The record contains no evidence of any ownership cost or rental payment for the backhoe, loader or trencher appellant used on contract 0022 (finding 11). After appellant submitted its 22 September 1987 claim, its employees Barnes and Morris on 8 October 1987 agreed to the amounts appellant claimed for the backhoe, loader and excavator equipment they owned (finding 15). Such "agreement" was a self-serving, post-dispute statement of no probative value. For equipment owned by a contractor and not in active use but rather in standby, 50 percent of the hourly rates determined on a jury-verdict basis applies. *Tom Shaw, Inc.*, DOT BCA Nos. 2106 et al., 90-1 BCA ¶ 22,580 at 113,337. The lowest 1987 Wichita equipment hourly rentals were $10.22 for a back hoe, $20.00 for a loader and $20.57 for an excavator (finding 15).

Our foregoing findings permit us to determine the appropriate quantum for the foregoing changes and delays, which we tabulate as follows:

Date	Delay	Direct Labor	44.4% overhead	Totals	
8-17-87	2.5 hr.	$147.70	$ 65.58	$213.28	
8-21-87	2.25 hr.	$118.62	$ 52.67	$171.29	
9-10 to 11-87	12 hrs.	$542.64	$240.93	$783.57	
9-17-87	3.75 hr.	$197.70	$ 87.78	$285.48	
	20.5 hours			$1,453.62	
9-11/16	Material	$920.96	$408.91	$1,329.87	
Equipment ownership costs:					
Back hoe	$ 5.11 × 20.5 hrs.		=	$104.76	
Loader	$10.00 × 20.5 hrs.		=	$205.00	
Excavator	$10.29 × 6 hrs.		=	$61.74	
Equipment costs			=	$371.50	371.50
	Subtotal				$3,154.99
Profit at 10%					315.50
Total equitable adjustment					$3,470.49

Appellant failed to prove that the Government-caused delays (findings 6-8, 10), rather than the contractor-caused delays (finding 13), were responsible for completion of contract 0022 one or four days after 1 October 1987. We conclude that appellant is not entitled to any contract time extension. Since respondent apparently assessed no liquidated damages (finding 13), the time extension is moot.

Appellant disputed the contracting officer's refusal to allow more than the $5,616.98 increase in modification P00003 (finding 19). Appellant failed to prove entitlement to more than $3,470.49.

We deny the appeal.

[¶ 26,342] Ben Levine Timber

AGBCA Nos. 92-124-1, 92-234-1, 92-235-1, September 16, 1993.

Sales of Government Property—Timber Sales—Logging Plan.—The government's denial of a contractor's logging plan that contemplated downhill logging as well as the construction of a road to a landing within the sale area was reasonable because the contracting officer determined that the logging plan could not be carried out without a signifi-

Digitized by Google

cant disturbance of soil conditions and wildlife. The contract provided that the location and width of temporary roads would be agreed upon prior to actual construction. The sale area, as pointed out in the prospectus, was within a northern spotted owl habitat area, and the contract also contained special yarding provisions to minimize soil disturbance. Given the soil and wildlife concerns expressed by and imposed upon the government, the board concluded that the government's denial was reasonable.

Sales of Government Property—Timber Sales—Estimates of Deleted Area.—The government's valuation of timber in five acres deleted from a contractor's timber sales contract was reasonable because there was no showing that the government erred either in computing the value of the timber or in deducting that value from the price the contractor was charged for the timber. The government determined the value of the deleted acres in the same manner it had for the initial sale offering; it applied current contract prices to the estimated volume and deducted the value from the contract price. The contractor asserted that its actual costs should have been used because these costs were lower than those used by the government. The contractor's position, however, was contrary to the parties' agreement for the deletion of the five acres. The agreement provided that if the five acres were to be deleted, the standard government procedure used for the contract estimate would be applied.

Sales of Government Property—Timber Sales—Slash Disposal Deposit.—Although the government elected not to perform slash and brush disposal work under a timber sales contract, a contractor was not entitled to recover the slash disposal deposit it was required to provide, because it was not damaged by the government's election not to perform the work. The slash deposit was a cost of removing the timber, which all bidders had to consider when making their bids to purchase the timber. The elimination of the slash deposit would have resulted in an identical increase in the timber price charged the contractor. The contractor, therefore, was not damaged.

Sales of Government Property—Timber Sales—Estimated Volume Shortage.—A timber sales contractor's contention that the difference between the estimated timber volume and the volume determined by scale evidenced a mistake in the government's estimates was rejected because the contractor did not identify any specific error in the estimates. The contract provided that the government volume estimate would be revised at the contractor's request for identified errors made in determining estimated volume, provided the errors resulted in a decrease of the total sale volume of at least 10 percent of value. The difference between the estimated volume and the volume as based upon a scale of the logs brought into a mill, however, was a shortage of only 6.2 percent. The contract also stated that the estimated quantities were not to be construed as guarantees or limitations of the timber quantities to be designated for cutting under the contract.

For the appellant: Ben Levine. For the government: Arno Reifenberg, Office of the General Counsel, U.S. Department of Agriculture, Portland, Oregon.

Before GISH, HOURY, and SETO, Administrative Judges.

GISH, Administrative Judge: These appeals arise out of a timber sale contract between Ben Levine, dba Ben Levine Timber (Appellant), and the Forest Service (FS), U. S. Department of Agriculture. The contract is identified as the Sandwich Timber Sale contract No. 071931. The sale was a premeasured or lump sum sale; that is, Appellant bid a lump sum amount as payment for all timber within the sale area. The volume was estimated for purposes of the sale but was not measured or scaled to determine volume for payment purposes. The sale was located on the Quilcene Ranger District, Olympic National Forest, Washington. The contract was awarded to Appellant on June 14, 1990, and by letter dated July 8, 1991, the FS advised Appellant that contract requirements on all units had been completed and accepted.

Appellant made three claims to the Contracting Officer (CO) which were denied and timely appealed to the Board. First (AGBCA No. 92-124-1), during the course of the sale a dispute arose as to how Unit 1 was to be logged resulting in a 5-acre portion of that unit being deleted from the sale. The FS appraised the value of the timber in the 5 acres and credited Appellant's timber sale account with that amount. Appellant disputes the deletion of the unit and the valua-

©1994, Commerce Clearing House, Inc.

Digitized by Google

tion placed upon the timber within the unit. Second (AGBCA No. 92-234-1), Appellant claims a refund of deposits made for slash disposal, claiming that since the FS did not do and did not intend to do the slash work, the money paid as a deposit should be returned. Third (AGBCA No. 92-235-1), Appellant alleges a shortage of timber volume as represented by the FS and claims the value of the difference in volume between the estimated volume shown in the contract and the volume Appellant claims to have recovered from logs delivered to a mill.

A 2-day hearing was held in Tacoma, Washington, November 3 and 4, 1992. The Board has jurisdiction pursuant to the Contract Disputes Act of 1978 (41 U.S.C. §§ 601-613).

FINDINGS OF FACT

1. Appellant, a logger and timber operator with many years' experience in the Olympic National Forest area, was, as high bidder at oral auction, awarded the Sandwich Timber Sale on June 14, 1990 (Appeal File (AF) Timber Sale contract). The sale was a premeasured sale with an estimated volume of 3,800 thousand board feet (MBF) over 91 acres in three cutting units (AF, Tab 3, timber sale contract, sale area map).

Claim 1, 5-Acre Deletion:

2. Unit 1, as designed by the FS was to be logged uphill. (Transcript (Tr.) 325, 404.) Appellant's first logging plan followed the original design to log uphill. However, due to the limits imposed by the height of Appellant's logging tower, a landing about halfway down the unit would be required. This would require a road to be constructed into the landing. The FS denied permission to construct the road due to excessive resource damage. (AF, Tab 6; Tr. 68, 404.)

3. Appellant's second logging plan proposed both downhill and uphill logging, the upper half going uphill and the lower half going downhill. The FS initially rejected this plan because downhill logging causes more soil disturbance than uphill logging, a concentration of debris on the landing and stream siltation or in this instance, additional debris in a wet or marshy area within the 5 acres. Subsequently after further discussion or negotiation, the FS concurred in the downhill logging if the lower 5-acre portion of the unit were deleted from the sale. Appellant was agreeable to the deletion if additional timber was added to the sale within 200 feet of the boundary as per the contract. The FS would not agree to timber replacement due to spotted owl habitat restrictions on timber sales. (AF, Daily Diary dated January 10, 1990, Tab 11; Tr. 74, 84-85, 89-90.)

4. Appellant and the FS signed a letter with attached agreement setting forth the terms for downhill logging and the deletion of the 5-acre portion from Unit 1. The agreement provided, among other things, for deletion of the 5 acres if the lower part were logged downhill, for special measures to prevent soil disturbance and for a reduction in payment based upon the same procedure used in making the cruise and appraisal as the original determination of estimated contract volume. The agreement describes the deletion as a minor adjustment under contract provision BT2.37 (AF, Tab 6; Tr. 96-100).

5. The contract provided that the location and width of temporary roads shall be agreed to prior to construction, BT5.2, and that landings and skidtrails be agreed upon prior to their construction, BT6.422. The contract also contained provisions expressing special concern for soil disturbance, CT6.42#. (AF, Tab 6.)

6. The sale area, as pointed out by the prospectus, was within a Northern spotted owl habitat area (AF, Tab 4) and the contract contained special yarding provisions to minimize soil disturbance, CT6.42 (AF, Tab 3). The sale was part of a congressionally mandated sale offering known as a "318 sales" notwithstanding Northern spotted owl habitat (section 318 of Public Law 101-121). (Tr. 93-94, 116, 151-152, 171-172, 200, 265, 274-277, 285; Government (Gov't) Exhibits (Ex.) C and D.)

7. Prior to logging Unit 1, Appellant's president and the CO became engaged in a personality conflict resulting in a lack of communication. In order to resolve the problem Appellant and the CO agreed to have the day-to-day operation of the sale conducted between Appellant's representative (REP) and the FS Timber Sale Officer (TSO). (Levine Appeal File (LAF), Tab 25; Tr. 332, 341, 353, 415.)

8. Appellant's REP logged the entire unit uphill, but decided not to log the 5 acres. In April of 1991, Appellant's REP told the FS to go ahead and make the appraisal. (Tr. 102, 135-138.)

9. The FS followed the same procedure in making the cruise and appraisal of the 5 acres as it did in the original determination for contract volume and value, concluding the contract value should be reduced by

Digitized by Google

$26,964.25. (AF, Tab 13; Tr. 390, 425-430.) When Appellant learned of the dollar value the FS placed on the timber in the deleted 5 acres, a dispute arose as to that value, the method used to determine the value and the validity of the deletion itself. Appellant's valuation of the timber in the deleted 5 acres, $69,815.47, was based upon its own costs, not averages used by the FS. An alleged higher volume of cedar in the 5 acres, as compared to the rest of the unit, and a difference in the grade of that volume, also account for some of the difference between the FS's and Appellant's valuation (Tr. 298, 400-402).

10. Appellant contends that it was under duress and coerced into signing the agreement deleting the 5 acres. Appellant stated it would go ahead and sign as it was getting into winter and snow would soon be a problem. Appellant also suggests that if it had not logged the sale, the FS would have called upon Appellant's letter of credit for $700,000 which would cause great financial distress to Appellant (Tr. 40-45, 331). Other than these allegations the record does not indicate that the FS intended or threatened any action which would not have been in accordance with contract terms and conditions.

Claim 2, Slash Disposal:

11. There is no dispute between the parties that the price Appellant paid for the timber included $53,200 as a deposit for slash disposal computed at $14 per MBF. The FS determined, after the units were cut, that there was not enough slash to cause a fire hazard (Tr. 269) and that what slash was there would be beneficial for regrowth. There is also no dispute that the FS retained the amount which Appellant contends should be refunded since the FS neither did the work nor does it intend to do the work. (Tr. 14-16.)

12. The FS appraisal takes into account the cost of slash disposal work and that cost is deleted from the selling price to arrive at the advertised price, the minimum amount at which the FS will sell the timber. If no slash disposal is required no amount will be deducted from the selling price and the advertised price would be higher by an amount equal to the cost of the slash deposit. (Tr. 326-327.)

Claim 3, Estimated Volume Shortage:

13. In a premeasured sale the purchaser pays a lump sum (the bid amount), plus certain deposits. If actual volume realized by the purchaser is more than the estimated volume in the contract the purchaser pays no more. If the actual volume realized is less than the estimated contract volume the purchaser pays no less (AF, Tab 3).

14. The actual volume realized by a purchaser may vary due to a variety of reasons such as errors in cruising the standing timber and in scaling the logs, differences in disallowance for defect, log length and a purchaser's operating methods (Tr. 217, 222-224, 300-301, 307, 314).

15. Contract provision BT2.4, among other things, stated that the estimated quantities in AT2 were not to be construed as guarantees or limitations of the timber quantities to be designated for cutting under the terms of this contract (AF, Tab 3).

16. Contract provision CT4.12 stated that the volume estimate shown in AT2 shall be revised at purchaser's request by correcting identified errors made in determining estimated volume which result in a decrease of total sale volume of at least 10 percent or $1,000 in value, whichever is less, when an incorrect volume estimate was caused by (a) an area determination error, (b) computer input error or computer malfunction, or (c) a calculation error. No adjustment in volume shall be made for variations in accuracy resulting from planned sampling and measuring methods or judgments of timber quality or defect. (AF, Tab 3.)

17. The contract estimate was based upon a cruise of standing timber. The volume recovered from the sale as claimed by Appellant was based upon a scale of the logs brought into a mill. These two measures are different and it is unlikely that they would ever be identical. Appellant's volume recovered on Unit 1 based upon Puget Sound Log Scaling and Grading Bureau was 2,712,670. The FS contract estimate was 2,892,000. The difference is 179,330 or a shortage of 6.2 percent. (Appellant's Amendment # 2, Ex. 7.)

18. Appellant, in making a claim for less volume, is claiming the difference between its volume as determined by scaling cut logs at the mill where Appellant sold its logs and the FS estimated volume in the contract as determined or estimated from a cruise of standing timber. Appellant's calculation makes no deduction of estimated volume for that volume deleted by the 5 acres not logged (Tr. 472-477).

DISCUSSION

Appellant, appearing *pro se* at the hearing, expressed numerous differences of opinion as to FS timber policy as well as forest management practices. These differences were not the subject of a CO decision and are not before the Board in these appeals. In its post-hearing brief Appellant sets out three issues which are properly before the Board and we will confine our comment to those issues.[1]

The 5 Acre Deletion:

Appellant describes this issue in terms of whether the FS may coerce a purchaser to delete 5 acres and unilaterally decide the value of the timber on the 5 acres. We believe this issue is more properly characterized as an interpretation of the terms of the modification entered into by the parties for the deletion of 5 acres. Appellant contends that it should have been permitted to log Unit 1 as it wished, that the deletion of the 5 acres should have been done as a contract modification rather than minor adjustment and that the valuation of the timber within the 5 acres was not calculated properly.

Unit 1, as originally designed by the FS, was to be logged uphill. Appellant's first logging plan contemplated uphill logging. However, due to the limited height of the logging tower, a landing would have been needed about half way down the unit. This would require construction of a road to the landing. The FS denied permission to construct the road. (Finding of Fact (FF) 2.)

Appellant's second logging plan contemplated both uphill and downhill logging. The first reaction of the FS was to deny downhill logging but eventually the FS approved the plan for downhill logging if the wet area (the 5 acres) were deleted from the sale. Appellant had the option to log it either way. (FF 3.)

After some negotiation between the parties, Appellant signed an agreement whereby the upper half of the unit could be logged uphill with the bottom half logged downhill if the 5-acre area was deleted. If the 5 acres were to be deleted the agreement further provided that the timber within the 5 acres would be valued by the standard FS procedure used for the contract estimate. (FF 4.) Appellant's REP chose to leave the 5 acres unlogged and to log the rest of the unit uphill. In April 1991, upon being advised of this fact, the FS determined the value of the timber left in the 5 acres and deducted that amount from the payment due from Appellant. (FF 8.)

The contract provided for approval of landing sites and road locations by the FS. Because this requires cooperation from both parties, neither can unreasonably withhold that cooperation. The contract also provided for a minimal amount of soil disturbance (FF 5) and FS concern for this aspect was reasonable. We do not find that the denial for the road or for downhill logging was unreasonable given the soil and wildlife concerns expressed by and imposed upon the FS. (FF 6.)

During the course of the sale operation, Appellant and the CO evidently reached an impasse as to how to proceed. In order to move the sale activity forward it was agreed that Appellant's owner and the CO would step aside and the TSO and Appellant's REP would resolve things out in the field regarding as day-to-day activities. (FF 7.) Appellant had the option of logging uphill or downhill and deleting the 5 acres. The record is not clear as to the reasons, but Appellant's REP chose to log uphill and still left the 5 acres unlogged. When the FS was advised of this decision, the timber left in the 5 acres was cruised in the same manner as in the original sale. (FF 9.)

Appellant contends that the FS should not have dealt with it's REP in the field but should have worked with him directly. The FS concedes that was the normal way they had dealt with Appellant but that it was not unusual to deal with a purchaser's representative. Further, in this instance Appellant concurred in the procedure that allowed the TSO and its REP to work things out in the field. (FF 7.)

Appellant also disputed the FS valuation of the timber left on this 5 acres. The FS cruised the timber in the 5 acres to determine the volume in the same manner that it did for the initial sale offering. Current contract prices were applied to that volume and that value deducted from the price Appellant was charged for the timber. Appellant contends that his actual costs should have been used because they were lower than

[1] At the hearing Appellant appeared *pro se* but indicated that he had sought legal advice from an attorney and that he might and, in fact, did seek assistance from counsel in writing the brief. Although no written notice of appearance has been entered in compliance with Board Rule 26 regarding representation of parties, we nonetheless have considered Appellant's brief in reaching the decision in these appeals.

Digitized by Google

those used by the FS and would result in a higher value for the standing timber, a difference of some $29,000. This difference, along with others, such as Appellant's alleged higher volume of cedar in the area and higher grade, results in Appellant's higher value for the deleted timber. (FF 9.)

The agreement for deletion of the 5 acres clearly indicated that the valuation was to be done by the standard FS method. The evidence shows that is how the value was determined. Appellant has not pointed out errors in the methodology or computation, but rather believes that his costs should have been used rather than averages in figuring the timber value. That is not, however, what the agreement provided.

Appellant complains about the way the 5 acres were deleted from the contract, arguing that it should have been done by a contract modification rather than minor adjustment. Appellant does not point out how it would help if the agreement were a contract modification. In either event Appellant signed the agreement and is bound by it. We are not persuaded by Appellant's argument that it was under duress or coerced into signing the agreement. (FF 10.) Appellant's president did not give the appearance of a person easily intimidated. Economic conditions or financial factors, unless caused by actions of the other party and not permitted by the contract, are not coercion. We find no evidence that the FS attempted to do anything not permitted under the terms of the contract.

In passing we note that Appellant logged the unit uphill as originally designed by the FS. Therefore, Appellant could have logged the entire unit including the 5 Acres. Appellant's failure to log the 5 acres appears to be a voluntary act on Appellant's part. We find no basis in the contract to credit Appellant for not completing the sale.

The claim is denied.

Slash Deposit:

Appellant's brief phrases this issue as whether the FS may retain a deposit required by the contract specifically designated for the disposal of brush and slash when the FS had elected not to dispose of the brush and slash.

There is no dispute as to the amount claimed or that the FS does not intend to do this slash disposal work (FF 11).

Appellant's argument here is straight forward and is simply that since the FS did not do the slash work and does not intend to do this work, it should not be allowed to retain a deposit required for that purpose. This, Appellant contends, is forced over-payment for the timber. This argument and similar ones have been made to the Board before and rejected. The contract is one for the sale of timber. The slash deposit is a cost of removing the timber which all bidders have to consider when making their bids to purchase the timber. Elimination of the slash deposit would have resulted in an identical increase in the timber price charged Appellant. Therefore, Appellant was not damaged. (FF 12.) *Marshall Logging, Inc.*, AGBCA No. 87-283-1, 90-1 BCA ¶ 22,629, *aff'd* 918 F.2d 186 (Fed. Cir. 1990); *see also, Blue Mountain Forest Prod., Inc.*, AGBCA Nos. 86-248-1, *et al.*, 92-1 BCA ¶ 24,560. Moreover, although the Board allowed recovery for deleted slash work in *H & H Logging, Inc.*, AGBCA Nos. 87-403-1, 88-248-1 and 89-211-1, 92-2 BCA ¶ 24,830, this was because the FS relied on the wrong contract clause to delete the work and did not provide sufficient information supporting the amount claimed.

The claim is denied.

Volume Shortage:

Appellant's brief states the issue is whether the FS may charge for a volume of timber erroneously computed where said error arose by virtue of a cruise by the U.S. Government.

This was a premeasured sale with an estimated volume. The purchaser pays a lump sum and actual volume may be more or less than the estimated amount (FF 13).

Appellant argues that because the timber volume determined by its bureau scale differs from the estimated contract volume a mistake was made by the FS. Appellant does not identify any specific error but relies upon testimony of witnesses that shows why differences might occur. (FF 14.) The Board finds no evidence that any of these witnesses said such an instance actually occurred in this case. Further, Appellant is comparing a scaled volume of logs delivered to a mill with a cruise of standing timber. It is unlikely that such a comparison would ever bring about an exact match of volume amount. (FF 17.) There is, in fact, very little difference when proper adjustment is made for the volume deleted on the 5 acres (FF 18).

Appellant also argues that there is no disclaimer of volume language before the Board. This is incorrect. The contract itself contains such language (FF 15). Such language, absent evidence of negligence, bad

©1994, Commerce Clearing House, Inc.

Digitized by Google

faith or grossly erroneous volume estimates, amounts to a disclaimer and there is no warranty of volume amount. *Clearwater Forest Indus. v. United States* [28 CCF ¶81,371], 650 F.2d 233 (Ct. Cl. 1981); *K & K Logging, Inc.*, AGBCA No. 85-271-3, 85-3 BCA ¶18,487.

The claim is denied.

DECISION

The appeals are denied.

[¶ 26,343] Linguist Services, Inc.

ASBCA No. 45804, September 8, 1993. Contract No. F42650-90-C-0126.

Contract Types—Time and Materials—Computer Equipment.—The costs of computer equipment were not recoverable under a time and materials contract for translating, interpreting, and related services, because the government was not obligated to purchase the equipment needed to perform the contract. Under the Payments under Time and Materials and Labor Hour Contracts (FAR 52.232-7), materials are compensable only if used or consumed directly in connection with the furnishing of an end product. The contract was for services, not for setting the contractor up in business. It was clear that the contractor did not consider the computer equipment a part of an end product. It made no effort to turn over the computer equipment to the government or to credit the government with its value.

For the appellant: Lorin D. Welker, Treasurer. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Capt. Leonard M. Cohen, USAF, Trial Attorney.

Before LUSSIER and STEMPLER, Administrative Judges.

LUSSIER, Administrative Judge: This appeal is taken by Linguist Services, Inc. (appellant) from the denial of its claim for the purchase of equipment used in the performance of a contract. The appeal is being processed at appellant's request under the accelerated procedures provided by Board Rule 12.3. The parties elected to proceed under Board Rule 11, submitting the case on the record. Each submitted documentary evidence and a brief. Only the issue of entitlement is before us for decision.

SUMMARY FINDINGS OF FACT

1. Contract No. F42650-90-C-0126 was awarded to appellant on 4 June 1990. It provided for on-call English/Russian translating, interpreter and escort services to support the On-Site Inspection Agency (OSIA) carrying out the U.S. Government's obligation under the Intermediate Nuclear Forces (INF) Treaty. The contract was awarded for the base period 4 June through 30 September 1990 at a "ceiling price" of $88,000.00. Each line item in the contract was shown as "estimated", with estimated hours being given if the item called for services, or estimated pages shown if the item called for written translation. The appellant filled in the unit price and extended total price when it bid. The contract stated at page 19 that these line items were "time and material". A separate line item for travel which was to be reimbursed under the Joint Travel Regulations (JTR) was added (as a $4,000 estimate) to all bids by the Government. The contract, at page 19, described this item as "cost reimbursement with no fee".

2. The contract "Statement of Work" specified that the contractor was to provide "all equipment, supplies and services" for the work. The contract "Schedule", listing the line items, likewise specified that the contractor was to provide "all labor, equipment and supplies" for all items other than the JTR travel item. The "Statement of Work" specifically provided that the contractor was to provide linguists/interpreters with portable word processing equipment capable of both languages and with communications equipment to connect them with the contractor's central office equipment for reproduction/review and corrections. There were no line items in the "Schedule" for any equipment or supplies. There is no showing, or allegation, that appellant complained about the absence of such line items.

3. Since classified material was involved, appellant needed whatever equipment, such as safes etc., was required under the applicable security regulations. There was no line item in the "Schedule" for this or for any labor hours connected with this function, or for maintaining a central office point of con-

Digitized by Google

tact, which was also required under the "Statement of Work".

4. The contract also contained similar bid items for four one year option periods. An option clause in the contract gave the Government the right to extend the contract upon written notice. The Government exercised the first year option which increased the ceiling price by $224,148. It also exercised the second year option increasing the ceiling price by $236,624. This extended the contract through 30 September 1992. The Government did not exercise the next option however, and the contract expired by its terms.

5. At the time of bidding, the appellant's president, Mr. Lorin Welker, evaluated what supplies and equipment he would need to perform the contract, such as dictionaries and general office equipment, and spread the cost to all the line items in the contract. He was aware that the workload estimates were not firm. Also, he made the assumption that all the options would be exercised. According to his deposition, "Rightly or wrongly we assumed that it would last; we figured four years." He went on to explain: "If we make an assumption that it's all going to be over in three months, our bid is going to be real high. So we had to make some assumption and that was the one that we were comfortable with." Later, when asked whether he understood at the time he was preparing appellant's bid that the option periods might not be exercised by the Government, he answered "totally".

6. According to Mr. Welker, appellant was a new business incorporated when the solicitation for the subject contract was issued. It did not have materials and equipment to perform the contract and obtained a Small Business Administration loan after award to permit it to purchase what was needed.

7. After the Government notified appellant in September 1992 that it was not going to extend the contract, appellant submitted an invoice for the outstanding balance ($13,445.46) of its SBA loan, indicating this amount was used to purchase computer equipment needed for the contract. The Government took issue with the appellant's right to receive payment and appellant filed a claim from which flowed the contracting officer's decision denying the claim and this appeal.

DECISION

Appellant contends that the contract did not follow the FAR 16.601 guidelines for a time and materials contract in that it did not contain line items for the equipment and supply items needed to perform the services. Appellant accurately quotes FAR 16.601(a) defining a time and materials contract:

> (a) Description. A time-and-materials contract provides for acquiring supplies or services on the basis of (1) direct labor hours at specified fixed hourly rates that include wages, overhead, general and administrative expenses, and profit and (2) materials at cost, including, if appropriate, material handling costs as part of material costs.

However, there is nothing in that description which would require the contracting agency to purchase all the equipment and supplies that a contractor would need to perform the contract. The absence of such items from the line item schedule is evidence of intent not to purchase those items.

Appellant claims entitlement to payment under the "Payments under Time and Materials and Labor Hour Contracts (APR 1984)", FAR 52.232-7, clause but that clause applies to materials "which enter directly into the end product, or which are used or consumed directly in connection with the furnishing of the end product" We doubt appellant thought differently since it made no effort to turn over the equipment to the Government, or to credit the Government with its value at any time. Nor can we lose sight of the fact that this contract was one for the appellant to perform services. It was not a contract for the Government to set the appellant up in business.

Appellant's position comes down to asking us to conclude that in circumstances where it was starting up in business and there was a substantial risk that it would not be able to amortize its equipment and supplies, there was an obligation on the Government's part to exercise all the options. This in effect shifts the risk of appellant's business judgment to the Government. No authority exists for this result. The appeal is accordingly denied.

[¶ 26,344] Laboratory Systems Services, Inc.

ASBCA No. 45798, September 2, 1993. Contract No. N00123-92-C-5317.

Interpretation of Contracts—Repair and Maintenance—Repair Requirements.—Under a contract for preventive maintenance services at a laboratory, a contractor's interpretation of repair requirements as being limited to repairs related to electrical or mechanical problems was unreasonable because the statement of work in the specifications clearly required the contractor to perform all repairs on equipment. No distinction was made in the specifications regarding the nature of the problem necessitating the required repairs. Similarly, the specifications required the contractor to make repairs as necessary to ensure a functional system. The only qualification to the contractor's complete responsibility for performing all needed repairs related to extensive repairs and parts replacement. Because the work performed by the contractor to restore a machine to an operable condition was not shown to have involved extensive repairs or parts replacement, the work was considered within the scope of the contract and did not constitute a constructive change.

For the appellant: Leslie B. Walker, Jr., President. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and James J. Paris, Trial Attorney, Naval Regional Contracting Center, San Diego, California.

Before GROSSBAUM and STEMPLER, Administrative Judges.

GROSSBAUM, Administrative Judge: This appeal was taken from a contracting officer's decision denying the contractor's claim for performing work allegedly beyond the scope of a contract to provide preventive maintenance services at a military laboratory. The amount claimed is approximately $26,000 and appellant has elected the accelerated procedure provided by Rule 12.3. Pursuant to Rule 11, both parties waived a hearing and submitted the case for decision on the record. Only liability is before us for decision.

SUMMARY FINDINGS OF FACT

On 20 December 1991 the Government awarded fixed-price contract N00123-92-C-5317 to appellant, Laboratory Systems Services, Inc. (sometimes LSS) for preventive maintenance and servicing of listed Hewlett Packard drug screening laboratory equipment items located in the drug screening laboratory at the Naval Hospital, Oakland, California. The contract term consisted of an eight month base period and two one-year options. (R4, tab 1)

The contract general provisions included the Changes—Fixed-Price (August 1987) clause prescribed by FAR 52.243-1.

Paragraph 1 under specification section C1.2 described the "scope of work" to be performed under the contract as including:

> the furnishing of all labor, equipment, materials and parts to perform all repairs on equipment listed to assure continued operation of the equipment at designated efficiency and capacity.

This provision also required the contractor to "provide all services, materials, and equipment necessary for the repair/service of the equipment stated in Section B" of the contract schedule and located at the Oakland Naval Hospital's drug screening laboratory. (R4, tab 1 at 8)

Specification paragraph C1.2.2 described particular functions that the contractor was required to perform and provided in part:

> b. Insure that only fully qualified field engineers and technicians who have gone through original equipment manufacturer (OEM) or comparable third party service schools for the above mentioned equipment, shall be employed in the performance of any and all work performed under this contract. The highest standard of professional capability and electrical/mechanical workmanship is to be maintained throughout the life of this contract.
>
> c. Make repairs to the extent necessary (as determined by inspection tests or disassembly) to ensure a functional system that will efficiently serve its intended purpose.
>
> d. Correct inoperable condition in a timely manner[,] including loaner response time of no later than twelve (12) hours after telephone notification . . .
>
> e. Provide only the work necessary to restore the equipment to a serviceable/operating condition by adjustments, replacement parts, or minor repairs when it is determined that extensive repairs and parts replacement are not necessary.

(*Ibid.*)

Digitized by Google

Specification paragraph Cl.2.3 imposed a special requirement on the contractor to "send a loaner unit within 12 hours of receiving notification that a loaner is required, postage prepaid by the contractor" (*id.* at 9). The specifications also stipulated that "[a]ll compensation for labor ... [and] for parts and materials is included in the contract price" (*id.* at 10).

The equipment items covered by the contract included several models of gas chromatographs (sometimes GC) and "Mass Selective Detector[s]" or mass spectrometers (sometimes MS) in various configurations. Several of the GC/MS units were used to detect the presence of "LSD" in urine samples. (R4, tabs 1 at 2-3, 3)

One of the GC/MS units, identified as "GC/MS #8," became inoperative in early April 1992, shortly after appellant's personnel performed a 7 April 1992 preventive maintenance inspection on this unit. On or about 10 April 1992 the Government determined that the unit could not be used for LSD assays. (R4, tabs 2, 3)

On or about 13 April 1992 the Government notified appellant about the problems being experienced with GC/MS #8. Appellant's personnel began evaluating and attempting to repair the machine that same day and spent the next several weeks (until on or about 11 May 1992) trying to bring the unit back on line. During this time period the Government used another, similarly configured GC/MS unit successfully to perform LSD assays. (R4, tabs 2, 3, 9)

Appellant alleges that, on 20 April 1992, its representative told the drug screening laboratory's manager, Lieutenant (LT) David Lesser, that the problem experienced with GC/MS #8 "was more applications oriented and outside the terms and conditions of our contract" (R4, tab 4). Although there is no evidence in the record to corroborate the alleged 20 April conversation, we find that, at some point prior to 11 May 1992, LSS representatives complained to LT Lesser that they believed the problem was "applications oriented," without identifying the suspected problem. However, we also find that, at no time during the repair of the machine, up through 11 May, did LSS representatives inform LT Lesser that they believed that the repairs were "outside the scope of the contract." (R4, tab 9)

Appellant also asserts that the Government "demand[ed]" that the instrument be brought "up and running irrespective of the nature of the problem" (R4, tab 4). There is no evidence to support appellant's assertion, which is contradicted by LT Lesser (R4, tab 9). We are not persuaded that any Government representative ever demanded that appellant get the equipment up and running regardless of the nature of the problem.

