Regarding suspension of interest, Richard Harr's 8 June 1990 statement to James Horst was not a promise to suspend interest pending the outcome of Bay Harbor I litigation and Harr lacked authority so to contract (findings 3, 7). Moreover, FAR 32.613(g) prohibits contracts and arrangements for deferment of collection of debts which provide that a Government claim will not become due and payable pending decision on a dispute. Appellant received respondent's 8 June 1990 demand letter with no undue delay (finding 17). There is no regulatory provision permitting suspension of interest on contract debts due to post-appeal delays in calculating the indebtedness of the sort appellant alleged (findings 16, 17). Respondent sustained its burden with respect to the issue of suspension of interest.

When appellant paid $104,299.20 to respondent on 30 October 1992, it disputed whether it had to pay interest thereon (finding 16). The FAR "Interest" clause in contract A065 requires payment of "simple interest" (finding 1), so interest did not accrue on unpaid interest. Accordingly, we apply appellant's $104,299.20 payment first to principal and compute interest on the principal amount due as follows:

Period	Rate	Days	Prin. Amount	Interest
Jan-June 1990	8.5%	23	$ 104,495.75	$ 559.70
July-Dec 1990	9.0%	184	$ 104,495.75	$ 4,740.96
Jan-June 1991	8.375%	181	$ 104,495.75	$ 4,339.79
July-Dec 1991	8.5%	184	$ 104,495.75	$ 4,477.57
Jan-June 1992	6.875%	182	$ 104,495.75	$ 3,572.41
July-2 Nov 1992	7.0%	124	$ 104,495.75	$ 2,478.21
3 Nov-Dec 1992	7.0%	59	$ 196.55	$ 2.22
1-4 Jan 1993	6.5%	4	$ 196.55	$ .14
Total interest due:				$20,171.00

The total of principal ($104,495.75) plus interest ($20,171.00) owed to respondent was $124,666.75. Appellant paid respondent $160,207.03 (findings 14, 18), which was $35,540.28 in excess of the amount owed. We sustain the appeals to the extent of $35,540.28, on which amount no interest is recoverable, which appellant overpaid to respondent, and deny the balance of the appeals.

[¶ 26,428] Louisiana Lamps and Shades

ASBCA No. 45294, October 18, 1993. Contract No. DLA400-90-C-1904.

Modifications—Changes—Written Order Prerequisite.—The government was not entitled to a summary judgment stating that there was a bilateral amendment reestablishing a contract delivery date, because there was no written modification in the file, either attested to by affidavit or appended to the motion as an exhibit. The government alleged that there was a bilateral amendment and that the contractor failed to comply with the delivery date. However, until both the contractor and the contracting officer agree in writing, a binding modification does not occur. Thus, there was a genuine issue with respect to the existence of a written agreement reestablishing the contract delivery date.

Defaults, Grounds—Delivery Failure—Absence of Contract Schedule.—The government failed to show that it unilaterally reestablished a delivery date that the contractor failed to comply with, because there was no evidence that the government conveyed an appropriate notice of a reasonable, specific time for performance on pain of a default termination. Although the government stated that a unilateral modification had occurred, the evidence showed instead that negotiations were being conducted for a bilateral contract modification reestablishing the delivery date. The government failed to show the absence of a genuine issue with respect to unilateral reestablishment of the delivery date.

Defaults, Waiver—Delivery Date—Failure to Reestablish.—The issue of whether a contract was properly default terminated on the basis of the contractor's delivery failure could not be summarily resolved, because issues remained as to the existence of a valid delivery schedule. The contractor contended that its contract was improperly terminated because the government waived the original delivery date and never reestablished another, and it asked the board to infer that fact from the documents contained in the file. However, the opposite could also be inferred from the file.

For the appellant: Alan J. Gould, Emeryville, California. For the government: Donald S. Tracy, Chief Trial Attorney, Defense General Supply Center (DLA), Richmond, Virginia.

Before HARTMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

HARTMAN, Administrative Judge: This is an appeal from a termination of a contract for default based on a failure to deliver. Both parties have filed motions for summary judgment.

UNDISPUTED MATERIAL FACTS

In September 1990, the Defense General Supply Center ("DGSC") awarded to appellant, Louisiana Lamps and Shades ("LA Lamps"), fixed-price contract No. DLA400-90-C-1904 in the amount of $96,957 for the supply of 3,402 floor lights on or before 27 January 1991. The contract provided that the floor lights were to contain a German-manufactured lampholder or socket to ensure compatibility with European-manufactured light bulbs. (R4, tabs, 1a, 1j, 1k; compl. ¶¶ 1 through 5; ans. ¶¶ 1 through 5; see R4, tab 27)

On 14 March 1991, approximately six weeks after LA Lamps was to have delivered the floor lights, DGSC sent the company a show cause letter stating the company had "failed to perform on contract DLA400-90-C-1904 within the time required" and DGSC was considering termination of the contract for default (R4, tab 2). LA Lamps submitted a response to the show cause letter and, through bilateral modification effective 18 April 1991, the parties amended their contract to establish 31 May 1991 as the delivery date and decrease the contract price by $350 (R4, tabs 11, 3, 4).

By letter dated 25 June 1991, LA Lamps requested that DGSC modify the parties' contract to change the FOB point, manufacturing location, and delivery date (R4, tab 5). DGSC's contracting officer declined to make the first change, but agreed to make the other two changes. On 8 August 1991, the contracting officer amended the contract to re-establish the delivery date as 31 December 1991. (R4, tabs 1m, 6, 7)

By letter dated 22 November 1991, LA Lamps indicated it was unable to obtain inspection of a floor light shipment because the quality assurance representative had not received a copy of a modification authorizing change of the manufacturing location (R4, tab 8). On 29 November 1992, the contracting officer amended the contract to

Digitized by Google

change the manufacturing (and inspection) site from Louisiana to California (R4, tab 1n).

During December 1991, LA Lamps notified DGSC that it was not going to meet the contract delivery date and requested an extension to 31 March 1992 (R4, tab 9). Shortly thereafter, on 7 January 1992, LA Lamps requested by telephone that the palletization requirement in its contract be changed. A DGSC contract administrator advised LA Lamps by telephone the same day that the change would not be made and it "should proceed with the performance of the contract as is." (R4, tab 10) By bilateral modification effective 30 January 1992, the parties amended their contract to re-establish the delivery date as 31 March 1992 and further decrease the contract price by $450 (R4, tab 1o).

In February of 1992, LA Lamps again raised the issue of changing the palletization requirement (R4, tabs 11, 12). Within two weeks of receipt of this request, a DGSC contracting officer advised LA Lamps by letter that: its requested change was once again denied; "a [r]eview of the contract revealed that of the 3402 items required only 204 have been delivered;" and "the remaining 3198 items must be delivered FOB Destination (New Cumberland Army Depot) by 31 March 1992" (R4, tab 14).

During late February and early March 1992, LA Lamps delivered 450 additional floor lights (R4, tab 25 at 8-9). By letter dated 27 March 1992, however, LA Lamps requested "approximately 60 days" to "complete[ ] the full order" and set forth the following as a basis for its delayed performance:

> We tried to get the government to accept an American socket that we feel was far superior than the German sockets. Our request was denied, we travelled to Crystal City to the Technical Division to see if we could get the division to allow us to use the American socket with a warranty.

(R4, tab 15)

During April 1992, the contracting officer issued another show cause letter indicating that DGSC was considering termination of the contract for default and seeking information concerning whether LA Lamps' failure to perform arose out of causes beyond its control and without its fault or negligence (R4, tab 16). On 29 April 1992, LA Lamps responded by stating that: "from the time issuance of the contract was made, we tried to clarify the socket issue by going to the Engineering Division in Crystal City"; "we have been working with the [socket] manufacturer from Germany and have now set up a line of fast delivery of these sockets"; and "we can finalize this contract within the next 60 days" (R4, tab 17). After reviewing LA Lamps' response, the contract specialist and contracting officer recommended that the contract be terminated for default (R4, tab 18). DGSC's termination contracting officer, however, declined to terminate the contract because she apparently believed that the delivery schedule had been waived as a result of the contractor "continuing to perform," *i.e.,* delivering another 246 floor lights during late May or early June 1992, and stated DGSC should "renegotiate a revised delivery schedule with consideration" (R4, tab 19).

In June 1992, the contract specialist, Elizabeth Brown, spoke by telephone with Bill Kaye of LA Lamps concerning a delivery date for the remaining floor lights and a reduction in the contract price. Mr. Kaye advised Ms. Brown "he would deliver the contract complete by 3 August 1992." Ms. Brown thereafter prepared a hand-written memorandum "of the [telephone] conversation" and a contract modification, No. P00004, which was executed by the contracting officer and forwarded by Ms. Brown to LA Lamps through "normal mail distribution." (Affidavit of E. Brown)

In a "Request for Deviation/Waiver" which was dated 28 August 1992 and addressed to Ms. Brown, Mr. Kaye stated that LA Lamps was not able to afford the German-manufactured sockets, which had increased in price to "3.30," and had "purchased from Leviton Electrics a socket that has the same voltage and wattage required for Europeon [sic] and German lighting ... made in the USA" for 82 cents per socket which it desired to use (R4, tab 21).

©1994, Commerce Clearing House, Inc.
Digitized by Google

On 3 September 1992, however, the termination contracting officer, Deborah Arrington, notified LA Lamps that its contract was being terminated for default based upon "failure to deliver the supplies in accordance with the established delivery schedule" (R4, tab 22), and issued modification No. P00005 terminating the contract for default (R4, tab 1q). By mailgram dated 4 September 1992, LA Lamps requested reconsideration of the termination, and stated 900 lamps were ready for immediate delivery upon granting of the waiver requested and filed "August 25 1992" (R4, tab 23).

On 9 September 1992, the contracting officer, Marie Payne, advised LA Lamps by letter that its waiver "request has been received and is under evaluation," but the "submission of your request in no way relieves you of the obligation to meet the specified delivery schedule" and an "offer of equitable price reduction or other offer of consideration" must be furnished prior to DGSC's final acceptance or rejection (R4, tab 24). By letter dated 16 September 1992, Mr. Kaye advised Ms. Payne he felt $1,050 was "fair and equitable" consideration (R4, tab 26). On 9 October 1992, Ms. Arrington notified Mr. Kaye that LA Lamps' waiver request had been reviewed and denied, and the "review of your request should not be construed as affecting in any way, the partial termination of Contract DLA400-90-C-1904" (R4, tab 28).

On 6 November 1992, LA Lamps appealed the contract's default termination to this Board. In December 1992, DGSC transmitted to the Board a Rule 4 file containing as tab 1p a standard form contract modification, which was numbered P00004, was executed by Ms. Payne, was not executed by any representative of LA Lamps, and provided that a signature of the contractor was required, the contract price was decreased by $500, and the delivery date was re-established as 3 August 1992. By letter dated 8 January 1993, LA Lamps objected to the inclusion of tab 1p because "this purported bilateral modification does not contain the signature of the contractor" and "is, therefore, not a contract document." Shortly thereafter, pursuant to Rule 4(e), the Board removed tab 1p from the Rule 4 file.

On 29 January 1993, LA Lamps filed a motion for summary judgment contending that DGSC had waived the contract delivery schedule, never re-established the delivery schedule, and thus improperly terminated the contract for failure to deliver. According to LA Lamps, modification No. P00004 "was established as a bilateral document," but "was never signed by the Contractor," and is therefore not a valid contractual document (app. br. at 6).

DGSC thereafter submitted a four-tab supplement to the Rule 4 file. Tab 32 of the supplement was a copy of the document previously submitted as tab 1p, except it appeared to contain in blue ink the signature of Mr. Kaye and the number "2" inserted immediately before the number "3" in the revised delivery date of "3 August 1992." According to a motion filed by DGSC to amend its answer, this "executed modification" apparently was "misfiled" and only belatedly discovered by counsel. At the same time it submitted the Rule 4 supplement, DGSC filed a cross-motion for summary judgment, which contended among other things that it properly terminated the contract for default because LA lamps had failed to deliver in accordance with the schedule established by "bilateral" contract modification No. P00004.

LA Lamps objected to DGSC's submission of tab 32 as part of the Rule 4 file and filed an opposition to DGSC's cross-motion, which contended there was no bilateral modification re-establishing a delivery date because the standard form modification P00004 bearing the signature of Mr. Kaye was a counteroffer to deliver on "23" August 1992 that DGSC never notified LA Lamps it was accepting. Thereafter, pursuant to Rule 4(e), the Board also removed tab 32 from the Rule 4 file.

DECISION

Summary judgment is granted only where there is no genuine issue of material fact and the movant is entitled to judgment as a matter of law. *E.g., Mingus Constructors, Inc. v. United States* [33 CCF ¶ 75,126], 812 F.2d 1387, 1390 (Fed. Cir. 1987); *Patten Co.*, ASBCA No. 35319, 89-3 BCA ¶ 21,957 at 110,449. The moving party bears the burden of showing the absence of any genuine issue of material fact and any doubt as to the existence of such an issue is resolved against that party. *E.g., Balboa Insurance Co. v. United States* [33 CCF ¶ 74,051], 775 F.2d 1158, 1163 (Fed. Cir. 1985); *Military Industrial Supply Co.*, ASBCA No. 43872, 93-1 BCA ¶ 25,312 at 126,099. The fact that both parties have moved for summary judgment does not mean that judgment as a matter of law must be granted for one side or the other. Each party's motion is evaluated on its own merits and properly denied if there

Digitized by Google

is a dispute regarding a material fact. *E.g., Mingus Constructors,* 812 F.2d at 1391.

In its summary judgment motion, DGSC argues that a bilateral amendment re-established the contract delivery date as 3 August 1992 and LA Lamps failed to comply with that delivery date (Gov't br. at 9-10). However, where a Government contract modification is required to be in writing, until both the contractor and the contracting officer agree in writing, a binding modification of the contract does not occur. *Mil-Spec Contractors, Inc. v. United States* [34 CCF ¶ 75,412], 835 F.2d 865, 867 (Fed. Cir. 1987); *SCM Corp. v. United States* [26 CCF ¶ 83,166], 595 F.2d 595, 598, 219 Ct. Cl. 459, 464 (1979); *Woodington Corp.,* ASBCA No. 37885, 91-1 BCA ¶ 23,579 at 118, 218-19. No written modification re-establishing an August 1992 delivery date currently is part of the Rule 4 file, attested to by affidavit, or appended to DGSC's motion as an exhibit. DGSC, therefore, has failed to show the absence of a genuine issue with respect to existence of a written agreement re-establishing the contract delivery date.

DGSC argues alternatively in its motion that, even if the Board cannot conclude there was a bilateral agreement reestablishing the delivery date, DGSC unilaterally re-established the delivery date as 3 August 1992 and LA Lamps failed to comply with that delivery date. According to DGSC, the actions of its contract specialist in speaking with Mr. Kaye and preparing a contract modification put LA Lamps on notice it was required to deliver the remaining floor lights by 3 August 1992. (Gov't br. at 11-13) However, in order to establish a new delivery date unilaterally, the Government must convey to a contractor appropriate notice of a reasonable, specific time for performance on pain of default termination. *ITT Corp. v. United States* [21 CCF ¶ 84,288], 509 F.2d 541, 547-49, 206 Ct. Cl. 37, 50-52 (1975); *DeVito v. United States* [13 CCF ¶ 82,319], 413 F.2d 1147, 1154-55, 188 Ct. Cl. 979, 991-92 (1969). Based upon the fact that the termination contracting officer stated DGSC should "renegotiate a revised delivery schedule with consideration," and the fact that both the contract specialist's affidavit and memorandum "of conversation" suggest she was seeking agreement by LA Lamps to a reduction in contract price, one could infer that negotiations simply were being conducted for a bilateral contract modification re-establishing the delivery date, rather than action being taken unilaterally to set a reasonable specific delivery date. *See, e.g.,* Sidney G. and Florence Kornegay, ASBCA No. 18454, 76-1 BCA ¶ 11,744 at 56,037. DGSC, therefore, also has failed to show the absence of a genuine issue with respect to unilateral re-establishment of the delivery date.

In its summary judgment motion, which was filed prior to DGSC's submission to the Board of a document appearing to be modification No. P00004 executed by Mr. Kaye, LA Lamps argues its contract was terminated improperly because DGSC waived the 31 March 1992 delivery date and never re-established another delivery date, *i.e.,* the converse of the arguments raised by DGSC. LA Lamps cites no sworn testimony or document in its motion purporting to establish that DGSC did not reestablish a delivery schedule. Rather, LA Lamps asks the Board to infer that fact from the documents contained in the Rule 4 file. However, based upon the affidavit of DGSC's contract specialist that, after being advised by Mr. Kaye in June 1992 LA Lamps "would deliver the contract complete by August 3," she prepared a contract modification, had it executed by the contracting officer, and sent it to LA Lamps, one could infer the opposite. Further, in its opposition to DGSC's summary judgment motion (app. reply br. at 2-3), which notes LA Lamps' objection to inclusion of the document executed by Mr. Kaye as part of the Rule 4 file, LA Lamps acknowledges the existence of a modification numbered P00004, but characterizes it as a counteroffer by Mr. Kaye to deliver on 23 August. Accordingly, LA Lamps also has failed to show the absence of a genuine issue with respect to the existence of a material fact, *i.e.,* the lack of existence of a modification reestablishing the delivery date. *See, generally, Military Industrial Supply, supra,* at 126,100; *Leadermar, Inc.,* ASBCA Nos. 40575, 42408, 92-2 BCA ¶ 24,919 at 124,248-49; *Greenstreet, Inc.,* ASBCA No. 3137, 59-1 BCA ¶ 2089 at 8932.

CONCLUSION

The parties' motions for summary judgment are denied. On or before 10 November 1993, each party is to file with the Board a proposed schedule for further proceedings.

[¶ 26,429] Bodell Construction Company

ASBCA No. 44474, October 18, 1993. Contract No. DACA83-89-C-0126.

Interpretation of Contracts—Drawings—Scaled Drawing Detail.—Under a contract calling for the construction of several concrete masonry buildings, a contractor's interpretation that wall footings for the buildings be placed no more than three feet below finished grade was unreasonable because this interpretation ignored a relevant drawing note. The drawing detail for the wall footings depicted four eight-inch blocks from the finished floor level to the top of the footing. In scaling this detail, the contractor assumed that the footings would be placed no more than three feet below grade. The drawings did not contain a break line on the footing detail that would have alerted the contractor to the fact that the drawings were not scaled. Nevertheless, the drawings did contain a note beneath the detail that highlighted the footing depth requirements. The note required that the wall footings be at a minimum of three feet and rest on firm, undisturbed ground. This note was obvious and was inconsistent with the reading that all footings be at the scaled depth of the detail. The contractor's oversight was further evinced by the repetition of this same note in the column footing schedule.

For the appellant: Suzuki & Goo, Honolulu, Hawaii, by William L. Goo and Aaron A. Lee. For the government: Col. Riggs L. Wilks, Jr., JAGC., Chief Trial Attorney, and Gayle B. Chestnut and Robyn U. Au, Trial Attorneys, U.S. Army Engineer Division, Pacific Ocean, Fort Shafter, Hawaii.

Before LUSSIER, RUBERRY, and SPECTOR, Administrative Judges.

LUSSIER, Administrative Judge: This appeal is from a January 1992 decision of the Corps of Engineers Contracting Officer denying a claim by Bodell Construction Company for $244,349.00 plus interest, as additional compensation for work performed under the contract. Because of a question regarding the adequacy of the certification accompanying appellant's claim it was recertified on 22 October 1992. The Government has stipulated that the contracting officer has informally considered the recertified claim and would deny the claim on the same basis as did the January 1992 decision.

FINDINGS OF FACT

1. On 29 September 1989, Contract DACA83-89-C-0126 was awarded by the U.S. Army Engineer District, Honolulu (HED) to Bodell Construction Company (Bodell) for the firm, fixed price of $9,102,000. The contract required, among other things, the construction of three multi-story concrete and concrete masonry unit (CMU) buildings (Buildings A, B and C) at a site on the East Range at Schofield Barracks. The contract work also included parking areas, utilities, sidewalks, storm drainage, and landscaping at the East Range site. (Stip. 1)

2. The contract contained the following pertinent clauses: "FAR 52.233-1 Disputes (APR 1984)" (R4, tab C-3); "FAR 52.236-3 Site Investigation and Conditions Affecting the Work (APR 1984)" (R4, tab C-4); "Specifications and Drawings for Construction (APR 1984)" (R4, tab C-5); and "Contract Drawings, Maps and Specifications (SEP 1987)" (R4, tab C-6). The latter clause provided in pertinent part that:

* * *

> (c) The Contractor shall check all drawings furnished him immediately upon their receipt and shall promptly notify the Contracting Officer of any discrepancies. Figures marked on drawings shall in general be followed in preference to scale measurements. Large scale drawings shall in general govern small scale drawings. The Contractor shall compare all drawings and verify the figures before laying out the work and will be responsible for any errors which might have been avoided thereby. [DFARS 52.236-7002]

3. The project site was a eucalyptus forest located on the north side of East Range Road at Schofield Barracks which sloped away from East Range Road to the north. The "Site Development Plan," (R4, tab E-4), indicated existing and final elevation contours for the project site. The greatest differences between existing and final elevation contours were indicated at the north end of Building A, where the existing contour was shown at an elevation of approximately 943 feet and the finished floor elevation was shown at 951.5 feet—a difference of approximately 8.5 feet.

Digitized by Google

4. The contract drawing for "Building A Foundation and Ground Floor Sections" (R4, tab E-19) contained details of five wall footings. Each detail showed that the scale was $1/2'' = 1'0''$. The walls shown were identified as "Typical 8″ CMU wall." The depiction for each detail reflected four 8″ CMU blocks from the finished floor level to the top of the footing. The details also show the finished grade to be a few inches below the finished floor level. The dimensions of each footing were shown, with each footing being 1′ deep, but no dimension, as such, was shown for the distance between the floor level and the footing. However, the fact that four 8″ CMU blocks were shown with no break line would indicate the distance to be 32," as would scaling the drawing. Underneath these details the drawing contained a box within which the following appeared: "*Note*, all bearing wall & column ftg's shall extend a minimum of 3′0″ below grade, free of any tree roots & shall rest on firm undisturbed ground."

5. The contract drawing for "CMU & Concrete Column Details & Footing Schedule & Typical Details" (R4, tab E-20), contains a column footing schedule showing the size of each column footing. At the bottom of the column footing schedule the following appears: "*Note!* All column footings shall extend a minimum of 3′-0″ below grade free of any tree roots and shall rest on firm, undisturbed ground. . . ."

6. The design for the contract was prepared for HED by a private Architect-Engineers (A-E) firm, Okita, Kunimitsu and Associates, Inc. (Okita) under a separate A-E contract. Okita subcontracted various aspects of the design to several other firms. The structural design work was subcontracted to SSFM Engineer (SSFM), and cost estimating for the structural and architectural portions of the design was subcontracted to Cost Engineering, Inc. (Cost Engineering). The approving engineer for SSFM was Mr. Lee Takushi, and the estimator who prepared the cost estimate for the architectural and structural portions of the design for Cost Engineering was Mr. Victor Tsuha. (Stip. 2)

7. Mr. Takushi approved the structural design based, in part, on data provided in a soil report dated July 1987, which had been provided to Okita by HED. Among the data was a finding that undisturbed natural ground at the East Range site had an allowable soil bearing capacity of 3,000 pounds per square foot (PSF), compared to an allowable soil bearing capacity of 2,000 PSF for insitu soil recompacted to 90% of maximum density. SSFM designed the structures of Buildings A, B and C based on the assumed 3,000 PSF soil bearing capacity for undisturbed natural ground. (Stip. 3)

8. In Mr. Takushi's opinion, the above quoted drawing notes were adequate to indicate what material the footings had to bear on when they were being constructed, although not the exact depths at which the footings were required to be placed, and were adequate to indicate that if the undisturbed natural ground varied, then the footing depths would also vary. Mr. Takushi also acknowledges that there are other methods by which the draftsman could have indicated that the footing depths might vary. These other methods include indicating break lines on the individual footing details, showing a dimension line with the word, "varies," calling out specific top-of-footing or bottom-of-footing elevations, and giving specific dimensions between finished grade and the top or bottom of the footing. (Stip. 5)

9. Mr. Tsuha prepared the portion of Okita's cost estimate relating to the architectural and structural design for this project. He does not believe that the civil drawings for the project were available to him at the time he prepared his estimate. In his estimate, Mr. Tsuha assumed that all of the footings for all three buildings would require excavation three and one-half feet below the bottom of the base course under the floor slab. He believes he either scaled the details of the footings on the contract drawings to arrive at that number, or he was given that number by someone else, but he does not recall which. He calculated the materials and labor required to construct the walls and columns on top of the footings based on the same assumption—i.e., that the bottom of the footings would extend no more than three and one-half feet below the base course under the floor slab. He is not sure whether he saw the two notes on the contract drawings which required that the footings rest on firm, undisturbed natural ground while he was preparing his estimate, and he is not sure whether or not either of those two notes was on the drawings at the time he made his estimate. (Stip. 6)

10. Mr. Tsuha's calculations of the quantities of materials and labor required to excavate for the footings, place the footings, and construct the walls and columns atop the footings were accepted by the Government's cost estimator, Mr. Thomas Taam, who prepared the final government estimate which

©1994, Commerce Clearing House, Inc.

Digitized by Google

is used to determine if bids are reasonable (tr. 3/112). Mr. Taam spot-checked the quantities indicated in Okita's estimate and assigned his own unit prices to the quantities indicated there (tr. 3/114, 119, 121). The final government estimate was approximately 8% below Bodell's bid on the contract (tr. 3/131).

11. Bodell subcontracted various items of the construction contract work to a number of subcontractors and planned to perform some of the contract work with its own employees. On 17 October 1989, Bodell executed subcontract agreements with a number of subcontractors for the contract work. Three of these subcontractors were Bateman Construction, Inc. (Bateman), Quality General, Inc. (Quality General), and Hawaiian Reinforcing Steel Company, Ltd. (Hawaiian Steel). This appeal is being prosecuted by Bodell at the request of these three subcontractors. (Stip. 8)

12. Bateman's subcontract with Bodell included, for the East Range site, all mass excavation and fill, finish subgrade, structural excavation and backfill, interior plumbing excavation, under slab cushion, base course, concrete curbs and wheelstops, wood edging, topsoil in place, underground fuel tank earthwork, exterior drain lines, sewer lines, and water lines, including concrete structures, soil and compaction tests, contractor quality control for Bateman's scope of work, clearing and grubbing, demolition, and landscaping. (Stip. 9)

13. Quality General's subcontract with Bodell included all masonry work, including, but not limited to, hoisting, cleanup of Quality General's debris, CMU sills, enlarging window openings, and placing of rebar furnished by others. (Stip. 10)

14. Hawaiian Steel's subcontract with Bodell included furnishing and installing all concrete rebar and furnishing, F.O.B. job site, all masonry rebar. (Stip 11)

15. The cost of the work performed by each of the three construction subcontractors listed above was affected by the elevations at which the concrete footings for Buildings A, B and C were placed. In general, the lower the elevations at which the concrete footings were placed, the greater the cost to each of these three subcontractors to perform its portion of the work. (Stip 12)

16. Each of these three construction subcontractors, independently, in preparing its subcontract bid for Bodell, interpreted the contract drawings as requiring the footings for Buildings A, B and C to be placed approximately three feet below finished grade, based upon either scaling the relevant details on the structural and architectural drawings and/or counting CMU blocks indicated on those details and based upon their interpretation that the contract drawings did not inform them that certain footings would be placed more than three feet below finished grade. (Stip 13)

17. Mr. Stanley Wada, the president of Quality General, assumed that the footings throughout the project would be essentially the same as the section details depicting specified wall footings (tr. 1/143). He admittedly saw the notes but considered them wrong because they were inconsistent with the detail depiction (tr. 1/148). He did not inquire about this inconsistency to Bodell or the Government before giving Bodell his bid. Mr. Brent Bateman, the owner of Bateman Construction, did not see the notes at the time he bid (tr. 2/105-106). Mr. Edson Hoo, the president of Hawaiian Reinforcing, testified that his estimator saw the notes but didn't think they applied and used only the details to estimate the amount of reinforcing steel (rebar) to bid to Bodell. Mark Bodell, the construction manager for Bodell Construction, could not recall whether he or his assistant saw the notes when they did a take off for concrete work but concluded that the footings would be approximately 3′ below grade based upon the details (tr. 3/21). He concedes there is an inconsistency between the notes and the drawings but dismisses it because the note is not "quantifiable" (tr. 3/39). He relied upon his subcontractor's bids in his bid to the Government (tr. 2/204).

18. By Memorandum dated 4 January 1990 (R4, tab D-1), while the clearing and grubbing operation was ongoing and before the footings had been placed (tr. 2-171, 2-172), Bodell's project supervisor, Mr. Richard Francisco, informed the Government's Construction Representative, Mr. Fabian Ladao, that:

> Due to the existing terrain, it will be necessary to step the footings initially on Bldg "A" and Bldg "B". At this time, the steps will be in increments of 8″ to interface with the CMU's. The locations for Bldg "A" will be at gridlines 4.5, 9.8, 12.4, and 13.5.
>
> These steps will be at no additional cost to the U.S. Army Corps of Engineers.
>
> Unless we hear otherwise, we will proceed assuming this is acceptable by the U.S.

Digitized by Google

Army Corps of Engineers and start forming by 08-January-90.

(R4, tab D-1)

19. Mr. Ladao first became aware of the stepped footings issue when he received Mr. Francisco's 4 January 1990 Memorandum (R4, tab D-1). Mr. Ladao felt that Mr. Francisco's Memorandum was "correct" (tr. 2-166) and that stepping the footings was in compliance with the contract, because the contours on the civil drawings did indicate that the property sloped toward the back (tr. 2-196). On a slope, the bottom of a footing must be stepped because a level bearing surface is needed on the bottom of the footing. Otherwise, the building would tend to slide downhill (tr. 1-152). The footing depth issue did not arise (tr. 2-189). Mr. Ladao did not become aware of any issue about the depth of footings until early April when Bodell wrote to the contracting officer (see finding 21 below) (tr. 2/177).

20. The concrete for the bearing wall footings and column footings for Buildings A and B was placed by early April 1990 (tr. 2-173). The elevations of the completed footings varied, and after the backfill was completed, their depths ranged from two feet, eight inches to fourteen feet below finished ground elevation (tr. 1-66). In particular, the footings along the north end of Building A where there was a large difference between the finished grade and the original contour of the land, ended up approximately eleven to fourteen feet below the finished grade (tr. 1-159, 1-160).

21. By letter dated 4 April 1990, after the footings had already been placed and construction was already 50% complete (tr. 2-172, 2-173), Bodell requested "additional compensation to extend the foundations of the buildings ... to a greater depth than anticipated due to incomplete, unclear and defective contract documents" (R4, tab D-3). Bodell's claim attached copies of correspondence from Bateman (dated 8 February 1990), Hawaiian Reinforcing (dated 28 February 1990), Quality General (dated 5 March 1990) and Shore Form, Inc., appellant's form subcontractor (dated 8 March 1990), setting forth their estimates for additional work involved in placing footing more than 3′ from the finished floor level. The letter attached a summary sheet requesting $211,798 which included the claims of the four named subcontractors, plus approximately $11,000 in Bodell direct costs, plus Bodell's mark-ups. The difference between this total of $211,798 and the $244,049 referred to in the contracting officer's final decision appears to be due to an increase in the estimate of damages for Quality General.

22. There was no testimony that Bodell ever expressed any dissatisfaction with respect to the contract's footing requirements prior to or during placement of the footings. There is no evidence that, either before or during the time the footings were placed, Bodell ever put the Government on notice that Bodell believed the contract specifications regarding footings were defective or that any differing site condition existed.

23. During construction and at all subsequent times relevant to this appeal, the Government has contended that the contract drawings required that all bearing wall and column footings be placed a minimum of three feet below existing grade and that they rest on firm, undisturbed natural ground. Bodell and its construction subcontractors assert that the contract drawings required the bearing wall and column footings to be placed at a depth of approximately three feet below finished grade, as indicated either by scaling the relevant details on the structural and architectural drawings and/or counting the CMU blocks indicated on them and that the contract drawings did not inform them that certain footings would be placed more than three feet below finished grade. (Stip 15)

24. It was Bodell's practice to obtain releases from its subcontractors prior to making final payments and to use a standard form supplied by its surety (tr. 2/217). Such a release is in evidence for both Quality General and Hawaiian Reinforcing (Govt. exh. 4, 5). It is likely that Bateman Construction signed a similar release (tr. 2/129, 218; 3/8) although it is not in evidence. However, there is reason to believe that Bodell and its subcontractors understood that the release did not apply to pass through equitable adjustments claimed due under the contract for the alleged drawing deficiency (app. exh. 2; tr. 2/44, 218-220). Since the issue of the releases was raised by the Government not in the pleadings, but rather at the hearing (to show Bodell suffered no damages,[1]) the record was not completely developed. Even

[1] While the Board has only the issue of entitlement, and not quantum, before it at this time, the Government's purpose in introducing the release issue was to estabish a bar to entitlement under the *Severin* doctrine, *Severin v. United States*, 99 Ct. Cl. 435 (1943), *cert. denied*, 322 U.S. 733 (1944). Because of our disposition of this appeal on other grounds, no useful purpose is to be served by a

©1994, Commerce Clearing House, Inc.

Digitized by Google

apart from the open question of whether the written releases fully integrated the agreement of the parties, the record does not permit us to conclude that Bodell has suffered no damages. Bodell has a direct cost claim which was included in the claim denied by the contracting officer and subsequently appealed. While the complaint filed in the appeal sought a lesser equitable adjustment totaling only the claims of Quality General, Hawaiian Reinforcing and Bateman Construction[2], the Government concedes Bodell's claim for mark ups is also before us although not mentioned in the complaint (tr. 1/20). It does not concede that Bodell's direct cost claim is still alive. However, there has been no withdrawal of that claim, even though Mr. Bodell testified that it would not have pursued its direct cost claim because of the small dollar amount, had not the subcontractor claims also been involved (tr. 2/210-212). No prejudice to the Government has been shown by the failure to include Bodell's direct cost claim specifically in the complaint.

DECISION

This appeal presents yet another example of the dangers of risk taking in Government contracts. The applicable legal principles where the parties disagree as to what the terms of a particular contract require are fairly straightforward. It is a basic tenet of contract interpretation that every portion of a contract must be considered and given effect, if possible. *Hol-Gar Manufacturing Corp. v. United States* [10 CCF ¶ 72,885], 169 Ct. Cl. 384 (1965). However, a bidder on a Government contract is not expected to be clairvoyant, nor inquire concerning subtle, latent or minor discrepancies in the solicitation. *Blount Brothers Construction Company v. United States* [10 CCF ¶ 73,058], 171 Ct. Cl 478, 346 F.2d 962 (1965); *WPC Enterprises v. United States* [9 CCF ¶ 72,289], 323 F.2d 874 (Ct. Cl. 1963). Nevertheless, it is clear that if the ambiguity is patent a duty arises for the bidder to inquire concerning the ambiguity prior to award. *Newsom v. United States* [29 CCF ¶ 82,417], 676 F.2d 647 (Ct. Cl. 1982); *Monarch Painting Corporation v. United States*, 16 Ct. Cl. 280 (1980). This doctrine protects the integrity of the bidding process by ensuring that all bidders bid to the same requirements. *Chris Berg, Inc. v. United States* [17 CCF ¶ 81,143], 455 F.2d 1037 (Ct. Cl. 1972).

In the case before us the problem might have been avoided had the Government drawings shown break lines on the individual footing details or given specific elevations or dimensions on the details to reflect the footing depth. The drawing did not do that but it did highlight the footing depth requirement by a box directly under the details relied upon by Bodell and its subcontractors. This note required that the depth be a "minimum" of 3′ below grade, free of tree roots, and that the footing "rest on firm undisturbed ground." The note was obvious and the testimony given by appellant's witnesses makes it clear the note was inconsistent with the drawing details (see finding 17). We agree that it is inconsistent with the drawing details if one were to read them as requiring only that all footings be at the scaled depth of the details. The discrepancy is highlighted again by the repetition of the note in the column footing schedule (see finding 5). Further, the "Site Development Plan" drawing made it quite clear that there was a significant slope to the existing grade at the project site requiring substantial fill at the north end of Building A (see finding 3).

We recognize that the Government cost estimate was based upon a 3 1/2′ footing depth. However, the estimator was not called to testify and the parties have stipulated that he is not sure that the notes were on the drawings he used (see finding 9). The later review by the HED engineer, who prepared the final government estimate, was only a spot check as to quantities. We do not think this background rises to the level of establishing that there was no patent ambiguity, especially in light of testimony that the inconsistency created by the notes was in fact noticed at time of bidding. Appellant's interpretation of the contract requirements left the note with no meaning, a result not favored by the law. *See Hol-Gar Manufacturing, supra.*

Even if it is customary to scale the drawings in the absence of an indication on the drawing that the column or wall shown was broken, this would not reasonably excuse ignoring the note staring the viewer in the face. Where there is a patent inconsistency, as here, a bidder is obliged to seek clarifica-

(Footnote Continued)

discussion of the *Severin* doctrine and later cases restricting its application.

[2] Counsel for appellant represented at the hearing that Shore Form had "decided not to prosecute the appeal" (tr. 1/25).

Digitized by Google

tion before unilaterally relying upon his own view of the meaning intended. *Metric Construction Company,* ASBCA No. 31750, 86-3 BCA ¶ 19,034; *Newsom v. United States, supra; Monarch Painting Corporation v. United States, supra.* We are troubled by the fact that, as in all patent ambiguity cases, there exists some Government fault. If there were not, there would be no ambiguity to begin with. However, once it is shown that the ambiguity is glaring, the law places the risk on the bidder to inquire or proceed at its risk. The appellant did not make that inquiry and we are compelled to hold against it.

The appeal is denied.

[¶ 26,430] Quality Granite Construction Co., Inc.

ASBCA No. 43846, October 12, 1993. Contract No. DMA700-91-C-0023.

Defaults, Procedure—Show Cause Notices—Reconsideration.—Upon reconsideration of an earlier decision involving the propriety of a default termination, the board affirmed its earlier decision because it had already considered and rejected the contractor's contention concerning the discretion of the contracting officer. The contractor asserted that the failure of the contracting officer to give the contractor notice of breaches of labor standards precluded upholding the default termination. The issue, however, was not whether the contracting officer's failure to give notice of the labor violations precluded default termination, but whether there were existing labor violations that constituted an independent and valid basis for the default termination.

For the appellant: Bernard & Davidson, Granite City, Illinois, by Kevin J. Davidson. For the government: Larry J. Olson, Assistant General Counsel, Defense Mapping Agency, St. Louis, Missouri.

Before PARK-CONROY, RUBERRY, and SPECTOR, Administrative Judges.

Affirming 93-3 BCA ¶ 26,073 on reconsideration.

PARK-CONROY, Administrative Judge: Appellant has moved for reconsideration of our 7 May 1993 decision. Although the appeal had been taken from the default termination of appellant's construction contract for failure to timely complete performance, we held that existing violations of the applicable labor standards provisions of the contract constituted a valid and independent ground for the default termination and granted the Government's motion for summary judgment.

Appellant makes two arguments in its motion for reconsideration. First, it contends that we discounted its argument concerning the contracting officer's discretion and departed from precedent, apparently because we found *Hellas Painting Contractor,* ASBCA No. 31656, 87-1 BCA ¶ 19,427, to be more analogous to the facts of this appeal than the cases appellant relied upon, *Corban Industries, Inc.,* VABCA Nos. 2181, 2559T, 88-3 BCA ¶ 20,843 and *La Madera Services,* ASBCA Nos. 29518, 30597—30603, 87-1 BCA ¶ 19,621. The Government responds, and we agree, that *La Madera* and *Corban* were fully discussed in the context of this appeal and correctly distinguished. We did not depart from precedent; we considered appellant's argument carefully and rejected it. Indeed, after explaining why *Corban* and *La Madera* were not applicable, we stated: "The issue here is not whether it would have been an abuse of discretion for the contracting officer to terminate the contract for alleged violations of the labor standards without giving appellant notice, but whether there were existing violations which constitute a valid and independent ground for the termination." Slip op. at 4. Appellant's motion for reconsideration does not raise any new argument in this regard.

Appellant's second contention is that, in the absence of an affidavit or other documents bearing indicia of veracity, we improperly considered the contracting officer's lack of knowledge of the alleged labor violations. The Government responds that the contention is untimely because appellant did not dispute this fact when it opposed the Government's motion for summary judgment although the knowledge issue was discussed in that motion. We again agree with the Government. *See RGI, Inc.,* ASBCA No. 38772, 93-2 BCA ¶ 25,581. Our reconsideration of this issue, however, revealed that,

©1994, Commerce Clearing House, Inc.

Digitized by Google

instead of making a separate finding of fact concerning the contracting officer's knowledge, we included our finding in the decision portion of our appeal. Therefore, we supplement our original Statement of Facts with the additional finding that the contracting officer did not have knowledge of the labor violations at the time she terminated the contract for default. Our finding was not, and is not, based upon an affidavit by the contracting officer; however, it was, and is, fully supported by the record evidence (*see* Gov't App. to Motion for Summary Judgment at 40, 42-45; R4, tabs 133, 134).

Having reconsidered our decision, we affirm it for the reasons stated.

[¶ 26,431] Choe-Kelly, Inc.

ASBCA No. 43481, October 18, 1993.

Contract Disputes—Implied-In-Fact Contracts—Intent to Contract.—There was no implied-in-fact contract between the government and a firm beyond the scope of a task order calling for the development and implementation of a software system for management functions, despite the firm's contention that the actions of the parties established an intent to contract for enhancements to the software program, because services performed to enhance the software programs were merely corrections of the system required to satisfy the task order. There was no indication that government personnel gave the firm any directions to perform out-of-scope work or promised compensation for any enhancements to the management system. After the change management system was implemented, a number of deficiencies still needed to be corrected. Those corrections were accomplished and reflected in what the firm submitted as version 1.1 of the change management system. For the most part, the firm's version 1.1 was simply a corrected version of the management system that was within the scope of the original task order.

Contract Disputes—Implied-In-Fact Contracts—Government Action.—Although a government official took steps to help a firm obtain contractual coverage for follow-on efforts to enhance a software program implemented under a task order for the development of a change management system, these actions did not establish an implied-in-fact contract to enhance the software program, because the government official did not have authority to bind the government. The firm knew that the government official was not a contracting officer and was without authority to obligate the government. The firm's assertion that the unauthorized promises made by the government official were ratified by the government was contradicted by the record. The contracting officer directly vetoed one of the attempts by the government official to obtain sole-source contractual coverage.

For the appellant: Thompson, Hine and Flory, Dayton, Ohio, by Richard A. Ciambrone. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Mark E. Landers and Maj. William M. Lackerman, Jr., USAF, Trial Attorneys.

Before GROSSBAUM, RUBERRY, and SPECTOR, Administrative Judges.

GROSSBAUM, Administrative Judge: This dispute arises under an allegedly implied-in-fact contract between the Government and appellant, Choe-Kelly, Inc. (Choe-Kelly, sometimes CKI), for services involving the design and implemention of a management software system for the propulsion program office within the Aeronautical Systems Division (identified by the symbol: ASD/YZ, sometimes simply YZ) of the United States Air Force Systems Command at Wright Patterson Air Force Base (WPAFB). Choe-Kelly submitted a certified claim in the amount of $209,792, representing the value of the work performed, and the appeal was taken from the contracting officer's failure to render a decision on the claim

By decision dated 10 March 1992, the Board denied a Government motion to dismiss this appeal for lack of jurisdiction, holding that "we clearly have jurisdiction to entertain the appeal, at least up to the point of establishing the existence of an implied contract." *Choe-Kelly, Inc.*, ASBCA No. 43481, 92-2 BCA ¶ 24,910 at 124,221. Accordingly, a hearing on the merits was held in Dayton, Ohio, after which both parties filed briefs. Only liability is before us for decision.

Digitized by Google

FINDINGS OF FACT

1. As noted in our March 1992 decision on the Government's motion to dismiss, "Choe-Kelly had been a subcontractor under Contract No. F33657-87-D-0097 between the Government and Frontier Engineering, Inc. (Frontier)." *Choe-Kelly, Inc.*, 92-2 BCA at 124,220. The record establishes that, in February 1988, contract F33657-87-D-0097 (contract 0097) had been entered into between the United States Air Force and the Small Business Administration (SBA) pursuant to Section 8(a) of the Small Business Act, 15 U.S.C. § 637(a), and that, concurrently, the SBA entered into an 8(a) contract with Frontier to perform the services required by contract 0097. The effective date of contract 0097 was 12 November 1987, however, events predating that effective date are also relevant.

2. In late 1986 the ASD propulsion program office's acquisition support directorate (symbol: ASD/YZW, sometimes YZW) prepared a statement of work for computer support services. A specific requirement to define, design and implement a configuration change management system (CMS, sometimes CCMS) to support ASD/YZ's change management functions and to install the system in YZ computers was identified and described in a document designated "Task Order 87-02," dated 17 December 1986. YZW is a technical management activity, and its personnel do not have any contracting authority. (AR4, tab 2; tr. 3/64-65)

3. Sometime in late 1986 or early 1987 Choe-Kelly and Frontier (sometimes FEI) arranged to seek contracts at WPAFB involving, *inter alia*, providing computer support services. To this end, Choe-Kelly and Frontier entered into a "Teaming Agreement" in March 1987. (Tr. 1/36-37, 2/126; exh. G-1)

4. During the first half of 1987 Choe-Kelly assisted Frontier in preparing a technical proposal to the Government. In June 1987 Frontier submitted a Task Implementation Plan, under which the Task Order 87-02 work was to be performed by Choe-Kelly as Frontier's subcontractor. Under its agreement with Frontier, Choe-Kelly would be paid for developing the change management system for ASD/YZ (sometimes referred to as the YZ CMS) only after a contract was awarded to Frontier. (R4, tabs 17, 18; tr. 1/62-64, 2/124)

5. Choe-Kelly had begun working on the CMS software described in Task Order 87-02 in April 1987. In this effort, Choe-Kelly worked directly with personnel from the Configuration, Data Management and Service Reporting branch (symbol: YZWC) within the ASD/YZW directorate. The principal YZWC representatives with whom Choe-Kelly dealt were Mr. Susano ("Sal") Mascorro, chief of the branch, and Mr. Thomas Gatchel, a configuration management engineer. (Tr. 1/41-45, 72, 131, 234, 3/114, 213)

6. Negotiations that eventually led to formation of contract 0097 were conducted directly between Frontier and the Government during 1987. These negotiations were completed on 12 November 1987 and the parties understood that the resulting award, which was not expected to be issued for more than thirty days, would reflect an effective date of "12 Nov 87." (R4, tabs 19, 20)

7. Meanwhile, a critical design review (CDR), intended to establish the baseline for the emerging configuration change management system, was held at Choe-Kelly's facility in September 1987. Choe-Kelly's principal management officials, Messrs. Michael Kelly and Neil Southerly, participated in the review. User activity representatives attending the CDR included Mr. Mascorro and Mr. Gatchel from YZWC. (R4, tab 18; tr. 1/44-45, 236)

8. During the CDR, government personnel identified several corrections needed to make the CMS acceptable and Choe-Kelly agreed with YZWC personnel on a list of the corrections to be made. Choe-Kelly has designated the version of the YZ CMS incorporating the agreed upon corrections as "Version 1.0." In addition to the foregoing corrections, Choe-Kelly and YZWC personnel discussed possible improvements or "enhancements" to the contemplated software, beyond the scope of Task Order 87-02. However, we are not persuaded that any agreement was reached as to whether or when Choe-Kelly would undertake an effort to make "enhancements" to the CMS. (Tr. 1/49-52, 236)

9. All of the documentation relating to "Version 1.0" of the YZ CMS that Choe-Kelly prepared was submitted to the Government under an FEI cover page that specifically referenced contract 0097. In late September or early October 1987 Choe-Kelly prepared and submitted to YZWC a typewritten report purportedly "cover[ing] those system improvements and corrections to be incorporated in the YZ Change Management System as a result of the Critical Design Review." However, this report listed only

©1994, Commerce Clearing House, Inc.
Digitized by Google

some, but not all, of the corrections to the CMS software that had been identified and agreed upon during the CDR. YZWC personnel made handwritten comments to the Choe-Kelly report, informing Choe-Kelly, *inter alia*, that:

> We feel that the base[line] product should be reworked to operate in a way that is functionally correct at no cost increase. How this is achieved is the contractor's decision.

(R4, tabs 25, 26; tr. 3/121, 200-202, 217-222)

10. Sometime in late November 1987 Choe-Kelly installed software for "Version 1.0" of the CMS on three YZ computers for an "initial operating capability (IOC)" period, intended to "obtain user feedback on system performance." On or about 30 November 1987 Choe-Kelly prepared and submitted to YZWC a Version Description Document (VDD) and a preliminary User's Manual for "Version 1.0" of the change management system required by Task Order 87-02. (R4, tabs 18, 27, 28; tr. 1/46, 3/229-230, 233-234).

11. According to Mr. Kelly, "Version 1.0" of the YZ change management system was "totally complete" by early December 1987 (tr. 1/46). In a memorandum to the ASD computer center dated 10 December 1987, the YZWC branch chief, Susano Mascorro, stated that Choe-Kelly had completed the requirements of Task Order 87-02 and that the "Change Management System has been delivered, tested, accepted and installed." The memorandum also noted that Mr. Mascorro's office was "in the process of determining system enhancements for [a] follow-on effort" and that a task order request for this effort would be submitted "in the near future." (AR4, tab 5)

12. Under letter dated 7 January 1988 Choe-Kelly transmitted to Frontier what it characterized as the "deliverable items" under Task Order 87-02, including three copies of the CMS software on floppy disks. The letter also enclosed a copy of Mr. Mascorro's 10 December 1987 memorandum, to show that the task order requirements were completed and had been accepted. (Exh. G-1)

13. However, despite Mr. Mascorro's 10 December 1987 memorandum, a number of deficiencies in the system, problems with the CMS software and inconsistencies between the "Version 1.0" software and the draft User's Manual had not yet been corrected. These problems were documented by YZWC personnel on "CMS System Problem Report" forms, and we find that these problems were not resolved completely until at least February 1988, when Choe-Kelly submitted a corrected revised software package (referred to as "Version 1.1"). (R4, tab 48; tr. 3/123, 227-234, 243)

14. Between December 1987 and February 1988, Choe-Kelly continued to make corrections to the change management system. According to Choe-Kelly's principal management officials, this work included developing "Version 1.1" of the YZ CMS, allegedly constituting "enhancements" to "Version 1.0" of the system. However, Choe-Kelly did not inform either Frontier or any government contracting officials that it was performing any changes or "enhancements" beyond the scope of Task Order 87-02. Moreover, we find that Frontier, for whom Choe-Kelly was acting as a prospective subcontractor, neither requested nor authorized Choe-Kelly to perform any work beyond Task Order 87-02. (R4, tab 45; tr. 1/79, 155, 178, 236-237, 2/35-36, 44, 3/21)

15. By February 1988 Choe-Kelly's relationship with Frontier had deteriorated for reasons not disclosed fully in the record. Among other things, Frontier informed Choe-Kelly's officials that it did not expect to give Choe-Kelly any more work under contract 0097. By this time Choe-Kelly recognized that it did not have a formal subcontract with Frontier for Task Order 87-02, that it had not yet been paid for any of the work already performed under that task order, and that it was undertaking what it regarded as a "follow-on effort" for the YZ CMS without contractual coverage. (Tr. 2/18, 24-25)

16. On or about 11 February 1988 Choe-Kelly entered into a consulting agreeement with a former Air Force employee, Mr. Eric Van Hoose, for marketing assistance services. In particular, the agreement contemplated the consultant's help in perfecting Choe-Kelly's rights under Task Order 87-02 and in obtaining "a contract vehicle" for "a follow-on to the YZ CMS which was delivered to YZ by CKI in December 1987." The value of this follow-on project was estimated to be $395,300 and Choe-Kelly was anxious to have this project "under contract no later than 15 April 1988." (R4, tab 50)

17. Indefinite quantity contract 0097 between the Air Force and the SBA was executed formally on 26 February 1988, with an effective date of 12 November 1987. Concurrently, the SBA entered into a corresponding subcontract with Frontier. Delivery Order 0001 under the then unexecuted contract 0097, showing an order date of 12 Nov-

Digitized by Google

ember 1987 and covering, *inter alia,* Task Order 87-02, had been signed by an ASD contracting officer on 9 February 1988. Both contract 0097 and Delivery Order 0001 showed a "Mailing Date" of 14 March 1988. (R4, tab 1)

18. SubCLIN 0002AB under Delivery Order 0001 was priced at $253,406 and incorporated the requirement specified in Task Order 87-02. The following labor effort was indicated at the end of the description of this item:

"HOURS: Frontier—420 Choe-Kelly—4,936" (R4, tab 1)

19. Sometime in February 1988, Choe-Kelly completed what it called "Version 1.1" of the CMS software and installed it in three ASD/YZ computers. Choe-Kelly prepared a VDD for "Version 1.1" dated 11 February 1988, the cover page of which indicates that it was prepared by Choe-Kelly and submitted to ASD by "Frontier Engineering Inc." under contract 0097. In addition, Choe-Kelly submitted to the Air Force a User's Manual for "Version 1.1" of the YZ Change Management System, dated 12 February 1988, which also referenced contract 0097 specifically. (Tr. 1/79, 2/44; R4, tabs 31, 32)

20. We find that most of what Choe-Kelly called "Version 1.1" of the YZ CMS represented the correction of deficiencies in "Version 1.0" that were within the scope of Task Order 87-02, many of which had been identified at the critical design review. Moreover, many of the functions listed by Choe-Kelly as "changes" or "enhancements" to the "Version 1.0" software and documentation simply represented necessary minor adjustments, corrections, or "fixes." (R4, tabs 31, 48; exh. A-1; tr. 3/131-132, 145, 223-225, 237-239)

21. However, a few of the "enhancements" listed with "Version 1.1" included changes that were beyond the scope of Task Order 87-02. These changes were discovered by YZWC personnel (including Mr. Gatchel and Mr. Mascorro), when reviewing Choe-Kelly's "Version 1.1" software and accompanying documentation in February and March 1988. (R4, tab 31; exh. A-1; tr. 3/251-255)

22. Mr. Gatchel and Mr. Mascorro questioned Choe-Kelly management about the out-of-scope changes being made to the CMS software and were told that the additional changes were being made for convenience, since Choe-Kelly's programmers were "in the area" and the company had no other work and needed to keep its people busy. Mr. Gatchel cautioned Mr. Southerly not to undertake work in advance of contractual authorization. He also made comments on various CMS System Problem Reports advising Choe-Kelly, among other things, to await written "[o]fficial direction to begin work" on any "enhancements" to the CMS, notify the program office of the nature of problems encountered "prior to implementing a fix," and await "official direction to proceed" from the contracting office before undertaking "a fix [that] would require further funding." Mr. Mascorro also claims to have warned Choe-Kelly about the risk of working without contractual coverage and did not promise Choe-Kelly that it would be paid for any "enhancements." (R4, tab 48; tr. 3/132-134, 151, 252-257)

23. Despite the foregoing warnings from YZWC personnel, Choe-Kelly started to design and develop additional "enhancements" to the CMS software as soon as it completed "Version 1.1." Choe-Kelly referred to these additional "enhancements" as "Version 1.2." (Tr. 1/97, 98, 250)

24. It is undisputed that Mr. Mascorro had discussed and expressed interest in Choe-Kelly's pursuit of a "follow-on effort" to develop "enhancements" to the change management system software required by Task Order 87-02. Mr. Mascorro actually took steps to assist Choe-Kelly in obtaining contractual coverage for this follow-on effort and, among other things, helped prepare a purchase request for "enhancements" to the CMS described as "Version 1.2." Choe-Kelly was listed as the prospective source for this effort, under a proposed SBA 8(a) contract, at an estimated cost of $192,000. That purchase request was never processed through ASD procurement channels because Choe-Kelly was unable to get designated as an 8(a) contractor. (Findings 8, 11; AR4, tab 3; tr. 3/124, 133)

25. Neither Mr. Mascorro, Mr. Gatchel, nor any other personnel within the YZWC organization were contracting officers or had any contracting experience. Both Mr. Kelly and Mr. Southerly understood that only a contracting officer could obligate the Government contractually. Mr. Southerly admitted that he knew that Mr. Mascorro was not a contracting officer and had no authority to obligate the Government. Mr. Southerly also acknowledged that he had been aware that a purchase request was not a contract and did not obligate the Government.

©1994, Commerce Clearing House, Inc.

Digitized by Google

For his part, Mr. Kelly admitted that he did nothing to ascertain the contracting authority of Mr. Mascorro, Mr. Gatchel or anyone else in the ASD/YZW organization with whom he dealt. (Tr. 1/185, 2/10-11, 13-14, 3/64-69, 134, 213)

26. We find, as admitted by Mr. Southerly, that Mr. Mascorro never "directed" Choe-Kelly to do anything in connection with developing "enhancements" to the YZ change management system. Moreover, Mr. Mascorro denies having promised to pay Choe-Kelly for any such "enhancements." (Tr. 2/15-16; 3/132-133) There is not the slightest suggestion in the record that any other ASD personnel ever gave Choe-Kelly any directions to perform out-of-scope work or ever promised Choe-Kelly compensation for any "enhancements" to the CMS.

27. By mid-March 1988 Choe-Kelly had not been paid by Frontier for the work it had done on the YZ change management system. Around that time Choe-Kelly's consultant, Mr. Van Hoose, contacted an ASD contracting officer, Mr. Donald Trenner, seeking assistance in getting Frontier to pay Choe-Kelly. To confirm Mr. Van Hoose's agency status, on or about 25 March 1988 Choe-Kelly sent a letter to the ASD contracting directorate designating Mr. Van Hoose as Choe-Kelly's "Contract Representative." (R4, tab 49; tr. 3/24-26)

28. As of 1 April 1988 Frontier still did not want to issue a formal subcontract covering the work on the YZ CMS that Choe-Kelly had performed at its own risk. After further prodding from Choe-Kelly, including a demand for return of its software and documentation, on 19 April 1988 Frontier's president executed a fixed-price subcontract agreement with Choe-Kelly in the amount of $206,315 covering the work performed on Task Order 87-02 under contract 0097. (Exh. A-2, G-1; AR4, tab 1).

29. In June 1988, Choe-Kelly was directed by the Air Force to remove the "Version 1.1" software from YZ's computers and to reinstall "Version 1.0" for testing and acceptance purposes. Around that time, Choe-Kelly was paid in full, by Frontier, for the work it had performed on the YZ CMS under Task Order 87-02. (Tr. 1/198, 247, 3/178-179)

30. The Air Force formally accepted the reinstalled "Version 1.0," even though it was not useful. On 7 June 1988 Mr. Mascorro signed a "Certificate of Completion," certifying that "all effort and deliverables have been received from Frontier" under contract "... -0097-0001, Task Order 87-02." (On 23 March 1988 Choe-Kelly had presented to Mr. Mascorro, and he had signed, a "Certificate of Completion," certifying that the contractor and/or subcontractor had satisfactorily completed all requirements under Task Order 87-02 of contract 0097.) (R4, tab 35; AR4, tab 4; tr. 3/127, 178-179) We are unable to determine with any certainty the reasons why the Air Force accepted a product that was not useful or why Mr. Mascorro signed, at different times, different certificates signifying completion of what was presumably the same requirement.

31. Shortly after the Air Force accepted "Version 1.0" of the CMS, "Version 1.1" was reinstalled in some YZ computers and remained there until May 1989. By this time Choe-Kelly's work on "Version 1.2" was substantially complete and Mr. Southerly was still attempting to secure contractual coverage for this effort. (Tr. 1/247, 250, 2/49, 3/177-79)

32. On or about 3 August 1988 Mr. Mascorro requested the ASD/YZ program control office to write an advanced purchase request "to enhance the current YZW Configuration Change Management System," as a task order under an existing Air Force contract "for an estimated value of $226,560." Choe-Kelly was identified as the "source for this effort." A "Call Order" entitled "YZ CMS VERSION 1.2," which had been prepared by Mr. Southerly, was attached to Mr. Mascorro's request. (AR4, tab 3; tr. 2/49, 3/124, 184-186)

33. The ASD contracting officer, Mr. Trenner, summarily rejected the request and accompanying "Call Order" as being "clearly not in the scope" of the existing Air Force contract under which it was sought to be placed. That contract was for computer hardware, not computer software. (Tr. 2/154, 3/36, 126)

34. On 27 October 1988 Mr. Southerly provided Choe-Kelly's "Version 1.2" of the CMS software and related documentation to YZWC for testing in YZ computers. These materials consisted of: 15 disks comprising 3 copies of "Version 1.2" software, a copy of a software test plan for "Version 1.2" of the YZ CMS, and 5 copies each of a User's Manual, a VDD, and data base documentation for "Version 1.2." All the "Version 1.2" documentation was dated 10 June 1988. (R4, tab 36)

35. These "Version 1.2" materials were "received [by YZWC] for the purpose of acceptance testing to determine their applica-

Digitized by Google

bility to the YZ change management process and for [the] possibility of future procurement" and Mr. Southerly was informed that any testing of these materials would be performed on a "non-interference basis with regular work" of ASD/YZ. One copy of the "Version 1.2" software was installed on a YZWC computer. When he provided the "Version 1.2" materials to YZWC, Mr. Southerly was aware that Choe-Kelly did not have a contract with the Air Force. Choe-Kelly kept a full copy of the "Version 1.2" software and documentation. (R4, tab 36; tr. 2/42, 95; 3/79, 137)

36. A "To Whom It May Concern" letter dated "19 Dec 88," signed by YZWC section chief Albert Pritchett "for" branch chief Mascorro, declared that:

> The Government intends to award a contract in the amount of $192,000 to Choe-Kelly, Inc. (CKI) for the delivery of Version 1.2 of the YZ Change Management System developed by CKI. A fully funded Purchase Request has been delivered to the YZ Contracts Department (YZK) as the initial step in the award process.

This letter was prepared at Choe-Kelly's request, to assist it in dealings with its bank. Mr. Mascorro was suspended for one day without pay because he permitted this letter to be released. (R4, tab 2; tr. 3/127-129)

37. In the late fall of 1988 Mr. Mascorro initiated a purchase request seeking to award a sole source contract to Choe-Kelly for its work on Versions 1.1 and 1.2. This sole source purchase request was routed to a contracting officer within the ASD/YZW contracting directorate (YZK), Ms. Marilyn Smith, who had not previously heard of Choe-Kelly. (Tr. 2/233, 234)

38. Ms. Smith questioned Mr. Mascorro about the justification for a sole source award to Choe-Kelly and Mr. Mascorro conceded that a sole source procurement could not be justified. However, Mr. Mascorro did not inform Ms. Smith that Choe-Kelly had already worked on "Version 1.2" or that YZWC possessed a "test version" of the "Version 1.2" software. (Tr. 2/245-246, 270)

39. On or about 17 January 1989 Ms. Smith issued a "sources sought" synopsis in the Commerce Business Daily (CBD) for "Version 1.2 of ORACLE based Configuration Change Management System." Choe-Kelly responded to the CBD synopsis on 1 February 1989 and responses were also received from other prospective contractors. All responses to the CBD synopsis were referred to YZWC for evaluation. (R4, tabs 3, 4; tr. 2/251; 3/126-127, 137)

40. After receipt of the CBD responses, Ms. Smith learned that Choe-Kelly had already done work on the solicited requirement. When this situation was reported to her supervisor within YZK, Ms. Smith was directed to stop all efforts to procure "Version 1.2" until the matter could be investigated. (Tr. 2/236-237)

41. By May 1989 ASD/YZW had completed evaluating the "Version 1.2" materials Choe-Kelly had provided in October 1988. The "Version 1.2" software was removed from YZ computers and "Version 1.0" software was reinstalled. By letter to Mr. Southerly dated 31 May 1989, the director of YZW indicated that the Government was returning the materials to Choe-Kelly. The materials were physically given to Mr. Van Hoose on 1 June 1988. (R4, tabs 5, 38; tr. 3/178, 180, 291)

42. Choe-Kelly's consultant, Mr. Van Hoose, was busy "doing his marketing" for various clients during the period relevant to this appeal. Choe-Kelly's consulting agreement with Mr. Van Hoose was discontinued by mid-1989, but was never terminated in writing as expressly provided in the agreement. Moreover, Choe-Kelly never rescinded the 25 March 1988 letter to the ASD contracting directorate designating Mr. Van Hoose as its "Contract Representative" and never notified the Government that Mr. Van Hoose's agency relationship had ended. (Tr. 1/134, 2/106-107, 3/24-25; R4, tab 49)

43. Choe-Kelly filed its certified claim with the contracting officer on 25 May 1990 and took this appeal from the contracting officer's failure to render a decision on that claim, as directed by the Board pursuant to Rule 1(e) (R4, tabs 6, 12-14).

DECISION

Appellant claims entitlement to compensation under an "implied in fact" contract allegedly entered into with the Government. An implied in fact contract is an agreement

> founded on a meeting of minds, which, although not embodied in an express contract, is inferred as a fact, from conduct of the parties showing, in light of the surrounding circumstances, their tacit understanding.

Baltimore & Ohio R. Co. v. United States, 261 U.S. 592, 597 (1923)

According to appellant, the following conduct of the parties gave rise to an implied in fact contract in this case:

©1994, Commerce Clearing House, Inc.

Digitized by Google

> Once Version 1.0 had reached the critical design review, CKI was encouraged by Air Force personnel to enhance the program. The understanding was that if CKI did enhance Version 1.0, it would be paid for the follow on effort. This understanding is evidenced by the efforts of Mr. Sal Mascorro to get Versions 1.1 and 1.2 under contract. Both parties intended to contract for the enhancement to Version 1.0. The Air Force offered to pay CKI approximately $192,000 for its software design and development of Versions 1.1 and 1.2 which CKI accepted. In fact, Version 1.0 was never installed in any YZ computer, but rather the Air Force waited until Version 1.1 was completed and then installed that software. A meeting of the minds with respect to Versions 1.1 and 1.2 existed between CKI and [the Government] which is evident from the conduct of both parties between December 1987 and October 1988. The conduct of both appellant and [the Government] clearly establishes a mutuality of intent to contract.

(App. br. at 8)

The record before us does not support appellant's version of events. When the critical design review was conducted in September 1987, to establish the baseline for the change management system, the details of the CMS still needed corrections. What appellant has designated as "Version 1.0" of the CMS was required to incorporate the corrections agreed upon at the CDR in order to satisfy the requirements of Task Order 87-02. There is no credible evidence of any agreement that Choe-Kelly would make and the Government would pay for "enhancements" to a system whose details had not yet been approved and we conclude that any encouragement Air Force personnel may have given Choe-Kelly, prior to February 1988, would have related to the scope of Task Order 87-02, which Choe-Kelly was performing without the benefit of formal contractual coverage. (Findings 7, 8, 15)

Moreover, when Choe-Kelly submitted a version description document and preliminary user's manual for "Version 1.0" of the CMS at the end of November 1987 a number of deficiencies still remained in the system and needed to be corrected. Those corrections were accomplished and reflected in what appellant submitted in February 1988 as "Version 1.1" of the CMS, the documentation for which expressly referenced contract 0097. For the most part, Choe-Kelly's "Version 1.1" was simply a corrected version of the CMS that was within the scope of Task Order 87-02. However, "Version 1.1" did include a few out-of-scope changes. (Findings 10, 13, 19-21).

Appellant focuses on the actions and "efforts of Mr. Sal Mascorro to get Versions 1.1 and 1.2 under contract" to prove the existence of the alleged implied agreement and to establish its terms. However, the behavior of Mr. Mascorro is still not enough to establish an implied in fact contract. For purposes of our decision we assume that Choe-Kelly did not intend the out-of-scope changes reflected in "Version 1.2" to be voluntary or gratuitous, even though we might draw a contrary inference from the record (see finding 22). We also assume, although it has not been proven, that Mr. Mascorro's conduct went so far as to amount to a promise on which Choe-Kelly actually relied.

The elements of an implied in fact contract include:

> 1) mutuality of intent to contract; 2) consideration; and, 3) lack of ambiguity in offer and acceptance [and, w]hen the United States is a party, ... [4)] the Government representative "whose conduct is relied upon must have actual authority to bind the Government in contract."

City of El Centro v. United States [37 CCF ¶ 76,044], 922 F.2d 816, 820 (Fed Cir. 1990) (citations omitted), *cert. denied*, — U.S. —, 111 S. Ct. 2851 (1991).

Appellant "admits that Mr. Mascorro did not have the actual authority to bind the Government" and the record establishes that appellant knew that Mr. Mascorro was not a contracting officer and had no authority to obligate the Government. (App. br. at 9; finding 25) However, appellant argues that Mr. Mascorro's actions (and whatever unauthorized promises he may have made) were "ratified by the Government," specifically by "the inactions of Donald Trenner, a[n ASD] contracting officer." (App. br. at 9) This argument is without merit. To the contrary, the record shows that Mr. Trenner directly vetoed one of Mr. Mascorro's several attempts to obtain sole source contractual coverage for Choe-Kelly and there is no evidence that any ASD contracting officials had reason to know about Choe-Kelly's performance of a so-called "follow-on effort." (Findings 11, 14, 32-33, 39-40).

Similarly without merit is appellant's alternative argument that whatever understanding was reached between Choe-Kelly and Mr. Mascorro was "institutionally ratified," in the sense that "the agency received

Digitized by Google

a direct benefit from the [claimant] based upon a promise of payment," despite the promising official's lack of authority to bind the Government. (App. br. at 9). The record does not establish the Government's receipt of any benefit from Choe-Kelly's extra-contractual efforts or, specifically, that the "Version 1.2" materials left with the YZWC for evaluation (and eventually returned to an individual cloaked with inherent agency authority by Choe-Kelly) were used for any other beneficial purpose. (Findings 34-35, 41-42). Nor do we consider authoritative the decision on which appellant mainly relies to support its "institutional ratification" theory. *See City of El Centro v. United States* [37 CCF ¶ 76,044], 17 Cl. Ct. 794 (1989), *rev'd* 922 F.2d 816 (Fed. Cir. 1990).

This appeal is based on an alleged implied in fact contract for the procurement of property or services entered into between an executive agency (the Air Force) and Choe-Kelly sometime after 1987, to which the Contract Disputes Act of 1978, 41 U.S.C. §§ 601 *et seq.*, would apply automatically. 41 U.S.C. § 602(a). Appellant has failed to prove the elements of an implied in fact contract in this case. Therefore, we hold that no contract for the performance of work beyond the scope of Task Order 87-02 ever came into existence.

This Board's jurisdiction under the Contract Disputes Act is quite broad and extends to "decid[ing] any appeal from a decision [including a "deemed" decision] of a contracting officer ... *relative to a contract made by its agency.*" 41 U.S.C. § 607(d)(1) (emphasis added). Since no contract ever came into existence, we lack jurisdiction to grant any relief under this appeal.

Accordingly, the appeal is dismissed with prejudice for lack of subject matter jurisdiction.

[¶ 26,432] Precision Dynamics, Inc.

ASBCA Nos. 41360, 41361, 41362, 41363, 41364, 42955, October 13, 1993. Contract Nos. N00102-88-C-0116, N00102-88-C-0115, N00102-88-C-0102, N00102-87-D-0013, N00102-86-D-3220, N00102-88-C-0105.

Procedure, Boards—Discovery—Motions to Compel.—A government motion to compel discovery or, alternatively, to dismiss the appeal was denied, despite its contention that the contractor's default was not traceable to any government-caused delays, because the board determined that there was nothing further to compel. The contractor made a reasonable search in response to the subpoena and cooperated with the government's investigation of the matter. Moreover, the government had not pursued other available means of gaining access to much of the information sought from the contractor.

For the appellant: Shain, Schaffer & Rafanello, P.C., Bernardsville, New Jersey, by Jeffrey A. Donner. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Dennis G. LaPointe, Trial Attorney, Portsmouth Naval Shipyard, Portsmouth, New Hampshire.

Before REITER, RUBERRY, and SPECTOR, Administrative Judges.

REITER, Administrative Judge: The Government's Motion to Compel or Dismiss was docketed on 28 September 1993. Discovery on this appeal commenced in September 1990. On 20 July 1993, the Government caused a discovery subpoena, returnable 20 August 1993, to be issued to appellant's President and the Custodian of the Records for certain records the Government feels appellant has in its possession, or under its control.

The subpoena in essence requested copies of:

1. Deposit slips covering deposited government checks which checks would evidence that the Government was paying twice for the same work.

2. The contents of a folder maintained for appellant by a Patricia Halosz containing information relating to the above duplicate payments.

3. Bank statements of an unregistered company, Greengate Development Company, for the 5 year period 1986-91. Appellant's president and members of his family allegedly have had an interest in this company during that 5 year period of time.

4. The work papers of appellant's accountants generated during the 5 year period, 1986-91.

©1994, Commerce Clearing House, Inc.

Digitized by Google

The thinking behind these discovery requests by the Government is that appellant's default was not traceable to any Government caused or excusable delays as appellant alleges, but that appellant's president was syphoning off appellant's assets which in turn resulted in appellant's inability to properly conduct its business.

Appellant's timely response to the discovery request was to the following effect:

1. That it had delivered, and was in its response delivering, all of the copies of deposit slips it could find and possessed.

2. It had no awareness of any folder as described in the subpoena and kept by Ms. Halosz.

3. It was not in possession or control of any bank statements relating to Greengate Development Company for the period 1986-91.

4. It had through its accountants provided all existing work papers for the period 1986-91 which its accountant could locate.

After a review of the Government's Motion and after a telephone conference with the Government's and appellant's attorneys on 6 October 1993 on this matter, the Board is unconvinced that there is anything further to compel.

Appellant has made a reasonable search in response to the subpoena and has cooperated with the U.S. Attorney's Office in that office's investigation of one of appellant's employees allegedly involved in the double payments. Although the Government has articulated suspicions that this may not be the case, we are unconvinced based on what has been presented that those suspicions are anything more than suspicions.

Obviously, if those suspicions were true, Federal felonies were committed; but in this connection, the Government has acknowledged that the matter has been brought to the attention of the U.S. Attorney, and that no active investigation is being pursued by that office into this matter.

Also, we note that the Government has alternate means of gaining access to much of the information and documents sought from appellant, but to our knowledge has not pursued them.

In light of all of the above, the Government's Motion to Compel or in the alternative to Dismiss is denied.

[¶ 26,433] Davey Compressor Company

ASBCA Nos. 38671, 38672, October 18, 1993. Contract Nos. F09603-85-C-1482, F09603-85-C-0536.

Delays—Causation—Concurrent Causes.—Under contracts for portable air compressors, a contractor was not entitled to an equitable adjustment for a delay allegedly caused by the government's rejection of impregnated oil sump castings, because any delay was concurrent with the much larger delay experienced by the contractor in connection with its suppliers.

Acceptance of Performance—Rejection of Nonconforming Items—Responsibility for Nonconformance.—Under contracts for portable air compressors, a contractor was not entitled to an equitable adjustment for the government's allegedly improper rejection of the contractor's cylinders, because the cylinders, which contained rust and oil in violation of the specifications, were properly rejected. The cylinder supplier conceded that the problem resulted from inadequate neutralization and improper plating, rather than from any government cause. The contractor failed to show that it was impossible to provide rust-free cylinders or to show that government-prescribed testing procedures damaged the cylinders or the compressor unit or contributed to the rust.

Quality—Compliance with Specifications—Testing.—Under contracts for portable air compressors that specified noise emission testing but remained silent as to how to read and interpret the sound meter, a contractor was not entitled to an equitable adjustment for allegedly improper testing, because the government's interpretation reasonably ensured that contract requirements were met. The contractor failed to show that the consistent use of low readings would ensure that the contract's not-to-exceed noise standard would be met, whereas the government's interpretation reasonably fulfilled the specifications' purpose

Digitized by Google

regarding the noise standard. Moreover, the government's interpretation was supported by an Environmental Protection Agency circular that required use of high readings in testing compressors. The contractor failed to prove its contention that the circular applied only to nonsteady noise compressors, rather than to the contractor's steady noise compressors or to show that its standard practice was to use low meter readings in testing.

Acceptance of Performance—Rejection of Nonconforming Items—Basis of Rejection.—Under contracts for portable air compressors, a contractor was not entitled to an equitable adjustment for the government's allegedly improper rejection of reworked mufflers, because it did not show that the rejected reworked mufflers were conforming. The contractor's receiving inspection report indicated that the mufflers had exposed edges and that corrective action was required. The contractor's inspection staff, rather than the government, required the contractor to use trim rings to correct the mufflers.

Delays—Causation—Concurrent Delays.—Under a contract for portable air compressors, a contractor was not entitled to recover for the government's improper reliance on a nonmandatory painting standard in rejecting castings, despite the fact that this government action affected production for one month, because the contractor was precluded from shipping during this period as a result of its inability to meet the painting specifications. The government contended that the defectively painted units did not affect overall function. However, the government was entitled to receive what it paid for and to reject the oversprayed units. The contractor did not show that compliance was impossible.

For the appellant: Thompson, Hine & Flory, Dayton, Ohio, by Donald J. Kinlin. For the government: Donald J. Srail, Trial Attorney, Defense Contract Management Area Office, Cleveland (DLA).

Before DELMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

DELMAN, Administrative Judge: Appellant, Davey Compressor Company, seeks damages for delay allegedly caused by the Government under the above captioned contracts. Jurisdiction lies under the Contract Disputes Act (CDA), 41 U.S.C. § § 601 *et seq.* A hearing was held on entitlement and quantum. We deny the appeals.

ASBCA No. 38671

FINDINGS OF FACT

Contract No. F09603-85-C-1482 ("1482")

1. Contract 1482, a multi-year contract, was awarded to appellant on 11 July 1985. Appellant was to deliver portable air compressors, type MC-1A, on a monthly basis in accordance with a prescribed contract schedule. The Government also reserved the right to exercise option quantities of compressors. It appears that appellant was obligated to deliver over 1,100 compressors over the life of this contract, including those exercised under option (R4, tabs 50, 65).

2. The contract contained the standard FAR clause entitled *Government Delay of Work* (Apr 1984), FAR 52.212-15, which states in part as follows:

(a) If the performance of all or any part of the work of this contract is delayed or interrupted (1) by an act of the Contracting Officer in the administration of this contract that is not expressly or impliedly authorized by this contract, or (2) by a failure of the Contracting Officer to act within the time specified in this contract, or within a reasonable time if not specified, an adjustment (excluding profit) shall be made for any increase in the cost of performance of this contract caused by the delay or interruption and the contract shall be modified in writing accordingly. Adjustment shall also be made in the delivery or performance dates and any other contractual term or condition affected by the delay or interruption. *However, no adjustment shall be made under this clause for any delay or interruption to the extent that performance would have been delayed or interrupted by any other cause, including the fault or negligence of the Contractor, or for which an adjustment is provided or excluded under any other term or condition of this contract.* [Emphasis added]

3. The contract required that appellant provide a certain number of compressors commencing December 1985, and monthly thereafter. Appellant failed to deliver the prescribed monthly quantities. By letter to the Government dated 30 April 1986, appellant acknowledged that it was delinquent and asked for a revised delivery schedule.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Appellant stated that several factors contributed to shipment delay. The first involved a post-award survey which was not accomplished until 15 November 1985. The second involved a claimed delay in the Government's approval of an engineering change proposal (ECP), telexed on 10 December 1985, but not reduced to a contract modification until 6 January 1986. This seems to refer to ECP Nos. 1482-1 through 1482-5 under contract Modification P00002. These ECPs updated the drawing and data package, ostensibly at appellant's request. Appellant failed to adduce any credible evidence linking these events to Government fault and to production delay.

4. Appellant's 30 April letter also acknowledged that its oil sump casting supplier went out of business, and that appellant's new supplier provided inferior product. According to appellant, this problem halted production about four weeks. We find that this was the problem which materially contributed to production delay during this period.

5. As far as we can tell, the Government neither granted nor denied appellant's request for a modification of schedule at this time.

6. By letter to the Government dated 23 June 1986, appellant reported further schedule slippage, and sought a further delivery schedule revision from that requested in April. Appellant cited the "major problem" as a receipt of a bad lot (500 units) of compressor oil sump castings. Appellant offered a total contract price reduction of $10,465 in return for the new delivery schedule. Appellant did not assert any Government responsibility for these delays.

7. The Government accepted appellant's offer. The parties executed Modification A00002 in late Summer 1986, which extended the delivery schedule in consideration for a contract price reduction of $10,465. The contract modification contained the following (R4, tab 4):

> This modification represents the final agreement of the parties. Both the contractor and the Government waive all claims against the other, either expressed or implied, which may be attributed to the adjustments made by this modification.

Impregnation of Oil Sump Castings

8. When appellant received oil sump castings from suppliers that contained major leaks or other defects, it rejected them. This was consistent with the contract requirement that porosity in castings was a cause for rejection. See Note on Drawing No. 50651 (R4, tab 20). However if the castings were found to have only minute leaks, appellant sought to repair them by impregnation. Impregnation is a process whereby polyester resin is forced into the molecular structure of a casting, thereby effectively sealing the casting. Appellant had used the impregnation technique since 1974 on Government contracts without Government objection (tr. 155, 162). As far as the record shows, use of impregnation, if performed properly, does not affect the form, fit or function of castings or the parts so derived. The Government's quality assurance representative (QAR) characterized a properly impregnated casting as a "minor" nonconformity (tr. 665). The contract neither prohibited nor permitted impregnation of oil sump castings.

9. Based on this record, we find that impregnation is a legitimate repair technique for the sealing of minute casting leaks and was allowable under this contract, assuming, of course, that the castings so impregnated were effectively sealed and otherwise met contract requirements.

10. It was appellant's practice to impregnate only a small percentage of the castings it received—those which evidenced minute leaks. Mr. Lang, appellant's quality control manager, estimated that approximately one percent of appellant's castings were impregnated (tr. 162). The record does not provide us with the total number of castings appellant had on hand in the summer of 1986. We do know, however, that appellant obtained castings from suppliers in lots as large as 500 (finding 6).

11. On 14 July 1986, the QAR issued a Quality Deficiency Record (QDR) upon learning that a group of 52 castings were impregnated and were to be placed in appellant's inventory. The QAR determined, *inter alia,* that the contract did not permit the impregnation of oil sump castings. It does not appear that the Government permitted the appellant to use any impregnated oil sump castings for the compressors under this contract.

12. Appellant disagreed with the Government's position, but returned the impregnated castings to the vendor. It received a credit from the vendor in the amount of $1,631 (R4, tab 5).

13. Appellant did not adduce any evidence as to how the Government's rejection of impregnated castings impacted upon its production line or shipment schedule. Appellant's vice president was unable to ascribe any particular delay to this dispute

Digitized by Google

(tr. 65-66). Appellant's quality control manager stated there was "some" delay, but was unable to describe it or quantify it (tr. 162-63).

Rust in Cylinders

14. An air purifier cylinder, also known as a dehydrator cylinder, was a component of the portable compressor under this contract. Insofar as pertinent, Drawing No. 65353, "Assembly Dehydrator Cylinder," stated as follows:

> Dehydrator Cylinder Aero Dri 82990/82991 Conforms to MIL-C-83959.

"Aero-Dri," a division of appellant, supplied this cylinder to appellant for this contract. Insofar as pertinent, MIL-C-83959, "Cylinder, Air Purifier," provided that cylinder components, during and after assembly, shall be free from corrosion products, oil, grease or other contamination or foreign matter. MIL-C-83959, para. 4.7.6.1.

15. On 30 September 1987, the QAR issued QDR 87-27, which documented a rejection of portable compressors. This report indicated that "Inspection showed rust in the air purifier cylinders and oil (P-10) applied by Davey personnel following 'rework' of the rust." According to the QDR, this was a violation of MIL-C-83959, para. 4.7.6.1 and other provisions. Appellant conceded the presence of rust in the cylinders (tr. 165). It did not contend that MIL-C-83959 did not apply to the contract. However, appellant did not acknowledge that the presence of rust was its responsibility.

16. By letter to appellant dated 9 October 1987, the president of Aero-Dri stated as follows regarding QDR 87-27 (R4, tab 48):

> The remaining 91 ea 82992 cylinders at Aero-Dri which were plated in July of 1987 *(the same batch as your cylinders)* have been inspected, *29 of these cylinders have rust present in the bottom or on the side.*
>
> *The cause of this rust is, inadequate neutralization and rinsing of the acid bath process or improper plating itself.*
>
> Our incoming inspection would not discover or suspect any problem at this time since the gold chromate conversion and the time frame would not be long enough for rust to appear.
>
> The 29 rusty cylinders were returned to the plater and corrective action has been implemented to insure that there is not a reoccurrence of this problem.
>
> Request you return all of your rusty 82992 cylinders (only) to Aero-Dri for corrective action .... [Emphasis added]

Based upon the above, it is clear that not all cylinders contained rust. Those that did were the product of faulty workmanship. These cylinders were plated to retard rust (tr. 80). Improper plating did not adequately serve that purpose.

17. On 23 October 1987, appellant sought the Government's approval of a rework procedure for cylinders "where plating is very thin" and "indications of rust or corrosion may appear" (R4, tab 15). This rework procedure included cleaning the rusted area with a wire brush, washing the affected area, and coating it with a two-part epoxy.

18. On 10 November 1987, the Government approved appellant's rework proposal (R4, tab 17). The parties executed Modification P00010 in late 1987 to incorporate the rework procedure. The parties agreed that "there will be no change in contract price or delivery as a result of this supplemental agreement" (R4, tab 49).

19. On or about 24 August 1988, appellant submitted a claim to the contracting officer in the amount of $436,301 for delays in compressor shipments due to the wrongful actions of the QAR, specifically the QDRs referenced herein. A claim for scrapped impregnated castings was also included. Appellant's claim was certified by Mr. Carl J. Wurtz, appellant's vice president for finance. By contracting officer's decision dated 1 March 1989, the Government denied the claim, and appellant took a timely appeal to this Board.

20. On the eve of trial, the Government filed a motion to "dismiss the appeal, or in the alternative, a motion in limine." The Government sought dismissal on the grounds that Mr. Wurtz was not an appropriate certifying official; alternatively, it sought to prohibit appellant from seeking more money than previously claimed. The Board deferred ruling on the Government's motion and the parties proceeded to hearing.[1]

---

[1] After hearing evidence on the Government's motion and on the merits, and after briefing, the Board held that Mr. Wurtz was not an appropriate certifying official and dismissed the appeal without prejudice. *Davey Compressor Company*, ASBCA Nos. 38671, 38672, 92-1 BCA 24,460. The Federal Circuit reversed, *Davey Compressor Company v. Cheney*, 985 F.2d 584 (Archer, dissenting) (table), and remanded to the Board for consideration of the merits.

DECISION

Impregnation of Oil Sump Castings

While we have held that appellant had the right to cure minute leaks in castings by impregnation, appellant has failed to establish any nexus between the Government's prohibition of impregnation and compressor shipment delay.

Plainly, not all of appellant's castings were impregnated or needed impregnation. Appellant's quality manager testified that it was his experience that approximately one percent of castings were impregnated (finding 10). The QAR questioned 52 impregnated castings (finding 11). However appellant purchased hundreds of castings (finding 6). Appellant's own witnesses were equivocal about the nature and magnitude of any delay due to the impregnation issue (finding 13).

On the other hand, the record reflects that appellant's original sump casting supplier went out of business and that the new supplier was not providing satisfactory product (findings 4, 6). It was this fact that caused appellant delay. Appellant requested a delivery extension because of delay and offered the Government a reduction in contract price in return—the parties executed a contract modification to embody the Government's acceptance of these terms. The aforementioned problem occurred in the same general time frame as the Government's rejection of the impregnated castings. Hence, even assuming, *arguendo,* that some undefined amount of delay resulted from the Government's rejection of the impregnated castings, the delay was concurrent with the much larger delay that appellant was experiencing with its suppliers. These "concurrent delays" preclude appellant from recovering delay damages under the contract. See *Government Delay of Work* clause (finding 2). *Perma-Cal Corporation,* ASBCA No. 42155, 91-2 BCA ¶ 24,034 at 120,320.

As for appellant's claimed cost to scrap impregnated castings, appellant failed to provide any credible evidence supporting this cost. To the contrary, the record reflects that appellant returned the castings for a credit (finding 12).

For reasons stated, appellant's claim is denied.

The Rusty Cylinders

We hear appellant to argue that the Government improperly rejected appellant's cylinders. We find no merit to this contention. When presented to the Government's inspector for acceptance, the cylinders contained rust and oil, in violation of the specifications. The supplier of the cylinder, a division of Davey, conceded the problem and attributed it to inadequate neutralization and improper plating, neither of which was shown to be attributable to the Government. We are unpersuaded that it was impossible to provide a rust-free cylinder—not all of appellant's cylinders were in this condition (finding 16).

Appellant contends that it should be held blameless for the rusty cylinders because, it is argued, the cylinders became rusty only after being tested on the compressor by appellant and hence became "used" components that were no longer appellant's responsibility (brief at 57). This novel argument is belied by the facts. Rust was found in cylinders while still in the supplier's hands—the ones that were inspected by the Government were from that same batch (finding 16). Assuming, for argument's sake, that rust first became evident only through the testing of the unit, we fail to see how this would be a boon to appellant's cause. Appellant does not suggest, let alone prove, that Government-prescribed testing procedures damaged the cylinder or the compressor unit. It appears that the compressor unit, along with its cylinders, was simply operated in the manner intended. We have not been persuaded that the mere testing of the unit will automatically generate visible rust in the cylinders. The presence of such rust at this early juncture speaks volumes about the overall poor quality of the workmanship of these parts.

Moreover, appellant proposed to the Government a rework procedure for those cylinders with thin plating and indications of rust, and signed a contract modification which incorporated these procedures. No mention was made of design error or Government responsibility at the time. No mention was made of the inapplicability of MIL-C-83959. Appellant characterized the need for these additional steps as "rework." In view of the foregoing, we must conclude that appellant's problem with rusty cylinders was not of the Government's making.

Appellant's claim is denied.

ASBCA No. 38672

FINDINGS OF FACT

Contract No. F09603-85-C-0536 ("0536")

21. The Government awarded multi-year Contract 0536 to appellant on 8 March 1985. Appellant was to provide a certain number

Digitized by Google

of portable air compressors, diesel engine driven, type MC-7, in accordance with a contractually prescribed schedule. The contract required appellant to provide and test a first article, with delivery of production units to begin after the Government's approval of first article testing.

22. Insofar as pertinent, the contract contained Clause F-29, *Government Delay of Work* (Apr 1984), FAR 52.212-15, *supra.*

23. The Government approved the first article, and shipment of units was to begin in February 1986. Appellant began shipment in April 1986 (supp. R4, tab 14). This delay was attributable, in material part, to the dispute between the parties regarding the testing of compressors for noise emission, addressed below.

Compressor Noise Emission Test

24. Amendment No. 0003 to the solicitation provided, *inter alia,* that "[a] noise emission test shall be conducted on the compressor unit in accordance with paragraph 204.54 of Environmental Protection Agency (EPA) Title 40, CFR, Part 204 Subpart B." Amendment No. 0003 further provided that "[t]he exterior sound level produced by the compressor unit *shall not exceed* the noise limits established by the EPA in effect on the date of manufacture." [Emphasis added)

25. The "noise limit" established by the EPA for portable air compressors, effective on the date of the manufacture of the units in question, was contained in 40 C.F.R. § 204.52(a), which specified that "[e]ffective January 1, 1978, portable air compressors with maximum rated capacity of less than or equal to 250 cubic feet per minute (cfm) shall not produce an average sound level in excess of 76 dBA when measured and evaluated according to the methodology provided by this regulation." (R4, tab 54) The air compressor at issue here was a 125 cfm rated compressor. (R4, tab 1, at purchase description paragraph 1.1) We find that appellant's compressors were obligated to meet this EPA noise emission standard under this contract.

26. Section 204.54 of the regulations, to which Amendment A00003 referred, contained the noise emission testing procedures for the unit, including information on test site description, measurement equipment, compressor operation, test conditions, microphone locations, and the calculation of average sound level. A sound level meter conforming to prescribed industry standards was to measure noise emission from each of five microphone locations around the unit. The unit was to be tested in an open area (outdoors). To assure test accuracy, background sound level had to be materially less than that of the unit, 40 C.F.R. § 204.54(e)(4). Such background noise would then become a nonfactor in the test result.

27. The sound level meter used by appellant for this contract had a digital readout. When appellant tested an air compressor, the readout flashed or fluctuated constantly from one decibel figure to the next within a given range, but never came to rest upon any particular number (tr. 602).

28. When the QAR witnessed noise emission testing of units in March 1986, he noticed that at each microphone location, the Davey test technician was consistently recording the low decibel reading from the range of numbers which flashed on the digital readout. The QAR disagreed with this technique; he believed that Davey should have recorded the high decibel reading at each location (tr. 627-28). The QAR called this to appellant's attention, but appellant maintained that its use of the low reading was appropriate. As far as we can tell, the QAR did not accept any compressors for shipment that were tested by appellant in this manner.

29. Neither the contract, nor the EPA regulation expressly states whether sound meter measurements were to be based upon the highest or lowest reading shown on the meter at each microphone location.

30. On 6 March 1986, Davey requested removal of EPA noise emission requirements from contract 0536. Davey had estimated a savings of $254.25 per unit (approximately $205,000.00 total contract savings) if its request was granted. The request was forwarded to the buying activity and was disapproved. (R4, tabs 34 through 37; tr. 200-01)

31. The QAR contacted EPA regarding sound meter readings. By letter dated 2 April 1986, the EPA confirmed the Government's interpretation, that is, that the high reading should be taken during the test, with care to exclude significant extraneous background noise. The EPA stated that to use the lowest reading "is inconsistent with any reasonable interpretation of the regulatory standard, which specifies a not-to-exceed sound level." (R4, tab 13).

32. The EPA also enclosed EPA Noise Advisory Circular No. 3, "Portable Air Compressors," for the Government's information. EPA circulars provide interested parties with EPA's interpretation of

©1994, Commerce Clearing House, Inc.
Digitized by Google

its regulations (see EPA Circular No. 1, R4, tab 14). These circulars were not published in the Federal Register. However, EPA Circular No. 3, issued in 1978, had been distributed to the industry; appellant had a copy of this circular in its files at the time that these units were tested (tr. 198). Circular No. 3 clearly stated that high decibel readings should be recorded for purposes of determining compliance of the units with noise emission standards, and that care should be taken to void the test if impacted by identifiable extraneous noise sources, such as trains, airplanes or noisy equipment such as chain saws (R4, tab 16).

33. After obtaining this input from EPA, the QAR reiterated the Government's position that compliance with EPA noise emission standards required that appellant test the compressors using the high readings measured at each microphone location. The QAR refused to accept units unless tested in this manner (tr. 187).

34. Appellant continued to dispute the Government's interpretation (tr. 598). However in order to keep the contract going, appellant began testing the units using the high readings, as required by the Government, and added noise-dampening insulation where necessary to meet the decibel standard. The QAR began accepting units so tested on or about 17 April 1986.

35. At the hearing, appellant's test technician testified that it was his practice to use the low readings on the sound meter to determine acceptable noise levels. He used the low readings because of the intermittent background noise at the testing site (tr. 122). However, Circular No. 3 provided that a particular test should be voided if variations were caused by identifiable extraneous noise sources; it did not authorize use of low readings under those circumstances (R4, tab 16). Appellant's test technician had never seen Circular No. 3 (tr. 124).

36. Appellant's test technician also stated that his test method was used to test and pass the first article under this contract. The QAR was present at first article testing. However, the QAR stated, and we find, that he did not observe the meter-reading method employed by appellant at that time (tr. 595).

37. There are letters of record from appellant's vice president of engineering to EPA in 1989 which take the position that Circular No. 3 does not apply to appellant's compressors, since the circular applies only to "nonsteady state" noise compressors, but appellant's compressors are of the axial vane type that produce only "steady noise." This person did not testify, nor did appellant proffer any other witness who was qualified at trial to give expert opinion in this area. Moreover it is interesting to note that in appellant's letter to EPA dated 26 May 1989, it did not seek to support its practice of using low readings to measure noise emission compliance, but rather proposed that "data at each test point be recorded to the nearest whole number, and averaged to the nearest 0.5 dba" (supp. 84, tab 6). As far as this record shows, EPA did not accept appellant's proposal, nor did it accept appellant's argument that its compressors were not subject to Circular No. 3.

38. The record also contains evidence which contradicts appellant's position that appellant's compressors generated "steady noise." The QAR observed, and we find, that the readout did not remain routinely flat or steady—rather, "the entire time it's going up and down, and when [the Davey test technician] would stop to record the number it's still going up and down and I had seen numbers that were higher than that" (tr. 661). The fluctuation was constant, even in the absence of extraneous noise (tr. 602).

Muffler Workmanship

39. Insofar as pertinent, the purchase description for the portable compressor set out the following workmanship standard (R4, tab 1):

> 3.20.2 Metal Fabrication.... External surfaces and edges of sheet, plate and structural members shall be free from burrs, slivers, and sharp projections.

40. A muffler was a component of the compressor unit. Appellant obtained mufflers from Nelson Muffler Corporation. When appellant received mufflers from Nelson, they were inspected and found not to conform to contract requirements. On 11 February 1986, appellant rejected the mufflers and returned them to Nelson (R4, tab 67).

41. Representatives from appellant and Nelson met at Nelson's plant to discuss muffler construction problems. Nelson redesigned and reworked the mufflers. The evidence does not indicate that this effort was due to the fault of the Government.

42. It appears that the QAR reviewed the reworked mufflers in late March 1986. He determined, and we find, that they still contained jagged edges (tr. 642). The QAR advised appellant that the mufflers failed to meet workmanship standards and suggested that appellant apply for a waiver of the con-

Digitized by Google

tract's workmanship provision above (R4, tab 17). Appellant did not contest the QAR's findings in writing at this time.

43. Appellant requested that the Government waive the above workmanship standards in the contract (R4, tab 30). The Government declined to do so.

44. On 8 April 1986, appellant received an additional delivery of mufflers from Nelson. Appellant's receiving report indicated that "All pieces has [sic] exposed welded edges." Appellant's proposed corrective action was indicated as follows (R4, tab 75):

> Davey to tack weld trim rings to all mufflers in house prior to use. Vendor to supply all future mufflers with trim rings.

The trim rings provided the mufflers with a smooth finish. This fix was acceptable to the QAR (R4, tab 32).

Paint Overspray

45. The contract required that each compressor, along with its attached frame, be painted. The purchase description at paragraph 3.15(d) specified that, "The total thickness of the primer and top coat shall be between 2.7 and 3.5 mills [sic]" (R4, tab 1).

46. On or about 28 September 1987, appellant presented 12 compressors to the Government for inspection and acceptance. The QAR found that "paint thickness on frames checked 5.0 or 1.5 mils over max." This exceeded contract requirements by over 40 percent. The QAR rejected the lot, and issued QDR 87-25 to document these findings (R4, tab 8).

47. On or about 30 September 1987, appellant proffered another 10 compressors. Again, the paint on the compressor frames was significantly thicker than prescribed by the contract—1.5 to 2.5 mils over the maximum allowed levels. The QAR rejected this lot as well, issuing QDR 87-26 for purposes of documentation. (R4, tab 9)

48. Appellant replied to these QDRs in writing. Appellant did not contest the Government's findings. By memorandum dated 9 October 1987, appellant indicated that the paint deficiency was caused by overspray from the painting of various assemblies, that this occurrence was an "isolated incident particular to this type of unit," and that "all future units will be masked in affected areas." Appellant also stated that it had submitted a request for the waiver of this contract requirement. (R4, tab 10)

49. By memorandum to the QAR dated 21 October 1987, appellant provided additional information regarding paint overspray (R4, tab 50):

> Some frames required touch-up at Davey due to damage during shipment. This also resulted in heavy paint on frames.

Appellant concluded with the commitment that:

> All future shipments received will be 100% inspected for proper Mil thickness. Any frames on future shipments which do not meet the paint thickness requirements will be returned to the Vendor.

We find that appellant's failure to meet contract paint requirements was within its control or within the control of its vendors, and was appellant's responsibility under this contract.

50. On or about 1 October 1987, appellant submitted Request for Deviation No. D0536-1 to eliminate or modify the contract's paint thickness requirement. Appellant indicated that production was currently stopped pending action on this request. The Government, through the buying activity, approved appellant's request for deviation on or about 21 October 1987, so long as it involved no cost to the Government (R4, tab 49). This deviation was eventually incorporated into a bilateral contract modification, P00012. The contract modification stated that "[t]here will be no change in price or delivery as a result of this modification."

51. In late October 1987, the QAR resumed acceptance of compressor units (see DD250's, R4, tab 61).

ASTM-A159

52. In late September 1987, the QAR conducted a "procedures review" under the contract, in which he reviewed certifications of the chemical content of certain gray iron castings which appellant had received from its vendors. The QAR noted that certain castings were represented as being over the maximum "carbon content" permitted by ASTM-A159, which was incorporated into the contract. The QAR also noted that a report which detailed this information was not initialed by Davey's quality engineer. Davey's internal inspection system, per MIL-I-45208, required initialing of the report by a quality engineer to assure acceptability of the item in conformity with contract requirements. In lieu of the report being signed by a quality engineer, the report was signed or initialed by appellant's quality control receiving inspector supervisor (tr. 142). The QAR issued QDR 87-24 dated 21 September 1987 specifying these nonconformities. (R4, tab 20)

©1994, Commerce Clearing House, Inc.

Digitized by Google

53. Appellant did not contest the fact that the wrong person signed the certification report. As far as this record shows, this appears to have been an isolated occurrence which was not shown to have had any impact upon appellant's compressor shipments.

54. In reply to the QDR, appellant stated, and we find, that chemical composition requirements were not mandatorily prescribed in the specifications for these castings. There is a section in ASTM-A159 which talks to "chemical composition," but that is located in the appendix of the specification, entitled "Nonmandatory Information" (R4, tab 19). Appellant asked the QAR to retract the QDR.

55. The QAR did not retract the QDB, and advised appellant to seek clarification from higher authority on the ASTM-A159 issue (R4, tab 21). The QAR stated that he would not accept any units until the matter had been resolved. On or about 28 September 1987, appellant submitted Waiver No. W0536-2 for the castings in issue. The Government approved the waiver on or about 15 October 1987 (R4, tab 51). We understand the import of this waiver as the Government's acknowledgement that any so-called carbon content "deviations" from ASTM-A159 would not be grounds for rejection. Shipments of compressor units resumed in late October 1987.

56. Appellant's executive vice president testified, and we find that appellant was delayed approximately one month due to the ASTM-A159 dispute (tr. 195). Appellant's shipping figures show that shipments went down significantly in September 1987, but rebounded by the end of October 1987 (supp. R4, tab 14).

57. We also find that in the period in which appellant experienced shipping delay due to the ASTM-A159 dispute, it was also unable to ship any units due to their rejection for defective paint work (tr. 654).

58. On or about 24 August 1988, appellant submitted a claim to the contracting officer in the amount of $698,984 for delays in compressor shipments due to the wrongful actions of the QAR. This claim was certified by Mr. Carl J. Wurtz, appellant's vice president for finance. (R4, tab 6) By contracting officer's decision dated 1 March 1989, the Government denied appellant's claim, and appellant took a timely appeal to this Board.

59. On the eve of trial, the Government filed a motion to "dismiss this appeal, or in the alternative, a motion in limine." As was the case with ASBCA No. 38671, the Government sought dismissal on the grounds that Mr. Wurtz was not an appropriate certifying official; alternatively, it sought to prohibit appellant from seeking more money than previously claimed. The Board deferred ruling on the Government's motion and the parties proceeded to hearing.[1]

DECISION

Noise Emission Testing Standard

When the contracting parties dispute the use of a test that is unspecified in the contract, we typically seek to determine whether the unspecified test serves to reasonably measure contract compliance. If so, the test is a proper one. *Allegany Technology, Inc.*, ASBCA No. 18395, 74-1 BCA ¶ 10,487. See generally, Nash & Cibinic, *Federal Procurement Law*, Volume II (3rd Ed. 1980), at 1565 and cases cited. We would think that this principle should equally apply here. Where noise emission testing is specified, but the contract and regulations are silent as to how the sound meter is to be read or interpreted, we must determine which of the party's interpretations serves to reasonably insure that contract requirements are met.

Appellant's interpretation is not reasonable. Appellant has not shown that the consistent use of low readings, and concomitantly, the consistent disregard of all high readings (including those above the 76 decibel level), will serve to insure that the contract's not-to-exceed noise standard of 76 decibels will be met. On the other hand, this standard will be met through the recordation of high readings, in accordance with the Government's view, so long as extraneous noise factors are eliminated. The Government's interpretation reasonably fulfills the purpose of the specifications—to obtain units which, when operated, do not emit noise in excess of 76 decibels. Appellant's interpretation does not.

The reasonableness of the Government's position is supported by EPA Circular No. 3. The circular expressly required use of high

[1] After hearing evidence on the Government's motion and on the merits, and after briefing, the Board held that Mr. Wurtz was not an appropriate certifying official and dismissed the appeal without prejudice. *Davey Compressor Company*, ASBCA Nos. 38671, 38672, 92-1 BCA 24,460. The Federal Circuit reversed, *Davev Compressor Company v. Cheney*, 985 F.2d 584 (Archer, dissenting) (table), and remanded to the Board for consideration of the merits.

Digitized by Google

readings in the test of portable air compressors. Appellant had a copy of the circular in its files, but for some unexplained reason, appellant's testing engineer had never seen it and did not follow it (finding 35).

We understand appellant to argue that Circular No. 3 does not apply to appellant's compressors, since appellant's compressors are of the type that produce only "steady noise" but the circular applies to only "nonsteady state" noise compressors. However, the circular does not state that it applies to nonsteady state noise compressors only. Appellant points to no pertinent technical exclusion in the EPA regulations, and we have found none. Appellant tried to get EPA to accept its position, but EPA did not do so (finding 37). Appellant failed to prove on this record that appellant's portable compressors were not subject to Circular No. 3.

Moreover, appellant's "steady state" noise thesis is belied by the record. The QAR observed that the readout did not remain relatively steady as appellant would have us believe—rather, it was going up and down "the entire time," and when appellant's testing engineer "would stop to record the number it's still going up and down" (finding 38).

We also hear appellant to argue that it should be allowed to use low meter readings because that was its standard practice. However, appellant failed to establish any course of dealing with the Government on the issue. Nor did it establish that the Government waived its interpretation through acceptance of the first article (finding 36).

We have reviewed appellant's other arguments, but find none of them persuasive. Appellant's claim is denied.

Muffler Workmanship

There is no question that the mufflers supplied to appellant in February 1986 did not conform to the workmanship standards of the contract—appellant rejected them and returned them to the supplier (finding 40). Appellant sought a waiver of the workmanship standard from the Government but it was denied.

We now hear appellant to argue that the reworked mufflers later submitted were conforming. However, appellant's own contemporaneous contract records are to the contrary. Appellant's receiving inspection report of 8 April 1986 makes clear that the mufflers received from Nelson had exposed welded edges and that corrective action—trim rings—was required (finding 44). It thus appears that the Government did not impose upon appellant the use of trim rings; appellant's own inspection staff did. In any event, it is clear that the mufflers required correction, even after rework. Appellant's claim related to muffler workmanship is denied.

ASTM-A159 and Paint Work Delays

While we agree that the QAR improperly relied upon a nonmandatory section of ASTM-A159 to reject certain castings, we have not been persuaded that this particular Government action caused appellant any recoverable delay damage under the contract. While this Government action impacted production and shipment during a one month period in September-October 1987 (finding 56), absent this delay, appellant was still precluded from shipping in this period due to its inability to meet the painting specifications. We have found that these painting defects were appellant's responsibility (findings 46 through 49). When two actions, one Government-caused and one contractor-caused, operate concurrently to produce delay, neither party may recover its delay damages. *Government Delay of Work* clause. *Perma-Cal Corporation, supra.*

We hear appellant to argue that it was wrongful for the QAR to reject the defectively painted units because the overspray did not encompass a substantial portion of the unit, and it did not affect its overall function. This is the time-worn refrain of Government contractors in defense of nonconforming work; it has been consistently rejected. Appellant signed this contract which contained this painting requirement. Appellant did not prove that compliance was impossible. Indeed, it appears that a watchful eye and some masking would have obviated the problem. It is well settled beyond the need for citation that the Government is entitled to receive what it pays for. If the Government was required to bicker with a contractor over the materiality or relevance of every instance of defective performance, rarely, if ever, would the Government—and the taxpayers—receive the benefit of their contractual bargain. The QAR had every right to insist that appellant comply with the painting specification. That the Government later agreed to waive future compliance was a gratuitous benefit to appellant; the waiver may not be used retroactively as a sword to attack the propriety of the specification, or the QAR's earlier enforcement thereof.

CONCLUSION

As appellant has failed to establish entitlement to delay damages under either appeal, we need not address the quantum portion of the evidence. The Government's motion in limine, insofar as it sought to limit appellant's quantum recovery, is denied as moot. The appeals are denied.[2]

[¶ 26,434] King Construction Company

ASBCA Nos. 38303, 39170, 40096, September 30, 1993. Contract No. N62467-83-C-0224.

Value Engineering—Savings to Be Shared—Disposable End Items.—Under a runway repair contract, a contractor was entitled to share in the savings resulting from a value engineering change proposal that it initiated and paid for, despite the contracting officer's determination that the VECP merely reduced the quantities of the deliverable end items, which were the reconstructed runways, because the contractor's VECP developed an improved and cheaper method of reconstructing the runways without changing the deliverable end items. The VECP changed the cost and the base material rather than the deliverable end item quantities. The board also determined that the waiver language in the modifications related only to the amount of the savings, rather than to whether the contractor released its share of the amount.

Acceleration Claims—Measurement of Acceleration Period—Government Delay.—Under a runway reconstruction contract, a contractor was entitled to an equitable adjustment for part of its delay/acceleration dispute in connection with defective specifications and government indecision that prevented it from finishing the contract as early as it had contemplated when bidding; although a contract modification compensated the contractor for that delay, the contractor was entitled to compensation for the acceleration necessary to overcome the 10 days of prepumping delay caused by the government's indecision regarding its defective specifications.

Performance—Voluntary Work—Government Directions.—Under a runway reconstruction contract, a contractor was entitled to an equitable adjustment for installing ground rods and clamps and for rewiring defective lighting systems, despite the government's contention that the contractor voluntarily made the electrical repairs, because the record indicated that the government directed the rod and wiring work. The government failed to show that a site visit would have revealed that the underground wiring needed to be rewired or that the contractor had already been paid for the corrective work.

For the appellant: Mattox & Associates, P.C., Colorado Springs, Colorado, by Judith Ward Mattox and Chris M. Darby. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Richard A. Gallivan, Trial Attorney.

Before REITER, RUBERRY, and FREEMAN, Administrative Judges.

REITER, Administrative Judge: These appeals from a contracting officer's final decision dated 30 November 1989 concern three separate disputes. ASBCA No. 38303 involves a value engineering change proposal wherein the appellant claims it did not receive its full share of the savings. ASBCA No. 40096 is a delay/acceleration dispute wherein the appellant claims defective specifications and Government indecision cost appellant its ability to finish the contract as early as it had contemplated when it bid. At the core of both ASBCA No. 38303 and ASBCA No. 40096 is a differing site condition. ASBCA No. 39170 is essentially a pass

[2] In its reply brief, appellant objected to the Government's inclusion of a time line chart with its brief, characterizing the Government's use of the chart as an attempt to introduce evidence after the close of the evidentiary record. The Board does not consider the chart as evidence and will not strike it from the Government's brief. Appellant also objected to the the fact that the Government's brief contained argument related to an exhibit which appellant proffered but was not admitted into evidence. This proposed exhibit related to appellant's quantum claim. We have ignored the Government's argument, at appellant's request, but the issue is essentially moot, since the Board has not found it necessary to reach the quantum issue in the disposition of these appeals.

Digitized by Google

through claim which appellant is sponsoring for its one-time electrical subcontractor.

The Government defends on the merits and raises the issue of accord and satisfaction. Only entitlement is at issue.

FINDINGS OF FACT

1. The appellant was low bidder under Contract N62467-83-C-0224 and received the notice of award on April 1985. The contract called for repair of two runways at Orange Grove Naval Air Station in Texas, *i.e.*, Runway 1-19 and Runway 13-31. The contract price was $4,700,000 which ultimately, through eleven (11) modifications, was raised to $5,407,832.27. The contract contained the standard clause for construction, including the Value Engineering-Construction clauses (APR 1984).

2. The repair work was to be completed by 19 November 1985 (within one hundred sixty-five (165) days of the starting date, 7 June 1985). Because the runways were critical to the Navy's training mission, no sooner starting date was possible. The appellant was told (orally) that time was of the essence, and no extensions could be granted. "Come hell or high water it had to be done on time." (Tr. 1/63) When appellant submitted its bid on 18 March 1985, it was convinced it could finish the contract in 52 to 37 days less than the 165 days allowed by the contract.

3. Although the contract was administered by a Resident Officer in Charge of Construction (ROICC) at Corpus Christi, Texas, change order authority rested with Naval Facilities Engineering Command (NAVFAC), Southern Division, Charleston, S.C. which was responsible for creating the contract specifications.

4. Section 01011 (GENERAL PARAGRAPHS) of the specifications described the work in general terms as follows:

> 3. The work includes reconstructing a portion of existing runways by removal of existing materials and the provision of new base and asphaltic concrete courses; repairing a portion of existing runways by sealing cracks and resurfacing with new asphaltic concrete binder and wearing courses; marking of pavement; rubber removal; provision of new Portland cement concrete and asphaltic concrete blast pavement around existing parking apron and ends of runways and taxiways; and replacing runway edge light circuits and modifying runway edge lights to provide circuit access . . . .

ASBCA NOS. 38303 AND 40096

5. The Government design required, among other things, tearing up portions of the runways, getting into the subgrade which had a high plasticity index (PI) and treating the mucky subgrade with lime to stabilize it before putting in the new runways.

6. The original (pre-1975) design to which the runways had been built bridged the subgrade with a base that would not sink. The runways were then put on top of that stable bridge-base. (Tr. 1/73-74) Additionally, runway 13-31 had its original design improved upon when it was repaired in 1975. This repair further strengthened its base.

7. Prior to bidding, appellant with the Navy's permission took 3 or 4 foot borings. (The Navy had taken no borings after 1971, and even these pre-1971 boring results were not provided the bidders by the Navy). The purpose in the appellant taking borings, as Mr. Alexander, the person who prepared appellant's bid stated, was not to challenge the Government's specifications but to see how much lime would be needed to control the subgrade plasticity. (Tr. 1/204; 2/14) Mr. Alexander testified as follows:

> I really wasn't looking for any conditions at the time; I just wanted to check the soil subgrades and find out what type of material was out there and what needed to be done . . . .
>
> (Tr. 1/44)
>
> [The borings] represent how much asphalt, how much base, how much clay, . . . was on the runways . . . and what type of material it was, and what type and what quantity of either lime or cement we would have to use to get what was required, . . .
>
> (Tr. 1/131)

8. Appellant hired as its independent Contract Quality Control (C.Q.C.) for this contract, W.P. Wills. Mr. Wills had been the original designer of the two Orange Grove runways and had done work on them in 1975 subsequent to designing them. Further, he had built runways all over the world. According to one of appellant's witnesses, Mr. Wills (also known as Sally) is noted for his talent, "He is the best there is"; and for his egocentricity, ". . . to Sally, nobody can design a runway except him . . . there is only one design that is any good; it is his."

9. Appellant in preparing for performance also hired the Brent Raubut Company to do nondestructive dynaflex testing to deter-

©1994, Commerce Clearing House, Inc.

Digitized by Google

mine the plasticity of the subgrade. When the results of the dynaflex testing became available in May of 1985 (tr. 1/53; R4, ASBCA 40096, tab 4 chronology), appellant grew apprehensive about the Navy's specifications. It was the considered opinion of W.P. Wills, and Mr. Alexander, the appellant's then construction superintendent, that the Navy specification was fatally flawed and doomed to fail because of the high plasticity of the secondary subgrade. On 9 May 1985 appellant presented a variance request to the Navy (tr. 1/49, 50) to obviate the subgrade plasticity problem. The essence of the variance was: (1) to use the existing bridge base, rather than piercing it and trying to lime stabilize the subgrade beneath the bridge; and, (2) not to disturb portions of the base that were further strengthened by the 1975 repairs to runway under Mr. Wills' direction. The variance represented a cure for a defective Southern Division specification which had negligently failed to take current soil conditions into consideration. The request for variance was signed by W.P. Wills, the C.Q.C.

10. What appellant feared if the Navy's design were followed was that "pumping" would occur in the unstable subgrade during construction. In "pumping", the subgrade when pressure is applied to it at one point simply pops up at another. The end result is the creation of a wave-like phenomenon throughout the subgrade which at worst can be destructive of all above it and at best make compaction impossible. Appellant was able to predict the strong possibility of a pumping action in the subgrade only after the dynaflex testing results were known. This was after the contract was awarded. (Tr. 1/204)

11. The variance request was apparently not initially fully considered by Southern Division because it had been signed by the C.Q.C., an independent contractor who although paid by appellant was not its employee and could not bind appellant; however, appellant was asked by Southern Division to, and did, resubmit the request on 29 May 1985 properly signed.

12. The variance had the support of the ROICC's office which shared appellant's "pumping" apprehension. As a matter of fact the ROICC's office on reviewing the specifications prior to issuing the solicitation had recommended not getting into the subgrade. They felt there was no reason to fix what was not broken. Visually there was no evidence of any base failures; ergo, no reason existed to further stabilize the base. (Tr. 2/89) Additionally, runway 13-31 because of 1975 repairs was so stable that it would prove difficult to get through the base to the subgrade as the proposed specification required.

13. Southern Division, the organization which had authority to change the specifications, also felt as early as 13 May 1985 that the variance request had merit but did not tell this to the appellant directly. Instead Southern Division on or about 11 June 1985, directed appellant to submit the variance as a value engineering change proposal (VECP). The rationale behind having the request for a variance resubmitted as a VECP is not clear. The Government stated that its reason was that a VECP would be more beneficial to the appellant. The assistant ROICC however opined that the real reason had something to do with the total dollars involved and Southern Division's lack of authority to modify the monetary value of the contract to that extent.

14. The appellant did as instructed without any feel for the rationale behind it and resubmitted its request for a variance first proposed on 9 May 1985 as a VECP on 28 June 1985. The appellant's motivation in complying with what appeared to it to be nothing more substantial than an internal bureaucratic maneuver, was to get some action, any action, out of Southern Division.

15. Appellant had previously, on 21 June 1985, written the Government wanting to know, yes or no, on its proposed variance from the contract. The appellant never did get a written response to this inquiry or many others. This failure to respond in writing promptly, or even just respond in writing, was endemic to the Government under this contract. (Tr. 1/52) Some eighty letters to the Government went unanswered. Changes to the contract during the performance period, 7 June 1985-22 November 1985, were made orally. The rationale for this deviation from normal contract procedure was the "urgency of the timeframe". (Tr. 2/278)

16. The appellant was pressing for a definite answer in writing because by 21 June 1985 appellant was rapidly approaching the critical area in the keelway on runway 1-19 where it would either have to break through the underlying bridge as per specification, the operation it justifiably feared because of the foreboding dynaflex tests, or use the existing bridge as the base as per its request for variance.

Digitized by Google

17. Appellant had mobilized its workforce on 7 June 1985, the designated starting date on which both runways were shut down. By 21 June 1985 appellant had done all the work it could do without getting further directions. Without attacking the subbase/keelway issue one way or the other other promptly, appellant could not finish 37 to 52 days early as was its game plan. Both the ROICC and Southern Division were aware of this potential delay. The ROICC testified "... the contractor did come to us a number of times and say: If you don't do this or if you don't tell me that, then we will be delayed...." (Tr. 4/174)

18. Confusing matters further for appellant (and the ROICC's office) was the fact that appellant had been previously led to believe that the essence of its variance had been approved. This occurred as a result of a site visit on or about 11 June 1985 when the design engineer and the construction representative, both from Southern Division, reviewed the site. Later on 26 June 1985 through the ROICC's office, again orally, appellant was told that the variance had been technically approved but to resubmit it as a VECP.

19. The appellant, as previously found, immediately (28 June 1985) submitted the variance as a VECP as requested. During this entire period Southern Division was continuously made aware of appellant's and ROICC's trepidations regarding pumping if the appellant were to proceed according to the contract rather than the variance/VECP.

20. On 2 July 1985 Southern Division informed the ROICC (orally) they had not approved the VECP and wanted appellant to come to Charleston to "sell" its VECP. The ROICC felt the matter had been settled on 26 June 1985 and told this to Southern Division. The ROICC nevertheless immediately contacted the appellant concerning the proposed trip to "sell" the VECP. The appellant was ready to go to Charleston that same day, 2 July 1985, but Southern Division declined, and set the meeting for 8 July 1985 instead.

21. Having prudently waited (tr. 4/258) for definite direction as long as it possibly could without compromising its ability to meet the schedule, appellant on 4 July 1985 opened up 1,000 feet of the keelway of the 4,000 ft. runway 1-19 in accordance with the contract specification but against its better judgment.

22. When appellant got to the subgrade and tried to compact it as required by the contract, the feared pumping action occurred making compaction impossible and enveloping some of appellant's equipment in the subgrade "like quicksand". (Tr. 1/74-75) The appellant was directed, orally, to stop work immediately on the keelway by the ROICC. Southern Division was contacted the next day for direction.

23. The appellant's people, the ROICC's people, and a team from Southern Division did confer telephonically on 8 July 1985 on what to do now that the cat (the pumping) was out of the bag. It immediately became apparent that Southern Division was wholly unprepared for the conference. According to the Assistant ROICC one of the Southern Division members inanely asked "What air pressure was in your tires?" trying to suggest the pumping was caused by excessive air pressure in appellant's vehicles in and about the runway. This inanity along with feigned ignorance of "Why are we here?" on the part of Southern Division embarrassed and infuriated the ROICC's office and worsened an already strained relationship between them which had already impacted adversely on prompt problem resolution to the appellant's detriment.

24. It was not until 24 July 1985 that appellant was notified to proceed. In the area where the appellant had proceeded as per contract and the pumping occurred the contractor was directed to:

> [E]xcavate 32 inches in the area; then take that bottom 12 inches, aerate it, compact it back in place, bring in caliche, a six-inch layer, lime stabilize it; bring in another layer, lime stabilize it; then put in an eight-inch stabilized base; and then lay your asphalt over it.

25. As far as the rest of the work on the runways was concerned the appellant's variance/VECP was incorporated into the contract. Although there were technical revisions to the VECP directed by Southern Division, those technical revisions did not affect the essence of the appellant's initial VECP, *i.e.*, to utilize the existing bridge base and not disturb those base areas that had been repaired in 1975.

26. The appellant now was able to proceed with vigor and utilizing the VECP completed the contract by 19 November 1985 within the allotted 165 days

27. The Government treated the pumping problem as a differing site condition and modified the contract accordingly by increasing the contract price by $704,620 through P00001 dated 3 September 1985

©1994, Commerce Clearing House, Inc.
Digitized by Google

and P00008 dated 26 February 1986. Additionally, P00008 issued well after the contract was completed extended the time of performance by 10 days. In negotiating the bilateral modification in November of 1985 the negotiators made it clear through a provision in the negotiation memorandum that they were not settling any delay claim encompassing pre-4 July 1985 (pre-pumping) delay. The provision reads as follows:

> (d) Any final agreement made would not "close the door" to the other items included in the 16 July 1985 proposal i.e. the contractor could still claim delay costs for the period prior to 4 July 1985, the cost of engineering and the additional work around the duct banks.

28. The final agreement P00008, as formalized however contained the following clause:

> Acceptance of this modification by the Contractor constitutes an accord and satisfaction and represents payment in full (for both time and money) for any and all costs, impact effect, and/or delays arising out of, or incidental to, the work as herein revised and extension of the contract completion time.

29. Both appellant's president and superintendent testified that there were no negotiations on the differing site conditions beyond the November 1985 date of the negotiation memorandum, and they simply read the formalized agreement as not covering any pre-pumping delay. The waiver language in this agreement and the others was meant to be applied only to those items specifically and clearly set forth as having been disputed, negotiated, and settled.

30. We find this pre-pumping delay which occurred between 21 June 1985 and 4 July attributable to Southern Division indecision. We find that delay to be 10 days. (The appellant could have opened the keelway, a critical part of the Government's design, at least 10 days before 4 July 1985. In this connection we note a Government representative, Carter, estimated the total delay (pre and post pumping) attributable to indecision to be twenty days (20).) As far as the post-pumping delay is concerned, we find that the appellant has been compensated for that delay as evidenced by P00008.

31. The suggestions in appellant's VECP were dealt with in modifications P00002 and P00003 both dated 5 November 1985. P00003 reduced the contract price by $342,982 and the time for performance by 10 days while P00002 reduced the contract price by $116,564. Modification P00002 acknowledges that it was effected under the VECP clause while P00003 does not. P00002 dealt with eliminating lime stabilization. P00003 dealt with eliminating the destruction of those areas in runway 13-31 which had been further strengthened by the 1975 repairs. Appellant was permitted to share in the savings accomplished by P00002, but not in the savings (money and time) accomplished by P00003. Both P00002 and P00003 contained an Accord and Satisfaction clause identical to the one in P00008 set out in Finding of Fact 28.

32. P00003, although it does not specifically refer to appellant's VECP, adopts a portion of it. The portion it adopts is the part where appellant suggests utilizing the base previously reconstructed in 1975 under runway 13-31. It was appellant's up-to-date scientific dynaflex testing, superior analysis and knowledge of local terrain which led to that suggestion in the VECP. By adopting that portion alone, the cost of performance was reduced by $342,982.

33. The Government however, did not treat this as a savings under the VECP clause. It treated it as a deductive $342,982 change in which the appellant could not share.

34. The Government's rationale in not permitting the contractor to share the $342,982 saving achieved under P00003 is that sharing in the Government's view was not called for under the following clause defining VECP.

35. (4) "Value Engineering Change Proposal (VECP)" means a proposal that:

> (i) requires a change to this, the instant contract, to implement; and
>
> (ii) results in reducing the contract price or estimated cost without impairing essential functions or characteristics, *provided that it does not involve a change in deliverable end-item quantities only*. [emphasis added]

36. a. The Southern Division's construction area manager and member of the paving team, under cross-examination, testified to the Government's thinking on this as follows:

> Q. So you really deducted 116- plus 342- and you only gave the contractor about $130,000 for saving the Government $600,000. Isn't that approximately correct?
>
> A. Correct, but under the VECP the contractor proposed to upgrade the base

Digitized by Google

course to increase the CBR, assumed liability for the subgrade pumping on the base course as a better way to do it than what was specified. *Under the straight deduct on the 13-31, he proposed not something to do better: he proposed deleting—don't do anything to that work which, in my opinion and apparently the PECP manager, it did not meet the definition of VECP).*

(Tr. 4/78, emphasis added)

b. The same witness did however agree there was no reduction in runway size to be repaired when he testified as follows:

Q. Well, the contractor did do something on runway 13-31. Didn't he—what did he do: seal those cracks and do some other?

A. Well, that is part of the contract.

Q. All right. But there was work done on 13-31. Is that true?

A. There was work done on 13-31; that is true.

* * *

Q. Were there quantities of materials specified in the contract? There weren't were there?

A. No.

Q. It was just the contractor was supposed to deliver this end product which is the finished or completed rehabilitated surface runways, and that didn't change in the value engineering change proposal, did it?

A. The surface area didn't change; I agree.

* * *

Q. Well, i [sic] guess what I am trying to get at is: What did you look at as being the end item quantities? Was it the surface of runway that was being delivered or was the quantities of materials that were involved in the various areas that were being repaired?

A. When you delete what is called for in the contract.

Q. Well, what? Was the amount of surface runways that was going to be eventually delivered to the Government for use, was that reduced by the value engineering change proposal?

A. Not to my knowledge, but it did not reflect—the surface didn't reflect—the final surfacing doesn't reflect the total picture that is required on the contract

Q. Well, were there—

A. —because that called for reconstruction.

(Tr. 4/78-83)

37. What the VECP accomplished was not a simple reduction "in deliverable end-item quantities." Rather we find that the VECP eliminated to a large extent the need for lime stabilization in the subgrade by proper utilization (rather than destruction) of existing site conditions. The VECP represented a novel engineering alternative which became reality only after the appellant enterprisingly availed itself of: (1) the latest scientific testing techniques; and, (2) a recognized runway expert familiar with local soil conditions. The result of this estimated $80,000 investment in research and development by the appellant was a better, simpler and cheaper design accomplishing the contract's objective, a reconstruction of the two runways. The appellant's 55% share of the savings should be taken against the $342,982 savings effected by P00003 as well as the savings effected by P00002.

38. a. Although the Government expected appellant, contrary to the written terms of the contract, to react to its oral directives in order to meet the critical completion date, the Government did nothing to expedite payments. The Government would not pay the appellant for any increased costs until there was a formal change to the contract (as per contract). These changes were not effected until November of 1985 or later when contract performance by the appellant was complete. Payment itself on these changes was not completed until April of 1986. (Interestingly there was no delay by the Government in collecting the savings under modifications P00002 and P00003 which reduced the contract price.) In April 1986 the appellant finally was paid, but as appellant's president testified:

> And the third time I went to Charleston is to plead for mercy for my check. They owed me about a million dollars, and I was just about to go down the drain. I went up there to see if there was any way in the world I could get my money. (Tr. 1/225)

b. The million dollars referred to by the appellant's president represents a little less than 20% of the adjusted ($5,407,832.27) contract price.

ADDITIONAL FINDINGS SPECIFICALLY RELATED TO ASBCA NO. 39170

39. The appellant's electrical subcontractor was initially Zeller Electric Company (Zeller). Zeller's president, Charles Zeller,

©1994, Commerce Clearing House, Inc.
Digitized by Google

was a registered professional electrician but with limited "airfield" experience. During the course of the contract Zeller's services were terminated, and Pecan Valley Electric which completed the electrical work was hired by appellant instead. Zeller's dismissal and its limited "airfield" experience, however, we find (contrary to the Government's contentions) to be irrelevant to the two pass-through claims endorsed and presented by appellant.

40. According to appellant, there were eleven changes affecting the electrical specifications during the contract. The adjustments or lack thereof are disputed as to two of those changes only *i.e.*,:

A. the installation of copper clad ground rods and clamps, and

B. the rewiring of the windtee and taxiway light systems.

(Tr. 1/6; appellant's opening Brief at 52-62, and Reply Brief at 33)

THE WINDTEE AND TAXIWAY LIGHT SYSTEMS

41. During the course of its work Zeller, appellant's original electrical subcontractor, noted that the tetrahedron (windtee) wiring was in a deteriorated condition causing the tetrahedron not to work. (The Tetrahedron performs the functions of a wind sock or tee and permits landing aircraft to gauge wind direction.) Also Mr. Zeller noted that the wires feeding the taxiway lighting system, most of which were underground, were corroded and their ability to conduct 5,000 volts safely was in question.

42. Rewiring the tetrahedron and taxiway lighting systems was not part of the contract as awarded.

43. Nevertheless, when these matters were brought to the attention of the Government, Zeller was directed (orally) to replace the suspect wiring. The source of the direction was the Government inspector and the assistant ROICC. Although the inspector disputes giving such a directive, his recollection of many of these events was obviously blurred by time and subsequent events. Further one of his reports implies otherwise, *i.e.*, that he was involved in these changes and their negotiation. This work was performed at additional expense to appellant, but no payment for it has been made.

44. The Government's basis for refusal to pay is that the defective wiring was apparent when appellant bid and that the Government did not direct appellant to make the repairs. The Government does not deny that the inspector and/or assistant ROICC had authority to issue such directives.

GROUND RODS AND CLAMPS

45. Under the contract the appellant was to install a continuous counterpoise ground wire "for the entire length of all circuits supplying airfield lighting." The system was to be grounded with a rod every 1,000 feet. (R4, tab H and subtab 1, ex. E, ¶ 15.3 and 3.6) Either the appellant, or the Government, or both together discovered that this approach as specified was inappropriate because of the condition of portions of the conduit that the counterpoise wire was to be run through and the danger of running the counterpoise wire through the same conduit as the electrified wire. (Tr. 4/121-122)

46. Again it was mutually decided that to correct this, the counterpoise wiring need not be continuous around each runway. Rather the wiring was to be interrupted, and where interrupted, a 10 ft. ground rod was to be installed. The corrective procedure was again done under the auspices of the Government and, because of the need for the installation of additional ground rods, at an additional cost to the appellant. The Government however refused to adjust the contract price.

47. The Government's reasoning for refusing to adjust the contract in this regard is as follows: (1) the idea was wholly appellant's who volunteered the change; (2) the change actually resulted in a saving to appellant; and, (3) the appellant in any event was already paid for this work under P00005. Modification P00005 provided for (i) rewiring distance markers, (ii) a change in concrete joint detail, and (iii) installing direct burial cable in a 12-inch sandbed. The back-up documentation for this modification does not indicate any allowance for grounding rods and clamps for interruptions of the counterpoise cable.

DECISION

I

We address the VECP problem as raised in appeal ASBCA No. 38303 first. The contracting officer had precluded appellant from sharing in a $342,982 saving effected by P00003 because in his view the appellant's VECP as incorporated in P00003 merely reduced the deliverable end-item only.

At the outset it should be noted that the Government's goal as reflected by the testimony and the contract itself was the recon-

Digitized by Google

struction of two runways. The reconstruction of these two runways was the deliverable end-item quantity within the fair meaning of the VECP clause defining what a VECP is.

In evaluating and characterising appellant's VECP we must also look to the Government's design. The Government's proposed method of accomplishing this reconstruction was only superficially feasible. To build to the Government's design, although probably technically possible, was wasteful to the point of being economically impractical. The appellant on its initiative and at its own expense, (estimated by appellant to be about $80,000) remedied the Government's design by developing an improved and cheaper method of reconstructing the runways. The mere fact that this improved alternate design ultimately, but reluctantly, adopted by the Government eliminated certain costly and unneeded operations does not excise the savings for eliminating those operations from the definition of VECP as the Government contends.

The proper use of the existing base (rather than destroying it and then rebuilding it) does not involve "a change in the deliverable end-item quantities only" as the Government contends. The deliverable end-item quantities—two satisfactorily reconstructed runways—remain the same. What was changed was the cost ($342,982 less) and the material used as the base.

This being so, there remains the question as to whether the appellant waived its right to share in this saving because of modifications P00002 and P00003, both of which contained a boilerplate accord and satisfaction/waiver of all claims clause.

The appellant contends, among other things, that the waiver language in modifications P00002 and P00003 (and also P00008) should be vitiated because those modifications were signed under duress. Although there may be some elements of duress here, we cannot set aside these agreements on that rather nebulous facet of contract law. *Fruhauf S.W. Garment Co. v. U.S.*, 126 Ct. Cl. 51 at p 62 (1953). Especially significant on the issue of duress is the fact that although payment representing a little less than 20% of the adjusted contract price was made 5 months after the work was completed, the agreements themselves were negotiated in November 1985 *before* all work was completed. Thus, the subsequent withholding of payment could not have influenced the prior agreements.

Rather than dwell on "duress", we look to the agreement, its words, and the context in which they were written to see just what effect the parties intended the rather broad and boilerplate release clause used by the Government under this contract should be given. In this regard, it should be noted that releases are not necessarily a favorite of the Courts or this Board. They are to be scrutinized with a high degree of care to determine the true intent of the parties. *Green Builders, Inc.*, ASBCA No. 35518, 88-2 BCA ¶ 20,734, reconsideration denied, 88-3 BCA ¶ 20,981.

Looking to modification P00003, we note that all the appellant was agreeing to was that by the elimination of the stated operations, there would be a $342,982 saving. The agreement did not deal with whether appellant would share in these savings. Consequently, the waiver language relates only to the amount of the savings, not whether appellant released its share of that amount. As far as P00002 is concerned, there is nothing in P00002 which disturbs this reasoning. Even though it was executed under the VECP clause it relates only to those operations listed within it making no mention of the work eliminated by P00003; and therefore, the waiver language in P00002 has no effect on whether the appellant should share in the savings effected by the elimination of the operations listed in modification P00003.

In line with the above, we sustain the appeal in ASBCA No. 38303 to the extent that appellant shares in the savings effected by P00003.

II

Next we address the delay/acceleration claim as raised in ASBCA No. 40096.

Initially we note that under the law the mere fact that appellant finished the contract on time is no impediment to this claim. Logically, and in the eyes of the law, the extra effort which a contractor puts forth to overcome Government caused delay in order to meet the performance schedule wherein time was agreed to have been of the essence, is fully compensable.

Here, however, the appellant has been compensated for that delay, as witnessed by P00008, with the sole exception of the prepumping delay caused by Southern Division's dawdle over what to do with its defective specifications.

The remainder of the delay/acceleration claim is settled in P00008 which was negoti-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ated and agreed to in November of 1985 although not formally executed and issued until February 1986.

Again, since those negotiations were conducted in November of 1985, just as the work was being completed, and the resultant memoranda of the negotiations was signed by appellant at that time, the subsequent delay in payment to April of 1986 could have had no effect on appellant's acquiescence in November of 1985, nor been the duress the appellant alleges.

In line with the above, we sustain the appeal in ASBCA No. 40096 to the extent that the appellant is entitled to compensation for the acceleration necessary to overcome the 10 days "pre-pumping" delay.

III

ELECTRICAL CLAIM ASBCA NO. 39170

The whole thrust of the Government's defense to the appellant's electrical claim consistently has been that what the appellant's subcontractor did regarding the rods and wiring was done as a volunteer. There was testimony to the contrary at trial which we obviously credited in our findings. Further, it seems inherently improbable that the Government would not want, and upon discovery did not direct, essential safety devices such as the Windtee and Runway lights fixed when the existence of the defective wiring became apparent.

Since most of the wiring was underground and rewiring was not part of the contract as advertised, we see no merit, none whatsoever, to the Government's other contention that this is something that should have been seen on a site visit and taken into consideration when bidding.

Further, we found no convincing evidence that appellant saved money by doing what the Government directed it to, nor did we find any convincing evidence that appellant had already been paid for this work.

The appeal in ASBCA No. 39170 is sustained.

IV

In conclusion, we sustain appellant's three appeals on the issue of entitlement only to the extent stated.

[¶ 26,435] KRW, Incorporated

DOT BCA No. 2572, October 13, 1993. Contract No. DTFH61-88-Z-00038.

Contract Disputes, Interest—Claim—Existence of Dispute.—Interest did not start running from the date a contractor submitted a request for adjustment and the request was not a claim, because there was no dispute between the parties on that date. The contractor did not consider the request to be a claim, inasmuch as it made no protest in response to the contracting officer's denial of the request in correspondence that fell short of being a final decision under the Contract Disputes Act.

Attorney Fees and Costs Under Equal Access to Justice Act—Application Timeliness—Premature Claims.—A claim, set out in the amended complaint, for the costs of prosecuting a claim under the Contract Disputes Act was not a valid claim under the Act, because an application for relief under the Act must be submitted after the adjudication. The time limits of the Equal Access to Justice Act for filing a claim are limited and must be strictly construed. The date of the adjudication is the date of the opinion; hence, the claim for the costs of prosecuting the underlying claim was premature.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Officer of the Contractor.—The costs of prosecuting a claim were not recoverable, because under rules in effect on the date of the contract, the costs of professional and consultant services could not be recovered if the services were provided by an officer of the contractor.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Unauthorized Practice of Law.—A contingent fee for preparing and presenting a claim was not reimbursable, because the individual and the company representing the contractor improperly practiced law before the board, and the government should not bear any of the contractor's costs of those improper acts. The contractor was represented by one of its corporate officers in his capacity as an officer of a separate company that he had

Digitized by Google

formed solely to collect debts for the contractor. A corporation may be represented by an officer of that corporation or by a member of the bar of any state, territory, or the District of Columbia. Had the contractor been forthright in revealing that it was being represented by a company that was not a professional corporation organized under state law for the practice of law, the board would have barred the company and the individual from conducting the representation. The board will not allow consultants and others who are not members of the bar to practice law through the subterfuge of a corporate officer's title.

Delays—Approval Delays—Oral Approval.—The oral advice of the contracting officer's technical representative did not constitute approval of a bibliography, glossary, and outline for a manual on stream stability at highway structures, because the contract required formal written action. The contract obligated the government to provide written comments on, or approval of, drafts of the sections within 30 days after the contractor submitted the drafts for review. The record showed that the government never satisfied its response obligations within the 30-day period. The contractor was not entitled to compensation, however, because it did not show that the government's failure to provide written approvals delayed its performance or increased its performance costs.

Delays—Extension of Time—Approval Delay.—Under a contract to develop a design manual, a contractor was entitled to an extension of the contract completion date because the government's failure to comply with the contract's requirements to provide comments by a certain date delayed the contractor's performance. The contract required the contractor to submit drafts of various chapters of the manual at two-week intervals and obligated the government to provide comments on a chapter-by-chapter basis within 30 days after their respective submissions. The absence of comments precluded any work from being performed for two months.

Modifications—Authority of Government Agents—Ratification.—Although a contract to develop a design manual clearly indicated that a contracting officer's technical representative was not authorized to make changes that would obligate the government to pay an increased price, a contractor was entitled to an equitable adjustment for making revisions to the manual because the contracting officer acquiesced in the alteration of the required work product. The technical representative directed the contractor to furnish an abbreviated manual. The contractor did not notify the contracting officer of that direction, but it submitted a progress report that contained a clear statement that it considered the directive to be a change of the contract terms. The progress report was addressed to the contract administrator, who had a duty to communicate the information to the contracting officer. Therefore, knowledge of the notice was imputed to the contracting officer. The contracting officer accepted the manual without the coverage originally requested and did not object to its omission.

Pricing of Adjustments—Proof—Records in Support.—Although the government's failure to provide comments on chapters delayed performance of a contract, a contractor was not entitled to an equitable adjustment, because it failed to provide proof of the amount of its alleged losses. Under a contract to develop a design manual, the contractor was not required to prove its damages with precise, mathematical exactitude. However, a reasonable, albeit approximate, basis for computation was necessary. In this case, the contractor attempted to discredit its own records, the most convincing evidence, by stating that the records did not include all the work performed. There was no evidence in the record of any labor costs incurred during the delay period, much less labor costs resulting from government-caused delay.

Pricing of Adjustments—Proof—Changes.—A contractor was not entitled to all the costs it claimed it incurred as the result of government-ordered changes, because the presumption that the time and monies expended by a contractor after a modification are reasonable was rebutted in this case. Under a contract to develop a design manual, the government changed the requirements after a draft of the manual had been written. Not all the effort performed after the change order resulted from the change; however, there was no evidence to distinguish the work required to rectify deficiencies from the work required to implement the change. The contractor did not call any persons who had the technical capability to explain why the hours of effort were actually required. The board grounded its

©1994, Commerce Clearing House, Inc.

Digitized by Google

decision on the only evidence presented, the testimony of a government expert, regarding the effort that reasonably resulted from the government-directed change to delete the material.

For the appellant: Russell E. Machol[1]. For the government: Eric A. Kuwana and Vivian A. Philbin, Federal Highway Administration, Washington, District of Columbia.

Before ROBERTORY, WARE, and FENNESSY, Administrative Judges.

ROBERTORY, Administrative Judge: KRW, Incorporated ("KRW" or "appellant") has appealed from a decision by the Contracting Officer, Federal Highway Administration ("FHWA" or "respondent"). That decision denied KRW's claim for $70,096.78 in its entirety. Appellant's final Amended Complaint[2] at the Board seeks $173,848.45.

The appeal was taken to the Board on November 23, 1992 and the trial was held in June-July, 1993. However, the trial was almost six years after many of the key events transpired. KRW made a decision to present its case through the testimony of only one of the persons who had been in its employ. This was Mr. Russell Machol, who during the events out of which this dispute arose was KRW's Contract Administrator. In lieu of calling other present and former KRW employees who had been personally involved in performance under this contract to testify, KRW elected to call involved FHWA and Defense Contract Audit Agency personnel as its witnesses[3] and to attempt to make out its case through their testimony. Out of deference to appellant's presentation of its case without the services of a member of the Bar, the Board permitted the appellant to question these persons as if hostile witnesses[4] under the Federal Rules of Evidence and thereafter to present evidence intended to impeach the testimony they gave.[5] However, to the extent that this selection of its witnesses may have impaired appellant's presentation, or to the extent that their testimony adversely affected the strength of its case, KRW must bear the result of such deficiencies. This matter is addressed in some detail in Discussion section VII.B, *infra*.

As an example: KRW's burden of proof includes proving the costs incurred as a result of an FHWA-directed change to the scope of work that appellant alleges as the basis of its claim. Rather than present testimony by KRW accounting personnel as to those costs as reflected in KRW's records, KRW chose to present its quantum case entirely through the testimony of the Defense Contract Audit Agency auditor, his notes, and the Audit Report he authored. In part due to a KRW misreading of the Audit Report, the auditor's testimony did not support the result KRW seeks, especially in the area of overhead rates.[6]

FINDINGS OF FACT

The Contract

1. On November 3, 1986, Contract DTFH61-88-Z-00038 was awarded to KRW through the Small Business Administration, acting on behalf of the FHWA, under section 8(a) of the Small Business Act. (RAF[7] Tab 6). The firm fixed price of the contract as awarded was $107,724.00. The contract called for KRW to review and evaluate available information on stream stability and stream scour at bridges, and to develop a design manual entitled *Stream Stability At Highway Structures*. The manual was to classify stability problems, provide assessment criteria, and categorize each by possi-

[1] Mr. Machol on some occasions (when seeking to establish his standing to represent KRW) stated that this representation was being effected by him as an officer of KRW, and on other occasions (when seeking to justify recovery of a contingent fee to be paid E.A. James Company) stated that it was being conducted as an employee of E.A. James Company. The matter of representation is a major issue in this case, and is addressed below in this Opinion. See *KRW Incorporated*, DOTBCA No. 2572, 94-1 BCA ¶ 26,268 (1993) for a Board decision on a respondent Motion to Dismiss that addressed Mr. Machol's status, before the name of the E.A. James Company was mentioned to the Board.

[2] Filed June 7, 1993.

[3] For examples, see Findings 27, 63, 84, and 85.

[4] The Board notes for the record that the demeanor of these witnesses during the trial was not hostile to KRW. There was no hostility exhibited.

[5] See Rule 611(c) of the Federal Rules of Evidence..

[6] See Findings 76, 78, and 81.

[7] There are two appeal files in the instant case, the original and a revised version, prepared by the Contracting Officer due to certain perceived inadequacies in the organization of the first. The Board ruled that either party could cite to either version. (Tr. 25). These are cited as "AF" for the original appeal file and "RAF" for the revised appeal file.

Digitized by Google

ble solutions which designers might utilize.[8] Among the areas to be addressed were stream instability, scour and erosion, and stream aggradation and degradation, with respect to their effects on highway bridges.[9] The work was to be a compilation of existing materials rather than a project to study the subjects of stream stability and scour directly. Thus, the research to be performed by KRW was the ferreting out of existing documents on the subject. As awarded, the contract called for full completion in 18 months from award, *i.e.*, by May 3, 1988. As modified by bilateral Modification #1,[10] the work was to be completed by September 30, 1988. Unilaterally-issued Modification #2 further extended the completion date to October 31, 1988.

2. In its final proposal that led to the award, KRW proposed the use of 2,130 hours of labor to produce the manual. (App. Exs. 3, 4). This included 454 hours for Dr. Everett Richardson (Principal Investigator[11]), 406 hours for Mr. Frank Johnson (Hydraulic Specialist), 196 hours for Mr. Fred Chang (Hydraulic Specialist), 654 hours for Mr. Pierre Julien (Assistant to Principal Investigator), 40 hours for Mr. Stan Schumm (Technical Advisor), 58 hours for Mr. Russell Machol (Project Coordinator), 224 hours for a secretary and 98 hours for a draftsman. Messrs. Johnson, Chang, and Julien, in addition to Dr. Richardson, were deemed professional staffers; Mr. Machol and the others were not.[12] The proposal included overhead at 85% of estimated direct labor costs, general and administrative overhead at 18% of the total of labor plus overhead, and profit at 10% of the aggregate of general and administrative overhead, overhead, and labor costs.[13] By entering into a fixed-price contract at the price proposed, the FHWA impliedly accepted these proposed hours and rates as reasonable.

3. The contract incorporated the clause entitled "Termination for Convenience of the Government (Services) (Short Form) (April 1984)" set out in Federal Acquisition Regulation section 52.249-4. The contract incorporated the clause entitled "Default (Fixed-Price Supply and Service)(April 1984)" from Federal Acquisition Regulation § 52.249-8. Also incorporated was the Changes clause[14] of Federal Acquisition Regulation § 52.243-1, which provides *inter alia*, "(c) The Contractor must assert its right to an adjustment under this clause within 30 days from the date of receipt of the written order. . . ."

4. The contract included a clause[15] entitled "Contracting Officer's Technical Representative," providing that the Contracting Officer could designate a Contracting Officer's Technical Representative who would be responsible for technical administration of the contract and technical liaison with KRW. The clause included the following caveats:

> "The COTR IS NOT authorized to change the scope of work or specifications as stated in the contract, to make any commitments or otherwise obligate the Government or authorize any changes which affect the contract price, delivery schedule, period of performance or other terms and conditions.
>
> "The Contracting Officer is the only individual who can legally commit or obligate the Government for the expenditure of public funds. The technical administration of this contract shall not be construed to authorize the revision of the terms and conditions of this contract. Any such revision shall be authorized in writing by the Contracting Officer." (Upper case in original.)

5. The contract set six tasks. The respective periods for performance were set out in the individual task descriptions and were also summarized in a graphical Work Schedule in the contract.[16]:

a. The first (Task A) was data gathering (reviewing existing technical information and evaluating present practices) and the preparation of two documents, a bibliogra-

[8] Contract, page 2 of 17.

[9] Contract, page 4 of 17.

[10] AF Tab 6.

[11] See Finding 7.a.

[12] See Finding 7.b.

[13] As we look at the record of negotiation (RAF Tab 3), it appears that the rates allowed in negotiating this fixed-price contract were actually 82% (84,984 ÷ 103,250) and 14% (33,881 ÷ 244,596), respectively.

[14] Although the instant contract would appear to be more in the nature of a services contract than a supply contract, none of the alternative versions for services contracts were incorporated.

[15] Contract section G, page 11 of 17.

[16] Contract page 8 of 17. The graph, altered by replacing the columns headed with the number of months since award with the actual months, is also in the record as the topmost portion of Appellant's Exhibit 2.

©1994, Commerce Clearing House, Inc.

Digitized by Google

phy and a glossary.[17] These latter two documents were to be delivered to the Contracting Officer's Technical Representative within two months after contract award, by January 3, 1987 according to the Board's calculations, based on the November 3 award date and the tabular Work Schedule, *infra*.[18] Thereafter, the FHWA was to provide comments to KRW within 30 days, which comments were to be included in the final bibliography and glossary to be delivered within 30 days after receipt of comments.

b. The second task (Task B) was for KRW to develop an outline for the manual.[19] A draft of this outline was to be delivered to the FHWA within two months after the effective date of the contract, January 3, 1987 by the Board's calculations.[20] The contract obligated the FHWA [21] to furnish KRW with comments on that draft outline within 30 days thereafter, which comments KRW were to incorporate into the final manual outline. The task as laid out in the contract provided that the approval of the final design manual outline would be given "in writing by the Contracting Officer." In bold-face type, the task went on to state that KRW was not to proceed to Task C prior to receipt of that written approval from the Contracting Officer.

c. The third (Task C) as set forth in the contract also cast performance obligations upon both parties. KRW was to develop the manual itself, submitting the chapters as developed to the Contracting Officer's Technical Representative for review at two-week intervals. The FHWA was obligated to review these chapter-by-chapter submissions and provide comments within thirty days after receipt of each. The manual was to cover five areas, which apparently equate to chapters.[22] These were: Introduction, Problem Identification, Selection of Countermeasures and Solutions, Construction Methods, Appendices. The Work Schedule called for the Introduction to be submitted to the Contracting Officer's Technical Representative by June 3, 1988,[23] the Problem Identification by June 18, Selection of Countermeasures and Solutions by July 3, Construction Methods by July 18, and Appendices by August 3. The Schedule also showed Contracting Officer's Technical Representative approval/comments were to be given KRW within 30 days after each such submission. In its pretrial claim submissions (see Finding 64), KRW has contended that $61,134.70 of the initial contract price was attributable to the Task C work. The FHWA has not denied this, and we therefore find this to be factual.

d. The fourth task (Task D) was to revise the manual to reflect the FHWA's comments.

e. The fifth (Task E) was to prepare a two to four page technical summary of the manual. This draft was to be submitted 60 days prior to the completion of Task C, with the FHWA to review the draft and provide comments within 30 days of receipt and KRW to incorporate those comments into the final summary.

f. The sixth task (Task F) was for KRW to conduct two one-day briefings for FHWA personnel.

6. The contract [24] required KRW to submit monthly progress reports, each to include descriptions of (i) significant progress made during the reporting period; (ii) interim results or trends that KRW might feel would be of interest to the FHWA; (iii) any problems encountered that would affect timely completion or completion within fiscal constraints, and proposed solutions; (iv) work planned for the next reporting period; (v) a bar chart showing work performed (by task) versus scheduled work; and (vi) current and cumulative expenditures (by task) versus planned expenditures.

7. The Contract contained two provisions relating to KRW's personnel assignments:

a. A clause entitled "Key Personnel" provided that Dr. Everett V. Richardson would be "Principal Investigator." If he should be terminated by KRW or unable to perform, his replacement would be subject to Contracting Officer approval. Mr. Richardson was to contribute at least 16% of normal

[17] Contract pages 2-3 of 17.

[18] The appellant gave the due date as January 1, 1987. (App. Ex. 2).

[19] Contract page 3 of 17.

[20] See subparagraph a. above.

[21] "The Government will review the draft design manual outline and furnish comments to the Contractor within 30 days after receipt."

[22] See Finding 9.

[23] These dates are based on the Board's calculation from the November 3 award date and do not take into account holidays or weekends coinciding with due dates.

[24] Section C, page 10 of 17.

Digitized by Google

working time to performance of this contract work.[25]

b. A clause entitled "Professional Staffing" stated that KRW agreed to assign four professional staff members to work on this contract: Dr. Richardson, Dr. Pierre Julien, Mr. Fred Chang, Mr. Frank Johnson. If KRW were to find it necessary to replace "any of the assigned personnel" during contract performance, the Contracting Officer was to be notified.[26]

Performance

8. By letter, the Contracting Officer appointed Mr. Robert Martin to be Contract Administrator and Mr. Thomas Krylowski to be Contracting Officer's Technical Representative. (RAF Tab 10). The letter directed KRW to submit all reports and administrative documents to Mr. Martin. It directed KRW to contact Mr. Krylowski on all technical matters, referencing the limitations on his authority reflected in the clause set out in Finding 4. The letter also contained a reminder that only the Contracting Officer had authority to modify the contract.

9. KRW delivered the Task A bibliography and glossary and the Task B draft outline to the Contracting Officer on Monday, January 5, 1987. (RAF Tabs 12-14). We take judicial notice of the fact that January 3, 1987 (the due date—Findings 5.a and 5.b) fell on a Saturday. Therefore, this was a timely submission. Following the areas called out in Task C (Finding 5.c), the draft outline (RAF Tab 12) provided for a manual composed of an Introduction and four chapters, summarized [27] as follows:

I. INTRODUCTION

A. Discussion of purpose of manual

B. Background of the problem at highway structures at river crossings

C. Description of Manual Organization

D. Instructions on use of the manual

II. CHAPTER 1—FACTORS TO CONSIDER IN STREAM AND BRIDGE STABILITY

A. Geomorphic considerations in stream and bridge stability

B. Hydraulic and flow consideration in stream and bridge stability

III. CHAPTER 2—PROBLEM IDENTIFICATION

A. Description of stream and bridge stability problems

B. What to consider in stream and bridge stability analysis

C. How to identify actual or potential stream and bridge stability problems

IV. CHAPTER 3—COUNTERMEASURES

A. Description of countermeasures

B. Selection of countermeasures

C. Design of countermeasures

V. CHAPTER 4—CONSTRUCTION OF COUNTERMEASURES

A. Construction factors to consider

B. Construction methods

VI. GLOSSARY

VII. REFERENCES

VIII. APPENDICES

10. On January 27, KRW submitted a revised outline to reflect comments received from Mr. Krylowski at a meeting on January 14. (App. Ex. 6; RAF Tab 17).

11. At some time during January, Mr. Krylowski had orally advised KRW that the outline was acceptable. (Tr. 313). On February 2, Mr. Krylowski advised the Contract Administrator that the bibliography, the glossary, and the draft outline were all acceptable and requested that KRW be provided with the appropriate written approval to proceed with Task C. (RAF Tab 16). Notwithstanding the clear, bold-faced prohibition of Task B (Finding 5.b), KRW proceeded with the Task C work on the basis of the oral advice.[28] KRW's Progress Report #4 (RAF Tab 18) for February 1987, dated March 12, 1987, stated that during February KRW had commenced work on Tab C, and recited that KRW was "advised by telephone call from CO that approval" of the Tasks A and B work (*i.e.*, the bibliography, glossary, and outline) was being prepared. The Progress Report also stated that "KRW was given verbal approval to start Task C." The appellant argues in its post-trial Reply Brief [29] that it did not commence work on Task C until some time in March. However, KRW's own Progress Report #4 for February not only states that it had commenced

Digitized by Google

work on Task C, but also states that a total of 88 labor-hours of effort were expended on this Task during February. We therefore find that work on Task C began during February, right on schedule.

12. On March 19, 1987, the Contracting Officer issued his formal, written approval of the design manual outline produced under Task B, some 44 days late. (RAF Tab 20; Tr. 28, 43).

13. KRW's Progress Report for March (RAF Tab 21), dated April 15, 1987, stated that work on Task C was proceeding. While it complained that KRW was still awaiting FHWA approval of the bibliography and glossary, the Progress Report made no mention of awaiting action on the outline.

14. On April 20, 1987, the Contracting Officer issued the formal, written approval of the bibliography and the glossary, some 76 days late. (RAF Tab 22; Tr. 25, 43). Although KRW later alleged progress was delayed by the FHWA's haphazard compliance with its contractual commitment to furnish, within thirty days, comments on the bibliography and the glossary? [30] Mr. Machol testified at trial that this FHWA untimeliness did not "affect anything else" (Tr. 25), *i.e.*, that it did not delay progress. In addition, the original claim (Finding 66) did not seek any amounts for this Task A work. There is nothing in the record to show that the delayed approval of the bibliography and the glossary delayed KRW, or for that matter how it could have delayed KRW's performance while the chapters were being drafted. The Board finds that KRW was not delayed by the FHWA's failure to provide comments on the bibliography or the glossary within the contractually-prescribed time.

15. KRW's monthly Progress Report for April, 1987, dated May 15, 1987, reported that a time extension would be needed due to delays by the FHWA in furnishing approvals of the bibliography, the glossary, and the outline and that, with such time extension, work was proceeding in a timely manner. (RAF Tab 25; Tr. 45).

16. An event occurred in April, 1987, which would have impact upon this contract. A New York Thruway highway bridge collapsed, with fatalities, during a period of high water flow that had undermined the bridge. This event imparted a new direction to FHWA efforts and studies in the area of stream scour and bridge stability. It wished to disseminate material on how to protect bridges from undermining, and was under pressure to do so promptly. (Tr. 62, 272, 807).

17. On May 27, KRW sent a letter to Mr. Martin, the Contract Administrator, forwarding a revised project schedule, said to be necessary due to the FHWA's delays in sending comments on the bibliography, the glossary, and the manual outline. The letter requested that the FHWA advise if it had any difficulty with the revised schedule. (RAF Tab 27). No reply was received, so KRW assumed that FHWA acquiesced. (Tr. 29, 169). The graphical depiction of the work schedule attached to the May 27 letter, a revision of the Work Schedule in the contract, called for chapters to be submitted to the FHWA monthly rather than every two weeks. Specifically, the revised graphical Work Schedule submitted by KRW, now keyed to the approved outline rather than to the Task C areas, called for the Introduction to be submitted to the Contracting Officer's Technical Representative by June 1, 1987, Factors Which Affect Stream and Bridge Stability by July 1, Problem Identification by August 1, Countermeasures by September 1, and Appendices by September 15.

18. The FHWA did not respond to this letter. It also never complained to KRW that the draft chapters were not coming at bi-weekly intervals as called for by the contract. (Tr. 169). The Board finds that by its silence the FHWA acquiesced in the revised pace of delivery.

19. On June 5, 1987, as required by Task C (Finding 5.c), KRW submitted to the FHWA for comments a draft of Chapter 1 "Introduction." The transmittal noted that the chapter could not be finalized until all of the other chapters had been completed, since an introduction should include an overview. (RAF Tab 28). The draft of Chapter 2 followed in July; the draft of Chapter 3 was sent to the FHWA on August 10. (RAF Tab 32).

20. At some time during the summer of 1987, Messrs. Krylowski and Machol discussed the need for the FHWA to withhold comments on individual chapters until all chapters had been received. Significantly, Mr. Krylowski did not testify that Mr. Machol had indicated assent during those discussions. Discussion and assent are two different concepts. However, neither did Mr. Machol protest such action by the FHWA, and the monthly Progress Reports

[30] See Findings 15 and 17.

Digitized by Google

did not mention any resultant problems until the report dated November 13, 1987 (Finding 25). (Tr. 247-248, 254). Factually, the FHWA decision not to submit comments on a chapter-by-chapter basis, for whatever reason, was contrary to the specific requirements of the contract, described in Finding 5.c. On the record, we cannot find that KRW acquiesced in this change.

21. KRW's Progress Report for July, 1987 dated August 12, stated that the planned activities for August were to "Begin revisions of chapters to incorporate FHWA comments," to submit the draft of Chapter 3, and to commence drafting Chapter 4. (RAF Tab 33).

22. KRW's Progress Report for September, 1987 dated October 15 stated that the planned activities for October were to "Begin revisions of chapters to incorporate FHWA comments." and to prepare for a meeting in Washington to discuss work to date and revisions to the manual. (RAF Tab 35).

23. Draft Chapter 4 was sent to the FHWA on September 22, 1987. KRW's covering letter noted that it would be desirable for KRW to have received comments on this and the preceding chapters before conducting a briefing. (RAF Tab 34). The KRW monthly Progress Report dated October 15, 1987 and covering the month of September, indicated that the planned activity for October was to commence revising chapters to incorporate FHWA comments and to finalize plans for a meeting with the FHWA to discuss the drafts. (RAF Tab 35).

24. After receiving the draft of chapter 4, Mr. Krylowski, the Contracting Officer's Technical Representative, commenced contacting Mr. Machol for the purpose of setting up a meeting to discuss the draft chapters. (Tr. 252). His efforts were unsuccessful until the parties finally met on December 8.

25. In its Monthly Progress Report dated November 13, 1987 (RAF Tab 38), KRW noted: (i) that no work had occurred during October; (ii) that a time extension would be necessary "as a result of not receiving FHWA comments in accordance with the project schedule"; and (iii) that in November it planned to revise draft chapters to incorporate FHWA comments, but that such activity would "depend on when KRW receives comments on material submitted to FHWA." This was the first statement in the Progress Reports that KRW was awaiting FHWA comments in order to proceed with work. The Progress Report dated December 7, 1987, covering performance during November, read to like effect. (RAF Tab 39).

26. During this period of contract performance and continuing until May 1988, KRW's monthly progress reports set forth, by named individual, the labor-hours of effort being expended on this job. Appendix I of this Opinion sets forth, *inter alia*, the effort expended by KRW through November 30, 1987, as set forth in KRW's December 7 progress report. This was the last Report KRW filed before the December 8 meeting, at which occurred events that KRW alleges constituted a change to the contract.

27. KRW and the FHWA met on December 8, 1987. The persons attending were technical personnel; it was not attended by any persons from either side who possessed actual authority to vary the terms of the contract. Mr. Machol, the sole KRW witness who was not a government employee, did not attend and testified that he had no record of what had transpired. (Tr. 42). KRW did not call Messrs. Johnson, Chang, or Richardson, the three KRW employees who were present at the meeting, as witnesses. As a result, the only evidence of what transpired at the meeting was a letter, dated December 11, 1987, in the appeal file (Finding 28) and the testimony of Messrs. Krylowski and Peter Thompson, FHWA employees who attended the meeting and were called to testify at trial. Accordingly, we accept as factual the uncontradicted testimony and writings by the other witnesses who had been present, such as Mr. Krylowski. See, for example, Findings 28 and 29.

28. A record of what transpired at the meeting is reflected in a letter of December 11, to KRW from the Contracting Officer's Technical Representative, Mr. Krylowski. The letter acknowledged that the FHWA had been delinquent in commenting upon the draft chapters. The letter also stated that the FHWA had erred in drafting the contract so as to require chapter-by-chapter review and comments by the FHWA, for it was impossible to review an individual chapter without having the benefit of the entire manual. (RAF Tab 40 and Tab 56, Item 2).

29. The letter described a change to the work product that was effected at the meeting. According to Mr. Krylowski, it was agreed by those present that the manual should be broken out into two Hydraulic Engineering Circulars, HEC-20 on "Stream Stability" and HEC-18 on "Scour at

©1994, Commerce Clearing House, Inc.

Digitized by Google

Bridges." According to the letter, the latter would

> "serve as a companion document to the Technical Advisory (TA) on scour currently being developed. This does not require additional work but will remove one chapter from the previous manual and call it a separate volume. Scour will be referred to in the circular on stream stability."

This change would not require KRW to gather any additional information. (Tr. 266). Mr. Krylowski, who had been present, testified that the persons present, including the KRW employees Messrs. Johnson and Richardson, were in agreement that this should be done using the material already at hand. (Tr. 267). Mr. Krylowski's letter of December 11 was to the same effect, stating that "Very little was eliminated from the manual" and that Mr. Frank Johnson, a technical employee of KRW, had "voiced the opinion (and we agree) that an effort can be made to condense much of the material we have." As noted above in Finding 27, KRW did not call Mr. Johnson, or either of the other two KRW employees present at the meeting, Messrs. Chang or Richardson, as witnesses. In the absence of contradictory testimony, we find Mr. Krylowski's description of what transpired and what Messrs. Richardson and Johnson said at the December 8 meeting to be factually correct.

30. Mr. Krylowski's letter set forth a revised outline, "subject to change" for the proposed HEC-20 "Stream Stability" reading, in its entirety:

I. INTRODUCTION

II. STABILITY FACTORS

A. Factors that affect stream

B. Factors that affect hydraulics

III. ANALYSIS PROCEDURES

A. Classify

B. Identify problems and alternative countermeasures

IV. APPENDIX

A. Aggradation/degradation

B. Lateral stability of banks

C. Countermeasures

This outline was nowhere as detailed as that which KRW had prepared under Task B (Finding 9) and which the FHWA had approved (Finding 12). (Tr. 66).

31. With regard to the proposed HEC-18 "Scour at Bridges," the letter simply stated that "Because of the urgency of the topic and the degree to which work on the subject has progressed, it was agreed that we would strive to complete HEC-18 first." The letter made no mention of what work, if any, KRW was to do regarding the proposed HEC-18. As it turned out, the FHWA contracted directly with Dr. Richardson for him to produce the circular on bridge scour, and the final product under this contract only addressed stream stability. (Tr. 114).

32. Two days before the meeting, the FHWA had given KRW's Mr. Johnson some comments on the chapter drafts that KRW had submitted. Comments were also given at the December 8 meeting and the December 11 letter also enclosed comments on the draft chapters. These were the first occasions on which the FHWA submitted comments on any of the chapters. (Tr. 30).

33. KRW argues that none of its employees attending the meeting were authorized to alter the terms under which KRW was performing. There is nothing in the record to contradict this. Nevertheless, KRW did not write directly to the Contracting Officer, when its officers learned of what transpired at the December 8 meeting and that its employees had apparently acquiesced in the revisions to the draft manual, to notify that official that KRW deemed the direction to split the manual to be a change. However, it did mention this belief in subsequent Progress Reports. See Findings 36 and 38.

34. Mr. Philip Thompson, Chief of the FHWA's Hydraulics and Geotechnical Branch, Highway Bridge Division, testified as to the scope of the two contemplated circulars and explained the difference between stream stability and scour. (Tr. 806-807). HEC-18 is the number assigned to the subject of scour at bridges. HEC-20 is the number assigned to stream stability at highway bridges. Stream stability is concerned with breach of a river and whether it is going laterally or vertically with time. Scour at bridges is concerned only with the cross-section of the bridge and what is happening to scour at that cross-section. Scour at bridges is a subset of stream stability in general.

35. On December 30, 1987, Mr. Johnson sent an internal KRW memorandum to Mr. Machol. (App. Ex. 36, page 2). The memorandum stated that much work remained because of problems other than the FHWA-directed reorganization of the draft manual:

> "I think considerable work may be necessary to overcome the fact that the figures came from numerous sources. There is no consistency in lettering on the figures; e.g., letter sizes vary all over the spectrum;

Digitized by Google

some lettering on the figures is all caps, some are upper case and lower case; some of the figures are too cluttered; some are not legible. I think we were aware of this from the beginning, but the reviewers became somewhat critical and I can't really blame them.

"I am trying to identify the source of figures as I work on the rewrite . . . .

This memorandum makes it clear that there remained a considerable amount of editorial-type work to be performed on the draft, even if the FHWA had not directed that the work be split into two circulars. What the appellant has not done in presenting its case is to introduce evidence tending to show, on the one hand, how much work was required for corrections and editorial revisions such as were described in this passage from Mr. Johnson, which were part of the original contract work and not a compensable change, and, on the other hand, how much work flowed from the FHWA direction to delete scour.

36. On January 4, 1988, KRW submitted its Progress Report for December, 1987 (AF Tab 43), addressed to the Contract Administrator. The report stated that in January KRW planned to evaluate "the changes requested by FHWA to determine the extent of work and time that will be required to make the revisions requested." KRW took the position that this would involve identification of new tasks, development of a new schedule, and reorganization of the manual "into a format considerably different from" the previously approved format. The Report closed by stating that the project was behind schedule and that contract revisions would "be necessary to reflect the changes that have taken place from that [sic] set forth in the existing contract." A chart attached to this Progress Report stated that as of the end of November the manual was 98% completed and the project as a whole was 93% complete. The Board accepts this last statement of the status of manual and project completion, which stands uncontradicted, as factually correct.[31]

37. Based on this statement of the degree of completion in the Progress Report for December, and on the consensus by the technical representatives of both parties at the December 8 meeting that the material already on hand need only be condensed to carry out the change (Finding 29), the Board finds that as of November 30, 1987, all research to prepare a manual that included coverage of both stream stability and scour had been completed and that, therefore, no further research would need to be done to delete scour pursuant to the FHWA's direction. Bearing out this conclusion is the fact that, in the text of that Progress Report, KRW only spoke of reorganization and made no mention of any need for further research. A reordering of content, including some deletions, was all that would be required; see also Finding 60.

38. The Progress Reports for January (AF Tab 44), February (AF Tab 45), March (AF Tab 46), and April (AF Tab 48), 1988 reported that during the following months KRW planned to continue this work and reiterated the need for contract revisions. Commencing with the Progress Report for May (AF Tab 55), KRW ceased including in its Progress Reports any statements of labor hours of effort expended.

39. On March 18, 1988, Mr. Machol sent a memorandum to Mr. Richardson. (Resp Ex. 1). The Memorandum forwarded, for Mr. Richardson's review and comment, copies of Mr. Johnson's rewrites of Chapters 1 (Introduction) and 2 (Factors That Affect Stream Stability). It noted that there were "minor changes" necessary, such as correcting figure numbers. The Memorandum advised that Mr. Johnson had determined how to combine chapters 3 and 4 into one and what to place in the Appendix, and expressed the hope that Chapter 3 and the Technical Summary could be forwarded "very soon."

40. On May 27, 1988, KRW submitted drafts of the revised chapters 1 and 2 and a revised outline to the FHWA for approval and comments. (RAF Tab 51). The revised outline altered the outline Mr. Krylowski had suggested (Finding 30) by providing for additional chapters 4 "Selection of Countermeasures" and 5 "Countermeasure Design." In Mr. Krylowski's outline, countermeasures was a topic in the Appendix. The May 27 letter also split the two remaining portions of Mr. Krylowski's outline into separate Appendices. By letter of June 10, the Contracting Officer's Technical Representative advised KRW that the outline "appears complete and we suggest you proceed on the remaining chapters of the manual based upon it." The letter advised that the FHWA would accommodate KRW's request for comments on the draft chapters, but would not give final comments until KRW delivered "the complete draft manual as called for in the contract." (RAF Tab 52).

[31] See also footnote 47.

Digitized by Google

41. On June 10, 1988, in its covering letter returning the executed Modification #1 (RAF Tab 54), KRW noted that the Modification did not give adequate time and indicated that additional compensation in an as-yet-unstated amount would be requested.[32] The letter stated that KRW had been delayed 1 1/2 months due to the FHWA delay in approving the outline. This allegation is not borne out by the record, since KRW at its own risk had proceeded with the Task C work notwithstanding the lack of written approval. (See Finding 11 and Discussion section V.) The letter also alleged that KRW had been delayed for five months due to the FHWA's failure to furnish comments on the draft chapters within the contractually-mandated thirty days.[33] Regarding the effect of the delayed comments on costs of performance, the letter stated that KRW estimated the effect of the delay in providing comments on the outline and on the chapters increased costs by 14% of the original estimate of costs for performing Task C. The letter included no basis for fixing this amount at 14%; neither does the trial testimony (see Tr. 37).

42. On June 17, 1988, Mr. Krylowski wrote KRW, advising that it was not necessary under the contract for KRW to again send chapters to the FHWA for review and that such action was not necessary to achieve a good product. Mr. Krylowski requested KRW not to submit anything but the final work, noting that the FHWA wanted the contract work complete by September 30. (RAF Tab 57; Tr. 311-312).

43. Messrs. Machol, Krylowski, and Martin met on October 24, 1988 and discussed the changes KRW was seeking. After Mr. Krylowski remarked that he would prefer to stop the contract work at that point and get what he could from KRW, Mr. Machol asked that that be put in writing. (RAF 68; Tr. 440-441, 443-445, 451).

44. On September 1, 1988, KRW filed a request for additional compensation; this request is described in Finding 64. The Contracting Officer denied this request in a letter of November 21, 1988. (AF Tab 70, Finding 65). Of significance to the instant dispute, without invoking either the termination for convenience or the termination for default provisions of the contract, without invoking the suspension of work provisions of the contract, and without stating that KRW was to proceed no further, the Contracting Officer's letter closed with the following sentence:

> "Deliver to the Federal Highway Administration in present form, all materials pertinent to this contract. In addition, please submit the enclosed forms and your final invoice."

The "enclosed forms" were DOT Form 4220.4 (2-71) "Contractor's Release" and an unnumbered FHWA Form entitled "Contractor Inventory Schedule."

45. The "Contractor's Release" form, obviously intended for use upon completion of a contract, provided for release of the United States and its employees from all claims under a contract except for certain described categories of claims. The "Contractor Inventory Schedule" appears to be for listing government property in a contractor's possession.

46. The Board finds that upon receiving the correspondence described in Finding 44, a reasonable contractor would not know what the FHWA was intending or what was to be the status of its contract. The correspondence gave rise to many questions. Was this to be a termination? If so, was it for convenience or for default? Was it to be a suspension of work? Upon receiving a letter phrased in this manner, a contractor would be reasonably entitled to ask for and *promptly* receive clarification of the FHWA's intent, for when a contracting officer wishes to direct some action, that action must be clearly stated, not ambiguous.

47. KRW sought such clarification. By letter of December 7, 1988 (RAF Tab 71), KRW sent a series of questions to the Contract Administrator regarding the November 21 letter (Findings 44 and 65). KRW asked:

> (i) if FHWA was taking the position that the FHWA was not obligated to comply with the contractual requirements for providing comments of draft submissions within 30 days;
>
> (ii) if FHWA was taking the position that the Contracting Officer's Technical Representative's directions at the December 8, 1988 meeting (Findings 27 *et seq.*) to split the manual was not a change in the scope of work;

[32] This request was eventually made in September. See Finding 64.

[33] According to the letter, he first chapter was submitted to the FHWA on June 5, so that comments would have been due on July 5. Comments were not provided until December 8, 11, and 27.

Digitized by Google

(iii) if FHWA was taking the position that this direction did constitute additional work but would not recognize any added costs because the work was not authorized by the Contract Administrator;

(iv) under what provisions of the contract did FHWA give the direction that concluded the November 21 letter (Finding 44).

The Board finds that these questions, and especially question (iv), were reasonable in the light of the paucity of rationale set forth in the November 21 letter.

48. The FHWA did not respond to KRW's December 7 inquiry because it could not decide whether to terminate the contract for default or for convenience of the government. (Tr. 644-647, 653).

49. After three months had gone by and it had not received any response to this letter, despite having mentioned the absence of a reply in several monthly Progress Reports, on March 9, 1989, KRW wrote to Ms. Margarita Montada, the Director of the FHWA's Office of Contract and Procurement, several echelons above the Contracting Officer and the Contract Administrator. (RAF Tab 76; Tr. 100-101). This letter forwarded copies of the correspondence and requested her to stimulate a reply.

"Three months have passed since KRW wrote FHWA for clarification and assistance with regard to this contract, as yet we have not received a response.

"We are writing you as a last resort, since we believe KRW has waited an inordinate length of time for a response to our inquiries...."

Any hopes KRW may have had about receiving a timely reply to this letter were soon dashed. The letter did not reach Ms. Montada. Ms. Montada testified that, notwithstanding that the letter was addressed to her, the person opening the mail would not have passed it to her, but directly to the Contract Administrator involved.[34] (Tr. 363-366). The letter eventually reached Mr. Anthony Martoccia, Chief of the Highway Support Services and Small Purchases Division, FHWA Office of Contracts and Procurement. When a month elapsed after sending the letter to Ms. Montada, with no reply forthcoming, on April 10 KRW wrote the Contract Administrator querying as to when a reply might be expected. (RAF Tab 78).

50. Finally, on May 10, 1989, over five months after KRW had justifiably sought clarification of the last paragraph of the Contracting Officer's November 21 direction, Mr. Martoccia replied to KRW's December 5 letter. (RAF Tab 80; Tr. 102-104). His letter addressed[35] separately each of the four questions KRW had posed in that letter. The following summary of Mr. Martoccia's responses is keyed to the questions described in Finding 47, *q.v.*:

(i) Although written approval of the outline was not provided until March 19, 1987, KRW had received verbal approval on January 14. [See Findings 5.b, 9, and 11.] Furthermore, FHWA reviewers found it neither practical nor wise to review individual chapters without having the entire draft manual. "KRW was immediately informed through conversations with the Contracting Officer's Technical Representative (COTR) that all comments would be provided after the last chapter was received .... In the months that followed, KRW never asked to discuss the comments."

(ii) Yes, for the instructions to which the KRW letter refers are in fact the FHWA comments on each draft chapter. "A change would have been issued in accordance with the Changes Clause of the contract."

(iii) "The FHWA recognizes that it provided comments on draft chapters, it did not change the contract [sic]. It is clear in the contract that the COTR can give technical direction without impacting the price."

(iv) On October 24, 1988, the Contracting Officer's Technical Representative stated "that he would prefer you to stop working at this point and deliver all available materials in its present form [sic] to the FHWA. You agreed and asked that this be put in writing."[36]

This statement (iv) was not responsive to the inquiry. In fact, it was based on a misunderstanding of what had transpired. The record indicates that the Contracting Officer's Technical Representative had spoken of stopping the work and then obtaining the

[34] The Board notes the inescapable conclusion: a contractor would, as a practical matter, find it almost impossible to bring improper conduct, or a failure to act, by a member of the contracting office to the head of that office.

[35] We do not say "responded to," for comment (iv) is not responsive.

[36] See Finding 43.

©1994, Commerce Clearing House, Inc.

Digitized by Google

work product (Finding 43), but the Contracting Officer's November 21 missive did not mention stopping work, much less directing KRW to cease performance. Continuing the FHWA's failure to clarify its intent or to cite any specific contractual, regulatory, or statutory authority for the November 21 direction (Finding 44), Mr. Martoccia closed with the following paragraph:

> "The FHWA is demanding that you comply with the terms of the contract. You are immediately required to deliver the Technical Summary and Final Design Manual. These items were due to FHWA no later than October 31, 1989. The FHWA has provided over $100,000 in progress payments. If the above items are not delivered and accepted by the undersigned within one (1) month of this letter, I will direct a repayment of the progress payments made to KRW."

The FHWA's failure to promptly clarify the November 21 direction was due in part to its prolonged indecision regarding what should be done with this contract (Finding 48),

51. On June 9, 1989, the Contracting Officer wrote KRW advising that the FHWA was considering terminating the contract for default due to KRW's failure to complete the contract work and giving it ten days in which to present any excuses for the alleged failure. (RAF Tab 82).

52. KRW declined to sign two FHWA-proposed Modifications that would have extended the completion date, on the grounds the time offered was inadequate and the question of compensation was not addressed. (RAF Tabs 87, 91, 93, 95; Tr. 92-95, 488).

53. On September 21, 1989, the Contracting Officer wrote to KRW, stating that the draft manual produced by KRW "still misses its mark as a 'how to' document for practicing hydraulics engineers" and, as a result, FHWA would publish it as an "Implementation Package" rather than as a Hydraulic Engineering Circular. He therefore requested KRW to eliminate from the draft all references to its being a Circular. The letter also listed seven deficiencies perceived by the FHWA to date, including a September 1987 notice of a deficiency that was as yet uncorrected and KRW's inclusion in the draft of equations that yielded "unrealistic results." KRW argues in its post-trial Reply Brief [37] that it never completed the contract work because this was another change directed by the FHWA. Reviewing the paucity of evidence on the nature of this alleged change, the Board finds that to the extent this was a change, it was made to accommodate deficiencies in KRW's work product.

54. On October 26, 1989, the Chief of the FHWA Engineering and Highway Operations Implementation Division requested the Contracting Officer to terminate the contract for convenience, due to an alleged lack of cooperation by the contractor which threatened the timely availability of the manual. On November 8, 1989, the Contracting Officer issued the requested termination in the form of a very brief three-line letter, advising KRW that detailed instructions would follow within ten days. Those instructions, based on Federal Acquisition Regulation § 52.249-2, were included in a letter dated November 21, 1989. (AF Tab 16). This letter was never received by KRW, and may not have been sent; see Finding 55.

55. Eleven months later, by letter of September 27, 1990, KRW advised the Contracting Officer that it was still awaiting the detailed instructions. (RAF Tab 100). In response, the FHWA sent KRW a copy of a letter dated November 21, 1989, which it states had been mailed to KRW at that time. (RAF Tabs 101, 99 [38]) The November 21 letter set out detailed instructions for KRW to follow. At the top appears the legend "Certified Mail—Return Receipt Requested" but the record does not contain any evidence of the FHWA having received the green card, the Postal Service receipt. At the bottom of the letter appeared blanks for KRW to acknowledge receipt; the only copy in the record shows no acknowledgement. Mr. Trainer, the Contracting Officer, acknowledged that he could not prove it had actually been sent. (Tr. 494). The Board must therefore determine that the promised instructions were never received by KRW.

56. On November 5, 1990, KRW submitted what it called a "termination proposal" to the Contracting Officer." The proposal specifically excluded claims which KRW said it would be filing for delays prior to January 1, 1988 and for additional work performed after that date. The proposal sought payment of $3,676.87. The proposal also included one copy of the final manual, complete with table of contents, references, glossary, graph-

[37] Page 4.

[38] The letter at Tab 101 forwarded a copy of the letter set out in Tab 99.

Digitized by Google

ics, and a floppy disc contained these matters. (RAF Tab 103; Tr. 116). The parties have deemed this to be the final delivery under the contract. (Tr. 808, 961; Resp. Ex. 12).

Impact Of The FHWA Direction To Alter The Manual

57. There is a deep difference of opinion between the parties regarding the actual impact of the revisions directed by the FHWA at the December 8 meeting. There is conflicting evidence in the record. We examine the testimony of various witnesses on this subject.

58. Mr. Krylowski, the Contracting Officer's Technical Representative, is not a hydraulics engineer. He possesses a Bachelor of Science degree in Aeronautics and a Masters degree in Engineering Mechanics. He has also completed the studies for a Ph.D. in Structures and Applied Mechanics. (Tr. 299). When called as a witness by KRW, Mr. Krylowski testified that the change basically only purged from the manual the material on scour. (Tr. 288). He also testified that, at the December 8 meeting, the KRW technical employees present were of similar belief (see Finding 29) and made no objection to the changes. (Tr. 267). Mr. Krylowski testified, without contradiction, that in April of 1988 Mr. Machol told him that the work should be completed within two months. (Tr. 293).

59. The respondent called Mr. Philip L. Thompson to testify as both a fact and expert witness. Mr. Thompson is Chief of the Hydraulics and Geotechnical Branch, Bridge Division, FHWA. He is a professional engineer, licensed in Virginia and Pennsylvania, possessing a masters degree in civil engineering with a focus on hydraulics and is a "national expert"—a person who provides technical assistance to state highway departments in support of the federal highway system. (Tr. 797-798, 888-889). He has been involved with the production of a substantial number of hydraulic engineering circulars published by the FHWA. (Tr. 801-802). The appellant conceded his expertise and the Board accepted him as an expert.[39] (Tr. 802).

60. Mr. Thompson, who had been involved with the contract work, testified from his position as an expert witness as follows:

(i) that, as of December, 1987, the draft manual was not ready for publication but was substantially complete, with most of the material it would eventually contain being present (Tr. 808-809, 824) (This comports with KRW's representations to this effect—see Finding 36.);

(ii) that the December 8 meeting that he attended had been called to resolve the question of direction for the manual, for its chapters did not "hang together," and that those present reached an agreement on how to overcome this (Tr. 817);

(iii) that, in his opinion, the effort involved in going from the draft manual as it existed in December, 1987 to the final manual as submitted in 1990 should not have exceeded one month if KRW had remedied the four areas of deficiencies: satisfying editorial comments, producing a chart on hydraulic factors, producing a design procedure, producing an example problem (Tr. 837);

(iv) that of these four areas of deficiency, only the first was ever rectified and the work involved in that effort should not have consumed more than one week (Tr. 838), 40 hours of effort (Tr. 846);

(v) that the removal of the material that the FHWA wished to cull from the manual and the relocating of blocks of text should not have taken more than 20 hours of effort (Tr. 833);

(vi) that the FHWA should have had the complete product by the end of January (Tr. 838);

(vii) that many deficiencies pointed out in FHWA comments were never corrected (Tr. 827, 829-832);

61. Mr. Machol was the only KRW employee, present or former, who testified. He did not testify on direct examination as to his background or credentials. On cross-examination, the respondent's counsel brought out that Mr. Machol was not a hydraulics engineer, although he had "experience" with hydraulic engineering, both educational and in the field. (Tr. 158). The record contains no details of this experience; it does not indicate that Mr. Machol in fact has any expertise. Under the contract, he is not designated

[39] In its post-trial Reply Brief (See three locations: page 6; page 15 with references to transcript page 89 on which this subject is not addressed; and page 17), the appellant seeks to limit the area of expertise of Mr. Thompson or to deny his expertise. However, at the trial the appellant did not seek to limit the area of expertise. (Tr. 802). The Board determines that Mr. Thompson's expertise, as conceded by the appellant at trial, is broad enough to cover the issues before the Board.

Digitized by Google

as a professional staff member.[40] He signed correspondence for KRW as, and was referred to in the pre-contract proposal as, "Project Coordinator." We cannot assume that Mr. Machol has any qualifications as an expert in the area of how much technical effort should have been required to comply with the FHWA directive to split the manual. We accord his testimony none of the weight which would be accorded that of an expert.

62. Mr. Machol produced a chart (App. Ex. 1) from which he testified. The chart stated that KRW worked from mid-March, 1987 until June 20, 1989 in revising the chapters of the draft manual, at which time they were submitted to the FHWA. The chart also shows that the FHWA review was completed in late September 21, 1989. (See also Tr. 1022). Although not shown on the chart, delivery of the final document occurred in November, 1990. (Finding 56). The total period during which KRW was engaged in rewriting was therefore twenty-nine months.[41] In contrast, the chart also shows that KRW needed only ten months (even with the FHWA's failure to provide timely comments) to produce the original manual from scratch. Because of Mr. Machol's failure to attain the status of expert witness, we cannot base on his testimony a finding that in fact the effort for which KRW makes claim was technically justified, and his testimony is not probative to the issue of the extent of the effort reasonably required to reorient the draft manual. His testimony did not distinguish between the effort required to correct deficiencies and the effort to carry out the FHWA-directed revision.

63. In sum, KRW produced no witness, expert or otherwise, to testify with specificity *why* the revamping of the manual consumed the period from December, 1987 (when the alleged change was effected) until November, 1990 (when it was finally delivered), or *why* the revision took so much longer in terms of calendar months than the original effort.[42] Such testimony or other evidence of that nature is an essential part of the appellant's burden of proving that the FHWA caused the additional effort for which claim is made. Absent such proof, the Board cannot make a finding that all of the effort for which claim is made was the fault of the FHWA. In contrast, the FHWA has produced a witness, Mr. Thompson, who possesses expertise and gave his opinion as to the reasonable effect of the FHWA direction to recast the manual and the effort that should have been required to carry out that mandate. The Board therefore finds that Mr. Thompson's testimony as to these matters, set forth in Finding 60, is accurate.

The Claims

64. On September 1, 1988, KRW submitted a request for additional compensation of $48,983.41 for three categories of costs.[43] (RAF Tab 63). The calculation of this amount was based on KRW's estimate of the percentage of cost increase; no basis was given for selecting these percentages rather than some other amount. The letter referenced KRW's earlier June 10 letter. (Finding 41). The compensation sought was as follows:

a. $8,558.85 for delays and costs resulting from the FHWA's failure to furnish timely comments, an amount calculated by estimating that the resulting effort/costs was 14% of that which would otherwise have been required, and taking 14% of the amount ($61,134.70) in the contract that was attributable to Task C.

b. $33,624.08 for delays and costs for revising the manual, pursuant to the December 8 meeting (see Findings 27 *et seq.*), after it had already been prepared and submitted, calculated at 55% of the amount in the contract for Task C.

c. $6,800.00 for developing and obtaining approval of a new manual outline, pursuant to the reorganization of the manual directed at the December 8 meeting, calculated at 80% of the amount in the contract for Task B. (Tr. 196)

65. By letter of November 21, 1988 (AF Tab 70), the Contracting Officer denied this

[40] Finding 7.b.

[41] 15 months from March, 1988 to June, 1989, plus 14 months from September, 1989 to November 1990.

[42] Although KRW alleges otherwise, the record does not show the existence of any FHWA-directed changes after December, 1987. The post-December changes were suggested by KRW (Finding 40) or effected to accommodate KRW's deficiencies in performance (Finding 53).

[43] The request was not certified pursuant to section 6(c)(1) of the Contract Disputes Act of 1978, 41 U.S.C. § 605(c)(1). It was not required to be, for the amount then sought was less than $50,000 and, as we have determined under "Date of Claim/Interest" in the "DISCUSSION" portion of this Opinion, it was not a claim within the meaning of the Act.

Digitized by Google

request for compensation on the grounds that the facts did not support this request, without giving detailed reasons therefor other than that quoted in the following sentences:

> "You stated in your letter of June 10, 1988, that the Contracting Officer's Technical Representative required you to perform additional effort under the contract. You are reminded that SECTION G—CONTRACT ADMINISTRATION DATA, CONTRACTING OFFICER'S TECHNICAL REPRESENTATIVE (COTR), states that the COTR is not authorized to change the scope of work as stated in the contract, to make any commitments or otherwise obligate the Government or authorize any changes which affect the contract price, delivery schedule, period of performance or other terms or conditions."

The letter closed with the controversial sentence[44] set forth in Finding 44.

66. On April 22, 1992, KRW submitted a certified claim for $70,076.98, but only for work performed subsequent to December 8, 1987.[45] (RAF Tab 107). KRW arrived at this figure by taking $33,179 for direct labor effort during the period between December 9, 1987 and November 9, 1989, when the contract termination became effective. December 9 was chosen as the controlling date because it was the day after the meeting (see Finding 27) at which the FHWA advised KRW that it wished to change the contents of the manual. The claim listed this amount by individuals allegedly rendering the effort, as follows:

Dr. Richardson	$ 825.00
Mr. Johnson	17,925.00
Mr. Chang	500.00
Mr. Julien	742.00
Mr. Machol	11,341.00
Mr. Mahotra	1,120.00
Mr. Kozan	570.00
Mr. Taylor	156.00

To this $33,179 KRW added overhead at 85% ($28,202.15), general and administrative expense at 18% ($11,048.61) of labor and overhead, and profit at 10% ($7,242.98) of the sum of these. These percentages were taken from the original proposal.[46] The total was $79,672.73. From this amount, KRW deducted $9,595.76, the amount KRW says it had included in its original proposal and would be attributable to the work which was yet to be performed as of December 9.[47]

67. The Contracting Officer denied this claim in its entirety by decision dated September 11, 1992, from which the instant appeal has been taken. The stated reason was that the contract was a fixed-price contract in the amount of $107,724 which had been terminated for convenience, that upon termination KRW had submitted a "final bill" in the amount of $5,740[48] which had been paid, and that therefore KRW had "been paid the entire amount due under the fixed price contract." While referring to the April 22 claim submittal (AF Tab 107, Finding 66), the decision did not address the bases for the claim KRW had filed. (RAF Tab 109). (This denial would seem to say that the payment of the termination proposal constituted an accord and satisfaction under the contract.[49] However, the termination proposal had specifically reserved the right to file the instant claims, so the defense of accord and satisfaction would not lie and we do not consider this further.)

68. By letter of March 9, 1993 to the Contracting Officer (Attachment A to the Amended Complaint[50]), KRW advised the Contracting Officer that it had erred in submitting the April 22, 1992 claim, in that it had omitted the $8,558.85 item for financial impact on KRW resulting from FHWA-caused delays prior to December 8, 1987.[51] As corrected, the claim sought $78,635.83. (Tr. 119-120).

69. On June 7, 1993, KRW filed an Amended Complaint, raising the *ad damnum* to $173,848.45. There were three elements of this $95,212.62 increase. *First,* a recalculation of direct labor claimed for each

---

[44] "Deliver to the Federal Highway Administration in present form, all materials pertinent to this contract. In addition, please submit the enclosed forms and your final invoice."

[45] *I.e.,* not including the claim for the FHWA's earlier delay in furnishing comments on draft chapters. See Finding 64.a.

[46] See Finding 2.

[47] The $9,595.76 is consistent with and supports our Finding 36 as to the state of project and manual completion as of December 8, 1987.

[48] This refers to KRW's termination proposal (Finding 56).

[49] The respondent has not alleged this before the Board.

Digitized by Google

year[52] of contract performance yielded a total of $34,305.50 rather than the previously used total of $33,179.00. *Second,* KRW made a major revision to the labor and general and administrative overhead rates, from 85% and 18% respectively over all the contract period, to the rates set out in the table in Finding 78. *Third,* KRW added $43,462.11 as "expenses to collect" the amounts claimed.[53] Notwithstanding the drastic change in dollars, the Board finds that this is essentially the claim that was before the Contracting Officer, the difference being merely the result of revising overhead rates to reflect what the appellant understood the Defense Contract Audit Agency auditor to have found, plus the adding of alleged costs to prosecute the claim.

70. The direct labor shown in the Amended Complaint as resulting from the FHWA's alleged delays and changes, $34,305.50, was broken down by individuals and fiscal years as set forth in Table 1 of this Opinion. Appendix I [Not reproduced—CCH.] to this Opinion sets forth the effort expended on a monthly basis, as expressed in statements of effort the monthly Progress Reports from performance inception until KRW ceased including the statement of effort in its monthly Reports. Comparing KRW's proposal (Finding 2), KRW's pre-change effort (Appendix I), and KRW's post-change effort, we find:

(i) Prior to the first day of December, 1987 (eleven days before the alleged change was ordered), KRW had expended a total of 1,173 labor-hours of effort (excluding secretary and draftsman). KRW is claiming for 1,089[54] labor-hours alleged incurred subsequent to January 31, 1988 (almost two months after the change). In other words, KRW is claiming that the redirected manual produced in compliance with the FHWA's December 11 directive consumed almost as much (92.8%) effort as KRW had expended to produce the manual in format as originally contemplated to a 98% stage of completion,[55] notwithstanding that no additional research was needed.[56]

Periods KRW FY Persons	2/87-1/88 1987 Hours	2/88-1/89 1988 Hours	2/89-1/90 1989 Hours	2/90-1/91 1990 Hours	TOTAL Hours
Richardson ..	28	29	0	0	57
Johnson	76	623	38	0	737
Julien	0	53	0	0	53
Chang	18	2	0	0	20
Machol	30	205	81	58	374
S/T	152	912	119	58	1,241
Mahotra	0	0	0	80	80
Kozan	0	0	38	0	38
Taylor	0	0	20	0	20
TOTAL	152	912	177	138	1,379

Table 1: Breakdown of direct labor hours claimed.

(ii) The monthly Progress Reports from October 1987 through April 1988 (the last Report containing a breakdown of labor-hours[57]) indicate that Mr. Machol personally expended zero hours during that period. The Progress Reports (see Appendix I) also show that he expended 33 hours during the period February 1 through September 30, 1987. The Amended Complaint alleges that, during the period February 1, 1987 through January 31, 1988, Mr. Machol expended 30 hours of effort due to the delays in furnishing comments and due to the change, *i.e.,* that only three hours of his effort during a twelve-month period were not additional work.

(iii) When questioned about discrepancies between hours claimed and hours reported in the Progress Reports, Mr. Machol testified that many hours had been expended which had not been reflected in the Reports. (Tr. 218 *et seq.*).

[52] The recalculation was performed as part of an exercise, requested by the Defense Contract Audit Agency auditor (Finding 77), to calculate overhead rates for each KRW fiscal year of contract performance.

[53] See Findings 72-74 and "III. Claim Prosecution Fee" under the "DISCUSSION" section of this Opinion.

[54] In Table 1, the difference obtained by subtracting 152 hours of pre-December 1, 1987 effort from the 1,241 claimed.

[55] Finding 36.

[56] Finding 29.

[57] Finding 38.

Digitized by Google

71. Included in the hours for which claim is made are eighteen hours for the time spent in December, 1987 in preparing for and attending the December 8 meeting. Mr. Machol testified that these were hours not reflected on KRW's monthly report for that month. (Tr. 219). He further testified that, starting in December, KRW incurred much effort which was not reflected on vouchers and monthly reports. (Tr. 219-220). To the extent KRW is claiming for hours of effort that were not reflected on contemporaneous statements of effort, it is undertaking a heavy, almost insurmountable, burden of persuasion. KRW has not met that burden.

Claims Collector

72. Mr. Machol testified that KRW hired E.A. James Company to "pursue and collect" the monies due it from the FHWA. (Tr. 119). The appellant also offered into the record a notarized "To Whom It May Concern" letter dated June 6, 1993, attesting that 25% of the funds received from this claim would be paid to "the E.A. James Company at 6109 Harmon Place, Springfield, VA 22152 for services rendered for the collection of the funds." (App. Ex. 8). This is also the address reflected on the Board's docket records as the address of KRW's representative in these proceedings. The E.A. James Company is not a corporation. Rather, it is a sole proprietorship, established by Mr. Machol in November/December, 1990 after he had sold his interest in KRW. (Tr. 188). E.A. James Company is not a law firm and Mr. Machol not an attorney. (Tr. 188, 194). Because the nature of E.A. James Company's relationship to this appeal is an essential element of KRW's claim, we review in detail the other materials and evidence in the record on this point:

(i) In entering his trial appearance for the record, Mr. Machol stated that he "worked for" E.A. James Company and was also a Vice-President of KRW. (Tr. 3).

(ii) Mr. Machol testified that KRW has an expense in that it must pay 25% of the amounts collected to the E. A. James Company "as a collection agency on all of the funds it collects." (Tr. 145).

(iii) Mr. Machol testified that, when he sold his interest in KRW to Mr. George Earnhart,[58] the latter was understandably reluctant to include in the consideration any element for what might be recovered from the FHWA (Tr. 187):

"It was agreed, however, that it was to KRW's advantage, since I was familiar with those particular four claims more than he was, that after I retire, for KRW to hire E.A. James Company, *specifically me,* to work on pursuing those claims." (Emphasis added).

(iv) Regarding the ultimate disposition of the proceeds of any recovery, Mr. Machol testified (Tr. 189):

"If we collected the money after we paid expenses and the E.A. James for collecting it, half of it would go to KRW, George Earnhart, who owns 100 percent of it; the other half would go to me, which is exactly what would have been done if the money had been collected prior to my selling the business."

(v) Mr. Machol testified that E. A. James Company is a collection company, "set up to perform that and other functions." (Tr. 194).

(vi) Mr. Machol testified that E. A. James Company was being paid 25% to collect the claim, without regard to the number of hours expended *by Mr. Machol,* because, to use Mr. Machol's words, "We felt this was typical of the way a lawyer would do it." (Tr. 203). Mr. Machol also expressed the view that this amount should be paid by the FHWA because he understood that, under the Federal Acquisition Regulation, "*legal fees* can be collected and other expenses can be collected if they were incurred by the company and not within the company." (Tr. 204). (Emphasis added).

(vi) Mr. Machol further testified (Tr. 204) that:

"This involves all of the work that I performed after I left KRW and for the E.A. James. It was after November when I sold my interest in KRW and was off on my own."

(vii) Mr. Machol again testified as to the nature of the services that E. A. James Company was to perform (Tr. 230-231):

"It's taken a lot of work to prepare this claim against the Federal Highway Administration. It's taken a lot of time working with the auditor to do what had to be done to deal with the auditor which Federal Highways requested—came in.

It's taken a lot of time filing the appeals. It's taken a lot of time to come here. This

[58] See our earlier decision, referenced in Footnote 1 of this Opinion.

is what E.A. James is getting paid for for collecting for the services performed.

As far as these four specific accounts receivable, you can call them, at the time I and Mr. Earnhart agreed that he was going to buy me out, we totalled what the assets were with the liability of the company. I determined what I would be entitled to up to that point.

He is not going to pay me for assets that he has questions that he will collect. I, on the other hand, am not going to walk away from assets which he might collect and I am entitled to a part of. So it was agreed—two different opinions—that these could be collected if effort was put in; and the opinion either we would collect them if we put the effort in and how to find the time to collect them.

So it was an excellent opportunity with my leaving the company, to enter into an agreement and say, okay, you go and you pursue these four claims. You continue as an officer of KRW with regard to these four claims. You will be paid a fee for performing that services and you will be reimbursed for out-of-pocket expenses that you incur—parking in this building, whatever else I incur as direct costs. That's what I've been doing.

So far, I've collected two of those. I get a fee. What is left over is divided between collectively E.A.—KRW and Mr. Earnhart and his wife, who are the people we sold to, and I get part of it after the expenses are paid. It's a normal type of arrangement and nothing should made [sic] out of it that isn't there." (Emphasis added).

73. In its post-trial Reply Brief,[59] KRW and Mr. Machol have made certain admissions which clearly state the functions of the E.A. James Company with regard to the claims before the Board. Due to the seriousness of what is stated, they are quoted verbatim:

"Mr. Machol is pursuing this and other KRW account receivables as an employee of the E. A. James Co. The E.A. James Co. was hired by KRW to pursue four specific account receivables (EA-8 [60]).

"55. FHWA states that the E.A. James Co. was established "to pursue KRW's three contract and one IRS dispute." [sic] The pursuit of four of KRW's account receivables is just one of many reasons for the establishment of the E. A. James Co.