During the period from 13 April through 11 May 1992 the Government's contract administrator observed appellant's repair efforts at close hand. The contract administrator noted, "in the first few days of work, a general state of confusion by [LSS] as to what to do to resolve the problems with GC/MS No. 8." At one point in April 1992, after several unsuccessful LSS attempts "to pin the problem down to hardware," the contract administrator suggested that the problem might be due to a faulty GC column and that it might be worthwhile to change the column. However, LSS took no action on this suggestion, when made, because "other factors were being checked out." (R4, tabs 3, 9)

Pursuant to contract requirements, LSS brought in a loaner GC unit but was never able to make it operational and the unit was eventually removed. On 4 May 1992 the Government requested another loaner unit. However, no other loaner equipment was ever provided. (R4, tabs 2, 3)

Sometime in early May 1992 appellant sent to a testing laboratory the GC column which the contract administrator had suggested might be faulty. This column was replaced and a new GC column was installed in GC/MS #8. After autotuning and conditioning, completed on or about 11 May 1992, the GC/MS unit operated properly. (R4, tabs 3, 8)

By letter dated 23 July 1993 appellant notified the Government that it had encountered a "cost overrun" amounting to $25,586.22 in repairing GC/MS #8, for which reimbursement was requested. According to appellant, it had expended a total of 208 labor hours and 63 travel hours, involving the efforts of "six of our own employees as well as two outside associates," to pinpoint the problem with the instrument. The breakdown for the alleged overrun included labor, travel, air fare and lodging costs, but did not mention any material costs. (R4, tab 4)

Appellant offered no evidence to show that the work needed to restore GC/MS #8 to a serviceable, operating condition involved extensive repairs and parts replacement. Instead, the record supports the conclusion that appellant may simply have

©1994, Commerce Clearing House, Inc.

Digitized by Google

"expended an undue amount of time analyzing the machine without finding the actual problem, namely, the faulty column." (R4, tab 9)

After the contracting officer disputed appellant's request for reimbursement, by letter dated 28 October 1992 appellant resubmitted to the contracting officer its overrun reimbursement request as a claim. Appellant argued in its claim letter that: specification subparagraph C1.2.2(b) only required the contractor to maintain the highest professional standards with regard to "electrical/mechanical workmanship"; replacement of "consumable devices (columns)" reflected an "applications-related" problem as opposed to an "electrical/mechanical" problem; and, therefore, column replacement was outside the scope of the contract. (R4, tabs 5, 6)

On 18 February 1993 the contracting officer issued a decision denying appellant's claim, from which this appeal was timely taken. (R4, tab 7)

DECISION

Although appellant has not filed a brief, its argument may be gleaned from its claim letter. In effect, appellant argues that the repair requirements imposed by the contract are limited only to repairs related to "electrical/mechanical" problems. Therefore, if the problems necessitating the equipment repair can somehow be classified as other than "electrical" or "mechanical" the contractor is not required to correct them. This argument is based on a strained interpretation of an isolated sentence in specification subparagraph C1.2.2(b) and is without merit.

The record sheds little light on the meaning of "applications related," a term not mentioned in the contract, nor on its distinction from other matters, including those of an "electrical/mechanical" nature. Nor are we persuaded that faulty GC columns in a GC/MS unit used for LSD assays represent an "applications-related" problem distinct from an "electrical/mechanical" problem. However, the distinction, if any, would be irrelevant.

Even if we were to assume that replacement of faulty GC columns in GC/MS #8 reflected an "applications-related" problem as opposed to an "electrical/mechanical" problem, the correction of this problem would still be within the scope of the contract. The statement of work in specification paragraph C1.2.1 clearly required the contractor "to perform all repairs on equipment listed [in Section B of the contract schedule] to assure continued operation of the equipment at designated efficiency and capacity." No distinction was made regarding the nature of the problem necessitating the required repairs. Similarly, specification subparagraph C1.2.2(c) required the contractor to make repairs as necessary "to ensure a functional system that will efficiently serve its intended purpose." Moreover, all compensation for labor, parts and materials needed to effect the required repairs was already included in the contract price.

The only qualification to the contractor's complete responsibility for performing all needed repairs on listed equipment items related to "extensive repairs and parts replacement." As indicated in specification subparagraph C1.2.2(e), performance of repairs and parts replacement determined to be "extensive" was not required by the contract. Instead, the contractor's responsibility to ensure a functional system was limited to making adjustments and performing only such minor repairs and parts replacement "necessary to restore the equipment to a serviceable/operating condition." However, such limitation on the contractor's responsibility is not applicable in this case, since we are not persuaded that the work needed to restore GC/MS #8 to a serviceable, operating condition involved extensive repairs and parts replacement.

We conclude that the work appellant performed in evaluating the operation of GC/MS #8 and in restoring the unit to a serviceable condition, including replacement of a faulty GC column, was within the scope of the contract and did not constitute a constructive change.

Accordingly, the appeal is denied.

ASBCA No. 45049, September 10, 1993. Contract No. DAAC01-88-C-0068.

Procedure, Boards—Reconsideration—Arguments Already Considered.—A contractor's motion for reconsideration of an appeal involving recovery of convenience

Digitized by Google

termination settlement costs was denied because the arguments presented by the contractor had been fully considered in the board's earlier decision.

For the appellant: Henry, Watz, Gardner & Sellars, Lexington, Kentucky, by James W. Gardner. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. Michael G. Skennion, JAGC, Trial Attorney.

Before YANNELLO and SPECTOR, Administrative Judges.

Reconsideration of 93-3 BCA ¶ 25,907 denied.

YANNELLO, Administrative Judge: Appellant has moved for reconsideration of the Board's decision of 25 March 1993 in the above-captioned appeal. The Government has responded in opposition.

Appellant contends first, that the Board erred in determining that the Contracting Officer's (CO) letter dated 17 August 1992 did not constitute a final decision. This issue was fully considered in the Board's earlier decision, and no new basis for reconsideration has been offered.

Appellant next contends that the Board erred in finding that appellant was entitled to only $2,673.91 rather than the $3,550.00 claimed. This issue too was fully considered in the Board's earlier decision which concluded that appellant had not presented sufficient evidence in support of its claimed "proposal preparation costs" of $94.55 or of its claimed "labor costs for field preparation" of $665.00. Appellant's brief seeking reconsideration alludes generally to the Rule 4 file but points to no evidence in support of these claims. Accordingly, there is no basis upon which to reconsider the initial decision.

CONCLUSION

For the foregoing reasons, appellant has failed to show any basis warranting the Board's reconsideration of its earlier decision. The motion for reconsideration is denied.

[¶ 26,346] Shemya Constructors

ASBCA No. 45251, September 16, 1993. Contract No. DACA85-90-C-0033.

Interpretation of Contracts—Drawings v. Specifications—Order of Precedence Clause.—A contractor's interpretation of its construction contract as not requiring the installation of fuel gages on underground fuel storage tanks was rejected, even though the drawings did not show the gages, because the specifications required the provision of a tank gage and the contract's Order of Precedence clause established that the specifications governed over the drawings in the event of a conflict. While the specifications required the tank gages, they were silent as to where the gages were to be installed. The specifications referred the bidder to the drawings regarding how the gages was to be mounted, but the drawings did not show gages. The board concluded that the uncertainty was with respect to where the gages were to be mounted, not about whether gages were required.

For the appellant: David M. Moor, Partner. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and M. Susan Fink, Engineer Trial Attorney, U.S. Army Engineer District, Anchorage.

Before DICUS and RIISMANDEL, Administrative Judges.

DICUS, Administrative Judge: This appeal arises from a dispute as to whether the contract requires installation of fuel gages on ten underground fuel storage tanks. The parties have elected to proceed under Rule 11, and appellant has elected the accelerated procedure under Rule 12.3.

FINDINGS OF FACT

1. Contract DACA85-90-C-0033 for construction of an addition to an existing aircraft support shop was awarded 28 September 1990 in the amount of $2,741,924.00 (R4, tab 1). Installation of ten underground fuel storage tanks was required (R4, tab 10). One tank was to be for diesel fuel, one for motor vehicle gasoline, one for

©1994, Commerce Clearing House, Inc.

Digitized by Google

turbine fuel, one for heating oil, and six for waste fuel (*id.*).

2. The contract contained the Disputes (APR 1984), Changes (AUG 1987), and Specifications and Drawings for Construction (APR 1984) clauses (R4, tabs 5, 6, 7). The latter clause provides:

> (a) The Contractor shall keep on the work site a copy of the drawings and specifications and shall at all times give the Contracting Officer access thereto. Anything mentioned in the specifications and not shown on the drawings, or shown on the drawings and not mentioned in the specifications, shall be of like effect as if shown or mentioned in both. In case of difference between drawings and specifications, the specifications shall govern. In case of discrepancy in the figures, in the drawings, or in the specifications, the matter shall be promptly submitted to the Contracting Officer, who shall promptly make a determination in writing. Any adjustment by the Contractor without such a determination shall be at its own risk and expense. The Contracting Officer shall furnish from time to time such detailed drawings and other information as considered necessary, unless otherwise provided....
>
> (c) Where "as shown," "as indicated," "as detailed," or words of similar import are used, it shall be understood that the reference is made to the drawings accompanying this contract unless stated otherwise. The word "provided" as used herein shall be understood to mean "provide complete in place," that is "furnished and installed."

(R4, tab 6)

3. The contract also contained the Contract Drawings, Maps and Specifications clause, which states in relevant part:

> (b) Omissions from drawings or specifications or the misdescription of details of work which are manifestly necessary to carry out the intent of the drawings and specifications, or which are customarily performed, shall not relieve the Contractor from performing such omitted or misdescribed details of the work but they shall be performed as if fully and correctly set forth and described in the drawings and specifications.

(R4, tab 8)

4. Technical Specification 15606 governed installation of the tanks. Various specification sections use the plural or "each" to preface the singular in referring to the tanks. Pertinent sections are set out below.

> 6.2 Tank Accessories: Accessories shall comply with standards which apply to the tanks.
>
> * * *
>
> 6.2.3 Tank Gage: The tank shall be provided with a remote reading hydrostatic liquid level gage. The gage unit shall be provided with an indicator unit, purge device, tank assembly unit and connection tubing.
>
> 6.2.4 Cleanout and Gage Connection: A combination cleanout and gage connection shall be provided with each tank and shall consist of a 4 inch pipe extending downward through the top of the tank to within 6 inches of the tank bottom. The cleanout/gage pipe shall have a locking type cap. The entire length of pipe inside the tank shall be provided with 1 inch wide by 12 inch long slots at alternate locations.
>
> * * *
>
> 11.3 Tank Calibration: The tanks shall be furnished with calibrated charts showing the liquid contents in gallons per 1/8 inch of tank depth. Two reproductions of the gage chart shall be enclosed in plastic envelopes and bound in hardback binders. Two gage sticks graduated in feet, inches, and eighths of an inch shall be provided. Gage sticks shall be of wood and properly treated after graduating to prevent swelling or damage from the fuel.
>
> 11.4 Tank Accessories: All accessories shall be installed in accordance with manufacturer's instructions, and tested for operability prior to backfilling the tank.
>
> 11.4.1 Liquid level gage readout shall be mounted as indicated. Gage readout shall be calibrated to coincide dipstick level/calibration chart readings.

(R4, tab 9) The drawings do not show the fuel gages (R4, tab 10).

5. Appellant's subcontractor, Alaska Mechanical, Inc. (AMI) was responsible for installation of the tanks. AMI did not include liquid level gages in its bid (app. exh. I). In a 2 November 1990 design verification/clarification request (DVCR) AMI sought verification from respondent that gages were not required (R4, tab 11). On 29 November 1990 AMI was informed that the gages were required by specification sections 6.2.3 and 11.4.1 (R4, tabs 12, 13). By letter of 6 December 1990 to appellant AMI responded as follows:

> We acknowledge receipt of the November 29, 1990 government response to our DVCR #003 dated November 2, 1990.

Digitized by Google

The response is incomplete and additional information is required. Per paragraph 11.4.1 (15606), we are instructed to mount gage "as indicated." No liquid level gage is indicated, only gaging dip tubes.

Industry standards for dispensing fuels normally do not include measuring methods beyond dispenser readings and stick gage readings. As both methods are provided for in the documents, we assumed the liquid level gage was not applicable to this installation since is [sic] was not indicated.

We did not include liquid level gages in our bid. If they are required by the owner, we regard this as a change to the contract pursuant to Contract Clause 75, Changes.

Please provide information as to where the liquid level gages are to be installed. We request a change order for this work, and will forward our costs when they are completely known. Please contact this office if you have any questions.

(R4, tab 13)

6. By DVCR of 18 December 1990 appellant sought further clarification, including the desired location of the gages. Respondent provided the information on 22 January 1991 and advised appellant it considered the gages to be at no additional cost (R4, tab 14). AMI installed the gages and by letter of 10 January 1992 filed a claim therefor in the amount of $11,022.00 with appellant. In that letter AMI states:

The specifications were not clear to provide the gage, (note specification 6.2.3 states tank gage singular). Since it was not indicated at bid time we assumed, that stick-gaging, along with metering on fuel storage tanks, were [sic] the extent of what was required. Our bid reflected this assumption and we did not include remote read tank gauges in the estimate.

(R4, tab 16)

7. Appellant filed a claim in the amount of $17,625.71 by letter of 22 January 1992 (R4, tab 3). In a 29 July contracting officer's final decision, the claim was denied (R4, tab 1). A notice of appeal was filed 28 October 1992 (R4, tab 2).

DECISION

Appellant points out that the drawings do not show the gages and the pertinent specification section refers to "tank" in the singular without a modifier such as "each." Thus, appellant contends it was not required to supply the gages, particularly since the contract provides for other means of measuring fuel levels. Respondent argues the gages are manifestly necessary, that appellant's interpretation is unreasonable, and that any ambiguity present with respect to gages is patent and required appellant to inquire.

AMI's letter of 6 December 1990 states that industry standards normally do not require gages (finding 5). Appellant cites this as evidence of industry standards. However, that single sentence in correspondence leading up to the claim is not probative evidence. *Peterman, Windham and Yaughn, Inc.*, ASBCA No. 21147, 77-2 BCA ¶ 12,674. We cannot conclude that industry standards are established thereby.

The contract establishes an order of precedence in which the specifications govern over the drawings in case of conflict. Specification paragraph 6.2.3 requires the provision of a tank gage. Specification paragraph 11.4.1 refers the bidder to the drawings regarding how the gage shall be mounted. The drawings do not show a gage. While the contract is silent as to where the gage is to be mounted, the governing specification is clear in establishing the gage as a contract requirement. Thus, the matter is resolved by the contract's order of precedence. *Hensel-Phelps v. United States* [35 CCF ¶ 75,736], 886 F.2d 1296 (Fed. Cir. 1989). The conflict is with respect to where the gage is to be mounted, not as to whether gages must be supplied.

Appellant also argues that use of the singular in specification section 6.2.3 confused the issue further. While the contract is hardly a model of clarity, we are not persuaded that the failure to use the plural or a modifier such as "each" somehow relieved appellant of any obligation to seek clarification. In resolving such conflicts, the contractor is under a duty to inquire if the conflict is patent. In AMI's letter of 10 January 1992 to appellant, AMI observed that "The specifications were not clear to provide the gage" and it assumed the gages were not required in preparing its bid (finding 6). If AMI considered the matter unclear, it was on notice of the conflict and under a duty to inquire. *Beacon Construction Co. v. United States* [9 CCF ¶ 72,018], 314 F.2d 501 (Ct. Cl. 1963). No reason has been suggested or is apparent as to why only one of the ten tanks would have been required to have a "remote reading hydrostatic level gage." Even if appellant had failed to recognize the conflict, we believe it was sufficiently obvious to require appellant to inquire. *J.A. Jones Construction Co. v. United States* [12 CCF ¶ 81,823], 395

©1994, Commerce Clearing House, Inc.

Digitized by Google

F.2d 783, 790 (Ct. Cl. 1968). The contract ranked the specifications over the drawings, and liquid level gages were unquestionably required by specification section 6.2.3.

The appeal is denied.

[¶ 26,347] FBS Generalbau GmbH

ASBCA No. 44496, September 9, 1993. Contract No. DAJA10-90-C-0095.

Contract Disputes, Certifications—Adequacy—Completeness of Data.—A certification of a convenience termination settlement claim that stated that the supporting data were accurate to the best of the contractor's knowledge and belief was defective because the assertion did not state that the supporting data were complete. The board was unwilling to infer that the supporting data were complete, because the contractor had failed to submit the subcontractors' termination settlement proposals. The applicable regulations require that a contractor submit such proposals to the government.

For the appellant: von Maur & Partners, Germany, by Michael J. Murphy. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Capt. Patrick J. LaMoure, JAGC, Trial Attorney, Headquarters, U.S. Army Europe & 7th Army.

Before RUBERRY, RIISMANDEL, and DELMAN, Administrative Judges.

RUBERRY, Administrative Judge: The Government filed a motion to dismiss this appeal alleging that appellant's claim was not properly certified under the Contract Disputes Act (CDA), 41 U.S.C. § 605(c)(1). Appellant opposes the motion.

STATEMENT OF FACTS

FBS Generalbau GmbH (appellant) timely appealed to the Board from a contracting officer's decision denying a claim for DM 750,928.09 under a contract for the replacement of built-in cabinets in family housing in Munich, Germany.

On 26 September 1990, the Government terminated the contract under the FAR 52.249-2-Alternate I "Termination for Convenience of the Government (Fixed Price) (April 1984)" clause (R4, tab 21). The contract is subject to the CDA and contained the FAR 52.233-1 "Disputes (APR 1984)" clause (R4, tab 1).

By letter dated 3 June 1991, appellant submitted its termination settlement proposal to the Government (R4, tabs 24 and 26). On 17 December 1991, the Government informed appellant by letter that appellant had not provided all the information needed to finalize the Government's review of the proposal. One of the main areas of Government concern was appellant's failure to submit subcontractors' termination settlement proposals. The Government noted that 50.7 percent of the total settlement sought involved subcontracts. (R4, tab 35) By letter dated 18 February 1992, appellant addressed many of the areas of concern, but did not discuss not having provided subcontractors' termination settlement proposals (R4, tab 38). On 19 February 1992, the Government wrote appellant that the absence of properly executed settlement proposals from the subcontractors and the lack of access to the subcontractors' records precluded an audit determination of the reasonableness, allowability, and allocability of the amounts being sought. (R4, tab 39)

By letter dated 21 February 1992 to the contracting officer, appellant submitted a "claim" which provided in part:

> Our settlement proposal now remains outstanding and unanswered well over sixty (60) days since the DCAA and Quality Assurance visited our offices. We understand it to be in dispute, and accordingly submit this certified claim pursuant to the Contract Disputes Act for the amounts set forth in our termination settlement proposal, less adjustments, totalling DM 750,928.09. A detailed breakdown of claimed costs which parallels our settlement proposal is attached and part of this claim.

(R4, tab 40)

The basis for appellant's stated understanding that its settlement proposal was "in dispute" apparently relates to a DCAA auditor's statement that extended overhead costs would not be allowed.

Digitized by Google

The certification was signed by the general manager of FBS Generalbau GmbH and reads as follows:

> As general manager of FBS Generalbau GmbH, I certify that this claim is made in good faith, that the supporting data is accurate to the best of my knowledge and belief, and that the amount requested accurately reflects the contract adjustment for which the contractor believes the Government is liable.

(R4, tab 40)

On 21 April 1992, the contracting officer issued a final decision denying appellant's claim (R4, tab 44). The decision stated that appellant had provided limited and incomplete information and had not complied with FAR 15.804-6, FAR 49.104(g), FAR 49-108-3, and FAR 49.108-2.

CONTENTIONS OF THE PARTIES

The Government contends that under 41 U.S.C § 605(c)(1) and FAR 33.207(a)(2), appellant has not properly certified its claim. The appellant's omission of the word "complete" from prong two assertedly renders the certification defective.

Appellant counters that, based upon an examination of its claim in its entirety, "it cannot be reasonably disputed that the data referred to in the second prong of the certification is the same data presented in complete form to the contracting officer and his representatives at DCAA and Quality Assurance to support the termination settlement proposal and this resultant claim." Appellant further contends that the documents and explanations clarifying costs questioned by DCAA are tangible evidence of the completeness of the data supporting the claim. Appellant infers that the language in the first paragraph of the claim (alluding to complete cooperation with the DCAA audit and Quality Assurance visits) should be read into the certification language in the last paragraph of the claim. Appellant concludes that the certification language, when the claim is considered in its entirety, is the substantial equivalent of that required by the CDA.

DECISION

For claims over $50,000, the CDA requires contractors to certify that: (1) the claim is made in good faith, (2) the supporting data are accurate and complete to the best of the contractor's knowledge and belief, and (3) the amount requested accurately reflects the contract adjustment for which the contractor believes the Government is liable. Proper certification is a jurisdictional prerequisite, *W. M. Schlosser Co. v. United States* [30 CCF ¶ 70,985], 705 F.2d 1336 (Fed. Cir. 1983). A proper certification either repeats the CDA's wording verbatim or is in substantial compliance therewith. *United States v. General Electric Corp.* [31 CCF ¶ 72,180], 727 F.2d 1567, 1569 (Fed. Cir. 1984).

There is no question that appellant failed to recite the CDA certification language verbatim. Appellant has properly included the first and third assertions in the certification, but the second assertion states "the supporting data is accurate to the best of my knowledge and belief ," rather than stating that "the supporting data are accurate *and complete* to the best of my knowledge and belief." The issue then is whether the language used in the second assertion is in substantial compliance with the statutory language.

Appellant's attempted certification is defective because the second assertion did not state that the supporting data are complete. Failure to certify that the supporting data are complete will defeat a claim certification. *Turbine Eagle Charters, Inc.*, ASBCA No. 36259, 88-3 BCA ¶ 21,128; *Eastern Car Construction Co.*, ASBCA No. 30955, 86-2 BCA ¶ 18,909; *Holmes & Narver Services, Inc./Morrison-Knudsen Company, Inc., A Joint Venture*, ASBCA No. 36246, 91-1 BCA ¶ 23,402; *aff'd*, 937 F.2d 622 (Fed. Cir. 1991) (Table).

In *Heyl & Patterson, Inc. v. O'Keefe* [38 CCF ¶ 76,475], 986 F.2d 480, (Fed. Cir. 1993), the court refused to find a certification defective despite the omission of the word "supporting." The court stated:

> Just as the section 605(a) requirement that the contractor request a final decision can be met inferentially, *id.* at 1577, 1581, so too can the section 605(c)(1) requirement that the contractor verify the accuracy and completeness of the supporting data. Especially in this case, where the government admitted that "there is certainly no evidence that Heyl *intentionally* omitted the word 'supporting' from its certification," we see no reason not to infer from the context in which the certification was made that the data to which Heyl & Patterson's certification refers is the attached data. [Emphasis in original]

Here, however, an inference that the data were complete is not appropriate. Despite the Government's emphasis on the contractor's failure to furnish subcontractors' termination proposals, appellant does not

©1994, Commerce Clearing House, Inc.

Digitized by Google

allege that such proposals were furnished, and no such proposals are in the record. Subcontractors' termination settlement proposals are required to be submitted to the Government by FAR 49.108-3. These circumstances underscore the importance of the contractor's failure to assert in its certification that the supporting data are complete.

Appellant's certification is not in substantial compliance with the statutory language, nor can substantial compliance be inferred. Accordingly, we lack jurisdiction of the appeal. We need not address whether appellant's general manager, who executed the certification, was qualified to do so under FAR 33.207.

CONCLUSION

The Government's motion to dismiss is granted.*

[¶ 26,348] Kimmins Contracting Corp.

ASBCA No. 44265, September 20, 1993. Contract No. F09650-89-C-0081.

Performance—Directions by Government—Floor Protection.—The government's direction that a contractor remove building floor paper from a welding area and replace it with plywood was a compensable change because the contract requirement that the contractor protect the flooring from combustible material in welding areas could have been satisfied by covering the building paper with fire resistant shields rather than by replacing the building paper with plywood. The contractor had concurrent duties under the contract to protect the flooring from traffic damage and from welding, cutting, and open flame fire hazards. In areas used for welding and cutting operations, the contract stated that combustible floors should be covered with damp sand or protected by fire resistant shields. To order the contractor to protect the floors by removing the combustible building paper went beyond the scope of the fire protection requirements.

For the appellant: George R. Robinson, P.E., Vice President. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Maria S. Kavouras and Michael F. Copley, Trial Attorneys.

Before JAMES, RUBERRY, and RIISMANDEL, Administrative Judges.

JAMES, Administrative Judge: This appeal arises from the contracting officer's denial of appellant's claim for alleged Government changes in flooring protection. We have jurisdiction under the Contract Disputes Act of 1978, 41 U.S.C. §§ 601 *et seq.* Pursuant to Board Rule 11, the parties agreed to submit this appeal for decision on the record, consisting of the Rule 4(a) file, tabs 1-32; appellant's exhibits A-A through A-G; and respondent's exhibits G-1 through G-40. Both parties submitted briefs. We are to decide entitlement only.

FINDINGS OF FACT

1. On 16 August 1989 the parties entered into contract F09650-89-C-0081 ("contract 81") for the repair and renovation of the Robins Air Force Base, GA, plating shop at the fixed price of $14,123,000 (R4, tab 1).

2. Contract 81 incorporated by reference the Federal Acquisition Regulation 52.243-4 "Changes" (AUG 1987) and 52.233-1 (APR 1984) "Disputes" clauses, *inter alia* (R4, tab 1).

3. Contract 81 prescribed three, sequential phases or areas to permit the plating shop to remain operational while appellant performed demolition and construction work (R4, tab 1, spec. § 01005, ¶ 1.2, § 01652, ¶ 2.1).

4. Contract 81 required appellant in Phase I to install: (a) Fluid Applied Resilient (FAR) Flooring on approximately 5,186 square feet depicted on the drawing of the 61 by 66 foot basement floor and drainage trenches and the second floor elevated walkway of building 142. (b) Carbon steel piping, supports and brackets, which required cutting and welding, throughout Phase I. (R4,

* Appellant submitted a corrected certified claim to the contracting officer on 28 July 1992 regarding the same subject matter as ASBCA No. 44496, to which the contracting officer has not responded. Appellant filed a notice of appeal to this Board on 23 November 1992, and that appeal has been docketed as ASBCA No. 45371.

Digitized by Google

tab 1, specification § § 9C, ¶ 9.2.1; 17C; dwgs. A-1, PR-2 *et seq.*)

5. Contract specification § 01005, ¶ 6, in pertinent part provided:

> COORDINATION: ... Avoidance of conflicts between mechanical, electrical, architectural and civil systems and other structural or physical aspects or features is the sole responsibility of the Contractor .... Manufacturers' requirements, if more stringent than the specifications and drawings, shall be incorporated at no additional cost to the Government.

(R4, tab 1)

6. Contract specification § 01505, WELDING, CUTTING, BRAZING, AND OPEN FLAME, provided in pertinent part:

> ¶ 1 GENERAL The Contractor shall observe all precautions and provide welding, cutting, brazing and open flame equipment in accordance with ... OSHA 1926.350 through 1926.354 (1985) and AFOSH Standard 127-5 (14 Feb 84). An AF Form 592 must be retained by the foreman at the work area for the duration of the work.

(R4, tab 1)

7. AFOSH Standard 127-5 (14 Feb 84) provided in pertinent part:

> Inside Areas .... A specific area ... designated or approved by base fire authorities for welding and cutting operations ... will be of noncombustible or fire-resistive construction ... free of combustible and flammable materials, and segregated from adjacent areas. Remove all combustible materials within 35 feet of the operation .... Combustible floors will be covered with damp sand or protected by fire resistant shields.

(R4, tab 29)

8. AF Form 592 contained a CHECKLIST FOR OPERATORS, in which item 3 stated, "Do not perform operation ... [w]ithin 35 feet of combustibles unless combustibles are protected and a fire watch is posted" (R4, tab 30). Neither OSHA 1926.352 Fire prevention, nor AFOSH Standard 127-5 requires *both* the protection of flammable materials or fire hazards *and* the removal of such materials or hazards from a welding area.

9. Contract specification § "9C, FLUID APPLIED RESILIENT FLOORING," provided in pertinent part:

> ¶ 4 SUBMITTALS
>
> ¶ 4.1 ... Manufacturers [sic] Application Instructions: Complete instructions for application of flooring system including any precautions or special handling instructions required to comply with the Occupational Safety and Health Act.
>
> * * *
>
> ¶ 13.1 Surfacing shall set for a minimum period of 48 hours at 70° F before traffic is allowed on the floor. Finished flooring shall be protected from traffic by covering with 30 pound building paper or other equally effective means until final acceptance of the project.
>
> * * *
>
> ¶ 14.4 Upon completion, leave the work clean and free from blemishes.

(R4, tab 1)

10. Appellant's 11 June 1990 submittal #060, which the contracting officer approved on 15 June 1990, proposed MBT-Construction Services as its FAR Flooring vendor, and attached MBT's 9 May 1990 letter to appellant, which stated the following *Operating & Maintenance Guidelines:*

> - Avoid physical impact that may be caused by falling objects or dropped tools, equipment, parts, etc.
> - Avoid gouging or scraping that may be caused by dragging drums, equipment, lift forks, etc. Avoid isolated point loads.
> - Avoid contact with burning torches, open flames, weld splatter ....
>
> Recommended normal precautions for reducing potential flooring damage would include temporary protection such as plywood sheets beneath work areas, use of rubber-wheeled carts or equipment, use of sill plates below point loads, and fire-rated blankets around burning or welding locations.

(Exh. G-11)

11. Under contract 81 appellant subcontracted with (a) MBT to install FAR flooring and protective covering and (b) J. Christopher Enterprises, Inc., later renamed Blue Ridge Mechanical (BRM), to install carbon steel piping (exh. G-38, G-39; R4, tab 2).

12. BRM installed carbon steel piping from May to November 1990. MBT applied FAR flooring in the plating shop basement from 25 June to 24 July 1990, and on the second floor elevated walkway between 14 and 17 August 1990. The FAR flooring was subject to traffic after 8 July 1990. (Exh. G-12 to G-14, G-19; R4, tabs 13-15, 18-22, 24)

©1994, Commerce Clearing House, Inc.

Digitized by Google

13. After several times observing closeby welding and equipment moved across unprotected FAR flooring, Dennis Keene, respondent's construction manager, on 19 July 1990 told appellant's safety officer David Cordova, and on 20 July 1990 told appellant's site manager Randy Allen, to "meet spec section 9C para. 13" (R4, tab 3; exh. G-13 at 2; G-19 at 1; A-A, ¶ 10).

14. On 20 July 1990 respondent's contract administrator, Gene Lee, verbally directed Randy Allen to comply with Keene's previous instructions to adhere to the specifications (exh. A-A, ¶ 9; R4, tab 3).

15. Appellant's 20 July 1990 letter to respondent, forwarding MBT's 19 and 20 July 1990 letters to appellant, stated that due to welding, building paper was more a fire hazard than a protection; MBT's FAR flooring would resist traffic damage after its 48-hour cure period; welding tarps and thin plywood were a better protection; and "plywood and polyethylene is being placed under ... erection and fitting operations to protect the floor finish." Appellant did not state that Keene insisted on installing building paper or that Lee directed it. (R4, tab 2; exh. A-E, ¶ ¶ 4-5)

16. Appellant's 23 July 1990 letter to Gene Lee stated: "Per your directive, we are preparing to furnish and place 30 pound building paper protection as specified in paragraph 13.1; however, we believe this will create an unacceptable fire hazard" and asked respondent to review it with the base fire safety officer and to revise the specification. (R4, tab 5)

17. The contracting officer's 23 July 1990 letter directed appellant to comply with Section 9C, ¶ 13.1, and stated that appellant could comply with that specification "and still provide adequate fire and safety precautions" (R4, tab 3).

18. Gene Lee's 24 July 1990 conversation record stated that he and Dennis Keene discussed the "30 lb paper we want the Ktr to cover floor with," noting that "Dennis stated that the fire dept. had no problem with this and Dennis wanted it done now" (R4, tab 6).*

19. On 24-25 July 1990 BLM installed 30 pound building paper over the basement floor area. Respondent's 31 July through 10 August 1990 inspection records and 6 August letter to appellant stated that the flooring protection paper had torn areas needing repair or replacement. Appellant replaced the paper covering the south section of the basement floor on 7 August 1990. Respondent's 10 August 1990 notes stated:

> [Manager D. Keene:] inspected site with Randy Allen and discussed situation on paper on floor. Decided to put wood on the areas that work was being accomplished and where the paper was destroyed.
>
> * * *
>
> [Inspector F. Wheeler] Discussed burning permit vs. paper in floor in work area. D. Keene states agreement w/contractor to remove paper & protect floor in welding area.

(R4, tabs 8, 9, 10, 32; exh. G-27)

20. Inspector F. Wheeler's 13 August 1990 Inspection Record stated:

> Called Fire Dept. .... Met w/Inspector Dixon (DEF) for inspection of jobsite. Dixon states that paper protective covering must be removed from welding areas. Discussed w/D. Keene. Concurs to use chip board covered w/fire retardant blankets in welding area as recommended.

(R4, tab 11) Gene Lee participated in these directions (exh. G-3, ¶ ¶ 20-23).

21. On 14 August 1990 appellant removed building paper from the basement floor and second floor elevated walkway, and installed plywood in those respective locations on 14 and 20 August 1990 (R4, tabs 13, 22).

22. Appellant's 15 August 1990 letter notified Gene Lee that on 18 July 1990 Dennis Keene verbally directed appellant to adhere to specification § 9C, ¶ 13.1 and to place 30 pound building paper on the FAR flooring; on 13 August 1990 Keene told appellant to remove the paper and to replace it with another means of protection and that 1/4" ply-

* Appellant's vice president George Robinson in a 1992 affidavit stated that on 24 July 1990, after he discussed FAR flooring protection with Gene Lee, "the conclusion ... was that Kimmins would put down the paper which would remain in place until base safety or fire officials recognized the hazard, at which time we would remove the paper and would have no further requirement" (exh. A-G at ¶ 11). Gene Lee's affidavit discusses his several conversations with Randy Allen, but mentions none with George Robinson on 24 July 1990 (exh. G-3). No other Kimmins affiant corroborates Robinson's statement. Nothing else in the record memorializes a 24 July 1990 Robinson-Lee telephone conversation. Appellant's briefs do not address Robinson's "conclusion" in its proposed findings of fact. Respondent's briefs ignore the Robinson affidavit. Robinson's "conclusion" is so far at variance with the preponderance of record evidence that we accord it no weight.

Digitized by Google

wood was acceptable. Appellant considered this to be a FAR ¶ 52.243-4 change. (R4, tab 16) Contracting officer Marlene Humphry reviewed this correspondence (exh. G-4, ¶ 3).