"The E.A. James Co. was hired as an Agent of KRW to pursue certain account receivables. There is no requirement that the filing of a claim with a Federal Agency or processing a complaint and appearing before a BCA must be accomplished by a lawyer, so it must not be legal work. The E. A. James Co. is much more that [sic] a "collection company".

"The quantity and quantity [sic] of the work the E.A. James Co. has performed for KRW is well documented by the: . . . [61]

(27) preparation and submittal of KRW's 38 page post hearing brief, covering both statements of fact and legal arguments as to why KRW's claim should be approved; and

(28) review of FHWA's post hearing brief and the preparation and submittal of KRW's rebuttal to the statements of fact and legal arguments put forward by FHWA in its defence." . . .

"56. . . . They [Mr. Earnhart and Mr. Machol] also testified that Mr. Machol continued as an officer of KRW to pursue the collection of four of KRW's account receivables. This is the only reason Mr. Machol continued as an Officer of KRW Inc. Mr. Machol's authority, as an officer, from November 1990 on was limited to the collection of funds owed to KRW from the IRS and from three projects. This agreement was necessary if the E.A. James Co. was to pursue the four KRW account receivables."

The Board finds that each of the activities described in the numbered paragraphs quoted above, taken both separately and collectively, constitutes the practice of law and the Reply Brief constitutes an admission that the representation of KRW was in fact carried out by the E.A. James Company. The Board notes for the record, that the transcript testimony described above was the first intimation that the E.A. James Company was representing KRW in the actual proceedings before the Board, and even at that, it is only in hindsight that the true status of E.A. James Company is brought to light. If the Board had been advised that Mr. Machol and E.A. James Company were representing KRW rather than Mr. Machol as a Vice-President of KRW, he would not have been allowed to continue. The Board further notes for the record that, in presenting KRW's arguments that led to the decision in *KRW, Incorporated,* DOTBCA NO. 2572, 94-1 BCA ¶ 26,268 (1993) (see footnote 1, *supra*) Mr. Machol made the positive statement that he was representing KRW as a Vice-President of KRW, and the Board accepted his statement as truthful. At that time, E.A. James Company was represented as being a collection agency, not as a practitioner before the Board.

74. The agreement called for E.A. James Company to be paid a flat 25%. The compensation to be paid to E.A. James Company is not on a per hour or per day basis for services rendered in putting together a claim. Rather, it is a contingent fee dependent upon the recovery in this litigation. Considering all the evidence recited above, the Board finds that KRW has entered into an obligation to pay E.A. James Company a contingent fee of 25% of any recovery in return for services, including representation of the KRW before the Board. The Board also finds that, to the extent that E.A. James Company is to be paid all or a part of this fee for filing and prosecuting the appeals before the Board, as indicated in the italicized extract above from Transcript page 230, and to the extent described in the extract from the Reply Brief (Finding 73), E.A. James Company has engaged in practicing law before the Board.

Audit Report and Costs Incurred

75. KRW maintained its records on a fiscal year basis, from February 1 to January 31. Contrary to normal practice, it named its fiscal year on the basis of the calendar year in which the fiscal year began, rather than the calendar year in which it ended. Thus, the fiscal year commencing February 1, 1990 and ending on January 31, 1991 was called

©1994, Commerce Clearing House, Inc.

Digitized by Google

Fiscal Year 1990. (Tr. 770). The Defense Contract Audit Agency auditor, Mr. Robert Gentile, persisted in referring to KRW's fiscal years by the calendar year in which the fiscal year ended, creating some confusion in the record. (Cf. Tr. 771).

76. The FHWA obtained an Audit Report from the Defense Contract Audit Agency on KRW's claim as described in Finding 66. At that time $70,076.98 was claimed, including $33,179 in direct labor. To the direct labor was added labor overhead at 85% and general and administrative ("G&A") overhead at 18%, the rates accepted by the FHWA when it negotiated the original contract.[62] The direct labor claimed included $17,925 for Mr. Johnson. The appellant has claimed that, as a result of the change effected by the FHWA on December 8, Mr. Johnson expended 661 hours subsequent to February 1, 1988[63] and prior to February 1, 1990.[64] (See Table 1). He, Dr. Richardson, and Mr. Chang worked on no other projects for KRW. (Tr. 121; RAF 107). The Audit Report does not question the expenditure of the direct effort set forth in the claim. (Tr. 693, 697, 699). However, it qualifies that position by saying that there was no technical review of the direct labor-hours claimed.[65] We interpret this as meaning that the Defense Contract Audit Agency does not question that the labor-hours claimed were in fact expended, but expresses no opinion as to the nature of the effort involved in those hours or whether they involve compensable effort.

77. The auditor advised KRW that it would have to apply direct overhead and general and administrative overhead at rates in effect for the years in which the labor was expended, rather than a single rate over the entire period of the contract. (Tr. 122). KRW had not made any such calculations, but set about performing them. (Tr. 123; Audit Report, page 2). It calculated, for each of the four years of contract performance, a greater rate than had been claimed. (Tr. 124). These newly-calculated rates are set forth in Finding 78.

78. KRW set forth these revised labor overhead rates and G&A rates in its Amended Complaint filed June 7, 1993, as follows:

KRW Fiscal Year	Labor Overhead Rate	G&A Rate
1987	149.25%	23.55%
1988	222.18%	21.08%
1989	116.76%	17.55%
1990	94.17%	15.06%

79. In part (a) of the Audit Report, under the heading "Circumstances Affecting the Audit", the auditor discussed overhead rates. The first sentence of the second paragraph from that section, quoted below in italics, has become controversial between the parties. It is set out below in context:

> "The contractor determined its claimed indirect costs by applying the indirect rates negotiated in the contract of 85 percent and 18% for overhead and G&A, respectively. The contractor could not readily determine the actual indirect costs incurred during the claim period of the contract because its accounting system does not accumulate indirect costs by indirect expense pool.
>
> "*The contractor provided actual indirect expense rate history which reflected significantly higher indirect rates incurred when compared to the indirect rates proposed on the claim.* However, we determined the contractor's supporting documentation for its actual indirect rate calculations contained numerous deficiencies and errors. Among the deficiencies, the contractor charged all indirect costs to one account, and allocated the costs to its overhead and G&A expense pools, but was unable to support the basis of the allocation. Furthermore, the contractor could not provide adequate support for its determination of the overhead allocation base of direct labor dollars. In addition, the contractor's G&A rate calculations contained material mathematical errors ....
>
> "The contractor confirmed to us in discussions that the indirect rate history was

[62] Finding 2. These were also the rates in the original request for equitable adjustment. See Finding 66.

[63] This date, taken from the Amended Complaint, is selected because it is the only "hard" date in the record from which we can determine hours attributable solely to the change.

[64] The Amended Complaint shows no time expended by Mr. Johnson thereafter.

[65] Audit Report, page 2.

Digitized by Google

not readily available, and because of this condition, it could not determine the profit or loss incurred under the contract. Based on the above cited inadequacies of the contractor's accounting system, and the contractor's inability to properly accumulate overhead and G&A costs, the results of our review of the allowable costs incurred and the indirect rates incurred during the claim period are therefore qualified." (Emphasis added).

80. The appellant argues that the first sentence of the second paragraph quoted in Finding 79 above ("The contractor provided . . . on the claim.") indicates that the auditor had agreed with the appellant's now-claimed overhead rates (set out in Finding 78) vice the 85% and 18% rates claimed initially (Finding 66). (Tr. 125, 128-129). After KRW had called the auditor, Mr. Gentile, to the stand as its own witness, attempting to prove its monetary claim by the auditor's testimony, the auditor testified that he found the claimed rates to be unsupported and unreliable, and therefore they were not audited. (Tr. 712-713, 721-724, 727-728). The auditor's testimony, while consistent with the Audit Report, apparently surprised the appellant, which seems to have interpreted the Report differently.

81. The Board does not accept KRW's interpretation of this sentence as correct. Read in context, we construe this sentence as meaning that during the audit KRW provided a history which purported to show that KRW's actual overhead rates were higher than the claimed 85% and 18%. The sentence does not mean that the auditor accepted the history presented him as being correct. While standing alone one *might* consider the sentence ambiguous, one must look at the sentence in context. The sentences before and after this sentence make clear that, because he deemed the material to be unreliable, the auditor would not accept the newly-proffered rates as being correct, and only because he deemed that KRW's historical records could not support *any* overhead rates, he did not question the tentative rates that had been agreed to by the FHWA during negotiations (85% and 18%) becoming the final rates. There is nothing in the record to demonstrate what the actually-incurred overhead and G&A rates were.

82. Mr. Gentile is a certified public accountant (CPA).[66] He had been such for two-and-one-half years prior to the trial and had been with the Defense Contract Audit Agency for four-and-one-half years, during which he had performed over one hundred audits. (Tr. 774). The Board therefore determines that he was qualified to express an expert opinion as to the condition of KRW's records used in support of the claim before the Board.

83. In response to a question by Mr. Machol as to whether he considered KRW's records to be "in shambles," [67] Mr. Gentile responded in the affirmative. (Tr. 785). Specifically, he testified: that while they were adequate to trace direct labor costs, KRW's records were poor, among the worst of similar size companies; that in effect there was no cost accounting system; that KRW did not use industry-accepted accounting methods or comply with the cost-accounting provisions of the Federal Acquisition Regulation; that KRW's financial records did not support the claimed overhead and general and administrative expense rates; that KRW didn't have an unallowable cost pool; that, when requested to provide data on indirect rates, it took KRW two weeks to provide them, an unduly long period. Mr. Gentile concluded that no reliance can be placed on KRW's statements of indirect costs, overhead rates, or general and administrative expense rates (Tr. 775-781).

84. In order to rebut Mr. Gentile's testimony regarding the condition of KRW's records, KRW presented testimony by Mr. George Earnhart, current president of KRW. KRW did not endeavor to present Mr. Earnhart as an expert in the field of accounting, nor was he asked to explain the accounting system or any portion of it. Mr. Earnhart testified that during September or October 1990, the Dallas Area Rapid Transit Authority had conducted an audit of KRW's records as part of the administration of a cost-plus-fixed-fee contract (apparently between the Authority and LTI Consultants, Inc., with Parsons, Brinkerhoff, Quade, and Douglas performing some sort of administrative role, and with LTI in turn subcontracting to KRW [68]), and expressed no problems. A copy of an extract from this report (App. Ex. 18) shows that it did not discuss the

[66] A certified public accountant is able to express opinions on financial reports and financial statements. Most states require that someone be a certified public accountant in order to be able to express such a formal opinion. (Tr. 792).

[67] A term first used in this case by respondent's counsel in his opening statement. (Tr. 15).

[68] The Exhibit (App. Ex. 18) contains a series of disconnected sheets taken from several more voluminous documents. The contents of the Exhibit

Digitized by Google

condition of KRW's records, but merely stated that review of the records of KRW had "resulted in adjustments ... to KRW's overhead rates" and the adjusted overhead rates exceeded the contract ceiling, so that the latter would govern. Because the auditors were not called as witnesses and the documentation placed in the record is so sketchy, this Exhibit is entitled to little if any weight on the issue of the condition of KRW's records, and cannot overcome the first-hand testimony by Mr. Gentile. Mr. Earnhart also testified that during April, 1993, the Defense Contract Audit Agency had audited its records in connection with a proposal it had submitted to the Nuclear Regulatory Commission, and that (after some discussion), the Audit Agency had approved KRW's accounting system. However, Mr. Earnhart also testified that when he bought out Mr. Machol in late 1990, he replaced the accounting software with a new program (Tr. 935). The effect of this change was not brought out by either party, and therefore we cannot tell if this was a substantial revision to the accounting system or what would be its effect. But, clearly, the accounting system in effect when these recent audits were performed was not the accounting system in effect when costs for this contract were being recorded.

85. While the condition of the accounting system at the time of the audits may be relevant to KRW's *present* ability to record and allocate costs, it is not relevant to the ability of the accounting system in effect at the time of contract performance to properly record and allocate costs. The testimony by Mr. Earnhart regarding the recent audits is not relevant and therefore not sufficient to overcome Mr. Gentile's testimony. KRW did not present any expert testimony to contradict Mr. Gentile's statements of his opinion as to the condition of KRW's records. It has not rebutted the statement [69] in the audit report (above) regarding KRW's lack of indirect rate history or inability to determine profit or loss. On the basis of Mr. Gentile's uncontroverted testimony as to the condition of KRW's records,[70] borne out by the testimony regarding the delays KRW experienced in putting together indirect cost figures that Mr. Gentile had requested during his audit, the Board finds that, during the period of performance of this contract, KRW did not have in place an accounting system which could properly record and allocate costs, especially indirect costs.

DISCUSSION

The record amply demonstrates that there were many failings in the FHWA's administration of this contract.[71] In fairness to the Contracting Officer, it must be stated that for much of the period when problems were developing, he was absent due to extended illness. Nevertheless, the existence of contract administration deficiencies does not automatically mean that the appellant is entitled to all the compensation it seeks. The function of the Board of Contract Appeals or the Court of Federal Claims under the Contract Disputes Act is not to punish the government for its failings, but to assure to contractors that they are made whole for any loss that they may have suffered as a result of those failings. This requires a claimant to prove that it was injured and the monetary amount necessary to compensate the claimant for the injury. We proceed to consider the various claims.

I. Date of Claim /Interest

Section 12 of the Contract Disputes Act of 1978, as amended, 41 U.S.C. § 611, provides for the accrual of interest:

> "Interest on amounts found due contractors on claims shall be paid to the contractor from the date the contracting officer receives the claim pursuant to section 6(a) [41 U.S.C. § 605(a)] from the contractor until payment thereof...."

When KRW submitted its request for adjustment to the FHWA on September 1, 1988 (Finding 64), there was no dispute between the parties, and it does not appear that even KRW considered it to be a claim under the Disputes Act. Certainly, when the Contracting Officer denied it in correspondence that fell short of being a Contract Disputes Act decision (RAF Tab 630), KRW made no protest that it had not received a decision conforming to the Contract Dis-

(Footnote Continued)

are of varying degrees of legibility, and do not always indicate to which contractual relationship they are directed. Some appear to refer to a subcontract other than that between LTI and KRW.

[69] "The contractor confirmed to us in discussions that the indirect rate history was not readily available, and because of this condition, it could not determine the profit or loss incurred under the contract."

[70] Elicited from him by the appellant itself after having called him as a witness. (Finding 83).

[71] For example, see the deficiencies noted in Findings 11, 12, 14, 17, 18, 20, 44, 46, 48, 49, 50, 55, 65, and 67.

Digitized by Google

putes Act and implementing regulations. Thus, the September 1 request for equitable adjustment was not a claim under the Act. *Dawco Construction, Inc. v. United States* [37 CCF ¶ 76,056], 930 F.2d 872 (Fed. Cir. 1991). Accordingly, interest did not start to run at that time.

In contrast, KRW's April 22, 1992 letter called itself the formal submission of a claim and included the certification required by the Contract Disputes Act for all claims seeking more than $50,000.00. It sought $70,076.98. It is this submission that constitutes the first formal submission of a claim satisfying the Contract Disputes Act as interpreted by the Court of Appeals in *Dawco,* and it is the date of this submission, April 22, 1992, from which interest, at the rate established pursuant to section 6(a) of the Act, must be calculated.

II. Claim Prosecution Fee

The appellant is seeking the sum of $43,462.11 as a claim prosecution fee, one-third of the amounts claimed. By agreement with E.A. James Company, KRW would pay that firm 25% of any amount recovered. E.A. James Company, a sole proprietorship owned by Mr. Machol, was formed at the end of 1990, specifically to pursue four "accounts receivable" that KRW had against various agencies. [72]

KRW argues that, although the obligation to E.A. James Company is for 25% of any amounts recovered, in order for KRW to be made whole by receiving the entire amount of compensation to which the Board may find it to be entitled, it is necessary that any such award be increased by one third. (Tr. 145-146,202). *If* the Board were to hold that the appellant were entitled to recover for the amounts paid to E.A. James, and *if* the Board were to rule that KRW were to be made whole apart from the costs of recovery, then KRW's argument would be mathematically correct. [73]

The basic rule in the United States is that each party to suits at law bears its own costs unless there is statutory authority permitting a shifting of that burden. *Alyeska Pipeline Service Company v. Wilderness Society,* 421 U.S. 249 (1975). When the party from whom costs of litigation are sought happens to be the United States, as is the case here, there is another barrier to overcome, the doctrine of sovereign immunity. Under that doctrine, the United States is only liable to the extent it has expressly consented to subject itself to liability.[74] However archaic, unjust, and criticized this doctrine may be,[75] it still stands as a bar unless a specific waiver can be found.

Therefore, at trial, the Board specifically directed the parties to address in their post-trial briefs the legal basis for granting so much of KRW's claim as seeks 25% of any recovery as a contingent fee to be paid to E.A. James Company. (Tr. 146, 204).

The Board rules that KRW is not entitled to recover any of this claim item, for three reasons. *First,* there is no applicable statutory authority for such payment. *Second,* recovery is contrary to the mandate of regulation. *Third,* in representing the appellant, E.A. James has engaged in the unauthorized practice of law and therefore should not be entitled to receive payment for such action.

A. Lack Of Statutory Authority

The only statutory authority for the Board to award the costs of prosecuting a claim under the Contract Disputes Act, and the only waiver of sovereign immunity of which we are aware that is pertinent to this case, is the Equal Access to Justice Act, 5 U.S.C. § 504. The Act permits a prevailing, otherwise qualifying claimant to recover "the reasonable expenses of expert witnesses, the reasonable cost of any study, analysis, engineering report, test, or project which is found by the agency to be necessary for the preparation of the party's case, and reasonable attorney or agent fees." Paragraph 504(a)(2) provides that a claimant seeking an award of fees and other expenses under the Act shall submit its application "within thirty days of a final disposition in the adversary adjudication."

[72] The others were against the Puerto Rico Department of Transportation and Public Works, the London Transport international consultant, and Internal Revenue Service on a tax matter. (Tr. 187; Resp. Ex. 7).

[73] For example, if the Board were to rule that KRW was entitled to an equitable adjustment of $100.00, from this sum KRW would pay E.A. James Company $25.00 and KRW would only net $75.00, so that it would not be made whole. But if the award were increased by 1/3, to $133.33, then after paying E.A. James Company 25% of that sum, or $33.33, KRW would net the $100.00.

[74] See *Irwin v. Department of Veterans Affairs,* 498 U.S. 89 (1990) for a relatively recent discussion of sovereign immunity.

[75] For example, see the concurring opinion by Circuit Judge Plager in *Wood-Ivery System Corporation v. United States,* 1993 U.S. App. LEXIS 23178, Ct. App. Fed. Cir. No. 92-5019 (September 9, 1993).

©1994, Commerce Clearing House, Inc.

Digitized by Google

Although the appellant's claim, as set forth in the Amended Complaint, does request compensation for the amounts due E.A. James Company/Mr. Machol as a cost incurred in conjunction with this litigation, such a prayer in a complaint is not a valid claim under the Act; a separate, formal application is required. *Inslaw, Inc.*, DOTBCA Nos. 1609 *et al.*, 89-3 BCA ¶ 21,901 (1989) at 110, 208; *J.M.T. Machine Company, Inc. v. United States*, 829 F.2d 26 (Fed. Cir. 1987).

Under the above-quoted extract from the Equal Access to Justice Act, 5 U.S.C. § 504(a)(2), an application for relief under the Act must be submitted *after* the adjudication. See *Woodington Corporation*, DOTBCA No. 2592, 93-3 BCA ¶ 26,090 (1993). In the case of the instant appeal, the day of adjudication is the date of this Opinion. The time limits of the Equal Access to Justice Act for filing a claim thereunder are quite limited and must be strictly construed. *Nikiforos P. Kalfountzas, d/b/a Engineered Electric*, DOTBCA No. 1819, 87-2 BCA ¶ 19,768 (1987). The claim for the costs of prosecuting the underlying claim is premature.[76]

B. Regulatory Proscription

Section 31.205-33 of the Federal Acquisition Regulation, *as in effect on the date of this contract* and therefore the provision governing this contract,[77] 48 C.F.R. § 31.202-33 (1986),[78] addresses the question of whether a contractor may recover the costs of professional and consultant services. Under paragraph (a) of that section, the general rule is that costs of professional and consultant services may be recovered unless provided by an officer of the contractor or unless specifically prohibited by other paragraphs of that section. Paragraph (d) bars recovery of "costs of legal, accounting and consultant services incurred in connection with ... the prosecution of claims or appeals against the Government (see 33.201) ..."

Inasmuch as Mr. Machol is an officer of KRW as well as an employee of E.A. James Company, recovery under this section would be barred because of the provision of § 31.202-33(a) precluding reimbursement of costs of services provided by an officer.

Going further, Mr. Machol specifically testified that E.A. James Company was retained to pursue "claims" against the government. (Finding 72, items (iii) and (vii)). Since the monies due E.A. James Company are admittedly for the prosecution of claims against the government, Federal Acquisition Regulation § 31.205-33(d) precludes recovery of any amount due or paid to E.A. James Company.

The Board therefore determines that the Federal Acquisition Regulation bars recovery for these costs.

C. Unauthorized Practice Of Law

The appellant is seeking a contingent fee to be paid to E.A. James Company, which is the alter ego of Mr. Machol, for preparing and presenting the claim. This sum is arrived at because that is the way lawyers do it, according to Mr. Machol. (Finding 72(vi)). KRW's arguments as to entitlement to reimbursement for a 25% contingent fee to be paid to the E.A. James Company and the facts KRW presents in support of these arguments are clear admission that there has been an unauthorized practice of law.

Practice before this Board is governed by Rule 29 of the Board's Rules of Procedure, 48 C.F.R. § 6302.29.[79] Under Rule 29, a corporation may be represented by an officer of that corporation or by a Member of the Bar

[76] This discussion of the Equal Access to Justice Act should not be construed as a determination regarding KRW's entitlement to a recovery under the Act, or a determination as to whether the amounts paid or to be paid to E.A. James Company, either as a consultant or as a representative in litigation, qualify for reimbursement under the Act. It is well-established that the Act does not permit recovery of expenses attendant to the preparation and submission of a claim to the Contracting Officer, or of expenses incurred in the discussion of a claim with that official. See *Cox Construction Company and Haehn Management Company, JV v. United States* [35 CCF ¶ 75,660], 17 Cl. Ct. 29 (1989).

[77] The regulation governing contracts awarded at the present time, Federal Acquisition Regulation § 31.205-47(f)(1), is similar.

[78] **"31.205-33 Professional and consultant service costs.**

(a) Costs of professional and consultant services rendered by persons who are members of a particular profession or possess a special skill and who are not officers or employees of the contractor are allowable subject to paragraphs (b), (c), (d), and (e) below when reasonable in relation to the services rendered and when not contingent upon recovery of the costs from the Government ...

(d) Costs of legal, accounting, and consultant services and directly associated costs incurred in connection with ... defense against Government claims or appeals, or the prosecution of claims against the Government ... are unallowable ..."

[79] **"6302.29 Representation of the parties (Rule 29).**

Digitized by Google

of any State, Territory, or the District of Columbia. Under Rule 29, a corporation may not be represented before the Board [80] by another corporation (other than a professional corporation organized under state law for the practice of law) or by an individual who is neither a member of the Bar nor a corporate officer.[81]

The sum total of the evidence set out in Findings 72 and 73 is that the representation of KRW before the Board was being conducted by E.A. James Company and by Mr. Machol as an employee of that company, rather than merely being an officer representing a corporation under the special leave granted by Rule 29.

In ruling on a Motion to Dismiss filed by the respondent, the Board considered and accepted KRW's arguments that it was represented by Mr. Machol and that Mr. Machol was a Vice-President of KRW. *KRW, Incorporated,* DOTBCA NO. 2572, 94-1 BCA ¶ 26,268 (1993), *supra,* footnote 1. The Board therefore rejected the FHWA's contention that Mr. Machol was not a proper representative of KRW and permitted his representation to continue. No mention was made to the Board at that time that the E.A. James Company had been retained by KRW to prosecute the claim, or that Mr. Machol would be representing KRW as an employee of E.A. James Company. This omission, taken with the statements and admissions by KRW in its post-trial Reply Brief (Finding 73), amounts to overreaching of the Board on the part of KRW.

If the appellant had been forthright at the time of the Motion to Dismiss and had stated that it was being represented by E.A. James Company through Mr. Machol as E.A. James Company's employee (as he states in the Reply Brief, Finding 73), rather than by Mr. Machol as KRW's corporate Vice-President (as was stated in KRW's Reply to the Motion to Dismiss), the Board would have barred E.A. James Company and Mr. Machol from conducting the representation. The Board will not allow consultants and others who are not Members of the Bar of a State or other jurisdiction to practice law through the subterfuge of a corporate officer's title.

Looking beyond Rule 29, we are aware of no Federal law (statute, regulation, or case precedence) which authorizes a person or an entity other than a member of any Bar or a corporate officer to represent a corporate appellant at the Board. The general statute regarding representation, 5 U.S.C. § 500, permits any person who has been admitted to the practice of law by any state, territory, possession, or the District of Columbia. E.A. James Company is not admitted to the practice of law in any state, etc., within the meaning of 5. U.S.C. § 500.[82]

(Footnote Continued)

(a) The Appellant. An individual appellant may appear before the Board in person, a corporation by an officer, a partnership or joint venture by a member, or any of these by an attorney-at-law admitted to practice before the highest court of the District of Columbia or any state, commonwealth, or territory of the United States. . . ."

[80] We are not addressing the question of whether a contractor may legally retain consultants for the purpose of assisting it in assembling and formatting a claim, but whether it may retain another company, not a law firm, to represent it before the Board. In the instant case, it is clear that KRW is arguing that E.A. James Company is entitled to its contingent fee money for representing KRW in prosecuting the claim before the Board. See Finding 73.

[81] Inasmuch as Rule 29 has been published in the Federal Register and the Code of Federal Regulations, it has the force and effect of Federal law. 44 U.S.C. § 1507; *Federal Crop Insurance Corporation v. Merrill,* 332 U.S. 380 (1947); *Aerospatiale Helicopter Corporation,* DOTBCA No. 1905 *et al.,* 89-1 BCA ¶ 21,559 (1989) at 108,581. State law governing the practice of law must yield to Federal law governing the practice of law in Federal tribunals. *Baylson v. Disciplinary Board of the Supreme Court of Pennsylvania,* 975 F.2d 102, 111 *et al.,* (3rd Cir. 1992). Thus, Board Rule 29 permitting a non-lawyer officer of a corporation to practice before the Board takes precedence over state prohibitions against such representation (*e.g.:* Code of Virginia, § 54.1-3904, *infra*).

[82] KRW, E.A. James Company, and Mr. Machol are all residents of and physically located in the Commonwealth of Virginia. It is from Virginia that KRW filed its pleadings and participated in telephonic pretrial conferences, and the address of KRW's representative as reflected on the appearance filed with the Board is in Virginia. Therefore, KRW's prime contact is with Virginia and it is the laws of the Commonwealth of Virginia that govern the eligibility of E.A. James Company for admission to practice in the courts of that jurisdiction. E.A. James Company is not authorized to practice law in the courts of the Commonwealth. Code of Virginia, § 54.1-3904 ("Any person who practices law without being authorized or licensed shall be guilty of a Class I misdemeanor."); Virginia Unauthorized Practice Rule 1-101 ("(A) A non-lawyer, with or without compensation, shall not represent the interest of another before a tribunal . . .").

The actual trial was held in the District of Columbia. If the laws of the District of Columbia were to apply, the same result would obtain. See *In Re Amalgamated Development Company,* 375

©1994, Commerce Clearing House, Inc.

Digitized by Google

Accordingly, we find that there is no legal basis under which E.A. James Company could properly represent KRW in the litigation before the Board. The acts, set forth in Finding 73, which the appellant alleges were performed by E.A. James Company as part of its representation of KRW were performed contrary to federal law, to wit, 48 C.F.R. § 6302.29. The Board determines that the actions which appellant's Reply Brief states were performed by E.A. James Company, were actions taken contrary to the federal law (Rule 29) governing practice before this Board. Acts taken contrary to law should not constitute a basis for monetary gain, at the expense of the United States, to the persons performing, or *in pari materia* with the persons performing, such acts. *United States v. Mississippi Valley Generating Company,* 364 U.S, 520 (1961); *K&R Engineering Company v. United States* [27 CCF ¶ 80,205], 222 Ct. Cl. 340, 616 F.2d 469 (1980); *John B. Rich (EZ Construction Company, Subcontractor),* DOTBCA No. 2518, 93-2 BCA ¶ 25,761 (1993), affirmed on reconsideration, 93-3 BCA ¶ 25,990 (1993).

The Board therefore determines that, because E.A. James Company has improperly practiced law before the Board, the government should not bear any costs to the contractor of those improper acts.[83]

C. Conclusion

The Board therefore determines that KRW is not entitled to any recovery on account of the monies it alleges it must pay to E.A. James Company for representing it in the prosecution of the claim, for the three disparate reasons set forth above. That claim element is denied and will not be considered in the following portions of this Discussion in determining the amount of equitable adjustment to which KRW is entitled.

IV. Delays Prior to December 8, 1978

The alleged FHWA delays fall into two categories, delays in rendering the approvals necessary before KRW could commence drafting the manual (*i.e.,* approval of bibliography, glossary, outline) and delays in rendering comments on draft chapters. We consider each category separately.

A. Delays in Approvals of Bibliography, Glossary, Outline

Task A of the contract obligated the FHWA to provide written comments on, or approval of, the bibliography and the glossary within thirty days after KRW submitted the drafts of those sections for FHWA review. Task B of the contract obligated the FHWA to provide comments on or approval of the KRW-drafted outline of the manual, within thirty days after KRW submitted it for approval.

KRW submitted these three documents to the FHWA for approval on January 5, 1987. (Finding 9). Therefore, the FHWA was obligated to furnish comments on KRW's bibliography, glossary, and outline by February 4, 1987.

The FHWA treated its obligation cavalierly. The record amply demonstrates that the FHWA never satisfied its obligations under Tasks A and B to provide comments on these three documents within thirty days after receipt. Although the Contracting Officer's Technical Representative had advised the Contract Administrator on February 2 to issue the approval (Finding 11, RAF Tab 16), formal written action as required by the contract languished until March 19. Although there is adequate evidence that KRW had been told orally of approval of the outline, the Board holds the FHWA to the letter of the restrictions it imposed in the terms of the contract. Government-drafted provisions must be construed as strictly against the government as the government, in another situation, would have them construed against a contractor.

Having so determined that the FHWA failed to abide by the contract, we must ascertain whether KRW suffered injury as a result of the delays in formal approval of the bibliography, glossary, and outline. Mr. Machol acknowledged that the delayed approval of the bibliography and the glossary did not impact progress of the contract work (Finding 14). No costs have been demonstrated to have resulted from the FHWA's tardiness in regard to these two documents. Therefore, as to these two approvals, KRW is not entitled to a recovery.

We turn to the delayed approval of the outline. The contract, in bold-face type to

(Footnote Continued)

A.2d 494 (App. D.C., 1977), cert. den. 434 U.S. 924 (1977); *J.H. Marshall & Associates v. Burleson,* 313 A.2d 587 (App. D.C. 1973).

[83] We leave it to KRW and E.A. James Company to determine the effect of the contract as between them.

Digitized by Google

emphasize its importance,[84] directed KRW not to proceed with Task C, drafting the manual, until the Contracting Officer had approved the outline "in writing." When a government contract specifies that the contractor is to await written direction to proceed with some activity, it behooves that contractor to refuse to proceed until such a writing is received. Legion are the reported cases in which contractors who were brash enough to proceed without written direction suffered pecuniarily as a result. In the instant situation, the bold type face in the contract left no doubt about the contractor's obligation.

Nevertheless, KRW struck out on Task C, proceeding to perform the work necessary to produce a draft manual. KRW elected to take the risk of plunging ahead based on oral statements by a contractually-unauthorized person, the Contracting Officer's Technical Representative, that the outline was acceptable and approved as submitted. (Finding 11). This indeed was a risk, for if the Contracting Officer were to eventually have disapproved the draft outline, KRW would undoubtedly have found itself bearing the wasted expense, due to its patent non-compliance with the contractual prohibition.

As a result, KRW commenced work on Task C right on schedule, in February. KRW has therefore failed to demonstrate that as a result of the FHWA Contracting Officer's failure to provide *written* approval of the outline within the contractually-specified period, performance was delayed or the costs of performance increased. What the facts evidence is shortcomings in the FHWA's contract administration procedures, but no actual damage suffered by KRW as a result.

B. Failure To Give Chapter-by-Chapter Comments

Task C required KRW to submit drafts of the various chapters of the manual at two-week intervals. (Finding 5.c). The FHWA acquiesced in this being stretched to monthly intervals. (Findings 17 and 18).

Task C also obligated the FHWA to provide comments on the chapters as submitted, within thirty days after their respective receipt; *i.e.*, the FHWA was obligated to provide comments on a chapter-by-chapter basis. The record amply demonstrates that the FHWA never satisfied this obligation, and that KRW did not acquiesce. (Findings 20 *et seq.*).

The FHWA states that it found that it could not provide meaningful comments on the chapters as individually submitted unless it could consider their relationship to other chapters, which required that it have before it the drafts of all chapters. The Board accepts this as true. KRW and the Contracting Officer's Technical Representative discussed this problem in the summer of 1987, but there is no evidence that KRW ever agreed to alter the provision for comments to be rendered chapter-by-chapter as the chapters were submitted. (Finding 20). The fact that KRW's Progress Report for July, 1987[85] dated August 12, stated that part of the work intended for August was to incorporate FHWA comments into the manual is evidence that KRW in fact had not assented; the fact that the FHWA did not raise with KRW the question of what comments KRW was expecting is evidence that the FHWA did not believe that KRW had assented. Once again, it was the FHWA that drafted the terms of Task C, and when those terms became embodied in the contract, it was the FHWA's obligation to honor them.

An FHWA failure to provide comments on a chapter within thirty days after submittal would not preclude KRW from proceeding to drafting the next chapter. Indeed, even if submitted in a timely manner, the comments on the first submittal (Introduction, due June 1, 1987[86]) would not have been available in time to be considered for the next chapter due (Factors, due July 1). But, a timely submittal may have reduced the need for revision later during performance, by permitting KRW to consider comments in drafting the later chapters. For example, the FHWA's Mr. Thompson testified at length regarding deficiencies in the first drafts that KRW submitted, including its failure to incorporate design problems or an example problem. (*E.g.*, Tr. 817, 831, 834-835). If the FHWA had provided comments on the individual chapters within thirty days after submission of each, as required by the contract, it is possible that the span of these deficiencies, and the commensurate corrective effort, would have been lessened.

Comparing the scheduled dates for chapter submissions in Finding 17 with the actual dates of submission in Findings 19 and 23, we find that the fourth and last chapter

[84] Finding 5.b.

[85] Finding 21.

[86] The schedule is set forth in Finding 17.

©1994, Commerce Clearing House, Inc.

Digitized by Google

was only submitted twenty-two days late,[87] and there is no evidence that the twenty-two days was the result of FHWA action or inaction.

Thus, as of September 22, KRW had done all that it could with the manual until comments were received. If the FHWA had submitted comments on a chapter-by-chapter basis as required by the contract, KRW could have immediately set about producing a final version of the manual, in accordance with Task D [88] as these comments were received. Indeed, this is the work that the Progress Report for September stated would be KRW's principal effort in October. (Finding 22). The absence of comments in October and November precluded any work from occurring in those months. (Finding 25).

Comments were only received on December 8. (Finding 27 *et seq.*). Since at that time the FHWA also made a change to the content of the manual, we cannot ascertain empirically how long it would have taken KRW to prepare the final manual had it received the comments earlier. We do know that KRW was precluded from doing work during October and November. It would also appear that during August and September KRW was precluded from performing revision work on previously submitted chapters, although it was drafting further chapters.

This delay would entitle KRW to a corresponding extension in the contract completion date. The Board therefore determines that, by reason of the FHWA not complying with the terms of the contract under which it was obligated to provide comments on the chapters by a certain date, KRW's performance of the contract was delayed. The issue of compensation to KRW for such delay will be addressed below under "VII. Amount To Which KRW Is Entitled."

V. The Changes of December 8, 1987

Acting under its contractual obligation to prepare a manual on *Stream Stability At Highway Structures,* to include discussion both of stream instability and of scour, KRW drafted and submitted for the FHWA's comment and approval, an outline of the manual. That outline called for an introduction and four chapters, addressing stream instability and scour. The outline was approved and KRW commenced work.

After submitting all of its draft chapters, but (as explained above) not receiving the promised comments from FHWA, KRW's technical employees attended a meeting with the FHWA set up for the purpose of discussing the organization of the draft manual's content. (Findings 27 *et seq.*). At that meeting, the FHWA conveyed its intention to cull from the draft manual the material on scour, which would be included in a separate circular to be prepared by others. The result, of course, was that KRW had to perform the tasks associated with that removal, as well as perform the other changes and revisions necessitated by the comments that the FHWA provided on at least two occasions (December 8 and 27) in December, 1987.

KRW argues that upon approval, the outline it had prepared became a part of the contract specifications and that when the FHWA, acting through the Contracting Officer's Technical Representative at the December 8 meeting, split out scour from the manual it was altering the outline and thus the contract specifications.

The FHWA argues, *inter alia,* that this could not constitute a compensable change because the persons present at that meeting lacked the actual authority to make changes to the contract work that altered the terms of the contract and affected price.

In reality, there are two questions presented in determining whether KRW is entitled to an equitable adjustment. The first is: Was there was a change to the contract requirements? If that is answered in the affirmative, the second follows: Is that change compensable?

A. Was there a change?

The contract as executed called for KRW to develop a manual which included some consideration of the problems of stream scour, as well as coverage of stream stability. KRW prepared an outline setting forth its understanding that such was actually the requirement. The FHWA approved the outline, signifying that the FHWA concurred in this interpretation. In fact, such interpretation was the only reasonable interpretation of the unambiguous specification.

Given this requirement and absent the December 8 directive to recast the manual, if KRW had submitted a draft manual not addressing scour, it would not have complied with the requirements of the contract and the FHWA could (and no doubt would)

[87] Delivered on September 22 vice the September 1 due date.

[88] Finding 5.d.

Digitized by Google

rightly have rejected that submission as non-complying. The effect of the December 8 directive was that the Contracting Officer's Technical Representative was advising KRW that the FHWA wanted and would accept something other than what was called for by the contract.

Thus, we can only conclude that when the FHWA, acting through the Contracting Officer's Technical Representative, directed KRW to only furnish such an abbreviated manual, it was waiving a contractual requirement, regardless of whether or not the Contracting Officer himself had issued a formal contract revision. The contract requirements were altered, the product to be delivered was something other than specified by the contract. That is a change.

The argument that this could not have been a change because the Contracting Officer's Technical Representative was not authorized to change the contract is not compelling. That argument goes to the question of whether this change is compensable.

B. Is the change compensable?

The contract terms are quite clear that the Contracting Officer's Technical Representative was not authorized to make changes which would obligate the FHWA to pay an increased price for the work. (Finding 4). The law is clear that when a contractor is confronted with a direction by someone other than the Contracting Officer and is of the opinion that such direction constitutes a change, the contractor must bring the matter to the attention of the Contracting Officer.[89] *W.W. Wilkinson, Inc.*, ASBCA No. 23031, 80-2 BCA ¶ 14,749 (1980) at 72,775.[90]

The written direction to KRW to carry out the change in the contract was the December 11 letter.[91] Having received this letter, which plainly and unequivocally altered the unambiguous requirements of the contract, it was therefore incumbent upon KRW to notify the Contracting Officer and seek his decision. Under the terms of the Changes clause,[92] this notice was to have been given within thirty days thereafter.

KRW did not write to the Contracting Officer and specifically advise him that it deemed this direction to be a change, or that it deemed extra compensation was in order. However, on January 4, 1988, KRW submitted its Progress Report for December, 1987. The extract from this Report set out in Finding 36 is a clear statement that KRW considered this direction to be a change to the contract terms, the full effect of which was still being evaluated. This text was not buried deep in a document. The entire Progress Report was three pages long, the last of which was a chart. This statement appears on the very first page, and could not easily have been overlooked. This statement was essentially repeated in the following monthly Progress Reports. (Finding 38).

This Progress Report was addressed to the Contract Administrator, not to the Contracting Officer. However, when advising KRW of the appointment of Mr. Martin as Contract Administrator, the Contracting Officer had specifically directed KRW to send all administrative documents to him. (Finding 8). We consider a notice that some action is deemed to constitute a change to be such an "administrative document."

When a contracting officer's representative receives from a contractor a notice of some problem, that recipient has a duty to communicate that notice to the Contracting Officer and therefore knowledge of that notice will be imputed to the contracting officer. *Xplo Corporation,* DOTBCA No. 1250, 86-2 BCA ¶ 18,863 (1986) at 95,110; *Davis Decorating Service,* ASBCA No. 17342, 73-2 BCA ¶ 10, 107 (1973) at 47,475.

We therefore determine that on January 4, 1988, within the thirty days allowed by the Changes clause, KRW gave proper notice to the Contracting Officer that it deemed the direction set forth in the December 11 letter to constitute a change to the contract, requiring additional time and effort in an as-yet-to-be-determined amount.

Having received that notice, it was then incumbent upon the Contracting Officer, if he was opposed to issuing a change or did not agree with the contractor's contention that it was actually a change, to make some response. This the Contracting Officer did not do.

---

[89] An exception, not applicable in the instant case, occurs when there is an urgent situation, as when concrete is curing. *Sigma Construction Co., Inc.*, ASBCA Nos. 37040 *et al.*, 91-2 BCA ¶ 23,926 (1991) at 119,859.

[90] We reject any argument that KRW employees present at the December 8 meeting agreed, and thereby bound KRW, to perform the changed work at no increase in contract price. They lacked actual authority to act in such matters and there is nothing in the record to imply that they were clothed with apparent authority.

[91] Findings 27 *et seq.*

[92] See the extract from paragraph (c) of the clause quoted in Finding 3.

In this regard, we cannot overlook the Contracting Officer's Technical Representative's testimony that, regardless of what the contract called for, the Contracting Officer would accept whatever the technical personnel, the personnel who effected this waiver, were willing to accept. (Tr. 295). We cannot overlook the fact that ultimately the Contracting Officer in fact did accept the manual without the coverage of scour and did not object to its omission. The reality is that the Contracting Officer acquiesced in the alteration to the required work product.

The Board therefore concludes that the contract requirements were altered by the FHWA at the December 8 meeting, with the Contracting Officer's acquiescence/ratification. The Contracting Officer's acquiescence in those changes renders compensable any additional work performed to meet the changed requirements.

Under the terms of this fixed-price contract, the FHWA retained the power to make comments upon the drafts, which KRW would then revise to incorporate those contracts. KRW did undertake some risk, in that at the time the contract was priced, it could not ascertain the extent that FHWA comments would require reworking the drafts.

However, implicit in such arrangement is that the FHWA's power to make comments was not unbridled, but the suggested revisions must be within the scope of the contract. By the time of the December 8, 1987 meeting, the manual was 98% complete. (Finding 36 and footnote 47). KRW had incorporated coverage of scour, as was required by the terms of its contract. To the extent that it now had to revise the manual to remove that coverage, it was doing work not contemplated by the contract. Conversely, to the extent that it was making editorial changes or changes to correct deficiencies in the draft, it was performing work plainly within the scope of the contract it had executed. The effort subsequent to the meeting must be allocated between these two categories.

The Board finds that KRW is entitled to an equitable adjustment of the contract price to compensate it for the effort involved in revising the manual to remove the coverage of scour. The amount of the compensation to which KRW is so entitled will be considered in the next section of this Opinion.

VI. Amount To Which KRW Is Entitled

KRW's Amended Complaint seeks $173,848.45. This sum includes $43,462.11 as the 25% contingent fee for E.A. James Company/Mr. Machol, which the Board has above ruled is not a valid element of KRW's claim. We address the remaining claim for $130,386.34 which KRW seeks.

It is well-established that a contractor bears the burden of proving affirmative claims against the government. "[C]onclusory and generalized allegations, unsupported by specific proof and probative evidence, are not a sufficient basis to sustain an appeal .... The contractor must establish its entitlement by a preponderance of evidence." *Fred A. Arnold,* ASBCA Nos. 20150 *et al.,* 84-3 BCA ¶ 17,624 (1984) at 87,843.

In determining the amounts to which KRW is entitled, the Board may only award what KRW has legally proven. *Malissa Company v. United States* [35 CCF ¶ 75,750], 18 Cl. Ct. 672 (1989). This does not mean that KRW is burdened to prove its damages with precise, mathematical exactitude; a reasonable, albeit approximate, basis for computation will suffice. But the essential burden KRW must satisfy is to establish "the fundamental facts of liability, causation, and resultant injury." *Wunderlich Contracting Company v. United States* [11 CCF ¶ 80,069], 173 Ct. Cl. 180, 199, 351 F.2d 956, 968 (1965).

KRW, as claimant, "bears the burden of proving the fact of loss with certainty, as well as the burden of proving the amount of loss with sufficient certainty so that the determination of damages will be more than mere speculation." *Willems Industries, Inc. v. United States,* 155 Ct. Cl. 360, 376 (1961), cert. den. 370 U.S. 903 (1962).

The most convincing evidence which may be considered in ascertaining effort expended are contemporaneous reports which were routinely prepared as the effort was expended. In the instant case, that would be KRW's monthly Progress Reports. While KRW has subsequently attempted, through unsupported testimony, to discredit those Reports as not including all effort (Findings 70(iii) and 71), the fact remains that they are contemporaneous documents and the best evidence.

While the Defense Contract Audit Agency auditor has not questioned the costs which KRW alleges it expended for direct labor, that is not conclusive that the costs are reimbursable to KRW. An auditor can form an opinion as to how much effort and dollars a

Digitized by Google

contractor's records reflect were expended on a project, but it is still a contractor's burden to demonstrate how many of those hours are the result of government action rather than having been expended for some other reason for which the government is not liable (*e.g.*, contractor inefficiency, claim prosecution, etc). The auditor studiously avoided making any determination that the hours expended were the result of the change to the work; his finding was only that these hours were charged to this contract. (Finding 76).

As is detailed below, the record demonstrates KRW has essentially failed to introduce evidence to support the amounts it is seeking, although there is sufficient evidence in the record to support some compensation for the changes to the manual.

A. Amounts Due KRW As A Result Of FHWA Delays In Providing Comments

The Board has determined above that KRW was delayed due to the FHWA's failure to provide chapter-by-chapter comments within the periods established by the contract. It does not automatically follow that amounts claimed for a particular basis of claim are therefore compensable. We turn to the question of a determination of the amount, if any, of compensation that is due.

The Amended Complaint alleges that during the period February 1, 1987 through January 31, 1988[93] KRW incurred additional labor costs of $3,890.00 as the result of FHWA actions, both the delays in providing comments and the change effected at the December 8 meeting. (Table I). To this $3,890, KRW adds labor overhead at 149.25%, general and administrative overhead at 23.55%, and profit at 10% to arrive at a total of $13,177.11. The Amended Complaint does not divide this amount between the delay claim item (which was prior to December 8, 1987) and the change claim item (which was subsequent to that date).

In its first submission seeking additional compensation, that of September 1, 1988 (Finding 64), KRW had sought $8,558.85 for the FHWA's delays in providing comments on the outline (which we have held not to have given rise to an entitlement to compensation) and on the chapters (which is a viable claim). That amount had been calculated on the basis of KRW's estimate that the ensuing delays had increased KRW's cost of performance of the Task C work by 14%, and therefore KRW should receive 14% of the contract price attributable to the Task C work ($64,134.70—Finding 5.c) as an equitable adjustment for the additional effort. (Findings 64a. and 68). KRW has offered for the record no basis for its estimate that this failure caused it to incur 14% greater cost.

KRW's costs did not continue unabated during the delay period. Its professional employees were part-time employees, paid for the hours they worked. The record indicates that they received no remuneration for the months of October and November. The monthly Progress Reports for October and November, 1987 (Finding 25; Appendix I), indicate that no work was performed by any KRW employee during this period on this contract. Presumably, this means that they earned, and were paid, nothing.

The only amounts claimed for this delay are keyed to labor effort. KRW has failed to demonstrate that in fact it did suffer additional labor costs in this regard, as was its burden. We can find no evidence in the record to define, even broadly, any labor costs incurred during this delay period, much less labor costs resulting from the FHWA-caused delay. Therefore, so much of KRW's claim as seeks compensation for this delay is denied due to a failure of proof.

B. Amounts Due KRW As A Result Of The FHWA Change To The Work

The key to the determination of the amount to which KRW is entitled is the ascertainment of the additional effort *reasonably* required to perform the changed work. The extent of the actual effort is evidentiary, but it is not conclusive.

Upon weighing the evidence referenced in the Findings, the Board determines that the quantum of effort for which KRW makes claim is not reasonable. This includes a comparison of the months required for the preparation of the original draft (ten) to the months required for the revision (twenty-nine). (Finding 61). To the extent that there may be a presumption that time or monies expended by a contractor after the work is changed is reasonable, that presumption is rebutted in this case. We also consider in this balancing the fact that not all of the post-December 8 effort resulted from the change; there was much effort required to overcome the deficiencies in KRW's draft, and there has been no presentation by KRW to distinguish work required to rectify defi-

[93] KRW's Fiscal Year 1987.

©1994, Commerce Clearing House, Inc.

Digitized by Google

ciencies from work required to implement the change.

In determining the amount of effort which would reasonably be required to effectuate the FHWA-directed change to the work, probative evidence may be given by expert witnesses based on their analyses of the situation and probative evidence may be given by fact witnesses, persons who were involved in the work performed and can knowledgeably testify as to the extent and nature of the actual effort.[94] In presenting its case, KRW elected not to call as witnesses any persons who were or had been in its employ and had the technical capability to explain why the hours of effort were actually required. Mr. Machol, KRW's sole "friendly" witness, lacked such technical background. KRW could have called Mr. Johnson as a witness, and the various testimony regarding Mr. Johnson's background and abilities indicates that he would have been qualified to give such testimony.

When the persons having the greatest familiarity with events are not called, but a litigant seeks to rely on the testimony of one having lesser familiarity, or when a litigant fails to produce other relevant evidence known to exist, a tribunal may draw an inference that the testimony of the person not called or the evidence not introduced might not support or might actually be adverse to that litigant. *Inter-West, Ltd.,* DOTBCA No. 2238, 92-3 BCA ¶ 25,073 (1992); *TDC Management Corporation,* DOTBCA No. 1802, 91-2 BCA ¶ 23,815 (1991) at 119,258, affirmed upon reconsideration, 93-1 BCA ¶ 24,061, affirmed without opinion *sub nom. Skinner v. TDC Management Corporation,* 975 F.2d 869 (Fed. Cir. 1992).

We mention this in passing, but in this case we are not required to render decision based on an inference that, had Mr. Johnson been called, he would have given testimony not supportive of KRW's claims. Rather, we ground our decision on the only evidence before the Board regarding the effort that reasonably resulted from the FHWA-directed change to delete the material on scour, namely, the evidence and testimony set forth in Findings 58 *et seq.*

The only evidence in the record from a person of technical expertise as to what would be a reasonable time to accomplish the revisions necessitated by the deletion of the material on scour is the testimony of Mr. Thompson. The Board discounts the testimony of Messrs. Krylowski and Machol because they lack the degree of expertise in the area that was exhibited by Mr. Thompson. He testified that the deletion of the scour material and the associated relocation of text should have consumed twenty hours of effort (Finding 60(v)) and that the work should have been complete by the end of January (Finding 60(vi)).

While Mr. Thompson also testified as to other effort (Finding 60(iii) and (iv)), that effort was directed to correcting deficiencies,[95] which would not be compensable effort.

Considering this testimony as to how much time and effort the rewrite reasonably should have taken, we turn to the Progress Reports, and find that during the month of January, 1988, KRW expended a total of thirty hours of technical effort: four hours by Dr. Richardson, twenty by Mr. Johnson, and six by Mr. Chang. This is commensurate with Mr. Thompson's estimate, with due consideration of the need for non-compensable corrections.

The Board therefore determines that KRW is entitled to be compensated for twenty labor hours of effort. The Amended Complaint shows that Messrs. Richardson, Johnson, and Chang each were paid $25.00 per hour; we determine to use this figure. KRW is entitled to $500.00 to compensate it for direct labor costs of professional staff.

Mr. Machol was not part of the professional (technical) staff (Finding 7.b). The Amended Complaint alleges that he performed 344 hours of effort after January 31, 1988 (Table I); prior to then, he had performed only 53 hours (Appendix I). The Progress Reports which he signed on behalf of KRW did state that he had performed no work under this contract during the months of October 1987 through April of 1988, when the Progress Reports ceased including a statement of labor-hours. Considering that the work to be performed after December 8, 1987 was only correction of deficiencies and a reorganization of technical material which should not consume more than twenty hours, we can see no basis for such a multiplication of Mr. Machol's effort. Many of

[94] For example, a secretary or bookkeeper in a construction firm's main office might be able to testify as to the amount of effort expended, but ordinarily would not be able to knowledgeably testify as to what actually occurred in the field or the technical reasons for the expenditure of each element of that effort.

[95] Which was not completely accomplished. (Finding 60(vii)).

Digitized by Google

these hours must have been devoted to developing the claim against the government, which is not a compensable expense; see the discussion regarding Federal Acquisition Regulation § 31.205-33, *supra*.

It is also true that the record contains several communications which he wrote during the period after December 8 that were primarily directed towards the FHWA-directed reorganization of the manual. That would be effort resulting from the redirection of the manual, and compensable. Mr. Machol would also have had to handle the details of sending correspondence to KRW's employees, by then located some distance from this office, and coordinating its employees' activities. Mr. Machol also expended effort (largely futile) in corresponding with the FHWA to ascertain the meaning of the obfuscated sentence set forth in Finding 44. Based on a review of the correspondence in the record, the Board determines that KRW is entitled to compensation for a number of hours of Mr. Machol's effort that is equal to the technical effort, namely twenty hours. Mr. Machol's rate is stated in the Amended Complaint to have been $29.00 per hour in 1988; this was not questioned by the FHWA or its auditor. We therefore allow KRW $580.00 for Mr. Machol's effort.

There is nothing in the record to indicate the nature of the work performed by any other persons, Messrs./Mesdames[96] Mahotra, Kozan, Taylor. We determine to allow KRW another twenty hours for administrative staff effort, at $12.34 per hour, the average of the rates for these three individuals ($8.00, $14.00, and $15.00 per hour—Amended Complaint), a total of $246.80.

We turn to mark-ups on this allowance of $1,326.80. Although KRW has claimed (Finding 78) overhead and general and administrative overhead rates substantially in excess of those used in negotiating the original contract (Finding 2), the record does not support the increased rates. In fact, the record does not support any overhead rates. See Findings 79, 80, 81, and 85. However, it is obvious that KRW must have had overhead expense, and it is appropriate that, absent any evidence of other rates, we hold the parties to the overhead, general and administrative overhead, and profit rates they accepted in negotiating the original contract, 85%, 18%, and 10% respectively. (Finding 2).

Thus, on the total of $1,326.80 in direct labor costs, we determine to allow markups as follows:

Direct labor	$1,326.80
Overhead @ 85%	1,127.78
Subtotal	$2,454.58
General and administrative @ 18%	441.83
Subtotal	$2,896.41
Profit @ 10%	289.65
TOTAL	$3,186.06

DECISION

KRW is entitled to an equitable adjustment in the contract price of $3,186.06, plus interest calculated in accordance with section 12 of the Contract Disputes Act of 1978, 41 U.S.C. § 611, from April 22, 1992 until payment.

[¶ 26,436] American Telephone & Telegraph Company, Federal Systems Advanced Technologies

DOT BCA No. 2479, October 14, 1993. Contract No. DTFA01-86-C-00034.

Procedure, Boards—Discovery—Deposition Deadline Extension.—A government motion for leave to conduct two depositions after the established deadline was denied because the government failed to show that it had good cause to waive the deadline. The government sought to conduct post-deadline depositions of two of the contractor's employees who were identified by a government consultant as having personal knowledge of the disputed events. However, when the government passed up a previous opportunity to depose the two employees, the consultant had been employed by the government for more than nine months. Thus, the government had more than ample opportunity to have questioned its consultant on matters raised during discovery and to have deposed the employees before the cutoff date.

For the appellant: Loretta A. Cecil and Debra L. Whited, and McKenna and Cuneo, Washington, D.C., by E. Sanderson Hoe, David M. Eppsteiner, Andrew N. Patrakes, James P. Lamoureux, J. Keith Burt, Lori L. Jackson, and Richard A. Feinstein. For the government: John R. McCaw, J. Thomas Waters, Nathan Tash, Gregory C. Carter, Christian F.P. Jordan, and Robert Zuckerman, Federal Aviation Administration, Washington, D.C.

Before ROBERTORY, Administrative Judge.

ROBERTORY, Administrative Judge: The Federal Aviation Administration ("FAA" or "respondent") has moved for leave of the Board to conduct two depositions subsequent to the final deadline established by the Board for the taking of depositions. The appellant American Telephone & Telegraph Company, Federal Systems Advanced Technologies. ("AT&T"), opposes the Motion.

By Order of February 7, 1992, the Board directed that April 1, 1993 was the last day for the service of notices of depositions. This Order was based on a discovery schedule jointly proposed by the parties. Trial is scheduled to commence on November 8, 1993. The trial promises to be prolonged, involving the termination for default of a contract last priced in excess of $100,000,000.00, with a potential government claim for refund of some $55,000,000.00 in progress payments. As befits a case of such magnitude, the witness and proposed exhibit lists are extensive.

Mr. Robert H.W. Jones is a former AT&T employee, who had been involved with performance of the contract. After retirement from that company, he entered into a consultant agreement with the FAA, to provide paid consultation (at an hourly rate) on the dispute which is now before the Board. This consultant agreement commenced in August, 1992. (Jones Dep. Tr. 73). This was after the instant appeal had been filed.[1]

In addition to his being a consultant, the FAA has included Mr. Jones on its list of 54 persons whom it intends to call as witnesses in support of its case-in-chief at the trial.

On September 14, 1993, AT&T deposed Mr. Jones. The FAA's Motion summarizes what transpired at the deposition:

> "Mr. Jones testified that '[i]t was widely known and widely publicized' within AT&T around the time of contract award that AT&T could not meet the schedule for First Article Test. (Tr. at 106-109). The FAA did not uncover this widely held belief until Mr. Jones's deposition. In addition, Mr. Jones testified about his personal knowledge regarding several willful violations of the RCE contract by AT&T. The Agency was unaware of any witnesses corroborating these violations until Mr. Jones's deposition." (Motion, p.2).

Mr. Jones testified that Messrs. J.L. "Ozzie" Osborne and Matthew V. Thompson had personal knowledge of these events. (Jones Dep. Tr. 124-125). It is these individuals whose depositions the FAA now seeks. Both were, and apparently still are, AT&T employees.

Before these events, on December 1, 1992, the FAA had served notice that it intended to depose both Mr. Osborne and Mr. Thompson, along with many others. (Opp. Ex.[2] 4). The depositions were not conducted in that period, and on April 1, 1993, the FAA included Mr. Osborne on another lengthy notice of depositions. Mr. Osborne's deposition was called for May 28, in Greensboro, North Carolina. (Opp. Ex. 5). An April 2 notice of rescheduled depositions set Mr. Thompson's deposition for April 26. (Opp. Ex. 6).

The FAA further postponed Mr. Osborne's deposition, and in June the FAA advised appellant that it no longer wished to depose him. (Opp. Exs. 7-8).

Although on March 1, 1993 AT&T had included Mr. Thompson on a list of intended trial witnesses, the FAA never proceeded with the deposition it had noticed. (Mot. p. 2[3]).

Normally, when a deponent gives testimony regarding the involvement of previously unidentified persons, the Board might be willing to permit deposition of those persons after an established deadline for discovery completion. But in this case, there are other militating factors which lead to a different result.

---

[1] AT&T's efforts to obtain a copy of the consulting agreement are the subject of a Motion pending before the Board on the date of this Opinion.

[2] Exhibit in support of the "Appellant's Opposition To Respondent's Motion To Conduct A Deposition Out Of Time."

[3] Although in its "Reply to Appellant's Opposition ..." the FAA takes issue with many of the statements in the Opposition, it does not dispute this statement, and therefore for purposes of the Motion we accept it as correct.

Digitized by Google

Not only had the FAA included Mr. Jones on its list of intended witnesses, but it had also entered into an agreement under which it paid him at an hourly rate for consultant services on matters related to this litigation. At the time (May-June, 1993) when the FAA passed up its opportunity to depose Messrs. Osborne and Thompson, Mr. Jones had already been under contract to it for some nine-plus months. That was a more than a sufficient period for the FAA, knowing as it did of the impending April 1 deposition notice cut-off, to have availed itself of the unusual opportunity to have virtually unlimited access[4] to a person who was closely involved with the opponent's internal discussions. In that nine months, one would expect the FAA to have queried Mr. Jones extensively in private on the matters which were raised during the deposition.

That it failed to do so, despite amply adequate opportunity, convinces the Board that the FAA has not made out a showing of good cause sufficient to warrant waiver of the Order.

The FAA's Motion to depose Messrs. Osborne and Thompson out-of-time is denied.

[¶ 26,437] Southwest Marine, Inc.

DOT BCA No. 1687, October 22, 1993. Contract No. DTCG-31-83-C-10099.

Interpretation of Contracts—Heating and Cooling—Valve Replacement.—Under a contract to overhaul the starting air system for propulsion engines of a military vessel, a contractor's interpretation that it could use 400 pounds per square inch air system valves as adequate substitutes for the 600 psi valves it removed from the air system was not reasonable, because the contract, when read as a whole, revealed that the 400 psi valves were not equal substitutes for the 600 psi valves. After dissembling and inspecting the air system valves, the contractor noted that some of the 600 psi valves needed to be replaced. Since the 600 psi valves were no longer available from the manufacturer, the contractor concluded from a reading of the contract documents that it could use 400 psi valves in place of the 600 psi valves. The contract, however, stated that any valve or component to be renewed or replaced had to be of the same type, body and trim, and service pressure as the one being replaced. The 400 psi valves were not of the same service pressure as the 600 psi valves and could not meet air pressure requirements. Further, the contractor failed to comply with the requirements for using substituted materials.

Modifications—Constructive Changes—Substituted Item.—Under a contract to overhaul the starting air system for propulsion engines of a military vessel, the contractor's contention that the government changed the contract by requiring 1,000 pounds per square inch valves as a substitute for the 600 psi valves removed from the high section of the air system was rejected, because the government required the contractor only to install valves of the same pressure rating as the valves removed from the system. The contractor advised the government that the 600 psi valves it removed from the system were no longer available from the manufacturer and that the only valves available as an equal substitute for the 600 psi valves were 1,000 psi valves. The government's objection to the use of the 400 psi valves as replacements for the 600 psi valves was proper. The government was not shown to have directed the use of 1,000 psi valves as an equal substitute, but only to have insisted that the replacement valves be an equal substitute. In any event, the contractor did not purchase 1,000 psi valves, but instead installed 600 psi valves it had located from another supplier.

For the appellant: Jeffrey K. Kominers, Washington, D.C. For the government: Michael R. Nevarez,[1] U.S. Coast Guard, Washington, D.C.

---

[4] Possibly limited by an agreement between AT&T and Mr. Jones under which the latter promised not to reveal proprietary information, which agreement would probably not extend to cover factual recitations of events. (We say "probably" because the agreement is not before the Board and the term "proprietary" does not normally include such matters. There would be serious public policy issues involved were an agreement to be interpreted to preclude a person from testifying as to transactional events, as opposed to financial matters or matters involving the fruits of research.)

[1] Mr. Michael Nevarez prosecuted this appeal while employed by the U.S. Coast Guard. He has since relocated to another Federal agency.

Before WARE, ROBERTORY, and STERN, Administrative Judges.

WARE, Administrative Judge: This is another in a series of opinions on the numerous appeals filed by appellant, Southwest Marine, Inc., from adverse Contracting Officer decisions. In this appeal appellant seeks reversal of the Contracting Officer's decision denying in its entirety appellant's claim for an equitable adjustment of $18,572.00, for an alleged mutual mistake in the pricing of two bilateral contractual modifications, under its contract with the United States Coast Guard of the U.S. Department of Transportation. Appellant prosecuted the claim in behalf of its subcontractor, Astro Pak, Inc., who performed work on the United States Coast Guard Cutter (USCGC) *GLACIER* pursuant to the modifications in dispute. Although appellant has increased its claim before the Board to $38,306.00, only entitlement is before us for decision. On the basis of our findings and analysis below, we deny the appeal.

FINDINGS OF FACT [2]

I. *CHANGE REQUEST NO. 165*

1. Under Definite Item D-19 of the contract specifications, appellant was required to overhaul the starting air system that was used to start and control the main propulsion engines and the ship service diesel of the *USCGC GLACIER*. (Tr. 34 at 13-14; Tr. 48 at 6) A major part of the work under Item D-19 involved the inspection, removal and disassembly of valves listed therein, the cleaning and testing of such valves, and reassembling the valves. (CAF 9 at 89) Appellant entered into a subcontract with Astro Pak, Inc. for the performance of most of this work. As an "open and inspect" item, Definite Item D-19 required appellant, after performing the work thereunder, initially to submit an inspection report to the Contracting Officer evaluating the condition of the valves, and to wait for direction from the latter on whether to "recondition or renew" the starting air system valves. (Tr. 48 at 62-63) Although Paragraph 1 of Item D-19 indicates eighty-seven (87) valves were to be inspected, Item D-19 in fact listed only eighty-six (86) valves. Forty-four of the starting air system valves are listed in Paragraph 3.3.5 of Item D-19 and forty-two of the valves are listed in Paragraph 3.4.13 of Item D-19. (CAF 9; AF, Docket No. 1687, Tab 18, pp. 89, 91-94)

2. In conjunction with Paragraph 1 of Item D-19, Paragraphs 3.3.1, 3.3.2, and 3.3.3 of Item D-19 required appellant to open, disassemble, and inspect, to determine whether to "recondition or renew," and to reassemble the 44 starting air system valves listed in Paragraph 3.3.5 of that item. Appellant's valve work under these provisions was to be performed on board the vessel, and Paragraph 3.3.2 of Item D-19 required the inspection of the valves to be in the presence of respondent's inspector. (CAF 9; AF, Docket No. 1687, Tab 18, pp. 89-92; Tr. 55 at 43-44)

3. In conjunction with Paragraph 1 of Item D-19, Paragraphs 3.4.1 through 3.4.12 and 4.1 of Item D-19 required appellant to remove from the ship, open, disassemble, inspect to determine whether to recondition or renew, and reassemble and test the 42 starting air system valves listed in Paragraph 3.4.13 of Item D-19. That inspection was to take place off the ship in appellant's shop and Paragraph 3.4.10 of Item D-19 also required that inspection to take place in the presence of respondent's inspector. After inspection appellant was to reassemble the valves and conduct a hydrostatic test of each valve listed in Paragraph 3.4.13 with clean, fresh water at 900 PSI in accordance with Paragraph 4.2. (CAF 9; AF, Docket No. 1687, Tab 18, pp. 89-92; Tab 16; Tr. 46 at 8)

4. Paragraph 18.0 of Definite Item D-19 required appellant to submit the reports required above, covering the results of its inspection of the 44 starting air system valves listed in Paragraph 3.3.5 of Item D-19, and the results of its inspection of the 42 air system valves listed in Paragraph 3.4.13 of Item D-19, within 24 hours of each inspection. The valves to be inspected ranged in capacity from valves capable of handling 600 pounds per square inch ("psi") to those that controlled 150 psi; however, as pointed out below, most of the valves were in the 600 psi category. After disassembling, inspecting and testing the valves, appellant's subcontractor, Astro Pak, ascertained that 34 of the 42 valves listed in Paragraph 3.4.13 needed extra work and so notified respon-

[2] The record consists of 85 volumes of transcripts, the Contracting Officer's appeal file, a consolidated appeal file prepared by the parties, individual appellant and respondent exhibits, and Board exhibits. As used herein, "Tr." refers to "Transcript" followed by volume and page, *e.g.*, "Tr. 1 at 25;" "CAF" refers to the "Consolidated Appeal File;" "AF" refers to the "Appeal File" on individual dockets prepared by the Contracting Officer; "AX" refers to "Appellant Exhibit;" "GX" refers to "Government Exhibit" and "BX" refers to "Board Exhibit."

Digitized by Google

dent by Inspection Deficiency Report (IDR) 7003-288, dated September 20, 1983. (AF, Docket No. 1687, Tab 17) The report specifically notified respondent that Astro Pak had been informed that the 600 psi valves listed in Paragraph 3.4.13 were "no longer in the inventory of the manufacturer as of 1952, and spare parts are no longer available as of 1962." (*Id.*; Tr. 55 at 58) The report further stated that "[a]ny corrective rework or replacement parts requires additional manhours and extensive machine work beyond the basic item requirements." (*Id.*) Although IDR 288 advised the Contracting Officer that the 600 psi valves at issue were no longer available from the "manufacturer," and that spare parts were no longer available, it did not state whether such valves were available from vendors or dealers other than the manufacturer of the 600 psi valves, or whether Astro Pak had attempted to contact a supplier or vendor other than the manufacturer in an effort to obtain the valves. (AF, Docket No. 1687, Tab Number 17; Tr. 55 at 58-60)

5. After disassembling and inspecting the 44 valves listed in Paragraph 3.3.5 of Item D-19, nearly all of which were 600 psi valves, appellant reported the results to the Contracting Officer on October 21, 1983, in IDR 325, noting therein that 3 of the 44 valves were missing, 18 valves were in satisfactory condition, and the remaining 23 valves had various stated deficiencies. (AF, Docket No. 1687, Tabs 16, 17; Tr. 48 at 11, 30)

6. Respondent received IDR 7003-288 on September 21, 1983. (AF, Docket No. 1687, Tab 17) In response, the Coast Guard issued Change Request (CR) 165, which was prepared by its inspector for Item D-19, Chief James C. Patrick, who had worked on the starting air system for two years prior to the instant contract. (AF, Docket No. 1687, Tab 15, Tr. 55 at 185-186) Because the old valves were in need of extensive repairs, Chief Patrick, in CR 165, directed the appellant to renew all 42 valves listed in Paragraphs 3.4 and 3.4.13 of Definite Item D-19 of the specifications as well as five additional valves, for a total of 47 valves to be renewed. (AF, Docket No. 1687, Tabs 16, 17; CAF 9, pp.21, 91; Tr. 55 at 45-47; Tr. 48 at 30)

7. The General Requirements of the contract defined the term "renew" to mean: "*Remove an existing piece or unit and install, in kind, a new and unused piece or unit.*" (CAF, Tab 9, p. 17, Paragraph 4.8.1) And Definite Item D-19, Paragraph 3.3.4, under the caption "Materials" states "*Any valve or components renewed are to be of the same type, body and trim material and service pressure as the one being replaced.*" (Emphasis added) (*Id.*, at p. 91) We interpret Paragraph 4.8.1 of the General Requirements and Paragraph 3.3.4 of the specifications to apply to all valves and components reported under specification Paragraphs 3.3, 3.3.5, 3.4 and 3.4.13 that appellant was required to renew, including the 47 valves it was required to renew pursuant to CR 165 and the 15 valves it was required to renew, hereinafter discussed, pursuant to CR 186. In addition to the above, Paragraph 17.0 of the General Requirements states as follows:

> *Material Quality:* Unless otherwise specifically provided in this contract, reference to any equipment, material, article, or patented process by trade name, make, or catalog number shall not be construed as limiting competition, and the contractor may, at his option, use any equipment, material, article or process which in the judgment of the Contracting Officer, is equal to that named. *The contractor shall furnish to the Contracting Officer for his approval the name of the manufacturer, the model number, and other identifying data and information of "or equal" products and materials which the contractor contemplates incorporating in the work.* When called for by the Contracting Officer, the contractor shall submit samples and full information concerning the material or articles which he contemplates incorporating in the work. Machinery, equipment, material, and articles installed or used without required approval shall be at risk of subsequent rejection. (*Id.*, at 24)

We interpret this paragraph of the General Requirements to require the contractor to furnish the Contracting Officer for his approval, prior to their incorporation in the work, any valves or other equipment not identical in manufacture or other salient features to that listed in the specifications and removed from the starting air system.

8. Clause 7 of the contract entitled "Inspection and Manner of Doing Work," vested in the Contracting Officer the authority to reject any nonconforming materials. (CAF 8, p. 3; also see Paragraph 8.0 of the General Requirements, entitled "Subcontractors." (CAF 9, p. 3)

AIR SYSTEM VALVE LAYOUT

9. The plans of the starting air system showed that the system was composed of three sections—a high, a middle, and an end or low section. The plans called for 600 psi

©1994, Commerce Clearing House, Inc.
Digitized by Google

valves in the high, or air flask, storage section, 250 psi valves rated to 400 psi in the middle section, and 150 psi valves in the end or low section. (*Id.* at 126-127; GX 422) All but 14 of the valves in the starting air system were 600 psi and, as shall be pointed out below, those valves were rated to 1000 psi. The 14 valves that were other than 600 psi, or 1000 psi rated, were either 250 rated to 400 psi or 150 psi and were located in the middle and end sections. (Tr. 55 at 200-201, 246-247, 276-277; CAF 1167, p. 51) They were designed to serve the 14 engines in the machinery spaces, *e.g.*, in the ten main and four service generators. Located on the air-out side of the 600 to 250 psi reducing station, these were the isolation valves for the main engine starters, and, as indicated above, were covered by Paragraph 3.4.13 of the specifications and by CR 165. (Tr. 55 at 275)

10. Mr. Thomas Ingersoll prepared Astro Pak's subcontract proposal for the work under CR 165 for Michael Kirst who was in charge of pricing and negotiating change requests for appellant. (Tr. 48 at 5, 7, 13, 16; AF, Docket No. 1687, Tabs 12, 14) Mr. Ingersoll testified that his cost proposal was based upon the purchase of 400 psi rated valves for the work under CR 165. (Tr. 48 at 48) He explained that he planned to install 400 psi valves in the system to replace existing 600 psi valves because the system's design was such that the pressure at the point at which the air "hits" the engines to start them was "250 psi or below," which made it evident to him that the system was a low pressure system that could use 400 psi valves. (*Id.*) His conclusion was based upon an analysis of the diagram of the valves, Drawing No. 310 WAGB-4105-9, Detail 3-B thereof, depicting typical 250 psi and 100 psi reducing stations, which he interpreted to indicate that any air going into the reducing stations would be reduced to 250 or 100 pounds. (Tr. 48 at 36; GX 421) The system reducing station depicted on the drawing shows a high inlet air pressure of 600 psi and a low outlet pressure of 250 psi. Mr. Ingersoll interpreted that part of the drawing to indicate that the reducing station reduced the pressure of the air passing through the system from its initial high pressure of 600 psi to a low pressure of 250 psi, depending upon the pressure at which the reducing valve is set. (Tr. 48 at 85-88; Tr. 55 at 34) In such circumstances, Mr. Ingersoll believed that the 400 psi valves would work just as efficient and safe as the 600 psi valves that were in the system when Astro Pak began its work. (Tr. 48 at 84)

11. While he was able to determine from the above drawing the proper pressure of the valves to be renewed, Mr. Ingersoll testified that his prebid inspection of the condition of the valves was hindered because someone had removed the ladders and deck plates leading to the engine room which prevented him from getting into and inspecting some of the spaces. However, since CR 165 [and CR 186] was negotiated and issued after award of the contract, any problems appellant may have had during its prebid inspection of the starting air system would have been superseded by the actual knowledge Astro Pak acquired during its detailed inspection of the valves prior to submitting IDR 288. Mr. Ingersoll also complained that some of the ratings on the valves he inspected were illegible because they had been heavily repainted or were crusted with grease and oil. (Tr. 48 at 31-32) But despite these conditions, Mr. Ingersoll was able to confirm his interpretation of the drawing as permitting the use of 400 psi valves by talking to the "sailors" about the system as he walked about the ship. (*Id.* at 103-04)

12. Although Mr. Ingersoll, who was not an expert, expressed the opinion that 400 psi valves constituted a satisfactory replacement for the 600 psi valves, he presented no credible evidence of any prior personal experience in substituting 400 psi valves for 600 psi valves in a similar starting air system, or in repairing, designing or installing starting air systems. Neither did appellant present any expert evidence to corroborate Mr. Ingersoll's opinion. The Board was impressed from Mr. Ingersoll's testimony that his intended use of 400 psi valves for the work under CR 165 was to a great extent motivated by the fact that such valves, in his words, allegedly were "four to five, even ten times" less expensive than the 600 psi, 1000 psi rated valves. (Tr. 48 at 40, 45-49, Tr. 39 at 85; AF, Docket No. 1687, Tab 7)

13. After receipt of Astro-Pak's prices, appellant, on October 26, 1983, submitted to respondent a price proposal of $46,894.00 for replacing 47 valves under CR 165 (IDR 288), which included a materials/subcontract line item of $38,000.00. (AF, Docket No. 1687, Tabs 14, 3) Chief Patrick and appellant's subcontractor, Astro-Pak, initially inspected the 47 valves that were to be replaced under CR 165 while the valves were on tables in Astro-Pak's shop in San Diego, California. At the time appellant submitted its price proposal for CR 165, the valves were still on the work tables in Astro-Pak's shop. (AF, Docket No. 1687, Tab 17; Tr. 55 at 56-59,

Digitized by Google

152-154) An examination of the valves on the table revealed that all of them were made by the same manufacturer. (Tr. 55 at 217) Also quite visible from an observation of the valves was the psi pressure ratings that were boldly cast into the body of each valve for ease of reference. (*Id.* at 41, 49, 131, 215-218) While 600 psi pressure ratings were visible on most of the valves, 400 psi and 150 psi ratings were visible on other valves. Although Mr. Ingersoll testified that other valves on the table were covered with paint, grease and oil, which rendered their ratings illegible, we find it difficult to believe that Astro Pak could not remove the paint, grease and oil sufficiently to allow it to determine the ratings cast on the sides of such valves. (Tr. 48 at 31-32; Tr. 55 at 193, 215-216)

14. Neither Astro-Pak nor appellant advised respondent that Astro-Pak was pricing and intending to install 400 psi valves as substitutes for the 600 psi valves Astro Pak had removed from the system; nor does it appear from the evidence that appellant ever inquired as to the type and pressure rating of the valves Astro Pak proposed to use for the work under Change Request No. 165. In fact, in its proposal to respondent appellant did not itemize any material costs or identify valve pressure ratings or size, but simply advised respondent that its material and labor cost for renewal were largely subcontract cost items. Appellant's price proposal did, however, include six mandays for Quality Assurance and Supervision of its subcontractor Astro-Pak. (Tr. 55 at 74-76, 94-95; AF, Docket No. 1687, Tab 14).

15. After receipt of Appellant's September 20, 1983 IDR 288, Chief Patrick called a local vendor to get an estimate for the cost of materials for CR 165. (Tr. 55 at 60; AF, Docket No. 1687, Tab 15) When Chief Patrick explained that the *GLACIER* air system had a working air pressure of 600 psi, the vendor cautioned Chief Patrick that 600 psi valves were no longer being manufactured and that the only valves available for use in the system were valves having a rating up to 1000 psi. The vendor also advised Chief Patrick that while valves rated higher than 600 psi were perfectly acceptable for use in the system, valves rated lower than the 600 psi working air pressure of the system were not. On the basis of that information, Chief Patrick prepared the Government's estimate for CR 165 in the total amount of $55,212.30, using the vendor's quoted cost of 1000 psi valves. (Tr. 55 at 61-69, 103-105, 200-201, 224-225, 244-246) On October 14, 1983, LT Richard Fornaseri revised Chief Patrick's estimate for CR 165 to $54,425.99, *inter alia,* correcting Chief Patrick's application of 20% profit to "parts," to 15 percent profit on "labor" and "materials." (AF, Docket No. 1687, Tab 15 at 2)

Respondents Rejection of Nonconforming Substitutes

16. On November 17, 1983, while inspecting the work being performed under CR 165, Chief Patrick noticed that Astro Pak was installing "400 WOG" psi valves in the high section of the system. Such valves, about 8 in number and rated to 400 psi, had been installed in the 600 pound working pressure section of the system, the air flask storage section, from which Astro-Pak had removed 600 psi valves. (Tr. 55 at 96-96, 100-105, 110-112, 269-271, 275-280; GX 712; CAF 1167, pp. 51, 56) Recognizing that the 400 pound valves were significantly different in pressure from the 600 psi valves Astro-Pak had removed from that high end of the air system, and knowing that the valves in every part of the system had to be rated at least to 150 percent of the system's normal operating pressure to assure efficiency and safety, he called Mr. Ingersoll and advised him that the valves Astro Pak was installing were inadequate and that Astro-Pak should remove them and install in the system valves with the same pressure ratings as the valves it had removed from the system, or their equal. Twenty-six of the valves to be renewed under CR 165 (and fourteen of the valves to be renewed under CR 186) were 600 psi valves, rated to 1000 psi. Appellant did not request, nor had it received, the Contracting Officer's approval to substitute 400 psi valves for the 600 psi valves in the high section or any other section of the starting air system. Although objecting to the use of 400 pound valves in replacement of the 600 pound valves in the high section of the system, Chief Patrick did not object to the installation of 400 psi valves in the middle or start engine section of the system from which Astro-Pak had removed 400 psi valves, or to the use of 150 psi valves in the end or control air section of the system where 14 valves were installed that were not 600 psi valves. (Tr. 55 at 96-97, 244-245, 249-250, 278-280) Nor is there any credible evidence to indicate that Astro-Pak in fact installed new 600 psi valves rated to 1000 psi valves in the middle and end areas in slots from which it removed valves of a lesser capacity. Patrick only required that the replacement valves installed in the system be

©1994, Commerce Clearing House, Inc.

Digitized by Google

identical in pressure rating and otherwise equal to the valves Astro Pak removed from it. (CAF 1167 at 51; Tr. 48 at 77; Tr. 55 at 200-207, 212, 269-270, 274-279) When ordered to change the valves Mr. Ingersoll opined that 400 psi valves would be sufficient in "most cases," but he, nevertheless, advised Chief Patrick that he would "research" the matter and if the system required valves with a pressure rating higher than 400 psi, he would install them. (Tr. 55 at 77, 48-49, 51-55, 90-91, 95-98, 105; Tr. 48 at 44-45, 77) Mr. Ingersoll thereafter examined the valves at Astro-Pak's shop and ascertained that the valves Astro-Pak had removed from the 600 psi side of the system were indeed 600 psi valves. (Tr. 55 at 78; CAF 1167, pp. 50-51; GX 712)

Appellant's Installation of Identical Valves

17. After confirming that Astro Pak had removed 600 psi valves from the high side of the system, Mr. Ingersoll began calling vendors to see if he could locate identical 600 psi valves. Although the manufacturer of the 600 psi valves earlier had advised him that the 600 psi valves were no longer in production, one of the three vendors Astro Pak later contacted was able to locate a supply of 600 psi valves in its warehouse. Astro Pak purchased these 600 psi valves and installed them in the starting air system pursuant to Chief Patrick's directive. (Tr. 48 at 79, 93) Mr. Ingersoll was of the opinion that those 600 psi valves Astro Pak purchased and installed were "1000 psi valves" and so informed respondent. (Tr. 55 at 105) However, when Chief Patrick examined the new valves, he discovered that they were 600 psi valves, "rated to 1000 psi" and were identical to the old 600 psi valves rated to 1000 psi that Astro-Pak had removed from the starting air system. In fact, they were the same valves that Astro-Pak and appellant earlier had advised the Government, in IDR 288, had not been manufactured since 1952 and the parts for which had not been obtainable since 1962. (*Id.* at 105-7) The valves were fabricated by the same manufacturer that made the old valves Astro-Pak had removed from the system and were identical in every respect and feature to the old valves. It is clear from the record that when Astro-Pak and appellant advised respondent in IDR 288 that the 600 psi valves Astro-Pak removed from the air system "were no longer in the inventory of the manufacturer as of 1952, and spare parts are no longer available as of 1962," neither appellant nor Astro-Pak had sought to purchase the 600 psi valves from the particular vendor from whom the 600 psi valves ultimately were obtained. Had that effort been made, they would have discovered the availability of the identical 600 psi valves prior to issuing IDR 288 advising of their unavailability. (AF, Docket No. 1687, Tabs 15 and 17; CAF 1167, p. 56; Tr. 55 at 99-120, 157-159, 218-221, 244-246)

18. At trial, Chief James Patrick, the Government inspector who, as found above, had worked on the starting air system for two years prior to the instant contract, contradicted Mr. Ingersoll's testimony that the starting air system was a low pressure system that could operate efficiently on 400 psi valves. Chief Patrick testified that the starting air system had a normal operating pressure of 600 pounds per square inch (psi), and not 250 psi as was testified to by Mr. Ingersoll and asserted by appellant in its trial brief. He explained that only a part of the system had a working pressure of 250 psi. Referring to Paragraphs 3.1.3, 3.2.1, 3.3.5, and 3.4.13 of Definite Item D-19, Chief Patrick, using Drawing 310 WAGB-4105-9 which depicted the starting air system, explained that the working air pressure at the high end of the system was 600 psi, which pressure was reduced to 250 psi in the middle section of the system, and that it was further reduced to 100 psi in the low end of the system. That drawing also showed that the working pressure of the system, where the valves called for under CR 165 were located, *e.g.,* the valves in Paragraph 3.4.13 of the specifications, was actually 600 psi, and that the system's safety relief valve had to be set either at or greater than 600 psi. This means that for the system to operate efficiently and safely, the high end of the system must use 600 psi valves or greater. (Tr. 55 at 32-39, 96-97, 156, 165-171, 181-185)

19. In explaining the difference between the starting air system's "working air pressure" and its "rated pressure," Chief Patrick noted that while the working air pressure of the system was 600 psi, the 600 psi valves themselves were rated to 1000 psi. He pointed out that the "600 psi crossover" listed in Paragraph 3.4.13 of Definite Item D-19 placed appellant on notice that the starting air system had a working air pressure rating of 600 psi. He also verified that the first section of the starting air system had a working air pressure of 600 psi, which has valves rated to 1000 psi; the second part of the system had a working air pressure of 200 psi with valves rated to 400 psi; and the third part of the system had a working pressure of 100 psi. The 600 psi or high section

Digitized by Google

was the storage part of the system that served as a reservoir or air storage tank for the volume of air used for starting the main engine. However, as the referenced contract drawings indicate, under the type of medium pressure system found on the *GLACIER*, all of the air, including the 600 psi air, was reduced as low as 250 or 150 psi. He stated that that does not mean, however, that the system could safely operate on 400 psi valves. (Tr. 55 at 38-40, 72-75, 87-89, 130, 140-152, 156-158, 165-172, 231-243; GX 421; GX 422; GX 423)

21. To further support his testimony that the start air system required 600 psi valves or new replacement valves rated to 1000 psi, Chief Patrick pointed out that Paragraph 3.3.3 and 4.2 of Item D-19 required appellant to perform a hydrostatic test to 900 psi, which alerted appellant that the system would have to be charged to 900 psi at least once. He explained that compressed air is dangerous, and the pressure requirements of a valve are stricter as the air pressure in the system becomes greater. Since the purpose of a valve is to isolate or activate a particular part of the system, if any valve is insufficient, the system might fail to shut off and could result in injury or jeopardize the safety of the system. (Tr. 55 at 34, 41, 49-51) More specifically, insofar as Paragraphs 3.3.3 and 4.2 of Definite Item 19 are concerned, appellant was alerted that it would have to consider certain safety matters when installing valves in the system, relating to the difference between the air pressure rating of the system and the air pressure rating of the valves. Since the working air pressure of the air starting system was 600 psi, and since the system was required to be hydrostatically tested to 900 psi, safety considerations required that the air pressure rating of the *valves* themselves be 150 per cent of the working air pressure rating of the *system* in order to withstand the higher pressures. (Tr. 55 at 209) Based upon knowledge gleaned from working with the *GLACIER* starting air system, Chief Patrick thus opined that the 400 psi valves Astro Pak installed to replace 600 psi valves could not withstand the required 900 psi hydrostatic test. (AF, Docket No. 1687, Tab 18; GX-421; Tr. 48 at 46; Tr. 55 at 40-42, 49, 54, 61, 68-69, 102-117, 125-127, 140-141, 151) If 600 psi valves (rated to 1000 psi) that could withstand such test were unavailable, he agreed with the manufacturer that the next highest rated valves that were available, *i.e.*, 1000 psi valves, or valves rated to 1000 psi, constituted the only approved equal valves on the market for replacing the 600 psi valves removed from the system. (GX-421; Tr. 48 at 80-83; Tr. 55 at 40-41, 49, 54, 61, 68-69, 102-117, 125-127) We find from the uncontroverted evidence that the valves Astro Pak removed from the high pressure end of the starting air system were 600 psi valves rated to 1000 psi. Such valves were listed in Paragraph 3.4.13 of Definite Item D-19 and were the subject of appellant's IDR 288. They also were the valves that were subject to renewal under CR 165. We further find Chief Patrick's testimony, that appellant was required to replace such valves with 600 psi valves rated to 1000 psi, rather than with 400 psi valves, was both credible and consistent with the contract requirements. (GX-421; CAF 1167, p. 51; Tr. 48 at 47, 77; Tr. 55 at 102, 110-117, 125-137, 178-180, 200, 246)

Deductive Change Request No. 229

22. When Chief Patrick was advised by appellant's IDR 288 and the manufacturer that identical 600 psi replacement valves were no longer being manufactured, he assumed appellant would not be able to replace the old valves with identical 600 psi valves. Accordingly, on the basis of the information received from Mr. Ingersoll and the manufacturer, Chief Patrick included in his estimate for new valves the cost of 1000 psi valves, the next highest rated valve to the 600 psi valves, which the manufacturer stated would constitute an equal replacement for the 600 pound valves Astro Pak had removed from the system. Chief Patrick expected the new replacement 1000 psi valves to be somewhat different from the old 600 psi valves, rated to 1000 psi. For that reason, his estimate also included an amount for new "nuts and tailpieces" for mounting the new 1000 psi valves he assumed Astro-Pak would have to purchase, since he considered it would be too expensive and unsafe for Astro-Pak to disassemble the old nuts and tail pieces from the old valves and use them on the new 1000 psi replacement valves. (Tr. 55 at 61-69, 99, 103-105, 200-201, 203-208, 224-225, 244-246)

23. As a result of Astro-Pak's installation of 600 psi valves, identical to those it had removed from the starting air system which it previously indicated were not available, the cost of the new nuts and tailpieces included in the Government's estimate, and later incorporated in the bilateral contract modification No. 47 price of $46,894.00 for CR 165, were no longer required, since Astro-Pak could use the old ones. The Government, therefore, issued a deductive change order (Change Request No. 229) reducing

©1994, Commerce Clearing House, Inc.
Digitized by Google

the price of the contract by the amount included therein for those items. However, that deduction was not for the full amount of $7,549.92 included in the Government's estimate for nuts and tailpieces and the labor for the sweat fitting and unsweating associated therewith, but was only $4,476.00 which the record indicates constituted a reduction primarily for labor, and an acknowledgement that appellant needed to replace some air valve nuts and tailpieces. (CAF 1167, pp. 55-56, 60-62; CAF 834, pp. 2-3; Tr. 55 at 99, 120-124, 159-163) On March 30, 1984, appellant executed, without objection, bilateral contract Modification No. 90, that reduced the contract price by $4,476.00, in accordance with deductive Change Request No. 229. (CAF 100; GX-422; Tr. 55 at 62-71, 124)

24. Southwest Marine Purchase Order Number 7003-103486 reflects that on October 20, 1983, Astro-Pak quoted appellant a price of $32,000.00 for the performance of CR 165. (AX 568; Tr. 48 at 20-26) Six days after it received the $32,000.00 price quote from Astro-Pak, appellant submitted a price proposal referred to above for the work under CR No. 165, representing to the Contracting Officer that its "Subcontractor/Rentals" cost for the work thereunder was $38,000.00. There is no explanation in the record for the difference of $6,000 in the price appellant negotiated with Astro-Pak for CR 165 and the subcontractor price set forth in appellant's CR 165 proposal to the Government. (*Id.* at 20-26, 28-29) The difference between the $46,894.00 price in bilateral contract Modification No. 47 and the $32,000.00 paid Astro-Pak for the work is $14,894.00, an amount the record indicates represented appellant's profit on the work performed under CR 165. (AF, Docket No. 1687, Tab 9; AX-568, AX-569, AX-570 and AX-571)

25. Following its removal of the 400 psi valves as ordered by Chief Patrick and the installation of new 600 psi valves that were identical in every respect to the 600 psi valves it had removed from the air system, Astro-Pak requested appellant to increase its subcontract price for CR 165 from $32,000.00 to $56,770.00, or by $24,770.00. Astro-Pak explained in its letter that its price for the work under CR 165 was based upon supplying "400 psi valves" rather than "1000 psi valves." Astro Pak's request indicated that, of the requested amount of $56,770.00, only $18,770.00 related to materials, and that 10 percent of the $18,770.00, or $1,706.36, represented its mark-up. (AF, Docket No. 1687, Tab 7, p. 2) In fact, the actual alleged increased cost of the twenty-six 600 psi valves (rated to 1000 psi) that Astro Pak actually replaced was only $16,982.00 and not $18,770.00. The record shows the cost of the twenty-six 600 psi valves was $20,088.00 and the cost of the rejected 400 psi valves was $3,106.00, or a difference of $16,982.00. (*Id.*) Astro-Pak's requested increase in the contract price of $24,770.00 thus represents $7,788.00 more than its actual increased cost of $16,982.00 for the twenty-six 600 psi replacement valves.

II. *CHANGE REQUEST NO. 186*

26. Paragraph 1 of Definite Item D-19 of the contract stated: "The starting air flasks shall be opened, cleaned, inspected and tested. The starting air system valves (87) and the air system pressure reducing valves (7) shall be reconditioned or renewed. The flask and system relief valves (13) shall be tested. The entire system shall be checked for leaks after overhauls." (CAF 9 at 89) By IDR 7003-325, dated October 21, 1983, appellant notified respondent that the 44 valves listed in Paragraph 3.3.5 were disassembled and inspected in the presence of the Coast Guard Inspector pursuant to the basic requirements of Paragraph 3.3.2. Appellant found that three one-half inch valves listed as Compressor Discharge Valves Nos. 4-77-3, 4-100-4, and 4-139-3 did not exist in the system; hence there were only 41 valves. Of those 41 valves, eighteen were inspected, found to be satisfactory and were reassembled. The remaining twenty-three of the forty-four valves were found to be in need of extra work. In CR 186 respondent directed appellant to repair eight of those valves and to renew the other fifteen valves. (AF, Docket No. 1687, Tabs 13, 16)

27. Appellant received Astro Pak's proposed price of $8,114.00 to repair and renew the valves under Paragraph 3.3.5 and included that price in its proposal with other work to be done by the appellant. As was true with its proposal for CR 165, appellant's proposal for CR 186, submitted on November 2, 1983, also was based upon the installation of 400 psi valves in all sections of the starting air system, but appellant did not mention that fact in its proposal, which merely stated that the proposal was for performance of "modification/amendment CR 186, Item D-19." (AF, Docket No. 1687, Tabs 12, 7; Tr. 48 at 48) The record indicates that the Government's estimate of $10,786.09 for the work under CR 186 was based upon the installation of 1000 psi valves in the 600 psi

Digitized by Google

slots, which, at the time, were considered to be the only available valves of the same type, body, trim material and service pressure as the 600 psi valves appellant had removed from the starting air system. The unit cost of those valves was identical to the unit cost of the valves the Government priced under CR 165. (Tr. 55 at 67-68; 161-164; Tr. 56 at 76-77, 80-82; Rule 4 File, Docket No. 1687, Tab 13) The Government considered appellant's proposal to be fair and reasonable and accepted it for the work under paragraph 3.3.5 as evidenced in bilateral contract Modification No. 62, dated December 29, 1983. (*Id.* at Tab 8; Tr. 55 at 53-54, 90-91; CAF 1167 at 50; CAF 71)

28. Most of the valves that were the subject of CR 186 (and IDR 325) also were 600 psi valves (rated to 1000 psi) when appellant originally removed them from the air start system. (Tr. 55 at 161-164, 276-280) The valves Astro Pak actually installed under CR 186 and which the Government accepted were 600 psi valves, rated to 1000 psi. (*Id.*) As was true with the valves Astro Pal installed under CR 165, the valves it installed under CR 186 were made by the same manufacturer and had features identical to those valves Astro Pak had removed from the starting air system.

29. Appellant submitted to the respondent its price proposal of $8,114.00 for CR 186 on November 2, 1983. Despite having been told on November 21, 1983 by Chief Patrick that the renewal of the existing 600 psi valves with 400 psi valves would not be acceptable, appellant elected not to revise its $8,114.00 price proposal for the work under CR 186. Instead, appellant agreed to accept the $8,114.00 by executing contract Modification No. 62 on December 29, 1983. (AF, Docket No. 1687, Tabs 8 and 12) On "Order Date," December 22, 1983, seven days before appellant executed bilateral contract Modification No. 62 on December 29, 1983, Astro-Pak was aware of the vendor prices for the new 600 psi valves rated to 1000 psi that are in dispute. On that date, Mr. Ingersoll informed Mr. Michael Kirst during a telephone conversation that Astro-Pak desired to increase the price of CR 186 to $12,549.00. But despite having been made aware by Astro-Pak that the prices the latter had quoted were for the incorrect 400 psi valves, appellant rejected Astro-Pak's request for a price increase, and instead agreed to accept $8,114.00 by executing contract Modification No. 62 as indicated above. (AF, Docket No. 1687, Tabs 6,7 and 12; Tr. 48 at 57-58)

30. On December 29, 1983, after appellant had bilaterally executed contract modification No. 62, Mr. Ingersoll wrote appellant's Mr. Kirst, referring to their prior telephone conversation on December 22 regarding CR 186, and advising again that Astro Pak's price proposal for the CR 186 valves was based upon supplying 400 psi valves at a total cost of $1,462.00, rather than the higher priced 1000 (*i.e.,* 600) psi valves. Mr. Ingersoll accordingly requested appellant to increase its price for the work under CR 186 from $5,784.00 to $12,549.00, a difference of $6,765.00. Of the $12,549.00 requested, $6,744.00 was for materials, and 10 percent of the latter amount constituted an Astro-Pak mark-up. Therefore, $5,998.00 represented Astro Pak's actual additional cost for installing the 600 psi valves that were identical to the 600 psi valves it removed from the system. (AX-561; AF, Docket No. 1687, Tab 7, p. 3; Tab 12)

The Contracting Officer's Final Decision

31. In mid-January 1984, following completion of the work, appellant forwarded to the Contracting Officer a letter from Astro Pak asserting a mistake in its cost proposal for the work under CR 165, in the amount of $13,093.00, and for the work under CR 186, in the amount of $5,489.00. Appellant sought a total increase of $18,582.00 in the contract price, based upon its alleged mistaken cost proposals for the two change requests. (AF, Docket No. 1687, Tab 3) During a meeting convened by the Contracting Officer with appellant and Astro Pak to discuss the claim, the parties reached a tentative agreement to settle appellant's claim in the requested amount of $18,582.00. However, following a more detailed review of the matter after that meeting, the Contracting Officer communicated to appellant a firm offer of $15,928.00 to settle the matter, which offer appellant summarily rejected initially, but sought to accept some two months later. Concluding that appellant had waited too long to communicate its acceptance, the Contracting Officer ruled his offer had lapsed and thereby rejected appellant's attempted acceptance of it.

32. The disparity between appellant's original offer to perform the work under CR 165 and the Government's estimate was $7,532.00 or 14 percent. The disparity between appellant's offer to perform the work under CR 186 and the Government's estimate was $2,672.00 or 20 percent. In a formal decision dated July 15, 1985, the Contracting Officer denied appellant's claim, and stated that appellant should have

©1994, Commerce Clearing House, Inc.

Digitized by Google

known of the alleged mistake at the time Astro Pak submitted its proposal, or at least at the time Astro Pak purchased the 600 psi, rated to 1000 psi, valves. The Contracting Officer determined that since appellant had waited until after completing the work to complain of the alleged mistake in its proposal prices, and since the disparity between appellant's price proposals and the Government's estimates were insufficient to give the Government actual or constructive notice of the alleged mistake in the pricing of the proposals, appellant had failed to establish any basis for relief. Appellant thereafter filed this appeal from the denial of its claim, but now seeks a total of $38,306.00, or more than twice the amount of $18,582.00 it sought before the Contracting Officer. (AF, Docket No. 1687, Tab 3)

Discussion

By this appeal, appellant, Southwest Marine, Inc., seeks reformation of its contract with the United States Coast Guard for alleged unilateral and mutual mistakes made by the parties during the execution of two bilateral contract modifications, *e.g.*, Modification 47 for Change Request (CR) No. 165 and Modification No. 62 for CR No. 186, under this ship repair contract. Appellant seeks $38,306.00, which it asserts represents its increased costs resulting from the Government Inspector's direction that it purchase and install forty 1000 psi rated valves in the ship's starting air system, rather than allowing appellant to install forty 400 psi valves in the system as it had planned. Although appellant's claim before the Contracting Officer sought only $18,572.00, appellant argues that it is entitled to $38,306.00 from the Board to cover certain additional costs which its subcontractor, Astro Pak, "inadvertently omitted" from its claim amount, plus stated appellant costs, profit and interest. (Appellant's Opening Brief, p. 234) In appropriate circumstances, a dollar increase in the amount claimed before the Contracting Officer, when based upon the same operative facts as included in the original claim, does not constitute a new claim negating the exercise of jurisdiction by this Board. *Diversified Marine Technology, Inc.*, DOTBCA Nos. 2455, 2482, 93-2 BCA ¶ 25,719; *Trepte Construction Company, Inc.* ASBCA No. 38555, 90-1 BCA ¶ 22,595 at 113,385-86.

Appellant's claim for reformation based upon mutual mistake is grounded in its allegation that in negotiating the costs of renewing the valves and parts for the starting air system, pursuant to Definite Item D-19 of the contract, both parties erroneously assumed that the system could be repaired with identical or equivalent materials, "but after soliciting customary suppliers, Astro Pak found that the 600 psi valves contained in the system were no longer in the inventory of the manufacturer as of 1952, and that spare parts were no longer available as of 1962." (*Id.* at page 223) Appellant's argument continues that had both parties known of the unavailability of the 600 psi valves at the time they executed the modifications, they would have negotiated higher prices for the valves. (*Id.*) Asserting additionally the theory of unilateral mistake, appellant states that its decision to purchase and install 400 psi valves, "with its consequent risks," after it was informed of the unavailability of the 600 psi valves, was not wholly unilateral. But even if unilateral, appellant asserts, respondent either had actual notice, or should have known that appellant had made a unilateral mistake in pricing its proposals for the two modifications on the basis of 400 psi valves, rather than 1000 psi valves, by virtue of the disparities between its proposals and the Government's estimates for the work. (*Id.* at 223, 225, 230) Appellant thus argues that it is entitled to relief *via* contract reformation or, alternatively, to an equitable adjustment, for the difference in the price of the two valves, on the theory that the Government had superior knowledge of the fact and failed to disclose that 1000 psi valves were required to satisfy the specifications. (*Id.* at 233-234)

Respondent argues that there is no basis in the record for relief under any of the theories espoused by appellant and that the evidence in the case points to nothing more than a mistake in the judgement of appellant's subcontractor, Astro Pak, that it could unilaterally substitute unequal valves for those called out under the contract. Such an effort by Astro Pak, respondent argues, violated the long-established principle that the Government has the right to insist upon the materials it bargained for under the contract. (Respondent's Reply Brief, Vol. II, p. 781)

Viewing the operative facts of this case as we have found them, the Board agrees that appellant's theories grounded in reformation and superior knowledge by the Government not only are lacking in merit and are irrelevant to a resolution of this dispute, but that appellant's conclusions and extensive arguments in support of such theories are

Digitized by Google

based upon a totally erroneous analysis of the clear evidence of the case.

Briefly summarized, the evidence shows that Definite Item D-19, an "open and inspect" item of the contract, required appellant, during its repair and renovation of the *USCGC GLACIER,* to remove, disassemble and inspect 44 starting air system valves listed in Paragraph 3.3.5 and 42 of such valves listed in Paragraph 3.4.13 of Definite Item D-19. The inspections, for which appellant engaged the services of its subcontractor, Astro Pak, were to be implemented on ship for the valves listed under Paragraph 3.3.5 and off the ship for those valves listed in Paragraph 3.4.13, all in the presence of the Government inspector. Both inspections were designed to ascertain whether to "recondition or renew" the valves during appellant's repair and modification of the *USCGC GLACIER.* Such a determination was to be made by the Contracting Officer, or his authorized agent, the Government inspector, upon receipt of appellant's post-inspection reports that were required to be submitted to the Contracting Officer within 24 hours after completion of each inspection, identifying each valve that was to be reconditioned or renewed.

The valves in the starting air system ranged in size from 600 psi, rated to 1000 psi, in the high or air flask section, 250 rated to 400 psi in the middle section, and 150 psi in the end or low section of the system. (Finding 9) All of the valves in the high section were 600 psi rated to 1000 psi, and, in fact, all of the valves in the starting air system, except 14 valves in the middle and end sections, were 600 psi valves.

The instant dispute arose when the Government inspector, Chief James Patrick, discovered during his inspection of the valves appellant was required to renew under Modification 47 (CR 165), that Astro Pak had installed about 8 valves, rated 400 psi, in the high section of the starting air system from which Astro Pak had removed 600 psi valves. Chief Patrick directed Astro Pak to remove the 400 psi valves and to replace them with valves of the same type and pressure rating as those it had removed from the system, or their equal. During a call to the manufacturer of the 600 psi valves, the inspector confirmed appellant's communication in Inspection Deficiency Report (IDR) 7093-288 that such valves had not been in the inventory of the manufacturer since 1952 and spare parts had not been available since 1962. The manufacturer told both the inspector and Astro Pak that since the 600 psi valves were not available, valves representing the next highest rating would have to be installed as substitutes for the 600 psi valves. The next highest rated valves then in production and available from the manufacturer were 1000 psi valves. Such valves constituted the only equal substitute for the 600 psi valves.

It is evident from the record, however, that the use of 1000 psi valves clearly conflicted with appellant's plans for renewing the valves under Modifications 47 and 62 (*e.g.,* CR 165 & CR 186), since the costs appellant included in its proposals for that work were based upon the purchase and use of 400 psi valves throughout the starting air system. Appellant based its conclusions that it could use 400 psi valves as adequate substitutes for the 600 psi valves it removed from the system upon Astro Pak's reading of the contract plans and specifications. However, as we have found above, Astro Pak's reading of the drawings and specifications as permitting the unilateral substitution of 400 psi valves for 600 psi valves was an unreasonable interpretation of the contract plans and specifications that was clearly contradicted by the Government inspector whose testimony demonstrated both an in-depth knowledge of the *GLACIER* starting air system, by virtue of his experience in working with the system, as well as a close familiarity with the applicable contract plans and specifications.

But the element of appellant's case that makes it particularly weak is that, on the question of replacing existing parts, the contract was very explicit in defining what constituted "renewal," expressly stating that "Any valve or components renewed are to be of the same type, body and trim material and service pressure as the one being replaced." (Finding 7) That the 400 psi valves appellant sought to install were not of the same service pressure as the 600 psi valves was evident from the uncontroverted testimony of Chief Patrick who, using the referenced contract drawings, showed that the 600 pounds per square inch working air pressure requirement of the starting air system simply could not be met by 400 psi valves, which could render the system unsafe. (Findings 18-21)

Moreover, the contract was just as clear in delineating the conditions under which valves and other equipment might be substituted for that required under the contract. When the contractor contemplated making such a substitution, the contract required it to "... furnish to the Contracting Officer for

©1994, Commerce Clearing House, Inc.
Digitized by Google

his approval the name of the manufacturer, the model number, and other identifying data and information of 'or equal' products and materials...." Appellant failed to comply with that requirement either before or after installing the 400 psi valves in the starting air system and it produced no credible proof that the 400 psi valves constituted equal products for the 600 psi valves for which they were offered as substitutes.

That the Government is entitled to full compliance with all of the terms of the contract, including the drawings and specifications, and is not obliged to accept anything less, is a principle of Government contract law that is now well-established. *Inter-West, LTD.,* DOTBCA Nos. 2238, 2238-E, 92-3 BCA ¶ 25,073 (1992) at p. 124,981; affirmed, without opinion, *sub nom. Inter-West, LTD. v. Andrew Card, Secretary of Transportation,* 996 F. 2d 1235 (Fed. Cir. 1993); *Fusco-Amatruda Co.,* DOT BCA 67-23, 68-1 BCA 6745; *Hilltop Electric Construction, Inc.,* DOTBCA No. 78-6, 78-2 BCA ¶ 13,421; *Laurence J. Rice, Inc.,* DOTBCA No. 67-17, 68-2 BCA ¶ 7103. This Board has held that inherent in this principle is the rule that a contractor "cannot substitute its own judgment for that of the specifications and supply something different than that called for in the specifications on the ground that the item furnished was, in its opinion, just as suitable." If the contractor does so, he acts at his own risk. *R&M Mechanical Contractors, Inc.,* DOTBCA No. 75-51, 76-2 BCA ¶ 12,084 at 58,034. Since Astro Pak's attempt to install 400 psi valves in the starting air system in place of the 600 psi valves clearly violated this rule, the Contracting Officer's authorized agent properly rejected the 400 psi valves.

Appellant argues alternatively on brief that "To the extent that respondent's inspector insisted that Astro Pak renew existing Paragraph 3.3 air valves rated at *less* than 600 psi with 1000 psi rated valves, such direction plainly exceeded the requirement of the contract." (Appellant's Rebuttal Brief, Vol. II, page 402) Appellant contends that such actions by the inspector constituted a constructive change in the contract requirements for which it should recover. But that argument is merely theoretical since appellant could not produce at trial any specific evidence to controvert Chief Patrick's testimony that he did not object to Astro Pak installing 400 psi valves in the middle or end areas where valves in those categories originally were installed and that his directive only required Astro Pak to install in the system valves of the same pressure rating as the valves it had removed from the system, or their equal. (Finding 16)

Finally, we find equally lacking in merit appellant's additional argument that the Government constructively changed the contract by requiring Astro Pak to supply 1000 psi valves for all of the valves it was required to install under CR 165 and CR 186, rather than allowing it to install 400 psi valves as it intended, since replacement 600 psi valves were physically impossible to purchase. (Appellant's Opening Brief, pp. 226, 231, 233; Appellant's Rebuttal Brief, Vol. II, p. 403) Again, appellant totally misreads a critical part of the evidence in the record, which, standing alone, is dispositive of its appeal. On the one hand, the evidence clearly demonstrates that Astro Pak did not purchase and install "1000 psi valves," but, instead, installed 600 psi valves rated to 1000 psi that were fabricated by the same manufacturer that produced the 600 psi valves it removed from the system. Those valves, which appellant purchased from a supplier other than the manufacturer of the valves, who happened to have had them in its warehouse inventory, were identical in all salient features to the original 600 psi valves Astro Pak removed from the starting air system. It is obvious from the record that had appellant contacted that particular supplier at the conclusion of its inspection, there would have been no need for it to have sent IDR 709-288 to the Contracting Officer erroneously inferring that the 600 psi valves were no longer available. (Finding 17)

On the other hand, appellant's argument must fail since, even if the 600 psi valves were unavailable, it could not have installed 400 psi valves in the starting air system's 600 psi capacity valve slots for safety and other reasons.

For all of the above reasons, we deny the appeal.

[¶ 26,438] Vista Computer Services, Inc. v. Department of Transportation; Digicon Corporation, Inc., Intervenor

GSBCA No. 12590-P, October 4, 1993.

Protests, GSBCA—Suspension of Procurement Authority—Critical Operation.—A protester's request for suspension of an agency's authority to procure computer support services was denied because the computer services being procured were critical to the agency's operation of an aviation safety hotline and its ability to take immediate action in response to possible flight safety violations. The computer services also enabled the government to track millions of financial transactions. If the delegation of procurement authority for the support services contract had been suspended as requested by the protester, the government would have been without support services from the time of expiration of the incumbent's contracts until the decision on the merits was issued. The protester asserted that there was an alternative method of proceeding, which was to modify the contract with the incumbent in order to extend the contract's expiration date. However, this was not a valid alternative means by which the government could satisfy its needs, because the contract had already been amended twice to extend the life of the contract and no further amendments could be granted beyond the extended performance period.

For the protester: Kaye, Scholer, Fierman, Hays & Handler, Washington, D.C., by Ronald K. Henry, John Schryber, Gary Thompson, and Kenneth L. Marcus. For the government: John R. McCaw, Jr., Anthony L. Washington, George P. Kinsey, and Loren Mulraine, Federal Aviation Administration, Department of Transportation, Washington, D.C. For the intervenor, Digicon Corporation, Inc.: Alan M. Grayson and Fred A. Cohen.

Before DEGRAFF, Administrative Judge.

DEGRAFF, Administrative Judge: In this protest, Vista Computer Services, Inc. (Vista) challenges the award of a contract by the Federal Aviation Administration (FAA) to Digicon Corporation, Inc. (Digicon). The contract requires Digicon to provide a variety of computer support services to the FAA's headquarters. The FAA entered into the contract pursuant to a delegation of procurement authority from the General Services Administration, which permitted the FAA to conduct a competitive procurement among contractors eligible to participate in the Small Business Administration's section 8(a) program. Vista requested that the Board suspend the delegation of procurement authority to the FAA, pending a decision upon the merits of the case. The FAA contested suspension, and a hearing was held on September 30, 1993. Later that same day, the Board advised the parties that it was denying Vista's request for a suspension.

In order to avoid a suspension, the FAA was required to establish that "urgent and compelling circumstances which significantly affect interests of the United States will not permit waiting for the decision of the board." 40 U.S.C. § 759(f)(3)(A) (1988). The effect of a suspension must be "drastic, direct and unavoidable through use of alternative methods of proceeding in order for a request for suspension to be denied." *Spectrum Leasing Corp.*, GSBCA 9881-P, 89-1 BCA ¶ 21,513, at 108,357, 1989 BPD ¶ 28, at 3. The evidence presented at the hearing establishes that the computer support services being acquired are critical to the FAA's mission and that interests of the United States would have been significantly affected by a suspension. The evidence also establishes that there were urgent and compelling circumstances which would not have permitted waiting for a decision upon the merits of the case.

The computer support services being procured enable the FAA to operate its aviation safety hotline and to take immediate action in response to possible flight safety violations. The hotline is accessible twenty-four hours each day, seven days each week. The services being acquired also enable the FAA to track millions of financial transactions in order to determine the amount of funds it has available, to obligate funds, to ensure that funds are available for payments to contractors, to ensure that funds are used appropriately, to take any needed corrective action, and to avoid violating the Anti-Deficiency Act. The effect of an interruption in the computer support services would be drastic and direct, upon both public safety and public funds.

As of the date of the suspension hearing, September 30, 1993, the FAA was acquiring its computer support services from three incumbent contractors. All three incumbents'

©1994, Commerce Clearing House, Inc.

Digitized by Google

contracts were due to expire at the end of the day. In addition, the delegation of procurement authority that enabled the FAA to contract with one incumbent, World Computer Systems, Inc. (World), did not provide the FAA with the authority to contract with World past the end of the day. That delegation of procurement authority had been amended twice in order to permit the FAA to extend the life of the World contract, and the FAA understood that no more amendments would be granted. World provided a much greater amount of services than did the other two contractors.

If the Board had suspended the delegation of procurement authority for the Digicon contract, as Vista requested, the result would have been that the FAA would have been without the services it needs beginning October 1, 1993, when the three incumbents' contracts expired, until the decision upon the merits is issued (a date which may be as late as December 1, 1993). FAA personnel testified that they knew of no alternative method of obtaining these services if the delegation of procurement authority were suspended.

Vista did not disagree with the FAA concerning the critical need for the services that are being procured. Nor did Vista disagree with the FAA concerning the need for there to be no interruption in these services. Vista maintained, however, that no suspension was necessary because the FAA did not have to do without services until December 1, 1993. Vista asserted that the FAA had an alternative method of proceeding, which was to modify the contract with World in order to extend the contract's expiration date by two or three months. Vista directed the Board's attention to the decisions in *Blue Cross and Blue Shield,* GSBCA 10480-P, 90-2 BCA ¶ 22,670, 1990 BPD ¶ 33, and *RGI, Inc.,* GSBCA 11348-P, 91-3 BCA ¶ 24,249, 1991 BPD ¶ 176.

In *Blue Cross* and *RGI,* the Board suspended the agencies' delegations of procurement authority because there were incumbent contractors whose contracts could be modified in order to extend their periods of performance and to maintain the status quo. In neither case was there any legal impediment to a contract modification. In our case, there was such an impediment to extending World's period of performance. The delegation of procurement authority that permitted the FAA to contract with World did not provide the FAA with the authority to contract beyond September 30, 1993. The FAA was not free to disregard the terms of the delegation by entering into a contract modification which would have extended the contract past September 30, 1993. *See CACI, Inc. v. Stone* [38 CCF ¶ 76,501], 990 F.2d 1233 (Fed. Cir. 1993).

Even if there had been no legal impediment to a modification of the World contract, the FAA introduced evidence to establish that continuation with World was not a viable alternative. As the transition from World to Digicon began, World terminated its employees and thirteen of those employees were hired by Digicon. In the opinion of the FAA technical officer assigned to the World contract, these employees were critical to World's performance and their absence would have had a disastrous effect upon World's ability to perform during any suspension period.

World's vice president testified that World was ready, willing, and able to continue to perform if the Board had granted the request for a suspension. When asked how World would obtain the personnel necessary to perform, he explained that World had identified a complete replacement team, some of whom were not currently employed by World, but "most" of whom would be available to begin work immediately. There was conflicting testimony concerning whether the thirteen former World employees who had been hired by Digicon would have been available to World, if the Board had granted a suspension. Vista introduced testimony that was somewhat unclear concerning whether World and Digicon had even an informal agreement concerning these employees. Digicon introduced testimony that it had hired World employees that Digicon believed would fulfill its needs in performing other contracts, and that it would not have held positions open for employees who chose to work for World during any suspension period.

It was clear from the testimony that World was willing to assist the FAA in any way possible during a suspension period. It was not so clear that World would have been able to live up to its good intentions. Employees who were crucial to World's performance had been hired by Digicon, and Digicon did not intend to lend those employees to World during any suspension period. Not all of World's replacement team was employed by World, nor were all members of the team available immediately. On balance, FAA's evidence establishes that an extension of World's performance period would not have provided the FAA with an alternative means of acquiring the services that it

Digitized by Google

needs, even if there had been no legal impediment to an extension.

Even if there had been no legal impediment to extending World's contract and all of World's staff had remained available, an extension of World's contract would not have provided the FAA with an alternative method of procuring the services that it needs. As noted above, the contract that was awarded to Digicon replaces three contracts and, as a result, the scope of work for the Digicon contract is different from the scope of work that was performed by World. The FAA was not obligated to amend the scope of World's contract in order to provide itself with an alternative method of proceeding.

At the hearing, Vista attempted to establish that the other two incumbents' contracts could have been extended by the FAA. But Vista's evidence—which consisted of a telephone conversation between Vista and a technical person for one of the contractors and between Vista and the office manager for the second contractor—was not persuasive. The contracting officer did not know whether either of the other two contractors was willing to continue to perform. Even if the FAA could have extended these two contracts, this would not have provided the FAA with an alternative means of meeting its needs, given that the bulk of the services were being provided by World.

In summary, the absence of a delegation of procurement authority which would have permitted the FAA to contract with World past September 30, 1993, precluded the FAA from modifying World's contract to extend the contract's expiration beyond that date. Even if World's contract could have been extended, the FAA established that an extension of World's contract would not have provided the FAA with an alternative means of meeting its needs during any suspension period. For these reasons, Vista's request for a suspension was denied.

At approximately 5:00 p.m. on September 30, 1993, seven hours before World's contract was to expire, Vista orally requested reconsideration of the decision. Only one of Vista's arguments requires comment. Vista asserted that no delegation of procurement authority was needed to continue with World or, alternatively, that the FAA could have utilized a blanket delegation of procurement authority to continue with World. The time to introduce facts in support of this argument was during the suspension hearing. The contracting officer testified at some length concerning the FAA's alternatives if a suspension were to issue, and he was clearly familiar with the delegations of procurement authority. No time limit was placed on either party at the hearing and nearly all of the FAA's witnesses, including the contracting officer, were present the entire time. Because no facts were presented in support of Vista's argument during the hearing, Vista's allegations did not warrant reconsideration.

In addition, even if Vista's allegations have merit, the "alternative" suggested by Vista is that the FAA could have entered into a sole source contract with World—not that the FAA could have extended World's existing contract. An agency does not have an alternative to suspension simply because it might be able to enter into a new sole source contract with an incumbent contractor. For these reasons, Vista's request for reconsideration was denied.

[¶ 26,439] Integrated Systems Group, Inc., Unitek Technology, Inc. v. Department of Labor; Dunn Computer Corporation and QSOFT, Inc., Intervenors

GSBCA Nos. 12581-P, 12592-P, October 7, 1993.

Protests, GSBCA—Interested Party—Exclusion from Competitive Range.—A protester lacked standing to protest the award of a contract under a procurement for computer equipment because, having failed to timely challenge its exclusion from the competitive range, it lost its status as an interested party with respect to the procurement. The protester contended that the letter it received from the contracting officer was insufficient to alert it to its basis of protest, because the letter did not include relevant price information. The letter, however, explicitly informed the protester that it had been eliminated from the competitive range because it did not meet the requirement for desktop units. The lack of price information was immaterial in these circumstances.

For the protester, Integrated Systems Group, Inc.: Skolnick & Leishman, Derwood, Maryland, by Shelton H. Skolnick, Judy D. Leishman, and Amy M. Hall. For the protester,

Unitek Technology, Inc.: Eugene D. Rossel, President. For the government: Vaughn Hill, Annaliese Impink, and Herman J. Narcho, Office of the Solicitor, Department of Labor, Washington, D.C. For the intervenor, Dunn Computer Corporation: Thomas P. Dunn, President. For the intervenor, QSOFT, Inc.: S.N. Mohanty, President.

Before HYATT, HENDLEY, and GOODMAN, Administrative Judges.

HYATT, Administrative Judge: On September 20, 1993, Integrated Systems Group, Inc. (ISG) protested respondent's award, on September 17, 1993, of a contract to CompuAdd Corporation for the procurement of personal computers and peripherals. Respondent has moved for dismissal of the protest. For the reasons stated, we grant respondent's motion.

Background

Respondent, the Department of Labor, Mine Safety and Health Administration (MHSA), issued request for proposals (RFP) number S2732002 on February 10, 1993. The RFP sought proposals for the procurement of four hundred 486/33 personal computers and peripherals. The closing date for initial proposals was March 31, 1993. Eighteen prospective contractors, including ISG, submitted proposals.

After reviewing the proposals received in response to the RFP, the contracting officer determined that thirteen proposals, including that of ISG, were outside of the competitive range for purposes of conducting discussions and would no longer be considered for award. The thirteen offerors were so informed by the contracting officer in letters dated June 3, 1993.

ISG received its letter on June 9, 1993. The letter stated, in pertinent part:

> Your proposal ... has fallen outside the competitive range based on your technical proposal which offered a [sic] ISG 433D Full Tower Workstation. Our solicitation calls for a desktop system unit. A revised proposal will not be considered.

ISG did not file a protest within ten days of receipt of this letter. The contracting officer conducted discussions with the remaining offerors and solicited best and final offers.

On September 17, 1993, protester learned that the contract had been awarded to CompuAdd in the amount of $1,399,148. ISG filed its protest of the award on September 20, 1993. The protest initially alleged that the award was improper because ISG's proposal was technically acceptable and lower in price. Subsequently, ISG amended its protest complaint to allege that its exclusion from the competitive range was improper.

On September 27, 1993, another firm, Unitek Technology Inc., which had remained in the competitive range and had submitted a best and final offer, also protested the award decision on the ground that its offer was technically acceptable and lower in price than the offer selected for award.

Discussion

Respondent has moved to dismiss the ISG protest because ISG failed to challenge the competitive range determination within ten working days of receiving the contracting officer's letter dated June 3. Once the period for filing a timely protest of the competitive range decision lapsed, respondent asserts, ISG lost its status as an interested party with respect to this procurement.

ISG responds that the letter it received from the contracting officer was insufficient to alert it to its basis of protest because of the absence of any price information in that letter. ISG contends that only after it learned of the amount of the award was it in a position to conclude the regulatory requirements applicable to a competitive range determination may have been violated. As such, ISG maintains that its protest was timely filed on September 20.

The Board has addressed similar situations in its decisions in *Trimble Navigation Ltd. v. Department of Transportation,* GSBCA 11692-P, 93-1 BCA ¶ 25,341, 1992 BPD ¶ 62, and *RMTC Systems, Inc. v. Department of the Army,* GSBCA 12249-P, 93-2 BCA ¶ 25,721, 1993 BPD ¶ 30. In *Trimble Navigation Ltd.,* we found the offeror had received notification of its elimination from the competitive range in a letter that stated its proposal was deemed "not to be technically acceptable." The letter further stated that the technical evaluation team had determined that the proposal failed to meet minimum requirements and would require a "major rewrite." The letter otherwise contained no specific detail as to why the proposal was unacceptable. Trimble waited approximately one and one-half months to file a protest. 93-1 BCA at 126,240, 1992 BPD ¶ 62, at 4.

The Board flatly rejected Trimble's argument that the generic explanation regarding

Digitized by Google

its elimination was inadequate notice of its basis for protest, thus tolling the ten day period established under the Board's Rule 5(b)(3)(ii).[1] Rather, "where an offeror is told it has been excluded from the competitive range because its offer is technically *unacceptable,* the offeror has received sufficient notification of an adverse agency action and must file its protest within ten working days of such notification." 93-1 BCA at 126,241, 1992 BPD ¶ 62, at 5. In reaching this conclusion, the Board reasoned that to allow an offeror to wait for an award decision and a post-award debriefing

> could severely prejudice the procurement process by potentially requiring agencies to redo months of negotiations and evaluations should such a protester prevail. Such a system would prejudice other vendors as well and unnecessarily prolong—at additional expense—the procurement process in contravention of the Brooks Act's stated support for the "goals of economic and efficient procurement."

Id. at 126,242, 1992 BPD ¶ 62, at 6-7.

ISG's notification, if anything, was more explicit than the letter provided to Trimble. ISG was pointedly told that it had been disqualified because its proposed product did not meet the specification for desktop units. ISG did not timely protest this adverse action. The lack of price information is immaterial in these circumstances. Having failed to protest the competitive range decision in a timely manner, and thus having not participated in the subsequent conduct of the procurement,[2] ISG is no longer an interested party to pursue a protest of the award decision. *RMTC Systems, Inc.,* 93-2 BCA at 127,997, 1993 BPD ¶ 30, at 3; *Trimble Navigation, Ltd.,* 93-2 BCA at 126,240, 1992 BCA ¶ 62, at 3-4; *Berkshire Computer Products,* GSBCA 11539-P, 92-1 BCA ¶ 24,587, at 126,685-86, 1991 BPD ¶ 302, at 3-4.

Decision

Respondent's motion is **GRANTED.** GSBCA 12581-P is **DISMISSED FOR LACK OF AN INTERESTED PARTY.**

[¶ 26,440] Federal Computer Corporation, I-Net, Inc. v. Department of Justice; International Data Products Corporation and Tisoft, Inc., Intervenors

GSBCA Nos. 12560-P, 12566-P, September 21, 1993.

Foreign Acquisitions—Trade Agreements Act of 1979—Nondesignated Country.—Although a protester alleged that the award of a contract for automatic data processing equipment violated the Trade Agreements Act because components allegedly included in the equipment were not manufactured in a designated country, the board concluded that the protest could not be summarily resolved, because there remained disputed factual issues concerning where the components were produced and transformed. Although the determination of whether the government violated the Act in making the award was a legal determination, it was wholly dependent upon the facts to be established in the course of the proceedings.

For the protester, Federal Computer Corporation: David S. Kovach and Doyle & Bachman, Washington, D.C., by James D. Bachman, Ron R. Hutchinson, and Scott A. Ford. For the protester, I-Net, Inc.: David W. Wells, Vice President and General Counsel, and Dickstein, Shapiro & Morin, Vienna, Virginia, by Richard J. Conway and Joel Freid. For the government: James R. Dietz, Federal Bureau of Investigation, Department of Justice, Washington, D.C., and R. Alan Miller, Civil Division, Department of Justice, Washington, D.C. For the intervenor, International Data Products Corporation: D. Oscar Fuster, Vice President. For the intervenor, Tisoft, Inc.: Hogan & Hartson, Washington, D.C., by William A. Bradford, Jr., Pierre M. Donahue, Timothy L. Schroer, David W. Burgett, Robert J. Kenney, Jr., Douglas A. Fellman, Thomas L. McGovern III, and James K. Trefil.

Before LABELLA, HYATT, and GOODMAN, Administrative Judges.

LABELLA, Administrative Judge: Federal Computer Corporation (FCC) and I-Net, Inc. have filed protests against the award of a contract to Tisoft, Inc. by the Federal Bureau of Investigation (respondent or FBI). The contract is for the acquisition of hardware, software, maintenance, integration support and technical support services to upgrade Tempest Intelligent Workstations. FCC and I-Net intervened in each other's protests; Tisoft intervened in both protests; and International Data Products Corporation intervened in FCC's protest.

The protests allege in part that the FBI violated the Trade Agreements Act (TAA) in awarding the contract to Tisoft because the trackball and token ring adapter included with Tisoft's equipment were manufactured in Taiwan. Both FCC and I-Net have moved for summary relief. We deny both motions.

Discussion

The TAA directs the President to prohibit the procurement of products from foreign countries which are not designated pursuant to 19 U.S.C. § 2511(b). 19 U.S.C. § 2512(a) (1988). The solicitation included both Federal Acquisition Regulation (FAR) clause 52.225-8, *Buy American Act—Trade Aqreements Act—Balance of Payments Program Certificate* and FAR clause 52.225-9, *Buy American Act—Trade Agreements Act—Balance of Payments Program,* which implement the Act.

Protesters argue that a physical inspection of both the trackball and token ring adapter revealed that the products are manufactured in Taiwan in that they bear a "Made in Taiwan" mark. Taiwan is not a designated country under the Act. Thus, they say, the award would violate applicable statute and regulation.

Respondent and intervenor Tisoft submitted a unified response to protesters' motions. The FBI and Tisoft agree that some component parts of the products are from Taiwan, and that the circuit board of the token ring adapter is marked "Made in Taiwan." However, they contend that both products will be populated in the United States using component parts from both the United States and foreign suppliers. The response is supported by declarations from executives of Tisoft's suppliers.

The Board has previously stated that

> ... summary judgment is properly granted only where there is no genuine issue of material fact and the movant is entitled to judgment as a matter of law. Fed.R.Civ.P. 56. ... The court must view all the evidence in a light most favorable to the opponent (or non-movant) and draw all reasonable inferences in its favor.

Richard S. Carson & Associates, Inc., GSBCA 9411-P, 88-2 BCA ¶ 20,778, (quoting *Armco, Inc. v. Cyclops Corp.,* 791 F.2d 147, 149 (Fed. Cir. 1986)). The facts concerning whether and where the trackball and the token ring adapter are populated and transformed are in dispute. While the determination of whether respondent violated the Act by awarding the contract to Tisoft is a legal determination, it is wholly dependent upon the facts to be established in the course of the proceeding. Based on the properly supported factual contentions raised in the response to the motions for summary relief, the FBI and Tisoft must be given an opportunity to establish the relevant disputed facts.

Decision

Protesters' motions for summary relief are **DENIED**.

GSBCA No. 12560-P, 12566-P, September 29, 1993.

Protests, GSBCA—Procedure—Discovery.—An attorney retained by an awardee was not denied access to protected material, despite concerns of protesters that the attorney would use the protected material for purposes other than the instant protest, because the board determined that the awardee should be given an opportunity to select counsel to represent it in the remedy phase of the protest and in dealing with recent allegations of violations of the Procurement Integrity Act. The protesters pointed to the attorney's practice in white collar criminal defense as a basis for their objections to access to protected material and contended that the only documents that would relate to a defense by the awardee against possible criminal charges were documents generated or received by the awardee. The protesters, however, did not comment on the attorney's practice of commer-

Digitized by Google

cial litigation or explain how the attorney's practice in this area would provide a basis for denying access to the protect material.

For the protester, Federal Computer Corporation: David S. Kovach and Doyle & Bachman, Washington, D.C., by James D. Bachman, Ron R. Hutchinson, and Scott A. Ford. For the protester, I-Net, Inc.: David W. Wells, Vice President and General Counsel, and Dickstein, Shapiro & Morin, Vienna, Virginia, by Richard J. Conway and Joel Freid. For the government: James R. Dietz, Federal Bureau of Investigation, Department of Justice, Washington, D.C., and R. Alan Miller, Civil Division, Department of Justice, Washington, D.C. For the intervenor, International Data Products Corporation: Akin, Gump, Strauss, Hauer & Feld, Washington, D.C., by Carl J. Peckinpaugh. Fellman, Thomas L. McGovern III, and James K. Trefil.

Before LABELLA, Administrative Judge.

LABELLA, Administrative Judge:

ORDER

The Board has received and reviewed the statement of Ty Cobb, Esq., attorney with the law firm of Hogan & Hartson, which has been retained by Tisoft, Inc. to represent that company in these protests. Mr. Cobb stated that he has no role in the "competitive decisionmaking" of Tisoft. Mr. Cobb has also stated that he is familiar with the terms of the protective order dated August 31, 1993, and will abide by its terms and conditions in handling any protective material which is produced in connection with this case.

During a prehearing conference held on September 24, 1993, the Board continued a stay in these proceedings so that the Government would have a period of time to investigate allegations concerning the procurement and to determine possible remedies. On September 27, 1993, the Government notified the Board and the parties that it would reach a determination on these issues within fourteen calendar days. With the agreement of the parties, the Board suspended the proceedings until October 13, 1993.

Both Federal Computer Corporation (FCC) and I-Net objected to the admission of Mr. Cobb to the protective order. FCC objects to admission because Mr. Cobb's area of practice is white collar criminal law. FCC contends that there is no need to allow Mr. Cobb access to review protected documents because the only documents which would relate to a defense by Tisoft against possible criminal charges are documents generated or received by Tisoft. FCC argues that these documents could be supplied to Mr. Cobb by Tisoft notwithstanding the protective order.

I-Net objects to admission on two separate grounds. First, I-Net argues that Mr. Cobb's assistance in the remedy phase of the protests is not necessary because Tisoft is already represented by eight attorneys. I-Net further contends that Mr. Cobb already has access to Tisoft documents which includes all the information he might need to represent Tisoft on the issue of remedy. Second, I-Net argues that Mr. Cobb "evidently will be representing Tisoft concerning possible Government investigatory matters, matters not part of the subject protests." As such, it contends, granting Mr. Cobb access would be inconsistent with the terms of the protective order by permitting use of protected material for purposes other than the protests.

Tisoft contends that FCC's objection is a "transparent and improper effort" to use Board procedures to influence the FBI's determination on how to end contractual relations with Tisoft. Tisoft argues that its counsel must have access to all documents that might bear on the conduct of this procurement and the type of remedy to be afforded to protesters.

The Board has considered the arguments advanced by both Tisoft and the protesters on the issue of access to the protective order. Both protesters have pointed to Mr. Cobb's practice in white collar criminal defense as a ground for their objections, but have failed to comment on Mr. Cobb's practice in the area of commercial litigation. While their concerns are duly noted, Tisoft should have the opportunity to select counsel to represent it in the remedy phase of these pro-

©1994, Commerce Clearing House, Inc.

Digitized by Google

tests and in dealing with recent allegations of violations of the Procurement Integrity Act. Thus, the Board will allow Mr. Cobb access to protected materials.

[¶ 26,442] Federal Computer Corporation, I-Net, Inc. v. Department of Justice; International Data Products Corporation and Tisoft, Inc., Intervenors

GSBCA Nos. 12560-P, 12566-P, September 24, 1993.

Protests, GSBCA—Interested Party—Noncompliant Proposal.—Although the government maintained that a protester lost its interested party status as a result of offering a noncompliant proposal under a best value procurement, the board ruled that the protester had standing to challenge the contract award because there was no showing that the protester's proposal was not compliant. The government asserted that the protester's best and final offer was nonresponsive because it did not comply with two mandatory requirements of the solicitation, but the government's actions during the course of the procurement contradicted its position. The government never treated the protester's BAFO as noncompliant or informed the protester that its proposal was ineligible for award. The purported noncompliant proposal did not cause the government to oust the protester from consideration for award in the source-selection decisions and the cost-technical trade-off analysis. Instead, the contracting officer evaluated the proposal and downgraded the protester's shortcomings in the cost-technical trade-off analysis.

Protests, GSBCA—Interested Party—Next-in-Line Rule.—The government's contention that a protester, not being the next in line for contract award under a best value procurement, was not an interested party to challenge the award of the contract was rejected because, if the offeror did prevail on the counts of its protest, the ranking of the offerors would change and the offeror would have an opportunity to receive the contract award. The next-in-line rule is applicable when there is a reliable and final ranking of all evaluated offers. The rule was inapplicable in the instant case, because the protest allegations, if proven, would have altered the rankings. Further, the board noted that the rule, which was articulated in a federal court decision, was applied in cases involving negotiated procurements. Unlike negotiated procurements, where the contract is awarded to the low cost, technically compliant offeror and where cost becomes the deciding factor, offerors in a best value procurement propose different packages of products and services. Given the differences and the nonstandardization of the vendors' solutions, the board concluded that the next-in-line rule was not appropriate for best value procurements.

For the protester, Federal Computer Corporation: David S. Kovach and Doyle & Bachman, Washington, D.C., by James D. Bachman, Ron R. Hutchinson, and Scott A. Ford. For the protester, I-Net, Inc.: David W. Wells, Vice President and General Counsel, and Dickstein, Shapiro & Morin, Vienna, Virginia, by Richard J. Conway and Joel Freid. For the government: James R. Dietz, Federal Bureau of Investigation, Department of Justice, Washington, D.C., and R. Alan Miller, Civil Division, Department of Justice, Washington, D.C. For the intervenor, International Data Products Corporation: D. Oscar Fuster, Vice President. For the intervenor, Tisoft, Inc.: Hogan & Hartson, Washington, D.C., by William A. Bradford, Jr., Pierre M. Donahue, Timothy L. Schroer, David W. Burgett, Robert J. Kenney, Jr., Douglas A. Fellman, Thomas L. McGovern III, and James K. Trefil.

Before LABELLA, HYATT, and GOODMAN, Administrative Judges.

LABELLA, Administrative Judge: Federal Computer Corporation (FCC or protester) has filed a protest against the award of a contract to Tisoft, Inc. by the Federal Bureau of Investigation (FBI or respondent). The contract is for the acquisition of hardware, software, maintenance, integration support, and technical support services to upgrade Tempest Intelligent Workstations. This decision considers and denies respondent's motion to dismiss.

Background

In this case, the FBI conducted a best value procurement. Protest File, Exhibit 6. As stated in Section M.1 of the solicitation, the contracting officer would award the contract to "that offeror whose proposal offers the greatest advantage to the Government

Digitized by Google

considering (a) the technical merits of the proposal and possible LTD [Live Test Demonstration] and (b) the system life cost/price." *Id.*

The protest alleges in part that the FBI conducted unequal discussions with FCC and Tisoft which affected the best value analysis. Both Tisoft and FCC submitted revisions to their initial technical proposals prior to the FBI's request for best and final offers (BAFOs). FCC contends that Tisoft was informed that its revisions were unacceptable prior to the submission of its BAFO, while FCC received no notice of deficiencies in its revised technical proposal between the time it submitted its revisions and the request for BAFOs. In a separate count, FCC also alleges that respondent's best value analysis was defective. Additional counts have been raised, but are not determinative of this motion.

Respondent filed a motion to dismiss the protest for protester's lack of interested party status. The FBI argues that FCC's BAFO was "nonresponsive" with respect to two mandatory items of the solicitation and that FCC was not next in line for award. Respondent seeks to apply the decision of our appellate authority in *United States v. International Business Machines Corp.* [36 CCF ¶75,772], 892 F.2d 1006 (Fed. Cir. 1989) (*IBM*), in support of its position that FCC is not an interested party to bring this protest.

Discussion

Noncompliance with the requirements of the solicitation

Respondent relies on the Federal Circuit's holding in *IBM* to support its first argument that FCC lacks standing because its proposal was noncompliant. In *IBM,* the court held that a nonresponsive bidder in a sealed bid procurement lacks a direct economic interest in the award. 892 F.2d at 1012. The bidder's standing to protest an award is predicated on the responsiveness of its bid. *Id.* Respondent argues that FCC's BAFO was "nonresponsive" because it failed to comply with two mandatory requirements of the solicitation. These two aspects of FCC's proposal that respondent now deems "nonresponsive," however, did not cause respondent to oust FCC from consideration for award in its source selection decision and the cost-technical tradeoff analysis. Protest File, Exhibit 80. Rather, that analysis shows that FCC was considered "below average" with respect to one of the subfactors for which this particular aspect of its proposal was evaluated. It was not considered at that time to be unacceptable for failure to meet a mandatory requirement. Indeed, this same approach in FCC's proposal that is now deemed unacceptable as not meeting mandatory requirements resulted in a grade of "average" with respect to all other subfactors within the general "discriminator" under which it was considered in the tradeoff analysis. We must reject respondent's request to apply the *IBM* responsiveness rule in this case.

The FBI's actions during the course of this procurement contradict the argument it advances in its motion. Respondent never treated FCC's BAFO as noncompliant. Instead, the contracting officer evaluated the proposal and downgraded FCC's "shortcomings" in the cost-technical tradeoff analysis to "below average" and "average." If FCC's BAFO was actually noncompliant as respondent contends, the contracting officer should have informed FCC of that fact and not included FCC in the source selection. *See* 48 CFR 15.609(b) (1993), (FAR 15.609(b)) (if contracting officer determines after discussions that a proposal no longer has a reasonable chance of being selected for award, it may no longer be considered for selection). *Centel Federal Systems, Inc. v. Department of the Army,* GSBCA 11238-P, et al., 91-2 BCA ¶24,028, at 120,303, 1991 BPD ¶123, at 11. At no time did the contracting officer treat FCC's BAFO as noncompliant nor was FCC informed that its proposal was no longer eligible for award. *See* FAR 15.609(c) (contracting officer must notify unsuccessful offeror at the earliest practicable time that its proposal is no longer eligible for award).

In making its argument, respondent is inviting the Board to apply the responsiveness rule articulated in *IBM* to best value procurements. While the Board has applied the *IBM*'s next in line rule to negotiated procurements in limited circumstances, neither party cited, nor was the Board able to independently locate, any case where the Board applied *IBM*'s rule of responsiveness to a negotiated procurement, let alone a best value procurement. Thus, the Board declines respondent's invitation to extend the rule to best value procurements where the protester was not rejected as unacceptable, was included in the tradeoff analysis, and such action forms the basis for the protest. As stated below, a best value procurement is not sufficiently analogous to a sealed bid procurement to justify extending the rule in these circumstances.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Moreover, even assuming, *arguendo,* that FCC's BAFO was noncompliant, FCC would still be an interested party. FCC's position would be analogous to an offeror which protests its exclusion from the competitive range. An offeror which believes that its exclusion from the competitive range violates the requirements of a statute or regulation may file a timely protest with the Board. *See, e.g., ST Systems Corp.,* GSBCA 11207-P, 91-3 BCA ¶ 24,201, 1991 BPD ¶ 154. If FCC's BAFO was noncompliant and FCC was no longer eligible for award, FCC still would be able to file a protest if it believed the decision violated a statute or regulation. FCC's position is even stronger than this—it complains that inadequate discussions had a potentially detrimental effect on its proposal. If this is true, there is no telling what FCC's proposal would have looked like if FCC had had the benefit of agency compliance with law. If this protest is granted, further discussions and new BAFOs would be required and FCC's BAFO would have to be re-evaluated with all the BAFOs which remained in the competitive range. Thus, FCC would still be an interested party.

Next in line for award

Respondent also argues the best value analysis shows that FCC was not next in line for award. The argument is based on the court's holding in *IBM* that a bidder that was not next in line for award was not an interested party as required by 40 U.S.C. § 759(f)(9)(B) (1988). 892 F.2d at 1011. An interested party is defined as an offeror whose direct economic interest is affected by the award. 40 U.S.C. § 759(f)(9)(B). Respondent contends that another offeror was determined by the contracting officer to be next in line for award, technically and in price, as well as based upon the best value analysis. Because FCC was not the next offeror in line for award, respondent argues, it is not an interested party and, thus, lacks standing.

In making its argument, respondent notes that the Board has applied the next in line rule articulated in *IBM* to negotiated procurements where the contract was awarded to the low cost, technically compliant offeror and where all proposals were judged technically equal and cost became the deciding factor. *See Computer Maintenance Corp. v. Department of the Army,* GSBCA 11718-P, 92-2 BCA ¶ 24,893, 1992 BPD ¶ 85; *Rocky Mountain Trading Co.,* GSBCA 11121-P, 91-2 BCA ¶ 23,877, 1991 BPD ¶ 71. While the Board has applied the rule to cases with negotiated procurements which closely resemble sealed bid procurements, this in no way means that the rule is applicable to all negotiated procurements. Respondent argues that the *IBM* rule could be applied in this case consistent with the Board's precedent because FCC has not challenged the best value evaluation of the firm that is next in line. Again, we disagree with respondent's argument.

The existence of a reliable and final ranking of all evaluated offers is essential to the application of the *IBM* rule. *See Data Switch Corp.,* GSBCA 11582-P, 92-1 BCA ¶ 24,673 (1991), 1992 BPD ¶ 23. As the Board has recently stated, "application of the rule [is] inappropriate where the protest allegations, if proven, will result in relief which alters or cancels the original ranking of offerors." *Service & Training, Inc. v. Department of the Air Force,* GSBCA 12220-P, 93-2 BCA ¶ 25,855, at 128,653, 1993 BPD ¶ 52, at 5. This change will occur where the protester has put the ranking of offerors directly at issue. FCC's protest in this case has done exactly that. FCC contends that the FBI conducted unequal discussions among the offerors which affected the best value analysis. If this allegation is proven during the course of the proceedings, the present ranking of offerors may change. Thus, the Board cannot say, as the court could in *IBM,* that the protester still will not receive the award even if it prevails.

Furthermore, in the limited circumstances where the Board has applied the *IBM* rule in cases involving negotiated procurements, the facts were closely analogous to sealed bid procurements. However, a best value procurement differs from a sealed bid procurement in virtually every regard. Bidders in a sealed bid procurement offer the same or similar products and services, and will vary only as to price. Offerors in a best value procurement will be proposing different packages of products and services, and, thus, will differ in more ways than price. Because of these differences and the nonstandardization of the vendors' offered solutions, the rationale behind the *IBM* rule is not appropriate for best value procurements. While the Board does not foreclose the possibility that the *IBM* rule could be applied to a best value procurement, it is difficult to imagine a factual scenario in which that could occur. Therefore, FCC is an interested party and the Board has jurisdiction to hear the protest.

Digitized by Google

Decision

The respondent's motion to dismiss is DENIED.

[¶ 26,443] QSOFT, Incorporated v. Small Business Administration; Contemporary Technologies, Inc., Intervenor

GSBCA No. 12558-P, September 20, 1993.

Protests, GSBCA—Interested Party—SBA 8(a) Procurements.—A protest against an award of a contract for automatic data processing support services under the Small Business Act 8(a) program was dismissed for lack of jurisdiction because the SBA determined that the protester was ineligible for award of an 8(a) contract at the time it submitted its proposal. Although the protester contended that the contracting officer had determined that the protester was in line for award and had a direct economic interest in award, any conclusion reached by the contracting officer before the solicitation's many amendments was of no consequence. Moreover, the SBA, rather than the contracting officer, was responsible for determining the protester's eligibility under the 8(a) program.

For the protester: J. Patrick McMahon, Vienna, Virginia. For the government: John W. Klein, Audrey H. Liebross, and Christopher Holleman, Office of General Counsel, Small Business Administration, Washington, D.C. For the intervenor, Contemporary Technologies, Inc.: Cohen & White, Washington, D.C., by David S. Cohen, Paralee White, Nikki Koulizakis, and G. Brent Connor.

Before LABELLA, BORWICK, and DEGRAFF, Administrative Judges.

DEGRAFF, Administrative Judge: On August 27, 1993, QSoft, Inc. (QSoft) filed its complaint in this case, protesting the decision of the Small Business Administration (SBA) to award a contract to Contemporary Technologies, Inc. (CTI). On September 13, 1993, SBA filed a motion to dismiss, asserting that the Board lacks jurisdiction to entertain this protest. On September 17, 1993, QSoft filed its opposition to SBA's motion. Pursuant to 40 U.S.C. § 759(f)(1988), we possess jurisdiction to consider a protest filed by an "interested party" who requests that we review a contracting officer's decision. Because QSoft is not an interested party in connection with the procurement at issue here, we grant SBA's motion to dismiss.

Background

The 8(a) Program

Sections 8(a) and 7(j) of the Small Business Act establish the Minority Small Business and Capital Ownership Development Program, commonly known as the 8(a) program. The statute authorizes SBA to enter into contracts with other Government agencies and to subcontract the performance of these contracts to small businesses owned and controlled by socially and economically disadvantaged individuals. The purpose of the program is to provide assistance to such businesses so that they are able to compete equally in the marketplace. 15 U.S.C.A. § § 636(j) and 637(a) (1993).

The Small Business Act and SBA's implementing regulations establish the eligibility criteria for participating in the 8(a) program. Generally, a firm must meet certain size requirements and must be owned and controlled by socially and economically disadvantaged individuals. 15 U.S.C. § 637(a) 13 CFR Part 124 (1993). Within SBA, the Office of Minority Small Business and Capital Ownership Development (MSB&COD) is responsible for handling matters relating to 8(a) program eligibility. 15 U.S.C. § 637(a)(8), 13 CFR 124.3.

If MSB&COD determines that a firm is eligible to participate in the 8(a) program, the firm may participate in the program for nine years. The first four years of participation are called the developmental stage, and the remaining five years of participation are known as the transitional stage. 15 U.S.C. § 636(j)(12), 13 CFR 124.110, 124.303. In order to ensure that a firm moves into the marketplace and does not become dependent upon 8(a) contracts, SBA requires 8(a) program participants to obtain business outside the 8(a) program. 15 U.S.C. § 636(j)(10)(I), 13 CFR 124.312. During a firm's transitional stage, it is required by SBA to achieve certain targets of non-8(a) contract revenue. *Id.* For instance, a firm in the third year of its

©1994, Commerce Clearing House, Inc.

Digitized by Google

transitional stage must achieve thirty-five to forty-five percent of its business from non-8(a) contracts, and a firm in the fourth year of its transitional stage must achieve forty-five to fifty-five percent of its business from non-8(a) contracts. 13 CFR 124.312(c)(4).

If a firm fails to achieve the minimum percentage of non-8(a) contract revenue, SBA is authorized to implement certain remedial measures, such as requiring the firm to attend business management seminars or restricting the firm's access to 8(a) contracts. 15 U.S.C. § 636(j)(10)(I)(iii)(V), 13 CFR 124.312(c)(6), 124.312(c)(12). In order to receive an 8(a) contract during the transitional stage of the program, a firm must certify either that it has complied with the non-8(a) business revenue target or that it is in compliance with any remedial measures imposed by SBA. 15 U.S.C. § 636(j)(10)(I)(iii)(III), 13 CFR 124.312(c)(11).

SBA may award either sole source 8(a) contracts or competitive 8(a) contracts. 15 U.S.C. § 637(a)(1)(B), 13 CFR Part 124. If a contract is to be awarded competitively, the procuring agency will conduct the competition in accordance with the Federal Acquisition Regulation (FAR). 13 CFR 124.311(f). The procedures for awarding an 8(a) contract are set forth in the FAR at Subpart 19.8. 48 CFR 19.800-19.812 (1992) (FAR 19.800-19.812). According to FAR 19.805-2(c), SBA—not the procuring agency—is responsible for determining the eligibility of a firm to receive award of an 8(a) contract. Further, this regulation provides that SBA will determine a firm's eligibility for award as of the time of submission of initial offers which include price. FAR 19.805-2(c). SBA's regulations provide that, if an offeror is in the transitional stage and has not achieved its non-8(a) business revenue target, this will not affect the firm's eligibility for award, so long as SBA and the firm have agreed upon a remedial plan. 13 CFR 124.311(f)(5)(iv).

SBA may terminate a firm's participation in the 8(a) program prior to the expiration of nine years, for good cause. 15 U.S.C. § 636(j)(10)(F), 13 CFR 124.209. If SBA terminates a firm's participation, the firm may appeal the termination to SBA's Office of Hearings and Appeals. 15 U.S.C. § § 636(f)(10)(G), 637(a)(9), 13 CFR 124.210. No appeal may be taken from SBA's decision to require remedial measures of a firm which fails to meet its non-8(a) business revenue targets. 15 U.S.C. § 636(j)(10)(I)(V).

The Procurement At Issue Here

SBA's Central Office decided to procure application software development services and, in a letter dated April 7, 1992, to MSB&COD, the Central Office offered to fulfill its requirements by means of a competition among 8(a) firms. Protest File, Exhibit 41. On April 13, 1992, MSB&COD accepted the Central Office's offer to fulfill its requirements in this manner. *Id.*

The Central Office issued solicitation SBA-92-8-FDS on June 1, 1992, and QSoft submitted its proposal on July 14, 1992. Protest File, Exhibits 1, 14. Subsequently, the solicitation was amended six times and offerors were permitted to submit revised proposals. Protest File, Exhibits 5-10. On May 24, 1993, QSoft and Central Office representatives entered into discussions concerning technical and cost issues and, on June 1, 1993, QSoft submitted its best and final offer. Complaint ¶ ¶ 12, 16; Protest File, Exhibit 21.

On June 2, 1993, the Central Office advised MSB&COD that three firms were within the competitive range, and requested that MSB&COD determine whether these firms were eligible for award of an 8(a) contract. Protest File, Exhibit 41. MSB&COD determined that, at the time QSoft submitted its proposal, it had not met its non-8(a) business revenue target. SBA's Motion to Dismiss, Exhibit 1; Protest File, Exhibit 41. Specifically, MSB&COD determined that QSoft was in the third year of its transitional stage at the time it submitted its proposal on July 14, 1992. Although SBA's regulations required QSoft to generate thirty-five to forty-five percent of its revenue from non-8(a) sources during the third year of its transitional stage, as of the end of the third quarter of 1992, QSoft had generated only 2.8 percent of its revenue from non-8(a) sources. This figure remained the same at the end of 1992. *Id.* In addition, MSB&COD determined that QSoft did not have an approved remedial plan in place at the time it submitted its proposal. *Id.*

Because at the time it submitted its proposal, QSoft had not met its non-8(a) business revenue targets and because QSoft had no remedial plan in place, MSB&COD determined that QSoft was not eligible for award of this 8(a) contract. MSB&COD advised the Central Office of QSoft's ineligibility in a memorandum dated June 14, 1983. Protest File, Exhibit 41. The Central Office notified QSoft of MSB&COD's determination in a letter dated August 18, 1993. *Id.*, Exhibit 43.

Digitized by Google

SBA notified CTI on August 18, 1993, that it was the successful offeror. *Id.*

The Protest

In its complaint, QSoft sets forth two grounds for its protest. In Count I, QSoft alleges that SBA failed to evaluate Qsoft's technical and cost proposals properly. In Count II, QSoft alleges that the contracting officer —and not the appropriate authority within SBA—made the determination that QSoft was not eligible for award. Alternatively, QSoft alleges that the eligibility determination was made at the wrong time. QSoft also alleges that the eligibility determination is incorrect.

Discussion

The procurement at issue here is for automatic data processing support services. Thus, pursuant to 40 U.S.C. § 759(f)(1988), we possess jurisdiction to entertain this case so long as it was filed by an interested party who asks us to review a decision by a contracting officer which is alleged to violate a statute or regulation. The term "interested party" is defined at 40 U.S.C. § 759(f)(9)(B) as "an actual or prospective bidder or offeror whose direct economic interest would be affected by the award of the contract or by failure to award the contract." A protester who has no chance of being awarded the contract lacks a "direct economic interest" in the award and so is not an interested party. *United States v. International Business Machines, Inc.* [36 CCF ¶ 75,772], 892 F.2d 1006 (Fed. Cir. 1989); *C.M.P. Corp.*, GSBCA 11115-P, 91-2 BCA ¶ 23,854, 1991 BPD ¶ 55.

Competition for award of the contract at issue here was limited to firms eligible to receive award of an 8(a) contract, and QSoft does not complain about this limitation. The FAR provides that 8(a) eligibility will be evaluated as of the date that a firm submits its initial proposal. FAR 19.805-2(c). Unless QSoft was an eligible 8(a) firm when it submitted its initial proposal in July 1992, it is not eligible for award of this contract. If QSoft is not eligible for award, it is not an interested party and we lack jurisdiction to consider either count of the protest.

There is no basis for QSoft's allegation that the contracting officer determined that QSoft is not eligible for award. It is clear from the record that MSB&COD—not the contracting officer —determined that QSoft was not an eligible 8(a) firm at the time it submitted its proposal and, thus, not eligible for award. According to statute and regulation, MSB&COD is the proper authority to make such an eligibility determination.

To the extent QSoft argues that we possess jurisdiction because the contracting officer should have been alerted to some deficiency in the timing or the correctness of MSB&COD's decision, we disagree. Concerning timing, the regulations clearly require that QSoft must have been eligible as of the date that it submitted its initial proposal, and the evidence is clear that MSB&COD examined QSoft's eligibility as of that date. If QSoft is arguing that MSB&COD should have conducted its examination earlier than it did, this argument is not supported by any regulatory or statutory requirement. FAR 19.805-2(c)(2). Additionally, although QSoft asserts that it had a remedial plan in effect, the evidence submitted by QSoft to support its assertion demonstrates only that in October 1992, SBA was considering QSoft's plan. We find no facts to suggest that the contracting officer should have been alerted to a flaw in MSB&COD's decision. Further, given that the statute does not permit even an administrative appeal of decisions concerning remedial plans, if we were to find that the contracting officer should have been aware of some inadequacy in MSB&COD's process, we are not certain what duty, if any, we would impose upon the contracting officer.

QSoft argues that it must be an interested party because it is participating as an intervenor in a protest concerning this procurement currently pending before the General Accounting Office (GAO). This argument is not persuasive. Assuming that GAO's definition of "interested party" is the same as ours, we do not know whether GAO has considered the propriety of permitting QSoft to participate in its protest. Even if our definitions are identical and even if GAO has decided to permit QSoft to participate, we would not be bound by GAO's decision.

QSoft also argues that we possess jurisdiction to entertain a protest concerning the propriety of any agency decision, no matter whether the decision was made by a contracting officer or by someone else within the agency, not acting for the contracting officer in connection with the procurement. We disagree. Our authorizing legislation is quite clear and cannot be read as broadly as QSoft would like.

Finally, QSoft argues that it has an economic interest in the award of this contract because, QSoft alleges, the contracting officer determined that QSoft was in line for award in September 1992. Even though we

©1994, Commerce Clearing House, Inc.
Digitized by Google

will accept QSoft's allegation as true, its argument fails. After September 1992, the solicitation was amended six times and offerors were permitted to submit revised proposals, so any conclusion reached by the contracting officer in September 1992 is of no consequence. More important, as we explain above, MSB&COD—not the contracting officer—was responsible for determining whether QSoft is eligible for award and MSB&COD determined that QSoft is not eligible. Because QSoft is not eligible for award, it is immaterial that, at some point during the rather lengthy history of this procurement, the contracting officer might have determined that QSoft was in line for award.

Decision

Because MSB&COD determined that QSoft is not eligible for award, QSoft lacks a direct economic interest in the award and so is not an interested party. For this reason, we lack jurisdiction to consider this protest. SBA's motion to dismiss is granted and the protest is **DISMISSED FOR LACK OF JURISDICTION.** The suspension of SBA's procurement authority lapses by its terms.

[¶ 26,444] Integrated Systems Group, Inc. v. Department of the Army

GSBCA No. 12538-P(12369-P), October 5, 1993. IFB No. DACW31-93-B-0032.

Protests, GSBCA—Interested Party—Direct Economic Interest.—A government motion to dismiss a protest against an award under a Small Business Administration set-aside for computer workstations on the ground that the protester was not an interested party was denied, despite the government's contention that the protester lacked a direct economic interest in contract award, because the government did not show that granting the protest would automatically put a lower-priced bidder in line for award of the contract ahead of the protester. Although the lower-priced bidder also checked a box in the bid's certification section that indicated that it would not furnish a product manufactured by a domestic small business, its protest ground was different from the protester's ground. The protester alleged that it checked the wrong box as a result of a clerical error, whereas the lower-priced bidder contended that no small business could truthfully check the other box, which the lower-priced bidder interpreted as requiring that every component of the system be manufactured by a small business in the United States.

Responsiveness of Bids—Commitment to Be Bound—Certification Requirement.—A protest against an award of a Small Business Administration set-aside for computer workstations was denied because the protester's failure to comply with the bid's certification requirements rendered the bid nonresponsive. By checking a box in the certification requirement section that indicated that the protester would not furnish a product manufactured by a domestic small business, the protester certified that it would not comply with a material requirement of the solicitation. The protester contended that its failure to comply with the certification requirement resulted from a mistake, which it wanted to correct. However, certification, which involves a performance commitment by a bidder, is not a minor informality or irregularity that allows for such correction.

Mistakes—Correction—Responsiveness.—A protester's bid under a Small Business Administration set-aside for computer workstations was properly rejected as nonresponsive, despite the protester's contention that the bid when read as a whole was responsive, because statements in the cover letter and technical literature, as well as the certification that the protester would not supply a system manufactured by a domestic small business, rendered its bid ambiguous and unacceptable. Although the protester alleged that the certification resulted from a clerical error, correction is limited to bids that as submitted are responsive to the invitation. Correction of nonresponsive bids to make them responsive is not permitted.

For the protester: Skolnick & Leishman, Derwood, Maryland, by Shelton H. Skolnick, Judy D. Leishman, and Amy M. Hall. For the government: Craig R. Schmauder and William A. Richards, Office of the Chief Counsel, Corps of Engineers, Department of the Army,

Digitized by Google

Washington, D.C., and Richard W. Kommers and Richard P. White, Corps of Engineers, Department of the Army, Baltimore, Maryland.

Before PARKER, DANIELS, and HENDLEY, Administrative Judges.

PARKER, Administrative Judge: Integrated Systems Group, Inc. (ISG), protests the decision of the U.S. Army Corps of Engineers to reject as nonresponsive ISG's bid to supply personal computer workstations. For the reasons discussed below, we deny the protest.

Findings of Fact

1. The U.S. Army Corps of Engineers issued Invitation for Bids (IFB) No. DACW31-93-B-0032 on February 22, 1993, for the purchase of twenty-five personal computer workstations. Protest File, Exhibit 2.

2. Paragraph I.16 of the solicitation incorporated the clause found at Federal Acquisition Regulation (FAR) section 52.219-6, "Notice of Total Small Business Set-Aside." Paragraph C of that clause states in part as follows:

> Agreement. A manufacturer or regular dealer submitting an offer in its own name agrees to furnish, in performing the contract, only end items manufactured or produced by small business concerns inside the United States, its territories and possessions, the Commonwealth of Puerto Rico, the Trust Territory of the Pacific Islands, or the District of Columbia.

Protest File, Exhibit 2 at I-19 to I-20.

3. The cover letter which accompanied ISG's bid stated:

> We understand and accept all terms and conditions contained in the proposal documents.

Protest File, Exhibit 3.

4. Unfortunately, however, the bid itself at Section K.11 said:

> (a) Representation. The offeror represents and certifies as part of its offer that it /[check mark]/ is, /__/ is not a small business concern and that /__/ all, /[check mark]/ not all end items to be furnished will be manufactured or produced by a small business concern in the United States, its territories or possessions, Puerto Rico, or the Trust Territory of the Pacific Islands.

Protest File, Exhibit 3 at K-10. Although ISG intended to indicate that the system it bid would be manufactured by a small business in the United States, an ISG employee inadvertently checked the wrong box. Declaration of Steve Mills (Sept. 15, 1993).

5. The technical literature submitted as part of ISG's bid stated on the first page that:

> Integrated Systems Group specializes in the design, manufacturing and marketing of a comprehensive range of personal computers.
>
> ....
>
> In-house manufacturing and extensive testing prior to shipping, makes quality and performance pertinent features of all ISG systems.

Protest File, Exhibit 3 at part II C.

6. On March 31, 1993, ISG and another bidder, Unitek Technology, Inc., were informed that their bids had been rejected as nonresponsive to the solicitation. Protest File, Exhibits 12, 13. Unitek, like ISG, had checked the box indicating that its system would not be manufactured by a small business in the United States. Both firms were told that "the bid does not establish your legal obligation to comply with Clause I.16—Notice of Total Small Business Set-Aside." *Id.* Unitek's bid was lower in price than ISG's bid. *Id.*, Exhibit 7.

7. On April 6, Unitek protested to the agency the rejection of its bid. Unitek asserted that 75 percent of its bid price represented work performed domestically by Unitek in manufacturing the computers and that no bidder could provide a computer system made up entirely of domestically manufactured components. Protest File, Exhibit 15. ISG also protested to the agency, asserting its "clerical error" theory. *Id.*, Exhibit 16.

8. Both firms also intervened in a protest of the same procurement filed at the Board by R&S Computers & Memory Enhancement Products. Protest File, Exhibit 35. ISG additionally filed its own Board protest, again asserting clerical error. *Id.*, Exhibit 32. The protests were dismissed without prejudice in accordance with a stipulation by the parties. The parties agreed to dismiss the Board protests in order to permit respondent to address them as agency level protests. The parties further agreed that the protests could be reinstated within ten days following any adverse decision on the agency protests. *Id.*, Exhibits 42, 43.

©1994, Commerce Clearing House, Inc.
Digitized by Google

9. Following respondent's denial of the agency protests, ISG filed this protest, which is a reinstatement of its original Board protest. None of the other bidders have intervened in this protest or filed protests of their own.

Discussion

Interested Party

Respondent moves the Board to dismiss ISG's protest for lack of an interested party. According to respondent, even if ISG prevails in its protest, it would not receive the award because Unitek, a lower-priced bidder, made the same mistake and would likewise be permitted to correct its bid.

We deny respondent's motion. Respondent is correct that, under the Brooks Act, only an "interested party" may pursue a protest at the Board. 40 U.S.C. § 759(f)(1) (1988). An interested party is "an actual or prospective bidder or offeror whose direct economic interest would be affected by the award of the contract or by failure to award the contract." 40 U.S.C. § 759(f)(9)(B). Construing this language, our appellate authority has stated that:

> the right to protest an agency's procurement practices before the Board is limited and may be exercised only by an actual or prospective bidder who would have been in line to receive the challenged award. The Board's protest authority does not extend to disappointed bidders who have no chance of receiving the contract.

Federal Data Corp. v. United States [36 CCF ¶ 75,913], 911 F.2d 699, 703 (Fed. Cir. 1990).

We do not agree with respondent, however, that Unitek would necessarily receive the award if ISG's protest were to be granted. Although Unitek, like ISG, checked the box indicating that its bid product would not be manufactured by a small business in the United States, Unitek's ground of protest was different than ISG's ground. ISG alleges that it checked the wrong box as the result of a clerical error. As discussed below, in order to win this protest, ISG must prove that its bid, standing alone, unambiguously obligated ISG to supply systems manufactured by a small business in the United States, notwithstanding the erroneous certification.

Unitek, on the other hand, did not allege that it checked the wrong box; essentially, Unitek alleged that no small business could truthfully check the other box, which Unitek interpreted as requiring that every *component* of the system be manufactured by a small business in the United States. Unitek did not argue that its bid, standing alone, obligated it to comply with the solicitation. As respondent correctly pointed out in its decision in Unitek's agency protest, the issue there was whether Unitek was entitled to *supplement* its bid with a post-award explanation of its responsiveness. Respondent held that Unitek was not permitted to do so and neither respondent nor Unitek has asked the Board to reverse that decision. Thus, we disagree with respondent that granting ISG's protest here would automatically put Unitek ahead of ISG in line for award of the contract. Respondent's motion is denied.

The Merits

Having said all that, we now deny ISG's protest on the merits. In government contract law, it is beyond cavil that "[t]o be considered for award, a bid must comply in all material respects with the invitation for bids." *Integrated Systems Group, Inc. v. Department of Commerce,* GSBCA 12420-P, 93-3 BCA ¶ 26,198, 1993 BPD ¶ 164, at 4 (June 15, 1993); 48 CFR 14.301(a) (1992) (FAR 14.301(a)). As the Comptroller General has stated, "[a] bid as submitted must represent an offer to perform, without exception, the exact thing called for in the IFB, so that upon acceptance, the contractor will be bound to perform in accordance with all the terms and conditions of the IFB." *Bulloch International, Inc.,* B-237369, 90-1 CPD ¶ 153, at 4 (Feb. 5, 1990). Thus, a responsive bid "is one that, if accepted by the government as submitted, will obligate the contractor to perform the exact thing called for in the solicitation." *Propper Manufacturing Co.,* B-233321, et al., 89-1 CPD ¶ 58, at 2 (Jan. 23, 1989). A bid which is ambiguous may not be accepted by the Government. *Southwestern Bell Corp.,* GSBCA 10321-P, 90-1 BCA ¶ 22,545, 1989 BPD ¶ 376.

By checking the box indicating that it would not furnish a product manufactured by a domestic small business, ISG certified that it would *not* comply with the requirements of the solicitation. ISG alleges that it made a mistake, which it would now like to correct. As discussed below, we hold that respondent correctly determined that such a correction would not be permissible.

Two sections of the Federal Acquisition Regulation discuss situations in which a bid may be "corrected." FAR 14.405 provides as follows:

> A minor informality or irregularity is one that is merely a matter of form and not of

Digitized by Google

substance. It also pertains to some immaterial defect in a bid or variation of a bid from the exact requirements of the invitation that can be corrected or waived without being prejudicial to other bidders. The defect or variation is immaterial when the effect on price, quantity, quality, or delivery is negligible when contrasted with the total cost or scope of the supplies or services being offered.

Numerous decisions of the Comptroller General make it clear that failure to comply with the certification requirement at issue here is not a minor informality or irregularity because the certification "involves a performance commitment by the bidder." *Wright Associates, Inc.*, B-238756, 90-1 CPD ¶ 549, at 2 (June 12, 1990).[1]

> The end item certification involves a performance obligation of the bidder, should it become the contractor, enforceable by the government. It reflects the view that the socioeconomic aims of the set-aside program are served only if the supplies are manufactured by small business concerns and reflects the Small Business Administration's requirement that a small business set-aside contractor furnish the product of a small business concern. . . . A bidder's failure to make such a commitment in its bid renders the bid nonresponsive because the government, upon acceptance of the bid, would not be able to require the bidder to supply items manufactured by small business concerns.

Morgan Lumber Sales, B-234997, 89-1 CPD ¶ 410, at 1-2 (Apr. 28, 1989); *see Hankins Lumber Co.*, B-248108, 92-2 CPD ¶ 50 (July 27, 1992) ("Where a bid fails to include a properly completed certification which contains performance requirements designed to accomplish the purposes of a small business set-aside, the bid is nonresponsive and must be rejected").

As protester points out, the Comptroller General has, in some cases, permitted the Government to overlook a bidder's failure to complete the required certification where the bidder is otherwise obligated by FAR 52.219-6 to supply the product of a domestic small business. The Comptroller General reasoned in these cases that, since the bidders did not take exception to the requirement, they were obligated to supply the product of a domestic small business. *See Certified Slings, Inc.*, B-243085, 91-1 BPD ¶ 442 (May 6, 1991); *Concorde Battery Corp.*, B-235119, 89-2 CPD ¶ 4 (June 30, 1989). In no case, however, has the Comptroller General permitted a bidder to "correct" an erroneous certification stating that the bidder will *not* supply the product of a domestic small business.

Protester also calls our attention to FAR 14.406, the other section which in certain circumstances permits correction of a bid:

> After opening of bids, contracting officers shall examine all bids for mistakes. In cases of apparent mistakes and in cases where the contracting officer has reason to believe that a mistake may have been made, the contracting officer shall request from the bidder a verification of the bid, calling attention to the suspected mistake. If the bidder alleges a mistake, the matter shall be processed in accordance with this section 14.406. Such actions shall be taken before award.

FAR 14.406-1. Not all mistakes are subject to correction, however. Section 14.406 continues:

> **14.406-2 Apparent clerical mistakes.**
>
> (a) Any clerical mistake, *apparent on its face in the bid*, may be corrected by the contracting officer before award. . . . Examples of apparent mistakes are—
>
> (1) Obvious misplacement of a decimal point;
>
> (2) Obviously incorrect discounts . . .;
>
> (3) Obvious reversal of the price f.o.b. destination and price f.o.b. origin; and
>
> (4) Obvious mistake in designation of unit. . . .
>
> **14.406-3 Other mistakes disclosed before award.**
>
> In order to minimize delays in contract awards, administrative determinations may be made as described in this 14.406-3 in connection with mistakes in bids alleged after opening of bids and before award. *The authority to permit correction of bids is limited to bids that, as submitted, are responsive to the invitation and may not be used to permit correction of bids to make them responsive.* This au-

[1] The failure to complete (or erroneously completing) the small business size status portion of the representation is a waivable minor informality. The size status certification involves only the firm's eligibility for award, whereas the second portion of the representation, at issue here, is not waivable "because it involves an obligation to provide supplies manufactured by a small business concern, a key element of a small business set-aside for supplies." *Lynd Gear of Michigan, Inc.*, B-224068, 86-2 CPD ¶ 247, at 2 (Sept. 2, 1986).

©1994, Commerce Clearing House, Inc.

Digitized by Google

thority is in addition to that in 14.406-2 or that may be otherwise available.

FAR 14.406-2, -3 (emphasis added). These sections of the FAR do not permit a bid which is non-responsive in a material way to be corrected to become responsive. *Southwestern Bell Corp.* To permit such material corrections would create a basic unfairness in the bidding process. *University Systems, Inc. v. Department of Energy,* GSBCA 11754-P, 92-1 BCA ¶ 24,932, 1992 BPD ¶ 93.

Protester characterizes its mistake as a clerical error, arguing that, notwithstanding its certification to the contrary, its bid unambiguously obligated protester to supply a system manufactured by a small business in the United States. Thus, according to protester, its bid was responsive on its face. Protester points to (1) the statement in the cover letter attached to its bid which stated that ISG understood and accepted the terms and conditions of the IFB, and (2) the statement on the first page of its technical literature indicating that ISG is a manufacturer of personal computers.

We agree with respondent that these statements, combined with ISG's certification that it would *not* supply a system manufactured by a domestic small business, rendered ISG's bid ambiguous at best and, therefore, unacceptable. A general statement that all furnished equipment will meet specifications cannot override specific performance information contained in the appropriate bid sections. *See University Systems, Inc.* Similarly, the announcement in general terms that ISG is a manufacturer of personal computers contained on the first page of ISG's technical literature does not negate ISG's certification that its bid system would not be manufactured by a domestic small business. ISG's bid nowhere stated that ISG would manufacture the particular system bid here. In fact, it said just the opposite.

The Comptroller General explained our reasoning well in a similar case, *Propper Manufacturing Co.* There, the protester, a small business manufacturer of blood testing kits, claimed that when its bid was read as a whole, it was apparent that only small business end items would be provided, notwithstanding the protester's erroneous certification. Specifically, Propper argued that Food and Drug Administration files referenced by numbers contained in its bid did not indicate that the test kits would be manufactured anywhere other than protester's own manufacturing plant. The Comptroller General said:

> Regardless of [protester's] contention that this certification was the result of a clerical error, because acceptance of [protester's] bid would not legally obligate the company to furnish small business products, we agree that the bid must be rejected as nonresponsive. With respect to [protester's] post-bid explanation of what it actually intended, responsiveness is determined from the face of the bid itself; to allow a bidder to make its nonresponsive bid responsive after opening would be tantamount to permitting it to submit a new bid, and thus, may not be permitted.
>
> Even if [protester's] bid could be read as [protester] suggests and we were to accept the contents of the referenced FDA filings as part of its bid, [protester's] bid is, at best, ambiguous since it contains a specific certification that [protester] will not be supplying small business products and an apparent contradictory statement incorporated by reference that its place of performance is a small business.

Id. at 3 (citations omitted). Here, as in *Propper,* ISG certified that it would not comply with the requirement to supply a product manufactured by a domestic small business. That certification, which related to a material requirement of the solicitation, rendered ISG's bid nonresponsive. We agree with the Comptroller General that the integrity of the bidding process requires that such bids be rejected.

Decision

The protest is **DENIED.** The suspension of respondent's delegation of procurement authority lapses by its terms.

[¶ 26,445] Wood & Company v. Department of the Treasury

GSBCA No. 12534-TD, October 8, 1993.

Contract Disputes, Claims—Submission to Contracting Officer—Same Set of Operative Facts.—A building renovation contractor's second claim for extended field and office overhead associated with delays caused by government orders to install a new heating,

Digitized by Google

ventilating, and air-conditioning system was properly dismissed for lack of jurisdiction because the allegedly separate second claim involved the same set of operative facts as a previous claim that was denied by the contracting officer. The contractor did not appeal the denial of its previous claim to the board within 90 days after receipt of the contracting officer's decision. Although the contractor's second claim, which was made in an undated letter to the agency, demanded a larger payment and asserted a longer delay period than the contractor had initially claimed, the second claim was not a separate claim. Both claims were premised on the theory that the government's requirement for additional HVAC work delayed project completion and caused the contractor to incur additional costs.

For the appellant: Milton A. Wood, President. For the government: David H. Brunjes, Office of the Legal Counsel, Federal Law Enforcement Training Center, Glynco, Georgia.

Before DANIELS, VERGILIO, and DEGRAFF, Administrative Judges.

DANIELS, Administrative Judge: The Department of the Treasury (Treasury), respondent, moves to dismiss for lack of jurisdiction an appeal filed by Wood & Company (Wood). We grant the motion.

Findings of Fact

1. Treasury awarded to Wood a contract in the amount of $310,012 to renovate a building in Glynco, Georgia. Appeal File, Exhibit 1.

2. While Wood was performing the contract, Treasury and Wood agreed that the latter should install a new heating, ventilating, and air conditioning (HVAC) system in the building in return for additional compensation. The parties could not agree on a price for this work, however, and the contracting officer unilaterally modified the contract to increase payments by $8,186.71. Motion to Dismiss, Exhibits A, B.

3. Wood took exception to the amount set by the contracting officer and demanded payment of an additional $9,893. Appeal File, Exhibit 17. The contracting officer recognized this letter as a claim and asked for supporting documentation. *Id.*, Exhibit 19. Wood then specified that in addition to previously identified costs, it believed that it was entitled to $4,264 in "extended job overhead" and $3,120 for "exerted office overhead," each representing the costs associated with twenty-six days of delay. *Id.*, Exhibit 20.

4. On April 2, 1993, the contracting officer rendered a decision which addressed four separate claims filed by Wood with respect to this contract. Among these claims was the one for delay costs related to installation of the HVAC system. This claim was denied in its entirety; the contracting officer held that because the contract modification regarding this installation did not involve a suspension of work, overhead could only be recovered as a percentage of the direct cost of the installation. Appeal File, Exhibit 24.

5. On June 2, 1993, Wood appealed the contracting officer's April 2 decision to this Board. The appeal was clearly limited to one aspect of the decision—the portion that denied a claim for additional payments for allegedly extra roofing work. Motion to Dismiss, Exhibits F-H.

6. On June 21, 1993, Treasury received an undated letter from Wood claiming that the contractor is entitled to payment in the amount of $31,040.03 for "extended field and office overhead" resulting from the agency's having delayed contract completion by forty-nine days by requiring that the additional HVAC work be performed. Complaint, Exhibit 1.

7. By letter dated July 22, 1993, the contracting officer responded, "Your letter sought to reopen our consideration of your HVAC claim .... My Final Decision letter to you on April 2, 1993—specifically in the second through fourth paragraphs—defined our response on the HVAC claim." Appeal File, Exhibit 25. The fourth paragraph is the one that denies the delay claim referenced in paragraph 3, above.

8. On August 6, 1993, Wood filed at this Board a notice of appeal of what it denominated the contracting officer's "final decision ... issued July 22, 1993." Wood additionally (and contradictorily) maintained that by the letter of July 22, the contracting officer had "denied Wood & Company the right to file a new and separate claim."

Discussion

The Contract Disputes Act of 1978 provides two means for a Government contractor to challenge a contracting officer's decision on a claim. The contractor may appeal the decision, within ninety days from its receipt, to the appropriate agency board

©1994, Commerce Clearing House, Inc.
Digitized by Google

of contract appeals. 41 U.S.C. § 606 (1988). Alternatively, within twelve months from the date of receipt of the decision, the contractor may bring an action directly on the claim in the United States Court of Federal Claims. 41 U.S.C.A. § 609(a) (West Supp. 1993).

The deadline for filing an appeal with a board of contract appeals is unforgiving; it has been strictly construed by the Court of Appeals for the Federal Circuit, because the authorization to make the filing is a waiver of sovereign immunity. A late filing divests the board of jurisdiction to consider the case on its merits. *Cosmic Construction Co. v. United States* [30 CCF ¶ 70,732], 697 F.2d 1389 (Fed. Cir. 1982); *Elden-Rider, Inc.*, GSBCA 8643, 90-2 BCA ¶ 22,878, at 114,901, *aff'd*, 935 F.2d 281 (table) (Fed. Cir. 1991); *George's Lawn & Rental Service, Inc.*, GSBCA 10087, 89-3 BCA ¶ 22,081.

Treasury contends that Wood has made one claim for costs associated with delays caused by the requirement to install a new HVAC system, and that that claim was resolved by the contracting officer's decision dated April 2. Wood did not appeal the denial of that claim to this Board within ninety days of receiving it, and consequently, Treasury says, the firm is barred from proceeding with it now at this Board.[1] According to the agency, Wood's letter of July 22 merely restates the earlier claim, albeit in grander dress. Because the second letter did not constitute a separate claim, Treasury concludes, the contracting officer's response to it cannot trigger the running of a separate ninety-day period in which to file an appeal.

Wood insists to the contrary that its demand of June 21 was "a separate new claim ... which is completely and absolutely different from the [earlier] claim." The contractor says that its "claim on 6-21-93 has no similarity in any form at all" to the other one. Wood maintains that because the appeal was filed within ninety days of the contracting officer's response to the second claim, the Board has jurisdiction to hear the case.

In deciding whether two allegedly separate claims "are merely various aspects of a single claim, involving a common set of operative facts, or are in fact separate claims," this Board follows a rule established by the Court of Federal Claims. The rule is that the "determining factor ... is not the characterization placed on the claim by the contractor, but whether the demand for relief arose out of essentially interrelated conduct and services and the same, or closely connected, facts." *Singleton Contracting Corp.*, GSBCA 9614, et al. (Oct. 4, 1988), at 3; *see also D.L. Kaufman, Inc.*, GSBCA 11040, et al., 91-2 BCA ¶ 23,843; *Richerson Construction. Inc.*, GSBCA 10653, 91-1 BCA ¶ 23,538 (1990); *LDG Timber Enterprises, Inc. v. United States* [32 CCF ¶ 73,681], 8 Cl. Ct. 445, 452 n.9 (1985); *Walsky Construction Co. v. United States* [31 CCF ¶ 71,677], 3 Cl. Ct. 615, 618-19 (1983).

Here, Wood's letter of June 21 was essentially nothing more than a reiteration of its initial claim. The two demands are both premised on the theory that by ordering supplemental work on the HVAC system, Treasury delayed completion of the entire project and thereby caused Wood to incur additional overhead costs with respect to both its office and the jobsite. The fact that the second letter asserts a longer period of delay and asks payment of a larger amount does not make this letter a separate claim. *Cf. Tecom, Inc. v. United States* [32 CCF ¶ 72,428], 732 F.2d 935, 938 (Fed. Cir. 1984) (increasing amount of claim to greater than $50,000, based on further information, does not implicate Contract Disputes Act's requirement for certification of claim).

If Wood's theory were valid, the Act's limitation on access to a board of contract appeals could be evaded with impunity. A contractor who concluded, more than ninety days after having a claim rejected, that it wanted a board to hear an appeal of the contracting officer's decision, could always get that consideration. It would simply have to file a second claim which was immaterially different from the first, wait for the expected denial, and submit an appeal within ninety days of receipt of that rejec-

[1] Actually, Treasury counts days from the date of the decision, not the date of receipt—something which is not envisioned by the statute. Wood has not alleged that it received the decision on any particular date, however. In such circumstances, we presume that receipt occurred five days after mailing. *Global Radon Testing Services, Inc. v. General Services Administration*, GSBCA 12517, 94-1 BCA ¶ 26,389 (Aug. 27, 1993); *Berkshire Computer Products*, GSBCA 11539-P, 92-1 BCA ¶ 24,587, at 122,686, 1991 BPD ¶ 302, at 4. Whether Wood received the decision on the date it was written or five days later is immaterial for the purpose of resolution of Treasury's motion; the date of filing of the instant appeal is more than ninety days later than either of these dates.

Digitized by Google

tion. This is clearly not the result Congress intended when it wrote the limitation into the statute.

Decision

This appeal was filed more than ninety days after Wood received the contracting officer's decision which it now challenges. The Board consequently does not have jurisdiction to hear the case. The appeal is **DISMISSED FOR LACK OF JURISDICTION.**

[¶ 26,446] Data Equipment, Inc. v. Department of the Air Force; Small Business Administration, Intervenor

GSBCA No. 12506-P, September 28, 1993.

Small Business—8(a) Procurements—Withdrawal of Procurement from 8(a) Program.—A protest against the withdrawal of a procurement's software requirements from the Small Business Administration 8(a) program and the purchase of the software requirements outside the 8(a) program was denied because, during the attempted 8(a) procurement, the government discovered that the required supplies were manufactured only by a large business. The protester knew that the required products were those of a large business because its proposal indicated that it was not offering the products of a small business. Award of the contract to the protester would have violated regulations governing 8(a) procurements. Moreover, the government did not obtain a waiver of the requirement that the products be manufactured by a small business. Before an award was made under the solicitation, the government properly corrected its error of initiating an 8(a) procurement for products that could only be produced by a large business. In the absence of an improper motive in the government's decision not to seek a waiver of the nonmanufacturer rule, the board lacked a basis for questioning the agency's decision.

For the protester: Mattox & Associates, Colorado Springs, Colorado, by Judith Ward Mattox and Ronald L. Roberts. For the government: Clarence D. Long III, Office of the General Counsel, Department of the Air Force, Washington, D.C. For the intervenor, Small Business Administration: David R. Gray, Office of General Counsel, Small Business Administration, Washington, D.C.

Before HENDLEY, HYATT, and DEGRAFF, Administrative Judges.

HENDLEY, Administrative Judge: By agreement of the parties, the protest is being decided on the record inasmuch as there are no facts in dispute. Although mistakes were made, the mistakes were recognized and corrected by the respondent, the Department of the Air Force, United States Air Force Academy (Academy), so that the protested award made to another firm was proper. There were no violations of statute or regulation in the award made, and for that reason we deny the protest.

Findings of Fact

1. The protester, Data Equipment, Inc., has been certified by the intervenor, the Small Business Administration (SBA), as a socially and economically disadvantaged small business and is a current participant in the SBA's "8(a)" program. Affidavit of Bill Bailey (Bailey Affidavit) (September 1, 1993) at 1. By letter dated May 5, 1993, the Academy offered one of its purchase requirements to the SBA for its 8(a) program. The requirement was for the acquisition, installation, and testing of Banyan Vines Software, compatible with the Academy's existing computer systems equipment. In its offering letter to the SBA, the Academy suggested the protester as the 8(a) firm to be matched to the requirement. The Academy also indicated that it estimated that an award would be made on or about June 30, 1993. Protest File, Exhibit 3.

2. On May 11, 1993, the SBA's Assistant District Director for Minority Small Business and Capital Ownership Development (the 8(a) program), Mr. Bailey, in the SBA's Denver, Colorado, District Office, accepted the offered requirement on behalf of the SBA for the 8(a) program and matched it to the protester as the 8(a) firm that could perform the requirement. Protest File, Exhibit 4. On or about June 18, 1993, the Academy

©1994, Commerce Clearing House, Inc.

Digitized by Google

issued a solicitation for the requirement. Protest File, Exhibit 6. On July 1, 1993, the protester responded with its final revised proposal. Protest File, Exhibit 8. It is the respondent's failure to accept this proposal that is the basis of this protest.

3. In its proposal, the protester represented that it "is ... a regular dealer in ... the supplies offered." The protester further represented and certified "that it is ... a small business concern and that ... not all end items to be furnished will be manufactured or produced by a small business concern in the United States ...." Protest File, Exhibit 8. The parties do not dispute that the protester is a small disadvantaged regular dealer who was offering the products of Banyan Vines, a large business.

The Confusion

4. On July 1, 1993, Ms. Kirby, a Contract Officer[1] for the 8(a) program in the SBA Denver District Office, was contacted by telephone by Ms. Goforth, the Academy's Associate Director for Small Business, Director of Contracting. Ms. Goforth was concerned that the protester would be unable to comply with the "limitation on subcontracting rule" because the protester was not a manufacturer. Affidavit of Tracey Kirby (Kirby Affidavit) (September 1, 1993) at 2. The limitation on subcontracting rule essentially requires the 8(a) contractor itself to perform work that constitutes at least half the cost of manufacturing the supplies without considering the cost of the material, and Ms. Kirby so informed Ms. Goforth. Ms. Kirby explained to Ms. Goforth that the subcontracting rule exempts regular dealers from the work performance requirements of the rule. Ms. Kirby believed that Ms. Goforth understood the application of that rule and that it presented no obstacle in the procurement inasmuch as the protester was a regular dealer, and hence exempt from the rule. *Id.* Obviously, no dealer could possibly comply with such a requirement because a dealer supplies the product of the manufacturer of the product.

5. Nonetheless, on July 6, 1993, Ms. Goforth sent a written request to the SBA's Denver office seeking a waiver of the subcontracting rule. Protest File, Exhibit 14; Kirby Affidavit at 3. After some discussion within the SBA's Denver office, the SBA officials agreed that there was no need for a waiver of the subcontracting rule inasmuch as the rule did not apply to dealers. *Id.* Ms. Kirby then faxed a document to Ms. Goforth which explained the operation of the subcontracting rule. *Id.*; Protest File, Exhibit 13. Ms. Kirby considered the Academy's concerns to be resolved. Kirby Affidavit at 4.

Back on Track

6. On July 16, 1993, Ms. Goforth telephoned Mr. Bailey of the SBA's Denver office and informed him that there was a problem in complying with the "nonmanufacturer rule." The nonmanufacturer rule requires the 8(a) contractor to supply the product of a small business manufacturer. She informed Mr. Bailey, apparently for the first time, that the procurement specified the product of Banyan Vines, a large business. After reviewing the nonmanufacturer rule, Mr. Bailey telephoned Ms. Goforth and informed her that he agreed with her that the nonmanufacturer rule would preclude the award under the 8(a) program unless the rule could be waived. Mr. Bailey and Ms. Goforth discussed obtaining a waiver of the nonmanufacturer rule. The upshot of that discussion was the recognition by the Academy that obtaining a waiver to the nonmanufacturer rule could well be time consuming and without any certainty of success. Ms. Goforth and Mr. Bailey concluded that the Academy had two options: (1) the Academy could request a waiver from the SBA of the nonmanufacturer rule, or (2) the Academy could withdraw the procurement from the 8(a) program and use an alternative procurement method. Mr. Bailey advised Ms. Goforth that if the Academy decided to withdraw the procurement from the 8(a) program, he would need its decision in writing. Bailey Affidavit at 4.

7. On July 20, 1993, Ms. Goforth, on behalf of the Academy, faxed a letter to Mr. Bailey informing the SBA that the Academy was withdrawing the procurement from both the protester and the 8(a) program. Bailey Affidavit at 4; Protest File, Exhibit 18. On July 21, 1993, Mr. Bailey faxed his concurrence to the procurement being withdrawn from the 8(a) program. Protest File, Exhibit 19. On that date he also telephoned the protester and informed it that the procurement had been withdrawn from both the protester and the 8(a) program by the Academy since the nonmanufacturer rule precluded the award and the Air Force Academy's time constraints did not permit obtaining a waiver of the rule. Bailey Affidavit at 5.

[1] Note that the individual was a "Contract Officer" and not a Contracting Officer.

Digitized by Google

8. The Academy purchased the requirements here in issue from other than the protester using other procurement methods outside the 8(a) program.

Discussion

The operative facts of this case are clear. The Air Force Academy initially attempted to procure its requirements in accordance with the 8(a) program. During the course of the attempted 8(a) program procurement, the Air Force Academy discovered that the supplies it required were manufactured by a large business. The protester must have known that the required products were those of a large business because, in its proposal, it did not represent that all end items to be furnished would be manufactured or produced by a small business concern but instead specifically represented that it did not offer the products of a small business.

The nonmanufacturer rule is part of the Small Business Act which provides, in pertinent part:

> (A) An otherwise responsible business concern that is in compliance with the requirements of subparagraph (B) shall not be denied the opportunity to submit and have considered its offer for any procurement contract for the supply of a product to be let .... solely because such concern is other than the actual manufacturer or processor of the product to be supplied under the contract.
>
> (B) To be in compliance with the requirements referred to in subparagraph (A), such a business concern shall—
>
> (i) be primarily engaged in the wholesale or retail trade;
>
> ....
>
> (iii) be a regular dealer, as defined pursuant to section 35(a) of Title 41 (popularly referred to as the Walsh-Healey Public Contracts Act), in the product to be offered the Government . . .; and
>
> (iv) *represent that it will supply the product of a domestic small business manufacturer or processor, unless a waiver of such requirement is granted*—
>
> (I) by the Administrator, after reviewing a determination by the contracting officer that no small business manufacturer or processor can reasonably be expected to offer a product meeting the specifications (including period for performance) required of an offeror by the solicitation; or
>
> (II) by the Administrator for a product (or class of products), after determining that no small business manufacturer or processor is available to participate in the Federal procurement market.

15 U.S.C. § 637(a)(17)(A) and (B) (1988 & Supp. IV 1992) (emphasis added). This statutory requirement is mirrored in the Federal Acquisition Regulation (FAR) 19.102(f), and in the SBA regulations, 13 CFR 121.906 (manufactured products under small business set-aside procurements) and 121.1106 (manufactured products under section 8(a) contracts). Under the SBA regulations governing 8(a) contracts, the SBA requires:

> (a) *General.* In section 8(a) contracts for the procurement of manufactured [2] products, in order to qualify as a small concern, the section 8(a) concern must be either a manufacturer or a regular dealer under the Walsh-Healey Public Contracts Act . . . and, in addition, must manufacture the end item being produced, or must comply with the requirements of paragraph (b). . . .
>
> (b) *Nonmanufacturers.* (1) A concern need not be the manufacturer of the item(s) being acquired under a manufacturing contract, if the concern:
>
> (i) Is a small business concern under this part under a 500-employee size standard;
>
> (ii) Is primarily engaged in the wholesale or retail trade;
>
> (iii) Represents that it will supply the product of a small business concern that is the manufacturer of the end product,. . . or obtains a waiver of such requirement. . . .

13 CFR 121.1106(a) and (b) (1993).

The basic difficulty with the protester's position is that the respondent not only did not violate any statute or regulation, it would have done so had it awarded the contract to the protester. All parties recognize that the protester is a small disadvantaged business dealer which offered the product of a large business. The protester, quite properly, did not represent that it was offering the product of a small business concern. It could not properly do so because the products called for are manufactured or produced by a large business. No waiver of the requirement that the products to be furnished be manufactured by a small business was obtained.

[2] The regulations make an obvious and necessary distinction between contracts for goods and contracts for services.

©1994, Commerce Clearing House, Inc.

Digitized by Google

The respondent erred in initiating an 8(a) procurement when the products to be supplied are only produced by a large business when it did not have a waiver. Inasmuch as the protester specifically did not, in its response to the erroneous solicitation, offer the product of a small business, it surely recognized that it was offering the products of a large business. The respondent's error was properly corrected prior to any award being made under that solicitation. There is nothing improper in an agency correcting its mistakes. In fact, it should always do so.

Should the respondent have sought a waiver from the SBA for the requirement that the products being furnished be manufactured by a small business? Whether an agency seeks a waiver of such a requirement is more than simply a matter of "business judgment." An agency's decision to seek, or not to seek, such a waiver from the SBA is more in the nature of a programmatic decision rather than a business judgment decision. It is essentially a decision not to set-aside the procurement for purchase under the 8(a) program. In the absence of any hint of a corrupt or unscrupulous motive in the respondent's decision not to seek a waiver of the nonmanufacturer rule, there is no basis upon which we could question the agency's decision on this issue.

Decision

The protest is **DENIED.**

[¶ 26,447] Coastal Computer Consultants Corporation v. Department of the Treasury

GSBCA No. 12504-P, September 27, 1993. (The text below is the redacted version issued to the public on October 5, 1993.)

Discussions—Technical Leveling—Proof.—A protester that was the only offeror under a solicitation for a multichannel communications unit was not entitled to a directed award, despite its contention that the agency committed technical leveling by revealing proprietary information to competitors during a market survey, because the capabilities of equipment manufactured by other offerors and available on the open market do not constitute the proprietary information of a used equipment dealer such as the protester.

For the protester: Patrick E. Collins, Manager of Government Sales. For the government: Frederick G. Petrick, Jr., and Patricia S. Grady, Office of the Comptroller of the Currency, Department of the Treasury, Washington, D.C.

Before DEVINE, HENDLEY, and HYATT, Administrative Judges.

DEVINE, Administrative Judge: Coastal Computer Consultants Corporation (Coastal) was the only offeror that responded to a solicitation issued by the Government seeking to buy certain electronic equipment. Coastal offered used brand name equipment. The Government found Coastal's price to be unreasonably high and cancelled the solicitation, causing Coastal to file this protest.

Findings of Fact

The Office of the Comptroller of the Currency (OCC), in need of a multi-channel communications unit, placed a synopsis in the Commerce Business Daily for February 10, 1993, stating its intent to purchase a channel-to-channel communications unit Model 9088-I-4 (HostNet 9088) from Data Switch Corporation. Protest File, Exhibit 3. In response to the notice Coastal offered a HostNet 9088, thus demonstrating the existence of some competition. However, OCC did not issue a solicitation for the equipment until Coastal had filed a protest of its failure to do so with this Board. As a part of the settlement of that protest, OCC agreed to issue a solicitation. It did so on April 6, 1993, soliciting protester and Data Switch Corporation. Protest File, Exhibit 5. The solicitation sought offers to supply a HostNet 9088 together with software, delivery, and installation. *Id.* Protester asked OCC to amend the solicitation to include a functional description of the equipment sought rather than simply describing it by make and model. Protest File, Exhibit 6. OCC agreed and amended its solicitation to include a functional description, on April 22, 1993. At that time, protester believed that OCC did not know that the IBM 3088-1 would meet its needs. Protester responded to the amended solicitation by offering a used IBM 3088-1 for the sum of $65,000. Protest File, Exhibit 8. Data Switch did not respond to

Digitized by Google

the solicitation, nor did anyone else. Protest File, Exhibit 17. Since protester was the only offeror, OCC conducted a market survey to determine whether its price for the used IBM was reasonable. Protest File, Exhibits 12 and 19. OCC solicited quotes from five suppliers for a used IBM 3088-1, delivered, installed, and warranted for six months. Protest File, Exhibit 12. It received three replies.

Id. The average of these prices is $39,382. A new IBM 3088-1 cost somewhere between $72,000 and $118,000, depending on where it was purchased, according to protester. Apparently because of the survey results, OCC asked protester for a best and final offer, but protester did not change its price. Protest File, Exhibits 14 and 15. On July 15, 1993, OCC found that protester's price was not reasonable, and that cancelling the solicitation would increase competition. Protest File, Exhibit 17. OCC then rejected protester's offer to supply the IBM 3088-1 for $65,000 and cancelled the solicitation on the same day. *Id.*

The Parties' Contentions

The present protest was filed on July 26, 1993. Its principal complaints are these:

(1) That the agency used protester's proprietary information to change its acquisition plan to the benefit of protester's competitors. Protester regarded the fact that it knew, but OCC apparently did not, that an IBM 3088-1 would meet OCC's needs, as protester's own proprietary secret. When OCC did its market survey based on the IBM 3088-1, according to protester, it tipped off its competitors to the fact that the IBM machine would also meet OCC's needs. Thus OCC revealed protester's "technical solution" to the problem. Protester dubs this "technical levelling."

(2) That in conducting the market survey OCC sought a price on only the machine itself and did not include all of the software and maintenance called for by the solicitation. Protester calls this a violation of FAR 15.402(b), which deals with the duty of the procuring contracting officer to supply identical information to all prospective offerors. Protester also complains that two other, much higher prices for the IBM 3088 were known to OCC but weren't used in its price determinations. Both were prices for new equipment, one in the amount of approximately $117,000 and one in the amount of $72,000.

It is protester's view that the proper way to rectify the situation is not to re-solicit but to accept its still-outstanding offer immediately.

OCC denies that technical levelling or other improper conduct took place. It also denies that the quoted Federal Acquisition Regulation has anything to do with market surveys, and insists that the price at which protester is offering the IBM machine is unreasonably high.

Both parties have submitted their cases for decision on the record.

The Government's Motions

OCC has filed three motions seeking to dismiss the protest. The first is a motion for summary judgment, the second is a motion to dismiss for tardy filing, and the third is a motion to dismiss for failure to state a claim. The last two motions are labelled "affirmative defenses." OCC also objects to protester's amendment to its protest complaint which, in essence, merely asserts that its $65,000 price is reasonable. This last objection is without any merit and is overruled.

The motion for summary judgment was overtaken by events when the parties submitted their cases on the record. The decision on this motion is subsumed in the decision on the merits.

The motion to dismiss as untimely filed is denied. OCC says that protester knew the operative facts of its protest more than 10 days prior to its filing, which assertion is generally true. However, until the OCC cancelled the procurement on July 15, 1993, protester had no reason to complain. Thereafter it filed its protest within 10 working days, as required by our Rules.

The motion to dismiss for failure to state a claim is also denied. Protester stated a claim of sorts, but its proof is lacking.

Discussion

Protester complains that the Government only discovered that an IBM 3088-1 would meet its needs as well as a HostNet 9088 as a result of reading protester's proposal, and then proceeded to commit the sin of technical levelling when it "gave away" this "proprietary secret" to protester's prospective competitors during the conduct of a market survey designed to determine the reasonableness of protester's $65,000 price. The trouble with this theory is that it just isn't so. The OCC knew at the time it published its CBD notice that the IBM machine would meet its needs. However, it also knew that

©1994, Commerce Clearing House, Inc.
Digitized by Google

the price for a new IBM was some $30,000 higher than the equivalent HostNet machine. In any event the capabilities of a machine manufactured by others and available on the open market can hardly be said to be the proprietary information of a used equipment dealer such as protester. The Government's market survey did not in any way amount to technical levelling.

Protester's final complaint, that the Government, in conducting its market survey, did not include delivery, installation, warranty costs, and software in its requests for price quotations, is also not supported by the evidence. The Government's unrefuted evidence shows that the price quotes received included delivery, installation and warranty costs in each case. The quotes did not include software costs because protester had advised the contracting officer that the IBM 3088-1 required no additional software.

Protester believes it is entitled to a directed award since it is the only offeror, a result which would not only not increase competition but would eliminate it entirely. That is not the purpose of the Brooks Act. The Government is not required to accept an unreasonable offer simply because it was the only offer made. FAR 15.608(b).