23. Appellant's 21 January 1992 letter to respondent enclosed a $2,802.42 estimate for work to install and remove Kraft paper and to install 1/4" plywood to protect the contract 81 Phase I FAR flooring allegedly "as directed by the Government," with invoices dated from 7 to 20 August 1990 for plywood, Kraft paper and duct tape, labor hours and costs (R4, tab 25).

24. Affiant Randy Allen stated that plywood and fire-rated welding blankets were used "prior to July 23, 1990" and "over five weeks . . . prior to Dennis Keene's insistence to place 30 lb. building paper on the floor for protection" (exh. A-A, ¶¶ 4, 11). Affiant Robin Sauer, appellant's quality control manager, stated that appellant used plywood and fire resistant welding blankets under cutting and welding operations and rubber-wheeled carts or equipment to avoid applying point loads to the FAR-finished surfaces (exh. A-F, ¶ 4). BRM's Marvin Overton stated that protective coverings were used "at all times" (exh. A-B). BRM's Mike Cross stated that "building paper was first installed, and then later chipboard was installed" (exh. A-D, ¶ 5).

25. Government affiant Keene stated that prior to 24 July 1990 there was no proper protective covering on the FAR flooring; he discussed 30-pound building paper with Randy Allen on 20 July 1990, but only directed Allen to comply with specification § 9C, ¶ 13; he told Allen on 10 August 1990 that the paper was not holding up under floor traffic and that plywood was doing a better job and would be acceptable; and he did not order appellant to remove the floor paper on 13 August 1990 (exh. G-1). Affiants John Fehr (a contracted field inspector), Gene Lee and contracting officer Marlene Humphry generally corroborate Keene's statements (exh. G-2, G-3, G-4). Affiant Emmett Dixon said that on 13 August 1990 he did not tell appellant it had to remove the floor paper; it had to protect it with fire retardant covers within 35 feet of all welding (exh. G-6; R4, tab 28).

26. Considering the conflicting 1992 affidavits, and weighing more heavily the contemporaneous 1990 records of the parties' statements, we find that (a) appellant used plywood and fire-resistant welding blankets for FAR flooring and fire protection prior to 24 July 1990, but such protection was inadequate; (b) Dennis Keene did not direct appellant to install 30-pound building paper on 19-20 July 1990; (c) the record contains no evidence of any actual damage to FAR flooring; (d) building paper, repaired or replaced as often as necessary, adequately protected FAR flooring from traffic damage and it was combustible, requiring fire shielding in welding areas; and (e) on 13 August 1990 Messrs. Keene, Dixon and Lee directed appellant to remove paper from the welding areas and replace it with plywood.

27. The contracting officer's final decision dated 25 February 1992 denied appellant's FAR flooring claim (R4, tab 31).

28. Appellant timely appealed that final decision to the Board on 16 March 1992.

DECISION

Appellant has the burden of proving entitlement to affirmative claims such as constructive change order claims. *Teledyne McCormick-Selph v. United States* [25 CCF ¶ 82,891], 588 F.2d 808, 810, 218 Ct. Cl. 513, 516 (1978); *Service Engineering Company*, ASBCA No. 40274, 93-1 BCA ¶ 25,520 at 127,119.

Appellant argues that contract 81 gave it the right to choose either "30 pound building paper" or "other equally effective means" to protect the FAR flooring, but not both. Appellant chose "other equally effective means" in submittal #060, namely, "plywood sheets beneath work areas, use of rubber-wheeled carts or equipment, use of sill plates below point loads, and fire-rated blankets around burning or welding locations." Respondent approved that choice, so appellant had no duty to install 30-pound building paper. Appellant does not stress that Dennis Keene's alleged direction to install building paper in July 1990 constituted a change. We found that Keene did not direct appellant to install the building paper in July 1990 (finding 26(b)). Appellant argues that (1) a change arose when respondent recognized that the building paper was a fire hazard and ordered appellant to remove it and to replace it with plywood; and (2) the specification permitting 30-pound building paper was defective because such paper cannot protect FAR flooring from anything.

If specification § 9C, ¶ 13.1, were construed in isolation, appellant's "either paper or equally effective means but not both" argument might be persuasive. But that interpretation conflicts with the elementary rule which requires us to construe a contract as a whole to give meaning to all its provisions. *Julius Goldman's Egg City v. United States*

©1994, Commerce Clearing House, Inc.

Digitized by Google

[30 CCF ¶ 70,662], 697 F.2d 1051, 1057 (Fed. Cir. 1983); *Coastal Dry Dock & Repair Corp.*, ASBCA No. 31894, 81-1 BCA ¶ 19,618 at 99,235. Appellant had concurrent duties to protect the FAR flooring from traffic damage and from welding, cutting and open flame fire hazards. Installation of 30-pound building paper to protect the FAR flooring from traffic damage did not satisfy appellant's contractual duties. Wherever combustible material was in a welding area, appellant had to protect it by fire-resistant shields (findings 7, 8).

Appellant's argument that the specification § 9C, ¶ 13.1, was defective is not sound. The 30-pound building paper, repaired and replaced as often as necessary, adequately protected FAR flooring from traffic damage (finding 26(d)). In areas of welding, cutting and open flame fire hazards, appellant had to protect the FAR flooring either (i) with noncombustible material or (ii) with building paper covered by fire-resistant shields. The need for such shields does not mean that the specification of building paper was defective.

Inspector Dixon's 1992 affidavit states that he told appellant only to protect the FAR flooring with fire retardant covers, not to remove the building paper on 13 August 1990 (finding 25). Dixon's statement is not consistent with inspector Fred Wheeler's records: 10 August 1990—"D. Keene states agreement w/contractor to *remove* paper & protect floor in welding area" and 13 August 1990—"paper protective covering *must be removed* from the welding areas" (emphasis added; findings 19, 20). We give more weight to the contemporaneous records than to the post-litem affidavit.

Contract administrator Gene Lee participated in the verbal direction which he, Keene and Dixon gave appellant on 13 August 1990 (finding 20). Contracting officer Marlene Humphry reviewed appellant's letter notifying Lee that it considered such direction a change (finding 22). Therefore, she ratified the change. *Reliable Disposal Company, Inc.*, ASBCA No. 40100, 91-2 BCA ¶ 23,895 at 119,717, and authorities cited therein.

Respondent argues that its direction regarding fire protection was a "sovereign act" enforcing the OSHA law and regulations. Neither OSHA 1926.352 Fire prevention, nor AFOSH Standard 127-5 requires *both* the protection of flammable materials or fire hazards *and* the removal of such materials or hazards from a welding area (finding 8). To require appellant to do both was not a sovereign act, but was a contract change.

We hold that appellant's original installation of 30-pound building paper was not a change (finding 26(b)), but respondent's direction to remove such paper on 13 August 1990 (finding 26(e)) was a change. Appellant is entitled to compensation for the cost of removing building paper, but not for installing such paper and particle boards throughout the Phase I area. We sustain the appeal to the extent set forth in this paragraph.

[¶ 26,349] McGhee Construction, Inc.

ASBCA No. 44064, September 20, 1993. Contract No. F08650-90-C-0195.

Performance—Directions by Government—Substitutions.—A contractor that offered laminate from three manufacturers listed in the specifications as acceptable in place of the brand name plastic laminate called for in the drawings was entitled to an equitable adjustment for the government's refusal to accept an alternative, because the contractor was entitled to substitute acceptable alternatives for the brand name. Also, the specifications took precedence over the drawings under the Specifications and Drawings clause.

Interpretation of Contracts—Drawings—Reasonableness of Interpretation.—A contractor was not entitled to an equitable adjustment for being required to use a brand name solid surface building material, even though the contract's listing the brand name product within a plastic laminate schedule and depicting the brand name product as plastic laminate over a plywood base rather than as an SSBM did not contribute to the contract's clarity, because the only reasonable interpretation was that the brand name was required.

For the appellant: Starfield & Payne, Fort Washington, Pennsylvania, by Timothy S. Kerr. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Michael F. Copley, Trial Attorney.

Before STEMPLER, RUBERRY, and THOMAS, Administrative Judges.

STEMPLER, Administrative Judge: This is a timely appeal from a contracting officer's decision denying appellant's $26,494 [1] claim for providing material allegedly not required by the contract. The Contract Disputes Act is applicable. Only entitlement is before us for decision.

FINDINGS OF FACT

1. On 28 September 1990, the Air Force and McGhee Construction, Inc. (MCI) entered into a $741,500 firm fixed price construction contract for the repair and upgrade of the lobby and command section of Building 989 at Patrick Air Force Base, FL. The relevant specification sections are as follows:

SECTION 06240

LAMINATED PLASTIC

PART 1—GENERAL

1.1 DESCRIPTION

A. Work included: Provide laminated plastic where shown on the Drawings, specified herein, and needed for a complete and proper installation.

* * *

PART 2—PRODUCTS

2.1 LAMINATED PLASTICS

A. Acceptable manufacturers:

1. Wilsonart Division of Ralph Wilson Plastics, 600 Bruce Drive, Temple, Texas 76501 (817) 778-2711.

2. Nevamar Corporation, 8339 Telegraph Road, Odenton, Maryland 21113 (301) 569-5000.

3. Micarta Division of Westinghouse Electric Corporation, 304 Hoover Street, Hampton, South Carolina 29924 (803) 943-2311.

B. Colors and patterns: Provide "solid colors & textured finish" *as noted on the drawings selected by the Contracting Officer from standard colors and finishes of the approved manufacturer.* [2]

C. Qualities and types: Provide general purpose type, 0.050" thick, complying with NEMA LD3.

(R4, tab 1)

2. The drawings relevant to this dispute are:

- Sheet 12 of 22: This sheet was the "room finish schedule". The drawing contains finish schedule codes for plastic laminates, ceiling finishes, floorcoverings & accessories, *etc.* The plastic laminate codes ranged from PL-1 to PL-11. PL-1 through PL-8 specified Laminart as the manufacturer with particular colors and finishes. PL-9 specified Wilsonart as the manufacturer. PL-10 read: "Avonite solid surfacing & building material, Color, CI-1050 midnight sky, Finish: High Gloss." PL-11 did not specify a manufacturer. The finish schedule legend stated that "PL" meant plastic laminate.[3]

(emphasis added)

- Sheet 10 of 22 depicted a typical cabinet section. Parts of the cabinet were to be made of plywood with plastic laminate as a finish surface. Notes on the drawing would state (*e.g.*) "plastic lam. on 3/4" plyw'd. on all cabinet front exposed surfaces w/ PL-2". An arrow would go from these notes to an area where there was a 3/4 surface with straight lines (indicating plywood) in it and a bold solid line on top of it. Two surfaces with these same straight lines had a different note. This note stated: "PL-10 Avonite Counter top." Two quarter rounds also appeared on the drawings with the note: "PL-10 Avonite quarter round." These quarter rounds did not have the straight lines in them. Sheet 9 of 22, the display cabinet section, also had notes including the use of both the Avonite quarter round and Avonite counter top, each without the straight lines.

- Sheet 6 of 22, note 2 required contractors to review the complete drawings and specifications to determine the entire scope of their work. It also directed the contractor, in case of conflict between sections of the specification, to include the most stringent requirements. Note 3 required the contractor to coordinate the drawings with the specifications.

(R4, tab 2; exh. G-1; tr. 30-31, 64-65, 67, 80-81)

3. The contract contained the FAR 52.236-5, Material and Workmanship (APR

[1] Appellant's claim now appears to be for $15,750 (app. reply br. at 6).

[2] Section 2.1 B. was changed by hand prior to the bid packages being sent to the bidders. The portion struck through was lined out. The portion in italics was added.

[3] Sheet 2 of 22 has the materials legend symbols. On this drawing, "PLAM" is the symbol for plastic laminate (tr. 123).

Digitized by Google

1984) clause, which provides in relevant part:

> References in the specifications to equipment, material, articles, or patented processes by trade name, make, or catalog number, shall be regarded as establishing a standard of quality and shall not be construed as limiting competition. The Contractor may, at its option, use any equipment, material, article, or process that, in the judgment of the Contracting Officer, is equal to that named in the specifications, unless otherwise specifically provided in this contract.

(R4, tab 1) The contract also contains the Specifications and Drawings For Construction (APR 1984) clause, FAR 52.236-21.

4. Avonite is a "solid surface building material" (SSBM), as distinguished from plastic laminate which is a thin finish sheet that is applied to a building material. Avonite, which is an imitation marble, is approximately 1/2" thick (tr. 34, 45).

5. While Avonite was not a plastic laminate, the architect and engineer firm (A/E) that prepared the drawings did not find it necessary to create a new finish category other than plastic laminate to specify Avonite because it was a surfacing material like plastic laminate. That is how Avonite came to appear on the finish schedule as PL-10. The representative of the A/E firm testified that the lines in the Avonite surface on sheet 10 of the drawings were not intended to depict plywood and were, in retrospect, a mistake (tr. 101-03, 107).

6. In preparing its bid, MCI did not include any amounts for Avonite (as PL-10) as opposed to plastic laminate, or for the more expensive Laminart plastic laminate for PL-1 through PL-8. MCI did not ask any suppliers for quotations prior to bidding. MCI's president (Mr. McGhee), who prepared MCI's bid, testified that he reviewed the entire contract, including the specifications and drawings in preparing the bid. It was his testimony that all three of the acceptable manufacturers listed in the specifications had similarly priced products, so he did not use the finish schedule (that called out Laminart and Avonite) when he arrived at his bid. It was his opinion that the finish schedule would contain only the color and texture of the finishes and that these would have no effect on MCI's bid. Mr. McGhee testified that he saw the reference on drawing sheet 10 to Avonite, but did not know what Avonite was and assumed it was a color or texture of a plastic laminate. He also had never heard the term solid surface building material (tr. 20, 13-14, 23-25, 28-30, 73-74).

7. After award, Mr. McGhee solicited quotes from suppliers for the cabinetry work, giving them the same information the Government had provided MCI to bid on. The suppliers quoted very high and when questioned by MCI, stated that the high bids were because of the Avonite which was not a plastic laminate but a SSBM. This was the first time MCI realized this fact. It was from the suppliers' quotations that MCI also discovered that Laminart had been specified as a plastic laminate on the drawings (tr. 22, 33-34, 71-72, 78-79).

8. On 14 March 1991, MCI submitted submittal no. 36 for the plastic laminates. MCI offered the choice of 5 different manufacturers for items PL-1 through PL-9, including the three listed in the specifications as acceptable. PL-1, 3, 5, 6, 7, and 8 were disapproved on 17 April 1991 with the following note: "Refer to specification 06240, paragraph 2.1 B. Submitted samples are not as specified on sheet 12 of drawings. Intent of design is compromised with submitted alternates." MCI's submittal for PL-10 stated: "Formica 271 Blackstone, Polished (Avonite not available as plastic laminate)." The Government disapproved the PL-10 submission stating: "Same as item 112 [same note as quoted above). Avonite is not a plastic laminate as stated on sheet 12 of drawings under PL-10. Refer to sheet 9 of the drawings for locations of avonite building material on cabinets. The intent of the design is not met with the submitted material alternate." (R4, tab 3; tr. 34-35, 37-38).

9. On 6 May 1991 MCI wrote the contracting officer stating that as to plastic laminates, MCI had not offered Laminart because of its low quality, high price (2-3 times the cost of the alternates), and nonavailability. MCI pointed out that the specifications listed three acceptable manufacturers, none of which was Laminart, and all of which were offered by MCI. As to the Avonite problem: MCI stated:

> 1) The specifications are silent with respect to Avonite or any like materials being required on this project.
>
> 2) The detailed drawings detail a plastic laminate for PL-10. Reference sheet 10, section 14/10.
>
> 3) The PL-10 designation would presumably stand for plastic laminate #10.
>
> 4) The color selection for PL-10 can be found on sheet 12 of the drawings under

Digitized by Google

the general heading of PLASTIC LAMINATE.

Only upon trying to locate a supplier for Avonite plastic laminate did we discover that Avonite is a material other than a plastic laminate, at 25 times the cost of the plastic laminate included in our bid. The Government should not be allowed to slip in the more expensive materials on an unsuspecting bidder in the manner utilized on this project.

MCI asked for reconsideration of the disapproval and stated that it would not resubmit until it had a decision on its request for reconsideration (R4, tab 7).

10. On 1 July 1991, the Government replied, stating:

1. Per your letter, the Contracting Officer has reviewed your request to reconsider the previously disapproved submittal items (Submittal No. 36). The disapproved submittals have been reviewed and remain disapproved because the materials are not considered to be equal in quality or functionality.

2. As to your claim that the government "slipped in" a more expensive material, the Avonite and Laminart were clearly identified in the finish schedule of the contract drawings. Specifications Section 06240, Part 2, paragraph 2.1.8, refers the reader to the drawings. In addition, the "General Notes No. 1-9" on Sheet 1 of 22 of the project drawings directs the contractor to include both specifications and drawings since both contain information needed by the contractor to prepare a bid package.

3. The paramount responsibility of the contractor during the bidding stage is to thoroughly review the contract documents and bid accordingly, and if omissions or discrepancies are noted, to raise them at that time. This project was bid without any protest from you, and your company is responsible to comply with the contract requirements. You are herein directed to submit the finishes called for, or finishes that are equal to Avonite and Laminart in quality and functionality. These submittals should reach this office no later than 10 Jul 91.

(R4, tab 7)

11. The Laminart product specified by the Government did not meet the abrasion standards required by the contract (AR4, tab 13; tr. 38-39).

12. On 11 July 1991, MCI filed a claim for $26,494 for the cost of providing the more expensive Laminart and Avonite[4] (R4, tab 8).

13. On 3 December 1991, the contracting officer denied the claim (R4, tab 13).

14. On 28 January 1992, MCI filed a timely appeal.

CONTENTIONS OF THE PARTIES

It is MCI's position that the drawings are defective because they specify a plastic laminate manufacturer who was not cited as acceptable in the specifications and because the drawings specify Avonite as a plastic laminate when it is in fact a SSBM. To the extent that any ambiguities in the contract are present, MCI contends they are latent and not patent.

The Government contends that the contract clearly calls for the use of Laminart and Avonite. If the contract contains ambiguities, the Government alleges that they are patent, giving rise to a duty on MCI's part to inquire before bidding.

DECISION

There are two issues for decision in the appeal before us. First, we must decide whether the Government's requiring MCI to provide Laminart entitles MCI to an equitable adjustment. Second, we must decide whether the Government's requiring MCI to provide a SSBM (where Avonite was specified on the drawings) entitles MCI to an equitable adjustment.

In interpreting contracts, we attempt to give meaning and consideration to all portions of a contract. *Hol-Gar Manufacturing Corp. v. U.S.* [10 CCF ¶ 72,885], 351 F.2d 972 (Ct. Cl. 1965). As to the Laminart issue, we can interpret the specifications and drawings without finding a conflict. While the drawings specify Laminart, MCI was, of course, entitled to substitute acceptable alternatives for the brand name. Also, the specification takes precedence over the drawing under the Specifications and Drawings clause. We hold that § 2.1 A of the specification establishes that products of the three listed manufacturers were acceptable alternatives. Therefore, the Government's rejection of those manufacturers was wrong-

[4] MCI eventually submitted a product called Corian as an alternative for Avonite and the Government approved this substitution. It is the difference between the plastic laminate and the Corian that MCI seeks in this portion of the claim (AR4, tab 34; tr. 38, 43-44).

©1994, Commerce Clearing House, Inc.

Digitized by Google

ful and MCI is entitled to its increased costs for providing Laminart.

As to the Avonite issue, we hold that the contract required the use of Avonite (or an acceptable SSBM alternate) and MCI is not entitled to an equitable adjustment for providing it. While listing Avonite within the plastic laminate schedule, and depicting (at least in some instances) the Avonite as plastic laminate over a plywood base, did not contribute to the contract's clarity, taken as a whole, the only reasonable interpretation is that Avonite was required. First, sheet 12 of the drawings clearly calls out Avonite as a SSBM. Second, both sheets 9 ad 10 included instances where the Avonite did not include the confusing plywood base representation. MCI's problem was that it was not familiar with Avonite or the term SSBM and it had not contacted any suppliers prior to award. MCI's suppliers had no difficulty interpreting the contract and determining that Avonite was required.

CONCLUSION

The appeal is sustained in part (and remanded to the contract officer for determination of quantum) and denied in part in accordance with the above opinion.

[¶ 26,350] Rice King

ASBCA No. 43352, September 10, 1993. Contract No. 110-100-89-C-0033.

Procedure, Boards—Parties—Partnership v. Doing Business As.—A government assertion that the party before the board was not a party to the contract and lacked standing to proceed was denied, even though the government argued that it had contracted with an individual, not a partnership, because the record contradicted the government. A partnership proposal was drawn up and signed by several individuals as partners; the partnership authorized an individual to submit a bid to a nonappropriated fund activity, which it did. A business clearance memorandum prepared by government personnel proposed award of the contract to "[the individual] dba: Rice King." It was noted that the individual owned and operated a Rice King in San Diego and had put together a partnership capable of providing the cash necessary to build and start operation of the facility for the nonappropriated fund activity. A more formal agreement, memorializing the partnership, was entered into by the individuals identified in the partnership proposal. The award was made to "[the individual] dba: Rice King." The government knowingly contracted with Rice King as the partnership described in documents supplied with the bid submission.

For the appellant: Clinton D. Hubbard, San Diego, California. For the government: Arthur H. Hildebrandt III, Navy Chief Trial Attorney, and Anthony Crouse, Trial Attorney, Naval Facilities Engineering Command, West Coast Litigation Team, San Bruno, California.

Before YANNELLO, RUBERRY, and THOMAS, Administrative Judges.

YANNELLO, Administrative Judge: The Government has filed a motion to dismiss the subject appeal, for lack of jurisdiction, on the grounds that the named appellant is not a party to the contract and lacks standing to proceed.

Specifically, the Government contends that it contracted with Ms. Paula Lutes, an individual who would be operating a restaurant under the name of Rice King; the Government argues that this appeal may be brought only by Ms. Lutes individually or by Ms. Lutes doing business as Rice King, but may not be brought by Rice King-32nd Street, a California Partnership, with which, the Government contends, it has no privity of contract (br. at 9-10).

SUMMARY OF FACTS

On 9 May 1989, a Tentative Partnership Proposal was drawn up and signed by several individuals, as partners, identified as follows:

Names:	[Apparent shares]
Mr. and Mrs. Lutes	8 shares, $80,000
Mr. and Mrs. Steve Sandoval	7 shares, $70,000
Leticia Rosario	12 shares, $120,000

Digitized by Google

Mr. & Mrs. Yung-Fa Lee (by Cheng)	4 shares, $40,000
Mr. & Mrs. Shen-Chia Ma (by Cheng)	4 shares, $40,000
Mr. and Mrs. Ron Battle	1 share, $10,000
Total:	36 shares, $360,000

In the record before the Board, affidavits were furnished by Ms. Lutes as well as Mr. Battle, Mr. Sandoval, Ms. Rosario, and, on behalf of Mr. & Mrs. Ma and Mr. & Mrs. Lee, by Dr. Cheng. All attest to their formation of the partnership beginning with discussions in April 1989 and culminating in a meeting on 9 May when the above document was executed. They also attest that Ms. Lutes was designated the General Manager and authorized to submit a bid in response to the Navy's solicitation, as discussed below.

In response to a solicitation for bids issued in March 1989 by the Navy Resale and Services Support Office (also referred to as NAVRESSO or the Navy Exchange), a non-appropriated fund activity, a proposal was submitted on 10 May 1989 by offeror Paula Lutes, who signed the offer as "General Manager." Accompanying the offer were representations that the offeror intended to operate as a member of a partnership, together with descriptions of the proposed partnership (see, e.g., R4, tab 6 at 4-7), including the signed agreement referred to above.[1]

Government questions concerning the bid proposal were addressed to Ms. Lutes who responded by letter of 14 May and enclosed a revised bid for Rice King.

A Business Clearance Memorandum (BCM) was prepared on 19 May by Government personnel (prepared by G.C. Carter as Acquisition Manager and submitted by J.C. Matthews, Commander). It proposed the award of the contract to "Paula Lutes dba: Rice King." It was noted that Ms. Lutes owned and operated one San Diego Rice King restaurant and that:

> She has put together a partnership financially capable of providing in cash the $360,000 estimated as necessary to build and start operation of this facility.

On 4 July 1989, a more formal agreement, memorializing the partnership, was entered into by the individuals identified in the 9 May Tentative Partnership Proposal, with the percentage ownership noted therein (for example, Mr. and Mrs. Lutes with a 22.24 percentage distribution of profit or loss). The name of the partnership was stated as the "32nd Street Naval Station Rice King." With respect to such terms as control and dissolution of the partnership, this agreement referred to a "formal partnership contract" to be drafted later.[2]

Accordingly, approval was given on 14 July 1989 for award of the contract to "Paula Lutes, dba Rice King." The award was signed on 14 July by Mr. Matthews as contracting officer.

Between 1989 and early 1991, the parties discussed revisions in the terms of the contract. Government personnel met or corresponded with Ms. Lutes as well as with other members of the partnership and its counsel.

In May or June 1991, Ms. Lutes resigned as managing partner in Rice King-32nd Street; in September or October 1991, she transferred her interests in the partnership to the remaining partners.

The Government, in mid-1991, issued a unilateral modification to the contract reducing the amount of the contractor's commission. Thereafter correspondence between the parties was chiefly undertaken by either Dr. Cheng or Clinton D. Hubbard, Esquire.

---

[1] In the descriptions furnished to the Government, Ms. Lutes was described as co-owner, with her husband, of a Rice King restaurant which opened on 2 March 1989 in San Diego; Dr. Cheng was described as the founder, in 1982, of "Rice King Foods, Inc." and also represented Mr. and Mrs. Lee and Mr. and Mrs. Ma, who entered into the 9 May 1989 partnership. In addition, financial statements for one month of operations of Ms. Lutes' restaurant were furnished.

[2] On 21 August 1989, a General Partnership Agreement was entered into between "Rice King II, Inc." (described as a wholly owned subsidiary of "Rice King Foods, Inc." or "Rice King I" owned by Dr. Cheng) and "Rice King-32nd St.," a partnership. The chief purpose of this Agreement was to obtain for the Naval Station restaurant (also sometimes referred to as "Rice King VII" apparently denoting the seventh in a chain of Rice King restaurants) rights to use the Rice King name. The capital contribution consisted exclusively of $360,000 from "32nd St. Partnership", which in turn had 99 percent of the distribution of profits/losses from the new partnership. This agreement was executed for Rice King II by Dr. Cheng and for the "32nd St. Partnership" by Paula Lutes, Managing Partner, and Mr. Lutes, Mr. and Mrs. Battle, Mr. and Mrs. Lee, Mr. and Mrs. Ma, Mr. and Mrs. Sandoval, and Leticia Rosario.

©1994, Commerce Clearing House, Inc.

Digitized by Google

The notice of appeal was filed with the Board on 5 August 1991, on behalf of Rice King-32nd St. Partnership. At the same time, the claim involved in the dispute was submitted and certified by Leticia Rosario as General Partner of Rice King-32nd St. Partnership.[3]

The Government contends, in essence, that its contract is with Ms. Paula Lutes individually or d/b/a "Rice King"; that "Rice King-32nd Street Partnership" did not come into being until after the contract was entered into; and that "Rice King-32nd Street Partnership" is not the contractor and is not entitled to pursue the instant appeal.[4]

DISCUSSION

In support of its motion, the Government cites many well-established precepts concerning privity with the Government and standing to sue. It is not necessary to discuss these contentions or precepts here. Rather, we find that the facts present in this appeal are sufficient predicate upon which to base our decision.

At the time of bid submission, the Government was advised that the offeror intended to perform the contract through a partnership, doing business as Rice King. Before bid opening and contract award, the Government was furnished with a description of the partnership together with a partnership agreement signed by the various partners and setting forth their proportionate ownership. There was indeed a partnership formed at the time of bid submission.[5] This

[3] Based on the foregoing findings, the Board notes that the captioned appellant should more precisely be described as Rice King-32nd Street Partnership.

[4] In its April 1992 Answer to the Complaint, at page 3 referring to the third paragraph on page 8 of appellant's proposal of 7 February 1991, the Government had admitted the following assertions:

The within claimant, "Rice King", was awarded the contract on July 14, 1989, under Contract No. 110-100-89C-0033. The managing partner of "Rice King" is Paula Lutes. The formal name of the partnership is "Rice King 32nd Street, A California Partnership" (herein after [sic] referred to as "Rice King").

Thus these facts, concerning the party with whom the Government believed it had contracted as well as the party appearing as appellant—both being "Rice King-32nd Street, a partnership", were addressed in the pleadings some six months before the Government first raised the concerns now voiced in its motion.

Government counsel states in its motion that he had noted, in the filing of this appeal, a change in style from "Paula Lutes, d/b/a Rice King" to "Rice King-32nd Street, a California Partnership" but, however, that he recognized Ms. Lutes as a member of the partnership and hence perceived no difficulty with the appeal. Counsel further states that he had only recently learned of Ms. Lutes' withdrawal from the partnership (allegedly prior to the filing of the Notice of Appeal although the documents make clear that, at that time, she had only resigned as General Manager; her sale of her partnership interest occurred after the filing of the appeal).

It is unclear what significance, as a matter of law, the Government attaches to Ms. Lutes' withdrawal from the partnership (or indeed to any other change in the composition of the partnership) since the partnership itself is admittedly the entity to which the contract was awarded and which performed the contract. In any event, as noted above, Ms. Lutes remained a partner at the time the instant appeal was initiated and for some four months thereafter.

Finally, counsel asserts that he had only recently obtained the documents pertaining to the partnership and thus learned that its formation had allegedly occurred after submission of the 10 May 1989 bid. Arguments concerning this issue are timely raised in the Government's motion.

However, here too, some question may arise with respect to conflicting factual allegations. The Government acknowledges that the partnership came into being by 4 July 1989 and that the contract was awarded on 14 July. Since, indeed, the contract was admittedly awarded to Rice King-32nd Street, a Partnership, and that entity performed the contract (as the Government was aware in its many conversations with the various partners during performance), then a contract between the Government and the partnership may have existed *in fact* regardless of the identity of the person or entity submitting the 10 May 1989 bid. However, since these questions are not raised by the parties, they are not addressed here.

[5] Appellant has provided many references to California law on formation of a partnership and treatises discussing the subject. These references include: West's Annotated California Codes, vol. 24A, "Corporations", sections 9000 to 24999 (1991 Ed.); California Corporation Code § 15006; and the California Business & Professions Code, esp. § 17900; as well as B.E. Witkin, 9 *Summary of California Law*, "Partnership", § 24, at 423 (1989, Bancroft-Whitney, 9th Ed.) and B.E. Witkin, 1 Summary of California Law, "Contracts"; § § 261-262; and a treatise published by the California State Bar entitled "Advising California Partnership" (ed. E. Giacomini, *et al.*; 2nd Ed. 1988). As discussed in these references, the determination of whether a partnership has been formed is based on the intent, manifest and/or otherwise, of the indi-

Digitized by Google

formation was further memorialized in an agreement executed on 4 July, prior to contract award on 14 July.

The Government contends that it "was never placed on notice that any entity other than Paula Lutes was the party to be charged under the contract" and that "there is no objective evidence that the Government intended to contract with anyone but Paula Lutes" (see br. at 9). This is contradicted by the record.

Ms. Lutes had owned and operated a restaurant for only a few months at the time of bid submittal (with only one month's financial statements accompanying the bid). There is nothing in the record to show that the Government considered or determined Ms. Lutes' responsibility as the contractor to construct and operate the base restaurant.

Rather, the BCM prepared by the Government clearly evidences that it considered the *partnership* which Ms. Lutes was forming as having the financial capacity to construct and operate the base restaurant facility. Government personnel recommended award of the contract to Ms. Lutes "dba Rice King."

Similarly, the Government's characterization of Rice King as an "undisclosed principal" who, under certain established principles may be restricted in its ability to prosecute an appeal against the Government, is wide of the factual mark. The identity of the partnership, and its individual members, was fully disclosed to and was indeed relied upon by the Government when the contract was entered into.

Thus, we conclude that the Government knowingly contracted with Rice King as the partnership described in documents supplied with the bid submission. Moreover, that partnership, as contractor, may submit a claim and/or initiate an appeal through any authorized officer or general partner; here, Ms. Rosario certified appellant's claim of 5 August 1991 as General Partner at that time, following the resignation of Ms. Lutes.[6]

CONCLUSION

Accordingly, we find appellant, Rice King [32nd Street Partnership], to be the proper party, as contractor, and the notice of appeal filed by its counsel to have properly initiated the above captioned action.

For the foregoing reasons, the Government's motion is denied.

[¶ 26,351] AEC Corporation

ASBCA No. 42920, September 15, 1993. Contract No. N62467-88-C-0646.

Procedure, Boards—Summary Judgment—Relevant Fact Issues.—A government motion for summary judgment in the appeal of a default termination was denied because the record did not support the government's contention that the contractor's appeal asserted, as a reason for its failure to perform, that its financial incapacity was caused entirely by parties other than the government. The board had to decide the extent to which, if at all, performance delay resulted from actions or omissions of the government, of the contractor itself, of a bonding specialist, or of a firm hired to oversee contract performance. Despite the government's effort to suggest that the contractor placed the entire blame for its performance difficulties upon the latter companies, for which the contractor itself would have to bear the consequences, the record reflected that the contractor did contemporaneously allege government responsibility and that it submitted an affidavit to this effect.

(Footnote Continued)

vidual partners rather than on any formal filing requirements.

The Government contends that "the partnership did not begin until two months after Ms. Lutes executed the proposal" (br. at 3), referring to the the 4 July 1989 partnership document (br. at 14); that a partnership was created as described in the document executed on 21 August 1989; and that no such partnership could have existed under California law at the time of bid submission (br. at 4). However, the Government cites no state law or other authority in support of these contentions. We have concluded that the parties to the May 1989 partnership proposal regarded the partnership as formed at this time.