OCC has indicated that it will begin this procurement over again by inserting a new notice in the CBD. If it does so any solicitation issued as a result will include protester.

Decision

For the reasons stated the protest is **DENIED**.

[¶ 26,448] Metropolitan Technical Services, Inc. v. Defense Information Systems Agency; Computer Management Corporation, Intervenor

GSBCA No. 12490-P, September 30, 1993. (The text below is the redacted version issued to the public on October 12, 1993.) Contract No. RFP DCA-100-93-R-0042.

Selection of Contractor—Evaluation of Proposals—Propriety of Evaluation.—The award of a contract for personal computers was improper because the government failed to properly evaluate the protester's proposal. The solicitation contained a list of equipment to be procured that included a mid-size tower. The technical evaluation team determined that the protester's proposal was technically unacceptable because the team interpreted the proposal to offer a "baby tower," whereas the proposal actually referred to a "baby AT mainboard" that would fit into a mid-size or full-size tower. The government and the protester stipulated that the government's determination that the proposal was technically unacceptable was not supported by the evidence.

For the protester: Johnson & Roche, McLean, Virginia, by Elizabeth N. Forgotson and Jon E. Shields. For the government: Roger B. Sabin, Eileen P. Manley, and Capt. Daniel M. Kline, Office of General Counsel, Defense Information Systems Agency, Arlington, Virginia. For the intervenor, Computer Management Corporation: Kinosky & Associates, Arlington, Virginia, by Barbara S. Kinosky and Dale M. Race.

Before GOODMAN, DEVINE, and NEILL, Administrative Judges.

GOODMAN, Administrative Judge: On July 8, 1993, Metropolitan Technical Services, Inc. (MTS or protester) protested the award by the Defense Information Systems Agency (DISA or respondent) of a contract pursuant to RFP DCA-100-93-R-0042 (the solicitation) for personal computers. The awardee, Computer Management Corporation (CMC or intervenor), has intervened in this protest as an intervenor of right. On August 5, 1993, protester filed an amended protest complaint.

On August 5, 1993, CMC filed a motion to dismiss the original protest complaint, and, on August 6, 1993, it filed a motion to dismiss the four additional counts of the amended complaint. On August 6, 1993, respondent also filed a motion to dismiss the four additional counts of the amended complaint. By decision dated September 3, 1993, The Board denied intervenor's motion to dismiss the original protest complaint and dismissed, *sua sponte*, the amended complaint. The only issue remaining in this protest is that raised by protester's original protest complaint—whether respondent properly evaluated protester's proposal with regard to the size of the tower offered by protester.

Digitized by Google

A hearing on the merits was scheduled for September 13, 1993. On that date, protester and respondent filed a stipulation with the Board with regard to the factual issues remaining in the protest,[1] and, pursuant to Board Rules 9 and 11,[2] protester, respondent, and intervenor elected to have the protest decided on the written record. For the reasons set out herein, we grant the protest.

Findings of Fact [3]

The Solicitation

1. The solicitation calls for 200 486/33 ET personal computer systems or equal, and is a total set-aside for small business. Pursuant to 48 CFR 15.610(a) (Federal Acquisition Regulation (FAR) 15.610(a)), the contract was to be awarded without discussions. Closing date for receipt of proposals was originally February 18, 1993. Protest File, Exhibits 2, 3, 4, 7.

2. The solicitation contains a list of salient characteristics[4] for the equipment to be procured, which includes:

> 486/33E Mid size tower w/16MB RAM on the motherboard; expandable to 64MB on the motherboard
>
> baseline performance requirements: Norton computing index 72+, Disk Speed 10+
>
> 21 inch, .28 dot pitch, flat display multifrequency color monitor with 1024 × 768 resolution
>
> 256 color display video card; SVGA adapter with 1MB VRAM
>
> Mid Tower full metal case

Protest File, Exhibit 2.

3. The solicitation was amended three times. Amendment 0001, dated January 25, 1993, responded to several pre-closing vendor questions. Protest File, Exhibit 3. Amendment 0002, dated February 16, 1993, extended the closing date to March 9, 1993. Protest File, Exhibit 4. Amendment 0003, dated February 25, 1993, extended the closing date to March 16, 1993. Protest File, Exhibit 7.

Evaluation of Proposals

4. offerors responded to the solicitation. offerors, including protester, submitted price proposals lower than CMC's price, but were determined to be technically unacceptable.[5] Protest File, Exhibit 14 at 3.

5. According to the contracting officer, a "sanitization process" was performed by which all references to price were removed from the proposals before the proposals were reviewed by the technical evaluation team. Protester's Memorandum of Points and Authorities in Response to Intervenor's Motion to Dismiss, Exhibit A at 12-13, 48-49.[6]

6. Mr. Thomas F. Bennett, the chairman of the technical evaluation team that evaluated the technical proposals, described the evaluation procedures as they related to the MTS proposal. Protester's Memorandum of Points and Authorities in Response to Intervenor's Motion to Dismiss, Exhibit B at 62-63; Bennett Deposition at 62-63, 76-99.

The MTS Proposal

7. The MTS proposal contains a cover letter dated March 15, 1993. This letter reads, in relevant part:

> Enclosed you will find technical specifications for components comprising the quoted system. All components meet or exceed the requirement in Exhibit A (salient characteristics), and the questions and answers sections of the amendments.

---

[1] While intervenor was not a party to this stipulation, it has not offered evidence in opposition to the matters stated in the stipulation, and has elected to have the protest decided on the written record.

[2] 48 CFR 6101 (1992).

[3] Findings of Fact 1-19 were contained in the Board's previous decision dated September 3, 1993. Protester and respondent, by stipulation filed with the Board on September 13, 1993, agreed that these findings of fact "are adopted by the respondent and the protester as applying to the merits of this protest." Stipulation ¶ 1.

[4] The list of salient characteristics was prepared by Mr. Thomas F. Bennett, the chairman of respondent's technical evaluation team. Deposition of Thomas F. Bennett (Bennett Deposition) (August 4, 1993) at 12.

[5] The other offerors were found to be technically unacceptable because they had failed the

[6] To support its response to the motions to dismiss, protester submitted portions of the depositions of the contracting officer, Ms. Barbara G. Redina, and the chairman of the technical evaluation team for the solicitation, Mr. Thomas F. Bennett. The Board requested complete copies of the depositions before rendering its decision of September 3, 1993. Thereafter, respondent and protester stipulated to the admission into evidence of both depositions. Stipulation ¶ 2. Intervenor, having received a copy of the stipulation, raised no objection to the admission of the depositions. Intervenor's Election for Decision on the Record.

©1994, Commerce Clearing House, Inc.

Digitized by Google

We have also tested our assembled system using Norton Utilities, Version 5.0 and found it exceeds the Norton computing index of 72+ and the disk speed of 10+.

Protest File, Exhibit 8.

8. The MTS proposal also contains the salient characteristics sheet from the solicitation with handwriting by MTS on the sheet, together with seven pages of descriptive literature. The salient characteristics sheet contains a reference to a "mid size tower" and "mid tower full metal case." The MTS proposal did not separately price components. There was not a separate quote for the price of the tower. Protest File, Exhibit 8.

9. The March 15, 1993, cover letter from MTS and the salient specifications sheet with handwriting by MTS on the sheet, together with the seven pages of descriptive literature, was transmitted from the contracting officer to the technical evaluation team. Protester's Memorandum of Points and Authorities in Response to Intervenor's Motion to Dismiss, Exhibit A at 48-49.[7]

10. According to Mr. Bennett, the evaluation team considered the MTS cover letter and the MTS annotated salient characteristics sheet as part of the MTS technical proposal. Protester's Memorandum of Points and Authorities in Response to Intervenor's Motion to Dismiss, Exhibit B at 62-63.

11. Unless contradicted by other technical specifications provided by protester, the evaluation team's methodology was to accept the salient characteristics sheet as indicating that the components listed in the salient characteristics were offered by MTS. Nothing in the descriptive literature submitted by MTS contradicted either the annotated salient characteristics sheet or the cover letter, nor did either indicate that MTS did not offer the components listed therein. Protester's Memorandum of Points and Authorities in Response to Intervenor's Motion to Dismiss, Exhibit B at 25-28, 30-33, 77-81; Protest File, Exhibits 8, 9, 37.

12. In the descriptive literature supplied by MTS in its proposal, the manufacturer of the hard drive included the phrase "[s]pecifications subject to change without notice" at the bottom corner of its description of the product. Protest File, Exhibits 8 at 39th unnumbered page, 37 at 4th unnumbered page. Likewise, another manufacturer printed on its description of the "Specifications Subject to Change Without Notice." *Id.*, Exhibits 8 at 44th unnumbered page, 37 at 9th unnumbered page.

13. MTS alleges that it submitted separate technical and cost proposals as required by section L-500(b) of the solicitation. Protest File, Exhibit 2 at 25th unnumbered page; Protester's Memorandum of Points and Authorities in Response to Intervenor's Motion to Dismiss, Exhibit C.

Evaluation of the MTS Proposal

14. The technical evaluation team determined MTS's proposal was technically unacceptable because it interpreted the proposal to offer a "baby tower" rather than a mid-size or full-size tower. Protest File, Exhibit 12.

15. The technical evaluation team's finding that MTS's proposal was technically unacceptable was based upon its determination that the only indication of size in the MTS technical proposal was on the technical specification sheet for the Main Board," where, included among the list of technical components or characteristics, was a reference to "Baby AT Size 8.5" × 13"." Protest File, Exhibit 28.

16. After reviewing the entire technical specification sheet for the mainboard, the technical evaluation team determined that the specification of the "Baby AT 8.5" × 13" " referred to the size of the case or tower, not just to the size of the mainboard. As such, the technical evaluation team determined that MTS was offering a "baby tower" rather than a mid-sized tower, as required by the solicitation. Protest File, Exhibit 28.

17. The chairman of the technical evaluation team did not know at what point the team terminated its evaluation of protester's technical proposal. Bennett Deposition at 99.

18. Mr. Bennett testified that a Baby AT mainboard could fit into a mid-size or full-size tower, and that there is no requirement

[7] This factual finding was further clarified on August 18, 1993, by stipulation between protester and respondent which states:

1. ... the MTS technical proposal which was transmitted to the Technical Evaluation team for evaluation contained at least nine pages, seven of which are the technical specifications sheets found at Tab 37 (protected) [Supplemental Protest File, Exhibit 37], together with the March 15, 1993 cover letter found at Tab 37, together with the salient specification sheet as annotated and found at Tab 37.

Stipulation ¶ 1.

Digitized by Google

that a Baby AT size mainboard be installed in any particular size tower. Bennett Deposition at 87.

The Original Protest Complaint

19. Protester alleges in its original protest complaint that it submitted a technically compliant proposal. It alleges that it did not offer a "baby tower," and that the Government misevaluated the proposal. Complaint ¶ ¶ 8-10.

Stipulation by Protester and Respondent

20. Respondent's determination that protester's proposal, submitted in response to solicitation DCA100-93-R-0042, was technically unacceptable was not supported by substantial evidence. Stipulation ¶ 3.

Discussion

Respondent and protester have stipulated that respondent's determination that protester's proposal was technically unacceptable was not supported by substantial evidence. Finding 20. Intervenor has offered no evidence contrary to the stipulation of protester and respondent. The Board, therefore, finds that respondent improperly evaluated protester's proposal as to the size of the tower offered.

Decision

The protest is **GRANTED.** Respondent's delegation of procurement authority is revised as follows: respondent is directed by the Board to 1) reevaluate protester's proposal and make an award consistent with the terms of the solicitation, or 2) if respondent determines that the solicitation did not reflect respondent's needs, revise the solicitation to accurately reflect its current justifiable needs, or 3) otherwise proceed in accordance with statute and regulation. The Board's order of July 13, 1993, suspending respondent's delegation of procurement authority hereby lapses in accordance with its terms.

[¶ 26,449] Government Micro Resources, Inc. v. Department of the Treasury

GSBCA No. 12364-TD, October 7, 1993.

Procedure, Boards—Discovery—Protective Order.—A contractor's request to protect the identity of its supplier, a description of equipment supplied, and the prices and discounts offered was denied because the contractor did not prove that the disclosure of confidential or privileged information would result from the disclosure. A party seeking a protective order must prove that a specific injury will result from the disclosure. The contractor did not meet that burden with regard to the information it sought to protect, because the contract was already in the public domain. A protective order cannot be used to protect the prices and discounts offered by a contractor, because that information is basic to the essence of the claim and to the board's analysis. Once negotiations are over and the contract has been awarded, there is no reason to protect the information.

For the appellant: Cohen & White, Washington, D.C., by Andrew J. Mohr and Alan J. Shusterman. For the government: Ingrid D. Falanga, Daniel J. Mazella, and David A. Ingold, Financial Management Service, Department of the Treasury, Washington, D.C.

Before LABELLA, Administrative Judge.

LABELLA, Administrative Judge: The Board has received several letters concerning the scope of the protective order in this appeal. Government Micro Resources, Inc. (GMR) seeks to protect the identity of its supplier, International Business Machines Corporation (IBM), the description of the equipment at issue, and the prices and discounts IBM offered to GMR. The Financial Management Service (FMS) seeks to protect the identity of an offeror who was subject to an audit by the Defense Contract Audit Agency (DCAA) in a wholly unrelated matter.

Background

FMS issued a solicitation to GMR on August 18, 1992, seeking an offer on Direct Access Storage Device equipment. GMR obtained price quotes from IBM on the equipment required to satisfy FMS' needs. IBM's quote consisted of the commercial list price for each item and the total list price for all items. The quote also listed a bundled dollar discount for all items. The discount was subtracted from the list price to provide GMR's cost for the products.

©1994, Commerce Clearing House, Inc.

Digitized by Google

When preparing the item-by-item product cost required by the solicitation, a GMR employee divided GMR's cost by the IBM list price to obtain GMR's cost figure. GMR alleges that the employee mistakenly used this cost figure as GMR's discount in all subsequent cost and pricing calculations.

FMS awarded the contract to GMR on September 28, 1992. After receiving the award, GMR discovered its mistake and, on September 30, informed FMS that it had made a bid mistake. GMR was informed by the contracting officer that there were no legal or factual grounds on which to reform or rescind the contract. Subsequently, GMR delivered the equipment and filed a certified claim for the mistake in bid. The claim was again denied and GMR filed an appeal at the Board.

Discussion

FMS objects to GMR's request on two grounds. FMS argues that the information is in the public domain and that disclosure will not cause GMR a specific injury. FMS notes that the contract, which is already in the public domain, contains a description of the equipment and identifies its manufacturer. Furthermore, FMS contends that neither GMR nor IBM will suffer a specific injury if pricing and discount information is disclosed. It asserts that GMR has not demonstrated that an injury to IBM would result from disclosure of either price quotations or discounts offered by IBM.

The Board has considered the submissions made by both parties. "A party seeking a protective order to prevent disclosure of confidential or privileged information bears the burden of showing specific injury that will result from disclosure." *Tidewater Consultants, Inc.*, GSBCA 8069-P, 85-3 BCA ¶ 18,294, at 91,804. We have agreed not to reveal trade secrets or certain proprietary information that is scrupulously held in confidence, e.g., burdens and overhead rates of the contractor that are held in confidence. *See, e.g., HFS, Inc. v. National Archives and Records Administration*, GSBCA 12010-P, 93-2 BCA ¶ 25,817, at 128,532; *Presearch, Inc.*, GSBCA 8075-P, 85-3 BCA ¶ 18,297, at 91,818-819.

GMR has not met that burden with regard to the information it seeks to protect. The identity of IBM and a description of the equipment involved in this procurement have been revealed in GMR's contract with FMS. This contract is already in the public domain. The protective order cannot be used to protect information to which the public already has access. *See, e.g., Smith v. BIC Corp.*, 869 F.2d 194, 199-200 (3rd Cir. 1989); *Zenith Radio Corp. v. Matsushita Electric Industrial Co., Ltd.*, 529 F.Supp. 866, 904 (E.D.Pa. 1981); *University Systems, Inc. v. Defense Nuclear Agency*, GSBCA 11813-P, 92-3 BCA ¶ 25,173, at 125,452 n.1.

Similarly, the protective order cannot be used to protect the prices and discounts offered by IBM to GMR. This information is so basic to the essence of GMR's claim and to the Board's analysis that we need to discuss it in our decision. The Board's proceedings are presumptively open to the public. *Presearch, Inc.*, GSBCA 8075-P, 85-3 BCA ¶ 18,297, at 91,818. This presumption ensures that the public is aware of how government spending impacts the public fisc. This Board does not operate in secret and intends to assure public access to information whose disclosure would not significantly harm specific governmental interests, or a party's trade secrets or proprietary information.

As we stated in *Tidewater*, "The negotiations are over and the contract has been awarded. We cannot discern a reason to now protect [the information]." 85-3 BCA at 91,805. GMR has not presented, and the Board does not know, a reason to protect the price and outdated discount information that is at the heart of this claim of mistake in bid and appeal. Because GMR has not demonstrated a specific injury which would result from disclosure, its request to protect the information is denied.

FMS has sought protection of the identity of a nonparty who was the subject of an audit conducted by the DCAA. GMR has not objected to protecting the nonparty's identity. FMS is using discount information contained in the audit report to demonstrate that the contracting officer was not on notice of GMR's alleged mistake. The identity of this nonparty in an unrelated procurement, as opposed to the discount information, is not essential to the disposition of this appeal. Thus, the Board need not disclose the identity of the offeror in its decision and will not do so. To this limited extent, the Board grants the Government's request to protect the identity of this entity which is not a party to this action.

Decision

Appellant's request to protect the identity of its supplier; a description of the equipment; and the prices and discounts offered by IBM is **DENIED.** The Government's re-

Digitized by Google

quest to protect the identity of a nonparty to this action that was the subject of a DCAA audit report is, without objection, **GRANTED.**

[¶ 26,450] 301 Howard Street Associates v. General Services Administration

GSBCA Nos. 10971, 10975, 11942, September 30, 1993.

Contract Disputes, Certification—Amount of Claim—Sum Capable of Calculation.—The reservation of potential upward adjustment in claims for lost and increased rent did not render the claims improperly qualified, because the amount of the claims was calculable from the facts provided. The government contended that the board did not have jurisdiction, because the claims did not seek a specific amount and were therefore improperly certified. However, the claims themselves constituted a clear and unequivocal statement that gave the contracting officer adequate notice of their basis and of the amount sought. The contractor need submit only the amount of the costs it has incurred or a basis upon which the contracting officer can compute that amount. The government's motion to dismiss was denied because the amount due would become plain and easily calculable once the board determined whether the government was at fault.

Contract Disputes, Certification—Adequacy—Sum Certain.—A claim for an equitable adjustment caused by a change in the scope and cost of tenant improvements in a lease was dismissed for lack of jurisdiction because the contractor failed to state a dollar amount. The contractor alleged that the cost of providing tenant improvements increased as a result of the government's delay in providing layout plans and in providing multiple plans. However, the contractor submitted only its original estimate for work, presumably as a benchmark for determining the unspecified increased costs. Although the claim submitted to the contracting officer mentioned aspects of the build-out costs, it failed to state a dollar amount sought for the adjustment. The contractor noted that the costs were ongoing and that their full impact could not be determined at the time the claim was submitted. However, because the claim was for additional compensation but stated no specific dollar amount for the increased costs, it was not a proper claim under the Contract Disputes Act.

Modifications—Constructive Changes—Delay in Providing Plans.—A government delay in providing final layout plans was a constructive change for which the contractor was entitled to an equitable adjustment, because the Changes clause permitted an adjustment when a change caused an increase in the contractor's cost of or in the time required for performance. Under a lease agreement, the government was obligated to provide layout plans for two separate blocks of floor space; however, the government delayed delivery of adequate layout plans for seven months and three months respectively. Although the contractor alleged that the government breached the contract by delaying delivery of the plans, the government was entitled to make changes in the specifications and in the space layout. The contractor was also entitled to an equitable adjustment to compensate for the delay.

Delays—Causation—Permit Problems.—A delay in obtaining building permits was not compensable, because the delay was directly attributable to factors outside the government's control that were not foreseeable by either party, and the contract provided no relief for such a delay. Under a lease agreement, the contractor was obligated to make improvements pursuant to the government's plans. However, the government delayed delivery of the plans for several months, which the contractor alleged resulted in an increase in more time than historically required to obtain the permits. The time was increased, however, primarily because of the backlog caused by the October 1989 San Francisco earthquake. The contractor failed to show that the government was the sole proximate cause for the delay and that there was no concurrent cause that would have equally delayed the project.

Pricing of Adjustments—Methods of Calculation—Lost Marketability.—The fair value of build-out, services, and utilities that had been amortized in a rental rate were subtracted from a lump-sum price adjustment for lost marketability for a period the government delayed providing adequate layout plans, because the contractor did not incur those

 ©1994, Commerce Clearing House, Inc.

Digitized by Google

costs for that time period. Under a lease agreement and contract to build out space to the government's specifications, the government admitted that this was the proper measure of relief if the board found the contractor to be entitled to damages for delays caused by the government.

Modifications—Reduction in Requirements or Prices—Net Usable Square Feet.—The government was not entitled to reduce rent, even though there was a loss of net usable square feet of floor space, because the space was lost as the result of the addition of fire corridors that were required by a code change that took effect after the anticipatory occupancy date. Under a lease agreement and contract to build out space to the government's specifications, the government delayed delivery of plans by several months. The addition of fire-rated corridors was required by a building code change that became effective for applications for permits filed after January 1, 1990. Had occupancy taken place as planned in December 1989, the new code would not have applied to this space. The contractor was entitled to a lump-sum payment equal to the reduction in rent attributable to the change in the rental rate made by the government. The rental rate was increased for future rental payments to take into account the same reductions.

Performance—Directions by Government—Fire-Rated Corridors.—The cost of constructing fire-rated corridors was compensable because the government required the work and the contractor did not amortize the cost in its rental rate. Under a lease agreement and contract to build out space to the government's specifications, the government delayed delivery of plans by several months. The government alleged that the fire-rated corridors were unnecessary for the space. However, the government's own layout plans required their construction and amounted to a change from the original plans.

Performance—Permits and Licenses—Business Judgment.—The costs of permit applications were not recoverable as damages, because the government did not require the contractor to apply for more than one permit, and the contractor made an independent business judgment regarding how to proceed. Under a lease agreement and contract to build out space to the government's specifications, the contractor bore the risk of an increase in permit costs resulting from its own business decisions.

Delays—Adjustments—Administrative Work and Build-Out Escalation.—Although a contractor demonstrated that its total costs increased above its budgeted costs for administrative work and build-out, it was not entitled to an adjustment, because it failed to present sufficient evidence that the government was the sole cause of the increase in administrative build-out costs. Under a lease agreement and contract to build out space to the government's specifications, the government delayed delivery of plans by several months. However, the evidence showed that the cost increase was due to the contractor's business decisions on how to perform the work rather than to a requirement imposed by the government. The contractor also failed to present credible evidence of the extent of the government's responsibility for any additional effort and costs incurred for the effort.

For the appellant: Pettit & Martin, San Francisco, California, by Patrick Martell and Bryant Zimmerman. For the government: Robert W. Schlattman and M. Leah Wright, Office of General Counsel, General Services Administration, Washington, D.C.

Before LABELLA, BORWICK, and WILLIAMS, Administrative Judges.

LABELLA, Administrative Judge: These consolidated appeals involve a lease entered into by the General Services Administration, GSA or respondent, with 301 Howard Street Associates, appellant or lessor, of commercial office space in downtown San Francisco, California, for use by the General Accounting Office (GAO).

On November 7, 1990, appellant appealed from the deemed denial of its certified Claim No. 1 to the contracting officer dated June 21, 1990, for lost rent stemming from GSA's delayed occupancy and late commencement of rental payments. This appeal was docketed as GSBCA 10971. On November 8, 1990, appellant appealed from the deemed denial of its certified Claim No. 2 to the contracting officer dated August 30, 1990. Claim No. 2 requested an equitable adjustment for changes (additional work) required in connection with the build-out of the space; for the reduction in the net usable square footage of the leased space caused by

Digitized by Google

the applicability of building code changes imposed after award of the lease contract that allegedly became applicable only because of Government-caused delay in providing appellant the layout drawings; and for various increased costs incurred in performing tenant improvements caused by the Government's delay in providing layout plans. This appeal was docketed as GSBCA 10975.

After the Government moved to dismiss these appeals on the ground that the Board lacked jurisdiction because the claims failed to state a definite amount and thus were not properly certified, appellant, while opposing such dismissal, submitted a restated certified claim to the contracting officer as a precaution against possible dismissal of the appeals. In submitting its claims, appellant revised and withdrew certain elements of the previous submission for Claim No. 2 resulting in an amended total claim of $282,214. On May 27, 1992, the contracting officer denied the claim and on July 29, 1992, the Board received appellant's appeal of this decision and assigned it docket number GSBCA 11942. On the basis of the Government's unopposed motion, this matter was consolidated with the other pending appeals regarding this lease contract.

For the reasons stated below, we deny respondent's motion to dismiss GSBCA 10971 for lack of jurisdiction, grant in part the motion and deny it in part with respect to GSBCA 10975, grant both of those appeals in part, and grant in part the appeal in GSBCA 11942.

Findings of Fact

1. By solicitation dated December 12, 1988, GSA requested offers for a five-year lease of office space with twenty-six inside parking spaces located within a discrete area of the city of San Francisco, California. The tenant agency was to be the GAO. Transcript at 64. Offers were due by December 29, 1988, and were to remain open until February 15, 1989. As originally solicited, the leased space was to be provided complete with tenant improvements which were to be built out in accordance with the Government's plans and ready for occupancy no later than June 1, 1989. Appeal File, Vol. A, Exhibit 1.[1]

2. On June 16, 1989, appellant[2] was awarded Lease No. GS-09B-88650 for Block A, or 26,090 net usable square feet (NUSF) of space consisting of the entire eleventh and twelfth floors at newly constructed premises at 301 Howard Street, San Francisco. Appeal File, Vol. A, Exhibit 1. The lease was for a term of five years to begin on the day the space was certified by the Government as complete and ready for occupancy. Under the revised schedule in the lease at the time of award, and the schedule submitted to GSA by appellant, the anticipated occupancy date for this space was December 26, 1989. *Id.*, Vol. K, Exhibit 220.

3. The lease imposed a requirement that the lessor alter the space by completing necessary build-out, or tenant improvements, after receipt of Government-approved (GSA's) layout drawings and receipt of building permits. Appeal File, Vol. A, Exhibit 1 at § 6. Within forty-five days after award or receipt of plans and samples from the lessor, whichever was later, GSA was required to deliver layout drawings giving the location and requirements for rooms, corridors, stairways and other information necessary to perform the build-out and finish selections to the lessor. *Id.* at § 44; Transcript at 75, 76. Supplemental Lease Agreement (SLA) Number 1 dated November 7, 1989, established August 1, 1989, as the date by which layout drawings and finish selections were required to be furnished to appellant for Block A. Appeal File, Vol. A, Exhibit 2. These were to be used by the lessor to complete the construction documents for the build-out and for obtaining building permits. Transcript at 75.

4. The record contains a preliminary budget for the build-out of the leased space which is dated two weeks after the execution of the lease. Appeal File, Vol. E, Exhibit 144. The Executive Vice President of Continental Development Corporation, who is the representative of both partners in the day-to-day operations of the building, testified as to how the rental rate was developed. He stated:

> A. The rental rate was a very carefully considered analysis of Number One, what we thought to be the market rate less what we felt would be a competitive rental

[1] The numerous appeal files and trial exhibits in these consolidated appeals have been consecutively numbered and are contained in volumes numbered A through L. With the exception of volume B, the exhibits therein are consecutively numbered in Arabic numerals. The exhibits in volume B are numbered consecutively in Roman numerals.

[2] 301 Howard Street Associates is a California general partnership which is owned fifty percent by Continental San Francisco Corporation, a wholly-owned subsidiary of Continental Development Corporation. The other fifty percent is owned by Palladin USA, Inc.

©1994, Commerce Clearing House, Inc.

Digitized by Google

rate in comparison with the rest of the market. We felt that the costs were important in terms of what would be the tenant improvement cost to provide the improvements in accordance with the solicitation and probably more importantly the timing, the timing of the originally envisioned occupancy under this solicitation was considerably earlier than the award was finally made.

....

JUDGE LaBELLA: Excuse me, Counsel. This was a series of questions having to do with how he decided what the rental rates should be, and this was the last point. Were there any factors that play into that [which] you have not mentioned . . . ?

THE WITNESS: Well, the timing which I have not quite finished elaborating on, the timing was very important because we had looked at the rental income stream from the lease to help in the building operating expenses and, since it was a newer building, the income stream toward our pro forma costs and in anticipation of paying the ongoing operating expenses and paying the loan payments and paying the security service and all those people, was important and another consideration why we chose to be very competitive and to look favorably at this lease because of the size and its timing.

Transcript at 61-63. This official also testified as to the development of the preliminary budget document for the build-out for the eleventh and twelfth floors of the leased premises. This document, Appeal File, Vol. E, Exhibit 144, post-dates the execution of the lease by two weeks, and was developed from a review of the plans and requirements of the lease by estimating the cost based upon consultation with subcontractors and consultants and recent experiences for certain items. Transcript at 77-78. It was an effort to "conceptually estimate the cost of improvements." *Id.* He conducted comparisons of this budget to other space for purposes of satisfying himself that it was in the right range and not way beyond the norm. *Id.* at 83. In this regard he stated:

At that time we had a norm based upon the type and level of our building improvements and based upon other buildouts that we have had that were running for full floor tenants in the neighborhood of $28, $29, $30 a square foot, probably averaging about $29 a square foot.

....

This budget was right on, as I recall. I believe this came out at about $29 a square foot ....

Id. at 83-84. The record in this case contains no evidence that a budget for build-out costs was specifically considered prior to bidding in determining the rental rate offered by appellant, although tenant improvement costs were to be amortized in the rent except for lump sum items requested and paid for separately. Indeed, the evidence supports a conclusion that other factors relating to competing market rates, size of the leased premises, and cash flow relating to operating expenses and loan service were the most significant factors in determining the rental rate.

5. On November 7, 1989, a portion of the tenth floor—6,358 NUSF—was added to the lease and denominated Block B of the lease. Appeal File, Vol. A, Exhibit 2. This space was also to be used by the GAO. The Government was to deliver layout plans for Block B by December 1, 1989. At the time SLA Number 1 was executed, on November 7, 1989, the Government had not yet delivered layout plans for Block A, which were overdue, and the SLA specifically provided that execution of the lease of Block B should not be construed as a waiver or limitation of the damages accruing for the Government's late delivery of plans for Block A. *Id.*

6. Appellant's project manager, Mr. Figone, testified that he prepared bar charts representing appellant's original contract work schedule and the as-built construction schedule. Appeal File, Vol. K, Exhibits 220, 221. He testified that he allowed four and one half weeks to produce construction drawings and two weeks for permit processing. Transcript at 145. These documents also indicate that appellant would have completed the tenant improvements for the eleventh and twelfth floors by December 26, 1989, if the Government had furnished layout drawings within forty-five days of award as required by the lease contract.

The December 5, 1989 plans

7. Appellant received its first set of layout drawings from GSA on December 5, 1989, for both Blocks A and B. Appeal File, Vol. C, Exhibit 13. The transmittal letter noted changes to additional private stairwells proposed to be built within the leased space and further stated that the stairwells had been approved for location only, thereby leaving open the question whether or not they would be built. *Id.* Accompanying the transmittal was a list of seventeen additional

Digitized by Google

items for which prices were requested. Appellant's Project Manager testified that upon review of the Government-furnished drawings he determined that he could not proceed with the project because there were inadequacies in the drawings and extra work was indicated which had not been approved. Transcript at 181-82.

8. The Government's contracting officer, whom the Board qualified as an expert regarding the sufficiency of layout drawings, testified that generally the type of drawings furnished on December 5 would be adequate for the contractor to provide construction drawings. The contracting officer admitted, however, that he was only generally familiar with the lease requirements and had no specific knowledge of them. Transcript at 637. His view that the drawings could be converted to construction drawings was somewhat qualified by at least one problem identified by appellant's project manager, i.e., maintaining adequate inside clearance because of a problem with the wall intersecting the window mullion. *Id.* at 661. He also was uncertain as to the effect of the fire code requirements. *Id.* at 666.

9. On December 11, 1989, appellant's project manager and project architect, Gensler and Associates, met with GAO and GSA representatives. Transcript at 183. Appellant's Project Manager discussed a number of ambiguities and conflicts observed in the December 5 drawings. *Id.* Some of the problems discussed are contained in a formal list the project manager finalized on December 15. Appeal File, Vol. D, Exhibit 106. Some significant deficiencies contained in the December 5 drawings are apparent: (1) requirement for a receptionist station shown on the drawings was not provided for in the lease contract, (2) maintaining necessary height clearance at the interface of diagonal exterior walls and partition walls, (3) locations where perimeter insets intersect with partition walls are required to be offset from centerline of mullion, (4) insufficient clearance for handicap exiting, and (5) noncompliance with fire code requirements for fire-rated corridors. *Id;* Transcript at 166-71, 186-91.

10. The GAO representative also advised at the meeting that she would effect some layout changes and submit revised layout drawings by December 18. GSA's Realty Specialist who attended the December 11 meeting testified that there was no discussion of code changes to take effect on January 1, 1990, which would require fire-rated corridors, Transcript at 769, and that it was her understanding that GAO would submit some minor changes and that construction drawings would be prepared once these minor changes were received. Transcript at 771.

11. On the following day there was another meeting between the GAO representative and Gensler at which there was discussion of the requirement for a fire-rated corridor between exit stairwells that was contained in the code that was to take effect on January 1, 1990. This code change would apply to this project because the late delivery of layout drawings on December 5 would necessarily result in obtaining building permits after the January 1 effective date. The December 5 layout drawings do not provide for these fire-rated corridors. Appeal File, Vol. K, Exhibit 222. This fact alone required significant changes to the layout drawings because the fire-rated corridor would be built into some of the net usable square footage that GSA had laid out, rendering the December 5 drawing inaccurate. Transcript at 769-70. GAO retained Gensler to assist in revising the plans to accommodate this change. Transcript at 790; Appeal File, Vol. K, Exhibit 218. The architect also advised appellant that since these changes were significant, construction drawings would be started upon receipt of the revised layout drawings. On December 12, GSA's Realty Specialist received a call from Gensler who advised of the code change and that this would affect the December 5 plans. Transcript at 769. Appellant's Project Manager also advised respondent of this by letter dated December 13, 1989. Appeal File, Vol. C, Exhibit 14. During the period appellant awaited production of revised drawings, appellant made repeated requests to GSA for such plans and alerted GSA to the lost rent that continued to accrue. *Id.*, Exhibits 15-18. Appellant was not advised by respondent to go forward with construction drawings on the basis of the December 5 layout plans. Transcript at 191.

12. While there is conflicting testimony regarding the adequacy of the December 5 drawings irrespective of the code changes, the preponderance of the evidence convinces us that a reasonable lessor would need revised layout plans before producing construction drawings adequate to obtaining requisite building permits in the circumstances. Finding 9. There is no question, however, that the addition of fire-rated corridors required revised layout plans. We also consider that GSA was given prompt and clear notice of this fact and of appellant's

©1994, Commerce Clearing House, Inc.
Digitized by Google

intention to proceed with construction drawings only after it received revised layout plans.

13. Our findings regarding the adequacy of the December 5 drawings are confirmed by GSA's issuance of the next set of drawings which took place on March 5, 1990.[3] Appeal File, Vol. C, Exhibit 21 and Vol. K, Exhibit 223. There were significant differences between the December and March drawings to accommodate layout changes required as a result of the discrepancies noted in Finding 9. *Id.*, Vol. K, Exhibits 222, 223; Transcript at 202-06.

Requirement for fire-rated corridors

14. The building's core contained two fire stairways, one on each side of the core, and included the latest available fire protection apparatus and life safety system, including smoke detectors and rapid-response sprinklers. The building had been constructed in accordance with the San Francisco Codes applicable at the time, in the mid-1980s. The code required, at the time this lease was executed, that fire exits be separated by a distance equal to at least one-half the diagonal measure of the building; and required construction of a fire resistant corridor connecting the exits if it did not meet or exceed that distance in separation. However, the corridor was not required in buildings having rapid-response sprinklers or other fire safety features, such as those present at the leased premises. Appeal File, Vol. L, Exhibit 232; Transcript at 445. Appellant's fifteenth floor was a full floor tenancy comparable to the eleventh and twelfth floors of the GAO lease. Appellant received permit approval for the fifteenth floor in January 1989 without having to build a fire-rated corridor connecting the two exits. Transcript at 442-44.

15. Mr. Keith Brown, an architect and expert in San Francisco building codes, space planning, and design, Transcript at 374, testified that in 1987 he assisted in developing the hypothetical floor plan for 301 Howard Street that was used for showing prospective tenants how the space might be utilized. *Id.* at 380. During that effort, Mr. Brown discussed the exit separation issue with officials of the Bureau of Building Inspection (BBI), including both the head of plan checking and the current head of BBI. During those discussions, it was concluded that one-hour fire-rated corridors were not required for the full-floor tenant floors of 301 Howard Street because they met all three criteria established by the BBI in a code ruling issued August 21, 1986. *Id.* at 382-84; Appeal File, Vol. L, Exhibit 232. In mid-1989 San Francisco adopted a new code that went into effect on January 1, 1990. According to Mr. Brown, at the time the new code was adopted, the prior interpretations were rescinded, and one-hour fire-rated corridors became required if exit stairwells were separated by less than half the diagonal of the building in linear feet. Transcript at 385. The new code applied to all building permit applications filed after its effective date. *Id.* at 387. According to Mr. Brown, prior to January 1, 1990, the eleventh and twelfth floor plans would have received a permit without fire-rated corridors connecting the exits due to the 1986 interpretation excepting floors that met the three criteria—single floor tenant, full sprinklers throughout entire floors, and rapid-response sprinklerheads.

16. GSA has attempted to show in its brief that fire-rated corridors were not required by the new 1990 code in a building with the features of appellant's building. However, credible expert testimony adequately established that it was the city's interpretation of the new code and the disallowance of prior exceptions that created the need for additional fire related measures in this case. We credit this testimony and conclude that the new code as interpreted by the city did not permit appellant to go forward on the basis of the December 5 layouts. Moreover, if the layout drawings had been delivered to the lessor by early August, as required by the lease, permit applications would have been submitted in early September 1989 and the new building code would not have applied to this build-out. Appeal File, Vol. K, Exhibit 220.

17. GSA has interpreted the lease as requiring a reduction in the NUSF attributable to the addition of the two corridors and a consequent reduction in the rent payable to appellant. It based its interpretation on lease Section 24 which provides that rent would only be paid for NUSF and excludes corridors "required by local codes" from that definition. The revised layout which included fire-rated corridors reduced the NUSF on the eleventh and twelfth floors by a total of 1,076 NUSF, or $118,360 over the five-year term of the lease. Appeal File, Vol. F, Ex-

[3] Both the December and March drawings were produced by architects employed or retained by GAO. Transcript at 711-12. In both instances, however, the drawings were approved and furnished to appellant by GSA.

Digitized by Google

hibit 166 and Vol. J, Exhibit 202. The San Francisco Board of Examiners approved this remodeling work on the condition that the drawings provide for fire-rated corridors. *Id.*, Vol. F, Exhibit 160 at 5.

The March 5, 1990 plans

18. On March 5, 1990, GSA issued the next set of layout drawings. Appeal File, Vol. K, Exhibit 223. These drawings contained many changes from the December 5 drawings, including the addition of fire-rated corridors connecting the exit stairways, and changes to the configuration of rooms which corrected prior inadequacies. *Id.*; Transcript at 202-04. The March drawings continued to show openings for a set of private internal stairways, however the transmittal letter from GSA stated that these stairways had been approved only for location and not for actual construction. Appeal File, Vol. C, Exhibit 21. Appellant's Project Manager testified that in early February he finalized a proposal to actually design these stairwells and sent the proposal to GSA. Transcript at 213. While on April 13, 1990, the parties entered into Supplemental Lease Agreement No. 2 for the design of the stairwells, Appeal File, Vol. A, Exhibit 5, GSA has never approved construction of these stairwells and they have never been built. Transcript at 206.

19. Appellant initially proceeded with the preparation of construction drawings based on the March plans but eventually discontinued that effort based on perceived inadequacies and conflicts in the plans. Transcript at 216-19. Appellant's Project Manager testified that although GSA was required to identify the finishes it desired, they were not included with the March drawings. *Id.* at 217. By letter dated March 29, 1990, appellant advised the contracting officer that the March 5 plans failed to conform to contract requirements in several respects and included a tabulation of nine specific issues that appellant believed needed to be addressed. Appeal File, Vol. C, Exhibit 23. Notably, the issue of the private internal stairs was not listed among the issues to be resolved. This letter also gave notice to GSA that unless clear direction was provided by April 13, 1990, appellant would proceed with the work as envisioned in the original lease.

20. By letter dated April 13, 1990, the contracting officer responded to the questions raised by appellant regarding the buildout. Appeal File, Vol. C, Exhibit 26. He further expressed surprise in learning that appellant was not proceeding with construction plans on the basis of the March 5 drawings. It was GSA's intention that any further changes requested by the tenant agency to the March 5 floorplans would be held and processed as alteration projects after the initial build-out was completed. *Id.*, Vol. J, Exhibit 204. At the hearing, the contracting officer expressed the view that GSA's response of April 13 was an adequate one. Transcript at 715-16. He testified convincingly that most of the items did not affect the completion of construction drawings, e.g., the failure to provide the architectural finishes with the March 5 drawings. These finishes normally are provided at a later time, *id.* at 705, and are not essential to the preparation of construction drawings because they pertain to surfaces rather than to the structure of the space. *Id.* at 725. He did admit to a potential problem with two of the items listed by appellant. *Id.* at 705. As to appellant's item number seven regarding a possible change in the structural floor load for a file room, he correctly pointed out that appellant did not receive such indication from the layout plans but rather from the client agency. Appellant's responsibility in such circumstances was to proceed in accordance with GSA's layout directions. *Id.* at 705-06. The contracting officer also stated that it was "a little bothersome" to him that the layout drawing for the mini-computer room identified wall-hung furniture while appellant believed this conflicted with the requirement for acoustical tile on walls. He stated it would be a problem only if the walls could not be reinforced to hang the furniture because of the acoustical tile. *Id.* at 706. Appellant, however, has presented no evidence to that effect. As to appellant's remaining items of concern, the contracting officer correctly pointed out that such concerns do not involve a difficulty with the layout plans, per se, but rather with directions or information received directly from the tenant agency.

21. We agree with the contracting officer that these problems should have been resolved by merely referring to the lease agreement as the controlling document. Transcript at 705-16. In any event, an adequate and timely response by GSA provided clarification to appellant. We find no substantial basis in the record for concluding that the March 5 plans were inadequate for purposes of producing construction drawings and permit approval.

22. By letter dated April 27, 1990, GSA provided its finish selections to appellant. Appeal File, Vol. C, Exhibit 30.

Construction and the permits

23. Appellant's Project Manager testified that he actually planned to begin construction of the tenant improvements prior to receipt of permit approval by the city.

> Q During the time that you allocated toward permitting, is there any other work that can be done while the permit applications are being processed by whichever authority processes them?
>
> A Yeah. About four or five weeks' worth of work can go from start and we can do all of the rough-ins, all the work, until we need rough-in inspections. So that means we can frame walls, we can even [dry] rock one side, we can stub in all the electrical, we can put in all the ceiling grid, the light fixtures, all the wiring—we can't close the ceiling up, we can't button up the second side of any drywall, and we can't lay any carpet if we have stuff on the floor. So all that can go on until we need inspections.
>
> Q So that can go on while the permitting process—
>
> A While the permitting is in process, yes.

Transcript at 154.

24. As to the permit applications made in this case, appellant's project manager testified that "[w]e submitted the 10th floor [permit application] on May 31st, I think we submitted the 11th floor [permit application] about two weeks later, mid-June, and then about the 28th of June we submitted the 12th floor [permit application], so they were about two-week intervals." Transcript at 174. Completion of construction drawings and commencement of construction would have more or less coincided with the timing of the applications for permits, as indicated on appellant's bar graph, Appeal File, Vol. K, Exhibit 221. Although construction of tenant improvements began at about the time applications for permits were made, or shortly after that time in the case of the tenth floor, delays in obtaining permit approvals caused the construction on the tenth and eleventh floors to be interrupted for significant periods of time. *Id.*, Vol. K and Vol. D, Exhibit 136; Transcript at 164-65. The delay in obtaining a permit for the tenth floor caused a break or delay in the construction for approximately one month and a delay of nearly two months occurred in the construction of the eleventh floor as a result of delays in obtaining a permit for that floor. Appeal File, Vol. K, Exhibit 221. Appellant's Project Manager testified that but for these interruptions, actual construction on the eleventh floor took place over a period of eleven weeks plus a couple of days and the twelfth floor work was done over a period of slightly less than thirteen weeks. *Id.;* Transcript at 164-65. The bar graph shows that construction of the tenth floor was completed in approximately thirteen weeks excluding the one month break in construction. Appeal File, Vol. K, Exhibit 221. The entire build-out period, including interruptions for permit approvals, was approximately twenty weeks. *Id.*

25. In its Claim No. 1, appellant states that the Government's actions caused a delay which impacted appellant's efforts to obtain permits. Appellant notes that after the October 1989 earthquake, the San Francisco Building Department was overloaded with building requests and that the permit process took seven to nine weeks, whereas prior to the earthquake this process could be completed in two weeks. *Id.*, Vol. A, Exhibit 7 at 2. In its Claim No. 2, appellant states that the earthquake increased the normal permit processing time from two weeks, as assumed in its bid, to almost thirteen weeks. *Id.*, Vol. B, Exhibit VII.

26. Upon completion of the work appellant notified the Government that the space would be delivered ready for occupancy on November 8, 1990. Appeal File, Vol. C, Exhibit 83. Subsequently, the parties executed a condition survey report which recorded measurement of the leased space and established a total of 6,358 NUSF of leased space on the tenth floor and 25,014 NUSF on the eleventh and twelfth floors for a total of 31,372 NUSF. *Id.*, Vol. J, Exhibit 202. The measurement of 25,014 NUSF for the upper two floors represents a reduction of 1,076 NUSF from the space anticipated in the original lease document. *Id.*, Vol. A, Exhibits 1 and 2. On August 15, 1991, the parties executed Supplemental Lease Agreement No. 5 which set the lease term as beginning November 8, 1990 and ending on November 7, 1995 for Blocks A and B. *Id.*, Vol. K, Exhibit 217. This document reserves appellant's claims as follows:

> In executing this Supplemental Lease Agreement, the Government acknowledges that Lessor reserves its claim to recover from the Government all rent, rent escalation and all damages, including losses, liabilities and all additional costs of performance caused by the delayed acceptance of the space and alleged breaches of the Lease, including claims for additional costs, as reflected in the complaint before

the General Services Board of Contract Appeals, Docket No. 10975.

Id.

The claim for lost rent through November 8, 1990

27. By letter dated June 21, 1990, appellant filed its certified Claim No. 1 for lost rent with the contracting officer. Appeal File, Vol. A, Exhibit 7. This claim seeks an equitable adjustment under the Changes clause for damages in the form of lost rent due to the Government's delay in providing layout drawings which in turn delayed the original planned occupancy dates of December 26, 1989 for Block A and March 31, 1990 for Block B through the revised projected occupancy date of October 30, 1990. This claim provides for a deduction for services and utilities not provided and requests a total sum of $439,508.66. No alternative remedy was sought in the claim presented to the contracting officer.

28. Appellant's initial complaint filed in this proceeding, GSBCA 10971, essentially restates the claim of June 21 with appropriate adjustments to cover the entire period through November 8, 1990, which was the occupancy date as agreed to by the parties. Appeal File, Vol. K, Exhibit 217. Appellant claimed a total of $464,301. Correspondence File, GSBCA 10971. Appellant subsequently amended its complaint and revised this claim upward to $502,821.14, to reflect the correct monthly rental rate established in Supplemental Lease Agreement No. 5. *Id.*, Vol. K, Exhibit 217.[4]

29. In both its original and amended complaints appellant added alternative requests for relief not originally presented to the contracting officer. Appellant requested that the Board reform the lease contract so that the five-year lease period be deemed to have commenced on December 26, 1989 for Block A and on March 31, 1990 for Block B. Correspondence File, GSBCA 10971, Complaints dated December 14, 1990 and January 10, 1991. Under this alternative appellant seeks what it deems the full rental rate without any deductions for services and utilities not provided, for a total of $604,036.62. This was also the only amount sought at trial. Appeal File, Vol. K, Exhibit 226. These amounts are calculated to compensate appellant for a "corridor loss" of $20,581, i.e., the rent for Block A includes payment for the fire corridor area.

30. The Government seeks to reduce the amount claimed for lost rent by any reduction in operating expenses that appellant has been able to save in the sense that some anticipated expenses were not actually incurred during the period of delayed occupancy. The lease, in Section 27 of the miscellaneous provisions, deals with the issue of the owner's savings due to reduced operating expenses during a period of Government-declared vacancy:

> 27 ADJUSTMENT FOR VACANT PREMISES GSAR 552.270-25
>
> IF THE GOVERNMENT FAILS TO OCCUPY ANY PORTION OF THE LEASED PREMISES OR VACATES THE PREMISES IN WHOLE OR IN PART PRIOR TO EXPIRATION OF THE FIRM TERM OF THE LEASE, THE RENTAL RATE SHALL BE REDUCED AS FOLLOWS:
>
> THE RATE SHALL BE REDUCED BY THAT PORTION OF THE COSTS PER SQUARE FOOT OF OPERATING EXPENSES NOT REQUIRED TO MAINTAIN THE SPACE. SAID REDUCTION SHALL OCCUR AFTER THE GOVERNMENT GIVES 30 DAYS PRIOR NOTICE TO THE LESSOR, AND SHALL CONTINUE IN EFFECT UNTIL THE GOVERNMENT OCCUPIES THE PREMISES OR THE LEASE EXPIRES OR IS TERMINATED.

Appeal File, Vol. A, Exhibit 1 at 10 of 33. No thirty-day notice of delayed occupancy, however, was ever provided to the lessor. Appellant's expert in Government leasing and construction contracts, a former GSA employee and consultant, testified as to the purpose of this adjustment clause:

> It's my understanding, in my experience, that this clause was written to cover situations where the government is tied up in a firm-term lease and the agency either goes out of business or changes their missions.... and they have to vacate leased space at some point *after the time it was delivered.* And in those situations the government gives the lessor 30 days prior written notice....
>
> Q Do you have an opinion as to whether this particular clause applies in the situation we've been taking about the last two days?
>
> A I don't think it has any application to this for several reasons. One, I'm not

[4] The amount claimed for Block A includes $20,581 of rent for the space taken up by the fire-rated corridor which the Government has excluded from its calculation of NUSF.

Digitized by Google

aware that the government ever gave 301 Howard Street 30 days notice of their intent to employ this clause and two, the reason they probably did not is because, like I said earlier, the intent of this clause is to come into operation when the government is already in a leased situation and they are trying to reduce their cost for some remaining term that they are unable to terminate. In this case the lease had not beg[u]n in the government's eyes, so there would be no vehicle for them to implement this.

Transcript at 421-23 (emphasis added).

The claim for "corridor loss" for remainder of lease term

31. The Government is required under the lease to pay rent on a square foot rate only for areas included in the computation of NUSF as that term is defined in the lease. Appeal File, Vol. A, Exhibit 1 at 9 of 33. This computation resulted in the exclusion of the fire-rated corridor areas on floors eleven and twelve and a reduction in the rent. Because the construction of fire-rated corridors became necessary only as a result of the Government's delay in producing layout drawings and because such corridors were not required at the time the lease was signed, appellant believes it is entitled to be paid the rental rate for this excluded area for the duration of the lease. This claim for an adjustment of $143,440 in the full five-year lease term to account for the reduction in NUSF initially was a part of appellant's Claim No. 2 dated August 30, 1990. *Id.*, Vol. B, Exhibit VII. It also was included in its amended claim of February 14, 1992, although it reduced both the amount of NUSF lost due to the corridors as well as the dollar amount claimed for this item. Appellant's claim of February 14 requests payment of $118,360 as compensation for the reduced space for the duration of the lease. Correspondence File, GSBCA 11942. At trial, appellant further adjusted the amount claimed for this item to be consistent with its demand for reformation of the lease term. Thus it takes into account the loss of rent for the corridor space already included in the demand for lost rent through November 8, 1990. On the assumption that the lease term would be reformed, appellant's "Summary of Claim," Appeal File, Vol. K, Exhibit 226, adjusts the amount claimed downward to $97,779.

The claim for construction of fire-rated corridors

32. Appellant seeks the cost of constructing the fire-rated corridors on the eleventh and twelfth floors, an expense it did not anticipate at the time it entered into the lease. These costs were first claimed in appellant's resubmitted claim of February 14, 1992, in an amount of $93,284. Correspondence File, GSBCA 11942. This amount later was reduced significantly. Appellant's Project Manager testified at trial that he computed this cost by determining the materials and labor that were used to construct the corridors, and subtracting the costs of materials and labor that would have been incurred if the corridors had not been built. The resulting estimated figure is $14,760.97 for each corridor, for a total of $29,521.94. Transcript at 253-54, 257-60, 264; Appeal File, Vol. K, Exhibit 225.

The claim for increased permit application fees

33. Appellant's Claim No. 2 dated August 30, 1990, makes a claim for "Change in Scope and Cost of Build Out." In connection with this claim, appellant articulates no dollar amount but states various general categories of increased build-out costs. Among those mentioned are appellant's costs incurred in applying for three separate "fast track" building permits—one for each floor—in order to accelerate performance. This process allowed appellant to treat each floor as an independent project and proceed on an incremental basis. Appeal File, Vol. B, Exhibit VII. Appellant's original Claim No. 2 sought the difference in cost of fees but the amount of such fees was unknown at that time. The appellant's resubmitted claim of February 14, 1992, states that the additional cost of fees for obtaining permits is $4,388.

34. Appellant now seeks $4,649 as increased costs of permit applications which it claims is owed as a result of the Government's breach. Appellant's claim summary arrives at this figure by determining the total reasonable permit cost for Blocks A and B ($8,717) and then subtracting this figure from what it claims is the total permit costs ($13,366) as increased "by the delays in delivering plans, the defects in the plans, and the need to divide the permit applications into several separate steps." *Id.*, Vol K, Exhibit 226 at 4. Appellant's Claim No. 2 as resubmitted on February 14, 1992, explains that "[i]n order to allow the alteration work to proceed in areas where permits were obtainable, Lessor applied for and received three separate 'fast track' permits." Appel-

Digitized by Google

lant's Manager for Administration testified that the budgeted permit cost of $7,000 for Block A was derived from appellant's historical permit costs for other build-out space. Transcript at 356-59. It does not appear to be derived from an analysis of the actual anticipated GAO build-out work but rather from a calculation of historical square footage cost for permits. Appellant's Project Manager testified as to why these costs were incurred:

> Q Do you know why you incurred the cost?
>
> A There were two reasons: [One is] that in permit fee calculations, some of the fees are a single set fee for each permit. So you're going to pay only that one if you apply for one permit. And you're going to pay it three times if you applied for three permits. The other thing that transpired is that the city evaluates some components of the permit based on the value of their perceived value of the cost of the work. Every time you send an application there is a box in there wherein you write in the value of the work that you want to give to them. At one time they used to follow and accept our prices that we gave them. Later, and especially into 1990 after the earthquake when they were fighting to capture fees in operating cost, they started implementing their own evaluations. They actually have their own publications they can follow. But they are not bound by any rules. And they can put a value in as they want. And that's what they started doing is they would scratch off our valuations that we consistently used to use, and they increased the value, therefore, the permit fees went up.

Transcript at 265-66. He further testified that the $13,366 cost figure includes the cost of hiring an expediter to expedite the permit processing. *Id.* at 268.

The claim for extraordinary administration

35. Appellant's Claim No. 2 dated August 30, 1990, requests an equitable adjustment for "Change in Scope and Cost of Build Out." One of the many elements mentioned under this general category is the extraordinary administrative cost associated with the Government's multiple layout submissions. This claim, however, fails to state any dollar amount for this work. Appeal File, Vol. B, Exhibit VII. Appellant's resubmitted claim dated February 14, 1992, states that the cost incurred for additional administrative effort caused by late receipt of plans, changes, and deficient plans was $17,127. Correspondence File, GSBCA 11942. It appears that this amount includes the administrative work associated with the three building permits. *Id.*

36. At trial, appellant alleged that excessive administrative (labor) costs were incurred by appellant's administrative staff in dealing with the Government's late issuance of layout drawings, the repetitive issuance of drawings, and the need for resolution of conflicts on the drawings. The amount of this claim as asserted at trial was $24,189. Appeal File, Vol. K, Exhibit 226. It appears to be based upon the Project Manager's comparison of the actual administrative staff costs attributed to this project—$25,885 in salaries for appellant's employees and $7,061.75 for services of appellant's consultant, for a total of $32,950 —with the administrative staff costs for a project on another floor. He estimated the latter cost to be $8,761 on the basis of an assumed cost per square foot. Transcript at 272-74. Appellant seeks the difference of $24,189.

37. Another element of claimed excess administration costs relates to the cost of employing architects and engineers for the build-out work. As in the above claim for administrative (labor) costs, appellant's original Claim No. 2 does not state a dollar amount for its alleged extra costs incurred for architects and engineers. The only express reference to the cost associated with architects and engineers was in the attachment (Tab No. 2) which shows merely the amount budgeted for this category of work and which presumably was amortized as part of appellant's basis for formulating its rental rate. This work was actually budgeted for Block A at $59,212, or $2.27 per square foot. Appeal File, Vol. L, Exhibit 236. It is unclear whether this budgeted amount represents merely appellant's historical costs reduced to a square footage charge or whether it represents an estimate of the actual services to be required under this lease. The earliest budget document in the record, dated June 30, 1989, post-dates the lease by two weeks. *Id,* Vol. E, Exhibit 144. Appellant's resubmitted claim dated February 14, 1992, makes a lump sum demand of $47,041, which includes the alleged extra costs for architects and engineers, extraordinary administrative work, and blueprint costs.

38. At trial, appellant claimed that a reasonable cost for architects and engineers for Blocks A and B was $73,645 and that its actual costs were $99,284. Transcript at 282-84; Appeal File, Vol. L, Exhibit 236 and Vol. K, Exhibit 226. Thus, appellant now seeks reimbursement of $25,639 for excess costs of architects and engineers. *Id.*

©1994, Commerce Clearing House, Inc.

Digitized by Google

39. Appellant's Project Manager testified that increased architect costs were incurred for the following reasons:

> A. . . . Even though Gensler was working with GAO to do the layout drawings, somewhere in that transition they started trying to produce construction drawings for us. And all these ambiguities that we've discussed, they went on for so long and time just etched away. Every time we had a meeting you had to rework the drawings and they had questions, as they were sitting down and trying to fit in the layout to finish the stuff, in that process they would find problems. You have to stop work. You had to clarify it, break away from it, wait for the answers to come back. It all takes time.

Transcript at 282-83.

40. The final element of appellant's claim for extraordinary administration relates to the costs for additional blueprints. There was no specific reference to the extra costs of producing blueprints in appellant's original Claim No. 2, but this element was included in the lump sum demanded for various items listed in its resubmitted claim dated February 14, 1992. At trial, appellant sought a total of $1,146 for producing additional blueprints. This is the difference between the actual costs incurred for Blocks A and B and the originally budgeted costs for Block A with a pro-rata increase for Block B. Costs budgeted for Block A were based on appellant's historical blueprint cost for various jobs which was converted to a square foot cost and then adjusting larger jobs downward for economies of scale. Transcript at 285. Appellant's Project Manager explained why he believed appellant incurred increased blueprint costs:

> A. Going back to the explanation I just was explaining why we had increased A and E cost, architect costs. While they're working on these drawings they're getting input from us, and if we're having meetings we had to produce another set of drawings. Well, the drawings, if they are not finished, they just keep being redone. So every time you have a new meeting the drawings have been revised so there's new input so you have to produce another set of drawings. And every time you crank them out you have to go out and blueprint cranks them out and it's another 50 bucks or whatever it cost.

Id. at 284-85. On cross examination of appellant's Project Manager counsel sought to obtain a clearer picture of this problem:

> Q. Isn't [it] true that yesterday I believe you said that Gensler was stuck when they looked at the March plans submitted by the government?
>
> A. No. I don't believe that's what I said. What I said was that they called me and said that they were trying to extrapolate the information and get [it] into the CAD system. And, in relation to everything that [had] transpired up to that point, the questions that I had asked about the conflicts and ambiguities, the stuff that they introduced to whatever answers we did get, if in fact we got answers, there obviously were things that were unanswered and they could not go forward any more. And what specific relationship that has to do with the March drawings, I am not sure. I am just saying in that point in time all the information that we had and if it included the drawings, it included the issues that were still outstanding, that's where they were. They could not finalize background drawings to go forward.
>
> Q. And isn't [it] odd that Gensler would have those, would perceive those conflicts, since it prepared the March drawings?
>
> . . . .
>
> A. . . . Now I do understand that part of the problem [was] that GAO was feeding Gensler changes and more information. And that they were trying to get them to put in and apparently saying go ahead and do this, but all those changes, none of those changes were part of our contract work. So there was this duality of conflict I think that Gensler was dealing with. They had one party saying one thing and another party is saying something else. And there was a real dilemma in there. I don't exactly [know] what transpired.
>
> . . . .
>
> A. . . . Here again the conflict is they each had a different agenda. GAO wasn't following the contract that I had with GSA. They would have a new agenda. So I think there [were] some problems being generated here. But it was not by me.

Transcript at 311-13.

The claim for increased labor, equipment, and materials

41. In its original Claim No. 2, submitted on August 30, 1990, appellant claimed an equitable adjustment under the Changes clause of the lease on the basis that GSA's delay caused the cost of build-out to increase from its original estimate. Appellant, however, did not state any dollar amount for this segment of its claim but promised to

Digitized by Google

supplement the claim when it "identified the full cost difference for this item." It did list various categories of increased costs for this claim: increased cost of permits, increases in its administrative costs due to multiple layout submittals; "subcontractor, consultant and associated cost increases;" and "increases due to renegotiation of union contracts for skilled workers and laborers, as well as increases in material costs ..." Appeal File, Vol. B, Exhibit VII.

42. In resubmitting this claim on February 14, 1992, appellant no longer requested an equitable adjustment under the Changes clause as previously claimed but rather asserted a breach of contract and set forth, inter alia, a claim for $2,986 for "[i]ncreased costs of labor, materials and equipment caused [by] increases in the cost of doing the alteration work required under the Lease." The claim contains no explanation as to precisely how this amount was determined. Correspondence File, GSBCA 11942. This resubmitted claim also seeks, apart from the claim for $2,986, as separate elements: damages stemming from reduction of rent and added construction costs (fire-rated corridors) as a result of new code provisions requiring additional corridors; additional fees for building permits; extra costs of extraordinary administrative work, architects/engineers fees and blueprint costs; and a profit factor for the claimed extra work. All of these latter elements of the restated claim, except for the claimed profit factor for the extra work, are treated separately above in accordance with the "Summary of Claim" presented at trial. Appeal File, Vol. K, Exhibit 226.[5]

43. Appellant's employee in charge of day-to-day operations of the leased premises testified that appellant's Office Manager and Construction Coordinator had a significant role in preparing the claim summary document in evidence at Appeal File, Vol. K, Exhibit 226, and used extensively at trial to prove entitlement on a total cost basis. "Her role primarily was to check back on the accounting records of construction costs of verifying administrative time, and breaking out certain of the expense claims that are set forth in the claim." Transcript at 133. Appellant's Project Manager testified that he helped produce the formation and presentation of appellant's claim for increased labor, equipment and materials as presented in Exhibit 226. Transcript at 276. He stated that increased costs in these categories were incurred because appellant's "budgeting and pricing was put together from early 1989 and we were not able to price out and contract for the work until mid 1990, almost a year and a half later." *Id.* at 277. As to the direct causes of cost increases he testified:

> A. We had during that timeframe almost every union renegotiated for increased wages. We had some material cost increases; copper and conduit prices were erratic and usually increasing during that timeframe. A lot of the fabricated and manufactured materials had increases in cost. Anything that was put together, electrical fixtures, all of these things had [a] tendency to go up by 20 percent or something.

Id. at 277-78.

44. At trial appellant pursued a total cost theory of relief for increased labor, equipment, and materials. Appellant's Exhibit 226 sets out appellant's total costs for all tenant improvement work, including additional work requested and separately paid for by GSA. Appellant deducts from this total cost amounts claimed separately for permits, blueprints, architect and engineer costs, and amounts it was separately reimbursed by GSA presumably for additional work required. The exhibit shows unreimbursed construction costs for Blocks A and B as $1,084,332. From this amount appellant has deducted its "reasonable budgeted costs" for Blocks A and B in the amount of $874,148 to arrive at increased construction costs of $210,184. From this amount it then deducts the cost of constructing the fire-rated corridors, $29,522, which are claimed separately, for a total claim for increase in construction costs of $180,622.

45. On the last day of trial this claim was substantially revised and reduced on rebuttal to $60,661 to account for a $120,000 error discovered in appellant's construction cost records. *Id.* at 802-04. This error erroneously inflated appellant's base figure for its total cost of tenant work.

Relevant lease provisions

46. The lease contains GSA Form 3517 (Rev. 3/89), General Clauses (Acquisition of Leasehold Interests in Real Property). Appeal File, Vol. A, Exhibit I. This document

[5] This exhibit makes no claim for profit, but appellant's counsel resurrects a profit factor in Appellant's Reply Brief. It argues therein that appellant is entitled to a liberal profit percentage in the range of fifteen to twenty-five percent. Appellant fails to state what element or figure this profit factor should be applied to.

provides for changes in the Government requirements:

17. 552/270-21 CHANGES (JUNE 1985)

(a) The Contracting Officer may at any time, by written order, make changes within the general scope of this lease in any one or more of the following:

(1) Specifications.

(2) Work or services.

(3) Amount of space.

(4) Facilities or space layout.

(b) If any such change causes an increase or decrease in the Lessor's cost of, or the time required for, performance under this contract, whether or not changed by the order, the Contracting Officer shall modify the lease by (1) making an equitable adjustment in the rental rate, (2) making a lump sum price adjustment, or (3) revising the delivery schedule.

(c) If such change causes an increase in costs under this contract, the Lessor shall submit any "proposal for adjustment" (hereafter referred to as proposal) under the clause at 552.270-20, Proposal for Adjustment.

(d) Adjustments for operating expenses in vacant leased premises will be in accordance with the clause at 552.270-25, Adjustment for Vacant Premises.

(e) Failure to agree to any adjustment shall be a dispute under the Disputes clause.

(f) No services or work for which an additional cost or fee will be charged by the Lessor will be furnished without the prior written authorization of the Contracting Officer or a designated representative of the Contracting Officer.

Id.

47. Other relevant provisions of the General Clauses follow:

5. 552.270-27 DELIVERY AND CONDITION

Unless the Government elects to have the space occupied in increments, the space must be delivered ready for occupancy as a complete unit. The Government reserves the right to determine when the space is ready to occupy.

7. MEASUREMENT FOR PAYMENT (APRIL 1984)

When space is offered and accepted, the space will be mutually measured upon delivery. Payment will be made on the basis of actual measurement; however, payment will not be made for delivered space which is in excess of the maximum square footage solicited.

20. 552.270-15 APPLICABLE CODES AND ORDINANCES (JUNE 1985)

The Lessor, as part of the rental consideration, agrees to comply with all codes and ordinances applicable to the ownership and operation of the building in which the leased space is situated and, at his own expense, to obtain all necessary permits and related items.

Appeal File, Vol. A, Exhibit 1.

48. The lease agreement also incorporated solicitation provisions as a part of the lease. A provision relevant to the Government's reduction in the rent because of the reduction in NUSF provides:

24. NET USABLE SPACE

Net usable space is the method of measurement for the area for which GSA will pay a square foot rate. It is determined as follows:

If the space is on a single tenancy floor, compute the inside gross area by measuring...

....

In all measurements, ... deduct the following from the gross area including their enclosing walls:

....

corridors in place or required by local codes and ordinances.

Appeal File, Vol. A, Exhibit 1.

Discussion

Respondent's motion to dismiss

The Government has moved to dismiss the appeals in GSBCA 10971 and 10975 for lack of jurisdiction on the basis that the claims presented to the contracting officer in these cases did not seek a particular requested amount. It argues that a proper claim must be for a specific amount of money and, as required by the Federal Acquisition Regulation, seek payment of money in a sum certain. 48 CFR § 33.201. Respondent argues that "appellant's statements that '... the amount of damages for which the Government is liable on this claim is indeterminable...' and that the certified claim figure '... represents the *minimum* amount the government is liable for' render the claims in these appeals qualified." Respondent would distinguish this case from the one considered in *Mary Lou Fashions,* ASBCA 29318, 84-2 BCA ¶ 17,483 at 87,100, because in *Mary Lou* the contrac-

Digitized by Google

tor said that the amount being certified was correct at the time of certification while appellant in these appeals states that the amounts it is seeking are "indeterminable."

Appellant argues that the claims as submitted were proper and that only future costs and losses, dependent on resolution of legal issues and future Government conduct, were reserved. At the time the claims were submitted, appellant claims it could not accurately predict when GSA would stop the delays. It contends that acknowledgment of a potential upward adjustment of a claimed amount does not improperly qualify a claim or deprive the Board of jurisdiction under the Contract Disputes Act, 41 U.S.C. §§ 601-613 (CDA), citing to *Computer Sciences, Inc.*, ASBCA 27275, 83-1 BCA ¶ 16,452 at 81,843. Appellant also argues that *Mary Lou Fashions* supports its position because the board there held that the specific reservation of right to change the claim did not affect the validity of the claim or certification. Finally, appellant contends that even if there had been no demand for a minimum monetary amount appellant's demand is still a proper "claim" as that term is defined by regulation to include the "adjustment or interpretation of contract terms, or other relief arising under or related to the contract." 48 CFR § 33.201.

In some respects this case is similar to *Mary Lou Fashions*. In that case, the contractor certified a claim for $944,201.05. There was a detailed breakdown of costs which included two estimated items. The board concluded that the claim was for a sum certain which was not qualified. The fact that two items were estimated did not render the certification invalid. The use of estimates can be justified on the basis that the contracting officer has been made aware of the basic parameter of the claim, even though the amount may change in light of new evidence. *Heritage Reporting Co. v. General Services Administration*, GSBCA 10396, 92-1 BCA ¶ 24,740.

Because the circumstances in each of these claims (Nos. 1 and 2) are quite different, we treat each separately and reach different conclusions with respect to each. The first claim dated June 21, 1990, Appeal File, Vol. A, Exhibit 7, is a claim for an equitable adjustment for lost rent or marketability due to the Government's delay in providing adequate layout drawings. The claim states a specific period of delay (a definite start date and a projected ending date), imputes responsibility for delay to specific Government action (failure to provide layout drawings), seeks a specific dollar adjustment ($439,508.66), and explains how appellant calculated the amount sought (lost rent for the delay period less an adjustment for services and utilities). What is indeterminate in this claim is any possible future delays that might occur. In other words, appellant reserved the right of a potential upward adjustment for any further delays. This possibility does not render this claim improperly qualified or the certification of such a claim inadequate. *Computer Sciences*, 83-1 BCA at 81,843. Once the Board determines whether or not the Government is at fault for the delay in layout drawings and the period of delay, the amounts due for lost marketability or rent would immediately become plain and easily calculable. Where the amount of the claim is calculable from the facts provided with the claim, a claim need not be rejected despite the absence of a precise dollar amount. *Metric Const. v. United States* [30 CCF ¶ 70,793], 1 Cl. Ct. 383 (1983). We therefore conclude that Claim No. 1 stated a sum certain and was properly certified and presented to the contracting officer for decision. As such, we have jurisdiction on the basis of the contracting officer's deemed denial of the claim in GSBCA 10971.

Claim No. 2, dated August 30, 1990, is a claim for an equitable adjustment in contract price for three GSA-ordered changes: 1) change in amount of NUSF space; 2) change in scope and cost of build-out, and 3) change in lease term. Regarding the first change, appellant's claim seeks payment at the rental rate for the reduction in NUSF due to the construction of fire corridors, which it views to be a change from the original lease requirement. It seeks payment of a specified amount for this space calculated at the rental rate for the entire five-year term of the lease. This claim for an adjustment due to the reduction in NUSF allegedly caused by the Government suffices as "a clear and unequivocal statement that gives the contracting officer adequate notice of the basis and amount of the claim." *Contract Cleaning Maintenance, Inc. v. United States*, 811 F.2d 586, 592 (Fed. Cir. 1987). The contractor need submit only the amount of costs it has incurred or a basis upon which the contracting officer could compute the amount. *25 New Chardon Street Ltd. Partnership v. United States* [36 CCF ¶ 75,952], 19 Cl. Ct. 208 (1990). We have jurisdiction over this request for an equitable adjustment because the contractor has asserted with sufficient specificity a right to additional compensation and has explained precisely how it has

©1994, Commerce Clearing House, Inc.
Digitized by Google

computed the amount requested. It is enough if the amount in dispute can be "easily determined by a simple mathematical calculation or from the contractor's submission to the contracting officer ...." *Metric Construction Co., Inc. v. United States* [34 CCF ¶ 75,424], 14 Cl. Ct. 177 (1988). *See also Quality Diesel Engines, Inc.*, GSBCA 11332-COM, 92-1 BCA ¶ 24,410 (1991) at 121,849 (claim which set forth the amount to which appellant believes it is entitled and the method by which the amount was calculated is sufficient even though appellant stated that the claim may increase when more information was provided by the respondent).

Appellant's claim for "change in scope and cost of build-out" seeks an equitable adjustment because the cost of providing tenant improvements increased as a result of the Government's delay in providing layout plans and in providing multiple plans. The claim as submitted to the contracting officer mentions various aspects of the build-out costs that increased as a result; e.g., the costs of obtaining permits; additional manhours and administrative cost to review, identify, and price multiple changes in the scope of work; and increases in material costs and wages for skilled workers and laborers. Appellant, however, fails to state any dollar amount sought for this adjustment and merely presents its original estimate for the build-out work, presumably as a benchmark for determining its unspecified increased costs. By way of explanation, appellant noted that these costs were ongoing and their full impact could not be determined at that time.

Although appellant presumably knew at the time it submitted this claim to the contracting officer that its costs for tenant improvements were increasing, it failed to state any sum certain for this demand for equitable adjustment. Because this claim is essentially one for additional compensation but states no specific dollar amount representing its increased costs, under the authorities cited above it is not a proper CDA claim and we dismiss it for lack of jurisdiction. *Essex Electro Engineers, Inc., v. United States* [38 CCF ¶ 76,304], 960 F.2d 1576, 1581 (Fed. Cir. 1992).

The final portion of Claim No. 2 relates to an alleged change in lease term. Many elements included under this rubric have been withdrawn, e.g., "Impact on Rent Free Period," "Parking Fees Impact," and "Change In Fair Market Value." Correspondence File, GSBCA 11942, Appellant's Resubmitted Claim dated February 14, 1992. Another element of this claim relates to the issue of lost market time caused by the delay in the commencement of the lease which is duplicative of the request for an adjustment in Claim No. 1. The only other element under this general heading is yet another demand for an adjustment to compensate for additional administrative labor expended as a result of the multiple submissions of layout plans. However, appellant once again failed to specify any dollar amount for this demand, and it is dismissed for the same reasons as stated above.

In conclusion, we deny the Government's motion to dismiss Claim No. 1. As to Claim No. 2, we deny the motion with respect to the claim for the equitable adjustment for the change in amount of NUSF and grant the motion with respect to the remaining elements of Claim No. 2.

The merits

Claim No. 1: Loss of rent/marketability

The Government was obligated under the lease agreement to provide layout plans for Block A by August 1, 1989, Finding 3, and for Block B by December 1, 1989, Finding 5. We have found as fact that the Government delayed delivery of adequate layout plans until March 5, 1990. Findings 12, 13, 18-21. This amounted to a delay of seven months and four days in the delivery of plans for Block A and a delay of three months and four days in the delivery of plans for Block B. Appellant, however, seeks recovery for a greater period of time than merely the delay in providing layout plans. It seeks compensation for the full period running from the original planned occupancy date of December 26, 1989, through the date the tenant improvements were completed and the premises was ready for occupancy, i.e., November 8, 1990, a period of slightly more than ten months for Block A. A lesser period is sought for Block B on the basis that the anticipated occupancy date was March 31, 1990. These longer periods reflected in appellant's claim include periods of extended delays in obtaining permits for the tenth and eleventh floors. Finding 24. Alternatively, appellant's complaints seek to have the lease reformed to commence on the date the parties originally anticipated occupancy to occur and to run for five years from that date.

Under the contract's Changes clause, the Government is entitled to make changes in the specifications and in space layout. The Government, in fact, changed the specification that required it to provide layouts

Digitized by Google

within the prescribed time frame. We hold that the Government's delay in providing final layout plans is properly addressed as a constructive change under the Changes clause. This is the relief appellant originally requested of the contracting officer. Appellant is not entitled to recovery on the basis of a breach of contract for which reformation of the lease term is requested, given the Government's rights under the Changes clause.[6] In addition, the parties expressly agreed in Supplemental Lease Agreement No. 5 that the five-year term would run beginning November 8, 1990 and continue through November 7, 1995. This agreement did not reserve any submitted claim for reformation of the lease term, and we see no basis for providing relief in contradiction to the express agreement of the parties.

The Changes clause permits an adjustment where a change causes an increase in the lessor's cost of, or the time required for, performance. Of the three methods provided to compensate the lessor for its losses, the one that most appropriately accomplishes this is a lump sum price adjustment for appellant's loss of marketability for the period the Government was at fault for delay in commencement of occupancy and rental payments.

Appellant has proven that the Government clearly was responsible for the delay in providing layout plans and we grant an equitable adjustment to compensate for that delay. We think the additional delay in obtaining building permits, however, was not the Government's fault. It is more directly attributable to factors outside the Government's control which were not foreseeable by either party and for which the contract provides no relief. *Robert L. Rich d.b.a. Unitranco*, DOT CAB 1026, 82-2 BCA ¶ 15,900 at 98,823-33. The evidence shows that the time required to obtain permits substantially increased from appellant's historical experiences for the leased building primarily because of the backlog caused by the October 1989 earthquake in San Francisco. Finding 25. As to any other cause of delay or increased costs in performing the build-out, appellant has not met its burden of proving that the Government was responsible for any such delay. The contractor must show that the Government was the sole proximate cause of the delay and there were no concurrent causes which would have equally delayed the project. *Avedon Corp. v. United States* [35 CCF ¶ 75,577] 15 Cl.Ct. 648, 653 (1988). Appellant has not met this burden.

Thus, we award appellant a lump sum price adjustment equivalent to the rental rate for the period the Government delayed providing adequate layout plans, i.e., from August 1, 1989 through March 5, 1990, for Block A and from December 1, 1989 through March 5, 1990, for Block B. We reduce this amount by the fair value of build-out, services, and utilities which were amortized in the rental rate, the cost of which appellant did not incur for the time period covering this period of lost marketability. In determining how much of an adjustment to allow, we turn to the contracting officer's request of the appellant to revise its claim by reducing the full rental rates for Blocks A and B to reflect an adjustment for appellant's unincurred costs that had been amortized into the rent. Appellant thereafter provided the contracting officer with its operating and build-out costs that were amortized in its full rental rates. The Government's post hearing brief admits that this is the proper measure of relief assuming the Board finds appellant to be entitled to damages for delays caused by the Government. We agree that this is the appropriate measure of damages. As reduced by these unincurred costs, the monthly rental rate per square foot for Block A is $.96 and the daily rate is $.032. For Block B the adjusted rates per square foot are $1.40 per month and $.047 per day. Appeal File, Vol. C, Exhibit 46. Accordingly, appellant is entitled to an equitable adjustment for Block A covering seven months and four days of lost marketability for an award of $178,664.32. For Block B it is entitled to an adjustment equal to three months and four days rent at the above rates for an award of $27,898.90. This comes to a total adjustment of $206,563.22 for both blocks of space.

Claim for corridor loss for lease term

Appellant's Claim No. 2, dated August 30, 1990, seeks a lump sum equitable adjustment to compensate for the reduction of 1,076 NUSF on the eleventh and twelfth floors. The Government reduced the rent to account for the reduction in NUSF due to the addition of fire-rated corridors required by the building code change that took effect after the anticipated occupancy date. Finding 17. Respondent's sole defense is that

[6] Counsel put forth this demand as an alternative basis for relief in the pleadings and argued this at hearing.

©1994, Commerce Clearing House, Inc.
Digitized by Google

there was no code change and thus appellant is not entitled to relief.

There is no merit to respondent's defense. The only credible expert testimony adduced at trial clearly shows that prior interpretations of the code were rescinded and one-hour fire-rated corridors were required in the circumstances applicable to this leased space for permit applications filed after January 1, 1990. Findings 15, 16. Indeed, the city's approval of the build-out was given on the basis of drawings that provide for fire-rated corridors. Finding 17.

At the time this lease was entered into the parties agreed to lease the entire eleventh and twelfth floors, described as consisting of 26,090 NUSF, at an agreed annual and monthly rate established for the combined floors. The Government interpreted the contract provision for Net Usable Space, Finding 47, as permitting it to convert the lump sum annual and monthly rates for the entire eleventh and twelfth floors to a square footage rate computed on the basis of 26,090 NUSF, and then to adjust the rental rate to account for the reduction of 1,076 NUSF. In support of this action it relies on the provision in the Measurement for Payment clause, Finding 46, that payment will be made on the basis of actual measurement. Irrespective of whether the Government's interpretation was correct, we think the Government constructively changed (reduced) the amount of space it initially agreed to rent. While the parties' bargain was that appellant would comply with all applicable codes, Finding 47, appellant never agreed to assume the risk of significantly reduced NUSF and rental income resulting from code changes affecting tenant improvements required to be made after the anticipated build-out period initially agreed to by the parties.

The initial layout plans provided by the Government on December 5, 1989, as drawn, would have had no effect on the amount of NUSF for these floors. The March plans which were drawn, in part, to accommodate the new building code interpretations that took effect on January 1, 1990, reduced the amount of NUSF by 1,076 because of the addition of fire rated corridors. Had occupancy taken place as planned on December 26, 1989, the new code would not have applied to this space. Because appellant's bargain reasonably did not assume the risk of such a code change during this vastly extended period, the Government's insistence that appellant comply is a constructive change for which an equitable adjustment is due under the Changes clause.

The Changes clause permits making an equitable adjustment in the rental rate as well as a lump sum price adjustment. We award appellant a lump sum equal to the reduction in rent attributable to the change in the rental rate due to the reduction in NUSF taken by the Government for the period commencing November 8, 1990 through the month preceeding the date of payment of this award. Because the lease term has not yet expired, we also increase the rental rate for future rental payments to take into account the reduction taken by the Government that is attributable to the reduction in NUSF. The record before us is inadequate to determine the precise adjustments to be made for this claim and we therefore return this matter to the contracting officer for calculation of the appropriate adjustments and amounts due. Our intention here is for the contracting officer to retain the monthly and daily amounts provided for in the lease agreement for the eleventh and twelfth floors without reducing the rent for the diminution in NUSF.

The claim for construction of fire-rated corridors

Appellant seeks the cost of constructing the fire-rated corridors on the eleventh and twelfth floors. It did not anticipate this expense at the time it entered into the lease agreement and the cost of performing this work was not amortized into the rent. Finding 32. At trial appellant's Project Manager credibly testified as to the actual extra cost of performing this work. The total amount shown at trial to be due for this work is $29,521.94. *Id.*

The Government objects to any award for this work because it does not believe fire-rated corridors were necessary for this space and it questions the adequacy of the proof offered by appellant for the cost of this item. As indicated above, there is no merit to the Government's position that such corridors were not required. Indeed, the Government's own layout plans dated March 5, 1990, required their construction which amounted to a change from its original December plans. While the Government properly notes the changing proof offered by appellant for this work, we are satisfied that appellant's Project Manager's testimony at trial provides sufficient proof of the actual cost of this work. Because the Government required this work and appellant did not amortize it in its rental rate, appellant is entitled to an equitable adjustment under

Digitized by Google

the Changes clause in the amount of $29,521.94. It is also entitled to a ten percent profit for this extra work for a total award of $32,474.13.

The claim for increased permit application fees

Appellant seeks $4,388 as increased costs of permit applications as damages for the Government's alleged breach of contract. Finding 34. We deny this claim because we conclude that the Government neither caused nor required this expenditure and did not breach the lease agreement so as to be responsible for such damages. As indicated above, we have determined that appellant is entitled to certain equitable adjustments under the Changes clause rather than breach damages. We make no such award for any increased cost of permit application because the Government did not require appellant to apply for more than one permit and appellant made an independent business judgment regarding how best to proceed. Appellant assumed the risk of any escalation in permit costs resulting from its own business decision.

Costs for extraordinary administrative work and build-out escalation

To the extent these claims are a part of Claim No. 2 dated August 30, 1990, they were dismissed for lack of jurisdiction. They were resubmitted in the claim dated February 14, 1992. There appellant sought $17,127 for the additional administrative effort caused by late receipt of plans, changes, and deficient plans; $28,842 as increased costs for architect/engineer services required for the build-out effort and in the repetitive permit applications; and $1,072 for additional costs for blueprints necessitated by changes to plans. These three elements comprised its total claim of $47,041 for extraordinary administrative work. Finding 37. In addition, appellant's February 14 claim requests $2,986 to compensate for increased costs of construction. Finding 42. These amounts were claimed as damages for the Government's alleged breach of the lease agreement.

At trial, appellant presented evidence in support of these claims on the basis of increased total costs in the administration and construction of this project. Although we have determined that the Government changed the contract work and we have allowed recovery for the proven cost of those changes where appellant has provided sufficient evidence to support an award, we do not find that the Government breached its lease contract with appellant. Nor do we think appellant has presented sufficient evidence that solely the Government caused these administrative and construction costs to increase. Appellant did demonstrate that its total costs increased somewhat from its budgeted costs in the areas at issue here. Findings 38-40, 43, 44. The evidence shows that in many respects the increase was due to appellant's own business decisions on how best to perform the contract work rather than because of any requirement imposed by the Government. Even if the Government imposed some extra work on appellant as a result of its actions, appellant has failed to present credible evidence of the extent of the Government's responsibility for any such additional effort and the cost incurred for that effort. Appellant's evidence of total build-out cost for this project does not segregate or exclude, for example, the cost of providing lump sum items or extras which the Government has separately paid for. Finding 44. We are unable to determine from this record whether the recovery sought for architects/engineers expenses, administrative labor costs, and blueprint costs were increased by the lump sum items included in the total build-out costs and whether the amounts being sought have been adjusted for any such increase. Nor does the evidence show the administrative costs associated with certain actions that are essentially appellant's responsibility, e.g., administrative costs associated with obtaining permits.

We agree with the Government's argument that appellant's total cost approach for recovery must fail here. This is because appellant has not proven that the nature of the particular losses makes it impossible or highly impracticable to determine them with a reasonable degree of accuracy and that appellant was not responsible for the added expense. *David J. Tierney,* GSBCA 7107 *et al.,* 88-2 BCA ¶ 20,806 at 105,170. We also have grave concern with the reliability of the evidence presented, given the diverse and varied claims submitted by appellant and the questionable accuracy and reliability of the evidence presented at trial. Finding 45.

Decision

We **DENY** respondent's motion to dismiss GSBCA 10971 (Claim No. 1), **DENY IN PART** respondent's motion to dismiss the portion of GSBCA 10975 (Claim No. 2) relating to appellant's claim for an equitable adjustment for the change in NUSF, and **GRANT** both of those claims in part. We

©1994, Commerce Clearing House, Inc.
Digitized by Google

GRANT the motion to dismiss with respect to the remaining claims in GSBCA 10975. We **GRANT** Claim No. 1 and award appellant $206,563.22 for lost marketability for blocks A and B. We **GRANT** the claim for construction of fire-rated corridors in GSBCA 11942 and award it $32,474.13, and **DENY** the remaining claims in that appeal. We **REMAND** GSBCA 10975 to the contracting officer for a determination of quantum in accordance with this decision. Interest shall be paid in accordance with the Contract Disputes Act, 41 U.S.C. § 611 (1988).

[¶ 26,451] Michael Weller, Inc. v. Navajo and Hopi Indian Relocation Commission

GSBCA Nos. 10627-NHI, 11411-NHI, September 24, 1993.

Procedure, Boards—Pleadings—Appendices to Reply Brief.—In an appeal involving claims filed by a contractor under a contract for the renovation of residential housing units, the contractor's motion to strike appendices attached to the government's reply brief was denied because the appendices related to disputed issues prominent in the appeal and the contractor could not be found to have been surprised by the government's use of these appendices.

For the appellant: Paul M. Meador. For the government: Margaret Lee Baskette and Edward E. Risha, Civil Division, Department of Justice, Washington, D.C.

Before BORWICK, Administrative Judge.

BORWICK, Administrative Judge: Appellant moves to strike appendices attached to respondent's reply brief related to four topics: (1) use of building codes in construing the scope of work of the contract; (2) alleged excess labor rate; (3) newly calculated deductions related to withdrawn changes; and (4) overtime calculations. Appellant argues unfair surprise because to its post-hearing brief, respondent has attached appendices which were not entered at the hearing. For the reasons below, we deny appellant's motion.

These cases involve appeals of claims filed under two time and material contracts for repair and renovation of residential housing on the Navajo/Hopi Indian reservation. Appellant filed a claim for direct costs (changes and suspension of work) on the two contracts amounting to $461,983.19, overhead of $587,308.35 and miscellaneous expenses of $108,331.37, for a total quantum of $1,157,622.86. Appeal File, Exhibit 117. The contracting officer denied the claims, with one exception, because the contracts' limitation of cost clauses barred additional compensation.

Appendix A is a list of alleged changes which were actually contained in the contracts. This appendix lists the applicable work order (entitled notice of intent to repair or NOIR), a list of twenty-five items detailed in the contract and, where applicable, a list of building code references to standards for some of the tasks to be performed. Appellant objects to the use of building codes in the appendix.

Appellant cannot claim that it was surprised by the Government's reliance upon building codes. The contracts incorporated the building codes by reference. Appeal File, Exhibit 2. In its answer to appellant's complaint, the Government denied Weller's allegations that the scope of work was not defined before the award of the contract. Respondent's Answer, ¶ 5. The scope of contract issue was present in the case from the beginning of the litigation. Whether the building codes gave definition to the contracts' scope of work was the subject of a colloquy at trial between respondent's witness and the panel chairman. Transcript at 1939-41. Moreover, the panel chairman requested at trial that the Government submit the codes as part of the record. Transcript at 1953. The Government has done so by submitting the codes, as well as an appendix pointing out where the alleged "changes" were contemplated by the codes incorporated in the contracts.

Appendix B is a compilation of alleged excess rate overcharges by subcontractors. These alleged excess labor rates also featured prominently in the case. The Government maintained that appellant used subcontractors who charged for labor in excess of the Davis-Bacon rates that Weller had bid in its proposal. The contracting of-

Digitized by Google

ficer, in his final decision on a claim for extra work performed in October of 1988, limited appellant to the Davis-Bacon rates Weller had bid. Appeal File, Exhibit 174. In his opening statement, Weller's counsel identified this issue as a prominent one. Transcript at 15-16. There is no ground for surprise about this issue. Respondent's appendix B is nothing more than extrapolations from evidence in the record and is not improperly introduced. *Vuyanich v. Republic National Bank of Dallas,* 505 F. Supp. 224, 259 (N.D. Tex. 1980), *rev'd in part on other grounds,* 723 F.2d 1195 (5th Cir. 1984).

Respondent introduces appendix C to its brief quantifying the withdrawn changes on quantum. Appellant's position was that there were withdrawn changes, but that the claimed amount remains the same on a total cost basis. Transcript at 537-38. Respondent's position was that the withdrawn changes reduced quantum. *Id.* at 540-41. The Board asked appellant to quantify the cost of the withdrawn changes. *Id.* at 546. Like appendix B, respondent's appendix C is nothing more than extrapolations from evidence in the record and is not improperly attached to the brief.

The alleged improper charging of overtime also was a substantial issue at trial. *See* Appeal File, Exhibits 7, 11; Transcript at 1932-33. Respondent furnished appendix D which merely sums the overtime wages claimed by Weller. We see no impropriety on the part of the Government in introducing the appendix.

Decision

Appellant's motion to strike is **DENIED.**

[¶ 26,452] Air Speed Tool Company v. General Services Administration

GSBCA Nos. 10118, 10119, 10120, September 30, 1993.

Defaults, Grounds—Performance Requirements—Quality Control.—Default terminations of contracts for ratchet sets and hammers were proper because the record showed that the contractor failed to meet the requirements of the contract's Quality Approved Manufacturer Agreement clause, that it lacked an acceptable point of production or inspection, and that it failed to deliver acceptable levels of ratchet sets and hammers under the purchase orders. The ratchet sets delivered under the purchase orders had unacceptably slow running speeds, and the contractor failed to take corrective action under the QAMA clause. In addition, the contractor failed to show that the conclusions and actions of the agency were arbitrary and capricious. The record showed that the contractor did not have a quality control system that would have assured the delivery of acceptable goods. The agency was entitled to recover the amount paid for the items returned.

For the appellant: Takahashi & Associates, Washington, D.C., by Kenneth K. Takahashi. For the government: Thomas Y. Hawkins, Office of Regional Counsel, General Services Administration, San Francisco, California.

Before VERGILIO, LABELLA, and HENDLEY, Administrative Judges.

VERGILIO, ADMINISTRATIVE JUDGE: Air Speed Tool Company, appellant, had two contracts with the General Services Administration (GSA), respondent. The agency terminated for default the contractor's right to proceed under one of the contracts. Separately, after determining that the contractor had delivered non-compliant goods under specific purchase orders issued under the two contracts and after the agency had returned the items because the contractor had failed to take corrective action, the agency terminated for default the contractor's right to proceed under the specified purchase orders. The agency also claimed entitlement to $142,977.58 for payments previously made to the contractor for the returned items.

Through a filing dated June 18, 1989, the contractor appealed the terminations for default of its contract, and of its purchase orders issued under the two contracts, as well as the agency's claims for reimbursements.

The Board concludes that the agency properly terminated for default the contract and the purchase orders. With respect to the contract, the contractor lacked a quality control system acceptable under the contract and was producing unacceptable items. With respect to the purchase orders, the contractor had delivered items not compliant with performance requirements. Contrary to the terms of the contract, the

©1994, Commerce Clearing House, Inc.

Digitized by Google

contractor failed to replace the items or take other appropriate corrective action.

The agency has failed to substantiate its claim for reimbursement in excess of the contract item price of the items returned. Therefore, the amount of the agency claim for reimbursement is reduced by $532.56 in one appeal. Accordingly, the Board denies two of the appeals, and grants in part the one appeal under which the agency claim is reduced. The contractor must pay the Government $142,445.

Findings of Fact

The 622 contract

1. With an effective date of May 8, 1987, GSA awarded to Air Speed an indefinite-quantity contract (the 622 contract) for pneumatic ratchet sets (item 16) at the unit price of $155. Appeal File, Exhibit 1.[1] Although no supporting contract documentation exists in the record, apparently the contract was later modified to include an indefinite-quantity award for pneumatic portable hammers (item 15)—no party suggests otherwise. *Id.*

2. The contract required the ratchet wrench to operate at a minimum of 280 rpm, and that the air consumption at no load be a maximum of 16 SCFM. Each set was to include seven hexagonal sockets (from 3/8" to 3/4" in increments of 1/16") and two spark plug sockets. Appeal File, Exhibit 1, Amendment 4 at 2-3; Respondent's Exhibits 5, 6. The parties agree that the hexagonal socket openings were required to satisfy gauging requirements, while the spark plug sockets had to satisfy differently specified tolerances. *Id.* and *e.g.*, Appeal File, Exhibits 12, 20, 24.

3. The contractor identified in the contract its Los Angeles, California facility as the production and inspection points for the ratchet sets (item 16) and hammers (item 15). Appeal File, Exhibit 1 at 31.

4. The contract's Quality Approved Manufacturer Agreement (QAMA) clause, E-FSS-539, requires that the contractor maintain a quality control system which complies with all requirements of Federal Standard 368A and that an acceptable quality control system must exist throughout the contract period. Appeal File, Exhibit 1 at 31; Respondent's Exhibit 1. Under the clause, the Government reserves the right to inspect prior to acceptance at all times and places including the point of manufacture. Moreover, "During the contract period, a Government representative will periodically select samples of material produced under the current contract for Government verification inspection and testing." Finally,

> Notwithstanding any other provision of this contract concerning the conclusiveness of acceptance by the Government, any supplies or production lots shipped under this contract found to be defective in material and workmanship, or otherwise not in conformity with the requirements of the contract within a period of *12* months after acceptance shall at the Government[']s option be replaced, repaired or otherwise corrected by the contractor at no cost to the Government within 30 calendar days ... after receipt of notice to replace or correct.

Appeal File, Exhibit 1 at 31; Respondent's Exhibit 1. Additionally, "This contract may be terminated for default if subsequent Government inspection discloses that plant quality and progress controls are not being maintained, subspecification material is being shipped, or for failure to comply with any provisions required by the QAMA." Appeal File, Exhibit 1 at 32.

5. The contract incorporates clauses from the FAR (Federal Acquisition Regulation): 52.246-2 Inspection of Supplies—Fixed-Price (Apr. 1984) ("If the contractor fails to promptly remove, replace, or correct rejected supplies that are required to be removed or to be replaced or corrected, the Government may ... terminate the contract for default.") and 52.249-8 Default (Fixed-Price Supply and Service) (Apr. 1984). *Id.*, Exhibit 1 at 37 and Exhibit 2, GSA Form 3507 at 8 (¶ 42) and 11 (¶ 51).

Performance under the 622 contract

6. By letter dated November 8, 1988, eighteen months into the contract, the contractor informed the agency that it was moving its manufacturing facility from Los Angeles to San Carlos, California. The letter stated that San Carlos would become the points of manufacture and inspection effective December 1, 1988. The contractor requested that the contract be amended accordingly. Appeal File, Exhibit 9.

7. In response, by letter dated November 16, 1988, the agency notified the contractor

[1] An appeal file is associated with each appeal. For ease of reference, unless otherwise stated, citations are to exhibits in the appeal file of GSBCA 10118. Parallel citations to identical exhibits in the multiple appeal files are not indicated.

Digitized by Google

that it would inspect the San Carlos facility "to determine if this plant has the capability to perform in accordance with the terms and conditions of the contracts." The production/inspection points remained unchanged, as did the delivery due dates for purchase orders. Appeal File, Exhibit 10.

8. On December 1 and 21, 1988, the agency inspected the San Carlos facility. The agency "found this plant not fully operational, and not capable of performing in accordance with contractual requirements." The agency provided the contractor with a cure notice, dated January 12, 1989. The notice specified unacceptable conditions, indicated that the contractor had ten calendar days from receipt to cure the conditions, and specified that failure to cure could result in a termination for default. Appeal File, Exhibit 12. At no time in 1989 did the contractor have an acceptable place of production or inspection under the contract. Transcript at 87-89.

9. While the contractor was attempting to change its production and inspection points, the agency instituted lot-by-lot inspections of the ratchets and hammers. Appeal File, Exhibit 14; Transcript at 17, 19.

10. By letter dated February 4, 1989, the contractor responded to the rejection by the agency of some of its ratchet sets inspected at Los Angeles. Appeal File, Exhibit 20. (The agency had concluded that certain socket openings were not within tolerances measured with go/no-go gauges. *Id.*, Exhibits 16-18.) The contractor contended that the agency used the improper standard for testing conformance—Federal Standard 346C not 346A. Moreover, the contractor asserted: "Since nominal nut opening sizes are acceptable on 2 [the two spark plug sockets] of the 9 [sockets], it would most certainly follow that the extremely close tolerances specified in Fed. Std. 346C are not really required on any of the sockets, for the end use envisioned for this item." The letter continued:

> In view of the above inconsistencies in the contract requirements and the fact that we know the quality of products supplied will meet all practical application tests, we would recommend that a deviation be granted on these orders to permit the same nut end opening requirements to be applied to all sockets as are required for the $5/8''$ and $13/16''$ [spark plug socket] sizes.
>
> In reviewing the specification defects discussed above, we would suggest that this contract be ammended (sic) either to specifiy [sic] ANSI 107.2-1975 and Fed. Std. 346C dated April 28, 1976 or that the nut end openings on all sockets be nominal sizes as with the spark plug sockets.
>
> Without this clarification, and since receiving this 308 rejection, we have no alternative but to change our normal sampling procedures as used in the past to 100% inspection, to preclude the possibility of future rejections .... We have replacement sockets on order to insure that all referenced orders can be reworked to pass your present inspection procedures and will be able to submit all orders for acceptance by February 17, 1989.

Id., Exhibit 20.

11. By letter dated March 21, 1989, the agency responded to the contractor's letter dated February 4. After noting that a contract modification had been issued to incorporate Federal Standard 346C in lieu of 346A, the letter stated that after reviewing the standards, the agency "found that both editions have the same gaging requirements for the ... sockets" at issue. Appeal File, Exhibit 24. The contractor has not demonstrated that this conclusion is inaccurate; namely, the two standards have the same gauging requirements for the relevant sockets.

12. The contractor responded to the inspection reports underlying the agency's letter of March 21, stating in part:

> We have sampled all seven regular sockets from the rejected lot ... and find that they will pass the hex. opening requirements if subjected to the same standards as required of the spark plug sockets. It is totally inconsistent to accept one set of standards on the spark plug sockets and reject the regular sockets when they also will meet these same standards.
>
> ....
>
> ... The fact that the sockets as supplied will perform practically in the intended use, should be considered in our request for contract modification. The $3/8''$ and $3/4''$ sockets that refused to accept the go gage are still large enough to fit on a $3/8''$ or $3/4''$ nut. The $9/16''$ sockets that accepted the no-go gage will still drive a $9/16''$ nut efficiently, and most importantly without introducing any safety hazard. We feel that the requested modification is entirely consistent with the inherent flexibility of this item description.
>
> ....

©1994, Commerce Clearing House, Inc.

Digitized by Google

> We do not feel that these orders should be terminated since the items furnished meet all practical requirements and secondly, items conforming to all technical requirements are immediately available. The reason for the initial non-conformable is because the standard sampling procedures would not detect these discrepancies. Only by inspecting 100% can we insure that a given sample will conform.

Appeal File, Exhibit 29.

13. A separate letter dated March 21, 1989, from the agency to the contractor concerns four purchase orders issued under the contract, for which delivery, acceptance and payment had occurred. Based upon complaints received, the agency took and inspected samples from the orders. Appeal File, Exhibit 26. The agency's inspections revealed one deficiency applicable to all four orders: the ratchet wrenches operated at a speed below the required 280 rpm minimum. *Id.*, GSBCA 10120, Exhibits 5-8. The agency found other deficiencies in some sets, such as wrenches becoming inoperable during testing and hexagonal socket openings failing the gauging tests. *Id.* Referencing the warranty provision of the contract, Finding 4, the letter directed the contractor to replace the defective material, with the contractor to offer replacement material within thirty calendar days. The letter alerted the contractor: "Failure to offer replacement material within the time frame specified above, or failure to offer material conforming to all requirements of the contract, may result in the termination of your right to proceed with the performance of the aforementioned purchase orders" under the termination for default clause. Appeal File, Exhibit 26.

14. By letter dated April 1, 1989, the contractor responded to the letters of March 21. Regarding the agency's conclusion that the wrenches failed to meet the minimum speed requirement, the contractor suggested that there was an error in the agency's testing procedures. "All tools produced are tested 100% for rpm and always run in excess of 400 rpm when tested with a strobotac [a registered name of an electronic stroboscope]." Further, the letter stated that "even the slightest load applied to this type of tool will immediately slow it down. .... The only accurate method to measure the rpm is with a strobotac. We do not believe these tools would fail this test if tested correctly." Appeal File, Exhibit 30. Despite the assertion that tools had been 100% tested, the contractor has introduced no such results into the record in support of its contention. Testimony of the contractor's president suggests that, at best, the contractor tested using mechanical means and extrapolated results to exceed the 280 rpm minimum requirement. Transcript, Vol. 2 at 192.

15. In the letter of April 1, the contractor reiterated its position regarding the hexagonal sockets. It contended that the requirement

> could easily be waived without adverse effect on the usability of the ratchet set. The go-no go requirement is only applicable to 7 of the 9 sockets supplied. The other 2 spark plug sockets have no such stringent dimensional requirements. Since this test is not required on the spark plug sockets, [it] is obvious that it is not an "absolute" necessity on the 7 regular length sockets in order to obtain commercially suitable sockets.

Appeal File, Exhibit 30. The contractor noted its willingness to offer "a modification to this effect on these orders. This solution would be far more cost effective than to endure the time lost for the return and rework of these orders for this feature." *Id.* The contractor further offered to replace the tools found inoperable during testing. *Id.*

16. A laboratory test record dated April 3, 1989, shows that a sample from a purchase order of pneumatic hammers was tested in March 1989. Appeal File, Exhibit 35. The sample and order were rejected because a tool would not operate. *Id.*, Exhibit 34. Previously, in February 1989, samples from the purchase order had been inspected and rejected—the pneumatic hammers failed to operate, totally or other than intermittently, at the prescribed pressure and chisels were of unacceptably low hardness. *Id.*, Exhibits 21, 22. In a letter dated February 28, to the agency, the contractor stated that it had retested the lot and concluded that all tools operated at the prescribed pressure. The contractor confirmed the findings of low hardness; it explained that previously rejected material had become commingled during the move to San Carlos. The contractor submitted new chisels which were tested in March 1989. *Id.*, Exhibit 23. No documentation in the record supports the contention of the contractor that the pneumatic hammers it ultimately supplied under the purchase order were compliant with the contract requirements.

17. By letter dated May 4, 1989, the agency terminated for default the contractor's right to proceed with the performance of the 622 contract. Appeal File, Exhibit 36.

Digitized by Google

Noting the importance of manufacturing standards in the industry, and the need for interchangeable and properly fitting parts, the letter rejected the proposed deviation for hexagonal socket standards. The termination stated that the contractor had consistently delivered ratchet sets and pneumatic hammers failing to conform with contractual requirements. "These failures demonstrate to the Government that your firm is unable, or unwilling, to take the necessary steps to operate an effective Quality Control System," as required by the Quality Approved Manufacturer Agreement, clause E-FSS-539, Finding 4.

18. By letter dated June 2, 1989, the agency terminated for default the contractor's right to proceed with the performance of four specific purchase orders for ratchet sets, Finding 13. Appeal File, GSBCA 10120, Exhibit 12. The letter states that in conducting its tests the agency, indeed, had utilized the contractor-suggested methods of testing the speed of the ratchet wrenches. Noting the importance of manufacturing standards in the industry, and the need for interchangeable and properly fitting parts, the letter rejected the proposed deviation for hexagonal socket standards. The letter specifies that the contractor "has failed to offer replacement material to the Government within the time frame prescribed in Clause E-FSS-539. [Finding 4.] Therefore, you have failed to deliver within the purview of" the termination for default clause, Finding 5.

19. The letter terminating for default the four orders further states, with references to check numbers and dates of payment, that the agency had previously paid for items received under the four orders. The total quantity stated for the four orders is 718. The letter requires, as a Government claim, that the contractor reimburse the Government $111,512.58—718 sets at $155.31 each. Appeal File, GSBCA 10120, Exhibit 12. The record does not indicate any basis for seeking reimbursement in excess of the unit price, $155.00, Finding 1.

20. The agency supports the claim with a bill of lading which indicates, by purchase order number, the quantity of ratchet sets returned to the contractor. Respondent's Exhibit 4. Unexplained in the record are the discrepancies between the purchase order quantities and the number of items referenced per purchase order in the bill of lading. The bill of lading shows that under two purchase orders more items were returned than were purchased, under one purchase order the agency returned the same number of items as purchased, and under one purchase order, two fewer items were returned than purchased. *Id.*, Appeal File, GSBCA 10120, Exhibit 12. The record supports the agency's claim to the extent that 716 (not 718) ratchet sets were returned under the terminated purchase orders.

The 629 contract

21. The agency awarded Air Speed a fixed-price, definite quantity contract—the 629 contract—for ratchet sets (468 sets at the unit price of $155 in the amount of $72,540). The effective date of the award is June 2, 1987. Appeal File, GSBCA 10119, Exhibit 1 at 1.

22. The ratchet set is described in terms identical to those in the 622 contract, Finding 2. Appeal File, GSBCA 10119, Exhibit 1 at 2-3. In the contract, the contractor identifies its San Carlos facility as the production point and the Los Angeles facility as the inspection point. *Id.* at 8. The Quality Approved Manufacturer Agreement clause, Finding 4, and the Inspection of Supply and Default clauses, Finding 5, are identical in the two contracts. Appeal File, GSBCA 10119, Exhibits 1, 2.

23. A laboratory test record dated January 31, 1989, indicates that of four sets sampled from one purchase order, one wrench utilized more than the prescribed maximum air consumption, the speed of another wrench was below the prescribed minimum, and one socket from an unspecified set was improperly gauged; all other items tested passed. Appeal File, GSBCA 10119, Exhibit 6. A laboratory test record dated February 10, 1989, indicates that all wrenches sampled from another purchase order failed to operate at the minimum speed; all other tests were successful. *Id.*, Exhibit 5.

24. By letter dated March 21, 1989 (the third letter with that date), the agency informed the contractor that the agency had determined that 203 ratchet sets previously delivered (and paid for) under the 629 contract were defective. These ratchet sets had been shipped under two purchase orders in quantities of 176 and 27. The letter specifies the defects found during inspection, Finding 23. Also, the letter states that the Quality Approved Manufacturer Agreement clause, Findings 4, 22, obligated the contractor to replace the defective material. The contractor was reminded that it was "required to offer the replacement material within **thirty (30) calendar days**, or such longer period as the Contracting Officer may au-

©1994, Commerce Clearing House, Inc.

Digitized by Google

thorize in writing, after the receipt of this letter." Further,

> Failure to offer replacement material within the time frame specified above, or failure to offer material conforming to all requirements of the contract, may result in the termination of your right to proceed with the performance of the aforementioned purchase orders, pursuant to [the Termination for Default clause].

Appeal File, GSBCA 10119, Exhibit 3.

25. By letter dated April 1, 1989, the contractor responded to the letters of March 21. The contractor's response is set forth in Findings 14 and 15. Additionally, the contractor offered to replace the tool which exceeded the air consumption requirement. Appeal File, Exhibit 30.

26. By letter dated May 18, 1989, the agency terminated for default the contractor's right to proceed with the performance of the two purchase orders. Appeal File, GSBCA 10119, Exhibit 10. The letter states that in conducting its tests the agency, indeed, had utilized the contractor-suggested methods of testing the speed of the ratchet wrenches. Noting the importance of manufacturing standards in the industry, and the need for interchangeable and properly fitting parts, the letter rejected the proposed deviation for hexagonal socket standards. The letter specifies that the contractor "has failed to offer replacement material to the Government within the time frame prescribed in Clause E-FSS-539. [Finding 4.] Therefore, you have failed to deliver within the purview of" the termination for default clause, Finding 5.

27. The letter terminating for default the two orders further states, with references to check numbers and dates of payment, that the agency had previously paid for items received under the orders. The total quantity stated for the two orders is 203. The letter requires, as a Government claim, that the contractor reimburse the Government $31,465—203 sets at $155. Appeal File, GSBCA 10119, Exhibit 10.

28. The agency supports the claim with a bill of lading which indicates, by purchase order number, the quantity of ratchet sets returned to the contractor. The document indicates that 203 sets were returned under the two purchase orders. Respondent's Exhibit 4.

Other information

Sampling

29. Under the Quality Approved Manufacturer Agreement clause, the agency samples ratchet sets and pneumatic hammer sets for inspection. In selecting sample sizes and in determining the acceptable quality levels (that is, the number of failures in a sampling which justified rejection of the lot), the agency relied upon the agency's Quality Assurance Handbook and Military Standard 105. Transcript, Vol. 2 at 170, Vol. 3 at 20-25. Some samples taken by the agency were smaller than those dictated in these guidelines. Appellant's Exhibit 4; Appeal File, GSBCA 10120, Exhibits 3, 5, 7, 8. However, in every instance, a sufficient number of sets was unacceptable to justify rejection had the proper sample size been taken. For example, for a lot of 236 sets, 8 samples should have been taken; 2 failures would support rejection of the lot. Appellant's Exhibit 4. Thus, although a sample of four sets was tested (rather than eight), the failure of three wrenches to operate at the minimum speed, justified rejection of the lot. Appeal File, GSBCA 10120, Exhibit 8.

Testing—socket openings

30. The agency utilized go/no-go gauges to test hexagonal socket openings for compliance with the contractual requirements. The testimony of the agency demonstrates that this testing complied with the terms of the contract and accepted practices within the industry. Transcript at 104-05; Vol. 2 at 48. Allegations by the contractor that testing instruments were improperly calibrated, and that testing conditions were unacceptable are not supported by the record. The contractor's contemporaneous letters do not state that the contractor's testing demonstrated compliance; rather, the contractor requested a deviation from the requirements, and stated that the sockets complied with less stringent standards. Findings 10, 12, 15.

Testing—wrench speed

31. In testing the ratchet wrenches, the agency used an electronic stroboscope. Appeal File, Exhibit 33; Transcript, Vol. 2 at 46-47. The agency tested the free-running speed of the ratchet; that is, no load was placed on the ratchet during testing. Transcript, Vol. 2 at 46-48, 50, 65-77. The record demonstrates that the agency properly conducted the testing and that the results are reliable. *Id.* The testing conformed to the testing procedures recommended by the con-

Digitized by Google

tractor during the course of performance. Findings 14, 18.

32. At the hearing on the merits, the president of the contractor testified that the speed should have been tested with a load, and that such testing would have resulted in greater speeds than no-load testing produced. Transcript, Vol. 3 at 92. Although this witness testified as "an expert in the area of ratchet and impact sockets," the testimony was not persuasive or credible. No test results were introduced in support of the testimony. The individual appeared ready to testify to whatever would support the latest theory of recovery. *Id.* at 171-72. The Board discounts the testimony of this individual as not credible.

Testing and conclusions

33. The record reveals that the testing and the acceptance/rejection of ratchets and hammers occurred in accordance with the terms of the contract and methodologies accepted within the industry.

34. By letters dated June 16 and 18, 1989, the contractor appealed the terminations for default of the 622 contract (GSBCA 10118), the two purchase orders under the 629 contract (GSBCA 10119), and the four purchase orders under the 622 contract (GSBCA 10120).

Discussion

The contractor contends that each of the terminations for default was improper. It seeks reversal of the terminations and withdrawals of the claims for reimbursement.[2] The agency bears the burden of proof for both aspects of its claims—the terminations for default and the reimbursements.

The record demonstrates that under the 622 contract, the contractor failed to satisfy the Quality Approved Manufacturer Agreement clause; did not have an acceptable point of production or inspection after December 1; and was failing to deliver acceptable levels of ratchet sets and pneumatic hammers under the purchase orders. The agency's termination for default of the contract is well-justified by the record.

The record demonstrates that the ratchet sets delivered under the six purchase orders under the two contracts failed to comply with contract requirements. The principal failure was the unacceptably slow running speed of the ratchet set. The testings and conclusions of the agency are fully supported in the record. The contractor was obligated to take corrective action under the Quality Approved Manufacturer Agreement clause. The contractor failed to act in accordance with the clause. The resulting terminations for default of the purchase orders were justified.

The conclusions and actions of the agency were neither arbitrary nor capricious. Contrary to the assertions of the contractor, the determinations were not made in violation of the provisions of FAR 49.402, 48 CFR 49.402 (1992), and were not inconsistent with the dictates of *Darwin Construction Co. v. United States* [33 CCF ¶ 75,063], 811 F.2d 593 (Fed. Cir. 1987). The contractor's failures to provide acceptable ratchet sets and pneumatic hammers did not represent isolated incidents. The contractor lacked a quality control system which would have assured the delivery of acceptable goods. The agency simply sought to enforce the terms of its contracts, which contained express requirements for adequate control processes, and for design and performance characteristics of the items. The contractor was unable to satisfy its contractual obligations to deliver acceptable items and to timely take corrective action regarding unacceptable items. The agency was not obligated to accept and retain unsatisfactory material.

The agency appropriately rejected as unacceptable and returned ratchet sets under the two contracts. Having not justified its entitlement to a greater amount, the agency is entitled to the amount it had paid for the items returned. The amount of recovery is limited to $155 for each item returned. Under the four purchase orders terminated under the 622 contract, the record demonstrates that 716 rejected sets were returned. Thus, of the agency's claim, the Board allows $110,980 ($155 × 716), and disallows $532.58 (the $.31 per unit sought in excess of $155, and the 2 additional sets not shown to have been returned). Under the two purchase orders terminated under the 629 contract, the agency has justified the entirety of its claim $31,465 ($155 × 203). Hence, the agency is entitled to $142,445 ($155 × 919).

[2] In its post-hearing brief, the agency seeks reimbursement of $144,977.58. The agency offers no explanation for the variation from the figures in the termination letters. The Board views the agency claims as totalling $142,977.58.

Decision

The agency has demonstrated the appropriateness of the three terminations for default. The agency has fully justified its claim for reimbursement in the GSBCA 10119 appeal, and has justified all but $532.58 of its claim for reimbursement in the GSBCA 10120 appeal. Accordingly, the Board **DENIES** the appeals in GSBCA 10118 and 10119, and **GRANTS IN PART** the appeal in GSBCA 10120. The agency has demonstrated entitlement to $142,455.

[¶ 26,453] Michael-Mark Ltd.

IBCA Nos. 2697, 2890, 2891, 2892, 2893, 2894, 2895, October 1, 1993. Contract No. OR952-CT8-1165.

Modifications—Reduction in Requirements or Prices—Access Methods.—Under a contract for the construction of a fish passage at a waterway, the government's downward price adjustment for the contractor's cost savings resulting from its allegedly improper use of a temporary access spur rather than the contractually approved access method was improper because the government failed to sustain its burden of establishing that the reduction was warranted. During the project, the government was concerned not that the contractor built a temporary road access spur but that the quantities of fill or rock placed in the stream bed exceeded the amount specified in state land permits. However, there was no indication that the temporary spur caused any environmental damage, nor was it clear that the government had properly calculated the original permit quantities of fill and rock. In any event, the state agency's rapid authorization of increases in the amount of the fill indicated that it was not particularly concerned about the changes in the permit amount.

Interpretation of Contracts—Reasonableness—Temporary Access Road.—Under a contract to construct a fish passage, the government's interpretation of the contract as completely disallowing the contractor's construction and use of a temporary access road to the waterway was unreasonable because the contract, when read as a whole, specifically provided for temporary access roads. Under the Operations and Storage Areas clause, the contractor could obtain authorization from the contracting officer to construct temporary roadways. The Project/Site Conditions clause contained a diagram that showed two potential alternative access roads to the jobsite. The Conditions clause further provided that access roads were not to be built unless indicated on the drawings or approved in writing by the contracting officer. Thus, it was clear that the contract unambiguously allowed for the construction and use of temporary access roads.

Interpretation of Contracts—Interpretation During Performance—Implied Approval.—Under a contract to construct a fish passage at a waterway, the contractor's conclusion that the government had approved its construction of a temporary access road to the construction site was reasonable because the failure of the contracting officer's representative and the government inspector to object to the access road constituted an implied approval of the contractor's interpretation that it could construct the road. The contractor had informed the COR of its intent to construct the temporary road. Further, the contractor obtained the appropriate state permits for the access road, secured the COR's approval of the permits, and met with the government to discuss the construction of the road access. The government inspector and the COR were present during the contractor's construction of the road. Even after the COR became concerned about turbidity in the waterway, he did not instruct the contractor to stop work. The lack of objection was evidence that the contractor's position was reasonable, particularly since the contracting officer had delegated the matter of the access road to the COR.

Pricing of Adjustments—Jury Verdict Technique—Extra Excavation.—In calculating the costs of performing extra excavation work under a contract for the construction of a fish passage, the board ruled that the jury verdict approach was the proper method of arriving at a price per cubic yard for the excavated material, because there was no more reliable method of computing the costs, the government had conceded that the costs had

Digitized by Google

been incurred, and there was sufficient evidence to make a reasonable approximation of the costs.

Pricing of Adjustments—Jury Verdict Technique—Unilateral Modification.—In determining quantum over a unilateral modification that increased the contract amount as the result of additional excavation work but then reduced the amount to reflect the deletion of boulder work, the board measured damages by the jury verdict method because liability was not at issue, there was no more reliable method of determining damages, and there was adequate evidence to make a fair approximation of damages.

Site Conditions—Contract Indications, Category I—Competent Rock.—Mud seams, rotten seams, and clay material encountered by a contractor while excavating under a contract for the construction of a fish passage constituted a compensable Category I differing site condition because the contract indicated that the contractor would encounter competent rock, largely bedrock, including massively bedded sandstone. The materials encountered by the contractor were clearly unforeseeable and caused it to spend extra time and incur additional costs.

Acceleration Claims—Constructive Acceleration—Excusable Delay.—Under a contract for the construction of a fish passage, a contractor's claim for constructive acceleration allegedly resulting from the government's delay in granting a time extension and partial suspension of work was denied because the contractor failed to prove that the government was responsible for the delay. The government's partial suspension of work did not result from action on the part of the government, but it arose out of the contractor's violation of state land-use permits. The contractor's request for a time extension beyond the in-stream work closure date, occasioned by the difficulties associated with a differing site condition, was also beyond the government's control, because the contractor had chosen the period for in-stream work.

For the appellant: Bennett, Yazbeck & O'Halloran, Portland, Oregon, by J. William Bennett. For the government: Richard A. DeClerck, Department Counsel, Portland, Oregon.

Before ROME and PACKWOOD, Administrative Judges.

ROME, Administrative Judge: Michael Mark (MM) has appealed from the contracting officer's decisions under its above contract with the Bureau of Land Management (BLM), in the amount, after modification, of $582,729.29, for the construction of a three-part fishway to facilitate the passage of anadromous salmonids[1] over Lake Creek Falls in Oregon. The fishway included a Lower Slide[2], Upper Slide and Lake Creek Falls Treatment (Falls). Post-hearing briefing was complete in March, 1993. MM's active appeals are as follows:

(1) IBCA 2890—entitlement and quantum dispute over unilateral modification 6's $37,832.40 contract price reduction on account of MM's allegedly improper use of a temporary access spur. MM seeks the $37,832.40.

(2) IBCA 2891—quantum dispute over unilateral modification 7's net contract price increase of $12,497.50 for site profile differences. MM seeks an additional $56,480.86.

(3) IBCA 2892—quantum dispute over unilateral modification 5, which increased the contract amount for certain work additions, but decreased it due to the deletion of boulder work, for a net decrease of $4,681. MM seeks $14,636.26.

(4) IBCA 2893—entitlement and quantum dispute over the denial of MM's claim for extra costs due to alleged differing site conditions in the form of clay, mud seams or rotten seams at the Lower Slide and Falls. MM seeks $74,287.59.

(5) IBCA 2894 and 2895—entitlement and quantum dispute over the denial of MM's claims for acceleration and impact associated with a partial suspend work order, the profile changes and the alleged differing site conditions. MM seeks $10,782.47.

[1] Anadromous fish are those which migrate upstream to spawn.

[2] "Slide is a local term for [an area] where water flows over a smooth slab of rock and does not indicate an area of slope instability" (AX 33 at 2).

Findings of Fact

I. *Background*

1. In 1985, BLM contracted with Buell and Associates, Inc., to analyze feasibility and options for a fish passage (Government's Exhibit (GX) 61). Buell's April 1986 report (Buell Report) was a "reconnaissance level analysis intended to assist in preliminary design. *A more thorough analysis with more complete geological testing will be required* to accompany any final design effort" (AF 5 at 298 (emphasis added)). Concerning test blasting upstream from Lake Creek Falls, "there were no mud seams visible in the blasted pool or visible joints in rock that had been blasted from the pool ... There is no evidence of potential problems with minor blasting for foundations or footing" (AF 5 at 303). The Buell Report apparently was not part of the contract solicitation, but the Golder Report, *infra,* which largely was included in the contract, refers to the Buell Report. It is not clear from the record whether the Buell Report was made available to bidders.

2. Neither BLM, nor its design consultants, conducted the further geological testing intended by Buell (Appellant's Exhibit (AX) 31; Tr. 144).

3. In 1987 BLM issued a Lake Creek Aquatic Habitat Management Plan, relying upon the Buell Report and proposing a fishway for the Falls constructed either with prefabricated modular aluminum counterflow "steep pass" fishway sections or with the fishway cast in place with steel or aluminum counterflow structures. Metal fish ladders were to be fabricated offsite, with components moved onsite for assembly. Materials were to be moved using cables off Oregon State Highway 36, with "no roads or trails needed" (AX 80 at 25). The Management Plan contained a $45,000 estimate for an access road for Falls work, however, with a total Falls estimate of $395,000 (AX 80 at 26).

4. In May, 1987, BLM completed an Environmental Assessment Report, which again referenced off-site fabrication of the fish ladder, the lack of need for roads or "new" trails, and the cable access system. However, the Falls cost estimate remained at the same $395,000 that had included the access road (GX 52 at 17, 20, 24; GX 61).

5. After State approval of the fish passage plan, BLM contracted with Fish Pro, Inc., in September 1987, to develop the plans and specifications, following the off-site fabrication, portable ladder plan. Fish Pro's contract stated that its access to the work site, and that of the construction contractor, was to be limited to existing facilities and that "*[no] new access roads shall be constructed* on site *without written authorization of the Contracting Officer.*" Based upon what it deemed to be excellent exposure of rock and soil materials, Fish Pro proposed, and BLM accepted, that borings along the fish passage alignment would not be necessary (GX 59, § C.5.3C. (emphasis added); GX 61).

6. Fish Pro hired Golder Associates for a geotechnical design study. Golder completed it in December, 1987 (Golder Report); most of it was included in MM's contract (AX 33; Tr. 443).

7. Fish Pro recommended changing the plan for a portable fish ladder built offsite and the design was modified to a cast in place concrete structure (AX 54, interrog. resp. G.1 and 2; AX 72 at 3). This design contemplated 582 c.y. of excavation, 186 c.y. of backfill, and 168 c.y. of concrete (AX 58; Tr. 15, 16, 461-66).

8. The Environmental Report had noted that, in 1971, the State had proposed a concrete, cast in place fish ladder that would have required an access road for construction. That plan had been rejected due to perceived major site impacts and over $2 million in cost (GX 52 at 18). The concrete, cast in place design ultimately accepted by BLM was not the same as this earlier design (AX 54, interrog. resp. G.3.(a)).

9. BLM issued the solicitation on June 6, 1988, with bid opening scheduled for July 6 (Appeal File (AF) 2 at 34). On about June 7, in a combined application, BLM sought permits from the Corps of Engineers (Corps) and Oregon's Division of State Lands (State Lands). The application stated that about 87.5 c.y. of fill, which was largely concrete, and about 360 c.y. of removal (excavation), would be required for the project. Of the 360 c.y., 300 were estimated for the Falls. The application stated that "no roads are to be built;" the Lower and Upper slides were to be built using hand equipment; the Lower Slide involved placing five cement weirs on "*bedrock*" in the channel and excavating "*bedrock*" pools; and the "*channel is over 95% bedrock.*" The application included a map which labeled the Lower Slide as the "Lower *Bedrock* Slide." The permit application was included as part of the contract documents (AF 2 at 51, 52, 53, 55 (emphasis added); Tr. 923).

Digitized by Google

10. On June 23, 1988, the Contracting Officer's Representative (COR), Mr. Bruce Runge, conducted a pre-bid site tour, attended by MM's project manager and vice president, Mr. Robert G. Thomas, and seven other prospective bidders (Tr. 101, 393-94, 871-72). Mr. Runge warned against tree injury during construction (Tr. 401). Mr. Thomas previously had reviewed the solicitation. Its provisions and the massively bedded sandstone he observed on site indicated sound, good rock to him (Tr. 411, 609). The only bidder concern that Mr. Runge recalled was whether the contract would contain the necessary permits, not yet in the solicitation (Tr. 405, 415-16, 609, 876, 885).

11. On June 29, 1988, bid opening was postponed indefinitely due to permit complications (AF 2 at 60).

12. On August 4, 1988, State Lands issued to BLM a fill/removal permit authorizing removal of up to 360 c.y. of material and the placement of up to 87.5 c.y. for the fishway construction. The permit stated that violations could cause its revocation or an action for damages. The permit holder, *i.e.*, BLM, was responsible for the construction contractor's activities. State Lands retained authority to halt temporarily or to modify the project in the case of excessive turbidity or damage to natural resources. The permit was included as part of the contract documents (AF 2 AT 48-49).

13. On August 11, 1988, the Corps issued its permit to BLM, authorizing the creation of a fish passage at the Lower Slide, Upper Slide and Falls, "by placing 87.5 [c.y.] of fill below ordinary high water." Of the 87.5 c.y., about 34 were designated for the Falls. The permit provided for the protection of vegetation; that "[c]are shall be taken to prevent any petroleum products, chemicals, or other deleterious materials from entering the water;" and that "[w]ork in the waterway shall be done so as to minimize turbidity increases in the water that tend to degrade water quality and damage aquatic life" (AF 2 at 40, 41). The permit was included as part of the contract documents.

14. On August 22, 1988, amendment 2 at the solicitation set a new bid opening for September 12, 1988, and added that the contractor was to perform administrative activities, such as schedule and other submittals, during the first stream closure period, about September 15, 1988, through July 1, 1989. Regarding the permits obtained, the amendment stated:

> *The amount of fill material — 87.5 [c.y.] — shown on the [two permits] was estimated for joint permit application purposes only.* The contractor will be responsible for determining the actual quantities required for completion of the entire project. Should the quantities estimated by the Contractor differ from those quantities estimated for application purposes, a request for modification to the permit *will* be performed by the BLM. [Emphasis added.] [3]

(AF 2 at 37). The amendment pointed out that State Lands and the Corps retained authority to suspend temporarily or to modify the project if the water quality, fish or wildlife were being adversely affected and that the contractor would have to comply with any mitigating measures directed by either agency.

15. On September 19, 1988, BLM awarded the contract to MM in its lump sum bid amount of $308,000, covering the Upper and Lower Slides (AF 2 at 35). On October 6, 1988, BLM issued modification 1 to cover the Falls, in MM's lump sum bid amount of $300,000, increasing the total contract amount to $608,000 (AF 2 at 33, 61).

---

[3] MM urges that the permits' fill and removal amounts erroneously were linked to the original, portable fish ladder, "steep pass" design (Tr. 710-12). It alleges that the ultimate design is not "steep pass," but COR Runge stated that the original design was an "Alaska steep pass" structure, and the design selected, a "Denil steep pass." The Corps permit covers a "Denil Steep-pass fishway" (AX 2 at 40).

The COR alleged that permit quantities did not pertain to all fill and excavation necessary for the project, but to permanent fill to be placed in the stream, and that the permits covered the correct quantities for the job as soliciated (Tr. 923-34).

Fish Pro's president, Mr. Edward Donahue, stated that the highline access alternative in the contract was not based upon the earlier, portable ladder, design, but he did not have an explanation for the differences in Fish Pro's fill and excavation estimates and the permits' fill and removal figures. This was not explored with him at any length, however (Tr. 460, 462).

Mr. Thomas believed contemporaneously that the fill allotted was sufficient for his stream access plans. Upon close review at hearing, he stated that the permit amounts were not correct. He had not been particularly concerned about the amounts, given the contract provision that they were estimates and that BLM would modify them if necessary. *See* Tr. 418, 692-93.

In view of our resolution of IBCA 2890, and the confusion in the record, we do not make a finding on whether the permits were incorrectly based.

II. *The Contract*

A. *Special and General Provisions*

The contract, with a 370-day performance time (AF 2 at 61), included the following pertinent Special and General provisions:

16. The COR was authorized to clarify technical requirements, and to review and approve work clearly within the scope of work. He was not authorized to issue changes under the Changes clause or to modify the scope of work (AF 2 at 63, § 1).

17. Under the Suspension of Work clause, the contracting officer could order the contractor, in writing, to suspend, delay or interrupt all or part of the work for a period deemed appropriate by the contracting officer for the Government's convenience. If for an unreasonable period, the contractor might be entitled to a price adjustment, unless the disruption were due to its fault or negligence (AF 2 at 68).

18. If the contractor submitted cost or pricing data in connection with pricing modifications, the Government had audit rights (AF 2 at 68).

19. The Differing Site Conditions clause provide:

> (a) The Contractor shall promptly, and before the conditions are disturbed, give a written notice to the Contracting Officer of (1) subsurface or latent physical conditions at the site which differ materially from those indicated in this contract, or (2) unknown physical conditions at the site, of an unusual nature, which differ materially from those ordinarily encountered and generally recognized as inhering in work of the character provided for in the contract.

If there were a differing site condition, and if it caused an increase in the contractor's cost or work time, an equitable adjustment to the contract was to be made (AF 2 at 99).

20. The Site Investigation and Conditions Affecting the Work clause provided:

> (a) The Contractor acknowledges that it has taken steps reasonably necessary to ascertain the nature * * * of the work, and that it has investigated and satisfied itself as to the general and local conditions which can affect the work or its cost, including but not limited to (1) conditions bearing upon transportation, disposal, handling * * * of materials; (2) the availability of * * * roads; * * * (4) the conformation and conditions of the ground * * * The Contractor also acknowledges that it has satisfied itself as to the character, quality, and quantity of surface and subsurface materials or obstacles to be encountered insofar as this information is reasonably ascertainable from an inspection of the site, including all exploratory work done by the Government, as well as from the drawings and specifications made a part of this contractor. Any failure of the Contractor to take the actions described and acknowledged in this paragraph will not relieve the Contractor from responsibility for estimating properly the difficulty and cost of successfully performing the work, or for proceeding to successfully perform the work without additional expense to the Government.
>
> (b) The Government assumes no responsibility for any conclusions or interpretations made by the Contractor based on the information made available by the Government.

(AF 2 at 100).

21. The contractor was to preserve and protect all vegetation, including trees (AF 2 at 101, § 52).

22. Under the Operations and Storage Areas clause, the contractor was to "use only established roadways, *or use temporary roadways, constructed by the Contractor when and as authorized by the Contracting Officer*" (AF 2 at 102, § 53(c) (emphasis added)).

23. Under the Changes clause, the contracting officer, by written change order, could make changes in the work within the scope of the contract, including changes in the specifications; manner of work; Government-furnished site; or directing accelerated performance. Any other written or oral order of the contracting officer (including direction, instruction, interpretation or determination) that caused a change was to be treated as a change order upon the contractor's written notice. If a change caused an increase in contract cost or time, the contracting officer was to make an equitable adjustment (AF 2 at 106).

24. Under the Inspection of Construction clause, "[t]he presence or absence of a Government inspector does not relieve the Contractor from any contract requirement, nor is the inspector authorized to change any term or condition of the specification without the Contracting Officer's written authorization" (AF 2 at 111, § 62(d)).

Digitized by Google

25. The contractor was subject to default under the Default clause if it refused or failed to prosecute the work or any part of it with the diligence to ensure its completion within the contract time period (AF 2 at 120).

B. *Specifications*

Division 1 of the specifications, General Requirements, contained the following pertinent specifications:

26. The Project/Site Conditions clause provided:

A. Access to the Work: The access to the site is via Oregon Highway 36.

1. At the [Falls] (upper Denil fishpass) access to the treatment area shall be by track equipment and high-line. *Figure 1 shows the potential points of access to the construction area* * * *. Access to the construction area will be limited before July 1, and after September 15, depending on constraints of fill-removal permit acquired by BLM.

Once track equipment is located at the work area, it shall remain on south side of the creek until required work has been completed. Continual creek crossings with track equipment is not allowed and precautions shall be taken to avoid gas, oil and grease spills into the creek.

* * * * * * *

3. Boulder placement at the upper and lower slide shall be accomplished with an overhead high-line cable or by other means approved by the Contracting Officer.

4. Concrete required at each location should be pumped from Highway 36 (downhill) or mixed on site. If the contractor chooses to use pre-cast concrete, these concrete sections shall be high-lined to their placement locations.

B. Seasonal Closure for In-Stream Construction Period: The preferred work period for in-water work recommended by the Oregon Department of Fish and Wildlife [ODFW] * * * is from July 1 to September 15. Extensions * * * may be obtained by [BLM] from [State Lands] * * * in consultation with [ODFW], depending on climatic conditions and stream flows. Construction work could continue after September 15 until Mid-October or before July 1 under low stream flow conditions, if and when extensions are granted.

* * * * * * *

C. Environmental Considerations: * * *

1. Care must be taken to minimize the impact of construction on this area * * *.

2. Construction activities shall minimize damage to the stream banks and stream beds. [Emphasis added.]

(AF 2 at 146-47).

27. "Figure 1" showed two potential alternative access roads, marked with dotted lines and described as "*Alternate Access (to be approved by BLM) for Tracked Equipment*" (AF 2 at 149 (emphasis added); Tr. 681, 874).

Division 2 of the specifications, Site Work, contained the following pertinent clauses:

28. The Project Conditions clause provided:

A. Work Limits: Areas to be cleared and grubbed shall be limited to only those areas to be excavated, *access locations,* and stock pile areas, *as shown on the drawings* and defined in the specifications.

* * * * * * *

C. Access Roads: Access roads shall not be constructed *unless indicated on the drawings or* written approval is given by the Contracting Officer. [Emphasis added.]

(AF 2 at 164).

29. Part 1.01 provided that section 02500, which consisted entirely of the Golder Report, was included: "to provide the technical data necessary for the contractor to properly plan for blasting and construction at the proposed treatment sites. The [Golder Report] should be carefully reviewed by the contractor and the blasting specialist when preparing bid documents and construction submittals" (AF 2 at 172).

30. Division 2, § 1.04D., provided that all blasting was to be in accordance with Golder Report recommendations (AF 2 at 167).

31. Blasting requirements were contained in § 3.01 as well. "Plan, sections and profiles" of areas where rock was to be removed were stated to be shown on the drawings (§ 3.01A.1.). Blasting for rock was to be completed only to the depth approved. Drilling and blasting was to be done under the direction of experienced, well qualified foremen (§ 3.01B.2.). The contractor was to employ an experienced blasting consultant to develop its blast plan (§ 3.01C.1). Individual shot plans were to be submitted to the contracting officer for review 24 hours in advance (§ 3.01C.2) (AF 2 at 167-68).

©1994, Commerce Clearing House, Inc.

Digitized by Google

The Project Site Conditions clause provided:

A. Environmental Considerations:

1. *Stabilization and Closure of Construction Access Roads:* Upon completion of the project, *access roads shall be barricaded,* as specified herein.

a. Barricade: *All access spurs [4] shall be barricaded upon completion of use or if work is suspended* due to seasonal closure.

Barricades shall consist of digging a trench perpendicular to the centerline of *the spur road* * * *.

* * * * * * *

4. Minimum Clearance of Vegetation: The only vegetation that shall be cut or removed from stream banks is that which is growing on or immmediately adjacent to designated sites of planned stream bank excavation or at designated stream crossings. This restriction is intended to provide efficient and safe operation of equipment without causing unnecessary damage to stream side vegetation. Any deviation from this procedure shall be approved in advance by the Contracting Officer.

(AF 2 at 169-70).

33. The Execution and Installation clauses referred the contractor to the drawings to determine the amount of streambed and stream bank excavation (AF 2 at 170-71).

34. The Site Preparation clause, under specifications Division 3, Concrete, provided:

All boulders and existing concrete surfaces that will be in contact with new concrete shall be cleaned of all dirt, moss and other foreign material by pressure washing with water. Pressure washer shall be capable of producing 2000 PSI at the nozzle.

(AF 2 at 198).

C. *Drawings*

The following drawings are of particular relevance:

35. Sheet 3 depicted boulder placement at the Lower Slide. At the lower boulder placement area, 16 boulders were to be relocated and pinned in place, and at the upper area, 36 boulders. Per Detail M on sheet 14, each boulder was to be pinned to a depth equal to 100 percent of the rock's thickness by drilling through the boulder into the rock below, and by using #10 rebar and epoxy to secure it. Alternate strength anchoring methods proposed by the contractor would be considered. Sheet 3 also depicted the construction of weirs. Notes to the drawing provided that the contracting officer was to determine all boulder placement and removal; the location of all weir notches; and the final dimensions and location of weirs (AF 2 at 217, 227).

36. Sheet 9, pertaining to the Falls, on Details D, E and F, depicted a tapered trench, with a concrete cover over the tapered area (AF 2 at 223). The concrete cover or "slab," as MM refers to it, is an attempt, after the Falls trench has been excavated and backfilled, to reestablish the former bedrock surface, albeit with concrete (Tr. 655). Drawing E stated that the contractor was to "use controlled blasting to maintain 1:4 sloped face and minimize overbreak." The drawings required backfilling the excavated tapered area with excavated materials (AF 2 at 223).

D. *The Golder Report*

37. The Golder Report included a narrative, figures depicting sandstone and siltstone rock layers, and specifications for rock excavation and blasting. It described its geotechnical study as "a review of the [Buell Report], detailed geologic mapping at each of the proposed sites, engineering analysis, and preparation of final geotechnical design recommendations." It concluded that "the proposed fish passage structures appear feasible geotechnically as currently planned" (AX 33 at 57).

38. The Golder field work was limited to surficial geologic mapping and its analysis, conclusions and recommendations were limited accordingly (AX 31).

39. Pertinent provisions of the Golder Report included in the contract were:

3. *SITE CONDITIONS*

3.1 *Lake Creek*

* * * The gentler river bank slopes tend to be underlain by soil (colluvium, alluvium, or landslide debris) and *the steeper slopes are underlain by bedrock.*

At every proposed fish passageway location, *bedrock* of the Tyee Formation, is at or near the surface. The *bedrock consists of massively bedded* (beds one and one-half to greater than five feet thick), *strong,*

[4] MM refers to its access construction as a "spur" or "ramp", and objects to BLM's description of it as a "road." We use the terms interchangeably. It is clear from photographs that it was temporary and not what a layman would describe as a "road."

Digitized by Google

fine sandstone interlayered with *thinly bedded* (beds one to six inches thick) *medium strong, fine sandstone* with *occasional thin (one to three inches thick) siltstone beds.* The massively bedded sandstone tends to form layers more resistant to erosion while the thinly bedded sandstone and siltstone are less resistant to erosion. Where exposed on the sides of the creek, the massively bedded sandstone tends to form ledges and overhangs, while the thinly bedded sandstone forms recesses * * *. *Lake Creek tends to flow directly on bedrock* and there is only a minor amount of alluvium within the active stream channel. In the creek-bed, the sandstone tends to sound hollow when struck with a hammer and appears to be detached, since the upper one-half to one inch breaks easily into flakes and plates parallel to the orientation of the bedding, generally less than six inches in maximum dimension. *The sandstone which directly underlies the flakes is usually hard and unweathered.* This suggests that the sandstone is somewhat susceptible to slaking.

* * * *The bedrock* tends to be unjointed to very poorly jointed, with bedding planes being the primary discontinuity. The *bedding planes are tight,* have moderate roughness, *and contain no infilling.* The Upper and Lower Slides are due to stream flow *over resistant, massive sandstone beds* * * *.

3.1.1 Lake Creek Falls

* * * The upper part of the waterfall is *underlain by massively bedded sandstone* * * *. Underlying the massive sandstone are *thin sandstone beds generally less than three inches thick* * * *. The thin sandstone beds overlie another series of massive sandstone beds* * * *.

* * * * * * *

3.1.3 Lower Slide

* * * *The side channel consists of* * * * *a middle section that is underlain by boulders, an upper bedrock section* * * * *and a boulder plug* * * *. The right bank of the side channel is underlain by ancient landslide debris which is composed of a chaotic mixture of silty sand and boulders. The landslide debris does not appear to be active* * * *. The left bank of the side channel is a bedrock knob,* which also forms the right bank of the main channel * * *. The *bedrock that underlies the upper and lower bedrock sections* of side channel was the same bed that forms the overhang on the right bank of the Upper Slide * * *.

* * * * * * *

4.1 *Lake Creek*

Based on the preliminary design drawings and the site explorations, *the three Lake Creek solutions appear to be all founded on bedrock. The bedrock at the Lake Creek sites consists of strong, massively bedded, sandstone and moderately strong to strong, thinly bedded sandstone with occasional thin, weak, siltstone beds.* These materials should provide adequate foundation support.

Rock and soil excavation will be required for the three Lake Creek solutions. The *majority of the excavation will be in rock* with minor soil excavation above Lake Creek Falls in the upper solution.

* * * * * * *

The majority of the rock consists of strong sandstone and will require blasting to excavate. The upper six inches to one foot of rock in the areas away from the stream channel is weathered and may be rippable, depending on the type of equipment used. A blasting test was performed by [Buell] and is desribed in their report. Based on this test, [Buell] determined that *controlled blasting is feasible for rock excavation* at the site * * *.

The greatest amount of excavation will be required in the [Falls], where a cut up to 18 feet will be necessary for the second fishway. *This entire cut will be in rock* * * *. *The rock exposed in the water fall face is sound,* but dips outward slightly, and care should be exercised during blasting in order to prevent weakening of the surrounding rock which could lead to instability.

* * * * * * *

4.3 *Other Considerations*

Much of the excavations for the Lake Creek solutions will be below the level of Lake Creek. Surface water drainage provisions for the excavations should be made * * *.

While we did not observe significant groundwater flow within the intact rock, groundwater seepage may occur into the excavations. The groundwater seepage may be exacerbated by the blasting, which may fracture the rock and create additional avenues for water flow * * *.

Access to the Lake Creek sites by heavy equipment will be difficult due to the terrain.

We recommend that a qualified geotechnical engineer observe the critical aspects of

©1994, Commerce Clearing House, Inc.

Digitized by Google

the construction of the fishways * * *. [Emphasis added.]

(AF 2 at 175-81).

40. An appendix to the report, also included in the contract, defined the term "rock" as follows:

Rock is defined as sound and solid masses of mineral matter in place and of such hardness and texture that, when it is encountered, it cannot be excavated by three passes of a ripper tooth mounted on a hydraulic excavator with a bucket curling force of at least 25,700 pounds and a stick crowd force of at least 26,100 pounds, or two passes of a single-shank ripper mounted on a Caterpillar D-8 Crawler tractor (or equivalent). [Emphasis added.]

(AF 2 at 192).

41. Mr. Clifford C. Knitter, an engineering geologist with a master of science degree in geology, employed by Golder, was offered, and qualified by the Board, as an expert. He was a principal participant in the Golder Report and co-signed it (AX 33 at 11). He admits that it described the contract site as "primarily a rock site" (Tr. 476-78, 530-31).

42. BLM omitted the signature page of the Golder Report's introductory narrative from the contract. It provided:

There are possible variations in subsurface conditions based on surficial mapping and in the groundwater conditions with time. We recommend a contingency for unanticipated conditions be included in the construction schedule and budget. Further, we recommend that we be retained to perform monitoring and testing during construction to confirm the conditions indicated by the explorations and/or provide corrective recommendations adapted to the conditions revealed during the work. [Emphasis added.]

(AX 33 at 11).

43. On October 28, 1988, BLM held a prework conference and issued the Notice to Proceed, effective October 31. MM submitted a preliminary "Construction Value and Schedule" depicting its estimated schedule and the approximate contract dollars attributable to types of work (AF 5 at 521-27). The schedule referred to highway access to the project, ramps and roadways, and other mobilization work, in the total amount of $60,000. The access discussion was inconclusive, as project start was more than 6 months away. The schedule also included log and boulder placement in the total amount of $28,000 (AF 5 at 525-26; AX 95; Tr. 584-85, 878-79).

III. Additional Facts Particular to IBCA 2890

Access Road/Modification 6 Claim

44. Mr. Thomas, who prepared MM's bid, read the contract to provide that he could build a temporary access road at the Falls. He elected that method, rather than a highline method, after reviewing the site and the contract's environmental strictures. An access road appeared to him to be the only reasonable and logical way to access the Falls without adversely impacting the area. *See* Tr. 392, 401, 405-14, 422, 455, 458-59, 548-49, 586, 591-93, 714, 994-95.

45. Fish Pro's Mr. Donahue acknowledged that the contract provided for a temporary access road, as opposed to a permanent road (Tr. 460-61).

46. Prior to construction, MM applied, on January 31, 1989, to the Oregon Department of Transportation for two permits for construction of a temporary approach road to the Lower Slide and a temporary approach road off Highway 36 to the Falls. The permits were granted on February 15, 1989, with the approaches to be removed and the permits to expire on November 1, 1989. On February 20, 1989, MM submitted the permits to BLM and COR Runge approved them on March 20, 1989 (AF 4 at 124-26; Tr. 426-27, 429).

47. On June 7, 1989, MM and BLM met and addressed MM's wish to start construction before July 1, and Falls access.

48. Regarding access, the COR's notes of the June 7 meeting record that Project Manager Thomas "explained way of gaining access to [Falls]. Contractor not sure exactly how access is gained, using fills, culverts, filter clothes [*sic*], flat cars, ramps, and unknown yet" (AF 4 at 134).

49. At the meeting, MM provided Submittal No. 11, dated June 5, 1989, "Plan to Provide Equipment to the Work Sites." Its attachments showed: an access road across a privately-owned embankment above the stream from Highway 36; a ramp and landing; use of native materials for fill required for the access ramp; a culvert placed in the stream to be covered with clean boulders and rock; a notation that the material would be removed upon completion of the work and the site restored per specifications; and a notation that MM intended to use an excavator and track drills at the Falls, with no limitation as to tracked equipment. The

Digitized by Google

COR testified that "he had no idea exactly what [MM] was going to use." There is no evidence that he had any concern or inquired (AF 4 at 1130-33; AX 70; Tr. 881-82).

50. The COR neither formally approved nor disapproved the submittal, but Mr. Thomas believed that MM had made its plan to use a temporary access spur with various types of equipment clear (Tr. 429-32, 590). The COR stated that he was acting upon his belief that MM did not seek a reply (which MM disputes) (Tr. 883, 995). We find that, in the absence of a reply or any disapproval, MM reasonably proceeded on the premise that its access and in-stream culvert plans were acceptable (Tr. 995).

51. The COR acknowledged that, in general terms, the culvert placement at the bottom of the access ramp was essentially what MM did during construciton (Tr. 948).

52. Mr. Wayne Elliott, BLM's Area Manager, acknowledged that he had had a publicist attend the June 7, 1989, meeting "to be able to gather a news story from our meeting." After the meeting, the Lake Creek Basin News reported upon the construction plans. The report included a copy of a drawing showing a construction access road to the Falls and noting that there would be temporary fill and culverts. The drawing was a copy of one originally prepared by Buell. Its use is consistent with MM's claim that it notified BLM about its intended access to the Falls and its use of fill and a culvert in the stream (AF 4 at 137; GX 15; Tr. 119, 125-26).

53. Also on June 7, 1989, BLM secured approval from ODFW for MM to begin work then, three weeks before the contract's July 1, 1989, date for in-stream work (AF 5 at 514; Tr. 886).

54. MM obtained approval from private landowners adjacent to the project for its access plan (AF 1 at 26, 27; GX 68).

55. MM commenced its access spur by building an approach off Highway 36. The COR was fully aware of the access spur. Mr. Thomas had several conversations with him about it (Tr. 217-21).

56. Both BLM's inspector, Mr. David Evans (Tr. 728, 730), and COR Runge, kept detailed diaries. Commencing as early as June 22, 1989, the diaries contain notifications by MM and observations by the COR and the inspector that the MM was planning to build, and was building, a temporary access road from Highway 36 to the streambed and that it had placed a 48-inch culvert into the stream (AF 3 at 236, 238, 468-69, 472, 480).

57. It was not until June 29, 1989, that the COR discussed any permit concerns with MM. The inspector's June 29, 1989, diary notes that MM was using dump trucks to haul rock for the access road; that rock had been placed to the culvert; that he had noticed an increase in turbidity in the water; that rock fill for the road had been pushed into the river; and that this was not within the Corps and State Lands permits. The COR's diary for that day records: "Discussed access road w/ Bob T., explained to Bob T. that action was not in [the Corps or State Lands permits] & they are on their own; watch out for turbidity problem @ culvert." Thus, the COR allowed work to continue and MM was not told that it could not use rubber-tired equipment (AF 3 at 234, 466-67).

58. Inspector Evans' diary notes that at 8:10 AM on June 30, 1989: "Access road for the [Falls] still being constructed. Rock has been placed approximately 15 feet into the river. There has been work done in the river to divert the water thru the culvert. Sandbags are currently being placed to force the entire flow of the river thru the culvert" (AF 3 at 462). Mr. Evans telephoned the COR about the stated activities. Later the same morning, after Mr. Evans noticed that a considerable amount of rock had been added to the access spur, he called the COR again (Tr. 731).

59. The COR acknowledged that he had been aware of the intended use of the culvert at least as of June 29, 1989, and that he had known of the in-stream activity by early morning on Friday, June 30 (Tr. 953). Nevertheless, it was not until 11:10 AM on Friday that he verbally instructed Mr. Thomas to stop the instream work (AF 3 at 228). The COR subsequently issued a written partial suspension of work order, on the ground that MM's in-stream operations violated BLM's permits (AF 3 at 226; Tr. 954-56). The order affected only work on the Falls access; other work could continue. Mr. Thomas informed the COR that MM would work the weekend and possibly the Fourth of July (AF 3 at 228, 231; Tr. 36).

60. By the time the COR issued the partial suspend work order, the access spur, with approach built to and across the culvert, was about 90 percent complete (Tr. 223).

61. After the COR issued the order, he took immediate steps to notify the Corps, State Lands, and ODFW. He also notified

©1994, Commerce Clearing House, Inc.

Digitized by Google

the contracting officer and questioned whether he had taken the proper action. She left the decision to him. The COR also told her that the access spur would yield substantial savings to MM. In his opinion the job had not been bid considering such a spur (AF 3 at 228-31; AF 5 at 493-94; Tr. 39).

62. On Monday, July 3, 1989, ODFW told the COR that there was minimum impact upon fish from MM's actions; it did not say whether the State Lands permit had been violated. The COR proposed a change to the permits by adding 110 c.y. of clean rock, of which 80 were in place, and 40 c.y. of sandbags, of which 20 were in place, to the allowable fill amount. An ODFW biologist opined that BLM was "nitpicking" (AF 3 at 224-25).

63. On July 5, 1989, BLM was notified that the Corps and State Lands had approved permit modification. It was noted that the fill was temporary and the modification deemed small. The COR issued a Resume Work Order stating that BLM's permits had been amended to allow the 150 c.y. of clean rock and sandbags, to be removed when the work season concluded, on or before September 15, 1989 (AF 3 at 220, 222; GX 23, 24).

64. It is clear from the record that BLM was not concerned that MM had built a temporary spur. Rather, the focus of BLM's concern was its belief that the quantities of temporary fill or rock placed in the streambed violated the Corps and State Lands permits.

65. On July 7, 1989, State Lands confirmed the permit modification, opining that the earlier permit had not authorized a road, but concluding that MM's actions had resulted from "an apparent lack of communication between the contractor and BLM;" and that no fishery impacts were likely from temporary use of the road and temporary stream diversion. The revised permit authorized the removal of up to 360 c.y. of material and placement of 150 c.y. at the Falls. Of the 150 c.y., 110 could be used for the temporary access road (AF 5 at 490-91).

66. MM did not work over the weekend. It worked Monday, July 3, but did not work on the holiday (Tr. 36).

67. By letter of August 2, 1989, MM notified the contracting officer that the partial suspension order had disrupted the project's momentum and schedule, "requiring acceleration and/or additional time." MM sought a 7-day extension (AF 1 at 18). On August 28, 1989, the contracting officer issued a final decision denying MM's request (AF 1 at 3) (MM has abandoned the extension aspect of its claim, as we discuss below).

68. After the resume work order, MM proceeded to dump fill rock into the stream bed and to place sandbags (AF 3 at 454). It drove its equipment, including rubber-tired and tracked, down the access ramp, over the culvert and onto the streambed to construct the fish ladder (Tr. 277).

69. MM used highline methods, both helicopter and cable, and conveyor belting, to deliver and remove materials to and from the Upper and Lower Slides, but used the access road to transport concrete and supplies at the Falls (Tr. 52, 694-96).

70. On August 28, 1989, the contracting officer forwarded to MM a draft contract modification, stating that, due to MM's use of the access road, substantial savings should accrue to BLM. She asked for MM's savings estimate (AF 5 at 423; Tr. 39, 43-44).

71. Eventually BLM provided its own estimate of savings, based upon helicopter and other highline work methods (AF 4 at 255; Tr. 44-45). By letter of March 12, 1990, MM stressed: "Our bid for the [Falls] does not include the use of a highline. We are overwhelmed by your estimate and opposite approach to the access route chosen by the Contractor which was practical and environmentally acceptable" (AF 4 at 166).

72. By letters of April 2 and 23, 1990, MM declared that it had clearly and properly notified BLM of its planned access method; and that low-water stream crossing was a "common statewide practice" (AF 4 at 112). MM reiterated that its bid had not included highline access to the Falls, because "the highline concept was not workable" (AF 4 at 76).

73. With its April 23 letter, MM submitted a March 15, 1990, report by Dallas C. Hemphill, P.E., of Logging International, Inc., concerning access alternatives for the project (AF 4 at 80; AX 78). Mr. Hemphill concluded:

> 2. The highline, even if technically feasible (probable, although not proven), would have had an unacceptable and illegal environmental impact on riparian vegetation, would have been impractical to operate, could have had safety problems, and would have posed a greatly increased risk of failing to meet schedule.
>
> 3. The as-built access route was practical, permitted the best chance to meet project schedule, and produced environmentally acceptable results. It was

Digitized by Google

approved by the Oregon State Department of Forestry and the landowner.

(AX 78 at 1).

74. On October 4, 1990, effective August 28, 1989, the contracting officer issued her final decision asserting BLM's claim for a contract price reduction of $37,832.40 and implemented it by unilateral modification 6 (AF 1 at 62-90; AF 2 at 5-8).

75. The contracting officer arrived at modification 6 by applying her interpretation of the contract's Value Engineering clause and reducing by 45 percent an $80,000 savings estimate by the COR (AF 1 at 80; AF 4 at 35; Tr. 45).

76. On December 6, 1990, MM appealed (AF 1 at 211).

77. In 1991, BLM asked the Forest Service (FS) to provide its estimate concerning various claims at issue. The FS' September 27, 1991, report estimates savings to MM on account of the temporary access spur at $61,891 (GX 27, 71).

78. There is no evidence that MM caused any environmental damage. Indeed, upon the public dedication of the project, Congressman DeFazio and a BLM spokesman praised MM's work as exceptional—a "beautiful job" and "spectacular," offering a high return on dollars invested. The Congressman stated: "We got an enhancement without any loss. I wish that all natural resources we dealt with could come out this way." BLM's counsel acknowledged that BLM does not have any complaint about project results and the COR confirmed that MM did excellent work under difficult conditions (AX 99 B; Tr. 555-59, 864, 986-87; and see below).

IV. Additional Facts Particular To IBCA 2891

Profile Differences Claim

A. *General Facts*

79. On June 23, 1989, MM notified BLM about profile differences, found by MM's surveyor, Mr. Jim Peterson, from those depicted in the contract. This affected excavation and concrete quantities (AF 1 at 100; AF 5 at 436). The parties have agreed to a total of 38 c.y. of extra excavation at the Lower and Upper Slides. They have not agreed upon price per c.y., however, or upon Falls excavation quantities and price, or upon extra concrete, and price, at all three areas (AF 1 at 107; GX 28; Tr. 54, 308-09).

80. Negotiations were protracted, with MM changing its quantities and price claims frequently (AF 1 at 96-114; AF 5 at 273).

81. On December 1, 1989, the contracting officer wrote to MM that, at the Falls, it had excavated 522.54 c.y., including 15 c.y. of taper omitted from the surveyor's figures. She stated that this was 8.97 c.y. less than the 531.51 of c.y., with taper, reflected on the contract profile. BLM did not seek a price deduction (AF 1 at 103-04). A taper is for safety purposes, to impede rock from falling over the top of an unstable trench. When rock breaks cleanly, there may be no safety reason for a taper. BLM accepted the trench in the manner built, because the trench was stable (Tr. 57, 60, 384, 767).

82. The parties disputed the role of taper. MM claimed that its bid price had not considered tapered excavation, because the contract documents had indicated to it that the area would break cleanly (AF 1 at 105). BLM asserted that the contract required a tapered trench at the Falls, and that MM's bid should have included the additional controlled blasting and excavation required to form it (AF 1 at 105; see AF 5 at 271; Tr. 54-55).

83. On February 21, 1990, MM responded that BLM's "interpretation on trench excavation requiring a one on four slope in 'solid rock' * * * agrees with neither good construction practices nor our interpretation" (AF 4 at 260).

84. In fact, Mr. Peterson had started to stake the Falls for a taper, which he believed the contract required. However, MM directed him to stake for a vertical cut to be drilled and blasted, stating that, because the taper was to be backfilled and covered with concrete anyway, a vertical cut would save time and money (Tr. 57, 313-14, 320, 354-55, 382-84, 764-65).

85. Mr. Jerry R. Wallace of Landworks Northwest, Inc. (Landworks), MM's blasting subcontractor, and Landworks' chief drill operator, Mr. David McGarr, confirmed that no blasting was aimed at constructing a 1:4 taper and that MM drilled vertical walls (GX 69; Tr. 845).

86. Inspector Evans confirmed that MM did not construct the taper, but added that it "got fairly good breakage on the neat line, and there was no need to do it" (Tr. 764, 767). He also acknowledged that Mr. Peterson did an "excellant job" of laying out project neat lines; an "excellent job on his surveying;" and was "very good" about rede-

©1994, Commerce Clearing House, Inc.

Digitized by Google

fining the area after drilling operations (Tr. 757-58, 767).

87. However, some taper resulted naturally from blasting (backbreak) and excavation. From visual inspection, Mr. Peterson opined that more taper had resulted naturally, and MM had been required to remove more backbreak, than called for under the contract (Tr. 321, 382-84, 764).

88. Photographs show that some trench is not tapered; some is tapered at more than a 1:4 slope (GX 49; Tr. 355-62).

89. At MM's request, Mr. Peterson recomputed Falls excavation volumes, finding that actual excavation exceeded contract planned quantities by 61.5 c.y. (AF 4 at 172; Tr. 314-15, 603).

90. Mr. Peterson superimposed a 1:4 slope upon his initial vertical cross-section measurements; he did not measure actual taper resulting from MM's operations (AF 4 at 68; Tr. 321, 325-26).

91. On October 4, 1990, the contracting officer issued her final decision on MM's profile difference claim, and implemented it by unilateral modification 7. She allowed $11,609 for the 38 c.y. excavation increase at the Lower and Upper Falls, at a price of $305.50 per c.y.; found a net 8.97 c.y. excavation reduction at the Falls (even acknowledging 15 c.y. of backbreak) but took no price deduction; allowed $467.50 for 1.87 c.y. of extra concrete at the Upper Slide, at $250 per c.y.; allowed $1,725 for 6.9 c.y. in extra concrete at the Falls, at $250 per c.y.; and found a $1,304 reduction due to a 3.26 c.y. decrease in concrete at the Lower Slide, at $400 per c.y. The net effect was to increase the contract amount by $12,497.50 (AF 1 at 94-115; GX 31; Tr. 57-64).

92. The contracting officer largely had relied upon the calculations of Dana Cork, a BLM engineer (GX 32; GX 74; Tr. 94).

93. MM appealed on December 6, 1990 (AF 1 at 211).

94. The FS' September 27, 1991, report found about $1,300 more due than had BLM (GX 27, 71).

95. Post-hearing, MM claims (including direct costs and burden and net of amounts paid by modification 7): $13,820.50 for the Lower Slide; $10,114.57 for the Upper Slide; and $30,667.15 for the Falls,[5] for a total of $54,602.22. MM's claim is not based upon a per c.y. measurement, but upon alleged total extra costs. MM claims, nonetheless, that its c.y. bid price for Lower Slide work can be extrapolated from its bid record, and that direct costs as bid were $818 per c.y., net of burden (AX 6, 88 at 11, 89, 94; Tr. 647-57; MM reply br. at 29).

96. MM alleges that changes in weir location due to Lower Slide profile differences increased rebar costs (As Built Plan, Sheet 3; Tr. 263-66). The weight of the evidence is that minor shifting in locations was to minimize excavation and that MM's problems were due partly to inexperienced labor (AF 3 at 203, 208, 212, 214, 222). Further, the contract authorized the contracting officer to determine final weir dimensions and locations (AF 2 at 217; Tr. 905).

97. MM's claim also includes the cost of: a second excavator at the Falls, because, due to profile changes, the one excavator planned no longer could maneuver as anticipated; 24 hours of survey layout and expenses for stream diversion and safety nets; blasting expenses; and additional labor to move material from the site (AX 89B; Tr. 604-06).

B. *Special Cost Findings*

The Defense Contract Audit Agency (DCAA) audited MM's claims and issued a report on May 28, 1992, made part of the record. We have thoroughly reviewed the audit, the parties' submissions in response, and all other relevant materials of record. Our findings in each appeal are based upon all information submitted.

98. MM disputes the contracting officer's estimates of $250 and $400 per c.y. for fill and structural concrete, respectively, but has not provided probative evidence to rebut those amounts nor her allowance of 1.87 c.y. in additional concrete at the Upper Slide and her 3.26 c.y. reduction at the Lower Slide.

[5] This includes $2,800 in alleged extra costs due to a 7 c.y. increase in concrete for the cover slab required by the contract (AX 89E; Tr. 655-57). This was not included in MM's claim to the contracting officer. The Contract Disputes Act of 1978 (CDA) requires that "[a]ll claims by a contractor against the government relating to a contract shall be in writing and shall be submitted to the contracting officer for a decision." 41 U.S.C. § 605(a). This is a jurisdictional prerequisite to our consideration of the claim. *Paragon Energy Corp. v. United States* [28 CCF ¶ 81,290], 645 F.2d 966, 967 (Ct. Cl. 1981). We find the claim for the concrete slab to be factually distinct from the other concrete claims MM submitted to the contracting officer and, thus, do not consider it. *See Blaze Construction Co.*, IBCA 2863, 91-3 BCA ¶ 24,071 at 120, 502-03.

Digitized by Google

99. MM has successfully controverted the contracting officer's per c.y. $305.50 excavation cost (GX 29 at 5-7). (The FS estimate for the Lower Slide was $346.50 per c.y. (GX 27, 71)). BLM's calculations, at $13.25/hour (GX 9 at 2), underestimated labor costs (see BLM's estimate of $17.00/hour for the access road claim (AF 1 at 81-84)); did not clearly include all applicable indirect costs; and did not address all relevant work (AX 89, 94; Tr. 640-45, 773-75).

100. We are not satisfied with MM's calculations either, however, which contain numerous inconsistencies. However, we find merit in its claim and allow a portion of it, below.

101. In determining the per c.y. direct cost for the 38 c.y. of extra excavation at the Upper and Lower Slides, we have considered the auditor's objections to MM's accounting system and attendant difficulties in segregating extra costs from costs of required work. However, we find that certain excess direct costs can be identified and traced to invoices, time cards, and the like. Labor is categorized by equipment use and equipment operators' hours. Based upon jury verdict, discussed below, we find that the reasonable direct cost per c.y. is $550.

102. The parties agree that MM's jobsite overhead (JSO) pool includes $108,184 (MM's Audit Response at 6).

103. However, the audit report concluded that some costs were unallowable per the Federal Acquisition Regulation, and that others were classified improperly as JSO instead of home office overhead (HOO). Having reviewed the evidence, including a May 13, 1993, submission by DCAA's Branch Manager of its Western Region (BLM's Reply to Audit Report, Attch. 2), we find that, except for telephone expenses, MM has failed to rebut the audit findings. With respect to $3,998 in telephone expenses, we find that $3,400 reasonably can be allocated to JSO and we adjust upward the audit's accepted JSO pool accordingly, for allowable JSO pool costs of $54,357.

104. BLM asserts that the JSO rate should be 9.46 percent, and MM, 12.79 percent (MM Audit Response, Ex. A at 2). We accept the auditor's computed direct JSO base of $538,750 (MM Audit Response, Ex. A at 1) and find that the proper JSO rate is 10.08 percent ($54,357 divided by $538,750).

105. The parties have agreed, and we find, that MM's HOO rate is acceptable at 7.43 percent and its profit at 10 percent (MM's Audit Response, Ex. A at 3).

106. We thus find that MM is entitled to $13,735.66 on its claims for overexcavation and extra concrete at the Upper and Lower Slides, as follows:

Lower Slide Direct Cost (25 c.y. × $550 per c.y.)	$13,750.00
JSO at 10.08%	1,386.00
Subtotal	$15,136.00
HOO at 7.43%	1,124.60
Subtotal	$16,260.60
Profit at 10%	1,626.06
Subtotal	$17,886.66
Upper Slide Direct Cost (12.9 c.y. × $550 per c.y.)	$ 7,095.00
JSO at 10.08%	715.17
Subtotal	$ 7,810.17
HOO at 7.43%	580.29
Subtotal	$ 8,390.46
Profit at 10%	839.04
Subtotal	$ 9,229.50
Subtotal Lower and Upper Slide ($17,886.66 + $9,229.50)	$27,116.16
Less Adjustments Paid Mod. 7	(11,609.00)
Adjusted Total	$15,507.16
Less Concrete Paid Mod. 7 Upper Slide Area	(467.50)
	$15,039.66
Less Concrete Reduction Mod 7 Lower Slide Area	(1,304.00)
TOTAL LOWER AND UPPER SLIDE QUANTUM	$13,735.66

107. Regarding MM's claim for additional costs of excavation and concrete due to profile differences at the Falls, we find that the contracting officer's allowance of 15 c.y. for taper was reasonable and that her other cost calculations were reasonable and supported by the record. We have considered MM's arguments, but find them unpersuasive.

V. Additional Facts Particular to IBCA 2892 Claim Related to Increased Weir and Channel Excavation Work and Decreased Boulder Work

A. *General Background*

108. Commencing in June, 1989, the contracting officer sought five contract changes and proposed pricing from MM: (1) deletion of the relocation and pinning work covering 52 boulders depicted on drawing 3; (2) addition of a 12-foot concrete weir at the Lower

©1994, Commerce Clearing House, Inc.

Digitized by Google

Slide (3) excavation of an entrance channel at the Falls; (4) excavation of an exit channel at the Falls; and (5) excavation of an entrance channel downstream from the Upper Slide (AF 5 at 395-402, 510).

109. On August 8, 1989, MM submitted a cost proposal for items 1-4, including a reduction of $4,706.13 for deletion of the boulder work; addition of $15,348 for construction of the weir; and an addition of $5,666.15 for excavation of the Falls entrance and exit channels. It did not price item 5 (AF 5 at 474).

110. On August 15, 1989, BLM questioned the proposed boulder price reduction on the ground that MM had included $28,000 in its value schedule at job commencement for the boulder work and placement of a log weir. BLM also thought the proposed price for the additional weir work to be inordinately high. MM responded that it would like to settle the matter. By October 11, 1989, MM had completed all work and submitted an invoice for item 5 at $1756.03 (AF 5 at 360-63, 459-60).

111. Ultimately BLM offered a $7,800 reduction for the deleted boulders and a $7,500 addition for items 2-5. MM proposed a $5,400 deletion and a $9,800 increase (AF 4 at 39, 51, 65-68).

112. It developed that the item 2 weir contained about 2.72 c.y. of concrete; item 3 excavation was designed at 1.71 c.y.; item 4 excavation at 2.02 c.y.; and item 5 excavation at 1.15 c.y. (AF 1 at 129-31; Tr. 48).

113. On July 24, 1990, the contracting officer issued unilateral modification 5, effective August 1, 1989: item 1, $10,400 reduction; item 2, $3,550 increase; item 3, $1,380 increase; item 4, $940 increase; and item 5, $605 increase, *i.e.*, a $6,475 increase for items 2-5, but a net price decrease of $3925, due to item 1 (AF 2 at 9-10).[6]

114. On August 6, 1990, MM objected to the unilateral modification, and to BLM's withholding of contract funds to offset MM's alleged savings due to its use of the temporary access spur and the deletion of the boulder work. MM requested a final decision and BLM's cost estimate backing modification 5 (AF-4 at 23).

115. The contracting officer issued her final decision on October 4, 1990, sustaining modification 5, and included BLM's estimate. MM appealed on December 6, 1990 (AF 1 at 120-38, 211).

116. The FS estimated a $16,330 deduction for item 1, at $314 per boulder, based upon 3 labor crew-hours per boulder and its conclusion that the work was labor-intensive; a $3,820 increase for item 2; a $1,940 increase for item 3; a $1,335 increase for item 4; and a $1,010 increase for item 5, netting a larger overall deduction, $8,225, than that of modification 5 (GX 27).

B. *Particular Findings Concerning Item 1*

117. BLM estimated cost savings of $266.60 per boulder, but reduced the contract price by only $200 per boulder (AF 1 at 127-28, 134; AF 2 at 9-10; AF 5 at 320-21).

118. On January 2, 1990, MM submitted comparative costs to BLM showing $40 and $50 per boulder for projects it had performed for the State of Oregon (AF 5 at 291-92). Although that work was performed mechanically, with excavators and support items such as trucks and a loader, rather than by the hand labor called for under the instant contract, MM asserted that the cost per excavator was five times the cost of one laborer, and the cost for trucks and loaders double the cost of one laborer (AF 1 at 128; AF 4 at 259).

119. BLM relied upon MM's $28,000 value schedule, above. BLM estimated the cost of the log weir at $2,600 and asserted that the $25,400 balance thus reflected MM's original boulder cost estimate. MM's value schedule for the boulder and log work, which it had planned to do early, had included "up front" money, not associated with the work, but to assist with cash flow (AF 1 at 128; Tr. 712-13).

120. The COR had prepared BLM's savings estimate. At hearing he stated that he relied upon his personal experience, on-job observations, and approximate sizes and weights of the boulders, but he appeared uncertain about the basis for his estimate (Tr. 906-07). Moreover, the contracting officer and the COR did not have much experience with estimating costs of boulder movement (AF 4 at 66).

121. On the job, with 2 laborers, MM had moved at least one boulder in less than an hour (AF 4 at 67; Tr. 993-94).

122. MM's post-hearing calculation of the proper deduction for the item 1 boulder

[6] Mod. 5 reflects an additional decrease of $756 for work added, then deleted before performance. This no longer is in dispute.

Digitized by Google

work is $6,616.08. This includes direct costs of $2,196.56 for 2 man hours at $20.04 per hour (104 hours) and the winch and supplies to move and place each boulder; $1,867.18 for 57.2 hours of labor and the supplies and equipment to drill and subsurface the boulders; and $856.05 for 13 hours of labor, plus material and supplies, to mix and place epoxy; plus burden. MM asserts that its estimate reflects its bid cost of labor and equipment. Because the contracting officer deducted $10,400, MM seeks $3,783.92 (AX 93-A; Tr. 993-94; MM's post-hearing br. at 51-52).

123. MM's estimate omits work (AF 4 at 67) and includes only 183.57 pounds of rebar, while the contract required considerably more (absent a contracting officer-approved alternative) (AF 2 at 227).

124. We find both BLM's and MM's estimates to be flawed. By jury verdict, we find that $8,000 is a reasonable approximation of what the deleted boulder work would have cost MM to perform; and that MM, therefore, is entitled to $2,400 ($10,400—$8,000) on account of BLM's excessive deduction.

C. *Particular Findings Concerning Items 2-5*

125. For item 2, MM now presents its costs and burden at $8,168.56 and seeks $4,618.56 in addition to the $3550 added by modification 5 (MM's post-hearing br. at 53).

126. For item 3, MM now claims $3,462.52 in costs and burden and seeks $2,082.52 in addition to the $1,380.00 added by modification 5 (MM post-hearing br. at 54).

127. For item 4, MM now claims $2,946.24 in costs and burden and seeks $2,006.24 in addition to the $940 added by modification 5 (MM post-hearing br. at 55).

128. For item 5, MM now claims $1,994.02 in costs and burden and seeks $1,389.02 in addition to the $605 added by modification 5 (MM post-hearing br. at 56).

129. In reaching her cost estimate for items 2-5, the contracting officer relied chiefly upon the COR's and inspector's diaries (AF 4 at 67). BLM did not use information from MM's diaries. The parties' disparate labor hour figures are due in part to the fact that MM worked on weekends when neither the COR nor the inspector were present (AF 4 at 67).

130. The DCAA audit reports that MM's claimed costs are insufficiently linked to its accounting system (which the auditor finds limited in any event), but are based, at least in part, upon individual checks, invoices and certified payrolls. MM has challenged the report. Because the audit was admitted post-hearing, we give it somewhat less weight than we otherwise might. Moreover, our review of the evidence persuades us that items 2-5 cost more than modification 5 allowed. By jury verdict, and based upon the data MM has presented, we find that $8,300 is a reasonable approximation of the costs of the added work, and that MM is entitled to $1,825 ($8,300—$6,475) in addition to that allowed by modification 5 for items 2-5.

In sum, MM is entitled to $4,225 ($2,400+ $1,825) on its IBCA 2892 claims.

VI. Additional Facts Particular To IBCA 2893

Differing Site Conditions Claim

131. Mr. Knitter acknowledged that the omission of the warnings in the Golder Report's last page could have affected bidders' pricing and Mr. Thomas so testified (Tr. 499-500, 614).

132. Mr. Thomas had no geology training, but had considerable experience with rock excavation and blasting (Tr. 387).

133. It was not common practice for bidders to secure their own geotechnical evaluations, due to time constraints and the considerable expense involved (Tr. 612-13).

134. On July 13, 1989, MM changed its blasting pattern because it had encountered soft mud seams, which absorbed blast, dissipated it, and diminished its effectiveness. Many of the areas had to be reshot three times (AF 3 at 422; Tr. 623, 790, 854).

135. On July 20, 1989, MM encountered a large void, which slowed its production (AF 3 at 427).

136. The inspector recorded that blaster Wallace was having trouble securing materials from MM. This was only a temporary impediment, and when Mr. Wallace consulted Mr. Thomas, he responded immediately (AF 3 at 426-27; Tr. 831, 838). It is apparent that some perceived problems originated with personality conflicts among some of BLM's personnel and the blaster, on the one hand, and one or more of MM's supervisors, on the other. We find that alleged management problems were greatly overshadowed by the actual physical difficulties at the site.

137. Mr. Wallace developed a subdrilling blasting plan with which MM concurred. Subdrilling to achieve grade in rock is standard industry practice (GX 69; Tr. 687-88, 843).

©1994, Commerce Clearing House, Inc.

Digitized by Google

138. The mud seams repeatedly caused drills to plug, requiring replacement or extra time (Tr. 240, 628).

139. On July 26, 1989, MM notified the contracting officer in writing that it had encountered differing site conditions in the form of "clay and/or mud seams and bottom" (AF 5 at 484-85; Tr. 27, 65).

140. On August 4, 1989, MM sought a 14-day extension, with excess costs to be determined, due to "mud, clay, rotten rock seams, and a soft clay bottom." MM enclosed Mr. Peterson's figures concerning the extent of mud seams and clay; an evaluation from Mr. Charles R. Lane, vice president of Northwest Testing Laboratories (Northwest), who had inspected the site on July 31 and reviewed the portions of the Golder Report contained in the contract; and a blasting report from Landworks, (AF 5 at 477-81).

141. Mr. Lane is a registered, senior, civil engineer with over 44 years' experience, over 35 in geotechnical work in the study of soils and foundation conditions. He was offered, and qualified by the board, as an expert (Tr. 178-81).

142. Mr. Lane's August 4, 1989, report noted:

> The [Golder Report] implies that the contractor will encounter massive bedded sandstone underlain by thin sandstone beds. The bedding plans were expected to be tight and contained no infilling.
>
> During our inspection of July 31, 1989, we observed a number of seams within trench excavation through the sandstone beds, which were very weathered soft and several feet in thickness * * *.
>
> It is well established that soft seams within units presents special difficulties in blasting of this type of rock (?) formation, thus additional expenses.

(AF 5 at 480).

143. Landworks' report, dated July 31, 1989, stated:

> * * * I am reiterating the *several problems* associated with blasting in the bedded sandstone layers * * *
>
> Due to the uniqueness of this project and the restrictions placed upon it by the Owner (with regards to overbreak and environmental damage), *exceptional* solutions were required * * *
>
> *The geology of the rock itself was a critical factor. It included a massive, strong layer of sandstone underlain by softer layers of siltstone which contained stretches of a soft, almost mud-like layer.* Finally, especially near the lower end, *there is a void filled with water* (see drill log).
>
> * * * with this Lake Creek rock formation being *softer at the bottom than at the top and of dissimilar materials throughout,* these [blasting] shock waves are transmitted at different velocities. Because the softer materials transmit slower than do the harder rock, they have tendency to absorb the magnitude of the explosion—thereby creating a special blasting situation.
>
> * * * * * * *
>
> Additionally, the open air/water seams created another potential endangerment. Water is an excellent transmitter of shock waves along an uninterrupted layer. *These water seams ran close to horizontal* and when the first holes were detonated the [shock] wave was rapidly conveyed laterally down the trench line risking possible disruption of the power column of the later delay charges * * *. [Emphasis added.]

(AF 5 at 481).

144. Mr. Wallace authored Landworks' report. He had no financial interest that would cause him to exaggerate because he worked on a time and materials basis (Tr. 829, 865).

145. Mr. Wallace testified for BLM at hearing, whose personnel clearly held him in high regard. BLM described him and his chief driller, Mr. McGarr, as very experienced and very good (Tr. 792). He was not offered as an expert witness, however. BLM and Mr. Wallace attempted to diminish the import of his July 31, 1989, report, including his use of the phrase "almost mud-like" and other aspects (Tr. 829-38).

146. Mr. Wallace had visited the site in Spring, 1989, and had read the contract plans before undertaking his subcontract. He had not taken part in MM's bidding evaluation (Tr. 684-85, 827, 859). He testified at hearing, that "in general" the plans depicted what he had encountered (Tr. 859). Upon further questioning, he acknowledged:

> I would be forced to admit that because of my experience in the industry that *I adopt a worse-case scenario,* and the conditions could have been worse, but they were—I will be straightforward in saying that *they were very bad conditions.* I felt that they were within the scope of the job. I felt that although as bad as they were, they were there. *By no means do I have to minimize how tough a job it was. This was an extremely technical and tough job.* I didn't

Digitized by Google

think that it was something that couldn't be handled though. [Emphasis added.]

(Tr. 864).

147. Mr. Wallace also acknowledged that it was not reasonable to expect the voids encountered at trench bottom (Tr. 850).

148. Mr. Wallace's testimony persuaded the Board that he was, indeed, exceptionally knowledgeable and experienced, but not that the site conditions were reflected in the contract.

149. Although he felt that MM should have anticipated the conditions, the COR also acknowledged that the job was difficult and that MM did excellent work:

It was a tough job. There's no doubt about that. But going into it up front, you should recognize that and make adjustments in your bid to accommodate that. I mean, it was no cakewalk to get down in there. It wasn't really the best working conditions, and it was a tough job. [MM] did an excellent job on the construction. In fact, you know, you really couldn't have expected a better project. They did excellent work * * *.

(Tr. 986-87).

150. The COR's weekly progress report dated June 16, 1989, noted a "slight" problem with a "mud lense" in test blasting. His daily report for June 16, however, stated that "a mud seam in the C-Weir absorbed much of the [blast] energy causing surface breakage to be nill." The COR's August 1, 1989, diary recorded a soft area in the Falls trench for which no bedrock bottom had yet been found (AF 3 at 168; 283, 488).

151. On August 7, 1989, after MM had claimed differing site conditions, the inspector opined to the contracting officer that some of MM's extra excavation and costs resulted from inexperienced labor and poor crew and subcontractor supervision (AF 3 at 400). On August 9, 1989, the COR recorded hand-excavation below grade in an already overexcavated zone (AF 3 at 150-51).

152. The inspector said that he had informed MM that the blasting plan contained too much subdrilling. He attributed problems to that, or to inexperiened drillers who did not clean their boreholes often enough (Tr. 745, 752, 756, 791). At the same time, he highly praised blaster Wallace and his chief driller, Mr. McGarr, and stated that he did not have a concern during the project about grade control or drill hole depth (Tr. 819-20).

153. Landwork's crew, including Mr. McGarr, drilled at the Falls; MM's crew drilled at the Lower Slide (Tr. 686). In Mr. Wallace's experience, although he did not observe all drilling, only one of MM's operators had a problem due to inexperience, which he corrected upon instruction from Mr. Wallace. Mr. Wallace acknowledged that the problem had stemmed from the mud-like conditions as well as from inexperience (Tr. 855-56).

154. Mr. Wallace had no concern about grade control; the one problem he recalled was due to the "mud" (Tr. 842, 856).

155. Due to these apparent conflicts, and to inspector Evans' and the COR's sometimes equivocal manner of responding to questions at hearing, we give their criticisms of MM some, but not great, weight.

156. Inspector Evans admits that Mr. Peterson is an excellent surveyor. We found Mr. Peterson to be highly credible. He was on site during most of the project. After all of the excavation was completed, he profiled the trench bottom to record the overexcavation that he attributed to geological problems at the site. He identified the problems as soft seams that would break up and wash away, and that had to be eliminated before construction could begin. He measured the depth of the areas that "were obviously not solid consolidated rock" (Tr. 321-22). The maximum depth of such a seam was about 2 feet (GX 34; Tr. 66).

157. While the plans depicted only about 2.1 c.y. of backfill, 68.4 c.y. were required. Mr. Peterson and Mr. Thomas attributed the extra excavation to the soft seams, which rendered the area unstable (GX 34; Tr. 324, 372, 624-25).

158. In response to MM's request for a 14-day extension, BLM asked that geologist Kristie H. Ward from its Eugene District office visit the site. She had not been there previously during construction. She visited the site on August 10, 1989, and concluded that the Golder Report reflected the site conditions. She advised the contracting officer that "to further support our case" BLM should "bring Golder in". She submitted a declaration, but did not appear at hearing (AF 5 at 469-71; GX 73; Tr. 65-66).

159. On August 14, 1989, Golder Report signatory, Mr. Knitter, visited the site with Ms. Ward (GX 73; Tr. 478). By that time, excavation had been completed and the trench floor covered with concrete. The walls still were exposed. Mr. Knitter's August 30, 1989, report opined that the site

©1994, Commerce Clearing House, Inc.

Digitized by Google

conditions were consistent with the Golder Report (AF 5 at 413-17).

160. At hearing, albeit describing it as a "slight deviation," Mr. Knitter acknowledged that: "some of the material exposed in the excavation was a little weaker than what I would have expected to have seen based on exposures on the face. The silty sandstone layers were a weaker rock than I would have expected to see there" (Tr. 481).

161. Mr. Knitter also admitted that he had expected weak rock that he had observed at the waterfall face to improve and become harder, further in, but that it had not improved (Tr. 521-22).

162. When Mr. Knitter had performed his studies for the Golder Report, in October, 1987, water volume in the stream had been low. He had never been at the site during the Spring, the time of year when the pre-bid tour occurred, and water levels were high (Tr. 509-10, 530, 546, 607-08).

163. We find that Mr. Knitter's testimony suffered from speculation (*see, e.g.,* Tr. 484-87, 511-12), and from his obvious bias as principal author of the Golder Report, and do not accord it great weight.

164. BLM attributes some of MM's problems to power washing, but the contract required that boulders, and existing concrete surfaces to be in contact with new concrete, be cleaned by a pressure washer capable of producing 2000 PSI at the nozzle (AF 2 at 198). MM used a $1\frac{1}{2}$ inch hose to attempt to reduce the negative effect of high pressure water upon the soft-seamed rock (AX 99B).

165. Moreover, even after Mr. Thomas informed the COR that washing was causing trouble with the siltstone rock layers, the COR stressed that all rock was to be washed before concrete was poured (AF 3 at 121).

166. MM's supervisor was aware that boulders had to be power-washed, but the COR and the inspector directed him to power wash "everything" including the exposed cut areas and the excavated trench. This created a "slurry" when it hit the mud seams, weakened them, and contaminated the site. MM then was directed to re-wash (Tr. 300-01).

167. Mr. Thomas' August 24, 1989, letter to the contracting officer reported:

> Seams of foriegn (sic) material in the trench have caused extraordinary time, effort, and cost to clean up for placing concrete in the walls and resting areas.
>
> The process is to shovel out rock and dirt, wash with fire hose, power wash, blow out with air, vacuum residue, and pump the water out.
>
> The seams of clay or rotten rock during this process will stay but generally will ravel off into the wall form zone requiring the contractor to do one or all of the above steps, generally more than twice. This date we have been required to stop placing forms and reclean three times today.

(AX 41).

168. On October 10, 1989, MM's supervisor recorded:

> No matter how deep or what spacing the [drill holes for blasting] were, the shot went to and followed the same mud seam.
>
> Near the end of digging, the Inspectors tested back into the rock seams and had us wash the debris and soft spots out with our 2000# pressure washer.
>
> They would take rebar and poke it into cracks and on the sides and bottom and then have us wash again and again and again. Every time we pressure washed, it would make a slurry of a mud type which would contaminate the rest of the weirs and bottom of the slide area and then we had to wash again. I think we washed 6 or 7 times with high pressure and 6 or 7 times with our 2" low pressure pumps.

(AX 26). The slurry forced MM to construct a sandbag dike and to pump the contaminated water to a disposal site so that it would not enter the stream (*Id.;* Tr. 261).

169. The Board viewed MM's video of the construction work, in conjunction with Mr. Thomas' testimony, and found the video to be a compelling demonstration of the "muddy" or unduly soft seams that caused MM so much difficulty (AX 99B; Tr. 534-53).

170. Testimony from one of MM's excavator operators, Mr. James J. Godfrey, confirmed extensive problems with mud layers. Had the Falls been a normal rock excavation job it would have taken a week or less to conclude but, due to the problems encountered, it took closer to a month (Tr. 564-70).

171. In 1989, during construction, MM continued to provide information as to the extent of the mud and rotten rock layers and associated time and costs and BLM continued to dispute its claim (AF 5 at 381, 425).

172. In March, 1990, expert Lane submitted another report to MM, concluding that a differing site condition had been encountered subsurface; the contract documents, including the Golder Report, would not lead a prudent contractor to suspect that highly

Digitized by Google

weathered sandstone seams, "near mud in character," would be encountered; and the highly weathered seams would cause overbreak and poor blasting characteristics, increasing the time and cost of the work (AF 4 at 108-09).

173. At hearing, Mr. Lane stated that the mud seams would not have been predictable absent diamond core borings, which BLM should have conducted (Tr. 186-88). Mr. Knitter confirmed that, based upon what Golder considered to be "excellent exposures of the bedrock and other geological units," and due to difficult access problems, Golder had not conducted any subsurface borings (Tr. 479).

174. By final decision of October 4, 1990, the contracting officer denied MM's claim; it appealed on December 6, 1990 (AF 1 at 140-63, 211).

175. Mr. Herbert G. Schlicker, a consulting geologist with a master of science degree in geology and 42 years' experience with the geology of Northwest Oregon, was offered, and admitted by the Board, as an expert in pertinent local geology. He reviewed the Buell Report and the contract, including the Golder Report. Although he did not visit the site during construction (as he had not yet been retained), he had been at the site previously and had reviewed it as a geologist. He also viewed MM's construction video. Mr. Schlicker's April 3, 1991, report and his expert testimony concluded that there were Type I and Type II differing site conditions resulting in extra costs (AX 35; Tr. 138-78).

176. Mr. Schlicker's report stated:

> No place within the [contract] documents was there a reference to a material other than rock. The material referred to as "hard sandstone", "soft sandstone", "moderately soft sandstone", "shale", "thin-bedded shale", and "thin-bedded sandstone" all refer to rock in the proper geologic terms. The mention of "hard massive layers of sandstone underlain by softer, erodible shale", still refers to competent rock.

(AX 35). In brief, Mr. Schlicker's testimony was that a "siltstone seam" was "fine-grained sedimentary rock composed of silt," which could have thin to very thin layers, but was nonetheless stone; a "mud seam" was "a layer of mud," probably surrounding fragments of harder rock, "a mixture of silt, sand and clay," but it was not stone; there was no reference to "mud" seams in the contract documents; yet "mud" or "clay" seams existed within the sandstone beds and affected three-fourths of the site, based upon his review of Mr. Peterson's survey profile (GX 34; Tr. 146, 154-55, 162).

177. Mr. Schlicker acknowledged that indentures in the site outcroppings, especially at the waterfall face, would indicate sandstone and siltstone layers, but normally such layers improve and get harder further into the rock (Tr. 150-51). Mr. Knitter's testimony to the same effect (above) confirmed this conclusion.

178. Mr. Schlicker was positive that it was not possible that what MM described as mud seams were actually sandstone or siltstone layers broken down or eroded as a result of drilling, blasting, fire hose washing, or excavation activities (Tr. 158).

179. Mr. Schlicker concluded that only subsurface, seismic or drilling investigations, which were not done by BLM, could have determined the adequacy of the subsurface material at the site (AX 35; Tr. 169, 175).

180. Although there were aspects of expert Schlicker's testimony that we did not find persuasive, as a whole, he was more persuasive than expert Knitter, and convinced the Board, in conjunction with expert Lane's report and testimony, and the other testimony and documents of record, that MM encountered, and was damaged by, Type I differing site conditions.

181. Mr. Thomas calculated that about 53.5 percent of the Lower Slide work, and about 19 percent of the excavation and 41.4 percent of the concrete structure work at the Falls, was extra work due to the differing site conditions (AX 94).

182. MM claims $9,811.76 in extra direct costs at the Lower Slide, and $45,429.28 in extra direct costs at the Falls; plus JSO at 14.9 percent, HOO at 6.4 percent, and profit at 10 percent, for each site; for a total differing site condition claim of $74,287.59 (MM post-hearing br. at 49).

183. Based upon jury verdict, discussed below, we find that MM is entitled to $47,427.68 on its differing site conditions claim, as follows:

©1994, Commerce Clearing House, Inc.

Grand total	$47,427.68

VII. Additional Facts Particular to IBCA 2894

Acceleration Claim and IBCA 2895 Impact Claim

184. On July 26, 1989, MM notified the contracting officer of various problems which would result in "acceleration and/or additional time and cost." The contracting officer responded that she was unable to determine whether additional time was warranted until she was provided more specific information, and advised MM that its in-stream work had to be completed by September 15, 1989, the contract due date. Thereafter, MM requested a 14-day extension due to the mud seam problems. On August 8, 1989, MM notified the contracting officer that, pending a decision on its extension requests, it had added personnel, equipment, and work time (AF 5 at 475, 477-78, 482-85).

185. On August 10, 1989, the contracting officer visited the site and inquired whether in-stream work would be completed by September 15. Mr. Thomas was pessimistic. On August 15, 1989, the contracting officer issued a cure notice, giving MM 10 days to show substantial progress evidencing that in-stream work would be completed by September 15. She also requested a revised work schedule (AF 5 at 462-64).

186. By letter of August 15, 1989, MM again requested an extension to October 5, 1989, and stated that the changed conditions and suspension of work, without any time extension, had forced MM to accelerate (AF 5 at 457-58).

187. On August 24, 1989, MM notified the contracting officer that the mud seams had caused extraordinary time, effort and cost (AF 5 at 437).

188. ODFW had chosen the period for in-stream work, from July 1 to September 15, to protect fish and wildlife. As noted, the contract provided that BLM might be able to obtain earlier entry or extensions, from State Lands, in consultation with ODFW, depending upon climatic conditions and stream flows (AF 2 at 146; GX 61; Tr. 25).

189. When MM sought to secure an extension directly, it was informed that it was BLM's responsibility. BLM could not let MM know until the State could evaluate climatic conditions. Because MM did not know whether an extension would be granted, and because BLM had issued the cure notice, MM worked overtime (Tr. 83-84, 128, 672, 696, 706).

190. MM's labor hours increased on about August 7; peaked on August 15; then declined (GX 42, 43). MM asserts that the decline was due to the conclusion of labor intensive tasks on the Upper and Lower Slides and notes that 683 overtime hours were reported for the weeks ending August 19 through September 15 (AX 84 at 9-11; MM reply br. at 49).

191. At 9 PM on September 13, 1989, ODFW notified BLM that MM's in-stream work could extend to September 22, 1989, and BLM so notified MM on September 14 (AF 5 at 378, 384).

192. On September 22 BLM notified MM that ODFW had granted an additional extension, to September 29 (AF 5 at 376; Tr. 128).

193. At project outset, MM had requested permission to enter the stream early. On June 7, 1989, ODFW approval was confirmed, but MM did not start in-stream work until June 15 (AF 5 at 514; Tr. 25, 26).

194. MM thus was granted additional time for in-stream work of 23 days before the July 1 contract date, and an additional 14 days after the contract's September 15, 1989, closure date, for a total of 37 extra days.

Digitized by Google

195. By letter of October 6, 1989, MM notified the contracting officer that in-stream work had been substantially complete as of September 14, with the exception of boulder placement and access removal, completed on September 22, and that all other work was completed on October 2, 1989 (AF 5 at 366).

196. On August 3, 1990, MM submitted a claim for constructive acceleration in the amount of $22,541.78, due to "government actions" in failing timely to extend the contract schedule for excusable delays (AF 4 at 27-32).

197. In her October 4, 1990, final decision, the contracting officer denied MM's acceleration claim; MM appealed on December 6, 1990 (AF 1 at 165-78, 211).

198. At hearing, MM merged its acceleration claim with its impact claim (IBCA 2895), because the only definable alleged impact costs were overtime labor hours (*See* AX 91; Tr. 670).

Because we deny these claims upon legal grounds, below, we make no further findings regarding them.

Discussion

IBCA 2890

[1] The contracting officer found that MM had incurred $37,832.40 in savings due to its purportedly unauthorized use at the Falls of a temporary access spur, rather than allegedly contract-required highline access methods. By unilateral modification 6, she adjusted the contract price downward accordingly. BLM bears the burden of proof that the price reduction was warranted. *See Nager Electric Co. v. United States* [16 CCF ¶ 80,367] 442 F.2d 936, 946 (Ct. Cl. 1971); *J.S. Alberici Construction Co.*, GSBCA Nos. 11024, 91-3 BCA ¶ 24,205 at 121,076.

In fact, BLM's focus during the project was not upon MM's construction and use of the temporary spur, but rather upon BLM's concern that fill to be placed in the stream would exceed the amount specified in BLM's State Lands and Corps permits (Finding of Fact (FF) 64). The record is unclear as to whether BLM properly calculated the original permit quantities, but it is clear that the contract provided that the amounts were estimates for permit application purposes only; that the contractor was to determine actual quantities; and that "modification to the permit *will* be performed by the BLM" (FF 14). It is also apparent that the State Lands and the Corps were not particularly concerned about the change in permit amount; they rapidly authorized amendment (FF 62, 65).

[2] Regarding BLM's belated contention that the contract prohibited the construction and use of a temporary access road at the Falls, we noted recently in *Hardrives*, IBCA 2319, *et al.*, 1993 IBCA LEXIS 4 (August 4, 1993) that it is elementary that:

> Contract interpretation begins with the plain language of the agreement. * * * "[P]rovisions of a contract must be so construed as to effectuate its spirit and purpose * * * an interpretation which gives a reasonable meaning to all of its parts will be preferred to one which leaves a portion of it useless, inexplicable, inoperative, void, insignificant, meaningless, superfluous, or achieves a weird and whimsical result." [Citations omitted.]

See also Gould, Inc. v. United States [37 CCF ¶ 76,108], 935 F.2d 1271, 1274 (Fed. Cir. 1991). When we read the contract to harmonize, and give a reasonable meaning to all of its parts, it is apparent that its general provisions and specifications—and a figure included in the specifications—specifically provide for temporary access roads.

Under the Operations and Storage Areas clause, the contractor was to "use only established roadways, *or use temporary roadways constructed by the Contractor when and as authorized by the Contracting Officer*" (FF 22). The Project/Site Conditions clause provided that access to the Falls was to be by track equipment and highline and that "*Figure 1 shows the potential points of access to the construction area*" (FF 26).

"Figure 1" showed two potential alternative access roads, marked with dotted lines and described as "*Alternate Access (to be approved by BLM) for Tracked Equipment*" (FF 27). The Project Conditions clause provided that access locations, as shown on the drawings, were among areas that could be cleared and grubbed, and that access roads were not to be built *unless indicated on the drawings or* the contracting officer gave written approval (FF 28). The Project Site Conditions clause discussed the stabilization and closure of access roads upon project completion (FF 32).

Thus, it is clear that the contract unambiguously allowed for the construction and use of a temporary access spur. As we noted in *Hardrives, supra*, "in order for a contract to be ambiguous, it must be *reasonably* susceptible of more than one interpretation" (emphasis in original) (citing *Edward R. Marden Corp. v. United States* [33 CCF

©1994, Commerce Clearing House, Inc.

Digitized by Google

¶ 74,642], 803 F.2d 701, 705 (Fed. Cir. 1986). BLM's interpretation of the contract as entirely disallowing construction and use of a temporary access road to the Falls is unreasonable.

BLM's arguments rest in part upon its Management and Environmental Assessment Plans and its design contract with Fish Pro. Although the Plans provided that no roads or "new" trails would be needed, both included an estimate for the cost of an access road (FF 3, 4). Therefore, the reference to "no roads" logically could be interpreted to mean "no new permanent roads." Indeed, the Fish Pro contract merely provided that no new access roads were to be constructed without the contracting officer's authorization (FF 5). Regardless, neither the Plans nor the Fish Pro contract were part of MM's contract with BLM.

BLM also cites its application for the State Lands and Corps permits, which, along with the permits, ultimately was included in the solicitation package. MM was not a party to those documents, and only the application states that "no roads are to be built" (FF 9). The contract's specific provisions allowing for access roads, however, belie any interpretation other than that the reference, once more, logically was to permanent roads. In fact, the president of Fish Pro, which drafted the specifications, acknowledged that the contract provided for a temporary access road, as opposed to a permanent road (FF 45).

[3] Further, we have found that MM reasonably concluded that BLM had approved its temporary access spur and in-stream work plans, based upon the following: MM had (1) informed the COR about its intent to construct the temporary road well in advance of construction; (2) sought appropriate State permits for approach roads for the Lower Slide and Falls, which were granted on condition that the approaches be removed upon completion; (3) secured the COR's approval of the permits in March, 1989; and (4) met with BLM on June 7, 1989, addressed Falls access, and delivered Submittal No. 11, dated June 5, 1989, "Plan to Provide Equipment to the Work Sites," with attachments showing: an access road across a privately-owned embankment above the stream from Highway 36; a ramp and landing; use of native materials for fill required for the access ramp; a culvert placed in the stream to be covered with clean boulders and rock; a notation that the material would be removed upon completion of the work and the site restored per specifications; and a notation that MM intended to use an excavator and track drills at the Falls, with no limitation as to tracked equipment (FF 46-50).

MM's notice to BLM of its access and in-stream work plans was confirmed by a press report of the June 7 meeting, which included a copy of a drawing showing a construction access road to the Falls and noted that there would be temporary fill and culverts (FF 52). The COR acknowledged that, in general terms, the culvert placement at the bottom of the access ramp was essentially what MM did during construction (FF 51).

Moreover, BLM's inspector and the COR were present daily, communicating with MM about the access spur, and observing its construction, including use of rubber-tired, as well as tracked equipment. Even after the COR became concerned about some turbidity in the stream, he did not instruct MM to stop work. By the time the COR issued the partial suspend work order, the access spur, with approach built to and across the culvert, was about 90 percent complete. Even after MM was allowed to resume work, there is no evidence that the COR, the inspector, or the contracting officer, ever disallowed the use of the rubber-tired equipment (FF 54-60).