[6] In an earlier decision in this appeal (92-2 BCA ¶ 24,805), on a Government motion to dismiss on other grounds, the Board also noted this certification by Ms. Rosario, as general partner.

For the appellant: Watt, Tieder, Killian & Hoffar, McLean, Virginia, by Robert G. Watt, Barbara G. Werther, and Vivian Katsantonis. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Lisa C. Gerideau, Trial Attorney, Naval Facilities Engineering Command, Alexandria, Virginia.

Before LIPMAN, RUBERRY, and THOMAS, Administrative Judges.

LIPMAN, Administrative Judge: Appellant is appealing the Government's termination for default of this construction contract. The Government has moved that we grant it summary judgment and deny the appeal. The basis of its motion is that appellant has advanced, as a reason for its failure to perform, its financial incapacity caused by parties other than the Government. The motion is unaccompanied by affidavits and is based solely upon documents in the evidentiary file and additional documents submitted along with the motion. Appellant opposes the motion and, in support of its opposition, has submitted affidavits as well as additional documents. We deny the motion below.

In the alternative to its Motion for Summary Judgment, the Government moves that we deem as admitted statements in the Government's Request for Admissions to which appellant provided inadequate responses. Appellant opposes the motion. We deny the motion, but treat it as a motion to compel and order appellant to provide complete responses to the Request for Admissions within 30 days of its receipt of this decision.

STATEMENT OF FACTS

On 12 May 1989, the Small Business Administration, pursuant to the provisions of Section 8(a) of the Small Business Act (SBA), entered into this contract with the Navy for the construction of a Naval and Marine Corps Reserve Training Center in Miami, Florida. The SBA subcontracted performance of the work to appellant at a firm fixed price of $4,361,631. The contract contained the standard construction contract default termination clause and a provision for the imposition of liquidated damages of $2,200 per day of delay beyond the required completion date.

The contract required appellant to provide performance and payment bonds. In order to obtain the required bonding, on 16 August 1989 appellant entered into agreement with Surety Specialists, Inc. (SSI) and Kimmins Contracting Corporation (Kimmins) whereby the two companies agreed to assist appellant in obtaining the required bonds in exchange for a bond premium consisting of $7\frac{1}{2}$ percent of the contract price. Appellant also agreed to permit Kimmins to oversee contract performance and to establish a joint bank account with Kimmins and to submit to the Government an irrevocable notice and directive that the Government make all payments under the contract directly into the joint bank account. On the same date, Cumberland Casualty Surety Company (Cumberland) issued performance and payment bonds for the contract work.

The Government had previously contracted with another contractor to perform the work, and it had terminated that contract for default. Appellant examined the worksite before commencing performance.

The original contract called for appellant to begin work on 22 June 1989 and to complete the work on or before 14 October 1990. The contract was later amended to increase the contract price and to extend the performance period to 3 March 1991.

During the course of contract performance, the Government sent appellant several letters expressing concern about what the Government considered to be appellant's slow progress.

Over the same general period of time, appellant sent the Government several letters complaining about alleged Government actions and omissions and other problems adversely affecting performance for which appellant was not responsible. Appellant also requested that the required period of performance be extended. Among appellant's allegations were the following: (a) lack of cooperation from Government personnel; (b) Government failure to approve drawing submittals in a timely manner; (c) Government mismanagement with respect to contractor requests for payment, including Government failure to place funds into the joint bank account appellant held with Kimmins; (d) additional work required by the Government which warranted a contract time extension; (e) Government misinterpretation of the contract requirements; (f) defective specifications; (g) deficiencies in the work performed by the previous contractor; (h) delays in the issuance of a permit; (i) Kimmins' withholding of funds from appellant; and, (j) interference by Kimmins and SSI with appellant's performance.

Digitized by Google

Ultimately, following the issuance of a cure notice, on 22 April 1991 the Government terminated the contract for default due to appellant's failure to make progress. Appellant made timely appeal.

Following the termination, the Government entered into a takeover agreement with the surety, Cumberland, to complete the work.

Appellant brought action in state court against Kimmins, SSI and Cumberland. In that proceeding, appellant alleged that the defendants were responsible for appellant's performance problems. Appellant made similar allegations in a "Demand for Arbitration" it filed with the American Arbitration Association with respect to appellant's agreements with the three companies as well as in a letter of 18 June 1991 from appellant's then counsel to the Government seeking documents under the Freedom of Information Act to assist it in the arbitration proceeding.

Appellant has submitted an affidavit of the Kimmins project manager assigned to the job stating that the Government did not disclose to appellant poor workmanship by the previous contractor as well as asserting other Government actions and omissions as causing performance delay.

DECISION

Motion for Summary Judgment

We will grant a motion for summary judgment when there is no genuine issue of material fact and where the moving party is entitled to judgment as a matter of law. The moving party bears the burden of demonstrating both elements and the party against whom the motion is advanced is entitled to have all inferences drawn in its favor. *Paragon Van Lines, Inc.*, ASBCA No. 32294, 87-1 BCA ¶ 19,366.

In the present appeal, it appears quite clear that material facts are in dispute. We are to decide upon the propriety of the Government's termination of appellant's contract for default and, based upon the positions of the parties, that decision will turn on the reason or reasons for appellant's delay in performance.

We must determine the extent to which, if at all, performance delay resulted from actions or omissions of the Government, of appellant itself or of Cumberland, SSI or Kimmins. Despite the Government's effort to suggest that appellant placed the entire blame for its performance difficulties upon the latter companies, for which appellant itself must bear the consequences, the record thus far reflects that appellant did contemporaneously allege Government responsibility and it has submitted an affidavit providing support for those allegations. We conclude, therefore, that the parties dispute facts material to delay causation.

The Government's Motion for Summary Judgment is denied. Appellant shall provide complete responses to the Government's Request for Admissions within 30 days of appellant's receipt of this decision. Under separate cover, the Board will issue instructions regarding the further processing of this appeal.

contract DLA100-87-C-0748 (C-0748) for default (R4, tab 35).*

The parties have elected to submit this matter on the record in accordance with Board Rule 11. The record consists of the appeal (R4) file; appellant's supplemental (SR4) appeal file; admissions to the Government's Request For Admissions (admit); and CO's affidavits (Govt. affid.). The Government submitted a brief. Only entitlement will be decided.

FINDINGS OF FACT

1. On 12 August 1987 Brill, a Wisconsin corporation, was awarded contract DLA100-87-C-0748 by the Defense Logistics Agency ("DLA" or "Government) for "1,430 JACKET, PARARESCUE, SAGE GREEN AF SHADE 1535" at a unit price of $77.42 and a total contract price of $110,710.60. The contract provided that Brill "shall deliver 50 unit(s) of Lot/Item 0001 within 90 calendar days from the date of this contract to the Government ... for first article tests." The initial production quantity delivery schedule was (R4, tabs 1, 2, 18; admit 1-4):

LINE ITEM	ITEM	DELIVERY DATE	QUANTITY
0001AA	Medium	08 Feb 88	85
0002AA	Large	08 Feb 88	150
0001AA	Medium	09 Mar 88	85
0002AA	Large	09 Mar 88	150
0001AA	Medium	08 Apr 88	90
0002AA	Large	08 Apr 88	155
0001AA	Medium	08 May 88	90
0002AA	Large	08 May 88	155
0001AA	Medium	07 Jun 88	85
0002AA	Large	07 Jun 88	150
0001AA	Medium	07 Jul 88	85
0002AA	Large	07 Jul 88	150

2. The contract included and/or incorporated by reference the following Federal Acquisition Regulation (FAR) and Department of Defense Federal Acquisition Regulation Supplement (DFARS) clauses: 52.233-1, DISPUTES (APR 1984); 52.249-8, DEFAULT (FIND-PRICE SUPPLY AND SERVICES) (APR 1984); and 53.232-7007, PROGRESS PAYMENTS (OCT 1986), ALTERNATE I (OCT 1986) DFARS. (R4, tab 1; admit 2)

3. FAR 52.249-8, DEFAULT and 52.232-7007, PROGRESS PAYMENTS provided in pertinent part:

DEFAULT

(a)(1) The Government may ... by written notice of default to the Contractor, terminate this contract in whole or in part if the Contractor fails to —

(i) Deliver the supplies ... within the time specified in this contract or any extension;

(ii) Make progress, so as to endanger performance of this contract (but see subparagraph (a)(2) below); or

(iii) Perform any of the other provisions of this contract (but see subparagraph (a)(2) below).

(a)(2) The Government's right to terminate this contract under subdivision (1)(ii) and (1)(iii) above, may be exercised if the Contractor does not cure such failure within 10 days (or more if authorized in writing by the Contracting Officer) after receipt of the notice from the Contracting Officer specifying the failure.

PROGRESS PAYMENTS

* * *

(c) *REDUCTION OR SUSPENSION.* The Contracting Officer may reduce or suspend progress payments, increase the rate of liquidation, or take a combination of these actions, after finding on substantial evidence any of the following conditions:

(1) The Contractor failed to comply with any material requirement of this contract ....

(2) Performance of this contract is endangered by the Contractor's (i) failure to make progress or (ii) unsatisfactory financial condition.

* * *

(h) *SPECIAL TERMS REGARDING DEFAULT.* If this contract is terminated under the Default clause, (i) the Contrac-

* The Government filed a Motion For Summary Judgment which was denied. *Brill Brothers Inc.*, ASBCA No. 42573, 93-2 BCA ¶ 25,795, 4 February 1993 slip op.

Digitized by Google

tor shall, on demand, repay to the Government the amount of unliquidated progress payments and (ii) title shall vest in the Contractor, on full liquidation of progress payments, for all property for which the Government elects not to require delivery under the Default clause.

4. On 12 February 1988 Brill informed the Government that, due to its originally contemplated cloth supplier being barred from Government contracts, its new supplier, Gladwyne Textiles, would not be able to begin delivery of its cloth until four weeks after receipt of a purchase order. Brill anticipated supplying the Government with samples of cloth for approval approximately the second week of February, after which it would be able to accurately determine a delivery schedule. (R4, tab 3)

5. The administrative contracting officer (ACO) on 6 May 1988 issued a show cause letter informing Brill its failure to make delivery in accordance with the schedule was not excusable and Brill was advised to prepare a "written proposal" for the principal contracting officer's (PCO) consideration. On 26 May 1988, Brill submitted a written response stating its failure to deliver on time was directly related to its inability to hire additional sewing people; and that although it was operating at a substantial loss it would fulfill its contract commitments (R4, tabs 4, 6; admit 5, 6)

6. On 11 May 1988 Brill informed the Government the test results on Gladwyne Textiles' fabric indicated the warp shrinkage was moderately excessive and Brill requested a waiver. Bilateral contract modification P00001 dated 21 June 1988 provided for the Government's waiver and acceptance of "1,430 each jacket, Pararescue, which failed contractor's dimensional stability" testing, in consideration for a contract price reduction of $253. (R4, tabs 5, 7)

7. On 7 September 1988 Brill requested a waiver for the shade failure experienced "in government laboratory testing," which bilateral contract modification P00002, dated 12 October 1988, ratified in consideration for a $205 contract price reduction (R4, tabs 8, 9).

8. On 17 October 1988 the ACO, informing Brill 520 CLIN 0001AA and 910 CLIN 0002AA items were delinquent as of "07 July 1988," requested Brill to submit a "realistic delivery schedule [and] consideration for the additional performance time needed" (R4, tab 10; admit 7).

9. Brill on 3 November 1988 requested that the contractor inspection system requirements of the contract be deleted which the CO, by letter and proposed modification P00003 dated 27 December 1988, offered to delete in consideration of a contract price reduction of $145. The letter informed Brill the Government had "foreborne" the delinquency of the contract for many months; that despite numerous attempts by Government personnel to revise the delivery schedule, the contract remained delinquent; and that unless Brill submitted a revised schedule within ten (10) days of receipt of the letter, the CO would "issue a unilateral delivery schedule." On 20 January 1989 Brill executed and returned modification P00003 but requested that a definite set of dates for delivery of contract items not be established until the first article was presented, which Brill anticipated would be in "approximately three weeks," inspected and accepted. (R4, tabs 11-15; admit 8, 9)

10. On 2 June 1989 the CO advised Brill that since it had neither presented first article items nor a revised delivery schedule, a schedule would be unilaterally imposed if none was received within ten days after Brill's receipt of the letter. Brill's response of 20 June 1989 stated the first article samples had been "cut, checked by [the Government's QAR] and introduced into the work" and it anticipated the first article lot would be ready to be presented on 17 July 1989 and, with a satisfactory inspection, the immediate start of production should be no problem. (R4, tabs 16, 17; admit 10, 11)

11. Unilateral modification P00004 executed by the CO on 7 July 1989 revised the delivery schedule as follows (R4, tabs 1, 18; admit 12):

50 Ea First Article to be delivered on or before 20 Jul 89
235 Ea to be delivered on or before 18 Oct 89
235 Ea additional to be delivered on or before 17 Nov 89
245 Ea additional to be delivered on or before 17 Dec 89
245 Ea additional to be delivered on or before 16 Jan 90
235 Ea additional to be delivered on or before 15 Feb 90
235 Ea additional to be delivered on or before 17 Mar 90

12. Brill's first article items, examined by Government personnel on 20 July 1989, were disapproved due to an excessive number of defects. Brill in its 14 August 1989 letter stated the contract could not proceed until it "received pattern clarification and [a] response to [its] slide fastener sewing op-

©1994, Commerce Clearing House, Inc.

Digitized by Google

eration." The CO on 6 September 1989, in response to Brill's pattern inquiry, made an "interim change" to specification MIL-J-38349 but he determined the first article would "still have been rejected for other defects." On 26 September 1989 Brill responded and stated it disagreed with the scoring of the defects. (R4, tabs 19-22; admit 14, 15) Modification P00005, bilaterally executed 5 October 1989, memorialized the "Interim Specification Changes to MIL-J-38349" and stated (R4, tab 23):

> The contract price and delay in delivery due are not affected by reason of the above described changes.
>
> THIS DOCUMENT CONTAINS THE COMPLETE AGREEMENT OF THE PARTIES. THERE ARE NO COLLATERAL AGREEMENTS, RESERVATIONS OR UNDERSTANDINGS OTHER THAN EXPRESSLY SET FORTH HEREIN. IT IS AGREED THAT NO SUBSEQUENT MODIFICATION OF THIS AGREEMENT SHALL BE BINDING UNLESS REDUCED TO WRITING AND SIGNED BY BOTH PARTIES.

13. Unilateral modification P00006 executed 3 January 1990 noted that Brill had failed to comply with the unilaterally revised delivery schedule called out in modification P00004 and set a new revised schedule as follows (R4, tab 24; admit 16):

50 Ea. First Article to be delivered on or before 15 Mar 90
235 Ea. within the 30 day period ending 23 Jun 90
235 Ea. within the 30 day period ending 23 Jul 90
245 Ea. within the 30 day period ending 12 Aug 90
245 Ea. within the 30 day period ending 11 Sep 90
235 Ea. within the 30 day period ending 11 Oct 90
235 Ea. within the 30 day period ending 10 Nov 90

14. On 16 February 1990, Brill, acknowledging the receipt of the unilateral extension of the delivery dates called out in modification P00006, stated it was "essential" the Government answer its 26 September 1989 letter "to enable [Brill] to proceed with this contract." The CO on 28 March 1990 informed Brill that in response to the views expressed in the 26 September 1989 letter the results of the first article test were reevaluated; that the noted defects were deviations to the contract specification requirements and, therefore, the rejection would not be reversed. Brill was requested to advise the CO when it intended to submit a new first article. Brill by FAX letter dated 11 April 1990 requested the CO to waive the deviations found during the first article inspection of 20 July 1989. Effective 4 May 1990, the parties executed bilateral modification P00007 authorizing the waiver in consideration of a contract price decrease of $145.00. In a separate 11 April 1990 FAX letter Brill notified the CO the first article items would be ready for resubmittal on 25 April 1990. By letter dated 18 May 1990 the CO informed Brill its second submittal of the first article was approved and production of the item was authorized. (R4, tabs 25-30; admit 17-19)

15. The CO on 29 June 1990 informed Brill that default termination was being considered due to its failure to meet the delivery schedule and it had ten days from the receipt of this notice to present written facts bearing on whether the failure to perform arose from causes beyond its control. Brill, in its reply of 18 July 1990, stated excuses for late delivery had been previously submitted and it "established" target dates which correlated to the Government's schedule in "Amendment P00006" as follows (R4, tabs 31, 32; admit 20-21):

DELIVERY SCHEDULE

235 ea. in the period ending 12 AUG 90
235 ea. in the period ending 11 SEP 90
490 ea. in the period ending 11 OCT 90
470 ea. in the period ending 10 NOV 90

16. By letter dated 12 October 1990 Brill, conceding it had "not adhered to the schedule [it] set forth in [its] letter of 18 July 1990," submitted the following revised schedule which the CO on 30 October 1990 memorialized in unilateral contract modification P00008 (R4, tabs 33-34; admit 22-23):

REVISED DELIVERY SCHEDULE

470 ea. in the period ending 31 OCT 90
490 ea. in the period ending 30 NOV 90
470 ea. in the period ending 29 DEC 90

17. Brill failed to meet the revised delivery schedule and on 6 December 1990 the CO issued unilateral contract modification P00009 terminating Brill's contract for default (R4, tab 35; admit 26). Brill admits that its "sole excuse for failing to meet the 31 October 1990 delivery schedule was that Mr. Brill, President of Appellant Company, became ill and was unable to return to work until 16 November 1990 to supervise the completion of Contract DLA199-87-C-0748." (Admit 25). Brill, from 31 October 1990 to 6

Digitized by Google

December 1990, neither presented contract items for inspection and acceptance nor provided proof sufficient to conclude that any such items were manufactured and available for presentation to the Government.

18. The CO, at the time of the termination, determined that Brill's inability to deliver the items in accordance with the delivery schedule, which appellant admitted was attributable only to the illness of Mr. Martin Brill, was not sufficient justification to grant further extensions; that the contract had been in existence for over three years, and over six months since first article approval, without a delivery; and further extensions were not anticipated to result in any deliveries within the required time. (Govt. affid.)

19. Brill by letter dated 4 March 1991 timely appealed the default termination (R4, tab 36).

BRILL'S POSITION

20. Brill avers that its failure to make timely delivery was due to the illness of Mr. Martin Brill, who was the only one in the organization who has ever prepared inspection reports and was in sole charge of military contracts; and the Contracting Officer's bad faith in terminating the contract.

DECISION

It is settled law that terminations for default "should be imposed (or sustained) only for good grounds and on solid evidence." The Government, as the initiator, has the burden of proof in establishing the validity of the default. *Local Contractors, Inc.*, ASBCA No. 37108, 92-1 BCA ¶ 24,491, *aff'd. on reconsid.*, 92-1 BCA ¶ 24,693, *aff'd., Local Contractors, Inc. v. Stone, Secretary of the Army*, 988 F.2d 131 (Fed. Cir. 1993) (Table). In a default termination we must be guided by the situation as it existed at the time of the termination and not as it existed thereafter. *RFI Shield-Rooms*, ASBCA Nos. 17374, 17991, 77-2 BCA ¶ 12,714.

Brill's termination was based on its failure to meet the delivery schedule. Under the DISPUTES clause of the contract, subparagraph (a)(1)(i), there is no requirement for the service of a cure notice when the reason for a default termination is the contractor's failure to make delivery of supplies, and the Government became entitled to terminate the entire contract when appellant inexcusably missed the delivery date for the first increment. *Sonora Manufacturing, Inc.*, ASBCA Nos. 31587 *et al.*, 91-1 BCA ¶ 23,444; *H&R Machinists Company*, ASBCA No. 39655, 90-3 BCA ¶ 22,948.

In the instant matter, these facts are undisputed. On 29 June 1990 Brill was informed in writing that the Government was considering terminating the contract for default and, pending a "final decision", Brill was afforded an opportunity to present in writing any facts in mitigation (finding 15). In response Brill submitted target dates for delivery of the items. Unable to meet its suggested target dates Brill, on 12 October 1990, submitted a revised delivery schedule proposing the first delivery to take place by no later that 31 October 1990 which the CO accepted and memorialized in unilateral contract modification P00008 as the "Revised Delivery Schedule" (finding 16). Neither from the record nor from Brill were we able to find any credible evidence to support a determination that the revised delivery schedule was, under the circumstances, unreasonable. At the time of the termination the CO determined, and the record supports with substantial evidence, that Brill, having performed under the contract for three years without providing any contract items, was incapable of performance within the required time (finding 18).

Having concluded that appellant had defaulted in its performance, it remains for us to consider whether Brill's failure to perform was beyond its control and without its fault or negligence or was otherwise excusable. *Orlando Williams*, ASBCA Nos. 26099, 26872, 84-1 BCA ¶ 16,983.

Brill in support of its contention that the failure to perform was excusable raised two arguments, each of which we will discuss separately (finding 20).

a. *Brill's president was ill*

Brill argues that its president, Mr. Martin Brill, the only person in the organization who has ever prepared inspection reports, took ill on 24 October 1990 thereby delaying for presentation for inspection the 470 Jackets due for shipment on 31 October 1990.

As the Government adequately argues, this Board has held that where, as here, a contract has been awarded to a corporate entity, the illness of a key person within the organization does not excuse the corporation's failure to perform its obligations, even though the corporation may be a small business. *M.W. Microwave Corporation*, ASBCA No. 45084, 93-3 BCA ¶ 26,027. As a matter of law the illness of Mr. Martin Brill does not excuse performance.

©1994, Commerce Clearing House, Inc.

Digitized by Google

b. *The contracting officer acted in bad faith*

It is well established that there is a presumption that public officials perform their duties correctly, fairly, in good faith, and in accordance with the law and governing regulations, and the burden is on the appellant to prove otherwise. *Space Age Engineering, Inc.*, ASBCA No. 26028, 82-1 BCA ¶ 15,766 and cases cited therein.

The Government's actions are reviewed in accordance with the circumstances as they existed at the time of the termination. *RFI Shield-Rooms, supra.* At the time Brill was terminated the contract had been ongoing for over three years and Brill had not proffered any item except the approved first articles (findings 14, 18); the delivery schedule had been modified, both unilaterally and bilaterally, a total of four times (findings 11, 13, 15, 16); subsequent to first article approval, 18 May 1990, Brill failed to meet the delivery schedules it had set for itself (findings 14-16); and Brill's admitted "sole excuse" for failing to meet the revised delivery schedule was that its president was ill and unable to participate in the contract's completion (findings 17, 18).

At the time of the termination the CO had lost confidence in Brill's ability to complete the contract. The CO, having reviewed the contractor's performance from contract award, had sufficient cause to believe Brill was unable to perform as required. Under the circumstances existing at the time of the termination the CO's action was neither arbitrary, capricious, an abuse of discretion, nor illegal. *Cf. Darwin Construction Co., Inc. v. United States* [33 CCF ¶ 75,063], 811 F.2d 593, 598 (Fed. Cir. 1987).

The appeal from the default termination is denied in its entirety.

[¶ 26,353] Arrow, Inc.

ASBCA Nos. 41330, 41338, September 16, 1993. Contract No. F08650-89-C-0003.

Pricing of Adjustments—Proof—Expected Work v. Actual Work.—A contractor's request for a price adjustment under a grounds maintenance contract was denied, even though the contractor alleged that it was required to perform more mowing work than was required by the contract, because the contractor failed to prove that the work performed was in excess of that to be expected. To prove that extra work was performed, one must first prove the amount of work that would have been required even if no extra work had been performed. The number of mowings that would have been required depended on the amount of growth, which depended on the amount of moisture, the amount and quality of nutrients, the temperature, the amount of sunlight, and other conditions.

Pricing of Adjustments—Proof—Records in Support.—A contractor performing a grounds maintenance contract was not entitled to a price adjustment for performing more edging, tree trimming, hedge cutting, and bush pruning than was required by the contract, because it had no records of the actual amount of these work items performed.

Interpretation of Contracts—Ambiguities, Patent—Contract as a Whole.—Under a contract for grounds maintenance, a contractor's claim for extra mowing services was denied because the contractor's reliance on the mowing map, which showed a height of 10 inches, was unreasonable in view of the contract read as a whole. To base a bid upon only one part of a contract, a map, while disregarding the other parts of the contract that clearly spell out that grass should be maintained at a lower height, is foolhardy. In addition to the map showing a height of 10 inches, the contract contained a map showing the disputed area as improved grounds. It also contained specifications that stated that improved grounds were to be maintained at a height of less than 10 inches. Such patent inconsistency between parts of the contract imposed on the bidder the duty to inquire of government personnel as to precisely what was desired.

Convenience Terminations—Short Form Termination Clause—Service Contracts.—A contractor's claim for the useful value of special machinery and equipment, a cost incurred subsequent to termination of the contract for convenience, was denied because the short form clause was included in the contract, which limited settlement charges to services rendered before the date of termination. The contractor argued that the long form clause should have been used because the fixed-price contract for grounds maintenance

Digitized by Google

exceeded $100,000 in value. The contractor failed to recognize, however, that the short form clause is appropriate regardless of contract value when a fixed-price contract is contemplated involving services, which was the case with grounds maintenance.

For the appellant: Battle, Winslow, Scott & Wiley, Rocky Mount, North Carolina, by M. Greg Crumpler. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Diana S. Dickinson, Trial Attorney.

Before HARPER, RIISMANDEL, and RUBERRY, Administrative Judges.

HARPER, Administrative Judge: Appellant, Arrow, Inc., a North Carolina corporation with its principal office located in Rocky Mount, North Carolina (hereinafter "contractor"), appeals from two final decisions of a contracting officer of the United States Air Force (hereinafter "Government"). ASBCA No. 41330 concerns contractor's appeal from a decision which denied contractor's claim for an upward equitable adjustment in the price of a grounds maintenance contract. ASBCA No. 41338 concerns contractor's appeal from a decision which denied contractor's claim for a monetary settlement arising from a termination of such contract. Both appeals were consolidated for purposes of efficiency in presenting evidence. We consider entitlement only.

FINDINGS OF FACT

1. On 31 December 1987 Government issued a Solicitation for Bids for furnishing all the personnel, equipment, tools, materials, supervision, labor and services to perform grounds maintenance at Patrick Air Force Base (AFB) in Florida. Such services, equipment, tools, materials, supervision and labor were to be furnished in strict accordance with the Performance Work Statement (PWS) dated June 1987 which comprised a part of the solicitation. Bids were to cover an orientation phase-in period of performance from 28 November through 11 December 1988, an initial contract period of performance from 12 December through 31 December 1988, a basic contract period of performance from 1 January through 30 September 1989, and three options for one year each of performance for the three years successively following 30 September 1989. (R4, tab 1)

2. Patrick AFB is situated in Brevard County, Florida, on a narrow barrier strip of land at the approximate center of the Florida peninsula's east coast. It is bounded on the east by the Atlantic Ocean, on the west by the Banana River, and on the north and south by portions of urban Brevard County. Patrick AFB lies on an island. The widest part of the base is about 7,000 feet and the narrowest part is approximately 900 feet. The base is approximately four miles long. The land is flat, sloping gently from east to west. There is a dune line on the east which reaches an elevation of 10-12 feet. The dune is only about 20 feet wide. From the dune to the Banana River is a gentle slope. Florida State Road A1A, a four lane highway divided by a median strip of land for much of its length, bisects the entire length of Patrick AFB running parallel to and close to the Atlantic Ocean. (R4, tab 1; exh. G19)

3. ASBCA No. 41330 involves a claim by contractor that it was required to perform more mowing in an area known as Zone 8, edging of lawns and grass basewide, tree, shrub and hedge trimming and pruning basewide than was specified in the solicitation and contract.

The solicitation contained a Performance Work Statement for Grounds Maintenance (PWSFGM) which, among other things, provided (insofar as mowing, edging and tree, shrub and hedge trimming were concerned), as follows:

> Performance Work Statement for Grounds Maintenance
>
> Section C 1.1 Scope of Work: The contractor shall provide all personnel, equipment, tools, materials, supervision, and other items and services necessary to perform Grounds Maintenance as defined in this Performance Work Statement (PWS) ... The Contractor shall perform to the standards in this contract. The estimated quantities of work are listed in Technical Exhibit 2, Work Load Estimates.

"Technical Exhibit (TE)-2, Annual Workload Estimate", just mentioned, estimated that there were 391 acres of improved grounds, 360 acres of improved grounds less athletic areas, 31 acres of improved grounds in athletic areas, 632 acres of semi-improved grounds, restricted areas and areas around airfield lighting and navigational aids, and 95 acres of semi-improved grounds designated as restricted areas around airfield lighting and navigational aids. TE-2 also estimated that there were 81,160 linear feet of sidewalks, driveways and curbs in improved areas plus 500 trees that would require trim-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ming or pruning each year, plus 1,500 shrubs that would require pruning each year, and that there were 1,000 linear feet of hedges. (R4, tab 1)

4. The solicitation's PWSFGM, under Section C-2, contained the following definition of "Improved Grounds":

> 2.2.1. *Improved Grounds:* Areas coded as such at TE-3A. Grounds on which intensive development and maintenance measures are performed. This category normally applies to areas within the built-up section of an installation which contains lawns, landscaping, parade grounds, athletic areas, recreation areas, and road shoulders along main thoroughfares. Military Family Housing common areas, improved areas adjacent to unoccupied Military Family Housing Units, and General's Quarters are also considered as improved grounds.

(R4, tab 1)

5. The "TE-3A" referred to in the definition of Improved Grounds, directed the reader to "TE-14, Base Land Management Plan (BLMP), Atch 1." of the solicitation's PWSFGM. The said BLMP showed Patrick AFB in its entirety drawn to a scale of 1-inch equals 400 feet. Such plan divided the entire air base into outlined areas each of which was designated as "Improved Grounds", or as "Semi-Improved Grounds", or as "Unimproved Grounds", or as "Housing Grounds", or as "Recreation Area" or "Recreation", or as "Golf Course." A legend was included on the left lower corner of such plan which stated as follows:

BASE ACREAGE (Include Housing)

	MOWABLE BREAKDOWN	*COVERED NON-MOWABLE*	*MOWABLE*	*TOTAL ACRES*
HOUSING ACREAGE				
IMPROVED				
Covered		119		
Recreation	31.7			
Mowable	339.3		371	
TOTAL HOUSING				490
GOLF COURSE	210		210	210
IMPROVED BASE				
Irrigated	105			
Non-irrigated	252			
Recreation	3			
Mowable			360	
Covered		203		
TOTAL IMPROVED BASE				563
SEMI-IMPROVED				
Covered		185		
Mowable			632	
TOTAL SEMI-IMPROVED				817
UNIMPROVED				28
TOTAL ACREAGE				2108

(R4, tab 1; exh. G-19)

Required Service	Standard
(RS-1) Mow grass on improved grounds. Excludes Athletic Areas. 5.1.1.1.1.	Height of grass excluding seed heads does not exceed a height of 6 inches nor cut to a height of less than 3 inches. Grass clippings are removed or mulched when clippings are not mulched on initial mowing.

6. Section C-5 of the solicitation's PWSFGM dealt with the specific tasks required to maintain the grounds at Patrick AFB. Paragraph 5.1.1.1.1 of Section C-5 covered grass mowing on "Improved Grounds". It stated that "Grass cutting shall be accomplished on 391 acres of improved grounds including athletic areas as indicated at TE-3A IAW [in accordance with] TE-1."

TE-1, "Performance Requirements Summary," insofar as mowing grass on Improved Grounds is concerned, provided as follows:

Digitized by Google

(RS-2) Mow grass on improved grounds in athletic areas. 5.1.1.1.1.	Height of grass excluding seed heads does not exceed 2½ inches nor less than 1½ inches

Paragraph 5.1.1.1.2 of Section C-5 of the PWSFGM of the solicitation stated as follows:

> Grass cutting shall be accomplished on 632 acres of semi-improved grounds as indicated at TE-3B IAW TE-1.

Section C-2, paragraph 2.2.2 described Semi-Improved Grounds as follows:

> 2.2.2 *Semi-Improved Grounds:* Areas coded as such at TE3-B. Grounds that require maintenance of a lesser degree than improved grounds. This category includes, but is not limited to, the airfield, rifle ranges, antenna farms, ammunition storage areas, road shoulders on secondary roads, and banks of drainage ditches.

(TE3-B contained the same information as TE3-A referred to above).

TE-1, Performance Requirements Summary (PRS), referred to in TE-3A and TE-3B above, contained the following language as to moving of semi-improved grounds:

Required Service	Standard
(RS-3) Mow grass on semi-improved grounds, restricted areas, and around airfield lighting and navigationalaids. 5.1.1.1.2.	Height of grass excluding seed heads does not exceed a height of 14 inches nor cut to a height of less than 7 inches except grass in restricted areas and 15 feet around airfield lighting, navigational aids, and edges of runways and taxiways which does not exceed a height of 6 inches nor cut to a height of less than 3 inches.

"Unimproved Grounds" is defined in Section C-2 at paragraph 2.2.2.3 of the PWSFGM of the solicitation and contract as follows:

> *Unimproved Grounds:* Areas coded as such at TE3-D. Grounds not included in the above categories. This classification includes, but is not limited to, bombing ranges, timber and forest areas, agricultural and grazing lands, lakes, ponds, and swamp areas requiring limited or no maintenance.

(TE-3D contained the same information as TE-3A referred to above).

The PRS, TE-1, provided as follows insofar as mowing of unimproved grounds is concerned:

Required Service	Standard
(RS-4) Mow grass in drainage ditches. 5.1.1.1.3.	Height of grass excluding seed heads does not exceed a height of 10 inches nor cut to a height of less than 5 inches.

(R4, tab 1)

7. "TE-12, Mowing Patterns" which comprised a part of the PWSFGM of the solicitation, directed the reader to see "TE-14, Base Land Management Plan (BLMP)". The said management plan was a part of the solicitation. It consisted of 71 pages covering the purpose of the plan, a description of the base, its soils, climate, vegetation, maintenance requirements for Improved Grounds, Semi-Improved Grounds and Unimproved Grounds, instructions to base housing occupants, the requirements for maintaining the golf course, fire suppression, environmental pollution prevention, wetland and flood plain controls, and maps and charts covering soils, equipment, recurring maintenance, and a mowing map. (R4, tab 1)

8. The said "TE-14, BLMP" contained language about mowing of Improved Grounds in pertinent part, as follows:

MAINTENANCE OF GROUNDS

a. *Improved Grounds*—1263 Acres. (This figure included areas not covered by this contract.]