That an inspector is present during work, and does not object to it contemporaneously, is evidence that a contractor's position is reasonable. *White Buffalo Construction,* IBCA Nos. 2166, 2173, 91-1 BCA ¶ 23,540 at 118,048. Here, not only BLM's inspector, but its COR, were present while MM was constructing the temporary access spur. Further, the court of appeals has held, albeit in a different context, that "[w]hen an official of the contracting agency is not the contracting officer, but has been sent by the contracting officer for the express purpose of giving guidance in connection with the contract, the contractor is justified in relying on his representations." *Max Drill, Inc. v. United States* [15 CCF ¶ 83,691], 427 F.2d 1233, 1243 (Ct. Cl. 1970).

In this case, the COR was authorized under the contract to clarify technical requirements, and to review and approve work clearly within the scope of work. He was not authorized to issue changes under the Changes clause or to modify the scope of work (FF 16), but approval of the temporary access spur, envisioned as a possibility by the contract, did not constitute such a change or modification. Indeed, the contracting officer delegated the matter of the

Digitized by Google

access spur and in-stream permit requirements to the COR, even after he notified her about his concerns pertaining to permit violation (FF 61). When the contracting officer's authorized representative and inspector impliedly approve a contractor's interpretation of a contract, as here, the contractor is justified in relying upon that approval. *WRB Corp. v. United States* [12 CCF ¶ 81,781], 183 Ct. Cl. 409, 449-50 (1968).

We perceive no windfall to MM because its bid was not based upon use of a highline access method at the Falls (FF 71, 72) and BIM has failed to meet its burden to prove the reduction justified.

Decision

Accordingly, IBCA 2890 is sustained in the amount of $37,832.40.

IBCA-2891

[4] In this quantum dispute, MM seeks costs, in addition to those awarded by unilateral modification 7, for extra excavation and concrete resulting from acknowledged site profile differences from those depicted in the contract. Our fact findings, including special cost findings, are set forth in detail above. As we noted, we used a jury verdict approach to arrive at a $550 per c.y. direct cost amount for 38 c.y. of extra excavation at the Upper and Lower Slides.

A jury verdict approach may be used when (1) clear proof of injury exists; (2) there is no more reliable method for computing damages; and (3) the evidence is sufficient to make a fair and reasonable approximation of the damages. *Dawco Construction, Inc. v. United States* [37 CCF ¶ 76,056], 930 F.2d 872, 880 (Fed. Cir. 1991); *B&M Roofing & Painting Co.*, ASBCA No. 44323, 93-1 BCA ¶ 25,504 at 127,033.

BLM conceded "injury." We found that there was sufficient data in the record, from BLM and from MM, to permit us to make a fair judgment as to MM's resulting extra direct costs; and there was no more reliable method of doing so.

Decision

Accordingly, as presented in our fact findings, IBCA 2891 is sustained in the amount of $13,735.66 and is otherwise denied.

IBCA 2892

[5] Again, for this quantum dispute over unilateral modification 5, which increased the contract amount due to additional excavation and weir work, but reduced it due to the deletion of boulder work—for an overall net price reduction—our findings are detailed above.

As to the boulders, when a contracting officer issues a unilateral change order deleting work and reducing the contract price, the Government bears the burden to prove that the amount of the adjustment is reasonable. *Nager Electric, supra; Zurfluh Enterprises, Inc.*, VABCA No. 1941, 85-1 ¶ 17,789 at 88,908. As to the appropriate upward adjustment for the contract changes which added more work, MM bears the burden of proof. *Lemar Construction Co.*, ASBCA Nos. 31161, 31719, 88-1 BCA ¶ 20,429 at 103,332. With respect to the deductive change, and the additive changes, the measure of adjustment is the difference between the reasonable cost to the contractor of performing without the change and performing with it. *Id.; Zurfluh; Celesco Industries, Inc.*, ASBCA No. 22251, 79-1 BCA ¶ 13,604 at 66,683.

As we explained, BLM did not persuade us that the full amount of its deletion was reasonable and properly based. BIM's efforts at proof failed in part because they were speculative, or not adequately based upon the job at hand and MM's actual experience.

At the same time, MM did not persuade us that it was entitled to the full upward adjustment it sought. It is not required to prove the amount of its damages "with absolute certainty or mathematical exactitude * * * It is sufficient if [it] furnishes the court with a reasonable basis for computation, even though the result is only approximate." *Wunderlich Contracting Co. v. United States* [11 CCF ¶ 80,069], 351 F.2d 956, 968 (1965) (citations omitted). It must do more than offer conclusory evidence, or evidence based solely upon speculative estimates, though. *Id.; Lemar, supra.*

MM's quantum proof, including in this appeal and others, was far from ideal. That proof was hampered by a succession of changes in the amounts claimed. However, MM's proof eventually improved after it acquired counsel, and it was sufficiently grounded in actual time and costs, and in credible testimony, to form a basis for recovery.

Thus, once more, with respect to each adjustment, we resorted to a jury verdict, because liability was not at issue; there was adequate data in the record to enable us to reach such a verdict; and there was no more reliable method.

©1994, Commerce Clearing House, Inc.

Decision

Accordingly, as presented in our fact findings, IBCA 2892 is sustained in the total amount of $4,225 and is otherwise denied.

IBCA 2893

[6] Among alternative arguments, MM seeks an equitable adjustment based upon paragraph (a)(1) of the contract's Differing Site Conditions clause, due to the presence of clay, mud seams, or rotten seams at the Lower Slide and Falls, contrary to contract indications. Because we find for MM on this ground, we do not reach its other theories.

The contract's Differing Site Conditions clause provides in pertinent part, that "(a) [t]he Contractor shall promptly, and before the conditions are disturbed, give a written notice to the Contracting Officer of (1) subsurface or latent physical conditions at the site which differ materially from those indicated in [the] contract" (FF 19). If the contractor establishes such a "Type I" differing site condition, it may be entitled to an equitable adjustment. The Federal Circuit has summarized the proof required:

> [T]he contractor must prove, by a preponderance of the evidence, "that the conditions 'indicated' in the contract differ materially from those it encounters during performance." * * * The conditions actually encountered must have been reasonably unforeseeable based on all the information available to the contractor at the time of bidding. * * * The contractor also must show that it reasonably relied upon its interpretation of the contract and contract-related documents and that it was damaged as a result of the material variation between the expected and the encountered conditions. * * *.
>
> "A contractor cannot be eligible for an equitable adjustment for changed conditions unless the contract indicated what those conditions would supposedly be." * * *. The bid documents or the contract must contain "reasonably plain or positive indications" that subsurface conditions were different from what was actually encountered. * * *.

Stuyvesant Dredging Co. v. United States [34 CCF ¶ 75,414], 834 F.2d 1576, 1581 (Fed. Cir. 1987); *accord White & McNeil Excavating, Inc.*, IBCA No. 2448, 92-1 BCA ¶ 24,534 at 122,439, *affirmed mem., White & McNeil Excavating, Inc. v. Manuel Lujan, Secretary of the Interior*, No. 93-1013 (Fed. Cir. May 5, 1993).

It is apparent from the contract provisions, including the Golder Report, and from the testimony of experts Lane and Schlicker, that the contract indicated that MM would encounter competent rock, largely bedrock, including massively bedded sandstone. The thinner sandstone or siltstone layers that were mentioned still referred to competent rock. Bedding planes were described as "tight" and containing "no infilling." Even BLM's expert, Mr. Knitter, described the contract as indicating "primarily a rock site" (FF 9, 39-41, 143, 176-77).

Mr. Thomas relied upon the contract representations in bidding. He is an experienced contractor, but he is not a geologist. It is not standard for contractors in his industry to secure their own geotechnical reports. The contract indications of competent rock appeared to be confirmed by Mr. Thomas' site visit, where he observed massively bedded sandstone and sound, good rock (FF 10, 132-33).

Despite the contract's exculpatory Site Investigation and Conditions Affecting the Work clause, a bidder is not required to hire his own geologist, make extensive engineering efforts, or conduct tests which even the Government has not performed (here, borings) to verify the conditions he reasonably assumes he will encounter based upon the contract and his site visit. *Stock & Grove, Inc. v. United States* [19 CCF ¶ 82,913], 493 F.2d 629, 631 (Ct. Cl. 1974); *Richard P. Murray Co.*, AGBCA No. 77-152-4 A&B, 86-2 BCA ¶ 18,804 at 94,755-56 (collecting cases).

It is eveident from the record, including testimony from MM's personnel, its construction video, and the expert testimony of Mr. Lane and Mr. Schlicker, which we have found persuasive, that the mud seams, rotten seams and clay-like material MM encountered at the Lower Slide and the Falls differed materially from the contract's indications, were not reasonably foreseeable,and caused MM substantial extra time and costs (FF 131-83).

As to quantum, once more we reached our determination by jury verdict, which we found to be the fairest and most reliable method under the circumstances, and adequately grounded in the record, and found that MM is entitled to recover $47,427.68 on its differing site conditions claim.

Decision

Accordingly, IBCA 2893 is sustained in the amount of $47,427.68 and is otherwise denied.

Digitized by Google

IBCA 2894 and IBCA 2895

[7] MM asserts that BLM subjected it to constructive acceleration under the Changes clause (FF 23) and it seeks impact costs, all overtime expenses. It contends that BLM's partial suspension of work, and the changed conditions encountered by MM, coupled with BLM'S refusal to grant, or delay in granting, requested time extensions, forced MM to accelerate. To prove constructive acceleration under the circumstances alleged, the contractor must establish (1) a period of excusable delay; (2) adequately supported notice to the Government of the excusable delay and request for an extension of time (unless a Government order directs acceleration without regard to any such delay); (3) the Government's failure or refusal to grant the requested extension within a reasonable time; (4) the Government's order, express or implied, that the contractor take steps to overcome the excusable delay; or complete the work at the earliest possible date; or complete the work by a given date earlier than that to which the contractor otherwise would be entitled by virtue of the excusable delay; and (5) reasonable efforts by the contractor to accelerate, which resulted in added costs. *Fermont Division, Dynamics Corp. of America,* ASBCA No. 15806, 75-1 BCA ¶ 11,139 at 52,999-53,000, *aff'd.* 216 Ct. Cl. 448 (1978).

MM has not met its burden of proof. Its first, 7-day, extension request, due to BLM's 5-1/2-day partial suspend work order, arose out of MM's violation of the State Lands and Corps in-stream fill limits. BLM was bound to stop the work and to seek amendment of the permits because it was the responsible party as the permit holder. The amount of fill placed in the stream was clearly within MM's control, even if it had misunderstood, or misread, the permits. It had not asked BLM to modify the permits at any point.

Further, the period of the partial suspend work order covered three days when MM did not work in any event—two weekend days and the Fourth of July holiday. BLM acted with great dispatch to secure the necessary permit amendments. In any case, the partial nature of the suspend work order allowed MM to work in other parts of the project (FF 59, 61, 63, 66).

MM's request for a 14-day extension beyond the contract's September 15 in-stream work closure date, due to the differing site conditions encountered, was not in BLM's control either. ODFW had chosen the period for in-stream work. The contract provided that BLM might be able to obtain earlier entry or extensions, from State Lands, in consultation with ODFW, depending upon climatic conditions and stream flows, and BLM attempted to do so. It notified MM as soon as it received the requisite State approval (FF 188-89, 191-92).

Moreover, BLM was successful in securing extra work time for MM, although it was not required to do so under the contract. MM was granted 23 days' additional time for in-stream work before the contract's July 1 start date, and an additional 14 days after its September 15, 1989, closure date, for a total of 37 extra days. MM actually substantially completed in-stream work on September 14, 1989. It's overtime increased for a while, but its overall labor hours decreased during the operative period (FF 190-95). Also, we note that the deletion of the labor-intensive boulder work (which the record reflects more than offset the time necessary to perform the work added by modification No. 5) netted MM a savings in time that it otherwise would have had to expend. Finally, we consider that our jury verdict in MM's IBCA 2893 differing site conditions appeal amply compensates MM for the extra time, and resulting monies, it expended due to those conditions.

Decision

Accordingly, IBCA 2894 and IBCA 2895 are denied.

IBCA 2697

[8] In this early appeal MM challenged the denial of its claim during performance for a 7-day extension due to BLM's partial suspend work order. MM timely completed the contract; described its extension request as moot; and subsumed the acceleration and impact aspects of IBCA 2697 into its unsuccessful appeals, IBCA 2894 and 2895. Therefore, we dismiss IBCA 2697 with prejudice.

Summary

IBCA 2890 is sustained in the amount of $37,832.40; IBCA 2891 is sustained in the amount of $13,735.66; IBCA 2892 is sustained in the amount of $4,225; IBCA 2893 is sustained in the amount of $47,427.68;

©1994, Commerce Clearing House, Inc.

Digitized by Google

IBCA 2894 and 2895 are denied. IBCA 2697 is dismissed with prejudice.

MM is thus entitled to a total of $103,220.74, plus interest in accordance with the CDA, 41 U.S.C. § 611.

[¶ 26,454] Neiman Sawmill, Inc.

AGBCA No. 93-196-10, October 21, 1993.

Attorney Fees and Costs Under Equal Access to Justice Act—Application Timeliness—Final Disposition.—A timber sale contractor's application for attorney fees and costs in connection with the dismissal of a government claim for refunds was timely because it was filed within 150 days of the board's decision. The Contract Disputes Act provides for appeal by an agency within 120 days from receipt of the board's decision. When neither party takes any action to interrupt the running of the CDA appeal period, the board's decision is final in 120 days and the prevailing party has an additional 30 days to file its application. The contractor's application was received by the board 135 days after the government received the decision.

Attorney Fees and Costs Under Equal Access to Justice Act—Substantial Justification—Government Position.—The government's position in an appeal concerning unique issues, including minimum base rates for timber in the instance of fire loss following enhancement of value resulting from road construction, was substantially justified because it would satisfy a reasonable person and had a reasonable basis in law and fact. The case was further complicated by a contract price modification after the forest fire and by a modification increasing road work. The contractor was thus not entitled to recover attorney fees and costs under the Equal Access to Justice Act.

For the appellant: Saltman & Stevens, P.C., Washington, D.C., by Alan I. Saltman. For the government: Daniel B. Rosenbluth, Office of the General Counsel, U.S. Department of Agriculture, Denver, Colorado.

Before DOHERTY, HOURY, and GISH, Administrative Judges.

DOHERTY, Administative Judge: This is a decision on Applicant's Application for Attorney Fees and Costs in the amount of $35,468.94[1] under the Equal Access to Justice Act (EAJA), 5 U.S.C. § 504. Under the Act, fees and costs (up to $75 per hour)[2] may be awarded to the prevailing party when the Government's position was not substantially justified. The Government concedes that Neiman was a prevailing party. Applicant sought and recovered $70,558.97 claimed by the Government. The Government opposes the application on the grounds that the Government's position was substantially justified. The Government also questions the timeliness of the claim and the reasonableness of the fees.

The underlying appeal for which recovery of fees is sought was *Neiman Sawmill, Inc.*, AGBCA Nos. 90-203-1, 91-119-1 and 92-187-1, 93-2 BCA ¶ 25,686.[3] The appeal related to Applicant's Forest Service timber sale contract, No. 03-2530, awarded October 7, 1981. Under terms of the sale, Applicant built roads necessary to remove the purchased timber.

Applicant was compensated for the road construction with purchaser credit. Under normal circumstances, that credit could be used to offset the price of timber removed in

[1] The figure for fees and costs includes those for the underlying appeal and also for the prosecution of this action for fees. Attorney fees and costs incurred in the preparation of the EAJA application and responding to the Government's response are includible. *Fulton Hauling Corp.*, PSBCA No. 2778, 93-1 BCA ¶ 25,249; *S.T. Research Corp.*, ASBCA No. 39600, 92-3 BCA ¶ 25,160.

[2] Applicant acknowledges in the claim that the maximum attorney fee rate is limited to $75 per hour. An example of a holding of this Board to that effect is found in *Eagle Contracting, Inc.*, AGBCA No. 93-114-10, 93-3 BCA ¶ 26,049. Fees charged, exceeding $59,000, could not be fully reconciled from supporting documentation.

[3] Citation is to a ruling on Cross Motions for Partial Summary Judgment favorable to Appellant. Remaining issues were dismissed on motion of Appellant without objection by the Government in an unpublished Order of Dismissal dated February 22, 1993.

Digitized by Google

excess of a fixed base rate. In the case decided, timber was destroyed by fire after credit had been earned and allowed but before title had transferred to Applicant. The price of the timber remaining was renegotiated to a lesser amount and road work was added without considering the effect on base rate limitations in the contract.

The Government acknowledged liability for the timber loss, but sought refund of the base rate value that could not be offset against above-base rate payments for the timber that was harvested at the new reduced rates.

As a preliminary matter, the Government asserts Applicant's claim for fees and costs is not timely. The Government argues as follows:

> 1) The applicable rules at 7 CFR, Subtitle A, Part 1, Subtitle J, Provision 1.193, *Time for filing application* states [sic] an EAJA application must be submitted "... in no case later than 30 days after final disposition of the proceeding by the Department." Final disposition is defined to include BCA decision resolving "...the merits of the proceeding." If "review["] or "reconsideration" is sought or taken of a decision, time periods shall be extended pending "final disposition" of the underlying controversy.

The Government goes on to argue the time for claiming fees is limited to 30 days from the date of the decision when no appeal is taken. The Government did not, in this case, appeal the Board's ruling.

The provision that the Government paraphrases in its reference allows filing of a claim within 30 days following final disposition and then states more completely at (b):

> For the purposes of this rule, final disposition means the date on which a decision or order disposing of the merits of the proceeding or any other complete resolution of the proceeding, such as a settlement or voluntary dismissal, becomes final and unappealable, both within the Department and to the courts.

The Contract Disputes Act (CDA) provides for appeal by an agency within 120 days from receipt of a copy of the Board's decision (41 U.S.C. § 607). Board records indicate the Government received the opinion January 5, 1993. Applicant's application for attorney fees and expenses was received by the Board May 20, 1993. That is 135 days after the Government received the decision.

Where neither party takes any action to interrupt the running of the CDA appeal period, the Board's decision is final in 120 days. A prevailing appellant has an additional 30 days to file its application for attorney fees (5 U.S.C. § 504(a)(2); *J.M.T. Mach. Co. v. United States* [34 CCF ¶ 75,326], 826 F.2d 1042, 1048 (Fed. Cir. 1987); *Corban Indus., Inc.*, VABCA No. 2181E, 2559T/E, 89-2 BCA ¶ 21,677. Compare the present case with *Forest Dev., Inc.*, AGBCA No. 86-132-10, 88-3 BCA ¶ 21,123 regarding an application for fees relative to an unappealable decision of this Board under expedited procedures in which it was noted the time for application was limited to 30 days from final disposition.[4]

We find Applicant's claim for attorney fees and costs to be timely filed within the established 150-day limit.

The Government is not, however, liable for such fees and costs if its opposition to the underlying appeals was substantially justified. Relying on the case of *Pierce v. Underwood*, 487 U.S. 552, 100 S. Ct. 2541 (1988), this Board has considered the standard to mean justification to a degree that would satisfy a reasonable person and have a reasonable basis in law and fact. *Giuliani Contracting Co.*, AGBCA No. 91-166-10, 92-2 BCA ¶ 24,930. We find the Government to have met this standard.[5]

---

[4] The underlying cases were dismissed by Order February 22, 1993, received by Appellant on February 23 and the Government on February 25. There followed correspondence through early March concerning whether the final dismissal was consistent with agreement reached by the parties. We need not decide the effect of such on extending the time for claims as Applicant's application was within 150 days of the Order. We note, however, all action may not extend the time for claims. *J-I-J Constr. Co.*, ENG BCA No. 4815-F, 86-3 BCA ¶ 19,126.

[5] Our decision is determined on the basis of the record, as a whole, which was made in the adversary adjudication for which fees and other expenses are sought. We have not considered factual supplemental material offered by the parties accompanying their submissions in this proceeding. 5 U.S.C. § 504(a)(1); *AST Anlagen-und Sanierungstechnik GmbH*, ASBCA No. 42118, 93-3 BCA ¶ 25,979; *see Digital Servs. Group, Inc.*, DOT BCA No. 1817E, 93-1 BCA ¶ 25,358, in which that board distinguishes the circumstances of a case with a complete record, as found here, from one where the case was settled, limiting the record.

©1994, Commerce Clearing House, Inc.

Digitized by Google

The case decided was one of unsettled law involving limited precedent and requiring the Board to struggle with contract provisions dealing with minimum base rates for timber in the instance of fire loss, following enhancement of value flowing from road construction. The case was further complicated by the parties having modified the contract price following a forest fire, and again to increase road work, without raising the questions relative thereto that were then brought to the Board. The case represented issues sufficiently unique that the Government was well within the standard in testing its interpretation of the case.

DECISION

We deny the application for attorney fees and expenses. We make no finding or decision on the reasonableness of the claimed amount.

[¶ 26,455] Harney County Gypsum Company

AGBCA No. 93-190-1, October 26, 1993.

Contract Disputes, Jurisdiction—Contract as Basis for Jurisdiction—Request for Quotations.—An offeror's claim for lost profits under a request for quotations for the rental of an excavator and operator for stabilizing a fish habitat was dismissed for lack of jurisdiction because the RFQ did not create a contract, and the offeror was not a contractor under the Contract Disputes Act. The government was not obligated to issue a purchase order to the offeror, despite the offeror's submittal of the lowest quote. The government's issuance of a purchase order in response to the low quotation was an offer that the government was free to withdraw at any time until accepted. The offeror did not submit a written acceptance or furnish the excavator and operator. Its offer to begin work more than one week after the estimated starting date was a counteroffer that the government rejected. The government's withdrawal of its offer and discussions with the firm that submitted the next-low quote did not constitute a breach of contract or a convenience termination.

Awards—Existence of Contract—Estoppel.—The government was not estopped from seeking the dismissal of a claim under a request for quotations in connection with a creek rehabilitation program, despite the government's previous stipulation that an oral contract was awarded to the offeror, because the contracting officer who stipulated as to the existence of a contract was legally incorrect, and the defense of estoppel is not available to parties relying on incorrect legal advice. Although boards of contract appeals generally accept stipulations as to the facts, boards are not bound by conclusions regarding questions of law, such as the existence of a contract. Under its *de novo* review authority, the board corrected the contracting officer's erroneous conclusion that the Forest Service orally awarded a contract for the creek rehabilitation project to the offeror.

For the appellant: David B. Hydes, P.C., Canyon City, Oregon. For the government: Jeffrey K. Handy, Office of the General Counsel, U.S. Department of Agriculture, Portland, Oregon.

Before EATON, GISH, and SETO, Administrative Judges.

EATON, Administrative Judge: This appeal concerns Request for Quotations (RFQ) No. 02-93-0314, which the Forest Service, U.S. Department of Agriculture, issued on October 9, 1992. The agency sought prices for rental of a "walking excavator" with operator for use in stabilizing and improving fish habitat on Fishhole Creek, within the Fremont National Forest, Oregon. The RFQ included an estimated starting date of October 23, 1992, for an estimated 140 hours of work. Time for performance was critical due to expected fall rains, falling temperatures, and State of Oregon permission to work in the stream only between October 26 and November 10, 1992.

Harney County Gypsum Company of Burns, Oregon (Appellant), provided the lowest quotation, $74 an hour; however it advised the Forest Service that its equipment would not be available until either October 30 or November 2, 1992. The Contracting Officer (CO) contacted the firm submitting the next-low quote, $78 an hour, which agreed to perform the work, complet-

Digitized by Google

ing it in 138 1/4 hours between October 27 and November 9, 1992.

Appellant filed pre-award bid protests, first at the agency level and then with the General Accounting Office (GAO), arguing that it had an oral contract with the Forest Service. Before the GAO issued a decision, the CO agreed to settle under the regulations applicable to termination for the convenience of the Government. Appellant withdrew the bid protest and submitted a claim for $5,900 in lost profits and $500 in attorney's fees.

In a final decision dated March 4, 1993, the CO denied the $5,900 claim, stating that the Federal Acquisition Regulation (FAR), Part 49, does not allow anticipatory profits on termination claims, but granted the claim for attorney's fees. Appellant timely appealed. On September 13, 1993, the Government filed a Motion to Dismiss, or in the alternative, a Motion for Summary Judgment. Appellant opposes the Motions.

The Board dismisses the appeal, finding that under the FAR provisions applicable to small purchases, there was no contract between Appellant and the Forest Service. Appellant is not a "contractor," defined by the Contract Disputes Act as a party to a Government contract other than the Government, 41 U.S.C. § 601(4), and therefore has no standing to file a claim under the Act.

FINDINGS OF FACT

1. The Forest Service, U.S. Department of Agriculture, issued RFQ No. 02-93-0314, the Fishhole Creek Rehabilitation Project, on October 9, 1992. The agency sought hourly rates for rental of a "walking excavator" with operator for use in stabilizing and improving fish habitat on Fishhole Creek in the Bly Ranger District of the Fremont National Forest, Oregon. (Appeal File (AF) 1, 8.) According to the vicinity map, the project was to begin 10.2 miles south of Bly, Oregon, and end 1.1 miles further downstream (AF 37).

2. Quotations were due by close of business on October 20 (AF 1), with an estimated starting date of October 23, 1992. An estimated 140 hours of work were to be completed within 18 calendar days, with contract time counted from the effective date of a Notice to Proceed. Work was required to begin no later than 10 calendar days after such effective date. (AF 14.)

3. The RFQ, on Standard Form 18, stated:

> **IMPORTANT:** This is a request for information, and quotations furnished are not offers ... This request does not commit the Government to pay any costs incurred in the preparation of the submission of this quotation or to contract for supplies or services.

(AF 1.)

4. With regard to evaluation of quotations, the RFQ further stated:

> The Government will issue an order as a result of this Request for Quotations to the responsible quoter whose quote conforming to the solicitation will be most advantageous to the Government, cost or price and other factors considered.
>
> The Government may issue orders to other than the lowest quote (sic], waive minor informalities or irregularities in quotes received or elect not to award at all. If necessary, the Government may conduct discussions with any or all quoters.

(AF 5.)

5. On October 20, 1992, Appellant submitted a telephone quotation of $74 an hour, or $10,360 for the estimated 140 hours (AF 39). This was the lowest quote received by the Forest Service (CO's Statement for AF page (p.) 2). Appellant confirmed the quotation on October 21, 1992, when the CO called to set Monday, October 26, 1992, as the date for move-in and a pre-work meeting (AF 40).

6. According to Forest Service memos of telephone calls on October 23, 1992, Appellant advised both the CO and the CO's Representative (COR) that Monday, November 2, was the earliest date it would be available. Later the same day, Appellant advised the CO that equipment and an operator could be available on Friday, October 30, 1992. There are conflicting versions of the parties' subsequent discussions re proposed starting dates. According to the Forest Service memos, the COR told Appellant she had not planned to work on Friday but could be there. (AF 41, 42.) Appellant's owner-operator, however, states that he agreed to Monday for the pre-work meeting and starting date solely for the convenience of the Forest Service, which was working 4-day weeks (Affidavit of Farris Benton, Oct. 4, 1993).

7. The delay in starting was not acceptable to the Ranger District's fisheries biologist who was to serve as project manager. A forest fire had denuded slopes that drained into the stream, and log structures that were to provide siltation control needed to be placed before fall rains washed ash and soil into the stream and increased flow and depth, making placement difficult if not impossible. Falling temperatures were also a concern be-

©1994, Commerce Clearing House, Inc.

Digitized by Google

cause epoxy glues to be used in anchoring the log structures are not effective at less than 40 degrees Fahrenheit. In addition, because of potential damage to eggs of the brown trout, the State of Oregon had agreed to waive a prohibition against machine activity in the stream only from October 26 to November 10, 1992. (AF 47; CO's Statement for AF p. 1.)

8. The CO therefore contacted All Terrain Excavating, which had submitted the next-low quote, $78 an hour. This firm began performance on October 27 and completed work on November 9, 1992, using 138 1/4 hours. (AF 41-46, 52; CO's Statement for AF p. 2.)

9. Appellant filed an agency-level bid protest which the Forest Service denied on November 3, 1992 (AF 48; CO's Statement for AF p. 2). On November 12, 1992, Appellant protested to the GAO, alleging that the Forest Service had accepted its bid on October 21, 1992. Appellant argued that because the RFQ called for work to begin within 10 calendar days of the effective date of a Notice to Proceed, its proposed starting date of November 2, 1992, should have been acceptable, and the CO's attempt to enforce an earlier date constituted an improper change in contract terms. Appellant sought $5,180 in lost profits, plus costs and attorney's fees. (AF 48-51.)

10. On December 3, 1992, the CO advised Appellant by telephone that the Forest Service would be willing to negotiate a termination for the convenience of the Government (AF 52-54).

11. Appellant provided the CO with a one-page summary of costs allegedly incurred in preparing to perform:

Transport excavator from West of Ukiah [CA.] to Burns Shop 178 miles @ $4	$712.00
Pilot Car 178 miles @ $.90	160.20
Labor (change bucket to 1 1/2 yard bucket) Shop time 4 hours @ $38	152.00
Bid Preparation	200.00
Two trips to John Day [OR.] to consult attorney 9 hours @ $50	450.00
Miscellaneous calls, fax, meals	150.00
TOTAL	$1,824.20

(AF 55.)

12. On December 14, 1992, the CO wrote Appellant stating that he accepted Appellant's position that the Government had entered into a "verbal contract" with Appellant and had then terminated the contract. He requested a documented termination proposal, separating costs incurred in pursuing the bid protest. (AF 62.)

13. On December 22, 1992, Appellant withdrew the bid protest, which had not yet been decided, on the basis of the CO's letter. Appellant again advised the CO that it was seeking lost profits of $5,900 plus $500 in attorney's fees (AF 63, 64). The CO sought clarification in view of the claim for $1,824.20 in expenses (AF 67). Appellant responded with an offer to settle for $6,400 ($5,900 + $500) (AF 68).

14. On March 4, 1993, the CO issued a final decision finding that Appellant had done no work under the contract, which had been entered into and terminated within a 2-day period. The CO quoted the FAR, 48 CFR § 49.202, which specifically states "Anticipatory profits and consequential damages shall not be allowed" on termination claims. The CO denied the claim for $5,900, but granted $500 for attorney's fees, noting that Appellant had received legal assistance and that the amount claimed appeared reasonable. (AF 76-81.)

15. In a Notice of Appeal dated April 26, 1993, Appellant seeks $5,900 in anticipated profits or, alternatively, $1,824.20 in costs of preparation for performance. Appellant also seeks an additional $750 in attorney's fees.

16. As indicated above, the Government has now filed a Motion to Dismiss, or in the alternative, a Motion for Summary Judgment. Appellant opposes.

DISCUSSION

There is no dispute that Appellant submitted the lowest quotation for the Fishhole Creek Rehabilitation Project, and that Forest Service officials orally advised Appellant of its status (Finding of Fact (FF) 5). The

Digitized by Google

only controverted facts in this case relate to proposed starting dates (FF 6). Interpreting these in the light most favorable to Appellant, as the non-moving party, we find that Appellant's equipment and operator would have been available on Friday, October 30, 1992, and that Appellant agreed to wait until the following Monday solely for the convenience of the Forest Service.

These actions, however, did not create a contract, or even an implied-in-fact contract. There was merely a request for prices and a discussion of Appellant's availability. *See RMTC Sys.*, AGBCA No. 88-198-1, 91-2 BCA ¶ 23,873. When the Government acquires goods or services valued at $25,000 or less from commercial sources under the FAR provisions covering small purchases, 48 CFR § 13.000, traditional roles regarding offer and acceptance are reversed. As clearly stated on Standard Form 18, the RFQ is for information only. The FAR describes the legal effect of quotations as follows:

> (a) *A quotation is not an offer and, consequently, cannot be accepted by the Government to form a binding contract* (see 15.402(e)).[1] Therefore, issuance by the Government of an order for supplies or services in response to a supplier's quotation does not establish a contract. The order is an offer by the Government to the supplier to buy certain supplies or services upon specified terms and conditions. A contract comes into being when the supplier accepts the offer.
>
> (b) When appropriate, the contracting officer may request the supplier to indicate acceptance of an order by notification to the Government, preferably in writing. In other circumstances, the supplier may indicate acceptance by furnishing the supplies or services ordered or by proceeding with the work to the point where substantial performance has occurred.
>
> (c) If the Government issues an order resulting from a quotation, the Government may (by written notice to the supplier, at any time before acceptance occurs) withdraw, amend, or cancel its offer.

(48 CFR § 13.108.) (Emphasis added.)[2]

Under this regulation, the Government remained free to withdraw its offer at any time until Appellant accepted. Appellant submitted no written acceptance; all communications were by telephone (FF 5, 6). Nor did Appellant furnish the requested excavator and operator, much less proceed to the point of substantial performance. Appellant apparently moved equipment from another job near Ukiah, California, back to its place of business in Burns, Oregon (FF 11). There is, however, no evidence that Appellant transferred the excavator from Burns to the project site near Bly, Oregon, a distance of more than 180 miles.[3]

The Government, moreover, was under no obligation to issue a purchase order to Appellant merely because it submitted the lowest quote (FF 4). Appellant's offer to begin work more than a week after the estimated starting date of October 23, 1992, was at best a counteroffer that the Government rejected. *Oak Ridge Precision Indus., Inc.*, EBCA No. 330-10-84, 85-2 BCA ¶ 18,035. The Government's withdrawal of the offer and discussions with the firm submitting the next-low quote therefore constituted neither a breach of contract nor a termination for the convenience of the Government.

In responding to the Government's Motions, Appellant asserts that the issue of whether a contract was formed is not even before the Board. "[T]he Government is now collaterally estopped from making this argument since it has already stipulated that a contract was awarded and formed in the GAO protest." As a result of this position, Appellant concludes, the protest was resolved as moot.[4]

The defense of estoppel is generally not available to parties relying on incorrect legal advice from Government officials. Considering the clear import of the FAR's small purchase procedures, the CO in this case was

[1] 48 CFR § 15.402(e) similarly states that a quotation received in response to an RFQ is not an offer, cannot be accepted by the Government to form a binding contract, and is informational in character.

[2] The Board called the attention of counsel for both parties to the FAR small purchase procedures during a telephone conference call on August 19, 1993. By letter dated August 27, 1993, counsel advised the Board that Appellant nevertheless wished to proceed with the appeal. (Correspondence File.)

[3] Rand McNally Road Atlas, 69th Ed. (1993).

[4] Appellant withdrew the protest prior to issuance of a GAO decision. Had the case been decided, there is no doubt the Comptroller General would also have found that no contract existed between Appellant and the Forest Service. *See Fed. Acquisition Management Training Serv.*, B-248171, B-248873, 92-2 CPD ¶ 214; *Data Vault Corp.*, B-248664, 92-2 CPD ¶ 166.

©1994, Commerce Clearing House, Inc.

Digitized by Google

legally incorrect in agreeing that an oral contract had been awarded and could be terminated for the convenience of the Government. We reject what is essentially the same argument, *i.e.,* that the CO stipulated a contract had been awarded to Appellant. The Board's review of CO decisions is *de novo;* a CO's findings of fact are not binding in any subsequent proceeding. 41 U.S.C. § 605(a); *Assurance Co. v. United States* [33 CCF ¶ 75,181], 813 F.2d 1202 (Fed. Cir. 1987). More importantly, while the Board generally accepts stipulations of the parties as to the facts, whether a contract came into being is a question of law, and the Board is not bound by the conclusions of the parties. *Federal Data Corp.,* GSBCA No. 8488-P, 1986 BPD ¶ 91.

Pursuant to our *de novo* review authority, we correct the CO's erroneous conclusion that the Forest Service orally awarded a contract for the Fishhole Creek Rehabilitation Project to Appellant. *Cf. Sefco Constructors,* VABCA No. 2747 *et al.,* 93-1 BCA ¶ 25,458 (CO erred in compensating contractor for supervisory labor expenses; Board corrects by disallowing the expenses). Appellant is not a "contractor" within the meaning of the Contract Disputes Act, 41 U.S.C. § 601(4); the CO's final decision on its claim was therefore a nullity; and we have no jurisdiction over an appeal from that decision. We do not reach Appellant's claims for termination costs and additional attorney's fees.

RULING

The appeal is dismissed for lack of jurisdiction.

[¶ 26,456] Buse Timber & Sales, Inc.

AGBCA Nos. 90-168-1, 90-200-1, October 29, 1993. Contract No. 069939.

Sales of Government Property—Timber Sales—Vandalism.—A timber sale contractor's timber-value loss recovery of the costs incurred in dealing with timber that was damaged by spikes placed by ecoterrorist vandals was not limited to the actual loss of volume, because the entire sale unit was affected by the spiking. The contractor's timber-value loss recovery claim included damages and downtime at its sawmill, the cost of labor and equipment for sorting logs in its log yard, and an administration cost consisting of wages and travel. The government did not show that the contractor failed to mitigate damages.

Sales of Government Property—Timber Sales—Timeliness of Claims.—A timber sale contractor's claim for the loss of volume resulting from tree spiking by ecoterrorist vandals was denied as untimely filed because the contractor failed to file its claim within 60 days of written notice that the sale was closed. The contractor sought to avoid the contract's time restrictions by bifurcating its claim into the previously submitted initial portion and a subsequent additional portion. However, the contractor's second submission was separate and distinct from the first and required a contracting officer's decision to determine its validity.

For the appellant: Saltman & Stevens, P.C., Washington, D.C., by Alan I. Saltman. For the government: Arno Reifenberg, Office of the General Counsel, U.S. Department of Agriculture, Portland, Oregon.

Before GISH, HOURY, and EATON, Administrative Judges.

GISH, Administrative Judge: These appeals arose out of a timber sale between the Forest Service (FS), U.S. Department of Agriculture, and Buse Timber & Sales, Inc. (Appellant). The sale was awarded to Appellant on May 5, 1988, and was completed in a satisfactory manner on May 19, 1989. The sale is identified as contract No. 069939 and called the Alpine II Buyout.

On September 30, 1988, after award but before all the timber had been removed from the sale area, Appellant discovered metal spikes in some of the trees remaining to be cut. These spikes appear to have been placed by vandals or what is described as "ecoterrorism," with the intent to disrupt timber harvesting in the area. Appellant submitted a claim (AGBCA No. 90-168-1) in the amount of $12,231.08 for costs incurred due to the spiking in the sale area. The Contracting Officer (CO) initially denied the claim in its entirety, but in a written decision dated December 19, 1989, reconsidered

Digitized by Google

and allowed $750 as an offer of settlement. This offer was rejected by Appellant, who appealed in a timely manner to the Board. By letter dated May 7, 1990, Appellant submitted another claim (AGBCA No. 90-200-1) to the CO in the amount of $3,749.76 for the loss of volume in logs that were spiked. The CO denied the claim on the basis that it had not been timely filed within the 60 days allowed by the contract for filing claims. Appellant timely appealed this decision to the Board.

The parties waived a hearing, submitted a joint statement of facts and filed briefs with attached declarations as agreed. The record consists of the Joint Statement of Facts, the declarations, and the Rule 4 Appeal File. The Board has jurisdiction under the Contract Disputes Act (CDA) of 1978 (41 U.S.C. § 601 *et seq.*).

FINDINGS OF FACT

Findings 1 through 21 are quoted directly from the parties' Joint Statement of Facts (JSF), which we adopt:

1. On May 19, 1988, the FS awarded the Alpine II Buyout timber sale, contract No. 069939, on the Skykomish Ranger District of the Mt. Baker-Snoqualmie National Forest, to Buse Timber & Sales, Inc. (Buse).

2. On September 30, 1988, after contract award, Buse discovered metal spikes in some of the trees remaining to be harvested on the sale area. The spiking occurred after contract award but before Buse removed the timber from the sale area.

3. Buse immediately informed the FS of the spiking.

4. Contract provision B8.11 specifies that title to the timber remains in the FS until the timber has been cut, scaled, removed from the sale area, and paid for by the timber purchaser.

5. At the time of the spiking, and of the damage caused thereby, and thus at the time of the timber value loss, the FS held title to the timber.

6. The damage to the timber was not caused by any fault or negligence on the part of Buse.

7. Upon discovering the spikes, Buse undertook special efforts to ensure the safe removal and processing of the spiked logs. Buse marked the logs remaining on the sale area so that it could segregate them from other logs at its mill yard.

8. Some logs from the area that was spiked had already been removed by Buse to its mill yard when the spiking was discovered. As a result of its discovery of the spiking, Buse had to separate out with heavy equipment the logs which it had previously harvested from the Alpine II sale areas so that it could manually review those logs, and the marked logs, with metal detectors.

9. Buse incurred costs for labor and equipment in the amount of $8,240.35 in order to perform these segregation and metal detection activities.

10. Fifty-six logs, each approximately 24 inches by 8 feet, were spiked.

11. The spikes were located approximately 5 feet from the butt of each log.

12. In order to remove the spikes, Buse made a V-cut in the center of each spiked log. This resulted in a loss of approximately 6 feet of lumber on one-half of each spiked log which Buse calculates as a loss of an average 124 board feet of lumber per log.

13. As a result of the presence of undetected spikes in the logs it processed through its mill, Buse's saw blades were damaged. This resulted in downtime of Buse's sawmill and excess labor costs in the amount of $3,701.73.

14. On June 19, 1989, Buse filed the initial portion of its claim with the contracting officer in the amount of $12,231.08. [Appellant's claim summary indicates this amount is composed of $3,701.73 from sawmill repairs and downtime, $8,240.35 for labor and equipment cost to sort the logs in the log yard, and $289 administrative costs (Appeal File (AF) pages (pp.) 4, 5).]

15. On July 31, 1989, the CO denied Buse's claim.

16. By letter dated December 4, 1989, the CO reconsidered his July 31, 1989 decision and again denied Buse's June 19, 1989 claim. In this letter, however, the CO proposed to settle the matter Buse [sic] for $750.

17. By letter dated December 8, 1989, Buse rejected the CO's settlement offer.

18. By letter dated December 19, 1989, the CO granted $750 of the $12,231.08 claimed by Buse and denied the rest.

19. By notice of appeal dated March 19, 1990, Buse appealed from the CO's final decision to this Board. The appeal was docketed as AGBCA No. 90-168-1.

©1994, Commerce Clearing House, Inc.

Digitized by Google

20. By letter dated May 7, 1990, Buse submitted the additional portion of its claim to the CO in the amount of $3,749.76.

21. By letter dated May 18, 1990, the CO declined to consider Buse's claim of May 18, 1990 on the grounds that it was untimely.

22. The contract contained the following provisions:

B8.11 Title Passage. All right, title, and interest in and to any Included Timber shall remain in Forest Service until it has been cut, Scaled, removed from Sale Area or other authorized cutting area and paid for, at which time title shall vest in Purchaser.

* * * * *

B8.12 Liability for Loss. If Included Timber is destroyed or damaged by fire, wind, flood, insects, disease or *similar cause*, the party holding title shall bear the timber-value loss resulting from such destruction or damage, except that such losses after removal of timber from Sale Area, but before scaling, shall be borne by Purchaser at Current Contract Rates and Required Deposits. There shall be no obligation for Forest Service to supply, or for Purchaser to accept and pay for, other timber in lieu of that destroyed or damaged. This subsection shall not be construed to relieve either party of liability for negligence.

(AF 40.) (Emphasis added.)

23. Upon discovery of the spikes, pursuant to FS policy, Appellant was given the option by the FS to leave the spiked timber, accept FS help in locating the spiked trees/logs or remove it at Buse's expense (AF 110). The Timber Sale Officer indicated that if the effort to find the spikes had been conducted in the sale unit it would have been a simpler and less costly effort than doing it in the mill yard (Declaration of Glen R. Katzenberger dated October 26, 1992).

24. Contract provision C9.21—Submission of Claims requires claims to be filed with the CO not later than 60 days after receipt of FS written notice that the sale is closed (AF 106). Appellant received written notice that the sale was closed and advice that any claim should be filed within 60 days on May 22, 1989 (AF 121).

DISCUSSION

Although some of the spiked logs were discovered at Appellant's mill (Finding of Fact (FF) 13), *i.e.*, after title passed, Appellant argues long and hard that so long as title to the timber remained in the FS when the damage or destruction occurred, the timber-value loss must be borne by the FS. It does not appear that the FS is in serious disagreement. Contract provision B8.12 is a risk allocation clause that places the risk of loss of the subject matter (timber-value) on the party holding title, except that such loss occurring after removal from the sale area and before scaling is to be borne by the purchaser at current contract rates plus deposits. We agree with Appellant that the location of the timber at the time of loss or damage, not the location when the damage is discovered, is determinative. Thus the loss in this instance is to be borne by the FS. (FF 22.) Determining the party to bear the loss is not the problem. The difficulty in this appeal is in determining what is or is not timber-value loss.

In *Ken Rogge Lumber Co.*, AGBCA No. 84-145-3, 84-2 BCA ¶ 17,381, we found that theft was a "similar cause" within provision B8.12 of the contract. In this case we find that vandalism is also a "similar cause" in that it is without the fault and beyond the control of either party. Accordingly, Appellant is entitled to the loss of value directly resulting from the spiking of the trees. If we were to apply the *Rogge* case narrowly to the present facts, Appellant would be limited to recovery of only the bid price times the actual loss of volume. Appellant did not claim this in its June 19, 1989, claim.

Appellant's June 19, 1989, claim is for damages and downtime at Appellant's sawmill, $3,701.73; for labor and equipment sorting logs in its log yard, $8,240.35; and an administration cost consisting of wages and travel, $289, a total of $12,231.08.

We conclude that when, as here, an entire sale unit is affected under the terms of B8.12, the reference to "timber-value loss" within the contract could include more than an actual loss of volume. Ideally, a timber-value loss would be reflected in the difference between a contract price without spikes and a contract price with spikes. We do not, however, have any record as to what that difference might be.

Under the somewhat unique facts of this case the costs claimed by Appellant appear to be comparable to increased costs to harvest the timber. These costs would be reflected in a purchaser's bid for the timber if the spiking had been known at that time. We do not hold that a purchaser may treat the problem when it is discovered later in any way it chooses. It is under the duty to

Digitized by Google

mitigate damages. The FS asserts that Appellant's dealing with the problem in the field might have resulted in lower costs. This would not, however, have affected the logs already moved into Appellant's mill yard prior to the discovery of the spiking. There is nothing in the record as to any less costly method to handle the situation other than a FS policy statement. FS policy, however, is not a part of the contract, and the Timber Sale Officer's affidavit indicating that not a great deal was required at the unit to identify the trees or logs that were spiked was not persuasive. Nor does it deal with the logs already at the mill. (FF 23.) The FS has not shown that Appellant failed to mitigate damages. We conclude in this instance that Appellant is entitled to the $12,231.08 for costs incurred in dealing with the spiked timber.

Appellant's $3,749.76 claim is for the loss of volume (124 board feet per log, 56 logs times 124 = 6,944 board feet). The CO declined to consider this claim on the basis that the contract required all claims to be filed within 60 days of written notice that the sale was closed. Appellant received such notice on May 22, 1989. The claim, however, is dated May 7, 1990.

Appellant seeks to avoid the contract time restrictions on presentation of claims by referring to its June 19, 1989, claim as the "initial" portion of its claim and the May 7, 1990, claim as the "additional" portion of its claim. The claim may not be bifurcated in such a manner. The claim submitted in 1989 neither mentioned nor gave any suggestion that an additional claim was to follow. A claim must state a sum certain, be the subject of a CO's decision, and involve the same operative facts. Appellant's second submission was separate and distinct from the first and required the CO to consider different operative facts to determine that claim's validity. We find the 1990 claim falls within the restrictions of the contract provisions regarding timely presentation of claims to the CO (FF 22). Such restrictions are valid and have been enforced by this Board and the U.S. Court of Appeals for the Federal Circuit. *Do-Well Mach. Shop, Inc., v. United States* [35 CCF ¶ 75,633], 870 F.2d 637, (Fed. Cir. 1989); *William E. Swart, dba TDS Logging,* AGBCA No. 91-111-1, 92-1 BCA ¶ 24,510; *Malhuer Lumber Co.,* AGBCA No. 87-398-3, 91-1 BCA ¶ 23,545; *P & M Cedar Prod.,* AGBCA 85-276-3, 86-2 BCA ¶ 18,947.

Although we need not decide the damages for the loss of volume claim we note Appellant has claimed lumber product value for sales in Japan, which is neither a loss in scale volume nor a measure of timber-value loss. Moreover, Appellant has not shown that the amount claimed as a loss of timber volume would have been a deduction from the scaling cylinder at the time of scaling if the spiking had been known at that time.

This claim is denied as untimely filed.

DECISION

Appeal No. AGBCA 90-168-1 is allowed in the amount of $12,231.08.

Appeal No. AGBCA 90-200-1 is denied.

ASBCA No. 46047, October 21, 1993. Contract No. DAAK70-87-C-0036.

Payments, Prompt—Interest—Effect of Settlement Agreement.—Although the government was delayed in obtaining funding to pay a contractor the agreed amount for the settlement of a convenience termination claim, the contractor was not entitled to receive Prompt Payment interest prior to the execution of the contract modification incorporating the settlement agreement, because the agreement made payment dependent on the execution of the modification. The parties had negotiated and reached the settlement amount on the premise that payment would be made by a certain date, but the government was delayed in obtaining the needed funding. The contractor contended that the PPA interest penalty accrued while the modification awaited execution. However, the board, having noted that there was no date recited in the agreement for payment, concluded that the payment of PPA interest was contingent upon the execution of the modification. This conclusion was consistent with the requirements under the Termination for Convenience clause.

For the appellant: Israel and Raley, Washington, D.C., by Charles E. Raley. For the government: Col. Riggs L. Wilks, Jr., JAGC., Chief Trial Attorney, and Maj. Terry L. Elling, JAGC, Trial Attorney.

Before BURG and RUBERRY, Administrative Judges.

BURG, Administrative Judge: Appellant filed a timely appeal from the contracting officer's decision denying its claim for Prompt Payment Act (PPA) interest for alleged late payment of the amount which the parties had agreed by written settlement agreement appellant should receive in settlement of two appeals pending before this Board. Since the amount involved in this appeal is less than $50,000, appellant has elected to have this appeal processed on an accelerated basis pursuant to Board Rule 12.3. The Government filed a Motion for Summary Judgment on the basis that appellant's invoice submitted prior to issuance of the unilateral contract modification was not a "proper invoice" for PPA interest purposes and, since payment was made before receipt of another invoice, no PPA interest is due. Appellant opposes the Government's Motion for Summary Judgment and has filed a Cross Motion for Summary Judgment. Only entitlement is before the Board.

FINDINGS OF FACT

On 3 December 1992 the parties agreed to a convenience termination settlement of two appeals then pending before this Board, ASBCA No. 43396, a partial default termination of the contract, and ASBCA No. 44184, a deemed denial of a convenience termination settlement claim. The settlement amount of $3,247,563 included an amount for Contract Disputes Act (CDA) interest calculated to 31 December 1992. The parties finalized the written agreement on 14 December 1992. It recited, in pertinent part, the following:

> ARTICLE I. The Government agrees to pay the Contractor the sum of three million two hundred and forty-seven thousand and five hundred and sixty-three dollars ($3,247,563.00) in full satisfaction of the Contractor's claims under ASBCA Nos. 43396 and 44184 and in full satisfaction of any and all remaining matters arising under Contract No. DAAK70-87-C-0036 within 30 days [sic] after the execution of the Contract Modification which incorporates this Agreement.

(R4, tab 1) The crossed-out phrase in Article I of the settlement agreement was the last revision made to the agreement and was made by striking out the words "within 30 days" and initialling in the margin. Appellant signed the settlement agreement on 14 December 1992 and forwarded it to the contracting officer on that date along with its final Invoice in the amount of $3,247,563.

The parties understood and agreed that the modification would be promptly issued and that PPA interest penalty on the amount due under the settlement agreement would commence if the payment was not timely made (Complaint and Answer ¶ 5). The letter of transmittal, dated 14 December 1992, stated:

> We understand that, immediately upon receipt, you will also sign and date the enclosure, sign a unilateral Modification, and submit the enclosed Invoice for a prompt payment.

(R4, tab 10) The contracting officer signed the settlement agreement on 17 December 1992 and returned it to appellant to initial the revision deleting the crossed-out phrase, *supra*. Appellant initialed this revision and returned the fully executed agreement along with a "Duplicate" of its 14 December 1992 invoice and a letter of transmittal concerning same on 18 December 1992. Since there were insufficient funds remaining in the contract to pay the amount due under the settlement agreement, on 16 December 1992 the contracting officer requested funds at the earliest possible date, preferably by close of business on 23 December 1992, making it quite clear that it was important to provide funding promptly and indicating that the Government might be required to pay interest if payment was delayed. (R4(b), tab 11)

On 10 February 1993, in response to a request from the Government trial attorney, appellant submitted a Certificate of Current Cost and Pricing Data, protesting that it was not required when there was a "ligitation settlement." Because of an unexplained delay in obtaining funds, the contracting officer did not issue a unilateral modification incorporating the settlement agreement until 19 February 1993. She then immediately submitted appellant's final invoice for payment. Due to a posting error by the Government against this contract, there again were insufficient funds to pay the total amount set forth in the settlement agreement. On 11 March 1993 the Government issued a check for partial payment in the amount of $3,216,596.55, leaving a balance due under the agreement of $30,966.45. Appellant received the partial payment on 22 March 1993. No PPA interest penalty was included in the payment. The remaining $30,966.45 was paid appellant by check dated 6 May 1993. Appellant submitted no final invoice after the 18 December 1992 submittal.

Digitized by Google

The PPA was enacted in 1982 and amended in 1988. The parties entered into the instant contract in July 1987, prior to the effective date of the PPA Amendment of 1988. The Director of the Office of Management and Budget issued implementing regulations to the original PPA, OMB Circular A-125 (Circular A-125), dated 25 August 1982.* Pertinent portions are set forth below:

3. *Policy.* Agencies will make payments as close as possible to, but not later than, the due date .... Payment will be based on receipt of proper invoices and satisfactory performance of contract terms.... Agencies will pay interest penalties ... without the need for business concerns requesting them ....

4. *Definitions.* For purposes of this circular, the following definitions apply:

* * * * *

i. *Due date*—the date on which Federal payment should be made. Determination of such dates is discussed in section 7 of this circular.

* * * * *

m. *Proper invoice*—a bill or written request for payment provided by a business concern for property or services rendered. A proper invoice must meet the requirements of Section 6.b. of this Circular.

* * * * *

6. *Payment Standards.* Payments will be made as close as possible to, but not later than, the due date following receipt of a proper invoice and acceptance of the property or services consistent with Treasury regulations (I Treasury Financial Manual 6-8040.20). To establish adequate documentation to support payments of interest penalties, the following information must be included in contract, invoices, and receiving reports.

* * * * *

b. A proper invoice must include:

—Name of the business concern and invoice date.

—Contract number, or other authorization for delivery of property or services.

—Description, price, and quantity of property and services actually delivered or rendered.

—Shipping and payment terms.

—Other substantiating documentation or information as required by the contract.

—Name where practicable, title, phone number, and complete mailing address of responsible official to whom payment is sent.

Invoices received by the designated billing office will be stamped or otherwise annotated with the date received in that office. Notice of apparent error, defect, or impropriety in an invoice will be given to a business concern within 15 days of receipt of an invoice ... and suitably documented.

* * * * *

7. *Determining Due Dates.* Payment will be made as close as possible to, but not later than, the thirtieth day after receipt of an invoice as defined in Section 4.n. of this circular, except as follows:

—In those limited circumstances when a specific payment date is provided for in the contract, payment will be made as close as possible to, but not later than, that date.

* * * * *

8. *Payment of Interest Penalty.*

a. An interest penalty will be paid automatically when due without regard to whether the business concern has requested payment when all of the following conditions are met:

—There is a contract or purchase order with a business concern.

—Acceptance of property or services has occurred and there is no disagreement over quantity, quality, or other contract provisions.

—A proper invoice has been received ... or the agency fails to give notice that the invoice is not proper within 15 days of receipt of an invoice ....

—Payment is made to the business concern more than 15 days after the due date ....

* * * * *

c. Interest penalties are not required when payment is delayed because of a disagreement between a Federal agency and a business concern over the amount of the payment or other issues concerning compliance with the terms of a contract .... Claims concerning disputes, and any inter-

* Appellant has based its arguments on the provisions of the PPA as amended in 1988 and regulations and amendment to A-125 as a result of such amendments. Regulations issued following enactment of the 1988 Amendments to the PPA would not be applicable to this appeal since the contract was awarded prior to the effective date of those amendments.

©1994, Commerce Clearing House, Inc.

Digitized by Google

est that may be payable with respect to the period while the dispute is being settled will be resolved in accordance with the provisions in the Contract Disputes Act of 1978 (41 U.S.C. § § 601 *et seq.*).

9. *Calculation of Interest Penalties.* Whenever a proper invoice ... is paid after the due date plus 15 days ... interest will be included automatically with the payment of the interest rate applicable on the payment date without regard to whether the business concern has requested payment....

* * * * *

—When an agency fails to make notification of an improper invoice within 15 days ..., the number of days allowed for payment of the corrected, proper invoice will be reduced by the number of days between the fifteenth day and the day notification was transmitted to the business concern. Calculation of interest penalties, if any, will be based on an adjusted due date reflecting the reduced number of days allowable for payment.

Interest penalties under the Prompt Payment Act will not continue to accrue: (1) After the filing of a claim for such penalties under the Contract Disputes Act of 1978, or (2) for more than one year. Interest penalties of less than one dollar need not be paid.

No Prompt Payment clause appeared in the FAR until after this contract was executed. The applicable provision would have been the Invoice clause (52.232-7000) which was required pursuant to DOD FAR Supplement 33.070. It provided that

33.070 Contract Clause.

(a) The Prompt Payment Act (Public Law 97-177) provides that a contractor will be paid interest penalties when certain payments by the Government are not made on time or when discounts are taken for payments that are not made within the discount period. The act applies to payments made on contracts awarded on or after 1 October 1982. Under the act, interest penalties are due if the contractor is not paid for delivery of complete items of supplies within 15 days after the required payment date .... Claims for interest penalties not paid may be made under the Contract Disputes Act.

(b) The required payment date for purposes of the Prompt Payment Act is the date on which payment is due under the terms of the contract or, if a specific date on which payment is due is not established by the contract, 30 days after the later of the date on which a proper invoice is received in the designated paying office or the date on which supplies or services are accepted....

(c) Interest penalties begin to accrue on the day after the required payment date and end on the date on which payment of the amount due is made. Interest penalties do not continue to accrue under the Prompt Payment Act after the filing of a claim for such penalties under the Contract Disputes Act or for more than one year. Interest penalties also do not accrue under the Prompt Payment Act when payment is not made within the prescribed period after the required payment date because of a dispute over the amount of the payment or other allegations concerning compliance with the contract.

The Invoice clause provided the following:

INVOICES (OCT 1982)

(a) An invoice is a written request for payment under the contract for supplies delivered or for services rendered. In order to be proper, an invoice must include as applicable the following:

(1) invoice date;

(2) name of contractor;

(3) contract number (including order number, if any), contract line item number, contract description of supplies or services, quantity, contract unit of measure and unit price, and extended total;

(4) shipment number and date of shipment (bill of lading number and weight of shipment will be shown for shipments on Government bills of lading);

(5) name and address to which payment is to be sent (which must be the same as that in the contract or on a proper notice of assignment);

(6) name (where practicable), title, phone number and mailing address of person to be notified in event of a defective invoice; and

(7) any other inforamtion [sic] or documentation required by other provisions of the contract (such as evidence of shipment).

(b) For purposes of determining if interest begins to accrue under the Prompt Payment Act (Public Law 97-177):

(1) a proper invoice will be deemed to have been received when it is received by the office designated in the contract for receipt of invoices and acceptance of the

Digitized by Google

supplies delivered or services rendered has occurred;

(2) payment shall be considered made on the date on which a check for such payment is dated;

(3) payment terms (e.g., "net 20") offered by the Contractor will not be deemed a "required payment date;" and

(4) the following periods of time will not be included

(i) after receipt of an improper invoice and prior to notice of any defect or impropriety, but not to exceed 15 days (or any lesser period established by this contract); and

(ii) between the date of a notice of any defect or impropriety and the date a proper invoice is received. When the notice is in writing, it shall be considered made on the date shown on the notice.

Appellant's final invoice complied with the requirements of the Invoice clause, *supra*. In her decision of 30 April 1993, the contracting officer determined that the invoice submitted by appellant on 14 December 1992 and resubmitted on 18 December 1992 did not become a "proper invoice" until the contract modification of 19 February 1993 incorporating the settlement agreement. It was not until briefing in this appeal that the Government raised the issue that no "proper invoice" was ever submitted by appellant since no invoice was submitted after the contract modification was issued.

On 29 March 1993 appellant filed a claim for PPA interest penalty on $3,216,596.55 from 16 January 1993 (30 days after execution of the settlement agreement) to 11 March 1993 and on $30,966.45 to the date of the claim, 29 March 1993. Appellant also sought an additional $5,000 PPA penalty because the interest penalty claimed in connection with the partial payment was not paid within 10 days of the partial payment. By final decision, dated 30 April 1993, the contracting officer denied appellant's claim for PPA interest penalty and for the additional $5,000 penalty on the $3,216,596.55 since it was paid within 30 days of the execution of the contract modification, 19 February 1993, upon which date, in the contracting officer's opinion, appellant's invoice became a "proper invoice." The contracting officer's decision also concluded that PPA interest penalty was due on $30,966.45 from 22 March 1993 until paid. Appellant filed a timely appeal seeking PPA interest penalty on the $3,216,596.55 from 16 January 1993 to 11 March 1993 and on the unpaid balance until 29 March 1993 and CDA interest thereafter and for payment of a $5,000 PPA penalty. The contract is subject to both the PPA and the CDA.

One of the factors which delayed resolution of the settlement agreement between 3 and 14 December 1992 was concern of appellant's counsel that relating the payment of interest to the execution of the contract modification would permit the contracting officer to control when any PPA interest penalty would begin (R4(b), tab 7). Affidavits by appellant's counsel submitted with its Cross Motion for Summary Judgment state (1) that language concerning interest if payment was not received by 31 December 1992 or shortly thereafter was causing difficulty in drafting the settlement agreement and was eliminated from the agreement because of representation by Government counsel that PPA interest penalty would apply if payment was not received by 31 December 1992 or shortly thereafter, and (2) that Government counsel acknowledged in a telephone call from appellant's counsel in February 1993 that interest was accruing, that the Government was not "playing games" and, should the agency refuse to pay PPA interest penalty, he would not support the agency in any appeal that appellant was required to file. In the reply to appellant's cross motion, Government counsel noted in a footnote that Government representatives had no intention of behaving in other than an honorable manner and that any statements by counsel concerning accruing of interest penalty were in the mistaken belief that the contract modification had been executed and that respondent "regrets any confusion this caused on Appellant's part, but denies that the delay in executing the modification can now serve as a basis for Government liability."

DECISION

We grant summary judgment when no material facts are in dispute and the moving party is entitled to judgment as a matter of law. No material facts are in dispute in this appeal. The question which must be decided is when payment was due under the facts here present. Appellant argues that this was within 30 days following the effective date of the settlement agreement by the parties (16 January 1993) which was after the date of submittal of its final invoice based on the settlement agreement. The Government argues that appellant never submitted a "proper invoice" since no invoice was submitted after execution of the contract modi-

Digitized by Google

fication and that the contracting officer's decision that PPA interest penalty applied to the $30,966.45 was in error since appellant never submitted a "proper invoice" as defined by the regulations and OMB Circular A-125 implementing the PPA. Alternatively, the Government argues that, should we conclude a proper invoice was filed, the earliest payment became due was 30 days after issuance of the contract modification incorporating the settlement agreement, and that, since payment of $3,216,596.55 occurred within that 30 days, any PPA interest penalty would only apply to the $30,966.45.

It is clear that the parties negotiated and reached the settlement amount on the premise that payment would be made by 31 December 1992 or shortly thereafter. The primary question which we must resolve is whether the delay in obtaining proper funding to pay the agreed amount extended the permissible date of payment beyond that contemplated by the parties. We have set forth in our findings those portions of the applicable Circular A-125 and clause which we feel pertinent to our decision. The parties argued the merits of this appeal based on the PPA as amended in 1988 and the OMB Circular A-125 issued implementing the amended Act. Since this contract was executed prior to the effective date of the amended PPA and the implementing regulations, our decision is based on the statute and regulations in effect at the time the contract was executed, namely, the 1982 PPA and Revised OMB Circular A-125 (FR Doc. 87-13252 filed 6-8-87).

The language of the settlement agreement was negotiated between the parties and could have been more specific. The critical language is that found in Article I of the settlement agreement, read after the elimination of the phrase "within 30 days" so it read as follows:

> The Government agrees to pay the Contractor ... in full satisfaction of the Contractor's claims under ASBCA Nos. 43396 and 44184 and in full satisfaction of any and all remaining matters arising under Contract No. DAAK70-87-C-0036 *after the execution of the Contract Modification which incorporates this Agreement.* [Emphasis added]

The settlement agreement did not recite the date for payment. It did make payment dependent on the execution of the contract modification incorporating the agreement. That event occurred on 19 February 1993. Appellant submitted its final invoice on 14 December 1992 and resubmitted it with the settlement agreement on 18 December 1992. It was not notified that its final invoice was not proper within the fifteen days after receipt required by Circular A-125. Not until the Government's Motion for Summary Judgment, long after payment has been made, was appellant's invoice challenged as not being a "proper invoice" because it was submitted prior to the execution of the contract modification. In our view appellant's final invoice met all the requirements of the Invoice clause, *supra,* and we have so found. This was also the view of the contracting officer as recited in her decision denying appellant's request for interest penalty where she concluded that appellant's invoice became a "proper invoice" for payment upon the execution of the contract modification. To hold otherwise would put form over substance.

Since the earliest indication appellant's invoice was not a "proper invoice" at the time it was submitted was the issuance of the contracting officer's decision on 30 April 1993, this was well after the 15-day requirement for notification of improper invoice established by Circular A-125. Under Paragraph 9 of A-125 the number of days allowed for payment must be reduced by the number of days between the fifteenth day after submittal of the invoice, 18 December 1992, and the day notification was transmitted to appellant, 30 April 1993. *Cf. Bruce-Anderson Co., Inc.,* ASBCA No. 34489, 88-1 BCA ¶ 20,355. Since this period was in excess of the 45 days permitted for payment under the 1982 PPA, we conclude that payment became due immediately upon execution of the contract modification incorporating the settlement agreement, 19 February 1993.

In reaching our conclusion we have considered various contract clauses and provisions of the Federal Acquisition Regulation (FAR) not discussed by the parties but which bear on our result, some of which we indicate below. Since the settlement reached by the parties was a termination for convenience the various requirements under the Termination for Convenience clause and regulations pertaining to a termination for convenience are relevant. These include (1) the FAR 49.001 definition of "Settlement agreement" which requires a "written agreement in the form of an amendment to a contract"; (2) FAR 49.109-1 requiring execution of a termination settlement by the contractor and the termination contracting officer (TCO) on Standard Form 30; (3) FAR

Digitized by Google

49.112-2 requiring a contractor to submit a voucher or invoice after execution of a settlement agreement; (4) Subparagraph (e) of the Termination for Convenience clause, FAR 52.249-2, requiring the contract to be amended and the contractor paid the agreed amount; (5) the requirement for a Certificate of Current Cost of Pricing Data required by FAR 15.804-4(h); and (6) FAR 43.103 and 301 which require that SF 30 shall be used to reflect supplemental agreements. The Payment clause (FAR 52.232-1) which requires the Government to pay upon submittal of a proper invoice the *price stipulated in the contract* also required the contract to be amended to reflect the new contract price before payment could be made. That the parties may have intended a different result does not permit us to ignore these various requirements or to reform the contract to reflect this mistake in law. The settlement agreement could have been prepared to provide for the contingency of delay in issuing the contract modification on SF 30. It did not do so.

The Government's Motion for Summary Judgment is denied. Appellant's Cross Motion for Summary Judgment is granted in part and denied in part. Appellant is entitled to PPA interest penalty on $3,216,596.55 from 20 February 1993 until payment was made on 11 March 1993 and on the remaining unpaid balance of $30,966.45 until receipt by the contracting officer of appellant's claim of 29 March 1993. Thereafter, CDA interest is due on the unpaid balance until date of payment, 6 May 1993, and on the entire unpaid PPA interest penalty until paid. Since, as previously noted, the 1987 contract involved in this appeal was subject to the 1982 PPA and not to the PPA as amended in 1988, appellant is not entitled to the $5,000 penalty for the Government's failure to make timely payment.

The appeal is sustained to the extent indicated above.

[¶ 26,458] Eurostyle Incorporated

ASBCA No. 45934, October 20, 1993. Contract No. DMA700-91-C-0032.

Contract Disputes, Claims—Nonmonetary Claim—Incorporation of Monetary Claim.—A contractor's claim for a time extension did not assert a demand for money, even though the contractor contended that the claim for the time extension incorporated by reference prior correspondence sent to the contracting officer that set forth the amount of the monetary demand, because the claim did not specifically incorporate any monetary claims. The fact that the claim was certified did not transform it into a claim for the payment of money.

Contract Disputes, Certification—Adequacy—Correction of Defect.—A contractor's letter that submitted additional documentation in support of an earlier claim for a time extension did not serve as a valid monetary claim, because the contractor did not include any certification with the letter, a defect that could not be corrected under the Federal Courts Administration Act of 1992. Although the Federal Courts Administration Act amended the certification requirements of the CDA so that a certification defect does not act to deprive a court or a board of contract appeals of jurisdiction, the board concluded that the complete absence of a certification was a defect that could not be corrected under the Act. A claim submitted to a contracting officer without a certification renders the claim invalid and precludes the board from exercising jurisdiction.

For the appellant: Lloyd Pooker, Vice President. For the government: Larry J. Olson, Assistant General Counsel, Defense Mapping Agency, St. Louis, Missouri.

Before RUBERRY, RIISMANDEL, and TING, Administrative Judges.

RUBERRY, Administrative Judge: This appeal arises under a fixed-price contract to renovate and repair a dining hall facility at the Defense Mapping Agency Aerospace Center in St. Louis, Missouri. Appellant timely appealed from a final decision of the contracting officer denying appellant's request for an extension of time to perform and assessing liquidated damages. The Government moves to strike portions of the complaint, alleging that appellant's demand for monetary compensation has not been

©1994, Commerce Clearing House, Inc.
Digitized by Google

submitted to the contracting officer in accordance with the Contract Disputes Act of 1978 (CDA), 41 U.S.C. §§ 601-613. Appellant has responded in opposition.

STATEMENT OF FACTS

The above-referenced contract was awarded to appellant on 26 September 1991 (R4, tab 83). The contract included the standard LIQUIDATED DAMAGES-CONSTRUCTION clause (APR 1984), FAR 52.212-5. The liquidated damage rate was $165 for each day of delay. On 15 October 1991, appellant received the notice to proceed, establishing 10 August 1992 as the contract completion date.

Delays occurred in construction, most notably involving the foundation work. By letter dated 14 September 1992, appellant requested a time extension of 161 calendar days (to 18 January 1993) and $125,907.30 for alleged Government caused delays (R4 Supp., tab 105). Included was a list of critical delay causing events and a breakdown of appellant's costs with supporting documentation. By letter dated 11 November 1992, appellant reiterated its previous request and proposed meeting with the Government in order to "resolve this matter as to time and money." (R4 Supp., tab 119)

On 1 December 1992, the Government issued unilateral Modification P00024, establishing 24 December 1992 as the new contract completion date for all work except the installation of the serving line equipment which was to be completed no later than 31 January 1993 (R4, tab 17). The modification warned that liquidated damages would be assessed for performance beyond those dates. Further, it stated that appellant would receive "an equitable adjustment for the time extension at a later date."

By letter dated 3 December 1992, appellant objected to the 24 December completion date of Modification P00024 and requested to be fully compensated for delays through 31 January 1993 (R4 Supp., tab 125). On 10 December 1992, appellant submitted a claim to the contracting officer for 38 additional calendar days (an extension to 31 January 1993) and requested a final decision (R4, tab 12). The claim was accompanied by a properly-worded certification, executed by Lloyd Pooker, Vice President. However, no mention was made in the 10 December submission of any monetary claim.

By letter dated 16 December 1992, appellant submitted additional documentation in support of its "equitable adjustment on the time extension" and provided a "cost recap of the monies claimed." The total cost based on a 31 January 1993 contract completion date (excluding home office overhead expenses) was $108,748.16. No certification accompanied this letter. (R4 Supp., tab 127)

On 30 December 1992, the Government notified appellant that in accordance with Contract Modification P00024 and the contract's liquidated damages clause, effective 25 December 1992, liquidated damages had begun and would continue until all work (except the installation of the service line equipment, which was to be completed by 31 January 1993) had been completed (R4, tab 3B).

The Government considered the contract work complete on 12 February 1993. By final decision of that same date, the contracting officer denied an extension of time beyond 24 December 1992 and determined that assessment of liquidated damages "is proper" (R4, tab 5). The decision did not address appellant's entitlement to any damages for delay.

By letter dated 22 February 1993, the contracting officer notified appellant that liquidated damages were assessed for the period 25 December 1992 through 11 February 1993, at $165 per day, for a total of $8,085 (R4, tab 3A). Unilateral Modification P00032, dated 4 March 1993, formally assessed the liquidated damages and decreased the contract price by that amount (R4, tab 3).

Appellant filed a timely notice of appeal from the 12 February final decision. Appellant indicated that it was seeking: (1) a contract time extension from 24 December 1992 until 12 February 1993 (50 calendar days), (2) remission of liquidated damages, and (3) monetary compensation for time, labor, and material costs from 10 August 1992 to 12 February 1993, estimated at $176,000. Appellant's complaint reasserted its demand for an extension of time and specified $174,132.47 plus interest as its requested monetary relief. That figure includes the $8,085 liquidated damages assessment.

CONTENTIONS OF THE PARTIES

The Government contends that appellant's claim sought only an extension of time for the completion of the contract and did not demand the payment of money. It asserts that as a consequence, the issue of appellant's entitlement to delay damages is beyond the scope of this appeal. In addition, the Government argues that at the time ap-

Digitized by Google

pellant filed its claim with the contracting officer, the parties were not yet in "dispute" over appellant's possible entitlement to an equitable price adjustment.

Appellant contends that it did assert a monetary claim in its 10 December 1992 letter. Appellant argues that the claim incorporated by reference prior correspondence sent to the contracting officer which set forth in detail the amount of money requested. Appellant asserts that the contracting officer's failure to render a decision on its monetary claim is essentially a deemed denial of the claim, an appeal from which the Board has jurisdiction.

DECISION

The CDA requires that "[a]ll claims by a contractor against the Government relating to a contract shall be in writing and shall be submitted to the contracting officer for a decision." 41 U.S.C. § 605(a). Further, monetary claims in excess of $50,000 must be properly certified. 41 U.S.C. § 605(c)(1). In *Ebasco Environmental,* ASBCA No. 44547, 93-3 BCA ¶ 26,220 (9 July 1993), we stated:

> In determining whether or not appellant submitted a "claim" within the meaning of the CDA, we employ a "common sense" analysis. *Transamerica Insurance Corp. v. United States* [38 CCF ¶ 76,374], 973 F.2d 1572, 1579 (Fed. Cir. 1992). "All that is required is that the contractor submit in writing to the contracting officer a clear and unequivocal statement that gives the contracting officer adequate notice of the basis and amount of the claim." *Contract Cleaning Maintenance, Inc. v. United States,* 811 F.2d 586, 592 (Fed. Cir. 1987).

Appellant's claim submitted to the contracting officer on 10 December 1992 clearly and unequivocally sought a contract time extension of 38 calendar days, *i.e.,* until 31 January 1993. What the claim did not do is assert any demand for money. Even though appellant referenced earlier meetings and correspondence in its 10 December claim, it did not specifically "incorporate" any monetary claims. Under the circumstances, we cannot expect the contracting officer to be put on notice of appellant's request for money. The fact that the claim was certified does not transform it into a claim for payment of money.

Appellant's 16 December 1992 letter also fails to serve as a valid monetary claim under the CDA. Although requesting over $50,000, appellant did not provide any certification with that letter. The certification which accompanied the 10 December claim did not relate to a monetary claim. Nor may such an earlier certification be applied to a later claim. *Davey Compressor Co.,* ASBCA No. 43893, 92-3 BCA ¶ 25,096 at 125,128; *Santa Fe Engineers, Inc.,* ASBCA No. 36292, 92-2 BCA ¶ 24,795 at 123,682.

The Federal Courts Administration Act of 1992, P.L. No. 102-752, § 907(a), 106 Stat. 4506, 4518 (29 October 1992), amended the certification requirements of the CDA, 41 U.S.C. § 605(c), so that "a *defect* in the certification of a claim shall not deprive a court or an agency board of contract appeals of jurisdiction over that claim." [Emphasis added] However, the complete absence of any certification is not a mere defect which may be corrected under the Act in order for the Board to retain jurisdiction. To hold otherwise would ignore and circumvent the legislative purpose of the certification requirement. *See Ingalls Shipbuilding, Inc. v. O'Keefe* [38 CCF ¶ 76,470], 986 F.2d 486 (Fed. Cir. 1993). Therefore, in clearly distinguishing between a defective certification and a "claim" submitted to a contracting officer unaccompanied by any certification, we note that the latter occurrence continues to render a claim invalid and precludes the Board from exercising jurisdiction. *Applied Science Associates, Inc.,* EBCA No. 9301146, 26 March 1993.

In *Skip Kirchdorfer, Inc.,* ASBCA Nos. 40515 *et al.,* 93-3 BCA ¶ 25,899 at 128,834, we stated:

> [T]he proper scope of an appeal processed under the CDA involving a contractor's claims against the Government "is circumscribed by the parameters of the claim, the contracting officer's decision thereon, and the contractor's appeal therefrom." *Stencel Aero Engineering Corp.,* ASBCA No. 28654, 84-1 BCA ¶ 16,951 at 84,315....
>
> Moreover, the appeal's scope cannot be enlarged by the pleadings. Matters extraneous to the foregoing parameters, "raised by a party in its pleadings ..., are outside the purview of the appeal and beyond our jurisdiction." *Magnavox Government and Industrial Electronics Co.,* ASBCA No. 32834, 91-2 BCA ¶ 23,758 at 118,989.

As we have noted, appellant submitted a valid claim for an extension of time. It was denied by the contracting officer's final decision and a proper appeal was noticed therefrom. The Government does not contest this issue. Appellant also filed a proper appeal from the contracting officer's final decision and the contract modification assessing

©1994, Commerce Clearing House, Inc.

Digitized by Google

liquidated damages. However, we have determined that appellant did not submit to the contracting officer a monetary claim for delay damages. Accordingly, the issue of appellant's entitlement to payment of money (aside from appellant's demand for remission of liquidated damages) is beyond the scope of the appeal and must be stricken from the complaint.

CONCLUSION

The Government's motion to strike is granted in part. Only appellant's entitlement to a time extension and the Government's assessment of liquidated damages are before the Board for adjudication. All references to appellant's claim for payment of money due to alleged Government-caused delays are stricken from the complaint. This action is without prejudice to appellant's right to submit a proper monetary claim to the contracting officer and to timely appeal from an adverse decision or failure to render a decision.

[¶ 26,459] J.W. Creech, Inc.

ASBCA Nos. 45317, 45454, October 26, 1993. Contract No. N62470-86-C-6125.

Liquidated Damages—Substantial Performance—Summary Judgment.—The propriety of the assessment of liquidated damages for the failure to complete a building could not be summarily determined in favor of the contractor, because the fact question of whether the contractor was required to hang shielded doors for substantial completion remained unresolved. Under a contract for the construction of a high-altitude electromagnetic pulse-shielded building, the contractor contended that the government should have established a beneficial occupancy date in July 1990 because, after that date, the government was able to award follow-on contracts to various third parties, and the contractor performed no more significant work on the project. However, all justifiable inferences are to be made in favor of a nonmovant in opposition to a motion for summary judgment. The government stated that the purpose of the project was to provide and secure the building, complete and ready for use, and that without the doors, the shield was not properly functional. Thus, a reasonable fact finder could possibly decide the question of substantial completion in favor of the government.

Liquidated Damages—Propriety of Assessment—Concurrent Delays.—The propriety of the assessment of liquidated damages for a period of government-caused delay could not be summarily determined, because the fact question with respect to whether there was a causal connection between the contractor's delay in substantially completing a contract and the government's actions was relevant and material. Under a contract for the construction of a high-altitude electromagnetic pulse-shielded building, the contractor sought a summary judgment, averring that any delay by the contractor was concurrent with government-caused delay and that therefore the assessment of liquidated damages was improper. The contractor's motion for summary judgment was denied because a reasonable fact finder could decide the question of "causal connection" in favor of the government.

Performance—Specifications—Performance v. Design Requirements.—The government's contention that a contractor was precluded, as a matter of law, from recovering an equitable adjustment for a purported defective specification inasmuch as the contract contained a performance rather than a design specification was denied because the basis for the claim was not a defective specification. Under a contract for the construction of a high-altitude electromagnetic pulse-shielded building, the contractor contended that the building, as designed by the government, incorporated a large variety of dissimilar metals, possessed a negative air pressure, and had stray currents. The basis for the claim was that the overall building design caused corrosion and attenuation problems and that the direction to perform extra work was a contract change. Thus, there was no straightforward defective corrosion specification claim upon which the government could obtain partial summary judgment by pointing to the existence of a performance specification. The labeling of the specification provisions as performance or design would not resolve the claim.

For the appellant: Hofheimer, Nusbaum, McPhaul & Samuels, P.C., Norfolk, Virginia, by Beth Hirsch Berman. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, Stephanie Cates-Harman, Assistant Director, and Jennifer Ryan Franchina, Trial Attorney.

Before HARTMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

HARTMAN, Administrative Judge: Appellant has moved for partial summary judgment, contending that the Navy's assessment of liquidated damages was improper because (a) appellant's contract performance was "substantially complete" on or before the contract completion date and (b), even if the Board were to disagree, any "delay [by appellant] was concurrent with a [Navy] delay over which [appellant] had no control." The Navy also has moved for partial summary judgment, contending that appellant is precluded from recovering an equitable adjustment based upon a purportedly defective corrosion prevention specification because the contract contains a performance, rather than "design," specification. Both parties argue that the other's motion should be denied due to the existence of disputed material facts.

UNDISPUTED FACTS

During July of 1988, the Navy awarded to appellant, J.W. Creech, Inc. ("Creech"), fixed-price contract No. N6247-86-C-6125 in the amount of $4,970,998.00 for the construction of a High-Altitude Electro-Magnetic Pulse ("HEMP") shielded building known as the Satellite Terminal Building and located at the Naval Security Group Activity, Northwest, in Chesapeake, Virginia. Specification section 01010 summarized the parties' contract as follows:

> 1. GENERAL INTENTION: It is the declared and acknowledged intention and meaning to provide and secure Satellite Terminal Building, complete and ready for use.
>
> 2. GENERAL DESCRIPTION: The work includes precast concrete wall panels, composite steel roof structure, land piling, a completely welded high electromagnetic pulse shield encompassing the entire building, raised access flooring, acoustical wall panels and ceiling, electrical power service upgrade, lighting, fire suppression system, HVAC system, auxiliary generators, and OPS system and incidental related work.

(R4, tab 1 at 56; compl. ¶ ¶ 2,3; ans. ¶ ¶ 2,3)

Specification section 13094 set forth detailed requirements for the "hemp shielded enclosure, welded type." It provided, in part, as follows:

> 1.2 HEMP PROTECTION SYSTEM GENERAL REQUIREMENTS:
>
> 1.2.1 HEMP Protection System: The High Altitude Electromagnetic Pulse (HEMP) protection system is designed to provide protection for specified critical electronics equipment. The protection system is essential to the function of the facility and the quality and installation of its components are key considerations under the requirements of this contract. If conflicts occur between the specifications contained in this section and other sections of the specifications, this shall be pointed out to the Contracting Officer in writing. In general, this section shall govern.
>
> 1.2.1.1 Penetrations: No penetrations of the HEMP shield other than those specified or indicated shall be allowed without prior written approval of the Contracting Officer.
>
> 1.3 HEMP PROTECTION SYSTEM COMPONENTS:
>
> 1.3.1 Shield: * * *
>
> 1.3.2 Penetrations: * * *
>
> 1.3.2.1 Waiveguide ... Penetrations: * * *
>
> 1.3.2.2 Pipe Penetrations: * * *
>
> 1.3.2.3 Electrical Filters: * * *
>
> 1.3.2.4 Doors: All RF shielded doors shall be supplied as complete assemblies, including frames and hardware, shall comply with all requirements stated herein and shall be welded into place in accordance with provisions of this section. All such doors shall be equipped with sensors to indicate when open and doors shall be interlocked where indicated to prevent simultaneous opening.
>
> 1.4 GENERAL REQUIREMENTS:
>
> * * *
>
> 1.4.3 Shielding Work: All shielding work shall be provided as an integral part of the overall facility construction.... It shall be the responsibility of the Contractor under this section of the specification, to supply and install all materials necessary for a complete, tested and operational shielding

©1994, Commerce Clearing House, Inc.
Digitized by Google

system. The shielding shall be continuous....

* * *

1.4.6 Prevention of Corrosion: All metallic materials exposed to the weather shall be protected against corrosion.

1.4.7 Testing and Inspection: The Contractor shall be responsible for the testing and overall performance of the shielding system as specified herein.

(R4, tab 1 at 363-65) (emphasis supplied)

The parties' contract required that performance be completed within 540 calendar days after Creech's receiving award or 14 January 1990. It further required that, if Creech failed to complete the work within the time specified or any extension thereof, Creech "shall pay to the Government as liquidated damages the sum of $2,950.00 for each day of delay." (R4, tab 1 at 1, 67)

The parties' contract incorporated by reference both the standard "Use and Possession Prior to Completion" (FAR 52.236-11) and "Other Contracts" (FAR 52.236-8) clauses (R4, tab 1 at 39). The former provides that:

> The Government shall have the right to take possession of or use any completed or partially completed part of the work.... The Government's possession or use shall not be deemed an acceptance of any work under the contract.

The latter provides that:

> The Government may undertake or award other contracts for additional work at or near the site of the work under this contract. The Contractor shall fully cooperate with the other contractors and with Government employees and shall carefully adapt scheduling and performing the work under this contract to accommodate the additional work, heeding any direction that may be provided by the Contracting Officer.

After receipt of contract award, Creech entered into subcontracts for the performance of various aspects of the contract work. For example, by letter dated 26 August 1988, Creech advised Barlows Incorporated ("Barlows") of its intent to enter into "a subcontract for all materials, equipment, labor and professional services required by the plans and specifications ... for a complete and tested HEMP Shielding System." (Gov't exh. 1; see R4, tabs 4 through 7)

During performance of the Navy contract, problems developed with respect to Barlows' supply of seven HEMP shielded doors, which the parties referred to as "RF" or "Barshield" doors (see, e.g., R4, tabs 4, 27, 32, 34). A test report regarding shielding effectiveness, which was prepared for Barlows by Advanced Measurement Systems, Inc., based upon tests conducted between 12 June and 12 July, 1990, stated that all RF doors at the building failed to meet specified fields and frequencies (R4, tab 17 at 257). On 6 August 1990, Creech advised Barlows by letter that: "[t]he ROICC and J.W. Creech Inc. have *not* acknowledged that the rapid corrosion on the tin plated areas on the Barshield doors is a design problem," "[a]t this point, we believe that the tin plating has *never* been installed to a proper thickness;" "[w]e are very dissatisfied with the door installation provided by Barlows;" and, although Creech reluctantly agreed to reimburse Barlows for the expense of replating the doors in May 1990 because Barlows indicated the rusting problem was due to improper protection by Creech, Creech has photographs demonstrating that, after the "work was done, only a few days passed before the problem occurred again" (Gov't exh. 8) (emphasis in original).

Four days later, on 10 August 1990, Creech's superintendent stated in a field note that "Barlows again has not fulfilled their promise to complete repairs for these doors," but has advised this date "that door #2, which has been re-tinned, will be delivered to the jobsite Monday," "Ted will be on site [Monday] to complete the mechanical repairs to doors 1, 6, & 7 which do not operate at this time," and "the field replating of the RF doors will begin next week" (Gov't exh. 9). Creech's superintendent further stated in his daily log for 10 August that he had spoken with the Navy's assistant resident officer in charge of construction ("AROICC") and been advised the Navy was "not going to take the building until the TAB[S] reports are submitted" for review and "all corrections completed" (app. exh. E).

The advice noted by the superintendent is in accordance with Navy practice. Generally, when having a building constructed, the Navy requires that testing, adjusting and balancing ("TABS") of the heating, ventilation and air conditioning ("HVAC") system be performed before it establishes a beneficial occupancy date ("BOD") in order to ensure that the HVAC system is operating in accordance with contract specifications. However, on occasion, "[t]he Navy will accept and take BOD of a facility prior to completing first season TABS in emer-

Digitized by Google

gency situations when for certain reasons the using activity must occupy the facility." (App. exh. D at 6-7)

On 17 September 1990, the Navy advised Creech that "[t]he Government has initiated work to install material and equipment that is required by the using activity once it moves in," "FAR 52.236-8 ... allows the Government to undertake or award other contracts for additional work at or near the site of work under this contract," "[t]he work [that] Barlows, Inc. is performing under a separate Government contract will not affect their [sic] performance under your contract," and "[t]he completion of the HEMP door installation to comply with the contracts [sic] specifications is your firms [sic] responsibility" (app. exh. B). Three days later on 21 September 1990, Creech's superintendent noted in his daily log he had been advised by the Navy's AROICC that "Barlows has been given the go ahead on the follow up contract" and the Navy "would not give us a warranty start date until [it] ha[d] a BOD date which [it] cannot furnish until the second season TAB[S] report is complete" (app. exh. F).

By letter dated 24 September 1990, Creech notified Barlows that its "completion of the Barshield doors" was "a major concern" of Creech's and Creech "expect[s] Barlows Inc. to take immediate action to complete this work ..." Creech enclosed with its letter a copy of a report from the job site, which stated that some door jams contained rust and two doors were not operating properly. (Gov't exh. 4)

In a field note dated 6 November 1990, Creech's superintendent stated as follows:

> We have four (4) exterior RF doors on the building and none of them operate at all, #1 door will not open at all, and #6 and #7 controls do not work at all and of course #4 door is not here. The building cannot be secured, the only way to keep the doors shut is to place something in the door mechanism to jamb the sprocket or put a wedge under doors #6 and #7, number 4 door opening has a piece of plywood over the opening which was supposed to be a temporary closer and is fastened with ... wire which can be cut with any sharp instrument, it has been about two (2) months now that the door was removed.

By letter dated the same day, Creech advised Barlows that, while they both were awaiting a report explaining the rapid corrosion experienced with the door plating, Creech expected Barlows "to immediately return all of the Barshield doors to the job and have them operating so that the building can be secured." (Gov't exh. 3)

In a daily report executed 13 November 1990, Creech's superintendent noted that "Barlows returned RF door #4," but "[d]oors #6 & 7 still not working" (R4, tab 4 at 14). On 28 November 1990, Creech notified Barlows that "it is absolutely essential that these doors be placed in proper working order and all corrosive problems solved" (Gov't exh. 5).

On 28 December 1990, Barlows furnished Creech with a copy of a report from Mazia Tech-Com Services, Inc., a specialist in corrosion prevention. It also advised Creech as follows:

> The Mazia report attributes the rapid corrosion being experienced at the Satellite Terminal Building to the following factors.
>
> The incorporation of a large variety of dissimilar metals in the construction of the building. A negative air pressure system present in the facility. The direct exposure of the R/F Doors to the natural elements, and the presence of stray currents in the building.
>
> We would like to caution J.W. Creech, that until all the contributing factors listed in the report are addressed and properly treated the Navy will continue to experience corrosive problems which will ultimately cause the facility to be inoperable.

(R4, tab 27)

On 1 February 1991, representatives of Creech, Barlows, the door manufacturer, and the Navy met to discuss the corrosion of the RF doors. After the meeting, the Navy's construction representative noted on the daily report that it "appears to me that contractor is no closer to resolving problem now than when problem first was noted." (R4, tab 4 at 24)

In a letter to Creech dated 4 March 1991, the Navy stated that "replating of the door frame at door number 5 was completed on 1 March 1991," "[i]t was determined that the repaired door satisfies the minimum contract requirements concerning magnetic, electric, and plane wave attenuation," "the government will allow you to perform the same repair on the remaining exterior doors," and "failure to complete repairs or failure of the repairs due to weathering will result in replacement of the doors." The Navy also stated that "[t]he doors are a necessary item to establish the SATCOM building as substantially complete," and "liquidated damages have been accumulat-

©1994, Commerce Clearing House, Inc.
Digitized by Google

ing at a rate of $2,950.00 a day since 14 January 1990." (Gov't exh. 13)

During the first half of April, employees of Barlows were at the site working on the doors. The Navy's construction representative noted on a daily report dated 10 April 1991 that "#6 door did not pass magnetic field test," "it appears as if ringer stock has ... corrosion and they do not know why this was happening," and "it seems that one problem gets corrected and another comes to take its place." (R4, tab 4 at 45-56)

By letter dated 9 July 1991, the Navy's supervisory general engineer advised Creech that "test reports demonstrating that the doors meet the magnetic attenuation and plane wave requirements in the format specified in the contract have still not been received and the doors will not be officially accepted until such information is provided" (R4, tab 33). Approximately three weeks later, on 2 August 1991, Barlows submitted to Creech a claim for $255,348.24 regarding the doors, which provided in part as follows:

> Barlows, Inc. installed the Barshield doors in strict accordance with the contract specification. The doors meet all the contract specifications .... The Navy through a combination of mistakes has designed a system that cannot meet their own [Electromagnetic Pulse Attenuation test] specification. Barlows, Inc. has proceeded to try and meet these specifications under direction by the Navy although we have pointed out that the specifications are impossible to meet.

(R4, tab 34)

On 15 August 1991, by modification No. P00033, the Navy unilaterally amended the contract to: reduce the price by $97,760.00 for seven HEMP doors failing to meet contract testing requirements; grant time extensions until October of 1990 consisting of 87, 60, and 131 calendar days, respectively, for "Government-caused delays during design of additional HEMP Shield penetrations," "Government-caused delay in providing filtered power," and "unusually severe weather;" and assess liquidated damages beginning in October 1990 for 199 calendar days and totalling $587,050.00. The Navy established the BOD of the building as 6 May 1991 and did not assess liquidated damages for any days thereafter even though it contends that the facility was not usably complete as of that date. (R4, tabs 2 at 68-69, 35)

In December 1991, Barlows again submitted a claim to Creech. The new claim stated that:

> JW Creech has never delivered the shielded enclosure in a condition that a true and proper [attenuation] test could be conducted. Barlows has protested the actions by JW Creech for repeatedly insisting that Barlows retest and work on the doors while the shield was in no condition to test .... JW Creech through their [sic] actions have caused Barlows to expend substantial sums of money to demonstrate that the doors are not the fault of the low ambient RF levels that exist on site.

(R4, tab 41)

Due to the negative air pressure problem existing in the building, TABS work could not be completed and demonstrate compliance with the air flows indicated in the contract. The Navy retained another contractor to perform a redesign of the HVAC system and correct the negative air pressure problem. Upon completion of the other contractor's work, TABS was performed successfully and, in December 1991, the HVAC system for the building became fully operational in accordance with the contract specifications. (App. exh. D at 7)

On 23 March 1992, Creech submitted a certified claim to the Navy seeking an equitable adjustment in the contract price of $817,000.00 and rescission of the liquidated damages assessment. Creech's claim was divided into nine parts: a section addressing liquidated damages and eight sections each addressing a different change order proposal previously rejected by the Navy. (R4, tab 45)

One of the change order proposals addressed in the claim was No. 58 dated 28 June 1991. With respect to that proposal, the claim provided, in part, as follows:

> [A]fter much work was done to try to discover how the doors might have failed, it was proved conclusively that the Building had failed, not the doors. That is, the numerous leaks in the Building's shield thwarted all efforts to obtain accurate readings as to the doors' effectiveness.
>
> * * *
>
> Barlows ... was the subcontractor responsible for manufacturing and installing the HEMP shielded doors. Barlows has proven to the Navy through test after test that the HEMP doors meet the contract specifications in so far as any doors can meet the contract specifications. That is to say because of the Building's design and construction materials certain magnetic

Digitized by Google

wave attenuation levels cannot be achieved .... In addition, Barlows was unable to provide the required test reports showing compliance with the Contract in July of 1990 because the Building's shield was compromised by numerous design problems that had not yet been corrected.

* * *

Creech has been advised that the replacement doors have not met the requirements of NSA 65-6. The fact that no doors have passed NSA 65-6 is an indication that ... the specifications are impossible to meet under the present design of the Building.

(R4, tab 45 at 6, 11-12)

By final decision dated 28 October 1992, the Navy's contracting officer denied Creech's claim in its entirety, except a $3,094.00 change order claim concerning construction of a shed to protect electrical equipment (R4, tab 50). With respect to the HEMP doors, the contracting officer stated that:

Construction of the building and its stainless steel shield including the installation of the doors continued until June 1990.... The [June-July 1990 test] report from the testing firm showed that the shield, including the doors, did not meet the attenuation requirements of the contract. It also stated that corrosion was present on the doors. On July 27, 1990, Barlows began work to correct the corrosion problem on the doors....

In December 1990 ..., Barlows provided a report by Mazia ... which set forth several alleged reasons for the corrosion.... These allegations were reviewed by Navy experts and were found to be unsubstantiated.

By April 3, 1991, all the doors had been successfully replated which presumably solved the corrosion problem.... By letter dated April 11, 1991, the ROICC advised you that the doors did not meet the attenuation requirements of the contract.

* * *

For the building to serve its intended purpose, the HEMP shield system had to function properly. It is clear from the foregoing that Barlows was involved in attempting to correct the corrosion problems with the doors until April 1991. Under these circumstances, it would not be reasonable to conclude that the facility was useably complete on July 19, 1990. Furthermore, since the doors that Barlows provided failed to meet the contract specifications regarding corrosion and attenuation testing, the costs and time to rework and retest the doors is your responsibility.

[R4, tab 50 at 5-6)

During November 1992, Creech appealed the contracting officer's decision to this Board. On 22 December 1992, Creech filed a seven-count complaint corresponding generally to the claim it submitted to the contracting officer (see R4, tab 50). Count six stated that "[t]he Navy wrongfully refused: (a) to apply MIL-STD-1888-125 to determine the effectiveness of the HEMP shielded doors supplied by Barlows, (b) to acknowledge the need for outer vestibules to protect the doors from certain unusual conditions at the project site, (c) to acknowledge that its plating specifications for the doors were deficient, (d) to accept the test results of the doors despite the fact that the tests demonstrated that the doors' HEMP shielding effectiveness was at least as great as that of the Building and of the replacement doors which the Navy accepted, and (e) to compensate Barlows and Creech for the extra costs of $350,604.63 they incurred in trying to meet the Navy's unreasonable demands and prove the effectiveness of the doors' shield" (compl. ¶ 42).

At a scheduling conference conducted on 29 April 1993, Creech indicated it wished to file a motion for partial summary judgment and a scheduling order was issued by the Board establishing dates for the filing of briefs, including an August 1993 date for Creech to "file its response to any cross-motion by the Government." On 27 May 1993, Creech filed a 10-page motion for partial summary judgment concerning the assessment of liquidated damages, which had an appendix containing seven exhibits. In July 1993, the Navy filed a 16-page opposition to Creech's motion and a four-page motion for partial summary judgment concerning "defective plating specifications." During August 1993, Creech filed a five-page opposition to the Navy's motion. It also submitted, as part of the same document, a 17-page reply to the Navy's opposition to Creech's motion with an appendix containing 14 additional exhibits. There was no provision in the Board's order for the filing of such a document and Creech did not request leave to file the document.

DECISION

Rule 5(b) expressly permits the Board to "entertain and rule upon other appropriate [*i.e* nonjurisdictional] motions," such as motions for summary judgment. The standards set forth for Fed. R. Civ. P. 56 guide the Board in resolving a motion for summary judgment. *E.g., Lear Siegler, Inc.,* ASBCA No. 30224, 86-3 BCA ¶ 19,155 at 96,794; *Allied Repair Service, Inc.,* ASBCA No. 26619, 82-1 BCA ¶ 15,785 at 78,162-63.

A motion for summary judgment, or partial summary judgment, is to be granted only when pleadings, depositions, answers to interrogatories, and admissions on file, together with affidavits, if any, show there is no genuine issue as to any material fact and the moving party is entitled to judgment as a matter of law. The party seeking summary judgment has the burden of demonstrating both elements and the nonmovant is entitled to have all inferences drawn in its favor. *Celotex Corp. v. Catrett,* 477 U.S. 317, 323 (1986); *Mingus Constructors, Inc. v. United States* [33 CCF ¶ 75,126], 812 F.2d 1387, 1390 (Fed. Cir. 1987); *Paragon Van Lines, Inc.,* ASBCA No. 32294, 87-1 ¶ 19,366 at 97,942.

The fact that both parties have moved for summary judgment does not mean that judgment as a matter of law must be granted for one side or the other. Each party's motion is evaluated on its own merits and properly denied if there is a dispute regarding a material fact. *E.g., Mingus Constructors,* 812 F.2d at 1391.

A fact is material if it may affect the outcome, that is, the finding of the fact is relevant and necessary to the proceeding. A genuine dispute exists with respect to the fact if sufficient evidence is presented that a reasonable fact finder could decide the question in favor of the non-moving party. *E.g., Anderson v. Liberty Lobby, Inc.,* 477 U.S. 242, 248-50 (1986); *Opryland USA, Inc. v. Great American Music Show, Inc.,* 970 F.2d 847, 849-50 (Fed. Cir. 1992). A non-moving party, thus, need not present its entire case in response to a motion for summary judgment in order to defeat that motion. It need only present sufficient evidence to demonstrate a specific conflict as to a material fact. *Opryland USA,* 970 F.2d at 850; *Lemelson v. TRW, Inc.,* 760 F.2d 1254, 1261 (Fed. Cir. 1985); *Military Industrial Supply Co.,* ASBCA No. 43872, 93-1 BCA ¶ 25,312.

I. *Creech's Motion*

In its motion for partial summary judgment, Creech contends that its contract performance was "substantially complete" in July of 1990, about two months before the October 1990 extended completion date, and the Navy's assessment of liquidated damages thus was improper. According to Creech, a BOD should have been established by the Navy for the building in July 1990 because the "Government was able to let follow-on contracts to various third parties" and "Creech performed no more significant work on the Project" thereafter (app. br. at 4).

The Navy, however, asserts that Creech's motion must be denied because there is a genuine dispute regarding a material fact, *i.e.,* whether the Satellite Building project was "substantially complete" in July 1990. According to the Navy, the project was not "substantially complete" because "the contract defines the intended purpose" of the facility as a "completed HEMP Building," "as late as 6 November 1990 . . . the [HEMP] doors were not even on site," and "the doors were essential to complete the Project." (Gov't br. at 5-9, 15-16).

As a matter of "law," liquidated damages may not be assessed under a construction contract where a project is "substantially complete" on or before the scheduled completion date. *E.g., Seaboard Surety Co.,* ASBCA No. 43281, 93-1 BCA ¶ 25,510 at 127,045; *Maysons Piping Contractors, Inc.,* ASBCA Nos. 28446, 29036, 86-1 BCA ¶ 18,626 at 93,594. However, whether a project was "substantially complete" on or before the completion date is a question of "fact." *E.g., Seaboard Surety, supra,* at 127,045; *Lindwall Construction Co.,* ASBCA No. 23148, 79-1 BCA ¶ 13,822.

A factual finding with respect to whether the Satellite Building project was or was not substantially complete thus is relevant and necessary to a determination of the propriety of the Navy's liquidated damages assessment here, and material to resolution of this appeal. *See Anderson v. Liberty Lobby, Inc.,* 477 U.S. at 248; *Opryland USA,* 970 F.2d at 849-50; *Maysons Piping, supra,* at 93,594; *Titan Mountain States Construction Corp.,* ASBCA Nos. 22617, 22930, 23095, 23188, 85-1 BCA ¶ 17,931 at 89,807; *Electronic & Missile Facilities, Inc.,* ASBCA No. 10077, 66-1 BCA ¶ 5493. Creech, therefore, is entitled to grant of partial summary judgment on the issue only if the Navy fails to reference, in opposition to Creech's motion, sufficient evidence showing that a reasonable fact finder could decide the "substantial completion" question in favor of the Navy. *See, e.g., Anderson v. Liberty Lobby, Inc.,* 477 U.S. at 248-50; *Paragon Podiatry Labo-*

Digitized by Google

ratory v. KLM Laboratories, 984 F.2d 1182, 1185 (Fed. Cir. 1993); *Patten Co.,* ASBCA No. 35319, 89-3 BCA ¶ 21,957 at 110,449; *R.J. Crowley, Inc.,* GSBCA No. 11080 (9521)-REIN, 92-1 BCA ¶ 24,499 at 122,274-75.

In opposing Creech's motion, the Navy cites sections 01010 and 13094 of the Specification as indicating that the intended purpose of the project was to "provide and secure Satellite Terminal Building, complete and ready for use" with a "HEMP Protection System" (Gov't br. at 4-5). It also references various documents generated during contract performance, such as test reports and Creech's correspondence, which are quoted or paraphrased above, as indicating that in July 1990 the RF doors, a principal component of the HEMP shield, were not properly functioning or even otherwise securing the building (Gov't br. at 6-10, 15-16). Based upon an examination of the evidence presented by the Navy and a drawing of all inferences in favor of the Navy, the nonmovant, as required when evaluating a summary judgment motion, a reasonable fact finder could possibly decide the question of "substantial completion" in favor of the Navy. *See Anderson v. Liberty Lobby, Inc.,* 477 U.S. at 248-50; *Mingus Constructors,* 812 F.2d at 1391; *Robert E. McKee, Inc.,* ASBCA No. 33643, 90-1 BCA ¶ 22,391 at 112,511; *Titan Mountain, supra,* at 89,807; *Joseph Morton, Co.,* GSBCA No. 4876, 82-2 ¶ 15,839 at 78,524; *Pathman Construction Co.,* ASBCA No. 16781, 74-2 BCA ¶ 10,785 at 51,299-300; *Electronic & Missile, supra,* at 25,741.

Creech argues in its motion that the Navy's assertions regarding the building being not substantially complete should not be believed because the Navy "has taken inconsistent positions regarding the HEMP shielded doors" (app. br. at 7-10). However, it is well-established that the evidence which is presented by a nonmovant in opposition "is to be believed, and all justifiable inferences are to be drawn in [its] favor." *Cooper v. Ford Motor Co.,* 748 F.2d 677, 679 (Fed. Cir. 1984); *accord Anderson v. Liberty Lobby, Inc.,* 477 U.S. at 255.

While summary judgment motions are an important means of conserving judicial and other resources, they are not to be employed to deny a party a chance to prove a worthy case. *Lemelson,* 760 F.2d at 1260; *Cooper,* 748 F.2d at 680. The Board's role in deciding motions for summary judgment is not to resolve material factual issues, but to determine whether such issues are present. *Anderson v. Liberty Lobby, Inc.,* 477 U.S. at 249; *Lemelson,* 760 F.2d at 1260; *John's Janitorial Services, Inc.,* ASBCA No. 34234, 90-3 BCA ¶ 22,973 at 115,366. Where reasonable minds could differ concerning the import of evidence, as here, summary judgment simply is inappropriate. *E.g., Anderson v. Liberty Lobby, Inc.,* 477 U.S. at 248-51.

Creech also contends in its motion that, even if the Board does not determine the building was "substantially complete" in July 1990, it is entitled to partial summary judgment regarding the propriety of the liquidated damages assessment because any "delay [by it] was concurrent with a [Navy] delay over which [it] had no control." According to Creech, the Navy "routinely requires [TABS] of the [HVAC] system to be completed prior to establishing a BOD for a project," "[t]he HVAC system for the project did not become fully operational for the Building until December, 1991," and "[t]he TABS work could not be completed and demonstrate the HVAC system's compliance with the Contract until that date because of 'the negative air pressure problem that existed in the . . . Building' " (app. br. at 6-7).

The Navy again responds that partial summary judgment is precluded by the existence of a genuine dispute with respect to a material fact, which this time is whether Creech's delay in substantially completing the project was "affected by completion of the TABS testing." According to the Navy, "the TABS work did not cause any delay [to Creech] during this period" because the Navy "did not require [Creech] to perform the final TABS (testing) on the portions of the system that were affected by negative pressure." (Gov't br. at 12-15)

Creech is incorrect in arguing in its motion that an "assessment of liquidated damages is improper where *any* period of delay is contemporaneous with delays not caused by the contractor" (app. br. at 5) (emphasis added). It is well-established that, where the Government has delayed part of the contract work, it properly can assess liquidated damages if there was no causal connection between its actions and the contractor's late completion. *E.g., Fehlhaber Corp. v. United States,* 151 F. Supp. 817, 825-26, 138 Ct. Cl. 571, 585-86, *cert. denied,* 355 U.S. 877 (1957); *G. Bliudzius Contractors, Inc.,* ASBCA Nos. 42366, 42368, 43269, 42370, 93-3 BCA ¶ 26,074 (18 May 1993); *William M. Wilson's Sons, Inc.,* ASBCA No. 30553, 85-2 BCA ¶ 18,028 at 90,484-85; *Blackhawk Heating & Plumbing Co.,* GSBCA No. 2432, 76-1 BCA ¶ 11,649 at 55,579.

©1994, Commerce Clearing House, Inc.

Digitized by Google

A factual finding with respect to whether there was a causal connection between Creech's delay in substantially completing the building and the Navy's actions regarding TABS therefore also is relevant and necessary to determination of the propriety of the Navy's liquidated damages assessment here, and material to resolution of this appeal. *See Anderson v. Liberty Lobby, Inc.,* 477 U.S. at 248; *Opryland USA,* 970 F.2d at 849-50; *Rivera Construction Co.,* ASBCA Nos. 29391, 30207, 88-2 BCA ¶ 20,750 at 104,85; *William M. Wilson's, supra,* at 90,484-85; *Titan Mountain, supra,* at 89,807. As a result, Creech again is entitled to partial summary judgment upon the liquidated damages assessment issue only if the Navy fails to reference sufficient evidence showing a reasonable fact finder could decide the factual question in its favor. *See, e.g., Anderson v. Liberty Lobby, Inc.,* 477 U.S. at 248-50; *Paragon Podiatry,* 984 F.2d at 1185.

In opposing Creech's motion, the Navy references various documents, which are quoted or paraphrased above, as indicating that it did not insist upon TABS completion for establishment of a BOD and thus TABS work had no connection to Creech's delay in substantially completing the project (Gov't br. at 12-16). Moreover, Creech itself supplies as exhibit D to its brief responses to interrogatories by the Navy, which are attested to under oath, stating that the Navy does not always insist upon TABS completion prior to establishing a BOD and did not do so here. Based on an examination of the evidence presented and drawing all inferences in favor of the Navy, the nonmovant, as required, a reasonable fact finder could decide the question of "causal connection" in favor of the Navy. *See Anderson v. Liberty Lobby, Inc.,* 477 U.S. at 248-50; *Mingus Constructors,* 812 F.2d at 1391; *William M. Wilson's, supra,* at 90,484-85. Accordingly, genuine disputes exist with respect to material facts precluding grant of Creech's motion.

II. *Navy's Motion*

In its motion for partial summary judgment, the Navy contends Creech is precluded, as a matter of law, from recovering an equitable adjustment based on a purportedly defective corrosion prevention specification because the parties' contract contains a performance, rather than design specification. According to the Navy, paragraph 1.4.6 of Specification section 13094 simply specifies the results to be obtained and leaves to Creech the responsibility of determining how to achieve those results. (Gov't br. at 18-20).

Creech responds that the Navy's motion must be denied because there is a factual dispute regarding whether the relevant Specification provisions are properly labeled as "design" or "performance" or, alternatively, because the Specification provisions clearly must be characterized as "design." In their arguments concerning the door corrosion claim, however, the Navy and Creech both lose sight of the actual claim presented.

While Creech asserts somewhat inartfully in one sentence of its complaint that "[t]he Navy wrongfully refused . . . to acknowledge that its plating specifications for the doors were deficient," that assertion does not necessarily constitute a defective "corrosion" specification claim. Barlows, the interested subcontractor, appears never to have asserted that the Navy specified a procedure for preventing door corrosion, which it followed and found to be defective. Rather, as discussed above, Barlows has asserted that rapid corrosion of the doors occurred because "the building," as designed by the Navy, incorporated a large variety of dissimilar metals, possessed a negative air pressure, and had stray currents. In the various claims submitted by Barlows to Creech, and more importantly the claim Creech submitted to the contracting officer, the basis set forth for obtaining an equitable adjustment with respect to door work was that doors "protected against corrosion" were supplied in accordance with the Specification, the overall "building" design caused corrosion and attenuation problems, and direction to perform extra work concerning door corrosion and attenuation was a contract "change."

The claim, therefore, is not one founded upon a purportedly defective "corrosion" specification, and the labeling of corrosion specification provisions as "performance" or "design" will not resolve it. *See, e.g., Blake Construction Co. v. United States* [38 CCF ¶ 76,478], 987 F.2d 743, 746 (Fed. Cir. 1993); *MM-Wave Technology,* ASBCA No. 41606, 93-1 BCA ¶ 25,272; *compare Foster Wheeler Corp. v. United States,* 513 F.2d 588, 206 Ct. Cl. 533 (1975), *with Hol-Gar Manufacturing Corp. v. United States* [11 CCF ¶ 80,438], 360 F.2d 634, 175 Ct. Cl. 518 (1966). Accordingly, there is no simple straight-forward defective "corrosion" specification claim upon which the Navy can obtain partial summary judgment by pointing to the existence of a "performance" specification, and the Navy's motion attempting to do just that must be denied.

Digitized by Google

*CONCLUSION**

The parties' motions for partial summary judgment are both denied. The Board will be contacting the parties shortly to schedule a status conference at which the parties will be expected to advise the Board of their proposed schedule for further proceedings in these appeals.

[¶ 26,460] Contract Management, Inc.

ASBCA No. 44885, October 25, 1993. Contract No. DAKF01-90-D-0004.

Modifications—Bar to Claims—Release by Contractor.—A release was not a bar to claims for alleged losses suffered during the base contract year, because only the option years were the subject of the parties' pricing agreement. A contractor claimed that the government did not order needed services under a requirements contract for custodial services at a military base. The government contended that the claim was barred by a release contained in a modification. However, releases must be scrutinized to determine the true intent of the parties. The government's reading of the release ignored two separate references to the contractor's proposal, which was limited to pricing of the option periods and resulted in a modification. In this case, the release did not bar the claim for the base contract year.

Indefinite Delivery Contracts—Requirements Contracts—Summary Judgment.—A claim alleging that the government improperly changed the nature of a requirements contract was not appropriate for summary judgment, because there were genuine issues of material fact relating to whether the contracting officer acted in good faith in determining what the government's custodial requirements would be. Although the contractor acknowledged that in a requirements contract, the contractor bears the risk that the government's actual requirements will fall short of the contractual estimates, it contended that the contracting officer did not order needed custodial services. Moreover, the record was insufficient for the board to determine whether the reductions in the frequency of scheduled services were accomplished by contract modifications or were the result of delivery orders issued by the contracting officer.

For the appellant: Timothy H. Power, Walnut Creek, California. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. Michael G. Skennion, JAGC, Trial Attorney.

Before PARK-CONROY, RUBERRY, and FREEMAN, Administrative Judges.

PARK-CONROY, Administrative Judge: This appeal involves a requirements contract for custodial services at the Presidio of San Francisco, CA. Appellant has filed a motion for summary judgment on entitlement which has been opposed by the Government. We deny the motion.

Findings of Fact for Purposes of Summary Judgment

The Army awarded Contract No. DAKF01-90-D-0004 for janitorial services at the Presidio of San Francisco, CA to appellant on 26 January 1990 for a base year beginning 1 February 1990, at an estimated amount of $1,218,649.32. The contract provided for two, one-year option periods. The standard Requirements (APR 1984) (FAR

* To expedite proceedings in these appeals, we have not returned to Creech the copies of its opposition to the Navy's motion, which contain a lengthy reply to the Navy's opposition to Creech's motion, for the submission of an opposition in accordance with the Board's order on briefing, but allowed the document to become part of the record. However, in fairness to the Navy, which complied with the Board's order, we have not considered Creech's "reply," other than to note that the documents appended to it support denial of Creech's motion based upon the existence of a genuine dispute with respect to a material fact. The appended affidavits, which contain similar language and purport to explain what was intended by various statements set forth in documents generated during contract performance (app. exh. H, K1, K2), show that Creech is asking the Board to draw inferences in its favor regarding what transpired, when in resolving such a motion inferences must be drawn in favor of the nonmovant, as explained above.

52.216-21), Ordering (APR 1984) (FAR 52.216-18), Delivery Order Limitations (APR 1984) (FAR 52.216-19), and Changes—Fixed Price (AUG 1987) with Alternate II (APR 1984) (FAR 52.243-01) clauses were incorporated by reference.

Appellant's prior contracts for these services had been fixed-price contracts for definite quantities of services. However, the contract at issue here was written as a unit price requirements contract. Both scheduled cleaning services and special or project cleaning in particular buildings were identified by individually-priced contract line items which contained a description of the work to be performed and estimated quantities. For scheduled cleaning services, the frequency of service was specified on the contract drawing floor plans of the areas to be serviced. Required work was to be ordered by the contracting officer via a delivery order.

It is undisputed that services performed as the result of delivery orders issued during the first six months of the base contract year roughly approximated the Government's estimated requirements. Thus, only the requirements for the last six months of the base contract period (1 August 1990 through 31 January 1991) are contested (R4, tab 97).

A "WEEKLY BULLETIN," issued 6 August 1990, advised that a reduction in the frequency of custodial services would be implemented. According to the bulletin, latrines would be cleaned only three days a week and hallways and stairways would be cleaned only once each week, except for a few high visibility and heavily used areas where the frequency of cleaning would be reduced. Beginning 3 August 1990, bilateral contract modifications incorporating revisions to drawings of floor plans of the buildings covered by the contract were executed to implement reductions in the frequency of services and the omission of some services completely in some buildings. Four such modifications (P00011 through P00014) were executed by the parties during the last six months of the base contract year, all at no change to the dollar value of the contract (R4, tabs 12 through 15). The changes in the custodial services ordered from appellant were due solely to a lack of funds (exh. G-1).

According to Mr. James Cominella, appellant's president, the reduction in the frequency of services ordered during the last six months of the base contract year caused appellant financial loss consisting of management costs resulting from the contractual staffing requirements together with labor and material costs associated with stocking bathrooms with consumable supplies (Cominella aff'd at ¶ 7).

By a letter dated 11 January 1991, appellant requested that an equitable adjustment in the pricing structure be negotiated prior to the exercise of the first option (R4, tab 91). The contracting officer responded on 15 January 1991 and expressed his willingness to make the option bilateral and to negotiate an adjustment to the contract pricing. He requested a proposal to adjust the line item prices for the option period, which appellant provided on 18 January 1991. (Cominella aff'd at ¶¶ 9 and 10, and attach.) Further information about appellant's proposed pricing was requested by the Government in a 29 January 1991 letter (Cominella aff'd at ¶ 11, and attach.).

Pending negotiations on the proposed pricing structure, the Government issued unilateral Modification P00015 exercising the first option on 30 January 1991 (R4, tab 16; Cominella aff'd at ¶ 12). On 6 February 1991, bilateral Modification P00016 was issued (R4, tab 17). Mr. Cominella's affidavit states that he and Government contracting personnel, specifically, Mr. Allen R. Harvell and Ms. Joyce Cavales, all understood that the proposal requested by the Government and the negotiations which followed related only to repricing the option period line item prices (Cominella aff'd at ¶¶ 13-15). His statement was not disputed by the Government.

Modification P00016 corrected the performance period to run from 1 February 1991 through 31 January 1992, added two new line items, changed the price of six other line items, and "[i]ncorporate[d] the revised bid schedule for the first and second option years." Modification P00016 also contained the following release:

> H. In consideration of the modification agreed to herein as a complete adjustment for the contractor's proposal, the Contractor hereby releases the Government from any and all liability under this modification for further equitable adjustments attributable to such facts or circumstances giving rise to the contractor's proposal for adjustments.

By a letter dated 14 May 1991, appellant submitted a request for an equitable adjustment for alleged losses suffered during the last six months of the base contract year (R4, tab 92). The request was denied by the contracting officer on 19 August 1991 (R4, tab 93). An appeal from the denial of its request was docketed as ASBCA No. 43526, but dis-

Digitized by Google

missed on 19 February 1992 for lack of jurisdiction under *Dawco Construction, Inc. v. United States* [37 CCF ¶ 76,056], 930 F.2d 872 (Fed. Cir. 1991) (R4, tab 94). Thereafter, appellant submitted a properly certified claim, this time in the amount of $96,884 (R4, tab 97), which was denied in a final decision issued by the contracting officer on 6 July 1992 (R4, tab 98). This appeal was docketed on 23 July 1992.

DECISION

Appellant has moved for summary judgment asserting that it is entitled to judgment as a matter of law. The Government opposes the motion, contending that there are disputed factual issues, that appellant is not entitled to compensation under the legal theory it asserts, and that the motion is premature because there has been no significant discovery. The Government has also asserted that appellant's claim is barred by the release contained in Modification P00016.

The Release

Releases are to be scrutinized to determine the true intent of the parties. *E.g., Leslie & Elliott,* ASBCA No. 36271, 89-1 BCA ¶ 21,263. The Government's reading of the release contained in Modification P00016 ignores two separate references to "the contractor's proposal." It is undisputed that the proposal referred to was appellant's 18 January 1991 proposal. The subsequent correspondence and negotiations between appellant and the Government relating to that proposal were limited to pricing of the option periods and resulted in the agreement contained in Modification P00016. There are no material facts in dispute regarding the release contained in Modification P00016. Only the option years were the subject of the parties' pricing agreement. The release does not bar appellant's claim for the base contract year.

Appellant's Motion for Summary Judgment

Appellant acknowledges that, in a requirements contract, the contractor typically bears the risk that the Government's actual requirements will fall short of the contractual estimates. It asserts, however, that in this case, the Government improperly changed the nature of its requirements after contract award when the contracting officer did not order needed custodial services.

The Government responds that the Requirements clause obligated the contracting officer to order only the services that were "required to be purchased." According to the Government, appellant has incorrectly equated the word "requirements" with the word "wants." It asserts that the contracting officer's discretion in purchasing "required" services is subject only to the exercise of good faith and adequate funds. Its legal argument is based upon *Arcon-Pacific Contractors,* ASBCA No. 25057, 82-2 BCA ¶ 15,838.

We have considered the respective legal contentions the parties have advanced and conclude that the record is not now such that we are able to rule upon the merits of these contentions. For example, there are no facts from which we can make any finding about how the parties interpreted those descriptions indicating that a service would be performed a given number of times weekly. Nor are we able to ascertain whether the reductions in the frequency of scheduled services were accomplished only by contract modifications or whether some were also the result of delivery orders issued by the contracting officer. In this regard, no facts or arguments have been presented regarding whether Modifications P00011 through P00014, which were bilateral, may operate as an accord and satisfaction.

Moreover, there are genuine issues of material fact relating to whether the contracting officer, confronted with funding difficulties, acted in good faith in determining what the Government's custodial requirements would be, as well as how to fulfill them. Of particular relevance are facts establishing what Government and contractor personnel knew about the nature and extent of the funding difficulties, both at the time the previous definite quantities contract was restructured into a requirements contract and when the contract was finally awarded, and what factors influenced the contracting officer in his evaluation of the custodial needs, the resources available, the priorities and the most economical method of satisfying the conflicting needs.

Conclusion

Appellant's claim is not barred by the release contained in Modification P00016.

Appellant's motion for summary judgment is denied. The parties are directed to provide the Board with two alternative dates during the month of March 1994 for the hearing of this appeal.

[¶ 26,461] Phoenix Petroleum Company

ASBCA Nos. 42763, 45412, 45413, 46671, October 25, 1993. Contract Nos. DLA600-89-D-0572, DLA600-90-D-0542.

Contract Disputes, Claims—Submission to Contracting Officer—Counterclaims.—The board did not have jurisdiction over a counterclaim advanced for the first time in a complaint, because the counterclaim was never submitted to the contracting officer for a decision. Under an indefinite quantity contract for deliveries of fuel, the government sought to recover an alleged overpayment. The contractor counterclaimed for breach damages, alleging that the government had not purchased the required minimum amount of fuel. However, the inclusion of a monetary claim in a complaint as a counterclaim is not sufficient to confer jurisdiction, because board rules do not authorize counterclaims. Earlier versions of board rules had provided for counterclaims, and the board interpreted the omission of any reference to counterclaims in the current rules as not granting authority to hear them. Thus, the board did not have authority to hear even those counterclaims arising out of the same transaction or occurrence that gave rise to the appeal.

Contract Disputes, Contracting Officer's Decision—Failure to Decide—Deemed Denial.—The board deemed a claim denied and assumed jurisdiction because the contracting officer failed to issue a decision within 60 days after the contractor submitted its claim. The contractor sought an equitable adjustment, alleging that the government had not purchased the required minimum quantity of fuel required by an indefinite quantity contract. The claim was first advanced as a counterclaim without having been submitted to the contracting officer. However, the contractor filed a claim while the government's motion to dismiss the counterclaim was pending. The government had conducted discovery on the claim, and the issue remained in dispute. Moreover, no useful purpose would be served by dismissing or suspending the appeal, even if it was filed before the expiration of the 60-day period.

Contract Disputes, Certification—Elements of Certification—Knowledge and Belief.—The board was not deprived of jurisdiction over a claim, even though the contractor failed to certify that the supporting data were accurate and complete "to the best of his knowledge and belief," because the claim was filed after October 29, 1992, the effective date of the Federal Courts Administration Act. Because the claim and appeal were governed by the provisions of the Act, the contractor was directed to submit a complete certification to the board within 15 days of the date of the decision.

Contract Appeals, Jurisdiction—Boards of Contract Appeals—Enforcement.—Even if a contractor had a valid judgment against the government from another tribunal, the board could not direct the government to pay, because the board does not have enforcement authority. A contractor counterclaimed against the government in an appeal arising out of an indefinite quantity contract, requesting the board to enter an order that the government pay the contractor the amount that the government admitted that it owed in bankruptcy proceedings. However, the admissions were not before the board, and it was not clear that they related to a contract made by an agency under the jurisdiction of the board.

For the appellant: Paul Crowley, Exton, Pennsylvania. For the government: John J. Ralston and Howard Phifer, Trial Attorneys, Defense Fuel Supply Center (DLA), Alexandria, Virginia.

Before TUNKS, RUBERRY, and RIISMANDEL, Administrative Judges.

TUNKS, Administrative Judge:

BACKGROUND

Appellant was awarded two indefinite quantity contracts for deliveries of JP-4 fuel during FY 1990 and 1991. Both contracts contained the clause entitled "Economic Price Adjustment—Published Market Price" (EPA clause). Contract DLA600-89-D-0572 contained the September 1987 version of the clause and Contract DLA600-90-D-0542 contained the December 1989 version.

Contract 0542 was terminated for default on 15 January 1991 and the appeal therefrom was docketed as ASBCA No. 42763.

Digitized by Google

Because of subsequent bankruptcy proceedings, ASBCA No. 42763 was dismissed without prejudice. The appeal was reinstated in January 1993.

By decision dated 10 September 1992, the contracting officer asserted that appellant had been overpaid $42,022.00 under the EPA clause in Contract 0572, $52,868.31 under the EPA clause in Contract 0542 and was indebted to the Government in the amount of $682,280.31 for excess reprocurement costs under Contract 0542.

Appellant timely appealed the contracting officer's decision to the Board. On 9 December 1992, the Board assigned three docket numbers to the appeals. ASBCA No. 45412 was assigned to the overpayment claim in Contract 0572; ASBCA No. 45413 was assigned to the overpayment claim in Contract 0542; ASBCA No. 45414 was assigned to the claim for excess reprocurement costs in Contract 0542. Appellant thereafter filed complaints in all appeals, including the appeal from the contracting officer's decision terminating Contract 0542 for default. All four appeals were consolidated for hearing. The appeal in ASBCA No. 45414 was subsequently dismissed without prejudice subject to reinstatement pending the Board's decision on the default termination in ASBCA No. 42763.

ASBCA No. 45412: MOTION TO DISMISS APPELLANT'S COUNTERCLAIM FOR LACK OF SUBJECT MATTER JURISDICTION

In its complaint of 1 February 1993, appellant denied liability for the price adjustment claimed by the Government under Contract 0542 and asserted a "counterclaim" for breach damages of $100,000 plus interest alleging that the Government had not purchased the required minimum quantity of fuel.

On 7 June 1993, appellant submitted its claim to the contracting officer for a decision requesting $126,629.81 in damages. Appellant certified its claim as follows:

> Pursuant to the requirements of the Contract Disputes Act of 1978 (41 USC 601-613), I hereby certify that this claim is made in good faith, that the data relating to contract volume and profit per gallon is accurate and complete and that the amount requested accurately reflects the contract adjustment for which Phoenix believes the government is liable.

By letter of 13 August 1993, the contracting officer admitted that the Government had underlifted the contract by 1,513,162 gallons and requested appellant to submit supporting documentation or an explanation of the $0.82 per gallon figure appellant used in calculating the claim. The contracting officer has not issued a decision on the claim.

On 9 July 1993, the Government moved to dismiss the "counterclaim" for lack of jurisdiction because no contracting officer's decision has been issued and to strike from the complaint the allegations relating thereto. In its 11 August 1993 response to the Government's motion to dismiss, appellant emphasized the common aspects of the underlift issue with matters involved in the other appeals and the "redundancy" of a contracting officer's formal written decision when the Government's positions have been clearly stated. Appellant also stated that it would appeal such a decision if issued and amend its pleadings accordingly.

DECISION

Under the Contract Disputes Act (CDA), all claims by a contractor against the Government must be in writing and submitted to the contracting officer for a decision before we can take jurisdiction over an appeal. 41 U.S.C. § § 605(a). The contracting officer's decision has been described as the "linchpin" of our jurisdiction under the CDA. Without it, we have no jurisdiction. *Ball, Ball, & Brosamer v. United States,* 878 F.2d 1426 (Fed. Cir. 1984); *Paragon Energy Corp. v. United States* [28 CCF ¶ 81,290], 645 F.2d 966 (Ct. Cl. 1981).

Since there is no dispute that appellant's "counterclaim" was advanced for the first time in the complaint, that it was never submitted to the contracting officer for a decision and that the contracting officer has not issued a decision, we have no jurisdiction to decide the claim. *Al Bosgraaf & Sons. Inc.,* ASBCA No. 43372, 92-1 BCA ¶ 24,746; *Solar Foam Insulation,* ASBCA No. 46278, 94-1 BCA ¶ 26,288, decision 6 August 1993.

The inclusion of a monetary claim in the complaint as a "counterclaim" is not sufficient to confer jurisdiction on the Board. Board Rule 6, which sets forth the requirements for pleadings, does not authorize counterclaims. While earlier versions of the Rules provided for counterclaims, the present Rules, which apply to appeals processed under the CDA, omit any reference to counterclaims. We have interpreted this omission to mean that we do not have authority to hear such counterclaims, even those arising out of the same transaction or occur-

©1994, Commerce Clearing House, Inc.
Digitized by Google

rence which gave rise to the appeal. *Trans World Maintenance, Inc.*, ASBCA No. 37480, 89-2 BCA ¶ 21,856; *Holly Corp.*, ASBCA No. 24975, 80-2 BCA ¶ 14,675.

Accordingly, Count V (¶ 31-34) and the pertinent part of the prayer in the complaint are stricken and the claim stated therein is dismissed without prejudice.

However, the Board has jurisdiction of a contractor's claim if the contracting officer does not issue a decision on the claim within 60 days or notify appellant of the date on which a decision will be issued. 41 U.S.C. § 605(c)(5). Any failure of the contracting officer to issue a decision within the period required will be deemed to be a denial of the claim and will authorize the commencement of an appeal. Moreover, where no useful purpose would be served by dismissing or suspending an appeal, even if it was filed before the expiration of the 60-day period, we have retained jurisdiction. *Emerson* Electric Co., ASBCA No. 31184, 86-2 ¶ 18,979 (jurisdiction retained even though appeal filed prior to contracting officer's decision because the Government had expressed its position on the claim thereby crystalizing the claim into a dispute ripe for adjudication) and cases cited therein.

Appellant submitted its claim to the contracting officer on 7 June 1993. The sixty days prescribed by the CDA have passed and the record does not indicate that the contracting officer advised appellant of when the decision would be issued. We deem the contracting officer to have denied appellant's claim, particularly in view of his letter of 13 August 1993 admitting that the Government had underlifted the contract by 1,513,162 gallons and requesting information regarding appellant's calculation of damages. Appellant has not responded to this request and the matter remains in dispute.

ASBCA No. 45412, which includes appellant's 7 June 1993 claim, has been consolidated with ASBCA Nos. 45413 and 42763 and all three appeals are set for hearing on 2 November 1993. The Government has conducted discovery regarding this claim. The respective positions of the parties have been "clearly crystalized into a dispute ripe for adjudication" and "no useful purpose would be served by returning the matter to the contracting officer for decision." *Monaco Enterprises, Inc.*, ASBCA Nos. 27142, 27423, 86-2 BCA ¶ 18,922, 95,435, quoting *R.G. Robbins Co., Inc.*, ASBCA No. 26521, 82-1 BCA ¶ 15,643, 77,273.

In these circumstances, we consider the statement in appellant's response to the Government's motion as a notice of appeal from the deemed denial of its claim. Inasamuch as more than 60 days have passed from the submission of the claim, the premature appeal does not prevent us from assuming jurisdiction. *SCM Corporation v. United States*, 225 Ct. Cl. 647 (1980); *Fuel Storage Corporation*, ASBCA No. 26994, 83-1 BCA ¶ 16,418 at 81,683 and cases cited therein.

Hence, we retain jurisdiction over the 7 June 1993 claim. A separate docket number, ASBCA No. 46671, has been assigned to that appeal. It is consolidated with ASBCA Nos. 45412, 45413 and 42763. The parties are considered to have waived the pleadings and the appeal will be heard with the other appeals on 2 November 1993.

The Government's motion to dismiss is denied in this regard.

There still remains the issue of the incomplete or defective certification of the claim. Under the second prong of the certification required by 41 U.S.C. § 605(c)(1), a contractor must certify that "the supporting data are accurate and complete *to the best of his knowledge and belief*" (emphasis added). Appellant's certification does not contain the underlined phrase. Under 41 U.S.C. 605(c)(6), defects in a certification do not deprive the Board of jurisdiction over claims filed after 29 October 1992 as long as the defects are corrected before a decision is issued. Both appellant's claim and appeal were filed after that date and thus are governed by the provisions of the Federal Courts Administration Act, Pub. L. 102-572, § 907(a)(1)(b), 106 Stat. 4518 (enacted 29 October 1992). Accordingly, appellant is directed to submit a complete certification to the Board within 15 days of this decision.

ASBCA No. 45413: RESPONDENT'S MOTION FOR SUMMARY JUDGMENT

Under Contract 0542, the second indefinite quantity contract for JP-4 in dispute, appellant invoiced and received payment for deliveries of fuel at the interim billing price under the EPA clause of that contract. At times, the interim billing price exceeded the final adjusted price. On 10 September 1992, the contracting officer issued a decision asserting that appellant owed the Government $52,868.49, the difference between the interim billing price and the final adjusted price. The Government moves for summary judgment alleging that it is entitled as a matter of law to recover the overpayment. Ap-

Digitized by Google

pellant does not oppose the motion, but, in its complaint, requests the Board to "enter an order . . . that the Government pay Phoenix the $317,003.53 it has admitted it owes Phoenix [in bankruptcy proceedings], plus interest" as an offset.

DECISION

There being no dispute as to appellant's indebtedness to the Government in the amount of $52,868.49, we hold that the Government is entitled to recover that amount from appellant. Appellant's counterclaim is a different matter.

As we indicated in the decision in ASBCA No. 45412, the CDA requires that all claims by a contractor against the Government be submitted to the contracting officer for a decision before we have jurisdiction over an appeal. 41 U.S.C. §§ 605(a). *Ball, Ball, & Brosamer, supra; Paragon Energy Corp., supra.* Consistent with that requirement, the Board's rules do not provide for counterclaims. Since appellant's claim has not been submitted to the contracting officer for a decision, we do not have jurisdiction to decide appellant's offset claim.

Appellant's counterclaim is based upon admissions the Government purportedly made during proceedings before the Bankruptcy Court. Those admissions are not before us and we do not even know if they relate to a contract made by an agency under the cognizance of this Board. If appellant has a valid judgment against the Government from some other tribunal, this Board cannot direct the Government to pay appellant because we do not have enforcement authority. *Gichner Mobile Systems,* ASBCA No. 25344, 84-1 BCA ¶ 16,995, *aff'd on motion for recon.,* 84-2 BCA ¶ 17,291.

The Government's motion for summary judgment is granted and appellant's counterclaim is dismissed for lack of jurisdiction. The appeal is denied.

ASBCA No. 42763: RESPONDENT'S MOTION TO STRIKE PORTIONS OF APPELLANT'S COMPLAINT AS PREMATURE

The Government's motion to strike paragraphs 49 and 50 of the Complaint is denied. Paragraphs 60 and 61 are monetary claims against the Government. Since these claims have not been submitted to the contracting officer for a decision, we do not have jurisdiction. Paragraphs 60 and 61 are stricken and those claims are dismissed without prejudice.

[¶ 26,462] Alliance Properties, Inc.

ASBCA No. 42451, October 14, 1993. Contract No. DAKF57-87-C-0031.

Interpretation of Contracts—Interpretation During Performance—Predispute Interpretation.—The government's interpretation of a contract was untenable because it was contrary to the parties' construction of the contract prior to the dispute and because it ignored various words of the contract. In a contract for family housing unit maintenance services, the government alleged that its actions before the dispute arose were mistaken. However, the parties' construction prior to the dispute is entitled to great weight. Moreover, the government's new interpretation would ignore most of the words of the contract, and it was rejected in favor of the construction that was used by the parties prior to the dispute and that harmonized all of the provisions of the contract.

Indefinite Delivery Contracts—Price Adjustment for Variation—Applicable Work Item.—A contractor sustained damage as a result of the government's inaccurate estimate of the work to be done under service orders for a particular task under an indefinite delivery contract for family housing unit maintenance services, even though most of the work ordered would have to have been performed under another portion of the contract for contractor-scheduled punch list work, because the contractor's costs for service-order work were different from those for contractor-scheduled work. The contractor and all other bidders had bid lower unit prices for the contractor-scheduled services than for an unawarded bid item under which the contractor would have been required to perform the same punch list work by service orders.

For the appellant: Corona, Balistreri & Ramseyer, San Diego, California, by William J. Braun. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. David C. Hoffman, JAGC, and Capt. Mitchell R. Chitwood, JAGC, Trial Attorneys.

Before HARTMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

HARTMAN, Administrative Judge: This is a timely appeal under the Contract Disputes Act of 1978, 41 U.S.C. § 601 *et seq.*, from a contracting officer's final decision denying a claim by appellant for an equitable adjustment in contract price based upon (a) variations between the quantities of service order work estimated to be supplied and actually procured by the Government and (b) the performance of preventive maintenance work allegedly beyond that specified. Pursuant to Rule 11, the parties have elected to waive a hearing and submit the case for decision on the record. Only the issue of entitlement is before us for decision.

STATEMENT OF FACTS

During the 1980s, the Department of the Army had approximately eight separate contracts to obtain family housing unit maintenance services, such as bathtub refinishing, door repair, chimney cleaning, cleaning of quarters, and interior painting, at Fort Lewis. Under these "requirement" type contracts, an occupant of a family housing unit or an Army maintenance employee would request the performance of specified work and the Army's contracting office would then distribute to the appropriate contractor a service order directing performance of the work. (App. supp. R4, tab 2)

In fiscal year 1987, however, the Army determined that it would benefit from awarding only one contract, which would require performance of the family housing maintenance services previously performed by a variety of contractors plus additional services. It therefore issued invitation for bids ("IFB") No. DAKF57-87-B-0032. (*See id.;* R4, tab 1; stip. ¶ 1)

The IFB had a base period of seven months with two 12-month option periods, and contained three bid items. A note on the IFB bid schedule stated that either the second or third bid item would be awarded, "but not both." (R4, tab 1 at 8-12)

The first bid item was for the provision of annual chimney cleaning and quarterly inspection of playground equipment, both of which were "contractor scheduled" work, and the provision of 27 different tasks which were set forth in technical exhibit ("Tech. Exh.") 19 of the IFB and to be performed pursuant to service orders issued by the Army. The first 26 tasks set forth in Tech. Exh. 19 were housing unit maintenance work such as interior quarters painting and cleaning, and repair or replacement of glass, shades, blinds, doors, sinks, bathtubs, countertops, and telephone lines. Task No. 27 of the exhibit was "Occupied between occupancy maintenance or preventative maintenance." Quantities for each of the 27 tasks were set forth in the exhibit based upon "historical data." The quantities for Task No. 27 were 100 units during the base period and 120 units during each option period. Paragraph 4.2 of Section 3 of the IFB stated that the Tech. Exh. 19 "quantities are estimated, but any task number should not be over 120% of the total amount anticipated." * (R4, tab 1 at 5, 8-10, 31-33, 50-51, 158-160; stip. ¶ ¶ 1 through 4)

The second bid item was Between Occupancy Maintenance ("BOM"), which would be "ordered by service order" for a particular housing unit and require the contractor to examine the unit using a standard punchlist prepared by the Army and "correct deficient items" found. BOM was to be performed in 895 unoccupied units during the base year and 1,080 unoccupied units during an option year. It also was to be performed as "preventative maintenance" in approximately 70 occupied units "which ha[d] not been newly assigned" during the base year and 80 occupied units "which ha[d] not been newly assigned" during an option year. This latter work in occupied units did not include approximately 35 unoccupied units during the base period and 40 unoccupied units during an option period "for which BOM was ordered, but which were occupied prior to the completion of BOM." (R4, tab 1 at 6, 8-10, 60, 62, 65, 68, 70-81)

The third bid item was Preventative Maintenance ("PM"), which also was referred to in the contract as "Preventive Maintenance." PM required the contractor to examine housing units using the same punchlist as BOM and correct deficiencies found. While periods for completing PM were set forth, the contractor could schedule the times for performing PM in units. The contractor would submit for approval within 10 calendar days after award of the PM bid

* The IFB initially provided that "any task number should not be over 150% of the total amount anticipated." However, in response to a comment by one of the bidders during the pre-bid conference that "[a]llowing the quantities of T[ech.] E[xh.] 19 to be exceded by 150% creates a very large cost exposure for the contractor," the Army amended the IFB to reduce "the percentage on any task number" from 150 to 120. (R4, tabs 1, 2)

Digitized by Google

item an annual schedule, which showed each housing area and the month(s) PM would be accomplished, and "update" that schedule monthly during contract performance. Paragraph 2.1 of Section 5 of the IFB expressly stated that:

> Preventative Maintenance (PM) if awarded shall be accomplished in accordance with the contractor's approved schedule. All quarters shall be completed during a one-year contract period .... Work in occupied quarters shall be completed within 5 working days after the work starts. PM in unoccupied quarters shall be completed within the time frame specified in paragraphs 1.2 thru 1.2.8 of this Section.

One constraint, however, existed with respect to the contractor's scheduling of PM. Paragraph 1.2 of Section 6 of the IFB provided as follows:

> *Preventative Maintenance (PM),* if awarded, shall be accomplished in conformance with the contractor's approved and updated schedule.... Quarters that are vacant shall be given first priority for each housing area in which PM is to be accomplished. There should not be more than a 10% change per month in the contractor's schedule for vacant quarters priority. For example, if 300 quarters are scheduled for preventative maintenance in a month, the contractor will not be required by the Government to change the schedule for more than 30 vacant quarters. If over 30 are requested by the Government, the contractor may or may not change the schedule as an option, but no additional time or money will be allowed if the contractor changes more than the anticipated 10% variance in vacant quarters per month. [Emphasis added]

Paragraph 5.1.2 of Section 3 of the IFB further provided as follows:

> The contractor shall at Government request (telephonic conversation from the Contracting Office) and at no additional cost, change the approved scheduled work by a maximum of 10% of the quarters scheduled a month. The contractor shall note the requested changes on the monthly log and the Daily Inspection Report.

PM would be performed upon 2,081 housing units during the base period and 3,569 units during an option year. (R4, tab 1 at 5, 8-10, 32, 50, 51, 62, 66, 68, 70-81; stip. ¶¶ 6 through 8)

With respect to "unoccupied quarters," the IFB stated that, "[i]n accordance with Army Regulation (AR) 210-50, Family Housing Management, the Fort Lewis goal is to obtain a 99% occupancy rate, which means that unoccupied quarters can only remain vacant for relatively short periods of time." The IFB further stated that work performed in unoccupied units is generally limited to BOM, major painting and repairs, cleaning, insulation of basement water pipes, and replacement of hardwood and vinyl flooring, some of which is performed under other Government contracts. The IFB noted that "the contractor shall not commit or permit any act which will interfere with the performance of work by any other contractor or Government employee," "[r]esolution of problems with cooperation or coordination will be done by the Government within two working days after notification by the contractor" and, "since all ordered work [in unoccupied quarters] must be accomplished at the same time, close coordination and good management is required." Paragraphs 1.2 through 1.2.8 of Section 5 of the IFB set forth specific periods for completing performance of BOM in unoccupied quarters, which depended upon the nature and number of tasks to be accomplished and which ranged from one to several days after the contractor's receipt of the Army's service order. (R4, tab 1 at 36-37, 58, 63-66)

In calculating its bid for the first bid item, appellant, Alliance Properties, Inc. ("Alliance"), relied on the Army's representation that "any task number [quantity the Army actually ordered] should not be over 120% of the total amount anticipated" (Gov't supp. R4, vol. IV, tabs 3, 4, 5, 21; app. supp. R4, tab 25 at 39-49, 76). For the base period, Alliance bid $905,800, $351,925, and $349,650, respectively, for the three bid items. For the first option year, it bid $1,287,000, $455,400, and $445,500, respectively. For the second option year, it bid $1,260,000, $450,000, and $441,000, respectively. Alliance, like each of the other bidders, bid a per unit cost for the second bid item which was greater than that for the third bid item. (R4, tab 1; app. supp. R4, tab 1; see affidavit of F.A. Johnston)

In February 1987, the Army awarded fixed-price contract No. DAKF57-87-C-0032 for the first and third bid items to Alliance. The parties' contract contained the provisions set forth in the IFB and incorporated by reference a standard changes clause (FAR 52.243-1, ALT-I). It did not, however, include any provision for computing adjustments based on variations in estimated

©1994, Commerce Clearing House, Inc.

Digitized by Google

quantities. (R4, tab 1; app. supp. R4, tab 3; stip. ¶ 1)

Shortly after commencement of and throughout the contract base period, Alliance complained to the Army it was having to expend significantly more resources upon performance of PM than it had anticipated and attributed this to various factors allegedly within the control of the Army. Those factors included: failure by Army personnel living in the housing units to utilize a self-help repair program available to them and referenced in the IFB; refusal by Army personnel to issue service orders for required work under bid item one because PM was scheduled to be performed on the units in the near future under bid item three; and refusal by Army maintenance personnel to complete work requested by personnel occupying housing units because PM would be performed on the units needing work in the near future and require the contractor to complete the work the maintenance personnel normally were to accomplish. (R4, tabs 6, 11, 12, 16, 17, 22, 23, 44, 51, 53)

During the seven-month contract base period, the Army issued service orders directing the performance of various tasks listed on Tech. Exh. 19 in quantities which exceeded 120 percent of the estimated quantities set forth for those tasks in Tech. Exh. 19. For example, with respect to Task No. 27, the Army issued service orders for 254 units or more than 250 percent of the estimated quantity of 100 units. (R4, tabs 1, 27, 37; app. supp. R4, tab 16 at 4; stip. ¶ ¶ 1, 9, 10)

In August of 1987, the Army exercised its option under the contract for the first 12-month option period. During the first option period, the Army again issued service orders directing performance of various tasks listed on Tech. Exh. 19 in quantities which exceeded 120 percent of the estimated quantities set forth for those tasks. For example, with respect to Task No. 27, the Army issued service orders for 548 units or more than 450 percent of the estimated quantity of 120 units. (R4, tabs 28, 54, 56, 57, 59, 60, 62, 64; app. supp. R4, tab 5; stip. ¶ ¶ 12, 18, 19)

The additional constraints set forth in the contract for performing service orders made Alliance's performance of service order PM and BOM more expensive than performance of contractor scheduled PM under the third bid item (R4, tab 1; app. supp. R4, tab 1; affidavit of F.A. Johnston; April 1993, affidavit of M. Crabtree). After Alliance indicated it was considering pursuit of a claim regarding Tech. Exh. 19 task quantities exceeding those estimated, the Army proposed modifying Tech. Exh. 19 to increase some of the quantities set forth and requested Alliance submit a cost proposal for such a modification. With respect to Task No. 27, the Army proposed: (1) altering the description to read only "Occupied PM;" (2) reducing the quantity of units estimated for the item by 20; and (3) adding a new "Task No. 28" described as "Unoccupied PM" and possessing an estimated quantity of 540. (R4, tabs 22, 37, 38, 43, 46, 54; stip ¶ ¶ 13)

While Alliance submitted the cost proposal requested, the Army rejected its proposal because of "budget restraints" and requested it submit a proposal for an alternate modification. With respect to Task No. 27, the Army's second proposed modification simply changed the description to read "Unoccupied preventive maintenance," which the contracting officer stated would "more correctly reflect the actual use of this item," and increased the quantity estimated by approximately 300 units more than performed as of that date, *i.e.*, to 540 units, which the contracting officer stated would require Alliance "to stop scheduling quarters [for PM] at 3,269 quarters and the remaining 300 quarters would be ordered under the new revised Task Item Number 27." Alliance submitted a second cost proposal to the Army, but the parties' contract was not modified to incorporate that or any other proposal regarding task quantities which exceeded by more than 120 percent those estimated for the base period and first option year. (R4, tabs 42, 47, 57, 58, 60; stip ¶ ¶ 14 through 17)

During March 1990, Alliance submitted a certified claim to the Army's contracting officer seeking over $1 million for Tech. Exh. 19 task quantity overruns which exceeded 120 percent of estimated quantities and for work directed to be performed in excess of that required under the PM bid item (R4, tabs 85, 87; stip. ¶ 23). In a final decision dated 5 December 1990, the contracting officer denied Alliance's claim (R4, tab 96; stip. ¶ 24). By letter dated 30 January 1991, Alliance appealed the contracting officer's decision to this Board (R4, tab 97). Thereafter, the parties submitted the required Rule 4 file, various supplements to the Rule 4 file (which include deposition transcripts), a stipulation of facts, several affidavits, initial and reply briefs, and a "Request For Partial Dismissal With Prejudice."

The latter submission advised that: the parties had settled claims concerning "excess

Digitized by Google

quantities performed ... for all Task Items, except Task Item No. 27;" this "settlement will be reduced to writing and executed as a bilateral [contract] modification;" Alliance "has decided to present no evidence" concerning "work performed in excess of what the contract required ... under the Preventive Maintenance line item[ ];" the parties therefore "mutually request that the Board dismiss this issue with prejudice;" and the submission has been reviewed by the bankruptcy trustee for Alliance, but "[n]o dismissal should occur until the Attorney for [Alliance] provides formal notice that the Bankruptcy Court has approved" the parties' actions. On 1 October 1993, Alliance's counsel notified the Board the "Bankruptcy Court approved the Partial Settlement Agreement entered into."

DECISION

Based upon the parties' partial dismissal request and Alliance's notice of 1 October 1993, there is no need to resolve the parts of this appeal concerning (a) furnishing of task quantities, other than Task No. 27, in exceess of 120 percent of estimated task quantities or (b) performance of PM bid item work beyond that contractually required. The former has become moot, *see, e.g., Local No. 8-6, Oil, Chemical & Atomic Workers Int'l Union v. Missouri,* 361 U.S. 363, 367-71 (1960); *Federal Data Corp. v. SMS Data Products Group, Inc.* [34 CCF ¶ 75,284], 819 F.2d 277, 279-80 (Fed. Cir. 1987), and the latter has been abandoned by Alliance. The only issue remaining in this appeal, therefore, is whether Alliance is entitled to an adjustment in the contract price for furnishing quantities of Task No. 27 during the base period and first option year exceeding 120 percent of quantities estimated to be supplied.

It is well-established that, when a Government contract contains a material representation which the contractor relies upon in bidding and has no reason to know is erroneous, the contractor can obtain an adjustment in the contract price under the standard changes or differing site condition clauses if the representation later is found to be incorrect and results in increased performance costs. *E.g., Summit Timber Co. v. United States* [29 CCF ¶ 82,507], 677 F.2d 852, 857-59, 230 Ct. Cl. 434, 445-46 (1982); *Morrison-Knudsen Co. v. United States* [12 CCF ¶ 81,901], 397 F.2d 826, 842-44, 184 Ct. Cl. 661, 685-90 (1968); *Schutt Construction Co. v. United States* [11 CCF ¶ 80,177], 353 F.2d 1018, 1021, 173 Ct. Cl. 836, 841-42 (1965); *Clement-Mtarri Companies,* ASBCA No. 38170, 92-3 BCA ¶ 25,192 at 125,538, *appeal docketed,* No. 93-1268 (Fed. Cir. Mar. 17, 1993); *Southeastern Services, Inc.,* ASBCA No. 21278, 78-2 BCA ¶ 13,239 at 64,755.

The parties' contract here represented that the Tech. Exh. 19 task "quantities are estimated, but **any task number should not be over 120% of the total amount anticipated"** (emphasis added). Such a representation is intended to guide bidders in eliminating from their bids allowances to protect themselves against the risk of having to supply a greater quantity of services than necessary and thus constitutes a material representation. *See, e.g., Medart v. Austin* [38 CCF ¶ 76,349], 967 F.2d 579, 582 (Fed. Cir. 1992); *Morrison-Knudsen,* 397 F.2d at 841, 184 Ct. Cl. at 685; *Womack v. United States* [12 CCF ¶ 81,795], 389 F.2d 793, 801, 182 Ct. Cl. 399, 412-13 (1968); *Southeastern Services, supra,* at 64,755; *compare Schutt Construction,* 353 F.2d at 1019, 1021, 173 Ct. Cl. at 838, 841-42, *with Raytheon Support Services Co.,* ASBCA No. 35688, 89-3 BCA ¶ 22,200, *aff'd,* 909 F.2d 1496 (Fed. Cir. 1990) (table).

As found above, Alliance relied upon this positive representation in preparing its bid. No reason is apparent why Alliance should have known that the Army's representation was incorrect. The Army has not contended in this appeal that clear and unequivocal contract language disclaimed the representation, that there was any other strong warning to potential bidders not to rely upon the representation in calculating their bids, or that a bidder could readily have determined for itself that the representation was in error. Alliance's reliance upon the representation therefore was reasonable. *See, e.g., Timber Investors, Inc. v. United States* [25 CCF ¶ 82,894], 587 F.2d 472, 477-78, 218 Ct. Cl. 408, 418-20 (1978); *Community Heating & Plumbing Co.,* ASBCA No. 33839, 89-3 BCA ¶ 22,149 at 111,474-75.

Further, as found above, the representation—that "any task number should not be over 120% of the total amount anticipated"—was incorrect with respect to Task No. 27 for both the base and first option periods. The parties have stipulated that the actual quantities ordered by the Army of Task No. 27 for those periods were 254 and 548, respectively, or more than 250 percent and 450 percent of the quantities set forth in Tech. Exh. 19, respectively. Thus, based upon the undisputed facts, Alliance appears entitled to an equitable adjustment if it in-

©1994, Commerce Clearing House, Inc.

Digitized by Google

curred increased performance costs because of the representation.

The Army argues, however, that the actual quantities of Task No. 27 which were ordered should be ignored because "[w]ork that was designated as Task Item No. 27 was actually performed under a separate provision of the contract, and is inapplicable to the estimates in the Task List" (Gov't br. at 2). According to the Army, all but 17 of the activities for which service orders were issued by the Army under Task No. 27 were for "unoccupied PM," which the Army was entitled to receive under the third bid item. While the parties disagree about the number of housing units which were "unoccupied" during Alliance's performance of Task No. 27 service orders, that factual issue need not be considered because the Army's current construction of the contract is untenable.

A contract is to be construed "as a whole" in a manner which harmonizes all of its provisions. *E.g., State of Arizona v. United States,* 575 F.2d 855, 863, 216 Ct. Cl. 221, 235 (1978). Contract language is to be given the meaning that would be attributed to it by a reasonably intelligent person acquainted with the circumstances surrounding the contract. *Alvin, Ltd. v. USPS* [34 CCF ¶ 75,255], 816 F.2d 1562, 1565 (Fed. Cir. 1987); *Firestone Tire & Rubber Co. v. United States* [16 CCF ¶ 80,450], 444 F.2d 547, 551, 195 Ct. Cl. 21, 30 (1971).

Application of these principles to the contract provisions here shows that, under the PM bid item, a contractor was free to schedule the housing units upon which it would perform PM during a particular month, but was required (within specified limits) to perform PM first on units it had scheduled which were "unoccupied" when requested to do so by the Army. The Army was not free to direct performance of PM in any housing unit under the PM bid item, as contended by the Army in this appeal. The Army could only direct performance of PM in an unoccupied unit which already was scheduled for PM by the contractor and where the number of scheduled units for which it had directed PM performance during a month was no more than 10 percent of the total number of units scheduled by the contractor for PM that month.

Under the plain language of the contract, the only possible authority for the Army ordering performance of PM in units *not* scheduled by the contractor for PM was the second bid item to perform BOM, which essentially was the same work as PM only in unoccupied units and which the Army elected *not* to award, and Task No. 27 of the first bid item, which appears to have been designed to allow the Army to obtain (in a limited number of units) work it could not otherwise direct be performed by service order. In the event BOM was awarded, Task No. 27 allowed the Army to issue service orders for the performance of BOM in newly assigned occupied units, activity not authorized under the BOM bid item. In the event PM was awarded, Task No. 27 allowed the Army to issue service orders for the performance of PM in any occupied or unoccupied unit, activity not authorized under the PM bid item.

The parties construed the contract in this fashion prior to a dispute arising regarding Task No. 27 quantities. As both parties acknowledge in their briefs, the Army issued service orders under Task No. 27 for the performance of PM in both occupied and unoccupied units not scheduled by Alliance for PM. While the Army characterizes its actions before the parties' dispute arose as "mistaken," the parties' construction of the contract prior to dispute is entitled to great weight. *E.g., Alvin Ltd.,* 816 F.2d at 1566; *Petrofsky v. United States* [19 CCF ¶ 82,740], 488 F.2d 1394, 1402, 203 Ct. Cl. 347, 361 (1973). Further, the Army's new found construction ignores various words of the contract. For example, paragraph 1.2 of Section 6 concerning the third bid item provides that vacant quarters "shall be given first priority for each housing area in which PM is to be accomplished" and PM "shall be accomplished in conformance with the contractor's approved and updated schedule." To allow the Army under the third bid item to order PM in vacant quarters not scheduled for PM by the contractor effectively would eliminate most of these words from the contract. A contract interpretation which eliminates words from a contract is unreasonable. *E.g., Astro-Space Laboratories, Inc. v. United States* [18 CCF ¶ 81,894], 470 F.2d 1003, 1010, 200 Ct. Cl. 282, 295 (1972). Accordingly, the Army's new found construction must be rejected in favor of the construction set forth above, which harmonizes all of the provisions of the contract, and the Army cannot avoid grant of an equitable adjustment if Alliance incurred increased performance costs because of the Army's representation.

The Army suggests in its briefs that Alliance incurred no extra cost as a result of the erroneous representation. According to the Army, grant of an equitable adjustment to Alliance "would be a double payment for

Digitized by Google

work that the contractor was already required to perform under the contract" (Gov't br. at 22). Because this phase of the appeal "is limited to entitlement only, Alliance has not presented detailed documentation of the quantum of entitlement" (app. br. at 13). Contrary to the suggestion of the Army, however, Alliance has presented sufficient information to conclude that it sustained an injury as a result of the erroneous representation. *Compare Viktoria Fit Internationale Spedition,* ASBCA No. 39703, 92-2 BCA ¶ 24,968 at 124,418 and *JBS Missouri, Inc.,* ASBCA No. 34044, 87-2 BCA ¶ 19,904 at 100,693 *with Southeastern Services, supra,* at 64,756-59.

While the Army is correct that, during the first option period if a service order was not issued under the first bid item to perform PM or BOM on a unit, Alliance was required to perform PM on the unit under the third bid item, the same is not true for the base period. Alliance only was required to perform PM on 2,081 units during the base period. By ordering Alliance to perform PM or BOM on 134 more units than represented would occur under the first bid item, the Army therefore clearly directed work that would not otherwise have been performed under the third bid item, *i.e.,* the incurrence of extra labor and material costs.

Moreover, the Army's basic supposition—that it cost the same to perform PM under the third bid item as to perform PM or BOM directed by service order under the first bid item—is not supported by the record. The ability of the Army to issue a service order under Task No. 27 of bid item one for the performance of PM is similar to the ability of the Army to have issued a service order under the second bid item (if it had been awarded) for the performance of BOM. In both cases, the Army directs the contractor to examine housing units using an Army punchlist and correct deficiencies found within a specified period after receipt of the Army's order. As found above, Alliance and every other bidder on the contract bid a greater per unit cost for BOM under the second bid item than for PM under the third bid item. Such action was to be expected because additional constraints set forth in the contract for performing service orders, such as completion of work within only a couple of days of order receipt, made performance of service order PM and BOM more expensive than performance of contractor scheduled PM under the third bid item. As F. Allan Johnston, President of Alliance, stated in his affidavit, "it was more expensive for Alliance to perform a Task [ ] No. 27 preventative maintenance ... due to the requirement that Alliance mobilize to an individual housing unit and perform the preventative maintenance upon the Army's issuance of a written Service Order, rather than performing the preventative maintenance in a pre-planned, contiguous and cost-efficient manner." The Army's assertion that the Board should not consider Mr. Johnston's affidavit because the Army did not have an opportunity to "cross-examine" him (Gov't reply br. at 2-3) is without merit. The Army was free to depose Mr. Johnston during discovery and ask him any questions it desired. Also, the Army "stipulated" to submitting this appeal on the record knowing that both parties would have an opportunity to submit further evidence prior to the Board declaring the record closed under Rule 13.

CONCLUSION

The part of this appeal which concerns furnishing of work beyond that required by the PM bid item is dismissed with prejudice. The part of this appeal concerning furnishing of task quantities exceeding 120 percent of quantities estimated, other than Task No. 27, is dismissed as moot. The remainder of this appeal, which concerns furnishing quantities during the base period and first option year of Task No. 27 exceeding 120 percent of the quantities estimated to be supplied, is sustained and remanded to the contracting officer for a determination of quantum.

ASBCA No. 42363, October 25, 1993. Contract No. F33657-83-C-2141.

Contract Disputes, Claims—Alternative Claims—Same Set of Facts.—Two counts of an amended complaint were allowed because they were not new claims but rather were new legal theories based on the same set of operative facts alleged in the original complaint. The government alleged that the two counts were factually separate and distinct from the original complaint and cited newly discovered evidence from interrogatories and

©1994, Commerce Clearing House, Inc.

Digitized by Google

depositions. However, the evidence was substantially the same as that offered in support of other government motions.

For the appellant: Dickstein, Shapiro & Morin, Washington, D.C., by Victor J. Zupa, Howard Shiffman, Brian J. Siebel, and Gregory Baruch. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, Maj. Daniel Godale, USAF, and Mark Landers, Trial Attorneys.

Before PARK-CONROY, RUBERRY, and SPECTOR, Administrative Judges.

PARK-CONROY, Administrative Judge: At issue is the Government's motion to dismiss two new causes of action alleged in the amended complaint: Count VII, which alleges a breach of the Government's implied duty to cooperate; and Count VIII, which alleges the Government required appellant to perform work outside the scope of the contract requirements. The Government asserts that Counts VII and VIII should be dismissed for lack of jurisdiction because no underlying claim alleging a failure to cooperate or out-of-scope work was ever presented to the contracting officer for a final decision. We deny the motion.

Background

The claim upon which this appeal is based sought an equitable adjustment on Contract No. F33657-83-C-2141 which was awarded to appellant on 5 August 1983 for the design and manufacture of an Aerial Refueling Part Task Trainer (ARPTT) for pilots of the C-5A/C-141B aircraft. Appellant entered into a contract with the Farrand Optical Company, Inc. (FOCI) to manufacture a Direct View With Depth (DVWD) optical vision system for the ARPTT, but subsequently terminated FOCI and undertook the design and development work associated with the direct view visual system itself.

In its 8 December 1989 claim, appellant asserted that the FOCI DVWD visual system was not an off-the-shelf system as appellant had been led to believe, but that it was developmental and required extraordinary effort to produce. The claim was denied by a contracting officer's decision dated 22 October 1990. The original complaint asserted that appellant was required to undertake extensive and unanticipated design and development effort which led to problems in manufacturing the direct view visual system and that the Air Force treated the contract as a total developmental contract rather than a "build to spec" production contract with some front-end development work. It alleged the following six causes of action: Count I (Impossibility of Performance); Count II (Economic/Commercial Impracticability of Performance); Count III (Mutual Mistake); Count IV (Superior Knowledge); Count V (Implied Warranty of Commercial Availability); and Count VI (Implied Warranty of Specification).

On 2 April 1993, appellant filed an amended complaint which raised two additional causes of action: Count VII (failure to cooperate) and Count VIII (out-of-scope work). On 9 April 1993, the Government moved to strike the amended complaint asserting, among other things, that appellant had raised new legal and factual issues which had not been presented to the contracting officer. By an order dated 21 April 1993, the Board denied the Government's motion to strike finding that "Counts VII and VIII are based upon the same set of operative facts that formed the basis of the claim presented to the contracting officer." On 26 April 1993, the Government moved for reconsideration of the Board's 21 April 1993 order. The motion was denied by an order dated 3 May 1993.

Discussion

The Government's current motion asserts that we should dismiss these same two counts of the amended complaint on grounds they "are factually separate and distinct from Counts I-VI of the original Complaint" and that, "[a]s such, they are separate claims and not just new legal theories based on the same operative facts (Gov't br. at 1). In support of its motion, the Government points to "evidence" that it describes as "newly discovered through interrogatories and depositions." This "evidence" consists of an affidavit by the contracting officer, an excerpt from the transcript of the deposition of Mr. Richard Johnson, appellant's ARPTT program manager, and appellant's answers to Interrogatory No. 2 of the Government's Second Set of Discovery Requests and Interrogatory No. 577 of the Government's Sixth Set of Discovery Requests.

Appellant opposes the motion on grounds the Board has already decided this issue. It asserts the Government's current motion is based upon essentially the same information the Government presented in its earlier mo-

Digitized by Google

tions to strike and for reconsideration. It further asserts, as it did before, that Counts VII and VIII of the Amended Complaint are based upon the same set of operative facts.

We agree with appellant that the affidavit of the contracting officer now offered by the Government is substantially the same as that offered in support of the Government's motion for reconsideration of the Board's 21 April 1993 order denying its motion to strike. As to the deposition transcript excerpts, Mr. Johnson's affidavit dispels any notion that he was either responsible for submitting appellant's claim or that the excerpts of his testimony support the Government's contention that Counts VII and VIII are factually separate and distinct from Counts I through VI.

Finally, we are satisfied with appellant's explanation of (1) the differences between Interrogatory Nos. 2 and 577, in particular that Interrogatory No. 2 did not ask for, and appellant did not provide, "a comprehensive set of TDs [test discrepancy reports] which related to its claim" and (2) the relationship between the technical discrepancy reports identified in these two interrogatory answers (app. br. at 6-7).

DECISION

Appellant's claim raised all of the problems it encountered with the ARPTT visual system. Counts VII and VIII of the amended complaint merely allege new legal theories based upon the same set of operative facts. *See e.g., Standard Technology, Inc.*, ASBCA No. 41831, 91-2 BCA ¶ 23,936.

This is the third occasion upon which the Board has been asked by the Government to decide this issue. We do not anticipate that we will be called upon to address this issue again.

The Government's motion to dismiss is denied.

[¶ 26,464] Engineering Construction, Inc., by Trustee in Bankruptcy

ASBCA No. 42132, October 28, 1993. Contract No. N62474-86-C-6527.

Site Conditions—Relief for Differing Site Conditions—Waiver of Obstructions.—Under a contract for the replacement of fuel pipelines, a contractor was not entitled to an equitable adjustment for debris encountered during excavation, despite its contention that the debris constituted a differing site condition, because in exchange for cost savings resulting from the government's granting of the contractor's request to abandon the old fuel lines and to reroute the new fuel lines, the contractor waived any claims for future obstructions. Although the waiver did not cover all difficulties that might be encountered while excavating, the board concluded that, as a matter of law, the debris constituted obstructions.

Site Conditions—Contract Indications, Category I—Soil Conditions.—Under a contract for the replacement of fuel pipelines, a contractor was not entitled to an equitable adjustment for the removal and replacement of allegedly contaminated soil, despite its contention that the soil constituted a differing site condition, because the record did not show that the relatively small amount of soil at issue was contaminated. Moreover, the government did not "force" the contractor to haul the soil from the project site and to replace it with imported sand, as alleged by the contractor. Further, the specifications also provided for the use of sand as a borrow material at no extra cost to the government.

Delays—Adjustments—Proof.—Under a contract for the replacement of fuel pipelines, the contractor was not entitled to an equitable adjustment for any delay resulting from problems with debris, water leaks, tie-ins of pipelines, and accommodation of the government's barge-loading schedule, because the board concluded that the contractor's progress on the job was not delayed by any of these alleged problems.

For the appellant: Carr, McClellan, Ingersoll, Thompson & Horn, Burlingame, California, by David M. McKim. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Richard L. Spector, Trial Attorney, Western Division, Naval Facilities Engineering Command, San Bruno, California.

Before PAUL, RIISMANDEL, and RUBERRY, Administrative Judges.

Digitized by Google

PAUL, Administrative Judge: This is a timely appeal of a contracting officer's decision denying appellant Engineering Construction Inc.'s (ECI) claim for an equitable adjustment in an amount of $295,671. A two-day hearing was held in San Francisco, California, and each party later filed two post-hearing briefs. The Contract Disputes Act (CDA), 41 U.S.C. § 601 *et seq.*, is applicable, and only issues of entitlement are before us for decision.

FINDINGS OF FACT

1. On 1 June 1988, the Naval Facilities Engineering Command (NAVFAC), Western Division, and ECI entered into contract No. N62474-86-C-6527 to remove, dispose of, and replace two fuel pipelines at the Point Molate Fuel Depot, Richmond, California. The face amount of this fixed-price contract was $457,480, and the contractual completion date was 11 January 1989 (R4, tab 1).

2. The contract incorporated by reference, *inter alia*, the following standard clauses: "FAR 52.212-12, Suspension of Work (APR 1984)"; "FAR 52.233-1 Disputes (APR 1984)"; "FAR 52.236-2, Differing Site Conditions (APR 1984)"; and "FAR 52.243-4, Changes (APR 1984)" (R4, tab 1).

3. In addition, the contract contained a detailed set of specifications and drawings. Particularly pertinent to this appeal are several subparagraphs which appear in section 02200 of the specifications entitled "Earthwork." For example, subparagraph "1.6.1 Shroing [sic] and Sheeting" required ECI to "[p]rovide shoring, bracing, cribbing, underpinning and sheeting where indicated." In addition, subparagraph "1.6.2 Dewatering" stated: "Include in dewatering the collection and disposal of all forms of surface and subsurface water that are encountered in the course of construction." Further, subparagraph 1.6.2.2 required ECI to:

> Operate the dewatering system continuously, 24 hours per day, 7 days per week until such time as construction work below existing water levels is complete, unless directed otherwise. Measure and record the performance of the dewatering system at the same time each day by use of suitable observation wells or piezometers installed in conjunction with the dewatering system.

(R4, tab 1)

4. Part 2 of section 02200 of the specifications was entitled "Products." It set forth the following contractual requirements:

> 2.1 SOIL MATERIALS: In general, shall be free of debris, roots, wood, scrap material, vegetable matter, refuse, soft unsound particles, frozen, deleterious, or objectionable materials.
>
> 2.1.1 Backfill: Shall conform to the general requirements for soil materials above and shall be material excavated on the site of this project. All particles larger than 1-1/2 inches shall be removed from backfill material.
>
> 2.1.2 Subgrade Material for Roads and Paved Areas: Shall conform to the general requirements for soil materials above and shall be classified as GW, GP, GM, SW, SP, SM by ASTM D2487 and meet the following: liquid limit shall not exceed 35 percent when tested in accordance with ASTM D423, plasticity index shall not exceed 12 percent when tested in accordance with ASTM D424, and not more than 25 percent by weight shall be finer than the No. 200 sieve.
>
> 2.1.3 Bedding Around Piping: Shall be sand and have a maximum particle size of 1/2 inch.
>
> 2.1.4 Sand: Shall conform to the general requirements for soil materials above and shall be clean, coarse grained material classified as SW or SP by ASTM D2487 of which not more than 10 percent by weight shall be finer than the No. 200 sieve.
>
> 2.1.5 Topsoil: Shall be material free of subsoil, stumps, rocks larger than one inch diameter, brush, weeds, toxic substances, and other material or substance detrimental to plant growth. Topsoil shall be a natural, friable soil representative of productive soils in the vicinity.
>
> 2.1.6 Borrow: Shall be materials conforming to the requirements for sand, bedding and backfill. Obtain borrow materials from approved sources off Government property.

(R4, tab 1)

5. Prior to the commencement of excavation, ECI's superintendent, Mr. Chuck Odem, became concerned that his firm had not properly estimated the job. Specifically, he concluded that ECI had not placed enough money in its bid to cover the costs of "isolating and blinding" the two fuel pipelines. Accordingly, Mr. Odem proposed to the Navy's construction representative, Mr. Richard Webb, the abandonment in place of the existing pipelines and a rerouting of the replacement pipelines (tr. 2/97-100).

6. At the time when he devised this scheme, Mr. Odem estimated that its accept-

Digitized by Google

ance by the Navy would result in a savings for ECI of "probably 25 percent of the contract" price. Mr. Odem described these savings in the following terms:

> There was much less excavation. There was no demolition of pipe at all. There was no hauling of pipe at all. There was no isolating, there was no cleaning, there was no burning. There was no trench installation, or shoring installation, shoring removal. In fact, shoring was almost, almost nonexistent. And the whole complexion of the job changed radically.

(Tr. 2/100-01)

7. Mr. Odem's testimony in this regard was corroborated by that of Mr. Webb who testified:

> There was [sic] some costs savings that would be involved here. One is, by going with a shallower excavation, say five foot compacted to the average of eight foot on the other one, it eliminated that much more backfill that he had to do. When he pulled the old pipes out, he would have had that additional amount of material to put back in. It eliminated disposal of the two 20-inch pipes that was [sic] in place. It took away a lot of the requirement for shoring. Because, all of a sudden, instead of being down eight foot, we were now four foot. As a matter of fact, I believe on the drawing that ultimately everybody agreed on, it showed 4'11", 5 foot being the magic number for shoring. Anything beyond that required shoring; anything above that, you know, discretionary. There was considerable cost savings there, you know.

(Tr. 1/194-95) Based upon the credible testimony of both Mr. Odem and Mr. Webb, the Board finds that ECI's rerouting proposal encompassed significant cost savings for the contractor.

8. The Navy's construction representatives concurred with ECI's proposal to abandon the existing fuel lines in place and to reroute the new lines. However, recognizing the substantial cost savings to ECI which were inherent in the scheme, Mr. Webb and Mr. Fortunado J. Esguerra, the Navy's contract administrator, demanded that ECI grant the Navy a *quid pro quo*. Accordingly, Mr. Lenny Silvia, ECI's project manager, executed a written waiver on 19 August 1988 in which he stated: "We waive any claims of future obstructions in lieu of abandoning two 20" lines." (Tr. 1/196-201; R4, tab 5).

9. ECI commenced excavation, and, during the month of August 1988, it encountered several unmarked obstructions, including eight lines and debris in a small area in the form of some old railroad ties, a telephone pole, and 60 to 70 bricks. These obstructions did not delay ECI's progress on the job. As Mr. Odem, ECI's superintendent, testified, the debris in its entirety was "[n]ot enough to fill the back of a pickup truck, actually." (Tr. 2/106) Moreover, ECI's crew continued to work on the job site. Finally, as Mr. Webb noted in his job diary:

> Contractor has uncovered approximately 14 pipes or obstructions to date—he has not ask [sic] for obstruction nor turned in the obstruction log.

(Exh. G-1)

10. Also during the month of August, ECI encountered a small volume of hydrocarbons during excavation. On 3 August 1988, Mr. Silvia wrote to the Navy, in pertinent part, as follows:

> On August 01, 1988, we started excavation for the pipelines. We removed approximately 5 cubic yards of earth, of which fifty (50) percent was contaminated with Hydrocarbon. At this time, we have set the contaminated soil along the side of the pipeline trench, as excavated. Our evaluation of the situation is that the entire pipeline will require import fill material. We also feel that the services of a special hazard waste handler/hauler and disposal site is required. This entire excavation and backfill process now becomes very tedious and time consuming.
>
> The process may be as follows:
>
> 1. Purchase the services of licensed hauler.
>
> 2. Hauler places disposal bins on site.
>
> 3. Engineering Construction, Inc. excavates and fills bins.
>
> 4. Hauler removes and replaces bins.
>
> 5. Engineering Construction, Inc. replaces native soil removed, with new import.

(Exh. A-4)

11. The Navy investigated the situation, and Mr. Webb, the Navy's construction representative, described the results of the investigation in these terms:

> In the beginning, on or about August 2 or 3, when he [ECI] was digging east of valve box 19, an abandoned storm drain line was broken. Water and some hydrocarbons material, petroleum products, ran out of that. In the bottom of that excavation, there was a small amount of soil that, on top of it, was water with oil floating on top of it. That material, at that time, it was unknown whether it was contaminated or not. It was alleged, I believe, in

©1994, Commerce Clearing House, Inc.

Digitized by Google

the letter of August 4, that it was contaminated material. That material was dug out of the excavation, and, as excess material, taken down to the drum storage lot. It was discovered on August 11 that no contamination existed. That we didn't have it. There was not enough hydrocarbons in the soil to be classified as contaminated material.

So, I guess what I'm trying to say is: between August 5, or 6, or 7, and August 11, there was a question there about a small amount of material. I'd say a dump-truck load, or maybe two dump-truck loads, that may be contaminated.

(Tr. 2/19-20) The discovery on 11 August to which Mr. Webb referred was a soils test conducted by LCDR Vickers of the ROICC office which led him to conclude that the volume of hydrocarbons in the soil was negligible. LCDR Vickers described this test in a memorandum dated 23 January 1990 (R4, tab 14). Moreover, Mr. Esguerra alluded to this test in a memorandum of telephone call which was dated 11 August 1988. He wrote:

1. In accordance with Ref(a), following were discussed:

(a) Regarding your letter of 03 Aug 1988 (Received 09 Aug 1988) the soil was tested and was determined that the soil was not contaminated.

(b) LCDR C. Vickers conducted the test with his environmental group.

(c) You may proceed [sic] your operations as usual.

(Exh. A-7) In contrast, ECI did not proffer any credible, substantiated evidence demonstrating that the soil at issue was contaminated. Accordingly, based upon the weight of the evidence, we conclude that the soil was not contaminated.

12. The incidents relating to the presence of both debris and hydrocarbons in the excavated soil generated a controversy between the parties. Largely because the Navy had accommodated ECI and had allowed it to leave the existing pipelines in place, there was, in Mr. Webb's words, "a great deal more excess material than there was material to be used, reused." Mr. Webb testified further:

So, basically, what you had, you dug out, say 60 inches of material, what you actually had to put back in is backfill amounting to 8 to 12 inches of material. So, you had the difference between, say one foot and five foot.

(Tr. 2/16) Based upon Mr. Webb's credible testimony, the Board finds that ECI would have been forced to transport substantial quantities of excavated soil beyond the location of the project regardless of whether the soil contained debris or hydrocarbons.

13. As a further accommodation to ECI, the Navy allowed it to spread any excess soil which contained debris behind the so-called "drum storage lot" which was located at the fuel depot. In addition, the Navy permitted ECI to spread excess soil which contained hydrocarbons on the drum storage lot itself. Finally, in accordance with subsections 2.1.4. and 2.1.6 of section 02200 of the specifications, the Navy gave ECI permission to use sand in certain areas in place of native backfill (tr. 2/52; exh. G-1).

14. However, ECI was not content with these solutions; and, on 19 August 1988, it forwarded the following letter to the ROICC's office:

On August 10, 1988, during our meeting at the jobsite, the Navy representative determined that the excavated material was not contaminated with hazardous waste, however, it was determined that the native soil was not suitable for backfill, due to miscellaneous debris too large for compaction. The debris that was found included a telephone pole ten (10) feet long, red brick, old building lumber, and alike.

Also noted at the meeting; purchasing and hauling the import backfill for the area of trench between the sand around the pipe and the base rock under asphalt would be a change in the scope of work; the hauling and spreading of the native fill is an extra to the contract.

We will submit the estimate for change order after the actual necessary cubic yards have been determined.

(Exh. A-8)

15. On 15 September 1988, Mr. Esguerra, the Navy's contract administrator, responded to ECI's letter in these terms:

In your letter of 19 August 1988 (received 29 August 1988), you mentioned that the Navy determined that the excavated materials were not contaminated, and that the native soil was not suitable for backfill because it contained debris (power pole, red brick, old building etc).

Furthermore, you stated that the hauling of the imported backfill is an extra cost to the contract which you intend to submit later.

Your costs for backfill are covered as part of the original contract by virtue of your agreement to waive unforeseen conditions

Digitized by Google

costs in exchange for approval of your request to abandon the two (2) 20-inch lines in place. (See enclosed letter dated 08 August 1988.)

(Exh. A-9)

16. ECI replied to the Navy's letter on 20 September 1988. It wrote:

This letter is in response to your document 913.3:FJE:bab:5757, dated September 15, 1988.

The backfill you refer to as being part of our original contract, is not. The U.S. Navy's own specification disqualifies the native soil as suitable backfill material, due to the size and quantity of debris existing. Specification Section No. 2.1, limits the largest size of solids to $1^1/_2$"; 3.4.1, required compaction of 95%.

Further, your letter mentions that we agreed to waive unforseen [sic] conditions, that is incorrect. Our letter of August 08, 1988 provides a waiver of additional claims, due to obstructions in the excavation of the pipeline.

Our request for additional compensation to haul in new import backfill material is due to changing site conditions, not obstructions impeding the installation of pipe.

(Exh. A-9)

17. Mr. Esguerra forwarded a response to ECI's letter on 30 September 1988, in which he stated:

The contract specification does not in any way disqualify the suitability of the native soil as backfill material. I call your attention to Specification Section 02200, Para 2.1 Soil Materials. It only requires that materials "in general, shall be free of debris, roots, wood, scrap material, vegetable matter, refuse, soft unsound particles, frozen, deleterious or objectionable materials".

Also, consider Specification Section 02200 Para. 2.1.1 Backfill. Per that requirement, backfill "shall conform to the general requirements for soil materials above *and shall be materials excavated on the site of this project.* All particles larger than $1^1/_2$ inches shall be removed from backfill material". This provides for removal of large particles by the Contractor.

However, if you decide that it is more convenient for you to dispose and replace the backfill materials, you may do so. In accordance with Specification Section 02200, para. 2.1.6 Borrow. It provides that you may "obtain materials *from approved sources* off government property". This is an option which you can exercise at no additional cost to the government

Your request for additional compensation to haul in new import backfill is no [sic] justified and is denied due to the following:

(1) The excavation materials from the trench which could have been reused were hauled away without direction or concurrence from the Government. You hauled it away at your own volition.

(2) During the 22 September 1988 telephone conversation between Lenny Silva, ECI, and Fort J. Esguerra, ROICC, you were informed that the borrow pit had been approved.

(3) On 27 September 1988, you hauled in new imported backfill at your own volition and without Government direction or concurrence.

(Exh. A-10)

18. None of these developments relating to backfill impacted upon ECI's job performance, and its workers continued to report to the job site on a daily basis throughout the period of this controversy (exh. G-1, -2; tr. 2/30).

19. Also during the month of August 1988, ECI encountered a minor, but persistent, water leak in the area of excavation. Mr. Webb gave credible testimony concerning the situation in these terms:

Going back about two or three weeks, when the contractor was digging next to valve box 11, there was a line that was uncovered that two things was happening with this line: One is there was a fluid, a water, that was coming out of this line. The second thing that was happening is ground water was following this line as it came down, and ground water was coming into the trench, too. It initially was addressed by sticking a plastic—and this, again, is a diary entry—there was a plastic pipe that was stuck in the inside of this pipe that was used to divert the water. As the job went on, it became real hard to get Public Works to fix this. Mainly, is because I don't think nobody understood exactly where the line came from or how to shut it off.

On or about the date of this daily report, 8-26, a decision was made, and I talked to Chuck Odem. What was ultimately done is we put a plumber's plug in it and tightened the plumber's plug, and that stopped the water leaking. For the two to three weeks prior to that, the water did—there was

©1994, Commerce Clearing House, Inc.

Digitized by Google

water leaking from this pipe. There was ground water coming out of this pipe. It ran into the ditch and went over to a monitoring well that was right next to this, that was being used as a dewatering station for this contract. It never stopped work. Work continued, work progressed through the whole course of this, as evidenced by all the daily reports and the number of men on the job, and those type of issues.

(Tr. 2/29-30)

20. Mr. Webb's testimony in this regard was corroborated by Mr. Odem, ECI's superintendent. He testified:

We excavated over to a Navy-installed sump pump, water separator pump. We excavated over to it and allowed the water to run to it to clear it out. We were—we had to do—as part of our contract, we were obligated to take care of ground water. It had been determined that this was primarily ground water running in, and they had allowed us to excavate the Navy's installation and allow it to take care of the ground water.

Mr. Odem also testified that, although this situation extended over a period of several weeks, it did not interfere in any way with ECI's progress on the job (tr. 2/112). Accordingly, the Board finds that this minor leakage did not delay ECI's work on the project.[1]

21. Subparagraph 2.2.2 of section 01011 of the specifications provided, in pertinent part, that:

One of the 20" pipelines, either existing or new, shall remain in service at all times during the period of construction. Provide 14 days notice prior to taking either pipeline out of service.

(R4, tab 1) On 7 October 1988 ECI gave notice to the Navy requesting the availability of pipeline "B." The Navy informed ECI that the line would be available on 21 October, but ECI responded that it would not need the line until 24 October. ECI's crew worked on the jobsite on 24 October, and the line was made available on 25 October (tr. 2/32-33; exh. G-2). The Board finds that ECI's progress was not delayed by any failure of the Navy to make pipeline "B" available in a timely fashion.

22. On 29 November 1988, ECI notified the Navy of its need for the availability of pipeline "A." The Navy responded that the line would be available on 5 December 1988, and the parties agreed that ECI's crew would return on that date. ECI decided not to return to the job site until 12 December, and the line was available on that date (tr. 2/34-35; exh. G-1, -2). We find that ECI's progress was not delayed by any failure of the Navy to make pipeline "A" available in a timely fashion.[2]

23. On 10 April 1989, ECI forwarded a claim to the Navy's contracting officer in which it sought relief as follows:

I. There are three distinct elements of additional cost our firm experienced during the course of actually constructing this project. The first element of our claim is the following summary of additional work that has not yet been paid:

1. The additional costs to remove the sluffing [sic]—saturated and contaminated soils near valve box #19; to shore and "dewater" the excavation; and to replace the contaminated soil with import.

2. The additional cost to load out the sluffing [sic]—saturated and contaminated soil; transport the same soil to the drum storage site; and to unload, deck, spread and turnover the same soil at the drum storage site (excluding Dirtworks subcontract).

3. The additional cost to import and handle a suitable backfill material.

4. The additional paving cost to pave areas of existing pavement that cracked and/or had to be removed due to sluffing [sic] soil conditions.

5. The additional cost to excavate, backfill and compact areas of the trench excavation removed due to a saturated sluffing [sic] soil condition.

6. The additional cost to provide dewatering capability to remove contaminated ground water as required throughout the project.

TOTAL DIRECT COST (Excluding margin, bonds, insurance and financing)	$72,528.00

[1] ECI also complained that soil in this area was "sloughing off" into the excavation. However, as indicated by Mr. Webb in his testimony, this phenomenon was the result of ECI's failure to comply with the contract's shoring requirements (tr. 2/56-59; R4, tab 1).

[2] There is no credible record evidence demonstrating that ECI's progress was delayed as a result of its accommodation of the Navy's barge loading schedule.

Digitized by Google

II. The second element of additional cost experienced by our firm was a series of critical time delays as follows:

08/02/88—	Daily Report identifies 2 c.d. of delay created by conflict with existing pipe.
08/26/88—	Daily Report identifies 21 c.d. of delay created by a severe sewer leak and public Works' inability to repair leak.
10/11/88—	Daily Report identifies 14 c.d. of delay created by the Navy's inability to provide scheduled tie-ins. (Note: specified notification period applies only to utilities!)
10/14/88—	Daily Report identifies a 3 c.d. delay to accommodate the Navy's barge loading schedule.
12/12/88—	Daily time sheets identify 11 c.d. of time lost due to the tie-ins being unavailable.
TOTAL DAYS DELAYED	51 c.d.
TOTAL TIME DELAY COST ($1145.14/c.d. × 51 c.d.)	$58,402.00

(Note: Appendix "A" for detailed time-related daily cost)

III. The third element of cost is the inefficiencies and minor delays created by working in hydrocarbon contaminated environment. Obviously, workers compelled to breath [sic] petroleum distillates and to be constantly exposed to the skin irritations of contaminated soils while being concerned with the potential of fire/explosion simply are not as productive as workers on a typical welded, buried steel pipeline.

In an effort to accurately quantify the loss of productivity costs created by being compelled to work in a noxious environment, we have chosen to use the recommendations of the Mechanical Contractor's Association of America. Their published research, in Bulletin No. 58, states that a severe degradation in attitude and moral [sic] caused by a hazardous location and poor site conditions is anticipated to create a 30% loss of productivity. Now, after having endured the actual construction of the Point Molate fuel line replacement in a fuel contaminated environment, our firm is in a position to concur with the Mechanical Contractors Association findings.

As of March 28, 1989, our firm has spent a total of $182,454.00 in labor. Using the Mechanical Contractors Association guides, the actual loss of productivity created by the contaminated soils is 30% of $182,454.00 or $54,736.00. Therefore, the total additional costs created by being compelled to construct the fuel line replacement through fuel contaminated soils and pockets of man-deposited rubble and debris are as follows:

A.	TOTAL DIRECT COST	$ 72,528.00
B.	TIME DELAY COST	58,402.00
C.	LOSS OF PRODUCTIVITY	54,736.00
	SUBTOTAL OF ECI DIRECT COST:	$185,666.00
D.	SUBCONTRACTORS	
	1. Dirtworks (contaminate soil removal, disposal, decking)	$ 24,750.00
	2. Gilbert Construction (removal of petroleum sludge from concrete)	8,597.00
	3. Med-Tox (soils contamination testing)	840.00
	TOTAL DIRECT COST:	$219,853.00
	23.83% Home Office Overhead	52,391.00
	SUBTOTAL:	$272,244.00
	7% Margin	$ 19,057.00
	SUBTOTAL:	$291,301.00
	1.5% Bonds and insurance	$ 4,370.00
	TOTAL COST: (Created by the petroleum contaminated soil and man-deposited debris)	$295,671.00

(R4, tab 10)

24. on 14 March 1990, the Navy's contracting officer issued a final decision in which he denied ECI's claim in its entirety. He stated, in pertinent part:

©1994, Commerce Clearing House, Inc.

Digitized by Google

VALVE BOX 19 TO 20 RELOCATION

You contend you are entitled to additional compensation for costs incurred because the material you encountered in the excavation between valve boxes 19 and 20 was unusable due to gradation and the existence of debris, stating the Government warranted the material was usable as backfill.

You located the new lines between valve boxes 19 and 20 parallel to (removed horizontally from and substantially shallower than) the existing lines which you capped and abandoned in place.

Between valve box 19 and 20, you encountered a small amount of debris (a 10′ pole, some bricks and some lumber) and you found the excavated material contains a substantial amount of rock that would not pass a 1-1/2″ screen. It is these events that give rise to this portion of your claim.

Relative to the material you discovered in your trench between valve boxes 19 and 20, you elected to follow an alignment of your own design which was removed horizontally from the existing piping so that you could not reasonably assume you would encounter the backfill for the existing pipes. The design was yours, not the Navy's, and you, not the Navy, are responsible for its adequacy. Further and as evidenced by entries in daily reports, diaries and other memoranda, you supplemented your proposal by assuming the cost of encountering any obstacles (any piping that crossed your trench and crossed the existing fuel pipelines the contract required to be removed, for example). It is this last item that gives evidence of some consideration to the Navy. Otherwise, you escaped a considerable amount of work that was contemplated in the contract without any benefit to the Navy. Accordingly, there is no merit in this portion of your claim.

CONTAMINATED SOIL AND WATER

You contend the presence of hydrocarbons and water in the trench adjacent to (North of) valve box 19 and between valve boxes 19 and 11 was a hazardous differing site condition for which you are entitled to additional compensation.

You cut away and capped the two 20″ lines from valve boxes 11 and 19, running the new lines exiting valve box 19 toward valve box 11 in a more horizontal (shallower) attitude than required in the contract documents, so that they ran above the abandoned and capped existing lines to a point near valve box 11 where you installed ells that directed the new lines down to ells on new lines exiting valve box 11 at the elevation of the existing lines.

On 2 August 1988, you encountered and broke a six or eight inch diameter clay drain line East of valve box 11 which ran parallel with and at the same level as the 20″ lines. The broken line discharged water for approximately two hours and then a heavy black oil identified by station personnel as Navy Special (which hasn't been stored at Pt. Molate for many years). The line was plugged and abandoned.

On 3 August 1988, you reported finding hydrocarbons in the trench along the North wall of valve box 19. You have subsequently stated you encountered hydrocarbons in the trench between valve boxes 11 and 19. It is these events that give rise to this portion of your claim for increased costs. You have subsequently stated you discovered a large quantity of oil in a Eucalyptus grove South of valve boxes 11 and 19 and infer the oil migrated from there into your trench.

The concentration of water borne hydrocarbons in your trench was tested by the Navy's station personnel and found to be within allowable limits. The samples you had Med-Tox test were taken by your employee, not a laboratory technician, and hence you haven't presented evidence they are representative samples of the concentrations at the sources or the extent of contamination.

You have attempted to elicit the intervention of Congressman George Miller, Senator Alan Cranston, the Contra Costa County Environmental Health Group, the Environmental Protection Agency, and numerous individuals in the Bay Area Water Quality Control Board. No citations have been issued relative to the conditions of which you complained.

The photographs of excavated spoil shows material from between valve boxes 19 and 20 (oversize rock) not oil contaminated material and the photographs of oil in the excavations do not prove there was more than a film of oil present. You have not proven that the oil you say you found in the eucalyptus grove migrated into your excavation.

Relative to the existence of hydrocarbons in your trench, the work is being conducted in the middle of a Navy tank farm that has been in operation for many years, long before environmental quality was a matter of public concern to the extent it is

Digitized by Google

now or governed the behavior of people managing tank farms. It would be unreasonable to assume that you would not encounter hydrocarbons in any excavation, particularly when you were replacing one pair of 20" diameter fuel lines with another pair of 20" diameter fuel lines. Your contract, while it neither says you will or will not encounter hydrocarbons in trenching, clearly contemplated your encountering both water and hydrocarbons and made provisions therefor, none of which include increasing the contract price. You have not demonstrated that you encountered a differing site condition in that it does not differ from that indicated in the contract or normally inhering in the work.

Based upon the foregoing, your claim is denied.

(R4, tab 17)

25. This appeal followed.

DECISION

ECI argues initially that the debris which it encountered at the onset of excavation constituted a differing site condition for which it should receive compensation. In formulating this contention, ECI overlooks the fact that the route of excavation was altered at its request and that it achieved substantial cost savings as a result of this rerouting. Moreover, ECI also ignores the waiver which it executed as consideration for these savings. We do not read this waiver as broadly as the Government to encompass all difficulties which ECI might have encountered while excavating. The Board does conclude, as a matter of law, however, that the debris at issue constituted "obstructions" and that, therefore, it squarely fit within the parameters of ECI's waiver. Accordingly, we must deny this claim.[3]

ECI raises similar allegations concerning soil which it contends was contaminated by hydrocarbons. It argues that this purported contamination constituted a differing site condition and that it was entitled to relief under the theory of a constructive change because it was "forced" to "haul away contaminated soil, spread and aerate saturated soil, and import replacement." First, the weight of the evidence does not support ECI's contention that the relatively small amount of soil at issue was contaminated. Indeed, we have found that it was not. Moreover, the Navy did not "force" ECI to haul this soil from the project site and to replace it with imported sand. It merely accommodated ECI's request and provided ECI with a convenient location to place the soil. Finally, we simply note, as a matter of law, that subparagraph 2.1.6 of section 02200 of the specifications provided the use of sand as a borrow material at no extra cost to the Government. Hence, we deny ECI's claim in this regard.[4]

ECI's third major argument is that it is entitled to recover for 51 days' of delay which resulted from problems with debris, water leaks, tie-ins of pipelines, and accommodation of the Navy's barge loading schedule. As a part of our factual findings, the Board has carefully examined each of these delay claims and has concluded that ECI's progress on the job was not delayed by any of these alleged problems. Therefore, we conclude that ECI's delay claim is devoid of merit.

CONCLUSION

The appeal is denied.

[¶ 26,465] Stapp Towing Company, Inc.

ASBCA Nos. 41584, 41585, 41586, 41590, October 25, 1993. Contract Nos. ILWX 35697-S, 02773-S, 40073-S, 14445-S.

---

[3] ECI also appears to contend that it should not have been required to screen excavated soil to remove particles larger than one and one-half inches. It thus overlooks the fact that, because there was far more excavated soil than was needed for purposes of backfilling, it would have been forced to haul this soil away under any circumstances. ECI also misinterprets subparagraph 2.1.1 of section 02200 of the specifications which clearly required it to remove large particles "from backfill material."

[4] ECI also apparently argues that it should recoup purported additional costs relating to dewatering and sloughing. In performing dewatering, ECI was merely complying with contractual requirements. Further, as we have found, the sloughing at issue resulted from ECI's failure to provide the contractually required shoring materials. Therefore, ECI is not entitled to recover any additional costs which may have resulted from these occurrences.

Delays—Adjustments—Demurrage.—Under the Equipment Ordered but Not Used clause of a contract for the movement of diesel marine fuel that was canceled by the government and awarded to another contractor, the original contractor was entitled to recover the specified demurrage, despite the government's contention that the contractor's allegedly late tender of performance justified the cancellation, because the government failed to show that the contractor was unreasonably late in arriving at the loading point. The record showed that the government knew that the contractor was off-loading other cargo when it was awarded the contract. The government ordered the contractor to finish off-loading and to proceed to the load point whenever reasonable. The government wrongfully moved the fuel without informing the contractor and canceled the contract when the contractor attempted to load.

Interpretation of Contracts—Moving and Storage—Equipment Ordered but Not Used Clause.—Under the Equipment Ordered but Not Used clause of a contract for the movement of diesel marine fuel that was canceled by the government and awarded to another contractor, the original contractor was entitled to the demurrage rate under the clause, despite the government's contention that the clause included an unenforceable liquidated damages provision that resulted in a penalty, because the clause was an alternate rate of compensation from the per barrel rate to be used if the contractor moved the fuel, rather than liquidated damages. In the clause, as written by the government, the government agreed to pay the contractor on an hourly basis in exchange for government's exercise of its right to cancel the contract. The contractor was entitled to the amounts it invoiced under the disputed contract.

For the appellant: Gardner & Kewley, Metairie, Louisiana, by Van M. Davidson, Jr. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. Scott L. Kilgore, JAGC, Trial Attorney.

Before STEMPLER, RUBERRY, and SPECTOR, Administrative Judges.

STEMPLER, Administrative Judge: These are timely appeals from refusals to issue decisions on appellant's claims resulting from the Government's cancelling the contracts in dispute.[1] A hearing was held and the parties have filed briefs. Both entitlement and quantum are before us. The Contract Disputes Act is applicable.

FINDINGS OF FACT[2]

Stapp Towing Company, Inc. (Stapp) is a duly licensed Texas corporation doing business in Texas. Its corporate headquarters is located in Dickinson, Texas. At all times relevant to these proceedings, Stapp was in business providing barge transportation services for petroleum products on the inland waterways of the United States. It provided these services primarily to the United States Army Military Traffic Management Command (MTMC).

ASBCA No. 41584

On 24 June 1988, MTMC requested a bid from Stapp to provide transportation services for fuel. The Government's solicitation was for shipment by barge on 1 July 1988 of approximately 75,000 barrels of diesel marine fuel from the Chevron USA facility in Pascagoula, MS, to Amerada Hess Corporation Terminal in Galena Park, TX. The same day, Stapp telephoned its bid to MTMC, quoting a price of $.85/bbl and $450/hour demurrage.[3] The Government awarded the contract[4] (designated No. ILWX 35697-S) to Stapp. In each of these appeals, the Government awarded the contract to the lowest per barrel bidder. The demurrage rate was not evaluated by the

[1] Our opinions concerning jurisdiction over these disputes appear at 92-2 BCA ¶ 24,862, supplemented on reconsid., 92-3 BCA ¶ 25,190. Familiarity with these opinions is presumed.

[2] There are very few facts in dispute. Most of the facts have been taken from the written stipulations of the parties, exh. B-1, 2, 3, 4.

[3] Demurrage is the amount paid to the carrier per hour for excess time a carrier spends waiting to on-load or off-load cargo.

[4] The contract in these instances is represented by a standard form (MTE Form 273). In three of the four moves in dispute, no Form 273 was issued because the moves were cancelled before the form could be issued. Both parties contend that in all instances the terms of their contracts are represented by the MTE Form 273.

Digitized by Google

Government unless the per barrel bids were equal.

On 26 June 1988, at 0800, Stapp's ship and barges (the tow) departed Dickinson Bayou, TX on orders from MTMC. On 27 June 1988 at 2000, the tow arrived at Chevron and remained on standby until 1 July 1988 at 1200. At that time, the Defense Logistics Agency-Defense Fuel Region South (DFRS)[5] informed Stapp that the contract had been cancelled. The Government cancelled Stapp's contract because it had a long term contract with another contractor and some of this contractor's equipment became available to perform the transportation services at issue. Stapp then redirected its tow to its next loading point, arriving at Chevron USA facility in Port Arthur, TX on 5 July at 1500.

Stapp invoiced the Government for $100,350, representing 223 hours at the $450 demurrage rate pursuant to the Equipment Ordered But Not Used clause (*infra*). The Government refused to pay the invoice, and on 17 July 1990 Stapp filed a certified claim which the Government refused to issue a decision on. Stapp filed a proper appeal to this Board.

The contract contains the following relevant provisions:

GENERAL PROVISIONS

EQUIPMENT: Equipment tendered shall be suitable to load intended cargo, equipped for complete discharge of cargo at carrier's expense, have permanent gauge point marks, and calibration charts shall be readily available to Government Representatives. Information as to standards of cleanliness of vessels may be secured from the Government Inspector at the loading point. In the event the equipment tendered is determined by the Government Inspector to be unsuitable for loading the intended cargo, carrier has the option to perform further cleaning at his expense, [sic] substitute equipment to meet the scheduled lift date. Time so used in cleaning shall not be considered as used laytime.

EQUIPMENT ORDERED BUT NOT USED. When equipment is placed for loading on orders of the Government, and such orders are subsequently cancelled, charges will be assessed at the agreed hourly demurrage rate. Demurrage will be computed beginning on the hour and date the equipment departs from the home terminal or point of dispatch and will continue until the hour and date the equipment returns to the home terminal or subsequent loading point. Release may be accomplished by telephone and confirmed in writing.

TIME OF PERFORMANCE: Upon receipt of notification (verbal or written) from the Military Department controlling this movement or its authorized representative, carrier will proceed to the designated loading point so as to arrive on the specified readiness date or such later date as may be authorized by the Military Department controlling the movement(s). Upon completion of loading, carrier will proceed to accomplish the transportation forthwith. In the event the carrier is unable to provide equipment within 24 hours of the date ordered the Government shall arrange for substitute equipment. The carrier shall be responsible to bear the costs of any additional charges incurred by the Government in arranging for substitute equipment.

ASBCA NO. 41585

On 26 October 1988, MTMC requested a bid from Stapp for a 31 October 1988 movement of 65,000 barrels of JP-4 from Phillips 66, Freeport, TX to Amerada Hess Corporation, Galena Park, TX. The same day Stapp telephoned its bid of $.615/bbl and $400/hour demurrage to the Government, and it was accepted. The contract was designated ILWX 02773-S.

On 30 October 1988 at 0645, Stapp's tow departed Dickinson Bayou, TX. The tow arrived at the Phillips loading dock at 0600 on 31 October 1988. Prior to arrival, the barges employed by Stapp underwent a laboratory analysis by a testing laboratory which established that the barges were not corroded. The last load for the barges being used was Government fuel. At 0610 on 31 October, the Government inspector at the Phillips docks informed Stapp that the barges were turned down due to corrosion.[6] By 1145 on 2 November 1988, Stapp's tow was at the Platzer Shipyard in Green's Bayou, TX to have the barges cleaned. At 1525 on that date, DFRS informed Stapp that the contract was being cancelled pursuant to the Time of Performance clause of the contract because of the

[5] DFRS is authorized to take contractual actions under the instruments in dispute.

[6] The corrosion test is a standard test for certifying barges are "clean" in accordance with applicable standards.

Digitized by Google

delay in Stapp providing the equipment for the movement. Stapp continued the cleaning and returned to its home port of Dickinson Bayou, TX on 5 November 1988 at 1115.

Stapp invoiced the Government for $59,400, representing 148 1/2 hours at the $400 demurrage rate, and $7,108.93 for the barge cleaning. The Government did not pay the invoice. On 3 August 1990 Stapp filed a certified claim which the Government refused to issue a decision on. Stapp filed a proper appeal to this Board.

The contract contains the following relevant provisions:

GENERAL PROVISIONS

EQUIPMENT: Equipment tendered shall be suitable to load intended cargo, equipped for complete discharge of cargo at carrier's expense, have permanent gauge point marks, and calibration charts shall be readily available to Government Representatives. Information as to standards of cleanliness of vessels may be secured from the Government Inspector at the loading point. In the event the equipment tendered is determined by the Government Inspector to be unsuitable for loading the intended cargo, carrier has the option to perform further cleaning at his expense, [sic] substitute equipment to meet the scheduled lift date. Time so used in cleaning shall not be considered as used laytime.

EQUIPMENT ORDERED BUT NOT USED. When equipment is placed for loading on orders of the Government, and such orders are subsequently cancelled, charges will be assessed at the agreed hourly demurrage rate. Demurrage will be computed beginning on the hour and date the equipment departs from the home terminal or point of dispatch and will continue until the hour and date the equipment returns to the home terminal or subsequent loading point. Release may be accomplished by telephone and confirmed in writing.

TIME OF PERFORMANCE: Upon receipt of notification (verbal or written) from the Military Department controlling this movement or its authorized representative, carrier will proceed to the designated loading point so as to arrive on the specified readiness date or such later date as may be authorized by the Military Department controlling the movement(s). Upon completion of loading, carrier will proceed to accomplish the transportation forthwith. In the event the carrier is unable to provide equipment within 24 hours of the date ordered the Government shall arrange for substitute equipment. The carrier shall be responsible to bear the costs of any additional charges incurred by the Government in arranging for substitute equipment.

ASBCA NO. 41586

On 28 July 1988, MTMC requested a bid from Stapp for the movement of 25,000 barrels of JP-5 from Mobil Oil Corporation Refinery, Beaumont, TX to the Pensacola Naval Air Station, FL to be loaded on 9 September 1988. On 2 September 1988, Stapp telephoned its bid of .91/bbl and $300/hour demurrage to MTMC. The Government selected Stapp and the contract was designated ILWX 40073-S. On 7 September 1988 at 1800, Stapp's tow departed its home port. On 8 September at 1201, while the tow was in route to Mobil, DFRS informed Stapp that the contract was cancelled because the Mobil fuel was not in compliance with the applicable standards. At 1215 Stapp directed its tow to return to its home port. It arrived on 9 September 1988 at 0600.

Stapp invoiced the Government for $10,800, representing 36 hours at the demurrage rate of $300. The Government did not pay the invoice and on 17 July 1990 Stapp filed a claim. The Government refused to issue a decision on the claim and Stapp filed a proper appeal to this Board.

The contract contains the following relevant provisions:

GENERAL PROVISIONS

EQUIPMENT: Equipment tendered shall be suitable to load intended cargo, equipped for complete discharge of cargo at carrier's expense, have permanent gauge point marks, and calibration charts shall be readily available to Government Representatives. Information as to standards of cleanliness of vessels may be secured from the Government Inspector at the loading point. In the event the equipment tendered is determined by the Government Inspector to be unsuitable for loading the intended cargo, carrier has the option to perform further cleaning at his expense, [sic] substitute equipment to meet the scheduled lift date. Time so used in cleaning shall not be considered as used laytime.

EQUIPMENT ORDERED BUT NOT USED. When equipment is placed for loading on orders of the Government, and such orders are subsequently cancelled,

charges will be assessed at the agreed hourly demurrage rate. Demurrage will be computed beginning on the hour and date the equipment departs from the home terminal or point of dispatch and will continue until the hour and date the equipment returns to the home terminal or subsequent loading point. Release may be accomplished by telephone and confirmed in writing.

TIME OF PERFORMAMCE: Upon receipt of notification (verbal or written) from the Military Department controlling this movement or its authorized representative, carrier will proceed to the designated loading point so as to arrive on the specified readiness date or such later date as may be authorized by the Military Department controlling the movement(s). Upon completion of loading, carrier will proceed to accomplish the transportation forthwith. In the event the carrier is unable to provide equipment within 24 hours of the date ordered the Government shall arrange for substitute equipment. The carrier shall be responsible to bear the costs of any additional charges incurred by the Government in arranging for substitute equipment.

ASBCA NO. 41590

On 1 February 1990, MTMC requested a bid from Stapp for a 9 February 1990 movement of 75,000 barrels of diesel marine fuel from the Chevron docks in Pascagoula, MS to Amerada Hess in Galena Park, TX. On 2 February 1990, Stapp telephoned its bid of $1.30/bbl and $500/hour demurrage. Another company was awarded the contract. Nonetheless, on 2 and 5 February, DFRS inquired of Stapp if it had the equipment available to perform and what equipment would be used. On 5 February 1990 at 1621, DFRS awarded contract ILWX 14445-S to Stapp and ordered Stapp to send a tug boat and three barges to Pascagoula, MS after they finished pumping off another fuel load. On 7 February 1990 at 0010, Stapp finished discharging its load, prepared to depart and at 0240, Stapp's tow departed for Pascagoula. On 12 February 1990, DFRS called Stapp and requested the tow's position. Stapp's tow arrived at Chevron at 13 February at 0345. On 13 February at 0800, Stapp called DFRS to inform it that Stapp had attempted to load at Chevron, but that Chevron had no orders to load fuel to Stapp. At 0927, DFRS called Stapp and informed it that the contract had been cancelled and awarded to another company and the fuel had been moved on 12 February. Stapp ordered its tow to proceed to the next job at Corpus Christi, TX arriving on 23 February at 1945.

Stapp invoiced the Government $198,000, representing 396 hours at the $500 demurrage rate. The Government did not pay the invoice. On 9 July 1990 Stapp filed a certified claim and the Government refused to issue a decision. Stapp filed a proper appeal to this Board.

The contract contains the following relevant provisions:

GENERAL PROVISIONS

EQUIPMENT: Equipment tendered shall be suitable to load intended cargo, equipped for complete discharge of cargo at carrier's expense, have permanent gauge point marks, and calibration charts shall be readily available to Government Representatives. Information as to standards of cleanliness of vessels may be secured from the Government Inspector at the loading point. of the date ordered the Government shall arrange for substitute equipment. The carrier shall be responsible to bear the costs of any additional charges incurred by the Government in arranging for substitute equipment.

With respect to all of the cancelled contracts, Stapp has not calculated its actual damages, although it is possible to reconstruct its actual costs or a close estimate thereof.

The demurrage rates set by Stapp were set based on Stapp's prior experience with the Government. Stapp considered the length of time it takes the Government to pay for moves, the moves for which Stapp considered itself never to have been paid by the Government, and the number of times the Government disputes the number of demurrage hours incurred. Stapp also uses the rates as an incentive to have its ships loaded promptly. They are not set in an attempt to estimate any potential damages from the Government cancelling a contract. Prior to, and subsequent to the contracts in dispute, the Government paid Stapp its demurrage rate when the Government cancelled a MTMC contract. There is no evidence in the record as to why these four contracts were treated differently.

CONTENTIONS OF THE PARTIES

It is Stapp's position that the contracts are valid and it is entitled to have the terms enforced, including the Equipment Ordered But Not Used (EOBNU) clause. Stapp denies that the demurrage rate in this clause operates as an unenforceable penalty in the nature of liquidated damages.

The Government concedes liability in ASBCA Nos. 41584, 41585 ad 41586. It contests liability in ASBCA No. 41590 on the basis that Stapp was late in arriving at the loading point and therefore the Government was entitled to cancel without liability.

As to quantum, it is the Government's position that the portion of the EOBNU clause that entitles Stapp to be paid the demurrage rate if the Government cancels the contract amounts to a liquidated damages provision. The Government argues that this liquidated damages provision is unenforceable because it is a penalty because: (1) it was not intended to be a measure of the prospective damage Stapp might incur, (2) Stapp's potential damages at the time of contracting were not difficult to estimate, and (3) the liquidated damages amount did not bear a reasonable relationship to Stapp's potential damages. Since the liquidated damage provision is allegedly unenforceable, the Government reasons that Stapp must prove its actual damages and since Stapp made no attempt to do so, it must take nothing.

DECISION

ENTITLEMENT

The Government concedes entitlement for ASBCA Nos. 41584, 41585 and 41586. As to 41590, the Government would have us hold that Stapp was late in tendering performance and therefore the Government's cancellation was justified. We cannot so hold. While it is true that the original load date for the movement was 9 February 1990, that contract was awarded to another contractor. Subsequently, the Government awarded the movement (the record does not disclose what happened to the original contractor) to Stapp knowing that Stapp was off-loading another cargo at the time. In fact, the Government ordered Stapp to finish off-loading and then to proceed to the load point. Stapp did so. There is no evidence that the time between contracting (5 February) and Stapp's arrival at the load point (13 February) was unreasonable. We hold that the load date for Stapp's contract, agreed to by the parties, was whatever date Stapp could reasonably arrive considering the Government's orders to finish unloading. The Government's actions of moving the fuel on 12 February, not even telling Stapp, and then cancelling the contract when Stapp attempted to load on 13 February was wrongful and entitled Stapp to the specified demurrage.

QUANTUM

The Government's challenge to quantum consists of an allegation that the EOBNU clause contains a provision that is a liquidated damages provision and results in a penalty and is therefore unenforceable, particularly since in three of the four contracts, this provision results in Stapp receiving more compensation than if it had performed the contract. We will find liquidated damage provisions to be a penalty if they are not fair and reasonable attempts to fix compensation for anticipated loss caused by one party, if at the time of contracting actual damages are not uncertain in nature and amount or if the amount does not bear a reasonable relationship to the anticipated loss. *Rivera-Cotty Corporation,* ASBCA No. 32291, 86-3 BCA ¶ 19,148. The clause itself does not make reference to liquidated damages. It requires that when the Government orders equip-

Digitized by Google

ment but subsequently cancels the order, the Government will pay the contractor the hourly demurrage rate from the time the equipment departs until it returns or arrives at its next loading point. We do not view the EOBNU clause to be in the nature of liquidated damages. Instead, we view it as an alternate rate of compensation from the per barrel rate to be used if the fuel was moved by Stapp. In the clause, authored by the Government, in exchange for the right to cancel the contract, the Government agrees to pay Stapp on an hourly basis if such cancellation right is exercised. Whether such a provision is prudent, especially in light of the fact that the demurrage rate was not evaluated when the contractors were selected is not for us to determine. Apparently the Government has paid claims of this nature to Stapp prior to these contracts and subsequent to these contracts. The Government has not attempted to distinguish these four contracts from the other contracts between Stapp and MTMC in which the demurrage rate was paid. Why the demurrage rates were not evaluated is not revealed in the record, but when all provisions of a bid are not evaluated, results that distress one of the parties can result. *DWS, Inc.*, ASBCA No. 33245, 87-3 BCA ¶ 19,960. Having canceled the contract pursuant to the terms of the EOBNU clause, the Government is required to fulfill its obligations under that clause and pay Stapp the demurrage rate. Stapp is entitled to the amounts it invoiced under each of the contracts in dispute.

CONCLUSION

The appeals are sustained. CDA interest shall run from 20 July 1990 [7] in ASBCA No. 41584, from 7 August 1990 for ASBCA No. 41585, from 20 July 1990 for ASBCA No. 41586, and from 12 July 1990 for ASBCA No. 41590.

[¶ 26,466] Hudson Contracting, Inc.

ASBCA No. 41023, October 27, 1993. Contract No. N62467-84-C-5119.

Site Conditions—Government Duty—Designation of Inspector.—Under a contract for the construction of a storm drainage system, the government's failure to designate an inspector or authorized person to receive notice of a subsurface condition encountered by the contractor was a constructive change, because the failure to make the designation was a breach of the government's duty to cooperate. The parties had agreed that the contractor would perform ditch excavation work on a holiday to avoid interfering with the government's use of a roadway. While excavating across the width of the roadway, the contractor encountered a two-inch pipe that was not shown on the drawings and did not know whether the line was gas or water or whether the line was active or abandoned. Pending directions from the government, the contractor covered the exposed line, filled the excavation, and paved the area with a temporary road surface. The contractor was entitled to recover the costs of performing this extra work.

Site Conditions—Contract Indications, Category I—Underground Pipe.—A submerged pipe encountered by a contractor while performing excavation work under a contract for a storm drainage system was a Category I differing site condition because the condition encountered differed from contract indications. There was no indication in the drawings of any pipe at the bottom of the ditch the contractor was digging across the roadway.

Site Conditions—Contract Indications, Category I—Absence of Indications.—An underground waterline encountered by a construction contractor while performing work preparatory to the installation of a ditch was not a Category I changed condition, because the contract did not contain any express representations regarding either the depth or the location of the waterline. The drawings depicted the waterline, but they did not show the depth at which it was buried. A general note on the drawings stated that all utility locations were "approximate" and directed the contractor to verify all locations. The failure to depict

[7] In the absence of evidence to the contrary, we presume the claims were received in the ordinary course of the mail.

©1994, Commerce Clearing House, Inc.

Digitized by Google

the depth at which the line was buried, coupled with the notice that the depiction of the waterline was approximate, precluded a finding that there were any express contract indications regarding the waterline.

Modifications—Bar to Claims—Accord and Satisfaction.—A contractor's differing site condition claim for the costs of removing a six-inch waterline encountered while excavating under a contract for the construction of a water drainage system was barred by accord and satisfaction, because this claim was the same claim as that addressed in a modification. The contractor's differing site condition claim for costs incurred in relocating a one-half-inch waterline and its differing site condition claim for the costs of removing a three-inch waterline encountered while excavating the work site were not barred by accord and satisfaction, because these claims were not included in the modification.

Site Conditions—Contract Indications, Category I—Underground Power Lines.—Underground power lines encountered by a contractor while digging a ditch under a contract for a storm drainage system was a Category I differing site condition because the underground condition differed from contract indications. There was no indication in the drawings of any underground duct bank containing power lines in the area where the contractor was excavating the ditch.

Site Conditions—Contract Indications, Category I—Underground Sewer Line.—A sewer line encased in concrete that was encountered by a contractor while excavating a ditch was a Category I differing site condition because the underground sewer line differed from contract indications. The sewer line was not shown in the contract drawings, and it was first disclosed when encountered during excavation.

Modifications—Bar to Claims—Demobilization Costs.—Under a contract for the construction of a water drainage system, a contractor's claim for the costs of demobilizing at the site of deleted work and remobilizing at another site was barred by a contract modification because there was no reservation in the release of a right to later assert this claim.

Performance—Direction by Government—Interpretation of Directive.—The costs of diverting workmen from ongoing tasks in order to perform repair work called for under a government directive were not compensable to a contractor under a contract for the construction of a water drainage system, even though the directive stated that the contractor was to give priority to the repair work, because the terms of the direction merely required prompt correction of the defects before the repair work was begun. Under its ordinary meaning, a direction to give "first priority" to repairs does not order the interruption of other work in favor of the repairs.

Site Conditions—Inspection—Visibility of Condition.—A small wooden bridge encountered by a construction contractor during ditch excavation work was not a compensable differing site condition, because the bridge was plainly visible and should have been discovered during a prebid site visit. A plainly visible bridge could not be an unknown condition under Category II or a latent condition under Category I.

Delays—Suspension of Work—Untimely Determination.—A suspension of work ordered by the government so that it could determine whether particular trees were to be removed from the path of ditch excavation was compensable to a construction contractor, because the government's failure to make a decision until after the commencement of contract performance was unreasonable. The contract drawings showed the exact route of the ditch excavation work. Prior to award of the contract, the trees in the path of the ditch could have been identified at the site and a decision made as to preservation or removal. The failure to make that decision until the contractor had arrived at the project site and prepared to remove the trees rendered the suspension unreasonable.

Performance—Risks and Duties—Safety Devices.—Under a contract for the construction of a water drainage system, a contractor was not entitled to recover the costs of complying with a direction to upgrade a walkway over an excavated area to improve safety, because it was obligated under the contract to protect persons using such walkways, and the initial walkway installed by the contractor had deteriorated following a rainfall. The

Digitized by Google

Accident Prevention clause of the contract required the contractor to comply with all pertinent provisions of the U.S. Army Corps of Engineers Safety and Health Requirements Manual. The manual provided that walkways or bridges with guardrails were to be provided where people or equipment were required to cross excavation areas. The initial walkway that the contractor provided created plain risks of injury to persons using the structure and thus fell short of what was required under the contract.

Performance—Interference by Government—Ditch Line.—Under a contract for the construction of a water drainage system, a government direction that a contractor postpone excavating ditch lines until after a scheduled military ceremony was a breach of the government's implied duty to avoid interfering with contract performance, because the direction was not related to contract performance or to the normal operation of the naval station where the contract was being performed.

Performance—Directions by Government—Leaking Valves.—The government's direction that a construction contractor excavate and repair leaking water pipes amounted to a constructive change because the direction was issued under the mistaken belief that the leaking pipes were caused by the contractor during excavation. The contract required the contractor to repair any damage to facilities resulting from its failure to exercise reasonable care in performing the work. Although the government believed the leaks were caused during the construction of the ditches, it was shown that the leaks did not result from any action on the part of the contractor.

Delays—Approval Delays—Pipe Inspections.—Although the government's approval of pipe installation was delayed for a few hours after the expiration of the 24-hour advance notice the contractor gave to the government that the work was ready for inspection, the contractor was not entitled to recover the costs of keeping workers at the site for backfill work to be performed upon approval, because it was not shown that the approval delay was unreasonable. The contractor was required to show that the government violated some standard with respect to approval time. The only evidence of delay was that the approval was delayed a few hours after expiration of the 24-hour advance notice to the government. The purpose of the notice was to afford enough advance notice of the contractor's requirement to permit proper scheduling of the inspector's time, not to establish a standard of delay reasonableness.

Performance—Interference by Government—Work Schedule Conflict.—Under a contract for the construction of a drainage system, the government breached its duty to cooperate with a contractor by failing to resolve a conflict in the work schedules of the contractor and another contractor working at the same location, because the government, having awarded the two contracts, had a duty to resolve the competing work schedules by directing the order of work at the location. The contractor's excavation of a ditch was delayed by a fence and by equipment belonging to the other contractor that was located in the path of the ditch. The other contractor refused to move its equipment until it completed work at the location. The equipment located in the path of the ditch could have readily been moved to accommodate the contractor. The government gave up trying to assist the contractor after the other contractor refused to interrupt its work. The government's refusal to take action to obtain a reasonable accommodation of the contractor's needs from the other contractor constituted a breach of its duty to cooperate.

Performance—Interference by Government—Implied Duty.—The government breached its implied duty not to impede performance under a contract for the construction of a water drainage system, because the government's public work personnel mistakenly opened a fire hydrant on the work site that later washed out ditches constructed under the contract. When government personnel tested fire hydrants, the open hydrant released water on the project site that caused the damage in question.

Awards—Existence of Contract—Oral Agreement.—An oral arrangement between a construction contractor and a government inspector relating to an exchange of services could not be avoided for lack of authority on the part of the government official, because the government official's authority under the contract was sufficient to enter into the arrangement in question. Under the arrangement, the contractor agreed to allow the

©1994, Commerce Clearing House, Inc.
Digitized by Google

government to use the contractor's backhoe on an unrelated project. In exchange, the government agreed to make available to the contractor a government-owned front-end loader. After the contractor performed its part of the arrangement, the government refused to carry out its part, asserting that furnishing government-owned equipment was not permissible. The scope of the authority of the government official, however, was sufficient to include making government property available to the contractor pursuant to the Government Property clause of the contract. The contracting officer had vested the government official with broad authority as to contract administration.

Performance—Specifications—Erosion Control.—Erosion control specifications under a contract for the construction of a drainage system were not defective, despite the contractor's contention that they were insufficient for the conditions of the highly eroded soil at the project site, because the specifications were shown to conform to industry standards and were suited to the conditions of the soil at the site. In any event, the contractor's failure to control erosion as required by the specifications made it unlikely that the defects in the specifications could have caused the erosion damage at issue.

Performance—Specifications—Design of Ditches.—Under a contract for the construction of a water drainage system, the contractor's contention that the design of the system was defective by failing to take into account surface runoff was rejected because the contract specifically made the contractor responsible for undertaking the necessary measures to prevent erosion, including control of runoff from the project site. The contract indicated several techniques, including the installation of berms, to control the erosion. Furthermore, the contractor should have been on notice from its prebid site inspection of the possibility of substantial runoff.

Performance—Specifications—Earth v. Concrete Ditches.—Under a contract for the construction of a water drainage system, the contractor's contention that the design was defective for prescribing earthen rather than concrete ditches to control the highly erodible soils was rejected because the highly erodible soil conditions could have been controlled by the contractor through dewatering and prompt vegetation.

Performance—Specifications—Shallow Ditch Design.—Under a contract for the construction of a water drainage system, the government's design of shallow ditches below the water table that caused a constant flow of water-borne soil and resulted in the accumulation of sediment in the ditches was defective, because this sedimentation resulted from the design of the drainage system rather than the actions of the contractor. The sediment resulting from the design was not capable of being successfully controlled during the term of the contract. The sedimentation attributable to the action of the running water was chargeable to the government. On the other hand, the costs of removing sediment because of conditions that were the responsibility of the contractor, such as sediment from surface runoff or sediment left in the ditch, were not recoverable by the contractor.

Performance—Direction by Government—Removal of Berms.—Under a contract for the construction of a water drainage system, the government's direction that a contractor remove berms in tail ditches and the nearby section of a larger ditch was a constructive change because the removal of the berms at the edge of the large ditch left the ditch sides unprotected from surface runoff, permitting the later washout of the area. The removal of the berms allowed surface runoff from later rainstorms to sheet down the slopes of the large ditch and wash away the growing grass planted by the contractor.

Performance—Risks and Duties—Unfinished Government Work.—Although the government stated that it would assume the responsibility for reseeding ditches that had not been successfully vegetated by the contractor, the contractor was not entitled to recover the costs of being directed to finish the reseeding work begun by the government, because the contractor's completion of the work was in discharge of its existing contractual obligation. The government's work did not cause additional expense to the contractor. On the contrary, that work benefited the contractor inasmuch as the contractor was liable for the entire effort of reseeding.

For the appellant: Russell S. Gill, Biloxi, Mississippi. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Garrett L. Ressing, Trial Attorney, Naval Facilities Engineering Command, Chesapeake Division, Washington, D.C.

Before MOED, RIISMANDEL, and RUBERRY, Administrative Judges.

MOED, Administrative Judge: Appellant (hereinafter "Hudson") constructed a storm drainage system at the Naval Construction Battalion Center, Gulfport, MS (hereinafter "the Center") and now seeks increases in contract price for: (a) underground utility lines assertedly not shown in the contract drawings; (b) directions, acts, and omissions by representatives of the Government allegedly amounting to changes; and (c) repair of erosion damage to the drainage ditches constructed under the contract. Only entitlement is now to be decided.

FINDINGS OF FACT

1. On 29 September 1987, as the result of small business-restricted sealed bidding, Hudson was awarded a fixed-price contract in the amount of $516,275 for construction of the Phase II Storm Drainage System at the Center. The date in the contract for completion of the work, as adjusted pursuant to bilateral modifications, was 18 August 1988. This was also the date of substantial completion of the work (R4, tab V). The contract contains the standard clauses for construction contracts including the "Differing Site Conditions", FAR 52.236-2, and "Site Investigation and Conditions Affecting the Work", FAR 52.236-3, clauses.

2. The work under the contract consisted primarily of the construction of a system of open, earthen-sided storm drainage ditches. Reinforced concrete pipe (RCP) culverts, supported at the ends by concrete headwalls, were used for continuing the system under roads and paved areas. The ditch system consisted of two large, deep ditches ("trunks") with numerous branches feeding in or carrying away drainage water. One trunk, referred to as the "Big Ditch", ran north-south between Sixth and Eighth Streets, with a connection to the existing drainage ditch system (the "Phase I" system) at Eighth Street. The other trunk, which was connected to the Big Ditch, ran east-west along Sixth Street.

3. Ancillary work under the contract included relocation of utilities in the path of construction and establishing grass and vegetation and taking other measures for controlling soil erosion in the ditches and in adjacent areas disturbed by construction.

4. On 29 August 1989 Hudson submitted a written request to the contracting officer for contract price increases totalling $98,772.17 in regard to approximately 75 instances of extra work arising from alleged constructive changes or differing site conditions. That amount contains $46,706.48 for added costs of the individual items. The amount sought for 71 of these is $500 or less. The remaining four items range between $2023 and $6,566. The remaining $52,065.69 relates to Hudson's assertion that the extra work added two additional months to the period of performance of the contract. The amount sought is for the costs of rented and owned equipment, site superintendence, project management, and operation of a site office during that two month period.

5. The parties were unable to resolve any of these claims through negotiation (R4, tab H). Hudson requested a written decision of the contracting officer on the claims. After three promised dates for issuance of the decision had been missed, Hudson filed a notice of appeal, dated 15 May 1990, based on the deemed denial of these claims. The claims have been certified pursuant to section 6(c)(1) of the Contract Disputes Act (CDA), 41 U.S.C. § 601(c)(1).

6. No proof was offered as to the items in the paragraphs of Hudson's document, dated 29 August 1989, numbered 51 and 75.

The items for which proof was presented are grouped herein for decision in the following categories: (a) claims for undisclosed underground utility lines (b) claims relating to directions by the Government for added work; (c) claims for other acts or omissions of the Government; and (d) claims relating to repair of the ditches.

Undisclosed Underground Utility Lines

Event 25 November 1987

FINDINGS OF FACT

7. Section 01011 ("General Paragraphs") of the specifications provides, in pertinent part, as follows:

> 7. Interference with station operations: The Contractor shall schedule his work as to cause the least amount of interference with Station operations.
>
> * * *

©1994, Commerce Clearing House, Inc.

Digitized by Google

28. WORK OUTSIDE REGULAR HOURS: If the Contractor desires to carry on work outside regular hours or on Saturdays, Sundays, or holidays, he shall submit an application to the Contracting Officer. The Contractor shall allow ample time to enable satisfactory arrangements to be made by the Government for inspecting the work in progress.

8. On 26 November 1987, Hudson encountered an existing 2" pipe, not shown in the drawings, in the bottom of the ditch that it was digging across Bainbridge Avenue at Sixth Street. The event is recorded in a Daily Report to Inspector (DRI) dated 25 November 1987, which was a Wednesday. That date is erroneous. The DRI and the testimony of knowledgeable Hudson and Government personnel agree, however, that the event occurred on a "holiday", which would have been 26 November 1987, Thanksgiving Day, and we so find the fact.

9. The location of the ditch was a roadway used for the movement of troops. The Government would not allow interference with that use and, for that reason, would not permit the ditch to be dug during regular weekday hours. In these circumstances, Hudson proposed, and the ROICC agreed, that the work would be performed on the Thanksgiving holiday.

10. On Thanksgiving Day, 26 November 1987, when the 2" pipe was encountered, no one was on duty in the ROICC office to receive and respond to notice of the condition. Hudson had no knowledge or means for knowing whether the line was gas or water or whether it was an active or abandoned line. In the circumstances, pending notice to, and directions from, the ROICC, Hudson covered over the exposed lines; filled up the excavation and covered it with a temporary surface of shell material; erected barriers; and demobilized its equipment and personnel from that location. (Tr. 1/55)

11. Hudson gave the Government notice of the condition on Monday, 30 November 1987 (tr. 3/161-62). That was the first day after the occurrence on which personnel were present in the ROICC's office to receive such notice. (Tr. 1/52-53, 3/157) Thereafter, on 28 January 1988, the ROICC informed Hudson that this was an abandoned water line that could be removed (CRR, DRI 28 January 1988; tr. 3/158). Hudson now seeks to recover for filling up the excavation, installing the crushed shell temporary road surface, and maintaining that surface until receipt of direction from the ROICC (tr. 1/56).

DECISION

We need not decide whether digging the ditch outside of regular working hours in order to accommodate the Government's operational needs came within the scope of Hudson's responsibilities for work scheduling under para. 7 of Section. 01011 of the specifications. Whether or not it was entitled to that accommodation, when the Government ordered the work to be performed outside regular hours, it incurred a duty to cooperate with Hudson in performing the work under those circumstances. That duty included designating an inspector or other authorized person to receive notice of subsurface conditions encountered and to give instructions with respect thereto. The breach of the duty of cooperation in failing to make that designation was a constructive change, entitling Hudson to an equitable adjustment for the resulting added costs.

The pipe encountered here constituted a Type I differing site condition. In the absence of an inspector or authorized ROICC representative at the time of encountering the pipe, it was reasonable for Hudson to take the measures described above for preservation of the *status quo* until notice of the condition could be given and directions obtained. Those costs are recoverable as part of the equitable adjustment due Hudson for the constructive change and the differing site condition.

Event 3 December 1987

FINDINGS OF FACT

12. In the course of clearing trees along Sixth Street preparatory to installation of a ditch, Hudson hit and burst a live 8" water line buried 12 inches below the surface. This caused the area to flood, interrupting the progress of work and requiring repair of the line. Contract drawing 4/28 depicts the line but does not show the depth at which it was buried (tr. 3/163-64).

13. General Note 1 on contract Drawing 1/28 states that "[a]ll utility locations are approximate" and directs that the contractor "field verify all locations to insure [sic] that no injury to utilities result." In addition, Section 01012 ("Additional General Paragraphs") of the specification states in Para. 8 that:

> The approximate locations of all known underground utilities and cables are indicated on the contract drawings and/or described/verified by the permit clearance review. The Contractor shall determine

Digitized by Google

the exact location and depth by ... approved methods before any excavation.

14. The depth at which the line was encountered was more shallow than the 18-inch depth normally specified for burial of water lines. It is not unusual, however, to encounter these lines at other depths (tr. 3/304-06).

DECISION

This condition does not qualify as either a Category I or II differing site condition. For Category I to apply, the depth must have been "indicated" in the contract. The failure to show the depth of burial in the drawing coupled with the notice that the depiction of the line was the "approximate location" precludes finding such an indication. For Category II to apply, the condition must be of an "unusual nature." It was not unusual to encounter such a line at a depth of 12 inches. *Sandwich Islands Construction, Inc.*, ASBCA No. 35244, 88-3 BCA ¶ 21,143. There is no entitlement to recover on this claim.

Events 16 March, 17-18 March, and 6 April 1988

FINDINGS OF FACT

15. Bilateral contract modifications P00001 through -00008, granting equitable adjustments of price and performance time for various causes, each contains the following text:

> Acceptance of this modification by the contractor constitutes an accord and satisfaction and represents payment in full (for both time and money) for any and all costs, impact effect and/or delays arising out of or incidental to the work as herein revised.

16. *Event 16 March 1988*—Hudson encountered a $1/2''$ line "in ditch line in front of hobby shop" and a $1\,1/4''$ line at "north end of same ditch" which were not shown in the drawings. Pursuant to the ROICC's direction, Hudson reburied the lines below the ditches and now seeks a price increase for that work.

17. The Government states that Hudson has been paid for that work under bilateral modification P00007, dated 22 July 1988. That modification covered eight items of extra work in consideration of which the contract price and performance time were increased. Items 5 and 6 in that group relate to gas lines, not shown on the contract drawings, at "various locations." Item 5 is for capping abandoned lines. Item 6 is for relocating live lines. The record of negotiations underlying that modification does not contain any indication that the lines encountered on 16 March 1988 were included in the price adjustments agreed to.

18. In these circumstances, we are not persuaded by the testimony given more than four years later by Mr. Paul Semmes, the ROICC's project manager, who negotiated modification P00007, that the relocation of the lines encountered on 16 March 1988 was included in that modification (tr. 3/202-03).

19. *Event 17-18 March 1988*—On 17 March 1988, Hudson encountered a six-inch water line, not shown in the drawings, in the path of the ditch on the north side of Fourth Street, which is also known as Marvin Shields Boulevard. Because of the risk of added damage to that line farther down the ditch if the excavation were continued, Hudson requested instructions from the ROICC prior to proceeding further (tr. 1/110). Hudson had not received such instructions as of noontime, the next day, 18 March 1988. It then demobilized at that site and remobilized and began working at another location (DRI, CRR 18 March 1988). Hudson was subsequently directed to remove the line. Its present claim is for the costs of the earlier demobilization and remobilization.

20. Item G of bilateral Modification P00005, effective 3 May 1988, provides for an increase in price for removal of the water line. The negotiators for this matter were Messrs. Allen, Hudson's project manager, and Semmes (exh. G-10). Hudson contends that the costs now claimed were not included in the price adjustment for that item but has produced no evidence in support of that contention. Mr. Allen, who had testified concerning the condition at the hearing, was not asked about the matter.

21. *Event 6 April 1988*—On this date, Hudson encountered a 3-inch water line, not shown in the drawings, in the path of the ditch at Simms Avenue and Fifth Street and stopped work at that location pending instructions from the Government. The next morning, 7 April 1988, the Government shut the water off and instructed Hudson to cut the pipe in place (CRR 7 April 1988). The Government asserts that this item was settled by the parties in contract Modification P00006. This is incorrect inasmuch as the item in that modification relates to a 3-inch line at a different location, namely, at Taylor Avenue near the Navy Lodge.

©1994, Commerce Clearing House, Inc.

Digitized by Google

DECISION

The Government had the burden of proving that Hudson has already been fully compensated for the above events. It has failed to meet that burden as to the events of 16 March and 6 April 1988. Hudson is entitled to recover equitable adjustments under the Differing Site Conditions clause for the added costs of these events.

As to the event of 17-18 March 1988, however, the preponderance of the evidence is that the condition for which claim is made is the same as that addressed in the parties' bilateral contract modification. There is no evidence of any exceptions or reservations from the generality of the release in that agreement. In these circumstances, the release is required to be enforced in accordance with its terms, thereby barring the claim. *Hobbs Construction & Development, Inc.*, ASBCA Nos. 30432, *et al.*, 91-2 BCA ¶ 24,014 at 120,228.

Events 25 April and 13 May 1988

FINDINGS OF FACT

22. *Event 25 April 1988*—Hudson encountered an underground duct bank containing power lines in the ditch being constructed on Taylor Avenue adjacent to the DAC site. The duct bank, which was not shown in the drawings, could not readily be relocated, necessitating additional work by Hudson in working around it in construction of the ditch.

23. *Event 13 May 1988*—On this date, Hudson encountered a small, 4-inch storm drain in the ditch line behind the EM Club that was not shown in the drawings. Work was stopped at that location pending instructions from the Government. On the next business day, 16 May 1988, Hudson was informed that the drain had been abandoned and was directed to remove the same.

DECISION

The added costs of these occurrences are compensable to Hudson as Type I differing site conditions.

Event 1 July 1988

FINDINGS OF FACT

24. Hudson encountered an existing 8-inch sewer pipe encased in concrete, not shown in the drawings, in the path of the ditch on Sixth Street. When notified of the obstruction, the ROICC directed that the pipe be left in place as there were no funds for relocation thereof. The pipe blocked the flow of water in the ditch, causing the accumulation of sediment at that point. Hudson seeks to recover the added costs of repeated cleanouts of the blockage performed in order to maintain the flow of drainage water.

DECISION

The sewer pipe, which was not shown in the drawings and was first disclosed when encountered during excavation for the ditch, constituted a Category I differing site condition. Pursuant to that clause, Hudson is entitled to an equitable adjustment for the added expense caused by the Government's election to keep the obstructing pipe in place.

Directions by the Government

Event 12 November 1987

FINDINGS OF FACT

25. This relates to a section of a 42" RCP pipe installed by Hudson along the south side of Sixth Street. The location of the pipe was determinable by reference to: (a) contract Drawing 4A/28 showing the path of the center line of the ditch for that section of the system; (b) Detail 4 on contract Drawing 28/28 showing the slopes of the ditch sides and dimensions of adjoining surfaces; and (c) General Note 6 on contract Drawing 1/28 directing Hudson to "move center line of ditch as required to accommodate side slopes of the ditch." During the initial installation, Hudson failed to apply Detail No. 4, resulting in an incorrect location of the pipe. The ROICC discovered the error, calculated the correct location of the pipe, and directed Hudson to relocate the same accordingly. (Tr. 3/134, 143) Hudson seeks to be paid for the relocation on the ground that the drawings were ambiguous in this respect.

DECISION

Hudson does not dispute that the pipe had been incorrectly installed. It contends that it should be compensated for the reinstallation because the Government had applied "obtuse and confusing calculations" for locating the pipe and that the drawings are ambiguous. No evidence for these allegations has been presented. On that record, the reinstallation of the pipe was for correction of a defect, precluding recovery for the costs thereof.

Digitized by Google

Event 12 February 1988

FINDINGS OF FACT

26. On this date, the ROICC directed Hudson to stop work on a ditch being dug on the south side of Sixth Street and to move to another location behind Navy housing. The Government had decided to delete the ditch from the contract as not needed for the reason that the existing drainage features in the area were sufficient (tr. 3/165).

27. Hudson could not immediately employ his forces at the new location because the route of the ditch had not yet been staked out. As a result, those forces could not be employed and were idled for the remainder of the day (tr. 1/63). The deletion of the ditch was implemented in para. 2 of bilateral Contract modification P00006, dated 1 July 1988.

DECISION

Hudson asserts that the costs of demobilization at the former site, remobilization at the new site, and idled forces were not covered by the settlement of the item in Contract Modification P00006. The basis of that contention is the allegation, unsupported in the record, that the Government had a general policy not to pay for such costs. Lacking a reservation in the release of a right to later assert the claim, the same is barred.

Event 19 February 1988

FINDINGS OF FACT

28. Mr. E. T. Hale, Hudson's superintendent, testified that on this date, Hudson was directed by Mr. Semmes and Mr. Bogue, the Government's inspector, to "give first priority" to straightening head walls that had been installed at Fourth and Sixth Streets. (Hale deposition, 12 April 1991 at 35-36). Hudson diverted workmen from other ongoing tasks on the project to perform that work with consequent disruption. The contract included the standard Inspection of Construction clause (FAR 52.246-12).

29. The "Daily Report to Inspector" (DRI) dated 19 February 1988, prepared by Hale and furnished for the record by Hudson, contains a notation confirming the issuance of the above directive. The notation, however, is absent from the copy of the DRI for that date produced from the Government's files as well as from the Construction Representative's Report (CRR) submitted by the Government inspector for that date.

30. In his testimony at the hearing, Mr. Semmes denied issuing that directive (tr. 3/180). He asserted that the DRI offered by Hudson was the one originally prepared and submitted to the Government and that after he had protested that the notation reflected a misperception of his statement, Hudson had voluntarily revised the DRI to the version submitted by the Government (tr. 3/313).

31. On that record, there is not a preponderance of evidence that Mr. Semmes directed that the head wall corrections be given "first priority." Moreover, even if issued, on its face, the directive does not require the interruption of other work in order to perform the repairs. There is nothing in the record supporting Hudson's interpretation of the alleged directive as containing that requirement.

DECISION

Under its ordinary meaning, a direction to give "first priority" to the repairs does not order the interruption of other work in favor of the repairs. Hudson has not produced evidence showing nor are we persuaded that it was justified, without inquiry, in giving the direction that additional connotation. Lacking that evidence, the terms of the directive merely required prompt correction of the defects, i.e., before *new* work was undertaken. Since that reasonable interpretation directs no more than was already required of Hudson under the "Inspection of Construction" clause of the contract, FAR 52.246-12, the added costs claimed would not be recoverable even had issuance of the directive been proved.

Event 20 February 1988

FINDINGS OF FACT

32. Reinforced concrete culverts were installed to carry the stream of drainage water under roads. After installing the culverts and backfilling, a temporary road surface of crushed shell material was put down. The temporary surface was to be replaced by a permanent asphalted surface.

33. Hudson contends that on 20 February 1988, Mr. Semmes directed Hudson "to be through with [permanent surfaces for] road crossings by 2-26-88." Hudson alleged that it had scheduled the work for later completion, but submitted no evidence of the scheduled date. The construction schedule that the contract required be prepared and maintained pursuant to the "Progress Charts and Equipment Delivery Schedule" clause of the specifications, Section. 01011, para. 16, and the "Schedule for Construction Contracts

©1994, Commerce Clearing House, Inc.

Digitized by Google

(APR 1984)" clause of the General Provisions, FAR 52.236-15, was not produced.

34. The record contains a letter, dated 24 February 1988, not challenged by Hudson, stating that at a meeting on 10 February 1988, Hudson had agreed that "all road crossings would be paved by 26 February [19]88" (R4, Section. I, tab J). That letter makes it clear that Hudson proceeded with the work under agreement and not under the compulsion of an order.

35. The damages claimed by Hudson are based on the assertion that in order to comply with the direction, it was required to divert resources from other aspects of the project, resulting in disruption of such work. There is no evidence whatever of such diversion. To the contrary, the CRR's and DRI's show that Hudson had been installing permanent surfaces for road crossings for at least one month prior to issuance of that directive on 20 February 1988. There is no indication that the pace of that work changed after that date or that other work was deferred to afford resources for the permanent road crossings. Hudson did not complete the work by 26 February 1988 and was still occupied therewith in March, 1988.

DECISION

This claim fails as being unsupported in the record and contrary to fact.

Event 22 February 1988

FINDINGS OF FACT

36. Hudson seeks to recover the cost of removing a small wooden foot bridge over an existing ditch that was also in the path of a new ditch (tr. 3/324). Section 02050 ("Demolition and Removal") of the specifications, para. 2.1.1 calls for the removal of such structures. The bridge was not shown in the drawings but would have been visible during the pre-bid site visit.

DECISION

Hudson seeks to recover the cost of removing the bridge pursuant to the "Differing Site Conditions" clause. Inasmuch as the bridge was plainly visible during a site inspection, it could not be an "unknown" condition under Category 2 or a "latent" condition under Category 1. *Vann v. United States* [14 CCF ¶ 83,353], 420 F.2d 968 (Ct. Cl. 1970).

Event 23 February 1988

FINDINGS OF FACT

37. The parties are in dispute as to whether Mr. Semmes directed Hudson on this date to start excavation at Colby Avenue, then move the crew to First Street to finish certain work and then move to a ditch under construction behind the family housing area for further work. (Hale deposition, *supra* at 39). Mr. Semmes denied giving the direction (tr. 3/186, 325). It is not necessary to resolve that conflict because there is no evidence whatever that Hudson complied with such a direction.

DECISION

Lacking compliance with the direction, no increased costs could have been incurred thereby. The absence of damages precludes recovery. *Crown Laundry & Dry Cleaners*, ASBCA No. 28163, 85-3 BCA ¶ 18,349.

Events 25, 29 February, and 3 June 1988

FINDINGS OF FACT

38. Specification section 02202 ("Earthwork for Utilities"), para. 7.1 ("Surface Preparation; Clearing and Grubbing") contains the following direction:

> Remove trees, stumps, brush, and other organic and nonorganic debris within the limits of construction. Protect from damage sound trees and shrubs which do not interfere with the construction.

39. Specification section 01560 ("Environmental Protection"), para. 3.2 provides that "[e]xcept in areas indicated to be cleared, the Contractor shall not remove, cut, deface, injure trees or shrubs without special permission from the Contracting Officer."

40. The Government was anxious to preserve as many trees on the site as possible. On 25 February 1988, while preparing to cut down trees that were in the path of a ditch north of First Street, Hudson received a direction from Mr. Semmes to suspend that activity until further notice. The contract contains the standard Suspension of Work clause (FAR 52.212-12).

41. The order was issued because the Government wished to identify the particular trees that were to be removed. That identification required determination of the boundaries of the ditch at that location including the width of the ditch at the top and how far back from those boundaries trees would have to be removed. (Tr. 1/87-88) The trees within the boundaries were identified within two hours after issuance of the order.

Digitized by Google

It was then rescinded and Hudson was permitted to cut the trees down (tr. 1/87). As a result of the order, a person employed by Hudson to cut down the trees was unable to perform that work when scheduled and was sent away from the site to await rescheduling (DRI 25 February 1988).

42. On 29 February 1988, Hudson encountered three trees in the ditch line west of the McDonald's restaurant and south of Fourth street. In the hope of saving some of the trees, Hudson was directed by the Government to cut them down one by one, allowing individual decisions to be made. Leaving the trees in place turned out to be impractical, however, because cutting the ditch sides to the slopes required by the drawings would have left roots of the trees exposed, resulting in eventual death of the trees. In the end, the Government directed the removal of all of these trees (tr. 3/325). Hudson incurred added expense for removal of the trees piecemeal rather than all at one time as had been expected. (Tr. 1/90-92)

43. Hudson also seeks to recover added costs incurred on 3 June 1988 for removing a tree in the ditch line behind the Enlisted Men's Club. This was a large old tree that the Government wished to preserve. Hudson was directed to delay cutting the tree down so as to allow the Government to investigate how it might be saved. Here again, Hudson's tree removal subcontractor, who had come to the site to perform the work, had to be sent away (tr. 3/247). In the end, the Government decided that saving the tree was not feasible. At added cost to Hudson, the subcontractor was brought back and the tree removed.

44. Bilateral Modification P00007, dated 22 July 1988 contains six groups of additional work to be performed in consideration of a price increase of $11,926.43 and a time extension of 14 days. The second group contains various items including "remove tree at Enlisted Mens Club." The negotiation memorandum prepared by Mr. Semmes indicates that the equitable adjustment in price agreed on for this group included $150 for removal of the tree (exh. A-7).

45. The $150 amount was the cost of remobilizing the subcontractor (tr. 3/373). Hudson now seeks to recover the cost of removing the stump, at an added cost of $130, which was accomplished subsequently by Hudson with its own forces (tr. 1/166). This amount was discussed during the negotiations and excluded from the equitable adjustment inasmuch as removal of the tree was already required by the contract (tr. 3/374).

DECISION

Under the "Suspension of Work" clause of the contract, Hudson was entitled to compensation for increased costs of performance if an order suspended, delayed or interrupted the work "for an unreasonable period of time." The order of 25 February 1988 was issued in order to determine whether trees in the path of the ditch could be saved. The contract drawings showed the exact route of the new ditch. Prior to award of the contract, the trees in the path of the ditch could have been identified on the site and a decision made as to preservation or removal. The failure to make that decision until Hudson had arrived at that location and prepared to remove the trees as directed by the specification rendered the suspension ordered on 25 February 1988 unreasonable in its entirety and entitles Hudson to be compensated for the costs occasioned by such disruption. *Pathman Construction Co.*, ASBCA No. 22003, 82-1 BCA ¶ 15,790 at 78,190.

The order issued on 29 February 1988 delaying removal of the group of trees until the Government had made individual decisions constituted a constructive change to the specifications which did not confer that right upon the Government but simply provided for removal of trees in the path of the ditch. Hudson is entitled to an equitable adjustment for the added costs of that decision step.

The denial of Hudson's claim for the cost of removing the stump of the tree cut down on 3 June 1988 was correct. This was work already required under the contract. This tree was situated in the path of the ditch and, therefore, was required to be removed pursuant to Specification section 02202, para. 7.1 directing removal of trees and stumps within the limits of construction.

Event 3 March 1988

FINDINGS OF FACT

46. Hudson had installed and backfilled an underground culvert along the side of Building 314 fronting on Sixth Street. Over the fill, Hudson had installed a temporary berm of crushed shell surmounted with unsupported wood planks for access to the building entrance on that side. After a rainfall, the backfill on the sides of the berm would be filled with muck and mud. There was also a

©1994, Commerce Clearing House, Inc.

Digitized by Google

side entrance, unaffected by construction, which was reached over a concrete sidewalk.

47. In time, the berm deteriorated and eroded causing a risk of persons losing balance on the boards and toppling into the muck and mire (tr. 3/189-93). On 3 March 1988, Mr. Semmes directed Hudson to upgrade the installation by building temporary walkways.

48. The "Accident Prevention" clause of the contract requires the contractor to "comply with all pertinent provisions of the U.S. Army Corps of Engineers Safety and Health Requirements Manual, EM 335-1-1 dated October 1987." Para. 23.A.10 of the Manual provides that "[w]alkways or bridges with guardrails shall be provided where people or equipment are required or permitted to cross over excavations." Subsequent to the direction, Hudson installed a walkway of planks covered with plywood with uprights connected with a ribbon to serve as a guardrail. The Government acquiesced to this installation which remained in place until the work in the area was completed (tr. 3/192). Appellant claims that the upgrading was not required by the contract and seeks compensation therefor.

DECISION

Under the "Accident Prevention" clause of the contract, Hudson had the basic obligation to "provide for protecting the lives of employees and other persons" in performing this contract. That general obligation is the standard for measuring the sufficiency of Hudson's performance of the specific obligation to provide walkways or bridges with guardrails for people crossing excavations. In that context, the installation initially provided by Hudson created plain risks of injury to persons using the same and, thus, plainly fell short of what was required by the contract. The upgraded installation was no more than was required by the contract in the first instance. Hudson is, therefore, not entitled to additional compensation for the costs of that work. The claim is without merit.

Event 29 March 1988

FINDINGS OF FACT

49. On 29 March 1988, Mr. Semmes directed Hudson to postpone any digging of new ditch lines in the area south of Fifth Street and east of Bainbridge Avenue until after 11 April 1988. A Navy ceremonial event was scheduled in that area during 7-11 April and Mr. Semmes believed that open ditches and piles of dirt would detract from the occasion. Hudson was working in the area at the time of the direction. As the result thereof, Hudson was compelled to stop that work, reschedule the same, and move its forces elsewhere (tr. 1/112-13).

DECISION

Hudson's work was interrupted in order to accommodate needs of the Government unrelated either to the contract or to normal naval station operations that might have been anticipated by Hudson and allowance made therefor. In these circumstances, the interruption was a breach of the Government's implied obligation to avoid conduct interfering with performance of the contract. The breach amounted to a constructive change and the increased costs are compensable accordingly. *Nichols Dynamics, Inc.*, ASBCA Nos. 17949, 18203, 75-2 BCA ¶ 11,556.

Event 20 April 1988

FINDINGS OF FACT

50. Specification section 02050 ("Demolition and Removal"), para. 1.2 requires daily removal of rubbish and debris and forbids accumulations inside or outside the buildings. The General Provisions of the contract contain the standard "Cleaning Up" clause, FAR 52.236.12, requiring Hudson to "at all times keep the work area, including storage areas, free from accumulations of waste materials." Debris from construction had accumulated at various work sites under this contract. Previously, at a meeting with the Government on 19 January 1988, Hudson had agreed to remove the debris daily from the sites.

51. That agreement notwithstanding, Hudson continued to allow accumulation of debris at its work sites. On 20 April 1988, Mr. Semmes directed Hudson to clean up its construction yard and to stack pipes and other materials in an orderly manner. Hudson's DRI, signed by Mr. Hale, contains a statement that it was directed to stop work in order to perform this work. Mr. Hale's discovery deposition, admitted to the record in lieu of his testimony, does not address this matter.

52. At the hearing, Mr. Semmes denied directing Hudson to stop other work in order to accomplish the clean-up. The record establishes only that Hudson was directed to clean up its work and storage areas. The evidence is not sufficient to find that Hudson was also directed to stop work on the

Digitized by Google

contract in order to accomplish the cleanup. Furthermore, there is no evidence that Hudson performed the clean-up or that it sustained any added costs from the stop work order, if any was issued.

DECISION

The claim is without merit. The order to maintain the work sites in an orderly condition, free of debris demanded no more than what was already required by the contract. Even if we could find that Hudson was ordered to stop work in order to perform that task, there can be no recovery therefor as Hudson has failed to show that it complied with said order and incurred added costs thereby.

Events 13, 21, and 24 June 1988

FINDINGS OF FACT

53. On 13 and 24 June 1988, the Government informed Hudson that leakage from existing water pipes beneath ditches constructed under this contract had been found. In the belief that the leaks were caused during construction of the ditches, the Government directed Hudson to excavate the pipes and to repair the leaks. The contract contains the standard "Protection of Existing Vegetation, Structures, Equipment, Utilities, and Improvements" clause, FAR 52.236-9, requiring Hudson to repair any damage to facilities "resulting from failure to ... exercise reasonable care in performing the work." Hudson excavated the pipes and, in both instances, found the installations to be in good order with no leakage present. (Tr. 1/167-68, 170)

54. On 21 June 1988, Hudson was notified by the Government of an asserted leak in a water line installed by Hudson. Upon investigation, Hudson found that the leak came from a cracked valve, not associated with Hudson's work, in an existing line. We so find. Hudson repaired the crack and covered over the line. (Tr. 1/169) Its claim is for the costs of the repair and the preceding investigation.

DECISION

As to the events of 13 and 24 June 1988, the Government's directions to excavate and repair the water pipes, issued under the erroneous belief that the pipes had been damaged by Hudson, constituted constructive changes. *Tecom, Inc.*, ASBCA No. 26022, 82-2 BCA ¶ 16,121 at 80,028. Hudson is entitled to an equitable adjustment for added costs of complying with those directions.

As to the event of 21 June 1988, Hudson is entitled to an equitable adjustment for this work under para. (h) of the "Inspection Of Construction" clause, FAR 52.246-12, which provides an equitable adjustment for costs of examination and reconstruction where work deemed defective and ordered to be corrected by the contracting officer is examined and found to meet contract requirements.

Other Acts and Omissions of the Government

Event 27 January 1988

FINDINGS OF FACT

55. Section 02721 ("Storm Drainage System") of the specifications provides in para. 6 ("Installation") that "[a]ll pipe shall be inspected and approved before being covered and concealed." On 27 January 1988, Hudson completed installation of a section of pipe at Bainbridge Avenue and Sixth Street. It was the general practice on that project to give the Government 24 hours advance notice for outages and inspections requiring the presence of an inspector (tr. 1/60).

56. In accordance with that practice, Hudson gave 24 hours notice requesting Government inspection of the connections and joints in the pipe prior to backfilling and covering the installation. An inspector did not appear at the site until several hours after expiration of the 24 hours. Upon inspection, the installation was approved. Hudson had workers and equipment at the site, ready to backfill the excavation upon approval of the installation. Hudson's claim is for costs of keeping these resources on standby awaiting the appearance of the inspector, after the expiration of the 24 hour period. (Tr. 1/59-62)

DECISION

In order to recover the added costs claimed, Hudson must show that Government approval of the installation was unreasonably delayed. That fact is not established merely by showing the length of time taken to give approval. There must also be evidence establishing a standard as to what Hudson could reasonably have anticipated for approval time in relation to this particular element of the work and the status of the project. Without such a standard, it is not possible to find that a delay was unreasonable. *Law v. United States* [16 CCF ¶ 80,286], 195 Ct. Cl. 370, 384-5 (1971); *R. J. Crowley, Inc.*, ASBCA No. 35679, 88-3 BCA ¶ 21,151.

©1994, Commerce Clearing House, Inc.

Digitized by Google

The only evidence presented here is that the approval was delayed for a few hours after expiration of 24 hours advance notice to the Government that the installation was ready for inspection. Since that period applied across the board to all types of outages and approvals where a Government inspector was needed, it must have been intended simply to afford enough advance notice of contractor's requirements to permit proper scheduling of the inspectors' time. There was no evidence that once notice was received, inspections would uniformly be held within that same 24-hour period. Under these facts, the notice period was not indicative of how long Hudson should have reasonably expected to wait for inspection and approval of this particular installation. In the absence of proof of unreasonable delay of approval, there is no entitlement to recover on this claim.

Access to the DAC Site

FINDINGS OF FACT

57. The Government awarded a contract to TAC Construction Co. for construction of a Dependents Activity Center (DAC) at the Center. The record does not indicate the date of award of the DAC contract. The DAC was not shown on the drawings for the present contract.

58. On 16 February 1988, Hudson notified the Government that the route shown on the drawings would take a ditch across a driveway for the DAC not shown on the drawings. In response to Hudson's notice, the ROICC advised that direction would be given within two days (CRR 16 February 1988). At the time of giving notice, Hudson had not yet reached the location of the driveway in constructing the ditch. It first reached that point on 5 March 1988. On that date, for lack of directions from the Government as to the route of the ditch, Hudson was required to stop digging at that location and to redeploy its forces elsewhere. (DRI 5 March 1988).

59. The Government provided direction on 8 March 1988. It sent Hudson a request for a proposal to change the route of the ditch, in accordance with an attached drawing, so as to avoid the driveway. Without submitting any proposal, Hudson re-routed the ditch in accordance with the drawing. The re-routing had no significant effect on the length of the ditch and, thus, no cost consequence. For that reason, the parties decided to forgo a contract modification memorializing the route change (tr. 3/198).

60. *Event 5 March 1988*—Hudson was delayed excavating a ditch through the DAC site by a fence and equipment, belonging to TAC, that were located in the path of the ditch. TAC would not remove these installations until the related DAC work had been completed several weeks later. The Government was notified of the situation but was unsuccessful in obtaining TAC's agreement to earlier access to the site for Hudson. Pending completion of TAC's work, Hudson demobilized its forces from that location and mobilized at another location of the project (tr. 1/105). Hudson seeks to recover the added costs of moving and returning to that location. The contract contains the standard "Other Contracts (APR 1984)" clause, FAR 52.236-8.

61. *Events 30 March—15 April 1988*—On 30 March 1988, material and equipment stored by TAC prevented Hudson from bringing a ditch through another area of the DAC site (tr. 1/113). TAC told Hudson that the items would be removed by 4 April 1988 (DRI 30 March 1988). On that date, TAC's material and equipment were still in place, preventing progress of the ditch. The Government was informed of that delay, communicated with TAC concerning the matter, but was unsuccessful in securing the removal of TAC's materials. (Tr. 1/118) TAC removed the materials on 15 April 1988, enabling Hudson to proceed with the ditch (DRI 15 April 1988). The Government was kept informed of these events by notations in the DRI's and by oral reports to the ROICC inspector and Mr. Semmes.

62. The TAC property located in the path of the ditch in the foregoing instances consisted of stored materials and temporary installations, all of which could have readily been moved aside to allow construction of the ditch. In these circumstances, we find that three days after receipt of notice from Hudson was a reasonable time for the Government to have issued directions to TAC for removal of its property and for that action to have been accomplished.

63. *Event 26 April 1988*—The drawings required a 3:1 slope for the sides of a ditch on Taylor Avenue adjacent to the DAC. Some of the surface area required to be excavated to obtain that slope was on TAC's work site, necessitating removal of a fence erected, and materials stored, by TAC. Notice of this situation was given to the Government on 26 April 1988. On the same day, after discussion with Hudson, the Government directed that the slope be steepened to 2:1, which obviated the need for excavation

Digitized by Google

on TAC's work site. The change did not entail any increased work on the part of Hudson (tr. 1/133). Hudson's claim is for standby costs of deployed labor and equipment pending resolution of the matter.

DECISION

Although the DAC project was not shown on the contract drawings, Hudson was on notice, pursuant to the "Other Contracts" clause of the General Provisions, that the Government might award a contract involving construction on or near the routes of the ditches. Under the clause, in the event of such award, Hudson was obliged, to "fully cooperate with the other contractors . . . and . . . carefully adapt scheduling and performing the work under this contract to accommodate the additional work."

If there was a conflict between the schedules of Hudson and the other contractor that could not be resolved by agreement, Hudson's only available course was to obtain directions from the Government. Hudson did not have the option of imposing its own solution on the other contractor. Doing so might violate the provision of the "Other Contracts" clause that forbade Hudson to "commit or permit any act that will interfere with the performance by any other contractor."

On its part, once it received notice of such a conflict, the Government was obligated, pursuant to its implied duty of cooperation, to timely take action to obtain a reasonable accommodation of Hudson's needs from the other contractor. *Robert R. Marquis, Inc.*, ASBCA No. 38438, 92-1 BCA ¶ 24,692 at 123,170-71.

With respect to the events of 16 February, 5 March, and 30 March 1988, the Government gave up trying to help Hudson after TAC refused to interrupt its work to accommodate Hudson's schedule. TAC's property and equipment could have been readily moved to allow Hudson's work to proceed. The only reason indicated by the record for TAC's refusal to move its materials was its preference for uninterrupted completion of its work.

Having awarded contracts that resulted in these two contractors being in the same place, at the same time, the Government had a responsibility to resolve the competing schedules and direct the order of work for that location. Its neglect to do so with respect to the events of 16 February, 5 March, and 30 March 1988 was a breach of its implied duty of cooperation with Hudson, entitling the latter to an equitable adjustment of the contract price for the increased costs incurred for demobilization and remobilization on these occasions.

We reach a different result with respect to the event of 26 April 1988. Here the Government gave prompt direction that solved the access problem by avoiding the need for entering the DAC site. Accordingly, there is no liability for any added costs incurred by Hudson pending that direction.

Events 8 June, 15, 21, and 25 July 1988

FINDINGS OF FACT

64. On 8 June 1988, Government public works personnel mistakenly left a fire hydrant open in the vicinity of a newly constructed ditch on the east side of Simms Avenue, south of Fifth Street.

65. On 15 and 25 July 1988, Government personnel testing fire hydrants on Sixth Street allowed water to be released with too much force, causing damage to ditch slopes, washing out nearby ditches constructed under this contract, and destroying newly installed mulching and grassing. Hudson performed repairs in both instances and seeks to recover the added costs.

66. On 21 July 1988, Center public works personnel re-routed a water line that was in the line of Hudson's ditch at Sixth Street and Evans Avenue. That work caused damage to the ditch structure and to the grassing in place, which was left unrepaired by the Government personnel. Hudson thereafter made those repairs and now seeks to recover the added cost therefor. (Tr. 1/181)

DECISION

The Government's actions causing damage to Hudson's installations were a breach of its implied obligation not to impede its contractor's performance. Hudson is entitled to an equitable adjustment for the increased costs resulting from that damage. *Volentine & Littleton v. United States,* 144 Ct. Cl. 723 (1959).

Event 22 June 1988

FINDINGS OF FACT

67. On this date, an employee of the Center's Public Works office, accompanied by the ROICC's inspector for this contract, proposed an arrangement whereby Hudson would furnish the Government a backhoe with operator to be used for one hour for an unrelated project being carried out by the Public Works office at the Center. In ex-

©1994, Commerce Clearing House, Inc.

Digitized by Google

change, the Government would make available to Hudson a Government-owned front end loader that Hudson needed for use in installing a piece of large-diameter RCP pipe in a ditch on Sixth Street. The contract contains the standard "Government-Furnished Property" clauses, FAR 52.245-2 and -4, and the standard "Changes" clause, FAR 52.243-4.

68. Hudson agreed to the arrangement and thereafter gave the Government the use of its backhoe and operator. Subsequently, however, the ROICC disavowed and refused to carry out his part of the arrangement, asserting that furnishing the Government-owned equipment was not permissible. Hudson seeks to recover the cost of carrying out its end of the bargain.

69. The record does not specifically address Mr. Semmes' knowledge of the arrangement prior to the Government's disavowal thereof. Circumstantial evidence indicates, however, that he must have learned of it soon after it was made. It was described by Hudson in the DRI for 22 June 1988, the day of the agreement. DRI's were submitted no later than the next day to the ROICC inspector and passed to, and read by, Mr. Semmes (tr. 3/224-25). In addition, as contract administrator, he would have been told of the matter by the inspector who was present at the time of the arrangement or learned of it during his daily visits to the work site (tr. 3/151).

70. The record indicates that Mr. Semmes had the authority to enter into this type of arrangement. Almost all of the written directives in the record from the Government to Hudson relating to actual performance of the work are signed by Mr. Semmes as project engineer. Correspondence from Hudson on these matters to the Government was invariably addressed to Mr. Semmes. The letters deal with a broad range of matters. In these letters, the directions or advices were given directly by Mr. Semmes under his own authority. In no instance, was there a deferral or referral of decision to the contracting officer or the ROICC.

DECISION

The Government defends against this claim on the ground that as an oral agreement, it is invalid and that it was entered into without requisite authority. Both contentions are without merit.

An oral agreement can be enforced if the proponent is able to prove a meeting of the minds as to the terms of the arrangement, the terms themselves, and an agreement to be bound thereto. *Essex Electro Engineers, Inc.*, ASBCA Nos. 30118, 30119, 88-1 BCA ¶ 20,440; *QES, Inc.*, ASBCA No. 22497, 78-2 BCA ¶ 13,462 at 65,789. Hudson has satisfied that burden by proving that a bargain as to the exchange of services was made and showing the terms and conditions thereof.

The agreement cannot be avoided for lack of authority to bind the Government. The contracting officer had allowed Mr. Semmes to exercise broad authority as to contract administration in his own name and position. The scope of that authority was sufficient to include making Government property available to Hudson pursuant to the "Government Property" clause for a single, minor use under the contract. Mr. Semmes' agreement to the transaction would, therefore, be binding on the Government. *Urban Pathfinders, Inc.*, ASBCA No. 23134, 79-1 BCA ¶ 13,709; *Urban Laboratories*, ASBCA No. 24905, 84-3 BCA ¶ 17,515.

While the record is adequate to show that Mr. Semmes must have known of the arrangement soon after it was effected, that knowledge would be imputed to him in any event by virtue of his supervision of the inspector who was a party to the transaction as well as his extensive day-to-day involvement in the progress of the contract. *Southwestern Sheet Metal Works, Inc.*, ASBCA No. 22748, 79-1 BCA ¶ 13,744. With actual or constructive knowledge thereof, Mr. Semmes could have terminated or disavowed the arrangement. Instead, it was allowed to proceed.

As conceived by the parties' representatives, the arrangement called for an exchange of performances, with Hudson's coming first. When Hudson's services were accomplished and accepted, a unilateral contract came into effect, binding the Government to render its own offered performance. *Amplitronics, Inc.*, ASBCA No. 33732, 87-2 BCA ¶ 19,906 at 100,704. Upon its refusal to do so, the Government became liable for damages for that breach. The amount expended to secure the performance promised by the Government from another source, rather than reimbursement of the costs of its own performance, as claimed by Hudson, is the correct measure of such damages. Restatement (Second) of Contracts § 347 (1979).

Event 29 June 1988

FINDINGS OF FACT

71. As positioned in the contract drawings, a wing wall to be erected by Hudson on the

Digitized by Google

south side of Fifth Street near Dong Xoia Avenue would have been directly in the path of a large existing water main. After Hudson brought the conflict to the attention of the ROICC, the matter was resolved by changing the angle of the wing wall and shortening the wall so as to avoid the pipe. The change was carried out without any added cost (tr. 3/362).

DECISION

Inasmuch as there was no increase in cost incurred as the result of this defect in the drawings, there is no entitlement to recover on this item.

REPAIR OF EROSION DAMAGE

Hudson seeks to recover added costs incurred during the period July-October 1988 for repair of erosion damage to the ditches caused by water.

FINDINGS OF FACT

Soil Conditions and Related Needs for Erosion Control

72. The subsurface soils in the areas of the ditches were typically sandy to silty to a depth of 18 to 30 feet, predominantly Plummer loamy sand. All of the soils were fine sandy soils, with only small amounts of clay.

73. The paucity of clay in the soil made the ditches highly susceptible to erosion (exh. G-20 at 19). Clay acts as a binder, imparting cohesiveness to soil, enabling it to better resist erosion from rain and wind. Ditch surfaces built in sandy soils which are not protected from erosion, will readily wash away in the rain (tr. 1/151-52). In working with such soils, the basic rule is to leave the smallest practical area of unprotected soil exposed to rain for the shortest possible time. Each exposure of unprotected soil to rain accelerates and exacerbates erosion that has already begun, making it increasingly difficult to stop or reverse that process. These considerations made it crucial for Hudson to take measures against erosion promptly upon beginning excavation for the ditches. (Exh. G-20 at 8; tr. 2/287-88)

Specification Requirements

74. The practices set forth above were embedded in the contract specifications. Section 01560 ("Environmental Protection"), Para. 4 ("Erosion and Sediment Control Measures") contains the following pertinent provisions:

4.2 Reduction of Exposure of Unprotected Erodible Soils: Earthwork brought to final grade shall immediately be finished as indicated and specified. Side slopes and back slopes shall be protected immediately upon completion of rough grading. All earthwork shall be planned and conducted in such a manner as to minimize the duration of exposure of unprotected soils.

75. An essential element of a program for controlling erosion in ditches constructed in sandy, unstable soils, such as those found here, was the prompt installation of vegetation on the slopes and immediately adjacent areas (exh. G-20 at 5). Section 01560 ("Environmental Protection"), Para. 4.3. provides:

Temporary Protection of Erodible Soils: Such methods as may be necessary shall be utilized to effectively prevent erosion and control sedimentation, including, but not limited to, the following:

* * *

4.3.2 Vegetation and Mulch: Temporary protection shall be provided on all side and back slopes as soon as rough grading is completed or sufficient soil is exposed to require protection to prevent erosion. Such protection shall be by accelerated growth of permanent vegetation, temporary vegetation, mulching or netting. Slopes too steep for stabilization by other means shall be stabilized by hydroseeding, mulching anchored in place, covering by anchored netting, sodding, or such combination of these and other methods as may be necessary for effective erosion control.

76. Also relevant is Section 0281 ("Grassing"), para. 6.7, as follows:

6.7 Winter Cover: All areas to be grassed shall be protected against erosion at all times. For protection during winter months Italian rye grass shall be planted . . . on all areas which are not protected by permanent grass.

77. Damage to the slopes in the form of gullies, erosion, and loss of grass on the slopes, can also be caused by the sheeting action of rain water running off adjoining roads and parking lots into the ditches. Characteristically, runoff from such developed surfaces would be much faster than runoff from undeveloped areas, such as open fields (tr. 2/160-61). Section 01560 ("Environmental Protection") of the specification requires the following:

4.3.1 Mechanical Retardation and Control of Run-off [sic]: The rate of run-off from the construction site shall be mechanically retarded and controlled. This includes construction of diversion ditches, benches,

©1994, Commerce Clearing House, Inc.

Digitized by Google

and berms, to retard and divert run-off to protected drainage courses.

78. Berms are placed on the surfaces adjoining construction sites to prevent surface runoff of rain unto the ditch slopes. They are normally constructed of earthen material, installed on both sides for the full length of the ditches. (Tr. 3/39-40) They serve to channel flows of rain water to flumes which are interspersed at suitable intervals on the sides of ditches to safely direct water channeled by the berms to the ditch bottoms (tr. 2/56).

Erosion Related to Ground Water Conditions

79. The water table at the site was ordinarily 5-6 feet below the surface (tr. 3/9). Rainfall would cause that level to rise. Winter rains would cause greater increases in ground water level than summer rains which sustained evaporation loss prior to reaching the subsurface (tr. 2/162). The ground water was contained in a layer of water-bearing sand, 12-18 inches thick. A band of impermeable clay beneath that layer prevented the ground water from percolating to lower soil levels.

80. The Center is located in the Gulf coast area of Mississippi. Contractors performing construction in that area can expect to encounter ground water close to the surface and are aware that measures to control the effects thereof must be taken in connection with subsurface work (tr. 2/255-56). Mr. Robert Allen, who prepared Hudson's bid for this contract and subsequently served as project manager, was experienced in the construction of subsurface installations in that locality. Moreover, as the result of performing previous projects at the Center for construction of underground utilities such as sewer and storm drains, he was familiar with ground water conditions and water table height prevailing at the Center.

81. Mr. Allen took that knowledge and experience into account in calculating Hudson's bid for the instant contract. He also had also visited the site in connection with the preparation of Hudson's bid and had then observed the existing ditch system (Phase I). (Tr. 2/5-6)

82. The Big Ditch was the deepest one in the project. It was designed with a depth of 10-12 feet from the invert to ground level. That placed the water table 5 feet above the invert (tr. 2/169-70). The large ditch, which ran along Sixth Street, had the same configuration. Hudson contends that the force of ground water escaping into the ditch after breach of the water table during excavation of the ditch would cause the ditch wall to collapse and sand to pile up in bottom of the ditch. Hudson asserts that this was the main cause of erosion and accumulation of sediment in these ditches. Expert testimony to that effect was presented by Hudson.

83. While the foregoing scenario is plausible, it is contradicted by other evidence indicating that surface water runoff, not ground water action, was the main cause of erosion in these ditches. Erosion from ground water action is evidenced by gullies starting from the bottoms of the ditch walls and moving upward. However, the numerous photographs in the record depicting erosion in the large ditches (exh. A-11, -18, G-21 to -23, -29), uniformly show the gullies starting at the top of the ditch, proceeding downward. This indicates erosion caused by surface water runoff. (Tr. 3/27)

84. To the extent that ground water was the cause of erosion in the Big Ditch and the other deep ditches, Hudson could have substantially limited and reduced this damage through a combination of prompt vegetation of the exposed surfaces and allowing sufficient time for dewatering of the soil after initial excavation and after rainfall. This could have been accomplished by dividing the project into segments, allowing some of the areas to dewater while work proceeded in others.

85. In some of the shallow ditches serving as branches of the system, the contract drawings placed the bottoms of the ditches directly in the water table, resulting in a constant flow of ground water in the ditch. The flowing water carried soil away from the bottom and sides of the ditch. The water-borne soil, referred to as "running sand", caused further erosion and, in turn, increased accumulation of sediment from erosion in the ditches (tr. 1/179). Under normal amounts of rainfall, the level of water in the ditch would cause merely a rounding of the bottom of the ditch (tr. 3/15). Significant rain fall, resulting in a higher water table and greater volume of water-bearing sand, would cause increased erosion and sedimentation. (Tr. 2/173)

86. Even by taking all required and necessary measures, Hudson could not have completely stopped erosion from running sand during the term of this contract. So long as water flowed in these ditches, dewatering and, in turn, establishment of vegetation in the ditch bottoms, could not be readily accomplished. Significant reduction of erosion

Digitized by Google

and sedimentation from running sand had to await dry periods during which water-tolerant vegetation could be established. This involved effort over an extended period, which would be longer than the term of this contract. (Tr. 3/15-18, 3/97)

87. *Sedimentation of the Ditches*—Large amounts of soil (hereinafter "sediment") were deposited in the ditches as the result of erosion. Hudson was required to frequently dig out accumulations of sediment in order to bring the ditches back to the depths required by the drawings. Some of this effort could have been saved had the drainage water in the ditches moved at a greater velocity. This would have "scoured" away most of the accumulated sediment. Instead, the water moved very slowly through the ditches, allowing the sediment deposit to remain undisturbed.

88. The low velocity of the water was caused by the very flat grade of the ditch system, which was a Government design requirement. The flatness was ascertainable from examination of the drawings which showed the grades of the ditches. The flat grade was required because the ditches emptied outside the Center into a drainage system maintained by the City of Gulfport, MS. Allowing the drainage water to enter that system at too high a speed might cause flooding. The objective of the design was to store the water in the ditches and feed it slowly into the municipal system (tr. 2/76-77).

89. *Phase I Ditches*—The design of the Phase II ditch system was based on, and virtually identical to, the Phase I ditch system that had been built several years earlier. The Phase II system emptied into the Phase I ditch system on Eighth Street, near Building 348. From that location, the Phase I ditch proceeded west along Eighth Street, turned north at Colby Avenue, exiting the Center, and ultimately emptied into the Gulfport municipal drainage system. (Tr. 2/140-42) The Phase I ditches were earthen, as deep as the Big Ditch under this contract, and had been successfully stabilized throughout with grass.

90. At the hearing, Hudson sought to attribute the successful stabilization of the Phase I ditches and the lack of success in stabilizing the Phase II ditches to differences in prevailing ground water conditions. Hudson pointed to the section of the Phase I system adjoining Eighth Street which had been constructed on an embankment of compacted fill, topped with asphalt with well-maintained shoulders, which was approximately 13 feet above ground level at the ditch. Under these conditions, rain striking the asphalted road surface would flow down directly into the ditch, never becoming part of the ground water. Hudson contrasted these conditions with the terrain surrounding the Phase II system. That system abutted long, flat, wide areas in which rainfall could readily percolate into the soil and become part of the ground water. (Tr. 2/206-07)

91. The difference in results between the Phase I and II systems does not derive from differences in terrain. The Phase I system contains successfully grassed sections next to terrain similar to that adjoining the Phase II ditches. This indicates that good erosion control, rather than better ground water conditions, was responsible for the successful stabilization of the Phase I ditches. (Tr. 2/197; exh. A-18, photo. no. 18)

92. *Alternate System Designs*—The Phase II ditch system was intended to satisfy the Government's need for additional storm drainage that would also have sufficient water storage capacity for a ten-year storm (tr. 2/134). There were two alternative designs for meeting that need. Neither of these would have resulted in the erosion problems associated with earthen ditches surfaced with vegetation—the design employed in this contract. The first alternative was a system utilizing large-diameter reinforced concrete pipe with suitable inlets, catch basins, and manholes for capturing and carrying away drainage water.

93. Without special features for surface storage of additional water, such a pipe system would not have provided enough storage capacity for a 10-year storm (tr. 2/236, 2/240-41). The other approach would have been to line the ditches entirely with concrete or with concrete bottoms and sides of rip-rap (tr. 2/84). While these approaches would have avoided the damage and expense of soil erosion they, likely, would have been much more costly than the earthen-sided ditches specified here.

Chronology

94. Hudson began excavating for the ditches early in November 1987. As of January, 1988, it had taken no measures to control erosion. There was erosion throughout the ditches. (Tr. 3/114-15) Uncompleted ditches were left ungrassed and unprotected pending completion of work (tr. 2/37-38). Unprotected, bare piles of dirt were everywhere. Temporary measures to seal off uncompleted areas from erosion were not taken (tr. 3/67).

©1994, Commerce Clearing House, Inc.

Digitized by Google

95. Hudson devoted very little effort to establishing vegetation upon completion of rough grading or exposure of sufficient soil to require protection to prevent erosion, as required by the specification. For the highly erodible soil present here, temporary vegetation should have been established on an almost daily basis, no less often than every three to four days, and never as much as a week apart. The objective is to have vegetation in place when the first rain occurs, so that the erosional process does not have the opportunity to begin. (Tr. 3/106) In late winter—early spring 1987-1988, soils were left unprotected and exposed by Hudson for three to four weeks. This was entirely too long a period. (Tr. 3/110-11)

96. The emphasis of Hudson's vegetation program was on the establishment of permanent grass for completed ditches. Here, also, Hudson's practices were conducive to erosion. After accomplishing all the work preparatory to vegetation, Hudson would delay calling in its grassing subcontractor until "there was enough area ... where it would be justifiable to do; we just didn't do just a small area" (tr. 1/153). The rationale was that "the grassing contractor could not just come [to] do a little bit at a time; he had to have enough area to be worth his while" (tr. 1/152). He "ha[d] to have a few acres before he c[ould] crank up" (tr. 2/37). As much as one or two months might pass before the subcontractor was brought in. If there were rainfall during that interval, all of the work preparatory to seeding, including final grading and application of top soil, would be lost.

97. Throughout the period through March 1988, there was also a failure to promptly take measures to control runoff into the ditches from adjoining improved areas. The sheeting action of rain water running off adjoining roads and parking lots into the ditches caused damage to the ditches in the form of gullies, erosion, and loss of grass on the surfaces.

98. Berms to control runoff should have been installed at the outset of construction. In bidding the contract, however, Hudson had not planned to install either berms or flumes. The berms were first installed sometime after February 1988 (tr. 2/122) at the suggestion of local Government personnel as a means of controlling the substantial damage being caused by runoff (tr. 2/54).

99. The berms were placed along the Big Ditch on the way to the outfall at Eighth Street and along the deeper ditches between Sixth and Seventh Street and along Sixth Street. Hudson obtained good growth of grass on slopes at locations where berms had been installed. (Tr. 2/44-45, 55). Hudson acknowledged, however, that berms might beneficially also have been used near the shallower ditches (tr. 2/54).

100. As of 10 March 1988, the ditches were in a highly eroded condition with some almost completely filled in with soil and sediment (tr. 3/296-97). Several areas had been ready for, and awaiting, grassing for more than a month. New ditches were being opened and not being grassed. On that date, the Government directed Hudson to grass all disturbed areas, as required by Specification section 02821, para. 5, within seven days (R4, tab K; tr. 3/297-98). That provision states:

> 5. Requirements: All areas within the limits of work not indicated for development otherwise, and all other areas disturbed by the Contractor's operations, shall be grassed. For erosion control measures, refer to specification section entitled "Environmental Protection."

101. Hudson carried out the Government's direction. However, as of 8 April 1988, additional areas had been excavated and had not yet been planted with temporary vegetation. In addition, repairs were needed where washouts had occurred. By letter of 8 April 1988, Hudson was directed to accomplish the additional grassing and repairs by 15 April 1988 (R4, tab L). Very little of the grassing effort was successful. As of 11 May 1988, only 20 percent of the area seeded was covered with growing grass (R4, tab P). In order to secure final acceptance of grassing under the contract, Hudson was required to establish "healthy and growing" permanent grass on 97 percent of the area with no bare surfaces wider than 12 inches. Section 02821, para. 6.9.

102. *Rainfall*—During February and March 1988, there was unusually heavy rainfall which exacerbated the effects of Hudson's failure to institute adequate erosion control measures. In February, the rainfall totalled 11.25 inches versus the norm of 4.8 inches. In March, there was a total of 8.5 inches of rain versus 5.1 inches normal. (Tr. 2/163) Rainfall was less than normal during April-July, 1988 and, therefore, did not contribute to erosion or lack of success in establishing vegetation. August and September 1988 had abnormally high rainfall, with 16.45 inches of rain versus a normal amount of 5.5 inches in August and 13.27 actual rainfall in September versus 8 inches of rain normally occurring.

Digitized by Google

Completion of the Contract

103. A final inspection of the work was conducted on 29 July 1988. This resulted in a discrepancy list containing many items related to the condition of the ditches (R4, tab T). Among these items were: "provide adequate erosion control" and "repair washouts and provide erosion control under all bridges and around all headwalls." Other items called for regrading of ditches to meet specified elevations and elimination of low and high points in the bottom of the ditches; and rework of ditches to repair washouts and erosion.

104. *Substantial Completion*—By letter of 16 November 1988 the ROICC notified Hudson that the contract work was deemed substantially complete as of 18 August 1988 (R4, tab V). As indicated in that letter, however, many corrective actions from the final inspection discrepancy list still remained to be accomplished.

105. In the letter dated 16 November 1988, Mr. Semmes had informed Hudson that final payment would be withheld until all of the listed discrepancies had been corrected. On 6 January 1989, the parties met and agreed that the balance of the price would be paid upon accomplishment of a reduced list of defect corrections (R4, tab IIa). Hudson did not accomplish all of the deficiency correction agreed to.

106. The Government agreed on 3 March 1989 to a further reduction of the number of deficiencies required to be corrected as a condition to final payment (R4, tab IID). Hudson then returned to the site and performed a large portion of the deficiency correction for which it received payment of $10,000, leaving $3,000 which has remained unpaid (tr. 1/214). That withholding is not addressed in Hudson's submittal of 29 August 1989 which is the subject of this appeal.

Hudson's Claims

Hudson seeks to recover the following added costs of repair and maintenance of the ditches:

Events 13-20, 23, 27-29 July, 1-3 August, 31 August-2 September.

12-15 September, and 19 September—4 October 1988

FINDINGS OF FACT

107. On these dates, Hudson repaired damage to the ditches caused by erosion. The evidence for these claims consists almost entirely of entries in DRI's submitted by Hudson. With the exception of several instances of repairs precipitated by rain, there is no indication of the causes of damage repaired. The repairs included re-sloping ditch sides; replacement of topsoil, re-fertilization, reseeding, and re-mulching of surfaces; and removing accumulations of sediment from the ditches.

DECISION

Hudson seeks to recover for the repair of the ditches, renewal of vegetation, and removal of sediment accomplished in the course of the contract. Ordinarily, costs of such work would be Hudson's responsibility pursuant to the provision of the standard "Permits and Responsibilities (APR 1984)" clause of the contract that makes the contractor responsible for "all materials delivered and work performed until completion and acceptance of the entire work." That includes repair of damage caused by rain. *Tyler Construction Co.*, ASBCA No. 39365, 91-1 BCA ¶ 23,646.

Hudson contends, however, that the Government is responsible for the costs of this work because it was occasioned by defective specifications for erosion control and defective design of the work.

Hudson asserts that the erosion control techniques specified in the contract were insufficient for the conditions of the highly eroded soil found here. Hudson asserts that it "performed the standard erosion control techniques that are used throughout the industry, and specified in this contract ... in such a manner that had there not been a design defect, the grassing, etc. would have worked" (app. br. at 45). Hudson's assertion does not conform to fact. From the beginning of construction in November 1987 until at least March 1988, Hudson made little or no effort to control erosion as required by the specification. During that period, large areas of soil were allowed to remain unprotected against erosion. This was especially destructive in February and March 1988 which were marked by unusually heavy rainfall. Grassing was unduly delayed during that period. As of 11 May 1988, with a contract requirement of 97 percent coverage with healthy, growing grass, only 20 percent coverage had been achieved.

The record does not support the assertion that the specifications for erosion control were defective. It shows, instead, that they conformed to the standards of the industry and were substantially suited to the conditions of highly erodible soil at the site. In any event, the fact that Hudson did not

©1994, Commerce Clearing House, Inc.

Digitized by Google

carry out those specifications to any significant extent during a large part of the ditch construction, makes it unlikely that defects in the specifications could have caused the damage now claimed. *See, Gulf & Western Precision Engineering Co. v. United States* [22 CCF ¶80,736], 543 F.2d 125 (Ct. Cl. 1976).

Hudson claims that the design was defective in several respects. First that, it did not take into account surface runoff from areas beyond the limits of construction under this contract (app. br. at 47). The contention is without merit. Section 01560, para. 4.3. of the specification required Hudson to undertake "such measures as may be necessary" to prevent erosion including, in para. 4.3.1, mechanical retardation and control of runoff from the construction site. The specification named several techniques, including installation of berms. From its pre-bid site visit, Hudson would have been on notice of the possibility of substantial runoff of rain, emanating from adjacent streets and other improved surfaces, onto the construction site and thence into the ditches and could, and should, have made appropriate cost allowances therefor.

The second aspect in which the design is claimed to have been defective is in prescribing earthen, rather than concrete-lined, ditches. In Hudson's view, the earthen ditch design was unsuitable in the circumstances of highly erodible soils and elevated water table. The record indicates, however, that these conditions could have been substantially mitigated and controlled through dewatering and prompt vegetation. These techniques would have been effective in achieving stabilization of the walls and bottoms of the deeper ditches against erosion from ground water. They had been successful during construction of the predecessor Phase I ditches which presented ground water conditions similar to those prevailing for the large ditches under the instant Phase II project.

Hudson's contention is partially correct, however. The drawings located the bottoms of shallow ditches in the water table. That action resulted in a constant flow of waterborne soil ("running sand") in the ditches. Establishment of vegetation in the ditch bottoms which would have stabilized the soil against erosion from the flowing water could not be accomplished during the period of the contract. A longer term was needed. Until that stabilization occurred, running sand would continue, with consequent erosion and deposit of sediment.

Hudson was required to frequently remove sediment from erosion that was filling up the ditches. Under the contract, Hudson was required to deliver ditches with the depths shown in the drawings. To the extent that the sedimentation was caused by failure to implement measures that would have stabilized ditch surfaces and prevented erosion, removal was for Hudson's account.

Sedimentation in the shallow branch ditches had various causes. In common with the Big Ditch and the other deep ditches, sedimentation was caused by erosion from rain and surface runoff. A cause of sedimentation unique to the shallow ditches was sedimentation caused by the action of running sand. That condition was not capable of being successfully controlled during the term of the contract. Inasmuch as the sedimentation was the proximate result of its design of the ditches which placed the bottoms in the ditches in the water table, at depths of 5 feet to 6 feet, removal of soil deposited thereby is chargeable to the Government and Hudson is entitled to an equitable adjustment under the Changes clause to that extent.

The record does not break out the portion of sediment removal cost attributable to the action of running sand. However, after evaluating the extent of sedimentation due to causes which were the responsibility of Hudson, namely, sediment deposited by erosion from rain and surface runoff and sediment left in place by the flat grade of the ditch system, we hold that 50 percent of the cost of removing sediment from the shallow ditches (*i.e.*, depths of 5 feet to 6 feet) is attributable to sedimentation caused by running sand.

Another aspect of the ditch design in respect of which added costs are claimed is the flatness of grade in the ditches. The lack of grade caused the water in the ditches to move so slowly that soil carried in the water was deposited in the bottoms of the ditches, increasing sedimentation. The slow movement also allowed accumulations of sediment to remain in place that would have otherwise been scoured away under conditions of normal water velocity.

While the drawings showed the grades of individual sections of ditch, the contract did not inform Hudson of the anticipated low velocity of water in the system or the probable effects thereof on sediment deposit or removal. The Government had designed the system with very little grade to mitigate high velocity of drainage water from the Phase I and II systems, overwhelming the

Digitized by Google

Gulfport municipal system that received the water.

Hudson knew or should have known of the flat grade of the ditches. This information was shown in the drawings. The fact that water located in a flat plane moves slowly under normal conditions is within the common knowledge of ordinary individuals. An experienced construction contractor such as Hudson, should be capable of foreseeing the effects, as to sedimentation, of slowly moving drainage water that occurred here. The control of sedimentation from that source was part of the work of building ditches and maintaining them, until acceptance, to the depths shown in the drawings. Moreover, the design was not defective but was based on achieving the more important goal of avoiding damage from high velocity drainage. Accordingly, Hudson is not entitled to added compensation for the costs associated with that work.

Other Claims for Ditch Repairs

Event 8 July 1988

FINDINGS OF FACT

108. The ditch on Sixth Street is carried under Young Avenue in a 42-inch RCP culvert. Repeatedly, the ditch and culvert filled up with sand, requiring frequent clean-out in order to maintain the flow of drainage water. The claim is for the expense of that work. Hudson asserts that the sediment came from the water in the ditch and had been deposited in the ditch and culvert as the result of the low velocity of the water flow, caused, in turn, by the insufficient grade and slope of the ditch (tr. 1/174-75). Contrary to that assertion, however, is evidence that the sediment is soil washed off from nearby ditch and headwall areas that Hudson left unprotected from erosion (tr. 3/261). On that record, we cannot find causation as urged by Hudson.

DECISION

In addition to our comments on the flatness of the grade, any liability of the Government for sedimentation of the ditches is precluded in the present instance because Hudson's failure to carry out contract requirements for erosion control was at least as likely the cause of the sedimentation as the low velocity of the water in the ditch.

Event 26 July 1988

FINDINGS OF FACT

109. This relates to a location on Sixth Street and Young Avenue where an existing shallow ditch was connected to the new large ditch along Sixth Street constructed under this contract. As the result of a difference in elevation between the existing ditch and the new ditch, drainage water from the existing ditch descended into the new ditch at a very steep angle, causing erosion in the new ditch. The difference in elevation between the ditches, however, was addressed in contract drawing 1/28, in Keyed Note 2, which required Hudson to "grade back [from the new ditch] to invert of existing ditch at a maximum 5:1 slope."

110. Hudson encountered difficulties, not described in the record, in constructing that slope and requested that a concrete flume be substituted as the connection between the ditches. A change order for the flume was requested. The request was refused. Hudson was told, instead, that performing the work as closely as possible to the requirement would be sufficient. (Tr. 3/266-74)

111. Hudson regraded the existing ditch as best it could to meet the contract requirement. The connection, however, appeared as a defect in the discrepancy list resulting from final inspection on 29 July 1988 for failure to conform to the specified 5:1 slope. One of these locations was Sixth Street and Young Avenue. Hudson performed work relating to that item on 3 August 1988 (DRI 3 August 1988) and now seeks to recover the costs thereof. Exactly what work was performed and how it compared to the contract requirement is not indicated in the record.

112. Mr. Allen testified that authorization to Hudson to "do the best it could" had been given also in instances of difficulty in building ditch sides to prescribed slopes and that, here also, Hudson had been held to the contract requirement. These locations and the individual situations, however, are not further addressed in the record.

DECISION

It is undisputed that the connection between the new and existing ditches noted as a deficiency at the final inspection did not conform to the specification. The work was subsequently re-performed and apparently accepted as conforming. Hudson contends that the rejection was wrongful inasmuch as it had earlier been permitted to accomplish the work "as close as possible" to the specification. There is no evidence, however, as to

©1994, Commerce Clearing House, Inc.

Digitized by Google

what was done pursuant to that agreement. In the absence of that evidence and in the light of Hudson's successful reperformance, we must conclude that what was required was also "possible." The initial rejection of the work was, thus, proper and costs of reperformance are, therefore, for Hudson's own account.

Event 7-9 September 1988

FINDINGS OF FACT

113. Hudson installed berms on a section of the Big Ditch between Sixth and Seventh Streets in order to protect the slopes from surface runoff. In addition, in order to better direct the runoff away from the ditch, Mr. Semmes proposed, and Hudson agreed that temporary subsidiary ditches (also known as "tail" ditches), coming off each side of the Big Ditch, be dug to catch and drain off surface runoff water and feed the same into the Big Ditch. The tail ditches were dug on 7-8 September 1988. Berms were then installed enclosing the sides of the tail ditches and the portions of the Big Ditch where the tail ditches came in.

114. The abnormally large rainfall in September 1988 caused so much water to be channeled into the tail ditches, that they became heavily eroded and could no longer serve their intended function. At that juncture, Mr. Semmes directed Hudson to remove the berms that had been installed around the tail ditches and the nearby section of the Big Ditch (tr. 3/293). The removal of the berms allowed surface runoff from later rain storms to sheet down the slopes of the Big Ditch and wash away growing grass that Hudson had planted (tr. 1/208-09, 3/365). Hudson seeks to recover the cost of repairing that damage. Alternate courses of action were available for dealing with the runoff that would have produced less damage to the ditch. One alternative was to leave the berms at the edge of the ditch in place and install a temporary flume, as permitted by Section 01560, para. 4.3.1, to convey the runoff to the bottom of the ditch without damage to the ditch walls.

115. There is an issue as to the scope of the direction given for removal of berms. Mr. Allen testified that Hudson was directed to remove all berms throughout the project. Mr. Semmes, the ROICC's project manager, testified that the direction related only to the above location only and, furthermore, that the berms elsewhere in the project actually remained in place until removed subsequent to beneficial occupancy as part of the final dressing-up of the ditches (tr. 3/366-67). We find the facts in accordance with Mr. Semmes' testimony. Directions of the magnitude and broad scope alleged here by Hudson were invariably noted in the DRI's. There is no such notation here and no other substantiation of that direction. Moreover it is unreasonable to believe that the Government would have issued such a direction. It made no sense for the Government to entirely deprive itself of protection of berms throughout the project on the ground that berms in one particular location had not been successful.

DECISION

The events culminating in the destruction of the vegetation planted by Hudson began with a suggestion from Mr. Semmes for installation of the tail ditches to diminish the force of surface runoff on the Big Ditch at that location. Hudson was free to proceed in another manner if it viewed the suggestion as infeasible. It was, therefore, Hudson's concurrence—not the Government's direction that prompted the construction of the tail ditches. *See, Singer Co., Librascope Div. v. United States* [24 CCF ¶ 81,914], 568 F.2d 695 (Ct. Cl. 1977).

Hudson had no such choice as to the removal of the berms. This was done by direction of the Government. Why the Government would direct removal of all berms in the locality rather than simply those enclosing the tail ditches that had become useless is not explained in the record. Suffice it to say that the removal of the berms at the edge of the Big Ditch, left the ditch sides unprotected from surface runoff, permitting later washout of the growing grass.

The contract requirements in Section 01560, para. 4.3.1 relating to control of surface runoff were of the performance type, vesting in Hudson both the right and obligation to choose the appropriate means for carrying out the requirement to "effectively prevent erosion and control sedimentation." After failure of the tail ditches, courses of action were available to Hudson that were less destructive than removal of the berms as directed by the Government. The Government's directive deprived Hudson of the right and opportunity to take such a course. As such, it amounted to a constructive change entitling Hudson to an equitable adjustment for the added costs proximately resulting therefrom. *CWC, Inc.*, ASBCA No. 28847, 84-2 BCA ¶ 17,282.

Digitized by Google

Event 15 September 1988

FINDINGS OF FACT

116. Hudson alleges that it was directed to remove a sediment build-up in a Phase II ditch behind the family housing area that had been caused by the activities of other contractors (claim, para. 62). There is no evidence in the record substantiating the claim.

DECISION

The claim fails for lack of proof.

Erosion Control by the Government

FINDINGS OF FACT

117. On 3 August 1988, using its own forces, the Government began re-mulching and reseeding ditches built under this contract along Sixth Street that had not been successfully vegetated by Hudson. The ROICC told Hudson that it was no longer responsible for vegetation of those areas (tr. 1/202, 204). Hudson continued to repair vegetation in other areas and to remove accumulations of sediment from the ditches.

118. On 24 August 1988, the Government ordered Hudson to complete repairs that had been started by the Government in an area of the ditch on Sixth Street near Building 113. Pursuant to that order, Hudson placed new topsoil on 30 August 1988 (tr. 1/205-07; DRI 30 August 1988). It regraded the ditch sides near Building 113 on 7 September 1988 in preparation for application of sod by the Government (DRI 7 September 1988). Hudson seeks to recover the costs of that work.

DECISION

Under the standard "Use and Possession Prior to Completion (APR 1984)" clause of the contract, FAR 52.236-11, the Government had the right to "take possession of or use any completed or partially completed part of the work." Hudson's liability for correction of defects, however, would survive the takeover. The clause provides that "[t]he Government's possession or use shall not be deemed the acceptance of any work under the contract."

The clause allows recovery where "use or possession by the Government ... causes additional expense to the contractor." The Government's work in re-seeding and re-mulching the ditches did not cause additional expense to Hudson. To the contrary, that work ameliorated Hudson's expenses inasmuch as it was liable for the entire effort pursuant to the "Inspection of Construction" clause of the contract. Since Hudson's work in completing the defect correction begun by the Government was in discharge of its existing contract obligation, it is not entitled to additional compensation therefor.

Claim for Costs of Extended Performance Period

Findings of Fact

119. No evidence was produced in support of Hudson's claim for the costs of two added months of performance. There is nothing in the record showing that any occurrence for which claim is made caused any increase in the time required for completion of the contract.

Decision

The claim is denied for lack of proof.

Conclusion

Hudson is entitled to recover to the extent indicated above and those claims are referred to the parties for negotiation of equitable adjustments to the contract price. The appeal is sustained to that extent. In all other respects, the appeal is denied.

[¶ 26,467] Nucleus Corporation

ASBCA No. 39612, October 22, 1993. Contract No. DAAA09-87-C-1313.

Interpretation of Contracts—Plumbing, Pipes, and Welding—Injector Nozzles.—Under a contract to provide fuel injection test stands and adapter kits for diesel fuel pumps, a contractor's interpretation of the contract as permitting the use of engine nozzles for the pumps was not reasonable, because the use of engine nozzles would not meet the contract requirement that the nozzles be part of the adapter kit. It was shown that when engine nozzles were used, they were provided with the pump and then returned with the pump. Consequently, the contractor was not entitled to recover the additional costs incurred as a result of supplying matched flow nozzles.

Digitized by Google

Interpretation of Contracts—Trade Usage—Pre-Formed Fuel Lines.—Under a contract to provide fuel injection test stands and adapter kits for diesel fuel pumps, the government's interpretation that the contract allowed the use of pre-formed high-pressure fuel lines to connect to the pumps rather than straight high-pressure fuel lines was unreasonable, because such interpretation was too strained and was contrary to industry practice. High-pressure fuel lines are used to connect diesel fuel pumps. The standard industry practice is to provide straight high-pressure fuel lines that are then bent in the field to fit the pumps in question. If pre-formed lines are required, industry practice calls for the customer to specify this requirement in the contract. In this case, the contract did not specify pre-formed high-pressure fuel lines. In keeping with industry practice, the government could have specified it wanted the fuel lines pre-formed, but it did not do so. The fact that the contractor had supplied pre-formed fuel lines in the prior procurement was no indication that this was a requirement.

Interpretation of Contracts—Reasonableness—Calibration Tools.—Under a contract to provide fuel injection test stands and adapter kits for diesel fuel pumps, the government's interpretation of the contract as requiring that the adapter kits contain specialized tools for calibrating the various pumps was strained at best and was not a reasonable interpretation of the contract. Both parties agreed that the contract did not specifically require the contractor to provide calibration tools. The government asserted that such a requirement was inherent in the requirement that the diesel pumps be tested in accordance with the manufacturers' specifications. The board, however, refused to read into this language a requirement to provide calibrated tools. In the board's view, the contractor's interpretation that the personnel who mounted the diesel pumps would have the necessary tools to calibrate the pumps was a reasonable interpretation of the contract.

For the appellant: Dykema Gossett, Washington, D.C., by Timothy Sullivan and Martin Fischer. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. Harold F. Clary, JAGC, Trial Attorney.

Before BURG, SPECTOR, and RUBERRY, Administrative Judges.

BURG, Administrative Judge: Appellant filed a timely appeal from the final decision by the contracting officer denying its claim for additional costs incurred in performance of this contract to provide fuel injection test stands and adapter kits for a variety of diesel fuel pumps. Appellant seeks additional costs for providing items in the adapter kits which it considers were beyond contractual requirements. Only entitlement is before the Board.

FINDINGS OF FACT

Background

1. On 11 September 1987 appellant was awarded this firm fixed price contract in the amount of $1,824,000 to supply 30 fuel injection test stands (FITS) and adapter kits to mount various specified fuel pumps to the stands. It contained the standard Changes and Disputes clauses.

2. The Government wanted the 30 FITS obtained under this contract to be compatible with the approximately 15 different adapter kits supplied under a prior procurement of 160 FITS and adapter kits from Bacharach, Inc., one of the three leading commercial producers of test stands. It had issued a solicitation which incorporated Description for Purchase (DFP) 227 (for the FITS) and DFP 213 (for the adapter kit) with the intention of supplying prospective bidders with approximately 15 different adapter kits supplied under the prior procurement. DFP 227 and DFP 213 were newly prepared DFP's which contained slight modifications from those in the earlier procurement. Subsequent to issuance of the solicitation it was realized that it would be a "monumental logistic problem" to supply all these kits to each prospective bidder and would also raise potential problems about proprietary data since the prior contract had been under a performance specification. The solicitation was, therefore, withdrawn.

3. The responsible Government engineer, under a "crash project," prepared two new DFP's which incorporated various dimensions of the previously provided adapter kits. Both DFP's contained performance and design elements. The Government expert who had revised the specifications intentionally omitted certain design information because of his concern that he might divulge proprietary information from the prior contractor. He did not acquaint the responsible Government procurement personnel with

Digitized by Google

these omissions. A new solicitation was issued on 22 April 1987 which contained DFP 243 (for the FITS) and DFP 244 (for the adapter kits). The three bidders in response to this solicitation were appellant, Bacharach and another of the leading producers. References in the solicitation remained DFP 227 and DFP 213 although DFP 243 and DFP 244 were attached. By unilateral Amendment P00001 to the contract dated 23 November 1987 all references to DFP 227 and DFP 213 were deleted and DFP 243 and DFP 244 substituted.

4. DFP 243, entitled "Fuel Injection Pump Test Stand" recited as its scope the following:

> 1.1 This Description for Purchase covers a Fuel Injection Pump Test Stand designed and constructed to facilitate the testing and calibration of diesel engine fuel pumps in accordance with manufacturer's specifications.

(R4, tab 1) Section 3.2.1 of DFP 243 required that the FITS "be designed to allow for testing of the following pumps with the appropriate adapter kit, in accordance with pump manufacturer's specifications" and then listed a series of pumps including AMBAC International pumps, listed as UTDS (American Bosch) in the DFP. After describing certain requirements for the FITS, the paragraph further provided that the "adapter kits shall be complete with all hardware required to successfully operate the related pump in accordance with the pump manufacturers [sic] instructions." Section 3.2.2 of DFP 243 required the contractor to provide certain adapter kits as specified by identified sections of DFP 244.

5. DFP 244, entitled "Adapter Kits for Fuel Injection Pump Test Stand" recited as its scope the following:

> 1.1 This specification covers the adapter kits for use in testing and calibrating diesel engine pumps on the Fuel Injection Pump Test Stand (FITS). The kits shall consist of the hardware required, in conjunction with the master accessories furnished with the FITS, for mounting and mating each of the pumps listed herein to the FITS to allow for testing the pump in accordance with manufacturer's specifications.

(R4, tab 1)

6. Appellant was the low bidder for this contract. The Government asked it to verify its bid on two separate occasions because of a concern that the bid was too low. In each instance, appellant reviewed its bid and, since it felt secure that the bid was sufficient, notified the Government such was the case. A pre-award survey was performed by several Government employees, including the technical expert who had prepared the DFP's. They could find no reason to conclude that appellant was not capable of performing the contract. The technical expert's supervisor was quite skeptical about appellant's ability to perform the contract so he was concerned that no basis to exclude appellant had been found. His misgivings increased after contract award when appellant requested a FITS manufactured under the prior contract to allow compatibility. No prior FITS was made available but arrangements were made for appellant to examine one at an Army location. Since it was a different model than the FITS manufactured under the Bacharach contract this did not prove very helpful to appellant.

7. Appellant's chief of engineering was responsible for preparing the bid for this contract. Since appellant had successfully built a number of test stands prior to this contract, he was experienced in preparing bids for test stands although he was not acquainted with the pumps for which this test stand was to be designed and used. In preparing the bid, he primarily focused on the high price items. Appellant could not prepare an exact estimate for the adapter kits since it was not aware of the specific items which would be included and viewed it as somewhat of a mystery, a "black box," at the time it prepared its bid. While appellant had a basic idea of what would be included in the kits, it was unable to establish all of the hardware which would be included without a detailed design of the equipment—a step which, because of cost and time constraints, appellant did not perform until after contract award. None of the pump manufacturers were contacted prior to bid to obtain information concerning available information on items which it would have to include in the adapter kits.

8. Appellant intended to prepare the kits itself. However, after learning the name of the prior contractor, appellant's chief engineer obtained the price that Bacharach was charging for the adapter kits and concluded that, since the Bacharach price included some profit, the actual cost would be less. He did consider the price that Bacharach charged for the kits in arriving at the $4,020 for the kits which was included in appellant's bid but could not explain how he had arrived at that figure.

Digitized by Google

9. A post award conference was held on 3 November 1987. At the conclusion of that conference, the Government technical expert gave appellant a copy of Bacharach's sales brochure which listed information about the Bacharach FITS and the adapter kits. The brochure indicated that the kits contained, *inter alia,* calibration nozzles and pre-formed lines. It also gave the Bacharach and National Stock Numbers for about 20 kits. The technical expert felt he could not be more specific since he considered it morally wrong to supply appellant with information which had been developed by a bidding competitor who was selling the kits commercially. In addition to supplying the brochure, the Government expert informed appellant of a meeting then taking place of the Association of Diesel Specialists and suggested appellant attend. Appellant's chief engineer did so. It proved helpful. However, Bacharach was very coy about divulging any information about the contents of the adapter kits.

10. Appellant's minutes of the post-award conference held 3 November 1987 were forwarded to the Government on 20 November 1987. They provided the following concerning the adapter kits:

> 3. Adapter kit contents remain unclear. It is our understanding of the contract, that Nucleus is to provide only components required to operate the pumps specified.
>
> Nozzle types, quantities and any calibration equipment for the pumps has not been specified within DFP-243 or DFP-244.
>
> An itemized list describing all components that we intend to supply with each adapter kit will be submitted to AMCCOM by year-end. Discrepancies will be addressed at that time.

(R4, tab 15 p. 7)

11. Shortly after contract award appellant had hired an expert in the types of pumps specified for the FITS as a consultant. With his assistance, on 1 February 1988, appellant forwarded a list of components it intended to include in the adapter kits. It stated the following:

> H. Adapter Kit contents
>
> The subject of the Adapter Kit contents was discussed during the Post Award and appeared unclear. In the interest of clarification, please find enclosed our Technical Memo "Accessory and Adapter Kits with Pump Installation and Drawings" for the Nucleus Model 8800 FITS. The enclosed document describes the Adapter Kit as quoted per the Statement of Work in the contract. Specific points include:
>
> 1. The type of nozzles supplied in the adapter kit for American Bosch pumps are engine production nozzles.
>
> 2. There are six nozzles supplied in the adapter kit for American Bosch pump PSB6A and twelve nozzles supplied for American Bosch pump PSB12BT.
>
> 3. Pump calibration tools are not supplied in the adapter kits.
>
> 4. Straight high pressure fuel lines are supplied in both adapter kits for the Stanadyne pumps, as well as the adapter kit for American Bosch pumps.

(R4, tab 17 p. 3)

12. By letter dated 12 February 1988, AMCCOM replied to the four items raised by appellant indicating objections to each of them. These will be discussed in detail below. In an effort to resolve the matter, a meeting was held between appellant and Government personnel on 25 February 1988. With a partial exception, each party retained its position. The parties are in disagreement whether at the conclusion of the meeting appellant was informed that, if it supplied adapter kits according to its view, it would not pass the first article submission. The Government denies that this was its position maintaining that appellant had to meet certain requirements and tests and, if appellant was confident that it could pass the requisite requirements and tests, it could have proceeded according to its plan. Since the Government had already made it clear that it concluded that appellant's proposals about the adapter kits in the 1 February 1988 letter did not meet the contract requirements and the 25 February meeting did not change that conclusion, the Government's position is a meaningless one. Even if the Government did not inform appellant in specific terms that it would not pass the first article, the Government's admitted position certainly led to that conclusion.

13. On 8 March 1988 appellant notified the Government that it would include the items in the adapter kits in conformance with the Government's 12 February 1988 letter but that it considered that the four items specified in the letter constituted changes in its contract. It sought an equitable adjustment of $5,834.99 per FITS, a total of $175,049.70. The Government responded by letter dated 1 April 1988 indicating that it did not consider its letter of 12 February 1988 contained modifications to appellant's contract, but considered that letter a clarifi-

Digitized by Google

cation of existing contract requirements. There was additional correspondence between the parties about this matter in which each reiterated its position.

14. Appellant successfully performed the contract and delivered the 30 FITS and the required adapter kits. Following satisfactory delivery of the items required under the contract, appellant filed a certified claim seeking an equitable adjustment in the amount of $236,380 for additional costs for providing certain equipment in various adapter kits which appellant maintains the contract did not require. Each item in dispute was denied by contracting officer decision issued 17 July 1988.

Injector Nozzles

15. DFP 244 required the contractor to provide adapter kits and a master accessory kit to be used in testing and calibrating various specified diesel fuel pumps on the FITS in accordance with manufacturer's specifications (finding 5). Nozzles and holders (sometimes referred to as injectors) are essential to provide a measured flow of fuel to the fuel pump while the pump is mounted and running on the FITS. The contract required the FITS to have 12 cavities which could hold a maximum of 12 injectors. The maximum number of cylinders associated with any of the pumps listed in the contract was 12. Calibration nozzles are used in testing and calibrating pumps. Engine nozzles are those used with the pump in its engine application. Calibration nozzles are calibrated and remain with the test equipment. At times, engine nozzles are used during testing and calibrating a pump. In those instances the nozzles are those actually used during engine operation and are forwarded and returned with the pump.

16. At issue in this appeal are the nozzles required by DFP 244 for AMBAC pumps, referred to in DFP 244 by their prior name, UTDS (American Bosch). Section 3.2.6.1 stated that the contractor should furnish nozzles for "PSB12BT and PSB6A90EH" AMBAC pumps. These designations were incomplete parts numbers and actually referred to a series of 12 cylinder and 6 cylinder AMBAC pumps. PSB12BT pumps all have 12 cylinders and require 12 injectors for testing. PSB6A pumps all have 6 cylinders and require 6 injectors for testing. For all pumps (28 in number) other than the AMBAC pumps, the contract specifically required calibration injectors. The contract did not explicitly reference the need for calibration nozzles for the AMBAC pumps. In addition to calibration nozzles required for 28 pumps, the contract required 6 specified calibration nozzles and holders be provided (DFP 244 Sec. 3.2.9).

17. Appellant's concept layout of the FITS indicates the location for mounting of calibration nozzles but does not mention engine nozzles. In its concept drawing of the manufacturing plan appellant stated that "purchased components" would include adapter kits, "cal." nozzles, flow meters, CRT, and computer sub-assembly. Its "Manufacturers Equipment List" lists Bacharach as the source for the contract adapter kits, listing the two AMBAC pumps here in dispute although indicating that no formal quote had been received. As previously indicated, appellant used the Bacharach kit for pricing purposes and intended to provide in-house kits to avoid the profit Bacharach would charge a competitor for its kits.

18. In its letter of 1 February 1988 (finding 11) appellant stated it would provide engine production nozzles for the AMBAC pumps. In its 12 February 1988 response, the Government stated:

> d. Adapter Kit Contents:
>
> (1) Engine production nozzles are *not* acceptable. Test nozzles for the PSB6A are AMBAC International (American Bosch) part number KT-7830 (Set of 8) and test nozzles for the PSB12BT are AMBAC International part number KT-7831 (Set of 16). Test nozzles are matching sets which have a smaller flow band than engine production nozzles. Requirements for these matching sets are based on testing injection pumps in accordance with manufacture's [sic] specifications stated in para 1.1 of DFP 244. [See finding 5]
>
> (2) Quantity of test nozzles in the adapter kit for American Bosch PSB6A pump will be eight and for American Bosch PSB12BT will be sixteen (See para (1) above.)

19. The Bacharach sales brochure for its FITS and adapter kits gave its part number for the AMBAC injector kit. Bacharach sold the AMBAC adapter kit for $11,400. Appellant's consultant (finding 11) contacted AMBAC concerning the injectors required for the AMBAC pumps. The AMBAC salesman informed him of the specific pumps in the 6 and 12 cylinder families which were used by the military. He further informed him that the injectors were flow matched and gave him the numbers of the AMBAC injector kits for those injectors. Flow matched nozzles are not actually calibration

©1994, Commerce Clearing House, Inc.

Digitized by Google

nozzles. They consist of a group of engine nozzles which have been matched for a tighter flow tolerance than would be experienced just using unmatched engine nozzles. They are sold as a group. The injector kit for the 6 cylinder pump, KT-7830, contains 8 nozzles; the injector kit for the 12 cylinder pump, KT-7831, contains 16 nozzles. AMBAC would not provide appellant with anything but these injector kits. It would not supply 6 and 12 flow matched nozzles for the 6 and 12 cylinder pumps. In the event more than 2 or 4 of the injectors became unusable (depending on whether for the 6 or 12 cylinder pump), the user could not obtain additional injectors from AMBAC. The AMBAC injector kit could be returned for reconditioning (which generally meant supplying another reconditioned kit) at a reduced price or a new injector kit could be purchased. AMBAC would not sell appellant only the 6 or 12 injectors. The contract did not explicitly reference AMBAC KT-7830 and KT-7831 injector kits.

20. Appellant supplied the KT-7830 and KT-7831 injector kits for use with the AMBAC pumps and thereafter filed a claim for supplying 2 additional nozzles (8 vs. 6) for the AMBAC PSB6A90EH pump and 4 (16 vs. 12) additional nozzles for the AMBAC PSB12BT fuel pump. It also sought costs for supplying the flow matched injectors supplied in the AMBAC KT-7830 and KT-7831 injector kits. The contracting officer denied these claims in the decision which is the subject of this appeal.

Pre-formed Fuel Line Dispute

21. In its 12 February 1988 response (finding 12) to appellant's 1 February 1988 letter (finding 11), the Government stated:

> (4) Straight high pressure fuel lines are not acceptable. High pressure fuel lines will be preformed to preclude being kinked in the field. Requirement for preformed high pressure fuel lines is based on para 3.1 DFP 244 starting with the sixth sentence.
>
> "Each kit shall be placed in its own metal container with hinged lid. Each container shall be partitioned with foam material conforming to PPP-G-1752 to prevent movement of the contents during transportation. Each component of the kit shall be separately identified. The exterior of the container shall be marked with the applicable pump(s) supported. There shall be attached to the lid interior a list of contents and its location within the container. Each kit shall include pump mounting diagrams, fuel line connection diagrams and other information required to attach and properly use the adapter kit. Tubing connections shall conform to ISO Standard 2974. Tubing shall conform to SAE J529."
>
> Straight fuel lines, once bent, would not fit the same location in the container. In addition, the fuel lines would no longer be identical, but would not be separately identified. Without separately identified fuel lines, the fuel line connection diagrams required in para 3.1 would be meaningless. This would cause excessive set up time, especially for the PSB12BT pump.

22. High pressure fuel lines are used to connect diesel fuel pumps to a test stand. Standard industry practice is to provide straight high pressure fuel lines which are then bent in the field by the customer. If pre-formed lines are required this is specified by the customer. Once the straight fuel lines are bent it is not recommended that they be re-bent. The commercial practice is to hang the fuel lines on the wall near the test stand once they are bent.

23. Bacharach had supplied pre-formed lines with the previous FITS procurement and the Government wanted pre-formed high pressure lines under this contract. However, in no place in the contract or specifications is it specified that high pressure fuel lines be pre-formed. Nor is there a specific notification that the metal container which was required for packaging the adapter kit items was other than for initial shipping purposes or that the FITS and adapter kits were not to remain in a permanent location. Appellant planned to identify each fuel line so that there would be no confusion where the line went.

Calibration Tools Dispute

24. The contract did not reference any requirement for specific tools used to calibrate the specified diesel fuel pumps. In drafting DFP 243 and DFP 244, the Government technical expert intended the adapter kits to contain hardware necessary for calibrating as well as mounting and mating the various pumps specified in the contract. At times the witnesses for both appellant and the Government used the term "calibrating" or "calibration" in a broad sense of including all the processes involved in placing a pump on the test stand and testing and adjusting it. The instant contract distinguished between "mounting and mating" and "calibrating" in various sections.

Digitized by Google

25. In its letter of 1 February 1988 (finding 11) appellant indicated that under its interpretation of the contract calibration tools were not required. In its 12 February 1988 reply (finding 12) the Government noted its disagreement, stating:

> (3) Tools peculiar to testing and calibrating diesel engine pumps will be included in the kits. Common tools such as end wrenches, screwdriver, pliers, etc., and specialty tools required to repair/rebuild diesel engine pumps will not be included. Requirement for tools peculiar to testing and calibrating diesel engine pumps is based on the statement "The kits shall consist of the hardware required", in para 1.1 of DFP 244.

(R4, tab 18) (See finding 5 for para. 1.1 referenced above)

26. Sections 4.4 of DFP 243 ad DFP 244 contain various tests to which the adapter kits would be subjected at first article testing. Because of their length they are not all set forth in these findings. The relevant requirements concerned mounting of the pumps with appropriate stability and testing of the pumps in accordance with manufacturer's specifications. Section 4.4.2 of DFP 244 provided:

> 4.4.2 *Functional test.* Each type of adapter kit specified in the contract shall be used to mount one of each type of injection pump to which it applies on a Fuel Injection Pump Test Stand conforming to Description for Purchase DFP-227 [sic. See finding 3]. While mounted on the FITS, each pump shall be tested in accordance with the pump manufacturer's test specifications. Failure of the adapter kit to provide all necessary hardware for mounting and mating each type of pump to the FITS, failure or leakage of any part of the adapter kit, or damage to the injection pump shall be cause for rejection.

DECISION

Injector Nozzles

The parties introduced substantially more oral testimony and exhibits on the number and type of injectors required by the contract for the AMBAC pumps than we have included in our findings and have requested a number of additional findings on this issue. This all has been considered but, because of our view of these questions, we have not considered it necessary to recite all of that material in this opinion.

In our view, by appropriate inquiry appellant could have ascertained prior to its bid that the only nozzles which it could obtain from AMBAC for the adapter kits for the two AMBAC pumps were by purchase of the AMBAC KT-7830 and KT-7831 injector kits. The information supplied by the AMBAC sales representative could have been obtained prior to bid as well as after. That appellant failed to do so and included an amount for a "black box" with contents unknown does not relieve it of the risk which is assumed as a result of its failure to do so.

We conclude that the appellant's interpretation that the contract permitted the use of engine nozzles for the AMBAC pumps was not reasonable. The evidence indicates that when engine nozzles were used they were provided with the pump and then returned with the pump (finding 15). This would not meet the contract requirement that the nozzles be part of the adapter kit. We further conclude that had appellant made the appropriate pre-bid inquiries it would have also learned that it had to purchase 8 and 16 nozzles rather than the 6 and 12 supplied for other pumps and could have bid accordingly. Its requests for equitable adjustment for any additional costs incurred as a result of supplying the matched flow nozzles and the additional 2 and 4 nozzles are denied.

Pre-formed Fuel Line Dispute

The Government agrees that the contract did not specify pre-formed lines. It further agrees that the usual industry practice was to supply straight high pressure lines unless there was a specific requirement that the lines be pre-formed. It argues that other provisions of the contract make its interpretation reasonable, thus creating an ambiguity. We do not agree. It relies on (1) a foam padded requirement for the adapter kits, (2) inability to maintain the integrity of the adapter kit if the high pressure lines could not be repacked after they were bent, and (3) how one would repack the lines for transportation to the field. We consider these arguments too strained and nebulous to consider the Government's interpretation a reasonable one so that an ambiguity arose. There is no indication in the contract that the FITS and the adapter kits had to maintain mobility. In keeping with industry practice the Government could have specified it wanted the line pre-formed. It did not do so. The fact that Bacharach had supplied them is no indication that this was a requirement. It could have done so because of its contract requirements or gratuitously. This did not mean appellant was required to do so.

©1994, Commerce Clearing House, Inc.

Digitized by Google

We conclude that the Government's interpretation that the contract, read as a whole, required pre-formed lines is unreasonable. Appellant is entitled to an equitable adjustment for additional costs incurred in providing pre-formed lines.

Calibration Tools Dispute

The parties agree that the contract did not specifically provide that appellant provide calibration tools in just those words. The Government argues that such requirement, that appellant provide calibration as well as mounting and mating tools, was inherent in the requirement that the pumps be tested in accordance with manufacturer specifications. Section 1.1 of DFP 244 (finding 5) required that the adapter kits contain hardware required "for mounting and mating each of the pumps . . . to allow for testing the pump in accordance with the manufacturer's specifications." The fact that the section also indicated that the specification "covers the adapter kits for use in testing and calibrating diesel engine pumps" on the FITS does not, in our view, indicate that appellant was to include tools required for such calibration in the adapter kits. Nor do any of the other various provisions.

It would have been a simple matter to have clearly spelled out the necessity for including special calibrating equipment in the adapter kits. We cannot read such requirement from the subjective intent of the drafter of the specifications. Nor do we consider the fact that various testimony used the term "calibration" to cover the entire procedure to be proof that this is understood throughout the industry.

We conclude that appellant's interpretation that the contract required it to include tools in the adapter kit for mounting the pump to the FITS and that the individual who mounted the pump (someone other than appellant's personnel) would have any necessary tools to calibrate the pump was a reasonable interpretation of the contract. We also conclude that the Government's interpretation that the specifications required that the adapter kits contain specialized calibration tools was strained at best and not a reasonable interpretation of the contract. Under such circumstances there was no ambiguity concerning this issue.

Appellant is entitled to an equitable adjustment for costs incurred in providing calibration tools not required for mounting or mating the pumps to the FITS.

SUMMARY

Appellant's request for an equitable adjustment for costs incurred in providing the AMBAC KT-7830 and KT-7831 injector kits is denied. Its requests for equitable adjustments for supplying pre-formed high pressure fuel lines and calibration tools are granted.

The appeal is sustained in part and denied in part as indicated.

[¶ 26,468] BH Services, Inc.

ASBCA No. 39460, October 26, 1993. Contract No. N68836-88-C-0198.

Attorney Fees and Costs Under Equal Access to Justice Act—Amount—Apportionment.—In determining the amount of recovery under a contractor's claim for attorney fees and costs under the Equal Access to Justice Act, the board apportioned fees and expenses on the basis of the percentage of claims in which the government's position was substantially justified. The government was either the prevailing party or its position was substantially justified on 12 of the contractor's 28 claims. The government did not prove that its position was substantially justified in the remaining 16 claims. The contractor, therefore, was entitled to fees and expenses on 16 of its 28 claims, or 57 percent.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Accountant's Fees.—Accountant fees incurred by a contractor in successfully prosecuting its appeal were recoverable under its application for fees and expenses because the contractor demonstrated that the hours claimed and the rate charged were reasonable.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Travel.—Travel costs incurred by a contractor in successfully prosecuting its appeal were reimbursable under its Equal Access to Justice Act application, despite the government's objection that the costs were too high, because the contractor's explanation for

Digitized by Google

the travel as necessary to the litigation was persuasive. Travel costs for nonemployee witnesses and counsel to the hearings are not subsumed in hourly rates.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Copy Rate.—Although the government insisted that the $.20 copy rate paid by the contractor was higher than the $.15 copy rate charged by the government, the board concluded that the rate paid by the contractor was proper for purposes of calculating copy expenses under its EAJA application for fees and expenses, because the contractor established that the rates were reasonable and customary in the area where the costs were incurred.

For the appellant: Whyte Hirschboek Dudek, S.C., Milwaukee, Wisconsin, by William E. Hughes III. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and L. James Gardner, Counsel, Navy Supply Center, Jacksonville, Florida.

Before DICUS, SHEPERS, RUBERRY, and RIISMANDEL, Administrative Judges.

DICUS, Administrative Judge: As a result of the Board's decision in *BH Services, Inc.*, ASBCA No. 39460, 7 May 1993, appellant filed an Application Under the Equal Access to Justice Act (EAJA). In its Answer, respondent concedes that appellant was the prevailing party and is otherwise qualified under the EAJA. Answer at 3. The Application, received by the Board 4 June 1993, is timely. The issue before the Board is whether respondent's position was substantially justified.

DISCUSSION

The burden to establish that the Government's position was substantially justified rests on the Government. *Trundel v. Bowen,* 830 F.2d 807 (8th Cir. 1987) *(citing Campbell v. Bowen,* 800 F.2d 1247, 1249 (4th Cir. 1986)). In view of the law and facts, the Government's position is substantially justified "if a reasonable person could think it correct, that is, if it has a reasonable basis in law and fact." *Pierce v. Underwood,* 487 U.S. 552, 576 (1988), *affirming in part, vacating in part, and remanding* 761 F.2d 1342 (9th Cir. 1985) and 802 F.2d 1107 (9th Cir. 1986).

The statutory standard applies both to the position asserted by the Government in the adversary adjudication and to the action or inaction upon which the adversary adjudication was based. 5 U.S.C. § 504(b)(1)(D); *Luciano Pisoni Fabbrica Accessori Instrumenti Musicali & Enzo Pizzi, Inc. v. United States,* 837 F.2d 465 (Fed. Cir. 1988).

In deciding whether the position of the contracting agency was substantially justified, the EAJA instructs that the decision "shall be determined on the basis of the administrative record, as a whole ... made in the adversary adjudication for which fees and other expenses are sought." 5 U.S.C. § 504(a)(1). Where the Board decides the merits of a CDA dispute, the administrative record available for use in determining whether the Government's position was substantially justified consists of those documents filed in the underlying appeal together with the hearing record, the so-called Rule 13 record, and such arguments, as opposed to facts, as may be found in the parties' EAJA filings.

The underlying decision addressed 28 claims. Of that number 8 were rejected outright. The parties stipulated reduced G&A and labor rates at the hearing, and the Board disallowed profit. Fifteen claims were reduced by additional amounts, several substantially.

Appellant has submitted, in addition to arguments in support of its application, invoices from Charles Redel, Esq., who tried the appeal on the merits, from the accounting firm of Boldon & Valiquette, affidavits in support thereof, and invoices from Mr. Hughes for preparation of the EAJA Application. Appellant also submitted an affidavit from appellant's vice president, Robert Heitzman, asserting *inter alia* that respondent made no settlement offers. Appellant's Reply to respondent's answer was received 21 July 1993. By letter of 25 August 1993 respondent filed a motion seeking permission to file a response, asserting generally that appellant had misrepresented facts. The request was denied by the presiding judge, mindful of the admonition that EAJA applications should not result in "a second major litigation." *Hensley v. Eckerhart,* 461 U.S. 424 (1983).

Thereafter, respondent's counsel prevailed on appellant's counsel to clarify the record with respect to the alleged misrepresentations. Appellant's counsel did so by filing affidavits documenting a settlement offer of $26,671.81 made by respondent. As the EAJA requires determinations of substantial justification to be made from the

©1994, Commerce Clearing House, Inc.

Digitized by Google

administrative record where the Board decides the merits of a dispute, we cannot consider evidence not previously before the Board on that issue. We can, however, consider such evidence with respect to the reasonableness of attorney's fees and other expenses incurred after the applicant has declined an offer of settlement. *Kos Kam, Inc.*, ASBCA No. 34684, 88-3 BCA ¶ 21,049. Accordingly, the affidavits are retained in the record for that purpose.

DECISION

Substantial Justification

Both parties argue first that this application should be decided on an all or none basis, while effecting opposing fallback positions on apportionment of the fees and expenses. Appellant first argues that where "excellent results" are obtained, a fully compensatory fee should be awarded, citing *JEM Development Corporation,* ASBCA No. 42645, 92-1 BCA ¶ 24,749. That case involves alternate theories, however. Where separate claims are involved they should be treated as separate lawsuits, and no fee should be awarded for services on unsuccessful claims. *Hensley v. Eckerhart,* 461 U.S. 424, 435 (1983). Respondent argues that as appellant prevailed on only 40 percent of the dollar value of the claims, the Board should find respondent's position in the litigation was substantially justified and totally deny appellant's application. Respondent relies on *Hedstrom Lumber Co. v. United States* [32 CCF ¶ 73,271], 7 Cl. Ct. 510 (1985). As that case does not involve multiple claims, we find it inapposite. Therefore, we shall proceed to treat the claims individually and apportion the fees and expenses. *Hensley v. Eckerhart, supra.; Community Heating & Plumbing Company, Inc. v. Garrett,* No. 92-1362 (Fed. Cir. Aug. 20, 1993).

Respondent argues that apportionment should be on the basis of the monetary value of recovery. We have previously rejected that approach. *T.H. Taylor, Inc.*, ASBCA No. 26494-0(R), 86-3 BCA ¶ 19,257. While there is no precise formula or rule to be followed, *Hoyer Construction Co., Inc.*, ASBCA No. 32178, 88-3 BCA ¶ 21,036, we believe the best approach here is to apportion based on the percentage of claims in which respondent's position was substantially justified. *Esprit Corporation v. United States,* 15 Cl. Ct. 491 (1988). On that basis, we conclude that respondent was the prevailing party on the 8 claims that were denied and on claims 19 and 22, on which only profit (which was denied) was at issue.

With respect to the remaining claims, we treat them as individual lawsuits in addressing them. *Hensley v. Eckerhart, supra.* In so doing, we are mindful that appellant should not be penalized for failing to prevail on every contention where the claim presentation is essentially successful. *Id.* at 435. However, on claim 24, which dealt with leaking sinks, appellant did not present the proper location of the only leaking sink until the hearing. We find respondent's position in disputing this claim was substantially justified. Similarly, on claim 25 appellant alleged cleanup costs from a leaking roof on days when rainfall charts did not support the claim. We limited recovery to the amount respondent conceded. Respondent was also substantially justified on claim 25. Accordingly, we find respondent was either the prevailing party or its position was substantially justified on 12 of 28 claims. Respondent has not proved that its position in the remaining 16 claims was substantially justified. Therefore, appellant is entitled to fees and expenses on 16 of 28, or 57 percent. That apportionment applies to both the appeal on the merits and this EAJA application. *United Construction Company, Inc. v. United States* [33 CCF ¶ 75,073], 11 Cl. Ct. 597 (1987).

Attorney's Fees and Other Expenses

As appellant recovered more than 2.5 times the offer of settlement made by respondent, the continued legal expenses were justified. *Kos Kam, Inc., supra.* The application seeks attorney's fees at the statutory ceiling rate of $75.00 an hour. Respondent contests this rate, but appellant's submissions satisfactorily establish that both of appellant's attorneys regularly bill at or above that rate.

Respondent also contests the accountants' hours and the $60.00 an hour rate. We are satisfied by appellant's submissions that the rates and total hours are within reason.

The fee of Dr. Ries, an expert witness, is contested based, apparently, on respondent's perception that the Board found his testimony harmful to appellant. We find that appellant is entitled to recover for his fee. However, if the amount claimed exceeds the highest hourly rate paid by respondent, it shall be reduced accordingly. *Benjamin S. Notkin & Associates,* ASBCA No. 29336, 87-1 BCA ¶ 19,483.

Digitized by Google

Respondent objects to travel costs as too high. Appellant's explanation for the travel as necessary to the litigation is persuasive. Travel costs for non-employee witnesses and counsel to the hearings in Puerto Rico and LaCrosse, Wisconsin, and for consultations are not subsumed in hourly rates. *Shipco General, Inc.*, ASBCA No. 29206, 29942, 87-2 BCA ¶ 19,877. However, appellant's submissions are lacking in documentation on travel costs, so it is not possible for the Board to ascertain if elements such as lodging costs are reasonable.

Respondent questions the $.20 per copy rate paid by appellant which is higher than the $.15 per copy rate charged by the Government under Freedom of Information Act requests. However, appellant has established the cost is reasonable and customary in the area where the costs were incurred. We find it reasonable. Telephone and mail expenses are explained as the actual costs incurred in connection with the appeal. As such, they are allowable. *Building Services Unlimited, Inc.*, ASBCA No. 33283, 88-2 BCA ¶ 20,611.

The determination of the amount of attorneys' fees and expenses is remanded to the parties for their negotiation in accordance with the foregoing. Should the parties fail to agree within 60 days from receipt of this opinion, the Board will determine the allowability and amount of the fees and expenses still in dispute.

[¶ 26,469] CCI Construction, Inc.

ENG BCA No. 6065, October 29, 1993. Contract No. DACW63-92-C-0091.

Interpretation of Contracts—Plumbing, Pipes, and Welding—Specific Prohibition.—Under a contract for the construction of recreational buildings, a contractor's interpretation that it could install polyvinyl chloride pipes rather than cast iron pipes under concrete floor slabs was not reasonable, because the contract specifically prohibited the installation of plastic pipes under concrete floor slabs. There was no general prohibition of the use of the polyvinyl chloride pipe underground, only the specific prohibition of such plastic piping under concrete floor slabs. When the contract was read as a whole, the prohibition was entirely clear.

For the appellant: Kerry R. Lee, President. For the government: Frank Carr, Chief Trial Attorney, Washington, D.C., and Howard E. Strackbein, Government Trial Attorney, Fort Worth, Texas.

Before SHERIDAN and SOLIBAKKE, Administrative Judges.

SHERIDAN, Administrative Judge: The Appellant seeks $20,993, including its markups, on a claim by a subcontractor for additional costs of installing cast iron piping under concrete building slabs instead of the PVC piping that it asserts was allowable under the contract. The Appellant has elected to pursue this appeal under the Optional Accelerated Procedure of the Contract Disputes Act of 1978 and Rule 12.3. Both parties have elected to present this appeal on the written record under Board Rule 11.

FINDINGS OF FACT

1. Pursuant to competitive (sealed) bidding, the United States of America (the Government or Respondent), acting through a Contracting Officer of the U.S. Army Engineer District, Fort Worth, Texas, awarded Contract No. DACW63-92-C-0091 on July 20, 1992, to CCI Construction, Inc. (CCI, the Contractor, or the Appellant) of Fort Worth, Texas. This was a Standard Form 1442 construction contract which provided for construction of recreation buildings at Johnson Branch Park, Ray Roberts Lake, Texas. The initial contract price was $894,640. (R.4, Tab 3).

2. Notice to Proceed was issued on August 19, 1992 and was acknowledged on August 26, 1992. A pre-construction meeting was held on September 4, 1992. A few days before that meeting, Mr. Andrew Pipkin, CCI's Quality Control Chief, pointed out to the Government inspector that the specifications prohibited the use of plastic pipe under concrete floor slabs. At the September 4 meeting, Mr. Pipkin reiterated that observation. Mr. Pipkin's notes of that meeting reveal that Capri Mechanical, Inc. (Capri), CCI's subcontractor, had intended to use Polyvinyl Chloride (PVC) pipe under concrete floor slabs, and that Mr. Pipkin "ruled that per 15400-21 Para 3.1 PVC was prohib-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ited under concrete." Mr. Pipkin noted that Capri had then elected, from the non-plastic pipe he considered allowable, to use cast iron hub pipe. (Tabs 2, 3, 6, 6A; Exh. R-1).

3. Paragraph 2.1 of Section 15400 of the specifications states in part: "Materials for various services shall be in accordance with TABLES I and II." Table II is inapplicable to this appeal. Table I covers "Pipe and Fitting Materials for Drainage, Waste, and Vent Piping Systems." Table I identifies six types of "Service." Type A is "Underground Building Soil, Waste and Storm Drain." Six items of "Pipe and Fitting Materials" are designated as acceptable for type A service. These items are numbered 1, 12, 13, 14, 15, and 16. Item 1 is identified as "Cast iron soil pipe and fittings, hub and spigot," and is the type actually installed. Items 12, 13, and 14 are identified as "copper." Items 15 (ABS) and 16 (PVC) are identified as "plastic." (R.4, Tabs 2, 4, 7).

4. Paragraph 3.1 of Section 15400 states in part:

> Neither hubless cast-iron soil pipe nor plastic pipe shall be installed under concrete floor slabs. . . .

(R.4, Tab 4).

5. On October 6, 1992, after the cast iron pipe had been installed, Capri wrote to CCI and requested a modification to its subcontract to allow $17,732.00 for installing cast iron pipe instead of the PVC pipe that it asserted had been the basis of its quotation to CCI. The letter stated: "It is our position that if PVC-DWV pipe and fittings are not approved for installation under concrete floor slabs it should not have been listed in Table I." (R.4, Tab 7).

6. On October 12, 1992, CCI forwarded Capri's letter to the Government. CCI's letter stated in part:

> We consider the disallowance of the ABS and PVC Plastic Pipes Item No's. 15 & 16 Table I for service A as indicated in Contract Specifications Page 15400-37, a change, and respectfully request a modification be issued in the additional amount of *$20,993.00.*

(R.4, Tab 7).

7. There is no evidence in the record that the Government ordered or required CCI or Capri to install cast iron pipe instead of PVC pipe. The Board finds that CCI ordered Capri not to install PVC or other plastic pipe under concrete floor slabs and that, under protest to CCI, Capri chose cast iron pipe as an alternative. The Government inspector was aware of CCI's position as to the unacceptability of PVC pipe for that application but did not insert himself into the dispute between CCI and Capri. There was no dispute between CCI and the Government as to this matter until after the installation had been completed. There is no evidence that the choice of cast iron pipe was the least costly alternative to PVC pipe, but, on the other hand, the Government has raised no issue in this regard. (R.4, Tabs 6A, 7; Exh. R-1).

8. Although there is discussion in the Contracting Officer's decision and in the Government's Brief of an argument seemingly made by CCI about the effect of Government approval of a CCI transmittal of information on PVC pipe, the Board can find in the record no actual exposition by CCI or Capri of this argument. In any event, the Board finds that there was no transmittal proposing use of PVC pipe under concrete floor slabs and no Government approval or disapproval of any such use. (R.4, Tabs 2, 10; Exh. R-1).

DECISION

CCI has not filed a brief or otherwise explained its position, other than by filing this appeal. The principal argument to be gleaned from the Rule 4 appeal file seems to be that the mere designation of PVC pipe as acceptable for "Underground Building Soil, Waste and Storm Drain" made it contractually acceptable for use under concrete floor slabs. Whatever force this argument might have if this designation were the only applicable provision of the contract, it is of no avail in the face of the specific provision of paragraph 3.1: "Neither hubless cast-iron soil pipe nor plastic pipe shall be installed under concrete floor slabs." There was no general prohibition of the use of PVC pipe underground, only this specific prohibition under concrete floor slabs. When the contract is read as a whole, this prohibition is entirely clear. There is no other reasonable reading to support the claim.

Besides the above fundamental infirmity of the claim, there is no evidence that CCI relied in bidding on an interpretation permitting the use of PVC pipe under concrete floor slabs, and, in fact, before there was any dispute between CCI and the Government, CCI had read the contract exactly as the Government argues, and the Board holds, it should be read. Furthermore, it was CCI (quite properly), not the Government, that prohibited Capri, CCI's own subcontractor, from using PVC pipe in this application.

Digitized by Google

The Board has considered all of the material submitted by the parties, whether mentioned or not, and finds the underlying claim to be totally without merit. This appeal is DENIED.

[¶ 26,470] Illinois Constructors Corporation

ENG BCA No. 5827, October 29, 1993. Contract No. DACW25-86-C-0056.

Pricing of Adjustments—Methods of Calculation—Estimates.—The calculation of the adjustment due a dam repair contractor in connection with a differing site condition was not based on the total cost method, as alleged by the government, because the contractor's presentation was a micro-level, detailed analysis by well-qualified witnesses of estimates, actual expenditures, and causation related to the site condition. Although the contractor used subcontractor estimates, it also corrected underestimates, eliminated some cost accounts from consideration, modified cost accounts to eliminate concurrent causes of increased costs, offered a detailed cost-code-by-cost-code presentation, and demonstrated that the claimed costs pertained to a discrete time period. The contractor showed that under the circumstances, the use of in-house estimates rather than estimates by outside consultants was as accurate a method of calculation as was reasonably possible. Moreover, the board concluded that the contractor showed what the reasonable costs of performance would have been but for the differing site condition and that the contractor's evidence was more probative than the government's.

Pricing of Adjustments—Causation—Management.—Under a dam repair contract, a contractor was entitled to an equitable adjustment for the increased costs incurred in connection with a differing site condition regarding concrete removal, despite the government's contention that the contractor's poor supervision, management, coordination, cooperation, and quality control caused the increased costs, because the preponderance of the evidence supported the contractor's position that management-related problems stemmed from the differing site condition. The contractor also showed that the increased costs resulted from an influx of unplanned resources and changes in the planned concrete removal methods to overcome the differing site condition under accelerated conditions.

Pricing of Adjustments—Methods of Calculation—Would-Have Cost.—A dam repair contractor was entitled to use scheduled costs as the basis for determining what the contract would have cost without a differing site condition regarding concrete removal, despite the government's contention that the contractor could not have timely completed the work according to its estimates and schedule, because the contractor's estimates included sufficient resources for completion of the work within the allotted time but for the differing site condition. The government's scheduling arguments were based on preliminary schedules that were prepared by subcontractors before the discovery of the differing site condition. The alternative schedules prepared by the government's claim consultant relied on the same preliminary schedules and amounted to little more than an academic indictment of the contractor's ability to complete the work scheduled during the outage period. Moreover, the government's schedules lacked any credible factual foundation for any of its key scheduling assumptions. The board concluded that the contractor's estimates were the best indicator of what timely completion would have cost had there been no differing site condition.

Contract Disputes, Jurisdiction—Boards of Contract Appeals—Look-Back Interest Claims.—Under the Contract Disputes Act, a board of contract appeals lacked jurisdiction to resolve a dam repair contractor's claim for look-back interest in the calculation of an equitable adjustment for increased costs incurred in connection with a differing site condition regarding concrete removal, because possible payment of such look-back interest is for resolution under pertinent provisions of statutes and regulations of the Internal Revenue Service. Whether such interest, if paid, would constitute a valid contract claim or an allowable cost under the Federal Acquisition Regulations was a matter not yet ripe for consideration.

For the appellant: Faegre and Benson, Washington, D.C., by Charles D. Ablard, and Perkins, Smith & Cohen, Boston, Massachusetts, by William M. Simmons. For the government: Frank Carr, Chief Trial Attorney, Washington, D.C., and Charles M. Laycock and Rian W. Hancks, Government Trial Attorneys, Chicago, Illinois.

Before PEACOCK, SOLIBAKKE, and SHERIDAN, Administrative Judges.

PEACOCK, Administrative Judge: In the Appeal of *Illinois Constructors Corp.*, ENG BCA No. 5678, 91-2 BCA ¶ 23,728, the Board held that Appellant was entitled to relief under the above captioned contract (the "Contract") to carry out repairs to the structure, machinery and equipment of Lock and Dam 20, located in the Mississippi River at Canton, Missouri, because the Lock's "remarkably sound, undeteriorated and undamaged" concrete constituted a Type II differing site condition (or DSC). The Board remanded the matter to the Contracting Officer for determination of the equitable adjustment due Appellant. *Id.* at 118,849.

After unsuccessful negotiations, Appellant filed an application for a hearing on quantum. The matter was docketed as ENG BCA No. 5827. Appellant claims $5,761,410.[1] The Government contends that the proper recovery is $629,935.

I. *ENTITLEMENT FINDINGS RELEVANT TO QUANTUM.*

A. *Background:*

1. Lock and Dam 20 serves as a unit of the Inland Waterways Navigation System of the Upper Mississippi River Basin. It is one of the 29 locks and dams on the Mississippi River, which operate as a system to provide 9 feet of navigational depth from St. Louis to Minneapolis. The Lock was constructed by the Corps starting in 1932. It is located on the Missouri side of the River about a mile above Canton, Missouri. The Lock is 600 feet long and 110 feet wide. During its construction, a system of approximately 55,000 linear feet of conduit for the wiring of the operating system and the lights was installed in the lock walls (Finding 1).[2]

2. The IFB required, *inter alia*, the removal and replacement of 21,750 cubic feet of "vertical" concrete and 2,260 square yards "for horizontal resurfacing," as estimated by the Corps. Removal and replacement of concrete on the walls within the Lock chamber and two monoliths below the Lock gates was to be done during the 60-day period between the shutdown and de-watering of the Lock starting January 5, 1987 and the Lock's reopening to traffic at 6 a.m. on March 6, 1987. This period was referred to as the "outage period" and/or closure period. Any work necessitating restrictions on the Lock traffic after the outage period required advance notice, approval of the Contracting Officer, provision of a boat and crew and compliance with other requirements. (Finding 18).

3. The drawings provided that concrete, with some exceptions, be removed to a depth of four inches in the specified "horizontal" or "overlay" areas. The concrete in the "vertical" areas generally was to be removed to a depth of 9 to 18 inches depending on the monolith section. (Finding 19).

4. Blasting was not permitted for concrete removal of substantial portions of the vertical surfaces of numerous monoliths. (Finding 21).

5. The Corps' "Reasonable Contract (Without Profit) Estimate" was $18.80 per cubic foot for removal of vertical concrete and $91.95 per square yard for the removal of "horizontal" concrete. The Corps' Cost Estimator for the Lock 20 rehabilitation work chose to estimate on the basis of using hand tools, *i.e.*, jackhammers, chipping hammers and hoe rams to perform the work. (Finding 30-31).

B. Subcontracting of Concrete Work

6. ICC was the low bidder and was awarded the contract on August 22, 1986. It bid all line items of work, including removing and reinstalling lock machinery, removing and replacing concrete and a major electrical rehabilitation. It bid $37.00 per cubic foot for the "vertical" concrete removal and $85.00 per square yard for the "horizontal" concrete removal, *i.e.* twice the Corps estimate for vertical removal and 92% of the Corps estimate for horizontal re-

[1] A portion of this amount pertains to attorney's fees and expenses. No application for such fees and expenses has been filed by Appellant pursuant to the Equal Access to Justice Act. Appellant concedes that this portion of the claim is not ripe for resolution, in this appeal.

[2] Finding numbers refer to those in the entitlement decision, ENG BCA No. 5678. Citations to the voluminous record, where given, are generally only for illustration and are not necessarily exhaustive. The Findings of Fact and Decision are based on the record as a whole.

Digitized by Google

moval. Notice to Proceed was issued on September 9, 1986. (Finding 41).

7. After receiving the award, and in late August or early September 1986, ICC solicited a subcontract quotation from Calumet Construction Corporation ("Calumet or CCC").

8. Calumet's proposal to ICC was based on employing hand held hydraulic breaking tools plus hydraulic hoe rams mounted on back hoes wherever they could reach the Lock surfaces. Calumet and ICC entered into a subcontract on October 10, 1986. Calumet's price for vertical ("other") removal was $32.00 per cubic foot, or 170% of the Corps $18.80 estimate. Its price for the horizontal removal was $73.00 per square yard, or 79% of the Corps $91.95 estimate. Generally, ICC passed down the bulk of concrete removal work, plus most concrete replacement work. ICC retained work in the Lock protective cell and concrete work related to the electrical rehabilitation. (Findings 51).

C. The Differing Site Condition Requires a Switch To Blasting Where Permitted:

9. In mid-October, 1986, after Calumet had entered into its subcontract with ICC, Appellant and Calumet learned that Dyer Construction Co. ("Dyer") in the summer/fall of 1986 was grinding out 22,000 cubic feet of old concrete successfully at a Corps project referred to as the "the Joliet Walls" on the Illinois River. CCC asked Mr. Harold Maupin, Dyer's estimator, to review the drawings and submit a quote to CCC. Dyer made a proposal based on use of its grinder which CCC accepted. Dyer priced the outage vertical concrete removal—which is all it proposed to do—at $12.50 per cubic foot. (Finding 52).

10. Mr. Maupin increased the actual Joliet removal rate of 411 cubic feet per day to 425 cubic feet per day for his proposal to Calumet. This proposal assumed a ten-hour day, eight hours for grinding and two for maintenance. (Finding 66). Dyer's proposal was accepted by CCC and a second tier subcontract was executed.

11. Calumet's Superintendent William R. Simmons moved to the site on December 8, 1986. Grinding out the old concrete was originally scheduled to start with the grinder sitting on the lock floor about the middle of January, 1987, after the lock was dewatered. The grinder was originally scheduled to start at the lower end of the land wall, grind to the upper end, cross to the intermediate wall, and grind downstream. (Finding 68).

12. However, Simmons pressed for an early start on concrete removal. He first obtained Corps permission to start grinding January 7, before de-watering, by putting the 50-ton grinder on a barge and floating it into the Lock. The grinder would settle to the bottom as the de-watering proceeded. The Corps conditioned its permission on the grinder's staying away from the gate areas, where the Corps would be removing the gates and doing other work, plus Simmon's promise to watch out for the embedded electrical conduit. Simmons therefore agreed to start grinding out concrete on January 7 in the middle the Lock at Monolith 30A, near the Lock Master's building. (Finding 69).

13. It became clear by December, 1986, that no one knew precisely where the electrical conduits were embedded in the Lock walls. The Corps could not have the electricity shut off as a result of contractor operations while the Lock was still in operation. However, Corps Supervisory Inspector Lane Mathena finally told Simmons on December 29 that there appeared to be no more barges scheduled to go through the Lock; hence, the grinding could begin on that date. (Finding 70).

14. The grinder could not efficiently chip off concrete because of the differing site condition. On New Year's weekend, both Dyer and CCC contacted line-drillers and blasters, in preparation for a decision to change removal methods. (Finding 72-73).

15. On January 5, 1987, after further investigation, CCC decided to drill immediately, then blast off the concrete where permitted by the specifications. Calumet and Dyer went to three shifts on January 5, with supervision working two 12-hour shifts and the crafts working three 8-hour shifts. Line drilling for blasting began on January 7. (Finding 76).

16. Test blasting was done on January 17. Blasting was completed by the end of January, 1987. (Finding 77).

D. The Differing Site Condition's Impact On Performance:

17. The plan had been for Dyer to use one-man, hand-held saws to sawcut the three inches around the removal areas as required by the contract. Although some use of seven inch saw cuts was indicated in the drawings, seven inch saw cuts in fact were required throughout the vertical removal areas to define the areas for blasting. Because of the DSC, heavier, two-man wall mounted saws

©1994, Commerce Clearing House, Inc.

Digitized by Google

were also necessary. In addition, Simmons had a metal plate fabricated and installed in the sawcuts to help control the blast. (Finding 78).

18. It was necessary for Calumet and Dyer to obtain and employ larger equipment—and more of it, *e.g.,* 90 lb. jackhammers and heavy backhoes with concrete breakers attached, in addition to the two-man saws. At one point, nine so-called combination backhoes were in use, plus an even larger Bantam backhoe. (Finding 79).

19. In addition, the hardness and size of the aggregate in the old concrete posed problems. It was not always practical to pull the drill bit out of the hole when it ran into a piece of the hard aggregate and start drilling another hole someplace else. Bolt holes had already been installed in the prefabricated concrete forms. Pieces of aggregate also could not always be seen before drilling. (Finding 80).

20. Instead of the approximately 60 people Simmons originally estimated as peak employment, Calumet employed 280, including 14 supervisors from the Hammond home office, plus seven or eight carpenter foremen and seven or eight general and labor foremen hired locally. (Finding 82).

21. The Dyer grinder was kept on the job site during a portion of the outage and utilized for some clean-up work even after the contractors commenced blasting as their primary removal method. (Finding 83; G R.4, Tab 51).

22. On January 16, 1987, Calumet notified ICC of its claim. ICC forwarded this claim to the Corps. The Corps denied the existence of a differing site condition in a letter from the Authorized Representative of the Contracting Officer dated January 27, 1987. (Finding 86-87).

23. Faced with this denial, Appellant accelerated its efforts to insure the Lock would open on time. Most significantly, CCC assisted Dyer. (Finding 88).

24. In the post-outage period, Calumet (Dyer was not involved) still could not return to its concrete removal method anticipated at time of quote. It continued to line drill vertical surfaces to make removal easier. Sawing, drilling and the hand work was as difficult as in the outage period, although costs could be better controlled because of the absence of outage-related schedule constraints. The concrete that Calumet removed during the post-outage period between March and the end of 1986 was the same as encountered during the outage and contained the same large, hard aggregate. Though the post-outage work required a less intensive effort, the tools experienced the same problems. The post-outage work involved primarily hand tools and hoe rams, rather than grinding or blasting.

25. Either blasting or grinding requires the use of hand tools and jackhammers to "clean up" the wall and to remove concrete in areas where the primary removal tools could not be used. Both required sawcuts to outline the area of removal and, in the case of blasting, to control the blast. These tools would have encountered the same problems using a blasting plan as using a grinding plan. The contractors ended up using many more tools and heavier tools (the hoe rams and bantam backhoe) than originally planned, and greatly increased manpower (at peak, 280 people instead of the expected 60, or more than four times the planned manpower) working around-the-clock.

26. The blasting plan, once put into effect, also was hampered by the differing site condition. In particular, the drills and saws labored with difficulty through the concrete.

II. *Quantum Details*

A. *Calumet's Cost Code Claims:*

1. *Calumet's Concrete Removal Estimate and Subcontract Proposal:*

27. Calumet's claim is set forth by its cost code numbers, which it assigns to every major contract. The prime and subcontracts were awarded on a unit-price basis with respect to the quantities of concrete removed and restored. Calumet's take-off of the job produced estimated quantities that were somewhat different from those estimated by the Corps in the solicitation. Labor hours and material required for the job were estimated on the Company's "yellow sheet" forms. Unit prices were computed at both the Corps and Calumet's estimated quantities. "Other Direct Cost" factors and profit were added to each basic unit price. The Corps quantities were used for the unit prices which were proposed to ICC, CCC then negotiated with ICC, including transferring certain work and material items from one unit price to another and from ICC to Calumet and vice-versa. (Tr. 483, 516,; Ex A-5; R.4, Tab 5).

28. Following subcontract signing, and in accordance with its standard unit price contract procedures, Calumet transferred the "yellow sheet" estimate to its standard cost codes on what the Company calls its "green sheet" forms for use by Calumet's account-

Digitized by Google

ing department in tracking progress via computerized reports. However, there were major changes in the subcontract facts after signing, including the decision to subcontract with Dyer for grinding off concrete rather than using standard tools, Calumet's decision to make rather than buy the cofferdams, and its decision to use a different forming system than planned in its proposal which, though more expensive, was expected to enhance performance. For these and other reasons, adjustments to the "yellow sheet" estimates were made. The "green sheets" were entered into the Company's cost control computer programs, so progress could be measured on each element of work as it progressed. The work was encoded approximately January 1, 1987, before the differing site condition became known, and costs were already being reported against the codes by the week ending January 11, 1986. (Tr. 31-40, 518, 529, 530, 534; Ex. A-1, Tab 26; Ex. A-10s).

2. *Development of Calumet's Claim:*

29. Mr. James P. Casey, Calumet's Secretary-Treasurer and Vice President of Finance, was placed in charge of claim preparation. Mr. Casey established a group to review the cost codes to determine whether the total estimated costs were correct, to break them down into outage and post-outage periods and to compare them to the actual costs where the group determined that the codes had been impacted by the differing site condition. They eliminated codes that were considered not to have been impacted by the differing site condition. Where estimated costs were found by them to be incorrect, they were changed. "The attempt was to get a correct estimated cost for what the project should have cost absent the (DSC) and determine the additional costs caused by it." (Tr. 16-18, 25, 28, 40, 47). The vast majority of these changes increased the amount of the estimate.

3. *Post-Outage Increase Generally*

30. ICC work on an electrical duct bank pursuant to a contract modification required it to dig a trench in the middle of the Intermediate Wall, place electrical conduit in the trench and fill the trench with concrete to an elevation four inches below the top of the horizontal surface of the lock. (GR4 Tab 112). The four-inch difference was the clearance CCC needed to place the sidewalk on the horizontal surface of the lock. (Tr. 1248-1249, 1253-1255). ICC performed this electrical duct bank work from about May to late September 1987. During this period, CCC removed and replaced the horizontal concrete from the same area. Because both contractors were attempting to perform work in the same area at the same time, the work of ICC interfered with the work of CCC. Among other things, the electrical duct bank work resulted in more concrete pours and smaller concrete pours than planned. (Tr. 334-335, 397-398). Appellant was paid for this work but failed to include costs related to the interference. Both parties agree that the bilateral modification, however, constituted an accord and satisfaction and each has attempted to price and exclude the increased costs resulting from the amounts claimed by CCC for the post-outage work.

31. The Government challenges Appellant's entitlement to virtually any recovery for the post-outage period. The Government contends that any increased costs were not caused by the differing site condition. According to the Government, they were instead caused by a lack of cooperation and coordination between ICC and CCC related to interference caused by ICC's concurrent construction of the electrical duct bank. The Government alleges that the lack of cooperation/coordination between Appellant and its subcontractor was compounded by the failure to resequence the intermediate wall and landwall work. According to the Government, Appellant should have performed the landwall work first and then moved to the intermediate wall "when presumably ICC would either be complete or would be a lot further along."

32. Appellant contends that the electrical work interference was relatively minor and has made deletions from its increased labor costs to reflect the impact of the interference as distinguished from the DSC. In addition, it has deducted $36,815 from CCC's total claim to allow for the increased costs attributable to the intermediate wall electrical work. The Government estimates that increased costs resulting from the electrical duct bank totaled $579,552, *i.e.*, 35% of CCC's actual non-material post-outage costs incurred ($1,655,863).

33. We find that the impact of the electrical modification was much less than that estimated by the Government. First, only the intermediate wall work was impacted by the electrical work. Post-outage concrete overlay work was also performed on the land and river walls, albeit the intermediate wall rehabilitation was more extensive. Second, portions of the intermediate wall work were not impacted by the duct bank construction.

©1994, Commerce Clearing House, Inc.
Digitized by Google

On the other hand, we also find that more than simply selected labor costs were increased by the interference as argued by the Government. Weighing all the evidence on this issue, we find that the electrical duct bank interference increased Appellant's costs an additional $70,000 over and above the amounts already deducted by Appellant. Including the $36,815, we deduct a total of $106,815 from the amount allowed Appellant for the post-outage period.

34. Resequencing the work was problematic, at best. It would have entailed obtaining the permission of the Lockmaster to work on both the land and intermediate walls concurrently. Such concurrent work on both locks was not permitted under the contract. During performance, no representative of either party considered resequencing to be a viable alternative and there is no evidence that the Lockmaster would have granted permission in any event. A series of other potential construction problems, schedule adjustments and approvals that are not necessary to detail also would have been presented by resequencing the work. It is sufficient to conclude that performance of both the electrical work and concrete work on the intermediate wall was a reasonable method of performance when the decision was made, given the information then at hand. Although a deduction for the increased costs attributable to the resulting interference and inefficiency is necessary, other costs as awarded herein were reasonably incurred and did not result from any failure to mitigate damages. We consider that the vast majority of Appellant's increased costs during the post-outage work were caused by the DSC.

4. *Claim Submission*

35. While post-outage work was underway, Calumet filed its claim for the outage period with ICC, which filed it, together with its own markups, with the Corps. The Corps received it on August 24, 1987. However, the ICC certification of the claim submitted in the letter dated August 24, 1987 was only for *its* portion of the claim and not for the portions of its subcontractor, CCC, and CCC's subcontractor, Dyer, which make up the vast bulk of the Appellant's claim. ICC's August 24, 1987 letter forwarding its certification stated, "Attached is a certificate of Illinois Constructors Corporation *regarding its portion of the above claim.*" (Emphasis added) (GR4 Tab 112, pp. 1-2 and Exs. 1 and 2). ICC did not submit an unqualified certification of all portions of the claim until February 14, 1989. (GR4 Tab 112, Exs. 10 and 11).

5. *Calumet's Claims by Cost Code:*

Findings concerning each of Calumet's cost codes are made below. In reaching our determinations, we have fully considered all evidence and contentions of the parties. Various adjustments to both the outage and post-outage totals also have been computed, *infra.* Appellant's allocations of CCC's costs, as between the outage and post-outage periods, have not been challenged by the Government except as indicated.

Code 1002—Supervision

36. The differing site condition required the hiring of approximately four times as many workers as had been planned, so as to assure meeting the March 6, 1987, deadline for re-opening the Mississippi River to barge traffic. As a result, additional supervision also was required. Calumet moved supervisors from other locations to Canton, Missouri. In the post-outage period, Calumet was able to place greater reliance on its general foremen and on local hires with lower pay rates than its originally-planned superintendents. (Tr. 538, 542). Calumet's estimated labor costs for supervision (without markups) was $45,800, of which Calumet allotted $15,246 to the outage and $30,554 to the post-outage period. Calumet's incurred costs for those periods exceeded its estimates by $18,353 and $447, respectively. (Ex. A-1, Tab 2, Schedule A, p. 1; *Id.*, Tab 16, p. 1; *Id.*, Tab 18, p. 1). We find the entire amount to be compensable.

Code 1003—Engineering

37. Calumet's outage estimate covered drawing control, handling changes and layout of work. Running many more work crews than planned during the outage period, as required by the differing site condition, and having to work in many more places at one time, was a greater effort than estimated. To mitigate its post-outage loss, Calumet employed a local engineer, rather than send engineers from its home office in Hammond, Indiana to Canton, Missouri. The confusion was less and there were fewer workers during the post-outage period. (Tr. 551-553). Calumet's total labor estimate was $37,440 for engineering. Calumet allotted $12,474 to the outage and, after review, $7,564, the amount of its actual costs, to the post-outage period, because it was able to replace its full-time engineer with a part-time apprentice resulting in no claim for the post-outage period. Calumet's outage period

Digitized by Google

overrun was $13,696. (Ex. A-1, Tab 2, Schedule A, p. 1; *Id.* Tab 16, p. 1; *Id.* Tab 18, p.1). The Government contention that Appellant's savings from the post-outage period should reduce its recovery for the outage period is not supported by any evidence. There is no proof, *inter alia,* that the outage period estimate was unreasonably low nor any indication that the increased outage period costs benefitted the later post-outage work. We find that Appellant is entitled to the full amount claimed for the outage period.

Code 1004—Temporary Offices

38. The construction and/or addition of more temporary facilities than planned, such as offices and trailers, was made necessary by the differing site condition's requirement for increased personnel during the outage period. (Tr. 553-554). Calumet's labor estimate was $2,500 for temporary offices, of which it allotted $1,667 to the outage and $833 to the post-outage period. Calumet's outage labor overrun was $2,879, but it underran $508 in the post-outage period. Calumet's material estimate was $2,350, of which it allotted $1,567 to the outage and $783 to the post-outage period. The material overruns were $3,747 in the outage and $642 in the post-outage period. However, Calumet found that the post-outage material overrun was unrelated to the differing site condition and withdrew that claim. (Ex. A-1, Tab 16 at p. 1.; *Id.,* Tab 18, p. 3; Ex. A-1, Tab 2, Schedule A. p.1). We allow the amounts claimed.

Code 1006/1008—Temporary Utilities

39. Because Calumet's labor force was increased, its use of utilities also increased, including the phones over which the workers' time sheet data for their payroll compensation were transmitted from computers at the site to Hammond. (This element includes the phone calls, not the computers themselves). To mitigate this cost, Calumet had a program written for its computer at Canton to calculate the time sheets so the information could be transferred directly into the home office computer via phone, rather than have the Canton clerk type all the data into the Hammond computer real time via phone lines. Under this newly devised system, the field clerk could obtain the data for payroll checks by dialing into the home office computer, which would already have made all necessary calculations, thereby avoiding the cost of telephone line usage during those calculations. (Tr. 99-100, 188-191; Ex. A-1, Tab 18 at p. 3). Calumet's total estimate was $5,000, of which it allotted $1,655 to the outage and $3,345 to the post-outage period. Calumet's overruns were $7,576 and $8,406, respectively. (Ex. A-1, Tab 2, Schedule A, p. 1: Ex. A-1, Tab 16, p. 1; *Id.,* Tab 18, p.3). The Government contends, *inter alia,* that the post-outage costs were increased largely by lack of cooperation and coordination between ICC and Calumet. As explained *supra,* we have made a separate overall deduction for the post-outage period. We allow the amount claimed.

Code 1019—Clean-Up

40. The differing site condition requirement for more people created more clean-up and safety activity to comply with the contract. During the post-outage period, the clean-up costs continued to be high, given that Calumet employed a second shift for concrete removal. Clean up was required on each shift. (Tr. 578-580). Calumet's estimated "clean-up" cost was $9,600, of which it allotted $6,400 to the outage and $3,200 to the post outage work. Calumet, during its review of the claim, admitted that its original estimate was inadequate, and allotted $6,400 (an additional $3,200) to the post-outage work (raising its total estimate to $12,800). The audit found that Calumet's actual costs were overstated by $865. Calumet agreed and made this adjustment to its outage costs at the trial. In sum, Calumet claims an outage period labor overrun of $42,056 and a post-outage labor overrun of $8,593. There was no dispute over its incurrence of a $516 material overrun in the outage and a $25 overrun in the post-outage period. (Tr. 42-44, 59-60; Ex. A-1, Tab 2, Schedule A, p. 1; *Id.,* Schedule A, Notes at N.3 at p. 8-9, N.33 at p. 23; *Id.,* Exh. A-1, Tab 18, p. 4; Ex. A-2 at Tab 13; Ex. G-106, Tab 12 p. 108; Exh. A-1 at Tab 13, p. 4). The Government contends that CCC's clean-up estimate was too low, that some of these costs should have been coded as "hauling" costs under cost code 1011 which was excluded from the claim and that Dyer's costs were understated. It has introduced no probative evidence to support these arguments except with respect to the Dyer underestimate discussed elsewhere in this opinion. We disallow only 10% of the claimed outage-period labor increase and allow:

Outage labor	$37,850
Post-outage labor	8,593
Outage material	516
Post-outage material	25

Cost Code 1023—Consumables (Small Tools)

©1994, Commerce Clearing House, Inc.

Digitized by Google

41. Calumet's estimates for the outage and post-outage work were $6,223 and $12,447, respectively. Its actuals were stated correctly for this material/ODC cost, except for a difference of $870 for extras. Calumet agreed that it had been paid $34 for extras 101 ($7) and 102 ($27) in the outage. Thus, Calumet claims an outage overrun of $49,411, and a post-outage overrun of $19,480. (Ex. A-1, Tab 2, Schedule A, p. 1; *Id.*, Schedule A, Notes at N. 4 at p. 9; *Id.*, Tab 18, p. 5; Ex. A-2, Tab 13, p. 4.; Ex. G-106, Tab 12, pp. 11-19). These small tools and consumables are normally carried in overhead expense, and recovered in the overhead markup. Appellant has failed to prove that criteria for removal of these items from overhead and direct charging them to this contract have been satisfied in a manner that avoids "double counting." Among other things, it has failed to prove that *all* costs related to small tools/consumables were removed from Calumet's overhead accounts in computing the percentage rate. Because we deny this claim element in its entirety, we need not address numerous other Government contentions concerning the propriety of the small tools/consumables claim item, including whether Appellant may recover amounts greatly exceeding (often by 1000% or more) any acquisition cost incurred with respect to the items.

Cost Code 1026—Job Clerk

42. Additional job clerks were necessary to handle the additional people and clerking responsibilities caused by the differing site condition. (Tr. 582, 583). CCC's labor overrun was $2,278 in the outage and $98 in the post-outage period. (Ex. A-1 Tab 2, Schedule A, p. 1; *Id.*, Schedule A, Notes at N.5, at p. 9; *Id.*, Tab 4, p. 1; *Id.*, Tab 16, p. 1; *Id.*, Tab 18; Tr. 581-582). We find the costs to be recoverable.

Cost Code 1028 (1099)—Premium (overtime) Labor

43. Calumet also had to use premium time labor to meet the outage schedule. (Tr. 584). Post-outage work had been estimated on a straight-time basis, since Calumet considered it would have ample time to accomplish the tasks. But, the differing site condition required overtime work, since the width restriction dates[3] established in accordance with the contract operated as intermediate milestones that had to be met, and overtime was necessary to do so. During the period of the width restriction for the intermediate wall, June 11, 1987—July 25, 1987, Calumet had to replace some of the concrete on Monoliths 2, 3 and 24 on the Lock side of that wall, which could not be done during the outage period because of the effects of the differing site condition and for which cofferdams were necessary. Overtime was also required for some of the concrete pouring, since Calumet poured concrete whenever it could. Substantially more work was required during the later land Wall width restriction—September 24, 1987—October 16, 1987, this work included cofferdam work on Monolith 60 at the upper end of the upper guide wall, Monolith 41 in the bulkhead recess and Monolith 19 where outage work had been prevented by the effects of the differing site condition. In addition, the work originally assigned to the post-outage period but actually performed during the width restriction required some overtime. Given the differing site condition, Calumet could not accomplish the work timely on a straight-time labor basis. (Tr. 591-595, 662-663, 740-741, 744, 751-754, 756-758; Ex. A-1, Tab 18, p. 7, Attachment 7A; Ex. A-9; Ex. A-12; Ex. A-13). Calumet estimated $34,800 for premium labor. However, Calumet admitted that its estimate was too low. Hence, it revised that estimate upwards from $34,800 for the outage (it estimated no overtime for the post-outage period) to $60,988. Calumet reduced its outage actual cost by $178 for Code 1099 (overtime) costs for Extra 303 to agree with the Auditor. Calumet's incurred labor overrun was $84,311 in the outage and $44,702 in the post-outage period. (Tr. 44-46, 583-584; Ex. A-1, Tab 2, Schedule A, p. 2; *Id.*, Schedule A, Notes at N. 6, p. 10; *Id.*, Tab 5, p. 7 of cost codes; *Id.*, Tab 16, p. 1: *Id.*, Tab 18, p.7). We find that the revised amounts claimed are recoverable subject to the overall post-outage reduction.

[3] The contract provided that Appellant could negotiate width restriction periods with the Corps. During a width restriction, the shipping industry would be directed to send barges through the Lock only two, instead of three abreast, *i.e.*, 70 foot wide tows instead of 105 foot wide. This would permit the contractor to get some men and equipment inside the Lock for work. (Tr. 585, 586, 588, 743; Ex. A-9).

Digitized by Google

Cost Code 1033—R.W.G.[4] Rentals

44. The contract contained the following provision:

SC-24. EQUIPMENT OWNERSHIP AND OPERATION EXPENSE SCHEDULE. (1985 JAN HQ USACE)

(a) Allowable cost for construction and marine plant and equipment in sound workable condition owned or controlled and furnished by a contractor or subcontractor at any tier shall be based on actual cost data when the Government can determine both ownership and operating costs for each piece of equipment or equipment groups of similar serial and series from the contractor's accounting records. When both ownership and operating costs cannot be determined from the contractor's accounting records, equipment costs shall be based upon the applicable provisions of EP 1110-1-8, "Construction Equipment Ownership and Operating Expense Schedule," Region V. Working conditions shall be considered to be average for determining equipment rates using the schedule unless specified otherwise by the contracting officer. For equipment not included in the schedule, rates for comparable pieces of equipment may be used or a rate may be developed using the formula provided in the schedule. For forward pricing, the schedule in effect at the time of negotiations shall apply. For retrospective pricing, the schedule in effect at the time the work was performed shall apply.

(R.4, Tab 3 at p. SC-19. See R.4, Tab 5 Article 15.5 (Incorporation)).

45. The auditor initially questioned Calumet's claim for increased rentals from its affiliated company. He told Calumet to use Corps Manual rates. Calumet revised its claim using the Corps rates. (Ex. A-1, Tab 2, Schedule A, Attachment (before schedule 2A); *Id.* Tab 5, p. 8; *Id.*, Tab 18, p. 8). The 1990 audit report agreed that Calumet's revised rates had been computed properly but questioned most significantly the hours of usage based on a Corps "technical analysis." Calumet agreed with certain other questioned items in the audit report. The "technical analysis" of equipment usage referred to in the audit report was an oral analysis provided to the auditor by Mr. Mathena. Mr. Mathena testified at the hearing, but Respondent's counsel did not ask him to present or explain this analysis. (Tr. 136, 146; Ex. A-1, Tab 2, Schedule A, p. 2; *Id.*, Schedule A, Notes at N. 32., p. 23; *Id.*, Schedules B, C, D, & E; Ex. A-1, Tab 4, p. 3; *Id.*, Tabs 8, 9, & 14; *Id.*, Tab 16, p. 1; *Id.*, Tab 18, p. 8., Ex. A-2, Tab 13. The Auditor was present at the hearing but never testified. We consider that Calumet's calculation of equipment hours is adequately supported.

46. In computing its overrun attributable to the differing site condition, Appellant failed to adjust upward its estimated costs for this equipment to the higher Corps' rates. If the estimated costs properly had been adjusted upward for valid comparison with the Corps rates, its claimed overrun would have been proportionately reduced. Considering all the adjustments to the accounts and evidence bearing on the amount of the proper adjustment, we find that the claimed amounts for both the outage and post-outage periods must be reduced by 50%. Using Appellant's hours, and the 50% reduction we allow $24,504 ($49,007 × .5) for the outage and $30,750 ($61,501 × .5) for the post-outage work.

Cost Code 1038—Outside Equipment

47. Appellant's estimate of $48,000 for this account, covered all equipment rental not from R.W.G. The Audit questioned $11,047 of the actual costs incurred. Calumet agreed to deduct $1,053 for the outage and $9,030 in the post-outage period for certain Extras. With these deductions, the audit verified that CCC incurred all but $964 of Calumet's total claimed overrun of $260,971, of which $100,006 was incurred in the outage and $160,965 in the post-outage period. The Government has established that the Calumet failed to include all required equipment in its estimate. Evaluating all evidence on this issue, we deduct 10% from the amount claimed for both the outage and post-outage work. (Ex. A-1, Tab 2, Schedule A, p. 2; *Id.*, Schedule A Notes at N. 7 at p. 10; Ex. A-1 Tab 4 at p. 2, p. 3, N. 1; Exh. A-1, Tab 13, p. 1; Ex. A-1, Tab 16, p. 1; Ex. A-1, Tab 18, p. 8; Ex. A-2, Tabs 2, 13). We allow Appellant $90,005 for the outage ($100,006 × . 9) and $144,869 (160,965 × . 9) for the post-outage work.

Code 1035—Sales and Use Tax

48. The differing site condition increased the material requirements. The blasting caused over-break concrete that resulted in the need for more concrete, which in turn meant additional sales tax payments. The differing site condition also made more concrete placement forms necessary. Calumet's

[4] R.W.G. is an affiliate of CCC.

©1994, Commerce Clearing House, Inc.

Digitized by Google

plan had been to purchase enough forms for half the Lock, then use the forms twice. But, the differing site condition made it necessary for Calumet to purchase additional forming systems in order to meet the schedule, which increased the sales taxes payable. (Tr. 588). A large quantity of additional equipment was also required, as described with respect to cost codes 1033 and 1038. Calumet had estimated only $3,000 for sales and use taxes because Mr. Short thought that Lock 20, as a Government project, would be exempt from Missouri taxes, except for expendables or consumable materials. This view proved incorrect. In updating the claim submissions, he added $25,000 to Calumet's estimate. Thus, the claim is reduced to $1,373 for the outage and $14,461 for the post-outage period. (Tr. 74-75, 535, 556, 558; Ex. A-1, Tab 2, Schedule A, p. 1; Id., Schedule A, Notes, N. 2 at p. 1; *Id.,* Tab 13, p. 1: *Id.,* Tab 18, p. 3). We conclude based on all evidence of record and, in particular that related to over excavation discussed *infra,* that 20% of these costs during the outage period and 50% during the post-outage period were not caused by the differing site condition. We reduce the taxes claimed by these same ratios, awarding Appellant $1,098 ($1,373 × .8) for the outage increase and $7,231 ($14,461 × .5) for the post-outage increase.

Cost Code 1039—Equipment Operating Engineers

49. Calumet switched to blasting in the outage period. Once blasting was completed on a monolith, it was still necessary to scale it, clean it, and face it to remove any loose concrete or concrete that was not removed back to full depth. This required many additional equipment operators. Calumet used as many as ten hoe rams on the job. Calumet used Dyer's grinder as a secondary removal tool. With the exception of Dyer's grinder, the post-outage work required the same equipment, plus another type of grinder rented for surface removal that operated somewhat like a milling machine. Calumet's estimate was $30,700, of which it applied $10,233 to the outage and $20,467 to the post-outage periods. The audit deducted $481 for certain Extras not in the cost codes but paid by ICC. Calumet agreed with these deductions. Calumet incurred a labor overrun in the outage period of $52,136 ($52,419 − $283) and in the post-outage period of $56,909 ($57,107 − $198), for a total of $109,045. (Ex. A-1, Tab 2, Schedule A, p. 2; *Id.,* Schedule A, Notes at N. 8 at p. 11; *Id.,* A-1, Tab 4 at pp. 1, 2, 3; *Id.,* Tab 13, p. 4; *Id.,* Tab 16, p. 1; *Id.,* Tab 18, p. 8. Ex. A-2, Tab 13). As found above, Appellant underestimated the required amount of equipment that would have been required to perform the work even had no differing site condition been encountered. We found that 10% of the excess equipment costs were caused by the initial underestimate. We also find that 10% of the operating engineering overrun was not caused by the differing site condition and allow Appellant $46,922 ($52,136 × .9) for the outage and $51,218 ($56,909 × . 9) for the post-outage portion.

Cost Code 1050—Carpenter General Foreman

50. The differing site condition created the need for more carpenters, who required more supervision. The original plan had been to start in December with one foreman, then add a second for the second and third shifts after the "deteriorated" concrete was removed. The differing site condition condensed the outage carpenter schedule (for installation and removal of scaffolding and forms for concrete placement), requiring more men, which resulted in having two foremen for each shift. (Tr. 601; Ex. A-1, Tab 18 at p. 9). Calumet's estimate for Carpenter General Foreman was $39,600. It incurred an overrun of $8,528 over its outage estimate of $17,640, and of $6,886 over its post-outage estimate of $21,960. (Ex. A-1, Tab 2, Schedule A, p. 2; *Id.,* Tab 16, p. 1; *Id.,* Tab 18, p. 9). We allow Appellant the amount claimed. We reject the Government's contention that this account, as well as cost codes 1051 and 1053, were underestimated.

Code 1051 Labor—General Foreman

51. CCC's Labor General Foreman estimate was $43,600. Calumet now claims an underage ($13,344) in the outage period and an overage of $15,451 for the post-outage period. (Tr. 607; Ex. A-1, Tab 2, Schedule A, p. 2; *Id.,* Schedule A Notes at N. 9, p. 11; *Id.,* Tab 16, p. 1: *Id.,* Tab 18, p. 9). CCC used labor foremen, not general foremen, for additional supervisors during the outage. Calumet costs its labor foremen to the line item of work under that direct operational code. (Tr. 607-608). Thus, while its post-outage overrun was $15,541, the outage underrun reduces its overall General Foreman labor claim to $2,107. We allow Appellant the amount claimed for the post-outage period, subject to the overall post-outage deduction and deduct the amount credited to

Digitized by Google

the Government by Appellant ($13,344) for the outage.

Cost Code 1053—Subsistence

52. During the outage, Calumet sent added supervisors from its home office to Lock 20. These supervisors required subsistence reimbursement as part of their employment compensation package. (Tr. 603). The audit confirmed that Calumet estimated $78,100 for this item, of which it assigned $23,501 to the outage and the remainder to the post-outage period, but found that Calumet had overstated its actuals by $300. Calumet agreed with this reduction. During the post-outage period Calumet was able to rely more on the local labor force than it had planned and makes no subsistence claim for the post-outage work. Calumet claims $5,583 for its outage period overrun and we allow that amount. (Ex. A-1, Tab 2, Schedule A, p. 2; *Id.*, Schedule A Notes at N. 10, p. 12; *Id.*, Tab 4 at p. 3; *Id.*, Tab 16, p. 1; *Id.*, Tab 18, p. 10).

Code 91207—Temporary Railing

53. The specifications required Calumet to remove the handrail around the Lock perimeter when it was removing concrete at a given monolith. Temporary railing was then required to be installed for the workmen's safety. As finally revised, Calumet claims a $9,817 labor and a $1,603 material overrun in the outage and a labor overrun of $3,082 for the post-outage period. (Exh. A-1, Tab 2, Schedule A, p. 2, Schedule A Notes at p. 12; Tab 4 at p. 1; Tab 16, p. 3; Tab. 18, p. 11; Exh. A-2, Tab 13). Appellant has failed to prove that these costs were increased as a result of the differing site condition. Although Appellant was required to work in many areas of the lock at the same time during the outage, it has not proved how the total labor and material quantity requirements for the erection of the temporary railing increased during either the outage or post-outage period. This portion of the claim is denied.

The 91300 Cost Code Series: Concrete Overlay Removal (Post-Outage)/4-inch Resurfacing

54. The 91300 series accounts relate to the 4-inch horizontal concrete removal work on top of the lock (*i.e.*, the land, intermediate and river walls), which work was made more difficult as a result of the differing site condition.

55. *91301: Sawcutting:* Calumet's labor estimate for 4 inch saw cutting was $5,100 and its estimate for material was $200. Calumet's labor underrun was $1,323 and its material underrun was $200. (Ex. A-1, Tab 2, Schedule A, p. 3; *Id.*, Tab 4, p. 1; *Id.*, Tab 16, p. 3; *Id.*, Tab 18, p. 12). Appellant credits these underrun amounts against its post-outage claim.

56. *91302: Landwall:* Calumet's labor estimate was $28,830 for the landwall removal work. Calumet's claimed labor overrun is $17,449 (Ex. A-1 Tab 2, Schedule A, p. 3; *Id.*, Schedule A, Notes at N. 12, p. 3; *Id.*, Tab 13 at p. 5: *Id.*, Tab 16, p. 3: *Id.*, Tab 17, Doc. 1001; *Id.* Tab 18, p. 12). We allow Appellant the claimed amount.

57. *91303: Intermediate and River Walls:* Calumet's labor estimate was $40,920. Calumet claims a $56,900 overrun. (Ex. A-1, Tab 2, Schedule A, p. 3; *Id.* Tab 4 at p. 1; *Id.* Tab 16, p. 3; *Id.*, Tab 18, p. 12; Ex. A-2 at Tabs 1, 3, 13). The resurfacing work included in these accounts was on River Wall Monoliths 1 through 6 or 7 and on Intermediate Wall Monoliths 1 through 26. Some of the center area was covered with grass, which did not need to be replaced. CCC admits some interference on the Intermediate Wall resulted from the cable trench and the temporary cable tray work, as discussed infra. Appellant estimated the impact would only be on fifty percent of the area to be resurfaced. It also concluded that a twenty percent inefficiency factor with respect to that affected 50%. (Tr. 608-614, 748-750, 752-755). Following adjustments to account for certain "Extras," CCC calculates that cost code 91303 should be reduced by $17,761, resulting in a $39,139 (instead of a $56,900) claim for that cost code. We allow Appellant the revised claim amount, subject to our additional overall reduction for the post-outage period.

58. *91304: Disposal:* Calumet's labor estimate for disposal was $2,350 and its estimate for material was $0. It claims a labor overrun of $2,950 and its material overrun was $250. (Ex. A-1, Tab 2, Schedule A, p. 3; *Id.*, Tab 4 at p. 1; *Id.*, Tab 16, p. 3; *Id.*, Tab 18, p. 12). No explanatory evidence was offered concerning this account and how any increased cost was related to the differing site condition. This portion of the claim is denied.

Cost Code Series 91400—Vertical Concrete Removal (Outage and Post-Outage Periods)

59. The 91400 cost code series involved vertical concrete removal work principally on the land, intermediate and river walls during both the outage and post-outage. All vertical removal work during the post-out-

©1994, Commerce Clearing House, Inc.

Digitized by Google

age period was performed by Calumet. This removal work was directly impacted and we consider that Appellant generally has proved the reasonableness of its estimates and the recoverability of its excess incurred costs. The Government argues that Appellant reduced the estimated cost of cost code 91404 by $29,630, thus increasing the excess costs claimed by the same amount. This reduction reflects Calumet's decision to subcontract most of the outage period removal work to Dyer. This subcontract previously had not been fully reflected in Appellant's estimated costs and particularly in cost code 91404. The Government has not challenged the specific amount of the reduction in the estimate and we consider it to be supported by the unrebutted evidence. However, there is insufficient evidence to establish why or how the differing site condition increased Appellant's waterblasting costs to remove dust and dirt from the concrete following removal operations. Therefore, no recovery with respect to cost code 91411 is warranted. Although the cost code 91406 "trash racks" work was impacted by the differing site condition, Appellant has failed to explain or prove how its claimed costs ($28,912) for the outage exceeded its estimated costs ($4700) by over 600% solely as a result of the DSC. We allow $10,000 for the 91405 cost code for the outage period. We have considered and rejected all other Government contentions related to the 91400 cost series. We conclude that the Appellant is entitled to recover the following claim amounts by cost code for the outage and post-outage periods.

Cost Code/Category	Outage	Post-Outage
91401: 3" sawcut	($654)*	10,048
91402: 7" sawcut		(2,348)*
91043: Land Labor Land ODC	8,142	13,004 2118‡
91404: Intermed. & River Wall	5,111	(19,735)‡
91405: L & U Grd Wall		26,136
91406: Trash Racks	10,000	48
91407: Disposal		(9110)+ * ‡
91408: Check Post	(600)*	
91409: Chip MH Frame		(200)*
91410: Racks/Frames	(1002)*	
91411: Waterblasting	0	0
Total Labor ODC	20,997 0	26,953 (6992)‡

* underrun offered as credit
‡ ODC = Other direct costs, not burdened with labor markups
\+ Net credit offered after offsetting increased cost of work performed by others.

The 91500 Cost Code Series—Install Anchors

60. The 91500 cost code series is for the drilling and installation of form anchors on the monoliths. The drilling was excessively difficult and drilling time was substantially greater than anticipated as a consequence of the DSC. (Tr. 630 Ex. A-17 Tab "Equipment," Simmons [Entitlement]; Tr. 502-504).

61. *91501 Drill:* Calumet's labor estimate for drilling the anchor holes was $9,350, of which Calumet estimated $4,080 for the outage and $5,270 for the post-outage period. Calumet incurred an outage overrun of $21,212 and a post-outage bare labor underrun of $181 offered as a credit. (Ex. A-1, Tab

Digitized by Google

2, Schedule A, p. 4; *Id.*, Tab 4 at p. 1; *Id.*, Tab 16, p. 5; *Id.*, Tab 18, p. 14). We allow the amount claimed.

62. *91502 Grout:* The Calumet's labor estimate was $3,100 of which Calumet estimated $1,378 for the outage and $1,722 for the post-outage period. Calumet incurred on outage underrun of $458 and a post-outage underrun of $1,393. Calumet also had $1,565 underrun in material cost. (Ex. A-1, Tab 2, Schedule A, pp. 4, 5; *Id.*, Tab 4 at p. 1; *Id.*, Tab 16, p. 4; *Id.*, Tab 18, p. 14). Appellant indicates that these amounts should be credited against the claim.

63. *91503 Install:* The Calumet's labor estimate was $1,550, of which it allotted $677 to the outage and $873 to post-outage period. The Calumet claims a $10,177 overrun in the outage and a $1997 overrun in the post-outage period. (Ex. A-1, Tab 2, Schedule A, p. 4; *Id.*, Tab 4 at p. 1; *Id.*, Tab 16, p. 4; *Id.*, Tab 18. p. 14. Although the Government admits that the hard concrete and aggregate made it harder to drill the holes for the anchors it argues that there is no reason why the hardness of the concrete impacted the costs of installing the anchors. Reviewing the meager evidence relative to the installation costs, we consider that installation costs were impacted by the DSC. However, Appellant has failed to prove how an increase of 1500% over its estimated costs during the outage was caused solely by the DSC. We allow Appellant the amount claimed for the post-outage period and $4,000 for the outage period.

The 91600 Cost Code Series—Install Rebar

64. The major increases in this series were due to the outage period inefficiencies caused by the DSC. It was necessary for the ironworkers, who install the rebar, to have personnel present at all time to react to any item of work that was required. If Calumet completed removal and water blasting on any monolith, morning or night, the ironworkers had to install the rebar so the entire process could continue. In addition, the rebar had to be drilled to a minimum of 18 inches and drilling was made more difficult by the differing site condition. The Government's generalized contentions that "poor management" increased these costs are rejected, as discussed in our decision below.

65. *91601 Install:* Calumet's labor estimate was $15,400, of which it allotted $5,714 to the outage and $9,686 to the post-outage period. Calumet claims an outage overrun of $20,441 and a post-outage overrun of $3,866. (Ex. A-1, Tab 2, Schedule A, pp. 4, 5; *Id.*, Tab 2 at Schedule A, Notes, N. 17 at p. 16; *Id.*, Tab 4, p. 1; *Id.*, Tab 13 at p. 4; *Id.*, Tab 16, p. 4; *Id.*, Tab 18, p. 14; Exh. A-2, Tab 13). We allow the amounts claimed.

66. *91602 and 91603: Accessories/Mesh:* The amounts involved for these costs codes are *de minimis* ($112) and there is no proof as to how these material costs were impacted, if at all, by the differing site condition. As best we can tell, no claim has been asserted by Appellant for any increased costs related thereto.

The 91700 Cost Code Series—Vertical Concrete Installation

(Outage and Post-Outage)

67. Calumet originally planned to assemble all the scaffolding, make up the visqueen panels to cover it, fabricate the rebar mats and assemble the gang forms before start of concrete removal, so these items could be swung by crane into the lock when the time came to install rebar and then the replacement concrete. The scaffolding is six feet high, five feet across and seven feet long when assembled. So, the panels were built up to 14 feet long and 18 feet high to reach across two sections of scaffolding. Superintendent Simmons started his program to assemble enough scaffolding to cover half the Lock on December 9, 1986. As a result of the DSC it was necessary for Calumet to scaffold the entire Lock at one time, since people were working in almost all areas. Moreover, the scaffolds had to be covered with the visqueen panels with propane heaters installed throughout the lock area. (Tr. 649, 651; Ex. A-17, Tab "Background," [Entitlement]; Tr. 452, 498, 505).

68. Calumet had intended to use the forms twice. They were to be assembled before concrete removal, so the forms could be swung into the Lock when the time came for installing replacement concrete. CCC's original purchase order was for enough forms for two uses. As a result of the differing site condition, Calumet procured additional forms, doubling the cost. The anchoring system for attaching the forms consisted of she-bolts for which it was necessary to drill into the remaining concrete in the monolith to anchor the form. This was made more difficult by the differing site condition. In addition, the she-bolt locations were set in the prefabricated, pre-assembled form, so the location of the hole to be drilled could not be moved to avoid large aggregate. Drilling for the anchoring system continued to be a problem in the post-outage period, but the overrun costs dropped substantially because the

©1994, Commerce Clearing House, Inc.
Digitized by Google

deadline for completion of the work was not so severe, and the situation was more controlled. In addition, during the outage the workers' skill level declined as more were hired because of the depletion of the labor force around Canton, Missouri thus increasing costs due to lowered productivity and the lack of a learning improvement curve. This problem was reduced in the post-outage. (Tr. 634, 637; Ex. A-17, Tab "Background," [Entitlement]; Tr. 452, 455, 498, 505, 932, 933).

69. The differing site condition caused most of the overrun of concrete. However, Appellant also increased the amount of concrete removed and replaced through overdepth excavation of concrete, excavation of concrete in areas of the lock walls where no excavation of concrete was required, and other construction errors that were not related to the differing site condition. (Ex. G-106, Vol. I, Sec. 1, pp. 14-18, 30-34, 36, 37, 40-42; GR4 Tabs 59, 112, pp. 541-542).

70. With respect to the vertical concrete requirements, we consider that a large portion of the "overexcavation" was caused by the differing site condition and need to accelerate removal operations during the outage period. To remove the concrete in sufficient time to accommodate the outage deadline it was not practicable first to remove the armor cover for the concrete that was present in many sections of the lock. To save time (and expenses) Appellant directed its blasting subcontractor to drill its blasting holes behind the armor, significantly overexcavating the specified quantity of concrete blasted from the walls and damaging the armor. In addition, because of the acceleration of the work, Appellant poured concrete whenever possible regardless of the size of the area. The smaller, less optimal, and more frequent pours increased the rate of wastage and rejection of the concrete. Appellant, as a result of the differing site condition, also was unable efficiently and expeditiously to sawcut all concrete areas so as to outline the removal depths and areas. Had it been able to sawcut more effectively, blasting would have been better controlled.

71. We have carefully considered all the conflicting evidence concerning the various reasons for "over excavation" of both horizontal and vertical concrete. Based on our review of the record as a whole, we conclude that approximately 20% of extra costs incurred for removal and replacement of 205.7 cubic yards of excess vertical concrete and 30% of the 977.3 square yards of excess horizontal concrete (*i.e.*, the 91800 series *infra*) were *not* caused by the differing site condition. We apply these percentage reductions to the overruns claimed and otherwise proved and allowable for the 91700 series in equitably *approximating* the extra costs that were not caused by the differing site condition, although we recognize that other installation accounts may also be involved. The 30% reduction (related to horizontal concrete installation) for the post-outage period is taken in addition to the general overall reduction for ICC interference. We also give the Government the full amount of credits offered by Appellant.

72. *91701 Scaffolding:* Calumet's labor estimate was $12,270, which Calumet increased during its claim review as inadequate, allotting $29,275 to the outage and $1,150 to the post-outage period. Calumet claims $29,493 and $9,186 overruns for the outage and post-outage periods, respectively. (Ex. A-1, Tab 2, Schedule A, p. 5; Ex. A-1, Tab 2 at Schedule A, Notes, N. 20, p. 17; *Id.*, Tab 4 at p. 1 & N. A at p. 3; *Id.*, Tab 13, p. 6; *Id.*, Tab 16, p.4; *Id.*, Tab 18, p. 15 & 15A, N. (1); Exh. A-2, Tab 13). We find Appellant entitled to recover 80% of its outage ($23,594) and 70% of its post-outage ($6,430) claim.

73. *91702-05 Forming Wall:* Calumet's labor estimate was $101,660, of which it allotted $58,691 to the outage and $42,969 to the post-outage period. It claims outage and post-outage labor overruns of $177,696 and $55,038, respectively. With respect to material cost, Calumet's total estimate was $50,700, of which it allotted $28,940 to the outage and $21,760 to the post-outage period. Calumet claims an outage overrun of $33,419 but withdrew a $6,040 post-outage claim as unrelated to the differing site condition. (Ex. A-1 Tab 2, Schedule A, pp. 5, 6; *Id.*, Schedule A, Notes at N., NN. 21, pp. 17-18, 20, 24; *Id.*, Tab 4 at p. 1. & Note E at p. 3; *Id.*, Tab 13, p. 6; *Id.*, Tab 16, p. 4; *Id.*, Tab 18, p. 15, 15A; Ex. A-2, Tab 13). A deduction for form anchor failures not caused by the differing site condition, as contended for by the Government, is made *infra*. We allow Appellant 80% of the outage and 70% of its post-outage claims as follows:

	Outage	Post Outage
Labor	142,157	38,527
Material	26,735	0

74. *91706 concrete wall:* Calumet's labor estimate was $29,600, of which it allotted $10,549 to the outage and $19,051 to the post-outage period. It claims a $18,716 out-

Digitized by Google

age period overrun and a $2,050 post-outage overrun. Calumet had a $23,859 outage material overrun and a $9,780 post-outage underrun offered as a credit. (Ex. A-1, Tab 2, Schedule A, pp. 5, 6; *Id.*, Schedule A, Notes at NN. 22, pp. 18, 19, 20, 25; *Id.*, Tab 4 at p. 2, 3 N. 4; *Id.*, Tab 13, p. 6; *Id.*, Tab 16, p. 4; *Id.*, Tab 18, p. 15, 15A; Ex. A-2, Tab 13). We allow the following:

Outage:	
Labor	15,013
Material	19,087
Post-outage:	
Labor	1,435
Material	(9,780)

75. *91707 Trash racks:* Calumet's labor estimate was $1,150, which it allotted to the outage when the work was to be done. Calumet claims a $1,985 overrun. Calumet estimated $400 for material and incurred a $71 overrun. (Ex. A-1, Tab 2, Schedule A, p. 5; *Id.*, Tab 4 at p. 1; *Id.*, Tab 16, p. 4; *Id.*, Tab 18, pp. 15, 15A). A portion of the increase was attributable to an initial mislocation of the trash racks for which we deduct $500 from the outage labor overrun, in lieu of the 80% reduction and allow $1485. No extra material costs have been proven to have been caused by the differing site condition.

76. *91708 Finish:* Calumet's labor estimate was $4,000 for this post-outage task. Calumet claims an overrun of $1395. CCC's material estimate was $60 for the post-outage work. It incurred and claims an overrun of $283 during the outage and a $60 underrun in the post-outage period. (Ex. A-1, Tab 2, Schedule A, p. 5; *Id.*, Schedule A Notes at N. 23, p. 19; *Id.*, Tab 4 at p. 2 & N. 4, p. 3; *Id.*, Tab 13, Supplement p. 6; *Id.*, Tab 16, p. 4; *Id.*, Tab 18, pp. 15, 15A). No evidence explaining and supporting any award for the material overrun has been offered. We allow only 80% of the post-outage labor overrun, *i.e.* $1,116.

77. *91709 Patch-Rub:* Calumet's labor estimate was $7,200, of which it allotted $4,102 to the outage and $3,098 to the post-outage period. Calumet incurred a $7,493 overrun in the outage and a $8,371 overrun in the post-outage work. Calumet also estimated $700 for material, of which it allotted $398 to the outage and $302 to the post-outage work. It incurred and claims an overrun of $308 in the outage and an underrun of $202 in the post-outage work. (Ex. A-1, Tab 2, Schedule A, p. 5; *Id.*, Tab 4 at p. 1; *Id.*, Tab 16, p. 4; *Id.*, Tab 18, pp. 15, 15A). We award 80% of the amounts claimed for the outage (labor—$5,994; materials—$246) and 70% for the post-outage labor, *i.e.*, $5,860. The entire amount of the $202 post-outage material underrun is credited to the Government.

78. *91710 Tile Gage:* Calumet estimated $100 for material for this outage work and spent none, hence Calumet credited the Corps with a $100 outage material underrun. (Ex. A-1, Tab 2, Schedule A, p. 6; *Id.*, Tab 16, p. 4; *Id.*, Tab 18, p. 15A). We include the credit offered to the Government in our claim computation.

The 91800 Cost Code Series—Overlay/Horizontal Concrete Installation

79. The differing site condition created post-outage concrete installation problems. Calumet had planned to use a Ramset gun, which uses an explosive charge to set the fastener to attach a plate to the form. The Lock 20 concrete was too hard to accept this method. Although the Government speculates that the Ramset gun would not have been effective regardless of the differing site condition, there is no probative evidence supporting this speculation. In addition, the unpredictability and difficulty of the removal resulted in additional pours of replacement concrete, increasing the costs of both pours and finishing. Finishing work was performed by a separate craft; hence, no matter how small the pour, a member of that craft was required on site. However, there was no need for additional forms in the post-outage period as there had been in the outage period.

80. Calumet reduced its 91800 series costs to reflect inefficiencies caused by the intermediate wall electrical modification, the elimination of certain extras, and certain adjustments to reflect the actual concrete quantities. We have previously concluded that 30% of the concrete overrun during the post-outage period was not caused by the differing site condition and therefore allow 70% of the remaining cost overruns claimed by Appellant to the extent otherwise proved and recoverable.

81. *91801 Handgrade:* CCC claims a material overrun of $608. We allow 70% of this amount, *i.e.*, $426.

82. *91802 Grout surface:* Calumet's labor estimate was $5,780 and its material estimate was $1,250. Calumet incurred a bare labor underrun of $3,764 and a material underrun of $528. (Ex. A-1, Tab 2, Schedule A, pp. 6-7; *Id.*, Tab 4 at p. 1; *Id.*, Tab 16, p. 5; *Id.*, Tab 18, p. 16). We include the credits offered

©1994, Commerce Clearing House, Inc.
Digitized by Google

to the Government in computing our allowances.

83. *91803 Forms:* Calumet's labor estimate was $7,220 and its material estimate was $1,400. Calumet claims a labor overrun of $31,610 and a material overrun of $706. (Exh. A-1, Tab 2, Schedule A, pp. 6-7; *Id.,* Schedule A Notes at N. 28, pp. 20-21; *Id.,* Tab 4 at p. 1; *Id.,* Tab 13 Supplement, p. 6; *Id.,* Tab 16, p. 5; *Id.* Tab 18, pp. 16, 16A; Ex. A-2, Tab 13). We allow Appellant 70% of the amount claimed, labor—$22,127, materials $494.