These grounds are intensively maintained because the public can observe so much of the Base from the state highway system. The recurring maintenance at Patrick requires work 12 months a year. The maintenance of these grounds is accomplished with the grounds section of 19 personnel and also borrowed personnel from other sections.

(1) *Turf cover.* There are three primary species of grass used at Patrick AFB. The use of an area, care to be given the area, and available water will dictate the grass species to be used.

(a) Recreation areas are irrigated and receive a lot of wear thus, 419 Bermuda grass is used extensively on the ballfield (see atch 6A Athletic Field Maintenance).

(b) Bahia grass is a drought tolerant grass frequently used on nonirrigated improved grounds.

(c) St. Augustine grass is considered the primary turf cover on the Base improved

©1994, Commerce Clearing House, Inc.

Digitized by Google

lawns. This is a broad bladed creeping turf grass requiring a high degree of maintenance. Insect [sic] and weeds are constant problems. Chinch bugs and sod webworms are troublesome insects; however, they are easily controlled by chemical spraying. Weed infestation in areas where the grass is weakened by foot traffic or insects consists of weed grasses such as goose grass, bermuda grass, crab grass, crowfoot grass; and broad leaf weeds, such as dichondra, dollar weed, purslane and creeping broad leaf species. Chemical weed control is very difficult in St. Augustine as the grass is sensitive to most of the herbicides.

(d) The St. Augustine grass does have its problems of insects and requires a fair amount of maintenance. However, it is the best adapted grass to conditions of high salt concentration of well water, as well as salt drift from the ocean.

(e) Also, the St. Augustine grass does as well in shade as in sun light. The chart in attachment *8c* shows species of turf grass used in Brevard County, Florida.

(2) *Mowing.* Mowing is very important in turf management. Proper timing of mowing affects turf density. When mowing, only 1/3 of a leaf blade should be removed. Height of cut depends on grass species. St. Augustine and Bahia grass should be cut at 2 1/2 inches to provide a dense turf; whereas, Bermuda is cut at 1 inch or less.

(3) *Fertilization.* Requirements for the different grass species vary, also number of applications per year. The chart in attachment *8b* shows fertilizer requirements for the grass in Brevard County, Florida.

(4) *Irrigation.*

(a) Irrigation is required at Patrick even though we have 45 inches of rainfall annually. There are times that no rain falls for 3-4 weeks and, being a sandy soil with only 0.5 inch moisture holding capacity, this moisture is rapidly depleted. Average water requirements for turf at Patrick is 2 inches per week. Areas like the Golf Course require more due to the height of cut and traffic on the turf.

(b) The Base grounds are receiving irrigation by means of installed, underground irrigation. The systems consist of pop-up heads of various sizes, with an automatic controller to start and stop the systems. The water is from deep wells, which is pumped into the systems.

(5) *Weed Control.*

(a) Weed control is accomplished first by providing a healthy turf which will overcome the weed population. A second approach to weed control in turf is use of herbicides. This method is not extensively used in the St. Augustine grass. Other areas of the improved grounds receive herbicide treatments as required.

(b) Herbicides are used extensively for edging around trees, posts, etc., within grassed areas. Soil sterilients are used around bumper blocks, fire hydrants, fence lines, etc. to reduce hand labor. All herbicides are listed in the Pest Management Plan and are submitted for approval annually as AFR 91-21 requires.

(6) *Insect and Disease Control.* Several insects attack the turf in Florida. The most prevalent are: Chinch bugs, sod webworms, army worms, and nematodes. These insects are all problems at Patrick and control measures have to be taken. The climate is very conducive to disease development; several disease organisms thrive in the hot, humid conditions here and have to be controlled. The chart in attachment *8c* shows the most prevalent insects and diseases in Brevard County.

(7) *Other Turf Operation.* Aeration and verticuting are practiced on the golf course regularly. Some verticuting is done on Base as required. The creeping grasses tend to build a dense thatch, especially since they grow 12 months in Florida.

(8) *Tree and Shrub Work.*

(a) Tree and shrub work is a 12 month program of pruning and replacing. Trees and shrubs have to be selected carefully for planting due to the salt condition and the drought periods. Some of the more common types of planting are Palm, Sea Grape, Crissa Plum, Spanish Bayonet, Austrailian [sic] Pine, Hibiscus, Oleander, Ligustrum, Pitisporum and Carrotwood (*see* atch *8f* for Recommended Plant List).

(b) Patrick AFB is cooperating with state and county personnel in efforts to find plants that will tolerate the conditions of the space coast.

(c) The storms that come through the area frequently cause wind damage consisting of broken limbs and up-rooted trees. When the landscape is badly disrupted new plants are put in. Many times storm damage gives the Base an opportunity to improve the landscape design in housing areas, thus coming closer to the overall Base Landscape Plan.

b. *Semi-improved Grounds—817 Acres.*

Digitized by Google

(1) This area is covered with Bermuda and Bahia grass plus several species of grassy weeds. No effort is made to control these weeds as they provide good soil cover and prevent erosion from wind and water.

(2) Mowing to a height of 4 to 8 inches around the lights and close to public areas keeps the area looking neat and controls unwanted vegetation. The outlying areas are mowed at 10 inches as needed.

(3) Fertilization is supplemented on the semi-improved land during establishment of grass. When planting, a period of normally wet weather is chosen because no provision has been made for irrigation of these areas. Liquid sludge is spread on much of this area thus providing some fertilization.

(4) The airfield and nonpublic areas are designated for spreading of liquid sludge in compliance with state environmental regulation.

(5) Trees growing in semi-improved grounds are trimmed.

c. *Unimproved Grounds—28 Acres.*

These acres are old landfill areas and some soil areas where dredge material was piled in previous years. Some grass is being established on the landfill. However, the dredge fill is very poor and it is hard to keep vegetation established on this area.

The said "Plan" also contained a chart entitled "Recurring Work Improved Grounds." Such chart had a space thereon for "Mowing" which directed the reader to "see map." The map referred to is TE-14, Attachment (Atch) 4 which was a part of the solicitation. (R4, tab 1; tr. 1/34, 39)

9. TE-14, Atch 4 is a map entitled "Base Civil Engineering Grass Mowing Map." Such map depicts the entire Patrick AFB, which is shown divided into nine outlined zones numbered 1 through 9. In this appeal we are concerned only with Zone 8 insofar as contractor's claim of having been made to do excessive mowing is concerned. The map contained a box or legend in its lower left hand corner which appeared as follows:

BASE CIVIL ENGINEERING
GRASS MOWING MAP

ZONE	HEIGHT	FREQUENCY	
1*	4″	weekly	Community areas
2	4″	weekly	
3	4″		Picnic area & roadsides Around airfield lighting
	10″	as needed	Airfield out areas
4	4″		
5	4″		
6	4″	as needed	Improved grounds
6A*	4″	weekly	Community areas in housing
7			Golf course maintenance responsibility
8	10″	as needed	
9	1″-4″	S weekly & W as needed	Recreation areas & ballfields

* Grass mowing in housing is limited to community areas only. Individual yards are occupant's responsibility

(R4, tab 1, vol. 2)

10. Zone 8, shown on the Land Management and Land Classification Map and on the Base Civil Engineering Grass Mowing Map, is almost all Improved Grounds. Located in Zone 8 are the base hospital and hospital supply buildings, a yacht club and marina, an entrance to the base, a sewage treatment plant, a dog kennel, several buildings, and a salvage yard. Also located in Zone 8 are an open field of sand and a small lake, both being Unimproved Grounds (R4, tab 1; tr. 1/140-41, 144, 2/21, 166-67, 173, 225; Scott depos. 14)

11. Section C-5, Specific Tasks, of the PWSFGM of the solicitation and of the contract in paragraph 5.1.1.2.1 provided as follows concerning edging or trimming of grass:

Edge/Trim Grass:

* * *

©1994, Commerce Clearing House, Inc.

Digitized by Google

5.1.1.2.1. Sidewalks, driveways, and curbs located in the improved grounds areas shall be edged IAW TE-1. This work involves 81,160 linear feet of sidewalks, driveway, and curbs in areas indicated at TE-3A. Grass and weeds shall be removed and disposed of at the Base Transfer Station when edging is performed.

12. TE-1, PRS, referred to in paragraph 5.1.1.2.1 above, provided as follows:

Required Service	Standard
(RS-5) Edge sidewalks, driveways, and curbs in improved areas. 5.1.1.2.1.	Grass and weeds do not extend over the edge of walks, drives or curbs more than 1 1/2 inches. Edging is not cut back from edge of walks, drives or curbs more than 1 1/2 inches. Grass and weeds are removed and disposed of when edging is performed.

(R4, tab 1)

13. TE-2, Annual Work Load Estimates, of the PWSFGM of the solicitation and contract showed the following as to "edging":

	Type of Work Load	Quantity	Growing Season
	* * *		
8.	Number of linear feet along sidewalks, driveways, & curbs in improved areas	81,160 ft	12 Months

(R4, tab 1)

14. Section C-5, Specific Tasks, of the PWSFGM of the solicitation and contract provided for pruning of trees, shrubs and hedges as follows:

5.1.1.3. *Prune Trees/Shrubs:* Clippings shall be removed and disposed of upon completion of work at the Base Transfer Station. Trimmings shall not exceed 4'-0". Trees referred to include both canopy and palm trees.

5.1.1.3.1. Trees shall be pruned/trimmed as required. Workload estimates are provided at TE-2. Pruning shall be accomplished in accordance with the industry standards indicated at TE-10. Class II medium pruning shall be used in general on all trees. Class IV pruning shall be used only for lifting, removal, and/or cutback of branches that conflict with normal traffic or safety in the vicinity of the trees. Minimum safety clearance is 14 feet over streets, 12 feet over driveways, 8 feet over walk areas, and 4 feet from buildings. Other trees shall be pruned on an as required basis to provide safety clearance and/or prevent structural damage. Trimming/pruning of trees around utility poles/power lines is not the responsibility of the contractor. Notify Base Civil Engineering Service Call Desk at 494-2778 when trimming/pruning around utility poles/power lines is needed.

5.1.1.3.2. Shrubs shall be pruned to maintain their natural growth characteristics. Workload estimates are provided at TE-2. New growth shall not be allowed to exceed 8 inches. Minimum clearances from buildings, utilities, and other obstructions shall be one foot.

5.1.1.3.3. Hedges shall be maintained to their original height and shape at contract start date. No informal hedges or screen plantings shall be converted to formal shapes. This work involves 1,000 linear feet of hedges in areas indicated at TE-3A. Trimmings shall be removed and disposed of at the Base Transfer Station when trimming is performed.

(R4, tab 1)

15. TE-2, Annual Work Load Estimates referred to above as to pruning, provided as follows in pertinent part:

Digitized by Google

	Type of Work Load	Quantity	Growing Season
	* * *		
9.	Number of trees that require trimming/pruning each year	500	N/A
10.	Number of shrubs that require pruning each year	500	N/A
11.	Number of linear feet of hedges	1,000	N/A

(R4, tab 1)

16. TE-1, PWSFGM of the solicitation and contract contained the following as to pruning and trimming:

Required Service	Standard
(RS-8) Prune trees. 5.1.1.3.1.	Trees are pruned IAW class II and Class IV of the Pruning Standards for shade trees, National Arborist Association at TE-10. Tree clippings are removed and disposed of upon completion of pruning. For palm trees, all dead fronds are removed from bottom row. All seedpot shoots are removed from all areas of palm trees.
(RS-9) Prune shrubs. 5.1.1.3.2.	Shrubs will be pruned to maintain their natural growth characteristics. Natural growth must be altered to allow for clearance of facilities. Shrub clippings are removed and disposed of upon completion of pruning.
(RS-10) Trim hedges. 5.1.1.3.3.	Hedges are trimmed to their original shape when new growth reaches 6 to 8 inches. Hedge clippings are removed and disposed of upon completion of trimming.

(R4, tab 1)

17. TE-3A, Improved Grounds, TE-3B, Semi-Improved Grounds, and TE-3D, Unimproved Grounds, all of the solicitation and contract PWSFGM, each referred to TE-14, BLMP more fully described in finding 8.

18. The solicitation contained the Prebid Conference/Site Visit (APR 1984) clause which, in pertinent part provided as follows:

a. A combination prebid conference and site visit will be conducted at Patrick AFB, Florida on 20 January 1988 at 0900 o'clock in Building 423, Room C-220.

b. When possible, questions previously presented will be answered during the conference. All questions presented before or during the conference will be answered in writing and furnished all potential offerors as soon after the conference as possible.

* * *

d. No explanation, remarks, or replies made in response to any inquiries will serve to qualify the terms or conditions of the RFP. The definitive treatment of any such problems or questions will be by formal amendment to the IFB.

e. Offerors are urged to attend the preproposal conference to satisfy themselves as to the general requirements of this solicitation.

(R4, tab 1)

19. John R. Jones of Deland, Florida (hereinafter "Jones") and Alfred G. Jones (an employee of Jones), attended the prebid conference and site visit in behalf of Arrow, Inc. (tr. 1/41, 124, 153, 2/7). At such time Jones had been previously involved in grounds maintenance and janitorial work, primarily at military establishments for over 25 years (tr. 2/86). Jones traded under the name of Jones Brothers Landscaping (tr. 2/86). Arrow, Inc. is the alter ego of Guy G. Tutterow, Sr., of Rocky Mount, North Carolina. When Tutterow became aware of Government's Solicitation for Bids to cover the grounds maintenance needed at Patrick AFB he formed an undisclosed partnership with Jones to seek the contract. Tutterow and Jones would prepare a bid showing Arrow, Inc. as the contractor and John R. Jones as Arrow Inc.'s project manager and vice president. Tutterow would provide to Government all preaward survey information and, in the event Arrow, Inc. received the contract, Tutterow would provide some of the contract administration. If the contract was awarded to Arrow, Inc. Jones was to not only supervise all the actual work in Florida, but also to provide all the labor and materials as well as all of Jones' existing

©1994, Commerce Clearing House, Inc.

Digitized by Google

machinery and equipment. Jones was to receive all Government's checks payable to Arrow, Inc. for deposit in Jones' bank account. Jones was to pay all costs of performance of the contract out of such Government receipts and if any sums were left over after such payment of costs Jones was to divide such sums 50-50 with Tutterow as profit. If additional machinery or equipment was needed Jones and Tutterow were to split the cost thereof 50-50. The partnership arrangement was not disclosed to Government. (R4, tab G6; tr. 1/35, 36, 37, 95, 96, 97, 2/7, 121-23, 169-70, 3/160, 175-77, 203)

20. At the prebid conference and site visit all attendees were instructed to write out any questions that they might have. Government advised that it would try to answer the questions verbally, but that verbal answers were not binding on the Government and that only written answers would be binding. Government also indicated that a written statement of the prebid conference questions and answers would be made and distributed to all attendees. No verbal questions and answers were made at the prebid conference. Neither Jones nor Alfred G. Jones submitted any written questions before or after the site visit. There were some written questions provided by other attendees. The answers were put in writing and assembled into one document by Government and mailed to the attendees at a later date. The following questions and answers pertinent to this appeal were placed in writing:

Quest:	Any estimate on shrubs or landscape areas?
Ans:	Technical Exhibit 2, page TE-2-1 of the PWS provides estimates of types of workload, including shrubs.
Quest:	Is the main road included for mowing?
Ans:	A1A is not included, median belongs to the state. Bid according to grass mowing map.

(R4, tab G3; tr. 2/74)

21. TE-2, page TE-2-1, mentioned above was described earlier herein (*see* finding 15) (R4, tab 1).

22. Jones and Tutterow above prepared a bid for Arrow, Inc. (tr. 1/35-36, 95, 2/50). Contractor's bid was based upon the work statement and grass mowing map contained in the solicitation (tr. 1/43, 128). Although contractor was aware that the grass mowing map of the solicitation indicated that grass in Zone 8 was to be a height of 10 inches while other parts of the PWS showed that the height of grass in improved grounds (which, as contractor knew, made up most of Zone 8), was to be not in excess of six inches and not less than three inches, contractor nevertheless, elected to follow only the grass mowing map and to disregard the inconsistency between such map and the rest of the solicitation requirements. (Tr. 1/183-84) Contractor felt there was an inconsistency between these different parts of the solicitation requirements, but chose not to ask Government to clear up the inconsistency (tr. 185). Jones did not read the entire solicitation at any time prior to assisting in preparation of the Arrow, Inc. bid (tr. 2/50-51).

23. In making up Arrow, Inc.'s bid Jones and Tutterow estimated that contractor would have to mow areas calling for a grass height of two to four inches 32 to 35 times per year. In areas calling for a 10-inch height of grass they estimated contractor would have to mow seven to eight times per year. (Tr. 2/51-52) Arrow, Inc.'s bid price was based upon doing 81,160 feet of edging per year (tr. 1/57, 2/10). Tutterow assumed that Government's Annual Work Load Estimate, TE-2 of the solicitation, was correct when it indicated 81,160 feet of linear feet of sidewalks, driveways, and curbs in improved areas (R4, tab 1; tr. 1/155). Tutterow assumed that once contractor had edged 81,160 feet such would be the maximum edging contractor would be required to perform (tr. 1/201).

24. Contractor interpreted the solicitation's Annual Work Load Estimates, TE-2, to mean that contractor had to perform only 500 trimmings/prunings of trees each year and only 1,500 prunings of shrubs each year rather than trimming/pruning 500 trees and pruning 1,500 shrubs as often as such number of trees and such number of shrubs might need trimming and pruning as described in other portions of the solicitation (tr. 1/203-05, 2/67).

25. Contractor's bid for the basic contract period of performance (1 Jan 89—30 Sep 89) was for $33,333 per month or $299,992 in the aggregate. Government accepted contractor's bid and awarded contract No. F08650-89-C-0003 on 6 October 1988. Such contract contained the following Federal Acquisition Regulation clauses pertinent to this appeal:

Digitized by Google

52.214-29	Order of Precedence (JAN 1988)
52.233-1	Disputes (APR 1984) Alternate I (APR 1984)
52.243-	Changes—Fixed Price (AUG 1987)
52.249-4	Termination for Convenience of the Government (SERVICES) (SHORT FORM) (APR 1984)

The contract also contained provisions for reduction in the amount of payments Government would make to contractor in the event contractor failed to meet minimum quality of performance standards set forth in the contract. (R4, tab 1)

26. Up to the time of contract award Government's own employees (normally 19 in number), performed the grounds maintenance at Patrick AFB (Scott depos. at 38). Mr. Charlie C. Brooks (hereinafter "Brooks") was foreman of such employees. Brooks had worked for Government for 34 years doing grounds maintenance at Patrick AFB and had been Government's foreman for 15 years. Brooks resigned from Government employment on 2 December 1988 and was promptly hired by Jones on 5 December 1988 to be the foreman as well as Quality Assurance Evaluator (QAE) for contractor. (Tr. 2/159-60, 162, 163)

27. Contractor started performance of the contract on 12 December 1988 (tr. 2/162). From the start of performance until May 1989, Jones kept six employees, including Brooks, to do the actual work (R4, tab G9; tr. 2/186). At such start of performance Patrick AFB was experiencing its dormant season for grass growth. Such dormant season usually begins in November and lasts until early April each year. (Tr. 2/167, 168; Scott depos. at 10)

28. The contract required contractor to prepare and submit to Government daily reports indicating the prevailing weather conditions, the employees utilized by contractor, the areas where such employees had been assigned to work, the work performed, contractor's oversight of such work, the results of safety inspections, and any Government instructions received (R4, tabs 1, G8). Jones assigned the task of preparing such daily reports to Brooks. Jones told Brooks to put something down on the daily report forms for each work day so that Government's QAE would believe that work had been performed. Brooks prepared a daily report at the beginning of each work day for the particular day involved. Such daily work reports do not accurately reflect the actual work that was accomplished. (R4, tab G8; tr. 2/163-66, 231) Per Jones' instructions the daily reports often made it appear as though certain work (such as mowing) had been done when, in fact, it had not been done (tr. 2/257-59).

29. On 3 January 1989 Jones and Tutterow complained to Government that they disagreed with Government's QAE (inspector) as to how Zone E of the base was to be mowed. They argued that contractor was only required to keep the grass in Zone 8 mowed to a height of 10 inches as shown on the contract mowing map and that inspector was using a map that indicated Zone 8 was to be cut to a height of three to six inches. They claimed that mowing Zone 8 to a height of three to six inches caused them extra work and costs. Inspector used the same map as the contract mowing map except that he had changed the figures in the height column of the table at the lower left hand corner of the map. Specifically, he changed the height for Zone 8 from 10 inches to three to six inches. Inspector claimed that Zone 8 was comprised of almost all Improved Grounds as defined in the contract and only a small unimproved area. Inspector pointed to the base hospital, marina, south entrance gate, sewer treatment plant, and salvage yard, all located in Zone 8, as being improved grounds. Inspector directed contractor to sections TE1-10 and 5.1.1.1.1. as requiring mowing to a height of three to six inches for improved grounds. Inspector pointed to the Land Management and Land Classification map of the contract as further proof that Zone 8 was shown as improved land requiring the shorter mowing height. (R4, tabs 1, G7, TE14, Atch 1, TE 14, Atch 4; tr. 1/39-40, 41, 44, 45, 48, 49, 64-65, 2/14, 53-54, 88-89, 225, 3/130; Scott depos. at 12-13, 14, 15, 16, 17, 58-59)

30. Government further responded to the complaint of Tutterow and Jones by taking them on a tour of the base together with the inspector on 4 January 1989. On such tour the mowing areas were identified as improved, semi-improved or unimproved. Government also offered to provide (and subsequently did provide) larger maps similar to the one employed by the inspector, to contractor to assist in determining what was required by the contract as to mowing. (R4, tab G7; tr. 1/132, 144, 2/23-24, 29, 31, 3/117, 129-30, 131; Scott depos. at 16)

©1994, Commerce Clearing House, Inc.

Digitized by Google

31. Prior to contractor's start of performance Government had always maintained the height of the grass coverage of Zone 8 at a height of approximately four inches. There was little, if any, good quality grass in Zone 8. The grass was mostly crab grass in the improved ground areas of Zone 8 and weeds on the unimproved areas. St. Augustine grass grew around the hospital. St. Augustine grass never exceeds a six inch height. Crab grass never grows to a 10-inch height. Only weeds in the unimproved portions of Zone 8 (under the right circumstances) might reach a 10-inch height. Government had most recently mowed Zone 8 (to a four-inch height) during November 1988 prior to contractor's taking over the grounds maintenance. (Tr. 2/167, 174-75, 228, 229, 230)

32. Having performed grounds maintenance at Patrick AFB for 34 years for Government prior to being employed by contractor and having been foreman of Government's grounds maintenance crews for 15 years, Brooks felt he knew the work that needed to be done when he became foreman for Jones. Accordingly, Brooks maintained the base the same as he had maintained it for Government. (Tr. 1/144, 2/10, 11, 160, 173, 222-23, 228, 251) When the grass in Zone 8 grew above four inches it was mowed back to a height of four inches. This occurred two times during contractor's entire period of performance from December 1988 through June 1989, *i.e.*, the grass in Zone 8 was mowed once in March 1989 and once in June 1989. (Tr. 2/165-66, 173, 174, 228, 229, 231)

33. During the dormant growth season contractor frequently had no work to do because there was little, if any, growth. Since the contract called for daily work reports Jones instructed Brooks to complete such reports in a way that would make it appear as though work had been performed. (Tr. 2/257-59) Despite contractor's doing little or no work during the dormant growth season Government paid contractor the full $33,333 for each month of such season. (Tr. 2/77, 121-23, 3/76; Scott depos. at 48)

34. Meetings were held between Government and contractor in February and March during which contractor, through Jones and Tutterow, continued to voice concern that Government's inspector was checking upon contractor's work with the aid of maps that were different than those contained in the contract. Government, as mentioned earlier, supplied additional maps and subsequently provided a single map that consolidated all the contract maps and included all the necessary information as to whether areas were improved, semi-improved or unimproved. Government also considered clarifying some of the PWSs in response to contractor's assertions that there were inconsistencies in the contract (not relevant to the present dispute) and it was having trouble understanding precisely the work it was required to perform. Government advised contractor repeatedly not to perform work above and beyond the contract requirements and also advised contractor more than once that Government's inspector did not have authority to broaden the scope of the contract performance requirements. (B4, tab G7; tr. 1/49, 207-08, 2/31, 3/15, 34, 57, 3/130, 133, 145-46; Scott depos. at 16-17)

35. A meeting was held between the parties on 11 April 1989 during which performance of the contract was discussed. One of the items discussed was the amount of edging required along sidewalks, driveways and curbs as well as the amount of hedges that needed to be maintained. Contractor claimed that it was only required to edge the 81,000 plus feet in the contract estimate (contract technical exh. 2) and was required to maintain only 1,000 feet of hedges listed thereon. Moreover, contractor claimed that such work had to be performed only one time during the entire period of the contract term. Government, on the other hand, argued that the 81,000 plus feet listed in the contract for edging was a linear measurement of the aggregate sidewalks, driveways and curbs; that the 1,000 feet of hedges was a linear measurement of the hedges on the base; and that such edging and hedge trimming had to be performed as often as needed during the term of the contract. (R4, tab G7; tr. 1/37, 39, 57, 83, 147, 170, 201-03, 2/10, 3/132)

36. On 14 April 1989 Tutterow wrote to Government advising that he accepted Government's interpretation of the contract requirements as to edging and hedge maintenance and requested Government to "identify location of the estimated 81,000 feet of edging; and location of the estimated 1,000 feet of hedges, you wish us to maintain." Contractor further stated as follows:

> I found an enlarged set of drawings on the main base area and did a preliminary estimate of my own. Based on my estimate the total edging required to maintain your entire base will be approximately 250,000 feet (to be done 3, or possibly 4 times per year). The hedges will be approximately 5,000 feet, as we have already done more than 3,000 feet.

Digitized by Google

If I can be of any further assistance in resolving this or any other matters, please advise. We would like to thank you and your people for helping this contract to run well. It is a genuine pleasure to work with people who want to get the job done, without an adversary relationship.

(R4, tab 6)

37. When the growth season arrived in April 1989 contractor added three employees to the six it had been utilizing as its work force to perform the contract (R4, tab G9; tr. 2/186, 189, 190, 226). Government made its first payment deduction from the monthly payment of $33,333 in May 1989 because of defective performance during April 1989 covering edging, pruning shrubs, mowing grass, trimming grass/weeds, and trimming hedges. Government also made payment deductions for defective performance during May and June of 1989. Such deductions did not involve work performed in Zone 8. (R4, tabs 7, 8, 10, 15; tr. 1/158, 1/159, 3/26; Scott depos. at 8, 19)

38. In response to contractor's request that Government identify the edging and hedge locations (finding 36) Government's inspector inspected the area. Government determined that there were 1,094 linear feet of hedges. In addition inspector measured the sidewalks, driveways and curbs that could be edged. Inspector measured not only the linear length of the sidewalks, driveways and curbs as estimated in the contract, but also measured all sides of such sidewalks, driveways and curbs that might require edging and came up with a total of approximately 116,200 feet of edging to perform one complete edging of the 81,160 linear feet of edging estimated in the contract. However, 5,811 linear feet of such possible edging did not require edging and was not edged by contractor because sand had replaced the grass for such linear length. Government identified an additional 22,964 linear feet that should not and had not been edged leaving only 81,641 linear feet to be edged. By letter dated 6 June 1989 Government advised contractor of the specific locations of the 5,811 linear feet of edging that were not required. (R4, tab 8; tr. 1/149, 3/135; Scott depos. at 19-20, 21, 22, 23)

39. Contractor through Brooks also measured *all* sides of the sidewalks, driveways and curbs that might require edging and came up with a total of 120,263 feet (R4, tab G32; tr. 1/167-69, 2/35, 133, 178-79, 180-82). Tutterow, in behalf of contractor, wrote to Government on 12 June 1989 indicating that he recognized that edging one linear foot of sidewalk can actually require three or four feet of edging, since one linear foot of sidewalk may have grass growing on more than one side of such sidewalk. Tutterow further indicated that contractor would edge in accordance with Government's letter of 6 June 1989. (R4, tab 11; tr. 1/154, 167-69, 2/35, 133, 178-79, 180-82) Contractor's own measurement of the *linear* feet of edging required by the contract was 81,160 feet (tr. 2/78).

40. On 15 June 1989 Tutterow wrote to Government advising that contractor had performed work in excess of the contract requirements for the period of 1 December 1988 through 1 May 1989. Tutterow stated that, henceforth, contractor would do no more than the minimum required by the contract since Government was deducting monies for defective workmanship. Tutterow indicated that contractor was only required to trim 378 trees during the contract term of nine months. Tutterow argued that, although the contract called for trimming 500 trees, such was for a period of 12 months. Accordingly, per Tutterow, contractor only had to trim 42 trees per month. Tutterow argued that contractor had already performed trimming 164 trees (as of 15 June 1989); that Government had requested 336 additional trees be trimmed; and that such would exceed the number of trees required to be trimmed by 122 trees. Tutterow stated that contractor would be glad to trim the 122 trees if Government would provide contractor with extra compensation. (R4, tab 12)

41. On 28 June 1989 Government decided that it would be in the best interest of Government to terminate the contract pursuant to its rights under the Termination for Convenience of the Government clause of the contract. Government telephoned Tutterow for contractor on such date and advised of Government's intentions. On 29 June 1989 the contracting officer sent the Notice of Termination as required by the contract clause to contractor. Contractor received the notice on 30 June 1989. (R4, tabs 13, 14; tr. 1/84; Scott depos. at 37)

42. The Termination for Convenience of the Government (Services) (Short Form) (APR 1984) clause of the contract provided as follows:

The Contracting Officer, by written notice, may terminate this contract, in whole or in part, when it is in the Government's interest. If this contract is terminated, the Government shall be liable only for payment under the payment provisions of this

©1994, Commerce Clearing House, Inc.

Digitized by Google

contract for services rendered before the effective date of termination.

43. On 25 July 1989 contractor submitted its termination settlement proposal. It was received by Government on 28 July 1989. Contractor stated that its direct costs for 1 January through 30 June 1989 had been $114,513.40 and that it had billed Government for $199,998. Contractor asked for $42,742.29 as a termination settlement. Contractor stated that the difference in operating costs versus its billing amounted to $85,484.60; that such $85,484.60 sum was compensation for six months use of its equipment, supervision and overhead or $14,247.43 per month; and that the three months terminated would amount to three times the $14,247.43 or $42,742.29 (its settlement claim) (R4, tab 16)

44. On 25 July 1989 contractor submitted a claim for compensation for extra work in the amount of $22,146.11 to Government. The claim was for alleged extra mowing of "Area 8" [Zone 8]. Tutterow argued that the contract grass mowing map indicated that "Area 8" was to be cut to a "height of 10 inches as needed"; that Government required contractor to maintain such area at a height of six inches; that the contract required edging of 81,160 feet but contractor had been required to edge 116,227 feet; and that the contract required pruning of 1,500 shrubs each year, but Government made contractor prune 5,000 shrubs. Tutterow stated contractor's damages in pertinent part as follows:

Since we were required to maintain Area 8 at 6" height, we are entitled to be compensated as follows:

PRS, Item RS.1 states that 360A of improved area = 32.7% of contract, of $10,899.89

Area 8 = Approximately 100A or 28% of $10,899.89 = $3,051.97

To maintain at 6" rather than 10" height requires 50% more work per month. 50% of $3,051.97 = $1,525.98 Total Extra Work Area 8 = 6 months × $1,525.98 = $9,155.98

The PWS, TE-2-1 states that the edging requirement is 81,160 feet to be maintained.

The footage that was maintained totaled 116,227 feet. This is a difference of 35,067 feet per month. (*See* Exhibit 4.)

PRS, Item RS-5 states that 81,160 feet = 10.6% of the contract or $3,533.30. $3,533.30 divided by 81,160 feet = $.0435 per foot. Extra edging = 35,067 feet × $.0435 = $1,525.41. Compensation due = 5 months × $1,525.41 = $7.627.05.

We are also entitled to have the monies ($1,413.32) deducted on CDR #2 dated 2May89 paid because the number of deficiencies allowed should have been greater on the larger quantity used. The deduction was based on quantities that were not accurate.

We are also entitled to be paid the $530.00 deducted from our invoice for June services.

Again this deduction was made, based on quantities of work that were not accurate.

The PWS, TE-2-1 states that 1,500 shrubs require pruning each year. PRS Item RS-9 states that 1,500 shrubs are 3.2% of the contract or $1,066.66. $1,066.66 divided by 1,500 = $.71 per shrub. We pruned 5,000, shrubs which is 3,500 more than the contract amount. Compensation due: 3,500 × $.71 = $2,845.00. (Exhibit 5) shows that you were still saying that shrub pruning was unsatisfactory, when we had already done 230% of the contract requirements.

You also deducted the amount of $574.76 from our payments for repair of government property damaged by us. We were also billed for this amount by the Staff Judge Advocate and paid it by our check #1963 (Exhibit 6).

In view of these facts as presented, we claim compensation in the amounts as follows:

$9,155.98	Extra Mowing
7,627.05	Extra Edging
1,413.32	Erroneous Deduction
530.00	Erroneous Deduction
2,845.00	Extra Shrubs
574.76	Deduction for Repairs
$22,146.11	TOTAL

(R4, tab 17) The claim was later reduced to $21,571.35 (R4, tab 23).

45. On 29 August 1989 the contracting officer wrote to contractor seeking substantiation of the costs claimed by contractor in its termination settlement claim (R4, tab 18). On the same date the contracting officer, by separate letter, wrote to contractor asking for proof of the added costs in its claim for compensation for extra work (R4, tab 19).