84. *91804 Sealt.—Forms:* Calumet's labor estimate was $3,200 and its material estimate was $1,200. Calumet's labor overrun was $2,702 and its material underrun was $895. (Ex. A-1, Tab 2, Schedule A, pp. 6-7; *Id.,* Tab 4 at p. 1; *Id.,* Tab 16, p. 5; *Id.,* Tab 18, pp. 16, 16A). We allow 70% of the overrun claimed, *i.e.,* labor $2,240, and include the $895 credit.

85. *91805 Sealt.—Caulk:* Calumet's labor estimate was $640, which Calumet increased to $7,240 because its original estimate was inadequate. Calumet's material estimate was $2,000. Calumet and the auditor agree that the labor overrun was $2,421. Calumet incurred a $682 material overrun, but Calumet increased its estimate to actual, withdrawing this material claim. (Ex. A-1, Tab 2, Schedule A, pp. 6-7; *Id.,* Tab 4, p. 1; *Id.,* Tab 16, p. 5; *Id.,* Tab 18, pp. 16, 16A). At 70% of the amount claimed, we allow $1695—labor and $477—materials.

86. *91806 Landwall:* Calumet's labor estimate was $3,530 and its material estimate was $6,210. Calumet's labor overrun was $4,205 and its material overrun was $7,829. (Ex. A-1, Tab 2, Schedule A, p. 7; *Id.,* Tab 4, p. 1; *Id.,* Tab 16, p. 5; *Id.,* Tab 18, pp. 16, 16A. We allow 70% of the claimed amount: labor—$2,944; materials—$5,480.

87. *91807 Intermediate and River Walls:* Calumet's labor estimate was $11,550 and its material estimate of $10,140. Calumet claims a $3,308 labor overrun and a material overrun of $13,270. (Ex. A-1, Tab 1, Schedule A, p. 7; *Id.,* Schedule A, Notes at N. 29, pp. 21-22; *Id.* Tab 4 at p. 1 *Id.,* Tab 13, Supplement p. 7; *Id.,* Tab 16, p. 5; *Id.,* Tab 18, pp. 16, and 16A. We allow 70% of these amounts: Labor—$2,316; materials—$9,289.

88. *91808 Concrete Finish:* Calumet's labor estimate was $7,700 and its material estimate was $2,500. Calumet claims a labor overrun of $9,189. It also reported a material underrun of $1,637. We allow Appellant 70% of the labor overrun, $6,432, and include the material credit offered in our computations.

Cost Code 1014—Concrete Test/Inspect

89. Calumet's "Other Direct Cost" estimate was $6,000, of which it allotted $1,740 to the outage and $4,260 to the post-outage period. Calumet's ODC overrun was $15,383 in the outage and $20,380 in the post-outage period. Calumet agrees that its total claim for overruns in this cost code must be reduced by $7,500, representing the cost value of additional concrete pours caused by the Corps' electrical modification, for which ICC received payment. Thus, at the hearing Calumet claimed $12,880 ($20,380 – $7,500) for the post-outage period. (Ex. A-1, Tab 2, Schedule A, p. 6; *Id.,* Schedule A, Notes at N. 26, p. 20; *Id.,* Tab 14; *Id.,* Tab 16, p. 4; *Id.* Tab 18, p. 15A; *Id.* Tab 19 p. 1, Item 2). Although the number of concrete pours (and tests) increased significantly, the percentage increase was proportionately far less than the percentage increase in testing costs for the outage (884%) or post-outage (478%) periods. Considering this and other evidence that the concrete testing costs were underestimated, we agree with the Government that Appellant failed to include all required testing costs in its bid. Based on the entire record on this issue and the conflicting estimates of the reasonable cost of the required testing that would have been incurred but for the DSC, we allow $5,000 for the outage and $5,000 for the post-outage work.

Other Related Claims

90. Calumet also billed ICC for work done during the outage period. The audit questioned these costs on grounds of duplication with costs in the company's cost codes allocability to the claim. Calumet reduced this claim to $3,617, removing duplicated costs and one invoice that had been paid by ICC. (Tr. 151; Ex. A-1, Tab 2, Schedule G; *Id.,* Tab 12). There is insufficient probative evidence describing the remaining claimed costs and linking them to the differing site condition. They are disallowed in their entirety.

B. *Concurrent Causes of Cost Increases*

91. The Government contends that Appellant's actual costs during the outage period were increased by poor management, supervision, and coordination. In support of those contentions, the Government introduced daily reports, other documentation and related cost estimates for the alleged inefficiencies. These include "workers standing around" ($28,000) and "workmen walking

Digitized by Google

around ... doing nothing" ($49,280) on certain days. There is also extensive inter-contractor correspondence detailing major and minor squabbles between the parties. We have fully considered the evidence presented by the Government on the generalized "poor management" issue. However, the more probative evidence in the record, as well as our findings in the prior entitlement decision, support a conclusion that the DSC caused the considerable majority of these inefficiencies, except in the case of specific instances of poor workmanship detailed elsewhere in our findings. In general, we also consider that Appellant reasonably managed and controlled its costs under the circumstances present here.

92. Miscellaneous construction problems and errors occurred during performance of the outage work that were not caused by the differing site condition. The Government has detailed and priced these problems and errors and we find that the following amounts for the items listed below properly are deductible from the increased costs otherwise due Appellant (Ex. G-106).

i.	Delays to Blasters	$4,676
ii.	Improper Water Blasting	$3,438
iii.	Forms/Anchor Failures & Problems	$7,222
iv.	Tile gage rework	$1,096
		$16,432

Fully burdened with taxes, insurance, fringe benefits profit and bond costs, we deduct a total of $23,500 from Calumet's total for the outage period.

C. *The Dyer Claim*

1. *Claim Format and Issues*

93. As corrected and revised, Dyer's claim now seeks:

Labor, Fringes & Benefits	$280,087
Less:	−28,929
	$251,158
Miscellaneous Expenses	33,927
Subcontracts & rentals	121,489
Dyer equipment	63,093
	$469,667
Less: Anticipated at Bid	−93,761
	$375,906
Overhead at 7.987%	30,024
Sub total	$405,930
Profits at 10%	40,593
TOTAL	$446,523

94. The Government raises five primary arguments with respect to the Dyer portion of Appellant's claim: (1) Dyer underbid its subcontract and the grinder would have been required to work considerably more hours than the eight hour shift anticipated in its bid; (2) the Dyer equipment rate for the grinder/backhoe should be $97 rather than the $115 claimed; (3) no mobilization costs are due Appellant; (4) the "Labor, Fringes & Benefits" account should be reduced to prevent double recovery for hours spent by Dyer equipment operators repairing Dyer equipment, since repair costs are included in the equipment rates; (5) numerous problems, unrelated to the differing site condition, also increased Appellant's actual costs; and (6) Dyer underestimated its sawcutting and chipping costs.

2. *Scheduling*

95. The first issue raised by the Government addresses the timely scheduling of the project during the outage period. The Government has proposed numerous findings critiquing virtually every "schedule" prepared by Appellant, CCC and Dyer. Most of these "schedules" were prepared by Calumet or Dyer before the differing site condition was discovered and/or before its full impact could be gauged. As such, they are irrelevant except to the extent that they reflect the reasonableness of Appellant's initial cost estimates. The reasonableness of the cost estimates is discussed by category elsewhere in this opinion, and the estimates are adjusted as appropriate. Accordingly, it is unnecessary to deal in detail with the Government's proposed findings concerning Appellant's early schedules.

96. The Government places primary reliance on CPM schedules prepared by its claims consultant, Hudson Construction Consultants (Hudson) to prove that Appellant could not have timely completed the outage period work by March 6, 1987. Although numerous schedules are in evidence, the latest and most pertinent Hudson CPM schedule was first presented at trial. (Ex. G-106). It is unnecessary to address in detail the logic and validity of the built-in constraints inherent in this schedule for reasons discussed elsewhere in this opinion. Hudson's conclusion, as expressed in the schedule, was that Appellant would not complete the outage period work until March 13, 1987, or perhaps "a couple of days" earlier. (Ex. G-106; Tr. 1028)

97. The Dyer estimate includes the use of the Dyer grinder with a 425 cubic feet per shift production rate for a single shift of eight hours per day plus two hours for maintenance. (Tr. 709-713, 717-718, 1418-1419d; Ex. G-106, Vol. III, Sec. 21, pp. 1-2; Ex. A).

©1994, Commerce Clearing House, Inc.

Digitized by Google

98. Mr. James Schneider, Appellant's scheduling expert considered that use of the Dyer grinder for a single shift of eight hours per day plus two hours for maintenance, *i.e.* one ten-hour shift, would have been inadequate to complete the required outage period work on time and that two ten-hour shifts would have been necessary for timely completion even had the differing site condition not been present. (Tr. 1416-1419; Ex. A-19)

99. Mr. Schneider used the Primavera "Finest Hour" CPM program, to analyze the Hudson-imposed contraints. Mr. Schneider developed a more detailed, resource-loaded hour-by-hour analysis of the required construction activities, based on Calumet's estimated resources. He concluded that Calumet and Dyer would finish the outage concrete removal on time with the grinder as the primary removal resource, had the DSC not been present. He emphasized that the Hudson-type, day-by-day, scheduling program constrained follow-on-activities a full day even where the prior activity was completed in anything less than a day. The more sophisticated "Finest Hour" program allows for reflecting follow-on work commencing the same day earlier work is completed. (Tr. 1009, 1013, 1026, 1032, Tr. 1287, 1288, 1416; 1453, 1459). Mr. Schneider, in addition to "resource loading" the "Finest Hour" analysis with Calumet's estimated costs, used two ten-hour Dyer shifts per day, seven days per week (as did Hudson), whereas Dyer only estimated one ten-hour shift of grinding per day. (Tr. 1417-19). The Schneider analysis was never materially challenged by specific and precise impeachment of its scheduling assumptions, except to the extent that Calumet's estimated costs for the various work categories have been adjusted, *supra.* With those adjustments, we consider that Appellant could have completed the outage period work prior to expiration of the outage period on March 6, 1987. However, inasmuch as meeting this schedule required twice as much time for the grinder shifts (20 hours vs. 10 hours), we double Dyer's "Anticipated at Bid" amount to $187,522 ($93,761 × 2) for purposes of deducting it from the amount claimed before overhead and profit. Without this upward adjustment, the Dyer quote was unreasonably low, at least given Appellant's scheduling methodology and the nature of the resources that Appellant chose to add to those quoted by Calumet and Dyer.

3. *Backhoe/grinder rate*

100. The audit proposed $80 per hour charge for Dyer's backhoe, but only $17 for the grinder, although Dyer's quote contemplated $115 for the two taken together. Dyer accepted the audit's backhoe rate. Dyer at trial claimed a $35 per hour grinder rate supported by unrebutted testimony that the equipment is specialized and does not operate the 1,550 hours per year applicable to the audit-suggested rate, and that the $115 rate was what Dyer included in its original estimate. On this record, we consider the $115 rate to be better supported and make no adjustment.

4. *Mobilization*

101. Dyer claims $4,318 for mobilization based on the 109.5 truck tractor hours (at $23.28 per hour) that the truck was used to transport the equipment to Canton, Missouri. There is no proof that mobilization costs were impacted by the differing site condition. We deduct $4,318 from the equipment amount claimed.

5. *Repairs*

102. The costs of equipment repairs are built into the Corps equipment rental rates. Appellant admitted that Dyer mechanics did perform some limited repair work on Dyer-owned equipment. We deduct $7,500 from the claim "Labor, Fringes & Benefits" amount to preclude double recovery of repair costs.

6. *Other Causes of Increased Costs*

103. The Government contends that the Dyer grinder experienced numerous mechanical problems, inefficiencies, and breakdowns that were not caused by the differing site condition and that the associated costs should be deducted from any recovery. The Government argues that the grinder was "useless" for a total of 30 days during the outage period and proposes a $41,040 deduction as follows:

2 men × $28.00 per hour × 8 hours × 30 days	=	$13,440.00
1 grinder 115.00 per hour × 8 hours × 30 days	=	$27,600.00
Direct Costs	=	$41,040.00

(Ex. G-106, Vol. I, Sec. 1, p. 55; Tr. 1303-1306, 1212-1213).

104. In general, these Government allegations are based on cryptic, incomplete notations in daily reports. Except to the extent that there is convincing, specific evidence as to other non-DSC causes, based on our review of the entire record, we consider that

Digitized by Google

the generalized "mechanical breakdowns," and "inefficiencies," etc. noted in the daily reports concerning the grinder were attributable to the differing site condition. However, the record does support some deductions for increased actual costs that were not caused by the DSC. These include downtime related to the delayed dewatering and debris removal of the lock and several incidents where the grinder lost a track. ICC was responsible for dewatering the lock chamber and clearing debris at the start of the outage period. Numerous documents and daily reports indicate that Dyer's work inside the chamber was adversely impacted and made inefficient by delays in the dewatering process and, to a lesser extent, by use of an undersized bulldozer to clear debris. We conclude that non-DSC causes rendered the grinder unproductive for a total of seven days during the outage period. Thus, Dyer's actual direct costs must be reduced by $9,576, as follows:

2 men × $28.00 per hour × 8 hours × 7 days	=	$3,136
1 grinder × $115.00 per hour × 8 hours × 7 days	=	$6,440
		9,576

7. *Chipping/Sawcutting*

105. Dyer failed to consider and include in its estimate all non-grinder work including some chipping and sawcutting activities that were required. An overly optimistic sawcutting rate was also used for part of the work. We deduct $3,000 from its actual costs to reflect the approximate cost of this work.

8. *Dyer Claim Summary*

106. We conclude that Appellant is entitled to recover $306,172 with respect to the Dyer claim as follows:

Labor, Fringes & Benefits	$280,087
Less (original claim)	(28,929)
Less: (Repairs)	(7,500)
Less (Other Causes)	(9,576)
Miscellaneous Expenses	33,927
Subcontracts & rentals	121,489
Dyer equipment	63,093
Less (Mobilization)	(4,318)
Less (Chipping/Sawcutting)	(3,000)
Subtotal	445,273
Less: Adjusted Bid	(187,522)
Subtotal	257,751
Overhead @ 7.987%	20,587
Subtotal	278,338
Profit @ 10%	27,834
Total	306,172

D. *Calumet Markups/Profit*

107. The Government auditor determined a Tax, Insurance & Fringe ("TIF") rate of 32.2% to be applied to all claimed labor, except overtime premium, to which he applied a 9.85% rate. Subsequently, after re-computing these rates to answer Corps criticism that its approach did not apply Indiana unemployment compensation tax rates to consider men who worked at Lock 20, Calumet arrived at 34.63% for all labor costs except overtime premium, for which it computed a 10.09% rate. It introduced its computations at the hearing, where they were undisputed. (Tr. 146-148, 166-169; Ex. A-1, Tab 2 at Schedule A, Notes, N. 1, N. 6 pp. 8, 10 *passim;* Ex. A-2, Tabs 4, 6). Absent any testimony from a Government auditor explaining the Government position and rebutting the revised rates as calculated by Appellant, the board finds that the proper TIF rates are 34.63% (regular) and 10.09% (overtime).

108. CCC's estimate included a combined 10% mark up for home office overhead and profit. CCC's actual incurred overhead rate was 5.85%. We use the combined 10% rate estimated as the overhead/profit rate in calculating the adjustment. (Tr. 149, 182; Exh. A-2, G-106, G-107).

109. *Bond:* Calumet's bond cost is $5.00 per $1,000 (.5%) of contract value, including overhead and profit. Calumet will be required to pay at that rate on any sums received as a result of this proceeding. (Tr. 162-163; Ex. A-1, Tab 25; Ex. A-2, Tab 25).

E. *Calumet Work for Dyer*

110. Calumet assisted Dyer in its concrete removal efforts and charged Dyer for this assistance for the following:

Description	Amount Claimed
Labor with Payroll Taxes & Insurance	$141,130
G & A Overhead on Above Labor	15,549
Profit on Above Labor & Overhead	6,045
Charges for RWG Equipment	3,067
Charges for Outside Equipment Rental	63,580
Material & G & A Overhead	206
Subcontractors & G & A Overhead	4,608
Vendor Invoices & Overhead	4,049
Total	$238,234

©1994, Commerce Clearing House, Inc.

Digitized by Google

111. The audit questioned $25,546 of the claimed amount for various reasons and Appellant agreed to reducing this portion of the claim to $212,687. Except to the extent reflected in the questioned costs above, there is no evidence in the audit or otherwise that the remaining costs sought by CCC in this portion of the claim duplicate other costs found to be due either CCC or Dyer above. However, the Government contends, and we agree, that there is no specific proof that all of these costs were caused by the differing site condition. Nevertheless, the only Dyer work pertained to the concrete removal process during the outage period. This work and this time frame were the most directly impacted by the differing site condition. The descriptions of the invoiced work generally support this conclusion. For these reasons, we find that a percentage of these costs are compensable. The best evidence of that percentage is the approximate ratio (70%) of costs claimed by CCC during the outage period to the same costs found due for that period. Thus, we allow $148,881 (.7 × $212,687). However, because markups and profit were included in Calumet invoices, they are not computed again with respect to this work in our allowance.

F. *Extras*

112. CCC included numerous costs that were isolated as "extras" in CCC's accounting system at the time in the CCC claim. (Tr. 64; Ex. A-1, Sec. 13).

113. Appellant admitted that many of the "extra" items it had originally included in its claim had been paid for or covered by contract modifications and reduced the amount for them included in the claim. It however, left $13,920 for various "extras" in its claim. (Ex. A-2, Sec. 13). There is insufficient probative evidence either describing these costs or proving that any of the remaining "extras" were caused in whole or in part by the differing site condition. The brief descriptions in the record of many of those costs indicate that they are unrelated to the DSC. We deduct $13,920 from CCC labor cost outage total.

G. *Quantity Reductions*

114. Appellant has deducted $60,244 from the total CCC portion of the claim to reflect the difference between CCC's estimated costs using the higher estimated subcontract quantities and what its estimated cost would have been using the actual, reduced quantities. The Government has failed to rebut Appellant's evidence that the final $60,244 total deducted by Appellant from the CCC portion of the claim is the proper figure. We deduct only that amount from the post-outage totals for CCC.

H. *ICC Markups*

115. The best evidence of ICC's overhead rate is the audited rate of 9.18%, which we apply. An ICC profit rate of 6% was negotiated by the parties for subcontractor work in contract modifications during performance. We apply that profit rate, as well as the ICC bond rate of .00576.

I. *Illinois Work for Calumet*

116. Once the outage period ended, ICC reviewed all the invoices for work it had done and materials it had provided to Calumet. Appellant claims that invoices in the amount of $48,596 are concerned with concrete removal work; $64,487 with the concrete replacement work; and $14,514 with additional dewatering work. These ICC costs, totaling $127,597, are not adequately justified or explained. ICC did not subcontract all concrete work to CCC. Calumet also contemporaneously and vigorously objected to many of these costs, contending that they were not incurred or were not chargeable to Calumet. This contemporaneous evidence remains largely unrefuted. Among other things, there is also no probative evidence to establish that most of the costs were caused by the differing site condition. Some of the invoiced work clearly is unrelated to the differing site condition, such as costs relating to dewatering and clearing debris from the lock at the start of the outage. The best estimate in this record of the actual increased costs to ICC caused by the differing site condition is $18,510, as estimated by the Government. (Ex. G-106, Vol. III, § 22). Appellant also has not proved that the invoiced amounts did not include all applicable markups and profit. Therefore, we allow $18,510 without further mark ups.

J. *"Look-Back" Interest*

117. Both Calumet and Illinois claim additional unquantified damages in the form of the obligation of each to pay "look back" interest pursuant to Section 460 of the Internal Revenue Code of 1986, as amended, with respect to amounts recovered from the Government in this action. Section 460 addresses the reporting of income from certain long-term contracts under the percentage of completion method. Both Calumet and Illinois have so reported the income from this contract. (Tr. 183-184, 303-304). A taxpayer, in reporting gross income from a covered

Digitized by Google

long-term contract for taxable years prior to the year of completion of the contract, generally determines the percentage of completion by comparing costs allocated to the contract (determined under Section 460(c)) and incurred before the close of the taxable year with the total estimated contract costs. Section 460(b)(1)(A). The gross income includable for the year is such percentage of completion for the year times the estimated total contract price reduced by amounts of gross income from the contract included by the contractor for prior years.

118. In the year of contract completion, the contractor, for the purpose of determining "look back interest," recomputes the income allocable to each year of the contract on the basis of the actual contract price and actual costs, and determines the hypothetical underpayment (or overpayment) of the tax which results solely from such reallocation of income. Section 460(b)(2). The contractor is required to pay for the year of contract completion so-called "look back interest" on the amount of the hypothetical underpayment of tax for each year of the contract. Such interest is paid at the rate provided for tax overpayments under Section 6621, Internal Revenue Code of 1986, as amended, and compounded daily to the date of payment. Section 460(b)(2)(C). "Look back" interest is in addition to, and not in lieu of, the income tax on contract income. Contract income, to the extent it has not been included in gross income in prior years, is included by the contractor in the year of contract completion. Section 460(b)(1). No amount has been included in the Quantum Statement for the "look back interest" damages, since any amount depends upon final determinations, among other things, of the contract price, contract costs, the year to which the costs are allocable, the year of contract completion, and the look back interest rate, a taxpayer may approximate and include in taxable income the amount of a potential claim recovery, thus paying tax thereon. The taxpayer may also recover interest from the Government under the Internal Revenue Code where an overpayment results. For reasons discussed in the Decision, we need not further detail the tax statutes, regulations and conflicting contentions of the parties with respect to "look back" interest.

119. Section 6(a) of the Contract Disputes Act, 41 USC § 601, 605(a) provides:

> All claims by a contractor against the government relating to a contract shall be in writing and shall be submitted to the contracting officer for a decision. The authority of this subsection shall not extend to a claim or dispute for penalties or forfeitures prescribed by statute or regulation which another Federal agency is specifically authorized to administer, settle, or determine.

120. FAR 31.205-15 states in part:

> 31.205-15 Fines, penalties, and mischarging costs.
>
> (a) Costs of fines and penalties resulting from violations of, or failure of the contractor to comply with, Federal, State, local, or foreign law and regulations, are unallowable except when incurred as a result of compliance with specific terms and conditions of the contract or written instructions from the contracting officer.

121. The following chart summarizes our determination of $2,084,249 as the total equitable adjustment due.

SUMMARY

Cost Code/ Category	Outage Claimed	Outage Allowed	Post-Outage Claimed	Post-Outage Allowed

DECISION

The issues in this appeal have largely been resolved by our factual findings. In addition to certain general comments, four topics require further discussion. These topics are: 1. The inapplicability of rules pertaining to "total cost" claims; 2. Alleged mismanagement; 3. Scheduling; and 4."Look Back" interest.

A. *General Comments—Positions, Proof*

The parties' positions on many of the issues in this appeal have been uncompromising, often at opposite extremes. Although there is some truth in each of their respective contentions on many issues, they have suggested no middle ground to assist the Board in developing reasonable solutions and results.

For the most part the Government has presented and tried this case on broad, general factual and legal arguments, in particular challenging what in its view is a "total cost" approach and emphasizing mismanagement as the factual basis for Appellant's problems. It also insisted on emphasizing certain dubious and speculative alternative estimates and theories of recovery by claims consultants at the trial rather than meeting the Appellant's presentation "head on" with detailed rebuttal testimony by jobsite and qualified technical personnel possessing working familiarity with the history of performance of the contract. Moreover, to the extent accounting issues were involved, the Government failed to call any audit witness to support its case in this multi-million dollar appeal.

For its part, the Appellant has seemingly assumed with respect to some of the cost categories claimed that an auditor's verification of actual costs incurred is somehow a substitute for proof of causation. However, its burden of proof is not satisfied without establishing that the costs claimed were caused by the claim event. The audit in this case is not competent evidence of causation.

As a result of these and other problems, our resolution of many issues has been made particularly difficult and time consuming. We have often been left to make our best judgment on voluminous facts, and a record aggregating approximately 12 linear feet.

B. *Total Cost Claim*

The Government maintains that Appellant has submitted a "total cost" claim which should be denied on the basis of a long line of case law disfavoring the "total cost" approach. See *e.g., WRB Corp. et. al. v. United States* [12 CCF ¶ 81,781], 183 Ct. Cl. 409 (1968); *Wunderlich Contracting Co. v.*

Digitized by Google

United States [11 CCF ¶ 80,069], 173 Ct. Cl. 180, 351 Fed 956 (1965); *J.D. Hedin Constr. Co., Inc. v. United States* [10 CCF ¶ 73,076], 347 F.2d 235 (Ct. Cl. 1965). In recent years, the outcry of "total cost" claim sadly has become a knee jerk response stereotyping any claim that happens to be based on contractor estimates and actual costs. The claim in this case is not a "total cost" claim and the precedents cited are inapposite.

Appellant did not simply subtract the estimated or bid costs of it and its subcontractors from their actual costs incurred. Although Appellant generally used the estimated costs of Dyer and CCC as a baseline, it also: 1. adjusted estimated costs upward to correct underestimates and reflect actual quantities; 2. eliminated numerous other cost accounts from consideration because they were not impacted by the DSC; 3. modified actual cost accounts and the claim to eliminate concurrent causes of its increased costs; 4. offered a detailed cost-code-by-cost-code presentation and explanation by highly credible technical witnesses of the nature of the claimed costs and how they were increased by the DSC; 5 demonstrated that the estimates/actual costs presented pertained to a discrete time period and portion of the work, not the entire contract; 6 proved that the nature of the claim event, i.e., the differing site condition, necessarily had a broad impact on the entire concrete removal/replacement process making it particularly difficult to isolate and estimate discrete incremental impacts; and, 7 showed convincingly that Appellant and its subcontractors had substantial experience with concrete removal and replacement.

As is obvious from our decision, further adjustments, modifications, revisions, deductions and/or proof of causation were required for various categories of costs. Nevertheless, the presentation here is not classifiable as a total cost claim simply, as the Government further argues, because it was based in part on subcontractor estimates for the concrete removal/replacement work rather than on estimates prepared by an outside estimator. Appellant's presentation in this case, for the most part is a *micro-level,* detailed analysis by well-qualified witnesses of estimates, actual expenditures and causation related to a pervasive DSC. It is not a broad, simplistic *macro-level* approach properly classifiable as a "total cost" claim.

Someone must estimate a baseline for computing damages, i.e., what the work would have cost had the DSC not been encountered. Ultimately, it is the quality, logic and probativeness of the estimate that is determinative, whether it is prepared by an "outsider" or an "insider." In this case, Appellant generally has established the reasonableness of its own estimates as modified and adjusted herein. The fact that most subcontract accounts were impacted is simply a logical consequence of the nature of the subcontracted work and the scope of the DSC. We have considered the fact that the estimates were internally prepared (with modifications, deductions, etc.) as an evidentiary matter in assigning weight. However, under the circumstances, it is as accurate a method as was reasonably possible to present. Evidence from knowledgeable, careful, analytical "in-house" estimators is in no way to be considered inferior to or degraded when compared with that from "outside" professional consultants. Sometimes the opposite is true. Individual circumstances stand alone.

Many of the Government's contentions are based on admitted inadequacies in the CCC'S initial "yellow sheet" bid estimates. The problem with these arguments is that they are generally irrelevant. The CCC portion of Appellant's claim is based primarily on the later "green sheet" revisions which addressed and corrected deficiencies in the "yellow sheets." By virtue of these revisions, Appellant has convincingly shown, except as noted elsewhere in this opinion, what the reasonable costs of performance would have been "but for" the differing site condition. This is one reason that Appellant's presentation generally is not classifiable as a total cost claim. ICC has made significant upward adjustments to cost codes that, upon reflection, were earlier underestimated. The Government has never adequately refocused and coherently concentrated its arguments on the baseline for the vast majority of the claim items, *i.e.,* the "green sheets." More cogent are the Government contentions that specific cost codes remain unreasonably low even following their upward adjustment in the "green sheets." We have carefully considered these specific contentions in developing our findings. However, the Government has failed to explain through trial testimony its alterna-

©1994, Commerce Clearing House, Inc.

Digitized by Google

tive positions and rebut the testimony of Appellant's witnesses on individual cost items. In general, we consider Appellant's evidence to be the more probative.

C. *Management and Supervision Problems*

The Government contends that Appellant's actual outage period costs were increased in large part because of poor supervision, management, coordination and cooperation, and quality control. It cites voluminous references in the documentary record containing general, conclusory statements to that effect. The Government position is without merit. Not even a "chicken or egg" conundrum is presented by this record. Here, the clear preponderance of the probative evidence supports the Appellant's position that management-related problems stemmed from the differing site condition and the large influx of additional unplanned resources and changes in the planned methods of removing the concrete as necessary to overcome the DSC under accelerated conditions. We have detailed the adverse effects of the DSC in our findings as well as in our entitlement decision.

D. *Scheduling*

The Government's primary scheduling contentions revolve around the testimony of its claims consultants. They assert that: 1. Appellant could not have timely completed the work using the grinder as the sole removal resource for most of outage period removal areas as allegedly planned by Appellant even had there been no differing site condition; 2. therefore, Appellant's cost estimates and its planned schedule were insufficient to complete the work within the time permitted, according to the Government; and 3. using a reasonable schedule and the resources required to meet that schedule, assuming no differing site condition existed, the contractor reasonably would have incurred far greater baseline costs than it anticipated.

For the most part, the Government's arguments relative to scheduling are based on preliminary, rough, abbreviated non-CPM "schedules" prepared by subcontractors well in advance of discovery of the differing site condition. Although the Government has proposed numerous findings dissecting the intricacies and inadequacies of these "schedules" that found their way into the record, we need not address them or their related arguments. Regardless of their adequacy, the preliminary schedules were rendered moot and largely irrelevant when the conditions were encountered.

The alternative schedules prepared by the Government's claim consultant overly criticize and rely on the same preliminary, schedules. These critiques amount to little more than an academic indictment, rather than a convincing impeachment of Appellant's actual ability to complete the work scheduled during the outage period. For example, the Hudson schedules purport to be based on an Appellant plan that indicated that grinding would not commence until January 14, 1987. In fact, initial grinding commenced in late December, 1986, and, before January 1, Appellant had determined that the grinder would be ineffectual and had shifted to other removal methods.

A further fundamental problem with the Government's schedules is that there is no credible factual foundation, documentary or otherwise, for key scheduling assumptions made by its claims consultant. The consultant's scheduling "understandings" were significantly based on hearsay discussions with often unidentified Corps officials. Whether these understandings are accurate or not, they are generally not adequately explained or supported by documentary or testimonial evidence *in the record.*

In any event, Hudson's own alternative CPM analysis, as finally revised, conceded that the Appellant could have completed the project within one week after the end of the outage period, perhaps a "couple of days less." The ultimate differences in the parties' final schedules are relatively insignificant, considering Appellant's use of the more precise Primavera "finest hour" program.

For purposes of quantum, the essential question is whether the Appellant's estimates included sufficient resources reasonably to complete the outage work within the allotted time but for the differing site condition. In general and with the adjustments discussed herein we consider that Appellant's cost estimates were adequate and the best indicator in this record of what timely completion of the work would have cost had no differing site condition been encountered. It follows that Appellant's CPM analysis presented at the hearing, that is based on those estimates, more logically establishes that the work could have been completed by March 6, 1987 with the planned resources as adjusted in this decision. The Government has failed materially to impeach or rebut the logic of Appellant's schedules as presented at the hearing. On this record, it is the generally convincing presentation of Appellant's witnesses, unrebutted by other testimony at the hearing, that is the most

Digitized by Google

credible and persuasive on most of the quantum issues before us, including those related to scheduling.

On the other hand, Appellant seems to argue that the Board's entitlement decision implicitly supported the efficacy of Dyer's schedule for completion of the removal work with the grinder during the outage period. Our prior decision said nothing concerning the adequacy of the Dyer schedule, impliedly or otherwise. It held only that the Dyer grinder would efficiently have removed concrete had the differing site condition not been encountered. Appellant's ability to complete, according to its own schedule offered at trial, required two ten-hour Dyer shifts per day, rather than one. Only with those resources added, and as its estimates have been adjusted and modified in our findings, have we concluded that Appellant would have timely completed the outage work.

E. *Internal Revenue Code "Look Back" Interest*

The Government argues that no "look back" interest has been incurred or will be incurred, and even if incurred, such a penalty would be the direct result of Appellant's negligent failure to approximate, recognize, and include in its taxable income for the appropriate years the amount of any recovery eventually due it as a result of the claim in dispute. It also asserts that Appellant has failed to present to the Board the relevant, governing versions of the Internal Revenue Code and regulations.

We do not address issues related to "look back" interest. Under the Contract Disputes Act, we would have no jurisdiction to resolve "a claim or dispute for penalties or forfeitures prescribed by statute or regulation which another Federal agency is specifically authorized to administer, settle, or determine." 41 U.S.C. s. 605(a). Possible or eventual payment of "look back" interest claimed is for resolution under the pertinent provisions of the Federal tax statues and regulations of the Internal Revenue Service. Such payment has not occurred.

We note that the Government, in this appeal, argues that no such interest penalty ultimately will be assessed. The issue is far from clear. Whether such interest is ever paid; and whether, if it is, it would constitute a valid contract claim and or be an allowable cost under FAR (see 31.205-15) are not matters now ripe for consideration.

CONCLUSION

The Appeal is SUSTAINED in the amount of $2,084,249. It is otherwise denied. Appellant is also entitled to interest pursuant to the Contract Disputes Act commencing February 14, 1989.

[¶ 26,471] Gulf Construction Group, Inc.

ENG BCA No. 5961, October 13, 1993. Contract No. DACW64-90-C-0013.

Site Conditions—Contract Indications, Category I—Material Difference.—Differences between hinge pin keys shown on contract drawings and those the contractor actually removed in rehabilitating a river lock gate did not entitle the contractor to additional compensation, because the differences were not material. The contractor failed to prove that the removal of the differing keys increased its costs or time for the work or that it had relied on a reasonable expectation of different conditions in formulating its bid. The contractor's interpretation that it would not have to remove bolts was unreasonable in view of the fact that three of the four types of pin keepers shown in the drawings were fastened to the hinge apparatus by bolts, and the fourth type consisted of two parts bolted together.

Property—Government-Furnished Material—Installation of Defective Items.—A contractor was not entitled to additional compensation for the costs of attempting to install defective hinge pin keys supplied by the government under a contract to rehabilitate a river lock gate, because it failed to show that the time spent by its crew exceeded that which it should have expected. The government completed installation work using its own resources. None of the work completed after the contractor's attempts to install the improper hinge keys was dependent on that installation.

Delays—Causation—Feasibility of Completion.—A contractor was not entitled to compensation for delay during a period in which the government took over responsibility for completing one of the last operations, because the contractor concurrently caused delay. The

©1994, Commerce Clearing House, Inc.
Digitized by Google

contractor contended that it could have completed work earlier, but that once the government-caused problem that led the government to take over a piece of the work had been identified, there was no justification to hurry to complete other work. However, reasonable and prudent business practice dictate that if the contractor could have finished, it would have. Furthermore, a subcontractor needed for part of the work was not present. Thus, although the government takeover created a government-caused delay barring assessment of liquidated damages, the concurrent contractor-caused delay precluded recovery of damages by the contractor.

For the appellant: Smith, Gunn & Kaster, Baton Rouge, Louisiana, by Steven E. Sanders. For the government: Frank Carr, Chief Trial Attorney, Washington, D.C., and Daniel Keys III, Government Trial Attorney, Galveston, Texas.

Before SOLIBAKKE, PEACOCK, and SHERIDAN, Administrative Judges.

SOLIBAKKE [1], Administrative Judge: The Appellant seeks additional compensation in the amount of $27,248.79, and a two-day time extension, as relief for differing site conditions encountered when components of waterway gate sectors were removed and for defective Government-furnished components to be installed by the Appellant. The claimed equitable adjustment is based on the alleged actual costs to perform difficult work to overcome the differing site conditions and extra work, delay costs, and return of liquidated damages on account of attempted installation of defective Government-furnished items.

The Respondent denies the existence of differing site conditions and, in any event, denies that any additional work was required. While there is no dispute that the Government-furnished parts could not be installed without alteration, the Respondent argues that no additional work was required of the Appellant before it was relieved by the Government of the necessity to perform the particular task involving the defective materials. Instead, the Respondent altered the components and completed their installation using Government resources.

The Appellant filed a pre-hearing memorandum. Following a one day hearing in Houston, Texas, each party filed a post-hearing brief.

FINDINGS OF FACT

The Contract

1. Contract No. DACW64-90-C-0013 (the contract) was awarded by the U.S. Army Engineer District, Galveston, Texas (the Respondent or Corps) to Gulf Construction Group, Inc. (the Appellant or GCG) on January 14, 1990. The contract work, to be performed on the Gulf Intracoastal Waterway, consisted of rehabilitation of the Brazos River Floodgates (BRF) near Freeport, Texas, and the east gate of the east lock of the Colorado River Locks (CRL) near Matagorda, Texas. (Consolidated Board Rule 4 Appeal File and Hearing Exhibits, Respondent's Exhibit 3 (R.4, Exh. R-3)).

2. As awarded, the contract price was $1,249,360.00 (increased by contract modifications to $1,405,269.78), the total estimated sum of 29 estimated quantity, unit priced and fixed price, lump sum payment items. The contract work included, *inter alia*, hinge revisions at both gate sectors of the east gate of the east lock of the CRL. Payment Item No. 19 of the contract listed an estimated quantity of two such revisions at a unit price of $2,500.00 each, yielding an estimated price of $5,000.00. (R.4, Exhs. R-3, R-3a).

3. The Corps' notice to proceed was received by GCG on March 22, 1990. The contract specified 428 days for completion after receipt of the notice to proceed. Therefore, the original contract completion date was May 24, 1991. The performance period was extended a total of 51 days by modifications to the contract. The modified contract completion date was July 14, 1991. According to GCG, the work was substantially complete on Friday, August 23, 1991. The Corps has determined that substantial completion was achieved by GCG on Monday, August 26, 1991. Pursuant to a Construction Special Provision of the contract which specified a rate of $648.00 per day for each day of delay as liquidated damages, such damages were assessed by the Corps through the latter date. (ENG BCA No. 5850, Finding 4;[2] R.4, Exhs. A-7, A-8, R-3a, R-4; Tr. 572, 598-99).

4. The contract included standard Contract Clauses typically found in Corps of En-

[1] The Board adopts the opinion of its Hearing Examiner, Steven L. Reed, Esq., who presided at the hearing of the appeal.

[2] *Gulf Constr. Group, Inc.*, ENG BCA No. 5850, 93-1 BCA ¶ 25,229 at p. 125,663.

Digitized by Google

gineers construction contracts. The following are pertinent to resolution of the appeal:

a. Disputes (APR 1984) FAR 52.233-1.

b. Differing Site Conditions (APR 1984) FAR 52.236-2.

c. Changes (AUG 1987) FAR 52.243-4.

d. Government-Furnished Property (Short Form) (APR 1984) FAR 52.245-4.

e. Default (Fixed-Price Construction) (APR 1984) FAR 52.249-10.

(R.4, Exh. R-3).

5. Certain paragraphs of section 2A of the Technical Provisions of the contract are relevant, in part, as quoted below.

1. Scope. The provisions of this section consist of furnishing all plant, labor, equipment and materials for performing the following work on the two (2) sectors of the East Gate of the East Lock at the Colorado River . . . .

* * * *

(9) Fabricate and install necessary hinge replacement parts.

* * * *

2.10 *Government-Furnished Items.* [No permanent hinge component replacement items are listed].

* * * *

7. REMOVAL AND REINSTALLATION OF SECTORS.

* * * *

7.2.1 *Removing Sector.*

(1) . . . Disconnect grease lines to pins and remove pin keepers and lower pin plug. . . .

* * * *

7.2.3 *Hinge Revisions.*

7.2.3.1 . . . The Contractor shall not proceed with the fabrication of replacement components until the sector has been removed and the existing components inspected by the Contracting Officer. . . . The contract drawings are believed to be accurate, although existing components may differ from that shown on the plans. Where the contract drawings indicate existing components to be replaced with identical components, and the existing component differs substantially from that shown, the new component shall be fabricated to match the existing.

* * * *

7.2.7 *Reinstalling Sector.* . . .

(1) . . . After removal of the undersized lower pin the permanent lower pin shall be reinstalled. . . .

(2) Reinstall the lower pin plug, top and bottom pin keepers and grease lines.

(R.4, Exh. R-3).

6. The lower hinge and the lower hinge pin of the gate sectors to be repaired under the contract were fastened together by one of two devices which functioned as "pin keepers": a "keeper plate" or a "hinge pin key." (R.4, Exh. R-4; Tr. 581-85).

7. Contract drawing No. M-3, entitled "Existing Lower Hinge Details—CRL," among other things, shows details of a keeper plate at the CRL. The keeper plate is similar to a manhole cover. It is fastened atop the lower hinge and hinge pin by 16 bolts. A grease line leading to the top of the pin connects through a hole in the keeper plate. The drawing also includes Note 3, which provides as follows: "Keeper plate may be different from that shown on this drawing. Hinge pin keys such as those shown in the drawings for [the BRF] have been found at CRL. Contractor to verify in the field." (R.4, Exh. R-4; Tr. 620-23).

8. Drawing No. M-9, "Existing Hinge Assembly & Removal—B.R.F.," includes details of the BRF lower hinge and keeper plate. A detail note indicates that the BRF west gate (both sectors) and east gate south sector lower hinges and pins are connected by hinge pin keys, not a keeper plate. Absent a keeper plate, the pin key does not preclude connection of the lower hinge grease line as it leads directly to the top of the lower pin. The keeper plate detail, in two separate notes, specifically indicates that the keeper plate shown is existing at the BRF east gate north sector. The keeper plate shown is similar to that shown for the CRL on Drawing No. M-3, except that only eight bolts fasten the plate to the hinge. (R.4, Exh. R-4).

9. Drawing No. M-10, "Pins, Bushings and Thrust Washers—B.R.F.," includes details of a lower hinge pin key. The key is a nearly two-foot long inverted-T-shaped steel bar, consisting of two connecting parts bolted together, when installed, near one end of the bar by a single bolt and nut. The hinge pin key also has a vertical plate and horizontal flange on each end to be installed flush against and into a slot in the outer diameter of the lower hinge. The key is mounted across the top of the hinge and hinge pin between "keeper lugs" (shown on Drawing Nos. M-11 and M-12) and across and

©1994, Commerce Clearing House, Inc.

Digitized by Google

through a "key slot" in the top of the pin. (R.4, Exh. R-4; Tr. 521-25).

10. Drawing No. M-11, "Lower Hinge Details BRF," includes a detail showing an "Alternate Hinge Pin Key." The alternate key is nearly identical to the key shown on Drawing No. M-10; however the alternate key differs in that it is a one-piece item rather than two and it connects to the hinge through the key's vertical plate on each end of the key by way of two bolts rather than a horizontal flange secured in a slot on the hinge. A note adjacent to the drawing detail provides: "This type hinge pin key was found at gates on the [CRL] and may exist at [the BRF] in lieu of the key shown on other drawings." A separate note provides: "Existing lower hinge at CRL similar." (*Id.*).

Lower Hinge Pin Key Removal

11. On May 10-13, 1991, in conjunction with other work to remove the gate sector, GCG removed a portion of the lower hinge pin key at the CRL east gate north sector. The key was broken into pieces. Portions at each end of the key, on opposite sides of the hinge, were missing. One piece remained in the key slot. It was difficult to remove. (R.4, Exhs. A-1, R-8, R-9; Tr. 515, 527, 547-54, 607, 626-27, 653-54).

12. On those same dates, GCG also removed the lower hinge pin key at the south sector of the same gate. The key was similar to that shown on Drawing No. M-10, except that it lacked a horizontal flange but was fastened to the hinge by four bolts. It was similar to that shown on Drawing No. M-11, in that it was bolted by four bolts through a vertical plate at each end of the key to the outer surface of the hinge, but differed as it was a two-piece item. In other words, the key was a combination of and similar to the lower hinge pin keys shown on Drawing Nos. M-10 and M-11, but not identical to either. (R.4, Exhs. A-1, A-12, R-4, R-8, R-9; Tr. 514-26, 543-48, 569, 585-87).

13. GCG claims that removal of the CRL lower hinge pin keys, in particular the broken piece remaining at the north sector, required a full day's work, amounting to performance of $4\frac{1}{2}$ extra hours of labor (overtime) and equipment use on May 12-13, 1991. No GCG daily report for May 12, 1991, is in the record. The Corps daily report for May 12, 1991, notes no problem with removal of lower hinge pin keys. The GCG daily report for May 13, 1991, notes "considerable time" lost removing the broken north sector lower hinge pin key, but also includes two report entries concerning delay on account of difficulties in removing the north sector lower hinge pin. The report shows that the north sector lower hinge pin was removed at 11:25 a.m. The Corps daily report for May 13, 1991, indicates that the north sector lacked a hinge pin key; it gives no hint of any delay attributable to removal of the hinge pin key. (R.4, Exhs. A-3, R-8; Tr. 528-36, 549-50, 606-08).

14. GCG's President testified that GCG did not expect to remove bolts or broken parts, that removal of the lower hinge pin keys at the CRL should have taken only one day, and that removal of the lower hinge pin keys at the CRL required about 2-3 hours longer than removal of comparable items at the BRF. No contemporaneous documentation records that information. At the time of his testimony concerning the hours expended in removing the lower hinge pin keys, GCG's President mistakenly was referring to a GCG daily report for August 1991, when new lower hinge pin keys were being installed. He admitted some uncertainty about particular dates and the sequence of events, relying instead on GCG's written reports. (R.4, Exhs. A-1, A-3, R-8; Tr. 528-41, 551-54, 562-68, 609-17, 630-32).

15. Removal of lower hinge components and bolts was difficult on account of corrosion, because the work occurred underwater in "zero visibility," because "it was impossible to know what you had until you got down there," and "because [the bolts and hinge castings were] covered up with a foot or two of oyster shells." (ENG BCA No. 5850, Finding 22 [3]; Tr. 627).

16. At the time of removal in May 1991, the Corps' site personnel observed the CRL lower hinge pin keys. By daily report dated May 13, 1991, and by letter dated June 11, 1991, GCG described the lower hinge pin keys that had been removed at the CRL and notified the Corps that the items differed from those shown on the contract drawings. The one intact lower hinge pin key was preserved. The GCG letter dated June 11, 1991, also gave notice of an intent by GCG to seek additional compensation from the Corps on account of alleged differing site conditions. The Corps did not respond to GCG's letter. (R.4, Exhs. A-1, A-7, A-12, R-8).

Lower Hinge Pin Key Installation

17. In an effort to standardize the parts for all gate sectors at the BRF and the CRL, the

[3] N.2, *supra* at p. 125,665.

Digitized by Google

Corps furnished new lower hinge pin keys to be installed at the CRL. The items furnished were identical to those shown on contract Drawing No. M-10, *i.e.*, two-piece lower hinge pin keys with a horizontal flange but no bolt holes through the vertical plate on each end for fastening to the lower hinge. (R.4, Exh. A-11; Tr. 594).

18. On August 21, 1991, GCG commenced reinstallation of the CRL north sector. The gate sector, the upper and lower pins, and other related items were installed. GCG's diver then proceeded to attempt to install the new Government-furnished lower hinge pin key. After over two hours of effort, GCG's diver was unable to install the pin key, attributing (mistakenly, it was later learned) that consequence to an existing broken bolt shaft found on the hinge. A temporary pin key was installed. (R.4, Exhs. A-3, A-4; Tr. 533, 564, 655-69).

19. On August 22, 1991, GCG commenced reinstallation of the south sector. After the lower hinge pin was in place, GCG's diver attempted to install the new Government-furnished lower hinge pin key. After about one hour, GCG's diver partially had installed the pin key. (R.4, Exhs. A-4, R-6; Tr. 533, 564, 680).

20. On August 23, 1991, GCG attempted to complete installation of both CRL sectors. Other work to complete both sectors, in addition to attempting to complete the installation of both lower hinge pin keys, was accomplished. Complete installation of the lower hinge pin keys on both sectors proved problematic. It was discovered that the keys' horizontal flange was thicker than the slot in the hinge casting. Therefore, proper, complete seating of the pin key was blocked. A GCG diver confirmed the slot measurements, which were then reported to Corps personnel. The GCG diver, his tender, and a laborer worked on the problem, as well as other gate sector installation tasks, for over four hours. (R.4, Exhs. A-2, A-3, R-8; Tr. 517-22, 532, 557-65, 657).

21. When it was determined by the Corps that the horizontal flanges would not fit, the flanges were removed. As modified, the pin keys could not be securely fastened to the hinge because the vertical plate on each end of the keys lacked bolt holes. At that time, on Friday, August 23, 1991, the Corps' Administrative Contracting Officer (ACO) relieved GCG of any further responsibility to install the pin keys. Corps officials decided to install the keys, using Corps divers, starting on Monday, August 26, 1991. (R.4, Exhs. A-2, A-7, A-11, R-8; Tr. 522-23, 532-38, 571, 590, 639).

22. GCG claims that installation of the CRL lower hinge pin keys required performance of 13 extra hours of labor (including 11 hours of overtime) and equipment use on August 21-23, 1991. GCG also claims ten extra hours of services by its marine equipment and construction subcontractor on August 21-22, 1991. GCG's President testified, based on his experience at other projects, that installation of the new lower hinge pin keys should have required no more than two hours each. He also testified that, when the true cause of the problem with the pin keys was discovered on August 23, 1991, GCG could have been substantially complete with all other work on the CRL gate sectors within one-half day, *i.e.*, during the balance of that same day, but for the pin keys problem. (R.4, Exh. A-3; Tr. 539-41, 568-71, 639-42).

23. Nothing in the record indicates what work, if any, was accomplished by GCG on the project during Saturday and Sunday, August 24-25, 1991. (R.4, Exhs. A-3, A-7).

24. On August 26, 1991, GCG completed installation of the top hinge pin and connected the lower hinge grease line at the CRL south sector. GCG's electrical subcontractor, which had not worked on August 23, 1991, completed its work at the CRL south sector. Punchlist and demobilization work at the BRF and the CRL was accomplished by GCG. Concurrently, Corps divers were attempting to install the modified lower hinge pin keys. The Corps' ACO considered the contract substantially complete. (R.4, Exhs. A-2, A-5, A-7, A-13; Tr. 534-35, 571-78, 595, 644, 659, 686-89).

25. GCG's President testified that work to install the CRL south sector top pin was not completed until August 26, 1991, because "[t]here wasn't any hurry until" all lower hinge work was completed. Once it was clear to him that installation of the lower hinge pin keys was a problem and would not be completed by the Corps until Monday, August 26, 1991, he determined that GCG should not "work night and day around the clock to get that top pin in." (Tr. 642-44).

26. GCG continued to perform punchlist and demobilization work through August 28, 1991, and beyond. The Corps further modified the CRL lower hinge pin keys. Corps divers completed installation of the keys on August 28, 1991. (R.4, Exhs. A-2, A-5, A-7, A-13, A-14, A-15; Tr. 575-76, 590, 687-93).

GCG's Bid

27. No direct evidence was provided by GCG to explain how its bid price for hinge revisions, Payment Item No. 19, $2,500.00 per revision, was formulated. The other five bids for Payment Item No. 19 ranged from $10,715.00 per revision to $40,000.00 per revision. The pre-bid Government Estimate for Payment Item No. 19 was $55,479.00 per revision. GCG prepared its bid for the entire contract as a lump sum. For example, certain equipment was to be used throughout the life of the project; therefore, the cost of its use was calculated for the entire performance period. After all costs were similarly calculated, unit prices were entered on the bidding schedule solely for the purposes of receiving estimated payments as the work progressed. Costs were not allocated to specific bid item prices based on the projected cost of the work required by that bid item. (ENG BCA No. 5944, Tr. 275-82; ENG BCA No. 5945, Exh. A-8 [4]).

The Claim and Appeal

28. In a letter dated June 11, 1991, GCG notified the Corps' ACO that removal of the CRL lower hinge pin keys involved differing site conditions and resulted in increased costs and performance time. No specific dollar amount was requested. (R.4, Exh. A-1).

29. In separate written daily reports dated August 23, 1991, GCG's superintendent and the Corps' quality assurance representative disagreed over whether any extra time and expense had been experienced by GCG while attempting to install the new pin keys. (R.4, Exhs. A-3, R-8).

30. In a letter dated September 4, 1991, GCG again notified the Corps' ACO that removal of the CRL lower hinge pin keys involved differing site conditions, that installation of the new pin keys was complicated by the initial discovery of differing site conditions, and that the Corps had furnished new pin keys that did not fit and could not be installed until modified. GCG suggested that pin key installation had also resulted in increased costs and performance time. However, no specific dollar amount was requested. (R.4, Exh. A-2).

31. In a letter to the Contracting Officer dated September 12, 1991, GCG claimed $27,248.79, for extra costs caused by the differing site conditions, the extra effort and time expended in attempts to install the new lower hinge pin keys, and for relief from liquidated damages. The letter referred to GCG's letters dated June 11 and September 4, 1991, GCG's daily reports, and spoken communications with Corps representatives. The letter noted problems with resolving earlier "changes orders and modifications," requested a Contracting Officer decision, and included detailed cost breakdowns for labor, equipment, time-related costs, and markups. It was received by the Corps on September 18, 1991. (R.4, Exh. A-3).

32. A Contracting Officer decision dated November 18, 1991, considered and denied only that portion of the claim related to removal of the CRL lower hinge pin keys in May 1991. The decision did not address GCG's claim as it related to the attempts to install new pin keys in August 1991. (R.4, Exh. A-8).

33. In a letter to the Contracting Officer dated January 10, 1992, GCG's counsel requested reconsideration of GCG's claim, particularly as it related to installation of new pin keys. (R.4, Exh. A-9).

34. In a second Contracting Officer decision dated March 18, 1992, the claim was again considered and denied. (R.4, Exh. A-11).

35. GCG timely appealed by counsel's letter mailed to the Board on April 9, 1992. (R.4, Exh. R-1; Board Correspondence File).

DECISION

The Parties' Positions

Concerning removal of lower hinge pin keys, GCG argues that the items removed differ from those shown on the drawings and that one item was broken and more difficult to remove, causing extra costs and time for performance. The Corps responds that GCG, in its bid, should have anticipated various types of lower hinge pin keepers, including keeper plates and/or pin keys. Thus, the Corps argues, GCG should have expected to remove a keeper plate fastened by as many as 16 bolts. Since GCG removed one pin key with no bolts (a broken piece of a key) and another held by only four bolts, the degree of difficulty was less than reasonably should have been expected.

Regarding installation of new lower hinge pin keys, the contract required GCG to supply those items. Instead, the Corps obtained new pin keys which proved to be defective in

[4] The parties agreed that evidence from all appeals under the contract may be considered in any of the appeals. (ENG BCA No. 6015, Tr. 26-27).

Digitized by Google

that they could not be installed without alteration. After abortive attempts to install the defective items, the Corps relieved GCG of any further responsibility for that item of work. GCG contends that extra costs and time were expended in attempting to install the new keys and GCG was delayed in its completion of the contract work by the Corps' completion of the work to install the new keys. The Corps contends that GCG spent no extra time unsuccessfully attempting to install the new pin keys before the Corps relieved GCG.

Jurisdiction

The contract is subject to the Contract Disputes Act, 41 U.S.C. §§ 601-13 (1988, Supp. II 1990, & Supp. III 1991). As the contract work completion drew near in August 1991, the parties generally had a disputatious relationship. (Finding 31). One appeal under the contract had already been filed with the Board. *Gulf Constr. Group, Inc.*, ENG BCA No. 5850, 93-1 BCA ¶ 25,229 at p. 125,665 (Finding 26).

As GCG unsuccessfully attempted to install the new lower hinge pin keys on August 21-23, 1991, a dispute arose between the parties. By August 23, 1991, the parties were documenting the specifics of their disagreement and their respective positions. A few days later, in a letter dated September 4, 1991, GCG bolstered its contentions by relating back to the perceived problems with removal of the lower hinge pin keys and the fact that GCG had notified the Corps, in May 1991, of the differences between the items removed and those shown on the drawings. (Findings 16, 28-30).

GCG filed its claim letter with the Contracting Officer on September 12, 1991. The claim events which underly the appeal were, by that date, disputed. In that letter, GCG submitted a written claim for a sum certain and demanded a Contracting Officer decision. In two decisions, the Contracting Officer denied the claim. GCG timely appealed to the Board. (Findings 4a, 31-35). The Board has proper subject matter jurisdiction.

Lower Hinge Pin Key Removal—Differing Site Conditions

The contract provides that an equitable adjustment shall be made under the Differing Site Conditions provision when "... subsurface or latent physical conditions at the site ... differ materially from those indicated in [the] contract ... and cause an increase or decrease in the Contractor's cost of, or the time required for, performing any part of the work ...." (Finding 4b). In addition, among other things, the claimant must prove the reasonableness of its interpretation of the contract indications and its reliance on that interpretation. *Weeks Dredging & Contracting, Inc. v. United States* [38 CCF ¶ 75,356], 13 Cl.Ct. 193 (1987), *aff'd*, 861 F.2d 728 (Fed. Cir. 1988); *Shumate Constructors, Inc.*, VABCA No. 2772, 90-3 BCA ¶ 22,946.

For several reasons, GCG's claim of differing site conditions in connection with removal of the CRL lower hinge pin keys fails. First, the Board concludes that the lower hinge pin keys removed by GCG did not *materially* differ from the contract indications. Two similar types of pin keys were shown on the contract drawings. The differences between the two, in form and function, are not significant. The hinge pin keys removed by GCG were not identical to either of those shown on the drawings; however, they were a combination of and similar to both. There is no material difference among the two types of pin keys shown on the drawings and the type actually removed. (Findings 9-10, 12).

Second, GCG failed to prove that removal of the pin keys increased its cost of, or the time required for, performance of the contract work. The Board is convinced that the work involved in removing the keys was difficult; however, that is not remarkable or unforseeable given the environment in which the work was performed. (Findings 11, 13, 15). Difficult work, without more, does not entitle a contractor to an equitable adjustment under the differing site conditions provision of the contract. *Gulf Constr. Group, Inc.*, ENG BCA No. 5850, *supra* at p. 125,667-68 (Difficult Bolt Removal).

GCG claims that extra time in the form of overtime on May 12-13, 1991, was incurred during removal of the keys, in particular the broken key. At best, the claim of overtime is a naked assertion without support; at worst, it is contradicted by the facts. GCG's contemporaneous record of performance for May 12, 1991, is missing from the record. GCG's report for May 13, 1991, does indicate a problem with removal of the broken pin key; however, other problems are also noted on that date. More to the point, removal of the lower hinge pin, which *must* follow removal of the lower hinge pin key, occurred at 11:25 a.m. The record clearly shows that no overtime on May 13, 1991, was directly caused by pin key removal. (Findings 11, 13).

Overall, the time spent on removal of the CRL lower hinge pin keys is not well estab-

©1994, Commerce Clearing House, Inc.

Digitized by Google

lished in the record. (Findings 11, 13-15). If the Board accepts the overtime alleged by GCG as factual, that alone does not prove that GCG necessarily incurred extra costs on account of differing site conditions. Stated another way, proof of entitlement does not necessarily follow from proof of performance of overtime work. GCG's President testified that removal of pin keys at the CRL took longer than the comparable operation at the BRF. The Board is unable to give full credit to that assertion; however, even if true, it does not prove differing site conditions and tells the Board nothing about GCG's pre-bid expectations.

Third, GCG failed to prove reliance. It omitted any specific proof of its bid formulation. The Board concludes from this scant record that GCG assigned too few resources, at least in the specific line item bid price, for lower hinge revision work. (Findings 27).

Fourth, GCG's interpretation of contract indications was not reasonable. GCG established that it did not expect to remove bolts. Assuming that such was its pre-bid interpretation of the contract indications, the Board rejects that interpretation as well outside the zone of reasonableness. Four possible types of pin keepers (keeper plates or pin keys) were depicted in the drawings. Three of four were fastened to the hinge apparatus by bolts. The remaining pin key type consisted of two parts bolted together. No reasonable contractor could have determined that removal of bolts would not be required as a part of the removal of pin keepers. (Findings 5-10, 14).

Lower Hinge Pin Key Reinstallation

The contract did not require the Corps to provide new lower hinge pin keys for the CRL. GCG was obliged to supply the items. However, the Corps chose to furnish the items. (Findings 5, 17).

When the Corps undertook to supply Government-furnished property to be used on the project, it assumed the duty to supply items suitable for the intended use. *S.S. Mullen, Inc. v. United States* [12 CCF ¶ 81,590], 182 Ct.Cl. 1, 389 F.2d 390 (1968).

The Corps was on notice that the old lower hinge pin keys removed by GCG in May 1991, differed from those shown in the drawings. The new Corps-furnished items proved to be unsuitable. Given these facts, the contract provides for an equitable adjustment under the Government-furnished Property and Changes provisions. (Findings 4c, 4d, 16, 21, 26).

On August 21-22, 1991, during a total of three hours, GCG's dive crew unsuccessfully attempted to install the defective lower hinge pin keys supplied by the Corps. The major work feature being performed by GCG on those dates was to reinstall both CRL gate sectors and all components. On August 23, 1991, GCG attempted to complete reinstallation of both sectors, including installation of both pin keys. On that date, GCG's dive crew worked on various tasks, including attempted installation of the pin keys, for four hours. The record does not show how much dive crew time was devoted exclusively to the pin keys or to other work. GCG neither completed installation of the pin keys nor all other work to reinstall the gate sectors. Remaining work, finalized on August 26, 1991, included completion of the reinstallation of the upper hinge pin, certain electrical components, and a lower hinge grease line at the south sector. None of the work completed on August 26, 1991, is dependent on installation of the lower hinge pin key. (Findings 5, 8, 18-20, 24).

There is insufficient proof that the time spent by GCG's dive crew in attempting to install the pin keys exceeded that which should have been expected. First, the actual time spent has not been definitely proved; it was less than seven and more than four hours. Second, GCG did not prove a reliable base for comparison, *e.g.* a pre-bid or other reasonable estimate. GCG's President testified that comparable work, in his experience, took no more than four hours. No specific details, description, or other determining factors on which that judgment was based were offered. Without more, the Board is unable to assign sufficient weight to the testimony to allow any recovery. (Findings 18-20, 22, 27).

Lacking convincing clear proof of injury, the Board leaves the parties where it found them. GCG failed to prove that it had incurred any extra costs as of the time and date when the Corps decided to complete the pin key installation work using its own resources. Failure to prove extra costs defeats that aspect of the claim. "The claimant bears the burden of proving the fact of loss with certainty, as well as the burden of proving the amount of loss with sufficient certainty so that the determination of the amount of [extra costs] will be more than mere speculation." *Willems Indus., Inc. v. United States* [8 CCF ¶ 71,693], 155 Ct.Cl. 360, 376, 295 F.2d 822, 831 (1961), *cert. denied*, 370 U.S. 903 (1962).

Digitized by Google

Delay

GCG claims time-related costs for remaining on the job after Friday, August 23, 1991, through Monday, August 26, 1991. GCG also seeks return of liquidated damages withheld by the Corps during that same time period. When the Government delays a contractor's performance such that overall completion is delayed, the Government is liable for time-related extra costs incurred by the contractor on account of the delay. *L.L. Hall Constr. Co. v. United States* [11 CCF ¶ 80,791], 177 Ct.Cl. 870, 379 F.2d 559 (1966). However, if the Government-caused delay is concurrent and intertwined with other delays for which it is not responsible, there is no recovery by the contractor for time-related extra costs. *Commerce Int'l Co. v. United States* [9 CCF ¶ 72,781], 167 Ct.Cl. 529, 338 F.2d 81 (1964). Finally, if any Government-caused delays, or other unforseeable causes of delay beyond the control and without the fault or negligence of the contractor, even if concurrent with contractor delay, are established, such delays may serve as a defense for the contractor against an assessment by the Government of liquidated damages. (Finding 4e). "[W]here a contractor is prevented from executing [its] contract according to its terms, [the contractor] is relieved from the obligations of the contract (as to time of completion) and from paying liquidated damages." *Levering & Garrigues Co. v. United States*, 73 Ct.Cl. 566, 578 (1932).

The modified contract completion date was July 14, 1991. There is no dispute that the work was substantially complete on August 26, 1991. On that date, GCG completed all work for which it was responsible and which was necessary to allow unlimited operation of the CRL. GCG's President testified that GCG could have finished all work on August 23, 1991, but did not on account of the pin keys problem. He reasoned that once the source of the problem with the pin keys was identified, there was no "hurry" and no justification to "work night and day" to complete all other work. (Findings 3, 24-25, 33).

The Board concludes that GCG delayed completion of the work from the modified contract completion date to August 26, 1991.[5] For two reasons, the Board is unable to agree with GCG that it could have finished all work on August 23, 1991. First, it did not do so. Reason and prudent business practice dictate that if GCG could have finished, it would have. Second and more specific, electrical work remained and was completed on August 26, 1991. The electrical subcontractor did not work on August 23, 1991; therefore, the electrical work could not have been finished. As for the intervening weekend, GCG apparently chose not to complete the work for which it remained responsible. Lacking any explanation other than that provided by GCG's President, as set forth above, the Board concludes that such work would not have been cost effective. (Findings 23-25).

There is no dispute that the Corps relieved GCG of the responsibility for performing installation of the CRL lower hinge pin keys on August 23, 1991. (Finding 21). At that point, the Board concludes, a Corps-caused delay ensued and ran concurrently with GCG's delay in completion. The Board holds that no liquidated damages may be assessed against GCG after August 22, 1991.

Liquidated damages at a daily rate of $648.00, were withheld by the Corps through and including August 26, 1991. GCG is entitled to return of four days' liquidated damages, $2,592.00, for the period August 23-26, 1991, inclusive.

CONCLUSION

The appeal is SUSTAINED IN PART. GCG is entitled to $2,592.00, plus interest in accordance with the Contract Disputes Act, from September 18, 1991 (Finding 32), until paid. *Ruhnau-Evans-Ruhnau Assoc. v. United States*, 3 Cl.Ct. 217 (1983); *JEM Dev. Corp.*, ASBCA No. 42872, 92-1 BCA ¶ 24,709. In all other respects, the appeal is DENIED.

---

[5] The conclusion as to the start date of GCG's delay, that is, the modified contract completion date, is limited and applicable to the Board's discussion of liquidated damages in this appeal only. Neither party purported to prove anything in this appeal concerning delays which may have been experienced prior to August 23, 1991.

[¶ 26,472] Soletanche Rodio Nicholson (JV)

ENG BCA Nos. 5796, 5891, October 29, 1993. Contract No. DACW03-89-C-0041.

Site Conditions—Unusual Conditions, Category II—Ground Stresses.—Rock that was unexpectedly difficult to excavate from a project site constituted a Category II differing site condition because the rock had been subjected to unusual and unforeseeable ground stresses. The compressive ground forces at the project site differed significantly from the norm and were not generally recognized as inherent in the contractor's work. Moreover, the contractor could not have anticipated the rock's compressive strength from the contract specifications or drawings or from its own prebid testing of rock samples taken from the site. The rock reacted differently in out-of-ground testing than it did on the site.

Site Conditions—Inspection—Subsurface Rock.—A contractor evaluated an excavation site appropriately, even though its method of testing the strength of subsurface rock did not take compressive ground stresses into account, because the contractor's methodology reflected trade custom and a reasonable appraisal of conditions at the site. The contractor conducted laboratory tests on a sample of rock quarried from the site. The rock reacted differently in out-of-ground testing than it did on the site, where it was subjected to unusual ground stresses. However, the contracting parties had no reason to believe that unusual stresses existed on the site. In the absence of any indication of unusual stresses, the normal trade practice is to measure the unconfined strength of rock.

Defaults, Excuses—Equipment Problems Caused by Site Conditions—Impossibility of Performance.—A contractor's failure to complete its excavation contract was excusable because the extremely low production rate caused by a differing site condition made it legally, commercially, and practically impossible to continue performance. On the basis of a reasonable assumption that normal ground stresses would be encountered at the site, the contractor had proposed and the government had accepted the use of a rock mill as a performance method. However, because of unusual ground stresses on the site, the rock exhibited great compressive strength, and the excavation could not be performed with a rock mill.

For the appellant: Smith, Pachter, McWhorter & D'Ambrosio, Vienna, Virginia, by Val S. McWhorter and Mark E. Hanson. For the government: Frank Carr, Chief Trial Attorney, Washington, D.C., and James R. Daugherty, Government Trial Attorney, Little Rock, Arkansas.

Before JOCKISCH, SOLIBAKKE, and SHERIDAN, Administrative Judges.

JOCKISCH, Administrative Judge: In these timely appeals under the Contract Disputes Act of 1978, Appellant seeks to overturn Respondent's termination for default and to recover $3,137,622 for encountering a differing site condition at the project site. The appeals have been consolidated, as the essential facts and issues of each appeal are the same and as a decision in one of the appeals is tantamount to a decision of the other appeal. The issue of entitlement is to be decided at this time, with quantum reserved. Following lengthy negotiations and discovery efforts engaged in by the parties after the appeals were filed, a two week hearing was held in November, 1992, and the parties completed briefing of the appeals during June, 1993.

FINDINGS OF FACT

As most of the *general* facts pertaining to these appeals are not in dispute, the Board incorporated much of the parties' joint stipulation of facts into its findings.

1. Shortly after completion of the Beaver Dam located on the White River, Carrol County, Arkansas, in the 1960's, a seepage problem was discovered at Dike No. 1 of the dam. (Tr. 5-55). In May 1984, a reconnaissance report prepared under the dam safety program recommended that alternatives be considered for correcting the seepage problem. Mr. Charles Deaver, chief of the Little Rock District's geology section, was essentially responsible for considering the "cut-off" wall alternative. (Tr. 5-60). Mr. Deaver reviewed other cut-off wall projects including those performed by the Bureau of Reclamation and other Corps districts. (Tr. 5-61). Further, Mr. Deaver contacted construction

Digitized by Google

contractors with experience relating to cut-off walls and rock cutting. (Tr. 5-65, 78). This led Mr. Deaver eventually to contact Soletanche, Inc., which specialized in the construction of slurry walls, trench excavation, and concrete walls. (Tr. 3-11-16). Soletanche had performed 94 projects using both the "4000" and "12000" model hydrofraises. (Tr. 2-72-89). The hydrofraise "4000" excavation capability was through limestone of 14,000 p.s.i. unconfined compressive strength. (Tr. 2-89, 90). A hydrofraise is a rock cutting machine, crane mounted with rotating wheel cutting pics (teeth). (Tr. 1-43-46).

2. Mr. Deaver provided geologic data, including the results of unconfined compressive strength tests on rock in the area of Beaver Dam, to Soletanche and other contractors. (Tr. 5-91, 109). Soletanche responded to Mr. Beaver that, based on the geologic information, including rock strength, Respondent had provided, it believed the hydrofraise could perform the rock excavation for the cut-off wall at Beaver Dam. (R.4, Tab O; Tr. 5-66, 75, 116, 120, 121). Experts for both parties agreed that unconfined compressive strength of rock is the main criterion used by the industry to determine the strength of rock and its cuttability. (Tr. 1-171; 4-21; 5-110; 8-216). Both Appellant and Respondent believed the hydrofraise could perform the project work at the time of the early discussions between the parties, which belief continued until the commencement of the actual excavation. (Tr. 1-56; 5-73, 74).

3. On April 19, 1988, the Government published a notice in the *Commerce Business Daily* that a Request For Proposals (RFP) would be issued for work to construct a concrete cutoff wall at Dike No. 1, Beaver Dam. (R.4, Tab D). The notice stated that a firm fixed price contract would result and that offerors would be required to submit separate technical and cost proposals, from which the Government reserved the right to award the contract without further negotiations. Soletanche, Inc., G. Rodio & Co., and Nicholson Construction Company, formed a joint venture titled Soletanche Rodio Nicholson Joint Venture for the purpose of bidding on and performing the contract for the Beaver Dam cut-off-wall. The Joint Venture agreement stated that Soletanche would serve as the sponsoring firm of the joint venture, with full responsibility for all technical and contractual matters. (Tr. 1-40).

4. In November 1987, Appellant, as well as other potential contractors, had suggested to Respondent that a full scale test with a rock-mill machine be performed at the site. Respondent would not allow a test at the site but suggested that Appellant make a test at a nearby quarry which it asserted had rock of the same formation as the rock at the project site. (Tr. 3-191, 192; 5-104; App. Exh. 78).

5. In December 1987, Appellant visited the site and selected seven samples of rock for testing (four from the quarry and three from Corps core boxes of Dike No. 1 material). Appellant sent these samples to Dr. Russell Miller at the Earth Mechanics Institute, Colorado School of Mines, for testing cuttability using a hydrofraise 12,000 pic (cutting tooth) and equivalent force. (Tr. 3-195, 198; 5-54, 55). Dr. Miller concluded from the linear cutting tests the following:

> Comparing the average physical properties, it can be concluded that the two sources of Rock are fairly similar. An exception is the tensile strength for the Samples is almost twice that for the Core. Abrasivity is also higher for the Samples from the quarry. *Using only the physical properties as a guide, it might be concluded that the Rock on site would be easier to cut than the Rock from the quarry.* [Emphasis Added] (App. Exh. A-32).

He also concluded that, based on the penetration rate per revolution achieved in the linear test, an instantaneous production rate of 10 square meters per hour should be expected. He also stated the following: (Tr. 4-60, 83, 84).

> 1) The estimated maximum normal load available per pic (2 tonnes) is sufficient to attain 0.20 inch penetration per revolution of the cutterhead....
>
> 2) Considering inefficiencies and losses, the actual performance will probably be between 0.10 and 0.20 inch per revolution of the cutterhead....
>
> 3) Good chipping action in the four samples as compared to the sandstones....
>
> (App. Exh. A-32).

6. In March, 1988, Respondent provided Appellant an information paper "to provide general information or data on the dam and proposed cutoff wall" and to inform that "of the alternatives studied to control seepage, a concrete cutoff wall has been recommended as the most advantageous and cost effective method." Respondent included as a part of the "Information Paper" a description of the geology of the site and rock strength distribution data "derived from over 200 rock core samples selected from both random and

©1994, Commerce Clearing House, Inc.

Digitized by Google

continuous (contiguous) zones (depths) in drilled borings at Dike 1." Respondent included the test data and a table of rock strength versus percentage of samples tested which showed the following:

Strength (psi)	*Percent of Samples*
1,000 to 6,000	23
7,000 to 11,000	45
12,000 to 16,000	23
17,000 to 21,000	7
over 21,000	2

(Tr. 2-98; App. Exh. A-41).

7. Appellant reviewed the information paper and concluded that since the vast majority of rock was below 26,000 psi for which the hydrofraise 1200 was designed and built to excavate, it would submit a proposal for the Beaver Dam cutoff wall when the request for proposals was issued by Respondent. (Tr. 2-98-103).

8. Figure 1, of Appendix A of the specifications indicated that the "Boone Formation" present in the foundation of "Dike 1" was to be found in the "Kirk Mountain Quarry" which was in close proximity to the excavation site. (Stip. 29; R.4, Tab E). Respondent had performed "Los Angeles" abrasion tests on rock samples from the Kirk Mountain quarry, which it included in the information provided prospective bidders. (Tr. 5-154). Further, Paragraph 2.1.4 of Appendix A encouraged offerors to obtain their own samples and perform their own tests to determine cuttability and excavatability of the rock expected at the project site. (R.4, Tab C). On August 25, 1988, Soletanche was given access to the Kirk Mountain quarry located near Beaver Dam. It selected and transported a large block of rock from the quarry offsite for full scale testing in Montereau, France. Also, core samples of the project area were obtained by it and submitted for cuttability testing to the Colorado School of Mines, which used the test methods described in Finding No. 5. These samples also were tested for compressive strength, tensile strength, acoustic velocities, and anchor abrasion. Based on the test results from France and the Colorado School of Mines, Appellant determined that a "hydrofraise" could excavate the cut-off wall even with "minor areas of high strength rock" present and that the excavation rates in the field could be estimated with a relative degree of confidence for bidding purposes.

9. Though Respondent later questioned the suitability of the rock sample taken from the Kirk Mountain rock quarry, which it had indicated to bidders to be representative of the rock formation to be found at the project site, Respondent's representatives, at the time, believed the rock sample to be representative of the rock to be excavated at Dike 1 and, at the time, offered no objection to the sample taken by Appellant. (Tr. 5-132-134).

10. The tests at Montereau, France, by the Paris School of Mines, established that the rock sample block, 5 feet 7 inches by 4 feet 3 inches weighing approximately 30,000 pounds, had an unconfined compressive strength of 25,000 PSI, which was higher than all but 2% of the test sample results provided potential bidders by Respondent in the request for proposals. (Stip. 23; Tr. 1-201, 202; 2-98, 130, 131).

11. The Paris School of Mines and the Colorado School of Mines tests on the rock and the cores produced unconfined compressive strength test results which were very similar. (Tr. 1-203; 2-120-121). Respondent raises one issue concerning another velocity test on the "Montereau rock" performed by Appellant's employees which appears to indicate a rock strength less than the other test results. Because of the manner in which that test was taken, very haphazardly, and because of the subsequent tests taken which provided confirming results of the earlier tests by the Colorado School of Mines and the Paris School of Mines, the Board considers the one non-conforming test to be an anomaly to be given little weight. (See Tr. 2-135, 135, 138, 190, 193; 4-56). The test of the rock sample at Montereau, France cost Appellant approximately $200,000. (Tr. 2-182-183).

12. Appellant used the same hydrofraise it used on projects at Monaco and at Mud Mountain, Seattle District Corps of Engineers, to excavate through the test block at Montereau, France. (Stips. 24, 62; Tr. 137-139). The project at Monaco required the hydrofraise 12000 to excavate rock with an unconfined compression strength of up to 30,000 PSI. (Tr. 1-72; 2-212). The instantaneous excavation rate at Montereau was similar to the excavation rate determined by the tests at the Colorado School of Mines. (Tr. 1-194). Appellant used these tests to determine an anticipated production excavation rate and, along with the abrasiveness tests, the pic consumption rate for the hydrofraise 12,000. (Stip. 41; Tr. 2-78-79, 87-88).

13. Request for Proposals No. DACW03-88-R-0005 was issued by the Government on September 22, 1988. (Stip. 21). Offerors were required to submit separate

Digitized by Google

technical and cost proposals by November 17, 1988. This date was eventually changed by amendment to December 2, 1988. (R.4, Tab E).

14. The work was described in the RFP for the 1,475 long cutoff wall as,

> . . . constructing a concrete cut-off wall and associated work items to include design, construction, quality control and inspection of approximately 200,000 square feet of cutoff wall to depths ranging from 80 to 185 feet through an embankment and/or overburden, and a hard permeable zone of limestone foundation rock with compressive strength up to 27,000 psi . . . (R.4, Tab C).

15. Appendix A of the specifications indicated that 90% of the test samples had an unconfined compressive strength of 15,000 psi or less and that approximately 2% of the test samples registered an unconfined compressive strength of over 21,000 psi.

16. The Feature Design Memorandum (FDM) referenced in Appendix A of the RFP contained information about the material to be excavated for the cut-off-wall. The Appellant used the information referenced or provided in the specifications, along with its own confirming test results, in determining that a hydrofraise, a rock-mill excavating machine, could perform the excavation. Particularly, Appellant relied on the following technical information in the FDM:

> Based upon both the detailed analysis of subsurface conditions/materials (6a(2)) and extensive studies of designs and/or case histories of cutoff wall installations done by the Corps and Bureau of Reclamation, the method chosen to excavate the cutoff wall must be classed as "specialty" type work which cannot be designed, procured, or constructed by "standard" methods (plans/specifications, and IFB). Recommendations are to request proposals for design and construction of the wall because of the width limitations, large amount of rock, and depth, which will require specialized methods and equipment . . . Equipment for excavating the wall may include clamshell, rock mill (Hydrofraise), rotary-drill, power chisels, draglines, or any combination thereof. *A major part of the excavation can be performed with a rock-mill (Hydrofraise)* which is a hydraulically powered milling machine (see Figure 7). . . . unconfined compressive strengths to 15,000 p.s.i. (Priority rock exceeding 15,000 p.s.i.). Supplemental methods (equipment) may be required for minor areas of rock which exceed 15,000 p.s.i. or new techniques/developments may be required to improve the rock-mill. (Emphasis added). (R.4, Tab C; Stip. 31).

Appellant asserts that Respondent independently concluded and represented to bidders that the cut-off wall could be excavated with a hydrofraise, based upon its discussions and analysis with other Government agencies, other Corps of Engineers districts, and six separate companies experienced in excavation of the magnitude contemplated for this project. (Tr. 5-11, 107-116). However, Respondent asserts the statement in the Feature Design Memorandum that a major part of the excavation could be performed with the "rock-mill (hydrofraise)" was based upon industry representations, including representation from Appellant that a hydrofraise could perform efficiently in the subject material up to 15,000 psi.

17. On October 12, 1988, a pre-proposal conference was held at Beaver Dam. Seven representatives from the Joint Venture were in attendance. During the conference, the following questions were asked by potential bidders and responded to by the Government:

> Question: Can we get any further information on the composition and nature of the overburden material?
>
> Response: Additional information, including lab tests results, on overburden samples from boring BE-4, will be furnished by Amendment No. 0002.
>
> Question: Plans indicate that the upper part of Boone formation was not recoverable. Why?
>
> Response: Poor recovery of the Upper Boone was due mainly to the intensely weathered characteristics of this zone. Besides jar samples and lab results of the undisturbed samples from this zone, a new boring, BE-313, was recently drilled using a $4\frac{1}{2}'' \times 5''$ core barrel through the overburden. The log of this boring will be included in a future amendment. Also, the core recovered from this boring is stored at the site and available for inspection. (R.4, Tab F).

18. On November 9, 1988, Amendment No. 0002 was issued incorporating the technical data referenced in the preceding paragraph as well as minutes of the pre-proposal conference. (R.4, Tab G).

19. On November 11, 1988, a site visit was made by representatives from Soletanche and Rodio in the company of Patrick Jordan, geologist from the Corps of Engineers Little Rock District. They visited the

©1994, Commerce Clearing House, Inc.

Digitized by Google

quarry and the storage area where the core borings were kept by the Government. According to the report of the visit by Mr. Jordan, the primary interest of Appellant in the quarry was the potential abrasiveness of various materials at the site on the hydrofraise teeth (PICS). Several small samples were taken by Appellant of the upper weathered portion of the siliceous Boone chert which had a coarse grained texture. At the storage facility, they looked at cores from bore holes 31, 31A, 31B and 32 and from some other older core borings. (R.4, Tab H).

20. By letter dated December 1, 1988, the Joint Venture submitted both a technical and a cost proposal in the amount of $23,125,650, based upon an estimated production rate in overburden and weathered rock of 80-120 sq. feet per hour and in unweathered rock of 25 to 45 sq. feet per hour and upon an estimated consumption pic rate of 0.7 per sq. meter in overburden and weathered rock and of 4 per sq. meter in unweathered rock. (R.4, Tab I; Tr. 1-65, 66). Statements made in the proposal revealed that the Joint Venture viewed this as an exceptional project due, in part, to the hardness of the material to be excavated. The Joint Venture stated:

> A large proportion of the total cutoff wall area will be in rock with compressive strength ranging up to 27,000 psi. This is about twice the strength of any rock which has been encountered on dam rehabilitation projects in recent years. ... In view of the exceptional nature of this project, i.e., very large area of excavation through very hard rock, our Joint Venture considered that the exposure, or risk for the Government and the contractor in the case of error in estimating machine capability or output rates was unacceptable without additional data upon which to base cost estimates.
>
> Therefore, it was decided to invest in a full scale excavation test, using the Hydrofraise 12000 and a representative sample of Boone Limestone. For the test, a large block of rock was taken from Kirk Mountain Quarry, transported to Soletanche's testing ground at Montereau, France ...
>
> The confidence resulting from the test enables us to affirm that on-site production will be compatible with the sensitive nature of the project.... there is no place for uncertain performance, constant breakdowns or time spent in improving or adapting unsuitable equipment.
>
> ... this will remain a Hydrofraise job, with all the guarantees that this brings. ...

21. The Joint Venture proposed constructing the concrete cutoff wall to the depth and thickness prescribed in the specifications with the hydrofraise machine it had successfully used at the Mud Mountain Dam project. It asserted that this piece of equipment was the most powerful type of hydrofraise in existence. Appellant felt that, since the solicitation expressly prohibited, at Section 2E-1.1.2.1, the use of explosives, it clearly indicated that this project could be performed by the method contemplated in Appellant's proposal. (Tr. 1-60, 61). Also, it considered that it would be constrained to perform the cut-off wall under the concept in its response to the RFP, as specification, 1.1.2.1 stated the work was to be performed "as proposed." (Tr. 1-61). Further, at section 4.4(i)(b) of its technical proposal, the Joint Venture stated that it contemplated excavation of the wall at its estimated excavation rates within the required contract period using the hydrofraise 12000 as the primary excavation equipment, but that it planned to mobilize a drilling tool (the "Superdrill") for the purpose of aiding the hydrofraise excavation in the "minor areas" of unexpectedly difficult rock described in the Design Memorandum as being present at the site. By letter of December 12, 1988, the Joint Venture was requested to furnish a breakdown of its cost proposal (R.4, Tab J), which it provided on December 20, 1988. (R.4, Tab K).

22. By letter dated January 19, 1989, the Joint Venture was provided with the Government's evaluation comments on its proposal. (R.4, Tab L; Stip. 43; Tr. 1-68, 70). The Joint Venture submitted a revised proposal by letter of February 9, 1989. (R.4, Tab N). The revised cost proposal was in the amount of $19,410,650. In a letter of February 16, 1989, the Joint Venture explained its cost reduction and stated that it had been able to reduce its cost proposal without altering the technical level of its initial proposal. (R.4, Tab O). The cost reduction was based upon: (1) use of the hydrofraise used at Mud Mountain rather than manufacturing and mobilizing another one, (2) lower costs on pics, (3) a favorable exchange rate, (4) lower subcontractor cost for construction of work platform, (5) adjustments in insurance rates, and (6) reduction in margin. (Stip. 45, 46; Tr. 1-70-72; 5-18-21). Further negotiations between the parties were held on March 2, 1989.

Digitized by Google

23. The Government requested that by March 16, 1989, best and final offers be submitted, and the Joint Venture submitted its best and final offer in the amount of $16,920,000. (R.4, Tab P; Stip. 52; Tr. 1-78). It stated that the reduced price was made possible by: (1) recent tests and improvements in the hydrofraise which allowed the down-the-hole hammer to be eliminated as a excavation aid, (2) an additional savings on the work platform, and (3) a further cut in their margin. No cost breakdown was provided with the best and final offer. (Stips. 52, 53; Tr. 1-79). The Appellant's workpapers indicated that it had increased the time of job performance from 32 to 40 weeks because of its elimination of the down-the-hole hammer from its final proposal. (Tr. 5-11, 20; App. Exh. 115, 116).

24. Respondent received only two offers to its RFP, both of which proposed using rock mills to perform the project. (Tr. 4-13; 5-146). By letter dated June 14, 1989, Contract No. DACW03-89-C-0041 was awarded by the Government to the Joint Venture of Soletanche Rodio Nicholson in the amount of $16,920,000, which accepted Appellant's proposal to perform the project excavation by use of the hydrofraise 12000. (R.4, Tab C; Stip. 55). The contract contained the following clauses pertinent to this appeal:

a. *General Provisions*

(1) G.P. 45, Disputes

(2) G.P. 48, Differing Site Conditions

(3) G.P. 49, Site Investigation and Conditions Affecting the Work

(4) G.P. 61, Changes

(5) G.P. 68, Termination For Convenience of the Government

(6) G.P. 69, Default

b. *Special Requirements*

(1.) COMMENCEMENT, PROSECUTION AND COMPLETION OF WORK

The Contractor shall be required to (a) commence work under this contract within *10* calendar days after the date the Contractor receives the notice to proceed, (b) prosecute the work diligently, and (c) complete the entire work ready for use not later than *760* days after the date the Contractor receives the Notice to Proceed. The time stated for completion shall include final cleanup of the premises.

(14.) PHYSICAL DATA

Data and information furnished or referred to below is for the Contractor's information. The Government shall not be responsible for any interpretation or any conclusion drawn from the data or information by the Contractor.

(a) The indications of physical conditions on the drawings and in the specifications are the result of site investigations by surveys....

c. *General Requirements*

(1) *Section 2E-Cutoff Wall*, particularly,

1.1.2.1 The cutoff wall shall be constructed of interconnected panels, columns, or a combination thereof. Excavation shall be performed by cutting, grinding, drilling, or pounding methods *as* proposed. The use of explosives or similar materials/methods will not be allowed. [Emphasis added].

2.1 General: The Contractor is responsible for maintaining stability of the excavations for the cutoff wall....

2.2 Panels: If the cutoff wall is to be constructed of panels, guide walls shall be constructed prior to excavating any portion of the cutoff wall.... The Contractor shall excavate a trench in panel segments in which the excavated length shall not exceed 30 feet nor be less than 5 feet.

2.2.1 The requirements for trench excavation quality are as follows:

2.2.1.1 Alignment: The cutoff wall alignment in the plan view shall be as shown on the drawings....

2.2.1.3 Width: At any depth and at any cutoff wall station, the trench excavation shall result in a continuous cutoff wall having a *minimum width of 24 inches.* [Emphasis added].

2.2.1.4 Joint Contact: At any depth along a panel joint, the minimum width of contact between adjacent panels shall be 18 inches....

2.2.1.6 If, in the opinion of the Contracting Officer, the trench quality is unacceptable, the Contractor shall be responsible for providing a solution satisfactory to the Contracting Officer. An unacceptable trench is defined as an excavation which would not provide for an 18-inch overlap between panels after concrete placement.

(2) *Appendix A—Geotechnical Data*, particularly,

2.1 General: The geologic description, drawings, water-level data, and test data in these specifications include information and records of geologic investigations for the work and are the final geologic data upon which design of the work is based....

©1994, Commerce Clearing House, Inc.

Digitized by Google

2.1.1 The following reports and/or design documents have been issued, some of which contain geologic data/information from previous studies (all were produced by the U.S. Army, Corps of Engineers, Little Rock District):

2.1.1.1 *Feature Design Memorandum*, Project Modification for the Major Rehabilitation Program, Beaver Dam, Arkansas, September 1987 (Revised December 1987).... [Emphasis added].

2.1.2 These documents contain information which may be valuable to offerors, and arrangements can be made to review the documents at the District Office....

2.1.3, which stated in part, that the samples and cores recovered by the Corps during its investigation were available for inspection by offerors.

2.1.4, which encouraged contractors, "to obtain their own samples and perform tests on the soil and rock materials to evaluate properties which the offeror believes to be significant in arriving at a proper bid."

2.1.5.5, which stated that, the borings had identified zones in the foundation rock of "extremely hard, random-depthed cherty (silica) zones in nodular, columnar, or lenticular shapes, and with compressive strengths (tested to date) up to 27,000 pounds-per-square-inch."

2.7, which stated that, the Corps had performed unconfined compressive strength tests on selected core samples from the Boone Formation, the results of which were presented in Table 1 to the solicitation.

2.7.1, which stated that,

"The Boone Formation (limestone and chert) appeared to exhibit the greatest strength. The high compressive strengths may be due to the chert nodules and lenses present in the formation. Approximately 10% of all cores tested were rated at 15,000 psi or higher...."

(3) *Feature Design Memorandum*, Project Modification for the Major Rehabilitation Program, Beaver Dam, Arkansas, September 1987 (revised December 1987), which stated on page 39,

"*Based on both* the *detailed analysis of subsurface conditions/materials* (6a(2)) and *extensive studies of designs and/or case histories of cutoff wall installations* done by the Corps and the Bureau of Reclamation, ...", the Corps had determined that: [Emphasis added]

Equipment for excavating the wall may include clam shell, rock-mill (hydrofraise), rotary-drill, power-chisels, drag lines, or any combination thereof. *A major part of the excavation can be performed with a rock-mill (hydrofraise). which is a hydraulically lowered milling machine (see Figure 7).* It consists of a large, weighted, metal frame, at the bottom of which are two rotating drums with hardened cutting teeth, all supported and controlled by a large crane.... *Supplemental methods (equipment) may be required for the minor areas of rock which exceed 15,000 psi* or new techniques/developments may be required to improve the capability of the rock-mill. [Emphasis added].

25. Following resolution of a protest, during which time the Respondent indicated to the Comptroller General of the United States that Appellant had submitted the best technical proposal, notice to proceed with the work was acknowledged by the Joint Venture on October 14, 1989. (R.4, Tab R). The completion date was established as November 13, 1991, which was 760 days following receipt of notice to proceed. (Stip. 57, 58).

26. The Contractor started mobilizing in November 1989 and began site work including platform construction on February 19, 1990. (R.4, Tab S1; Stip. 60; Tr. 3-5). Preparatory work, including the platform, was completed, and excavation for the cutoff wall was started on July 12, 1990. Based on the production rate used in preparing its estimate (see Finding 9), Appellant projected completion of the project in approximately 40 weeks. (R.4, Tabs D, C).

27. The initial excavation was started on Panel No. 67 on July 12, 1990, but the records do not show the depth of excavation obtained for that day. On July 13, 1990, the records show that the hydrofraise was able to excavate 54 feet in a working time of 2 hours and 26 minutes, for a production rate of 21.6 feet/hour. Eighty-seven pics (teeth) were replaced on the hydrofraise during the day. (R.4, Tab S). This overburden production rate was within the rate anticipated by Appellant in its bid estimate. (R.4, Tabs BC, DC).

28. No excavation was scheduled or performed on July 14-15, 1990.

29. On July 16, 1990, records show that, when the hydrofraise encountered unweathered rock, it was able to excavate 2.7 feet in Panel No. 67 during 3 hours, for an overall production rate of 0.89 feet/hour.

Digitized by Google

The record indicated that 277 pics were replaced during that day. (R.4, Tab S). This was a production rate of approximately 10% of that used in preparing Appellant's estimate and a pic replacement rate approximately 3000% above that which it had estimated. (R.4, Tab DC; Stip. 65; Tr. 3-23-37).

30. On July 17, 1990, excavation continued on Panel No. 67 until a total depth of 68.47 feet had been achieved. The day's excavation amounted to 1.64 feet in 2 hours and 25 minutes for a production rate of 0.68 feet/hour, with a pic replacement total of 144. That afternoon, the hydrofraise was moved to Panel No. 1 to test initiation of excavation without digging a 10 foot pretrench for the hydrofraise. This proved to be unsuccessful. Later in the afternoon, the hydrofraise was moved to Panel No. 11c and achieved a depth of 29.5 feet (including the 10 foot pre-trench). The production rate was computed as 35.54 feet/hour. (R.4, Tab S).

31. On July 18, 1990, excavation on Panel No. 11c continued to a depth of 37.57 feet using a chisel in conjunction with the hydrofraise. The production rate was less than 3 feet/hour. (Tr. 3-38-43).

32. On July 19, 1990, excavation with the use of the chisel continued on Panel No. 11c to a depth of 41.63 feet achieving a production rate of approximately 2 feet/hour. (R.4, Tab S).

33. Production records through July 30, 1990, show the continuing patterns of high production in the early stages of excavation through overburden and weathered rock and of low production once the unweathered rock was encountered at a depth between 28 to 30 feet. (R.4, Tab S).

34. On July 31, 1990, the Joint Venture conducted tests using different types of pics on the hydrofraise in Panel No. 67. The Quality Assurance (QA) report shows that 5.5 inches of excavation was achieved in 1 hour and 42 minutes of production time. (R.4, Tab S; Tr. 1-212; 3-25-27).

35. By letter dated August 1, 1990, the Joint Venture gave written notice to the Administrative Contracting Officer (ACO) that the encountering of substantial problems in cutting through rock "may be the source of the differing site condition" and requested site conditions be investigated promptly by the Government. (R.4, Tabs T, AQ).

36. On August 1, 1990, the Joint Venture started drilling holes in the *in situ* material at Panel No. 11a in order to test whether this would have any effect on the production rate of the hydrofraise. This drilling continued on August 2, 1990. (R.4, Tab S; Stip. 73; Tr. 3-58, 59).

37. On August 3, 1990, following the predrilling to a depth of approximately 40 feet, the Appellant commenced excavation of Panel No. 11a. A depth of 34.9 feet was reached with a production time of 2 hours and 15 minutes, which was considerably below the estimated production rate used by Appellant in preparing its bid.

38. On August 6, 1990, excavation continued on Panel No. 11a using various types of pics. Excavation went from 34.9 feet to 38.65 feet in a production time of 2 hours and 5 minutes. Noted on the quality control (QC) report was the statement that it is "impossible for the hydrofraise to excavate the nonweathered rock even when more than 50% of the volume to excavate is predrilled with a Down-the-Hole Hammer."

39. When preparing its bid for excavating unweathered rock, Appellant had used an industrial production rate of *43 square feet per hour* and a pic consumption rate of *0.372 per square foot* based upon the tests performed at the Colorado School of Mines and Montereau, France and the unconfined compressive strengths stated in Respondent's documents. However, as detailed in the above findings (Findings 23-37), the industrial production rate achieved in unweathered rock was only *1.65 square feet her hour* and the pic consumption rate was *9 per square foot.* (Stip. 54, 78, 80, 94; App. Exh. 123; Tr. 3-58, 59).

40. By letter of August 7, 1990, the ACO acknowledged receipt of the August 1, 1990, letter and noted that the material at the site was the same as portrayed in the contract documents and that the Joint Venture had offered nothing to support its allegation of a differing site condition other than the low production rates. (R.4, Tab U; Tr. 3-64).

41. Geologists from the Little Rock District visited the site during the period of August 8-10, 1990, to investigate the site conditions. Their conclusion was that the material being excavated was as described in the contract.

42. In mid-August, 1990, Appellant substituted roller bits for the pics on the hydrofraise, without any significant increase in rock-excavation production. (R.4, Tab W). While the roller cutter system did result in an improved excavation rate, that rate was still less than half the anticipated rate, with pic consumption at more than six times the estimated rate. (Tr. 2-167; 3-67; App. Exh.

©1994, Commerce Clearing House, Inc.

Digitized by Google

120). The cutting wheels suffered from internal wear, necessitating overhaul or replacement, and the system for guiding the hydrofraise perpendicular to the wall was damaged to such an extent that it would have had to be redesigned or replaced for continued excavation. Furthermore, the hydrofraise had to be raised regularly to permit tightening of all bolts loosened by the significant vibration.

43. During this time, Respondent continued to remind Appellant that it was contractually obligated to continue work and complete the project in a timely manner. (App. Exh. 65).

44. On August 29, 1990, representatives of the Joint Venture met with the Contracting Officer to discuss the problems encountered. The Appellant stated that cutting the rock with the hydrofraise was commercially impractical. It proposed three options. The first was research and development of modifications to the hydrofraise based upon the on-site experience to date, at the Government's expense. The second was blasting, which was prohibited by the contract. The final involved addressing the leakage problem at the dam by means other than the concrete cutoff wall called for by the contract. In response to a question by the Government as to why the hydrofraise would not work, Appellant answered that it did not know, since its extensive pre-bid testing indicated it would work at the site. The Contracting Officer directed the Joint Venture to continue performance and rejected Appellant's proposed alternatives. (R.4, Tab X).

45. By letter dated October 1, 1990, the Appellant advised the Government's ACO that its study "makes it clear that the rock cannot be cut in an acceptable manner with the method contemplated by the contract, confirming the existence of a differing site condition." Included with the letter was a report prepared by Dr. Russell Miller, Colorado School of Mines, which stated that there is "an apparent difference in cuttability of the rock from the cutoff wall section and rock blocks of similar material and of the same formation obtained from a quarry nearby the site.... The rock in the cutoff wall section at Beaver Dam cannot be excavated in commercially practicable manner with the existing hydrofraise...." (R.4, Tabs Y, BT; Tr. 4-65). Appellant estimated that it would cost $400,000,000 and take 17 years to complete the project at the rate the hydrofraise had been able to cut the rock to date. (Tr. 3-109-113; App. Exh. 123).

46. On October 5, 1990, a meeting was held between representatives from the Contracting Officer's technical staff and the Joint Venture. The discussions centered around the hydrofraise's inability to cut efficiently the rock and the issue of a differing site condition.

47. By letter dated October 9, 1990, the Contracting Officer advised the Appellant that an analysis of the contract documents and recent studies and observation of the rock had been conducted in response to the Joint Venture's allegation of a differing site condition, that no differing site condition had been found, and that the Joint Venture had been unable to offer evidence of a DSC except the conclusion that one existed based upon production rates. (App. Exh. 18).

48. On October 14-16, 1990, representatives from the Corps of Engineers Waterways Experiment Station (WES) in Vicksburg, Mississippi, visited the project site for the purpose of investigating the site conditions and offering the Contracting Officer their opinions concerning the existence of a differing site condition. Their report concluded that there was no differing site condition but "strongly recommended" that Respondent retain a consultant recognized as an authority on rock mechanics. Respondent did not retain a rock mechanic consultant prior to the issuance of the termination for default but did retain one for the processing of this appeal. (R.4, Tab AB; Tr. 6-70, 71).

49. By letter dated October 13, 1990, Appellant informed Respondent that it could not proceed without a change order. (Tr. 1-97; App. Exh. 19). By letter dated October 29, 1990, the Government responded to the Contractor that it was considering terminating the contract for default because of the Joint Venture's failure to proceed with the work and its statements that it was unable to perform the excavation. The Government directed the Joint Venture to cure the deficiencies within ten days by resuming work such that it could complete the work within the contract time, or by submitting a written plan and schedule for completing the project.

50. On November 13, 1990, a meeting was held between representatives of the Joint Venture and the Contracting Officer. At the meeting, the Joint Venture offered for consideration other options for addressing the leakage problem at Beaver Dam, which did not include the concrete cutoff wall required by the contract. In attendance were representatives of Appellant's consulting firm,

Digitized by Google

Woodward-Clyde, who stated for the first time that, though they could not then pinpoint any basis for a differing site condition, the hydrofraise's excavation difficulties could be accounted for by lateral stresses within the *in situ* material. (R.4, Tab AC; Tr. 4-94, 96, 174).

51. Respondent held an in-house meeting on November 20, 1990, in order to come to a "final decision with regard to this contract." (Tr. 7-72). The following conclusions were expressed in the memorandum of the meeting signed by Lt. Colonel Eaton, Deputy District Engineer:

* * *

> 9. After careful analysis of all the options available to us and all the discussions, we are convinced that the contractor does not have the capability to excavate the wall as required by the contract. We additionally believe that the contractor has made a good faith effort to live up to the terms of the contract and that his expertise in this field which led us to believe that the equipment he owns was capable of doing the job is the same expertise that now leads us to believe that the equipment he has is not advanced enough to complete this project.
>
> * * *
>
> As a result, the final decision was to terminate this contract for convenience.
>
> * * *
>
> We are making our decision on having seen the hydrofraise operate and acknowledging the fact that this is the most technologically developed machine of its type, yet it is not advanced enough to complete this project as specified.

(App. Exh. 131).

52. However, in a letter dated December 5, 1990, the Contracting Officer again requested the Joint Venture to show cause in writing why it should not be terminated for default, as he had found no excusable cause for the Joint Venture's failure to perform the contract. Referring to the November 13, 1990, meeting, the Contracting Officer wrote: "You also presented several alternative methods for dealing with the seepage problems at Beaver Dam. I appreciate your efforts in that regard, but must remind you that your contract is for construction of cutoff wall and not necessarily for correction of the seepage." (Stip. 89; App. Exh. 25; Tr. 1-101).

53. By letter dated December 12, 1990, the Joint Venture responded that the contract should not be terminated for default because the conditions the Joint Venture encountered differed materially from those indicated in the contract and were unusual in concrete diaphragm wall construction work. Further, the Joint Venture stated that it believed performance of the contract was commercially impracticable, and that the excavation and cutter pic consumption rates actually experienced would increase dramatically the cost of completing the wall and the time necessary for construction many times over that contemplated at the time the parties agreed to a contract price of $16,920,000 and a contract duration of 720 calendar days. It indicated that the cost to complete the excavation and construction of the cutoff wall alone, using the hydrofraise method of construction the parties contemplated when entering the contract, would exceed $400,000,000 and that the time for completion would exceed 17 years. (App. Exh. 26).

54. On December 14, 1990, Colonel McCluskey, Contracting Officer, terminated for default the Joint Venture's right to proceed with the contract. (R. 4, Tab AD). During the hearing on this appeal, Colonel McCluskey stated he "acted" on the advice of his staff. Appellant appealed on January 29, 1991. (R.4, Tab A; Stips. 90, 92; Tr. 7-101). This appeal was docketed as ENG BCA No. 5796.

55. A certified differing site condition claim in the amount of $3,127,209 was submitted to the Government, by the Joint Venture's letter of April 8, 1991. (R.4, Tab AE). Later, the Appellant requested permission to conduct on-site borings and tests, and Respondent granted permission. (R.4, Tab AF). These test activities were initiated by Appellant on April 14, 1991, and lasted through May 2, 1991. (Tr. 4-97-100).

56. By letter dated June 17, 1991, the Appellant revised its claimed amount upward slightly to $3,137,622. (R.4, Tab AG).

57. On June 18, 1991, the Appellant furnished Respondent a copy of the report prepared by its consultant, Woodward & Clyde, entitled, "Evaluation of Rock Conditions Influencing Hydrofraise Performance at Beaver Dam, Arkansas." (R.4, Tab AH; Tr. 4-97; App. Exh. 29). Conclusions reached by Woodward-Clyde in its report were:

> (1) The rock mass in the quarry from which the contractor extracted its prebid test samples is similar both geologically and mineralogically to the cherty limestone underlying the dike and was a repre-

©1994, Commerce Clearing House, Inc.

Digitized by Google

sentative source of rock for the large scale Hydrofraise and linear cutting testing.

(2) The quarry rock block sample used by the Contractor was of a strength which was comparable to the uppermost range of strengths reported by the Corps of Engineers in its Feature Design Memorandum.

(3) In reporting the results of compressive strength tests on the rock taken from borings drilled in the vicinity of the dike, the Corps of Engineers did not report the presence of unusual horizontal stress in the foundation rock nor its influence on the strength of the foundation rock mass. To the contrary, the Corps description of rock strengths indicated much lower strengths than actually experienced in the field under in situ conditions.

(4) ... in conducting its full scale excavation tests and in preparing its bid, the Joint Venture was not aware of, nor did it take into account the presence of high horizontal stresses and the possibility that they could significantly increase the strength of the rock mass in which the cutoff wall would be constructed....

(5) The results of the field testing program indicate that the horizontal stresses present in the rock mass are unusually high compared to the vertical stresses at the given testing intervals.... Such conditions are very unusual and may have a very significant impact on the strength of the in situ rock mass.

(6) The results of triaxial compressive strength laboratory tests (for determination of the confined strength of the rock) conducted in the stress ranges from the field tests confirm the results of the field tests and reveal that the confined strength of the stronger, cherty limestone could be as much as 40% to 75% greater than the unconfined compressive strength of the rock. Such strength increases in excess of 27,000 psi to an approximate maximum of 47,000 psi would adversely affect the cuttability and excavation production of the Hydrofraise.

58. Respondent provided the Woodward-Clyde report to WES for review. WES's review did not support the conclusion that unusually high *in situ* horizontal stresses were present or were the basis for the hydrofraise being unable to excavate productively the material. The WES report questioned the applicability of one type of test employed to determine confined compressive strengths and the ability of Woodward-Clyde to draw conclusion from one test result while ignoring a contrary test result. (R.4, Tab AI).

59. The parties presented voluminous contradictory evidence of experts on the issue of whether significant "lateral stresses" existed at the project site and, if they did exist, what effect, if any, those stresses would have on the strength of the rock and on its cuttability. (Tr. 4-67, 68, 114, 115, 133, 164-173, 183, 184, 200-202; 6-108, 134-136; 8-60, 112, 114, 116, 240-261). Issues among the experts ranged from appropriateness of testing procedure, validity of test results, effect of any lateral stress on strength or cuttability, what was known or should have known about lateral stresses in the region of the project, etc.

60. The experts agree that *unconfined* compression strength of the material is the factor used by the industry to determine cuttability and excavatability and that expected minor lateral stresses (*e.g.*, 3 to 3.5 horizontal over vertical) have limited, if any, impact on cuttability of rock and would not be considered by prospective bidders in the evaluation process for determining cuttability. However, the experts diverge on the issues of the effect of high lateral stresses (*e.g.*, 7-20 horizontal over vertical) on cuttability and of the existence of high lateral stresses at the project site. The Board notes the only test evidence presented in the record of lateral stresses at the site is Appellant's tests, which Respondent attempted to refute without providing any alternative substantive test results.

61. Though the issue of the experts' opinions in the appeal is a close question, the Board finds the preponderance of the evidence to support Appellant's experts' positions that unexpected significant lateral stress existed at the project site, that the lateral stress increased the *in situ* compressive strength of the unweathered rock to be excavated, and that the high lateral stress made the excavation of the rock significantly more difficult than could have been assumed from information in the RFP or from Appellant's preproposal testing of unconfined material.

62. By decision dated October 10, 1991, the Contracting Officer denied Appellant's DSC claim of April 8, 1991, and Appellant appealed on October 22, 1991. (Stip. 93, 94, 95). This appeal was docketed as ENG BCA No. 5891.

63. Respondent entered into a reprocurement contract with the joint venture of Rodio Nicholson, two of the three members

Digitized by Google

of the original joint venture. (Tr. 7-150). In the reprocurement contract Respondent changed the minimum width of the cut-off wall to 18 inches rather than the original established 24 inches and allowed a different method of excavation and construction rather than the required excavation by the use of a rock milling hydrofraise in Appellant's contract. (Tr. 7-148-154). Respondent contends the reprocurement contractor is constructing the wall on schedule, but Appellant asserts the reprocurement contractor is already behind schedule. (Tr. 7-140, 142). The Board finds that neither party has presented clear evidence of the timeliness/effectiveness of the reprocurement contractor's excavation/construction at the time of the hearing.

POSITION OF THE PARTIES

Appellant asserts that its termination for default should be converted to a termination for convenience as it encountered differing site conditions which made the project practically impossible to perform and that it should receive an equitable adjustment for its attempt to overcome the differing site conditions it encountered at the project site for the following reasons:

a. The specifications included in the Government's request for proposals reasonably led Appellant to conclude it could rely on the Respondent's stated assertion that the excavation could be performed with a hydrofraise;

b. The specifications specifically stated that a hydrofraise excavation procedure could perform most of the excavation;

c. The geological information provided in the specifications informed bidders that only minor areas of the excavation would be difficult for a hydrofraise method of excavation;

d. The significant pre-bid tests made by Appellant, which tests Respondent encouraged bidders to make, of material similar to material to be excavated showed that the excavation could be performed by the use of a hydrofraise;

e. The significant reduction in expected production rates upon its encountering unweathered rock demonstrated the existence of a differing site condition and the commercial impossibility of performing under the original concept of the project;

f. The Government knew of Appellant's proposed procedure for excavating the cut-off wall with the hydrofraise and, not only concurred in its use, but evaluated the technical proposal as the best concept submittal;

g. The Appellant's experts' evaluation of the excavation difficulties showed that unusual lateral pressures were being applied to the *in situ* material to be excavated which increased some of the unweathered rock to a hardness of 47,000 psi and caused the material to perform in an unusual manner *in situ* as opposed to when tested for unconfined compressive strength in the laboratory.

h. The Contracting Officer acted arbitrarily and abused his discretion in issuing the termination for default.

Respondent counters that the termination for default was proper and that Appellant presented no evidence of defective specifications or a differing site condition creating a commercially impossible project for the following reasons:

a. The material to be excavated by Appellant was the same as described in the specifications;

b. The Appellant has presented no evidence of a differing site condition other than extrapolating the theory of a differing site condition from the lack of production it encountered when excavating unweathered rock;

c. The specifications did not guarantee that a hydrofraise could perform the entire cut-off wall excavation, as only the Appellant stated so in its final technical proposal;

d. The Appellant, not the Government, had the responsibility for devising a system to excavate the cut-off wall, which is why this request for proposals was in two steps;

e. The specifications warned bidders of material up to 27,000 psi approximately 10% of the time, which Appellant recognized as a difficult project;

f. The Appellant's technical expert's report of lateral stress causing the material to act as if it was 47,000 psi in strength and making the material react differently from what usually would be expected *in situ* is not convincing and is based on inaccurate and selective test results;

g. The Appellant has not provided any supporting evidence of commercial impossibility in excavating the cut-off wall;

h. The Respondent did not concur in Appellant's proposed method of excavation but relied upon Appellant's expertise when it accepted Appellant's proposal for

©1994, Commerce Clearing House, Inc.

Digitized by Google

the excavation of the cut-off wall, and Appellant relied upon its own studies and tests to develop its proposed method of excavation.

i. The Contracting Officer was fully justified and exercised reasonable discretion in terminating for default Appellant's right to proceed with the contract.

DECISION

In these consolidated appeals, Appellant has asserted that it encountered either or both Type I and II differing site conditions (DSC) and/or that the specifications provided by Respondent were defective. For the following reasons, the Board concludes that Appellant encountered a Type II differing site condition which made it practicably impossible for it to continue to perform the excavation of the cut-off wall with the hydrofraise as contractually required.

The Board stated the generally recognized criteria for proving a Type II differing site condition in *Guy F. Atkinson,* ENG BCA No. 4693, 87-3 BCA ¶ 19,971, as follows:

> When asserting a type II, differing site condition claim, the Appellant has a relatively heavy burden of proving the encountering of conditions "of an unusual nature, differing materially from those ordinarily encountered and generally recognized as inhering in work of [this] character...." To prevail, the Appellant's evidence must demonstrate what is normally to be expected and what was encountered was materially different from the norm.

The Government indicated in the contract the classification of material to be encountered from the core borings, the compressive strength of the material, and the methods for potentially successful excavation. As to the classification of the material to be encountered, the parties have little, if any, disagreement and the evidence supports the conclusion that the material at the project site was essentially of the same classification as indicated in the contract specifications. As to the statement of *unconfined compressive strength* which indicated *some* material between 15,000 PSI and 27,000 PSI, the evidence supports no material difference between the indicated and the actual. As to the method of excavation, the Government stated and Appellant concurred that "a major part of the excavation can be performed with a rock mill (hydrofraise) which is a hydraulically powered milling machine..."

The Feature Design Memorandum (FDM) prepared by the Government specifically stated that a cut-off wall was the best method to control seepage and that the cut-off wall could be excavated using rock-milling (cutting) machinery (hydrofraise). The record is replete with the evidence of Respondent's history of extensive investigation of the problem and solution for the seepage, including contacting Appellant and others in the industry, other Corps districts, and its own experts to come to its independent judgment and decision that a rock-mill machine could perform the project excavation.

Appellant, also, took added actions to confirm the cuttability of the rock by the hydrofraise 12000. Appellant considered in great detail the plans and specifications, reviewed the Government's core borings and test results, brought in experts to evaluate Government test results and to make on-site tests, and, most significantly, quarried a large rock sample of material indicated to be similar to the material specified in the contract, found at the site, and reflective of the high side (26,469-27,220 PSI) of PSI scale, which it sent to France for testing with the hydrofraise excavation procedure. All of these efforts by SRN, along with the Respondent's indications in the specifications of the unconfined compressive material strength and of this being a hydrofraise project, led Appellant to the reasonable conclusion that the hydrofraise could satisfactorily perform the project.

Neither the Appellant nor the Government recognized the adverse conditions existing in the *in situ* material or any significant difficulty to be expected in the *in situ* material as compared to cutting the same material in a controlled laboratory situation. The Contractor had no way of anticipating from the specifications or its own tests the increased difficulty in cutting the rock it encountered when it was in its *in situ* position.

The Appellant has not solely relied on the lack of production for its proof of a differing site condition. Appellant utilized the drastic reduction it experienced in excavation from what it expected when it bid the project as a make-weight argument of encountering something different from expected, but it also went further in its proof. Its experts showed that the *in situ* material reacted differently when subjected to the lateral stresses applied to it as it lay in the ground than when it was quarried and tested without the external pressures to which it was subjected *in situ.*

Digitized by Google

Respondent agreed with Appellant that, unless a significant concern with lateral stress was known to exist at a project area, which would not be the norm, designers use the determined "unconfined compressive strength" as their basis for evaluating rock strength, cuttability of the rock, and excavation rates. Respondent's designers/estimators based all of their decisions and estimates on the "unconfined compressive strength" of the rock to be excavated without consideration or concern for the existence of extreme lateral stresses. Respondent agreed with Appellant that the trade practice is to use the unconfined compressive strength test results in formulating project excavation procedures. Neither the Government nor Appellant was concerned that the laboratory tests would not reflect the actual condition of the *in situ* material. Neither party considered the existence of lateral stresses to be significant.

Both parties expected the tested and calculated "unconfined compressive strengths" of the rock to be excavated to be reflective of the cuttability and excavatability of the rock. As minor confining stresses normally have either limited or no impact on the cuttability of rock, neither party expected that significant lateral stresses would exist at the project site which would significantly increase the strength of the *in situ* rock and decrease its cuttability and excavatability.

Though the experts presented to the Board differed greatly on what was to be expected at the project site and on the adequacy and reliability of Appellant's post-termination "stress" testing, the preponderance of the evidence indicates that the hydrofraise 12000 should have been able to excavate rock with the unconfined compressive strengths stated in the contract specifications and that the rock did not behave *in situ* as was to be expected. The most credible evidence presented to the Board was by Appellant and its experts which indicated that the *in situ* rock behaved materially differently from the norm because of significant lateral stresses (7-20 horizontal to vertical stress actual as compared to 3-3.5 horizontal to vertical stress expected) exerted upon it which increased its strength and reduced its cuttability.

Though Respondent urges that Appellant's tests allegedly indicating the existence of high unexpected lateral stresses at the project site were not accurate, performed properly or accepted in the industry as appropriate, the record indicates the Appellant's various and different tests corroborate one another in result. Though the experts in the field of rock mechanics are divided on the reliability of the tests and results, Respondent made no effort of its own to determine the existence or magnitude of lateral stresses at the project site. The best evidence before the Board, upon which the Board must rely, was that presented by Appellant.

From the record as detailed above, the Board concludes Appellant encountered material different from that normally to be expected from rock with the unconfined compressive strengths listed in the contract. The impact of significant lateral stresses on the rock strength and cuttability was not ordinarily encountered or generally recognized as inhering in work of this character. Because of these unusual conditions at the site, the "unconfined compressive strength" measurements used by the industry and included in the contract specifications were not an accurate indication of the cuttability of the rock, as the rock behaved *in situ* differently from what reasonably should be expected.

Summarizing,

a. The Request for Proposals allowed for the use of a hydrofraise method of excavation;

b. The Appellant's reasonable tests showed that a hydrofraise would excavate the cut-off wall material;

c. Appellant used the most-powerful hydrofraise then in existence;

d. Respondent did not take issue with Appellant's machine or workmanship;

e. Respondent recognized that some of the unweathered rock encountered reached an *in situ* confined compressive strength of 42,000 PSI, significantly above the upper limit of the unconfined compressive strength of 27,000 PSI stated in the RFP;

f. Appellant tried various other excavation procedures by utilizing different bits on the hydrofraise and by drilling with a super-drill, with little or no increase in production.

Why, then, did the hydrofraise not work in the unweathered rock when both parties believed it would, tests indicated it would, and the unweathered rock tested was essentially of the same composition and unconfined compressive strengths as that found at the project site? The only reasonable conclusion is that the unweathered rock *in situ* acted materially differently from the norm and from what was expected by the parties from the results of the tests of the rock prior to actual excavation. Thus, the Board con-

©1994, Commerce Clearing House, Inc.
Digitized by Google

cludes that Appellant encountered material which behaved differently from what a reasonable contractor would have normally expected at the project site and, therefore, it encountered a Type II differing site condition. *See Kinetic Builders, Inc., supra; J Lawson Jones Construction Co., Inc.,* ENG BCA No. 4363, 86-1 BCA ¶ 18,719; *R.A. Heintz Construction Co.,* ENG BCA No. 3380, 74-1 BCA ¶ 10,562.

Appellant has met its heavy burden in proving by the preponderance of the evidence that a Type II differing site condition existed at the project site. Having found the existence of a Type II differing site condition, discussion of Appellant's Type I DSC and defective specifications allegations are unnecessary.

Having found the existence of a Type II differing site condition, we now focus on the issue of the termination for default, as relates to Appellant's failure to continue performance of the contract. The existence of "practical impossibility" is alleged by Appellant to excuse its not continuing to perform the contract, which would include overcoming the differing site condition. In *Guy F. Atkinson Co.,* ENG BCA No. 4771, 88-2 BCA ¶ 20,714, we stated the general concept of legal impossibility as follows:

> Legal impossibility may be established without showing actual or literal impossibility. Thus, a finding of legal impossibility may be based on "commercial impracticability." *Hol-Gar Mfg. Corp. v. United States* [11 CCF ¶ 80,438], 175 Ct.Cl. 518; *United States v. Wagematic Corp.* [11 CCF ¶ 80,417], 360 F.2d 674 (2d. Cir. 1966).
>
> The principle of practical impossibility consists of the theory that the object of the contract could not be accomplished without commercially unacceptable costs and time input far beyond that contemplated in the contract. *Foster Wheeler Corporation v. United States* [20 CCF ¶ 83,110], 206 Ct.Cl. 533 (1975). Absolute impossibility is not required, if the specifications are so time consuming as to be outside the basic objectives contemplated by the parties. *Tombigbee Constructors, et al. v. United States* [14 CCF 83,360], 190 Ct.Cl. 615 (1970); *Johnson Electronics, Inc.,* ASBCA No. 9366, 65-1 BCA ¶ 4628; *Natus Corp. v. United States* [11 CCF ¶ 80,882], 178 Ct.Cl. 1, 371 F.2d 450 (1967); *Clark Grave Vault Co. v. United States,* 178 Ct.Cl. 52, 371 F.2d 459 (1967). The principle that practical impossibility may exist when the work cannot be completed until much later than the time set forth in the contract is well established. *Appeal of Schurr and Finlay, Inc.,* IBCA No. 644-5-67, 68-2 BCA ¶ 7200; *Appeal of Ace Electronics Associates, Inc.,* ASBCA No. 10711, 66-2 BCA ¶ 5750; *Tombigbee Constructors v. United States, supra.*
>
> As noted before, practical impossibility need not be actual impossibility. It can be such that it is economically infeasible or it is not possible to construct within either the allotted or a reasonable construction time. As best expressed, practical impossibility means that the result asked for is not possible within the basic objectives contemplated by the parties so as to amount to commercial senselessness.

The preponderance of the evidence in this appeal establishes the classic case for legal, practical, commercial impossibility. Respondent has admitted that a rock mill (hydrofraise 12000) as stated in Appellant's proposal and as accepted by Respondent in the contract *could not* perform the excavation. Further, Appellant's evidence, which has not been refuted by Respondent, suggests that it might have taken up to 17 years and cost up to $400,000,000 (rather than 760 days and $16,920,000) to complete the project using the contract-required method of excavation. These projections may be influenced by some degree of hyperbole. However, the actual production rates experienced by Appellant during its performance show not merely a more expensive effort to perform the contract but clearly a projected commercially unacceptable cost and a time far beyond that contemplated in the contract.

Respondent urges that the contract was not practically impossible because of the alleged successful effort of the reprocurement contractor. However, the reprocurement contract is not based upon the same specifications under which Appellant was performing, and the reprocurement contractor has not progressed sufficiently to determine whether it is proceeding satisfactorily or not. In fact, there is evidence in the record indicating the reprocurement contractor is behind schedule. Thus, Respondent's effort to demonstrate commercial practicability of the Appellant's contract is unconvincing and not supported by the record.

Since the extremely low production rate caused by the differing site condition made it legally, commercially, and practically impossible to continue performance, Appellant was justified in not continuing to attempt to "slug" through the excavation, its non-per-

Digitized by Google

formance was excusable, and Respondent's termination for default was improper. The default termination is, hereby, converted to a termination for the convenience of the Government.

CONCLUSION

The consolidated Appeals of SRN are SUSTAINED. The appeals are remanded to the Contracting Officer for further action as provided in the clause, "Termination For Convenience of the Government."

[¶ 26,473] Maitland Brothers Co.

ENG BCA No. 5782, October 13, 1993. Contract No. DACW17-87-C-0059.

Labor—Contract Work Hours Act—Overtime.—The government's failure to inform a breakwater construction contractor of the applicability of the local double-time overtime requirement did not constitute a breach of a duty to cooperate, despite the contractor's submission of a forward pricing proposal for a change in the stone placement method that specified overtime at the federal time-and-a-half rate, because the contractor failed to show that the government knew that the contractor underpriced overtime work. The implementation of the local double-time rate was compatible with the minimum set by the Contract Work Hours and Safety Standards Act, which mandated that contractors on federal projects pay for overtime work at a rate of "not less than one and a half times" the basic pay rate. The record did not show that the government required the contractor to incur the overtime costs to achieve timely completion.

Performance—Duty to Disclose Superior Knowledge—Readily Available Information.—The government's failure to inform a breakwater construction contractor of the applicability of the Puerto Rico double-time overtime requirement did not constitute a breach of a duty to disclose superior knowledge regarding the local overtime law, because access to the Puerto Rico overtime requirement was available equally to all parties. The contractor did not make a reasonable and diligent investigation of information that was generally available.

Performance—Specifications—Defects.—A contract for the construction of a breakwater in Puerto Rico was not defective, despite its failure to refer to Puerto Rico's labor law requiring double-time payments for overtime work, because the contract mandated overtime payments at a rate not less than time and a half, and the Permits and Responsibilities clause advised the contractor to investigate the effect of local laws. If the contractor had observed the contract's requirements and had inquired, it would have discovered that Puerto Rico mandates double-time payments for overtime work.

Mistakes—Mutual Mistakes—Mistake of Law.—Under a contract for the construction of a breakwater in Puerto Rico, the parties' failure to consider local overtime requirements at the time of contract award and execution of a modification changing the stone placement method was not a mutual mistake of fact that entitled the contractor to recover the additional overtime costs it was required to pay, because the contract did not mandate overtime work, and the contractor's decision to use overtime work was a business judgment intended to facilitate early completion rather than the result of any confusion regarding the scope and nature of the work in the contract formation or in the ensuing modification. Moreover, the Permits and Responsibilities clause required the contractor to comply with local law, and any mistake would be one of law rather than of fact. The risk flowing from ignorance of or inattention to local laws and work conditions rested with the contractor.

For the appellant: McCormick & Maitland, Norfolk, Massachusetts, by Edward J. McCormick III. For the government: Frank Carr, Chief Trial Attorney, Washington, D.C., William A. Baxter, Government Trial Attorney, Jacksonville, Florida, and Noel Acevedo-Mendex, Government Trial Attorney, San Juan, Puerto Rico.

SOLIBAKKE [1], Administrative Judge: In this timely appeal, Maitland Brothers Co., seeks $219,383.31 in additional compensation for overtime costs it incurred in connection with the construction of a protective breakwater at the historic El Morro fort in San Juan, Puerto Rico. A hearing was held and the parties have filed briefs. Only entitlement is before the Board at this time. This appeal is processed under the Contract Disputes Act of 1978, 41 U.S.C. § § 601 *et seq.*

FINDINGS OF FACT

1. Contract No. DACW17-87-C-0059 was awarded to Maitland Brothers Co. (Maitland or Appellant) by the Jacksonville District, U. S. Army Corps of Engineers (Corps or Government), on September 25, 1987, in the amount of $7,888,101.10. Under the terms of the contract, Appellant was required to construct a stone breakwater and revetment, along with various other barrier measures designed to protect the historic El Morro fort at the entrance to San Juan harbor, in San Juan, Puerto Rico, from the effect of ocean-driven erosion. By its terms, the contract required Appellant to complete the work in 1,095 calendar days. (R.4, Tab 14; Tr. 1-14).

2. In addition to the "Changes (1984 APR)," "Site Investigation and Conditions Affecting the Work (1984 APR)," "Permits and Responsibilities (1984 APR)" and other clauses customarily included in Corps of Engineers construction contracts, the contract contained the following General Provision germane to this appeal:

> 19. CONTRACT WORK HOURS AND SAFETY STANDARDS ACT—OVERTIME COMPENSATION (1986 MAR)
>
> (a) Overtime requirements. No Contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborers or mechanics ... in any workweek in which the individual is employed on such work to work in excess of 40 hours in such workweek unless such laborer or mechanic receives compensation at a rate *not less than 1-1/2 times* the basic rate of pay for all hours worked in excess of 40 hours in such workweek.

(Emphasis supplied). (R.4, Tab 14).

3. Notice to Proceed was received and acknowledged by Appellant on October 29, 1987. (R.4, Tab 12).

4. In its bid, Appellant included a significant allowance for overtime work—generally about two hours per day per employee—with the expectation of completing the job ahead of schedule. According to Appellant's President, Mr. John Maitland, it was Appellant's practice to try to finish projects ahead of schedule, since early completion produced the "best economic position" for Appellant. Overtime work was one means of attaining early completion. (Maitland Deposition, at 7). In addition to the cost savings attendant to early completion, Appellant's estimator, Mr. Gary Maitland, observed that certain efficiencies can be achieved in marine construction by working ten-hour days. Among other things, a full eight-hour work day could be achieved, because transit time to and from the work site was not "lost." In the bid, Mr. Gary Maitland priced overtime work at time and one-half. (Tr. 1-122-27, 130-32).

5. The breakwater was to be constructed, in part, using Government-furnished stone. The stones, ranging in size up to 45 tons, were furnished with imbedded wire cables in the form of a loop, which was supposed to aid in lifting and placement. However, Maitland immediately experienced problems in handling the stones, because the wire loops tended to break easily. Because of the failure of the cables and the attendant safety factor, Maitland notified the Government of the problem in early May, 1988. (Tr. 1-17, 65-67, 96; App. Supp. R.4).

6. In July, 1988, following discussions between the parties, Maitland proposed using cranes equipped with grapples for rock handling and placement, and forwarded a cost proposal to the Government seeking $5,622,808.42 in additional costs arising from the proposed change in stone placement method. Included in the calculations supporting the proposed change were labor cost estimates showing overtime work priced at time and one-half. (App. Supp. R.4).

7. Maitland began placing stone using grapples, but its overtime usage increased because stone placement using grapples was slower than it had anticipated, and the use of grapples increased its maintenance time, at the expense of operating time. Mr. Gary

[1] The Board adopts the opinion of its Hearing Examiner, Thomas H. Gourlay, Jr., who presided at the hearing of the appeal.

Digitized by Google

Maitland estimated that overtime utilization per job category doubled following the adoption of the grapple placement method. Maitland's efficiency also was impaired because it had difficulty recruiting local skilled operators. (Tr. 1-69-75, 86, 97-98, 102).

8. Bilateral Modification P00001, dated December 22, 1988, provided a $1.5 million increase to the contract price for changing the method of stone placement from wire hooks to the grapple method. The modification effected no change to the contract term. No time extension was granted. The instrument also contained the following language:

> It is understood and agreed that this adjustment constitutes an accord and satisfaction between the Government and contractor with respect to any and all added costs and markup directly or indirectly attributable to the change ordered, for all delays related thereto, for performance of the change within the time stated.

(Exh. G-1; App. Supp. R.4; Tr. 1-17; Maitland Deposition, at 13).

9. Appellant followed a work regimen that included seven-day work weeks, multiple shifts and overtime work, which enabled it to complete the project almost one year ahead of schedule. While the Government was aware of Maitland's unilateral plan to speed up performance, it did not order early completion or otherwise dictate Maitland's work schedule. (Tr. 1-18-19, 33, 37, 83; 2-7, 12, 43; App. Supp. R.4).

10. On April 12, 1989, Appellant received a letter from Ivan Garau Diaz, Esq., asserting a claim on behalf of several Maitland employees for unpaid overtime salaries on the El Morro project. Relying on "Mandatory Decree #44," issued by the Minimum Salary Board of Puerto Rico, Mr. Diaz indicated that applicable Puerto Rico labor law required that employers pay employees double time ("tiempo doble") for work in excess of 8 hours per day. (R.4, Tab 4).

11. Puerto Rico labor law with respect to overtime payments and eligibility reads as follows:

> Section 4—Extra hours of work are:
>
> (a) The hours that an employee works for his employer in excess of eight hours during any period of twenty-four consecutive hours;
>
> (b) The hours that an employee works for [his] employer in excess of forty-eight hours during any week, unless the hours worked daily in excess of eight are paid at double rates....
>
> Section 5.—Every employer who employs or permits an employee to work during extra hours shall be obliged to pay him for each extra hour a wage rate equal to double the rate agreed upon for regular hours; *Provided, however*, That every employer in any industry in Puerto Rico covered by the provisions of the Fair Labor Standards Act enacted by the Congress of the United States of America on June 25, 1938, as heretofore or hereafter amended, shall be under obligation to pay only for each hour of work in excess of the legal eight-hour working day, or in excess of forty (40) hours a week, a wage at the rate of not less than time and a half the rate of wage agreed upon for regular hours, save when by a decree of the Minimum Wage Board or by a collective labor agreement, other working and or compensation standard is heretofore or hereafter fixed....

The statute also provided for a one-hour meal period, and if an employer did not provide such a period, it was obligated to pay double time for the affected period or fraction thereof. (R.4, Tab 8).

12. Appellant's personnel alleged that they were unaware of the double time requirement during performance, since the contract was silent, the Corps did not indicate that overtime was to be paid at the higher rate, and they did not receive any contemporaneous employee complaints. (Tr. 1-54, 107-08). The United States Department of Labor "Job Site Poster" (WH Publication 1321) that was displayed at the site merely stated that employees were to "be paid not less than one and one-half times (your) basic rate of pay for all hours worked over 40 a week. There are some exceptions." However, Mr. Gary Maitland acknowledged that the term "not less than" reasonably connotes only a minimum rate to be paid for overtime work; a higher rate might, in fact, apply. (R.4, Tab 7; Tr. 1-50-51, 137-38).

13. Appellant was aware that certain local costs often vary from the "average" costs encountered by contractors. In this regard, Maitland's estimators made specific inquiry regarding local sales taxes in Puerto Rico, as well as other matters. However, they assumed that overtime in Puerto Rico would be paid at the "standard" time and one-half rate, and made no separate inquiry concerning these rates. (Tr. 1-87-89, 100-01, 126, 133, 135; Maitland Deposition, at 8).

14. Mr. Antonio Rivera, the Chief of Construction Operations and Acting Resident Engineer, reviewed Maitland's cost proposal for the change to grapple placement, but he

©1994, Commerce Clearing House, Inc.
Digitized by Google

did not verify the labor rates supplied by Appellant. Mr. Rivera was unaware of the double time requirement, and he did not notice that Maitland priced overtime work at time and one-half. Instead, he focussed primarily on the overall reasonableness of Maitland's overall proposal, rather than individual cost elements, and analyzed it from the perspective of whether the work could be performed at an acceptable total cost to the Government. Dr. Emilio Colon, the Area Engineer, was generally aware of the double time requirement, but did not convey this information to Maitland. The record is not clear whether in analyzing Appellant's cost proposal Dr. Colon reviewed the projected overtime rates. (App. Supp. R.4; Tr. 1-35-36, 53, 68; 2-4, 21-28, 48).

15. In a letter to Dr. Colon dated May 2, 1989, Mr. Robert W. Hall, Appellant's Executive Vice President, referred to the letter from Mr. Diaz, and opined that, if Mandatory Decree #44 obligated Maitland to pay double time for hours worked in excess of 40 hours per week, the decree would operate to supercede GP-19, and would constitute a change to the contract. He further indicated that a claim would be filed. (R.4, Tab 5).

16. Dr. Colon rejected Appellant's argument, and stated that any increased overtime costs were a result of Appellant's unilateral acceleration of the work, and that the Government was not responsible for the increased costs incurred by Appellant as a result of its unilateral business decision. Dr. Colon also addressed the interrelationship between the Puerto Rico labor provisions and the Federal provisions, observing that the Contract Work Hours and Safety Standards Act ("CWHSSA or Act") merely required employers to pay *at least* time and one-half for overtime work; there was nothing in Federal law precluding a higher overtime rate. He further noted that, under the provisions of the "Permits and Responsibilities" clause, Appellant was required to comply with all local laws, and concluded that Maitland was required to pay the higher overtime rate prescribed by Puerto Rico law. (R.4, Tab 6).

17. Appellant requested a Contracting Officer's final decision on May 26, 1989, and expressed its disagreement with Dr. Colon's position as follows:

> We disagree with your findings that [the "Permits and Responsibilities" clause] makes this overtime the Contractor's responsibility. [The clause] does not address payroll information. Overtime requirements are addressed in Clause 19 and are quite clear. The Contract Clauses are titled "Construction-Puerto Rico" and any special payroll requirements must be included in Clause 19. We have a right to rely on the specifications, as included in the bid package to base our costs on. You have an obligation to include all areas that affect costs so bidders can include these costs in their respective bids.

(R.4, Tab 9).

18. On February 14, 1990, Appellant forwarded an uncertified claim in the amount of $143,970.94 for additional overtime costs incurred on the El Morro project. The claim included attorney's fees and mark-ups. (R.4, Tab 10).

19. In a letter to Appellant dated April 23, 1990, Dr. Colon reiterated that the language in GP-19 requiring payments for overtime at "not less than" time and one-half was merely a minimum responsibility, and that "nothing precluded paying at a higher rate." He again opined that the "Permits and Responsibilities" clause obligated Maitland to comply with local laws, specifically the overtime requirements. Dr. Colon concluded by stating that the decision to use overtime was a contractor decision, and the Government would not assume responsibility for Maitland's managerial decisions and the financial impacts these decisions had on the work. (App. Supp. R.4).

20. In a letter dated April 30, 1990, Mr. Hall again asserted Maitland's entitlement to the claimed costs as follows:

> Clause 19 of the [Contract] clearly states that time and one half is acceptable for this project. A review of the contract clauses for this project will reveal that the index calls the "CONTRACT CLAUSES CONSTRUCTION—PUERTO RICO." It will also reveal each page of the contract clauses has at the bottom "25 FEB 87" and "CONST—PUERTO RICO." The Corps of Engineers made it quite clear to bidding contractors that it took into consideration that these contract clauses addressed construction in Puerto Rico. This would lead any prudent contractor to believe "time and one half" was the requirement for workers in Puerto Rico.... The Government ... was certainly aware of the double time requirement [in Puerto Rico], but chose to remain silent on the matter and yet included Clause 19 in the bid documents which says time and one half is acceptable.... [t]hat statement also leads

Digitized by Google

a prudent contractor to believe time and one half is acceptable.

The catch-all wording in [the "Permits and Responsibilities" clause], in my opinion, is clearly not sufficient for the Government to hide behind on such an important and cost intensive matter, especially in light of Clause 19 being made a part of the contract documents. The ... "Permits and Responsibilities" [clause] would lead any prudent contractor to believe that [it] deals with permits and responsibility of looking into the requirement for permits and licenses.

(R.4, Tab 11).

21. On August 27, 1990, Appellant filed a certified claim seeking the following additional costs attributable to its increased overtime expenses:

Additional double time	$ 81,815.39
Audited Payroll Taxes 22.1%...	18,081.20
Attorney Fees	46,031.85
Audited Field Overhead 18.7%	27,288.62
Audited Office Overhead 14% ..	24,250.39
Profit 10%	19,746.75
Bond 1%	2,172.11
Total	$219,383.31

(R.4, Tab 3).

22. On October 12, 1990, the Contracting Officer issued his final decision denying the claim. He observed that Appellant incurred the overtime costs as a result of its voluntary management decision to accelerate the work. The Contracting Officer concluded that GP-19, which incorporates the provisions of CWHSSA into the contract, merely required that overtime shall be paid at a rate not less than $1\frac{1}{2}$ times the basic rate of pay for all hours worked in excess of 40 hours per week, and did not relieve Maitland from the responsibility to comply with local laws that might require a higher rate. He further indicated that the "Permits and Responsibilities" clause charged Appellant with the responsibility to investigate the effect of Puerto Rico labor laws which, he opined, could have been discovered easily either upon consultation with counsel or the Commonwealth. (R.4, Tab 2). A timely appeal followed. (R.4, Tab 1).

DECISION

The salient facts in this appeal are undisputed. Maitland was required to construct the breakwater for El Morro using Government-furnished stone embedded with wire loops to enable placement. As things turned out, the loops failed, prompting the parties to investigate another placement method. The parties ultimately agreed upon placement by use of grapples and a contract modification was executed incorporating the changed method, with a $1.5 million increase in the contract price.

While Maitland had planned overtime work under the wire loop method, it apparently utilized more overtime work than it had projected for the wire loop method when it adopted the grapple method. Maitland's reliance on overtime work resulted in its completion of a three-year project in about two years. After the work was completed, Appellant was required to pay for overtime the difference between the double time compensation mandated by Puerto Rico, and the time and one-half that it already had paid to its employees. It now seeks to recover these costs. The decision to incur overtime charges was made solely by Maitland. The Government neither ordered acceleration of the work, nor mandated overtime. There is nothing in this record to suggest that Appellant "had to" incur the claimed overtime costs after the change to the grapple method in order to achieve timely completion.

Appellant does not directly challenge the application of the Puerto Rico double time overtime provision. The Contract Work Hours and Safety Standards Act mandates that contractors on Federal projects (including those performed in Puerto Rico) shall pay for all overtime work at a rate of *not less than* $1\frac{1}{2}$ times the basic rate of pay. This raises a question of whether the Puerto Rico provision is superseded by the Federal provision.

The Act's legislative history is silent regarding Congressional intent to preempt local regulation of overtime compensation. When no Congressional intent to supersede local statutes is expressed, state statutes must be upheld unless an actual conflict is found between the state and Federal schemes, such that both cannot stand in the same area. See *Head v. New Mexico Board of Examiners in Optometry*, 374 U.S. 424, 430, 83 S.Ct. 1759, 10 L.Ed. 2d 983 (1963).

When used in Federal labor legislation (*e.g.*, the Davis Bacon Act, 40 U.S.C. § 276a), "not less than" has been recognized as creating only a minimum; higher rates may be prescribed by local authorities. The purpose of CWHSSA was to ensure that workers would be paid at a rate not less than time and one-half for qualifying overtime work. See *United States v. Binghampton Construction Co., Inc.*, 347 U.S. 171, 74 S.Ct. 438, 98

©1994, Commerce Clearing House, Inc.

Digitized by Google

L.Ed. 594, *reh. den.* 347 U.S. 940, 74 S.Ct. 625, 98 L.Ed. 1089 (1954). We find that Puerto Rico's expansion of the compensation framework for overtime work to require double time is not inconsistent with this Congressional expression. As a consequence, we conclude that CWHSSA and the relevant provisions of Puerto Rico's labor law are compatible, and the implementation of the double time requirement does not frustrate the intent of the Federal statute. See *Dyad Construction, Inc. v. City of Portland*, 765 F.Supp. 653 (D. Oregon 1991); *Firelands Sewer & Water Construction Co., Inc. v. Valentine*, 404 F.Supp. 1231 (W.D.N.Y. 1975); see also *Florida Lime and Avocado Growers, Inc. v. Paul*, 373 U.S. 132, 141, 83 S.Ct. 1210, 10 L.Ed.2d 248, *reh. den.* 374 U.S. 158, 83 S.Ct. 1861, 10 L.Ed.2d 1082 (1963); *Colorado Anti-Discrimination Commission v. Continental Air Lines*, 372 U.S. 714, 722, 83 S.Ct. 1022, 10 L.Ed.2d 84 (1962).

Appellant argues that the Government breached its duty of cooperation and communication by not informing Maitland of the double time requirement. (App. Br., at 7-12). The first element of this argument is that the Government, cognizant of the double time requirement and aware of Maitland's proposal to pay overtime only at time and one-half, nevertheless failed to alert Maitland, and let Maitland proceed at its peril. The second, implicit, aspect of this argument is that the double time requirement was a type of information within the Government's possession ("superior knowledge") that it was obliged to disclose.

The record clearly indicates that the Government never informed Maitland about the double time requirement imposed in Puerto Rico, and Maitland did not make an independent effort to ascertain this fact. The forward pricing proposal Maitland submitted for the change in stone placement method reflected overtime rates at time and one-half. It was reviewed generally by Dr. Colon and Mr. Rivera. While Dr. Colon was aware of the double time requirement, the record does not indicate whether he noticed the proposed overtime rate when he studied the proposal. Likewise, Mr. Rivera, who was unaware of the double time requirement, reviewed the cost proposal in greater detail, but he also did not scrutinize the particular labor rates contained in the document. Rather, his main concern was with the "bottom line." We find this explanation credible. Estimating is more of an art than the seeming precision of some calculations would imply. In a forward-pricing situation, the estimator's eye of necessity is focussed more on the bottom line, since cost elements can be "moved around" or offset in the actual performance of the work.

Based upon this record, Appellant has not established the basic factual predicate underlying its argument that the Government breached its duty of cooperation and communication; namely, that the Government "knew" that Maitland was underpricing overtime work and did not advise Appellant of the double time requirement.

As an adjunct to its breach of duty to communicate argument, Appellant implicitly contends that the Government possessed "superior knowledge" vis-a-vis the Puerto Rico overtime law, and that its failure to disclose this information provides a ground for relief.

In order to prevail under the doctrine of "superior knowledge," the proponent must demonstrate that: (1) the Government failed to disclose a "vital fact" in its possession that was not known by or reasonably available to the contractor; (2) the Government knew or should have known of the contractor's ignorance, and; (3) the nondisclosure materially affected performance of the contract. See *Helene Curtis Industries, Inc. v. United States* [9 CCF ¶ 71,992], 160 Ct. Cl. 437, 312 F.2d 774 (1963); *Petrofsky v. United States*, 222 Ct.Cl. 450, 616 F.2d 494 (1980), *cert. den.* 450 U.S. 968, 101 S.Ct. 1288, 67 L.Ed.2d 618 (1981). Critical to determining whether the Government in fact possesses superior knowledge is whether the information is held exclusively by the Government or is subject to very limited access. See *Bermite Division of Whittaker Corporation*, ASBCA No. 19211, 77-2 BCA ¶ 12,675. The corollary to this doctrine is that the Government is under no duty to highlight information in its possession if the contractor reasonably can be expected to seek and be able to obtain the facts elsewhere. See *H.N. Bailey & Associates v. United States* [16 CCF ¶ 80,782], 196 Ct.Cl. 166, 177-78, 449 F.2d 376, 382 (1971); *Ambrose-Augusterfer Corporation v. United States* [12 CCF ¶ 81,820], 184 Ct.Cl. 18, 38, 394 F.2d 536, 547 (1968); *T.F. Scholes, Inc. v. United States* [11 CCF ¶ 80,333], 174 Ct.Cl. 1215, 1226, 357 F.2d 963, 970 (1966); *National Concrete and Foundation Co. v. United States* [10 CCF ¶ 72,982], 170 Ct.Cl. 470, 476 (1965); *Leal v. United States*, 149 Ct.Cl. 451, 460, 276 F.2d 378, 380 (1960).

Access to the Puerto Rico overtime requirement in question was available equally to all parties; it was not some esoteric matter

Digitized by Google

exclusively in the Government's possession or otherwise hard to find. It was part of a codified statute, part of the public domain. Where information is publicly recorded and equally available to the contracting parties, courts and boards uniformly hold that it will not constitute superior knowledge. See *Edwards v. United States* [36 CCF ¶ 75,822], 19 Cl.Ct. 663, 671 (1990); *T.L. James and Company, Inc.*, ENG BCA No. 5328, 89-2 BCA ¶ 21,643; *Instalaciones Aire Frio, S.A.*, ENG BCA No. PCC-44, 85-2 BCA ¶ 18,015; *Hobbs Construction & Development, Inc.*, ASBCA No. 34890, 91-2 BCA ¶ 23,755; *Max Jordan Bauunternehmung*, ASBCA No. 23055, 82-1 BCA ¶ 15,685; *cf. Emerald Maintenance, Inc.*, ASBCA Nos. 36628, 36632, 37026, 90-2 BCA ¶ 22,719, *aff'd on other grounds*, 925 F.2d 1425 (Fed. Cir. 1991). The doctrine of "superior knowledge" was not developed to remedy informational asymmetries caused by a contractor's failure to make a reasonable and diligent investigation of information generally available. Appellant's failure here to research local labor laws, which would have revealed the required overtime rates, when it otherwise made specific inquiries regarding local sales taxes, speaks volumes. Appellant's ignorance was not caused by any act of the Government; rather, it resulted from Maitland's failure to make a simple inquiry which should have revealed the double time requirement. Accordingly, we conclude that the double time provision is not within the reach of the "superior knowledge" doctrine.

Appellant next argues that the contract was defective because it failed to contain a reference to the double time requirement imposed in Puerto Rico. (App. Br., at 12-17). Appellant correctly observes that the contract was silent regarding Puerto Rico labor law. However, the contract contained a matrix formed by GP-19, which mandated overtime payments at a rate not less than time and one-half, and the "Permits and Responsibilities" clause, which obliged the contractor to investigate the effect of local laws. Through the operation of these two clauses, the contractor was informed that it must pay at least time and one-half for overtime, but was advised that it must investigate local conditions to insure, *inter alia*, that payments it made for overtime work complied with local law.

The essence of a defective specification is that the work cannot be performed successfully in accordance with its requirements or, at the very least, is more expensive or inefficient. The reverse applies here. Had Appellant observed the dictates of these two clauses and made inquiry, it would have discovered that Puerto Rico mandates double time payments for overtime work. Armed with this knowledge, Maitland could have prepared a cost proposal for the change to grapple placement that would have predicted its costs of performance more accurately.

The clauses contained in the contract are not all-inclusive vis-a-vis extrinsic legal requirements, and are not intended to function as a comprehensive legal education for the contractor. Indeed, the "Permits and Responsibilities" clause places the burden of local inquiry on the contractor, and we certainly are not persuaded by this record to attempt to shift the responsibility for contractor unawareness of a codified local statute to the Government. The failure to include a reference to the double time requirement does not render the specifications defective. We reject this argument.

Appellant finally contends that the parties' failure to consider the unique overtime requirements in Puerto Rico law, both at the time of contract award and of the execution of Modification P00001, constitutes a mutual mistake of fact entitling Maitland to recover the additional overtime costs it was required to pay. We note that this postulate is intellectually dissonant with the preceding "failure to warn" and superior knowledge averments, since the crux of those contentions necessitates Government knowledge of the double time requirement.

The test for relief under a mutual mistake of fact has been announced in *Flippen Materials Company v. United States*, 160 Ct.Cl. 357, 312 F.2d 408 (1963). In order to recover under this theory: (1) there must in fact be a mistake which is mutual; (2) the risk of the mistake must not be one which was to be borne, under the terms of the contract, by the contractor, and; (3) the party from whom relief is sought, if it had been aware of the correct facts at the time of entering into the proposed contract, would have agreed to the proposed relief having been embodied in the instrument.

Appellant relies on *Security Associates International, Inc.*, DOTCAB Nos. 1340, 1432, 84-2 BCA ¶ 17,444, for the proposition that the parties' failure to consider relevant local law gives rise to a mutual mistake of fact, entitling the contractor to relief. In *Security Associates*, the Immigration and Naturalization Service (INS) entered into a contract for security and guard services in connection with the detention of refugees entering Pu-

©1994, Commerce Clearing House, Inc.

Digitized by Google

erto Rico. Owing to the urgency of the situation, the contract was negotiated in haste, and the parties "forgot" about the Puerto Rico labor requirement for double time if employees were not permitted one-hour meal periods. The Department of Transportation Board held that the parties' inadvertent omission of an allowance for the double time payment requirement, where the contract required levels of work that effectively prohibited one-hour meal periods and "triggered" the double time requirement, constituted a mutual mistake of fact entitling the contractor to relief.

The facts of this appeal are distinguishable from those in *Security Associates.* This contract was not a contract for round-the-clock work that would, by necessity, run afoul of Puerto Rico's overtime and meal period requirements. There was nothing in the performance provisions of the contract or Modification P00001 that mandated or necessitated overtime work. Furthermore, the events leading up to contract award and the execution of Modification P00001 hardly can be called "urgent." Indeed, several months elapsed between the discovery of the frailties of the wire loops and Appellant's proposal to use grapples, and several more months passed before the modification was executed. Had Appellant examined Puerto Rico labor law during that period, it would have discovered the double time provision. The decision to undertake overtime work was made exclusively by Maitland as part of a set of business judgments intended to facilitate the early completion; it was not caused by any confusion regarding the scope and nature of the work in the formation of the contract or the ensuing modification.

While we believe that Appellant and the Government personnel who reviewed Maitland's forward-priced cost proposal for Modification P00001 were either ignorant of, or inattentive to, the double time requirements mandated by Puerto Rico, this mutuality does not alter the responsibility placed on Maitland under the "Permits and Responsibilities" clause to comply with local laws. Any mistake here, mutual or otherwise, was not one of fact, but one of law. When the parties negotiated Modification P00001, they did not misapprehend the scope or nature of the work to be performed. Instead, they proceeded unmindful of a particular facet of Puerto Rico law that effected an increase in Maitland's performance cost only when Maitland unilaterally decided to perform overtime work. Persons are charged with knowledge of the law. See *Federal Crop Insurance Corporation v. Merrill*, 332 U.S. 380, 385, 68 S.Ct. 1, 3, 92 L.Ed. 10 (1947); *see also Heckler v. Community Health Services of Crawford County, Inc.*, 467 U.S. 51, 63, 104 S.Ct. 2218, 2225, 81 L.Ed.2d 42 (1984); *Sanders-Midwest, Inc. v. United States* [35 CCF ¶ 75,548], 15 Cl.Ct. 345, 350 (1988); *Mayer v. United States*, 201 Ct.Cl. 105, 113-14 (1973); *Mills v. United States*, 187 Ct.Cl. 696, 699-700, 410 F.2d 1255, 1257-58 (1969).

The "Permits and Responsibilities" and "Site Investigation and Conditions Affecting the Work" General Provisions included in this contract required Maitland to ascertain the local conditions affecting the cost of the work, and charged Maitland with the responsibility for compliance with all local laws. As such, the risk flowing from ignorance or inattention to local laws and work conditions generally rests with Appellant. Appellant made no inquiry, and there was no evidence that the Government either promoted or suffered Maitland's apparent ignorance of the local overtime requirements, thereby relieving Maitland of this responsibility. *Cf. La Font v. United States*, 17 Cl.Ct. 837 (1989). In view of the foregoing, we reject Appellant's mutual mistake argument.

We note that bilateral Modification P00001 contained standard "release" language. The Government has not raised any potential defense associated with this issue and, in view of the foregoing, we do not address it.

Conclusion

Having reviewed the record and arguments, we conclude that Appellant's claim for additional costs as a result of its underpayment for overtime work in Puerto Rico is without merit. Accordingly, the appeal is DENIED.

[¶ 26,474] Aoki Corporation

ENG BCA No. PCC-95, October 22, 1993. Contract No. CC-2-917.

Delays—Sequence and Scheduling—Access to Work Site.—Under a contract that included transporting equipment across a United States Army bridge to the project site,

Digitized by Google

a contractor was not entitled to recover from the Panama Canal Commission any increased costs stemming from a delayed bridge crossing, because any delay in transporting equipment across the bridge was caused by the contractor's failure to coordinate with the Army and not by an action or inaction of the PCC. The contractor failed to prove its allegation that the Army and the PCC were one legal entity, that is, "the government," or that the action of one was tantamount to the action of the other. The Army's action was that of a third party in the context of the contract between the contractor and the PCC. The PCC had no control over or knowledge of the Army's action at the bridge, and the contractor's delay in crossing the bridge did not result from the PCC's fault or negligence. The contractor was responsible for coordinating the bridge crossing with the Army, which had jurisdiction over the bridge at the time of the contractor's intended crossing.

For the appellant: Mitsuo Saka, General Manager. For the government: Theodore G. Lucas, Office of General Counsel, Panama Canal Commission, Balboa, Republic of Panama.

Before JOCKISCH and SOLIBAKKE, Administrative Judges.

JOCKISCH, Administrative Judge: This is an appeal from the failure of the Contracting Officer timely to consider Aoki Corporation's (Aoki) request for a Contracting Officer's decision (COD) on its claim for increased costs because of alleged interference by the "Government" (United States Army) in the Contractor's performance of the project. Following a conference call on February 26, 1993, between the Board and representatives of the parties, the appeal was dismissed without prejudice at the parties' request, as they indicated a settlement was likely. On April 12, 1993, Aoki initiated reinstatement of the appeal as the parties had failed in settlement negotiations. Aoki requested that the Board process the appeal under Board Rules 12.3, Accelerated Procedure, and 11, Submission Without a Hearing. Briefing of the appeal was completed by the parties in October, 1993. The parties requested the decision of the Board be limited to entitlement, with quantum reserved.

FINDINGS OF FACT

1. On December 12, 1991, Invitation For Bids (IFB) No. 92-19, Cut Widening Program, Project No. 1 Mandinga, was issued by the Panama Canal Commission (PCC). Included in the IFB was Special Condition No. 6, which stated the following:

SC-6 *SPECIAL REQUIREMENTS:*

* * *

(b) *Mandinga Bridge:* The Mandinga Bridge has a maximum allowable vehicle load of 20 Tons and shall not be exceeded by the Contractor's equipment. Tracked vehicles cannot crawl on bridge surface unless a protective action to the concrete surface is made. Surface shall be kept clean from rocks to prevent damage to the concrete surface by trucks running over.

(c) *Alternative Transportation of Equipment That Cannot Cross the Mandinga Bridge:*

(1) *Transportation:* The Commission will provide transportation services to Contractor's equipment that cannot safely cross the Mandinga Bridge. Suitable Commission equipment will pick up the Contractor's equipment at a location to be coordinated with the Commission, at Gamboa on the East bank, and carry it to the West bank, at a location just north of the Project area. Unloading ramp(s) shall be the Contractor's responsibility.

(2) *Scheduling:* The Commission will provide this service as follows: transportation of Contractor's equipment at the beginning of the contract and a return trip at the end of the contract, i.e., one round trip. Transportation of equipment will take one day and shall be coordinated with Dredging Division through the Contracting Officer.

By amendment No. 1 to the IFB, dated January 3, 1992, subparagraph SC-6(c)(2) was amended as follows:

Subparagraph SC-6(c)(2): At the end of this subparagraph, add: "The Contractor shall notify the Contracting Officer, in writing, at least 14 calendar days in advance, of proposed dates for transportation of equipment."

2. Prior to bid, Appellant visited the site to determine how it would transport its equipment to the project area. It decided to use the alternative transportation provided for under the invitation for bids special condition 6(c). Appellant determined that one of two bridges could be used to get its equipment to the Tres Pesos area from which the PCC would then transport it to the project site. Only one of the two bridges could handle the larger equipment required for the

©1994, Commerce Clearing House, Inc.

Digitized by Google

project. The PCC concurred in Appellant's evaluation and proposed procedure.

3. On January 10, 1992, Aoki was the low bidder in the amount of $1,175,000; and, on January 28, 1992, it was awarded the contract for cut widening project No. 1 at Mandinga.

4. The following contract provisions are pertinent to this appeal:

A. General Conditions

(1) GC-16, Scope of Work

The Contractor shall furnish all plant, materials, equipment, supplies, labor and transportation, including, fuel, power, water (except any materials, equipment, utility or service, if any, specified herein to be furnished by the Commission), as required to accomplish all work under the contract, in strict accordance with the specifications, schedules, and drawings, all of which are made a part hereof, and including such detail drawings as may be furnished by the Contracting Officer from time to time during the prosecution of the work in explanation of said drawings.

(2) GC-27, Permits and Responsibilities

(3) GC-49, Disputes

(4) GC-54, Suspension of Work

(5) GC-55, Changes

B. Special Condition-6, Special Requirements, particularly SC-6(b) and (c), as amended. [*See* Finding No. 1].

5. Prior to the incident which gave rise to this appeal, Appellant used the procedure described in Finding No. 2 to transport equipment from Tres Pesos to the project site. By letter dated February 14, 1992, Aoki had requested transport of 6 specifically listed pieces of equipment, which were transported by the PCC to the project site as scheduled and without incident. (R.4, Tab 3).

6. On March 24, 1992, Appellant orally notified the PCC that it would require transportation of additional equipment, a Komatsu 300 excavator, on March 30, 1992, from the Tres Pesos area to the project site. Though the request was oral, the PCC concurred and sent the work boat *Goliath* to transport the equipment. (R.4, Tabs 5, 6). Aoki had not specified any other equipment, such as a D-8 bulldozer, to be transported. Aoki actually intended to transport an excavator and a bulldozer. On March 27, 1992, the PCC inspector for the project telephoned Appellant to assure that the "excavator" would be at the pick-up site on the morning of March 30, 1992. During this call, Appellant did not inform the PCC of its intent to transport a D-8 bulldozer.

7. The excavator crossed the large bridge and arrived at the Tres Pesos area on March 24, 1992. However, the bulldozer, which was leased equipment, did not reach the large bridge until the morning of March 30, 1992. At this time, the United States Army was utilizing the bridge. This use delayed movement of the bulldozer over the large bridge for approximately 2 hours. The large bridge is located in an area of operations dedicated and reserved for the exclusive use and control of the armed forces of the United States by the Panama Canal treaty of 1977.

8. On the morning of March 30, 1992, the *Goliath* loaded the excavator at Tres Pesos. No one from Aoki had informed the PCC personnel that additional equipment was to be transported along with the excavator. By the time the bulldozer finally arrived at the transportation site, the "Goliath" had already departed.

9. Aoki's leased bulldozer remained at the Tres Pesos area for 17 days before being returned to the lessor. Appellant paid the lessor the required fee for the 17 days.

10. On April 6, 1992, Appellant notified the PCC, for the first time, of the incident concerning the bulldozer and of its intent to have had the bulldozer transported on March 30, 1992. By letter dated April 10, 1992, Aoki specifically requested the transportation of another two pieces of equipment, a Komatsu PC-400 excavator and a Caterpillar D-8 bulldozer, which the PCC transported to the project site on April 16, 1992. (R.4, Tabs 8, 9).

11. On December 14, 1992, Appellant filed a claim for costs associated with the leased bulldozer being at the Tres Pesos area for 17 days. By letter dated February 15, 1993, Appellant filed an appeal based on the Contracting Officer's failure to issue a Contracting Officer's decision.

12. During a conference call between the Board and the parties on February 26, 1993, the PCC indicated that it intended to enter into settlement negotiations with Aoki. However, at the negotiations meeting on March 4, 1993, the PCC raised defenses to Appellant's claim of: (1) lack of appropriate notice, (2) delay caused by a third party, not the PCC, (3) Aoki's responsibilities under the contract to provide all equipment to the site, and (4) the obligations of Appellant under the Permits and Responsibilities clause in the contract.

Digitized by Google

13. On April 6, 1993, Respondent issued a final Contracting Officer's decision denying the claim; and on April 7, 1993, Appellant requested reinstatement of its previous appeal.

DECISION

Though Respondent has raised a number of defenses, such as lack of notice, Appellant's contract responsibilities to provide the equipment to the site, and Aoki's obligations under the Permits and Responsibilities clause, the gravamen of this appeal is the PCC's relationship to the United States Army (Army) as pertains to the Army's action which delayed Appellant's crossing of the bridge on the morning of March 30, 1992.

Even though Appellant urges that the PCC and the United States Army are one, "the Government," it has not proved this allegation or established that the action of one is tantamount to an action by the other. The action of the United States Army was, in contractual contemplation, that of a third party, not the PCC. The PCC had no control over, or knowledge of, the Army's action at the "Bridge" on the morning of March 30, 1992, and, thus, it was not through its fault or negligence that Appellant was delayed. As Appellant noted in its reply brief, "the Army's action was unannounced and uncontemplated by both parties when it occurred ... on said date." It was Appellant's responsibility to coordinate with the Army its crossing of the bridge over which the Army, not the PCC, had jurisdiction and which was being utilized by the Army, almost certainly acting for "the Government" in its sovereign capacity, at the time of Appellant's intended crossing.

Further, Respondent was given no opportunity by Appellant possibly to alleviate the situation, which was unknown to the PCC at that time. Appellant did not call or inform the PCC of the difficulties it was encountering in getting the bulldozer to the rendezvous point on time. If it had, the PCC possibly could have attempted to alleviate Appellant's problems or could have delayed the *Goliath's* leaving until the bulldozer arrived.

In this instance, Respondent had no information from which it could have performed its duty to cooperate with Appellant. It did not know of the incident at the bridge. It did not know that a bulldozer was to be part of the equipment to be taken to the project site. All it knew was that Appellant would have a Komatsu PC-300 excavator at the Tres Pesos area to be transported to the Mandinga project site. Aoki's Komatsu PC-300 excavator was there and was transported to the project site without any Aoki personnel informing the PCC that other equipment it wanted transported had not yet arrived.

As the PCC and Army are not one legal entity, as the delay to Appellant was thus caused almost by a third party and not by the fault or negligence of the PCC, and as the PCC met both its contractual requirement to transport Appellant's equipment as to which it was notified from designated area to the job site and its implied duty to cooperate and not hinder the Contractor, Appellant cannot recover from the PCC its costs stemming from this unfortunate incident of timing, the Appeal is DENIED.

[¶ 26,475] Universal Automation Labs, Inc. v. Department of Transportation; Diversified International Sciences Corporation and Galaxy Scientific Corporation, Intervenors

GSBCA No. 12370-P-R, October 1, 1993. (The text below is the redacted version issued to the public on October 25, 1993.)

Protests, GSBCA—Reconsideration—Evidence Newly Discovered.—Upon reconsideration, a board of contract appeals affirmed its previous decision denying a protest against a procurement, despite the protester's allegation that new evidence supported the protester's contention that a technical evaluator violated statutory ethical standards, because the protester did not show that the evaluator's actions diminished the protester's ability to compete in the procurement. The record, as enhanced by additional discovery, did not support the protester's contentions regarding the evaluator's dishonesty or that the evaluator's alleged dishonesty tainted the entire procurement. The protester failed to develop a factual record that went beyond suspicion or innuendo.

Before NEILL, HYATT, and VERGILIO, Administrative Judges.

Reconsideration of 93-3 BCA ¶ 26,142.

NEILL, Administrative Judge: By decision dated July 29, 1993, we granted in part the request of Universal Automation Labs, Inc. (UAL), protester in this case, for reconsideration of our earlier decision denying its protest. Specifically, we authorized UAL to engage in discovery regarding contacts during the CADSS procurement between an employee of the Federal Aviation Administration (FAA), Dr. Mark Smolensky, and any agent or representative of the Center for Applied Human Factors in Aviation (CAHFA) or Embry-Riddle Aeronautical University (ERAU) concerning the employment of Dr. Smolensky by either CAHFA or Embry-Riddle. Protester was also authorized to engage in discovery regarding any investigation of these contacts by the FAA. The parties were authorized to supplement the record with additional evidence and argumentation concerning these contacts. *Universal Automation Labs, Inc. v. Department of Transportation*, GSBCA 12370-P-R, 93-3 BCA ¶ 26,142 (July 29, 1993).

In a separate order issued immediately prior to this decision, we have ruled on the objections posed to the additional record submissions by the parties and once more closed the record for this case. Having reviewed the new evidence as well as the argument presented by counsel for the parties, we are not convinced that a basis exists for altering our original decision denying this protest. For the reasons set out below, therefore, we reaffirm our decision denying this protest.

Supplemental Findings of Fact [1]

Details Regarding Dr. Smolensky's Negotiations for a Position at the Center for Aviation/Aerospace Research (CAAR)

64. In Finding of Fact number 57, we recounted a series of facts set out in a letter written by counsel for respondent, dated June 28, 1993, and received by the Board on June 29. *See* Supplemental Protest File, Exhibit NN. The letter advised that a member of the Technical Evaluation Team (TET) for the protested procurement, namely Dr. Mark Smolensky, while attending a conference in Orlando, Florida, in late January 1993, received an offer of employment from a representative of CAHFA. At the time, Dr. Smolensky was said to have informed the CAHFA representative that he was not interested.

65. Further discovery into the facts recounted in the aforesaid letter of June 28 has revealed that the meeting in question took place not in late January 1993, but in early February of the same year. The meeting in question did take place under CAHFA management. Supplemental Protest File, Exhibit II at 54. The record, however, now shows that the individual who approached Dr. Smolensky was not only the Associate Director of CAHFA but also the Director of the Center for Aviation/Aerospace Research (CAAR) at Embry-Riddle Aeronautical University (ERAU). *Id.* at 11.

66. The Director of CAAR was professionally acquainted with Dr. Smolensky from occasional contacts with him at FAA's Technical Center at Atlantic City. He had personally heard Dr. Smolensky complain on occasion about the frustrations of Government gridlock. He had also heard from third parties within his professional circle that

[1] These findings are supplemental to those found in the Board's original decision denying this protest, namely, *Universal Automation Labs, Inc. v. Department of Transportation*, GSBCA 12370-P, 93-3 BCA ¶ 26,142 1993 BPD ¶ 211 (July 7, 1993).

Digitized by Google

Dr. Smolensky was interested in moving into a university environment and might want to consider ERAU. Supplemental Protest File, Exhibit II at 60-62. This individual has described his conversation with Dr. Smolensky during the February meeting as "a feeler to see whether he would really be interested." *Id.* at 56.

67. The FAA letter of June 28 to the Board also stated that, at the time Dr. Smolensky was first approached at the Orlando meeting, he indicated he was not interested. The Director of CAAR has stated that Dr. Smolensky replied he would consider the matter and get back to him if there was an "interest worth pursuing." Supplemental Protest File, Exhibit II at 57. Dr. Smolensky did in fact reply almost immediately. In a letter dated February 9, 1993, he outlined in detail what it would take for him to "set up shop" at CAAR. *Id.*, Exhibit S. Dr. Smolensky has testified that his change of mind was somehow prompted by discussions with his parents, who by then had found a place to settle in Florida. *Id.*, Exhibit JJ at 84-85.

68. Shortly after receipt of Dr. Smolensky's letter of February 9, the Director of CAAR responded to him with a phone call. Supplemental Protest File, Exhibit II at 66. He has testified that during this period, the possibility of Dr. Smolensky working for CAAR was conjectural since he would not yet know what the Center budget would be until May 1. *Id.* at 71. He has explained that he conveyed this fact to Dr. Smolensky. *Id.* Dr. Smolensky has testified that during this same period he reached "soft agreements" with the Director of CAAR regarding most of the conditions set out in his letter of February 9. *Id.*, Exhibit JJ at 91. The matter of Dr. Smolensky's accepting a position with CAAR appears to have languished thereafter or, at the most, gone on hold.

69. In Finding 58, we noted that Dr. Smolensky's parents moved to central Florida in April 1993 and asked him to join them. At that time, Dr. Smolensky explored with his supervisor[2] the possibility of being detailed to Florida. He found, however, that the maximum detail available was for only one year. Supplemental Protest File, Exhibit B, ¶ 5. During this period, however, the Director of CAAR again approached Dr. Smolensky and advised him that the offer to come to CAAR was still open should he want it. *Id.*, Exhibit A. Dr. Smolensky then asked his supervisor if he believed accepting a position with CAAR would lead to resentment on the part of FAA. *Id.*, Exhibits U, JJ at 91-94.

70. By letter dated May 3, Dr. Smolensky again wrote to the Director of CAAR in what appears to be an effort to push matters further along toward his being hired for a post at CAAR. Supplemental Protest File, Exhibit U. The Director contacted him by phone shortly thereafter. He later spoke to Dr. Smolensky personally in late May during a visit to the Technical Center. *Id.*, Exhibit II at 77-78. Negotiations between the two of them concluded shortly thereafter when Dr. Smolensky accepted a firm offer made to him in writing and dated June 10. *See* Finding 58.

71. Dr. Smolensky has stated that he received a firm oral offer from the Director of CAAR on June 10. Supplemental Protest File, Exhibit B, ¶ 8. This was followed by a written offer dated June 10 and set out on ERAU stationery. It offers Dr. Smolensky the position of "Senior Research Associate in the University's Center for Aviation/Aerospace Research." The letter is signed by Lee Hays, Director, Human Resources. It requests Dr. Smolensky to sign the letter and return it to Mr. Hays if he agrees with the terms and conditions offered. A copy of this letter is contained in the file. It bears the signature of Dr. Smolensky. His signature line is dated "6/25/93." *Id.*, Exhibit Y. The Director of CAAR has testified that this countersigned letter was faxed to him by Dr. Smolensky on June 25. *Id.*, Exhibit II at 86-87.

72. The record also contains a formal acceptance letter signed by Dr. Smolensky also dated June 25, 1993. It is addressed as follows:

Richard Gibson, PhD
Associate Director/Center for Human Factors in Aviation
Center for Aviation Aerospace Research
Embry-Riddle Aeronautical University
600 S Clyde Morris Blvd.
Daytona Beach, FL 32114-3900

Supplemental Protest File, Exhibit I. This acceptance letter begins with the statement:

[2] Dr. Smolensky's supervisor referred to here and elsewhere in this opinion was not his immediate supervisor. Dr. Smolensky has explained that his immediate supervisor was serving at the time only as an "acting supervisor." He preferred to deal, therefore, with a supervisor further up the chain of command with whom he had discussed his career development. Supplemental Protest File, Exhibit JJ at 105-06.

©1994, Commerce Clearing House, Inc.
Digitized by Google

> It is with pleasure that I accept your offer of Senior Rescarch [sic] Associate in the Center for Human Factors in Aviation (CAHFA).

Id. Dr. Smolensky has since recognized that he is employed by ERAU. *Id.*, Exhibit JJ at 50.

73. Dr. Smolensky has stated, under oath, that he has not discussed the CADSS procurement or any information related to it with ERAU, CAHFA or anyone else not on the TET. He has also stated that at the time he evaluated proposals in response to the CADSS solicitation, he did not seek employment from ERAU, CAHFA or any competing contractor, nor was any offer of employment made to him by any of these. Supplemental Protest File, Exhibit B, ¶ 11.

74. Dr. Smolensky has also stated, under oath, that his last involvement in the CADSS procurement was January 7, 1993, when he completed his revised technical evaluation after examining the offerors' responses to possible weaknesses and deficiencies. Supplemental Protest File, Exhibit B, ¶ 1. In his deposition, Dr. Smolensky has acknowledged that this date marked his last involvement "in an official way" with the evaluation team. He has explained, however, that his personal interaction with scoring concluded in the summer of 1992 after the "second go-around" [3] when he turned in the key he had previously been issued to the cabinet in which the proposals were contained. Following that time, he claims to have had no further substantive discussions regarding the CADSS procurement with members of the TET. *Id.*, Exhibit JJ at 17, 43, 120.

75. Protester has submitted for the record evaluation score sheets signed by Dr. Smolensky and dated "10/22/92." Supplemental Protest File, Exhibit MM. These are revised score-sheets for Factor 4, issued to correct an error detected after the TET had finished its earlier evaluation. *See* Finding 33.

The Status of CAHFA, ERAU, and CAAR

76. In Finding 58, we found that the TET member in question, namely Dr. Smolensky, had stated in his affidavit that in April he began to negotiate in earnest with CAHFA for a position and eventually in June accepted a formal offer from CAHFA. While it is correct that Dr. Smolensky so stated in his affidavit, further discovery has revealed that his statement was wrong. His employer is not CAHFA but ERAU.

77. Documentation in the file indicates Dr. Smolensky clearly understood that the position offered to him was that of a researcher at CAAR. *E.g.*, Supplemental Protest File, Exhibits S, U. The source of the confusion over the identity of his new employer stemmed from Dr. Smolensky's belief that CAAR is part of CAHFA rather than ERAU. This is incorrect. CAAR is part of ERAU. *Id.*, Exhibits W, X, II at 87-88. In his deposition Dr. Smolensky has explained that he believed that CAAR, although situated at ERAU, was, nonetheless, a part of CAHFA. *Id.*, Exhibit 4 at 63, 81. Similarly, in his affidavit he stated:

> I saw no problem in negotiating employment with CAHFA. I believed it to be a separate entity from Embry-Riddle University. In addition, I was not aware that CAHFA or Embry-Riddle are active competing contractors. I am still not aware of CAHFA's status or the status of Embry-Riddle.

Id., Exhibit B, ¶ 10.

78. Notwithstanding Dr. Smolensky's misunderstanding as to the specific identity of his new employer, FAA was very much aware of the presence of ERAU in the equation of things when it reported to the Board and opposing counsel in its letter of June 28 that Dr. Smolensky had accepted a new position. FAA counsel, by that date, had already secured a copy of CAHFA's Bylaws and was able to explain the role of CAHFA *vis a vis* its two sponsoring charter members, ERAU and the University of Central Florida (UCF). *See* Finding 59. FAA counsel also knew and reported at that time that ERAU would be paying Dr. Smolensky's salary and that ERAU was mentioned as an "available resource" in a proposal submitted . *See* Findings 59-60.

The FAA's Investigation of Matters Relating to Dr. Smolensky's Negotiations for a Position with CAAR

79. In Finding 60, we noted that a memorandum from the contracting officer to the Director of the Technical Center advised him of "possible integrity violations" and reported that a TET member had accepted employment with CAHFA but that his salary would be paid by ERAU. We also found that this same memorandum spoke of a "thorough investigation" which led the contracting officer to conclude that any possible

[3] *See* Findings 31-34.

Digitized by Google

violation had no impact on the pending award or selection of a source for the CADSS procurement.

80. At the time our original decision was issued, we had no details regarding the investigation mentioned by the contracting officer in the aforesaid memorandum to the Director of the Technical Center. Counsel for the parties have since supplemented the record in this regard. On June 28, the contracting officer for the CADSS procurement directed a contract specialist on her staff to investigate whether Dr. Smolensky's employment discussions violated Federal Acquisition Regulation (FAR) 3.104, 48 CFR 3.104 (1992). The investigation ran from June 28 to July 21. With the release of the Board's decision on July 7 and the resulting expiration of the suspension order in place during the protest, the contract specialist expanded her investigation to include a representative of . Supplemental Protest File, Exhibit GG at 7, 10-12.

81. As part of her investigation, the contract specialist interviewed Dr. Smolensky and the supervisor with whom Dr. Smolensky had discussed his decision to accept the position at CAAR. She also interviewed a representative of

In addition, she discussed the investigation with the contracting officer for the CADSS procurement and with FAA counsel. Supplemental Protest File, Exhibit GG at 13.

82. FAA's office of counsel at the Technical Center also conducted its own investigation.

Supplemental Protest File, Exhibit JJ at 102-03. An affidavit was obtained from Dr. Smolensky explaining in detail his negotiations for a position at CAAR. Copies of the CAHFA Charter and Bylaws, some promotional materials concerning CAHFA, and the State University System of Florida Standard Practice for Classification of Institutes and Centers in the State University System were secured for review by the Technical Center's Office of Counsel. In addition, an FAA attorney questioned officials at UCF and ERAU regarding the relationship of their institutions to CAHFA and CAAR, the source of CAHFA's funding, and the source of Dr. Smolensky's salary. *Id.*, Exhibit EE.

83. The focus of the investigation undertaken by the contract specialist was to determine if Dr. Smolensky's employment discussions violated the Procurement Integrity Act, 41 U.S.C. § 423, and, if so, whether there had been any impact on the procurement as a result. Supplemental Protest File, Exhibit GG at 48. Her conclusion was that there was no violation and, therefore, no impact on the CADSS procurement. *Id.* at 49, 80. Specifically she determined that ERAU was not a "competing contractor" within the meaning of FAR 3.104-4(b)(1) because it was not likely to become the recipient of a contract or subcontract under the CADSS procurement. Her conclusion was based in part on the fact that

Id., Exhibits C, GG at 49, 53, 80.

. *Id.*, Exhibits H, GG at 56, 64.

84. In the course of her investigation, the contract specialist prepared a fact-sheet regarding

Supplemental Protest File, Exhibit E. She also prepared a fact-sheet explaining the interrelationship of UCF, ERAU, CAAR, CAHFA and the Airway Science Simulation Laboratory at ERAU. *Id.* Also in the record now is a memorandum for file prepared by the contract specialist which describes her contacts with

Id., Exhibit D. One question asked by the contract specialist was[4]

Id. at 3.

Id., Exhibit H.

85. In conducting her investigation, the contract specialist incorrectly assumed that Dr. Smolensky would be working for CAHFA. Supplemental Protest File, Exhibit GG at 29, 44. However, she recognized that his salary would be paid by ERAU. She also concluded that neither CAHFA nor ERAU was a "competing contractor," as defined in FAR 3.104-4(b), for the CADSS procurement. *Id.*, Exhibit C.

86. Based on the contract specialist's investigation, the contracting officer determined that Dr. Smolensky's employment discussions had no impact on the CADSS

[4] In her memorandum the contract specialist refers to "ERAC" rather than "ERAU." In the same memorandum, however, she identifies "ERAC" as "Embry-Riddle Aeronautical Center" which we take to be the equivalent of "ERAU." We note that makes the same assumption. *See* Supplemental Protest File, Exhibit H.

procurement. Supplemental Protest File, Exhibits F, HH at 43-44. She has testified that in arriving at this conclusion she relied upon Dr. Smolensky's affidavit (*id.*, Exhibit B), the contract specialist's report (*id.*, Exhibit C), the contract specialist's notes regarding contacts with (*id.*, Exhibit D), and her own memorandum drafted by the contract specialist and addressed to the Director of the Technical Center (*id.*, Exhibit E). *Id.*, Exhibit HH at 13-15. The contracting officer has further testified that, in accordance with FAR 3.104-11, she forwarded the determination to the Director of the Technical Center as Head of the Contracting Activity. *Id.*, Exhibit F. The Director concurred in the finding and advised the contracting officer to proceed with the CADSS procurement. *Id.*, Exhibit KK.

Status of the CADSS Procurement

87. As of July 7, 1993, when this protest was denied, the CADSS procurement was still far from complete. Amendment 0006 was an extensive amendment to the solicitation. Revised proposals submitted in response to it had not been processed except for the auditing of revised cost proposals. At the hearing on the merits, respondent advised the Board that if the protest were to be denied, FAA planned to hold face-to-face discussions with offerors. Following this, there would, of course, be a call for best and final offers and a final evaluation leading to contract award. Transcript at 281-82.

88. Because Dr. Smolensky has left the FAA and is now employed by ERAU (Finding 72), he is no longer a member of the TET and will obviously not participate in any subsequent evaluations of revised offers. As to the earlier technical evaluations in which he participated, it is the plan of FAA to delete his scores from these evaluations. Respondent's Reconsideration Brief at 24; Respondent's Reply Brief to Protester's Supplemental Brief Regarding Conflict of Interest/Procurement Integrity Issues at 25.

Discussion

Protester's Basis for Relief

The additional evidence provided by the parties in conjunction with our reconsideration of this case has permitted us to refine and, where necessary, correct our earlier findings relating to Dr. Smolensky's negotiations with CAAR. These refinements and corrections are set out in the supplemental findings included in this decision. Protester believes that new evidence added to the record should lead us to reverse our original decision denying its protest. Counsel writes:

> Indeed, there is now ample evidence of the "hard facts" of both the appearance and probability of impropriety resulting in a violation of 48 C.F.R. § 301-1, 5 C.F.R. § 2635 and 49 C.F.R. Part 99. Therefore, the procurement must be cancelled.

Protester's Supplemental Brief Regarding Conflict of Interest/ Procurement Integrity Issues at 30.

We disagree not only with protester's ultimate conclusion but also with the manner in which it reaches this conclusion. A protester is not automatically entitled to relief if it demonstrates to us that a law or regulation has been violated. Such an approach would be in direct conflict with the express wording of the statute from which the Board derives its jurisdiction to resolve protests. That statute provides:

> If the Board determines that a challenged agency action violates a statute or regulation or the conditions of any delegation of procurement authority issued pursuant to this section, the board *may* suspend, revoke, or revise the procurement authority of the Administrator or the Administrator's delegation of procurement authority applicable to the challenged procurement.

40 U.S.C. § 759(f)(5)(B) (1988) (emphasis added). The Board's authority to grant relief is, therefore, discretionary. As we have previously observed:

> Relief does not automatically flow from the demonstration of a violation of statute or regulation; it is a matter left to the discretion of the Board and turns, among other things, on matters such as whether the harm alleged actually occurred, whether it was a result of the violation alleged, and whether the relief serves the goals of economic and efficient procurement.

Computer Systems & Resources, Inc., GSBCA 9971-P-R, 89-3 BCA ¶ 22,217 at 111,732, 1989 BPD ¶ 261 at 2-3.[5]

Both protester and respondent have expended considerable effort on the issue of whether the conduct of Dr. Smolensky vio-

[5] We note that in dealing with whether relief is appropriate in situations where a protester demonstrates the existence of a *de minimis* violation, our appellate authority has recognized and upheld the discretion granted to the Board by statute in matters relating to relief in bid protests. *See Andersen Consulting v. United States* [37 CCF ¶ 76,284], 959 F.2d 929, 932-33 (Fed. Cir. 1992).

Digitized by Google

lated the Procurement Integrity Act and conflict of interest regulations. We choose to begin our analysis elsewhere by seeking to determine first if protester has, in any way, been actually harmed by the alleged violations.

In this case, we can find no harm. The entire record, even as refined and corrected, still does not convince us that Dr. Smolensky's negotiations with CAAR have, in any significant way, harmed UAL. Whether Dr. Smolensky's actions constituted a violation of ethical standards is not of primary concern here—serious as the matter may be.[6] What we are concerned with here is whether UAL's ability to compete in this procurement has been diminished or compromised as a result of Dr. Smolensky's activities during the CADSS procurement.

Protester in briefing this case does not explicitly discuss the harm which it may have suffered or may suffer as a result of the allegedly improper conduct of Dr. Smolensky. Counsel for UAL does, however, discuss the adverse impact which this conduct is said to have had on the CADSS procurement as a whole and, presumably, on UAL's interests as well.

UAL contends that Dr. Smolensky's conduct has had a widespread impact on the procurement. Three examples are given. Protester points to , to FAA's offer to remove Dr. Smolensky's scores from the evaluation, and to an overall contamination of the integrity of the procurement process. Protester's Supplemental Brief Regarding Conflict of Interest/Procurement Integrity Issues at 24-25. We obviously find no actual harm to UAL from the first two examples.

The alleged overall contamination of the integrity of the procurement process could, however, be a source of real harm to UAL if it did in fact occur. In the mind of protester, this "contamination" springs from the dishonesty of Dr. Smolensky. Protester writes:

> Although Smolensky claims that he never discussed CADSS with any offeror, he has repeatedly lied and cannot be trusted. Smolensky lied about the dates of his employment negotiations, he lied about the identity of his future employer, he lied about his last involvement in the CADSS procurement, he lied in his affidavit, and he lied in his deposition.... This impact can never be corrected no matter what *post hoc* remedies FAA proposes....

Id. at 25.

We do not find that the record supports protester's harsh assessment of Dr. Smolensky. We have found that the dates and time frames provided by him in his original affidavit have remained substantially intact even after the completion of the additional discovery we authorized in this case. The overture made to him in early February now appears to have been a highly tentative one or, as the Director of CAAR states, "conjectural." Finding 68. In the affidavit provided for the record by Dr. Smolensky prior to our deciding this protest, he described the negotiations for his new position as having begun in earnest in mid-April 1993. *See* Finding 58. The record, as enhanced by additional discovery, only confirms this fact. Findings 68, 70-71. Earlier discussions appear to have languished or, at most, been put on hold—to the point that Dr. Smolensky, in April, was exploring with his supervisor the possibility of an extensive detail to the Florida area. Findings 68-69. The evidence, as further developed, now confirms that Dr. Smolensky certainly did not get a firm offer, in the strict sense of the term, until June of 1993. Findings 66, 71.

As to Dr. Smolensky's alleged lies about the identity of his future employer, we are not at all convinced that this was as deliberate as protester would have us believe. The record confirms that there has been a good deal of confusion regarding the identity and interrelationship of CAHFA, CAAR, and ERAU. *See* Findings 76-78, 82, 85. Any experienced lawyer knows that the operative distinctions regarding corporate entities, so often used in law, are frequently misunderstood or simply missed by laymen—even those who are well educated in their own respective fields. Protester has not convinced us that Dr. Smolensky's confusion as to the identity of his new employer was not genuine. Dr. Smolensky's erroneous assumption that CAAR was part of CAHFA is also understandable when one recalls that he was first approached regarding a position with CAAR during a CAHFA meeting and by the

[6] Nothing we say herein should be interpreted as a finding that such violations have or have not occurred. Because there is no need to make any finding in this regard in order to arrive at a reasoned decision for this protest, we do not consider that it is even within our jurisdiction to make one. *See SMS Data Products Group, Inc. v. United States* [34 CCF ¶ 75,531], 853 F.2d 1547, 1555 n. (Fed. Cir. 1988).

©1994, Commerce Clearing House, Inc.
Digitized by Google

Director of CAAR, who is also Associate Director of CAHFA. *See* Finding 65.[7]

The case made by protester for the assertion that Dr. Smolensky lied about his involvement in the CADSS procurement is the least convincing of all. We do not see the clarifications provided by him during his deposition as being in fundamental contradiction with the statement made in his affidavit that his last involvement in the CADSS procurement was January 1993. The distinction being made is obviously between involvement in a technical or "an official way" and substantive, personal involvement. The turning-in of the key to the cabinet containing the proposals in the summer of 1992 is certainly a credible indication that his substantive, personal involvement was, practically speaking, complete. Finding 74. As to the signature of revised sheets in October, we already know from the testimony of the TET chairman that this involved a technical correction and not a substantive revision of the previously completed evaluation. *See* Findings 33, 75.

Even assuming a substantive involvement of Dr. Smolensky in the CADSS procurement during the fall of 1992, the facts, as now developed, show that prior to his February meeting in Orlando, Dr. Smolensky did nothing more during that period than indicate to professional colleagues in the private sector that he was entrenched in Government gridlock and possibly interested in leaving his post at FAA for a position outside of the Government. Finding 66. Protester has provided us with no convincing evidence that this frustrated attitude on the part of Dr. Smolensky somehow influenced the objectivity or impartiality of his judgment in the evaluation process. Furthermore, it is clear that discussions regarding a position at CAAR did not begin until after a point in time in which all parties agree that Dr. Smolensky had completed any work he may have done on the CADSS evaluation. Findings 67, 74.

In short, for the reasons stated, we remain unconvinced that Dr. Smolensky's alleged dishonesty is a wellspring of contamination tainting the entire CADSS procurement and somehow harming or threatening real harm to the interests of UAL. Protester has failed to develop a factual record which goes beyond suspicion or innuendo. We simply find no such contamination and, therefore, no such harm.

UAL's Demand that the Procurement Be Canceled

In urging us to cancel this procurement because of alleged improprieties on the part of Dr. Smolensky, UAL relies heavily on the decision of the Court of Appeals for the Federal Circuit in the case of *NKF Engineering v. United States* [33 CCF ¶ 74,691], 809 F.2d 372 (Fed. Cir. 1986), and on a decision of the Court of Federal Claims which was recently affirmed by that Court of Appeals, namely *Compliance Corp. v. United States* [36 CCF ¶ 75,991], 22 Cl.Ct. 193 (1990), *aff'd*, 960 F.2d 157 (Fed. Cir. 1992).

We find UAL's reliance on these cases to be misplaced. First, UAL errs in stating that the Court in *NKF* "expressly rejected the reasoning" of an earlier decision, *CACI, Inc.-Federal v. United States* [31 CCF ¶ 71,709], 719 F.2d 1567 (Fed. Cir. 1983). Protester's Supplemental Brief Regarding Conflict of Interest/Procurement Integrity Issues at 27. The *NKF* decision rejects what it considers an incorrect interpretation of *CACI, Inc.-Federal*, but it certainly does not reject the decision itself. On the contrary, in deciding *NKF*, the Court specifically noted that the position it was taking was consistent with the decision in *CACI, Inc.-Federal*. It wrote:

> Indeed, our vacating the Claims Court order in this case is consistent with the reversal in *CACI, Inc.-Federal*. In both cases, the Court finds the agency award to be based on a rational ground and the Claims Court interference with the normal procurement process to be error.

NKF at 376. Protester fails to recognize the continuous thread running through *CACI, Inc.-Federal, NKF*, and *Compliance*. All three cases stand for the simple proposition that a contracting officer's decision to take or not to take corrective action in the face of an appearance of impropriety will not be interfered with by the Court if that decision rests upon a rational and reasonable basis. This proposition most assuredly applies to

[7] Protester attaches special significance to the fact that Dr. Smolensky accepted a firm offer of employment by countersigning the letter sent him by the Director of Human Resources for ERAU but then sent a letter of acceptance to the Director of CAAR in his capacity as Associate Director of CAHFA. *See* Findings 71-72. This, according to protester, is evidence of a concerted effort on the part of Dr. Smolensky to cover up his employment discussions with ERAU. The record does not shed any light on what Dr. Smolensky's actual intentions were in writing this letter and protester has simply not convinced us that the letter is not just more evidence of Dr. Smolensky's mistaken belief that CAAR was part of CAHFA.

Digitized by Google

the facts in this case, but not in the manner which protester intends. These cases do not justify the Board's cancellation of the CADSS procurement, based merely on the appearance of impropriety, without further recourse to the position of the contracting officer. Rather, these cases remind us of the need to examine first the reasonableness of the contracting officer's decision to act or not act.

The contracting officer is by now in possession of the pertinent facts relating to Dr. Smolensky's negotiations for a position with CAAR. She disagrees with protester over whether there has even been a Procurement Integrity Act violation. Having concluded that there is no violation, she likewise concludes that Dr. Smolensky's negotiations have had no adverse impact on the procurement. *See* Finding 86. Consequently, she has not canceled the CADSS procurement.

Protester demands that we overrule the contracting officer and tells us that, based on *NKF* and *Compliance*, we are required to do so since there is at least the appearance of an impropriety—if not any actual one. Precisely because of these cases—and *CACI, Inc.-Federal* as well—we decline to do so. Having made our own *de novo* review of the facts in this case and quite apart from any considerations of whether there has or has not been a Procurement Integrity Act violation, we conclude that the contracting officer's decision not to cancel the CADSS procurement is entirely reasonable.

This CADSS procurement has already been the victim of extraordinary delay. Findings 61-62. Protester itself complains of this fact. Initial and revised proposals have been evaluated. Findings 25-28, 33-34. Following the second evaluation, however, amendment 0006 to the CADSS solicitation made extensive changes and afforded offerors the opportunity to revise their cost and technical proposals. Findings 36-41. This protest has delayed the evaluation of these revised proposals. Our order of April 20, 1993, granting UAL's request that we suspend respondent's delegation of procurement authority, precluded respondent from carrying out the further processing of these revised offers other than to audit updated cost proposals. In the absence of any demonstrable harm to UAL from the alleged improper conduct of Dr. Smolensky, a further delay of this procurement by cancellation makes no sense.

Furthermore, even if UAL were able to demonstrate that it had suffered or would suffer harm as a result of Dr. Smolensky's conduct either during the earlier evaluations or subsequent to January 7, 1993, the demand that this procurement be cancelled is excessive in the extreme and, given the circumstances of this case, contrary to the goals of economic and efficient procurement as well. *See* 40 U.S.C. § 759(f)(5)(A). Any effect of the allegedly injurious conduct should be eliminated by the deletion of Dr. Smolensky's scoring from the results of the two earlier evaluations and by his absence from the future evaluation of revised proposals before and after oral negotiations. *See* Findings 87-88. Similarly, even if the contracting officer had concluded that a violation of the Procurement Integrity Act did occur, a decision not to cancel would still have been reasonable, given the facts in this case, and permissible as well. *Federal Data Corporation v. United States* [36 CCF ¶ 75,991], 911 F.2d 699 (Fed. Cir. 1990).

Accordingly, we see no reason why the contracting officer's decision not to cancel the CADSS procurement should not be permitted to stand. For the reasons stated, we consider it a preeminently reasonable one. We, therefore, deny protester's demand that we overturn that decision.

Decision

Upon reconsideration, the protest is again DENIED.

[¶ 26,476] Tek Pro's v. General Services Administration

GSBCA No. 12355, October 18, 1993.

Labor—Price Adjustments for Changes in Wage Determinations—Jurisdiction.—The board dismissed an appeal concerning the calculation of a price adjustment for a change in a Department of Labor wage determination because it lacked jurisdiction over a preliminary matter in the appeal. The wage determination affected an employee who had been working under two labor classifications. It was necessary to resolve this employee's classification before the price adjustment could be calculated, and resolution of employee classification matters is reserved to the Department of Labor's exclusive jurisdiction.

©1994, Commerce Clearing House, Inc.
Digitized by Google

For the appellant: James E. Hampshire, President. For the government: Jerry Ann Foster, Office of Regional Counsel, General Services Administration, Fort Worth, Texas.

Before GOODMAN, Administrative Judge.

GOODMAN, Administrative Judge: On March 31, 1993, appellant, TEK PRO'S, filed this appeal of a contracting officer's decision dated December 29, 1992. The decision denied in part appellant's claim for a price adjustment to its contract as the result of increased minimum wages contained in a new Department of Labor wage determination applicable to appellant's contract with respondent. According to a price adjustment clause in the contract, appellant alleged it was entitled to an increase in the contract price. Appellant elected to have its case resolved under the Board's accelerated procedure. Rule 14.[1]

The claim involved appellant's designation of an employee as both a motor vehicle mechanic and a working supervisor. Appellant asserts that for purposes of calculating the price adjustment, the employee should be classified as a motor vehicle mechanic, and only that portion of his wages deemed by appellant as payment for mechanic's wages should be considered in the calculation of the price adjustment. Respondent asserts that the employee's total compensation, and not just that portion of wages designated by appellant as mechanic's wages, should be considered in calculating the price adjustment. Thus, the contracting officer granted a price increase, but not in the amount requested by appellant. Appellant sought its total claim on this issue in its appeal to this Board.

During a conference on September 28, 1993, the Board informed the parties that it believed a resolution was necessary as to the proper classification of the individual employee in question before a price adjustment could be determined, as appellant was asserting a dual function for the individual. The issue of the proper classification of the individual is a dispute concerning labor standard requirements. Pursuant to Federal Acquisition Regulation (FAR) 52.222-41(t), set forth in full at 48-51 of the contract, all disputes concerning labor standard requirements are to be resolved by procedures established and conducted by the Department of Labor, and not pursuant to the Disputes clause of the contract. Thus, the Board, *sua sponte,* raised the issue of its possible lack of jurisdiction to resolve a preliminary issue necessary for determination of the price adjustment. *See, e.g., Emerald Maintenance, Inc. v. United States* [36 CCF ¶ 76,018], 925 F.2d 1425 (Fed. Cir. 1991); *JL Associates, Inc. v. General Services Administration,* GSBCA 11922, 93-3 BCA ¶ 25,939.

During a second conference on October 6, 1993, counsel for respondent stated its position that after reviewing the situation further, respondent had determined that the contracting officer's decision of December 29, 1992, incorrectly stated appeal rights to this Board under the Contract Disputes Act, and that the proper forum for resolution of the dispute as to the classification of appellant's employee was the Department of Labor. Accordingly, respondent stated its intent to reissue the contracting officer's decision with the appropriate appeal rights and to file a motion to dismiss the instant appeal for lack of jurisdiction. Mr. Hampshire stated on behalf of appellant that he would not object to respondent's motion to dismiss the appeal for lack of jurisdiction.

By letter dated October 6, 1993, to appellant, the contracting officer stated that the previous decision of December 29, 1992, should have included appeal rights to the U.S. Department of Labor rather than to this Board. On October 7, 1993, respondent filed a motion to dismiss the instant appeal for lack of jurisdiction, on the grounds stated above, to which appellant had previously stated it would not object.

Accordingly, respondent's motion is granted. The appeal is **DISMISSED WITHOUT PREJUDICE.**

[¶ 26,477] PAE GmbH

ASBCA No. 46163, November 10, 1993. Contract No. DAJA37-87-C-0262.

Cost Types—Employee Morale, Health, and Welfare—Work Clothing.—A contractor's unilateral decision to provide work clothing to its employees did not warrant an equitable adjustment of the estimated costs in a cost-plus-award-fee contract, because the contractor submitted mere self-serving argument about the health, safety, security, and employee morale benefits of the work clothing in lieu of actual evidence that any benefits had resulted. Moreover, the contract contained no provision authorizing the contractor to unilaterally change the contract terms and the government's contracting costs. The contract required advance government approval of allowable costs, and the government had refused the contractor's request for reimbursement for uniforms.

For the appellant: Heinz D. Bertram, CPCM, Frankfurt, Germany. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. E. Michael Chiaparas, JAGC, Trial Attorney.

Before ELMORE and STEMPLER, Administrative Judges.

ELMORE, Administrative Judge: PAE GmbH (PAE or appellant) has appealed the contracting officer's (CO) adverse decision denying its claim for reimbursement of the alleged cost of work clothing provided to its European Redistribution Facility (ERF) employees during the contract period extending from 1 December 1991 through 30 September 1992. Appellant has elected the accelerated procedure under Board Rule 12.3.

The parties have elected to submit the matter on the record in accordance with Board Rule 11. The record consists of the appeal (R4) file; appellant's complaint (complaint) and attached exhibit (exh. A); sworn declaration of Glenn Tolbert (exh. G-1); and Government's answer (answer) and enclosures (encl.). Both parties submitted briefs. Only entitlement is decided.

SUMMARY FINDINGS OF FACT

PAE was awarded Cost-Plus-Award-Fee option contract DAJA37-87-C-0262 (C-0262) on 15 June 1987 to provide "Non-personal services for the operation/management services for the European Redistribution Facility [ERF], Nahbollenbach" for the phase-in period, 15 June through 30 September 1987, and the base contract year, 1 October 1987 through 30 September 1988, at a total estimated cost (excluding base fee of DM 119,657 and award fee of DM 167,519) of DM 5,200,082. The Government subsequently elected to execute four one-year options extending the contract four additional years, 1 October 1988 through 30 September 1992. (R4, tabs 1, 11, 21, 34, 49)

Contract Section B, "SUPPLIES OR SERVICES AND PRICES/COSTS" (R4, tab 1), provided for PAE to be paid a fixed amount "Base Fee" and additionally, an "Award fee" based upon contract performance, the amount of which was not subject to the Disputes clause. The contractor was authorized to submit twice each month properly executed invoices or vouchers for reimbursable costs and fees, equal to the total allowable expenditures made for accomplishing the required services, to the Defense Contract Audit Agency through the Administrative Contracting Officer (ACO) for review and approval.

"SPECIAL CONTRACT REQUIREMENTS", Section H-3, *"ALLOWABLE COSTS"*, provided for advance agreements on allowability of costs, deviation to which required the approval of the CO. Allowable costs were, in pertinent part, as follows (R4, tab 1):

> a. Costs for labor when they do not exceed the rates established by valid wage and salary tariffs in line with German Labor Law, or are otherwise approved by the Contracting Officer.
>
> b. Cost for personnel, where salaries are not established by valid tariffs. Increases of these salaries shall be in line with tariff increases for tariff-bound personnel (see a. above). In no event shall such salaries be increased to amounts higher then the amount of salaries paid to holders of comparable positions.
>
> c. Voluntary social contributions, in the amounts which have been agreed upon between the contractor and the contractor's employees.

"SPECIAL CONTRACT REQUIREMENTS", Section H-12, *"SECURITY PROTECTION PLAN,"* provided that the contractor shall establish and implement a security protection plan; that its employees

©1994, Commerce Clearing House, Inc.
Digitized by Google

shall not be allowed to enter ERF facilities without an identification badge, which was provided by the Government and obtained prior to start of work; and that all contractor employees, their vehicles and property entering, leaving and while within the confines of the Nahbollenbach Storage Activity, were subject to search/inspection.