46. On 1 September 1989 Tutterow replied to the contracting officer concerning substantiation of contractor's termination settlement claim. Tutterow restated contractor's previous claim for $42,742.29 and argued that FAR 52.249-2, paragraph (h)

Digitized by Google

says that the cost principles of Part 31 of the FAR govern such claims; that Part 31.2205-42 paragraph (d) allows compensation for loss of value; that the loss of value applies whether or not equipment is owned or leased; that Part 50.302-1(b) allowed Government to settle the claim based on fairness; and that it would be only fair to pay contractor's claim in full since it had only two days notice prior to the termination and Government had shown bad faith by deducting monies from sums due contractor and later billing contractor for same and also for enforcing the provisions of the contract which called for deductions from payments due, when contractor's performance was defective, even though contractor believed it was "performing above the contract levels." (R4, tab 20)

47. On 13 September 1989 Tutterow responded by letter to the contracting officer's request for some proof of contractor's claim for compensation for extra work. He stated that contractor had "cut the salvage yard or the yacht club 27 times without your [Government's] people knowing it was done". As proof thereof he enclosed unsworn signed typewritten statements each dated 5 September 1989, from Jones, Brooks and J.C. Brooks (a tractor operator, *infra*). Jones' statement stated as follows:

> In reply to your request regarding grounds maintenance in Zone 8, this area was maintained to a height of 6 inches or less. Please find enclosed dates on which this area was mowed and trimmed. Edging on the entire Base was done as specified and approximately 5,000 shrubs trimmed.

The list of dates showed 27 dates beginning on 13 December 1988 and ending on 27 June 1989. Such dates were taken from the daily Construction Quality Control Reports (CQCR) prepared by Brooks, which Brooks testified under oath were untrue. (*See* finding 28).

Brooks statement was as follows:

> In reply to your request on grass mowing at Patrick Air Force Base, Zone 8, also edging and shrub trimming. Zone 8 was maintained at a height of 6 inches or less, approximately 5,000 shrubs trimmed and edging was done on the entire base.

Brooks testified under oath that when he signed the paper it did not contain any of the aforesaid typewritten language on it and that he had been led to believe by Jones that the paper was to be an acknowledgement that Brooks had received petty cash from Jones and that Jones was going to fill in the amounts and details thereof when Jones returned to his office. Brooks denies that Zone 8 was mowed 27 times.

J.C. Brooks statement was as follows:

> I, J.C. Brooks was the tractor operator at Patrick Air Force Base and maintained the grass mowing at 6 inches or less.

J.C. Brooks was not called to testify as a witness. (R4, tabs 22, G53; tr. 2/206-10, 216, 237-40) Contractor provided no evidence that Government's deductions for improper performance or nonperformance were incorrect.

48. Contractor's only records that might disclose the actual work performed by contractor were the CQCRs prepared by Brooks and contractor's monthly time book and payroll. The former were inaccurate as to many of its entries and false as to others. The latter records disclosed only the names of the employees and dates that each worked. The hours worked and the tasks performed were not recorded. (R4, tabs G8, G9; tr. 1/176-77, 2/114, 129-30, 165-66, 219-20, 231)

49. Contractor's CQCR's disclose that during the entire period of performance rain fell at Patrick AFB only on 3, 7, 8, 9 and 10 March. Such reports do not disclose the amount of rain or whether the land was irrigated (R4, tab G8). There was no evidence that the weather and growth conditions that occurred during contractor's period of performance were good, bad, or compared favorably or unfavorably with the climatic data contained in the contract (R4, tab 1). The grass in Zone 8 grew approximately $1/4$" per month during the dormant season (tr. 2/243). There was no evidence as to how much the shrubs, hedges, and trees grew during the period of contractor's performance or how much the grass grew in the growth period. Likewise, there was no evidence as to normal growth rates for the vegetation which contractor claims was the subject of extra work. Growth of vegetation or lack of growth is dependent on a multitude of factors such as rainfall, irrigation, sunshine, soil nutrients, temperature, traffic affecting such vegetation and similar factors. (Tr. 1/77)

50. Brooks testified that the grass in Zone 8 was not mowed more or less often than it had been mowed when the maintenance had previously been performed by Government (tr. 2/167). It was cut only twice. Brooks counted the number of shrubs pruned in behalf of contractor. He counted approximately 800 shrubs. They were pruned only

©1994, Commerce Clearing House, Inc.

Digitized by Google

one time (tr. 2/182-83, 237). The shrubs were only pruned when they needed it (tr. 2/184, 205). Brooks personally performed or directed the performance of the edging for contractor (tr. 3/109). In any event, the contractor lacked adequate personnel to perform all the edging called for in the contract (tr. 3/111). Contractor did no more edging than the 81,160 linear feet called for in the contract (tr. 1/163-67, 176, 3/178, 205).

51. In the absence of substantiation of contractor's claims the contracting officer asked that Government's auditors review contractor's records (tr. 3/33, 50). The Defense Contract Audit Agency (DCAA) conducted an audit of contractor's records including records obtained from Jones Brothers Landscaping. All of contractor's records and those of Jones Brothers Landscaping concerning performance of the grounds maintenance contract were examined. In addition the auditor questioned Tutterow at length. (Tr. 2/124-25, 126-27, 3/155, 156, 157, 158, 160) There was no documentary evidence of any legal relationship between contractor and Jones Brothers Landscaping (tr. 3/166). Contractor's bid papers failed to disclose any estimate of the amount of labor hours or material costs to be utilized by contractor. The bid and bid preparation papers showed only rates of pay and bid amounts. Likewise there was no showing of an estimated profit rate. (R4, tab G49; tr. 3/158, 159) The auditor found only estimates and no proof of expenditures to cover contractor's claims of added labor and material (tr. 3/161). Contractor was unable to show that it, in fact, incurred extra costs to perform the contract (tr. 3/168). Tutterow told the auditor that contractor anticipated making a 10% profit (tr. 3/204, 208).

52. Contractor's records disclosed that it had costs to perform the contract in the aggregate amount of $114,513 and that it received from Government the aggregate amount of $193,115. Contractor's records disclosed that it made a profit of $78,602 (equivalent to a profit rate of 68%). If there had been no deductions by Government for defective performance contractor would have received $199,998 (R4, tabs G42, 43; tr. 3/169, 170). Contractor experienced lower costs to perform the contract than it had estimated in its bid price (tr. 3/172).

53. DCAA provided an audit report to Government covering contractor's claim for an equitable adjustment (in the amount of $21,571.35 for extra costs). The report indicated no basis for sustaining a claim to an equitable adjustment in any amount. (R4, tab G43)

54. DCAA also provided an audit report to Government covering contractor's termination settlement claims for $42,742. The report indicated that contractor had not supported its claim to $42,742. (R4, tab G42) Contractor's claim to $42,742 amounts to the profit it lost as a result of the termination (tr. 3/173). The auditor allowed the sum of $2,262 for depreciation of Jones' machinery, $450 for rental of a lot upon which Jones' machinery was stored, and settlement costs in the amount of $852 for a total of $3,564 (tr. 3/173, 180-81). The auditor in allowing depreciation assumed that contractor was owner of Jones' machinery (tr. 3/182). The lot rental expense allowed by the auditor was actually billed to and paid by Jones (tr. 3/183). The audit reports showed that if contractor were to receive the $21,571.35 equitable adjustment sought and the $42,742 termination settlement sought it would receive a "windfall" profit of $124,733 (R4, tabs G42, 43). The auditor opined that if contractor had finished performance of the contract at only a break even cost for the three months terminated it still would have had an overall profit of 36.6% (tr. 3/224).

55. The contracting officer issued a letter offering settlement of contractor's termination settlement claim for the amount of $4,155.06 on 3 April 1990 (R4, tab 30; tr. 3/50).

56. On 16 April 1990 contractor rejected Government's offer of settlement as being "totally too low for the costs involved."

57. On 17 April 1990 the contracting officer issued a final decision denying contractor's amended claim for $21,571.35 for extra costs alleged for mowing, edging and pruning and disputed deductions made in June and July of 1989 for unsatisfactory performance (R4, tab 32; tr. 3/37). On 30 May 1990 the contracting officer issued a final decision determining that the sum of $4,155.06 was the proper amount for settlement of the contractor's claim for settlement of the termination of the contract for the convenience of the Government (R4, tab 33). Contractor made timely appeals from each of the decisions.

DECISION

Contractor argues in its brief that it is entitled to additional compensation for work performed under the contract in excess of the contract requirements and that it is also entitled to recover for the loss of useful

Digitized by Google

value of its machinery and equipment resulting from Government's termination of the contract.

Government contends in its brief that contractor is not entitled to any additional compensation for extra work since it failed to prove that it performed extra work; that the constructive change claimed by contractor did not occur in that the mowing height of 3-6 inches in Zone 8 was spelled out in the contract as well as the 10-inch height which contractor claimed was the contract requirement; that the contract terms, accordingly, were ambiguous; that the ambiguity was obvious; that contractor failed to perform its affirmative duty to seek clarification of the patently ambiguous requirements; that even if the ambiguity is deemed not obvious contractor's interpretation thereof was unreasonable and not in fact relied upon; that if extra work was performed it was done on a volunteer basis; that contractor is not entitled to added compensation for edging and pruning because of claimed differing site conditions; and that contractor failed to prove that Government's deductions for deviations from or nonperformance of contract duties were improper.

In addition Government contends that contractor is not entitled to a termination settlement in excess of the payment it has already received; that it has the burden of proof of its alleged termination settlement costs; that its termination settlement is limited to payment for services performed per the contract terms of the Termination for Convenience of the Government (Services) (Short Form) clause; that contractor failed to prove that it incurred the termination costs claimed; and that sanctions in the form of Government's litigation expenses in the amount of $7,366 should be imposed upon contractor for prosecuting frivolous claims.

The law is well established and needs no citation of authorities to the effect that one who seeks damages must prove by a preponderance of the evidence that damages occurred. In these appeals contractor has alleged being damaged by having been required to perform extra work and by having the contract terminated three months prior to the end of the contract term. However, mere allegations by themselves are not enough to prove that damages in fact exist. To prove that extra work was performed one must first prove the amount of work that would have been required even if no extra work had been performed. The basic work amounts required in these appeals, insofar as mowing in Zone 8 is concerned, were never established. Whether the height of the grass was to be maintained at four inches or 10 inches is of no consequence unless there is growth of the grass. If the grass grew no higher than the prescribed height during the entire term of the contract contractor would not have been required to mow it at all. Thus, the number of mowings performed or required was dependent upon the amount of growth. Contractor had to prove the amount of such growth and the times that it occurred. The evidence showed that growth is and was dependent upon the amount of moisture that fell upon the vegetation, the amount and quality of soil nutrients existent, the temperature that occurred, the amount of sunlight that occurred and other growth conditions that existed. There was little, if any, evidence provided as to such growth conditions and the amounts and times of growth that occurred. Moreover, there was little or no evidence as to historical records of grass growth for the area of Zone 8. In the absence of evidence to assist us we are unable to determine whether the amount of mowing performed by contractor was more or less than would reasonably be expected or more or less than was estimated by contractor in its bid price or whether or not contractor's estimate of the number of times Zone 8 was to be mowed was reasonable. Thus whether Zone 8 was only mowed twice during contractor's performance over a nine month period, as testified to by its foreman (who was most intimately connected with such work) or the 25 or 27 times claimed by Jones is of no help to us in determining whether the amount of mowing performed was more than reasonably anticipated by contractor when it bid. Contractor has failed to carry its burden of proof as to its allegation that it performed *extra* work in mowing Zone 8 because of faulty specifications, maps or by direction of Government.

Likewise, contractor has failed to prove that it performed more edging than was required by the contract. Contractor has no records of the actual amount of edging that it performed. It relies on the allegations of Jones and Tutterow who performed no edging themselves, and did no measuring of edging. Contractor's foreman, Brooks, who did most of the edging himself, and who did the measuring testified that the amount of edging did not exceed the 81,000 approximate feet of edging estimated in the contract. In the absence of any other persuasive evidence we conclude that contractor did nothing more than it was supposed to do insofar as edging is concerned.

©1994, Commerce Clearing House, Inc.

Digitized by Google

We have a similar situation as to the evidence as to tree trimming, hedge cutting and bush pruning. Contractor has no records of the number of trees it trimmed, the feet of hedges it clipped, or the number of bushes it pruned. Moreover, it has no records of the number of times it performed such maintenance. Here, again, we are left with allegations by Jones who, as project manager, and Tutterow, as office administrator, did not perform the work and did no measuring or record keeping of claimed extra work. But Brooks, the foreman who did such work and directed such work, testified that such work did not exceed the contract requirements. We have been shown no reason to disbelieve Brooks. He was most closely associated with the work and would best know what was done and what was not done. He saw and knows of no work performed above and beyond the contract requirements.

Even if we were to accept contractor's argument that it performed mowing work in excess of the amount it contemplated in its bid price (which we do not accept), we would not find contractor entitled to relief. Contractor's claim that it relied on the contract's mowing map which showed a height of 10 inches for Zone 8 is unreasonable. To base a bid upon only one part of the contract, a map, while disregarding the other parts of the contract, which clearly spell out that grass on Improved Grounds shall be maintained at a lower height is foolhardy. The law requires reading the entire contract in such a way as to give meaning to all parts of it. One cannot pick the part of the contract one wishes to follow and disregard other parts of the contract which are contrary to one's wishes. The contract in this instance contained a mowing map showing grass in Zone 8 to be maintained at a height of 10 inches. It also contained a map showing Zone 8 as Improved Grounds. It also contained specifications that stated that Improved Grounds were to be maintained at a height less than 10 inches. If such was confusing to contractor it was, nevertheless, open and obvious to anyone carefully reading the contract. Indeed, contractor recognized the inconsistency (finding 22). Such patent inconsistency between parts of the contract imposed on the bidder the duty to inquire of Government as to precisely what was desired. Contractor failed to so inquire and thus should not be heard to complain that it was caused more work than it had contemplated. If it had asked it would have been told that there was a small unimproved portion of Zone 8 which called for the 10-inch height mowing whereas most of the zone was Improved Grounds requiring a lower cutting height.

We also find contractor's interpretation of the requirements for tree trimming, shrub pruning, and hedge clipping to be unreasonable. When read as a whole the contract requires trimming, pruning and clipping to be "as needed." Trees were to be pruned to the Pruning Standards (of Class II and Class IV for shade trees) of the National Arborist Association, shrubs to be pruned to maintain natural growth characteristics, and hedges to be trimmed to their original shape when new growth reaches six to eight inches. The amount of growth and the resultant need for maintenance obviously are dependent upon climatic conditions that occur and similar growth factors. It was no more reasonable to interpret the contract as requiring the estimated quantities of trees, shrubs and hedges to be maintained only one time during the entire contract term regardless of the amount of growth than it would be reasonable to insist that the trees, shrubs and hedges be pruned or trimmed even if there were no growth.

Contractor's claim for the loss of the "useful value of special machinery and equipment caused by the termination of the contract for convenience" is based upon its argument that the long form termination clause, FAR 52.249-2, should have been used in the contract rather than the (*Services*) (Short Form) clause FAR 52.249-4. The latter clause limits settlement charges to services rendered before the date of termination. Contractor argues that the long form clause should have been used in the contract since the fixed-price contract exceeded $100,000 in value. Contractor, however, fails to recognize that the short form clause is appropriate regardless of contract value when a fixed-price contract is contemplated involving *services* (such as was the case with grounds maintenance at Patrick AFB) and the contracting officer makes the prescribed determination. (FAR 49.502(c)(1), 52.249-4) There is no evidence that the contracting officer did not make the required determination or did so improperly. In the absence of evidence to the contrary we find no abuse of discretion by the contracting officer and we conclude that the short form clause was properly included in the contract. *Muncie Gear Works, Inc.*, ASBCA No. 16153, 72-1 BCA ¶ 9429.

Contractor's rights to recover a settlement can rise no higher than their source. Under the terms of the termination for convenience clause of the contract Government is

Digitized by Google

liable only for services rendered before the effective date of termination, namely 30 June 1989. As such contractor's claims to $42,742.29, which covered the three months terminated, are not allowable. Moreover, if, as the DCAA found, such amount was merely anticipatory profit, even under the long form clause it would not have been allowable. FAR 49.202(a).

We conclude that contractor is not entitled to an equitable adjustment to cover extra work and deductions from contract payments and is not entitled to any additional termination settlement sum.

The appeals are denied.

Government's request for sanctions is denied.

[¶ 26,354] Container Systems Corporation, Inc.

ASBCA No. 40611, September 2, 1993. Contract No. N00197-87-C-0092.

Defaults, Grounds—Delivery Failure—Waiver of Delivery Date.—Despite a contractor's assertion that the government's acceptance of late deliveries under a contract for missile containers waived the delivery schedule, termination for failure to deliver was proper, because even when late deliveries were accepted, each successive increment represented a severable obligation to deliver on the contract delivery date. The board disagreed with the contractor's assertion that a sequence of events involving missed incremental deliveries and government extensions of the delivery dates left no delivery schedule to meet.

Defaults, Excuses—Causation—Burden of Proof.—A contract for the supply of missile containers was properly terminated for default, despite the contractor's contention that the default was excused by reasons beyond the control and without the fault or negligence of the contractor, because the contractor could not prove its allegations that drawing errors and inspection problems caused the default. Moreover, by agreeing to a modification, the contractor surrendered its right to argue then-existing excusable causes of delay as a defense to its later default.

Defaults, Government Acts Excusing—Bad Faith—Abuse of Discretion.—A contractor's argument that the default was excused was denied, even though the contractor argued that the contracting officer abused his discretion by not considering all of the factors listed in FAR 49.402, because the mere failure to consider one or more of the factors is not an automatic admission ticket to a termination for convenience. The first five considerations listed by the contractor made no difference to the decision to terminate. Nor did the sixth consideration, the failure to mention whether the termination was economical, favor upsetting the termination action. The termination memorandum specifically considered the availability of supplies from other sources and the urgency of the need for the supplies. The fact that it did not go into costs was not fatal to the termination.

For the appellant: Chandler, Dillion & Allyn, Chartered, Boise, Idaho, by Thomas B. Chandler and Kathleen P. Allyn, and Popham, Haik, Schnobrich & Kaufman, Ltd., Washington, D.C., by James P. Gallatin, Jr., and Karen D. Powell. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and James H. Haag, Trial Attorney.

Before LUSSIER, RUBERRY, and STEMPLER, Administrative Judges.

LUSSIER, Administrative Judge: This appeal is from a decision terminating for default a contract for the production of containers for the Harpoon missile. Container Systems Corporation, Inc. ("ConSysCo" or "CSC"), the appellant herein, had a change in ownership 18 months into performance and a large part of appellant's case concentrates on the events from that point forward. In attacking the propriety of the termination for default appellant raises many issues including whether there was a valid delivery schedule in effect, whether any default was excusable and whether the decision to terminate violated Government procedures and was an abuse of discretion. We hold for the Government.

FINDINGS OF FACT

I. *The Contract*

1. On 8 September 1987 the Naval Ordnance Station, Louisville, KY (NOSL) awarded Contract No. N00197-87-C-0092, as a formally advertised small business set aside, to CSC, under its former name of Yanke Container Corporation.[1] The contract called for delivery of 306 MK 607 Harpoon missile containers, 50 MK 630 Harpoon missile containers and 40 MK 608

[1] The change of name from Yanke Container Corporation to Container Systems Corporation was recognized by an administrative modification, dated 10 November 1988 (R4, tab 63).

©1994, Commerce Clearing House, Inc.

Digitized by Google

Harpoon missile containers, to be made in accordance with specified Government drawings and specifications, for a total price of $1,835,910.00. The contract contained the "First Article Approval-Government Testing (APR 1984)" clause, found at FAR 52.203-04, and required submission of one preproduction unit of each model within 150 days, and delivery of the production units thereafter at specified delivery times.

2. The pre-award survey found appellant satisfactory in all areas except for quality control, concluding appellant did not have sufficient quality control personnel and had instances of quality deficiencies on past contracts (R4, tab 8.1). Naval Weapons Station, Earle ("NWS Earle"), which was the design office for the containers in issue (tr. 6/57), recommended close monitoring of performance as a minimum requirement to obtain quality containers from Yanke or any contractor (R4, tab 9). The Navy Contracting Officer (PCO), Charles Buccola, called Richard Fish, who was then appellant's vice president and general manager, on 11 September 1987 to advise him that a Certificate of Competency had been issued and he had awarded the contract to appellant. Mr. Buccola's memo of the phone call states "I told him that I was looking for 100% quality on this. Fish said he believes they make good containers but would put extra attention to this. I told him they could expect a lot of scrutiny on performance" (R4, tab 11).

4. Quality control of missile containers was a matter of concern to the Navy. The containers are designed to protect the missile from shock, vibration, temperature and moisture conditions. The Harpoon missile contains JP 10 fuel with the explosive power of 20-30 sticks of dynamite (tr. 1/30), sensitive electronic circuitry in the missile guidance system, and an explosive device within the missile. In December 1987, the Assistant Secretary of the Navy for Shipbuilding and Logistics requested a study which was jointly conducted by Naval Air Systems Command and Naval Sea Systems Command (app. exh. 7). This study (the "Joint Container Inspection Group" or "JCIG" study) included missile, torpedo and mine containers within its scope. One early result of the study was to institute 100% inspection on container contracts in February 1988 (app. exh. 3, 10).

II. *The Delivery Schedule*

5. The First Article for the MK 607 container was approved for production on 10 March 1988 (R4, tab 19). The First Articles for the MK 630 and MK 608 containers were approved for production on 26 August 1988 (R4, tabs 45, 60.1; tr. 1/269-70).

6. Modification P00016 (Mod 16), effective 21 December 1988, unilaterally revised and extended the contract delivery schedule to require completion of all deliveries by 30 June 1989 (R4, tab 71). Modification P00018 (Mod 18), effective 17 March 1989, further unilaterally revised the delivery schedule. Instead of completing all deliveries by 30 June, appellant now could deliver the last 20 MK 608 and 20 MK 630 containers, 10 of each on 15 July and on 15 August 1989 (R4, tab 81).

7. In early May 1989, appellant ran out of money and ceased production (R4, tab 94). The Government was advised that negotiations were underway to sell appellant's business. The negotiations were with the owners of Defense Technologies Inc. (DTI), a firm in southern California, which also had manufactured containers for the Government (tr. 4/202-05). At the time, appellant's then attorney advised Mr. Jerry Smith, the administrative contracting officer (ACO), that there were three possibilities, consisting of 1) insolvency, 2) novation of specific contracts, or 3) takeover by a third party (DTI) of the entire operation. He also advised the ACO that appellant had potential claims against the Government for inconsistent inspection, delay in progress payments, application of overly stringent quality standards, and bad specifications (R4, tab 97.2).

8. At this time appellant had a number of ongoing container contracts with both the Navy and the Army (R4, tab 103). Based upon a review of appellant's records through March 1989, a Government financial analyst concluded that the financial condition of appellant was unsatisfactory (R4, tab 100). Further, appellant was considered an unacceptable risk for progress payments by the ACO, and was notified on 24 May 1989 that progress payments were being suspended (R4, tabs 101, 102).

9. On 18 May 1989, the PCO wrote to appellant reaffirming the Mod 18 delivery schedule and giving appellant 10 days under the "Default" clause to "cure" the work stoppage, or face possible termination for default (R4, tab 98). Appellant responded on 24 May (R4, tab 104) requesting a new delivery schedule due to "Government caused delays." It suggested it was due monetary consideration for the delays. It also voiced objection to 100% inspection being utilized. The PCO responded on 26 May that appellant's reply was nonresponsive to the ques-

Digitized by Google

tion as to what it intended to do to cure the work cessation (R4, tab 105).

10. On 26 May the PCO talked to Mr. Shane Kelly, the intended purchaser (and later to become sole owner and president) of appellant. The PCO's memorandum of that conversation reveals Mr. Kelly felt the subject contract could be completed in short order with his new management and a revamping of appellant's quality system (R4, tab 106.1). When the PCO asked why Mr. Kelly would want to acquire appellant Mr. Kelly gave a number of possible reasons.[2]

11. On 30 May 1989, Mr. Kelly and the PCO had a phone conversation during which the PCO asked Mr. Kelly if he was aware of the delinquent status of the contract. The PCO's memorandum of that phone call shows that Mr. Kelly advised he was aware of it and would not be interested in buying the appellant if all its contracts were going to be terminated for default. The PCO memorandum adds "I explained my situation—that sent cure notice but customer is interested in containers so we will forebear for a short while. Kelly understood the situation" (R4, tab 106.2). The PCO testified that what he meant by "forebear for a short while" was for "a matter of weeks" but he could not specifically recall discussing this with Mr. Kelly (tr. 2/203). The "customer" referred to is obviously the Government office requisitioning the containers. Attached to the memorandum was a hand written schedule for deliveries of containers beginning 30 days after date of agreement and concluding 120 days after date of agreement. This schedule was proposed by Mr. Kelly (tr. 2/201).

12. On 31 May Mr. Fish responded to the 18 May "cure" notice, explaining that appellant was negotiating the sale of 100% of its stock to a buyer experienced in container manufacture. It advised that it could not produce 48 containers a month because of the Government use of 100% inspection instead of MIL-STD-105 sampling inspection. The letter proposed delivery of 36 containers per month from July through November 1989 (R4, tab 107).

13. Notes of a JCIG meeting in Washington, which the PCO attended on 31 May, state that the potential sale of appellant was discussed. The hopeful observation was made that "if acquired, probability exists of completion of performance" (R4, tab 107.2). A more complete trip report of the meeting spelled out the possibilities of: 1) terminating the contract for default, 2) renegotiating the delivery schedule with the current ownership, 3) renegotiating the schedule with the new ownership once the sale was final, or 4) terminating the contract for convenience (R4, tab 107.3). One of the "cons" of the third option was stated to be that it "Requires period of forebearance [sic]".

14. On 7 June, the PCO responded to appellant's letters of 24 May and 31 May. He rejected the concept in appellant's 24 May letter that there were Government caused delays entitling appellant to compensation. He left open the possibility of reducing the monthly quantity, as suggested in appellant's 31 May letter, but advised the Government would expect monetary consideration if it did so (R4, tab 108).

15. On 16 June 1989, the day after the agreement for the sale of appellant's shares was executed (R4, tab 111), the PCO issued a "Show Cause" letter in an effort to get a response and "get the contract rolling again" (R4, tab 112; tr. 2/111). The letter stated that appellant had failed to perform within the time required and the Government was considering terminating the contract for default. Appellant was given 10 days to present facts bearing on the question of whether the failure to perform was excusable. By letter of the same date, DTI notified the Government that the sale had taken place on 16 June and Mr. Shane Kelly would be in touch

[2] I asked why they would want to acquire ConSysCo. Kelly elaborated on a number of reasons as follows: (1) There are some common contracts: they feel that there is still profit in the existing contracts at ConSysCo. (2) The Hawk container contract, which both DTI and ConSysCo have. (3) They would like to have some of the tooling ConSysCo has, particularly for the 608 and 630. (Kelly said they would verify the tooling before planning to use.) This exposes them to some new product. (4) For what they are paying for ConSysCo, they are acquiring metal forming equipment they feel is in good condition and of which they have need. Basically, for the price of the machinery, they are acquiring a company and the contracts. (5) 80% of the material needed to complete is on hand, and they are discounting it at 70% to allow for scrap, rework, etc. Kelly said they don't see a great profit, but feel that they will do well buying the company for what they would pay for one machine. [Although not stated by Kelly, it was evident that cash flow was of interest to him also.] Kelly said that they would FedEx a copy of the signed contract to me. Once signed, Kelly said he will want to talk schedule. He feels they can complete the contract in five months. He reiterated their commitment to quality. (R4, tab 106.1)

with Mr. Boone the following Monday to "start working out the details".

16. On 21 June Mr. Kelly wrote to the contract negotiator, Mr. Boone, giving a "preliminary" delivery schedule which provided for deliveries beginning on 30 June 1989, and continuing each month thereafter in specified quantities until completion of the last delivery on 24 November 1989 (R4, tab 115). Mr. Kelly had begun rehiring of employees (R4, tab 115) and was planning to move to a new facility in Boise (tr. 4/216). He was also utilizing the services of the prior owner/manager of the company (tr. 4/213).

17. On 28 June Mr. Kelly met with the PCO to discuss a number of matters. The PCO's notes indicate appellant was given an extension of time until 5 July to answer the 'Show Cause" notice of 16 June (R4, tab 119). The testimony of both Mr. Kelly and Mr. Buccola, the PCO, makes it clear that no specific timetables were established at this meeting (tr. 2/150-52, 4/210, 217-18).

18. On 5 July Mr. Kelly responded to the 16 June "Show Cause" letter from the PCO advising that the delay occurred "due to necessary clarifications involving inspection requirements on welds" and stated:

> [W]ith that issue resolved we would like to continue with the remainder of the contract in the following manner:
>
> 1) Follow inspection guidelines as agreed upon by Consysco, Louisville, and the respective DCAS representatives.
>
> 2) Submit a delivery schedule proposal for the remainder of the contract quantity at which time we will offer $250.00 for the modification.

(R4, tab 122)

19. On 14 July the PCO wrote to appellant complaining that appellant's 5 July letter proposed no firm delivery schedule and gave no assurance that any positive action was being taken. The letter requested that a delivery schedule be provided immediately and that failure to provide one "may compel the Government to consider other remedies" (R4, tab 129). It did not suggest what those remedies might be.

20. Government inspection of MK 630 containers was being performed in July (R4, tab 133) and nine were accepted and shipped on 3 August to McDonald Douglas Astronautics Co. (R4, tab 141). A delivery schedule was still on the mind of the Government and Mr. Boone called appellant on 8 August with the message that if appellant did not submit a proposed schedule the Government would impose one (R4, tab 143).

21. By memorandum to file, dated 21 August 1989, Mr. Boone recorded that Modification P00020 (Mod 20) was being issued to incorporate various engineering changes, to reestablish the delivery schedule for MK 607, 608 and 630 containers, "and to protect the Government's rights under the contract" (R4, tab 147). The memorandum made the point that the contract delivery schedule had been delinquent since April 1989 for the MK 630 containers, and since May 1989 for the MK 607 and 608 containers. Attached to the memorandum was a copy of a letter, dated 16 August 1989, from appellant submitting for approval the delivery schedule which was adopted in Mod 20. The modification was signed by Mr. Kelly on 29 August 1989. His testimony is that at the time he signed it he thought he could meet the delivery schedule specified therein (tr. 4/313). For the Government, Mr. Buccola signed the modification. The date shown on the modification for Mr. Buccola's signature is 5 August 1989 but this is obviously in error since the modification terms had not been negotiated until mid-August and the contracting officer signs modifications only after the contractor signs (tr. 1/262).

22. Mod. 20 revised the delivery schedule to provide for delivery on 15 September of 24 MK 607 and 25 MK 630 containers; for delivery on 15 October of 48 MK 607 and 16 MK 630 containers; for delivery on 15 November of 48 MK 607 and 10 MK 608 containers; for delivery on 15 December of 42 MK 607 and 10 MK 608 containers; and for delivery on 15 January of 20 MK 608 containers (R4, tab 142). On 18 September, Mr. Buccola extended the 15 September delivery date until 29 September for the 25 MK 630 containers because of a two week period it took the Government to approve a Request for Deviation (RFD 92-10) affecting the support casting of the MK 630 (R4, tab 151). At the same time he asked for information on what action was being taken to rectify the failure to deliver the 24 MK 607 containers on 15 September.

23. The Government had overpaid appellant on progress payments by approximately $43,000 in August and advised appellant it would not pay future invoices on the subject contract until the amount overpaid had been recouped (R4, tab 156.1). In a telephone conversation with Mr. Boone on 12 October 1989, Mr. Kelly conceded the subject contract was getting little attention since there

Digitized by Google

was no potential cash flow. Only one lot of eight MK 607 containers and one lot of nine MK 630 containers had been submitted since the new ownership took over. Mr. Kelly advised he would respond to the 18 September letter and propose a new delivery schedule (R4, tab 159).

24. On 14 October 1989, appellant wrote proposing a new delivery schedule and a $2,000 reduction in contract price (R4, tab 160). The new schedule was proposed by appellant as a "worst case prognosis" with a commitment that "every effort will be made to expedite." The schedule proposed delivery of 20 MK 607 containers on 3 November 1989, 20 on 10 November, 20 on 24 November, 30 on 8 December and 30 "biweekly until contract complete." It further proposed delivery of 11 MK 630 units on 10 November and 10 each on 24 November, 8 December and 22 December. It did not propose any changes in the MK 608 delivery schedule. Appellant's letter added the information that as a result of poor inventory control by the prior owners,[3] progress payments had been suspended prior to the Kelly's purchase of CSC and this coupled with the recoupment of the past overpayment had been making cashflow for the subject contract very difficult. It noted also that its fiberglass tooling for the MK 607 container shells was defective, and it had to build a new set of fiberglass plugs to make new molds. It advised that the new molds should be ready in about three weeks.

25. A memorandum to file on 24 October 1989 from the ACO recorded a meeting the previous day with Mr. Kelly to discuss progress on the several contracts appellant was performing. Appellant's cash flow problem was discussed, with Mr. Kelly eventually expressing the view that without some relief he could not meet payroll and would have to stop production. The memorandum indicated the ACO was attempting to expedite whatever payments the Government could make (R4, tab 161.2).

26. The new delivery schedule proposed by appellant's 14 October letter was incorporated into Modification P00021 (Mod 21), with slight adjustment (R4, tab 162.1). This delivery schedule is sometimes referred to by the parties as the "3 November delivery schedule" since the first delivery was to be on 3 November. Mod 21 was sent to appellant by Mr. Buccola on 30 October 1989. It was date stamped as received by appellant on 6 November 1989, signed by Mr. Kelly, and mailed back to Mr. Buccola, all on the same date (tr. 4/340). It is Mr. Kelly's testimony that he signed Mod 21 because Mr. Boone told him he needed it back but would get a new delivery schedule out (tr. 4/339, 344) and that he signed it because "we were continuing to negotiate so I did what he asked" (tr. 4/340). Mr. Boone has no recollection of such a conversation (tr. 3/53).