"SPECIAL CONTRACT REQUIREMENTS," Section H-13, *"AUTHORITY OF GOVERNMENT REPRESENTATIVES"*, informed prospective bidders that the Procurement Contracting Officer (PCO) of the USAREUR Contracting Center Frankfurt, Germany, was the Government representative authorized to execute this contract, and any modification or change order thereto and take such action as set forth in this contract; the Administrative Contracting Officer (ACO) at the ERF or Center was the Government Representative authorized and responsible to take all actions issued by the Procuring Contracting Officer; the Contracting Officer's Representative (COR) was the Government Representative authorized and responsible to take all actions as set forth in the letter of assignment issued by the PCO or ACO; and that personnel authorized by the PCO may contact and discuss with the contractor contractual matters; however, they can neither (1) bind the Government or authorize purchases, (2) direct changes of work, (3) direct any other actions to be taken by the contractor which may change contractual provisions, nor (4) amend approved procedures. The contractor was advised not to accept any directives or perform any work directed from other Government agencies, officers and personnel other than the PCO or his designated representatives acting within their delegated authority and to immediately notify the PCO of any directives or work request issued by an unauthorized party.

The contract incorporated by reference the following Federal Acquisition Regulation (FAR) clauses (R4, tab 1); 52.233-1, Disputes (APR 84); 52.232-17, Interest (APR 1984); 52.216-7, Allowable Costs and Payments (APR 84); 52-242-1, Notice Of Intent To Disallow Costs (APR 84).

FAR clause 52.216-7, Allowable Costs and Payments (APR 84) provided in pertinent part (R4, tab 1):

> *Reimbursing costs.* (1) For purpose of reimbursing allowable costs ... the term "costs" includes only—
>
> (i) Those recorded costs that, at the time of the request for reimbursement, the Contractor has paid by cash, check, or other form of actual payment for items or services purchased directly for the contract;
>
> (ii) When the Contractor is not delinquent in paying costs of contract performance in the ordinary course of business, cost incurred, but not necessarily paid, for—
>
> (A) Materials issued from the Contractor's inventory and placed in the production process for use on the contract;
>
> (B) Direct labor;
>
> (C) Direct travel;
>
> (D) Other direct in-house costs, and;
>
> (E) Properly allocable and allowable indirect costs, as shown in the records maintained by the Contractor for the purpose of obtaining reimbursement under Government contracts; and
>
> (iii) The amount of progress payments that have been paid to the Contractor's subcontractors under similar cost standards.

PAE's employees were issued identification badges in compliance with the Security Protection Plan. On 19 July 1988, during the contract base year, PAE requested the COR's approval for a yearly expenditure of DM 24,960 to provide work clothing for ERF employees contending they "[are] recommended by our Safety Inspector as well as local Works Counsel for uniformity, security and work morale." The COR, in a 14 September 1988 memorandum to PAE, acknowledged the Government's agreement to provide safety equipment for the ERF employees and stated there was no contractual requirement or responsibility for the Government to provide work clothing and that normal clothing was suitable for wear in the warehouse environment. Unless PAE could cite a contract paragraph authorizing the expenditure the requested authorization was "declined." PAE did not provide its ERF employees uniforms at this time. (R4, tab 79; complaint, ¶ 4d(1))

In "the fall" of 1991 the COR was approached by PAE's project manager, Mr. Renk, who requested that the Government reimburse the cost of uniforms for the ERF employees, alleging uniforms were required under German law. The COR, after investigating the allegation, determined, and informed Mr. Renk, that the only uniforms required by German law were protective clothing and accordingly, the request was disapproved. (R4, tab 80; exh. G-1; complaint, ¶ 4d(1)) PAE did not then provide its ERF employees with uniforms.

Digitized by Google

In December 1991, with the contract in its final option year, PAE, for the first time, provided work clothing to the ERF employees. In a "SHOP AGREEMENT", executed 22 September 1992, between the "Works Council", represented by Armin Spinner, and PAE, represented by H. D. Renk, the works council and PAE "ratified" an August 1991 agreement to "provide work clothing to ERF employees" as well as "provisions for storage in appropriate lockers ... at no cost to the employees." The agreement stated "[b]oth parties agree that the issuance of work clothing was necessary to adhere to safety rules and regulations, as well as to facilitate better control (identification) of employees. The Government was not party to the agreement and the parties' execution of the agreement on 22 September 1992 was eight days prior to the 30 September 1992 expiration of the contract. (Exh. A-7; complaint, ¶ 4c(2); answer, encl. 2) PAE did not provide any evidence, such as an affidavit or sworn declaration from Mr. Renk or Mr. Spinner, regarding the circumstances surrounding the signing of the agreement.

On 21 January 1993 PAE submitted to the CO a claim for an equitable adjustment in the amount of DM 78,980.35, its alleged costs for providing work uniforms to its ERF employees (R4, tabs 78, 81). PAE, in support of its claim, argued in pertinent part:

> Although ... cited contractual requirements or environmental deficiencies individually and directly prescribed the issuance and wear [sic] of distinctive and protective work clothing, the synergistic effect of the principles involved in these Sections i.e Legal Compliance, Safety and Security was one which compelled PAE's management to conclude that the issuance and prescribed wear [sic] of work clothes by all its ERF Depot employees was in their own best interest as well as that of the US Government and PAE GmbH. It provided for:
>
> Improved safety through industrial grade and type of clothing which protects employees from dust, dirt, fluid and other outside influences found in the depot.
>
> Improved security through easy recognition of authorized personnel ... and unauthorized/visiting personnel.
>
> Improved health and morale through clean and functional work clothing.
>
> Improved welfare and morale through individual safe storage space for personal items.
>
> Improved working conditions and productivity through team spirit and cohesiveness generated through the wear [sic] of professional looking work clothing.
>
> When PAE GmbH approached the Government with its management decision, the COR chose to disagree with it and refused to allow PAE GmbH to include the monthly costs for uniform rental in its reimbursement vouchers. COR sentiments notwithstanding, PAE GmbH exercised its management prerogative over its own employees and provided each one with his/her own set of work clothing without billing the Government at the time. This management decision and the works council demands are memorialized in a BETRIEBSVEREINBARUNG between the works council and PAE GmbH management.
>
> Contract [C-0262] is a cost-plus-award-fee contract. It falls under the provisions of FAR 31 which sets forth cost reimbursement principles....
>
> PAE GmbH believes the claimed costs are reasonable since they represent commercial prices charged by the uniform supplier to his other industrial customers. Copies of all bills through September 1992 are attached.
>
> PAE GmbH believes the claimed costs are allocable to the contract since the uniforms were rented for the sole benefit of this Government contract and not used by PAE or its employees for any other purpose.
>
> PAE GmbH believes the claimed costs to have been accumulated and charged in compliance with its own, as well as generally accepted accounting principles.
>
> PAE GmbH believes the claimed costs to be in compliance with the implied terms of the contract charged PAE GmbH to provide for the safety and security of its personnel.
>
> PAE GmbH does not believe that the reimbursement is limited by any section of FAR 31; in fact, FAR 31.205-13 provides for reimbursement of employee morale, health and welfare costs incurred to improve working conditions, employee morale and employee performance.
>
> REQUESTED REMEDY
>
> Based on the above discussion, PAE GmbH requests an equitable adjustment to the estimated cost of the contract incident to the rental of work uniforms for its employees through 30 September 1992, in the following amounts:

©1994, Commerce Clearing House, Inc.

Digitized by Google

Increase in estimated cost: ..	DM 71,533.69	
G&A of 10.41% on Costs	DM 7,446.66	
Fixed Fee:	0.00	
Total Amount of Claim:	DM 78,980.35	($49,363 @1.60)

plus interest on the total claimed amount as provided by law.

In an undated letter, acknowledged by PAE as received on 6 May 1993, the CO denied PAE's 21 January 1993 claim stating in pertinent part (R4, tab 88):

> Your claim concerning rental of uniforms is denied, based on the following:
>
> (i) The contract required PAE to develop and maintain a security system. The issuance of Identification Cards to employees and subsequent proper display and control/enforcement by PAE management satisfied contract security requirements.
>
> (ii) The only "protective clothing" justified for this contract are the safety items and clothing such as safety shoes, eye protection, welders aprons, gloves, etc. We have reimbursed you for these items.
>
> (iii) The contract does not require PAE employees to wear uniforms.
>
> (iv) In 1988, you requested reimbursement for the cost of uniforms. The contract files contain a written disapproval, memorandum, SDSNC-ERF-NAH, 14 Sep 88, Subject: Work Clothes, from Mr. Dorcus, Contracting Officer's Representative, to Mr. Ucur, PAE GmbH. Subsequent to that time, there were also several verbal disapprovals from Mr. Tolbert, Contracting Officer's Representative. There is no evidence that circumstances varied significantly in the interim period to now justify the rental of uniforms.

By letter dated 3 June 1993 PAE appealed the CO's undated final decision and filed its complaint with the Armed Services Board of Contract Appeals (Board's Correspondence file).

DECISION

Appellant proffers the following arguments as support for providing its workers with uniforms: (1) improved safety by protecting the employees from dust, dirt, corrosive fluid and other outside influences found in the depot; (2) improved security through easy recognition of authorized personnel; (3) improved health and morale through clean and functional work clothing; (4) improved welfare and morale through individual safe storage space for personal items; and (5) improved working conditions and productivity through team spirit and cohesiveness generated through the wearing of professional looking work clothing.

In the instant matter it is undisputed that appellant was informed that uniforms were not contractually required and requests for payment for same would be disallowed; that PAE unilaterally determined to provide uniforms to its ERF workers; and, eight days before the contract was to expire, PAE executed a shop agreement with the Works Council ratifying an alleged August 1991 verbal agreement to provide work clothing at no cost to the employees.

We see no reason to address each of the alleged benefits PAE attributes to its issuance of work clothing to the ERF employees, for it is clear to us they are solely unsupported assertions. Except to allege the stated benefits are attributable to the issuance of work clothing, PAE has not provided one scintilla of evidence showing the wearing of work clothing actually resulted in the alleged benefits or that the benefits it contends are attributable to the work clothing, were not already existing.

It is black letter law that an appellant, to prevail, has the burden of proving its affirmative claim and establishing its entitlement to an equitable adjustment by a preponderance of the evidence. *Planning and Human Systems, Inc.*, ASBCA No. 29725, 90-2 BCA ¶ 22,821, *recon. den.*, 90-3 BCA ¶ 23,098. Allegations advanced in a brief are not converted into facts by their vigorous assertion. *Harvex Trading Company*, ASBCA Nos. 38279, 41611, 41699, 92-3 BCA ¶ 25,027 at 124,756, citing, *Southern California Engineering Co., Inc.*, ASBCA No. 43329, 92-2 BCA ¶ 24,957. PAE has failed to meet its burden of proof, having failed to provide even one concrete instance where its generalized, conclusory and unsupported opinions/assertions are something more than self serving statements which, we have held, are unpersuasive and will not be considered as evidence. *See, AGH Industries, Inc.*, ASBCA Nos. 27960, 31150, 89-2 BCA ¶ 21,637.

Assuming, *arguendo*, we were to accept PAE's contention that benefits were derived from employees wearing the work clothing, we would still find the claim lacking. Neither PAE, nor our review of the contract, has identified a contract provision which would allow the unilateral increase of the contract's base or award fees. To allow PAE to unilaterally change the terms of the

Digitized by Google

contract would be tantamount to giving it carte blanche authority to do whatever it cared to regardless of the Government's position. We are unaware of, and PAE has not cited, any legal theory or case citation permitting or condoning the unilateral addition of contract requirements that increase the other party's contract cost.

The appeal is denied.

[¶ 26,478] American Scientific Corporation

ASBCA No. 46037, October 27, 1993. Contract No. F42620-92-C-0377.

First Article Testing—Default Termination—Government-Supplied Samples.—The government's failure to furnish a sample coupler did not excuse a contractor's delay in failing to deliver a first article on time, because the contract did not contain a Government-Furnished Property clause or any other clause requiring it to loan the contractor an acceptably produced sample. After the termination for default of a contract for the supply of directional couplers to be used in certain aircraft, the contractor had the burden of proving the existence of an excusable cause for the nondelivery. Although the contractor alleged that the government refused to furnish a sample coupler to verify specifications, the contract required the contractor to manufacture and test the item with the data provided, and no clause required the loan of a sample part.

For the appellant: Louis Gerkin, President. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, Capt. Mark Alexander, USAF, and David H. Doro, Trial Attorneys.

Before YOUNGER and SPECTOR, Administrative Judges.

YOUNGER, Administrative Judge: In this appeal of a default termination, a contractor contends that it was excusably delayed in the production of a first article principally because respondent failed to loan it a sample of the part called for by the contract and failed to respond to inquiries. Appellant elected Rule 12.3 disposition and both parties have submitted under Rule 11. We deny the appeal.

FINDINGS OF FACT

1. By date of 16 November 1992, respondent awarded appellant fixed price contract no. F42620-92-C-0377 for the supply of directional couplers to be used in F-16 aircraft. The delivery schedule required appellant to deliver an acceptable first article "90 DAYS ARO [after receipt of order]." We find that the delivery date under the schedule was 25 February 1993.

2. The contract contained various standard clauses, including "First Article Approval-Government Testing (SEP 1989)," as prescribed in FAR 52.209-4, and "Default (Fixed Price Supply and Service) (APR 1984)," as prescribed in FAR 52.249-8. We find that the contract contained no Government-Furnished Property clause (*see, e.g.*, FAR 52.245-2), or other clause, requiring respondent to loan appellant an acceptably-produced sample of the coupler.

3. The contract also contained Attachment A, "Engineering Data Requirements," which referred to the coupler, set forth two revisions to the data package, and provided that "[a] new contractor must be able to manufacture and test the Item with the data provided."

4. We find that respondent did not fail to respond to appellant's letters and telephone calls, thereby impeding progress on the contract. By date of 16 February 1993, appellant sent the procuring contracting officer three letters. The first was a 19 November 1992 letter to the contract administrator stating that "[p]er our telecon today, request bailment (loan) of 1 each of the directional couplers.... The loan of this item will facilitate production validation under the contract." The second was a 29 December 1992 letter to the administrative contracting officer seeking a response to the first letter. The third was a 16 February 1993 letter to the procuring contracting officer complaining of the lack of response to previous inquiries, posing a technical question and requesting both loan of a coupler and a 60-day extension of delivery dates. Accepting the affidavits of both the administrative and procuring contracting officers, we find that, if the first two letters were sent, they were not received. We further find no persuasive evidence that respondent failed to respond to appellant's telephone calls.

©1994, Commerce Clearing House, Inc.
Digitized by Google

5. Crediting the procuring contracting officer's affidavit, we find that he did not tell appellant's president in February 1993 that appellant should be given an extension of time because post-award contract personnel had not been responsive to appellant's inquiries and requests.

6. We find that respondent's assigned industrial specialist did not unfairly or erroneously characterize appellant's progress after visiting appellant's facility on 4 March 1993. We find no credible evidence to controvert the industrial specialist's statements in his affidavit that he "found that [appellant] had not [then] produced a first article" and that it was his "opinion that [appellant] had not made significant progress on the contract and that [appellant] was not likely to be able to deliver an acceptable first article in the near future."

7. We find that the administrative contracting officer did not mislead appellant regarding the availability of a coupler from a Florida surplus dealer. We find that, as stated in her affidavit, she told appellant's president on 16 February 1993 that he "might possibly obtain" a coupler from the dealer.

8. Appellant failed to deliver a first article by 25 February 1993. (*See* finding 1) By letter dated 16 March 1993, the terminating contracting officer advised appellant that "a termination for default is being considered." As an alternative, he offered appellant a no-cost termination, requested appellant's response within ten days, and advised that failure to respond within that time would be deemed rejection. Thereafter, by modification PH0001 dated 7 April 1993, the terminating contracting officer terminated the contract for default.

9. Appellant subsequently brought this timely appeal, and elected Rule 12.3 disposition. Both parties thereafter elected to submit under Rule 11.

DECISION

Familiar principles govern appellant's allegations that its failure to tender a first article within the delivery schedule (*see* finding 1) resulted from respondent's refusal to furnish a sample coupler to "verify USAF specifications," and by respondent's lack of response to technical inquiries. "[W]here a contractor fails to comply with contract delivery schedules the contract may be terminated, pursuant to the default clause." *Churchill Chemical Corp. v. United States* [26 CCF ¶ 83,573], 602 F.2d 358, 362 (Ct. Cl. 1979). The contractor must demonstrate "[t]he existence of 'excusable' causes for ... nondelivery." *Franklin E. Penny Co. v. United States* [21 CCF ¶ 83,912], 524 F.2d 668, 674 (Ct. Cl. 1975). The standard First Article clause (*see* finding 2) provided that if the contractor failed to deliver "any first article on time," then the contractor "shall be deemed to have failed to make delivery within the meaning of the Default clause." *See AeroParts*, ASBCA No. 37822, 90-1 BCA ¶ 22,510 at 112,984.

In applying these principles here, we can only conclude that appellant has not established excusable delay. We have made findings regarding each of the components of excusable' delay that appellant has alleged in its complaint. Thus, with respect to respondent's alleged failure to furnish a coupler, we cannot say that it was obligated to do so. The contract required appellant "to manufacture and test the Item with the data provided," and no clause required loan of a sample part. (Findings 2, 3) In any event, respondent did attempt to direct appellant to a third party source for the part. (Finding 7) With respect to the alleged failure to respond to inquiries, we have found against appellant. (Finding 4) We have also found that the evidence does not support the further allegations that the procuring contracting officer conceded that appellant was entitled to a time extension; that the industrial specialist wrongly characterized appellant's progress; and that the administrative contracting officer misled appellant regarding the availability of a coupler from a third party. (Findings 5, 6, 7)

CONCLUSION

The appeal is denied.

[¶ 26,479] Oriental Gasket and Packing Company, Inc.

ASBCA No. 45895, November 9, 1993. Contract No. DLA500-91-C-FA42.

First Article Testing—Default Termination—Test Report.—A contract was properly terminated for default, even though the contractor was misled by its supplier regarding the existence of an acceptable first article test report, because the government was

Digitized by Google

not required to accept the supplier's report. The contractor requested a waiver of the report requirement on the ground that its material supplier had previously provided a report to the government for the same material. However, the government rejected the report because it was more than three years old and had been filed with another agency.

For the appellant: James L. Swanson, President. For the government: Judith R. Robbins, Trial Attorney, Defense Industrial Supply Center (DLA), Philadelphia, Pennsylvania.

Before FREEMAN and STEMPLER, Administrative Judges.

FREEMAN, Administrative Judge: Oriental Casket and Packing Company, Inc. (Oriental) appeals a termination for default. The parties have submitted the appeal for decision under Rule 11 without oral hearing. Oriental has elected the Rule 12.3 accelerated procedure. We find that Oriental, without legal excuse, failed to deliver a first article test report (FATR) within the required time. The default termination was proper.

FINDINGS OF FACT

1. On 5 July 1991, Oriental and the Government entered into a contract for 25 rubber sheets to be manufactured in accordance with specification MIL-R-25988B. The contract also required a FATR as a separate deliverable line item in accordance with a clause entitled "FIRST ARTICLE APPROVAL—CONTRACTOR TESTING (APR 1984) ALTERNATE I (APR 1984)". This clause stated in relevant part:

> (a) The Contractor shall test Batch* unit(s) of Lot/Item I as specified in this contract. At least 10 calendar days before the beginning of first article tests, the Contractor shall notify the Contracting Officer in writing of the time and location of the testing so that the Government may witness the tests.
>
> (b) The Contractor shall submit the first article test report within 180 calendar days from the date of this contract to DISC-QRB ... Within 60 calendar days after the Government receives the test report, the Contracting Officer shall notify the Contractor, in writing, of the conditional approval, approval or disapproval of the first article.... A notice of disapproval shall cite reasons for the disapproval.
>
> * * *
>
> *I/A/W paragraphs 3.2, 3.2.1, 4.3.1, 4.3.2, 4.3.3, 4.4 and all other pertinent paragraphs referenced in MIL-R-25988B

2. By letter dated 25 July 1991, Oriental requested a waiver of the FATR requirement on the ground that its material supplier, SFS Industries, Inc. (SFS) had previously provided a FATR to the Government for the same material. On 29 October 1991, the Government rejected the waiver request. The SFS FATR was more than three years old, and had been filed with a different procurement agency.

3. On or about 20 February 1992, Oriental submitted a FATR purportedly based on a test conducted by SFS on 10 January 1992. The Government had not been notified ten days in advance of this test as required by the First Article Approval—Contractor Testing clause, and did not witness the test. On 27 May 1992, the FATR was disapproved for that reason and because the report did not include a required material certification. On 26 August 1992, Oriental requested a no-cost cancellation of the contract on the ground that the cost of a new first article test would cause a loss on the contract. The contracting officer denied this request.

4. The originally specified delivery date for the FATR was 1 January 1992. By unilateral Modification P00001, dated 3 September 1992, the contracting officer extended the FATR delivery date to 3 October 1992. By letter dated 9 September 1992, Oriental complained that the Government quality assurance representative responsible for witnessing tests at SFS (the "Santa Ana QAR") had not told SFS what tests she wanted to witness and had not arranged a time for the tests. The required tests were specified in the contract specification, MIL-R-25988B. Moreover, the First Article Approval—Contractor Testing clause stated that the contractor, not the Government, was responsible for setting the time and place for the tests.

5. By letter to SFS dated 14 September 1992, the Santa Ana QAR listed the first article tests required by MIL-R-25988B, and requested SFS's schedule for conducting those tests. There is no record of any SFS response to this letter. On 30 September 1992, Oriental notified the Government that SFS was demanding $3,361 for performing the first article tests, and requested the Government either to pay for the tests or terminate the contract for convenience.

6. On 7 October 1992, the Government issued a "show cause" letter for Oriental's fail-

©1994, Commerce Clearing House, Inc.
Digitized by Google

ure to deliver the FATR by the date specified in Modification P00001. Oriental replied with the following excuses: (i) that it had relied in bidding on SFS's representation that it had "a current first article approval ... that we could use to have the entire first article [requirement] waived;" (ii) that the Government QAR at Oriental's plant (the "Dallas QAR") had refused to sign the "paperwork" for the initial FATR; (iii) that the Dallas QAR had directed that the first article test be performed at the SFS plant; (iv) that the Santa Ana QAR had delayed telling SFS the tests she wanted to witness; and (v) that the additional charges demanded by SFS were the result of "the extensive testing the [Santa Ana] QAR was requiring."

7. There is no evidence that either the Dallas QAR or the Santa Ana QAR directed Oriental to have the first article tests performed by SFS or at the SFS plant, or that such direction if given was confirmed by a contracting officer. There is no evidence that the Santa Ana QAR directed SFS to perform any tests that were not required by the contract specification, MIL-R-25988B.

8. On 8 January 1993, the contracting officer terminated the contract for default, purporting to act under the FAR 52.249-8 clause entitled "DEFAULT (FIND-PRICE SUPPLY AND SERVICE)." The contract documents provided by the Government for the appeal (Rule 4) file do not show that the cited Default clause was in fact a part of this contract. The cited clause is not mandatory in contracts which do not exceed the small purchase limitation ($25,000). See FAR 49-504(a)(1). The price of the contract at issue ($6,239) did not exceed the small purchase limitation.

DECISION

It is not disputed that Oriental failed to deliver a FATR within the time specified or otherwise as required by the contract. This failure was a default under the terms of the cited Default clause, or a material breach under common law principles if the Default clause was not a part of the contract. Oriental has not proven any facts legally excusing the default or breach.

The fact that Oriental was misled by its supplier, SFS, as to the existence of an acceptable FATR does not excuse Oriental's failure to provide a report. Oriental has not cited any contract provision requiring the Government to accept the SFS FATR. The Dallas QAR properly refused to sign the report of the purported 10 January 1992 test because he had not witnessed that test. Oriental alleges that it was directed to perform the first article test at SFS. If true, such direction might entitle Oriental to recover any resulting increased cost, but it does not excuse a failure to perform the tests as directed, with advance notification to the Government and otherwise in accordance with the contract. The alleged delay by the Santa Ana QAR in telling SFS what tests she wanted to witness is irrelevant. The tests to be performed were specified in the contract specification. It was Oriental's obligation to have all of the specified tests performed, and to notify the Government of the location and time ten calendar days in advance. It did not do so. There is also no evidence that SFS was directed to perform any tests that were not specified by the contract.

On these facts, the termination was proper either for default under the cited Default clause, or for common law material breach. The appeal is denied.

[¶ 26,480] Techno Engineering & Construction, Ltd.

ASBCA No. 45809, November 5, 1993. Contract No. F64605-86-C-0116.

Modifications—Bar to Claims—Oral Reservations.—A claim for legal expenses that a contractor alleged were orally reserved was denied because any such claim for additional legal fees was barred by the express releases in the modification. The parties negotiated a settlement agreement resulting from a termination for the convenience of the government. Subsequently, the contracting officer denied a claim for legal expenses associated with the settlement of subcontractor claims that the contractor alleged were to have been reserved for payment at a later date. However, the meaning of the releases was undisputedly clear. The allegation that there was an oral agreement reserving certain legal fees was inconsistent with the releases.

Digitized by Google

For the appellant: Michael A. Georgopapadakos, President. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Robert C. Allen, Trial Attorney.

Before GROSSBAUM and SPECTOR, Administrative Judges. Separate concurring opinion by Administrative Judge SPECTOR.

GROSSBAUM, Administrative Judge: This dispute arose after the parties negotiated a termination for convenience settlement under a construction contract. The appeal was taken from a contracting officer's decision denying the contractor's claim for legal expenses associated with the settlement of subcontractor claims. According to the contractor, such expenses had not been incurred at the time the termination settlement was negotiated and were understood to have been reserved for payment at a later date.

The amount claimed is $822.64 and appellant has elected to proceed under the accelerated procedure provided by Rule 12.3. Both parties have elected to submit the case for decision on the record, pursuant to Rule 11. Only liability (entitlement) is before us for decision.

SUMMARY FINDINGS OF FACT

In September 1986 the Government awarded the instant contract to appellant, Techno Engineering & Construction, Ltd. (Techno), to install water meters at Hickam Air Force Base, Hawaii, for the price of $248,178. The contract was terminated for default in May 1987. However, during proceedings on Techno's appeal from the default termination, in March 1989 the termination was converted into a termination for convenience.

In October 1989 Techno submitted a termination for convenience cost proposal for $260,144.30. Among the termination costs Techno sought to recover was an amount of $17,313.80 categorized as "Legal Fees" and a separate amount of $5,000.00 for "Legal Fees" subsumed in the total amount of $30,624.92 under the category styled "Settlement Costs." (R4, tab 21)

The parties could not agree on the termination settlement amount and, in early 1991, Techno certified and resubmitted its proposal to the contracting officer as a claim in the amount of $259,349.54. The total claimed for "Settlement Costs" remained at $30,624.92, and the elements under that category were unchanged. However, the amount claimed for the separate category "Legal Fees" increased to $17,625.79. (R4, tab 23)

Techno's termination claim also alleged, *inter alia*, the following amounts owing to certain subcontractors and vendors: Wisdom Industries—$12,681.21 ($8,071.51 + 4,609.70); Fluid Systems—$5,444.58; and A & E Painting—$2,000.00. With respect to the subcontractor Wisdom Industries, Techno's claim also indicated unspecified additional amounts for "interest," "attorney's fees," and "costs incurred in . . . collection of this claim." (R4, tab 23)

In July 1991 Techno took an appeal from the contracting officer's failure to issue a decision on its termination claim. The appeal was docketed as ASBCA No. 43288.

The prayer for relief in Techno's 23 August 1991 complaint in ASBCA No. 43288 omitted reference to any additional unspecified amounts (such as "attorney's fees") associated with settlement of the Wisdom Industries subcontract, but did include a amount of $18,159.61 claimed for the separate category "Legal Fees." The total amount prayed for in the complaint was $213,697.23. Among other things the 'Settlement Costs" category had been reduced to $21,624.92 and no longer included a subcategory styled "Legal Fees." (R4, tab 24)

In January 1992 Techno and the Government agreed to settle the pending convenience termination claim. Settlement negotiations were conducted by Techno's president, Michael A. Georgopapadakos, and Major Terry N. Petrie, USAF, the Government trial attorney in ASBCA No. 43288, and agreement was reached between them on 29 January 1992. The basic terms of the settlement agreement were recited in a 30 January 1992 letter signed by both parties and the complete agreement was later memorialized in bilateral modification P00004, effective 29 January 1992. (R4, tabs 3, 5)

According to its express terms, modification P00004 had been "written to definitize all costs associated with the settlement of Techno Engineering & Construction, Ltd.'s [termination for convenience] claim," which was the subject of ASBCA No. 43288. Paragraph 2 of the modification set forth the following terms:

> Subject [to] the availability of funds, Techno Engineering & Construction, Ltd. (Techno), is to be paid an additional $90,001.31 to the monies already received plus any interest that accrues after 14 March 1992 if payment is not made by

©1994, Commerce Clearing House, Inc.
Digitized by Google

that date. Beginning 15 March 1992, interest accrues until payment is made at the rate provided for claims under the Contract Disputes Act of 1978.

The parties agree that any interest that the Government was, is, or may be liable for on any of Techno's claims arising out of the subject matter of ASBCA No. 43288 is included in the amount set forth in this agreement. No additional interest beyond what is provided for in this agreement will be paid on said claims for any reason.

Within 30 days of receipt of payment [from] the Government, Techno will pay $10,748.86 to Wisdom Industries, $2,000.00 to A & E Painting, and $5,444.58 to Fluid Systems. Techno further agrees within 30 days of payment to each of the aforementioned companies to provide written documentation of the release of claim by each of these companies against Techno or to refund the amount of monies due each company for which payment was not made to [the contracting officer].

That this agreement constitutes a full discharge, accord and satisfaction, and release of any and all claims, demands, or causes of action, actual or constructive, legal, equitable, contractual or administrative, known or unknown which Techno or the Government has against the other, arising out of the actions of the parties and subject matter of the appeal before the Armed Services Board of Contract Appeals docketed as No. 43288.

In consideration of the foregoing, the parties mutually release and forever discharge each other, without reservation, of and from all ma[nn]er of actions, causes of action, suits[,] proceedings, debts, dues, judgments, damages, claims and demands whatsoever, in law or equity, or under administrative procedures which either of them ever had, now has, or may have for or by reason of any matter, cause or thing, whatsoever arising out of the actions of the parties encompassed in ASBCA No. 43288.

Techno, as part of the consideration for this settlement, agrees to withdraw with prejudice its appeal ASBCA No. 43288.

That this agreement also stands as full accord and satisfaction for any legal fees or litigation costs to which Techno may be entitled to [sic] under the Equal Access to Justice Act.

The modification did not expressly reserve any claims or state any specific exceptions to the mutual releases indicated therein. (R4, tab 3)

On 30 January 1992 Techno submitted to the Government's finance and accounting officer an invoice, styled "Final Billing," in the amount of $90,001.31. The Government paid the full amount of this invoice by check, which was received by Techno on 6 March 1992. In accordance with the parties settlement agreement, ASBCA No. 43288 was dismissed with prejudice. (R4, tabs 4, 7)

In mid-March 1992 Techno paid $10,748.86 to Wisdom Industries and $5,444.58 to Fluid Systems, as stipulated in modification P00004, and obtained releases from these suppliers. The release from Wisdom Industries was transmitted to the Government on 17 March 1992. However, the release from Fluid Systems was not sent to the Government until 7 July 1992. (R4, tabs 8, 10)

By letter dated 2 July 1992 the contracting officer reminded Techno of its agreement to submit releases from the vendors mentioned in modification P00004 or, alternatively, "to refund the amount of monies due each company ...." A Government contract specialist telephoned Techno on 13 July to inquire about the status of the release expected from A & E Painting. By reply letter dated 13 July 1992, Techno advised the contracting officer, *inter alia*, that, since reaching its settlement with the Government, it had incurred several hundred dollars in "expenses associated with legal fees for settlement of all claims with Wisdom Industries." (R4, tabs 9, 11, 12)

In a 12 August 1992 letter to the contracting officer, Techno suggested that the issue of legal fees associated with settling vendors' claims, entitlement to which would not be subject to the Equal Access to Justice Act, "was left to be addressed if and when it might arise." Alternatively, "since A&E painting is no longer in business" and Techno could not obtain a release from them, Techno offered to "defray the legal fees towards the amount of [A & E's] claim" in order to "close out the contract." (R4, tab 14)

Techno's president describes his understanding of the settlement agreement reached on 29 January 1992 in a "Declaration" dated 30 November 1992, as follows:

> Both parties were aware of the possibility of incurring additional costs in the area of legal fees associated with settlement costs of vendors but were unable to determine their magnitude. ... It was mutually

Digitized by Google

agreed that the amount that could possibly arise was minor in comparison with the overall settlement; as such the issue was decided to be left out of the agreement syllabus to be addressed if and when it might arise in the future.

It was my understanding, at the time I signed the settlement on behalf of Techno ... that all future legal expenses associated with settlements of subcontractors and thus not subject to the Equal Access to Justice Act would be paid by the Government in addition to the settlement.

(R4, tab 18) Techno's president elaborates on this understanding in a further "Declaration" dated 10 August 1993, as follows:

5. Since we already had ongoing litigation with subcontract[or]s and supplie[r]s we were unable to determine the total costs associated with category (1) legal fees [*i.e.*, "fees associated with defense and/or settlement of claims with subcontractors and suppliers"]; while since we were settling with the Air Force we could control the legal fees under category (2) [*i.e.*, "fees associated with defense and/or settlement of our claim with the government"] associated with ASBCA No. 45809 [sic—43288] under the Equal Access to Justice Act.

6. Accordingly, we agreed to settle on the legal fees under the Equal Access to Justice Act, but not on the legal fees associated with the settlement of claims between the vendors and ourselves.

7. These residual legal fees together with our overhead and profit were to be submitted to ABW Contracting Center, 15 ABW/LGCC, Hickam AFB, Hawaii 96854-6430, for payment upon completion at a later date.

8. The costs under category (1) included in our January 30, 1992 settlement were limited to the ones supported by invoices by our attorneys. Accordingly, invoices received subsequently to the January 30, 1992 date were not included in the settlement.

The above-quoted statements are contradicted in an affidavit by Major Petrie, who asserts, *inter alia*, that:

In the negotiations we discussed every entry in Appellant's termination for convenience cost proposal. The discussions covered each party's view of the merits of the individual entry and the documentation available to substantiate the claimed cost. After trading views on the individual entries, we engaged in several rounds of offers and counteroffers until the figure reached in the settlement was agreed upon by both of us. The offers and counteroffers were discussed in terms of dollar amounts without commenting how the proffered figures related to the specific merits of a given claimed cost entry.

As it has at each stage of the litigation involving this contract, Appellant claimed legal fees and expenses in ASBCA No. 43288....

Like every other claimed cost, Appellant's entry for legal fees and expenses was discussed and negotiated by Mr. Georgopapadakos and myself....

* * *

... at no time was an agreement reached that any settlement figure reached would later be supplemented by additional legal fees incurred after settlement. If it had been then it would have been a stated, written provision of the settlement agreement, just like the provision governing payments to the supply vendors was described in writing. Rather, the expressed goal, which was openly stated by each of us during negotiations, was to wrap-up the litigation with a one-time settlement that disposed of Appellant's claim against the Air Force.

(R4, tab 26) This statement is consistent with facts disclosed by the record before us and is entitled to credence.

By contrast, we find Techno's president's declarations regarding understandings reached during negotiation of the termination settlement in January 1992 to be inherently implausible. We make this finding without considering evidence, admissible under Fed. R. Evid. 609(a)(2), submitted by the Government to impeach the credibility of Techno's president (R4, tab 25). Such evidence would simply reinforce our finding herein.

By letter to Techno dated 25 November 1992, the contracting officer rejected Techno's request for additional legal fees and noted that $2,000 may be "owed to the government by you since A&E Painting was never paid according to the terms of modification P00004" (R4, tab 17).

Under letter to the contracting officer dated 30 November 1992, Techno submitted a claim in the amount of $822.64 for additional legal fees, allegedly billed from January through June 1992, and associated contractor markups. By letter to Techno dated 23 February 1993, the contracting officer issued a decision denying the claim. Techno took a timely appeal from this deci-

©1994, Commerce Clearing House, Inc.
Digitized by Google

sion. The contracting officer's 23 February 1993 letter also "remind[ed]" Techno that it owed the Government $2,000.00 for the settlement amount "unpaid to your subcontractor[,] A&E Painting, but did not assert a claim for this money. (R4, tabs 18, 19)

DECISION

Techno's claim for additional legal fees and related markups associated with the settlement of subcontractor claims is devoid of merit.

Appellant argues that "the intent of the parties rather than the language of the settlement [agreement is] of paramount importance" and refers us to its president's declarations to adduce that "intent during the January 30, 1992 settlement." (App. ltr. 10 Aug 1993) However, even if we were to give credence to appellant's professed subjective intent that "all future legal expenses associated with settlements of subcontractors ... would be paid by the Government in addition to the [termination] settlement," which we do not, it could not alone overcome the unequivocal terms of the parties' termination settlement agreement. These terms are memorialized in modification P00004 and are recited in our summary findings.

Modification P0004 was a binding integrated agreement, "written to definitize all costs associated with the settlement of Techno['s] ... [convenience termination] claim" under ASBCA No. 43286. In addition to stating that the settlement agreement represented a "full accord and satisfaction for any legal fees or litigation costs to which Techno may be entitled ... under the Equal Access to Justice Act," two separate subparagraphs in paragraph 2 of modification P00004 expressly set forth sweeping mutual releases. In one subparagraph the parties mutually released "any and all claims ..., known or unknown[,] ... arising out of the actions of the parties and subject matter of" ASBCA No. 43288. In the other subparagraph the parties mutually released and discharged each other, "without reservation, ... from all ma[nn]er of actions ..., claims and demands whatsoever ... which either of them ever had, now has, or may have ..., whatsoever arising out of the actions ... encompassed in ASBCA No. 43288."

Techno executed modification P00004 without stating any specific exceptions to the mutual releases therein and without expressly reserving any rights concerning further claims to legal fees or anything else. The meaning to be attached to these releases is clear and is not disputed. However, Techno's president's declarations purport to show that, during negotiations, the parties made an oral agreement about reserving certain legal fees that is inconsistent with the releases. We hold that such prior agreement is discharged, and Techno's claim for additional legal fees is barred, by the express releases in modification P00004. *Eslin Co.*, ASBCA No. 34029, 87-2 BCA ¶ 19,854 at 100,455-56; *see* RESTATEMENT (SECOND) OF CONTRACTS § 213 (1981).

Accordingly, the appeal is denied.

SEPARATE OPINION BY ADMINISTRATIVE JUDGE SPECTOR

I concur in result on the basis that I am not persuaded that the Government agreed, as contended by appellant, to address in the future the additional legal fees at issue.

[¶ 26,481] Emerald Maintenance, Inc.

ASBCA No. 45287, November 8, 1993. Contract No. DACA83-88-C-0141.

Interpretation of Contracts—Contract as a Whole—Omissions.—The omission of a symbol requiring the installation of resilient flooring from the plans for a laundry room in one type unit did not relieve the contractor of the responsibility of installing the flooring, because the note beneath specifically advised that the information pertained to both type units. To interpret the note to eliminate, rather than to add, the symbol on one type unit would render the symbol meaningless and would violate the principles of contract interpretation. In a contract for the renewal of family housing, a contractor alleged that the contract did not require it to place resilient flooring over newly placed concrete in the laundry rooms of certain type units. However, a symbol on a drawing to prepare existing concrete surfaces for new flooring did not preclude a requirement, shown elsewhere, to cover concrete surfaces that later came into being as a result of pouring a new concrete slab. The first floor plans indicated that new concrete floors were to have resilient flooring.

Digitized by Google

Interpretation of Contracts—Contract as a Whole—Zone of Reasonableness.—A contractor's interpretation was not within the zone of reasonableness, because the contractor did not establish that it relied on its interpretation in bidding on the contract. In order to obtain a recovery based on its interpretation of an ambiguous contract, a contractor must show that it relied on this interpretation in submitting its bid. The contractor did not supply any evidence in support of its burden.

For the appellant: Dan Deshon, President. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, Gayle B. Chesnut and Robyn U. Au, Engineer Trial Attorneys, U.S. Army Engineer Division, Pacific Ocean, Fort Shafter, Hawaii.

Before LUSSIER and SPECTOR, Administrative Judges.

LUSSIER, Administrative Judge: This appeal is taken from a deemed denial of a claim by Emerald Maintenance, Inc. (appellant) seeking an equitable adjustment in price of $32,507.50 for installation of resilient flooring over new concrete areas in the laundry rooms of buildings being renovated under the subject contract. After the filing of the appeal, the contracting officer issued a decision denying the claim and stating his reasons in detail for the denial. The parties have submitted the appeal for decision on the record under Board Rule 11, with appellant further electing the accelerated procedure in Board Rule 12.3. In accordance with a schedule established by the Board for supplementing the record with documentary evidence and a brief, the Government submitted one document to supplement the Rule 4 file which had previously been submitted by it. It also submitted a brief. The appellant did not take advantage of submitting either additional evidence or a brief.

SUMMARY FINDINGS OF FACT

1. Contract No. DACA83-88-C-0141 was awarded to appellant on 30 September 1988. The contract was for the renewal of family housing quarters at Pearl Harbor. Appellant's bid of $1,815,322 was over 30% below the Government's estimate and it was notified of that disparity and asked to review its bid and verify it, which it did.

2. The record indicates that in January 1989, a disagreement arose as to whether the contract required appellant to place resilient flooring over newly placed concrete in the laundry rooms. The Government then directed appellant to do so.

3. In July 1991, over two years later, appellant filed the claim which is the subject of this appeal. There is no documentation, or allegation by the Government that the claim was untimely filed for any reason. Other than asserting that the appellant had been directed to do the work and that the work was beyond the scope of the contract, the letter made only the following points:

1.) Detail 1/1/6, Ring 7 denotes that the flooring of the new laundry room should be finished concrete.

2.) Detail 40 of the Demolition drawings states "Prepare existing concrete surface for new flooring."

3.) No other contract specifications require the installation of resilient flooring over new concrete surfaces.

4. There is no evidence, or allegation, that appellant held the interpretation that it did not have to place resilient flooring over new concrete, at the time it bid the contract, or that it relied upon a flooring subcontractor who held that interpretation.

5. The contract contains the standard *Disputes* (APR 1984), *Changes* (AUG 1984), and *Contract Drawings, Maps and Specifications* (SEP 1987) clauses. The last clause provides in pertinent part:

* * *

(b) Omissions from the drawings or specifications or the misdescription of details of work which are manifestly necessary to carry out the intent of the drawings and specifications, or which are customarily performed, shall not relieve the Contractor from performing such omitted or misdescribed details of the work but they shall be performed as if fully and correctly set forth and described in the drawings and specifications.

6. The drawing referred to as "Ring 7," in the above quoted paragraph 1 of appellant's claim letter, is the first floor plan. Detail 1/1 reflects concrete floors, by the use of speckled markings, in the laundry rooms in "Unit Type A." Detail 1/2, directly adjacent, shows "Unit Type A-R" and, while also depicting the laundry rooms with concrete floors, this depiction has a box in the middle of the laundry rooms with the letters "RF" written in it. (See attachment A hereto) [Attachment A not reproduced.—CCH] Those letters are indicated elsewhere to mean resilient flooring. Further, there is a note directly underneath, and between

©1994, Commerce Clearing House, Inc.

Digitized by Google

these two depictions, which states that "notes, dimensions, etc." shown for the A unit pertain to the reverse type A-R unit, and that "information shown" for the A-R unit pertains to the A unit.

7. "Detail 40" referred to in the above quoted paragraph 2 of appellant's claim letter, is actually R/C (removal code) note 40 on the "Removal/Repair Code Schedule" of the site demolition drawing. It is correctly quoted by appellant as stating "Prepare existing concrete surface for new flooring." It must be added however, that there is a further note at R/C 43 of that same schedule, which states "sawcut and remove existing concrete slab as necessary for new mechanical work. Pour new concrete slab after completion of new work to match existing adjacent slab." Other contract drawings make it clear that the laundry rooms would contain R/C 40 existing concrete, R/C 43 removed and replaced concrete, and new concrete (R4, tabs E-3, E-4 and E-19). Only one corner of the room contained existing concrete. An adjacent larger section contained what was to be removed and replaced concrete and the largest section contained new concrete.

8. With reference to paragraph 3 of appellant's claim letter, the Government has not referred us to any contract "specification" which specifically mentions applying resilient flooring to new concrete surfaces, and we have found none. The Government has however, referred to the contract drawings as a basis for its position that resilient flooring was to be installed throughout the laundry rooms.

DECISION

The issue before us is one of contract interpretation. We begin with the well recognized rule of law that "an interpretation which gives reasonable meaning to all parts of an instrument will be preferred to one which leaves a portion of it useless, inexplicable, inoperative, void, meaningless or superfluous; nor should any provision be construed as being in conflict with another unless no other reasonable interpretation is possible." *Hol-Gar Manufacturing Corp. v. United States* [10 CCF ¶ 72,885], 351 F.2d 972, 979 (1965). Viewing the contract as a whole with that principle in mind, we conclude that it required installation of resilient flooring over the concrete in the laundry rooms.

The R/C note on the demolition drawing to prepare "existing" concrete surfaces for new flooring does not preclude a requirement, shown elsewhere, to cover with resilient flooring concrete surfaces that later came into being as a result of pouring new concrete slab. R/C 43 on that same demolition drawing directs the contractor to cut and remove the existing slab as necessary for the new mechanical work and to pour the new concrete slab to "match the existing slab." We agree with the Government that it is clear that the intent was for the new slab to form a continuous floor with the existing slab. To interpret the contract to require resilient flooring only on the "existing" concrete and not on the "removed and replaced" concrete and the "new" concrete areas would leave only one small corner of the laundry rooms with resilient flooring. Also, as indicated in our findings, "Ring 7," the first floor plan, indicates, by the symbol "RF," that new concrete floors were to have resilient flooring. Even though that symbol appeared only on the laundry rooms depicted in the "A-R" type unit, and not the "A" unit, the note beneath specifically advised that the "notes dimensions, etc." and "information" pertained to both units. To interpret the note to eliminate the "RF" symbol on the "A-R" type unit and thus render it meaningless, rather than to be applicable to the "A" unit, would violate the principles set forth in *Hol-Gar, supra.*

While we conclude that the contract read in its entirely required resilient flooring throughout the laundry rooms, were we to conclude that appellant's asserted interpretation was within the "zone of reasonableness" described in *WPC Enterprises, Inc. v. United States* [9 CCF ¶ 72,289], 323 F.2d 874, 876 (Ct. Cl. 1963), we would still have to deny the appeal. To prevail on its interpretation, appellant would have to establish that it relied on that interpretation in bidding the contract. As the Court noted in *Fruin-Colnon Corp. v. United States* [36 CCF ¶ 75,923], 912 F.2d 1426, at 1430, 1432 (Fed. Cir. 1990):

> The general rule is that "where a contractor seeks recovery based on his interpretation of an ambiguous contract, he must show that he relied on this interpretation in submitting his bid." [Citations omitted] This rule of law is well settled. [Citations omitted] The burden of proving reliance on the claimed interpretation thus falls on the contractor.

* * *

Digitized by Google

Evidence at the time of bidding is thus crucial to proving reliance.

Appellant has not supplied one iota of evidence in support of this burden.

The appeal is denied.

[¶ 26,482] **Chamac, Inc.**

ASBCA No. 44905, November 8, 1993. Contract No. N62474-84-C-4789.

Interpretation of Contracts—Reasonableness—Intent of Contract.—A contractor's contention that a contract to provide a target range for tanks required concrete-encased cable only under paved roads was not reasonable, because a logical interpretation of the intent of the contract would require concrete-encased cable wherever cable crossed under roads that were subject to tank traffic. Under a contract for the construction of additions to a tank moving-target range, a contractor sought an equitable adjustment for installing concrete encasement for cable under trails, alleging that the word "trail" did not appear in underground electrical work applications. The contractor alleged that the ordinary meaning of the word "trail" was different from that of the words describing roads and that the requirement for concrete encasement under roads did not apply to trails. However, the contractor should have understood "trails" to be included within the term "roads" because the intent of the contract was to provide a target range for tanks. Moreover, a note on one drawing stating the requirement for concrete-encased cable at road crossings depicted a tank trail.

Interpretation of Contracts—Ambiguity—Duty to Seek Clarification.—A contractor was precluded from recovering on a claim for the costs of encasing cable that ran under unpaved trails, because the omission of "trails" from a contract for the installation of concrete-encased cable under roads subject to tank traffic would have been an obvious and significant omission that imposed a duty on the contractor to seek clarification of the requirements before bidding. The differing views of the parties could be considered sufficient to find an ambiguity in the contract; however, any ambiguity was patent, and the contractor did not attempt to clarify its obligations before bidding.

For the appellant: Kent B. Scott, Salt Lake City, Utah. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Wayne O. Hadland, Trial Attorney, Naval Facilities Engineering Command, San Bruno, California.

Before TODD, RUBERRY, and RIISMANDEL, Administrative Judges.

TODD, Administrative Judge: This appeal is from the denial of a constructive change claim for extra work installing concrete-encased electrical cables under road crossings. Pursuant to Board Rule 11, the parties agreed to submit the appeal for decision on the record. Only entitlement is before us.

FINDINGS OF FACT

1. On 16 November 1987, the Department of the Navy Western Division, Naval Facilities Engineering Command, San Diego Branch issued Solicitation No. N62474-84-B-4789 for the construction of additions to the Tank Moving Target Range at the Marine Corps Base in Camp Pendleton, California. The specifications, plans and drawings prepared by the Government and furnished for the bidding contractors became part of the contract documents (R4, tab 1).

2. On 12 February 1988, award of the contract was made to appellant Chamac, Inc. (Chamac) in the amount of $2,310,258 (R4, tab 1). The intention of the contract was to provide and secure a Moving Target Range complete and ready for use (*id.*, § 01010, ¶ 1.1). The contract included the following description of work:

> 1.2 GENERAL DESCRIPTION: The work includes earth berms and emplacements for moving vehicle armor targets, stationary vehicle armor targets, moving and stationary infantry targets, *service roads and tank trails,* hull downs, subdrainage and above ground drainage, control tower, on-site and off-site electrical and support structures identified as addi-

©1994, Commerce Clearing House, Inc.

Digitized by Google

tive bid items, as well as incidental related work.

(*Id.*, § 01010, ¶ 1.2, emphasis added.) The contract specifications included the following instructions:

3.6 SPECIAL EARTHWORK INSTALLATION REQUIREMENTS: ... For installation requirements for buried electrical and data cable systems refer to SECTION 16301, UNDERGROUND ELECTRICAL WORK, and SECTION 16741 TARGET CONTROL AND DATA SYSTEMS.

(*Id.*, § 02202, ¶ 3.6) The specifications for the underground electrical work provided in pertinent part:

3.4 DIRECT BURIAL SYSTEM: The cables shall be buried directly in earth, except that under *paved areas and roadways* the cables shall be installed in PVC coated RGS conduit encased in concrete.

3.5 UNDERGROUND DUCT WITHOUT CONCRETE ENCASEMENT:

3.5.1. Types of Conduit and Duct: Conduits shall be polyvinyl chloride, Schedule 40 or PVC coated rigid galvanized steel. PVC shall be used only in areas closed to vehicular traffic.

* * *

3.5.3 Roads and Paved Areas: *Under roads and paved areas,* ducts shall be encased in concrete and installed as specified for underground duct lines encased in concrete. The concrete encasement shall extend at least 5 feet beyond the edges of *paved areas and roads.*

3.6 UNDERGROUND DUCT WITH CONCRETE ENCASEMENT: Construct underground duct lines of individual RGS conduits encased in concrete. ... [T]he top of the concrete envelope shall not be less than 18 inches below grade except that under *roads and pavement* it shall be not less than 24 inches below grade.

(*Id.*, § 16301, ¶¶ 3.4, 3.5.1, 3.5.3, 3.6, emphasis added.)

3. The contract drawings included separate legends for existing tank trails, new tank trails, new service/support area roads, and new pavement (concrete) (R4, tab 2). The location of the underground cable was shown on the electrical site plan contract drawings. Trails were identified on the electrical drawings, but there were no roads similarly marked. (Exh. G-7) Drawing No. 6315400 (E-2) showed a cable crossing under a tank trail with a reference to the following drawing note:

All underground cables crossing under a road shall be installed in RGS conduit encased in concrete. Conduit to extend 5 ft beyond the ditch-line on both sides of the road.

(Exh. A-1; G-5, ¶ 14; G-7) This note did not distinguish between paved and unpaved roads. Two contract drawings, entitled "Plan Profile Hull Down Access Road," showed profiles of trails and not roads. Another drawing, entitled "Typical Road Sections and Concrete Turn Pad Sections," showed cross sections labeled, "Typical Tank Trail Section," "Typical Service Road Section," "Typical Support Area Road Section," "Concrete Turn Pad Section," and "Typical Aggregate Parking Area." The section details for the tank trail and the support area road were identical. (Exh. G-6)

4. The contract included the standard clauses, "Specifications and Drawings for Construction (APR 1984)" (FAR 52.236-21), "Changes (AUG 1987)" (FAR 52.243-4), and "Disputes (APR 1984)" (FAR 52.233-1).

5. There was no pavement on the project except for concrete tank turnaround areas which were unassociated with cable crossings (exh. G-5, ¶¶ 15, 16). Of the six miles of roads and trails associated with the project, ninety percent were tank trails. (R4, tab 13)

6. Chamac entered into a subcontract, dated 25 February 1988, with Rocky Mountain Electrical (Rocky Mountain) in the amount of $799,920 for the supply, installation, and test of the entire electrical system specified in the contract (Supp. R4, tab 5). Appellant relied on this subcontractor's bid in preparing its bid to the Government (R4, tab 15).

7. On 29 March 1988, approximately six weeks after award of the contract, representatives of appellant and the Government attended a progress meeting. No one from Rocky Mountain was there. One item discussed was Chamac's request for clarification of the word "roadways" in paragraph 3.4 of the specifications. Minutes of the meeting state that it was "agreed that the requirements for roadway crossings applied to all roads and trails on the contract plans." (Exh. G-3) The minutes were prepared by Jerry Renich, Chamac's Project Manager (R4, tab 13; exh. G-5, ¶ 35).

8. After Rocky Mountain received information about the discussion at the meeting, it sent a letter, dated 4 April 1988, to appellant stating its position that putting the conduit in concrete at every roadway including trails was not required by the term "paved

Digitized by Google

areas and roadways" in paragraph 3.4 of the specifications. They had not considered trails to be paved areas or roadways and had not asked any questions about the installation before bidding. They intended to do the crossings under trails without concrete encasement. (R4, tab 4) Rocky Mountain stated that approximately three locations would require concrete encasement depending on the cable routing (*id.*, exh. G-5, ¶ 17). Appellant sent this letter to the Government with a request for review and direction on how to proceed (R4, tab 4).

9. The Government's response, dated 14 April 1988, did not approve Rocky Mountain's interpretation, but stated:

> The nature of the traffic planned for tank trails fully defines the word "roadway", and justifies the RGS conduit encased in concrete requirement. "Roadway" applies to all tank trails.

(R4, tab 5) The Government directed use of the concrete encasement for cable crossing some, but not all, roadways (Supp. R4, tab 10).

10. The reason for requiring concrete-encased cable crossings under the tank trails and other roads subject to tank traffic was to protect the electrical cables, which were encased in steel conduit, from being damaged by the heavy crushing weight and severe abrading lateral forces imposed on the road surface by the tracked vehicles, which are 60-ton tanks (R4, tab 13; exh. G-4).

11. By letter dated 4 May 1988, Rocky Mountain submitted a change order request with an estimate for change order costs of $6,298 for each of the underground conduits at trail and roadway crossings. It was explained that the term "paved areas and roadways" was understood to imply "paved roadways." There were only paved vehicle turnarounds shown on the general drawings that would not be crossed, and no paved roadways were shown on the electrical drawings. No money had been allowed in the bid for this work. The letter further stated that in bidding, "we did not think twice about concrete encased PVC coated rigid at trails because there are only trails that show up on our drawings." Appellant added overhead, profit, and bond premium and submitted the change order request in an amount of $11,086 each and for an estimated time extension of five calendar days to the Government. (R4, tab 6)

12. On 19 May 1988, the Government acknowledged appellant's letter, but did not agree that concrete-encased conduit was required under pavement only. Appellant was "instructed to place concrete encased PVC rigid conduit when it is necessary to cross service roads and tank trails in accordance with Specification Section 16301 Paragraph 3.4." In the event of disagreement with the Government's position, instructions were provided for filing a claim. (R4, tab 7)

13. Appellant's claim, dated 15 July 1988, of $81,874 consisting of subcontractor costs only was received by the Government on 25 July 1988, but it was not certified by the prime contractor (R4, tab 9). Chamac was advised that its demand for a contracting officer's final decision did not constitute a claim by letter, dated 1 August 1988 (R4, tab 10). By letter dated 22 August 1988, Chamac submitted a certified revised claim in the amount of $91,791 with no request for a time extension (R4, tab 11). The Contracting Officer's final decision denying the claim was issued 22 February 1989 (R4, tab 14). Appellant's appeal filed in the United States Claims Court was dismissed without prejudice due to improper certification of the claim, and leave was granted to file a properly certified claim. Appellant's subsequent claim, dated 10 February 1992, was denied by the Contracting Officer on 23 April 1992 (R4, tabs 15 and 17). Appellant filed this timely appeal to the Board.

14. The parties agree that the total number of concrete-encased cable crossings was 13, but disagree on the location of some of the crossings (exh. G-5; Gov't. br. at 3; app. br. at 27-29).

DECISION

Appellant claims that its interpretation of the specifications and plans to require concrete encasement only under sidewalks, roads, or other paved areas was the proper interpretation of the contract requirements, or if the contract language is susceptible of more than one meaning, it should be construed against the drafter. Appellant maintains that the Government's direction to encase the cables in concrete under 13 tank trails was a contract change primarily because the word "trails" did not appear in the applicable specifications. The Government maintains that appellant's interpretation is a strained reading that would render useless portions of the contract language and that the only reasonable interpretation of the language consistent with the intent of the contract is the inclusion of tank trails and unpaved roads in the term "paved areas and roads" used in the specifications.

©1994, Commerce Clearing House, Inc.
Digitized by Google

Appellant argues that a proper interpretation of the contract documents would lead a reasonable bidder to conclude that it would be required to provide concrete encased cable under crossings involving paved areas or roads, but not unpaved trails, both new and existing, or unpaved service roads. The rules of contract interpretation require us to determine the intention of the parties at the time of contracting. The language of a contract must be given the meaning derived from the contract by a reasonably intelligent person acquainted with the contemporary circumstances. *Firestone Tire and Rubber Co. v. United States* [16 CCF ¶ 80,450], 195 Ct. Cl. 21, 444 F. 2d 475 (1971). In looking at the circumstances, we consider that contractors will estimate their bids on the basis of costs that will be incurred for the performance the Government can require under the contract terms. In *Blount Bros. Constr. Co. v. United States* [10 CCF ¶ 73,058], 171 Ct. Cl. 478, 496, 346 F. 2d 962 (Ct. Cl. 1965), the Court stated:

> [C]ontractors are businessmen, and in the business of bidding on Government contracts, they are usually pressed for time and are consciously seeking to underbid a number of competitors. Consequently they estimate only on those costs which they feel the contract terms will permit the Government to insist upon in the way of performance.

Appellant's subcontractor reviewed the specifications and plans in bidding and found no provision requiring the concrete encasement of cables under trails or unpaved service roads. Appellant read the word "paved" in paragraph 3.4 to imply "paved roadways." The word "trail" did not appear in underground elerical work specifications, although it was in the description of the work. In reading the specifications, appellant considered that the ordinary meaning of the word "trail" was different from that of the words "road" and "roadway" and requirements for concrete encasement under roads did not apply to trails.

We are to consider the contract in its entirety and interpret it in a way that will harmonize and give meaning to the various words and provisions. Terms in a contract are to be given their ordinary and commonly accepted meaning without a twisted or strained out of context analysis. *Andersen Consulting v. United States* [37 CCF ¶ 76,284], 959 F.2d 929, 934-35 (Fed. Cir. 1992); *Brunswick Corp. v. United States*, 951 F.2d 334 (Fed. Cir. 1991). In judging the import of words in a contract, "the context in which the contractual terms are used and the intentions of the parties are more meaningful than dictionary definitions." *Tri-O, Inc. v. United States* [38 CCF ¶ 76,521], 28 Fed. Cl. 463, 468 (1993); *Corman v. United States* [38 CCF ¶ 76,407], 26 Cl. Ct. 1011 (1992). Where the meaning of a word is doubtful, it will take its coloring from, and be limited by, the words with which it is associated. *C.W. Roberts Construction Co.*, ASBCA No. 12348, 68-1 BCA ¶ 6819. We have looked to the dictionary which defines "trail" as "a track made by passage" or "a beaten path," and "road" as an "open way or public passage for vehicles" which may be "one that is unpaved." A definition of "roadway" is "the part of a road over which the vehicular traffic travels." Webster's Third New International Dictionary, Unabridged 1963, 2423 (1971).

Considering these definitions in context, we find appellant's interpretation unreasonable. The Government argues that appellant should have understood "trails" to be included within the term "roads" or "roadways," because the intent of the contract was to provide a target range for tanks. According to the Government, it is logical that concrete-encased cable crossings will be required wherever cable crosses under roads that are subject to tank traffic (finding 10). In support of its position, the Government notes that section 3.4 of the specifications refers to "paved areas and roadways," not "paved areas and paved roadways," and the other sections 3.5.3 and 3.6 use reverse wording, "roads and paved areas." The Government believes the words were used synonymously and refers to the drawings as further basis of its position. Contract drawings use the word "road" in their title and show details of tank trails. A note on one drawing states the requirement for concrete-encased cable crossings at "road" crossings with the depiction of a tank trail.

In the context of this contract, we agree with the Government that appellant had reason to consider the term "trails" included within the designation of roads where concrete encasement would be required. Although the Government did not apply the requirement for concrete encasement consistently to all cable crossings, that fact does not make its interpretation strained or otherwise unreasonable.

When interpreting the language of a contract, the Board must give reasonable meaning to all parts of the contract and not render portions of the contract meaningless. *Gould, Inc. v. United States* [37 CCF

Digitized by Google

¶ 76,108], 935 F.2d 1271, 1274 (Fed. Cir. 1991); *Fortec Constructors v. United States* [32 CCF ¶ 73,474], 760 F.2d 1288, 1292 (Fed. Cir. 1985). Under appellant's interpretation, the provisions in the specifications for concrete encasement would be rendered superfluous since there were no paved roads on the project that would involve crossings of the electrical cable. This is further reason for rejecting appellant's interpretation.

The differing views of appellant's subcontractor and the Government of the specification requirements could be considered sufficient to find an ambiguity in the contract. *Edward R. Marden Corp. v. United States* [33 CCF ¶ 74,642], 803 F. 2d 701, 705 (Fed. Cir. 1986). Any apparent omission of tank trails from the specification provisions would, however, be an obvious and significant omission that imposes a duty on the contractor to seek clarification of the requirements before bidding. *Community Heating & Plumbing Co. v. Kelso* [38 CCF ¶ 76,488], 987 F.2d 1575 (Fed. Cir. 1993); *Interstate General Government Contractors, Inc. v. Stone* [38 CCF ¶ 76,446], 980 F.2d 1433 (1992); *Advance Contractors, Inc.*, ASBCA No. 39150, 90-1 BCA ¶ 22,591. The question that was raised for clarification in the early progress meeting with the Government should have been addressed earlier, but neither appellant nor its subcontractor made any inquiry before bidding.

We have found the Government's interpretation gave the proper meaning to the contract requirements. An ambiguity, if any, was patent and since appellant did not attempt to clarify its obligations before bidding, it is precluded from recovery on its claim.

The appeal is denied.

[¶ 26,483] TECOM, Inc.

ASBCA Nos. 44122, 44123, 44516, 44959, 45158, 45555, 45800, October 27, 1993. Contract No. F05604-88-C-0030.

Indefinite Delivery Contracts—Price Adjustments for Variation—Unit Prices v. Costs.—For excess orders under a fixed-price contract to provide vehicle maintenance services, a contractor was not entitled to an equitable adjustment based on unit prices for the extra work but, rather, upon its actual extra costs. The Variation in Workload clause specifically provided that increases or decreases in the contract price would be calculated on the basis of changes in the contractor's costs, as did the government's formal answer to the contractor's prebid query seeking clarification of the Variation in Workload clause.

Interpretation of Contracts—Prior Contracts—Subsequent Contracts.—Under a fixed-price contract containing a Variations in Work clause, it was irrelevant that the government had based similar adjustments in other contracts on unit prices rather than on actual costs, because the other contracts were awarded after the contract at issue here. The contractor could not have relied on the government's actions in the other contracts in bidding the present contract.

Procedure, Boards—Summary Judgment—Relevant Fact Issues.—Whether the cost figures accepted by the Defense Contract Audit Agency were a contractor's actual costs incurred in doing work in excess of the estimated quantities was an issue of fact that precluded summary judgment. The contractor had available records of its actual costs for each vehicle, whereas the DCAA's auditors treated each vehicle as having received the same amount of maintenance under the contract. The question of what the costs actually were could not be determined in summary proceedings.

For the appellant: Bastianelli, Brown & Touhey, Washington, D.C., by Ronald H. Uscher and Bradley A. Rush. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Robert C. Allen and John Case, Trial Attorneys.

Before FREEMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

FREEMAN, Administrative Judge: These appeals involve seven claims for price adjustment for variations in quantity under a service contract. Each claim covers a distinct period of contract performance, but the issue in all seven claims is the same. TECOM moves for partial summary judgment. We deny the motion.

STATEMENT OF FACTS

1. The contract was awarded on 11 March 1988 for operation and maintenance of Government vehicles and related equipment at Peterson Air Force Base (AFB), Colorado. The basic services specified in the Performance Work Statement (PWS) were priced on a fixed lump sum per month basis. This monthly lump sum fixed price varied slightly in each of the four option years after the base period of three months. With a phase-in period, exercise of the options, and an extension of the fourth option year, the total period of performance was 1 June 1988 through 31 December 1992.

2. The PWS at section 5.2 required TECOM to maintain the vehicles and related equipment listed in Technical Exhibits 5a through 5e. Technical Exhibit 5a was a "PCN 23" master list of vehicles by serial number dated 27 February 1987. The PCN 23 list changed weekly as vehicles were added or dropped from the fleet. Each vehicle on the PCN 23 list had a "vehicle equivalent" (VE) number based on its maintenance complexity in comparison to a passenger sedan. A passenger sedan had a VE of 1.0. The 27 February 1987 PCN list had 941.0 VE's.

3. Section 5.2 of the PWS also stated that: "Twelve month work load estimates are in Technical Exhibit 2." One of the workload estimates at Technical Exhibit 2h was "Number of vehicle equivalents assigned—941.0 (as of 27 Feb 1987 from PCN 23)." Technical Exhibit 2 also included the following provision:

> *VARIATION IN WORKLOAD.* The quantities of output to be furnished by the contractor as stated herein are estimates and as such are subject to variations. The prices of Section B, supplies/services and prices, are firm within a net variation of plus or minus 15 percent from the estimates stated in Technical Exhibit 2. If at the end of each three-month period (quarter) the total work, considering complexity, difficulty, and cost of the various outputs in Technical Exhibit 2 varies above or below 15 percent from the total estimated contract workload, negotiations for an equitable price adjustment may be initiated by either party. Any increase or decrease in price shall be based on the net of all increase [sic] or decreases in this workload. Adjustment to the contract price shall be made only for that portion of the total net increase or decrease in excess of 15 percent.

4. The contract special requirements also included at Clause 40 a variation in workload provision which stated:

> 40. *VARIATION IN WORKLOAD:*
>
> The estimated workloads contained in Technical Exhibit 2 of the Performance Work Statement are subject to variations. When the accumulated increases or decreases exceed 15% of the original total estimated workload specified in Technical Exhibits 2a through 2i, an equitable adjustment in the contract price shall be made upon demand of either party. The equitable adjustment shall be based solely upon that portion of the total net increase or decrease in excess of 15% of the original total estimated workload.

5. Six months before award of the contract and three months before the submission of offers, the Government provided TECOM with written questions and answers clarifying various provisions of the solicitation. Question 7 addressed the workload variation provisions. Parts a and b of this question and their related answers stated in relevant part:

> 7. Q. Technical Exhibit 2 Workload Estimates. The Variation in Workload Clause is somewhat confusing. Please provide clarification for the following:
>
> a. Please explain how *complexity, difficulty,* and *cost* will be computed. . . .
>
> b. If the transportation requests (workload) listed in Technical Exhibit 2 exceed 15 percent from the estimates listed are we eligible to enter into negotiations for a price adjustment . . . .
>
> 7. A. Technical Exhibit 2—Workload Estimates
>
> a. Complexity, difficulty and cost shall be computed by the Contractor based upon the amount of change and the level of effort expended to meet the requirements of the change. Once computed, the contractor shall submit his/her proposed cost for the change to the Contracting Officer for consideration. The Government will review the proposed costs and will negotiate an equitable adjustment, if merited.
>
> b. It must be understood the figures contained in Technical Exhibit 2 are estimates . . . The Government recognizes, however, that unforeseen requirements beyond these original projections are a possibility. These requirements as they occur, will be considered for an equitable adjustment. The Contractor shall be required to submit his/her projected costs for the change at the time the change occurs. . . .

6. In bilateral Modification P00002, dated 30 June 1988, the parties substituted the 30 March 1988 PCN 23 vehicle list for the 27 February 1987 list in Technical Exhibit 5a. The 30 March 1988 list had a total of 971.0 VE's. Modification P00002, however, did not expressly change the VE workload estimate (941.0) in Technical Exhibit 2h.

7. During the base period and first option year of the contract (1 July 1988—30 September 1989), taxi, bus and U-Drive requests exceeded 115 percent of the workload estimates for those services in Technical Exhibit 2. Pursuant to bilateral Modifications P00019, P00040 and P00042, the contract price was increased an aggregate $114,693 for the excess requests.

8. TECOM alleges that the price increases in Modifications P00019, P00040 and P00042 were based on pricing factors derived from the original bid lump sum monthly prices, and not on actual or estimated costs incurred for the excess requests. The Government alleges that these price increases were based on estimated incurred costs for the excess requests. (See Pavlik affidavit, 20 October 1993, and attachments thereto; Gov't supp. R4, tab 1). We find a genuine issue of material fact as to the manner in which the price increases in the three modifications were determined.

9. During the first two quarters of the second option year (1 October 1989—31 March 1990), taxi, bus and U-Drive requests again exceeded 115 percent of the estimates in Technical Exhibit 2. TECOM again claimed a price increase, but did not present evidence of actual or estimated increased cost caused by the excess requests. On 21 August 1990, the contracting officer denied this claim on the ground that an adjustment under the Variation in Workload clause "is determined by the increased cost of performance which is caused by the change in workload." This decision was appealed, but the appeal was withdrawn before hearing and dismissed with prejudice (ASBCA No. 41697). No equitable adjustment was provided by the Government in connection with this claim or with the withdrawal of the appeal. (Pavlik affidavit; Gov't supp. R4, tab 1)

10. On 12 February 1991, TECOM submitted a claim for VE's exceeding 115 percent of the estimate in Technical Exhibit 2h in each of the months July, August and September 1990. This claim was computed for each month by (i) dividing the "maintenance portion" of the monthly lump sum fixed price by the VE estimate in Technical Exhibit 2h (941.0), and then (ii) multiplying that amount times the number of VE's in PCN 23 list for the month in excess of 1,082.15 (115% of 941.0). The "maintenance portion" of the monthly lump sum fixed price (48.23 percent) was derived from TECOM's contract price proposal.

11. By letter dated 8 July 1991, the Government proposed an equitable adjustment for increases in VE's based on increased costs. TECOM answered this proposal on 31 July 1991 with a revised claim which increased the previous claim for the period July—September 1990, and added claims for monthly increases in VE's for the period 1 October 1990—30 June 1991. The aggregate amount of the revised claim was $106,892.22 and was computed in the same manner as the 12 February 1991 claim.

12. On 2 December 1991, the Government requested cost data supporting the revised claim. This request was denied by TECOM's counsel on 23 December 1991. By final decision dated 13 January 1991, the contracting officer denied the revised claim for lack of "showing actual impact of the added vehicle maintenance upon its accounting records." This decision was appealed. The appeal is docketed as ASBCA No. 44122.

13. TECOM has submitted six additional claims, for monthly VE's in excess of 1,082.15 for the period 1 July 1991 through 31 December 1992. All six claims used the same pricing method used in TECOM's prior VE claims. All six claims were denied by the contracting officer for failing to show increased costs traceable to the excess VE's. All six claims were appealed. Those appeals are docketed as ASBCA Nos. 44123, 44516, 44959, 45158, 45555, and 45800.

14. In addition to the contract at Peterson AFB, TECOM also performed similar contracts with similar workload variation provisions at Tinker AFB and Wright-Patterson AFB. TECOM has provided evidence of price adjustments for VE workload variations on the Tinker and Wright-Patterson contracts. One of those adjustments was a price reduction. All of the adjustments for which evidence is submitted used the same pricing method which TECOM used in its VE claims on its Peterson contract. The Tinker and Wright-Patterson contract adjustments were made after award of the Peterson contract. TECOM did not rely on the Government practice under the Tinker and Wright-Patterson contracts when it bid the Peterson contract.

Digitized by Google

15. A Defense Contract Audit Agency (DCAA) report dated 3 December 1992 shows Tecom's total vehicle maintenance costs incurred on the Peterson contract by month from 1 July 1990 to 31 March 1992. By allocating the total maintenance costs in each month equally to all VE's shown on the PCN 23 list for the month, the report determines the cost of the excess VE's for each month. The aggregate cost for excess VE's for the audited period determined by DCAA in this manner was $184,942. The assumption in the DCAA allocation of maintenance costs, that all vehicles received maintenance services proportional to their VE rating, is disputed by credible affidavits of Government personnel involved in monitoring contract performance.

16. The contract required, and TECOM did in fact maintain, individual maintenance cost records showing direct labor hours and material cost for each vehicle (the "OLVIMS" reports). It is possible to determine the actual maintenance cost incurred on the added vehicles which caused the excess VE's from the OLVIM's reports and from TECOM's payrolls and other cost accounting records. No attempt was made either in TECOM's claims, or in the DCAA audit, to determine the actual maintenance costs on the added vehicles. Moreover, some maintenance on the added vehicles was reimbursed by separate contract modification, but nevertheless may have been included in the DCAA determination of VE unit cost.

DECISION

TECOM moves for partial summary judgment for $184,942, contending that the DCAA audit establishes that amount as the minimum due for excess VE's during the period 1 July 1990—31 March 1992. We disagree with that contention, and with TECOM's basic claim that it is entitled to adjustments based on a VE unit price derived from the maintenance portion of the lump sum monthly price.

The Government is correct in requiring that any equitable price adjustment for workload variation be based on the additional costs caused by the excess in variations. The Variation in Workload clause in Technical Exhibit 2 expressly referred to "the cost of the various outputs" in stating the conditions under which an equitable price adjustment will be negotiated. See Finding 3 above. Moreover, the questions and answers provided prior to bidding expressly stated that workload variation adjustments would be based on costs. Answer 7.a. stated: "... *cost shall be computed* by the Contractor based upon the amount of change and *the level of effort expended* to meet the requirements of the change." (Emphasis added). Answer 7.b. stated "... The Contractor shall be required to submit his/her *projected costs* for the change [in workload estimates] at the time the change occurs." (Emphasis added). See Finding 5 above.

TECOM contends that the Government agreed to unit price type adjustments for the excess taxi, bus and U-Drive services in Modifications P00019, P00040 and P00042, and that these agreements represent a contemporaneous interpretation of ambiguous provisions. The Government contends that those adjustments were based on actual or estimated costs, and not on unit prices. There is a genuine issue of material fact here, but even if we were to accept TECOM's contention as to the basis for the adjustments in the cited modifications, the contemporaneous interpretation rule would not apply because there is no ambiguity to be interpreted.

TECOM cites price adjustments under similar contracts at Tinker AFB and Wright-Patterson AFB in which the unit price method was followed, including one adjustment reducing the contract price. Those adjustments, however, were all made after the Peterson contract was bid and awarded. TECOM cannot claim that it relied on the Government's course of dealing on the Tinker and Wright-Patterson contracts when it entered into the Peterson contract.

At this stage of the appeal, the undisputed facts do not establish that additional costs in the amount allocated by the DCAA audit were caused by the excess of VE's. The DCAA audit's allocation of total maintenance costs equally to all VE's is valid only if all VE's received substantially the same amount of maintenance. That assumption is contested by the credible affidavits of Government personnel responsible for monitoring performance of the contract.

The excess VE's were the result of added vehicles. Records were kept of the actual direct maintenance cost (labor hours and material) for each vehicle. TECOM's failure to support its claims with evidence of the maintenance costs actually incurred on the added vehicles suggests that such costs were not in fact incurred in the amounts claimed by TECOM's unit price analysis, or in the amounts allocated in the DCAA audit.

Digitized by Google

Since there is a genuine issue of material fact as to the actual unreimbursed costs for the added vehicles which caused the excess VE's, the motion for partial summary judgment is denied.

[¶ 26,484] **Henry Angelo & Company**

ASBCA No. 43669, October 27, 1993. Contract No. DABT39-86-D-1047.

Indefinite Delivery Contracts—Price Adjustments for Variation—Unabsorbed Overhead.—After the government ordered only 31 percent of the estimated quantity under a requirements contract for housing maintenance, a contractor was entitled to recover unabsorbed overhead under the standard Variations in Estimated Quantities clause because unabsorbed overhead is an increased cost. The clause provides for recovery of increased costs resulting from variations exceeding 15 percent of the estimates, whether those costs are direct or indirect. Fixed overhead costs that are not absorbed because the government orders less than the estimated quantity come within the type of costs contemplated by the Variations clause.

Indefinite Delivery Contracts—Price Adjustments for Variation—Unabsorbed Overhead Calculation.—Under a requirements contract, an adjustment for unabsorbed overhead under the Variations in Estimated Quantities clause was calculated by using the ratio between the quantity actually ordered by the government and the quantity it was required to order under the Variations clause. The government ordered 31 percent instead of 85 percent of the estimated quantity. Thus, it failed to order 63.7 percent of what it was required to order, and the contractor was entitled to 63.7 percent of both its actual direct field office overhead and that portion of its indirect home office overhead costs chargeable to the contract, as well as profit computed using the contractor's historical profit rate for similar contracts.

Indefinite Delivery Contracts—Price Adjustments for Variation—Computation Using Price.—The original contract price was not a proper basis for computing an adjustment for unabsorbed overhead under the Variation in Estimated Quantities clause, because the clause allows recovery only of increased costs. The contractor's method of computing an expected price on the basis of 85 percent of the estimated quantity, then using that price in conjunction with a historical home office overhead percentage, did not measure increased costs resulting from the variation from the estimate. Because of the extent of the government's failure to order the guaranteed amount, however, it was appropriate to use a jury verdict method to arrive at a fair and reasonable approximation of increased costs.

For the appellant: Carey, Dwyer, Eckhart, Mason & Spring, P.A., Miami, Florida, by Michael C. Spring. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. Robert A. Duecaster, JAGC, Trial Attorney.

Before LIPMAN, RUBERRY, and SPECTOR, Administrative Judges.

LIPMAN, Administrative Judge: This is an appeal from a contracting officer's denial of appellant's claim to recover unabsorbed overhead allegedly incurred due to the Government's issuance of less orders than it was obligated to issue under the provisions of this requirements type contract. The parties presented documentary evidence and testimony at a hearing. We are to decide both entitlement and quantum.

FINDINGS OF FACT

In February 1986, the Government issued an Invitation for Bids (IFB) for a requirements contract to perform interior and exterior surface preparation and painting on family housing units at Fort Sill, Oklahoma. The IFB contained a schedule setting forth estimated quantities of the various work items to be performed under the contract.

Appellant's bid reflected unit prices for the individual work items along with the estimated total price for each work item. Appellant's estimated total bid price for all work items was $619,235 and it was awarded the contract on 5 June 1986.

Appellant was to provide the services or supplies under the contract upon receipt of delivery orders from the Government. The

©1994, Commerce Clearing House, Inc.

Digitized by Google

contract performance period was from the award date through 28 February 1987. The contract contained the FAR 52.212-11 clause entitled "Variation in Estimated Quantities (APR 1984)," which provided, in pertinent part:

> If the quantity of a unit-priced item in this contract is an estimated quantity and the actual quantity of the unit-priced item varies more than 15 percent above or below the estimated quantity, an equitable adjustment in the contract price shall be made upon demand of either party. The equitable adjustment shall be based upon any increase or decrease in costs due solely to the variation above 115 percent or below 85 percent of the estimated quantity.

Appellant is located in Miami, Florida. In order to perform the contract work, appellant sent a superintendent to the contract site in Oklahoma to open an office and secure storage space.

During the contract period, the Government issued 92 delivery orders totalling approximately $192,000, which was 31 percent of the dollar value of the $619,000 price of the estimated quantity of work under the contract. The Government issued no delivery orders with respect to 31 of the 52 items in the bid schedule and it ordered less than 85 percent of all but one of the 52 items. Delivery orders were issued at the rate of about one every 10 days. While appellant was prepared to have as many as 15 employees working on the contract, it was generally down to as low as three or four. In addition, the limited amount of work caused worker inefficiency. Appellant was unable to close down the Oklahoma office because the Government continued to issue delivery orders, albeit at the substantially reduced rate. Appellant's workers at the Oklahoma site could not be used on other contracts during periods in which they were not gainfully occupied in performing this contract.

Appellant twice submitted claims to recover unabsorbed overhead allegedly resulting from the low number of delivery orders, and both times appeals to this Board based on the claims were dismissed without prejudice due to inadequate claim certifications. Finally, on 1 July 1991, appellant submitted a properly certified claim in the amount of $51,611. The Government received the claim on 8 July 1991. The claimed amount was quantified, as follows:

Original Contract Price $619,235 × 85%	$526,350
Home Office overhead which should have been absorbed (historical average of contract prices 9.45%)	49,740
Direct costs (actual)	177.116
	$226,856
Profit (historical average 9.42%) of actual direct cost	16,684
New Contract Price	$243,540
Less amount Paid	191,929
Amount claimed	$ 51,611

The contracting officer denied the claim in its entirety, based upon an audit report from the Defense Contract Audit Agency (DCAA). DCAA questioned appellant's quantum methodology and, in DCAA's opinion, appellant's inability to demonstrate that incurred costs increased solely as a result of the variation in quantity below 85 percent of the estimated quantity in the contract. DCAA took specific exception to appellant's use of the original contract price as the starting point of its calculation because that price included home office overhead and profit, and its position that the application of overhead to overhead and profit is not a generally accepted accounting practice. The DCAA report continued:

> It is also noted that the overhead rate of 9.45 percent and profit factor of 9.42 percent were computed [by appellant] using the average historical data for the years ended 30 June 1981 through 30 June 1987. Since the contract performance was during fiscal year 1987, only FY 1987 data should be used to compute these rates. We requested from the contractor a break-down by cost element of the bid proposal that originated the contract in order to delete the proposed home office overhead and profit from the original contract price. The contractor was unable or unwilling to furnish the requested data.
>
> * * *

The DCAA audit confirmed that appellant's direct costs on the contract totalled $177,116. It also arrived at an 11.85 percent home office overhead rate for appellant's Fiscal Year 1987. DCAA further determined that appellant incurred a loss of $6,175 (three percent) on the contract.

Appellant timely appealed the contracting officer's decision denying its claim.

Based upon the uncontested testimony of appellant's independent accountant, we find that, during the course of contract perform-

Digitized by Google

ance, appellant incurred direct field overhead costs of $37,981.49 in connection with its Oklahoma site. Those costs were comprised of supervision, equipment and office rental, telephones, utilities, gas and oil, maintenance, travel, and bonds. The costs were fixed overhead costs but were incurred for this contract only, were charged directly to the contract, and were included in the total direct costs of $177,116.

DECISION

This requirements contract provided that appellant is entitled to a equitable adjustment in contract price for increased costs due solely to the variation of unit-priced items actually ordered by the Government below 85 percent of the quantities of the unit-priced items estimated to be ordered under the contract. There is no dispute that, during performance, the total dollar value of the Government's delivery orders was 31 percent of the dollar value of the estimated quantity of work under the contract.

Appellant has the burden of demonstrating that it incurred increased costs due to the quantity variation. The Government contends that appellant's claim, seeking to recover for unabsorbed overhead on the basis of a mathematical formula, is essentially a claim similar to that allowed in *Eichleay Corp.*, ASBCA No. 5183, 60-2 BCA ¶ 2688, aff'd 61-1 BCA ¶ 2894, where unabsorbed overhead costs resulting from a compensable delay were recovered. Here, the Government's argument continues, the claim is not recoverable because no delay is being claimed.

We do not agree. To the extent that appellant can demonstrate that increased costs resulted from a variation in estimated quantities, it is entitled to recover both direct and indirect costs. *Les Killgore's Excavating*, ASBCA No. 32261, 86-3 BCA ¶ 19,117. There is no reason why the costs recoverable should not include overhead which would have been absorbed had the estimated quantities been ordered, but were left unabsorbed by the order shortfall. Those costs are real, whether they result from delay or some other cause, and the absence of delay allegations does not prevent their recovery.

We turn to the method used by appellant in computing its claim. Its claim computation is based upon the contract price. To that price it applies the 85 percent from the clause to allow for permissible quantity variation to arrive at, in effect, an expected price. That expected price is then used as a basis of computation in conjunction with an historical home office overhead percentage. Based on our discussion below, we conclude that the method used by appellant to compute its claim is faulty.

It is clear from the Variation in Estimated Quantities clause itself that appellant's measure of recovery is an increase in costs and the calculation should not be based on the contract price. In *Les Killgore's Excavating, supra.*, we were presented with a similar claim under a contract with a similar clause. We concluded, there, that the contractor, whose guaranteed dollar amount of orders had not been met, was entitled to recover increases in both direct and indirect costs, plus a reasonable profit on those costs, resulting from the Government's failure to issue sufficient orders. In arriving at that conclusion, we stated:

> There can be no doubt that the clause in question does not allow recovery of the contract price (presumably the contractor's anticipated cost plus profit) for work not ordered. Rather, the clause requires that recovery be based upon actual increased costs caused by the underrun of actual work ordered below the . . . guaranteed minimum. To allow recovery of the contract price for the underrun quantity would be to pay appellant for work not done, which is manifestly not the intent of the clause . . . . [Supra. at 96,629-2]

In *Clement-Mtarri Companies*, ASBCA No. 38170, 92-3 BCA ¶ 25,192, the Board was faced with the identical "Variation in Estimated Quantities" clause and what was effectively the mirror image of the instant appeal. There, the Government sought to limit appellant's recovery under the clause where the contractor's effort in disposing of contaminated water exceeded 115 percent of the contract's estimated quantity. The unit price in the original contract was $360 and the issue was whether, if at all, that unit price should be adjusted for the quantities in excess of 115 percent of the estimate. The Government took the position that a standard equitable adjustment analysis be applied providing appellant with its actual reasonable costs plus a reasonable profit, and its unilateral modification established a new unit price of $15.09 for the quantities in excess of 115 percent of the estimated quantity. The contractor contended that the clause required that it be paid the original unit price of $360 less any savings "due solely" to the quantity increase. The Board decided in the contractor's favor based, in part, upon the "administrative history" of the clause. That history clearly reflected an

©1994, Commerce Clearing House, Inc.

Digitized by Google

intent to preserve the integrity and importance of the unit prices arrived at by competitive bidding and not to permit an overrun to result in the repricing of the entire contract.

In the instant appeal, we are faced with a quantity "underrun" rather than an overrun, but our task is the same—to permit recovery to the extent that the underrun of the unit-priced items resulted in increased costs.

Appellant's method of computation, based on the contract price, does not produce that result. Because of the extent to which the quantities ordered here fell short of the estimated quantities, however, we are reluctant to deny the appeal in its entirety simply because appellant's method of computation is unsatisfactory. The use of a "jury verdict" technique is appropriate where we have sufficient evidence to permit us to arrive at a fair and reasonable approximation of the damages. *Schuster Engineering, Inc.*, ASBCA Nos. 28760, 29306, 30683, 87-3 BCA ¶ 20,105. We believe this to be such a case.

Appellant seeks relief in the nature of unabsorbed overhead—that is, the underrun in orders on this contract left a corresponding portion of its direct field overhead and indirect home office overhead unabsorbed on this contract requiring their absorption by other contract work. In order to calculate that portion of the indirect costs which were unabsorbed, we look to the 31 percent ($191,000) of the estimated quantities ordered as compared to the 85 percent ($526,000) required to be ordered. The math indicates that the Government ordered 36.3 percent of what it was required to order or, stated another way, it failed to order 63.7 percent of what it was required to order. Appellant is, therefore, entitled to recover the 63.7 percent of the direct field overhead costs and the indirect home office overhead costs.

In the calculations which follow, we reduce the total incurred cost of $177,116 by the $37,981.49 in direct field overhead, we apply the 11.85 percent home office overhead rate determined by DCAA to the adjusted total costs incurred, and we allow appellant's claimed historical average profit of 9.42 percent:

$37,981.49 × 63.7% = $24,194.21 (compensable field overhead)
$177,116 − $37,981.49 = $139,134.51 × 11.85% = $16,487.44
$16,487.44 × 63.7% = $10,502.50 (compensable home office overhead)

We add compensable field overhead and home office overhead and complete the computation, as follows:

$24,194.21	(compensable field overhead)
10,502.50	(compensable home office overhead)
$34,696.71	
3,268.43	(9.42% profit)
$37,965.14	

We conclude that appellant is entitled to recover $37,965.14, plus interest under the Contract Disputes Act of 1978 calculated from 8 July 1991. The appeal is sustained to the extent reflected above.

[¶ 26,485] Teltara, Inc.

ASBCA Nos. 42256, 44917, November 8, 1993. Contract No. DAKF36-90-D-0013.

Interpretation of Documents—Contract Documents—Incorporation by Reference.—The mention in a contract of a table found in a particular military specification did not incorporate that specification into the contract, because there was no expression of intent to incorporate the specification. The contract provided that random inspection of janitorial services was to be conducted in accordance with sampling tables provided in the military specification. Because no other mention of the specification was made, it was not reasonable to conclude that the specification in its entirety had been incorporated into the contract.

Digitized by Google

Quality—Inspection Methods—Random Sampling.—The government's inspection of janitorial work by random sampling was not unreasonable, because the contract specifically provided for such sampling and established a method for calculating contract price reductions on the basis of such sampling.

Acceptance of Performance—Price Reduction for Defects—All-or-None Deductions.—The government's use of random sampling of janitorial services to determine price reductions for inadequate cleaning was not a prohibited "all-or-none" price deduction, because the sampling involved the separate tasks to be done under the contract. In all-or-none sampling, all tasks done in a particular area could fail for the day if one task was performed inadequately. Here, each task was treated separately.

Acceptance of Performance—Price Reduction for Defects—Random Sampling Methodology.—Under a contract for janitorial services, price reductions for inadequate work, which were calculated by dividing the square footage of defective work by the square footage of sampled buildings, were reasonable because the methodology reflected the reduced value of the services performed. The sample size was determined by a table incorporated in the contract, and no deductions were made for any buildings in which fewer than 5 percent of the tasks performed were defective.

For the appellant: Patton, Boggs & Blow, Washington, D.C., by Dean M. Dilley and Curtis V. Gomez. For the government: Col. Riggs L. Wilks, Chief Trial Attorney, and Capt. Randall J. Vance, Trial Attorney.

Before DICUS, RUBERRY, and RIISMANDEL, Administrative Judges.

DICUS, Administrative Judge: These appeals arise from a contract for cleaning services at Fort Drum, New York. In dispute is the method used by respondent in calculating deductions for unsatisfactory service. Only entitlement is at issue.

FINDINGS OF FACT

1. Contract DAKF36-90-D-0013 between appellant Teltara, Inc. and respondent U.S. Army was awarded 16 July 1990. The contract was a requirements contract with a performance period of 1 August 1990 to 31 July 1991, and included the Changes—Fixed Price (AUG 1987), Disputes (APR 1984), and Inspection of Services—Fixed Price (APR 1984) clauses. In the event of defective service, the latter clause allows the Government to "reduce the contract price to reflect the reduced value of the services performed." Also included was Order of Preference—Sealed Bidding (JAN 1986):

> Any inconsistency in this solicitation or contract shall be resolved by giving precedence in the following order: (a) the Schedule (excluding the specifications); (b) representations and other instructions; (c) contract clauses; (d) other documents, exhibits, and attachments; and (e) the specifications.

(42256 R4 (R4), tab 1)

2. Section B listed the various services to be performed (e.g. sweep and vacuum all areas), which were priced separately on a per square footage basis. These services were referred to as "tasks" in the Statement of Work and Technical Exhibit #1. Section C, the Statement of Work, defined in detail the services or tasks which, under Section F, were to be performed in accordance with monthly delivery orders, and defined Acceptable Quality Level (AQL) as "The maximum percent of defective work allowable before work is considered unsatisfactory . . . As long as unsatisfactory work does not exceed the AQL, the service will not be subject to payment reduction." Technical Exhibit #1 established the maximum allowable deviation from requirements as 5 percent and random sampling as the primary method of monitoring contract performance. We find the 5 percent AQL reasonable and consistent with levels established in MIL-STD 105D (exh. G-3). Buildings receiving five to seven day service were exempt from random sampling. Paragraph 3.1 provided:

> For areas monitored by Random Sampling, the Quality Assurance Evaluator (QAE) will use the Lot Size, Sample Size and Acceptable Quality Level to determine the maximum number of defects that can be identified before a Contractor's performance is considered to be unsatisfactory. The contractor will not be paid for the portion of work deemed to be unsatisfactory. Procedures for the deduction of payment to the contractor are out-

©1994, Commerce Clearing House, Inc.

Digitized by Google

lined in para (sic) 4 of this Performance Requirements Summary.

(R4, tab 1)

3. Paragraph 4 of Technical Exhibit #1 provided an example of the method to be used in random sampling, as follows:

4. Monthly payment to the Contractor will be reduced for unsatisfactory performance using the following method:

4.1 Random Sampling—If random sampling is used, the contractor shall not be allowed to reperform. The deductions will be taken automatically.

4.1.1 Example.

4.1.1.1 Given:

Task: Sweeping of floors, etc., (TE-1.4, page TE 1.4, Task #1).

AQL: 5% defective (TE-1, page TE 1.4, Column C).

Number of buildings being swept for that day: 60 (assumed).

Total Square Footage of Buildings: 300,000 SF (assumed).

Bid Price for Sweeping: $.005/SF (assumed).

4.1.1.2 Sampling Methodology:

Sample Size Code Letter: E (from MIL-STD-105D, Table 1).

Sample Size: 13 (from MIL-STD-105D, Table II-AO.

13 buildings will be randomly selected for inspection of sweeping.

4.1.1.3 Deductions:

Three buildings found to be more than 5% defective (assumed) for sweeping.

Square Footage of Sampled Buildings: 65,000 SF (assumed).

Square Footage of Defective Buildings: 12,000 SF (assumed).

SF defective divided by SF sampled = % deduction.

12,000 divided by 65,000 = 18%

Total square footage × bid price × % deduction = total deduction

300,000 × .005 × 18% = $270.00

(R4, tab 1)

4. Technical Exhibit #1 also established Validated Customer Complaint and 100 Percent Inspection as means of contract monitoring. Unlike random sampling, both provided for reperformance by the contractor except in buildings using five or seven day service. No deductions were to be made unless reperformance was unsatisfactory. Technical Exhibit #1 also included charts showing the required service, standard therefor (which referred back to the Statement of Work), AQL, and method of surveillance or monitoring (R4, tab 1).

5. Technical Exhibit #2 consisted of a Task and Frequency Chart describing the tasks, assigning a number to the task, and establishing the frequency of performance as daily, weekly, monthly, semi-annually, annually, and when ordered. Technical Exhibit #4 provided a sample schedule for tasks to be performed two days per week, and Technical Exhibit #5 provided a sample schedule for services to be performed one day per week. Floor plans were included as attachment B. While Technical Exhibit #1 referenced Tables 1 and II-A from MIL-STD-105D, the contract documents did not otherwise include MIL-STD-105D, either physically or by reference. Copies of the MIL-STD-105D charts referenced in Technical Exhibit #1 were not physically included in the contract documents (R4, tab 1).

6. Delivery Orders issued under the contract coordinated daily and weekly tasks with specific buildings. Thus, sweeping and vacuuming, trash removal, and restroom cleaning, were ordered for the same day and building. Similarly, weekly tasks due to be performed in a particular building on a particular day were coordinated (e.g., R4, tab 3; tr. 35-37, 98-99). From review of the Delivery Order, the buildings to be cleaned on a particular day were ascertainable, and from that the process of random sampling was initiated (tr. 32).

7. After discerning the number of buildings scheduled for a specific cleaning service (e.g., 6), which constituted the lot size, the sample size for inspection purposes was obtained by reference to MIL-STD-105D, Table 1, which provided a sample size code letter (e.g., 6 = A). Further reference to MIL-STD-105D, Table II A, provided the sample size (e.g., A = 2). The specific buildings to be cleaned were assigned a number (e.g., 1 through 6) and the sample size (e.g., 2) was put into a computer, using the Lotus 1-2-3 program, which selected 2 numbers between 1 and 6 (e.g., 1 and 6). Those buildings were then scheduled for inspection on the day in question to determine if the AQL had been met (R4, tabs 3, 10; exh. G-3; exh. G-4, at 14; tr. 31 -38).

8. Inspectors would proceed to the sample buildings to make their inspections. They were provided with the Statement of Work, inspection sheet, and discrepancy sheet, on which discrepancies were noted. At least one inspector also carried floor plans (tr. 38,

Digitized by Google

125). To ascertain whether the AQL had been met, inspectors identified work that had not been performed in accordance with contract standards using primarily visual inspection techniques (tr. 134-38). If deficiencies were found representing more than 5 percent of the scheduled cleaning service task, they were noted on the discrepancy sheet (tr. 126, 134). Inspectors did not note deficiencies when less than 5 percent of the work did not meet contract standards (tr. 81-83, 134; *but see* exh. G-4, at 23-24).

9. The inspection reports were reviewed by a supervisor who, if he did not find adequate justification, would overrule the inspector and would not consider the deficiency (tr. 42-43). Working with the reports for which he considered justification to be adequate, the supervisor would determine whether the 5 percent AQL was exceeded for the buildings sampled. If so, he divided the square footage of the defective buildings by the square footage of the sample buildings to obtain the percentage of the buildings that exceeded the AQL. The percentage derived was employed to determine the deduction by using it to multiply the square footage of the buildings for which the task was ordered that day by the bid price for the service task item (tr. 44-45, 48-52; exh. G-1, -2). We find the procedure was not an "all-or-none" deduction system.

10. Copies of the resultant discrepancy sheets were made available to appellant's project manager on a daily basis (tr. 41). The project manager employed by appellant for the first three months of the contract, who had been designated by appellant to confirm deficiencies, agreed with 75 percent of the deficiencies identified by respondent's inspectors (R4, tab 2; exh. G-4, at 4, 20-21). We find the inspection procedure employed in practice by respondent (findings 6-10) was consistent with that prescribed In Technical Exhibit #1 (findings 2-4).

11. The discrepancy sheets show the date of the inspection but do not have a place for designating the time of inspection (R4, tab 10). Appellant's project manager for the first three months was aware of the circumstances under which the inspections were made, and generally accompanied an inspector each day. As noted, he agreed with 75 percent of the deficiencies (exh. G-4, at 21-22). There is no probative evidence appellant did not know when or how the inspections were being conducted. There is no probative evidence of contemporaneous complaints about the timing of the inspections. Inspectors generally were at the first buildings to be inspected between 7:45 and 8:00 a.m. (tr. 38, 129-30). When they were an hour or more later getting to the buildings they gave appellant the benefit of the doubt and, while deficiencies may have been noted, the building would be found to meet the AQL (tr. 130-32). There is no probative evidence that respondent's inspections were untimely and resulted in deficiencies being ascribed to appellant that were due to causes other than inadequate cleaning. We conclude respondent's inspections were timely.

12. Appellant had bid on the contract believing that MIL-STD-105D was incorporated (tr. 164). When appellant saw random sampling referred to in the bid documents, appellant expected MIL-STD-105D to apply (tr. 183-84). Appellant expressed concern over the lot size at the preperformance conference (tr. 26). There was an expression of dissatisfaction with the random sampling process by appellant for the first six months of the contract (tr. 160-62).

13. About halfway through the contract random sampling was eliminated by modification (tr. 141, 145). The standard method of monitoring became validated customer complaint, and reperformance was allowed as a result (tr. 146). Thereafter, few deductions were taken (tr. 144).

14. By letter of 16 October 1990 appellant filed a claim in the amount of $12,559.93 based on respondent's failure to adhere to MIL-STD-105D in monitoring contract performance (R4, tab 16). The claim was denied in a final decision of 20 December 1990 (R4, tab 19). An appeal was taken therefrom and docketed as ASBCA No. 42256.

15. A second claim in the amount of $30,872.86 was filed by letter of 23 March 1991 (44917 R4, tab 35). The claim was denied in a final decision dated 21 May 1992 (44917 R4, tab 36). An appeal was taken and docketed as ASBCA No. 44917.

DECISION

Appellant argues that respondent's inspection plan was invalid because it produced unreasonable, statistically flawed results, and used "all-or-none," untimely, inspections. Respondent argues that the contract's random sampling plan was reasonable, unambiguous, and consistently applied.

We have not found that MIL-STD-105D can reasonably be read into the contract. The references to the two tabies from that source do not reasonably lead to the conclusion that the MIL-STD is otherwise included (*see* finding 3), and it is not

©1994, Commerce Clearing House, Inc.

Digitized by Google

mentioned elsewhere in the contract (finding 5). Moreover, the inspection system described in Technical Exhibit #1 is not ambiguous as to how deductions were to be calculated *(finding 3)*. Thus, to the extent appellant's arguments are based on inclusion of MIL-STD-105D in the contract, they are rejected. Moreover, we have found respondent's inspections to be timely and consistent with contract requirements (findings 10, 11).

Appellant cites *Clarkies, Inc.*, ASBCA No. 22784, 81-2 BCA ¶ 15,313; *Contract Maintenance, Inc.*, ASBCA Nos. 19409, 19509, 75-1 BCA ¶ 11,207; and *Environmental Aseptic Services Administration and Larson Building Care, Inc.*, Comp. Gen. Dec. B-207771, *et al.*, 83-1 CPD ¶ 194, in support of its argument that inspection methodology must not violate the prohibition against "all-or-none" deduction plans. We have found that the inspection procedure was not on an "all-or-none" basis (finding 9). Moreover, *Environmental Aseptic Services*, wherein the provision at issue was found to constitute a penalty, dealt with a methodology in which all tasks performed in a room could fail for the day because of the failure of only one task. Here, each task was accepted or rejected individually. Thus, the methodologies are distinguishable.

However, the contract provides in the Inspection of Services—Fixed Price clause that price reductions must reflect the reduced value of performance (finding 1). Under the Order of Precedence clause, that provision takes priority over Technical Exhibit #1. We have held the Government "must show that its method of calculating the deductions reasonably reflected the reduced value of the services performed ...." *Capital Services, Inc.*, ASBCA No. 40510, 91-1 BCA ¶ 23,310 at 116,908. As respondent points out, the random sampling methodology found to be reasonable in *Capital Services* is similar to the methodology used here. The formula employed in that case was (total square footage × daily contract unit price × price deduction percentage) × (defective buildings divided by total sample buildings) = daily deduction. The specific example given in the decision is (100,000 sq. ft. × $.0027 × .10) × (10 divided by 20) = $13.50. *Id.* at 116,909. In the instant appeal, the contract does not employ the price deduction percentage (finding 3) used in *Captial Services* because tasks are individually priced (finding 2). In *Capital Services*, the contract was priced using a unit price per square foot for all custodial tasks and assigning a percentage value to each task so as to limit the deduction to the scope of the task which was rejected. *Id.* at 116,903, 116,906. Here, the same effect is achieved by the individual pricing of each task (finding 2). Although the AQL in *Capital Services* differed with the task, *id.* at 116,906, and information on specific AQLs is not provided therein, we have found the 5 percent AQL in appellant's contract to be reasonable. Given the similarity between the methodology in the instant appeal and that found to be reasonable in *Capital Services*, we find that the system used in the contract here reasonably reflects the reduced value of the services performed as set out in the Inspection of Services—Fixed Price clause.

Finally, we have found the contract to be unambiguous with respect to calculation of deductions, and the record is devoid of complaints or questions about the sampling/deduction process prior to award. If, as appellant argues, the system was unreasonable and thus in conflict with the Inspection of Services—Fixed Price clause, it should have been apparent prior to award. The duty to seek clarification in such matters is upon appellant. *J. A. Jones Construction Co. v. United States* [12 CCF ¶ 81,823], 395 P.2d 783, 790 (Ct. Cl. 1968). Accordingly, the appeals are denied.

[¶ 26,486] South Georgia Cleaning Services, Inc.

ASBCA Nos. 40972, 41219, November 2, 1993. Contract No. F09607-87-D-7006.

Attorney Fees and Costs Under Equal Access to Justice Act—Substantial Justification—Merits v. Damages.—Even though the government thought that a contractor's lack of a prepared budget weakened the case for an equitable adjustment, the government was not substantially justified in refusing to admit liability for negligent preparation of contract estimates, because it had an obligation to prepare estimates based on all information available to it. The government believed that the contractor's lack of a budget would prevent the contractor from demonstrating its damages on appeal. That belief did not

Digitized by Google

justify the government's refusal to admit liability, and the contractor was entitled to recover its attorneys fees and costs.

Attorney Fees and Costs Under Equal Access to Justice Act—Substantial Justification—Sampling Methods.—The government was not substantially justified in denying a contractor's claim, because the government's position relied on sampling methods that had no statistical validity. Random samples taken at unknown places by unknown operators provided no basis for determining proper contract payments, and the government was not justified in maintaining a position in reliance on such samples.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Lay Witness Fees.—A contractor's claim for witness fees and expenses under the Equal Access to Justice Act was denied because the Act does not provide for reimbursement for lay witnesses, as the board has consistently held.

For the appellant: Smith, Currie & Hancock, Atlanta, Georgia, by Thomas E. Abernathy IV and E. Alan Arnold. For the government: Col. James C. Babin, Chief Trial Attorney, and Richard C. Phillips, Trial Attorney.

Before WATKINS, SPECTOR, and RUBERRY, Administrative Judges.

WATKINS, Administrative Judge: South Georgia Cleaning Services, Inc., seeks attorney's fees and expenses incurred in connection with three appeals under the Equal Access to Justice Act (EAJA), 5 U.S.C. § 504. Familiarity with our decision sustaining the appeals in ASBCA Nos. 38546 and 40972 (93-2 BCA ¶ 25,800) is presumed. The appeal in ASBCA No. 41219 was settled by the parties. Appellant meets the EAJA eligibility requirements. We are issuing a separate decision in ASBCA No. 38546. We decide entitlement only.

In ASBCA No. 40972 the Board sustained the appeal. The parties have agreed on the sum of $42,664.08 for this appeal, utilizing the Board determined unit adjustment of $2.02 per acre. Appellant was the prevailing party in this appeal.

In ASBCA No. 41219, the parties settled the claim after a continuance was granted during the hearing on the other two appeals. Appellant had claimed that the Government knew or should have known that the estimated quantities provided for Exhibits 1 (Pavement work) and 2 (Grounds maintenance work) did not reasonably reflect the Government's actual requirements for the contract performance periods. The Government generally denied liability, asserting that its estimates were reasonable.

On settlement, the Government conceded liability of $98,542.00 on appellants claim of $112,856.75 and a modification to the contract was executed. It is well settled that a party may be deemed a prevailing party where an appeal is resolved by settlement. *Technical Communication Electronic Consultants, Ltd.*, ASBCA Nos. 29143, 39395, 93-1 BCA ¶ 25,311. Likewise, appellant need not obtain all the relief sought to be the prevailing party. *Hart's Food Services dba Delta Food Service*, ASBCA Nos. 30756R, 30757R, 40280R, 40281R, 93-1 BCA ¶ 25,524, *citing Sterner v. Department of the Army*, 711 F.2d 1563 (Fed. Cir. 1983); *Crown Laundry & Dry Cleaners, Inc.* ASBCA Nos. 28889, 31900, 87-3 BCA ¶ 20,034, *Mot. for recon. dismissed*, 88-1 BCA ¶ 29,345, Accordingly, appellant is the prevailing party in this appeal.

Substantial Justification

The EAJA provides for payment of attorneys' fees and lenses by the Government to the prevailing party unless the position of the agency was substantially justified. 5 U.S.C. § 504(a)(1). The substantial justification standard in the Act was defined by the United States Supreme Court as " 'justified in substance or in the main,' " a meaning "no different from the 'reasonable basis in both law and fact' formulation adopted by the . . . vast majority of . . . Courts of Appeals. . . ." *Pierce v. Underwood*, 487 U.S. 522, 565 (1988), *Hart's Food Services, Inc., dba Delta Food Service, supra, citing Pierce v. Underwood, supra.* The standard is applied to the agency's position in litigating the appeal and to its actions leading to the appeal. 5 U.S.C. § 504(b)(1)(C), (E).

The Government has the burden of proving that its position was substantially justified. *J.J. Seifert Machine Co., Inc.*, ASBCA No. 41398, 92-1 BCA ¶ 24,608. As noted, it must establish this in the context of the litigation as well as in the administrative action or inaction upon which the adversary adjudication was based.

©1994, Commerce Clearing House, Inc.

Digitized by Google

With respect to ASBCA No. 40972, the Government asserts that it was not unreasonable in its reliance on the engineering, or "building block," approach in computing quantum. We found that the random samples taken in unknown locations of unknown operators were invalid and inexact as statistical samples and were entitled to no weight. The Government's position in this appeal is not substantially justified.

With respect to ASBCA No. 41219, the Government denied liability up to, and through, the scheduled hearing dates for the appeal. The Government asserts it denied liability because appellant did not have a budget and could not demonstrate how the underordering of hours had resulted in damage to appellant. The Government has provided no evidence concerning this assertion.

We have held that the Government can be liable to a contractor where the Government fails to prepare estimates that are based upon all information available to the Government. See *Integrity Management International Inc.*, ASBCA No. 18289, 75-1 BCA ¶ 11,235 at 53,481, *citing Womack v. United States* [12 CCF ¶ 81,795], 389 F.2d 793, 182 Ct. Cl. 399 (1968); and *Machlett Laboratories, Inc.* ASBCA No. 16194, 73-1 BCA ¶ 9929. Appellant had to to labor within the disputes process before the Government ultimately paid appellant substantially all of the damages that appellant claimed. The Government has not shown that its position in this appeal was substantially justified.

Fees and Expenses

Appellant is awarded reasonable attorney's fees at the rate of $75.00 per hour. We note that this is the rate claimed by appellant. Appellant is also entitled to reasonable expenses. However, the Government objects, and rightly so, to award of the expenses of lay witnesses. This Board has consistently held that such expenses are not recoverable. *Roberts Construction Co.*, ASBCA No. 31033, 86-2 BCA ¶ 18,846; *Shipco General, Inc.*, ASBCA Nos. 29206, 29942, 87-2 BCA ¶ 19,877.

The matter is remanded to the parties for settlement in accordance with this decision. In the event the parties are not able to settle the amount of fees and expenses, to which appellant is entitled, within 60 days from the date of this decision, they shall seek reinstatement of these applications for further proceedings as the Board may direct and for Board determination of the fees and expenses due appellant.

[¶ 26,487] Southwest Marine, Inc.

ASBCA No. 39472, October 27, 1993. Contract No. N00024-85-H-8221.

Attorney Fees Under Equal Access to Justice Act—Propriety of Charges—Discovery.—A contractor could not recover its attorney fees and costs associated with the government's failure to respond to certain requests for admissions, because neither the Equal Access to Justice Act nor the board's own procedures provide for such a remedy. The contractor relied upon authority that concerned court rules and specifically permitted the recovery of costs for failure to properly reply to discovery requests. However, those rules had no application to proceedings before the board under the Contract Disputes Act, despite the Act's language to the effect that the board may grant the same relief as the U.S. Court of Federal Claims.

For the appellant: Foster, Jones & Donovan, Irvine, California, by Peter B. Jones. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Evadne Sanichas, Trial Attorney, Western Division, Naval Facilities Engineering Command, San Bruno, California.

Before DELMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

DELMAN, Administrative Judge: In *Southwest Marine, Inc.*, ASBCA No. 39472, 93-2 BCA ¶ 25,682, the Board held that appellant was entitled to an equitable adjustment under the Changes clause for the extended use of its dry dock. Thereafter, appellant filed an application for attorney's fees and other expenses allegedly incurred as a result of the Government's "failure to admit" in response to certain requests for admissions propounded during discovery. Our rules do not expressly provide for such an award. However, appellant invites our attention to Rule 37(c) of the United States Court of Fed-

Digitized by Google

eral Claims which does provide for same,[1] and it argues, based upon case law and statute, that we should adopt this remedy here. The Government opposes appellant's application. For reasons stated, we deny the application.

As for the case law cited by appellant, we believe that appellant's reliance on *Essex Electro Engineers, Inc. v. United States* [32 CCF ¶ 73,263], 757 F.2d 247 (Fed. Cir. 1985), is misplaced. In *Essex*, the court affirmed that while the United States Claims Court (predecessor to the United States Court of Federal Claims), had authority to award fees and expenses to a prevailing party under the Equal Access to Justice Act (EAJA), 28 U.S.C. § 2412(d), no such award was appropriate under the circumstances because the position of the United States was substantially justified. We fail to see any connection between the facts in *Essex* and those before us. Appellant does not seek an award under 28 U.S.C. § 2412(d); it seeks expenses for the Government's "refusal to admit" in discovery. Moreover, *Essex* did not even involve an action brought under the Contract Disputes Act, 41 U.S.C. § 601 *et seq.*, under which we take jurisdiction here; the underlying dispute in *Essex* was a protest action seeking injunctive relief of a contract award. Clearly, *Essex* does not provide any persuasive authority in support of appellant's position in this case.

Nor are we persuaded by *M.A. Mortenson Company v. United States*, 12 FPD ¶ 54 (Fed. Cir. 1993). In *Mortenson*, the court held that the United States Claims Court, under its rules, may properly impose the sanction of reasonable fees and expenses against the Government for discovery abuse, and that the Government's sovereign immunity from such a sanction was waived by 28 U.S.C. 2412(b). However, this statutory provision gives *courts* the authority to award fees and expenses.[2] An agency board of contract appeals is not a court. *E.M.I. Corporation*, ASBCA No. 30661, 85-3 BCA ¶ 18,313. See *Fidelity Construction Company v. United States* [30 CCF ¶ 70,827], 700 F.2d 1379 (Fed. Cir. 1983). See also *Blue Cross Association and Blue Shield Association*, ASBCA 25778, 89-2 BCA ¶ 21,840, at 109,900. We have held that we do not have the authority to award attorney fees as a sanction against the Government. *LTV Aerospace and Defense Company*, ASBCA No. 37571, 89-3 BCA ¶ 22,249; *Turbomach*, ASBCA No. 30799, 87-2 BCA ¶ 19,756.

Next, appellant points to the CDA, 41 U.S.C. § 607(d), in support of its position. This section provides that an agency board "is authorized to grant any relief that would be available to a litigant asserting a contract claim in the United States Court of Federal Claims." According to appellant, since this court has the power to grant fees and expenses for a refusal to admit, RCFC 37(c), this Board must also have this power pursuant to the above statutory provision.

This argument is not a new one. It was rejected in *Fidelity Construction Company, supra*. In *Fidelity*, the court held that the boards of contract appeals did not have the authority to award attorney's fees and expenses under the EAJA (prior to statutory amendments allowing for same), even though courts were given that authority under 28 U.S.C. § 2412. The court stated that the intent and purpose of 41 U.S.C. § 607(d) of the CDA was to provide boards with authority to grant relief on certain claims which previously they did not have,

[1] Rule 37(c) provides as follows:

(c) Expenses on Failure To Admit. If a party fails to admit the genuineness of any document or the truth of any matter as requested under Rule 36, and if the party requesting the admissions thereafter proves the genuineness of the document or the truth of the matter, such party may apply to the court for an order requiring the other party to pay such party the reasonable expenses incurred in making that proof, including reasonable attorneys' fees. The court shall make the order unless it finds that (1) the request was held objectionable pursuant to Rule 36(a), or (2) the admission sought was of no substantial importance, or (3) the party failing to admit had reasonable ground to believe that the party might prevail on the matter, or (4) there was other good reason for the failure to admit.

This rule corresponds to Rule 37(c) of the Federal Rules of Civil Procedure.

[2] Insofar as pertinent, 28 U.S.C. § 2412 provides:

* * *

(b) Unless expressly prohibited by statute, a *court* may award reasonable fees and expenses of attorneys, in addition to the costs which may be awarded pursuant to subsection (a), to the prevailing party in any civil action brought by or against the United States or any agency or any official of the United States acting in his or her official capacity in any court having jurisdiction of such action. The United States shall be liable for such fees and expenses to the same extent that any other party would be liable under the common law or under the terms of any statute which specifically provides for such an award. [Emphasis added]

©1994, Commerce Clearing House, Inc.

Digitized by Google

i.e., breach of contract claims. This provision had no bearing on the authority of a tribunal to grant fees and expenses against the Government, which raised issues of sovereign immunity and required express waiver.

We find the court's reasoning in *Fidelity* persuasive and equally applicable here. We also find nothing in the CDA, or in the legislative history, which reflects a Congressional intent to establish uniform procedures between court and board for handling discovery disputes, sanctions, or the management of CDA proceedings in general. The Congress did not seek to remake the boards into courts and vice-versa. Rather, it recognized that each dispute-resolution forum was unique, and justice would best be served by providing contractors with a choice of forum to hear their contract disputes:

> Justice and efficient operation of the contract disputes-resolving system can be obtained best with a flexible system that provides alternative forums for resolution of particular kinds of disputes. The claimant should be able to choose a forum according to the needs of his particular case; that is, one where the degree of due process desired can be balanced by the time and expense considered appropriate for the case. To this end, *alternate forums, each with special characteristics*, should be maintained for initial resolution of disputes above the contracting officer and informal agency review level. [Emphasis added]

(S. Rep. No. 95-1118, 95th Cong., 2d. Sess., *reprinted in* 1978 U.S. Code Cong. & Adm. News 5235 at 5247)

We believe that the "special characteristics" of each forum alluded to above relate to the respective rules of the tribunals. That the United States Court of Federal Claims and the Armed Services Board have different rules serves to promote their uniqueness, which the Congress found to be healthy and deserving of recognition and confirmation. If we were to accede to appellant's request here, we would go far to undo this healthy diversity. Contractors should appreciate that their rights and responsibilities, in some respects, are different in each forum. An evaluation of these differences, prior to appeal, should make for a more efficacious election.

In conclusion, the rules of the ASBCA do not provide for an award of attorney's fees and expenses for a party's "failure to admit." That such a provision exists under Rule 37(c) of the United States Court of Federal Claims does not compel its inclusion here.

The appellant's application is denied.

[¶ 26,488] South Georgia Cleaning Services, Inc.

ASBCA No. 38546, November 2, 1993. Contract No. F09607-87-D-7006.

Attorney Fees Under Equal Access to Justice Act—Substantial Justification—Close Question.—The government was justified in litigating an issue of whether the parties had reached accord and satisfaction, because the issue was a close question. That the contractor ultimately prevailed in the appeal did not affect the reasonableness of the government's position. The board noted that the government's belief that accord and satisfaction had been reached was based on specific facts that were open to that interpretation. The board noted further that the eventual settlement of the appeal involved only about 20 percent more than the contract modification upon which the government's litigation position rested. The contractor's claim for attorney fees and expenses was denied.

For the appellant: Smith, Currie & Hancock, Atlanta, Georgia, by Thomas E. Abernathy IV and E. Alan Arnold. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Richard C. Phillips, Trial Attorney.

Before RUBERRY, SPECTOR, and WATKINS, Administrative Judges. Separate dissenting opinion by Administrative Judge WATKINS.

RUBERRY, Administrative Judge: In our decision on the merits of this appeal (which was issued in conjunction with ASBCA No. 40972—93-2 BCA ¶ 25,800), we held that Modification P0008 to the contract did not constitute an accord and satisfaction and sustained the appeal. Following our remand, the parties have agreed on the sum of $14,349.51 for this appeal. Therefore, appellant was the prevailing party.

Substantial Justification

The criteria for determining whether the Government's position was substantially justified, and the Government's burden in this regard, are set forth in our decision of this date in ASBCA Nos. 40972 and 41219.

It is well-settled that the Government's position may be substantially justified even though an appeal was decided against it. *Zinger Construction Company, Inc.*, ASBCA No. 31858, 88-2 BCA ¶ 20,661, aff'd on reconsid., 88-3 BCA ¶ 20,978.

Here, we found that there was no meeting of the minds with respect to Modification P0008 inasmuch as the Government intended the $11,859.95 increase provided for therein to be a one-time, lump-sum settlement, whereas appellant intended to effect a unit price increase (findings 14-16 at 128,389). The increase was to compensate for unabsorbed overhead resulting from a partial termination for convenience. (*Id.*) The modification described the $11,859.95 increase as a "sum certain" (finding 18, at 128,389). However, we further found that the Government contract administrator advised appellant's project manager that he "assumed" the increased unit prices calculated by appellant would be reflected on the first delivery order, and that, on that basis, appellant's project manager signed the modification (finding 22, at 128,390).

We held that no accord and satisfaction was effected by the modification inasmuch as there was no meeting of the minds and the "sum certain" language could "encompass a one-time, lump-sum payment as well as payment by increased unit prices." (at 128,390) We did not decide "whether a one-time, lump-sum payment or the unit price increases spread over successive years is the proper form of payment for the termination of the golf course maintenance work." (*Id.*)

Our decision involved an extremely close question. There is no evidence that the Government contract administrator said anything abou exceeding the $11,859.95 amount, and the $11,859.95 figure certainly was a specific amount more consistent with a lump-sum agreement than a unit price increase over a uncertain period of time. We hold that the Government's belief that there had been an agreement on a total amount of $11,859.95 was reasonable under the formulation adopted in *Pierce v. Underwood*, 487 U.S. 522, 565 (1988).

We also note that the $14,349.51 settlement agreed to by the parties on remand apparently does not encompass the full four-year option period—through September 1991 (finding 2 at 128,387)—and is only about 20 per cent more than the amount provided by Modification P0008.

We conclude that the Government's position was substantially justified. Accordingly, appellant's application is denied.

DISSENTING OPINION BY ADMINISTRATIVE JUDGE WATKINS

I dissent.

With respect to ASBCA No. 38546, we held a modification to the contract invalid since there was no meeting of the minds. Mr. Pike, appellant's project manager, testified that the Government's contract administrator, Mr. Kirby, "assured me over and over as we received our delivery order that it would reflect the cost we had previously agreed upon ..." (tr. 34). Mr. Kirby did not deny Mr. Pike's testimony; accordingly, I find that Mr. Kirby did assure Mr. Pike that the delivery order would reflect the agreed-on cost. Mr. Pike asked the secretary to prepare a breakdown from the negotiations to prove back the totals of the two modifications that were to be signed (tr. 34, 50). It was the normal practice not to have the unit prices attached to the modifications that exercised the options (tr. 88). There would be a lump-sum modification and unit prices would be shown on subsequent delivery orders.

I find that Mr. Pike signed the modification relying on these assurances. It was not reasonable of the Government to renege on the contract administrator's assurance. The Government does not deny that the contract administrator was authorized to give such assurance. The Government settled this claim by awarding appellant approximately 21 per cent more than the original amount shown in the modification which was set aside by the Board. Appellant was compelled to litigate to recover this sum.

I find that the Government's position in this appeal is not substantially justified.

ASBCA No. 32169, October 28, 1993. Contract No. N00406-84-C-2236.

Procedure, Boards—Reconsideration—Accuracy of Findings.—A government motion for reconsideration on the ground that the board's findings of fact did not support the board's conclusions was denied because, upon review, the board could find no reason to disturb its decision. The government's assertions on reconsideration were contradicted by the evidence in the record.

For the appellant: Dickstein, Shapiro & Morin, Washington, D.C., by David M. Nadler. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Douglas P. Hinds, Associate Chief Attorney, Litigation Office, Western Division Trial Team, San Bruno, California.

Before REITER, RUBERRY, and SPECTOR, Administrative Judges.

REITER, Administrative Judge: The Government in its motion to reconsider our 4 June 1993 decision argues that the facts as we have found them, do not support our conclusion that: (1) the Government had "superior knowledge" which it failed to share with appellant; and, (2) the Government's control over the previous contractor was so lax that facilities which appellant took over under the follow on contract had been degraded in violation of the Government's duty to cooperate with offerors.

We have reviewed the Government's ample motion, the appellant's response and our own findings of fact and conclusions of law but find no reason to disturb our previous decision in this matter.

The Government's failure to share its up-to-date financial information, which only it and the one other bidder possessed, fits squarely into the category of superior knowledge as defined by the courts and the Boards. It must be remembered that this financial data was critical to the bidding process and that the appellant's requests were repeated, oral and in writing. Most poignant is the appellant's understated call for help when it wrote "... we are uncomfortable with this task which requires all but the incumbent [contractor] to place a speculative monetary cushion in the proposal."

The Government's argument that the incumbent contractor's performance was satisfactory flies into the face of such unbiased reports as the one from Naval Hospital Branch Clinic which advised that there existed on the part of the incumbent contractor a "complacent attitude toward sanitation where a real urgency exists." Further the measuring stick which the Government sets forth in its motion for determining what is satisfactory performance is foreign to the integrated contract which spells out with precision the standard for food service sanitation and the care of Government-furnished property. (See findings of fact 35, 36)

In light of the above, our prior decision is reconsidered and affirmed.

[¶ 26,490] Dutra Construction Co., Inc.

ENG BCA Nos. 5939, 6045, November 12, 1993. Contract No. DACW07-90-C-0017.

Payments—Measurement for Payment—Dredging.—A dredging contractor's claim that the government's method of measuring for payment was inaccurate did not entitle the contractor to additional payment, because the contractor offered no credible evidence that the government's method adversely affected the contractor. Payment was measured by conducting hydrographic surveys before and after the dredging operation to determine the amount of material removed. The contractor's expert witness criticized the methodology used by the government, stating that it could result in an inaccurate measurement but offering no evidence that such inaccuracy had actually occurred. Moreover, the contractor's suggested alternate method of counting the number of scows loaded during the operation gave no indication of whether the material removed came from the "pay prism," the area and depth delineated by the contract for dredging. Only material removed from the pay prism was to be measured for payment.

For the appellant: Kelly, Cox, Wootton, Welch, Gill & Sherburne, San Francisco, California, by Timothy M. Gill. For the government: Frank Carr, Chief Trial Attorney, Washington, D.C., and James D. Stout, Government Trial Attorney, San Francisco, California.

Before PEACOCK, SOLIBAKKE, and SHERIDAN, Administrative Judges.

PEACOCK, Administrative Judge: These appeals involve a claim by Dutra Construction Co., Inc. (Dutra or Appellant) in the amount of $452,231 under the referenced contract for the maintenance dredging of the Suisun Bay Channel and New York Slough, in Solano and Contra Costa Counties, California. Dutra contends that 319,200 cubic yards of material were taken from the pay prism. The Government contends that only 91,395 cubic yards of material were removed from the pay prism, with the remainder resulting from excessive dredging. At the hearing in ENG BCA No. 5939 on October 20-23, 1992, problems pertaining to the scope and certification of the claim were discussed. As a result of those discussions, Appellant filed a certified claim for an overrun with the contracting officer.[1] The Contracting Officer denied the claim by final decision dated December 15, 1992. Appellant timely appealed that decision and the appeal was docketed as ENG BCA No. 6045. In its Notice of Appeal, dated February 23, 1993, Appellant moved "that the record made in ... ENG BCA No. 5939 [including all pleadings, documentary evidence admitted and hearing testimony] be incorporated" into ENG BCA No. 6045. The Government joined in this motion and both parties have requested that ENG BCA No. 6045 be decided on the record made in ENG BCA No. 5939. As a consequence of these motions, and the Board's granting thereof, ENG BCA No. 5939 has been rendered moot and will be dismissed. We proceed to decide ENG BCA No. 6045.

FINDINGS OF FACT

1. On July 31, 1990, the U.S. Army Corps of Engineers (hereinafter referred to as the Government or "Corps") awarded Dutra Construction Co, Inc. ("Dutra") the referenced contract to perform maintenance dredging in Suisun Bay and New York Slough, Solano and Contra Costa Counties, California. (Ex. 7). The channel areas were to be dredged to a depth of −35 feet with allowable overdepth payable to a depth of −36 feet. In addition to a lump-sum item for mobilization/demobilization, the contract provided for payment of $1.60 per cubic yard of material removed from the pay prism. (Ex. 6). The Corps estimated, based upon its pre-dredge survey of the area, that 85,000 cubic yards were to be removed from the required dredging prism, with an additional estimated 40,000 cubic yards of payable overdepth.

2. The "Division 2-site work" portion of the technical provisions included the following pertinent clauses:

> 7. OVERDEPTH AND EXCESSIVE DREDGING.
>
> 7.1 *Overdepth.* The two (2) foot overdepth shown on the drawings is being allowed only to assure removal of a sufficient amount of material to reach project depth(s) and width(s). One (1) foot of the overdepth is included in the maximum payline as shown on the drawings. No overdepth dredging will be allowed where dredging to achieve required project depth is not performed and no overdepth will be allowed under side slopes.
>
> 7.2 *Excessive Dredging.* Payment will not be made for material taken from beyond the maximum payline.
>
> * * *
>
> 9. PREDREDGE AND FINAL SURVEYS.
>
> The Government will perform the predredge survey. For the postdredge survey, the Contractor shall notify the Contracting Officer at least 72 hours prior to completion of the entire work or any section thereof (up to 4 acceptance sections as approved by the Contracting Officer) and the Government will perform the final survey no later than 14 days after completion of the work at no cost to the Contractor. The Contractor or his authorized representative will be notified when soundings and/or sweepings are to be made, and will be permitted to accompany the survey party. All area found to be in compliance with the contract require-

[1] The Appellant also included an alternative contention, contingent on the Board ultimately finding that only 91,395 cy were removed from the pay prism, that an equitable adjustment would then be due for an underrun below 85% of the estimated quantity. Although the Appellant estimated that adjustment as $59,000, the total additional payment at the contract unit price would have been only $23,768 even if the full 85% had been removed. In any event, the alternative contention is not before the Board in this appeal.

Digitized by Google

ments will be accepted finally and be measured for payment as stated in Paragraph "MEASUREMENT AND PAYMENT", subparagraph "Measurement" hereinafter.

* * *

10. MEASUREMENT AND PAYMENT.

* * *

10.2 *Dredging.*

10.2.1 *Measurement for Payment.* The total amount of material removed and disposed of will be measured by the cubic-yard, by computing the volume between the bottom surface shown by soundings of the survey taken before dredging and the bottom surface shown by soundings of the final survey, and shall include excavation performed within the one (1) foot payable overdepth within the maximum payline as shown on the drawings. No payment will be made for materials removed below the maximum payline shown on the drawings.

10.2.2 The contract drawings represent conditions existing on the date of the survey shown on the drawings and are for information purposes only. Soundings taken from the predredging survey performed by the Government after award of contract and prior to commencement of dredging will be used in determining quantity of material removed for payment. Determination of quantities removed and the deductions made therefrom to determine quantities by in-place measurement to paid in the area specified, after having once been made, will not be reopened, except on evidence of collusion, fraud or obvious error.

3. Section 01330 "HYDROGRAPHIC SURVEYS" of the technical provisions stated in pertinent part:

1. GENERAL.

The Government will perform the pre- and post-dredge surveys for payment. The Contractor shall perform interim surveys for progress payments and quality control surveys. The Contractor shall make computations to determine the quantities of material removed during interim periods for which progress payments are to be made.

* * *

2.11 *Daily Quality Control Surveys.* For every day of dredging, the Contractor shall perform surveys in the dredging area and/or behind the dredge. These surveys shall verify that all contract channel dimensions are being obtained as specified. Field records for these surveys shall consist of a hard copy "x", "y" or "z" position plot. The plot shall have left and right edge of channel, centerline, time date, tide, tide correction and project control line stationing for each line surveyed. This record shall be included with the daily quality control report for submission to and review by the Contracting Officer.

* *

3. *PAYMENT.*

No separate payment will be made for the work performed under this section. Payment for performing the progress payment surveys and daily quality control surveys, including furnishing data, quantity computations and drawings, will be included in the contract unit price for "Dredging and Disposal".

4. The predredge survey was performed during the period of 28 June through 6 July 1990. It reflected payable quantities of available material as follows (Exh. A-9):

	C.Y. in Standard Depth	*C.Y. in Over Depth*	*Totals*
SUISUN BAY CHANNEL.....	47,056	28,427	75,483
NEW YORK SLOUGH.....	27,754	13,008	40,762
TOTALS	74,810	41,435	116,245

5. A preconstruction conference was held on August 2, 1990, and the Notice to Proceed was issued on August 10, 1990. (R.4, Tabs 9, 10).

6. Dutra began dredging operations in the Suisun Bay Channel on August 16, 1990, using the dredge *Paula Lee.* The *Paula Lee* was joined by the dredge *Super Scoop* on August 29, 1990. On September 13, 1990, the *Paula Lee* moved and commenced dredging in the New York Slough. The *Super Scoop* remained in the Suisun Bay Channel, and both dredges completed dredging on September 21, 1990.

7. Dutra did not perform any of the daily, required hydrographic surveys for quality control. Mr. Thomas McDonnell, the Government's inspector, "constantly" reminded the contractor that he needed hydrographic surveys to establish that the dredge was digging in the proper place and at the proper depth. Mr. McDonnell was promised surveys by Dutra but none was ever provided. (Tr. 684, 700-701).

8. No "out of position" dredging or excessive overdepth dredging (referred to herein collectively as excessive dredging) was observed by the Government or Dutra dredg-

Digitized by Google

ing personnel during performance. Mr. McDonnell visited the dredges four times during performance. Blaine Delvaux, another Corps inspector, also visited the dredges on a less frequent basis.

9. Dutra regularly checked the depth of its dredging using "lead line" measurements. Only an incomplete record of Appellant's measurements was available and placed in evidence. The remaining "lead line" data were lost by Appellant. The available records establish a consistent pattern of excessive overdepth dredging and an average dredging depth greater than -37 feet for the areas measured, as adjusted for tides. (Exh. G-11). Appellant also dredged an additional 20 feet outside the contract area. (Tr. 283; R.4, Tab 17).

10. Dutra measured the volume of material removed during dredging by the number of scows or barges it filled. Pursuant to these calculations (or "slow counts"), it ultimately determined that it had dredged a bulk quantity of 399,000 cubic yards. Using an 80% "rule of thumb" for a "swell factor" it claims that a pay quantity of 319,200 *in situ* cubic yards (399,000 × .8) of material were dredged. The "scow count" method of determining pay quantities does not consider the source of the materials measured or whether the material was from within the pay prism.

11. During performance of a contract awarded by the Corps Portland District at Coos Bay, Oregon, the Corps and Dutra agreed that the hydrographic surveys taken on that job were inaccurate, and that Dutra should be paid 80% of the scow quantities. (Tr. 208, 242). The contract is not in the record. There are no further details, *inter alia*, as to the nature of the survey errors. There is no evidence that Appellant relied on using "scow counts" in bidding the contract in dispute. The final pay estimate for the Coos Bay contract, dated March 6, 1992, indicates a 24% overrun of pay quantities over estimated quantities. (Exh. G-49).

12. The post-dredge survey was conducted by the Corps during the period of September 6, through September 26, 1990. The same personnel and equipment were used for the post-dredge survey as had been used for the pre-dredge survey. The post-dredge survey was conducted with survey lines at 100-foot intervals and it reflected removal of pay quantity materials as follows:

SUISUN BAY CHANNEL	70,255 cubic yards
NEW YORK SLOUGH	20,154 cubic yards
TOTAL	90,409 cubic yards

13. The Government's pre-dredge survey was performed using 200 foot intervals between survey lines. Hydrographic surveys using intervals of 100 feet between survey lines are more accurate, provide greater confidence in their results, and are preferable to surveys using wider 200-foot intervals. Internal corps guidance now prescribes 100-foot intervals between lines for pay surveys. This internal guidance was in the draft stage at the time the pre-dredge survey was conducted in connection with this contract. However, 200-foot interval surveys are sufficiently accurate for pay purposes, particularly where the channel is regularly dredged. Such surveys are also accurate and preferable to the "scow count" method of computing pay quantities. (Tr. 585, 588-9, 743-45, 808-815, 912-13, 915-16). There is no specific or comprehensive evidence that the use of 200-foot intervals for pay purposes resulted in a material understatement of the actual pay quantities in this case.

14. After performing the post-dredge survey, the Corps calculated the quantity of material for which Dutra should be paid. That calculation was done by comparing the pre- and post-dredge survey condition at 200 foot intervals, since the pre-dredge survey was done on 200 foot intervals. The Corps calculated that Dutra should be paid for 91,395 cubic yards of material. Appellant did not accompany the Government survey party or request that the survey be reaccomplished.

15. The post-dredge survey also disclosed extensive overdredging outside the pay prism.

16. Both parties presented expert testimony concerning hydrographic surveying. Mr. John Langan testified as an expert for Appellant. Mr. Langan, among other things, identified what he referred to as "scalloping" on the post-dredge survey plan plot where one of the two types of Corps' surveying equipment had been used. He attributed the cause to a delay in the computer's matching of "x", "y" data with "z" data—that is matching location with depth readings. And he described the result as a shifting of the plotted position of depth readings from the appropriate position—with the direction of shift being alternately one direction across the channel on one survey line and the opposite direction on the adjacent survey line. He also expressed the opinion that there was a problem in determining the quantity of material removed from the area of survey lines 153 through 181 because of scalloping. In the area defined by survey

©1994, Commerce Clearing House, Inc.

Digitized by Google

lines 153 through 181, the resulting apparent shift in plotted position was toward the north side of the channel on lines ending with ".00" and toward the south side of the channel on lines ending with ".50". (Exhibit G-15; Tr. 456-488). Mr. Langan also identified, more generally, other surveying problems. He did not, however, quantify the comprehensive effect (up and/or down) on quantity computations of the various problems he identified with the surveys in this case. Appellant offered no detailed analysis by survey interval as to how any surveying error increased or decreased the *pay quantities* dredged by Appellant. Although Mr. Langan considered that Dutra's laser positioning system provided adequate horizontal control for controlling dredging on the sides of the channel, he was unable adequately to explain or rebut the survey evidence that substantial overdepth dredging occurred below the pay limits (−36 feet) in areas clearly within the channel. There is no probative and specific evidence impeaching the accuracy of the vast majority of the survey lines showing substantial excessive dredging, in particular the accuracy of the survey lines showing dredging below −36 feet. We cannot determine the adverse cumulative effect, if any, that any survey errors had on the ultimate question of the number of cubic yards for which Appellant is entitled to be paid under the contract.

17. Mr. Max Blodgett, the Corps' Resident Engineer, testified as an expert for the Government. Although agreeing with Mr. Langan that there were some errors in the surveys, Mr. Blodgett considered and we find that they were generally minor and isolated and they tended to have an offsetting or negligible effect insofar as calculating the pay quantities in this case. Problems with surveys do not necessarily reduce the pay quantities dredged; the problems instead may produce an increase in the pay quantity. Mr. Blodgett emphasized that there is a small amount of scalloping and/or other minor errors in virtually any hydrographic survey and that, at most, any conceivable survey errors in this case would have had a *de minimis* effect on the calculation of pay quantities. (Tr. 779-80, 785-86, 796-803, 914-915). The Board found Mr. Blodgett's testimony to be highly credible.

18. Based on our review of the Government surveys and the related evidence and testimony, including the highly credible testimony of Mr. Blodgett, we consider that the surveys are adequate for determining the pay quantity dredged and provide the best evidence of that quantity.

19. Appellant vigorously objected to the receipt into evidence of Exhibit G-16, an historical record of certain facts relating to prior contracts for the dredging of the Suisun Bay Channel (including the New York Slough). Those records are subject to several varying and conflicting interpretations. In view of our decision, it has been unnecessary to address the historical dredging records of the channel and they have not been considered in reaching our conclusions in this appeal.

DECISION

Appellant has presented its claim under the "Variation in Estimated Quantity" clause. The issues under the "Variation" clause ordinarily pertain to the propriety and/or amount of any adjustment of the price of the portion of the overrun or underrun quantities that are subject to adjustment. Here, however, whether the overrun quantities dredged were pay quantities is in dispute. Fundamentally, to recover in this case, whether at the contract unit price or an adjusted unit price pursuant to the "Variation" clause, Appellant must first prove that the materials dredged came from within the pay prism established in the contract.

Appellant's proof fits within two primary evidentiary themes. First, it contends that its dredging personnel were highly qualified and that they observed no excessive dredging during performance. Second, it emphasizes that these were problems with the surveys both pre- and post-dredge. Therefore, it follows, according to Appellant, that the channel areas and depths to be dredged must not have been as represented in the pre-dredge survey and the "scow count" measurements of dredged materials provide the best evidence of the pay quantities.

We begin our analysis of Dutra's contentions with the contract. The contract specified that pay quantities would be determined by comparison of the Government's pre- and post-dredge surveys. The final surveys indicate that substantial excessive dredging occurred. The contract also required that Appellant perform daily quality control surveys of the areas dredged. It failed to do so.

The paramount cause of Appellant's plight in this appeal is that it failed to comply with the contractual quality control survey requirements. Despite repeated requests by

Digitized by Google

the Government and promises of compliance by Appellant, these interim surveys were not conducted nor submitted to the Corps. During performance, Dutra failed to resolve what to it must have been incredible variances between the pre-dredge survey and actual condition of the areas being dredged. These failures prevented the Government from timely checking the accuracy of its pre-dredge survey when the nature and source of any problem could have been identified and resolved.

Appellant also did not ask to accompany the final survey party. Nor did it request that the final survey be reaccomplished as was its right under the contract. If it had availed itself of these contractual rights, Appellant either could have assured itself that the final survey/resurvey was accomplished to its satisfaction or provided probative, contemporaneous evidence of any improprieties. The evidence of record offered by Appellant is neither qualitatively nor quantatively sufficient to sustain its burden of proof that actual quantities dredged greatly exceeded quantities calculated from comparison of the pre- and post-dredge surveys by the Government.

Appellant primarily offers an academic critique of perceived problems with the surveys in this case. As the Government's highly credible expert Mr. Blodgett pointed out, many of these problems do not necessarily have a material or an adverse effect on Appellant. They may cancel each other over the course of an entire survey and/or accrue to Appellant's benefit, *i.e.*, result in a higher pay quantity than if the errors had not been present. Simply pointing out general problems with a particular survey (or portions thereof) does not lead to the conclusion that the conditions were materially different from indicated. Nor does it justify throwing out the survey. This is particularly true when the surveys were not timely and contemporaneously rebutted by Appellant's own surveys. It is even more imperative when the alternative suggested here by Appellant, *i.e.*, the use of "scow counts," is far more problematic. Moreover, notwithstanding the expertise of Dutra's dredging personnel, there is contemporaneous, objective, non-survey evidence that substantial excessive dredging occurred. Among other things, the limited lead line data available indicates that the areas sounded were dredged to a depth in excess of one foot below the pay prism.

Dutra has made no comprehensive attempt to quantify the significance of the alleged problems with the pre-dredge survey other than to suggest that its "scow counts" are an accurate, composite reflection of these problems. Because of the general and unquantified nature of the evidence offered, it is unnecessary to detail more precisely the results of the Government's pre- and post-dredge surveys or point out the areas of excessive dredging. We consider that Dutra's case on the adequacy of the Government's surveys simply is not persuasive without offering its own detailed analysis of the cumulative and prejudicial effect of the alleged errors and/or the contractor's own contemporaneous survey evidence of the conditions encountered. The best evidence in this record of the actual pay quantities dredged is the Government surveys, occasional warts and all.

We conclude that Appellant has failed to prove any basis for discarding the contractually-specified basis for determining pay quantities, *i.e.* the government surveys. Accordingly, we further conclude that Appellant is entitled to payment for 91,395 cubic yards as determined by the Contracting Officer. The appeal docketed as ENG BCA 6045 is DENIED.[2] ENG BCA 5939 is DISMISSED.

[¶ 26,491] Hemphill Contracting Company, Inc.

ENG BCA Nos. 5698, 5776, 5840, November 12, 1993. Contract No. DACW43-88-C-0017.

Acceleration Claims—Government Pressure—Actual Acceleration.—Although a tree clearing contractor was entitled to the costs incurred in connection with a government-ordered change in the debris disposal method from open-air burning to air-

[2] The denial of this appeal does not prevent the pursuit of Dutra's alternative contention to the Contracting Officer for an equitable adjustment under the "Variation" clause on the basis of an underrun. That contention was contingent on the ultimate denial of the present appeal. See footnote 2, *supra*.

©1994, Commerce Clearing House, Inc.

Digitized by Google

curtain burning, it was not entitled to acceleration costs, because the record did not show that acceleration resulted from government action. The contractor contended that a 21-day suspension of burning work during a no-burn period without any time extension constituted an excusable delay that forced the contractor to accelerate its subsequent burning efforts to complete the project on time. However, the record did not show that the contractor enlarged its labor force, worked overtime, or performed weekend and holiday work in connection with the delayed burning. Although the contractor alleged that it brought rental equipment on site to speed up performance, the record showed that much of the work could have been accomplished with contractor-owned equipment. Moreover, the contractor did not show that its labor and equipment usage exceeded its original plan.

Performance—Directions by Government—Methods of Performance.—A tree burning contractor was entitled to recover the extra costs incurred in connection with the government-ordered change in the disposal method from open-air burning to air-curtain burning, as required by the state's air pollution law, despite the government's contention that the Permits and Responsibilities clause already required the contractor to comply with applicable state laws, because the contractor priced the contract in accordance with the government negotiator's suggestion to use open-air burning. The government's alteration of the performance method resulted in a compensable contract change.

Site Conditions—Notice——Lack of Timely Notice.—Under a tree clearing contract, a contractor was not entitled to an equitable adjustment for an alleged differing site condition, despite its contention that the acreage and mix of clearing work differed materially from the government's estimates, because it failed to provide notice of the alleged discrepancy between the estimated or indicated site conditions and the actual conditions until after the condition was removed. By providing notice months after contract completion, at which time the site was reduced to ashes, the contractor deprived the government of an opportunity to correct its estimates. Moreover, the differing site conditions argument failed not only from the lack of evidence of the alleged material difference but also from the inability to detect the alleged variation through a reasonably thorough site inspection.

Site Conditions—Contract Indications, Category I—Materiality of Difference.—A tree clearing contractor was not entitled to compensation for a differing site condition, because it failed to show that the conditions encountered differed materially from those indicated in the contract and that the conditions could not have been anticipated by a site investigation. The contractor's failure to preserve the site precluded any determination of the acreage and mix of debris actually encountered by the contractor.

Interpretation of Contracts—Parol Evidence—Integrated Agreement.—Under a tree clearing contractor's claim for an equitable adjustment for additional snag removal work, the parol evidence rule did not bar the use of information conveyed to the contractor during the preaward negotiation phase concerning the number of snags requiring removal, because the prior and contemporaneous oral and written agreements were offered to explain or supplement the contract terms or to evince consistent additional terms, rather than to establish matters that contradicted the terms of an integrated agreement. The contract did not indicate the number of snags to be removed. Thus, the information contained in the government's preaward estimate did not alter a term of the contract, and the estimate served to demonstrate what the parties expected to encounter.

Mistakes—Relief After Award—Reformation.—Reformation of a tree removal contract to reflect the parties' intended agreement was proper because the parties entered into the contract under a mutual mistake of fact with regard to the quantity of snags that had to be removed from the project. The parties had believed that the contract's requirement to remove all snags would require the removal of about 1,100 snags, but in fact over 3,300 snags had to be removed from the site. The parties would have altered their agreement if they had known the correct information at the time of contract formation. The contractor did not assume the risk of an overrun of snags, and it would have been unjust to place the burden of an overrun on the contractor under the contract, which did not provide for relief for a variation in estimated quantities.

Digitized by Google

Pricing of Adjustments—Jury Verdict Technique—Lack of Precise Evidence.—A tree clearing contractor was not entitled to additional recovery under the jury verdict method for a change to an air-curtain burning disposal method, because the claim, which was prepared by a claims consultant who was retained after contract completion and was not present at the work site, was based on unverifiable assumptions and contained numerous mathematical errors. The contractor failed to show that it was entitled to an adjustment in addition to that already granted by the contracting officer. Moreover, the record did not provide any persuasive evidence in support of a departure from the contracting officer's original allowance regarding the contractor's claim for additional snag removal costs.

For the appellant: Edward L. Welch, Edwardsville, Illinois. For the government: Frank Carr, Chief Trial Attorney, Washington, D.C., Rozann M. Heininger and William P. Levins, Government Trial Attorneys, St. Louis, Missouri.

Before KETCHEN, SOLIBAKKE, and SHERIDAN, Administrative Judges.

KETCHEN, Administrative Judge: In these timely appeals, Hemphill Contracting Company, Inc. (Hemphill or Appellant) seeks additional compensation in a total amount of $507,332 for increased costs on a clearing contract attendant to the change in disposal method (ENG BCA No. 5698) and for a differing site condition (ENG BCA No. 5776). In ENG BCA No. 5840, Respondent seeks a refund in the amount of $152,000, representing an overpayment on a unilateral modification. A hearing was held and the parties have filed briefs. Both entitlement and quantum are before the Board for decision. The Contract Disputes Act of 1978, 41 U.S.C. § § 601, *et seq.*, applies.

PRELIMINARY MATTERS

The Board's opinion will be presented in two phases. "Phase I" will focus on issues surrounding Appellant's entitlement to an equitable adjustment under ENG BCA Nos. 5698 and 5776. "Phase II" of this opinion will address quantum issues arising under these two appeals, as well as the Government's refund claim in ENG BCA No. 5840.

FINDINGS OF FACT: PHASE I

Pre-Award Activities

1. Solicitation No. DACW43-87-R-0045 was issued by the St. Louis District, U.S. Army Corps of Engineers, on March 16, 1987. The solicitation, for a contract negotiated pursuant to Section 8(a) of the Small Business Act, 15 U.S.C. § 637(a), called for the clearing and removal of all trees and brush from Ellis Island on the Missouri side of Lock and Dam No. 26 (Replacement) on the Mississippi River in St. Charles County, Missouri. Removal of timber and debris was necessary because Ellis Island would be inundated once Lock and Dam No. 26 was operational, and the timber and debris could pose a navigational threat in the resulting reservoir. Work was to be completed within 180 days of receipt of Notice to Proceed. (R.4, ENG BCA No. 5698, Tab AA; Exh. G-1; Tr. 40-41, 721-29, 993-94, 1000).

2. In addition to the "Changes (1984 APR)," "Differing Site Conditions (1984 APR)," "Site Investigation and Conditions Affecting the Work (1984 APR)," and other general provisions customarily included in solicitations for Corps of Engineers clearing contracts, the solicitation contained the following provisions germane to this appeal:

SPECIAL CLAUSES

SC-34. EQUIPMENT OWNERSHIP AND OPERATING EXPENSE SCHEDULE (1985 JAN)

(a) Allowable cost for construction and marine plant and equipment in sound workable condition owned or controlled and furnished by a Contractor or Subcontractor at any tier shall be based on actual cost data when the Government can determine both ownership and operating costs for each piece of equipment or equipment groups of similar serial and series from the Contractor's accounting records. When both ownership and operating costs cannot be determined from the Contractor's accounting records, equipment costs shall be based upon the applicable provisions of EP 1110-1-8, "Construction Equipment Ownership and Operating Expense Schedule Region V." *Working conditions shall be considered to be average for determining equipment rates using the schedule unless specified otherwise by the Contracting Officer....*

(b) Equipment rental costs are allowable, subject to the provisions of FAR 31.105(d)(ii) and FAR 31.205-36 substantiated by certified copies of paid invoices. Rates for equipment rented from an or-

©1994, Commerce Clearing House, Inc.
Digitized by Google

ganization under common control, lease-purchase or sale-leaseback arrangements will be determined using the schedule except that rental costs [sic—of equipment?] leased from an organization under common control that has an established practice of leasing the same or similar equipment to unaffiliated lessees are allowable. Costs for major repairs and overhaul are unallowable.

* * *

SC-36. ORDER AND COORDINATION OF WORK. The Contractor may start and complete the work in such order and sequence as he may desire.

a. The Contractor's first order of work shall be to clear all items required under this contract located in the area shown on the drawings in the vicinity of the existing disposal area on Ellis Island. All work in this area must be completed 60 days after Notice to Proceed....

* * *

TECHNICAL PROVISIONS

SECTION 2B—CLEARING

1. SCOPE. The work covered by this section consists of furnishing all plant, labor, equipment, and materials, and performing all operations necessary for the clearing of the areas specified herein or indicated on the drawings, and for the removal and disposal of all cleared materials.

* * *

3. CLEARING.

3.1 *General.* Clearing, unless otherwise specified, shall consist of the complete removal of all trees, stumps, down timber, snags, and brush from within the boundaries shown on the drawings including the complete cleanup of the area by the removal and disposal of all debris and rubbish resulting from clearing operations....

* * *

3.5 *Areas to be Cleared.* The timber limits shown on the drawings are approximate and may vary somewhat and there may be areas of timber and brush and scattered single trees that are not shown on the drawings. Any timber within the area to be cleared that is not shown on the drawings shall be cleared as specified.... Notwithstanding any difference between the drawings and the present condition at the work site, the Contractor will be required to clear all timber encountered within the overall limits shown on the drawings and as specified hereinafter.

4. DISPOSAL OF MATERIAL

4.1 *General.* The material cleared from the areas shall be completely removed by transporting from the area or disposed of by chipping or burning within the cleared areas....

4.2 *Burning.* The Contractor shall comply with all applicable State and local air pollution restrictions. Subject to such restrictions and obtaining any permit which may be required by said State, the Contractor may burn material within the contract area, and at any time within the contract period, provided such burning does not cause the above standards to be exceeded or does not interfere with inhabitants of the area by drastic changes in their accustomed environment, such as addition to air pollution or danger of fire. However, the specific time, location, and manner of burning shall be subject to the approval of the Contracting Officer from the view points of air pollution, governing fire laws and safety.... All burning shall be so thorough that the materials will be reduced to ashes, except that occasional charred pieces of logs or branches not exceeding 4 inches in diameter and 8 feet in length will be permitted to remain if covered with earth as hereinafter specified.

5. *Payment.* Payment for clearing and grubbing will be made at the contract sum job price for "Clearing and Grubbing," which price and payment shall constitute full compensation for providing all plant, labor, material, and equipment and performing all operations necessary to complete the work specified herein and shown on the drawings.

(Emphasis supplied). (R.4, ENG BCA No. 5698, Tab AA).

3. The drawings accompanying the solicitation generally delineated the clearing limits, but did not state the exact acreage to be cleared, and did not identify the level of effort in the areas to be cleared, in terms of "heavy," "medium," "light" or "brush hog" clearing. (Exh. G-1; Tr. 691, 734).

4. The terms "heavy," "medium," "light," and "brush hog" clearing are not defined in the contract. In addition, guide specifications prepared by the Corps of Engineers for clearing and grubbing also do not create parameters for the specific clearing categories. These terms commonly are used in the debris-clearing industry to denote the relative difficulty of the work. Depending on the classification, *e.g.*, heavy versus medium, a higher degree of clearing difficulty generally

Digitized by Google

will require a correspondingly higher investment in terms of labor, equipment and time in order to clear an area of vegetation. The determination as to whether an area will require heavy, medium or light clearing depends on the density, size and diameter of trees, terrain, the type of equipment that will be required, and such other factors as may affect the work. Such determinations are subjective in nature. (R.4, ENG BCA Nos. 5776 & 5840, Tabs S, T, U; Exhs. G-24, G-29).

5. The initial Government contract estimate was prepared by Mr. Chuck Rhoads on June 17, 1987. Mr. Rhoads, an estimator in the St. Louis District's Cost Engineering Branch, had previously visited the job site and determined that the clearing area included approximately 12 acres of heavy clearing, 84 acres of medium clearing, 64 acres of light clearing and 60 acres of brush hog clearing. He estimated that the work would cost $217,000. (R.4, ENG BCA Nos. 5776 & 5840, Tab G; Tr. 840, 847).

6. Following preparation of the Government estimate, Mr. Lenard Ross, a civil engineer in the Contract Administration Branch responsible for coordinating 8(a) contracts, commenced negotiations with Appellant on August 3, 1987. In his "Negotiation Report," Mr. Ross indicated that Hemphill's original proposal was $998,999.33, and:

> It became immediately obvious at the start of negotiations that there was no mutual understanding of the contract scope of work. The meeting was devoted to going over the Government's breakdown of the total clearing area into heavy, medium, light and brush hog areas. The contractor had not made any attempt to breakdown the total area. The contractor requested a meeting in the field to inspect the work area.

(R.4, ENG BCA Nos. 5776 & 5840, Tab J).

7. Shortly thereafter, representatives of the Corps and Hemphill conducted a site visit so that Appellant could become familiar with the work site. During the visit, the parties discussed generally the number of acres and types of trees that were to be cleared. Appellant's representatives (including its President) made only a cursory investigation of the site and did not determine independently the size and types of trees that were to be cleared. Mr. Dennis Foss, the Park Manager for the Corps' Mark Twain Lake Project and Mr. Jimmy Bissell, the Contracting Officer's Representative (COR), opined that since the classification method for materials in a removal contract is subject to a considerable degree of discretion and numerous topographical variables, a prudent contractor should inspect the site before bidding and make his own evaluation of the types and concentration of materials to be removed. (Tr. 895, 1046-47; Exh. G-29). The parties did discover, however, that the Government's estimate made no provision for the removal of snags that were located in watery areas at the site. A snag is a tree or branch embedded in a lake or stream bed that constitutes a hazard to navigation. Thereafter, the Corps issued an amendment to the solicitation adding a provision for snag removal. (R.4, ENG BCA Nos. 5776 & 5840, Tab J; Tr. 588-89, 693-95, 982-83; Exh. G-35).

8. Mr. Rhoads made a second visit to the site and performed new acreage calculations in order to prepare an updated contract estimate. His revision yielded the following "mix": 12 acres of heavy clearing, 84 acres of medium clearing, 99 acres of light clearing, and 129 acres of brush hog clearing. He also determined that 1,100 snags required removal. The estimate was based on his physical observation of the site, terrain features, and the size and density of the trees. He also consulted commercial literature to ascertain the types of equipment and sizes of work crews that would be necessary to perform the clearing work. The Government's revised contract estimate, in the amount of $315,000, was prepared on October 6, 1987. (R.4, ENG BCA Nos. 5776 & 5840, Tab H; Tr. 849-52).

9. On October 13, 1987, Mr. Ross spoke with Appellant's Construction Coordinator, Mr. Bernard Simington. He discussed the Corps "mix," in terms of "heavy," "medium," "light," and "brush hog" work, and provided the Corps acreage figures from the revised contract estimate. At that time, Mr. Simington referred to the provision in the specifications directing the contractor to comply with local environmental requirements, and asked Mr. Ross whether Hemphill should burn the debris in the open—"open air burning" or in a pit with air injection—"air curtain burning." Mr. Ross replied that Hemphill should plan on open air burning, and that the local Missouri laws would not apply since this was a "government project." (Tr. 591, 594; R.4, ENG BCA Nos. 5776 & 5840, Tab J; Exh. G-35).

10. The parties held another negotiation meeting on October 30, 1987. Hemphill presented a revised proposal totalling $516,189.66, in which it adopted the "mix" of clearing categories contained in the re-

©1994, Commerce Clearing House, Inc.
Digitized by Google

vised Government estimate. Following further analysis and review by the Corps, Mr. Ross offered $359,563 in a meeting on November 9, 1987, and the parties reached agreement on a contract price of $360,400 on the following day. (R.4, ENG BCA Nos. 5766 & 5840, Tab J; Exh. G-35; Tr. 601, 658-60).

11. Appellant's "Contract Price Proposal," dated December 13, 1987, included prices for clearing 12 acres of "heavy" material, 84 acres of "medium" material, 99 acres of "light" material, and removal of 1,100 snags. The proposal did not contain an entry for brush hog work. (App. Exh. G).

Contract Award and Performance

12. On January 12, 1988, the Corps of Engineers and the Small Business Administration (SBA) entered into a firm-fixed price negotiated contract in the amount of $360,400. The bid schedule contained one lump-sum item, "Clearing and Grubbing." The SBA thereafter awarded Contract No. DACW43-88-C-0017 to Hemphill. (R.4, ENG BCA No. 5698, Tab AA). The contract did not contain any information regarding the total acreage to be cleared or the relative proportions of heavy, medium, light, or brush hog clearing work to be performed. (Tr. 691, 1047). The contract did not indicate the number of snags to be removed. The contract also was silent on the burning method to be employed for disposal of material.

13. Notice to Proceed was acknowledged by Appellant on February 16, 1988. Appellant began mobilizing at the site on that date, and clearing operations commenced two days later. (R.4, ENG BCA Nos. 5776 & 5840, Tab K; Exh. J-1, Report Nos. 1, 3).

14. On February 19, 1988, Appellant submitted its Construction Progress Chart. The chart depicted the various aspects of the contract work as follows:

Work Element	*Start*	*End*
Clearing	February 17, 1988	July 17, 1988
Burning	March 17, 1988	July 17, 1988
Burning and Clean-Up	March 17, 1988	August 15, 1988
Snag Removal	May 17, 1988	July 17, 1988

(Exh. J-3). The record does not indicate whether Appellant planned to work on weekends.

15. On or about February 22, 1988, the parties learned that the Missouri Department of Natural Resources would not issue a permit for open air burning and, instead, required the use of air curtain burning. (Exh. J-1, Report No. 7; Tr. 43; Exh. G-35). As a consequence, the Corps directed Appellant to suspend burning operations until an acceptable disposal method was found. However, while burning was suspended, Appellant was not precluded from clearing trees, and it continued to knock down trees and stack them for later burning. (Tr. 43-46).

16. Air curtain burning requires the use of a burning machine which injects air into a pit. The burning process involves placement of debris into a previously-excavated pit, where it is ignited. Injection of air into the pit by the air curtain burner results in a higher burn temperature, creating a blast furnace effect. By contrast, open air burning merely involves placing trees and brush into piles on the ground surface and igniting them. Air curtain burning accelerates the burning process and is more efficient than open air burning. (Tr. 760-61, 788-89).

17. On February 24, 1988, the Contracting Officer requested a cost proposal from Appellant for a change to the contract's debris disposal process from open air burning to air curtain burning. (R.4, ENG BCA No. 5698, Tab B). Between March 1 and March 18, 1988, Appellant submitted four separate cost proposals ranging from $372,929.32 to $692,529.05. (R.4, ENG BCA No. 5698, Tabs C, D, E, F).

18. Appellant's progress schedule indicated the commencement of burning activities on March 17, 1988, but burning work did not begin on that date. (Tr. 1177).

19. The parties met to discuss the cost of air curtain burning on March 24 and 25, 1988. They recognized that Appellant would need "additional resources" in order to complete the work on time. The Corps had developed a revised estimate for the change in the amount of $45,855, but it was "obvious that the Contractor was not going to settle for the Government's price." At the conclusion of the meetings, the parties concluded that they could not agree on a price, whereupon the Contracting Officer determined to issue a unilateral modification in the amount of $150,000. Appellant was advised that if it intended to challenge the amount of the change order, it would have to maintain detailed records to support any claim for additional compensation. (R.4, ENG BCA Nos. 5776 & 5840, Tab L; Tr. 31-33, 47, 54-55, 527; Exh. G-35).

Digitized by Google

20. By unilateral Modification P00002, dated March 31, 1988, the Contracting Officer directed Appellant to use air curtain burners in the performance of disposal operations, and increased the contract price by $150,000 under the provisions of the "Changes" clause. No time extension was granted. (R.4, ENG BCA No. 5698, Tab G). The Government described the increase in the contract price as providing payments to the contractor for use of two air curtain burners as opposed to one, because the parties determined that two burners would be required to complete the burning work within the contract term. (R.4, ENG BCA Nos. 5776 & 5840, Tab V; R.4, ENG BCA No. 5698, Tab I; Tr. 1053, 1149-51). Appellant's President did not sign the modification, intending to reserve Hemphill's right to seek a higher adjustment for the change to air curtain burning. (R.4, ENG BCA No. 5698, Tab M).

21. During the period when Appellant was unable to burn as planned, from March 17 to April 7, 1988—the "no burn" period—it continued to clear the site, generally employing an eight or nine member work crew, working eight to ten hour days. During the 21 calendar days between the planned "start" date and actual commencement of burning, Hemphill worked on only nine days. Rain or wet conditions prevented work on seven days, but the record does not indicate whether this inclemency was abnormal. Appellant only worked on one weekend day, Saturday, March 19, 1988, and chose not to work on the remaining five weekend days. (Exh. J-1, Report Nos. 31-51). There is no evidence demonstrating whether any work was delayed exclusively by the delayed burning, or otherwise detailing the precise effect on Hemphill's overall progress.

22. On April 7, 1988, Appellant began making preparations for air curtain burning. Up to that point, Appellant's activities had been devoted to clearing brush and timber and "decking" it in piles for open air burning. Because of the change to air curtain burning, Appellant had to "undeck" the piles of debris and move the materials into the pits excavated for air curtain burning. (Tr. 360).

23. From April 7, 1988, to May 16, 1988, Appellant's efforts generally were devoted to burning materials that had been cleared when burning was suspended—the "burn only" period. During this period, Appellant's crew ranged from 12 to 25 workers, averaging 22 workers per day, and normally recorded only 8-hour workdays. The record does not reflect a meaningful amount of overtime. In the early stages of the "burn only" period, Hemphill's workers also performed clearing and decking in addition to burning, but the crew size did not change appreciably once Appellant began burning exclusively. (Exh. J-1, Report Nos. 52-89). On April 27, 1988, the Corps Quality Assurance Inspector noted that "Contractor has stopped clearing until burning can catch up. No problem with schedule." (Exh. J-1, Report No. 70).

24. There is no evidence as to what crew size Appellant would have employed if burning had begun as scheduled on March 17, 1988.

25. Beginning on May 16, 1988, Appellant began full-scale operations, performing both clearing and burning. Its crew size remained unchanged from the "burn only" period. On July 13, 1988, the Corps Quality Assurance Inspector noted that "Contractor bringing in more equipment to speed up progress." Up to this point, the Inspector had continually observed that Appellant's work was "on schedule." On July 15, 1988, Appellant's clearing efforts at the site were complete. (Exh. G-36; Tr. 1084; Exh. J-1, Report Nos. 89-149).

26. With the completion of clearing operations on July 15, 1988, Appellant again devoted all of its efforts to burning collected material. Burning was completed on August 10, 1988, and Appellant began final clean-up work. All work was complete on August 16, 1988. During performance, Hemphill removed a total of 3,317 snags and recorded this information in the daily reports it provided to the Corps Quality Assurance Inspector.[1] (Tr. 401, 1084-85; Exhs. J-1, G-36).

27. In the 132 days from the commencement of burning activity until contract completion, Appellant worked at the site for 90 days. No work was performed on 38 weekend days (at Hemphill's option), two "rain" days, and two national holidays. (Exh. J-1).

28. Hemphill brought the following seven pieces of its own equipment to the site during the mobilization phase:

[1] Appellant reported these quantities in Contractor Quality Control Report Nos. 86, 89, 110, 112-13, 125, 132-34, 141, 145, 147-49, 153, 155-56, 159-61, 163, 166, 170, and 173. On other occasions, the reports refer to snag removal, but do not supply a number. The parties used varying figures to describe the number of snags on the site; there is no support for these differing figures in the daily records.

Digitized by Google

Equipment	*Dates on Site*
D-8 Dozer	February 6 to April 13, 1988
D-7 Dozer	February 16 to August 11, 1988
977-L Endloader	February 17 to July 21, 1988
245 Backhoe	February 17 to August 15, 1988
399 Crane	February 22 to July 26, 1988
235 Backhoe	February 22 to July 29, 1988
977-K Endloader	February 23 to July 1, 1988

During performance, Appellant employed the following rental machinery at the site:

Equipment	*Dates on Site*
D-4 Dozer	April 7 to July 11, 1988
D-4 Dozer	July 12-15, 1988
977-H Endloader	May 4 to July 12, 1988
D-3 Dozer	May 19 to August 16, 1988
6620 Backhoe	June 10-14, 1988
6620 Backhoe	July 7 to August 15, 1988
963 Endloader	July 1 to August 10, 1988
D-8 Dozer	April 15 to July 1, 1988
D-8 Dozer	July 14 to August 14, 1988
D-6 Dozer	July 12 to August 16, 1988

(Exhs. J-1, G-42).

29. During the period from April 7, 1988, when Hemphill instituted air curtain burning, until contract completion, it recorded the following "work" and "idle" hours for its owned and rented equipment:

Owned Equipment	*Work Hours*	*Idle Hours*
D-7 Dozer	499	157
D-8 Dozer	236	84
235 Backhoe	344	48
245 Backhoe	224	176
399 Crane	244	348
977-K Endloader	154	324
977-L Endloader	302	258
Totals (3,398)	2,003	1,395

Rented Equipment	*Work Hours*	*Idle Hours*
D-8 Dozer (2)	152	0
D-3 Dozer	246	10
D-4 Dozer	259	29
D-6 Dozer	172	4
963 Endloader	136	0
6620 Backhoe	165	19
977-H Endloader	350	34
Totals (1,576)	1,480	96

(Exhs. G-6, G-9; Tr. 249-62). Stated as a whole, Appellant utilized 4,974 hours for owned and rented equipment (3,398 + 1,576). Rented equipment constituted about 32 percent of this total. While contractor-owned equipment was idle for about 41 percent of the time, rented equipment was idle for only about six percent of the time. As can be seen generally, rented equipment "work" hours are roughly comparable to contractor-owned equipment "idle" hours.

30. Hemphill did not bring additional rental equipment onto the site solely to supplement owned equipment. On one occasion, Hemphill withdrew its Caterpillar D-8 Dozer and replaced it with a leased machine. In another instance, Appellant rented a Caterpillar 977-H Endloader to replace a contractor-owned Caterpillar 977-K Endloader that had broken down. The Hemphill 977-K Endloader later was removed from the site. Hemphill rented the 977-H Endloader from Mr. Frank Powell, a frequent Hemphill employee, and the Superintendent on this project. Mr. Powell is not in the business of regularly renting construction machinery. While Appellant recorded a $30,000 rental obligation to Mr. Powell for the three month rental of the machine, no payment was ever made. (Tr. 807-811, 1006; Exhs. G-41, G-42, G-43, J-1). There is no explanation in the record for Appellant's actions in replacing owned machinery with rental equipment, or whether rental equipment brought to the site to supplant disabled Hemphill equipment was removed when the owned machinery was repaired.

Digitized by Google

31. Mr. Arnold Hardwick was the superintendent of another small business contractor that contemporaneously performed a clearing contract in connection with the Lock and Dam 26 project. He had extensive experience in clearing contracts of this type, and opined that Hemphill brought an excessive amount of owned and rented equipment to the site. In calculating equipment costs for his contract, Mr. Hardwick determined that the conditions prevailing at his site were "average," and thus used the "average conditions" rates contained in Corps publication EP 1110-1-8. Similarly, the COR observed that the conditions at Ellis Island were "average." (Tr. 1050; Exh. G-31).

Post-Performance Events

32. On September 19, 1988, Appellant submitted a properly certified claim in the amount of $754,785.75, including $13,891.75 in interest, for alleged increased costs from the change in burning method to air curtain burning. This amount had been reduced from $917,369 by deductive credits for "open burning" in the amount of $26,475, and "unilateral modification (P00002]" in the amount of $150,000. (R.4, ENG BCA No. 5698, Tab I). The record does not disclose the methodology by which Hemphill derived the credit for deletion of open air burning.

33. An audit of Appellant's claim was performed by the Resident Audit Office of the St. Louis District. In the ensuing report, the auditor considered the initial claim of $917,369 and determined that $618,519.71 of the proposed costs were "questioned," and an additional $66,671.23 in costs were "unsupported or unresolved." The audit incorporated a technical analysis provided by the Construction Division of the St. Louis District, which included an analysis of Hemphill's equipment operating versus standby hours, and labor costs for the period from April through August, 1988. (R.4, ENG BCA Nos. 5776 & 5840, Tabs M, Z).

34. On March 8, 1989, Mr. Ross performed a cost analysis of Hemphill's "burning change" claim in preparation for negotiations with Appellant. He considered, among other things, Appellant's equipment and labor use, relying on the field records prepared by Appellant and the Corps. He divided the scope of work into seven elements: (1) suspend open burning; (2) delete open burning; (3) suspend all original operations and perform "catch-up" burning; (4) undeck, rehandle and burn downed timber; (5) air curtain burning; (6) accelerate basic contract; (7) remove 2,206 snags.[2] Mr. Ross determined that $185,702 of direct costs in Hemphill's claim were supported by the audit and, based on undisclosed "technical considerations," Appellant was entitled to an additional $177,558 of the questioned and unsupported costs identified in the audit, for a total amount of $363,260. Mr. Ross then deducted the $213,702 in costs allowed in Modification P00002.[3] The resultant amount, plus mark-ups, yielded a pre-negotiation objective of $188,518. (R.4, ENG BCA Nos. 5776 & 5840, Tab N; Exh. G-35; Tr. 1153, 1225).

35. Mr. Ross reduced the Government's pre-negotiation proposal to $96,802 on March 10, 1989, in response to the Contracting Officer's determination that $91,716 of costs identified with dozer ("push cat") usage, representing 100 percent of dozer hours, were allocable to the clearing operations, rather than the burning work. (Exh. G-35; R.4, ENG BCA Nos. 5776 & 5840, Tab N).

36. Following meetings between the parties on March 10 and 15, 1989, when Appellant first articulated arguments of acceleration, defective specifications, breach of warranty, additional clearing, heavier clearing, and additional snag removal, the Contracting Officer agreed to increase the Government's offer for the burning change to $140,000. In addition, he offered $30,000 for acceleration of the basic contract and $30,024 for "additional snag removal." The Contracting Officer then apparently "rounded up" the figures and made a total offer of $205,000 in order to achieve bilateral agreement. (Exh. G-35; R.4, ENG BCA Nos. 5776 & 5840, Tab O).

37. At a meeting between the parties on April 13, 1989, Hemphill again presented arguments for acceleration, heavy clearing, and additional snag removal. In addition, Appellant contended that the acreages and "mix" contained in the Government estimate were incorrect, and specifically denom-

[2] We assume that this figure represents Mr. Ross' independent determination of the number of snags Appellant removed in excess of the Government estimate of 1,100 snags. The total number of snags estimated by Mr. Ross varies from the data contained in the daily logs. See Footnote 1, *supra*.

[3] Modification P00002 was executed in the amount of $150,000. The record does not disclose the source of the $213,702 figure cited by Mr. Ross.

©1994, Commerce Clearing House, Inc.

Digitized by Google

inated this claim as a differing site condition. (R.4, ENG BCA No. 5698, Tab N).

38. Following the meeting, Mr. Ross recorded the following "prenegotiation objectives":

The Government will again make the Contractor two offers, one for burning only and one for complete settlement. It is assumed that a burning only mod will be issued unilaterally and that a complete settlement agreement would be bilateral and result in complete accord and satisfaction ....

Burning Only Offer

Burning	$ 96,716
Push Cats	43,284
Acceleration	30,000
	170,000

From 10 Mar. Prenegotiation Objectives

* * *

The Mod that added the burner did not include a contract time extension. The Contractor shut down all basic contract work for 6 weeks to get caught up with the burning and then spent 13 weeks performing the remaining clearing and burning. ... The Contractor was able to finish on time by accelerating the basic contract clearing and by adding personnel and equipment to the burning operation. The full cost of the personnel and equipment involved in burning are included in the $96,716 allowance for burning and the $43,284 allowance for push cats. The acceleration allowance of $30,000 is determined by allowing approximately six nineteenths of the cost of push cats plus markups, in recognition of additional resources spent on clearing. This brings the total allowance for push cats to ... $73,284 or 80% of dollars identified in the 10 Mar. prenegotiation objectives, as being partially or totally allowable.

Complete Settlement Offer

The Contractor has persistently argued that the basic contract was defective because the Government Estimate was based on erroneous determinations of the amount of clearing and breakdown of the clearing area into light, medium, and heavy clearing.... The Government finds no merit in the argument and has determined that the contract is a lump sum contract; the contract makes no representations as to the exact quantity or breakdown of quantity of clearing to be performed and, accordingly, will not include any money in its offer for what the Government feels is contract reformation.

The Government's final offer ... will include an allowance for additional snag removal. This allowance is considered reasonable because the Government Estimate was based on 1100 snags when 3306 snags were actually removed. Allowance for snag removal will be at the original contract Government Estimate amount of $13.61 each.

The final settlement offer is based on the following elements: a. the Government's acceptance of 100% of the costs expended during the 6 week period when burning was the only operation performed, b. an allowance for only the burning cost during the 13 week period when both clearing and burning were allowed, c. snags as discussed above, d. acceleration of the basic contract work as discussed, e. a credit for the $150,000 paid to date under P00002.

Summary:

Operations from 7 Apr—13 May 88 per audit:		
Undecking	$116,080	
Cutting and Burning	24,300	
		$140,380
Operations 13 May—16 August 88		
Burning 13 weeks @ $4,050		52,650
Acceleration of basic contract $^{6}/_{19}$ of Push Cats × $72,618		22,932
Snags 2206 × $13.61 ea		30,024
		$245,986
Markups, 12% G&A, 7% Profit, 2$^{1}/_{2}$% Bond		$302,159

An independent Government Estimate has been prepared. The estimate totals $305,434. The final objective of $302,159 is less than the estimate and is considered a fair and reasonable price.

Digitized by Google

(R.4, ENG BCA Nos. 5776 & 5840, Tab O). Mr. Ross observed that the Government "went to the limit of reasonableness" in calculating the proposed $305,000 increase in the contract price. (Exh. G-35). The Contracting Officer endorsed the calculations made by Mr. Ross, and tacitly included them in the proposed modification. (R.4, ENG BCA Nos. 5776 & 5840, Tab P).

39. In preparing the cost analysis for the proposed modification, Mr. Ross reviewed the parties' field records, certified cost and pricing data submitted by Appellant, actual cost records submitted by Appellant, the Government audit, his own prior cost analysis, and the pre-award Government estimate. (Exh. G-35).

Modification P00005 and its Aftermath

40. On April 20, 1989, the Corps prepared a final estimate for Modification P00005 in the amount of $305,000. On May 10, 1989, the Government negotiator and Appellant reached an oral agreement to settle the claim in that amount, and on May 16, 1989, Hemphill executed a Certificate of Current Cost and Pricing Data. (R.4, ENG BCA Nos. 5776 & 5840, Tab P).

41. On May 19, 1989, the Corps sent an unexecuted Standard Form 30 to Appellant, on which was inscribed proposed Modification P00005, in the amount of $305,000, for "all costs and mark-ups directly or indirectly attributable to the substitution of air curtain burning for open air burning, and for all impacts, delays, and/or acceleration directly or indirectly related thereto." The instrument did not include a detailed price breakdown of the components of the amount paid. The proposed modification also included "release" language. (R.4, ENG BCA No. 5698, Tab Q).

42. Appellant's President, Mr. John Hemphill, signed the instrument on May 30, 1989, and the document was executed by the SBA on June 2, 1989. However, before the Contracting Officer was able to execute the modification, Mr. Hemphill orally informed Mr. Ross that he wished to withdraw his assent to the modification. The Contracting Officer signed the instrument on June 8, 1989. Mr. Hemphill restated his intention to withdraw from the agreement in a letter dated June 9, 1989. (R.4, ENG BCA No. 5698, Tabs Q, R, AA; Tr. 701-04; Exh. G-35). Notwithstanding Appellant's oral notice and letter of withdrawal, the Corps treated Modification P00005 as a bilateral instrument and issued payment to Hemphill on or about June 13, 1989, in the amount of $305,000. (R.4, ENG BCA No. 5698, Tab S).

43. By letter dated September 8, 1989, then-counsel for Appellant filed a properly certified, revised claim that was computed as follows:

Description	*Amount*
Equipment:	
Owned	$213,828.63
Leased	76,775.00
Purchased	18,785.00
Fuel & Oil, Repairs & Maintenance	60,667.50
Sub Total	$370,056.13
Materials	6,930.00
Direct Labor	296,678.06
Field Overhead	44,368.88
Sub Total (Direct Costs)	$718,033.07
G & A Expenses (12% of Direct Costs)	87,038.77
Bond (2 1/2%)	22,374.85
Insurance	10,100.00
	$837,546.69
Profit (10%) of Direct Costs	72,532.31
	$910,079.00
Less: Credit for open burning ($26,475) and credit for unilateral modification ($150,000)	176,475.00
TOTAL	$733,604.00

The claim also sought $69,034.15 in Contract Disputes Act interest, computed from September 19, 1988, through September 15, 1989. (R.4, ENG BCA No. 5698, Tab W).

44. The Contracting Officer declined to entertain the revised claim. He referred to Modification P00005, asserting that it was bilateral and binding, and, as such, Appellant had no valid and extant certified claim. Further correspondence between the parties did not result in a change of position by the Government. (R.4, ENG BCA No. 5698, Tabs X, Y, Z). By letter dated November 22, 1989, Appellant filed an appeal from the Contracting Officer's refusal to issue a final decision. (R.4, ENG BCA No. 5698, Tab A). The appeal was docketed as ENG BCA No. 5698.[4]

[4] Appellant subsequently filed a motion for partial summary judgment challenging the effectiveness of Modification P00005. The Board ruled that the modification was not enforceable because, prior to execution by the Government, the Contracting Officer was aware that Appellant had withdrawn from the agreement; there was no

Differing Site Conditions Claim

45. On August 16, 1990, Hemphill submitted a second certified claim in the net amount of $428,604 for additional costs it incurred because of an alleged differing site condition with respect to the acreage and mix of clearing categories on the job site. Although the contract did not contain specific acreage and "mix" figures for the various types of clearing to be performed, or the number of snags to be removed at the site, Appellant alleged that:

> The Government's original specifications called for 129 acres of brushhogging, 99 acres of light clearing, 84 acres of medium clearing, and 12 acres heavy clearing. Contrary to the government's specifications upon which Hemphill relied when submitting its initial bid and proposal, 3 acres needed brushhogging, 146 acres needed light clearing, 75 acres needed medium clearing, and 100 acres needed heavy clearing. The government's specifications further erroneously provided that 1,100 snags needed to be cleared when actually 3,600 snags had to be cleared. Hemphill incurred additional costs and expenses due to the errors in the government's specifications.

According to Appellant, the costs associated with its differing site conditions claim were included in its September 8, 1989, "burning" claim and the new "net" claim amount reflected the reduction of the principal amount of $733,604 by the earlier payment of $305,000 through Modification P00005. (R.4, ENG BCA Nos. 5776 & 5840, Tab A).

46. Shortly after clearing began, Appellant retained the Lundan Corporation (Lundan), an engineering and land survey firm, to perform closed traverse measurements around the areas to be cleared in order to determine the exact acreage of heavy, medium, and light clearing. In conducting its survey, Lundan used criteria provided by Hemphill on the size of trees to be included in the three clearing categories. When the Lundan crew arrived at the site on April 5, 1988, about 100 acres already had been cleared by Appellant and the material placed in piles, but Hemphill provided no information to Lundan on these materials. In an attempt to ascertain the "mix" of clearing categories in the areas already cleared by Hemphill, Lundan performed random surveys of the debris piles. However, even in the case of areas in which trees remained standing, Lundan did not measure all standing trees in order to develop its acreage estimate; rather, it made only random surveys of those areas, as well. Upon the conclusion of its survey, Lundan estimated that there were about 50 acres of heavy clearing, 75 acres of medium clearing and 107 acres of light clearing at the site, in a total area of 232 acres. The Lundan estimate made no allowance for brush hog work or snag removal. (SR. 4, Tab F; Exhs. G-10, G-18, G-19; Tr. 434, 636-39, 643, 656-57, 662-65)

47. Appellant never lodged a protest with the Government or otherwise remarked about the clearing acreages or mix during performance. (Tr. 1051; Exh. J-1). The first time Appellant raised this issue was during the negotiations surrounding Modification P00005 in March, 1989. (Tr. 1075).

48. As part of its trial presentation, Appellant presented acreage estimates prepared by its claims consultant, Mr. Edward Hick, who was retained after the contract was completed. Mr. Hick prepared his analysis in an attempt to resolve the discrepancy between the acreages alleged in Appellant's claim and the data presented in the Lundan report. He determined that 175 acres of heavy clearing, 75 acres of medium clearing, 54 acres of light clearing and zero acres of brush hog work were performed. However, Mr. Hick was not present at the job site during performance and had no personal knowledge of the actual conditions and the materials removed; his estimate was based entirely on information he obtained at a pretrial consultation with Hemphill personnel. (Tr. 292-95, 433-49; Exh. G-10). Aside from the conclusory statements in Mr. Hick's report, there is no substantive evidence to substantiate his acreage and mix estimates.

49. On November 2, 1990, Hemphill filed an appeal based on its differing site conditions claim, citing a letter from the COR (dated October 3, 1990) denying the claim on the ground that it was barred by accord and satisfaction through Modification P00005, as well as the Contracting Officer's failure to act on the claim within 60 days of submission, as set forth in 41 U.S.C. § 605. (R.4, ENG BCA Nos. 5776 & 5840, Tab B). The appeal was docketed as ENG BCA No. 5776.

The Government Affirmative Refund Claim

50. Following the Board's decision setting aside Modification P00005, the Successor Contracting Officer (SCO) issued his final decision on March 12, 1991. He determined that the action of his predecessor in issuing unilateral Modification P00002 was "contrary to the provisions" of the contract and, since Modification P00005 was a successor modification, demanded refund of the entire $455,000 disbursed to Appellant through Modification P00002 and Modification P00005. He based his decision on the "Permits and Responsibilities" clause, which charged Appellant with the responsibility for obtaining permits, as well as the provisions of TP 2B-4.2 requiring the contractor to "comply with all applicable State and local air pollution restrictions." According to the SCO, irrespective of his predecessor's characterization of the directive to employ air curtain burning, Appellant remained obligated to comply with Missouri environmental requirements and, as such, was not entitled to an adjustment to the contract price for the change in burning method. (R.4, ENG BCA Nos. 5776 & 5840, Tab C). Hemphill took a timely appeal, which was docketed as ENG BCA No. 5840. (R.4, ENG BCA Nos. 5776 & 5840, Tab D).

51. At the hearing, Respondent's auditor, Mr. Nicholas Katashuk, concluded that Hemphill was overpaid through Modification P00005 in the approximate amount of $152,000. He opined that the Government was entitled to a refund of $30,000 paid for snag removal, because the cost and pricing data supplied by Appellant was incomplete. He similarly determined that the Government was entitled to return of $22,000 paid through the modification for acceleration, since the contract was not accelerated. Finally, he argued that the Government was entitled to a refund of "not less than" $100,000 for overstated equipment costs. (Tr. 1229-30; Exh. G-41).

DECISION: PHASE I

ENG BCA No. 5698—Entitlement

In this appeal, Hemphill seeks the additional costs of performance it incurred when the method of debris disposal was changed from open air burning to air curtain burning. Appellant also seeks costs for acceleration which, it claims, resulted from the change in burning method.

Respondent does not dispute Hemphill's assertion that the change in burning method resulted in additional, compensable performance costs, but rejects the contention that Hemphill also incurred legally-recognizable acceleration costs in connection with the change in burning method.

The solicitation expressed no preference for the method of debris disposal. In response to Appellant's query with regard to the particular burning method to employ, the Government negotiator advised Hemphill to use open air burning and allayed the contractor's concerns about the impact of local environmental laws, stating that this contract was a "government project" not subject thereto. Appellant accordingly structured its proposal to include open air burning, and the parties contractually expected to dispose of debris by open air burning.

Shortly after work began, the parties discovered that the State of Missouri would not permit open air burning, and required air curtain burning. At that point, the Contracting Officer ordered Hemphill to suspend burning operations until an acceptable disposal method was approved. While Appellant was unable to begin burning as planned, it continued to clear and stack debris for later disposal. When air curtain burning began, Hemphill "undecked" the collected debris and moved it to the pits for burning. Ultimately, the Contracting Officer issued unilateral Modification P00002, directing a change in burning method to air curtain burning, with a concomitant $150,000 increase in the contract price, but no time extension. Subsequently, the Government issued unilateral Modification P00005, further increasing the contract price by $305,000.

When Hemphill submitted its claim for additional costs attendant to the change to air curtain burning, the Successor Contracting Officer rejected its arguments on the basis of the "Permits and Responsibilities" clause.

Among the obligations placed on the contractor by the "Permits and Responsibilities" clause is the responsibility for compliance with all applicable laws. Additionally, Technical Provision 2B-4.2 of this contract specifically required the contractor to comply with "all applicable State and local air pollution laws." In its brief, Respondent acknowledges the applicability of the "Permits and Responsibilities" clause to this situation, but expressly abandons this defense.

In an advertised procurement, performance methods (such as burning in this case) frequently are left to the discretion of the

©1994, Commerce Clearing House, Inc.

Digitized by Google

bidder/contractor. However, in this negotiated procurement, open air burning essentially was suggested by the Government's negotiator, Hemphill priced the contract in accordance with his suggestion, and this method was impliedly incorporated into the contract. The "Permits and Responsibilities" clause normally places the risk of added costs flowing from compliance with local laws on the contractor. However, because of the unique nature of this procurement, the fact that the *parties* agreed to dispose of debris through open air burning, and the fact that the Corps specifically directed Appellant to change to the air curtain burning method, the "Permits and Responsibilities" clause is not a defense in this instance.

The contract the parties executed incorporated disposal of debris through open air burning. When the Corps directed Hemphill to utilize air curtain burning, it injected a new manner of performance into the contract. This alteration of the performance method gave rise to a compensable change to the contract. As such, Hemphill is entitled to an equitable adjustment to the contract price for the additional costs of performance associated with the Government-ordered change in burning method.

Acceleration

In determining whether a constructive acceleration has occurred, the following factors must be addressed:

1. Existence of one or more excusable delays;

2. Notice by the contractor to the Government of the excusable delay, and a request for a time extension;

3. Failure or refusal by the Government to grant the requested extension;

4. An express or implied order by the Government to accelerate; and

5. Reasonable efforts by the contractor to accelerate resulting in increased costs.

McNutt Construction Co., Inc., ENG BCA No. 4724, 85-3 BCA ¶ 18,397; *Fermont Division, Dynamics Corporation of America*, ASBCA No. 15806, 75-1 BCA ¶ 11,139, and cases cited.

The essence of Appellant's argument is that the 21-day suspension of burning work during the "no burn" period, from Appellant's March 17 "start" date to April 6, 1988, without any contract time extension, constituted an excusable delay that had the effect of forcing Hemphill to accelerate its subsequent burning efforts in order to complete the project on time.

The test for establishing an excusable delay that underpins an acceleration claim is whether the delay flows from causes "beyond the control and without the fault or negligence of the contractor." During the 21-day period when Hemphill was unable to burn, it otherwise performed work on only nine days (including one weekend day). Seven days were lost to rain or wet conditions, but the record does not disclose whether the conditions on those days constituted "unusually severe weather," and there is no indication whether or not burning or any other work could have been accomplished on those days. On five weekend days, Hemphill simply decided not to work—a policy that continued throughout the contract term.

When a contractor's performance is delayed by multiple causes acting concurrently, and only one cause is excusable, *i.e.*, where other causes lie with the contractor, courts and boards have adopted the approach that neither party will benefit from the delay. Consequently, in a "Changes" clause analysis, a contractor cannot recover acceleration costs flowing from a concurrent delay, unless the record supports a clear apportionment of the delay and expense attributable to each party. See, *e.g., Blinderman Construction Co., Inc. v. United States* [30 CCF ¶ 70,619], 695 F.2d 552 (Fed. Cir. 1982); *John McShain, Inc. v. United States* [17 CCF ¶ 80,906], 199 Ct.Cl. 364, 412 F.2d 1281 (1969); *Paragon Energy Corporation*, ENG BCA Nos. 4997, 4998, 4999, 87-2 BCA ¶ 19,934; *Rivera General Contracting*, ASBCA No. 25888, 85-2 BCA ¶ 18,095; *Hardeman-Monier-Hutcherson, A Joint Venture*, ASBCA No. 11869, 67-2 BCA ¶ 6522.

From our review of the record, we are not convinced that any delay to Hemphill's work was occasioned solely by the Government's restriction on burning during the "no burn" period, or other excusable causes. Hemphill's failure to work during the majority of that period either was attributed to rain or wet conditions that did not rise to the level of "unusually severe weather," or was part of Hemphill's consistent pattern of no weekend work. Furthermore, there is nothing in this record by which we can apportion any segment of the delay exclusively to the Government. For these reasons, we conclude that Appellant's partial idleness during the "no burn" period was not exclusively the result of an excusable delay.

Looking to the second and third factors of acceleration, namely, a contractor request for and a Government denial of, a time ex-

Digitized by Google

tension, the record clearly indicates that Hemphill never gave notice of delay to the Corps nor sought a time extension. Furthermore, there is no evidence of exhortatory conduct on the part of the Government that induced Appellant to accelerate.

However, of paramount importance in an analysis of an acceleration claim is whether, in fact, the contractor actually accelerated. It is beyond cavil that Hemphill was precluded from beginning burning operations for 21 days and, once it was permitted to burn, this 21-day lacuna was not rectified through a contract time extension. When Hemphill was restricted to clearing and decking during the "no burn" period, it employed eight or nine-member crews working eight to ten-hour days. Following the onset of burning on April 7, 1988, Hemphill's work crew averaged 22 workers per day, working eight-hour days. While most of Appellant's efforts during the "burn only" phase were devoted to "catch-up" burning, when full-scale operations began on May 16, 1988, its crew size did not change appreciably. Throughout the remainder of the contract term, no significant overtime, weekend or holiday work was performed, and two days were lost to rain or wet conditions.

Appellant employed basically the same size work force during both the "burn only" and full operation phases of the job. We determine from this record that Hemphill did not enlarge its labor force solely because of the delayed onset of burning.

Hemphill's equipment usage pattern similarly does not support its claim of acceleration. Hemphill performed the work with a combination of owned and rental equipment. Starting on April 7, 1988, when Hemphill began air curtain burning at the site, until contract completion, its rental equipment comprised about 32 percent of the total equipment hours it recorded for the work. Rental equipment was idle only about six percent of the time, while contractor-owned equipment was idle 41 percent of the time. In some cases, the work time of rental equipment was virtually equivalent to the idle times recorded for identical contractor-owned equipment. On at least one occasion, contractor-owned equipment was removed from the site and replaced with rental equipment, without explanation. On another occasion, malfunctioning contractor-owned equipment was supplanted with rental equipment; Appellant does not explain why the rental equipment was not removed after the owned machine was restored to work.

The mere fact that Appellant brought rental equipment onto the site does not establish acceleration. From this record, we determine that some, if not all, of the work performed by rental equipment reasonably could have been accomplished using contractor-owned equipment. While we are not privy to Hemphill's decisional matrix in employing equipment, there is nothing in this record to suggest that the introduction of rental equipment was necessary, or supports a Hemphill effort to accelerate, inasmuch as contractor-owned equipment lay idle for almost the same amount of time as rental equipment was operating. While there are fleeting references in the record to the fact that Appellant brought rental equipment onto the site in order to "speed up" performance, there is no demonstrable nexus between this action and accelerated performance.

Much as with "early completion" claims (where contractors claim that completion would have occurred earlier, "but for" Government interference), a determination of whether a contractor was accelerated is aided by a "base line" finding of what level of effort the contractor would have expended "but for" the delay factor. See generally, *Skyline Painting, Inc.*, ENG BCA No. 5810, 93-3 BCA ¶ 26,041; *Bell Coatings, Inc.*, ENG BCA No. 5787, 93-2 BCA ¶ 25,805; see also *J.M.T. Machine Company, Inc.*, ASBCA Nos. 23928, 24298, 24536, 85-1 BCA ¶ 17,820. Part of the problem in analyzing this claim is that we have no evidence of the crew size and spread of equipment Hemphill intended to employ had burning proceeded according to its original schedule. On this record, Hemphill has not established the extent (if any) to which its use of labor and equipment exceeded its original plan. When we add to this uncertainty the absence of some of the traditional indicia of acceleration, *i.e.*, overtime hours, weekend and holiday work, we find the record to be insufficient to support Appellant's claim. Both parties have alluded to acceleration, but we have received no credible demonstration of that effect. Mere allegations do not constitute proof. See, *e.g.*, *Inversiones Aransu, S.A.*, ENG BCA No. PCC-77, 92-1 BCA ¶ 24,584. While we do not doubt that the 21-day burning suspension disrupted Appellant's operation, we are not persuaded that Hemphill accelerated its performance as a consequence of that interruption.

Based on the foregoing, we determine that Appellant has failed to establish entitlement to additional costs for acceleration.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Conclusion

The appeal is SUSTAINED IN PART, to the extent that Hemphill is entitled to the additional costs of performance entailed by the change from open air burning to air curtain burning, but not to include costs associated with acceleration.

ENG BCA No. 5776—Entitlement

Hemphill contends that the physical conditions it encountered at the site varied materially from what the Government conveyed to it during the negotiation process. Specifically, Appellant argues that the acreage and "mix" of trees and other materials to be removed was misrepresented by the Government and, when combined with the change to air curtain burning, dramatically increased the cost of performance. While Appellant does not denominate its differing site conditions claim, we assume it is advancing a "Type I" claim. Hemphill also alleges that the significantly greater number of snags (than the parties anticipated) that it encountered and removed from the site constituted a differing site condition.

Acreage and Mix

In a clearing contract, the size of the clearing area as well as the "mix" of clearing work are critical elements affecting the level of effort required to perform the work and, hence, the cost of performance. While the terms "heavy," "medium," and "light" clearing are used commonly in the clearing industry, they have no precise meaning. Determination and gradation of materials to be removed are, by necessity, subjective processes that are affected by the bidder's analysis of the size of the trees and other materials, terrain features, and intended equipment usage.

The specifications accompanying the solicitation were silent with regard to the size and composition of trees and other materials within the job limits. However, during the negotiations between the parties, the Corps disclosed its initial estimates to Hemphill. Following the disclosure of the Corps' first estimate, the parties made a site visit, but Appellant did not make a thorough study. Thereafter, the Corps revised its estimate to 12 acres of heavy clearing, 84 acres of medium clearing, 99 acres of light clearing, and 129 acres of brush hog work. All of this information was provided to Hemphill.

After clearing work began, Appellant retained Lundan to perform a survey and determine the acreage and mix of clearing work to be done. Lundan determined that the area to be cleared was approximately 232 acres, comprised of 50 acres of heavy clearing, 75 acres of medium clearing and 107 acres of light clearing. However, the reliability of the Lundan survey was compromised by a number of factors. Prior to the survey, Hemphill already had cleared 100 acres at the site and collected the debris in piles, but provided no guidance to Lundan concerning the character of the collected materials. As a result, Lundan was forced to rummage through the piles in an attempt to determine the relative mix of the collected materials, and was able to make only random estimates of the mix of the collected materials. However, even in areas where trees were still standing, Lundan performed only random surveys.

At trial, Appellant presented Mr. Hick's estimate that the work consisted of 175 acres of heavy clearing, 75 acres of medium clearing, 54 acres of light clearing and zero acres of brush hog work. This estimate was wholly the product of collaboration between unidentified contractor personnel and Mr. Hick, who was never present at the job site during the contract term, and had no personal knowledge regarding the work.

In order to establish the existence of a "Type I" differing site condition, the proponent must demonstrate:

1. The conditions encountered differed materially from those indicated in the contract;
2. The different conditions could not have been reasonably anticipated by either a site investigation or a study of the contract drawings and specifications;
3. The contractor reasonably relied upon his interpretation of the contract; and
4. The contractor was damaged because of the difference between the expected and actually-encountered conditions.

Guy F. Atkinson Company, ENG BCA No. 4693, 87-3 BCA ¶ 19,971; see also *John Collins v. United States*, 200 Ct.Cl. 642, 26 CCF ¶ 83,110 (1972).

Before proceeding to an analysis of the merits of this portion of the appeal, we must address the issue of notice. Under the terms of the "Differing Site Conditions" clause, the contractor is obliged to notify the Government of an alleged differing site condition promptly and before the condition is disturbed, in order to afford the Government an opportunity to investigate the condition.

Hemphill never raised the issue of the accuracy of the Government estimate during

Digitized by Google

performance. In fact, it was not until a meeting on March 10, 1989, nearly seven months following the completion of the job, that Hemphill first filed a recognizable notice with the Corps.

Prejudice flowing from a lack of timely notice is recognized as a bar to recovery on a differing site conditions claim. See *Tompkins & Company*, ENG BCA No. 4484, 85-1 BCA ¶ 17,853; *Jo-Bar Manufacturing Corp. v. United States* [22 CCF ¶ 80,291], 210 Ct.Cl. 149, 535 F.2d 62 (1976). The test of the prejudice attendant to lack of timely notice is the disability imposed on the Government either to take remedial action to mitigate the effect of the differing site condition, or to prepare its defense against the claim. Cf. *Wayne L. Grist, Inc.*, ENG BCA No. 5503, 90-2 BCA ¶ 22,915; *Bohemia, Inc.*, ENG BCA No. 4305, 84-3 BCA ¶ 17,650; *Troup Brothers, Inc.*, ENG BCA No. 3030, 72-2 BCA ¶ 9491. The prejudice here is direct and palpable. When Hemphill gave notice of the alleged discrepancy between the Corps estimate of acreage and mix and the actual conditions, months after contract completion, the trees and other materials were, at best, little more than ashes. Obviously, at that stage, the Government's ability to correct its estimates was academic. Likewise, we are hard-pressed to envision how the Corps could make *any* kind of intelligent analysis of the site conditions, in order to prepare a defense to Appellant's claim. Indeed, even when Lundan performed its survey of the site, *when trees were still standing*, it was unable to ascertain the mix of materials in the areas already cleared, and had to resort to rough estimates for the cleared areas.

For the foregoing reasons, Appellant's differing site conditions claim with regard to the acreage and mix of materials to be removed fails for the lack of timely notice. Even if we were, for the sake of argument, to ignore our determination to deny this appeal based on the absence of timely notice, we nonetheless would deny entitlement on substantive grounds.

The contract was silent with regard to acreage and mix, but the Corps disclosed its estimates for these two factors to Appellant during the negotiation phase. Even if we were to imbue these figures with the status of contract indications, the effect would be largely irrelevant. Considerations of latency notwithstanding, the first criterion in a "Type I" analysis is a demonstration that the actual site conditions differed materially from those indicated in the contract documents. However, there is no way from this record by which we can determine the actual site conditions Hemphill encountered. Much as with the preceding notice analysis, the ability to establish the actual site conditions with any degree of confidence suffers from Appellant's failure to preserve the site in a manner whereby the acreage and mix of trees and debris could be ascertained. Since Appellant is unable to present credible evidence of the discrepancy between the "indicated" and actual site conditions, we conclude that this aspect of the claim would fail because the materiality of the difference between the indicated and alleged conditions is not susceptible to proof.

This differing site conditions argument also would fail because there is nothing in the record to suggest that the variation alleged by Appellant between the Government estimate and the site conditions could not have been detected through a reasonably thorough site inspection.