27. Prior to the time he received and signed Mod 21, Mr. Kelly had written a letter on the subject (R4, tab 164; tr. 4/338). That letter, also dated 6 November, advised that the financial condition of the company had improved but that appellant was approximately seven days behind schedule on the dates proposed in its 14 October letter. The letter further advised:

> I am sure you agree it would not be in anyone's best interest to execute a modification in which Container Systems is already delinquent. Therefore, I ask that you delay the proposed delivery schedule two weeks for the stated due dates to help us recover. At that point we should be in full operation and will do everything possible to accelerate the delivery schedule.

28. Mr. Boone made a contemporaneous memorandum to file on 8 November 1989 stating that the appellant advised it had not received Mod 21; that while the Government was waiting for appellant to sign Mod 21 appellant became delinquent in deliveries; and that by letter of 6 November 1989 appellant proposed a new delivery schedule with a two week slippage for an additional $500 consideration. The memo concludes "Contract Modification 21 will be reissued establishing a schedule with deliveries to commence on 17 November for a total of $2,500 consideration" (R4, tab 165; tr. 3/53). Thereafter Mr. Boone annotated his file copy of Mod 21 with the word "cancelled" on each page (R4, tab 162.2).

29. On 9 November Mr. Buccola wrote to appellant to advise that Mod 21 was being revised to incorporate the (two week) extension proposed in appellant's 6 November letter. He asserted that the Harpoon Missile

[3] In early November 1989, appellant was involved in a dispute with the previous owners prompting it to demand arbitration in accordance with the terms of the stock sale agreement. Mr. Kelly's position, as stated by his attorney in a letter to the previous owners, at the time, was that, among other issues, the inventory had not been manufactured in accordance with contract terms and needed extensive work, and that the problem was "fraudulent" inspection records (R4, tab 163).

©1994, Commerce Clearing House, Inc.
Digitized by Google

Program had been severely impacted by the lack of container deliveries and costly wooden containers had to be purchased to allow for continued missile production.[4] The letter forwarded copies of the modification asking appellant to sign and return them if the proposed modification was acceptable (R4, tab 165.1). This modification, sometimes referred to by the parties as the "17 November delivery schedule" was never returned by the appellant. Mr. Kelly had no recollection of ever receiving it and could not find it in his files (tr. 4/344).

30. The record does not reveal when the copy of the first version of Mod 21, signed by appellant on 6 November, was received by the Government. However, Mr. Buccola signed that version on 27 November 1989 and the executed copy was received back by appellant on 5 December 1989 (R4, tab 168.1). He testified that he signed it because Mr. Kelly signed it "and I believed he was in agreement with it. We were seeking a schedule and I signed it" (tr. 2/202).

31. When Mr. Buccola signed Mod 21, the "3 November delivery schedule" on 27 November, three delivery dates set forth in that schedule had already passed without deliveries being made, namely 22 MK 607 containers scheduled for 3 November, 20 MK 607 containers and 11 MK 630 containers scheduled for 10 November, and 20 MK 607 and 10 MK 630 containers scheduled for 24 November. There were additional incremental deliveries due on 8, 15, and 22 December 1989, and on 7 January and 15 February 1990 (R4, tab 168).

32. On 30 November Mr. Buccola sent a certified letter to appellant which refers to the delivery schedule in Mod 21 (version 2), the "17 November delivery schedule". The letter is better quoted than summarized:

> By Contracting Officer letter 4200 1141/1167 of 9 November 1989 you were advised of the Government's concern regarding your poor performance under the above contract. Modification P00021 was forwarded to you to incorporate the revised delivery schedule proposed by your letter of 6 November 1989. By your letter you agreed to deliver 22 MK 607 containers on 17 November and 11 MK 630 containers on 24 November. We have been advised by DCASMA Seattle that no deliveries have been made and that no production effort is being made on any items under this contract including the MK 608 container which is due in less than 30 days. Despite your repeated assurances, Government representatives report that no progress is being made toward completion of this contract.
>
> Since you have *failed to perform* Contract N00197-87-C-0092 *within the time required* by its terms, *and are failing to make progress* toward completion of this contract, the Government is considering terminating the contract under the provisions for default. Pending a final decision in this matter it will be necessary to determine whether your failure to perform arose from causes beyond your control and without fault or negligence on your part.
>
> Accordingly, you are given the opportunity to present, in writing, any facts bearing on the question to Charles F. Buccola (Code 114), Naval Ordnance Station, "V" Building, Louisville, KY 40214-5001, within 10 days after receipt of this notice. Your failure to present any excuses within this time may be considered as an admission that none exist. Your attention is invited to the respective rights of the Contractor and the Government and the liabilities that may be invoked if a decision is made to terminate for default.
>
> Any assistance given to you on this contract or any acceptance by the Government of delinquent goods or services will be solely for the purpose of mitigating damages, and it is not the intention of the Government to condone any delinquency or to waive any rights the Government has under the contract. (Emphasis supplied)

(R4, tab 171)

33. The appellant responded by a letter fax, on 18 December, "to explain the circumstances regarding the delays" (R4, tab 174). No reference was made to any particular delivery schedule. We note that simply reading the "Show Cause" letter and appellant's response one might think that the "17 November delivery schedule" was in effect. However, it is Mr. Kelly's testimony that he did not think at the time that there was a delivery schedule (tr. 4/345). The letter pointed out that the former management of CSC kept no records of inventory purchased. The letter further stated that most of the inventory that had been purchased and reimbursed, through Government progress

[4] This is confirmed by evidence showing that NAVAIR directed the Naval Weapons Station, Earle, to take immediate action to procure 225 MK 607 containers as an "urgent and compelling requirement" because of contract delivery delinquencies (R4, tab 165.2, 167.1).

Digitized by Google

payments, was left to deteriorate exposed and unidentified. It advised that at the end of October, when it began to prepare the production line for MK 607 containers, it discovered there were no shock mounts to complete the containers and that the shock mounts could not be obtained until early 1990. An additional problem it identified was the lack of correct castings for the MK 630. Mr. Boone was aware of both problems in November (tr. 3/52, 4/342). The letter concluded:

> I am aware of the severe damage these continued delays are causing the government on these programs. While those delays are in no way caused by the government, they were aware of the circumstances existing prior to my purchase of the company that have caused these delays. Representatives of the Navy have witnessed the conditions referenced above.
>
> While it is understandable that the government is loosing [sic] patience with this company a [sic] ask that you continue to work with us as we solve these problems. If the government were to terminate now it would virtually be writing off the more than $650,000 in outstanding progress payments given to the former owners. Because of the condition of the inventory and the quality records concerning that inventory, the only value in the government paid for property would be for salvage (less than $50,000). It would be in everyone's best interest to allow us to complete to [sic] contract and fully liquidate to [sic] progress payments.
>
> If continuation is desired, please let me know. I would be willing to offer large consideration for a re-negotiated delivery schedule. At this time I have not instructed any of the vendors to stop production. If you wish me to do so, please let me know.

(R4, tab 174)

34. Between 18 December and 20 December, comments were obtained by the PCO, Mr. Buccola, from the ACO (R4, tabs 179, 180, 182, 184) and NWS Earle (R4, tab 178) with respect to appellant's response to the "Show Cause" letter of 30 November. On 20 December 1989, Mr. Buccola sent a certified letter to appellant formally terminating the subject contract for default (R4, tab 185). Referring to his 30 November 1989 letter he asserted:

> You were specifically advised that you had failed to deliver in accordance with the established delivery schedule and that you were failing to make progress toward completion of this contract. The letter further offered you the opportunity to present, in writing, any facts bearing on the question. Your response dated 18 December 1989 did not show that your failure to perform arose from causes beyond your control or from lack of fault or negligence on your part. Accordingly, it is hereby found that your company is in Default under Contract N00197-87-C-0092. Therefore, your right to proceed further with performance under Contract N00197-87-C-0092 is hereby terminated pursuant to the clause of the contract entitled 'Default', said termination to be effective immediately.

35. Between the time of the 30 November "Show Cause" letter and the 20 December termination notice the appellant had missed delivering on incremental delivery dates due under all of the three delivery schedules discussed in our previous findings.[5] If Mod 20 was in effect, it required delivery of 42 MK

[5] *Modification 20 delivery schedule:*

15 September 1989	24 MK 607 containers
29 September 1989	25 MK 630 containers (extended from 15 Sep.)
15 October 1989	48 MK 607 containers 16 MK 630 containers
15 November 1989	48 MK 607 containers 10 MK 608 containers
15 December 1989	42 MK 607 containers 10 MK 608 containers
5 January 1990	20 MK 608 containers

(R4, tab 142)

Modification 21, the 3 November delivery schedule:

3 November 1989	22 MK 607 containers
10 November 1989	20 MK 607 containers 11 MK 630 containers
24 November 1989	20 MK 607 containers 10 MK 630 containers
8 December 1989	30 MK 607 containers 10 MK 630 containers
15 December 1989	10 MK 608 containers
22 December 1989	30 MK 607 containers 10 MK 630 containers
7 January 1990	32 MK 607 containers
15 January 1990	10 MK 608 containers
15 February 1990	20 MK 608 containers

(R4, tab 162.1)

Modification 21 (version 2) the 17 November delivery schedule:

17 November 1989	22 MK 607 containers
24 November 1989	20 MK 607 containers 11 MK 630 containers

©1994, Commerce Clearing House, Inc.

Digitized by Google

607 and 10 MK 608 containers on 15 December 1989. If Mod 21, the "3 November delivery schedule" was in effect, it required delivery of 30 MK 607 and 10 MK 630 containers on 8 December 1989 and 10 MK 608 containers on 15 December. If Mod 21, the "17 November delivery schedule", was in effect, it required delivery of 20 MK 607 and 10 MK 630 containers on 8 December 1989.

36. Since the time the new management took over CSC in June 1989 and the termination of the contract in December 1989, only 17 containers were delivered and accepted by the Government under the subject contract. These consisted of nine MK 630 containers (the first article unit and eight production units) accepted on 3 August 1989 (R4, tab 141) and eight MK 607 containers accepted in early October 1989 (R4, tab 159; tr. 3/203).

37. During the 60 day period prior to termination, appellant devoted very little effort to work on the subject contract but rather concentrated on other contracts which would produce cash flow to it (tr. 3/142). Mr. Kelly testified that $540 of direct labor was expended on the subject contract in November 1989 (tr. 4/361). However, the general ledger he relied upon to reach that conclusion (R4, tab 203) simply shows the $540 adjacent to the date of 11/30/89 under a column headed "Work in Progress" for the subject contract. The previous date for direct labor is shown as 9/30/89 and thus it is not entirely clear that the $540 charges do not cover October 1989 as well as November 1989. There are no labor charges shown for December 1989. However, as late as 29 November 1989, appellant was writing to Morel Foundry confirming its order for castings (R4, tab 171.1) and, on 6 December, writing to Barry Controls, confirming its order for shock mounts (R4, tab 172), needed for the subject contract. Mr. Kelly also testified that when he received the Show Cause letter advising him that he was in default and anything he did was at his risk, he stopped work on the subject contract (tr. 5/83, 86). However, there is no evidence that he attempted to cancel the orders to his suppliers. Since we are to conclude in the decision portion of this opinion that there was a valid existing delivery schedule and appellant was in default of it at the time of termination we move on to additional facts bearing upon the cause of that default.

II. *Additional Findings—Alleged Excusable Causes of Default*

38. The contract incorporated the "Default (Fixed Price Supply and Service) (APR 1984)" clause which provided in pertinent part:

> (a)(1) The Government may, subject to paragraphs (c) and (d) below, by written notice of default to the Contractor, terminate this contract in whole or in part if the Contractor fails to—
>
> (i) Deliver the supplies or to perform the services within the time specified in this contract or any extension;
>
> (ii) Make progress, so as to endanger performance of this contract (but see subparagraph (a)(2) below); or
>
> (iii) Perform any of the other provisions of this contract (but see subparagraph (a)(2) below).
>
> (2) The Government's right to terminate this contract under subdivisions (1)(ii) and (1)(iii) above, may be exercised if the Contractor does not cure such failure within 10 days (or more if authorized in writing by the Contracting Officer) after receipt of the notice from the Contracting Officer specifying the failure.
>
> * * *
>
> (c) Except for defaults of subcontractors at any tier, the Contractor shall not be liable for any excess costs if the failure to perform the contract arises from causes beyond the control and without the fault or negligence of the Contractor. Examples of such causes include (1) acts of God or of the public enemy, (2) acts of the Government in either its sovereign or contractual capacity, (3) fires, (4) floods, (5) epidemics, (6) quarantine restrictions, (7) strikes, (8) freight embargoes, and (9) unusually severe weather. In each instance the failure to perform must be beyond the control and without the fault or negligence of the Contractor.
>
> (d) If the failure to perform is caused by the default of a subcontractor at any tier,

(Footnote Continued)

8 December 1989	20 MK 607 containers 10 MK 630 containers	19 January 1990	32 MK 607 containers
22 December 1989	30 MK 607 containers 10 MK 630 containers	29 January 1990	10 MK 608 containers
29 December 1989	10 MK 608 containers	28 February 1990	20 MK 608 containers
5 January 1990	30 MK 607 containers 10 MK 630 containers	(R4, tab 165)	

Digitized by Google

and if the cause of the default is beyond the control of both the Contractor and subcontractor, and without the fault or negligence of either, the Contractor shall not be liable for any excess costs for failure to perform, unless the subcontracted supplies or services were obtainable from other sources in sufficient time for the Contractor to meet the required delivery schedule.

* * *

(g) If, after termination, it is determined that the Contractor was not in default, or that the default was excusable, the rights and obligations of the parties shall be the same as if the termination had been issued for the convenience of the Government.

39. When Mr. Kelly took control of the company, there were over 600 containers in various stages of construction on all of appellant's contracts (tr. 4/230). There were some 350,000 parts for this contract alone, and approximately 1,000,000 parts including all container contracts, which had to be segregated, inventoried and inspected before assembly (tr. 4/233). Mr. Kelly found no in-process records or identification of inspection status (tr. 4/231). As a result, according to Mr. Kelly, appellant did 100% inspection of everything, and continued that up until it stopped work in December 1989 (tr. 4/231).

40. Nine MK 630 containers were a first priority (tr. 4/236). These took "a little longer than expected" according to Mr. Kelly because of a question whether the welds had been inspected prior to painting, which was solved by appellant agreeing to remove the paint for Government inspection (tr. 4/237). The inspection of these containers was to be done at a new manufacturing facility (Braniff Street facility), obtained by appellant in late June (tr. 4/235), while fabrication of the components of the MK 607 and MK 630 frame was reinstated at the old facility (Gekeler Lane facility) (tr. 4/240-41). The old facility had only 24,000 sq. ft. of space, which was inadequate to accommodate the inventory and the manufacturing lines (tr. 4/216) whereas the new facility had approximately 45,000 sq. ft. (tr. 4/232).

41. Mr. Kelly prepared a number of exhibits in early 1992 in preparation for the trial of this appeal. One (app. exh. 24) represented the plan he had in mind in early July 1989 for getting work on all of appellant's existing contracts restarted (tr. 4/223, 229). The exhibit was based only upon his best present recollection, PCO notes (tr. 4/227-28) and another document received in discovery (tr. 4/293). We are unimpressed with the appellant's evidence of delay based upon its reconstructed original plan of performance. It is contrived at worst and speculation at best. We are not satisfied that appellant had the plan Mr. Kelly reconstructed in his testimony, or for that matter any fixed plan for performance of this contract. We find this evidence insubstantial and not credible. Mr. Kelly also attempted to reconstruct the time spent on the subject contract from appellant's records (tr. 4/255; app. exh. 27) and a chronology of those events Mr. Kelly happened to be "aware of" (app. exh. 28; tr. 4/265). Another exhibit purported to show the causal relationship between Government actions and appellant's default (app. exh. 26). While useful in illustrating appellant's position, the exhibits are flawed by a lack of credible backup.

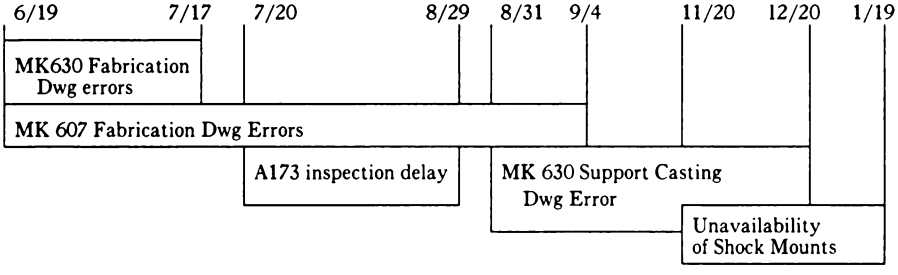
A. *Delayed Inspection on Contract A173*

42. Appellant's "plan", as Mr. Kelly remembers it, was to complete the component fabrication of the MK 630 and 607 container parts by 6 August (tr. 4/244). Whether this was reasonable in light of the defective inventory he was to find (see footnote 3) is unclear on this record. The move of the component parts was to begin on 7 August and be completed by 23 August (tr. 4/243-44). Counting and verifying these parts was to be done from 12 August to 9 September, overlapping the moving. Inspection of the components was to have been done during the period 26 August—23 September (tr. 4/245).

43. On 20 July 1989 when Government inspectors came out to inspect the nine MK 630 containers under the subject contract (tr. 4/284-85) appellant had several lots of MK 535 containers ready for inspection under another contract (A-173), occupying a major portion of the new facility, which the inspectors did not inspect. Mr. Kelly strenuously objected (tr. 4/286) but the MK 535 containers were not inspected until the last part of August. Accordingly, there was no space for the move of component inventory on the subject contract from the old facility to the new facility (tr. 4/289). We have not been shown, however, how many components had been manufactured and were ready for an earlier move to the new facility. Nor have we been shown good cause for not counting and inspecting the components at the old facility under the circumstances.

44. The move of the materials began in early September (tr. 4/327). Inventory did not in fact begin until late September (tr. 4/277). By the end of October the machinery was relocated and the component parts

©1994, Commerce Clearing House, Inc.



Digitized by Google

were pretty well in place (tr. 4/327-28). However, the assembly line for the MK 607 was still being set up in early November (tr. 4/339). The move to the new facility wasn't completed until 22 November 1989 (tr. 4/271-72). Moreover, the new building needed certain renovations and installation of special electrical wiring and gas lines, and these renovations were not completed as of the time of the termination for default (tr. 4/272-73). Taking all the facts into account, we cannot find that a causal relationship between the A123 inspection delay and appellant's default on the subject contract has been established.

B. *Drawing Errors and Shock Mount Problems*

45. In the July, August, September 1989 time frame the manufacturing work (bending of metal and welding pieces together) was still being done at the old facility (tr. 4/304). According to Mr. Kelly's reconstruction (app. exh. 24) of his June 1989 thinking, this work would have been completed on 6 August, instead of the actual completion on 17 September (tr. 4/305). Mr. Kelly's testimony is that he knew the work was not getting done fast enough but, at the time, he did not know why (tr. 4/306). He has since concluded that certain errors on the Government drawings caused delays, the nature and effect of which were computed by appellant's welding expert, Mr. Frank Kuncz, Jr., and a former employee, Mr. Matthew Cooney (tr. 4/309). Appellant's exhibit A-26 graphs the Government caused delays for delayed inspection on contract A173, MK607 drawing errors (fabrication), MK630 drawing errors (fabrication), and MK630 drawing errors (lower support casting). It adds another item for "unavailability of sole source item-shock mounts" for the MK 607 container.

46. The graph may be fairly summarized as follows. We have taken the liberty of adding the end date for the shock mount delay which was not on the exhibit, but was supplied by Mr. Kelly's testimony (tr. 4/350).

B.1. *Shock Mounts*

47. With respect to the shock mount problem, the evidence establishes only that Mr. Boone was made aware of the problem by the appellant (see finding 33) and that one source, Universal Technology, would not deal with appellant because of a financial dispute (tr. 3/66, 4/347). The evidence does not establish that the problem with the shock mounts, to the extent it prevented delivery of the MK 607 containers on time, was beyond the control and without the fault or negligence of both the appellant and its subcontractors. The shock mounts were a long lead time item. Appellant apparently assumed it had a sufficient quantity to complete production. It has not shown a reasonable basis for so doing. Nor has it shown why taking an inventory of the component parts, which revealed the shortage, should not have been done prior to transfer to the new facility, or even more important, why appellant did not have sufficient parts in its inventory to begin with.

B.2. *Errors in MK 607 and MK 630 Fabrication Drawings*

48. There was considerable expert testimony with respect to errors in the MK 607 and MK 630 fabrication drawings. We have carefully reviewed the testimony, and the relevant exhibits,[6] and consider it unnecessary to make extensive detailed findings of

[6] A JCIG study forwarded to the Assistant Secretary of the Navy on 11 March 1988 at p. 3-16 contained the following information:

MK 608, MK-630 and MK-694 Harpoon container drawing packages are being reviewed by NAVWESA. Cursory review, not validated, revealed deficiencies in the following areas: Incomplete specification control drawings, general notes lack reference to straightness requirements, welds not always dimensioned or identified, mating hole positions and strap length are not properly dimensioned, some specifications are out-of-date, some filet welds not properly identified, missing references to applicable MIL-STD for inspection of crit-

Digitized by Google

fact. We find that there were drawing defects in Drawing No. 2645429, the drawing used in welding the outer cradle frame for the MK 607 containers, and in Drawing No. 5166063, the drawing used in welding the outer frame assembly for the MK 630 containers. There were similar drawing defects in the MK 608 drawing package. The type of defects included not only inadequate welding information but also design requiring further engineering effort by appellant to overcome welding problems.

49. The problems related to the drawings would have surfaced at the time appellant produced its First Article units, yet there is no indication that appellant found these faults in the drawings until two years after the termination for default was issued. This raises substantial question as to whether the drawing errors in fact significantly impacted production, as now alleged. The proof as to the drawing errors delaying performance, to the extent of being an excusable cause of default, is based entirely upon an estimate, two years after termination, of the amount of labor hours it would take to correct problems in fabricating the MK 607 and MK 630 containers due to those errors. We have precious little to explain why, if in fact appellant encountered such problems, to the degree it now alleges, it did not complain about the drawing errors at the time, or later, when it was threatened with termination of the contract. Even assuming a reasonable basis for silence existed, and we know of none, we still have no sound basis to show that the "extra" hours expended by appellant necessarily delayed delivery. Furthermore, if these delays were in fact being experienced in fabrication of containers during the summer of 1989, as alleged, they were institutionally known to appellant at the time Mr. Kelly proposed, and agreed to, the delivery schedule in Mod 20.

50. Thus, while the evidence establishes drawing errors which complicated fabrication of the containers there is no credible proof showing that these rendered manufacture impossible, only more time consuming and costly. In fact, appellant produced 144 acceptable MK 607 containers prior to, and 8 after, the sale of the company. It produced nine MK 630 containers. Considering the numerous other factors, such as the fact that Mr. Kelly had no plan for any set delivery schedule for this contract when he took over the company, that he apparently inherited an inventory of defective component parts, that the electrical and gas lines necessary for welding at the new facility were never installed, and that appellant elected to devote its work force to other contracts with cash flow, we can not find that the drawing errors caused the default.

B.3. *Error in MK 630 Casting Drawing*

(Footnote Continued)

ical welds on some drawings, detail views not always codified, and readability of drawings is substandard.

(App. exh. 7)

The record also contains April 1988 Production Engineering Studies by NAVWESA of the MK 608 and 630 drawings. The "Summary of Findings" for each study stated:

The engineering package as a whole does not meet the requirements specified for Level 3 data as defined by DOD-D-1000. The major areas in which the data is lacking in Level 3 engineering definition are as follows:

a. Specification and Source Control drawings are lacking performance and functional requirements necessary to ensure identification and adequate reprocurement of interchangeable items. Control appears to be primarily by Vendor's part number rather than the drawing requirements.

b. Dimensions and tolerances are lacking on drawings, particularly on the frame, outer weldment, to accurately fabricate details without resorting to additional engineering effort. This lack of dimensioning also reduces the effectiveness of inspection of finished assemblies/product for Govt. acceptance.

c. Welding symbology is either used incorrectly or fails to contain the required information as specified by ANSI/AWS A 2.4. In addition weld sizes given in many cases result in an over-weld condition (i.e.: weld size greater than thickness of minor member) which while reducing strength increases cost.

d. Dimensions and Tolerances specified produce interference fits in several instances as detailed under specific comments.

(App. exh. 31, 32)

The NAVWESA evaluation of the drawings was not known to appellant. Mr. Buccola, while aware of the JCIG Study, did not recall ever receiving any final report from NAVWESA on its drawing package review (tr. 2/91). The testimony of the Government expert, Mr. Cummings, satisfies us that some of the NAVWESA defects were purely cosmetic, and those that were not could have been discovered by appellant in production of the first article units. The record fails to disclose that appellant, during performance, ever requested a waiver, or deviation, or change, related to any of the errors identified in these studies (tr. 8/61).

©1994, Commerce Clearing House, Inc.

Digitized by Google

51. On 31 August 1989, appellant submitted Request for Deviation 92-10, requesting a change in dimension on the MK 630 lower support casting drawing to facilitate machining (R4, tab 168). This was approved by the Government on 14 September 1989. The casting for the tooling was to be poured by one subcontractor, Morel Foundry (Morel), and sent out for machining, a process that would take a total of four to five weeks (tr. 4/315). Appellant wrote to Morel on 16 November to complain about delays and "to invoke the Defense Priority Allocations Rating stated on the purchase order."

52. Morel's reply to appellant on 20 November stated the problem with the castings was found originally to be "shift in the mold and also our predetermined shrinkage rule" (R4, tab 167). It added that even after it received the order from appellant in mid October (R4, tab 166, attachment) implementing the dimension change (in RFD 92-10) it was still producing parts "with continued excessive variation" and was continuing to work on the problem. Appellant received and approved an acceptable first article from Morel on the 29th or 30th of November, and received the first production castings necessary to assemble MK 630 containers in the second or third week of December (tr. 4/316-17).

53. Nine MK 630 containers were inspected and accepted prior to the RFD 92-10 change and we have no evidence to conclude they did not meet the specification requirements. Mr. Kelly frankly concedes that his understanding that the casting could not be machined to the old dimension "could be wrong" (tr. 5/112). It is also possible that the machine work for the nine accepted MK 630 containers was done by a different machinist or machine shop than after the sale of the company (tr. 5/113-14).

54. The evidence does not establish that the drawing error with respect to the MK 630 lower support casting, to the extent it prevented delivery of MK 630 containers on time, was beyond the control and without the fault or negligence of both the appellant and its subcontractors. While the evidence suggests that the dimension waiver approved in RFD 92-10 would facilitate manufacture, it also suggests that there were other factors contributing to the problem manufacturing the casting, such as the mold shift mentioned by Morel. Furthermore, the problem was one obviously overcome by appellant in manufacturing the nine MK 630 containers accepted by the Government. While in doing so, it may be assumed extra effort was expended, we have no credible basis to conclude that this caused appellant's failure to make timely deliveries.

C. *Additional Findings—Government Inspection*

55. Although certain objections to Government inspection were included in appellant's post hearing brief under the heading of abuse of discretion by the PCO in terminating for default, it is evident that appellant is also urging them as excusable causes for its delays. These objections relate to the Government's use of 100% inspection and the Government inspectors' use of certain Quality Assurance Letters of Instruction (QALI) (app. exh. 10, 11, 12, 13).

56. The contract incorporated the clause "Inspection of Supplies—Fixed Price" found at FAR 52-246.2 which provides in pertinent part:

> (b) The Contractor shall provide and maintain an inspection system acceptable to the Government covering supplies under this contract and shall tender to the Government for acceptance only supplies that have been inspected in accordance with the inspection system and have been found by the Contractor to be in conformity with contract requirements. As part of the system, the Contractor shall prepare records evidencing all inspections made under the system and the outcome.
>
> * * *
>
> (c) The Government has the right to inspect and test all supplies called for by the contract, to the extent practicable, at all places and times, including the period of manufacture, and in any event before acceptance. The Government shall perform inspections and tests in a manner that will not unduly delay the work. . . .

57. The contract also contained the following:

> INSPECTION AND ACCEPTANCE OF THE SUPPLIES OR SERVICES TO BE FURNISHED HEREUNDER SHALL BE MADE BY THE COGNIZANT GOVERNMENT INSPECTION OFFICE AT THE CONTRACTOR'S/SUBCONTRACTOR'S FACILITY.
>
> SPECIAL INSPECTION INSTRUCTIONS
>
> AN INSPECTION LOT SHALL CONSIST OF ITEMS MANUFACTURED UNDER ESSENTIALLY THE SAME CONDITIONS AND AT ESSENTIALLY THE SAME TIME. PRIOR TO SUBMIT-

Digitized by Google

TAL OF EACH INSPECTION LOT TO THE GOVERNMENT REPRESENTATIVE, THE CONTRACTOR SHALL PROVIDE INSPECTION AND/OR TEST RECORDS THAT ASSURE THE UNITS PRESENTED HAVE PASSED ALL INSPECTIONS AND TESTS REQUIRED BY THE APPLICABLE DRAWINGS, SPECIFICATIONS AND QUALITY ASSURANCE DOCUMENTATION. UNLESS SPECIFIED OTHERWISE, *AS A MINIMUM,* THIS INSPECTION AND TESTING SHALL BE IN ACCORDANCE WITH MIL-STD-105, LATEST REVISION AT ISSUE DATE OF SOLICITATION, INSPECTION LEVEL II, WITH 100% INSPECTION FOR CRITICAL CHARACTERISTICS, 1.0. AQL (ACCEPTANCE QUALITY LEVEL), FOR MAJOR CHARACTERISTICS AND 2.5 AQL FOR ALL OTHER CHARACTERISTICS. ALL AQLS WILL BE CONSIDERED COLLECTIVELY, BY CLASS. (Emphasis supplied)

(R4, tab 1, p. 9 of 32)

58. MIL-STD-105 states at paragraph 6.1 that "[A]cceptability of a lot or batch will be determined by the use of a sampling plan or plans associated with the designated AQL [acceptable quality level] or AQLs" (R4, tab 220). The sampling plan under MIL-STD-105 involves drawing a certain number of samples at random from the lot to be tested and measuring acceptability of the lot on the basis of the sampling. The publication provides conditions for going to a tightened inspection, which permits rejection for a lesser number of defects than a normal inspection when 2 out of 5 consecutive lots or batches have been rejected. Other specifications (R4, tabs 190, 211, 218) contain a reservation the Government asserts gave it the right to perform any of the inspections set forth in the particular specification, when it was deemed necessary to assure that supplies conform to requirements.[7]

59. When the contract was awarded the, PCO made appellant aware of the fact that close scrutiny was going to be paid to the quality of the product, and there was justifiable cause for the Government to be concerned, as later events were to prove. 100% inspection was instituted in early 1988 as a result of concerns for the quality of the product (finding 4, *supra*). The concerns encompassed both inadequate Government inspection and deficiencies in appellant's quality assurance program (app. exh. 3). It is not disputed that prior to the time of the sale to the new owners, the appellant was objecting to the 100% inspection and talking about filing a claim for extra costs connected with what it considered was excessive inspection (R4, tabs 97.2, 104). As early as June 1988, it objected to amending the contract to require it to correct all defects regardless of the AQLs unless it was also given a price adjustment (R4, tabs, 35, 36). Nevertheless, in August 1988, appellant agreed to a new delivery schedule in bilateral Modification 10 (Mod 10) (R4, tab 42). We have no reason to conclude that in so doing appellant did not take into account the impact upon delivery, if any, of the increased inspections.

60. It is evident that when the new ownership took over in June 1989 100% inspection was considered by Mr. Kelly to be quite appropriate, and even necessary (see finding 39, *supra;* footnote 3). Between June 1989 and the default termination in December 1989, the Government inspected only one lot of nine MK 630 containers and one lot of eight MK 607 containers (see finding 36).

[7] The Government refers to WS 20876, a NAVSEA Weapons System fabrication specification, applicable to all three types of Harpoon containers, and specifically to paragraph 4.1, which reads as follows:

4.1 *Responsibility for Inspection.* Unless otherwise specified in the contract or order, the supplier is responsible for the performance of all inspection requirements as specified herein. The contractor shall provide an inspection system conforming to the requirements of MIL-I-45208. Except as otherwise specified in the contract or order, the supplier may use his own or any other facilities suitable for the performance of the inspection requirements specified herein, unless disapproved by the Government. *The Government reserves the right to perform any of the inspections set forth in the specification where such inspections are deemed necessary to assure that supplier and services conform to prescribed requirements* (R4, tab 190). (Emphasis supplied)

The appellant refers to paragraph 4.1 of that same specification, which reads as follows:

4.4.1 *Quality Conformance Samples.* Examination for major and identified minor drawing requirements *may be performed in accordance with statistical sampling plans defined by MIL-STD-105, general inspection level II.* The acceptable quality level for major characteristics shall be 1.0 and minors 4.0. Inspection shall be by class for each lot submitted. Critical characteristics must be inspected 100%. Undesignated characteristics may be inspected at a level acceptable to both the contractor and cognizant DCAS Representative. After examination, each container shall be subjected to the test defined by Para 4.4.2. (Emphasis supplied)

©1994, Commerce Clearing House, Inc.

Digitized by Google

While 100% inspection by Government inspectors would normally be more costly and time consuming than sampling inspection, we have no trustworthy basis to measure impact upon any delivery schedule. Thus, we cannot find as a fact that the Government's use of 100% inspection, instead of sampling inspection, led to appellant's default.

61. The QALIs were internal instructions to the Government inspectors which instructed them how to conduct inspections. There was one QALI inspection characteristic (characteristic #30) in use during the period July 1988—January 1989 that was in error. It was cited on a September 1988 inspection report as a basis for finding a defect in one container, which also had many other defects (R4, tab 46.4). The tolerances for another dimension (characteristic #26) were not taken into account (tr. 8/186) resulting in the finding of a deficiency on two containers in September 1988, both of which also had other defects (R4, tab 46.4). While the QALIs were not drafted in accordance with applicable internal Government procedures in certain respects, the evidence does not show a nexus between this and appellant's nonperformance resulting in the default termination.