Snags

The preaward Government estimate indicated that 1,100 snags were present at the site and required removal. The record contains several different quantities for snags removed. Our review of the record, in particular, a thorough review of the daily reports, persuades us that the removal of 3,317 snags recorded in the daily reports is the best evidence of the work performed by Hemphill. There is no suggestion that Hemphill mischaracterized the materials it described as snags in the daily reports, thereby inflating the number of "snags."

This contract was awarded as a one item, lump sum fixed-price contract. There is no way to distill the contract price for any one element of the work (here, snag removal) from the instrument. It is undisputed that Hemphill removed triple the number of snags estimated by the Corps. At issue is whether this additional work is compensable, and by what vehicle.

The Government opposes this facet of the appeal on two grounds. It first argues that, through operation of the parol evidence rule, information conveyed to Appellant during the negotiation phase preceding award, *i.e.*, the Corps estimate of 1,100 snags, cannot be offered to vary the terms of the contract, in order to establish a differing site condition.

The Government correctly recites the parol evidence rule when it states that evidence of negotiations prior to execution of a written contract is not admissible where the

©1994, Commerce Clearing House, Inc.

Digitized by Google

language of the contract is clear and unambiguous. While the parol evidence rule rejects evidence of prior oral or written agreements or contemporaneous oral agreements offered for the purpose of establishing matters that contradict or are otherwise inconsistent with the terms of an integrated agreement, it does not preclude the use of such evidence to explain or supplement the contract terms or to evince "consistent additional terms." *Restatement (Second) of Contracts*, § 213(1); see *Sylvania Electric Products, Inc. v. United States* [17 CCF ¶ 81,287], 198 Ct.Cl. 106, 458 F.2d 994 (1972); *J.A. Jones Construction Company*, ENG BCA No. 4635, 85-2 BCA ¶ 17,952; *Unicom Systems, Inc.*, ASBCA No. 29468, 84-3 BCA ¶ 17,675; *Environmental Tectonics Corporation*, ASBCA No. 21657, 79-1 BCA ¶ 13,796, *aff'd. on reconsid.*, 79-1 BCA ¶ 13,876. Previous and contemporaneous discussions properly may be considered in order to ascertain the subject matter of the contract or the sense in which the parties may have used particular terms. In such cases, the evidence is not offered for the purpose of making a contract for the parties, but to aid in understanding precisely what contract the parties actually made.

This contract contained no reference to the number of snags to be removed. As such, the information contained in the Government's preaward estimate does not, *per se*, alter a term of the contract. Rather, the estimate here serves to demonstrate what the *parties expected* to encounter. For Hemphill, these numbers imparted a notion of how much work was required, while this same information created a framework under which the Government could evaluate Hemphill's proposal. Since the estimate was used by both sides in negotiating this contract and it does not contradict any provision of that instrument, we find, for purposes of this analysis, that the parties entered into a clearing contract contemplating removal of approximately 1,100 snags.

The parties entered into the contract believing that the scope of work included removal of about 1,100 snags. Their belief proved to be erroneous. We determine that their jointly-shared belief that about 1,100 snags were present on the site and had to be removed, when, in fact, about three times that many snags were present and were removed by Hemphill, constitutes a mutual mistake of fact for which relief is warranted.

In order to reform a contract because of a mutual mistake of fact, it must be shown that both parties entered into the contract unaware of a fact material to the successful performance of that contract or that both parties entertained an erroneous belief as to the present existence of a matter material to the contract. *Restatement (Second) of Contracts* § 152 (1981); 13 *Williston on Contracts* § 1545 (3d. Ed. 1970); *Shear v. National Rifle Association of America*, 606 F.2d 1251, 1260 (D.C. Cir. 1979); *Leasco v. Taussig*, 473 F.2d 777, 781 (2d. Cir. 1972); *Bowen-McLaughlin-York Company v. United States*, 10 Cl.Ct. 223 (1986); *Elias Brothers, Inc.*, ENG BCA No. 5321, 88-3 BCA ¶ 21,091; *Quality Electric Service*, ASBCA No. 25811, 81-2 BCA ¶ 15,380.

A major part of this contract required the contractor to remove "all" snags from the project. The mutually understood quantity of 1,100 (based on the Government estimate) was used by both sides in forming this contract. Since a major purpose underlying this contract was the removal of potential hazards to navigation (snags being one type), we determine that the parties would have altered their agreement had they known the correct information at the time of formation.

Appellant did not assume the risk of an "overrun" of snags. While the Government estimated that there were about 1,100 snags to be removed, it is abundantly clear from this record that the Government wanted all snags removed, whatever their number. In light of the foregoing, it would be unjust to place the burden of the overrun on Appellant in this lump-sum contract where there was no contractual remedy available for relief in the face of such an occurrence (*e.g.*, the "Variation in Estimated Quantities" clause).

Based on this record, we conclude that the parties entered into this contract under a mutual mistake of fact with regard to a basic assumption respecting the quantity of snags that had to be removed from the project. The traditional remedy for mutual mistake of fact is to reform the contract to reflect the agreement the parties intended.

Conclusion

The appeal is SUSTAINED IN PART, to the extent that Appellant is entitled to compensation for its removal of all of the snags on the project. As to all other matters, the appeal is DENIED.

Digitized by Google

FINDINGS OF FACT: PHASE II

52. On December 12, 1990, the Board issued an "Order On Proof Of Costs," requiring Hemphill to furnish a statement to Respondent detailing the costs it sought and the verifying source of those costs, *e.g.*, "books and records." Respondent was obligated to respond to Appellant's statement and to file a cross-statement of its own if it sought a reduction in costs payable to Appellant. (Board Correspondence File).

53. In early-March, 1991, a meeting was held between Hemphill personnel, Mr. Hick, and Hemphill's predecessor counsel (Mr. Mark Zellmer) in order to establish an operational framework for the preparation of Appellant's cost proposal. At that meeting, Hemphill personnel did not provide technical assistance or other input (in terms of on-the-job experience) to Mr. Hick for his use in making judgmental analyses of the cost data. Instead, most judgmental decisions were left to Messrs. Hick and Zellmer, neither of whom was present at the job. (Tr. 86-90, 102-15, 435, 472-73, 691-92).

54. Mr. Hick acknowledged that he was not an accountant, and admitted that he did not know whether his reports conformed to generally-accepted accounting principles. (Tr. 83, 102).

55. In preparing his reports, Mr. Hick reviewed Hemphill's Quality Control Reports, equipment time sheets appended to the Government's Quality Assurance Reports, official payrolls, and various invoices and receipts. He observed at the hearing that his efforts were handicapped by the poor quality of Hemphill's records. (Tr. 87-90. 97-98, 115, 119, 398, 460).

56. Mr. Hick highlighted the problems he faced in using Hemphill's records. In the case of labor costs, the records did not present detailed information as to where, when and how long employees worked. Sometimes, the records indicated labor time for equipment operators, yet no equipment time was recorded. (Tr. 149, 153, 170, 413). Equipment records were equally uninformative. Mr. Hick's review of Appellant's records did not reveal why machinery was idle (*e.g.*, stand-by or inoperative), the reasons underlying the use of additional equipment at the job site, and the time that was devoted on a given day to a particular item of work. (Tr. 137-39, 261, 272-73, 369, 1199). The problems confronting Mr. Hick were best illustrated by his attempt to separate costs attributable to the change to air curtain burning from those chargeable to the alleged differing site condition. The daily quality control and quality assurance documents recorded labor and equipment hours under a heading "Clearing, Burning, and Snagging." Mr. Hick testified that, when he was analyzing the field records, he had "no idea" where clearing (*i.e.*, work associated with the alleged differing site condition) "stopped" and burning (the work associated with the change in disposal method) "began." (Tr. 280; Exh. J-1).

57. Many aspects of Hemphill's claims overlapped and, in an attempt to isolate costs associated with particular claims, Mr. Hick made numerous allocations of labor and equipment costs that he admitted were judgmental. He recognized that, under this approach, a change in his allocation formulas would effect corresponding changes in the dollar values attached to the other claims. (Tr. 108, 175, 195, 233, 278-82, 307, 375-76).

58. Mr. Hick used "severe conditions" rates in calculating equipment costs for owned equipment. In calculating the cost of rental equipment, he used the "severe conditions" operating rate for owned equipment plus the actual rental cost, minus ownership costs. However, the equipment rates utilized by Mr. Hick often varied inexplicably from the "severe conditions" rates listed in EP 1110-1-8, "Construction Equipment Ownership and Operating Expense Schedule, Region V," which was identified in the contract as the pricing schedule for equipment costs. (Exhs. G-4, G-6, G-7; App. Exh. C).

Appellant's Proof of Costs Statement[5]

I. Mr. Hick's May 19, 1991, Cost Report

59. On May 19, 1991, Mr. Hick prepared his first cost report ("Hick 1"), which presented additive and deductive items for the following cost elements:

[5] In response to the Board's Order, Appellant presented four separate proof of cost statements prepared by Mr. Hick, which we shall examine *seriatim*. While we have found no entitlement to additional costs for acceleration or a differing site condition, we present the factual materials underlying these claims in the context of Mr. Hick's proposals, because of the interrelated nature of the claims in his analysis, and the requirement that we decide related quantum issues regarding Appellant's entitlement to additional compensation for its "burning change" and snag removal claims.

©1994, Commerce Clearing House, Inc.

Digitized by Google

DESCRIPTION	TOTAL COST
1. Acceleration	$ 138,116
2. Credit for Open Air Burning	(23,255)
3. Air Curtain Burning (Net)	237,714
4. Differing Site Conditions	208,886
5. Delay	99,358
6. Snags	17,713
7. Credit for Brush Clearing	(9,962 [6]
Total Individual Items	$ 668,570
Less P00005	−305,000
Additional Amount Due	$ 363,570

(Exh. G-4). The "Additional Amount Due" represented costs in excess of the $815,400 already disbursed to Appellant under the original contract ($360,400) and Modifications P00002 ($150,000) and P00005 ($305,000).

General

60. In preparing his "acceleration" analysis, Mr. Hick was unable to determine which costs were attributable to original contract work once burning began. As a consequence, he made a judgmental determination that 50 percent of the rental equipment and labor costs during the burning period were devoted to "productive work," *i.e.*, original contract work. He offered no justification for this mathematical apportionment. Based on this assumption, the "Hick 1" acceleration cost component was presented as follows:

	Hours	Rate	Cost
1. Additional Rental Equipment			
D-3 Tractor	442	25.59	$ 11,310.78
D-4 Tractor	483	29.26	14,132.58
D-8 Tractor	152	120.22	18,273.44
963 with operator	JOB		17,066.74
6620	205	47.39	9,714.95
977H	382	121.28	46,328.96
Subtotal	1664		$116,827.45
Less—Amount Allocated Productive Work (50%)			58,413.73
2. Labor—Operator (1320 Hrs × 50% × 16.95)			11,187.00
—Laborer (1320 Hrs × 50% × 16.77)			11,068.20
3. Subtotal Acceleration/Loss Efficiency			80,668.93
4. Overtime Premium–Labor			3,297.39
5. Other Direct Costs			
A. Payroll Taxes	40.97%	$10,468.90	
B. Union Fringes			
Operators	5.35%	729.90	
Laborers	2.68%	319.97	
C. Small Tools	2.00%	511.05	
D. Field Costs (15 Days)	$566	8,485.20	20,514.21
6. Additional Supervision			4,892.00
Total Direct Cost			$109,372.53
7. G & A Overhead	12.00%		13,124.70
Subtotal			$122,497.23
8. Profit	10.00%		12,249.72
Subtotal			$134,746.96
9. Bond	2.5%		3,368.67
Total Acceleration & Loss of Efficiency Costs			$138,115.63

(Exhs. G-4, at 3; Tr. 173, 304).

61. Mr. Hick calculated Hemphill's "Field Costs" by adding all of the miscellaneous costs that were not attributable to any particular phase of the work (*e.g.*, Mr. Frank Powell's salary as project superintendent, job trailer, sanitary toilets, signs, utilities, job truck, teamster [presumably the driver of the job truck], "ice and other misc.," and payroll tax and insurance) and dividing them by the total number of days on the project. The actual computation amounted to $565.68 daily. (Exh. G-4, at 25). However, the 40.97 percent "payroll taxes" mark-up factor used by Mr. Hick in calculating daily field costs also was applied as a separate line item in the "Other Direct Costs" or "Labor

[6] Mr. Hick calculated a "credit" to the Government for the removal by Hemphill of less brush than originally estimated by the Government. There is no persuasive evidence in the record to explain his rationale or methodology for this action.

Digitized by Google

Overhead Expenses" categories[7] in every portion of the cost proposal, effectively duplicating this cost entry. When Mr. Hick applied his field cost to the various elements of his cost proposal, he sometimes used the precise figure, and other times apparently "rounded" the amount to $566.

Credit for Open Air Burning

62. Mr. Hick calculated the reduction in costs Hemphill experienced because open air burning was deleted. Based on undisclosed judgmental factors, he determined that a credit of $23,255 was due. His calculation is as follows:

1.	Equipment		$ 8,276
2.	Laborer		11,950
	Total Direct Cost		20,226
4.	G & A Overhead	12.00%	2,427
	Subtotal		22,653
5.	Profit	10.00%	2,265
	Subtotal		24,918
6.	Bond	2.50%	623
7.	Subtotal		25,541
8.	Other Costs		933
9.	Original Estimated Cost		26,474
	Less Expended Costs		
	Share of Mobilization Costs	$435	
	G & A Overhead	2,427	
	Profit	286	
	Bond	72	
			-3,220
Net Credit for Open Air Burning			$ 23,255

(Exh. G-4, at 4; Tr. 278-79).

63. This credit differed from the $26,475 net credit proposed in Appellant's certified claim. Mr. Hick indicated that he achieved the reduction by reducing the mobilization cost share for open air burning, G & A overhead expenses, profit and bond mark-ups. He did not elaborate on the methodology by which he achieved this reduction. (Tr. 278-80, 396).

Air Curtain Burning

64. In his attempt to determine the net increase in costs attributable to the change to air curtain burning, Mr. Hick separated owned equipment cost information into clearing and burning categories, and assigned the clearing costs to the differing site conditions claim. Owned equipment costs for burning were represented to be $150,505. Appellant had recorded equipment rental costs on the project of $116,827, and Mr. Hick allocated 50 percent of these costs ($58,414) to the acceleration claim. From this, he subtracted $1,404, which he attributed to the delay claim. He then arbitrarily made the judgment that 50 percent of the "remaining" rental costs of $57,010 ($28,505) were attributable to the change to air curtain burning. (Exh. G-4, at 6). Mr. Hick did not describe the judgmental process by which he decided to allocate equipment rental costs.

65. Appellant recorded labor costs of $115,285.42 for equipment operators and $60,975.72 for laborers during the job. Mr. Hick allocated 50 percent of equipment operator costs to clearing and burning, respectively. He arbitrarily allocated about 76 percent of incurred laborer costs to burning, while the remainder of the costs were allocated to clearing. Mr. Hick associated "burning" costs with the change to air curtain burning claim, while he identified "clearing" costs with the differing site conditions claim. Based on his allocation, Mr. Hick charged $57,643 in equipment operator costs and $46,353 in laborer costs to the "burning" work. There is no independent evidence in this record either to corroborate or contradict these allocations.

66. Applying his assumptions, Mr. Hick calculated the net cost of the change to air curtain burning as follows:

[7] Mr. Hick used the categories "Other Direct Costs" and "Labor Overhead Expenses" interchangeably through his various cost proposals, but the components of the categories remained basically the same.

©1994, Commerce Clearing House, Inc.

Digitized by Google

1.	Equipment—Owned		$150,505	
	—Rented		28,505	$ 179,010
2.	Labor			
	Operators		57,643	
	Laborers		46,353	103,996
3.	Labor Overhead Expenses			
	A. Payroll Taxes	40.97%	$42,607	
	B. Union Fringes			
	Operators	5.35%	3,084	
	Laborers	2.68%	1,242	
	C. Small Tools	2.00%	2,080	
	D. Field Cost Per Day	$283	6,509	55,522
	Diesel for Fire (1600 Gal)	$1.02		1,632
	Total Direct Cost			340,160
4.	G & A Overhead	12.00%		40,819
	Subtotal			380,979
5.	Profit	10.00%		38,098
	Subtotal			378,258
6.	Bond	2.50%		9,456
7.	Total Cost for Air Curtain Burning			387,714
8.	Less Unilateral Modification [P00002]—Payment			−150,000
9.	Additional Amount Claimed			$ 237,714

(Exh. G-4, at 5). Mr. Hick applied only one-half of the $566 daily "Field Cost" factor to the air curtain burning claim. He determined that, when burning and clearing proceeded simultaneously, only one-half of the field cost properly was allocable to each work element. (Tr. 282-83).

67. When Mr. Hick calculated the amount claimed for air curtain burning, he did not include the $40,819 cost for G & A overhead. Properly added, the total additional amount claimed for air curtain burning would be $279,554.

Differing Site Condition

68. In determining the costs allegedly flowing from the differing site condition, Mr. Hick reduced Appellant's total clearing costs by his judgmental estimate of the original clearing costs. The labor component of this claim was based on the allocation method between burning and clearing work that Mr. Hick adopted in the "change to air curtain burning" element of the cost statement. (See Finding 65). He computed this element as follows:

1.	Equipment—Owned		$127,218	
	—Rented		28,505	$155,723
2.	Labor			
	A. Operators		57,642	
	B. Laborers		14,623	72,265
3.	Labor Overhead Expenses			
	A. Payroll Taxes	40.97%	29,607	
	B. Union Fringes			
	Operators	5.35%	3,084	
	Laborers	2.68%	392	
	C. Small Tools	2.00%	1,445	
	D. Field Cost Per Day	$283	6,509	41,037
	Total Direct Cost			$269,025
4.	G & A Overhead	12.00%		32,283
	Subtotal			$301,308
5.	Profit	10.00%		30,131
	Subtotal			299,156
6.	Bond	2.50%		7,479
7.	Total Cost for Clearing			306,635
8.	Less Cost Allocated to Original Contract Work			105,074
	Additional Clearing Cost			201,561
9.	Cost Attributed to Differing Site Condition—(Survey)			5,800
	Mark-Up			1,525
	Total Cost Differing Site Condition			$208,886

Digitized by Google

(Exhs. G-2, G-4). Like the "Air Curtain Burning" calculation, Mr. Hick applied only a $283 daily field cost, one-half of the previously calculated amount, because he made the judgment that clearing work only consumed one-half of the available work time when burning and clearing were proceeding simultaneously.

69. In calculating the "original" clearing cost (reflected in Item 8), Mr. Hick determined the cost per acre by category, in terms of heavy, medium and light, for the actual work performed (based on his determination of 175 acres of heavy clearing, 75 acres of medium clearing and 54 acres of light clearing work) and then multiplied these costs times the Government estimate of 12 heavy, 84 medium and 99 light acres of clearing work. The calculation contained no allowance for brush hog work. As we noted earlier, the acreage coefficient to his calculation was not factually supported. (Finding 48).

70. There is no explanation in the record for the "mark-up" on the survey listed in Item 9 of the above calculation. (See Finding 68).

71. As with the air curtain burning costs, Mr. Hick did not include the G & A overhead cost component in his calculations. Properly added, the cost proposal for the differing site conditions item would amount to $241,976.

Delay

72. Mr. Hick characterized the delay portion of the air curtain burning claim as incorporating the costs incurred in the initial start-up, stacking of debris until burning began, and the ensuing undecking. He surveyed the record for the period February 24 to April 6, 1988, and included all costs of idle equipment, other than for machines that were identified as inoperable. He also made the judgment that 50 percent of equipment operating hours were used inefficiently as a result of the delay, and allocated one-half of the "working" equipment costs to the delay claim. He allocated the entire standby equipment cost component to the delay claim. With regard to labor costs, Mr. Nick reviewed the payrolls and unilaterally determined that equipment operators were inefficiently employed for 1,146 hours and laborers were similarly inefficient for 182.5 hours during the period. His calculation included costs incurred in "undecking" debris that was collected during the "no burn" period in anticipation of open air burning, reduced by the costs for both job categories devoted to mobilization and equipment maintenance. He then arbitrarily allocated 50 percent of the total equipment and labor costs incurred in undecking work to the delay claim. There is nothing in the record to confirm or contradict these assumptions. (Tr. 299, 307, 316-18). As calculated, this portion of the proposal is as follows:

Loss of Efficiency	*Total*	*50% Allocation*	
1. Equipment Stand-By	$8,017	$8,017[8]	
Inefficient Use Equip.	43,136	21,568	
2. Labor			
A. Operators	13,391	6,696	
B. Laborers	2,725	1,363	
UNDECKING			
3. A. Equipment	31,136	15,568	
B. Operators	11,390	5,595	
Laborers	11,088	5,544	
4. Subtotal			
A. Equipment			$45,153
B. Labor—Operators		12,391	
—Laborers		6,907	19,297
5. Other Direct Costs			
A. Payroll Tax	40.97%	7,906	
B. Union Fringes			
Operators	5.35%	663	
Laborers	2.68%	185	
C. Small Tools	2.00%	386	9,140
6. Field Cost Per Day	$565.68		5,091
7. Total Direct Cost			78,681

[8] Mr. Hick allocated 100 percent of standby equipment costs to the delay.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Loss of Efficiency	*Total*	*50% Allocation*	
8. G & A Overhead	12.00%		9,442
9. Subtotal			88,123
10. Profit	10.00%		8,812
11. Subtotal			96,935
12. Bond	2.50%		2,423
13. Total Cost Due to Initial Delay			$99,358

(Exhs. G-2, G-4).

Snags

73. Mr. Hick surveyed the daily reports and identified the labor and equipment hours associated with snag removal. He then calculated the cost of removing snags in addition to the 1,100 estimated by the Government as follows:

1. Equipment			$ 1,526
2. Labor			
A. Operators		$339	
B. Laborers		8,142	8,481
3. Labor Overhead Expenses			
A. Payroll Taxes	40.97%	3,475	
B. Union Fringes			
Operators	5.35%	18	
Laborers	2.68%	218	
C. Small Tools	2.00%	170	
D. Field Cost Per Day	$566	8,490	12,371
Total Direct Cost			22,378
4. G & A Overhead	12.00%		2,685
Subtotal			25,063
5. Profit	10.00%		2,506
Subtotal			24,884
6. Bond	2.50%		622
7. Total Snag Cost			25,506
8. Cost Per Snag	3,600		$ 7.09
9. Additional Cost for Snag Overrun; Actual 3600 Less Original 1100	2,500		$17,713

(Exh. G-4).

74. Like the other sections of "Hick 1," this calculation fails to include the calculated component for G & A overhead costs. The corrected total amount for the snag item is $19,625.

II. Mr. Hick's May 25, 1991, Cost Report

75. In response to questions about "Hick 1" that were raised by the Government, Mr. Hick prepared a revised cost proposal ("Hick 2") on May 25, 1991, which was computed as follows:

Description	*Total Cost*
1. Acceleration	$ 131,938
2. Credit for Open Air Burning	(23,255)
3. Air Curtain Burning (Net)	344,728
4. Differing Site Conditions	157,187
5. Delay	99,360
6. Snags	17,713
7. Credit Brush Clearing	(9,962)
Total Individual Items	$ 717,709
Less P00005	−305,000
Additional Amount Due	$ 412,709

(Exh. G-7). The entries for the "credit for open air burning," "delay," "snags" and "credit brush clearing" were essentially unchanged from their iteration in "Hick 1." Appellant's acceleration costs as represented are $6,178 lower than in "Hick 1," but there is no explanation in the record for this change.

Digitized by Google

76. Unlike his approach in "Hick 1," (see Findings 66, 68) Mr. Hick applied the entire daily "Field Cost" mark-up to both the Air Curtain Burning and the Differing Site Conditions claims. Also unlike "Hick 1," he applied the daily field cost mark-up on the Air Curtain Burning claim for a 42 day period, while the mark-up was applied for a 25 day period in the case of the Differing Site Conditions claim. The record does not explain these differing approaches.

Air Curtain Burning

77. In his second attempt to identify the costs incurred by Hemphill as a result of the change to air curtain burning, Mr. Hick re-evaluated reported equipment usage on the site. He altered his earlier judgment that owned equipment costs were allocable equally between clearing and burning work and, instead, posited that 80 percent of owned equipment time was dedicated to air curtain burning work, while the remaining 20 percent was devoted to clearing work. (Exh. G-7, at 4). There is nothing in the record to explain this new approach to equipment cost allocation that Mr. Hick adopted in "Hick 2." Mr. Hick also adopted a new allocation method vis-a-vis the equipment operator component of the labor cost, but we are unable to determine, from this record, the source of the new allocation.

78. Mr. Hick depicted this portion of the cost proposal as follows:

1. Equipment—Owned		$192,945	
—Rented		28,505	$221,450
2. Labor			
A. Operators		80,700	
B. Laborers		46,353	127,053
3. Labor Overhead Expenses			
A. Payroll taxes	40.97%	52,054	
B. Union Fringes			
Operator	5.35%	4,317	
Laborer	2.68%	1,242	
C. Small Tools	2.00%	2,541	
D. Field Cost Per Day	$565.68	23,759	83,913
4. Diesel for Fire (1600 Gal)	$1.02		1,632
Total Direct Cost			434,048
5. G & A Overhead	12.00%		52,086
Subtotal			486,133
6. Profit	10.00%		48,613
Subtotal			482,661
7. Bond	2.50%		12,067
8. Total Cost for Curtain Burning			494,728
9. Less Unilateral Modification—Payment			−150,000
10. Additional Amount Claimed			$344,728

(Exh. G-7, at 3)

79. Much as with the calculations in "Hick 1," Mr. Hick did not include the G & A overhead cost component in the "Air Curtain Burning" cost. So included, the total "additional amount claimed" calculation for air curtain burning should result in a figure of $398,116.

Differing Site Conditions

80. Mr. Hick computed this aspect of the cost proposal as follows:

1. Equipment - Owned		$84,778	
- Rented		28,505	113,283
2. Labor			
A. Operators		34,586	
B. Laborers		14,623	47,209
3. Labor Overhead Expenses			
A. Payroll Taxes	40.97%	20,161	
B. Union Fringes			
Operators	5.35%	1,850	
Laborers	2.68%	392	
C. Small Tools	2.00%	984	
D. Field Cost Per Day	$565.68	14,142	37,529

©1994, Commerce Clearing House, Inc.

Digitized by Google

Total Direct Cost		200,021
4. G & A Overhead	12.00%	24,003
Subtotal		224,024
5. Profit	10.00%	22,402
Subtotal		222,424
6. Bond	2.50%	5,561
7. Total Cost for Clearing		227,985
8. Less Cost Allocated to Original Contract Work		-78,123
Additional Clearing Cost		149,862
9. Cost Attributed to Differing Site Condition (Survey)		5,800
Mark-Up		1,525
Total Cost Differing Site Condition		$157,187

(Exh. G-7, at 2)

81. Mr. Hick's new calculation resulted, among other things, from the new judgmental approaches he adopted for the "owned equipment" and "labor-operators" components. Mr. Hick again failed to include the G & A overhead cost factor in the calculation, producing an understated total amount. Including this factor, the corrected amount would be $181,789.

III. Mr. Hick's June 12, 1991, Cost Proposal

82. On June 12, 1991, following further Government comments, Mr. Hick prepared his second revised cost proposal ("Hick 3") which he summarized as follows:

Description	*Total Cost*
1. Acceleration	$ 140,014
2. Credit for Open Air Burning	(23,255)
3. Air Curtain Burning (Net)	425,538
4. Differing Site Condition	150,298
5. Delay	96,537
6. Snags	12,198
7. Credit Brush Clearing	(9,962)
Total Individual Items	$ 791,368
Less P00005	-305,000
Additional Amount Due	$ 486,368

(Exh. G-6). The credits for deletion of open air burning and brush clearing were unchanged from his previous versions.

83. In computing equipment rates for "Hick 3," Mr. Hick erroneously applied a 1.138 adjustment factor to depreciation costs and costs of facilities capital for owned equipment, which had the effect of increasing the computed hourly operating cost of owned equipment by about five percent. (Exh. G-6; Tr. 1147-49).

84. Mr. Hick also utilized a recomputed "Field Cost" charge of $500 per day. This is compared with the $565.68 and $566 daily rates charged in his two previous cost proposals. The reduction in the daily field cost was the result of Mr. Hick's adoption of the equipment rates for the "job truck" set forth in EP 1110-1-8. As he did in "Hick 2," Mr. Hick applied the entire daily "Field Cost" mark-up to the "Air Curtain Burning" and "Differing Site Conditions" claims. In a departure from "Hick 2," he applied this factor for a period of 49 days in the "Air Curtain Burning" claim, and a period of 32 days in the "Differing Site Conditions" claim, without explanation. (Exh. G-6, at 21).

Acceleration

85. The change in the total amount for this item resulted from Mr. Hicks' adoption of different hourly rates for rental equipment than he had used in the two earlier cost statements. He calculated the hourly rates using the following factors: (1) "rent," calculated by dividing Hemphill's total reported rental cost by the hours the machine was used on the job; plus (2) "fuel" and "FOG" factors at the "severe conditions" rate established in EP 1110-1-8; plus (3) the "repair" (minus overhaul) factor for "severe conditions" operations included in EP 1110-1-8. In reducing the "repair" factor, Mr. Hick determined that the major overhaul component of "repair" properly was not chargeable to rental equipment, so he judgmentally allocated 75 percent of the "repair" factor to major overhaul, and reduced the factor accordingly. (Exh. G-6, at 30-35).

86. Mr. Hick's computation also included a larger charge for labor costs, which was

Digitized by Google

based on his allocation of a greater number of operator and laborer hours chargeable to the acceleration. There is no explanation in the record for this increase.

Air Curtain Burning

87. In this portion of the proposal, Mr. Hick used owned equipment rates that differed from those he had applied in his earlier proposals, and which were not consistent with the rates contained in EP 1110-1-8. Costs for rental equipment similarly differed from the previous iterations of this claim item, and the record does not indicate the reason for the change. The work hours attributed to air curtain burning were not changed.

88. Mr. Hick also adopted a new judgmental method for the allocation of labor costs between clearing and burning work, assuming that about 77 percent of operator time and 88 percent of laborer time were devoted to burning. There is nothing in this record either to validate or invalidate this assumption. This change in allocation method effected a corresponding reduction in the labor component of the differing site conditions claim, which was based on estimated labor costs for clearing.

Differing Site Conditions

89. In this iteration of the claim, Mr. Hick adopted new figures for owned and rented equipment costs, as well as for labor costs for equipment operators and laborers. The record is silent as to the source of his new data.

Delay

90. Mr. Hick continued to apply his judgment that one-half of equipment and labor costs were the result of inefficiency during the "no burn" period caused by the delay and undecking that occurred when the change to air curtain burning was made.

91. As part of the claimed delay costs, Mr. Hick included "inefficient use of equipment" costs of $21,047, reflecting his judgment that 50 percent of equipment operating hours were inefficiently used because of the delay caused by the change to air curtain burning. However, he incorrectly computed the costs for equipment operation during the "delay" period. According to his table of costs, which ostensibly was prepared from the daily logs, the incurred operating costs during the delay period actually were $46,661. Using Mr. Hick's allocation method, the equipment costs attributed to the delay should have been $23,330. (Exh. G-6, at 14-15).

Snags

92. Mr. Hick computed this portion of the cost proposal as follows:

1. Equipment			$ 1,481
2. Labor			
A. Operators		$ 339	
B. Laborers		$8,142	8,481
3. Labor Overhead Expenses			
A. Payroll Taxes	40.97%	$3,475	
B. Union Fringes			
Operators	5.35%	18	
Laborers	2.68%	218	
C. Small Tools	2.00%	170	
D. Field Cost Per Day	$ 500	1,000	4,881
Total Direct cost			$14,843
4. G & A Overhead	12.00%		1,781
Subtotal			$16,624
5. Profit	10.00%		1,662
Subtotal			$18,286
6. Bond	2.50%		457
7. Total Snag Cost			$18,743
8. Cost Per Snag	3,150		$ 5.95
9. Additional Cost for Snag Overrun Original 1100 Less Actual 3150	2,050		$12,198

93. The reduction in this portion of the cost proposal from "Hick 2" is the result of several factors. Initially, the equipment cost factor is $145 lower than in the previous Hick reports, but there is no explanation in the record for this change. Second, Mr. Hick only included costs for two days of "field costs," (which computed to $1,000 at the new rate of $500 per day), whereas his previous versions had included field costs for 15

©1994, Commerce Clearing House, Inc.

Digitized by Google

days. In addition, his calculations were based on a smaller number of snags—3,150—2,050 more than the Government's estimate. There is no explanation in the record for his use of a smaller number of snags in this calculation, or for his reduced field cost computations. Mr. Hick included the G & A overhead cost component in "Hick 3."

IV. Mr. Hick's October 29, 1991, Cost Report

94. On October 29, 1991, Mr. Hick presented his fourth and final cost report, which indicated that Hemphill was entitled to additional compensation in the amount of $507,332 beyond that already paid under the contract and the two modifications ("Hick 4"). Mr. Hick summarized the claimed costs as follows:

DESCRIPTION	*TOTAL COST*
1. Acceleration	$146,832
2. Credit for Open Air Burning	(23,255)
3. Air Curtain Burning (Net)	399,025
4. Differing Site Condition	181,876
5. Delay	104,698
6. Snags	13,118
7. Credit Brush Clearing	(9,962)
Total Individual Items	$812,332
Less P00005	−305,000
Additional Amount Due	$507,332

(App. Exh. C). The cost elements for the open air burning and brush clearing credits were unchanged from the previous iterations prepared by Mr. Hick.

95. Mr. Hick used the daily field cost of $500 he had developed for "Hick 3" when calculating overhead expenses. He also continued to apply this factor for a 49 day period on the "Air Curtain Burning" claim and for a 32 day period on the "Differing Site Conditions" claim.

Acceleration

96. Mr. Hick's analysis of the costs attributable to acceleration was largely unchanged. However, with regard to the "Labor Overhead Expenses" item, he discovered that he had incorrectly applied the "union fringes" component. In his previous cost submissions, he had applied a 5.35 percent mark-up on operator salaries and a 2.68 percent mark-up on laborer salaries. He learned that the proper mark-up application was based on a dollar per hour burden factor whereby operator labor was burdened with a $5.35 per hour "union fringe" mark-up, and laborer salaries were burdened with a $2.68 per hour mark-up. Application of these two factors effected the total change in the acceleration costs in "Hick 4." (App. Exh. C; Exh. G-42).

Air Curtain Burning

97. Mr. Hick's allocation of owned and rental equipment expenses was unchanged in "Hick 4." However, he adopted a new allocation for labor costs, determining that 66 percent of the total operator hours and 82 percent of the total laborer hours recorded in Hemphill's payrolls were chargeable to the change to air curtain burning. Mr. Hick offered no specific explanation for this third change in allocation method. The new allocation method had the effect of reducing the labor costs charged to air curtain burning in "Hick 4" from the corresponding costs in "Hick 3."

98. Mr. Hick's calculations also were altered by his adoption of a different dollar per hour mark-up on operator and laborer salaries for "union fringes" than he had used in connection with the acceleration claim. Unlike the $5.35 per hour mark-up for operators and the $2.68 per hour laborer mark-up he adopted for that claim, Mr. Hick used a $5.43 per hour mark-up for operators and a $2.57 per hour mark-up for laborers. (App. Exh. C, at 4). There is nothing in the record to explain why Mr. Hick utilized different mark-up factors for the acceleration and air curtain burning claims.

Differing Site Conditions

99. Mr. Hick's adoption of the new labor allocation in the air curtain burning claim had the corresponding effect of increasing operator and laborer hours allocated to clearing work, thereby increasing the cost of the differing site conditions claim. Under this new allocation method, 34 percent of operator hours and 18 percent of laborer hours were identified as being devoted to clearing work.

100. The costs attributed to the differing site conditions claim also were affected by Mr. Hick's adoption of the hourly burden for "union fringes," stated in terms of dollars per hour, rather than the percentage factor that he had applied in his previous cost proposals. However, as with the air curtain burning claim, he adopted hourly mark-ups that differed from the mark-up factors he used in the acceleration claim. Again, there is no explanation in the record for his differing approach.

Delay

101. In his computation of the delay portion of the air curtain burning claim, Mr. Hick corrected the arithmetic error contained in his "inefficient use of equipment" factor in "Hick 3." (See Finding 92).

Digitized by Google

102. The only other change to the delay cost computation in "Hick 4" involved Mr. Hicks' adoption of the different "union fringe" mark-ups that he used in connection with the air curtain burning and differing site conditions claims. Again, there is no explanation in the record why Mr. Hick applied the differing mark-up factors presented throughout "Hick 4."

103. Mr. Hick continued to charge 100 percent of the standby equipment costs to the delay. While the dollar value attached to this component was reduced (it declined from $8,017 in "Hick 1" to $4,561 in "Hick 4"), this reduction resulted from Mr. Hick's adoption of lower hourly equipment rates. One component of the standby costs included $1,396.80 for a 399 Crane that was allegedly idled by the delay during the "no burn" period. However, the daily logs reveal that the crane was not employed by Hemphill until June 6, 1988, some two months after the expiration of the "no burn" period, and then it was only used to remove snags. Similarly, Mr. Hick also charged $770 in standby costs incurred for an idled 977-L Endloader during the "no burn" period, but the record indicates that the machine was inoperable during the period. (Tr. 263-71, 1006, 1131-34; App. Exh. C, at 11; Exh. J-1, Report No. 110; Exh. G-41).

Snags

104. Mr. Hick computed the cost for snag removal as follows:

1. Equipment			$ 1,481
2. Labor			
A. Operators		$ 339	
B. Laborers		$8,142	8,481
3. Labor Overhead Expenses			
A. Payroll Taxes	40.97%	$3,475	
B. Union Fringes			
Operators	5.43%	109	
Laborers	2.57%	1,248	
C. Small Tools	2.00%	170	
D. Field Cost Per Day	$ 500	1,000	6,001
Total Direct cost			$15,963
4. G & A Overhead	12.00%		1,916
Subtotal			$17,878
5. Profit	10.00%		1,788
Subtotal			$19,666
6. Bond	2.50%		492
7. Total Snag Cost			$20,158
8. Cost Per Snag	3,150		$ 6.40
9. Additional Cost for Snag Overrun; Original 1100 Less Actual 3150	2,050		$13,118

105. Mr. Hick's snag proposal was unchanged from "Hick 3," except that he adopted the $5.43 per hour operator and $2.57 per hour laborer mark-ups for "union fringes." The use of these new figures, burdened by mark-ups for overhead, profit and bond, produced the $920 increase in the claim. (App. Exh. C).

Allocation of Labor to Equipment

106. Mr. Hick also employed judgmental allocations of equipment hours to labor hours. Throughout his four cost proposals, he used various allocation methods, without explanation. In many instances, he could not determine the number of workers assigned to a particular machine. In "Hick 4," he provided the following allocation of labor to equipment:

Cost Item	*Machine Hours*	*Labor Hours*
Acceleration	832.0	832.0
Delay	303.0	395.0
Undecking	240.0	336.0
Snags	10.0	21.0
Clearing	1,335.0	2,390.6
Burning	3,673.0	4,625.4
Total	6,393.0	8,599.0
Chain Saws	3,606.0	2,664.5

(App. Exh. C; Exhs. G-8, G-42; Tr. 114-19, 124-27, 139, 169, 213, 287, 359, 373-83, 459-60). As can be seen, Mr. Hick reported significantly less labor time for chain saws than the recorded equipment hours.

The Government's Proof of Costs Statement

107. Mr. Katashuk, the Corps auditor and a Certified Public Accountant, reviewed "Hick 4" in December, 1991, and prepared the Government's "Proof of Cost Response." As a result of his study, he questioned all labor and equipment costs that were based on Mr. Hicks' judgmental allocations, inasmuch as they were simply unverifiable allegations. He opined that every erroneous allocation had a ripple effect throughout the report and distorted relevant direct and indirect costs. According to Mr. Katashuk, an audit cannot address technical judgments regarding equipment and labor allocations in construction contracts. (Tr. 1258-61, 1270-78; Exhs. G-41, G-42, G-43).

108. Among the various components of Mr. Hick's cost proposals, Mr. Katashuk first challenged the $23,255 credit computed by Mr. Hick for the deletion of open air burning. Mr. Hick had acknowledged that his proposed credit was judgmental in origin, and he did not supply factual data to support his allocations of labor and equipment costs. (Tr. 278-79).

109. In his review, Mr. Katashuk determined that the Government was entitled to a credit of $144,697. He established this figure by subtracting from the original contract price of $360,400: (1) the costs in the differing site conditions claim that Mr. Hick assigned to the original contract work ($90,491); (2) Hemphill's delay claim ($104,687); (3) the cost of removing the contract-estimated 1,100 snags at Appellant's calculated price of $6.40 per snag ($7,040); and (4) Hemphill's proposed credit for decreased brush clearing, before reduction for lower actual direct costs and unrecovered mark-ups ($12,981). Properly added, this credit amount should be $145,201. In his report, Mr. Katashuk made the following statement:

> The $144,697 is subject to analysis by technical personnel. Also the data as presented by the Contractor is unreliable and not valid since it is based on estimates and not factual data.

(Exhs. G-41, G-42).

Snags

110. In reviewing the previous payment for added snag removal in Modification P00005, Mr. Katashuk initially questioned the entire amount claimed in "Hick 4" ($13,118) because the field records contradicted the equipment and labor hour components in Mr. Hicks' proposals. He also questioned the "Field Cost" component of the calculations. In "Hick 1," 15 days were allocated to snag removal, while in "Hick 4," only two days were allocated to this work. According to Mr. Katashuk, the judgmental allocations contained in the various Hick reports were not based on verifiable factors. (Exh. G-41).

Equipment Costs

111. Mr. Ross, the Corps 8(a) contract negotiator, observed that "Hick 4" overstated equipment costs by miscalculating rates and using "severe conditions" operating rates even though the contract mandated "average conditions" rates. He also indicated that the Hick reports overstated Hemphill's actual ownership and operating expense costs for equipment on the site. (Exh. G-35).

112. The Hick reports uniformly used the "severe conditions" rates contained in EP 1110-1-8 when formulating the equipment cost factors in the cost proposals, although in many instances, the numbers did not "match up." Mr. Katashuk utilized the equipment hours reported in the Hick cost proposals and computed equipment rates using both the "severe conditions" and "average conditions" rates. As a result of his review, he made the following comparisons:

BURNING COSTS—OWNED EQUIPMENT

Equipment	*Hours*	*Severe Rate*	*Average Rate*	*Severe "Cost"*	*Average "Cost"*
D-7	499	$ 60.06	$46.56	$ 29,970	$ 23,233
D-8	236	87.92	67.96	20,749	16,039
235	344	77.99	60.50	26,829	20,812
245	224	117.26	90.60	26,266	20,294
399	122	41.53	35.47	5,067	4,327
977-K	151	67.50	53.32	10,193	8,051
977-L	302	67.50	53.32	20,385	16,103
D-6	172	47.72	37.11	8,208	6,383
Saws	3606	1.19	1.19	4,291	4,291
Burner (JD)	674	16.72	15.09	11,269	10,171

Digitized by Google

Equipment	Hours	Severe Rate	Average Rate	Severe "Cost"	Average "Cost"
Burner-Ford	557	18.06	16.70	10,059	9,302
TOTALS	6887			$173,286	$139,006

CLEARING COSTS—OWNED EQUIPMENT

Equipment	Hours	Severe Rate	Average Rate	Severe "Cost"	Average "Cost"
D-7	228	$ 60.06	$46.56	$ 13,694	$ 10,616
D-8	375	87.92	67.96	32,970	25,485
235	369.5	77.99	60.50	28,817	22,355
245	512	117.26	90.60	60,037	46,387

D-6	40	47.72	37.11	1,909	1,484
TOTALS	570			$148,860	$115,391

BURNING COSTS—RENTAL EQUIPMENT

Equipment	Hours	Severe Rate	Average Rate	Severe "Cost"	Average "Cost"
D-3	134	$23.61	$22.22	$ 3,163.74	$ 2,977.48
D-4	290	29.23	27.43	8,476.70	7,954.70
963 (w/op.)	139	84.71	84.71	11,774.69	11,774.69
6620 Backhoe	96	56.14	53.68	5,389.44	5,153.28
TOTALS	659			$28,804.67	$27,860.15

CLEARING COSTS—RENTAL EQUIPMENT

Equipment	Hours	Severe Rate	Average Rate	Severe "Cost"	Average "Cost"
D-3	308	$23.61	$22.22	$ 7,271.88	$ 6,843.76
D-4	193	29.23	27.43	5,641.39	5,293.99
963 (w/op.)	64	84.71	84.71	5,421.44	5,421.44
6620 Backhoe	109	56.14	53.68	6,119.26	5,851.12
TOTALS	674			$24,453.97	$23,410.31

Mr. Katashuk summarized his calculations as follows:

Owned Burning Equipment:	
Severe Cost Total	$173,286.00
Average Cost Total	$139,006.00
Difference	$ 34,280.00
Owned Clearing Equipment	
Severe Cost Total	$148,860.00
Average Cost Total	$115,391.00
Difference	$ 33,469.00
Rental Equipment (Clearing and Burning)	
Severe Cost Total	$ 53,258.64
Average Cost Total	$ 51,270.46
Difference	$ 1,988.18

Adding the three sums, Mr. Katashuk determined that "Hick 4" overstated Hemphill's equipment rate costs in the amount of $69,737.18 ($34,280.00 + $33,469.00 + $1,988.18), as a result of Mr. Hick's unsupported use of "severe conditions" rates in calculating equipment costs, and that the Government was entitled to a credit in that amount. (Exh. G-42).

113. Messrs. Ross and Katashuk next argued that payments to Hemphill were excessive because Hemphill had presented

©1994, Commerce Clearing House, Inc.

Digitized by Google

inflated equipment ownership costs. According to Mr. Ross, the Government audit revealed that Hemphill's actual ownership and operation expenses were less than one-half of the price presented in the Hick reports, which were based on the equipment rates found in EP 1110-1-8. He also alleged that Appellant's judgmental allocation of labor and equipment costs to the various claims resulted in an overstated claim. (Exh. G-35; Tr. 1230-34).

114. In the four Hick reports, Appellant's ownership and operating costs varied from $270,831 to $277,723. Mr. Ross noted that in its claim, Hemphill reported "fuel and oil" and "repairs and maintenance" costs (operation costs) of $80,890 for owned equipment. (R.4, ENG BCA No. 5698, Tab I, Exhibit I). To this Mr. Ross added a $39,995 cost for depreciation "based on corporate depreciation schedule, FY ending August 31, 1988," for a total ownership and operation cost of $120,885. We received no evidence to suggest the genesis of the alleged depreciation cost. Mr. Ross then off-set this amount against Appellant's claimed ownership and operating cost of $270,831 and argued that the Government was entitled to a refund of $149,946 ($270,831—$120,885).

115. Mr. Ross also asserted that the Government was entitled to a refund for overpayment on equipment costs, because of Appellant's adoption of an erroneous mark-up factor for cost of facilities capital. (See Finding 83). However, Mr. Ross was unable to supply a figure for this alleged overpayment, stating that he could not "remember how much it was." (Tr. 1147-50). In its post-hearing brief, the Government alleges that this amount computes to $12,944. There is no evidence detailing the underlying calculation.

DECISION: PHASE II

Preliminary Matters

In ENG BCA No. 5698, we are faced with Appellant's request for an equitable adjustment for its burning change claim. In ENG BCA No. 5776, we must address Hemphill's claim for additional compensation flowing from the removal of a larger number of snags from the project than anticipated by the parties. ENG BCA No. 5840 finds its origin in the Government's demand for return of alleged overpayments, and affects elements of the equitable adjustment that apply in both of the other appeals. We shall discuss all of the appeals together.

It is clear in these appeals that Hemphill performed additional, compensable work when the debris disposal method was changed from open air burning to air curtain burning, and when it removed about three times as many snags from the site as the parties had anticipated. In addition to the contract price of $360,400, Appellant has received an additional $455,000 through two unilateral modifications in connection with this work. The issue now is whether Hemphill is entitled to any additional funds, whether it must return some of the amounts already paid, or whether we leave the *status quo* undisturbed.

Additions to the Equitable Adjustment

In response to the Board's Order of Proof of Costs, Hemphill commissioned Mr. Hick to prepare a cost proposal supporting its claim for additional compensation. At the conclusion of this process, he had prepared four separate proposals seeking additional funds progressively increasing from $363,590 to the final version of $507,332.

Hemphill's cost proposals for its "burning change" claim (ENG BCA No. 5698) appear to be based on a hybrid of the "modified total cost" and "jury verdict" methodologies. Unlike the disfavored total cost approach, which assumes that all costs incurred by a contractor in excess of the reasonable bid price were caused by the change, the modified total cost approach reflects an attempt analytically to identify the causation underlying specific incurred costs and then to assign those costs to separate incidents or claims. Under this approach, a contractor must demonstrate:

1. The nature of the losses makes it impossible or highly impractical to determine the actual losses directly with a reasonable degree of accuracy;

2. The contractor's bid was reasonable;

3. The actual costs incurred were reasonable; and

4. The contractor was not responsible for the increased costs.

Servidone Construction Corporation v. United States [36 CCF ¶ 75,797], 19 Cl.Ct. 346, 384 (1990), *aff'd.*, 931 F.2d 860 (Fed. Cir. 1991), citing *WRB Corporation v. United States* [12 CCF ¶ 81,781], 183 Ct.Cl. 409 (1968).

When damages cannot be calculated through use of actual cost data, courts and boards may resort to a "jury verdict" methodology when: (1) clear proof of injury exists; (2) there is no more reliable method for com-

Digitized by Google

puting damages; and (3) the record is sufficient for the construction of a fair and reasonable approximation of the damages. *Dawco Construction, Inc. v. United States* [37 CCF ¶ 76,056], 930 F.2d 872, 880 (Fed. Cir. 1991); *Assurance Co. v. United States* [33 CCF ¶ 75,181], 813 F.2d 1202, 1205 (Fed. Cir. 1987); *JCD Wrecking & Salvage Company*, ENG BCA No. 4598, 90-2 BCA ¶ 22,731; *Servidone Construction Corporation*, ENG BCA No. 4736, 88-1 BCA ¶ 20,390, and cases cited. However, the evidence mustered to support such an approach must have a demonstrable nexus to actual costs incurred and should be founded upon reasonable statistical methods or estimating techniques, not unsubstantiated and conclusory assertions. The court or board must not be placed in a position where it must estimate for itself or guess the amount of extra expense to which the contractor is entitled. See *Eagle Paving*, AGBCA No. 75-156, 78-1 BCA ¶ 13,107, and cases cited.

Courts and boards have permitted proof of damages through estimates where such estimates are prepared by individuals with personal knowledge of the claim events and costs, or where the estimates can be substantiated through resort either to detailed and reliable performance data, or where the estimates are reasonably based on verifiable experience. Use of estimates is permissible, with the proponent bearing the burden of demonstrating the basis for and accuracy of the estimates. See *Delco Electronics Corporation v. United States* [35 CCF ¶ 75,679], 17 Cl.Ct. 302 (1989), *aff'd.*, 909 F.2d 1495 (Fed. Cir. 1990); *International Equipment Services, Inc.*, ASBCA Nos. 21104, 23170, 83-2 BCA ¶ 16,675, *aff'd. on reconsid.*, 84-1 BCA ¶ 17,025; *Pathman Construction Company*, ASBCA No. 22393, 81-1 BCA ¶ 15,010.

Since the record did not divulge the cost and scope of the additional work attendant to the change to air curtain burning, Mr. Hick embarked on a series of changing assumptions in his four cost proposals in an attempt to isolate the costs attributable to the changed versus original work. In the section of his cost statements quantifying the change to air curtain burning, for example, he adopted three different allocation formulas for equipment operator and laborer costs in an effort to identify the increased costs attributable to the change. There was nothing in the record against which his judgments could be measured. Similarly, he adopted different proportions of owned and rented equipment costs associated with the change that also were not verifiable. These unexplained variations in labor and equipment allocations were mirrored in the delay and differing site conditions cost statements. In short, Mr. Hick adopted numerous judgmental positions in pricing the various claims that are not susceptible to independent verification.

When he attempted to supply a price for additional equipment costs, Mr. Hick used hourly operating costs that, as often as not, were at variance with the equipment rates contained in EP 1110-1-8, the "Construction Equipment Ownership and Operating Expense Schedule" listed in the contract. The source of the rates Mr. Hick used frequently could not be identified. In addition, he priced the equipment operation using "severe conditions" rates, while the contract directed the use of the "average conditions" rates. The conditions at the site did not warrant use of the enhanced rates.

Mr. Hick's proposals also were afflicted with numerous obvious arithmetic errors, such as his repeated failure to include the G&A overhead component in the calculations. In addition, he apparently duplicated the 40.97 percent payroll tax on labor, including this cost as a component in the daily "Field Cost" calculus. He also included this factor as a separate labor mark-up for cost categories that he alternatively designated as "Other Direct Costs" and "Labor Overhead Expenses." He also utilized differing "Field Cost" amounts in his proposals, as well as the number of days of "Field Costs" charged to the change to air curtain burning.

The Hick reports also were characterized by the use of differing "union fringe" burden factors on labor. While Mr. Hick used an erroneous mark-up predicated on a percentage of salary calculation in his first three proposals, in "Hick 4" he adopted the accepted dollar-per-hour basis for computing the mark-up. However, even when he adopted the correct union fringe mark-up approach, he used conflicting mark-up rates in the separate elements of his cost proposal, without explanation.

Mr. Hick readily acknowledged that his efforts were an after-the-fact operation unaided by personal knowledge of the events underlying the claims. Through a review of the sterile, and not particularly informative, documentary record, he attempted to recreate the job events in an attempt to price the various aspects of Hemphill's claims. His difficulties are perhaps best illustrated in his attempt to allocate labor to equipment hours. He remarked generally on the sparseness of the records regarding the allocation

©1994, Commerce Clearing House, Inc.

Digitized by Google

of labor to equipment. The daily reports failed to disclose the relationship between labor and equipment and no clarification was available elsewhere in the record. Perhaps the most prominent example of the effect that the paucity of information had in this regard can be found in his attempts to allocate labor hours to chain saw operating hours. His calculation of chain saw costs produced the anomalous result of chain saws being "operated" for about 1,000 hours without operators.

In short, the proof underlying Hemphill's damage claim was based almost exclusively on the testimony and estimates prepared by Mr. Hick. In most instances, we received no corroborative evidence to substantiate his judgments and assumptions, and Mr. Hick also failed to demonstrate the various processes through which he developed the allocations he used. We have not recited the full litany of erroneous, contradictory and confusing determinations contained in Mr. Hick's four cost statements, but the quantity, continuing nature and profusion of unexplained judgments and arithmetic errors contained in these determinations leaves us with little confidence in his proposals. While we appreciate the great difficulty he faced in attempting to reconstruct Hemphill's incurrence of added costs, this overriding pattern of shifting and unverifiable assumptions, overlain by judgmental calls equally not susceptible to verification, potential duplication of costs, arithmetic errors and unexplained changes in accounting and allocation approaches leaves us no choice but to reject his conclusions.

Ordinarily, failure of proof connotes a proponent's inability to marshal sufficient persuasive evidence and argument in support of its position. This appeal does not suffer from a shortage of allegations. Rather, we are faced with an interwoven mass of unverifiable and conflicting postulates. In the absence of corroboration from the record, we are not persuaded that the myriad proposals by Mr. Hick have established that Hemphill is entitled to compensation in excess of that already allowed by the Contracting Officer. Furthermore, this record does not permit us *sua sponte* to make any independent assessment of the cost framework that would itself be anything more than mere surmise. Cf. *Diso Corporation*, ENG BCA No. 4945, 87-1 BCA ¶ 19,462, *aff'd sub nom. Diso Corp. v. United States*, No. 87-1250 (Fed. Cir. 1987), 6 FPD ¶ 153; *Groves-Black (A Joint Venture)*, ENG BCA No. 4557, 85-3 BCA ¶ 18,398.

Based on the foregoing, we determine that Appellant has failed to establish entitlement to compensation for the change to air curtain burning in excess of that already allowed by the Contracting Officer. ENG BCA No. 5698 is accordingly SUSTAINED to the extent that Hemphill has recovered the amounts already allowed by the Contracting Officer.

Neither party raised an issue of whether Contract Disputes Act interest has been paid. In the absence of any contradictory indication from the record, we treat the Contracting Officer's unilateral adjustments in both Modifications P00002 and P00005 as representing the entire equitable adjustment with Contract Disputes Act interest thereon subsumed in the increased contract price. See *ReCon Paving, Inc. v. United States*, 745 F.2d 34 (Fed. Cir. 1984); *Paragon Energy Corporation*, ENG BCA No. 5302, 93-1 BCA ¶ 24,349; *Harry Claterbos Co., JV*, ENG BCA No. 5226, 92-2 BCA ¶ 25,010; *Massman Construction Company*, ENG BCA No. 4966, 86-3 BCA ¶ 19,325.

We have denied Appellant's differing site conditions claim with respect to the acreage and mix components of the contract. However, we have found that Hemphill is entitled to relief for the removal of "excess" snags.

In Modification P00005, the Contracting Officer recognized additional costs of performance occasioned by the removal of the "excess" snags. He used the Government estimate as a basis for computing the increased cost of performance, and paid Hemphill $30,042, plus mark-ups. While the Contracting Officer made this payment under the "Changes" clause, we have determined that any increased costs of performance flow from a mutual mistake of fact.

The Government now seeks a refund of a minimum of $30,000 for overpayment for snag removal. According to the Government, the original contract price included $14,969 for snag removal, and adding this to the allowance in Modification P00005, yields a total snag removal payment in excess of $44,000. The Government then goes on to cite the $13,118 snag removal element in "Hick 4" and contends that it is entitled to a refund of the difference (about $44,000 – $13,118). (Gov't Br., at 41).

The Government's claim fails to comprehend the extent of the alleged overpayment. The "Hick 4" computation of snag removal referred to costs for the "excess" snag removal; thus any overpayment for snag re-

Digitized by Google

moval could be determined only through comparison of the allowance under Modification P00005 and the Hick proposal. All of the data contained in the Government's refund claim is based on the cost proposals developed by the parties; as with all of the Hick proposals, we have no confidence in his snag removal calculations. The cost presentation by the Government adopts this unreliable data and fails to account for the fact that the Hick presentation on snags only relates to the removal of snags in "excess" of the Government estimate.

Both parties' presentations on the quantum element of the snag claim are fraught with mistakes and unexplained and unsubstantiated assumptions. In light of this record, we find no persuasive basis to depart from the Contracting Officer's original allowance. Accordingly, we decline to disturb it.

The adjustment in Modification P00005 represented an effort by the Contracting Officer to make the contract price reflect the actual work that the parties included in the contract but underpriced because they mutually underestimated its scope. Based on the foregoing, ENG BCA No. 5776 is SUSTAINED; Appellant is entitled to the increase in the contract price already recognized by the Contracting Officer.

Proposed Deductions from the Equitable Adjustment

In its refund claim of March 12, 1991, the Government alleged that it overpaid Hemphill in unilateral Modification P00005, and has offered a variety of calculations with the intent to demonstrate that the overpayment is in the magnitude of $152,000. The Government's refund claim is generally founded in the three following categories: $30,000 for snag removal (which we already have discussed), $22,000 paid for acceleration costs, and "not less than" $100,000 for overstated equipment costs.

At the outset, we note that the Government's (specifically, Mr. Ross') early calculations in the process culminating in Modification P00005 justified a payment of about $190,000. In an apparent attempt to settle all claims, this calculation was "adjusted" to achieve the $305,000 quantum reflected in the modification. When Hemphill withdrew from the tentative settlement agreement and insisted on pursuing additional funds, the Corps went ahead and paid the full amount, anyway.

Acceleration

The Government seeks return of $22,932 paid under Modification P00005 for acceleration, arguing that these costs properly are not payable to Hemphill, since the contract was not accelerated. While we have found that the record in these appeals does not support Hemphill's claim that it suffered a "legally recognized" acceleration, we are equally convinced that the work was disrupted by the 21-day delayed start of burning. Since the parties made no effort to differentiate between costs attributable to disruption and claimed costs of acceleration, we decline to disturb this element of the Contracting Officer's allowance, viewing it as an adjustment for disruption to the work, and have accepted it as part of the equitable adjustment due for the compensable events involved in these appeals.

Credit for Deletion of Open Air Burning

Mr. Hick consistently proposed that a credit of $23,255 was due the Government for the deletion of open air burning. Our review of the entire record persuades us that his proposed "credit" is merely a part of the overall calculus behind his proposal for an enhanced equitable adjustment, rather than a specific determination of cost savings occasioned by the change to air curtain burning. The Government's auditor alleged that the Government was entitled to a credit of approximately $145,000. However, his calculation was based on contractor data that he characterized as invalid and unreliable. We conclude that the record is insufficient to support any of the proposed credits for the deletion of open air burning.

Equipment Costs

The Government also seeks return of "not less than" $100,000, representing inflated equipment costs that were paid through Modification P00005.

The Government's refund claim as a whole is stated in less-than-precise terms, but it made a clear calculation of an inflation in equipment costs allegedly flowing from Appellant's use of "severe conditions" operating rates, as opposed to the "average conditions" rates required by the contract.

Mr. Hick uniformly applied the "severe conditions" rates in computing equipment costs, yet the conditions at the site did not warrant this application. Furthermore, use of this enhanced pricing structure was not authorized by the Contracting Officer, and Appellant offered no evidence otherwise in support of its pricing approach. While it is

©1994, Commerce Clearing House, Inc.
Digitized by Google

clear to us that application of the "severe conditions" equipment rates mathematically produces the increased cost factor, the record does not indicate whether any previous payments to Hemphill included costs derived from use of the higher rate structure. Indeed, in the absence of contradictory evidence, we would assume that in calculating the equipment cost component for the two unilateral modifications, the Government used the contractually-required "average conditions" rates. In view of the failure of the record to demonstrate that payments were made based on the "severe conditions" rates, we decline to credit to the Government any adjustment for costs flowing from alleged overstated equipment costs.

The Government also has sought a refund for overstated ownership costs (in the amount of $149,946) and inflated costs ($12,944) for misapplication of a cost of facilities capital mark-up on equipment.

We find this record insufficient to evaluate and support the quantum alleged by the Government for these two cost elements. The claimed refund for overstated ownership costs is an amalgam of unvarnished figures whose genesis is unknown. Likewise, the mathematics underlying the claimed refund for overstated cost of facilities capital mark-up are unascertainable. In view of the frailties of the record on these two matters, we decline to apply the alleged credit against the amounts already paid. Based on the totality of the facts before us, we decline to disturb the Contracting Officer's decision by directing a refund representing these two calculated costs.

CONCLUSION

Appellant has been paid $455,000, inclusive of interest, for the costs attendant to the change to air curtain burning and the removal of "excess" snags from the site. Appellant is not entitled to a further equitable adjustment. The Government is not entitled to any credit for overpayment. Accordingly, we decline to disturb the allowances already made by the Contracting Officer.

ENG BCA Nos. 5698 and 5776 are SUSTAINED IN PART. ENG BCA No. 5840 is SUSTAINED.

[¶ 26,492] Citicorp v. General Services Administration; American Express Travel Related Services Co., Inc., Intervenor

GSBCA No. 12631-P, October 22, 1993. Proposal No. FCXS-F1-930002-N.

Automatic Data Processing Procurement—Brooks Act Applicability—Financial Services.—The General Services Administration Board of Contract Appeals lacked jurisdiction over a protest against an award under a solicitation for travel-related financial services, because the procurement was not for the purchase, lease, or maintenance of automatic data processing equipment, as required by provisions of the Brooks Act. Although the solicitation required the delivery of data on line, on diskettes, on magnetic tape, and in hard copy, the acceptance of the awardee's credit cards by automatic teller machines, and the provision of credit card readers, these requirements did not call for the delivery of a system or a system of equipment to the government for its use. Although the tasks called for by the solicitation depended upon the use of ADPE, they were incidental to performance in that they did not restrict the contractor's discretion in the acquisition and management of ADPE resources. The solicitation did not specify any particular software, personnel, equipment, or systems of equipment, and it did not establish any requirements for the compilation or maintenance of databases.

For the protester: Diantha McJilton, Arnold & Porter, Washington, D.C., by David B. Apatoff and Steven S. Diamond, and Howrey & Simon, Washington, D.C., by Michael R. Charness and William A. Roberts III. For the government: George Barclay, Michael J. Ettner, Janet L. Harney, Michelle A. Harrell, Seth P. Binstock, and Pamela J. Reiner, Office of General Counsel, General Services Administration, Washington, D.C. For the intervenor, American Express Travel Related Services Co., Inc.: Paul, Hastings, Janofsky & Walker, Washington, D.C., by Hamilton Loeb, Bruce D. Ryan, Scott M. Flicker, John M. Oseth, and Randall M. Stone.

Before DEGRAFF, LABELLA, and HENDLEY, Administrative Judges.

Digitized by Google

DEGRAFF, Administrative Judge: Citicorp protests the award by the General Services Administration (GSA) of a contract to American Express Travel Related Services Co., Inc. (AmEx). GSA and AmEx filed motions to dismiss the protest, asserting that the Board lacks jurisdiction because the procurement is not for the purchase, lease, or maintenance of automatic data processing equipment. Because the procurement is for travel-related financial services and not for the purchase, lease, or maintenance of automatic data processing equipment, we dismiss the protest for lack of jurisdiction.

Findings of Fact

On May 13, 1993, the General Services Administration (GSA) issued request for proposals FCXS-F1-930002-N (the solicitation), for the Travel and Transportation Payment and Expense Control System (TTPECS). Complaint ¶ 8. The TTPECS is a system that permits government employees to utilize credit cards and travelers checks when they make work-related travel arrangements and when they pay their travel expenses. The TTPECS contractor will be required (1) to establish individually billed credit card accounts, (2) to establish centrally billed credit card accounts, (3) to provide travelers checks to agency personnel, and (4) to prepare a variety of reports for the Government. Respondent's Motion to Dismiss, Attachment 1.

Section CA.6 of the solicitation explains the requirements associated with establishing individually billed credit card accounts. The contractor is required to provide employees credit cards with no pre-set spending limits. The cards must be accepted by common carriers, car rental agencies, lodging establishments, restaurants, gas stations, and automated teller machine (ATM) networks and banks. The Government is not liable for any of the charges incurred by employees. The contractor is required to replace lost and stolen cards and to provide each individual cardholder with an itemized monthly statement. The contractor must be able to accept payment electronically. The contractor is required to develop a cardholder agreement and enter into such an agreement with each individual cardholder. The solicitation explains how the contractor is required to issue cards, deliver cards, verify that cards are received, and renew cards. The solicitation also explains how the contractor can suspend and cancel individually billed credit card accounts. From 1989 through 1992, there were nearly 900,000 individually billed credit card accounts and the total card volume exceeded $3.5 billion. The solicitation projects that from 1994 through 1998, there will be approximately 1.8 million individually billed credit card accounts and that the total card volume will exceed $7.9 billion. Respondent's Motion to Dismiss, Attachment 1.

Section CA.7 of the solicitation explains the requirements associated with establishing centrally billed accounts. These accounts are used primarily to meet the needs of an agency for common carrier transportation purchases and for emergency lodging associated with mass personnel movements and other special functions. The contractor is required to provide credit cards with no preset spending limits. The cards must be accepted by common carriers and lodging establishments. The Government is liable for charges incurred in accordance with government travel regulations. The contractor is required to replace lost and stolen cards and to provide the government agencies with itemized monthly statements and summary statements. Agencies may make payments electronically. The solicitation explains how the contractor can suspend and cancel centrally billed credit card accounts. The solicitation also explains how payment will be made and how billing discrepancies will be identified and resolved. From 1989 through 1992, there were nearly 4,000 centrally billed credit card accounts, and the total card volume exceeded $2.6 billion. The solicitation projects that, from 1994 through 1998, the total card volume for centrally billed accounts will exceed $5.7 billion. Respondent's Motion to Dismiss, Attachment 1.

Section CA.5 of the solicitation contains general requirements for both individually billed and centrally billed credit card accounts. The contractor is required to work with agencies to implement the credit card program within certain time limits. The contractor is required to provide dedicated customer service personnel twenty-four hours per day, 365 days per year. The solicitation also requires that the contractor provide a quarterly newsletter to all cardholders containing information concerning the TTPECS. The solicitation requires that the cards be designed and embossed in a particular fashion. The contractor is required to establish unique account numbers, to retain records of purchases, to provide training necessary to implement the system, and to fulfill certain quality assurance and security requirements. The solicitation pro-

©1994, Commerce Clearing House, Inc.

Digitized by Google

hibits the contractor from releasing cardholder information to any third party. The contractor is required to provide a full-time dedicated staff to manage the project. Respondent's Motion to Dismiss, Attachment 1.

Section CA.8 of the solicitation explains the requirements associated with establishing the travelers checks program. The contractor is required to work with agencies to establish their travelers checks programs. The solicitation requires the contractor to provide credit card readers at no cost to the Government, so that employees may use their cards to purchase travelers checks. The checks are required to be accepted by merchants and financial institutions. The solicitation explains how the contractor must make refunds for lost and stolen checks, the denominations of checks that the contractor must make available, how inventories of checks will be replenished, and payment terms. From 1989 through 1992, approximately $455 million of travelers checks were purchased. The solicitation projects that from 1994 through 1998, approximately $738 million of checks will be purchased. Respondent's Motion to Dismiss, Attachment 1.

Section CA.9 of the solicitation explains the reporting requirements of the TTPECS program. Reports are required to be made available to agencies in a variety of media, including hard copy, magnetic tape, or electronic. Electronic access to electronic reports is to be available twenty-four hours per day, 365 days per year. A variety of reports are required, including account activity reports, suspension reports, cancellation reports, airline credit reports, ATM reports, and travelers check transaction reports. There are also some management reports that must be provided to GSA. Respondent's Motion to Dismiss, Attachment 1.

Section L of the solicitation contains instructions for preparing offerors' technical proposals. The section explains that proposals must contain material to establish the range, scope, and extent that the offeror's credit card, travelers checks, and ATM product are accepted. An offeror's "ATM product" is the ability to use the offeror's credit card to withdraw cash from generally available ATMs or at bank counters. The section also explains that proposals must demonstrate the offeror's corporate experience in supporting charge card and travelers check programs on a scale similar to that required by the Government. Section L provides that proposals must demonstrate an offeror's quality and extent of customer service and support programs, including an offeror's support for providing reports. Section L also provides that proposals must demonstrate an offeror's support for centrally billed accounts, and an offeror's ability to bring agencies into the credit card and travelers checks programs and to manage the project. Respondent's Motion to Dismiss, Attachment 1.

Section M of the solicitation explains the factors that GSA would utilize to evaluate offerors' proposals. There are five equally weighted factors: Acceptance, Corporate/Past Experience, Customer Service, Centrally Billed Account Support, and Program Implementation Plan. Respondent's Motion to Dismiss, Attachment 1.

The solicitation expects that offerors will utilize computers in order to keep track of account information, to provide security to maintain the integrity and function of all databases and systems, and to generate monthly statements and reports. Given the number of accounts and the dollar volume of transactions, it is difficult to imagine how an offeror could perform this contract without utilizing computers. The solicitation contains several specific requirements for the use of an automated system:

Section CA.5.5 requires the contractor to provide dial-up electronic access to account and transaction data. If any software is required to accomplish this, the contractor shall provide it at no cost to the government. This electronic access shall consist of two parts. First, the government must have on-line access to account information. Second, account information must be available in ASCII file format that can be downloaded via electronic means.

Section CA.7.1.12 provides that the contractor shall provide a monthly invoice for centrally billed accounts in the medium requested by the agency, such as hard copy, floppy disk, and/or magnetic tape.

Section CA.8.7 provides that the contractor shall provide dial-up access or software packages to enable the agencies to automate their travelers check systems, so that the systems can track, add, tally, report, and reorder checks.

Section CA.9 provides that reports are required to be made available to agencies in a variety of media, including hard copy, magnetic tape, or electronic. Electronic access to electronic reports is to be available twenty-four hours per day, 365 days per

Digitized by Google

year. Section CA.9.8 provides that agencies may request customized reports, to be generated from existing data and produced in ASCII format if requested.

Respondent's Motion to Dismiss, Attachment 1. GSA required offerors to demonstrate that they could provide on-line access to data. Protester's Opposition Brief, Attachment A.

Citicorp and AmEx submitted proposals in response to the solicitation. GSA awarded the contract to AmEx on September 30, 1993. Complaint ¶¶ 1, 4. This protest was filed on October 8, 1993.

Discussion

The Brooks Act provides us with jurisdiction to entertain a protest "in connection with any procurement conducted which is subject to [the Act]." 40 U.S.C. § 759(f)(1)(1988). A procurement is subject to the Brooks Act if is for the "purchase, lease, [or] maintenance of automatic data processing equipment." 40 U.S.C. § 759(a). For purposes of 40 U.S.C. § 759:

> [T]he term "automatic data processing equipment" means any equipment or interconnected system or subsystems of equipment that is used in the automatic acquisition, storage, manipulation, management, movement, control, display, switching interchange, transmission, or reception, or data or information—
>
> (i) by a Federal agency, or
>
> (ii) under a contract with a Federal agency which—
>
> (I) requires the use of such equipment, or
>
> (II) requires the performance of a service or the furnishing of a product which is performed or produced making significant use of such equipment.

40 U.S.C. § 759(a)(2)(A). The term "automatic data processing equipment" (ADPE) includes computers; ancillary equipment; software, firmware, and similar procedures; services, including support services; and related resources as defined by regulations issued by the Administrator for General Services. 40 U.S.C. § 759(a)(2)(B). The Brooks Act does not apply to ADPE which is acquired by a contractor and which is "incidental" to the performance of a contract. 40 U.S.C. § 759(a)(3)(A).

Pursuant to the Brooks Act, GSA issued the Federal Information Resources Management Regulation (FIRMR), which applies to the acquisition, use, and management of federal information processing (FIP) resources by federal agencies.[1] 41 CFR ch. 201 (1992). GSA also issues FIRMR bulletins which contain nonregulatory guidance to agencies concerning FIP resources. The FIRMR and its bulletins provide valuable assistance for interpreting the provisions of the Brooks Act. For example, the Brooks Act provides that the procurement of a "system" of equipment to be used by the Government is subject to the Act's terms. The FIRMR defines a "system" of equipment as "any organized combination of FIP equipment, software, services, support services, or related supplies." 41 CFR 201-4.001. The FIRMR also explains that use of FIP resources is "incidental" to performance if a contract does not substantially restrict the contractor's discretion in the acquisition and management of FIP resources. 41 CFR 201-1.002-1(b)(2)(ii).

Consistent with these regulatory provisions, FIRMR Bulletin A-1 provides two examples of "incidental" use. In one example, an agency initiated a procurement for the completion of a study of the agency's organization and personnel distribution and the delivery of a hardcopy report. The solicitation required the contractor to develop software, gather information, and utilize a computer to process information and generate the report. Because the agency stated a general requirement for software and use of a computer and did not place any restrictions upon the contractor's acquisition or management of FIP resources, Bulletin A-1 explains that the use of FIP resources is incidental to performing the contract. In the other example, an agency initiated a procurement for identifying and enrolling more than one million people in a benefit program. The solicitation required the contractor to provide a means of maintaining current and immediately verifiable information concerning each person's benefits. Although the solicitation did not specifically require the use of FIP resources, it was reasonable to expect that the contractor must use such resources, given the magnitude of the contract tasks. Because the agency did not state its requirements in a manner which would have restricted the contractor's discretion in the acquisition and management of FIP resources, Bulletin A-1 explains that the use of FIP resources is inci-

[1] Instead of referring to ADPE resources, the FIRMR refers to FIP (federal information processing) resources. The FIRMR's definition of FIP resources mirrors the Brooks Act's definition of ADPE.

©1994, Commerce Clearing House, Inc.

Digitized by Google

dental to performing the contract. Bulletin A-1, Attachment C at 1-3.

Bulletin A-1 suggests that an agency consider a series of several questions when deciding whether a procurement is subject to the FIRMR. Bulletin A-1 recommends deciding whether the solicitation requires the delivery of FIP resources for use by a federal agency. If not, the bulletin advises that we should look to see whether a principal task of the solicitation depends directly upon the use of FIP resources. If so, the bulletin suggests that we then examine the requirements of the solicitation in order to determine whether they have the effect of substantially restricting the contractor's discretion in the acquisition and management of the FIP resources. If not, the FIRMR does not apply, because the FIP resources are incidental to the performance of the contract. Bulletin A-1, Attachment C at 1-3. The analytical framework provided by Bulletin A-1 is consistent with the provisions of the Brooks Act and the FIRMR, and we will use this framework in deciding whether the procurement at issue in this protest is one for the purchase, lease, or maintenance of ADPE.

The solicitation is not for the purchase of ADPE resources which will be delivered to a federal agency for its use. 40 U.S.C. § 759(a)(1), (a)(2)(A)(i).

According to the Brooks Act and the FIRMR, ADPE resources consist of either equipment (including software and other items) or an organized combination of equipment, software, services, support services, or related supplies. This solicitation does not require that the awardee deliver any such resources to the Government for its use. The solicitation does require that the awardee deliver data electronically on-line, on floppy disk, on magnetic tape, and in hard copy. But, no matter what delivery format is utilized, the fact remains that data—not equipment and not a system of equipment—is being delivered to the Government for its use.

Although the solicitation also requires that the awardee's credit cards must be accepted by ATMs, the solicitation does not require that the awardee purchase ATMs, deliver ATMs, or establish a network of ATMs. If the Government is procuring anything, it is procuring ready access to cash, which is a financial service. Consequently, requiring that the awardee's credit card be accepted by ATMs does not amount to requiring that the awardee supply the Government with equipment or a system of equipment for the Government's use.

Finally, the solicitation requires that the awardee supply credit card "readers" so that employees may use their credit cards to purchase travelers checks. According to Citicorp, this requirement is for the delivery of ADPE because the solicitation requires the awardee to supply readers which electronically read the information contained in a credit card's magnetic strip. The solicitation, however, does not require that these readers be electronic readers, and there are mechanical readers. Section CA.8.2, which contains the requirement for the readers, provides, in full: "The contractor shall provide card readers (point of sale machines) at no cost to the Government, to agencies/organizations issuing travelers checks, if requested by the participating agency/organization." Respondent's Motion to Dismiss, Attachment 1. It may be that Citicorp intended to provide electronic readers or that it believed only electronic readers would be accepted by GSA. However, Citicorp's beliefs and intentions do not establish that the solicitation requires an electronic card reader. Instead, the terms of the solicitation establish what is being procured. *Best Power Technology Sales Corp. v. Austin* [38 CCF ¶ 76,468], 984 F.2d 1172 (Fed. Cir. 1993). The requirement that the awardee supply credit card readers does not amount to a requirement that the awardee deliver ADPE to the Government for its use.[2]

Even though many of the tasks required by the solicitation depend upon the use of ADPE, the requirements of the solicitation do not substantially restrict the contractor's discretion in the acquisition and management of ADPE resources. 41 U.S.C. § 759(a)(2)(A)(ii), (a)(3)(A).

There is no doubt that the solicitation anticipates that the awardee will make extensive use of ADPE. Any offeror capable of providing widely accepted credit cards and travelers checks, adequate customer service, and accurate billing would have to depend heavily upon ADPE. As we have noted previously, the use of ADPE is ubiquitous, and the Government procures many products

[2] Citicorp suggests that it is important that AmEx's proposal emphasizes its ADPE capabilities. As *Best Power* establishes, what AmEx proposed is not material to determining whether the procurement is for ADPE.

Digitized by Google

and services which could not be produced or provided without extensive use of ADPE. *National Loan Servicenter Inc. v. Department of Housing and Urban Development,* GSBCA 12193-P, 93-2 BCA ¶ 25,853, 1993 BPD ¶ 64. The Brooks Act takes into account the pervasiveness of ADPE when it provides that a procurement is not subject to the Act if the contractor's use of ADPE is "incidental" to performance of the contract. 40 U.S.C. § 759(a)(3)(A).

The FIRMR sets forth the test for determining whether the use of ADPE is incidental to performance, when it directs us to determine whether the requirements of the solicitation substantially restrict a contractor's discretion in the acquisition and management of ADPE resources. The FIRMR's test is based upon the fact that, when the Government wishes to procure any ADPE product or service, it specifies what it wants to obtain. ADPE specifications place a substantial restriction upon contractors, because contractors are required to submit proposals which state that they will fulfill all of the requirements set forth in the specifications, and they are required to perform in accordance with the terms of the specifications. If a solicitation anticipates that ADPE will be utilized during a contractor's performance, but does not contain any specifications for ADPE equipment or services, then a contractor's discretion is not substantially restricted by the terms of a solicitation. The lack of a substantial restriction upon a contractor's discretion is a reliable indication that the contractor's acquisition and management of ADPE are immaterial to the Government, and that the use of ADPE is incidental to performance. The FIRMR's provisions are reasonable and must be respected. *Blum v. Bacon,* 457 U.S. 132 (1982).

The use of ADPE is incidental to performing the contract being awarded by GSA, because the solicitation does not place any substantial restrictions upon a contractor's discretion in the acquisition and management of its ADPE resources. The facts of this case are similar to those contained in the two FIRMR Bulletin A-1 examples discussed above. The solicitation permits offerors to utilize whatever equipment or system of equipment they wish. The solicitation does not explain how the awardee should compile or maintain its databases. It does not require any particular type of computers or ancillary equipment, any specific operating speed, any certain amount of storage capacity or memory, any particular operating software, or the use of any specified computer language or word processing program. The awardee is free to use whatever software it has available or is able to develop in order to provide the services that GSA is procuring. The solicitation does not require that persons with computer science backgrounds be assigned to the contract. The solicitation does not set out ADPE as a separate task or deliverable or evaluation factor. In summary, the solicitation permits offerors to meet the Government's needs by utilizing a wide variety of alternatives, and does not restrict a contractor's acquisition or management of its ADPE resources.

If requiring data to be made available on diskettes, electronically on-line, on magnetic tape, or in ASCII file format are restrictions at all, they are not substantial. The contractor's choice of how to provide these media is not limited or restrained by the terms of the solicitation. *Childress & Associates v. ACTION,* GSBCA 11768-P, 92-2 BCA ¶ 24,997, 1992 BPD ¶ 103; *CSC Credit Services, Inc. v. Department of Veterans Affairs,* GSBCA 11414-C (11350-P), 92-2 BCA ¶ 24,778, 1992 BPD ¶ 47.

The solicitation requires the contractor to provide reports which contain certain information presented in a particular order. It also requires the contractor to set aside a block of account numbers for government users. In addition, the solicitation requires that the contractor be able to identify and track payments by a cardholder's social security number. Citicorp states that these requirements are unique to the Government and are not required of its non-government accounts. Citicorp asserts that it will have to modify or develop software in order to fulfill these requirements and so, Citicorp concludes, these requirements place a substantial restriction upon its acquisition and management of ADPE resources. We disagree. The fact that some software might have to be modified or developed places virtually no restriction upon Citicorp's acquisition or management of its ADPE resources. It is free to choose a programming language, a computer, software, an operating system, and whatever other ADPE components it believes to be necessary in order to provide the Government with the data it requests.

©1994, Commerce Clearing House, Inc.

Digitized by Google

The decision in *National Loan Servicenter* is persuasive precedent.[3] The solicitation in our case requires the use of ADPE. But, the use is merely incidental to the contractor's obligation to provide customer service and widely accepted credit cards and travelers checks; to implement and manage the program; to send bills and invoices; to process payments; and to provide data to the Government concerning use of the contractor's financial services. The primary item being procured is not ADPE. Instead, the primary item being procured is travel-related financial services. The system that the Government wishes to acquire is not a system of ADPE. Rather, the Government wishes to acquire a system that permits the Government and its employees to utilize common commercial practices when traveling. The ADPE that will be utilized by the contractor who provides this system is truly incidental to the contractor's performance.

Decision

The protest is **DISMISSED FOR LACK OF JURISDICTION.**

[¶ 26,493] Information & Telecommunications Strategies, Joint Venture v. Department of the Navy; Computer Data Systems, Inc., Intervenor

GSBCA No. 12605-P, October 19, 1993. Solicitation No. N66032-90-R-0003.

Automatic Data Processing Procurement—Authority to Procure—Suspension Pending Protest.—The government's procurement authority was not suspended pending a protest, even though the protester alleged that it was not debriefed as soon as possible after award of the contract, because the timing of the briefing did not prevent the protester from becoming aware of and exercising its statutory right to suspension by filing a protest within 10 calendar days of award. The protester received prompt notice of contract award by telefax on or about the date of award and therefore knew or should have known that its right to a statutory suspension would expire within 10 calendar days. Even though the debriefing might have revealed circumstances upon which other grounds of protest could be based, the contractor was not prevented from filing a protest to exercise its right to a statutory suspension.

For the protester: Fried, Frank, Harris, Shriver & Jacobson, Washington, D.C., by Kenneth S. Kramer, Douglas W. Baruch, and Pamela A. Roth. For the government: Ellen D. Washington and M. Elizabeth Hancock, Information Technology Acquisition Center, Department of the Navy, Washington, D.C. For the intervenor, Computer Data Systems, Inc.: Charles B. Machion and Suzanne Ferrara.

Before GOODMAN, HENDLEY, and VERGILIO, Administrative Judges.

GOODMAN, Administrative Judge: This protest was filed by Information & Telecommunications Strategies Joint Venture (ITS or protester) on September 30, 1993, protesting the award by the Department of the Navy Information and Technology Acquisition Center (Navy or respondent) of a contract for automatic data processing software, support and services (the contract) pursuant to solicitation number N66032-91-R-0003 to Computer Data Systems, Inc. (intervenor or CDSI). CDSI has intervened in this protest as an intervenor of right. Protester alleges that the agency failed to provide a timely post-award debriefing and has requested that the Board immediately grant summary relief on this issue and suspend respondent's delegation of procurement authority until this protest is resolved. The request is made pursuant to 40 U.S.C. § 759(f)(5)(A) and (B) (1988), not 40 U.S.C. § 759(f)(3) (1988). As discussed below, we deny protester's request.

Findings of Fact

The contract was awarded to CDSI on or about August 31, 1993. ITS was informed of the award by letter dated August 31, 1993, from respondent and telefaxed on that same date. Respondent's Opposition to Protester's Request for Suspension of Procurement, Ex-

[3] Citicorp characterizes as "dicta" the discussion in the *National Loan Servicenter* opinion concerning whether ADPE was incidental to the contractor's performance. In fact, the discussion constitutes an alternate holding. In addition, we do not agree with Citicorp that *National Loan Servicenter* is distinguishable in any material respect from this case.

Digitized by Google

hibit 1. Respondent's letter invited offerors to request a debriefing and to inform respondent by September 3, 1993, if a debriefing was desired. Respondent's letter further requested that questions to be answered at the debriefing should be submitted to respondent in writing prior to September 8, 1993. By letter dated September 2, 1993, ITS informed the Navy that it desired a debriefing. Respondent's Opposition to Protester's Request for Suspension of Procurement, Exhibit 2. By letter dated September 3, 1993, telefaxed to the Navy on September 7, 1993, ITS submitted its written questions. Respondent's Opposition to Protester's Request for Suspension of Procurement, Exhibit 3.

On or about September 14, 1993, respondent contacted protester to schedule a debriefing and protester informed respondent that it should call back. Respondent made several more attempts to contact protester to schedule a debriefing, but was unsuccessful. On or about September 16, protester informed respondent that the debriefing must be held after September 20. Respondent, therefore, held protester's debriefing on September 21.[1]

ITS filed this protest on September 30, 1993, and requested this Board to suspend the performance of the contract pending resolution of the remainder of the protest on the merits. At the prehearing conference on October 5, 1993, counsel for protester and respondent stated their belief that there were no issues of material fact in dispute with regard to the request for suspension, and the Board requested a stipulation of facts and legal memoranda.

Discussion

Statute empowers this Board to suspend an agency's procurement authority under two different circumstances. First, a statutory suspension, if a protest is filed within ten calendar days of award and a suspension order is timely requested, is mandatory unless the agency involved establishes "urgent and compelling circumstances which significantly affect interests of the United States will not permit waiting for the decision of the Board." 40 U.S.C. § 759(f)(3)(B) (1988). Under such circumstances, we "shall suspend the ... procurement authority to acquire any goods or services under the contract which are not previously delivered," and the suspension shall last until the protest is decided. *Id.* We may exercise this power only if a protest is filed within ten calendar days of contract award. This protest was filed thirty calendar days after contract award, and protester has not requested a suspension under this statutory provision.

Second, on the merits, if we determine "that a challenged agency action violates a statute or regulation or the conditions of any delegation of procurement authority," we "may suspend" the delegated procurement authority as a means of providing appropriate relief. *Id.* § 759(f)(5)(B). ITS seeks suspension of the procurement authority as partial affirmative relief under this statutory provision.

ITS alleges that the award of the contract did not occur until two years after receipt of proposals; the Navy has other contractual vehicles in place to provide the services in question; and the respondent has admitted that it does not have an urgent and compelling need for the performance of the contract. ITS asserts that the Board should grant a suspension as partial affirmative relief as respondent violated Federal Acquisition Regulation (FAR) 15.1003(a), 48 CFR 15.1003(a) (1992), by not debriefing ITS "as soon as possible" as required in that regulation.

As legal support, protester cites several decisions in which we have granted suspension of procurement authority as partial relief on the merits because respondent had violated procurement regulations which required respondent to notify unsuccessful offerors promptly as to contract award. *Berkshire Computer Products v. Department of the Navy*, GSBCA 11989-P, 93-1 BCA ¶ 25,538, 1992 BPD ¶ 257; *Locom Corp.*, GSBCA 8951-P, 87-2 BCA ¶ 19,940, 1987 BPD ¶ 111; *American Service Corp.*, GSBCA 8224-P, 85-3 BCA ¶ 18,517, 1985 BPD ¶ 115. We granted a suspension in these cases because the protester had not received prompt notice that the contract had been awarded, and therefore had no reason to know that its right to request a statutory suspension had arisen. The very act of failure to give prompt notice of award entitles a protester to relief because it "renders the exercise of this right [to request a suspension of the procurement by filing a protest within ten calendar days

[1] These facts were set forth in ¶¶ 1-10 of respondent's response to protester's request for suspension. During a conference call with the Board on October 7, 1993, protester's counsel stated that these facts were not in dispute.

©1994, Commerce Clearing House, Inc.

Digitized by Google

of award] impracticable." *Locom Corp.*, 87-2 BCA at 100,915, 1987 BPD ¶ 111, at 6.

ITS analogizes these cases to its current situation, claiming failure to debrief as soon as possible as required by FAR 15.1003(a) is a violation of regulation which entitles it to a suspension as partial relief on the merits. ITS argues that it did not have a "readily discernible ground of protest until after the conduct of the debriefing," and that "any protest filed within ten calendar days of award would have had to be based on pure speculation." Request for Suspension of Procurement at 2. Thus, it alleges that the debriefing which did not take place until twenty-one days after contract award prevented it from filing a protest until that time.

We fail to see how the timing of the debriefing prevented ITS from becoming aware of and exercising its statutory right to suspension by filing a protest within ten calendar days of award. ITS received prompt notice of contract award by telefax on or about the date of award, and therefore knew or should have known that its right to a statutory suspension would expire within ten calendar days. Once it became apparent to protester that debriefing would not take place within that period, ITS could have filed a protest requesting the statutory suspension within ten calendar days of award. Even though the debriefing may have revealed circumstances upon which other grounds of protest were based, nothing prevented ITS from filing a protest within ten calendar days of award to exercise its right to a statutory suspension.[2]

Decision

Protester's request that we find an agency violation and suspend respondent's delegation of procurement authority is DENIED.

[¶ 26,494] Cleveland Telecommunications Corporation and Metrica, Inc., Anstec, Inc., and Tri-Cor Industries, Inc. v. National Aeronautics and Space Administration; Recom Technologies, Inc., Intervenor

GSBCA Nos. 12586-P, 12599-P, 12629-P, October 18, 1993. (The text below is the redacted version issued to the public on October 22, 1993.)

Protests, GSBCA—Procedure—Attorney Disqualification.—The law firm representing the protester was disqualified because it also represented a subsidiary of a major proposed subcontractor of the intervenor, which was the proposed awardee in the case. The protest involved the challenge of a potential award to the intervenor of a contract for computational, administrative, professional, and engineering services. The subsidiary continued to be heavily involved in the intervenor's proposal team and would inevitably be involved in the litigation against the protester. The relationship between the intervenor and its subsidiary was so intertwined as to produce a strong likelihood that a problem of dual loyalty would arise from the simultaneous representation of the protester and the intervenor's subsidiary.

For the protester, Cleveland Telecommunications Corporation and Metrica, Inc.: Arter & Hadden, Cleveland, Ohio, by Carl E. Anderson, and Alexander, Gebhardt, Aponte & Marks, Washington, D.C., by David R. Smith and Bridnetta D. Edwards. For the protester, Anstec, Inc.: Crowell & Moring, Washington, D.C., by James J. Regan and Kathryn D. Kirmayer. For the protester, Tri-Cor Industries, Inc.: Fried, Frank, Harris, Shriver & Jacobson, Washington, D.C., by Kenneth S. Kramer, William A. Davis, and Shannon L. Haralson. For the government: Sumara M. Thompson-King, Office of the General Counsel, National Aeronautics and Space Administration, Washington, D.C., and Laura Henry, Office of the General Counsel, National Aeronautics and Space Administration, Cleveland, Ohio. For the intervenor, Recom Technologies, Inc.: John J. Fausti and Kathryn Adah Stackhouse.

Before BORWICK, Administrative Judge.

---

[2] Moreover, protester has failed to demonstrate how this issue of protest—failure timely to debrief—was timely raised, as it had known for approximately twenty days after receipt of notification of award that it was not yet debriefed.

Digitized by Google

BORWICK, Administrative Judge: This protest involves a challenge, mounted by ANSTEC Inc., to the potential award by the National Aeronautics and Space Administration (NASA) of a contract for computational, administrative, professional, and engineering services (CAPES) to Recom Technologies, Inc. (Recom). Recom seeks the disqualification of ANSTEC litigation counsel, Crowell & Moring, because Crowell & Moring currently represents a sister subsidiary (Sterling Software U.S.A.) of a major proposed subcontractor on Recom's proposal team (Sterling Software U.S.).

Recom relies on District of Columbia Rule of Professional Conduct 1.7(b).[1] We grant the motion to disqualify. Sterling Software (U.S.) is heavily involved in Recom's proposal team and will inevitably be involved in the litigation against Crowell & Moring's client, ANSTEC. Sterling Software (U.S.A.), the other current client of Crowell & Moring, is in the same general business as Sterling Software (U.S.), shares l services through the parent, and shares with Sterling Software (U.S.). The relationship is so intertwined as to produce a strong likelihood of a problem of dual loyalty arising from the simultaneous representation of Sterling and ANSTEC.

Background

Recom is the sole potential awardee for the CAPES procurement. Recom is to be responsible for Sterling Software (U.S.) is proposed to handle scientific engineering Another firm is to be responsible for . Protest File, Exhibit 11, Volume 1 at 2. The proposed is an employee of Sterling Software (U.S.).[2]

Sterling Software (U.S.) will provide , comprising of Recom's proposed work force. Declaration of Russell Molari, President, Scientific Systems Division of Sterling Software (U.S.) (Molari Declaration) (Oct. 8, 1993) ¶ 2. Sterling Software (U.S.) assisted Recom in preparing the proposal. Sterling Software (U.S.) personnel contributed concepts, text, and review of the management portion of the mission suitability proposal. Sterling Software (U.S.) personnel assisted Recom in devising the *Id.* ¶¶ 4-5. Recom's was developed with recommendations of Sterling Software (U.S.) management and technical personnel based on Sterling's prior experience with NASA. *Id.* ¶ 6.[3]

Sterling Software (U.S.) is a subsidiary of Sterling Software, Inc. Declaration of Albert K. Hoover, Esq., Assistant General Counsel of Sterling Software, Inc. (Hoover Declaration) (Oct. 8, 1993) ¶ 2. Crowell & Moring has an existing client, Sterling Software (U.S.A.), formerly known as Systems Center, which is also a subsidiary of Sterling Software, Inc. Sterling Software, Inc. acquired Systems Center in July of 1993. Letter from Jeanette P. Meier, Executive Vice President and General Counsel of Sterling Software, Inc., to Crowell & Moring (Oct. 5, 1993) (Meier Letter); Hoover Declaration ¶ 5. Sterling Software (U.S.A.) has retained Crowell & Moring to advise it on

Declaration of Geno P. Tolari, President of Sterling Software (U.S.) (Tolari Declaration) (Oct. 8, 1993) ¶ 7.

Sterling Software, Inc. conducts its business operations through subsidiaries, but Sterling Software, Inc. does "business as one." For federal tax and financial purposes, Sterling Software, Inc. and its subsidiaries are consolidated. Hoover Declaration ¶¶ 2-3. for subsidiaries are performed by the parent corporation. "Sterling's General Counsel's Office provides legal advice to all subsidiaries." *Id.* ¶ 4.

Sterling Software (U.S.) manages certain Sterling Software (U.S.A.) contracts, one of which is a quasi-Government contract with . Tolari Declaration ¶ 5. The employees involved in that contract are employees of Sterling Software (U.S.A.) but report to the management of Sterling Software (U.S.). *Id.* An employee of Sterling Software (U.S.) who

[1] Recom also relies on Rule 1.9 seeking disqualification because Crowell & Moring represented a former client, Sterling Federal Systems, Inc., in an alleged substantially related matter, *Sterling Federal Systems, Inc.*, GSBCA 9835-P, 1989 BPD ¶ 78. We do not address the issues raised by this ground in view of our ruling on the current client issue.

[2] Recom also proposed from its other teaming partner. Protest File, Exhibit 11, Vol. II, Appendix A.

[3] Recom has entered into teaming agreements with Sterling Software (U.S.) and another firm prior to contract award. Protest File, Vol. II, Exhibit 11 at 107.

Digitized by Google

participated with Recom in developing the proposal at issue in this protest has been directed to assist Sterling Software (U.S.A.) in obtaining government business and managing its present government contracts. *Id.* ¶ 7. The president of Sterling Software (U.S.) is presently on a six month assignment to Sterling Software (U.S.A.) to manage the transition of Sterling Software (U.S.A.) into the Sterling Software family of companies. Hoover Declaration ¶ 6.

In this protest, ANSTEC alleges that the Government failed to sufficiently account for Recom's . Complaint ¶ 30. In addition, ANSTEC alleges that if a cost realism analysis had been performed on the Recom proposal, the Government would have recognized that Recom cannot (and that is required by the RFP) *Id.* ¶ 39.

ANSTEC has filed interrogatories on Recom seeking information from "subcontractors" as to the identity of individuals involved in formulating and drafting any aspect of the proposal, including price and costing strategies and the proposed ANSTEC also seeks information on all oral communications held by Recom (or its subcontractors) regarding plans to and the approach to the cost proposal portion of the proposal. ANSTEC Interrogatories to Recom. ANSTEC requested Recom to produce all documents referring to those subjects. ANSTEC Document Production Request to Recom.

The executive vice president and general counsel for Sterling Software, Inc. has advised Crowell & Moring that Sterling Software, Inc. withholds consent for Crowell & Moring to represent ANSTEC in this protest. Meier Letter.

Discussion

Courts have a duty to rule on attorney disqualification issues to safeguard the sacrosanct privacy of the attorney-client relationship which is necessary to maintain trust in the legal profession and to protect the integrity of the judicial process. *Panduit Corp. v. All States Plastic Mfg. Co.*, 744 F.2d 1564 (Fed. Cir. 1984). This is also true of boards of contract appeals, which have inherent authority to control their dockets and the attorneys appearing before them. *See Goldsmith v. United States Board of Tax Appeals*, 270 U.S. 117, 121 (1926). *See also Griffin & Dickson v. United States* [35 CCH ¶ 75,627], 16 Cl. Ct. 347, 351, 357 (1989) (boards of contract appeals possess inherent authority to impose sanction of dismissal without prejudice and lesser sanction of attorney discipline and assessment of litigation costs against attorney).

We are mindful of several, and countervailing, public policies in approaching disqualification motions. First, litigants are entitled to counsel of their choice, particularly in a specialized area such as Government contracts. Second, disqualification hinders the speedy resolution of lawsuits. Finally, we must be wary of motions being used purely as a litigation tactic. Thus, motions to disqualify must be viewed cautiously. *Laker Airways Ltd. v. Pan American World Airways*, 103 F.R.D. 22, 27-28 (D.D.C. 1984). On the other hand, the Bar has an interest in avoiding even the appearance of impropriety; consequently, when there is doubt, the doubt should be resolved in favor of disqualification. *Glueck v. Jonathan Logan Inc.*, 512 F.Supp. 223, 228 (S.D.N.Y. 1981), *aff'd*, 653 F.2d 746 (2d Cir. 1981).

In deciding disqualification matters, we apply the Rules of Professional Conduct of the District of Columbia Bar, because Crowell & Moring practices in the District of Columbia. *B.G.W. Ltd. Partnership*, GSBCA 10501, 91-3 BCA ¶ 24,336, at 121,584.

Recom relies on District of Columbia Bar Rule of Professional Conduct 1.7, which provides in pertinent part:

> (b) Except as permitted by paragraph (c) below, a lawyer shall not represent a client with respect to a matter if:
>
> (1) A position to be taken by that client in that matter is adverse to a position taken or to be taken by another client with respect to the same matter;
>
> . . . .
>
> (c) A lawyer may represent a client with respect to a matter in the circumstances described in paragraph (b) above, if:
>
> (1) Each potentially affected client provides consent to such representation. . . .

ANSTEC argues that Rule 1.7 does not apply:

> In this case, Sterling Software (U.S.) . . . is not a party to the litigation, and cannot take any positions in the case. Thus, by its terms, Rule 1.7 does not apply. . . . The parties to whom ANSTEC is directly adverse are NASA and less directly, RECOM. Sterling Software U.S. . . . has only an indirect interest in the outcome.

ANSTEC Supplemental Opposition to Recom Motion to Disqualify at 4.

Digitized by Google

Implicit in ANSTEC's argument is the thought that to apply in a litigation context, Rule 1.7 requires the adversity of formal parties to litigation; but the Rule is not so limited. Rule 1.7 applies when there is adversity of positions "to be taken ... with respect to a matter." The comments to the D.C. Rule of Professional Conduct make it clear that the "matter" is broader than the litigation; it encompasses the subject of the litigation:

> The concept of a "matter" is typically apparent in on-the-record adversary proceedings or other proceedings in which a written record of the position of [the] parties exists .... A lawyer may not undertake a presentation known to be adverse to the interests of another client, whether that representation is in a court proceeding, an on-the-record administrative hearing, a notice-and-comment rulemaking, or in an effort to influence policy or achieve a legislative result.

Comment 3.

ANSTEC, represented by Crowell & Moring, challenges Recom's ability to Sterling Software (U.S.), however, is one of the authors of Recom's proposal—in particular, portions of the mission suitability proposal and the proposed by Recom. The challenge to Recom is also a challenge to Sterling Software (U.S.), which undoubtedly has "taken a position" in the CAPES procurement.

Considering only the litigation, Sterling Software (U.S.) will have to "take a position," although not as a formal party. Sterling Software (U.S.) is responsible for the

Sterling Software (U.S.) is supplying the proposed work force, and will undoubtedly assist Recom personnel in justifying the reasonableness of the and mission suitability portions of the proposal. Testimony by Sterling Software (U.S.) personnel is not inconceivable.

Informed commentary rejects the notion that the client asserting the conflict must be one of parties to the litigation:

> On the other hand, adversity of position in litigation is not a *necessary* precondition for the existence of a direct conflict. If, for example, two businesses were competing for the same Government contract, and each engaged the same lawyer to prepare bids, Rule 1.7(a) [of the Model Rules of Professional Conduct] would surely be applicable. A number of cases hold that representation is directly adverse ... when a lawyer may be called upon to attack the credibility as a witness of a person the lawyer currently represents ... in a substantially related matter, even if that person is not a party in a pending matter.

Geoffrey C. Hazard Jr. & W. William Hodes, *The Law of Lawyering: A Handbook on the Model Rules of Professional Conduct* § 1.7:203, at 234 (2d ed., Supp. 1992).

Recom's counsel represents that Sterling Software (U.S.) personnel are now deeply involved with Recom's personnel in defending against ANSTEC's protest. Recom Supplemental Memorandum in Support of Disqualification at 9. ANSTEC, moreover, anticipates the participation of Sterling Software (U.S.) in the litigation; it has sought information by written discovery from Recom's subcontractors on responsibility for certain phases of the proposal and oral conversations regarding . As ANSTEC mounts an attack on Recom's proposal it also mounts an attack on Sterling Software (U.S.), the author of part of the proposal. If ANSTEC, through Crowell & Moring, is successful in overturning the award to Recom, both Recom and Sterling Software (U.S.) will be deprived of revenue from this contract.[4] Thus, there is a clear and direct adversity of interest between ANSTEC and Sterling Software (U.S.) with respect to the litigation over the CAPES procurement.

Crowell & Moring also argues that its other client (Sterling Software (U.S.A.)) is a separate subsidiary of the parent Sterling Software, Inc., and has an attenuated relationship with Sterling Software (U.S.):

> [U]pon information and belief, the relationship between these two legally distinct entities, which have different businesses, operate as separate profit centers, and seek and retain outside counsel independently from each other, is very attenuated.

ANSTEC Opposition to Recom Motion to Disqualify at 16.

We do not consider the relationship attenuated. To the contrary, Crowell & Moring must treat Sterling Software (U.S.) and Sterling Software (U.S.A.) as if the subsidiaries are one client.

---

[4] Recom's counsel represents that Sterling Software (U.S.) will over the next five years if Recom does not retain the contract. Recom Supplemental Memorandum in Support of Disqualification at 4.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Sterling Software, Inc. operates on a one company philosophy, providing common , to the subsidiaries. In this regard, we note that the letter refusing consent for Crowell & Moring to represent ANSTEC was written by the executive vice president and general counsel of Sterling Software, Inc. The subsidiaries do not have their own in-house counsel; legal advice is furnished through the parent's Office of General Counsel.[5] Thus, if Crowell & Moring is allowed to remain in the protest, it could very well find itself in the anomalous position of fighting Sterling Software, Inc.'s Office of General Counsel on matters related to the CAPES procurement, while assisting that same office on matters related to its other business with Sterling Software (U.S.A.).

Further, it is apparent that Sterling Software (U.S.) acts as a corporate "big sister" to Sterling Software (U.S.A.), a client of Crowell & Moring. The president of Sterling Software (U.S.) is on assignment to manage the transition and integration of Sterling Software (U.S.A.) into the Sterling Software corporate family. Sterling Software (U.S.) provides management support and other expertise to the conduct of Sterling Software (U.S.A.)'s business. The two subsidiaries are not isolated entities; they are in the same general business (providing goods and services to the Government) and there is considerable cross-fertilization of support and personnel.

As noted above, an employee of Sterling Software (U.S.) who participated with Recom in developing the proposal at issue in this protest has been directed to assist Sterling Software (U.S.A.) in obtaining Government business and managing its present Government contracts. Given Crowell & Moring's simultaneous representation of Sterling Software (U.S.A.) and ANSTEC, this person could very well be advised by Crowell & Moring (in its capacity as the lawyer for Sterling Software (U.S.A.)) and also be a hostile target of opportunity for Crowell & Moring (in its capacity as lawyer for ANSTEC).

The case of *Teradyne Inc. v. Hewlett-Packard Co.*, No. C-91-0344, 1991 WL 239949 (N.D. Cal. 1991) is instructive. There, a firm represented Teradyne against the Hewlett-Packard Co., in a patent infringement suit, while at the same time it represented Apollo Computer, a wholly-owned subsidiary of Hewlett-Packard, in trademark matters. The court disqualified the firm from representing Teradyne:

> The court finds that [Hewlett-Packard]'s control and supervision of the legal affairs of Apollo, and specifically its direct role in the retention and supervision of the work of Fish & Richardson as outside counsel, represents a significant identity of legal interest between Apollo and its parent [Hewlett-Packard]. This identity of interest is sufficient for a finding that the two should be treated as a single client for the limited purpose of determining whether there is a conflict between [the law firm's] representation of Apollo and its representation of Teradyne in the present action against [Hewlett-Packard]. See *Hartford Acc. and Indem. Co. v. RJR Nabisco, Inc.*, 721 F.Supp. at 540 (parent deemed client of subject law firm through representation of its subsidiary where parent supervised and directed course of litigation on behalf of subsidiary).
>
> . . . .
>
> The court finds that the disqualification standard for adverse simultaneous representation should apply to the facts of this case. The degree of connectedness between [Hewlett-Packard] and Apollo, particularly the fact that all of Apollo's legal work was referred to and handled by [Hewlett-Packard's] office of legal counsel, leads the court to conclude that although [Hewlett-Packard] and Apollo may be separate entities for some purposes, they are one client for the purposes of the conflict rules. [The law firm is] therefore disquali-

[5] Sterling Software (U.S.A.) retained Crowell & Moring by retainer letter dated October 4, 1993, signed by a legal administrator of Sterling Software (U.S.A.). Retainer Agreement. This appears to be a renewal of the firm's relationship with the client when the client was an independent entity called Systems Center. Declaration of Jeanette Meier (Oct. 14, 1993) ¶ 7; ANSTEC's Opposition to Recom's Motion to Disqualify, at 13. There is a question whether the legal administrator was authorized to sign this agreement in light of the particular terms and conditions in the retention letter. Crowell and Moring agrees those terms are irrelevant to the issue before the Board. Letter from Crowell & Moring to Board (Oct. 14, 1993.) What is not refuted by the retention letter is that the parent's (Sterling Software Inc.) Office of General Counsel is responsible for legal work for the subsidiaries.

fied from further representation of plaintiff Teradyne in this matter.

Id.[6] at *5-6.

ANSTEC points to *Pennwalt Corp. v. Plough, Inc.*, 85 F.R.D. 264 (D. Del. 1980) for the proposition that there is no *per se* disqualification of lawyers when simultaneously suing and representing "sister" corporations on unrelated matters. Rather, the relationship of the subsidiaries is to be examined. *Id.* at 272. The proposition is correctly stated. But there, the court noted that the law firm's withdrawal from one of the client relationships prevented a conflict sure to arise when: (1) the subsidiaries were placed in the same division of the parent; (2) the same chief executive officer of the division sat on the boards of both subsidiaries; and (3) legal work for the two subsidiaries was consolidated at headquarters. *Id.* In this case, variations on that theme are present. Here the parent provides common legal services to the subsidiaries with management personnel from Sterling Software (U.S.) guiding and directing the operations of sterling Software (U.S.A.).

Similar relationships have been found sufficiently close to warrant disqualification. In *Stratagem Development Corp. v. Heron International N.V.*, 756 F.Supp. 789 (S.D.N.Y. 1991), the court, applying Canon 5 of the New York Code of Professional Responsibility, disqualified a law firm. The firm represented a client suing a property developer for breach of a development agreement and represented a subsidiary of the same developer in an unrelated labor dispute. The court found that the duty of undivided loyalty to client, which Canon 5 promoted, extends when the client is a subsidiary of the entity to be sued. Thus the firm could not at the same time represent both a subsidiary and another party suing the parent of the subsidiary's parent. *Id.* at 792; *see also Glueck.*

Decision

Recom's motion to disqualify ANSTEC's present counsel, Crowell & Moring, is GRANTED. Crowell & Moring may, however, work with ANSTEC in securing new counsel and familiarizing new counsel with the proceedings to date. Upon application of counsel, the Board will entertain a motion to suspend proceedings for a period of no longer than five working days to allow these things to be done.

[¶ 26,495] Integrated Systems Group, Inc. v. Department of the Navy

GSBCA No. 12571-P, October 20, 1993.

Protests, GSBCA—Dismissal of Protest—Frivolousness.—A protest was dismissed as frivolous because the protester knew, prior to filing the protest, that the first count was false and knew also, after responding to the government's interrogatories, that the second count was false. The protester alleged that the government created an ambiguity in its solicitation by asking offerors to propose computers with standard connectors but, at the same time, specifying a nonstandard pin assignment for the connectors. However, the pin assignments contained in the solicitation were consistent with the standards established by the Electronic Industries Association and the Telecommunications Industry Association.

For the protester: Skolnick & Leishman, P.C., Derwood, Maryland, by Shelton H. Skolnick, Judy D. Leishman, and Amy M. Hall. For the government: Angela J. Cosentino, Naval Air Warfare Center, Indianapolis, Indiana, and Demetria Carter, Office of Counsel, Naval Supply Systems Command, Arlington, Virginia.

Before DANIELS, HENDLEY, and NEILL, Administrative Judges.

DANIELS, Administrative Judge: Integrated Systems Group, Inc. (ISG), protests that in conducting a procurement for handheld computers, the Department of the Navy's Naval Air Warfare Center in Indianapolis, Indiana (Navy), took two actions that interfered with full and open competition. First, ISG contends that the Navy created an ambiguity in its solicitation by asking offerors to propose computers with standard RS-232 connectors, but at the same time specifying a non-standard pin assignment for

[6] The asterisk refers to the Westlaw page designation as it appears in the Westlaw printout.

©1994, Commerce Clearing House, Inc.

Digitized by Google

the connectors. As a result, according to protester, prospective offerors could not understand what types of connectors the agency actually sought. Second, ISG maintains that the Navy prejudiced the competition by giving some vendors, but not all, special information that clarified the intent of certain specifications contained in the solicitation. A third count of protest was abandoned early in the protest proceedings.

ISG raised these allegations in a protest it filed with the contracting officer before initial proposals were due. The contracting officer denied that protest after proposals were received. ISG has timely raised the same grounds at the Board. Rule 5(b)(3)(iii) (41 CFR 6101.5(b)(3)(iii) (1992)).

We dismiss the protest as frivolous. ISG knew, prior to filing the protest, that the first count was false. Protester also knew or should have known, prior to responding to the Navy's interrogatories—at the very latest—that the second count was false. This is a case that should never have been presented to the Board for decision.

Findings of Fact

1. On June 18, 1993, the Navy issued the solicitation in question. The solicitation required that any computer offered in response to it had to meet numerous specifications, among which were restrictions on the kind of input/output port on the computer. The port had to be "full RS-232" and have a "standard 25 pin 'D'." Assignments for pins 2 through 8 were specified. Protest File, Exhibit 8 at 9th unnumbered page.

2. The pin assignments contained in the solicitation are consistent with standards for the RS-232 "interface between data terminal equipment and data communication equipment employing serial binary data interchange" established by the Electronic Industries Association/Telecommunications Industry Association. Protest File, Exhibits 11 at 8, 12 at 15. Upon reading the solicitation, ISG's senior associate who was responsible for the firm's response to the solicitation believed that a computer with an RS-232 interface with usual pin assignments would be acceptable to the Navy. Transcript at 148.

3. Under the industry standard for the RS-232 interface, pin 11 is unassigned. Protest File, Exhibits 11 at 8, 12 at 15. In amendment one to the solicitation, the Navy added assignments for seven pins that had not been mentioned in the original solicitation. One of these was pin 11, which was given a "DSR" (data set ready) function. *Id.*, Exhibit 8 at 3d unnumbered page.

4. The Navy electronics engineer who was responsible for writing the solicitation's specifications gave this explanation for the change: The computers being purchased under the solicitation are to be linked to optical scanners, which will in turn be used to make settings on sonobuoys (devices which, when placed in the ocean, acoustically detect submarines and radio information about them to aircraft). Transcript at 64-67. The settings may have to be made under adverse conditions, such as in a rainstorm on the deck of an aircraft carrier. *Id.* at 82, 121-22. After the solicitation had been issued, the engineer gave additional thought to the agency's requirements for the computers. He realized that the likelihood of successful operation of the computers/optical scanners would be enhanced if the number of places on the computer that are open to the elements were to be minimized. He therefore determined that each computer should have only a single interface with the scanner linked to it. Each scanner is designed to be linked to a peripheral device, as well as a computer. To convey through a single interface information from the computer to both the scanner and the peripheral device, functions would have to be assigned to pins on the computer's interface other than those originally mentioned. *Id.* at 79-83, 95-98.

5. ISG's senior associate was asked whether, after having read this amendment, he believed that a computer with an RS-232 interface with usual pin assignments would be acceptable to the Navy. His complete response was:

> No. I was chagrined to note that I could not, that it would not be acceptable, because they very clearly and properly, you know, specified what they needed.

Transcript at 188; *see also id.* at 149 ("to me that's a change"). The Navy engineer also understood that the amendment caused an RS-232 interface with an unassigned pin 11 to become unacceptable. *Id.* at 135-36.

6. ISG's senior associate specifically testified that his firm is not quarreling, through this protest, with the Navy's assessment of its needs. Transcript at 151 ("we don't seek here to dispute the government's desire or need to modify the standard"). Protester's posthearing brief, at 2, confirms this position: "Protester does not challenge the wisdom of the assignment of pin 11."

Digitized by Google

7. The Navy engineer testified that in his view, the assignment of pin 11 is not inconsistent with the words "full RS-232" in the original solicitation. He predicated his conclusion on this statement in the industry standard: "Pin assignments for circuits not specifically defined ... are to be made by mutual agreement. Preference should be given to the use of unassigned pins ...." Transcript at 83-86, 90-92, 105-10; Protest File, Exhibits 11 at 9, 12 at 15. ISG's senior associate believes that the assignment and the solicitation's words are inconsistent; he looked to the phrase at the end of the last-cited standard provision: "but in the event that additional pins are required extreme caution should be taken in their selection." Transcript at 177; Protest File, Exhibits 11 at 9, 12 at 15. In light of our resolution of the case, we need not decide who is right.

8. After the solicitation was issued, several prospective offerors contacted the contracting officer by phone and letter, asking questions about the document. The contracting officer responded to the questions in two ways. First, after consulting with the engineer who was responsible for writing the specifications, she issued amendment one. Transcript at 29-31; Protest File, Exhibit 8 at 1st-3d unnumbered pages. Second, she responded individually to the vendors who had contacted her, attempting to describe to each of them how the amendment's provisions did or did not respond to their concerns. Transcript at 29-31; Protest File, Exhibits 5E-5I. The contracting officer testified—and ISG does not contest her conclusion—that the letters conveyed no more information than is contained in the amendment. Transcript at 52-54.

9. Still later, but before the closing date for receipt of initial proposals, prospective offerors directed additional inquiries to the contracting officer. Transcript at 37-39, 54; Protest File, Exhibits 5C, 5D, 5J. One of these was a letter from Corvallis Micro Technology, Inc. (CMT), asking that the Navy modify specifications in various ways. This letter was dated August 18, less than a week before proposals were due. *Id.*, Exhibits 5J at 1st-2d unnumbered pages, 8 at 1st unnumbered page. The engineer who had written the specifications was on military reserve duty at the time; he would not return until the morning of the day on which proposals had to be submitted. Transcript at 69-70, 92-93. The contracting officer was not familiar with the technical issues raised. *Id.* at 37-38. She consequently turned for help to a Navy programmer, who admittedly did not understand the issues, either. *Id.*; Respondent's Exhibit 4. In an effort to be helpful to CMT, she responded in a tentative way, explaining that the engineer was absent and using phrases such as "[w]e do not have a definitive answer" and "would appear." Protest File, Exhibit 5J at 3d unnumbered page. The information provided to CMT was not given to any other prospective offerors. Transcript at 50. The contracting officer and the engineer now believe that much of the information in the letter is incorrect. *Id.* at 40, 42-43, 94-95.

10. On the day that proposals were due, CMT filed an agency protest regarding certain specifications. Protest File, Exhibit 5A at 1st unnumbered page. This protest was denied by the contracting officer two days later. *Id.* at 3d-4th unnumbered pages. The denial clearly states that CMT did not submit a proposal in response to the solicitation. *Id.* at 4th unnumbered page. CMT has not pursued its concerns at this Board.

11. In responding to interrogatories propounded by the Navy in the course of the instant case, ISG showed the agency that it had independently come into possession of the contracting officer's two letters to CMT which are referenced in Findings 8 and 9. Transcript at 157.

Discussion

The Brooks Act empowers the Board to dismiss a protest it determines is frivolous. 40 U.S.C. § 759(f)(4)(C) (1988). Where we find that the protester knew, before filing its complaint, that a protest ground is false, we dismiss the case pursuant to this authority. *Computer Sciences Corp. v. Department of the Air Force,* GSBCA 12299-P, 93-3 BCA ¶ 26,054, 1993 BPD ¶ 109 (Apr. 7, 1993), at 13. Taking the time of the Board and the affected agency to consider a frivolous allegation is an abuse of the protest process. It postpones the time when the agency can award a contract and receive the goods or services it needs, wastes scarce agency resources, and disrupts the business planning of the other competitors in the procurement.

In this case, ISG advances two grounds of protest. The first of these is that the Navy has represented its requirements for an interface in two ways which are inconsistent with each other: it has said that it needs a standard RS-232 interface, but has also stated specifications for the item which are not standard. Specifically, ISG alleges that amendment one's requirement that pin 11 of the interface be assigned a specific function

©1994, Commerce Clearing House, Inc.
Digitized by Google

conflicts with the original solicitation's demand that the interface be "full RS-232." *See* Transcript at 175. The ambiguity, according to ISG, inhibits full and open competition.

The testimony of ISG's senior associate who was responsible for the firm's response to the solicitation makes clear that this protest ground is false. By this gentleman's own admission, ISG understood immediately upon reading amendment one that an RS-232 interface with the usual assignment of pins (including a lack of assignment to pin 11) would no longer meet the Navy's requirements. Finding 5.

An "ambiguity" is "the condition of admitting of two or more meanings, or being understood in more than one way, or of referring to two or more things at the same time," or "uncertainty of meaning or significance of a position in relation to something or somebody else." *Webster's Third New International Dictionary* 66 (1986). ISG knew before it filed the protest that the solicitation's specifications regarding the interface were not ambiguous; to the contrary, they were plainly changed by amendment one from one intelligible requirement to another intelligible requirement. Whether the amendment was consistent with the solicitation's requirement that the interface be "full RS-232," as contended by the Navy, or represented a modification of that requirement, as suggested by ISG, is immaterial. *See* Finding 7. What matters is that ISG knew after receipt of the amendment exactly what it had to provide in order to be compliant with the agency's specifications. The first ground of protest is dismissed as frivolous.

We note that the protest complaint contains a subsidiary allegation regarding the RS-232 interface specification: any requirement for a non-standard interface is "unnecessary and unjustifiable and therefore in violation of statutes and regulations." ISG did not pursue this point during the development of the case, and at hearing, the firm's senior associate testified that protester is not challenging the Navy's explanation of why the agency needs an interface with pin 11 assigned. Finding 6.

ISG's second protest ground is that the Navy "failed to create a level playing field by failing to communicate to all interested parties clarifications ... orally and in writing." During discovery in this case, the Navy provided to counsel for ISG, under protective order, copies of correspondence that had been exchanged between the contracting officer and inquiring vendors, between the date that the solicitation was issued and the date on which proposals were due. *See* Board's Memorandum of Conference of Sept. 14, 1993; Findings 8, 9. ISG also had in its own possession copies of correspondence between the contracting officer and a prospective offeror, CMT. Finding 11.

At hearing, ISG was able to point in support of this allegation only to the correspondence involving CMT. *See* Finding 8. That correspondence makes clear that CMT did not submit a proposal in response to the solicitation. Finding 10. Thus, even if the information provided to CMT was highly important, the fact that it was given did not put ISG at a competitive disadvantage. As soon as ISG determined that the only foundation to the second protest ground was a letter to a firm that had chosen not to participate in the procurement, it should have abandoned this count. To have pursued the allegation through hearing was an unnecessary intrusion on the time of the Board and the agency. It caused the Navy to send counsel and two witnesses from Indianapolis to Washington to present testimony on what was clearly not a real issue.

Protester does not even address the allegation in its posthearing brief. Apparently, it has at last abandoned the count. By not informing the Navy that it would take this action, however, ISG has further wasted agency resources by causing agency counsel to spend her time addressing the allegation in her posthearing brief. *SMS Data Products Group, Inc. v. United States* [36 CCF ¶ 75,845], 900 F.2d 1553, 1557-58 (Fed. Cir. 1990).

ISG should have known prior to the hearing that this count was without basis. We dismiss this ground, like the first, as frivolous.

Decision

The protest is **DISMISSED AS FRIVOLOUS.** 40 U.S.C. § 759(f)(4)(C) (1988). Our order suspending the Navy's authority to proceed with the procurement lapses with the issuance of this decision. *Id.* § 759(f)(2).

[¶ 26,496] CBIS Federal, Inc. v. General Services Administration

GSBCA No. 12516-C(12461-P), October 18, 1993.

Protests, GSBCA—Costs of Protest and Attorney Fees—Stipulated Prevailing Party.—A protester's motion for costs was granted because the parties had stipulated that the protesters and intervenors were prevailing parties and that reasonable costs of filing and pursuing the protests should be awarded. Protests, including reasonable attorney fees, may be awarded to an appropriate interested party when an agency has violated a statute, regulation, or the conditions of a delegation of procurement authority. A prevailing party has been determined to be an appropriate interested party. The government did not dispute the reasonableness of the protester's costs, and the itemized expenses were found to be reasonable and well-documented regarding attorney fees and taxable costs.

For the protester: Susan Warshaw Ebner, and Petrillo & Hordell, Washington, D.C., by Joseph J. Petrillo, Michael A. Hordell, Eric L. Lipman, and Jessica C. Abrahams. For the government: Seth Binstock, Pamela J. Reiner, and Tenley A. Carp, Office of General Counsel, General Services Administration, Washington, D.C.

Before PARKER, HENDLEY, and HYATT, Administrative Judges.

PARKER, Administrative Judge: CBIS Federal Inc. (CBIS) protested the award of a contract to OAO Corporation (OAO) by the General Services Administration (GSA) for automatic data processing technical support services. The Board consolidated CBIS's protest with a protest previously filed by Computer Data Systems, Inc. A short time later, CTA Inc. and ARC Professional Services Group, Inc., intervened in the consolidated protests on the side of the protesters. On July 17, 1993, GSA terminated the contract with OAO for convenience as a result of GSA's admitted violations of law.

By order dated June 28, 1993, the Board dismissed the consolidated protests pursuant to a stipulation agreement filed by the parties. *Computer Data Systems, Inc. v. General Services Administration*, GSBCA 12455-P et al., 1993 BPD ¶ 179 (June 30, 1993). The Joint Stipulation of Dismissal provided in part:

> The Parties jointly stipulate that GSA evaluated the offers in a manner inconsistent with the evaluation criteria during the competition for the Contract and that this constitutes a violation of the Competition in Contracting Act. In addition, GSA stipulates that it (i) failed to conduct meaningful discussions with the offerors during the competition for the Contract; and (ii) provided information which reasonably led offerors to believe that if changes were made in their rates for skill categories included in the requirement, that such changes would improve the offeror's chances for award, while in actuality, the offeror's chances for award were negatively affected as a result of making such changes.

The parties also agreed in the stipulation that the protesters and intervenors were prevailing parties and that reasonable costs of filing and pursuing the protests should be awarded. CBIS now moves the Board to award those costs.

Under Rule 35 and 40 U.S.C. § 759(f)(5)(C) (1988), the Board may award protest costs, including reasonable attorney's fees, to an "appropriate interested party" when an agency has violated a statute, regulation, or the conditions of a delegation of procurement authority. An appropriate interested party has been defined as a "prevailing party" or "one that has succeeded on any significant issue in the litigation that achieves some of the benefit it sought in bringing suit." *Bedford Computer Corp.*, GSBCA 9837-C(9742-P), 89-2 BCA ¶ 21,827, at 109,811, 1989 BPD ¶ 121, at 3.

On July 30, 1992, CBIS filed its motion for payment of protests costs in the amount of $27,525.42. This amount represents $25,550.00 for outside attorney fees, $957.00 for in-house counsel costs, and $1,018.42 for other expenses. We agree that CBIS is an appropriate interested party entitled to recover its costs pursuant to Rule 35 and 40 U.S.C. § 759(f)(5)(C) (1988). Respondent does not dispute the reasonableness of protester's costs. We have examined the itemized expenses and find them to be reasonable and well documented as attorney fees and taxable costs.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Decision

Protester's motion is **GRANTED.** Protester is awarded $27,525.42, to be paid in accordance with statute, 31 U.S.C. § 1304 (1988).

[¶ 26,497] Computer Data Systems, Inc. v. General Services Administration

GSBCA No. 12515-C(12455-P), October 18, 1993.

Protests, GSBCA—Costs of Protest and Attorney Fees—Stipulated Prevailing Party.—A protester's motion for costs was granted because the parties had stipulated that the protesters and intervenors were prevailing parties and that reasonable costs of filing and pursuing the protests should be awarded. Protests, including reasonable attorney's fees, may be awarded to an appropriate interested party when an agency has violated a statute, regulation, or the conditions of a delegation of procurement authority. A prevailing party has been determined to be an appropriate interested party. The government did not dispute the reasonableness of the protester's costs, and the itemized expenses were found to be reasonable and well-documented regarding attorney fees and taxable costs.

For the protester: Mary Ann Mayhew and Charles B. Machion, and Morgan, Lewis & Bockius, Washington, D.C., by Marcia G. Madsen, Thomas F. Williamson, Brian W. Craver, and David F. Dowd. For the government: Seth Binstock, Pamela J. Reiner, and Tenley A. Carp, Office of General Counsel, General Services Administration, Washington, D.C.

Before PARKER, HENDLEY, and HYATT, Administrative Judges.

PARKER, Administrative Judge: On June 11, 1993, Computer Data Systems, Inc. (CDSI), protested the award of a contract to OAO Corporation (OAO) by the General Services Administration (GSA) for automatic data processing support services. CBIS Federal Inc. also filed a protest of the award and the Board consolidated the two protests. A short time later, CTA Inc. and ARC Professional Services Group, Inc., intervened on the side of the protesters. On July 17, 1993, GSA terminated the contract with OAO for convenience as a result of GSA's admitted violations of law.

By order dated June 28, 1993, the Board dismissed the consolidated protests pursuant to a stipulation agreement filed by the parties. *Computer Data Systems, Inc. v. General Services Administration*, GSBCA 12455-P et al., 1993 BPD ¶ 179 (June 30, 1993). The Joint Stipulation of Dismissal provided in part:

> The Parties jointly stipulate that GSA evaluated the offers in a manner inconsistent with the evaluation criteria during the competition for the Contract and that this constitutes a violation of the Competition in Contracting Act. In addition, GSA stipulates that it (i) failed to conduct meaningful discussions with the offerors during the competition for the Contract; and (ii) provided information which reasonably led offerors to believe that if changes were made in their rates for skill categories included in the requirement, that such changes would improve the offeror's chances for award, while in actuality, the offeror's chances for award were negatively affected as a result of making such changes.

The parties also agreed in the stipulation that the protesters and intervenors were prevailing parties and that protest costs should be awarded. CDSI now moves the Board to award those costs.

Under Rule 35 and 40 U.S.C. § 759(f)(5)(C) (1988), the Board may award protest costs, including reasonable attorney's fees, to an "appropriate interested party" when an agency has violated a statute, regulation, or the conditions of a delegation of procurement authority. An appropriate interested party has been defined as a "prevailing party" or "one that has succeeded on any significant issue in the litigation that achieves some of the benefit it sought in bringing suit." *Bedford Computer Corp.*, GSBCA 9837-C(9742-P), 89-2 BCA ¶ 21,827, at 109,811, 1989 BPD ¶ 121, at 3.

On July 30, 1993, CDSI moved for protest costs in the amount of $34,963.26. On September 12, 1993, CDSI filed a supplement to its motion which raised the total amount to $39,526.28. Of the total amount claimed,

Digitized by Google

$39,013.57 represents attorney fees and $512.71 represents other expenses. We agree that CDSI is an appropriate interested party entitled to recover its costs pursuant to Rule 35 and 40 U.S.C. § 759(f)(5)(C) (1988). Respondent does not dispute the reasonableness of protester's costs. We have examined the itemized expenses and find them to be reasonable and well documented as attorney fees and taxable costs.

Decision

Protester's motion is **GRANTED.** Protester is awarded $39,526.28, to be paid in accordance with statute, 31 U.S.C. § 1304 (1988).

[¶ 26,498] CTA, Incorporated v. General Services Administration

GSBCA No. 12511-C(12455-P), October 18, 1993.

Protests, GSBCA—Costs of Protest and Attorney Fees—Stipulated Prevailing Party.—A protester's motion for costs was granted because the parties had stipulated that the protesters and intervenors were prevailing parties and that reasonable costs of filing and pursuing the protests should be awarded. Protest costs, including reasonable attorney fees, may be awarded to an appropriate interested party when an agency has violated a statute, regulation, or the conditions of a delegation of procurement authority. A prevailing party has been determined to be an appropriate interested party. The government did not dispute the reasonableness of the protester's costs, and the itemized expenses were found to be reasonable and well-documented regarding attorney fees and taxable costs.

For the intervenor: Shea & Gardner, Washington, D.C., by I. Michael Greenberger and J. Bradford Weigmann. For the government: Seth Binstock, Pamela J. Reiner, and Tenley A. Carp, Office of General Counsel, General Services Administration, Washington, D.C.

Before PARKER, HENDLEY, and HYATT, Administrative Judges.

PARKER, Administrative Judge: Computer Data Systems, Inc., and CBIS Federal Inc. protested the award of a contract to OAO Corporation (OAO) by the General Services Administration (GSA) for automatic data processing technical support services. The protests were consolidated by the Board. On June 21, 1993, CTA Inc. (CTA) intervened in the consolidated protests on the side of the protesters. On July 17, 1993, GSA terminated the contract with OAO for convenience as a result of GSA's admitted violations of law.

By order dated June 28, 1993, the Board dismissed the consolidated protests pursuant to a stipulation agreement filed by the parties. *Computer Data Systems, Inc. v. General Services Administration,* GSBCA 12455-P et al., 1993 BPD ¶ 179 (June 30, 1993). The Joint Stipulation of Dismissal provided in part:

> The Parties jointly stipulate that GSA evaluated the offers in a manner inconsistent with the evaluation criteria during the competition for the Contract and that this constitutes a violation of the Competition in Contracting Act. In addition, GSA stipulates that it (i) failed to conduct meaningful discussions with the offerors during the competition for the Contract; and (ii) provided information which reasonably led offerors to believe that if changes were made in their rates for skill categories included in the requirement, that such changes would improve the offeror's chances for award, while in actuality, the offeror's chances for award were negatively affected as a result of making such changes.

The parties also agreed in the stipulation that intervenor CTA was a prevailing party and that reasonable costs of filing and pursuing the protest should be awarded. CTA now moves the Board for award of those costs.

Under Rule 35 and 40 U.S.C. § 759(f)(5)(C) (1988), the Board may award protest costs, including reasonable attorney's fees, to an "appropriate interested party" when an agency has violated a statute, regulation, or the conditions of a delegation of procurement authority. An appropriate interested party has been defined as a "prevailing party" or "one that has succeeded on any significant issue in the litigation that achieves some of the benefit it sought in bringing suit." *Bedford Computer Corp.,*

CTA Inc. moved for an award of its protest costs in the amount of $13,745.40. Of this total amount, $13,511.25 represents attorney fees and $234.15 represents other expenses. We agree that CTA, as an intervenor on the side of the protesters, is an appropriate interested party entitled to recover its costs. *See Computer Consoles, Inc.*, GSBCA 8450-C(8134-P), 86-3 BCA ¶ 19,069, 1986 BPD ¶ 103. Respondent does not dispute the reasonableness of CTA's costs. We have examined the itemized expenses and find them to be reasonable and well documented as attorney fees and taxable costs.

Decision

Protester's motion is GRANTED. Protester is awarded $13,745.40, to be paid in accordance with statute, 31 U.S.C. § 1304 (1988).

[¶ 26,499] Security Services, Inc. v. General Services Administration

GSBCA No. 12390-C(11052), October 25, 1993.

Attorney Fees and Costs Under Equal Access to Justice Act—Substantial Justification—Legal Support for Position.—The government's position that estoppel could not be used against the government was not substantially justified, because the controlling law was clear that the use of estoppel against the government was preserved under the facts of the case. In this case, the contracting officer issued a modification that increased the contractor's base year hourly price and costs to the government for the provision of guard services, in return for which the contractor agreed to pay its employees in accordance with two recently issued Department of Labor wage determinations that the modification made applicable to the contract. The government averred that the modification was in error and that it was not estopped from recovering funds it had paid to the contractor pursuant to the erroneous modification. However, the use of estoppel has been preserved against the government in cases when the representations made were within the scope of the agent's authority.

Attorney Fees and Costs Under Equal Access to Justice Act—Statutory Fee Rate—Cost of Living Adjustment.—Attorney fees that exceeded the statutory cap were reduced because there is no General Services Administration regulation that provides that an increase in the cost of living requires an award at a fee higher than the statutory cap. The contractor was a prevailing party, and the government did not prove that its position was substantially justified. However, the contractor submitted copies of billing statements for attorney fees for hourly rates that ranged from $125 per hour to $225 per hour. The Equal Access to Justice Act provides that attorney fees shall not be awarded in excess of $75 per hour unless the agency determines by regulation that an increase in the cost of living justifies a higher fee. The contractor made no attempt to argue that it was entitled to an increased hourly rate and did not even acknowledge that there is a statutory cap on fees.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Change of Counsel.—Services performed after a change of legal representation was allowed were compensable because the services performed were reasonable, and the substitution did not slow the appeal process and did not result in duplicative charges. The government contended that it should not be made to pay for the contractor's business decision to substitute counsel and that the change of legal representation resulted in duplicative charges. However, the board examined whether the substitution slowed the appeal process and whether fees associated with the substitution were reasonable.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Prelitigation Charges.—Although the government alleged that the contractor included litigation costs incurred prior to the beginning of the adversary adjudication, the charges were accepted, because the invoices were dated after the contracting officer's final decision was rendered. The beginning of the adversary adjudication is the date on which the contractor receives the contracting officer's final decision. The law firm's involvement came after the contracting officer's final decision. Moreover, the law firm's affidavit represented that the fees were related to the appeal.

Digitized by Google

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Other Litigation Charges.—A portion of the attorney fees sought by a contractor was disallowed because the fees were not related to the appeal but, rather, were related to an agency-level protest involving another solicitation. The Equal Access to Justice Act provides that attorney fees and other expenses may be awarded to the prevailing party, other than the government, in connection with the proceeding in which it prevailed. The attorney invoices showed that only a portion of the billed hours was spent on the appeal, and the invoices were not clear on how that time was apportioned between the protest and the appeal. In light of a Supreme Court instruction that an applicant should maintain billing time records in a manner that would enable a reviewing court to identify distinct claims, the charges where entries showed time spent on both the protest and the appeal were disallowed, because it was impossible to determine how the time was apportioned for each claim.

Attorney Fees and Costs Under Equal Access to Justice Act—Amount—Number of Hours.—The award of attorney fees was reduced because the board found that it did not require 17 hours to complete a one-page notice of appeal that did not include the details of the dispute or provide support for the arguments advanced. The Supreme Court has determined that hours that are excessive should be excluded from the fee request. Therefore, since the notice of appeal briefly described the nature of the dispute and the relief sought, the board allowed two hours of time, which it stated was generous given the brevity of the information required.

Attorney Fees and Costs Under Equal Access to Justice Act—Amount—Proportion of Successful to Unsuccessful Claims.—The fees claimed for opposing the government's motion to dismiss a claim for lack of jurisdiction were awarded because the contractor's efforts were successful. Although the contractor, through its prior counsel, attempted to get the contracting officer to rescind the final decision, it changed counsel, and the new counsel opposed the rescission of the final decision and the motion to dismiss. The Supreme Court has stated that the most critical factor in establishing a fee award is the degree of success achieved. The second counsel was successful inasmuch as the board denied the government's motion to dismiss, and therefore, the fees were allowed.

Attorney Fees and Costs Under Equal Access to Justice Act—Amount—Documentation.—Although the government contended that some of the entries by the contractor's attorney were too vague, the billing records were sufficient to support the award because they identified the task involved, the fee charges, and the attorney's billing rates. Billing records need to state the exact time spent on the case, by whom, that person's status, and the usual billing rates. The brevity of the entries was not troubling to the board, because there was enough information in each of the entries to determine the reasonableness of the fee.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Expenses.—Expenses incurred for secretarial work were not allowed, because there was no indication of why the time was necessary or how it was spent, of the billing rate of the secretaries involved, or whether the charges were for overtime or for temporary help to assist with the appeal. Not only were the invoices not specific enough, but secretarial costs are normally office overhead expenses and should be absorbed in the attorney fees charged to clients unless the demands of the case require supplemental charges.

For the appellant: Kinosky & Associates, Arlington, Virginia, by Barbara S. Kinosky. For the government: Sharon Roach, Office of General Counsel, General Services Administration, Washington, D.C.

Before LABELLA, BORWICK, and NEILL, Administrative Judges.

LABELLA, Administrative Judge: Security Services, Inc. (SSI or applicant), has filed an application for attorney fees and expenses pursuant to the Equal Access to Justice Act (EAJA), 5 U.S.C. § 504 (1988), incurred in its appeal of the General Services Administration's (GSA's or Government's) decision to withhold monies owing under contract GS-05P-86-GAC-0054 from final payment due to an alleged overpayment. We ruled in a decision dated November 10, 1992, that SSI was entitled to these withheld funds.

©1994, Commerce Clearing House, Inc.

Digitized by Google

The Government does not dispute SSI's status as a prevailing party or its eligibility to recover EAJA costs. However, GSA contends that its actions were substantially justified and disputes the quantum claimed. We find that GSA's position in withholding the funds and defending the ensuing litigation was not substantially justified and that SSI is eligible for an award of attorney fees and expenses under EAJA. The application is granted in the amount of $21,107.76.

Background

The events leading to GSA's decision to withhold monies owing to SSI from its contract to provide professional armed guard services at four Government facilities in Illinois are listed in the Board's decision in *Security Services, Inc. v. General Services Administration,* GSBCA 11052, 93-2 BCA ¶ 25,667 (1992). They are briefly summarized below.

SSI was awarded a contract to provide armed guard services. The contract contained two wage determinations from the Department of Labor (DOL) which established the minimum wage at which SSI could compensate its work force. Eight months into the first contract period, the contracting officer issued modification nine to the contract which increased SSI's base year hourly price and cost to the Government for the provision of guard services. In return, SSI agreed to pay its employees in accordance with two recently issued DOL wage determinations which the modification made applicable to the contract. Subsequently, GSA decided that SSI had been overpaid as a result of modification nine and later modifications based on the rates contained therein.

In its decision granting SSI's appeal, the Board found that the modification was a valid exercise of the contracting officer's authority supported by consideration. GSA argued that the modification was in error because the contract provided for such a modification to occur upon the exercise of the option period and it occurred prior to the option period. In making this argument, GSA argued that it was not estopped from recovering the funds and relied on the Supreme Court's decision in *Office of Personnel Management v. Richmond,* 496 U.S. 414 (1990) (hereinafter *OPM*), which limited the instances in which estoppel is available against the Government. However, the Board stated that *OPM* was inapplicable and that *Broad Avenue Laundry and Tailoring v. United States* [30 CCF ¶ 70,003], 681 F.2d 746 (Ct. Cl. 1982), was controlling. In *Broad Avenue,* the court ruled that the Government was estopped from denying the validity of a contract modification prematurely incorporating a new wage determination because the mistake was within the contracting officer's area of actual authority. GSA argued that *Broad Avenue's* vitality after *OPM* was in question and, thus, its position was substantially justified.

Discussion

Substantial justification

The EAJA provides that a prevailing party under an adjudication conducted by the Government is entitled to an award of attorney fees and expenses unless the Government's position is substantially justified or special circumstances make an award unjust. 5 U.S.C. § 504(a)(1) (1988). The Government has the burden of proving that its litigation position and the agency actions or omissions that formed the basis of the adjudication were substantially justified. *Schuenemeyer v. United States,* 776 F.2d 329, 330 (Fed. Cir. 1985); *Warwick Holding Co.,* GSBCA 8459-C(5070) et al., 88-3 BCA ¶ 21,114, at 106,590. Substantial justification has been interpreted to mean "justified in substance or in the main—that is, justified to a degree that could satisfy a reasonable person." *Pierce v. Underwood,* 487 U.S. 552, 565 (1988).

In determining whether the Government's position was substantially justified, we do not end our inquiry with the fact that the Government lost the case. Instead, the test is whether the Government's position was reasonable in light of the law and the facts. *Gavette v. Office of Personnel Management,* 808 F.2d 1456, 1467 (Fed. Cir. 1986) (en banc).

GSA contends that its position in recovering an overpayment to SSI was due to a contracting officer's mistake and was substantially justified because the estoppel issue was unclear. In its opposition to the application, GSA asserts that in the wake of *OPM,* it was not clear whether estoppel could be used against the Government. GSA points to the Board's decision in *Turner Construction Co. v. GSA,* GSBCA 11361, 92-3 BCA ¶ 25,115, which questioned the vitality of *Broad Avenue* and the dissent in *Security Services, Inc.,* as evidence that the issue was unsettled. Thus, GSA argues, this uncertainty in the state of the law substantially justified its decision to recover the overpayment and to oppose SSI's appeal of that action.

Digitized by Google

SSI disputes GSA's argument that the law concerning using estoppel against the Government was unsettled. SSI contends that the law was clear and that modification nine was a valid exercise of the contracting officer's authority which was supported by consideration. SSI asserts that GSA's decision to recover the overpayment was not legally sufficient to constitute substantial justification.

After reviewing the arguments pertinent to the Government's position, we cannot find that its actions were substantially justified. Our appellate authority instructs us that "[t]he Government must show that it has not 'persisted in pressing a tenuous factual or legal position, albeit one not wholly without foundation.' It is not sufficient for the Government to show merely 'the existence of a colorable legal basis for the government's case.' " *Gavette,* 808 F.2d at 1467 (quoting *Gava v. United States,* 699 F.2d 1367, 1375 (Fed. Cir. 1983)).

In making its arguments, GSA has advanced a tenuous position on the use of estoppel against the Government. The Government reasons that the issue was unclear because the Federal Circuit in *JANA Inc. v. United States,* 936 F.2d 1265 (Fed. Cir. 1991), the Board in *Turner Construction,* and the dissent in *Security Services, Inc.,* questioned whether estoppel could be used against the Government. The fact that the Government may have succeeded in convincing another tribunal that its position is correct does not mean that it was substantially justified in advancing that position in this appeal. "[T]he fact that one other court agreed or disagreed with the Government does not establish whether its position was substantially justified." *Pierce,* 487 U.S. at 569; *see also Community Heating & Plumbing Co., Inc. v. Garrett,* No. 92-1362 (Fed. Cir. Aug. 20, 1993); *Schuenemeyer,* 776 F.2d at 331 (Government's position is not substantially justified merely because it prevailed before a lower tribunal).

Furthermore, while the clarity of the controlling law is one factor to examine when deciding the issue of substantial justification, *see Drillers, Inc.,* EBCA 451-10-90(E), 91-3 BCA ¶ 24,197, at 121,023, the controlling law in this case was clear. As the majority stated, the Supreme Court in *OPM* specifically preserved the use of estoppel against the Government in cases where the representations made were within the scope of the agent's authority. *See Security Services, Inc.,* 93-2 BCA at 127,687. This was the basis for the *Broad Avenue* decision and those principles controlled the outcome. Thus, even after *OPM,* the issue of estoppel against the Government was settled. GSA has not established that its position was substantially justified. Therefore, SSI is entitled to an award of reasonable fees and expenses.

Hourly rate

In support of its EAJA application, SSI submitted copies of billing statements for attorney fees which total $54,001.75. Keck, Mahin & Cate (Keck, Mahin) requested fees of $20,981.75 and Kinosky & Associates requested fees of $33,020. The fee request consists of 109.50 hours of attorney time by Keck, Mahin; 6.10 hours of paralegal time by Keck, Mahin; and approximately 177.50 hours by Kinosky & Associates. The application covers the period of October, 1990, through July, 1993. The attorney fees listed are based on hourly rates that range from $125 per hour to $225 per hour. The paralegal fees are based on hourly rates of $50 to $55 per hour.

The Government has requested the Board to reduce the attorney fees because they exceed the statutory cap. The EAJA provides that

> attorney or agent fees shall not be awarded in excess of $75 per hour unless the agency determines by regulation that an increase in the cost of living or a special factor, such as the limited availability of qualified attorneys or agents for the proceeding involved, justifies a higher fee.

5 U.S.C. § 504(b)(1)(A) (1988). We have stated that there is no GSA regulation which provides that an increase in the cost of living requires an award at a fee higher than the statutory cap. *Marty's Maid and Janitorial Service v. General Services Administration,* GSBCA 11980-C(10614) et al., 93-2 BCA ¶ 25,713, at 127,926.

SSI has made no attempt to argue that it is entitled to an increased hourly rate and, as the Government has correctly noted, has not even acknowledged that there is a statutory cap on fees. Furthermore, SSI has not broken down the claim to show exactly how many hours were staffed by each of its attorneys and by paralegals on the appeal. Counsel for applicant should have made a more diligent effort to conform to the requirements of the EAJA or at least make it appear that it completely read the statutory requirements. Accordingly, SSI is only entitled to reimbursement of discernible attorney time at the statutory rate of $75 per hour.

Change of counsel during the proceedings

During the course of the appeal process, SSI changed legal counsel from Keck, Mahin to Kinosky & Associates. The Government argues that SSI's change of legal representation resulted in duplicative charges and that it should not be made to pay for SSI's business decision to substitute counsel. The Board does not accept the Government's argument, and instead will examine whether the substitution slowed the appeal process and whether fees associated with the substitution are reasonable. *See, e.g., White Buffalo Construction Co.,* IBCA 2918-F, et al., 91-3 BCA ¶ 24,221. The Government has not offered, and we do not find, any evidence that the fees were duplicative. Moreover, there is no indication that applicant changed counsel in order to delay the proceedings or abuse the judicial process in any way. The Board finds that the services performed by Kinosky & Associates after the change in counsel were reasonable, especially in light of the results achieved. However, we reduce a portion of the fees on other grounds.

The Government has advanced several arguments concerning the propriety of entries made by both Keck, Mahin and Kinosky & Associates. We will deal with these arguments as they relate to each firm.

Keck, Mahin

Keck, Mahin submitted invoices covering the period of October, 1990, through September, 1991. Pursuant to the EAJA, SSI cannot recover any litigation costs incurred prior to the beginning of the adversary adjudication. We have held that the beginning of the adversary adjudication is the date on which the applicant received the contracting officer's final decision. *Tele-Sentry Security, Inc. v. General Services Administration,* GSBCA 11639-C(7703), 93-2 BCA ¶ 25,816, at 128,530. In this appeal, the contracting officer's final decision was rendered on October 9, 1990. Keck, Mahin's involvement began after the contracting officer's final decision and a fair amount of the charges incurred involved actions which are appropriate to the appeal process. With regard to these entries, we will accept these charges based on the representations made in Keck, Mahin's affidavit that the fees were related to the appeal. However, we disallow some charges incurred by Keck, Mahin for the reasons discussed below.

The Government argues that a portion of the fees incurred by Keck, Mahin were not related to the appeal, but rather were related to an agency level protest involving another solicitation. SSI does not dispute this contention. The EAJA provides that "[a]n agency that conducts an adversary adjudication shall award, to a prevailing party other than the United States, fees and other expenses incurred by that party in connection with that proceeding. ..." 5 U.S.C. § 504(a) (1988). The proceeding underlying this fee application is the appeal of the Government's decision to withhold money due to an alleged overpayment, not the protest of an unrelated solicitation.

Keck, Mahin's invoices reveal that 25.30 hours were, either partially or wholly, spent on the protest. The hours at issue can be broken down as follows: 17.6 hours appear on invoice 94814 for October, 1990; 6 hours appear on invoice 108016 for November, 1990; 1.7 hours appear on invoice 102564 for December, 1990. On those occasions where Keck, Mahin only spent a portion of its billed hours on the protest, the invoices are not clear on how that time was apportioned between the protest and the appeal. The Supreme Court instructs us that the applicant "should maintain billing time records in a manner which will enable a reviewing court to identify distinct claims." *Hensley v. Eckerhart,* 461 U.S. 424, 437 (1983). It is impossible to determine how the time was apportioned for each claim from Keck, Mahin's invoices. We will disallow all the charges where entries show time spent on both the protest and appeal. Thus, we deduct 25.30 hours from the award for Keck, Mahin's fees.

The Supreme Court has determined that hours which are excessive should be excluded from the fee request. *Hensley,* 461 U.S. at 434. The Government argues that applicant's counsel expended excessive effort on the appeal and raises two examples with reference to Keck, Mahin's charges. We agree with the Government's objections to Keck, Mahin's hours and add one of our own.

GSA contends that the time spent on the notice of appeal was excessive. Keck, Mahin's invoices show that 17.55 hours were, partially or wholly, spent researching, drafting, reviewing, and revising the notice of appeal. Several of the entries associated with the notice of appeal even postdated the filing of the notice with the Board. The work occurred over a period of two months; eight hours appear on invoice 108016 for November, 1990, and 9.55 hours appear on invoice 107060 for January, 1990. Some of the entries involved show that Keck,

Digitized by Google

Mahin's time was spent on several tasks. As with their entries involving the unrelated protest, counsel did not apportion the time between each task. Because it is impossible to determine how the time was apportioned and whether the charges are reasonable, we will assume all 17.55 hours were spent on the notice of appeal.

The notice of appeal is a one page document which states that the appellant is appealing a final decision, and briefly describes the nature of the dispute and the relief sought. The notice does not require the details of the dispute or provide support for the arguments advanced. There is no reason why three attorneys spent over seventeen hours to complete this document. We will only allow two hours of this time and that amount is generous given the brevity of the information required.

The Government contends that three attorneys from Keck, Mahin spent over fourteen hours researching and drafting a letter to the contracting officer concerning the agency level protest and the contracting officer's final decision. We have already deducted a portion of this time from the award because it was spent on the unrelated protest, not the appeal, and are left with 5.20 hours spent on the letter. Our examination of Keck, Mahin's records show that 2.5 hours appear on invoice 94814 for October, 1990, and 2.5 appear on invoice 108016 for November, 1990. Approximately half of the letter referred to the protest and the remainder was an attempt by SSI to have the contracting officer rescind the October 9, 1990, final decision.

The contracting officer ultimately did rescind the October 9 decision, and the Government moved to dismiss the case for lack of jurisdiction on that basis. However, in the meantime, SSI changed counsel and its new counsel, Kinosky & Associates, opposed the rescission of the final decision and the motion to dismiss. Kinosky & Associates was successful in its efforts, and we denied the motion to dismiss. The Supreme Court has stated that the most critical factor in establishing a fee award is the degree of success achieved. *Hensley,* 461 U.S. at 436. As to the hours spent on this letter, Keck, Mahin was entirely unsuccessful and these hours will be deducted from the fee award.

Keck, Mahin's invoices reveal that on October 23, 1990, 3.70 hours were spent researching applicable law and reviewing files. While the Government did not specifically object to this entry, we find that given Keck, Mahin's practice of bundling its charges for both matters, it is unclear whether this time was spent on the appeal or on the protest. Because we cannot identify the specific claim involved, we will deduct 3.70 hours from the fee award.

Keck, Mahin billed SSI for 6.10 hours of paralegal time. One hour of this time was billed at $55 per hour and the remainder was billed at $50 per hour. The paralegal's time was spent on the appeal and the Government has not objected to the hours. Paralegal fees can be recovered through an EAJA application. *See Spectrum Leasing Corp. v. General Services Administration,* GSBCA 10902-C(7347) et al., 93-1 BCA ¶ 25,317 (1992), at 126,513. We award SSI $310 for paralegal time.

Kinosky & Associates

Kinosky & Associates began representing SSI in August, 1991. An examination of its billing statements does not indicate that Kinosky & Associates represented SSI on any matters other than the appeal. With regard to these entries, we will accept these charges based on the representations made in Kinosky & Associates's affidavit that the fees were related to the appeal. However, we disallow some charges incurred by Kinosky & Associates for the reasons discussed below.

The Government objects to some of the charges incurred by Kinosky & Associates, alleging that the time spent was excessive. GSA argues that it is unreasonable for Kinosky & Associates to have spent thirty-one hours on its response to the motion to dismiss. The Government did not raise any specific objections as to the unreasonableness of the time spent on the motion, but only alleged that the response did not address the jurisdictional issue it raised. Because the Government has not articulated any specific objections to the time, we deny the Government's request to reduce the fee award.

The Government argues that Kinosky & Associates spent seventy-seven hours on the summary judgment motions and that this amount of time was excessive. It contends that the factual portion of SSI's motion was taken from earlier pleadings; the legal discussion was composed of lengthy recitations from cases; and that SSI failed to mention *OPM* or *Turner Construction.* The fact that counsel took the facts from an earlier pleading and quoted cases is not troublesome. Counsel still had to analyze the materials she did cite. Furthermore, there was no need to refer to *OPM* or *Turner Construction* when neither of those cases supplied the

©1994, Commerce Clearing House, Inc.

Digitized by Google

controlling law. Therefore, we deny the Government's request to reduce the fee award.

The Government argues that some of the entries by Kinosky & Associates are too vague upon which to base an award. Our appellate authority instructs us that billing records need to consist of the "exact time spent on the case, by whom, their status and usual billing rates. ..." *Naporano Iron and Metal Co. v. United States,* 825 F.2d 403, 404 (Fed. Cir. 1987). Kinosky & Associates has identified the task involved; the fee charges; and the attorney's billing rate in her billing statements. Where this is the case, the exact hours worked by the attorney can be computed. As we stated in *Spectrum Leasing Corp.,* "we are not troubled by the brevity of some of these entries." 93-1 BCA at 126,148. There is enough information in each of the entries to determine the reasonableness of the fee. Thus, we need not reduce the fee on this ground.

While the majority of Kinosky & Associates's billing entries satisfy the specificity requirements, we are troubled by two entries made in September, 1991, and January, 1992. The invoices show that a total of $2,157.50 was billed by Stephen Mims. While there is a notation which shows that a portion of this charge was for time spent on the Lexis on-line research system, it is unclear how much of the charge should be allocated to Lexis fees and how much to the attorney's. Furthermore, the billing entries do not indicate Mr. Mims' hourly rate or the exact hours spent on the project. Because of this dearth of information, we are unable to determine the reasonableness of the charge and disallow the entire $2,157.50 from SSI's fee award.

SSI requested a total of $54,001.75 in attorney and paralegal fees. In making our award, we have disregarded all fees incurred by Stephen Mims and have reduced the award to the EAJA's statutory ceiling. Accordingly, we find that SSI is entitled to attorney fees for 237.25 hours at the statutory rate of $75 per hour, for a total of $17,793.75, and $310 in paralegal fees.

Expenses

SSI seeks a total of $5,940.95 in disbursements: $921.84 incurred by Keck, Mahin and $5,019.11 incurred by Kinosky & Associates. While the Government has not raised any specific objections to the costs included in the fee application, we have independently examined the entries. Our appellate authority has instructed that we may award "those reasonable and necessary expenses of an attorney incurred or paid in preparation for trial of the specific case before the court, which expenses are those customarily charged to the client where the case was tried." *Oliveira v. United States,* 827 F.2d 735, 744 (Fed. Cir. 1987). In making our award, we are to use our discretion to determine whether an expense may be recovered. *Id.*

Examples of expenses which are recoverable include photocopying; printing and binding of briefs; telephone, postal, and overnight delivery charges; and computer-assisted research. *See American Power, Inc.,* GSBCA 10558-C(8752), 91-2 BCA ¶ 23,766. The majority of the costs sought by SSI fall within one of those categories and will be allowed. However, some expenses fall outside those categories and will be disallowed for the reasons stated below.

Kinosky & Associates included secretarial charges of $2,637.50 among the expenses charged to SSI. There is no indication of why this time was necessary or how it was spent; the billing rate of the secretary or secretaries involved; or whether the charges were for overtime or for temporary help to assist with the appeal. We totally disallow these charges. We have reached this decision not only because the invoices are not specific enough to determine the need and reasonableness of the expenses, but because secretarial costs are normally office overhead expenses and should be absorbed in the attorney fees charged to clients unless the demands of the case require supplemental services. That does not appear to be the situation here.

Kinosky & Associates also included a disbursement of $299.44 under the heading "Legal Research" in its billing invoice for October, 1991. There is no indication that this research pertained to the appeal; that it was a fee for computer-assisted research; or that Ms. Kinosky conducted any legal research during October, 1991. The billing statement must provide enough detail for us to judge the reasonableness of the expense involved. *See Naporano Iron and Metal Co.,* 825 F.2d at 404. We will disallow expenses if an applicant does not explain how they relate to the litigation. *See, e.g., Universal Development Corp. v. General Services Administration,* GSBCA 12174-C(11251), 93-2 BCA ¶ 25,836; *American Power Inc.,* GSBCA 10558-C(8752), 91-2 BCA ¶ 23,766. Kinosky & Associates has not provided us with any detail on this expense or how it relates to the appeal, and we disallow the $299.44 claimed.

Digitized by Google

We find that all $921.84 of the expenses incurred by Keck, Mahin are allowable and $2,082.17 of the expenses incurred by Kinosky & Associates are allowable. The total sum awarded to SSI for expenses is $3,004.01.

Decision

SSI's application under the EAJA for attorney fees and costs is **GRANTED IN PART.** We award SSI $17,793.75 in attorney fees; $310 in paralegal fees; and $3,004.01 in expenses, for a total of $21,107.76.

NEILL, Board Judge, dissenting.

I find myself unable to concur in the opinion of the majority because I believe that GSA has demonstrated that its position in this case was substantially justified. The majority concludes that GSA's concern over the possible unavailability of an estoppel argument to appellant in the wake of *OPM* was without justification. My colleagues reach this conclusion by relying upon language in the *OPM* decision which specifically preserved the use of estoppel against the Government in cases where the representations made were within the scope of the agent's authority.

This provision in the *OPM* decision is clear enough. The only difficulty in relying upon it here is that the record was never sufficiently developed to support a conclusion that the exception is applicable to the facts in this case. Indeed, as I pointed out in my dissent to the majority's decision granting appellant's motion for summary relief, the conclusion which should have been reached on this issue was that the exception preserved in *OPM* was *not* available.

I dissented from the majority's decision granting appellant's motion for summary relief precisely because I considered the issue of whether there was adequate consideration for the price adjustment made in modification nine as clearly material to the case and unquestionably in dispute. Because the case had been presented to us to decide on motion for summary relief, I considered that the Board was obliged to draw an inference on this issue which was adverse to appellant, as the movant. In short, I believed that, for purposes of deciding this motion, we should have assumed that the consideration was inadequate. Presumably, this would have rendered the contracting officer's action outside the scope of his authority. Thus, for purposes of deciding the motion for summary relief, the exception preserved by *OPM* would have been inapplicable to the facts in this case. Unfortunately, the majority drew the opposite inference and thereupon promptly concluded that the exception was available.

In deciding this case, the majority seized upon the exception language of the *OPM* decision to lever conveniently its way out of the perplexing issue of whether an estoppel argument could still be used against the Government in the wake of *OPM*. Given GSA's theory of the case, this exception was inapplicable. The agency was left, therefore, to wrestle with the question raised by the *OPM* decision. It is no secret that the *OPM* decision raised a serious question regarding the future use of estoppel by contractor claimants and received considerable attention, at the time, among those working in the public contracts arena.

If GSA acted reasonably in concluding that modification nine was outside the scope of the contracting officer's authority, then clearly its reluctance, at the time, to concede to appellant was substantially justified. Unfortunately we will never know the particulars of GSA's case on this issue. The Board drew its own inference on the issue of consideration without ever affording GSA an opportunity to present evidence and argument on it. Under these circumstances, the benefit of the doubt should go to GSA and appellant's cost application should be denied. The Board, in granting appellant's motion for summary relief, has dealt unjustly with GSA. The injustice is only compounded by now granting appellant's application for costs.

In short, the scope and application of *OPM* was not a foregone conclusion at the time GSA litigated this case. Absent clear-cut facts and applicable law, it is inappropriate to conclude that the Government's position was not substantially justified. In granting the present motion, the majority dispenses with the threshold test under EAJA. For this reason, I respectfully dissent.

[¶ 26,500] State Street Management Corporation v. General Services Administration

GSBCA No. 12374, October 22, 1993.

Modifications—Authority of Government Agents—Estoppel Against the Government.—The government was not estopped from taking a credit pursuant to contractually provided guidelines, because the government employee who allegedly promised to modify the contract was not the contracting officer and the statement was not in writing. A lease contract required the contractor to provide interior doors in the leased space in the ratio of one door for each 100 square feet of space. The lease also provided that if the government ultimately ordered more or fewer doors than projected, payment would be adjusted accordingly. The contractor failed to establish that the government made a binding offer and that the government could reasonably foresee that it would induce reliance by the contractor.

For the appellant: David D. Terry. For the government: John C. Ringhausen and Diana M. Parks, Office of Regional Counsel, General Services Administration, Atlanta, Georgia.

Before DANIELS and DEGRAFF, Administrative Judges.

DANIELS, Administrative Judge: A lease contract between State Street Management Corporation (State Street), the lessor and the appellant here, and the General Services Administration (GSA), the lessee and respondent, required State Street to provide interior doors in the space in question. The lease established a ratio of one door for each one hundred square feet of space, and said that if GSA ultimately ordered more or less doors than projected, payment would be adjusted accordingly. State Street maintains that GSA promised to alter the ratio to the lessor's benefit and must be estopped from taking a credit pursuant to the stated ratio.

The amount in dispute is less than $50,000. State Street was therefore permitted to elect that the case be considered under our accelerated procedure. Rule 14. It did so. Consequently, the decision is being rendered by a panel of two judges and within 180 days of the date of election. The parties also asked that the case be decided on the basis of a written record, without benefit of a hearing. Rule 11.

We hold that the assertion of estoppel is unsupported for several reasons: GSA never made a promise of sufficient specificity that reliance on what was said would have been reasonable; the promise (such as it was) was made by an individual who had no authority to bind the Government, and it was never reduced to writing; and no proof of reliance has been established. We consequently deny the appeal.

Findings of Fact

1. On October 5, 1989, GSA awarded to State Street [1] a twenty-year lease for space[2] in a building to be constructed in Raleigh, North Carolina. Appeal File, Exhibits 1, 2. The building was to house a military entrance processing station. *Id.*, Exhibits 3, 4. The lease incorporated the provisions of a Solicitation for Offers (SFO) which GSA had issued and to which State Street had responded. *Id.*, Exhibit 1 at 2.

2. A key provision of the lease, with regard to this dispute, is paragraph 20 of the SFO, "Unit Costs for Adjustments." This paragraph states:

> Several paragraphs in this SFO specify means for determining quantities of materials. These are Government projections to assist the offeror in cost estimating. Actual quantities may not be determined until after the lease is awarded and the space layout completed. To enable an equitable settlement if the Government layout departs from the projection, the offeror must list a unit cost for each of these [following] materials. GSA

[1] The name of the entity to which the contract was awarded is State Street Corporation. Virtually all of the documentation in the record is also from State Street Corporation. Whether there is any distinction between State Street Corporation and the appellant, State Street Management Corporation, is not known to us and is ignored by the parties. In this opinion, we use the name "State Street" to refer to both entities.

[2] The lease originally was for 23,989 net usable square feet of space. Appeal File, Exhibit 1 at 1. The document was later amended, in accordance with mutual measurement, to reflect an increase in net usable square feet to 25,550; the parties agreed, however, that rental should be based on a figure of 24,500 net usable square feet. *Id.* at Suppl. Lease Agreement 2.

Digitized by Google

will use each unit cost to make a lump sum payment or rental increase if the amount of material required by the layout is more than specified or take credit from rental if the amount is less than specified.

Appeal File, Exhibit 1 at page 7 of SFO.

3. Among the items for which a unit price was required by this paragraph was interior doors. Appeal File, Exhibit 1 at page 8 of SFO. The contract price for this item is $370 per door. *Id.* at 4. The lease states that interior doors "will be provided at a ratio of one door per 100 square feet of space provided." *Id.* at page 16 of SFO. At no time prior to award of the contract was the ratio of doors to space ever discussed by the parties. Declaration of Brenda S. Murray (July 15, 1993) (Murray Declaration) ¶ 7 (uncontested in "Appellant's Rebuttal Documentation" (Aug. 2, 1993)).

4. In late 1990 or early 1991—more than a year after contract award—State Street first mentioned the ratio as a problem. The firm told GSA's Brenda Murray that its construction contractor had based its bid to State Street on the assumption that the Government would order one door for each 250 square feet of space. State Street asked that GSA alter the lease ratio. Murray Declaration ¶ 8, 9 (uncontested in "Appellant's Rebuttal Documentation" (Aug. 2, 1993)). Ms. Murray was a realty specialist at the time; she was not promoted to contracting officer until January 27, 1992. *Id.* ¶ 12.

5. On March 18, 1991, the contracting officer told State Street that "GSA would look at the ratio." Declaration of A. Fred Creighton, Jr., contracting officer (July 16, 1993) ¶ 6, 7 (uncontested in "Appellant's Rebuttal Documentation" (Aug. 2, 1993)). According to GSA, the contracting officer "considered the ratio to be high and requested that Ms. Murray advise [State Street] that GSA would amend the ratio, if possible. Ms. Murray verbally advised [State Street] of this in a telephone conversation." Respondent's Brief at 2. The State Street representative who received the phone call has sworn that Ms. Murray told him "that the lease provision relating to the Unit Cost Item, Interior Doors, would be reduced." Affidavit of David D. Terry (July 13, 1993). More specifically, State Street maintains in an answer to an interrogatory posed by GSA, "Ms. Murray gave the verbal assurances to [State Street], during telephone conversations only, that GSA would grant the same relief that was granted on State Street's Jackson project." Appellant's Answer to Interrogatory 11.

6. On April 5, 1991, State Street wrote to Ms. Murray, "As we discussed on the phone, the number of doors required in the SFO is unrealistical[ly] high. Our [construction] contractor used 1 per 250 square feet for his estimating purposes, but any relief you can give on this matter [would] be greatly appreciated." Appeal File, Exhibit 5.

7. At approximately the same time that the subject lease was agreed to, GSA awarded to State Street (or an affiliate thereof) a lease for space in a building in Jackson, Mississippi. Like the subject lease, the Jackson lease contains a requirement that the lessor provide one interior door for every 100 square feet of space. Under the Jackson lease, GSA actually paid for interior doors at the ratio of one per 200 square feet of space. Respondent's Response to Request for Admissions 3, 4. GSA also awarded to State Street (or an affiliate thereof), during this period of time, a lease for space in a building in Memphis, Tennessee. The ratio of interior doors to space in the Memphis building was one per 300 square feet. *Id.* at 6; Appeal File, Exhibit 7 at 11th unnumbered page. *See, Generally,* Respondent's Brief at 4.

8. On August 8, 1991, State Street renewed its request that the ratio be changed for the subject lease. The letter says, "[W]e will adjust[] our budget quantity as authorized by GSA." State Street noted the ratios in the Jackson and Memphis leases and suggested "we split the difference and use 1 per 250." Appeal File, Exhibit 7 at 1. Appellant made this request in full knowledge that GSA's determination of costs for a particular item on one lease was "a guideline only" for other leases and "in no way obligated" GSA to accept those costs for the same item on those other leases. *Id.*, Exhibit 5.

9. According to Ms. Murray, "No specific alteration or change to the interior door ratio stated in the Lease was ever approved by me, nor do I have any knowledge of any alternate ratio for the interior door ratio stated in the Lease being conveyed by any other GSA official to any representative of State Street." Murray Declaration ¶ 10. State Street says that Ms. Murray's statement is technically correct; "the assurance was unspecific in exact amount of reduction." Appellant's Reply Brief at 3. Appellant maintains, however, that "her verbal assurance was that she would grant the same relief granted on previous contracts. At the time the reduction in the ratio was granted we believed two different reductions in interior door ratios had been granted on two

©1994, Commerce Clearing House, Inc.

Digitized by Google

separate projects. Our appeal requests the least amount of reduction be honored to 1 door for every 200 square feet." "Appellant's Rebuttal Documentation" (Aug. 2, 1993).

10. The contract provides that the contracting officer may make changes to the instrument, within its general scope, by written order. Appeal File, Exhibit 1 at page 3 of GSA form 3517. The document states additionally that "[n]o services or work for which an additional cost or fee will be charged by the Lessor will be furnished without the prior written authorization of the Contracting Officer or a designated representative of the Contracting Officer." *Id.* GSA's award letter to State Street states that all modifications to the contract must be made by a contracting officer in writing (or in an emergency, orally with written confirmation to follow). *Id.*, Exhibit 2.

11. State Street admits that it never received any documentation from Brenda Murray about her alleged verbal approval of the modification. Appellant's Brief at 2. State Street also admits that GSA never altered the ratio of interior doors to space in writing. *Id.*; Appellant's Response to Respondent's Request for Admission 1; Appellant's Response to Respondent's Request for Production of Documents 1.

12. On July 26, 1991, GSA informed State Street that GSA had available $215,000 to fund the cost of Government-ordered construction in the building. The agency's statement makes no reference to the cost of interior doors—or any other item within the scope of the construction. Appeal File, Exhibit 6. On September 17, 1991, State Street borrowed $294,170.14 to finance the construction. Respondent's Reply Brief, Attachments B, C.

13. On January 10, 1992, GSA informed State Street by telephone that the ratio would not be changed. Appeal File, Exhibit 8. State Street asked the contracting officer to reverse this position. The firm said that Ms. Murray had "agreed to the same settlement reached on [two other] lease contracts." Further, State Street said that it had "relied on this verbal agreement in making certain business decisions including securing loans to be repaid with these funds." *Id.*, Exhibit 9.

14. In writing a supplemental lease agreement on February 10, 1992, the parties agreed that a price adjustment relating to the number of interior doors "has not been resolved." Appeal File, Exhibit 10 at 3d unnumbered page.

15. The contracting officer issued his final decision in this matter on July 9, 1992. He determined "that the Government should not grant relief from a bargained for lease provision, especially, since all offerors relied on the door ratio contained in the SFO." Appeal File, Exhibit 11.

16. An undated supplemental agreement was apparently entered into during July of 1992.[3] It shows that the lease was amended to give GSA a credit of $51,430 relating to interior doors. This amount was calculated by subtracting the number of doors GSA actually ordered (106) from the number projected in the SFO (245), and multiplying the difference by the unit cost of the doors ($370). *Id.*, Exhibit 1 at page 3 of Suppl. Lease Agreement No. 9.

17. By letter dated July 22, 1992, State Street appealed the decision to this Board. Appeal File, Exhibit 13. This letter did not reach us, however; we were unaware of its existence until April 14, 1993, when State Street asked about the status of proceedings. The sender of the notice of appeal has provided us with an affidavit stating that the document was indeed mailed to us, and that "the [GSA] office in Atlanta, Georgia in fact received this written notice of appeal timely." Affidavit of MacAllynn J. Achee (May 3, 1993). GSA counsel has acknowledged that the assertion regarding the agency's timely receipt of the notice is correct. Board's Memorandum of Conference of May 18, 1993, at 1. GSA has subsequently not pursued the issue of whether the notice was filed sufficiently close in time to the issuance of the contracting officer's decision to vest in us jurisdiction to consider the case. *See Cosmic Construction Co. v. United States* [30 CCF ¶ 70,732], 697 F.2d 1389 (Fed. Cir. 1982); *Marci Enterprises, Inc. v. General Services Administration*, GSBCA 12197, 93-2 BCA ¶ 25,717.

[3] The preceding supplemental lease agreement is dated March 12; the succeeding one is dated September 14. Appeal File, Exhibit 1 at Suppl. Lease Agreements 8-10. The contracting officer's decision on the matter now in dispute, which was issued on July 9, states that the agreement in question, which implements the substance of that decision, is enclosed. *Id.*, Exhibit 11. A letter from State Street dated July 27 makes reference to the agreement. *Id.*, Exhibit 12.

Discussion

The contract in question is for the lease of a building some of whose interior space was to be constructed in accordance with a design, or "layout," which was to be provided by the Government. This layout had not been devised at the time the contract was awarded. (Indeed, the building whose interior was to be constructed did not even exist at that time.) To allow prospective offerors to prepare their proposals in accordance with a common set of expectations, GSA included in the solicitation for offers projections of the amounts of certain items that would ultimately be ordered, as well as a requirement that unit prices be given for those items. The projections were stated as ratios of the numbers of the items to numbers of square or linear feet of space.

We have previously explained that the consequence of the inclusion of these definitive ratios in a lease is that when the Government orders more of an item than is projected, the Government must increase its payments in accordance with the unit price established, and when the Government orders less, it is entitled to a commensurate credit. *Rock Creek Associates K Limited Partnership v. General Services Administration*, GSBCA 11333, 93-1 BCA ¶ 25,351, at 126,270 (1992); *Plaza Maya Limited Partnership*, GSBCA 9086, 91-1 BCA ¶ 23,425, at 117,499-500 (1990). Thus, with relation to the subject lease, the lease projected that the lessor, State Street, would have to provide one interior door per 100 square feet of space, or 245 doors for the entire 24,500 square feet; GSA actually ordered 106 doors, or 139 less than projected; so under the terms of the lease, State Street owes GSA 139 times the unit cost of a door, $370, or $51,430. *See* Finding 16.

Both sides accept this view of the law and the facts. The contracting officer's analysis stops here. State Street complains, however, that there is a compelling reason for going further and reaching a different result: GSA told the firm that it would modify the ratio of doors to space, with a significant negative impact on the amount of credit due the Government, and the firm relied on this statement to its detriment in borrowing money to finance the construction. Consequently, according to State Street, GSA must be estopped from collecting the entire amount it claims. The lessor asks us to conclude that the contract was effectively modified to require that State Street provide one door for each 200 square feet of space, rather than one for each 100. The change in ratio would have resulted in a requirement that the lessor provide 123 doors, not 245. Since only 106 were actually provided, State Street says that GSA is entitled to a credit for only seventeen doors. According to appellant, the credit should have been $6,290 (17 × $370), or $45,140 less than GSA took. Appeal File, Exhibit 13.

The Court of Appeals for the Federal Circuit has questioned whether, in light of *Office of Personnel Management v. Richmond*, 496 U.S. 414 (1990), the defense of estoppel is still available against the Government. *JANA, Inc. v. United States*, 936 F.2d 1265, 1270 (Fed. Cir. 1991). This Board has continued to consider assertions of estoppel, however. *Turner Construction Co. v. General Services Administration*, GSBCA 11361, 92-3 BCA ¶ 25,115, at 125,213-14; *Kosak Micro Systems, Inc.*, GSBCA 10519, 91-1 BCA ¶ 23,342 (1990), 92-2 BCA ¶ 24,853, *aff'd*, 989 F.2d 1201 (table) (Fed. Cir. 1993).

The particular assertion made by State Street, however, fails on several counts. First, an

> essential element of promissory estoppel is that the promisor has made a binding offer in the form of a promise. This promise must be definite and certain so that the promisor should reasonably foresee that it will induce reliance by the promisee or a third party. A mere expression of future intention ... does not constitute a sufficiently definite promise to justify reasonable reliance thereon.

Santoni v. Federal Deposit Insurance Corp., 677 F.2d 174, 179 (1st Cir. 1982) (citations omitted). Whatever promises GSA made to State Street do not meet this test.

The only commitments we have been able to identify are set out in Finding 5: GSA's contracting officer told State Street that the agency would "look at the ratio." The agency admits that its realty specialist, Brenda Murray, told the firm that the agency "would amend the ratio, if possible." These statements are so unspecific that the agency could not reasonably have foreseen that they would induce reliance by the lessor. Even one of State Street's versions of the commitment is nothing more than a "mere expression of future intention"; it is that Ms. Murray said that the lease provision relating to the ratio "would be reduced." State Street alleges in another version that the commitment was more particular: it was "that GSA would grant the same relief that was granted on State Street's Jackson project." The latter version is inconsistent with statements made by the

©1994, Commerce Clearing House, Inc.

Digitized by Google

lessor during the period of time that the parties were discussing the ratio; we consequently find this account not credible. The statements are described in the following paragraph.

State Street's correspondence manifests an understanding that no definite promise had been made. The firm first told Ms. Murray that "any relief you can give on this matter [would] be greatly appreciated." Finding 6. Later, the company suggested that the agency "split the difference" between the ratios used on two other leases. Finding 8. After the fact, State Street maintained that Ms. Murray had "grant[ed] the same relief granted on previous contracts." Findings 9, 13. This contention does not help to find a definite commitment, however, because the two leases in question involved two different ratios of doors to space, and no relief whatsoever was granted on one of them. Finding 7.[4]

There are two additional problems with State Street's theory that Ms. Murray's statements were the sort of promise on which estoppel may be based. She was not authorized to make a commitment that could bind the Government, and whatever she told the lessor was not in writing. The Supreme Court has held that "anyone entering into an arrangement with the Government takes the risk of having accurately ascertained that he who purports to act for the Government stays within the bounds of his authority." *Federal Crop Insurance Corp. v. Merrill*, 332 U.S. 380, 384 (1947); *see also Thanet Corp. v. United States* [25 CCF ¶ 82,997], 591 F.2d 629, 635 (Ct. Cl. 1979) ("To the extent that the plaintiff depends on statements made by [Government] officials, it must prove that these officials were acting within the scope of their authority."). A person dealing with the Government may not rely on advice from a "mere conduit." *Heckler v. Community Health Services of Crawford County, Inc.*, 467 U.S. 51, 65 (1984). At all times relevant to State Street's estoppel claim, Ms. Murray was not a contracting officer. Findings 4, 12.[5] The lessor had been specifically cautioned that only a contracting officer could modify the lease. Finding 10.

Further, State Street has presented no evidence to the effect that a contracting officer ratified whatever Ms. Murray said. Appellant does address the subject of ratification in its reply brief, at 4, where it says that the contracting officer "never contested the many revisions of our Cost Differential Report which all showed a reduced ratio for interior doors" and "participated in the closing of our secondary loan," which was allegedly made after the lender had reviewed those Reports. There is nothing in the record to support this assertion. Even if there were, however, the argument is to no avail. A contracting officer's inaction might create a basis for a claim of estoppel only where it involves a knowing acceptance of benefits to the Government. *Parking Co. of America, Inc.*, GSBCA 7654, 87-2 BCA ¶ 19,823, at 100,296-98. Here, the benefits from the change in the ratio would have been for the benefit of the lessor. The general rule is that "[r]atification . . . must be based on a demonstrated acceptance of the contract," *EWG Associates, Ltd. v. United States*, 231 Ct. Cl. 1028, 1030 (1982), and should be in writing. *Drain-A-Way Systems*, GSBCA 6473, 83-1 BCA ¶ 16,202, at 80,499 (1982).

The oral nature of the statements is a problem for appellant, as well. The lease provided that all changes would be made in writing. Finding 10. State Street admits, however, that whatever GSA said about changing the ratio was never put onto paper. Finding 11. The Court has explained:

> It is not merely the possibility of fraud that undermines our confidence in the reliability of official action that is not confirmed or evidenced by a written instrument. Written advice, like a written judicial opinion, requires its author to reflect about the nature of the advice that is given to the citizen, and subjects that advice to the possibility of review, criticism, and reexamination.

[4] We note additionally that whatever GSA did on the two other leases did not amount to the sort of pattern of performance that could bind the Government; it did not "involve[] repeated occasions for performance by either party with knowledge of the nature of the performance and opportunity for objection to it by the other." *Universal Development Corp. v. General Services Administration*, GSBCA 11468, 93-2 BCA ¶ 25,662, at 127,675-76 (1992) (quoting U.C.C. § 2A-207(1) (1992)). State Street understood this; it acknowledged that GSA's determination of costs for a particular item on one lease was "a guideline only" for other leases and "in no way obligated" GSA to accept those costs for the same item on those other leases. Finding 8.

[5] The reliance posited by State Street occurred when the firm borrowed money to finance interior construction of the building. This took place on September 17, 1991. Finding 12. Ms. Murray did not become a contracting officer until January 27, 1992. Finding 4.

Digitized by Google

Community Health Services, 467 U.S. at 65. Even where the Government has been found to have been estopped by a contracting officer's order that incorporated a mistake of law, a written decision was necessary to the court's conclusion. *Broad Avenue Laundry & Tailoring v. United States* [30 CCF ¶ 70,003], 681 F.2d 746 (Ct. Cl. 1982).

Lastly, even if State Street had been able to demonstrate the existence of a binding promise, its claim of estoppel would still fail. Critical to the success of such a claim is proof that the lessor actually relied to its detriment on the Government's commitment. *USA Petroleum Corp. v. United States* [34 CCF ¶ 75,312], 821 F.2d 622, 625 (Fed. Cir. 1987); *American Electronic Laboratories, Inc. v. United States* [33 CCF ¶ 73,973], 774 F.2d 1110, 1113 (Fed. Cir. 1985); *Kozak Micro Systems, Inc.*, 91-1 BCA at 117,060, 92-2 BCA at 123,986-87. State Street points to only two concrete events in attempting to show detrimental reliance. The first is a statement in a letter: "[W]e will adjust[] our budget quantity as authorized by GSA." Finding 8. This statement, standing alone, says nothing more than that the lessor will comply with whatever direction GSA makes; it hardly establishes that the agency had already authorized a particular change in the ratio of doors to space. The same letter, indeed, shows that no change had yet been agreed to; in writing to the agency, State Street was still suggesting that the lease be modified to include a certain number. *Id.*

State Street also maintains that when it borrowed money to finance construction of the building's interior to suit the Government, it did so in reliance on GSA's promise to alter the door ratio. The lessor has presented no evidence in support of this contention, and we find the proposition hard to swallow. Two months before the loan was made, GSA told State Street that it had available $215,000 to fund the cost of Government-ordered construction. Finding 12. This figure was stated without any apparent reference to the number of doors to be provided, or to any other specific construction matter. *Id.* There is no indication in the record that the agency's construction budget ever changed. Yet State Street borrowed nearly $80,000 in excess of that budget to finance the work. *Id.* Why it did this is not explained by any evidence before us. Even if the lessor had believed for some reason that an additional $45,000 would be forthcoming as a result of a change in the door ratio, that would account for little more than half of the very large disparity between what the agency said it had available to pay and what State Street actually borrowed. The maximum possible proceeds from GSA, even if supplemented in this way, would not give State Street enough funds to repay its loan.

Decision

State Street has not established that GSA should be estopped from enforcing the lease in accordance with its terms. The appeal is therefore DENIED.

[¶ 26,501] Koll Construction Company v. General Services Administration

GSBCA No. 12306, October 12, 1993.

Modifications—Reduction in Requirements or Prices—Credit.—The government was entitled to a credit after a modification that permitted the contractor to provide doors with compression seals rather than with magnetic seals, because the contractor did not have to incur the expense of installing metal strips in the doors with compression seals. The contractor alleged that the subcontractor had read the strips out of the solicitation and did not include a price for the strips in the bid. The contractor's theory was based on the application of the contract clause that stated that specifications govern when drawings and specifications vary. According to the contractor, no door could meet all the requirements listed in the solicitation, and because the strips were mentioned in the drawings but not in the specifications, they were read out of the contract. However, this theory was factually inconsistent with statements made by the contractor and subcontractor while work was progressing. If there was a patent ambiguity between the drawings and the specifications, the contractor had a duty to inquire before bidding.

Pricing of Adjustments—Price Reduction—Calculation of Credit.—The government was entitled to a credit for the deletion of metal strips and magnetic seals around doors but was required to pay an extra amount because of the addition of weatherstripping, the replacement means of sealing the door openings. The contracting officer used a figure

 ©1994, Commerce Clearing House, Inc.

Digitized by Google

that was appropriate for magnetic seals on metal doors in figuring the amount of the credit, but the magnetic seals for the wood doors required in the contract were much less expensive. The government was thus required to remit money to the contractor because it took a larger credit than it was entitled to.

For the appellant: Bishop, Payne, Williams & Werley, L.L.P., Fort Worth, Texas, by Richard Lee Brown. For the government: Thomas Y. Hawkins, Office of Regional Counsel, General Services Administration, San Francisco, California.

Before DANIELS, PARKER, and NEILL, Administrative Judges.

DANIELS, Administrative Judge: The parties to a construction contract have agreed to modify the details of part of the work, but dispute the amount by which contract payments should be adjusted as a consequence of the change. They have submitted the case to us for a decision on the basis of a written record. Rule 11.

In most regards, we hold for the Government. We agree with the contracting officer's assessment of the elements of the adjustment and with his determination of prices for two of the three factors. As to the price of the third item, we find that the appropriate amount is between the sums proposed by the two parties.

Findings of Fact

1. This case involves a contract between the General Services Administration (GSA) and Koll Construction Company (Koll). The contract provides that in exchange for payment of $40,200,000 (including options), Koll was to construct tenant improvements in the Edward F. Roybal Federal Building in Los Angeles, California. Appeal File, Exhibit 10. The instrument was awarded on February 28, 1991, with work to begin on April 2 of that year. *Id.*, Exhibits 10, 11.

2. The contract calls for the installation of various types of doors in the building; requirements are prescribed for each of them through specifications and drawings. Appeal File, Exhibits 1-9. The instrument contains a standard changes clause, FAR 52.243-4 (AUG 1987), which says that when the contracting officer alters the specifications or drawings, with an impact on the contractor's cost of performance, he shall make an equitable adjustment to the contract price. *Id.*, Exhibit 1 at page 27 of GSA form 3506. Determination of the amounts of these adjustments is governed by another standard contract clause, GSAR 552.243-71 (APR 1984), "Equitable Adjustments." *Id.* at pages 27-28 of GSA form 3506. Koll made claims under these clauses regarding five different changes that were made to the requirements during the course of construction. *Id.*, Exhibit 34. The contracting officer decided that as a result of all five changes, GSA is entitled to a credit of $53,952. *Id.*, Exhibit 35.

3. The contracting officer calculated this sum as follows. First, he determined the appropriate amount for each of the five changes (which the parties refer to as "conditions"). The total of these amounts is a credit to GSA of $32,337. To the total, he added markups in this fashion:

1.	Conditions 1-5	($32,337)
2.	Overhead costs of Koll's door subcontractor, WBH International, Inc. (WBH), 25 percent of line 1	(8,084)
3.	WBH's profit, 10 percent of line 1	(4,042)[1]
4.	Subtotal, lines 1-3	(44,463)
5.	Tax, 8.25 percent of line 4	(3,668)
6.	Subtotal, lines 4 & 5	(48,131)
7.	Bond, 0.675 percent of line 6	(325)
8.	Total subcontractor's cost, lines 6 & 7	(48,456)
9.	Koll's commission, 10 percent of line 8	(4,846)
10.	Subtotal, lines 8 & 9	(53,302)
11.	Bond, 0.55 percent of line 10	(293)
12.	Liability insurance, 0.55 percent of line 10	(293)
13.	Gross receipts tax, 0.118 percent of line 10	(64)
14.	Total, lines 10-13	($53,952)

Appeal File, Exhibit 35 at 4. GSA actually took a credit in the calculated amount via a

[1] This amount is actually 12.5 percent of the base amount for conditions 1-5 (line 1). Ten percent of the base amount for conditions one through five is $3,234. Had the contracting officer used the latter number, the total credit calculated would have been $52,970.

Digitized by Google

unilateral modification to the contract. *Id.*, Exhibit 36.

4. Koll does not contest the contracting officer's determination regarding conditions two through five. Appeal File, Exhibit 38. For those conditions, the base amount (line 1 in Finding 3) is an increase of $7,098 in contract payments to Koll. Applying the markups in the fashion employed by the contracting officer, the total amount for these conditions is $11,627.

5. The parties' dispute concerns condition one. For this change, the contracting officer determined that the base amount should be a credit of $39,435 to the Government. Appeal File, Exhibit 35 at 2. With markups, this results in a credit of $64,597. Koll believes that the base amount should be an increase in contract payments of $1,195. Koll uses a method slightly different from the contracting officer's to determine the total amount for this condition. It calculates profit on the basis of the base cost plus overhead (using the Finding 3 scheme, line 3 is ten percent of the sum of line 1 plus line 2), and it does not include any markups for the bond, liability insurance, and gross receipts tax shown on lines 11 through 13, thus making the line 10 amount the total due. Complaint at 2. Koll consequently claims that it is owed $1,970 for the changes denoted as condition one.

6. Condition one pertains to a change which the parties agree involves doors with which are associated 2,390 linear feet of seals. Appellant's Brief at 2; Respondent's Brief at 4; *see* Appeal File, Exhibits 35 at 2, 37 at 3d unnumbered page. The contract required that these doors have certain properties. Most of the properties were delineated in the document's specifications: The doors had to be made of wood, have solid cores, and meet a stated standard for retarding transmission of sound. Appellant's Brief at 1; Respondent's Brief at 3. The doors also had to have magnetic seals. *Id.;* Appeal File, Exhibit 1 at 08710-9. In addition, the doors had to be "essentially the standard catalogued products of manufacturers regularly engaged in production of such products and . . . be the manufacturer's latest standard design that complies with the specification requirements." Appeal File, Exhibit 1 at 01632-5. The doors had to carry a manufacturer's warranty as well. *Id.* at 08210-3. One additional property that the contract required of the doors was shown on the contract drawings: metal strips had to be inlaid in the doors. Appellant's Brief at 2; Appellant's Reply Brief at 1; Respondent's Brief at 3.[2] The Government's brief asserts—in a statement not challenged by the contractor—that the strips were to be installed so that they could "marry with the specified magnetic seals." Respondent's Brief at 3; *see also* Appeal File, Exhibits 23 at 2 (Nov. 21, 1991, letter from WBH to Koll: "magnetic seals would not hold against a wood surface"), 28.

7. GSA stated in the contract that Glenmar was a manufacturer "offering [these] doors which may be incorporated in the Work." Appeal File, Exhibit 1 at 08210-4. On May 21, 1991—nearly two months after the starting date for contract performance—Koll told GSA that doors meeting all specifications were not being made by Glenmar. According to Koll, sound-retardant wood doors were available from Buell Door Company, in the form of modified Weyerhaeuser Corporation doors; however, sound-retardant wood doors were not "available with the type of seals shown on the drawings mortised into the face of the door. STC [sound-retardant] DOORS MUST BE FURNISHED WITH THE EXACT TYPE OF SEAL WITH WHICH THEY WERE TESTED; OR THE STC RATING BECOMES INVALID." *Id.*, Exhibit 12.[3]

8. A week later, GSA authorized Koll to "provide STC wood doors, frames and seals as tested by the manufacturer." Appeal File,

[2] Koll believes that the fact that some required properties of the doors were stated in the specifications and another was shown in the drawings is important. In making this argument, Koll directs our attention to the presence in the contract of a standard clause entitled "Specifications and Drawings," GSAR 552.236-77 (APR 1984), which says that "[i]n case of difference between . . . Drawings and the specifications, the specifications will govern." Appeal File, Exhibit 1 at page 7 of GSA form 3506; *see also id.* at 01090-3.

[3] This last point was made more fully in a letter dated January 30, 1992, from door subcontractor WBH to Koll: "IF WOOD DOORS HAD BEEN SUPPLIED WITH RECESSED STRIPS AS SHOWN ON THE CONTRACT DRAWINGS . . . THERE WOULD HAVE BEEN NO WARRANTY. . . . In [the contract], the only reference to available manufacturers is Glenmar solid core acoustical doors; and although Glenmar is now out of business, the only product that they produced; or the only product produced by other sources is in every single case regularly produced only with compression seals." Accompanying this letter are supporting statements from manufacturers Weyerhaeuser and Algoma Hardwoods, Inc. Appeal File, Exhibit 24.

Exhibit 14. The agency's project manager (a commercial firm) advised Koll that as a result of this change, the contractor could provide doors with compression seals, rather than ones with magnetic seals and corresponding metal strips. The project manager said that an adjustment to the contract price would ensue. *Id.*, Exhibit 16.

9. GSA's construction manager (another commercial firm) told the agency on June 15, 1992, that although Koll had been authorized to substitute compression seals for magnetic seals on the doors in question, "[t]he doors as installed are furnished with a fibre weather-strip only." The construction manager urged that Koll be directed to install "acoustical gasketting accessories" as well, to ensure that the doors meet the prescribed sound-retardancy test. Appeal File, Exhibit 29 at 1. The GSA program manager agreed that Koll should install the additional items. *Id.*, Exhibit 30. The contracting officer believed that Koll had ultimately installed weatherstripping, not compression seals, in lieu of the magnetic seal and metal strip called for in the contract. He said that GSA had accepted the substitution. *Id.*, Exhibit 35 at 2. The record does not contain any challenge by the contractor to the agency's conclusion as to the sealing mechanism actually used, other than a letter from WBH to Koll dated February 1, 1993. This letter states that "[t]he seals actually furnished for wood doors are manufacturer's standard which have been tested with the door." *Id.*, Exhibit 37 at 2d unnumbered page.[4]

Admittedly, making determinations of credibility in cases submitted for decision on the basis of a written record is often difficult. We find here, however, that GSA's assertion of the mechanism actually used is more credible than Koll's position. The agency's contention is backed by contemporaneous memoranda written during the course of construction; the contractor did not contest this conclusion until more than two months after the contracting officer had issued his decision, and although Koll has submitted three affidavits in the course of this litigation, none of them contains any support for the contractor's position on this disputed issue. On the basis of the record before us, we conclude that the doors were actually supplied with fibre weatherstripping, not compression seals.

10. On September 9, 1992, Koll made a claim regarding conditions one through five. Appeal File, Exhibit 34. In making this claim, the contractor contended that the condition one changes should be at no cost to either party. *Id.* at 8th unnumbered page. This conclusion was apparently based on the statement by WBH's president that when the subcontractor made its bid to Koll, "wood doors were correctly figured with compression seals/approved with compression seals." (The president said that this was because the doors were not commercially available with recessed metal strips, and the strips could not have been added without invalidating the manufacturer's warranty.) *Id.* at 5th-6th unnumbered pages. While this case was before the Board, Koll submitted affidavits from WBH's president and project manager, both of which said that the president's earlier statement is incorrect; the original bid was based on the provision of magnetic seals (though not recessed metal strips) for the doors. Affidavit of Harley D. Webb (July 16, 1993) at 2; Affidavit of Roger Dugan (July 14, 1993).

11. The contracting officer rendered his decision on the claim on November 25, 1992. In this decision, he determined the base amount due the agency in three steps. First, he assumed prices, on a per linear foot basis, for each of the three sealing materials he thought were involved—the weatherstripping, magnetic seal, and metal strip. Second, he assigned a credit to the Government for the items which were deleted from contract work—the magnetic seal and the metal strip—and an offset to the contractor for the item which was added—the weatherstripping. He finally arrived at a total amount by multiplying the affected 2,390 linear feet of material by the net per linear foot price differential. He believed that the prices per linear foot were, for the weatherstripping, fifty cents; for the magnetic seal, $10.50; and for the metal strip, $6.50. Appeal File, Exhibit 35 at 2.

12. Koll has not challenged the contracting officer's determination that the type of weatherstripping he believed Koll had installed costs fifty cents per linear foot. The contractor's position is not that

[4] WBH did make an earlier statement that "the net cost of the seals AS ACTUALLY FURNISHED ON WOOD STC DOORS IS $4.00 PER LINEAR FOOT." Appeal File, Exhibit 26 at 1; *see also id.*, Exhibit 25. This sentence speaks to the seals that are regularly furnished with wood sound-retarding doors, but it does not address the sealing mechanism that is on the doors that Koll/WBH supplied to GSA in the building in question. Whether the sentence's lack of precision is an artful dodge or not, the words do not clearly support the position Koll would have us accept.

Digitized by Google

weatherstripping has a price different from fifty cents a foot, but that the price of weatherstripping is irrelevant because a different sealing mechanism was used. On March 5, 1992, WBH maintained that "the net cost of the seals AS ACTUALLY FURNISHED ON WOOD STC DOORS IS $4.00 PER LINEAR FOOT." Appeal File, Exhibit 26 at 1; *see also id.*, Exhibit 25. After the contracting officer issued his decision, WBH changed its position: "The seals actually furnished for wood doors ... [have a] net cost [to WBH of] $2.00 per linear foot." *Id.*, Exhibit 37 at 2d unnumbered page. The record contains a facsimile transmission from Weyerhaeuser to Koll which says, "S88 Pemko door gaskets are $2.00/lineal foot." *Id.* at 8th unnumbered page. These are the seals shown in the manufacturer's catalog as being supplied with the doors. *Id.*, Exhibit 35 at 41st-44th unnumbered pages. The contractor has not demonstrated, however, that Pemko S88 seals have actually been installed on the doors. Finding 9 & n.4. The $2.00 figure is the one used in Koll's complaint and brief.

13. The contracting officer used the price of $10.50 per linear foot for a magnetic seal because this is the price claimed by Koll/WBH for magnetic seals for condition four doors. Appeal File, Exhibits 34 at 16th unnumbered page, 35 at 2. Condition four involves paneled steel doors. Koll insists, as it did while the amount of the equitable adjustment was before the contracting officer, that "[t]he seals for wood doors are entirely different from seals on hollow metal doors; and the cost is appreciably less." Appellant's Reply Brief at 2; Appeal File, Exhibits 26, 27; Affidavit of Roger Dugan (Aug. 4, 1993) (Second Dugan Affidavit). Although we find Koll's evidence as to this point to be credible, we also find the contractor's assertions as to the actual price of the magnetic seals for the wood doors involved in condition one to be inconsistent with each other. WBH has steadily maintained that the list price of the magnetic seals specified in the contract for the condition one wood doors was $4 per linear foot. Appeal File, Exhibits 26 at 1st unnumbered page, 27, 37 at 2d unnumbered page; Second Dugan Affidavit. This is indeed the catalog price for those seals. *Id.*, Exhibits 26 at 4th unnumbered page, 37 at 3d-6th unnumbered pages. WBH has provided various figures, however, for the price it was actually quoted for these seals—the per linear foot price was stated to be $1.29 on March 5, 1992; $1.62 on March 6, 1992; and $1.50 on February 1 and August 4, 1993. *Id.*, Exhibits 26 at 1st unnumbered page, 27, 37 at 2d unnumbered page; Second Dugan Affidavit. WBH said on February 1, 1993, that the figure of $1.50 "can be verified with the Pemko factory if necessary." *Id.*, Exhibit 37 at 2d unnumbered page. Koll has presented no evidence, however, regarding Pemko's discounted prices. The figure of $1.50 is the one used in Koll's complaint and brief.

14. The price of $6.50 per linear foot which was used by the contracting officer for a recessed metal strip is the same one that was proposed by WBH on March 5, 1992, with particular reference to condition one doors. Appeal File, Exhibits 26 at 2, 34 at 2.

Discussion

This contract called for the installation of wood doors with magnetic seals. Finding 6. The contractor, Koll, complained to GSA that doors with these seals could not meet other contract specifications—they could not pass a prescribed sound-retardancy test, be standard commercial products, or carry a manufacturer's warranty. Finding 7; *see also* Finding 6. Koll proposed that GSA permit it to provide doors with compression seals, as furnished by the manufacturer, rather than magnetic seals. Finding 7. GSA agreed to the proposal. Finding 8.

The parties understood that a ramification of this change in seals would be an equitable adjustment to the contract price. Findings 8, 10. They have been unable to agree about two matters, however: first, whether the Government is entitled to a credit for the deletion of a requirement that metal strips be inlaid in the doors; and second, what the appropriate price adjustments should be for each of the elements involved in the changed requirements.

The metal strips are shown in the contract drawings as being recessed in the doors, apparently to serve as the object that the magnetic seals would attract so that the doors would close. Finding 6. Once GSA eliminated the requirement for magnetic seals, the metal strips were no longer needed. The Government consequently took a credit for the cost that the contractor would have incurred if it had had to install the strips in the doors. Findings 2, 3, 11.

Koll contends that a credit is not due. The contractor's theory rests on an application of the standard contract clause which provides that "[i]n case of difference between ... Drawings and the specifications, the specifications will govern." *See* n. 2. The specifica-