III. *Additional Findings—Alleged Abuse of Discretion in Termination*

62. The memorandum supporting the default termination was prepared by Mr. Boone and signed by both Mr. Boone and Mr. Buccola on 18 December 1989 (R4, tab 175). It was three and one half pages in length and summarized the contract history. Making reference to the Federal Acquisition Regulation governing the procedure for default,[8] it specifically contained paragraphs paralleling the factors specified in the FAR to be considered.

63. In pertinent part the memorandum stated:

3. In accordance with (FAR 49.402-3] the following factors have been considered:

(a) *The terms of the contract and applicable laws and regulations.* The contract includes FAR clause 52-249.8, Default, which defines the Government's rights to terminate the contract. The contract required delivery no later than 17 Nov 89. Despite repeated assurances, the contractor failed to deliver. In lieu of immediate termination, a show cause letter was issued to determine if the failure to deliver was excusable. Reports from on site DCAS representatives indicated that no work was being performed on the contract. The contractor's response to the show cause did not indicate that the reasons for delay were excusable and the contractor admitted the delay was not the Government's fault. The issue of unavailability of designated sources for shock mounts does not constitute an excusable delay. In view of the contractor's overall performance as well as the performance under the new owners, the Navy's best interests are served by terminating the contract for default.

(b) *The specific failure of the contractor and the excuses for the failure.* The contractor failed to perform in accordance with the terms of the contract. The contractor was given numerous opportunities to cure the condition but failed to do so. Following the transfer of ownership on 16 Jun 89, there was no evidence of effort made toward new production. Only a small quantity of units in process were reworked, completed, and delivered.

(c) *The availability of supplies or services from other sources.* The long acquisition leadtime associated with containers was significant in the Government negotiating numerous schedule extensions. Due to the impact on the Harpoon Missile Program of Consysco's failure to deliver containers,

[8] FAR 49.402-3, which at Subparagraph (f) provides:

(f) The contracting officer shall consider the following factors in determining whether to terminate a contract for default:

(1) The terms of the contract and applicable laws and regulations.

(2) The specific failure of the contractor and the excuses for the failure.

(3) The availability of the supplies or services from other sources.

(4) The urgency of the need for the supplies or services and the period of time required to obtain them from other sources, as compared with the time delivery could be obtained from the delinquent contractor.

(5) The degree of essentiality of the contractor in the Government acquisition program and the effect of a termination for default upon the contractor's capability as a supplier under other contracts.

(6) The effect of a termination for default on the ability of the contractor to liquidate guaranteed loans, progress payments, or advance payments.

(7) Any other pertinent facts and circumstances.

Digitized by Google

MK 607 containers are being obtained via NAEC Lakehurst with competition limited to proven manufacturers. MK 608 and MK 630 containers are being delivered under another contract which was awarded in April 1989.

(d) *The urgency of need for the supplies or services and the period of time required to obtain them from other sources, as compared with the time delivery could be obtained from the delinquent contractor.* This was the factor which attributed to the Contracting Officer's decision to not terminate the contract earlier. The contractor's delay has contributed to the current urgency. Furthermore, due to the contractor's delays, current needs are being met by containers being delivered under more recently awarded contracts.

(e) *The degree of essentiality of the contractor in the Government acquisition program and the effect of a termination for default upon the contractor's capability as a supplier under other contracts.* Containers are normally acquired by full and open competition. This contractor is not considered essential to the Government's acquisition program in view of other manufacturers with the capability to perform.

(f) *The effect of a termination for default on the ability of the contractor to liquidate guaranteed loans, progress payments, or advance payments.* As a Small Business, the termination is bound to have an impact on the contractor's ability to liquidate progress payments, etc. As noted above, the Government has extended the contract numerous times in the hope and expectation that the contractor would perform. Negotiations will be held to determine the value of the material funded by progress payments with thoughts of delivering the inventory to Naval Weapons Station Concord for completion by Government personnel.

(g) *Any other pertinent facts and circumstances.* The contractor is a Small Business. The termination was discussed with the resident SADBU who did not object to the termination. A copy of the Show Cause letter was sent to SBA Seattle in accordance with FAR 49.402-3 (e)(4) and no response was received.

4. In accordance with the Default clause of the contract, reference (b), the contractor having been provided notice by reference (c), the subject contract will be terminated for default due to the contractor's failure to (i) make timely delivery of the supplies within the time specified in the contract, and (ii) to make progress (no evidence of on-going production) and that failure endangers performance of the contract.

(R4, tab 175)

64. The ACO's report to the PCO regarding the appellant's answer to the "Show Cause" letter indicated that there might be problems with the shock mount deliveries, that there had been no production activity on the contract in the previous 60 days,[9] that there was no current capability to apply paint, and that the plant lacked power except for two welders (R4, tab 184). He also raised a question regarding appellant's financial capability to follow through on its offer of a "large consideration" for a renegotiated delivery schedule. As previously indicated Mr. Buccola also obtained the views of NWS Earle (finding 34). Appellant suggests that the 18 December memorandum justifying the termination was prepared prior to consideration of its response to the Show Cause letter because of the fact that the Show Cause letter was received by the PCO no earlier than 10:49 A.M. on 18 December. It also relies upon notes of a 13 December 1989 meeting in Washington, attended by Mr. Buccola, which indicate the "consensus" was to terminate "all DTI and CONSYSCO contracts for default" (exh. A to app. Motion to Supplement Record, 17 July 1991).

65. We are not unmindful of the background environment of the ongoing JCIG study and the higher level concern over the quality of Harpoon containers. The record indicates that even before receipt of appellant's answer to the "Show Cause" letter Mr. Buccola was inclined to terminate for default. It also indicates that Navy officials involved in the Harpoon container procurement shared that view. However, it also indicates that there was little reason to expect that appellant would offer excusable cause for its lack of performance. Indeed, it offered none when it responded to the "Show Cause" letter (see finding 33). We conclude that Mr. Buccola's decision to terminate was not a decision brought about by the direction of others, but rather was his own decision based upon his own opinion, an opinion which was shared, but not directed, by

[9] The appellant maintains that there was activity on the contract but the evidence reflects that it was minimal at best. In any event, it is irrelevant to the question of whether the contracting officer reasonably relied upon the reports given him in the context of the issue of abuse of discretion.

©1994, Commerce Clearing House, Inc.
Digitized by Google

others. In this connection, we also dismiss as unfounded the appellant's assertion that Mr. Buccola terminated the contract in order to give the business to Navy manufacturing facilities.

66. The termination memorandum does not show, as appellant correctly points out, that consideration was given by Mr. Buccola to: 1) his telling Mr. Kelly, at the time Mr. Kelly purchased appellant, that he would "forbear for a short while", 2) the fact that the Government employed 100% inspection, 3) any improprieties in the QALIs, 4) any deficiencies in the drawing package, 5) any disruption caused by delay in inspection of the A123 contract, 6) time spent by Government inspectors in conducting inspections, or 7) whether it was to the Government's economic advantage to terminate for default.[10] We will take these omissions up in the decision portion of this opinion but make the following findings here.

67. Mr. Buccola never believed, and had no reason to believe, that his statement about forbearance in June 1989 was a factor in December 1989. While he was aware of the 100% inspection and the longstanding objection by appellant's predecessor, he had no reason to connect that to appellant's default condition in the fall of 1989. As to the QALI deficiencies, there is no basis to conclude Mr. Buccola had any reason to know of this as a possible factor to consider. While he may be presumed to have been aware of the comment in the JCIG report that NWS Earle had tentatively identified errors in drawings in 1988 (see footnote 6), he had no basis to conclude appellant was being hampered by this in the fall of 1989 after delivery of the first article and production units. Similarly, if inspection delays were the problem, appellant would have been the first to know and allege that fact as the reason for its nonproduction. Mr. Kelly's actions in negotiating a new delivery schedule in August 1989 and attempting to obtain further modifications thereafter belie any intent to make the contracting officer aware of this as a real problem. Thus, it is understandable it would not be specifically addressed in the termination memorandum.

DECISION

The first issue to be decided is whether the appellant was in default at the time its contract was terminated for default. The Government contends that appellant was in default for failure to deliver in accordance with an existing delivery schedule and for failure to make progress so as to endanger the performance, or for abandonment of the contract. It is well established that the Government bears the burden of proof on the issue of default by the contractor. *Lisbon Contractors, Inc. v. United States* [34 CCF ¶ 75,358], 828 F.2d 759, (Fed. Cir. 1987).

The "Default" clause of the contract permits termination for default under subparagraph (a)(1)(i) for failure to deliver the supplies within the time specified in the contract. Appellant contends that this basis for termination was not available to the Government for the reason that no valid delivery schedule was in existence. It contends that the Mod 20 delivery schedule was waived by the Government and that neither version of Mod 21 ever became effective.

That the Government can waive its right to default a contract is well established. In *D. Joseph DeVito v. United States* [13 CCF ¶ 83,319], 413 F.2d 1147 (Ct. Cl. 1969) the court held that:

> The necessary elements of an election by the non-defaulting party to waive default in delivery under a contract are (1) failure to terminate within a reasonable time after the default under circumstances indicating forbearance, and (2) reliance by the contractor on the failure to terminate and continued performance by him under the contract, with the Government's knowledge and implied or express consent.

It is also well established, however, that even where late deliveries of installments have been accepted, each successive increment represents a severable obligation to deliver on the contract delivery date, for default of which the Government has the right to terminate the contract. *Prestex, Inc.*, ASBCA Nos. 21284, *et al.*, 81-1 BCA ¶ 14,882; *Lapp Insulator Company Inc.*, ASBCA No. 13303, 70-1 BCA ¶ 8219, *aff'd on reconsid.*, 70-2 BCA ¶ 8471; *Novelty Products Company*, ASBCA No. 21077, 78-1 BCA ¶ 12,989; *Systems and Industry Optical*, ASBCA No. 21635, 79-2 BCA ¶ 13,966.

[10] As to the last point the record contains a January 1990 estimate that it would cost $2,184,281 to complete the contract (R4, tab 194). We merely note here that this figure can not be compared, as appellant asserts (Brief, p. 69), to $560,960 remaining on appellant's contract, for the simple reason that the value of appellant's termination inventory was highly suspect by appellant's own admission (see Finding 33), at the time the contracting officer was considering termination.

Digitized by Google

Less than three weeks after Mod 20 was executed, appellant missed the first incremental delivery, on 15 September 1989. The contracting officer promptly extended this delivery for two weeks for a portion of the missed delivery (25 MK 630 containers) but asked what appellant was doing to rectify its failure to deliver the remaining portion (24 MK 607 containers) (see finding 22). Appellant then missed the 29 September extension and responded to the contracting officer on 14 October proposing a new "worst case prognosis" delivery schedule for a $2,000 reduction in price, with the first increment to be due on 3 November (see finding 24). This was acceptable to the Government and a formal modification was sent to appellant incorporating its proposal. Mr. Kelly signed the modification and returned it to the Government on 6 November. He contemporaneously expressed concern about signing a modification where the first incremental delivery had already been missed and requested a two week schedule delay for an additional $500 reduction in price (see findings 27, 28). While this was agreeable to the Government, a revised modification incorporating the extension was never executed by appellant (see finding 29). Thereafter, the contracting officer signed the earlier modification, even though three of the nine incremental delivery dates had already passed without deliveries. Appellant would have us conclude that this sequence of events left it with no delivery schedule to meet. We do not agree.

Appellant's reliance upon the Board's statement in *DBA Systems, Inc.*, ASBCA No. 34664, 89-3 BCA ¶ 22,202 at 111,684 that "[b]y insisting that a new delivery schedule was established, the Government is implicitly agreeing that the original contract schedule was waived" is misplaced. *DBA Systems* is distinguishable in that there the only delivery date in the contract had passed; there were no incremental delivery dates yet to be met. Moreover, the quoted statement in *DBA Systems* is based upon a quoted portion of *Northrop California, Inc. v. United States*, Ct. Cl. No. 98-75, 22 CCF ¶ 80,535 at 85,754, adopted in 213 Ct. Cl. 670 (1976), to the effect that "It is clear that if the contract delivery dates are not considered waived there is no requirement, nor need, to establish new delivery dates before terminating for default". In the context of the issue before it, this was not a holding by the court that an effort to negotiate a new delivery is tantamount to a waiver of the existing delivery schedule.

The other cases cited by appellant in support of its waiver argument are clearly distinguishable on their facts. *D. Joseph Devito v. United States, supra; Star Food Processing, Inc.*, ASBCA Nos. 34161, *et al.* 90-1 BCA ¶ 22,390; *Vista Scientific Corporation*, ASBCA Nos. 25974, *et al.* 87-1 BCA ¶ 19,603. The circumstances of each individual case determine what is a reasonable time for the Government to terminate for default. What was said in *H.N. Bailey & Associates v. United States* [16 CCF ¶ 80,782], 449 F.2d 376, 385 (Ct. Cl. 1971) is equally applicable here:

> In light of defendant's extensive experience in Government procuring and in the absence of convincing evidence, it cannot be presumed that defendant waived its right to terminate for default, even impliedly, in a situation where the procured item is urgently needed as part of a vital and high integrity national program, and the contractor has yet to demonstrate satisfactorily that it is capable of successfully producing the article. If we are to penalize defendant for displaying a benevolent attitude towards the defaulting contractor, a posture, incidentally, which the Government does not frequently assume, we must be prepared for the predictable and undesirable consequence of discouraging defendant from again rendering any assistance, voluntary or otherwise, beyond that specifically required by the contract, for fear of waiving an essential contractual right.

By its willingness to negotiate a new delivery schedule it is evident the Government was also willing to forgo terminating for past missed deliveries. However, certain relevant factors must be considered to put this in a true light. It was appellant, not the Government, who opened negotiations for the Mod 21 delivery schedules. Also, the amount of time taken by the Government to consider appellant's proposals was reasonable by any measure. There was an urgent need for the Harpoon missile containers and appellant's efforts to renegotiate the delivery schedule in October and November 1989 were treated seriously by the Government. Each time the Government indicated a willingness to accept appellant's proposal appellant backed off, but not openly. Appellant's failure to execute the modification containing the "17 November delivery schedule", or, if it had not received that modification, to follow up on it, is one example of this. We see little in the record to show any substantial performance by appellant because of the Government's willingness to negotiate the delivery

©1994, Commerce Clearing House, Inc.
Digitized by Google

schedule. See *Phoenix E. Incorporated,* ASBCA No. 25872, 82-1 BCA ¶ 15,729. Viewed in retrospect, and in light of the appellant's prioritizing other work, it appears to have been more a stall by appellant rather than serious negotiations. If there was detrimental reliance by anybody as a result of these negotiations, it was the Government's, not appellant's.

Even if we accept what we understand to be appellant's view, that it withdrew the "3 November delivery schedule" proposal, despite signing the modification, when it offered the "17 November delivery schedule" proposal, we still cannot accept the conclusion that the Government's willingness to negotiate further constitutes a waiver of its right to terminate for future missed deliveries on the Mod 20 delivery schedule. Whether or not earlier incremental deliveries in Mod 20 were waived by the time lapse between the delivery dates and termination becomes immaterial since the termination was clearly within a reasonable time of appellant's default on later incremental deliveries. The "Show Cause" notice was within 15 days of the missed 15 November delivery and 15 days in advance of the missed 15 December delivery. The termination came quickly (too quickly according to appellant) after receipt of appellant's response to the "Show Cause" letter.

We conclude from our review of the evidence of record, and the controlling law, that appellant failed to deliver supplies within the time specified in the contract, under subparagraph (a)(1)(i) of the "Default" clause, and thus was in default at the time of the termination for default. The Government's alternative ground for termination, that appellant failed to make progress so as to endanger performance of the contract under subparagraph (a)(1)(ii), does not afford a basis for default termination since the necessary "Cure" notice was never issued to appellant. *Lanzen Fabricating, Inc.,* ASBCA No. 40328, 93-3 BCA ¶ 26,079; *C3, Inc.,* ASBCA No. 38391, 91-2 BCA ¶ 23,750; *Turnco Machine Co., Inc.,* ASBCA No. 33559, 88-2 BCA ¶ 20,551. We need not reach the further contention that appellant "abandoned" the contract.

The default having been established, the burden shifts to the appellant to show that the default was excusable, or the result of an abuse of discretion. *Cantrill, Development Corp.,* ASBCA Nos. 30160, 30693, 30717, 89-2 BCA ¶ 21,635 at 108,849; *Sayco Ltd.,* ASBCA No. 36105, 91-1 BCA ¶ 23,568 at 118,165.

Under the "Default" clause of the contract, a failure to perform is excusable if it arises from causes beyond the control and without the fault or negligence of both the contractor and its subcontractors (see finding 38). The factual background related to the issue of excusability may be found at Part II of our Findings of Fact. As there indicated, major obstacles to accepting the alleged excusable causes of default lie in the proof. As to the shock mount problem and the MK630 casting problem, appellant has not shown the problems were beyond the control and without the fault or negligence of itself and its subcontractors. As to all the drawing error problems and the inspection problems, we have been unable to find a credible nexus to the default.

In addition to the deficiency in proof to establish cause and effect, another obstacle exists for a number of the alleged excuses, in that by agreeing to MOD 20, appellant effectively surrendered its right to argue then existing excusable causes of delay as a defense to its later default. *Taylor Corporation,* ASBCA Nos. 37139, 38351, 90-2 BCA ¶ 22,693, *aff'd on reconsid.,* 90-3 BCA ¶ 22,958; *A.C. Ball Company,* ASBCA No. 27677, 86-2 BCA ¶ 18,744. At the time appellant entered into Mod 20 it knew that the Government had been imposing 100% inspection; it knew, or should have known, that it was having problems, if in fact it was, manufacturing containers because of drawing inadequacies or errors; and it knew it had substantial quality problems with the inventory it took over from the previous owners. We conclude that appellant has not established any excusable cause for its default.

The final issue to be reached is appellant's contention that the default termination was improper and should be converted to a termination for the convenience of the Government because the contracting officer abused his discretion in terminating the contract for default. The law is clear that such abuse of discretion by the contracting officer is a basis for setting aside the termination for default. *Darwin Construction Co. v. United States* [33 CCF ¶ 75,063], 811 F.2d 593 (Fed. Cir. 1987). The appellant has the burden of proof on the matter. *Sayco Ltd., supra; Quality Environment Systems, Inc.,* ASBCA No. 22178, 87-3 BCA ¶ 20,060.

The appellant bases its contention on two grounds which we take up separately. The first is that the contracting officer failed to consider the pertinent circumstances existing at the time of termination and there-

Digitized by Google

fore failed to comply with FAR 49.402-3 (see footnote 8) which sets forth the factors the contracting officer is to consider in determining whether to terminate for default.

Before discussing the specific deficiencies asserted by appellant in this regard, we note that the mere failure to consider one or more of the factors listed in FAR 49.402 "is not an automatic admission ticket to a termination for convenience. It is but one factor to consider in looking at the totality of the circumstances surrounding the contracting officer's actions". *Lafayette Coal Company,* ASBCA No. 32174, 89-3 BCA ¶ 21,963.

The specific circumstances appellant says were not taken into consideration may be summarized as follows:

a. Mr. Buccola's agreement with Mr. Kelly "to forbear".

b. The Government's imposition of 100% inspection despite the contract provisions specifying sampling inspection.

c. The 100% inspection despite the NAVWESA studies in 1988 indicating there were errors in the drawing package.

d. The use of QALIs that were not prepared in accordance with the Government's internal procedures resulting in more deficiencies being noted by Government inspectors than otherwise would have been.

e. The delay in inspection on the A173 contract and its impact on appellant's ability to perform the subject contract.

f. Whether the termination was economical to the Government.

Our findings of fact make it clear that the first five of these considerations would make no difference in the decision to terminate. Moreover, none of these considerations were raised by appellant in its answer to the "Show Cause" letter. While appellant may not have been aware of the 1988 NAVWESA studies or the QALI deficiencies, it was aware of the extent of what it considered excessive Government inspection, and failure to cooperate, as well as any problems it encountered in producing to the Navy drawings. Nor does the sixth consideration, the failure to mention whether the termination was economical, favor upsetting the termination action. The termination memorandum specifically considered the availability of supplies from other sources and the urgency of the need for the supplies. That it did not go into costs is not fatal to the termination and appellant has not cited legal authority to the contrary.

The second ground for appellant's contention that there was an abuse of discretion is that the contracting officer failed to exercise independent judgment citing *Schlesinger v. United States,* 390 F.2d 702 (Ct. Cl. 1968). We have found otherwise (see finding 65). The contracting officer's reliance upon information and advice provided by others does not negate the independence of his decision. *Kit Pack Company, Inc.,* ASBCA No. 33135, 89-3 BCA ¶ 22,151.

We have carefully reviewed the evidence and arguments presented and conclude that the appellant was in default without excusable cause at the time of termination, and that the termination for default was not the result of an abuse of discretion. Accordingly, the appeal is denied.

ASBCA No. 39391, September 8, 1993. Contract No. N00140-85-D-BA03.

Indefinite Delivery Contracts—Requirements Contracts—Indefinite Quantity v. Requirements.—A contract for ship overhaul planning and ship design support services was of the indefinite-quantity type, rather than of the requirements type, which permitted the government to place delivery orders with sources other than the contractor because, despite inconsistent information given to the contractor, the signed contract contained only indefinite-quantity provisions, not requirements provisions. A contract negotiator had told the contractor that the contract was being changed to a requirements contract, and the letter of notification of award characterized the contract as a requirements contract. As awarded and signed, however, the contract did not contain the Requirements clause or a similar clause.

Attorney, and David H. Turner, Trial Attorney, Naval Regional Contracting Center, Philadelphia, Pennsylvania.

Before DICUS, RUBERRY, and RIISMANDEL, Administrative Judges.

DICUS, Administrative Judge: This appeal arises under a contract for ship overhaul planning and ship design support services. At issue is whether the contract is an indefinite quantity contract or a requirements contract.

FINDINGS OF FACT

1. Request for Proposals (RFP) N00140-85-R-BA03 for ship overhaul planning and ship design support services was issued 8 November 1984. The RFP provided under SUPPLIES/SERVICES AND PRICES "This is an Indefinite Delivery-Indefinite Quantity contract with Cost Plus Fixed Fee provisions." The RFP also contained the Indefinite Quantity (APR 1984) clause, which provides "The Contractor shall furnish to the Government, when and if ordered ... services up to and including the quantity designated in the Schedule as the 'maximum.' The Government shall order at least ... the 'minimum.'" The RFP included other relevant provisions set out below:

> L71 SUBMISSION OF PROPOSALS
>
> ... *NOTE:*
>
> The proposed contract(s) will be for services to back-up and supplement the in-house capabilities of SUPSHIP Groton ....
>
> H44 MINIMUM AND MAXIMUM QUANTITIES
>
> As referred to in paragraph (b) of the "Indefinite Quantities" clause of this contract, the contract minimum quantity is a total of $25,000.00 worth of orders .... The contract maximum quantity is a total of total estimated contract price as awarded.

(R4, tab 1)

2. Respondent issued four amendments to the RFP. Amendment No. 3 in relevant part provided "Section L71N—Submission of Proposals is deleted in its entirety and replaced with the following ...." The substituted Submission of Proposals provision omitted the *NOTE* (*see* finding 1; R4, tab 1).

3. Appellant submitted its proposal on 13 March 1985 (R4, tab 2). It was the low responsive offeror (R4b, tabs 1, 2). On 10 July 1985 the contract negotiator sought permission from the Contract Review Board (CRB) to change the contract type from Indefinite Delivery/Indefinite Quantity (IDIQ) to requirements. The CRB, which included the contracting officer, did not approve the change to a requirements contract, noting instead "Award on initial offers as received ...." (R4b, tabs 1, 2) The initial offer was based on an IDIQ contract (R4, tab 2). The record contains no probative evidence that the CRB approved any subsequent change. However, on 12 July 1985 the contract technical representative told the contract negotiator that the minimum guarantee was unacceptable. Thereafter the contract negotiator advised the contract technical representative that the contract was changed to "indefinite delivery." (R4, tab 6).

4. In a 12 July 1985 telephone conversation the contract negotiator told appellant's president that the guaranteed minimum provision was being deleted and the contract was being changed to a "requirements" type. In a subsequent conversation on 23 July 1985 with the contract negotiator appellant agreed to accept the contract without a minimum guarantee on a "requirements" basis, which he understood to mean that no work was assured, but that all of respondent's needs for work meeting the criteria of the contract's Statement of Work would go to appellant (app. exh. D).

5. By letter of 26 July 1985 the contracting officer notified appellant it was awarded the contract. The letter stated "This Indefinite Quantity/Requirements Contract will bear an estimated CPFF of $829,423.00." (App. exh. A). However, the contracting officer forwarded the final version of the contract for the parties execution by letter of 15 August 1985 with the following directions:

> Enclosed herewith are the original and three copies of subject proposed contract. If the contract is in form acceptable to you, it is requested that you promptly execute and return to this office .... The proposed contract must be signed without *change* and mailed or otherwise furnished to the Contracting Center within ten (10) working days after receipt. (Underlining in original.)

(Resp. exh. 24) The contract, with an effective date of 1 August 1985, incorporated appellant's 13 March 1985 proposal and retained the Maximum and Minimum Quantities and Indefinite Quantity (APR 1984) provisions. Under SUPPLIES/SERVICES AND PRICES the fol-

Digitized by Google

lowing change was made: "This is an Indefinite Delivery-Indefinite Requirements contract ...." As awarded, the contract did not contain the Requirements (APR 1984) clause or a similar clause (R4, tab 2). The contract was executed by appellant on 20 August 1985 and on 5 September 1985 by the contracting officer (app. exh. B).

6. When appellant had only received $32,954.50 in orders under the contract by 16 May 1988, it complained to respondent. Appellant alleged in a 16 May 1988 letter that respondent had placed delivery orders with others which should have been placed with appellant (R4, tab 7). After attempts at resolution were unsuccessful, appellant filed a claim in the amount of $42,380.61 dated 22 May 1989 (R4, tab 22). The claim was denied in a 21 June 1989 final decision (R4, tab 23).

DECISION

The sole issue here is whether the contract is a "requirements" contract or an "indefinite delivery-indefinite quantity" (IDIQ) contract. Appellant argues it is a requirements contract. Respondent argues it is an IDIQ contract. The parties do not dispute that respondent ordered in excess of the $25,000 contract minimum.

Appellant asserts, in effect, that the parties intended a requirements contract, but a "confused" contract resulted because the contracting officer "modified existing documentation rather than comprehensively modifying that documentation." App. br. at 2. Appellant does not argue mutual mistake, but rather contends that the overall circumstances lead to an interpretation of the contract as a requirements contract. Respondent asserts that the provisions of the contract "unambiguously create" an IDIQ contract, while conceding it is "mislabeled." Resp. br. at 7, 18. We cannot conclude only one reasonable interpretation of the contract is possible, particularly since the "mislabeling" is in a contract provision, while appellant does not dispute the contract included other provisions which are consistent with IDIQ contracts (app. br. at 11; *see* findings 1, 5). The matter cannot be decided, however, based solely on the way the parties have classified the contract. "We must ignore the label plaintiff attaches to its contracts and see what legal rights it claims it received." *Mason v. United States* [27 CCF ¶ 80,204], 615 F.2d 1343, 1346 (Ct. Cl. 1980).

Respondent argues that we should not consider appellant's extrinsic evidence of intent in interpreting the contract. We disagree. "To shut out the light furnished by the parties themselves—to read their words not as they meant them but as they appear when denuded of that meaning—is to decide an unreal, fictitious, hypothetical case." *United States v. Lennox Metal Manufacturing Co.*, 225 F.2d 302, 313 (2d. Cir. 1955). From this record we conclude that as of late July of 1985 the negotiating representatives of both parties intended to enter into a requirements contract (finding 4). However, the contract received and executed by the parties in August and September 1985, as was the case with the proposed contract on which appellant's proposal was submitted in March 1985, had no Requirements clause committing respondent to place all work of like character with appellant (finding 5). In addition, it retained the Indefinite Quantity (APR 1984) and Maximum and Minimum Quantities clauses (*id.*). There is no persuasive evidence that the contracting officer, at the time the contract was executed, was authorized or intended to enter into other than an IDIQ contract. Thus, whatever they had intended earlier, the parties executed an agreement which committed respondent to a minimum purchase of $25,000.00 and limited deliveries to no more than $829,423.00, terms inimical to a requirements contract (findings 2, 5).

Appellant argues that the contract must be interpreted from the instrument as a whole, and that the whole instrument includes the contract, RFP and amendments, the facts surrounding the execution of the contract, and respondent's subsequent interpretation. However, appellant received copies of the contract to execute which did not include the Requirements clause but did include the Indefinite Quantity and Maximum and Minimum Quantities clauses. These clauses clearly establish the range of respondent's obligation. Prior versions of a contract cannot modify the last one and appellant is presumed to have read the contract as executed. *Schoeffel v. United States,* 193 Ct. Cl. 923, 935 (1971). While we are sympathetic to appellant's position insofar as the contract negotiator's misleading precontractual representations are concerned, she was without authority to bind respondent. *Federal Crop Insurance v. Merrill,* 332 U.S. 380 (1947); *Prestex, Inc.,* ASBCA No. 22552, 81-2 BCA ¶ 15,193, aff'd 3 Cl. Ct. 373 (1983).

Moreover, while the contracting officer characterized the contract as a requirements contract in the letter notifying appellant of award, the subsequent letter forwarding the

©1994, Commerce Clearing House, Inc.

Digitized by Google

contract for execution required appellant to execute the contract without change and gave a last chance to refuse. Appellant does not dispute that the contract forwarded with that letter contained provisions consistent with an IDIQ contract and not a requirements contract. App. br. at 11. We are aware of no principle that excuses a party from reading a contract he is about to sign. *Richardson Camera Company, Inc. v. United States,* 467 F.2d 491, 496 (Ct. Cl. 1972); *Schoeffel v. United States, supra* at 934-35; *Walsky Construction Co.,* ASBCA Nos. 21110, 21556, 21979, 22293, 79-1 BCA ¶ 13,878 at 68,117. In this regard, what appellant refers to as "the admittedly confusing documentation relating to this contract" (app. br. at 5) includes provisions of the contract itself. Only the description of the contract as an "Indefinite Delivery-Indefinite Requirements contract" under SUPPLIES/SERVICES AND PRICES (finding 5) supports the view that the contract is a requirements contract.

In *Mason v. United States, supra,* the Court considered the issue of whether certain contracts were requirements or IDIQ contracts, commenting "Resolution of this controversy depends upon a determination of the respective rights conferred by these term contracts on plaintiff and defendant." *Id.* at 1347. The Court found the contracts to be IDIQ contracts. "The Guaranteed Minimum Quantity clause would be given legal meaning and serve a purpose only if these are indefinite quantities contracts." *Id.* at 1350. We reach the same conclusion here and find appellant's interpretation unreasonable. *See also Ralph Construction, Inc. v. United States* [32 CCF ¶ 72,430], 4 Cl. Ct. 727 (1984). Even assuming appellant's interpretation is reasonable, the existence of the Indefinite Quantity (APR 1984) clause and the Maximum and Minimum Quantities provision would create a conflict with the "Indefinite Requirements" characterization sufficiently obvious to impose upon appellant the duty to inquire. The appeal is denied.

[¶ 26,356] Manhattan House C.T.C., Inc.

DOT BCA No. 2067, September 1, 1993. Contract No. J100C-302.

Procedure, Boards—Failure to Prosecute—Incarceration of Officer.—Incarceration of a corporate contractor's president was not a defense to a motion to dismiss for failure to prosecute, because the failure of the corporation or its incarcerated president to respond to documents served upon them by their own counsel, documents warning that the appeal would be dismissed, was strong evidence that the corporation was not willing to pursue the appeal. The board was not provided with any precedent to support an argument that the incarcerated president was unable to participate in the prosecution of the appeal as long as he remained in prison.

Procedure, Boards—Attorneys—Withdrawal.—The motion of attorneys to withdraw in a case in which a corporate contractor's president was serving a five-year criminal sentence was granted because counsel satisfied the procedural requirements. The motion was held in abeyance initially, but it was granted now because the attorneys had served the registered agent of the corporation and, with the government's cooperation, had documents formally served upon the contractor's president.

For the appellant: Frankfurt, Garbus, Klein & Selz, New York City, New York, by Arthur J. Ginsburg, and Swidler & Berlin, Washington, D.C., by C. Joel Van Over. For the government: Agnes M. Brown, United States Department of Justice, Washington, D.C.

Before ROBERTORY, FENNESSY, and STERN, Administrative Judges.

Granting motions initiated in 93-3 BCA ¶ 26,037 but held in abeyance.

ROBERTORY, Administrative Judge: This appeal grows out of the respondent's termination of a contract with Manhattan House C.T.C., Inc., ("Manhattan House C.T.C") due to alleged abuse of prisoners. Both counsel who entered appearances on behalf of the appellant Manhattan House have now filed Motions To Withdraw. The Board also has pending before it a Motion by the respon-

Digitized by Google

dent Bureau of Prisons to Dismiss For Failure To Prosecute.

The background to these Motions is set forth in *Manhattan House C.T.C. Inc.*, DOTBCA No. 2067, 93-3 BCA ¶ 26,037 (1993), *q.v.*, where we held decision in abeyance pending the following actions:

"1. The appellant's counsel are directed to serve upon the registered agents of the corporation in the state in which the contract services were performed and in its state of incorporation, if known, notice of their wish to be relieved of further responsibility for representation, together with a copy of the respondent's Motion To Dismiss For Failure To Prosecute and a copy of this Opinion and Order. Such notice shall advise the corporation that it has thirty days from the date of such service to advise the Board in writing whether the corporation consents to withdrawal of counsel, and that the corporation is at risk of having its appeal dismissed with prejudice for lack of prosecution.

"2. The appellant's counsel shall also serve a copy of the notice upon counsel for respondent, together with brief written interrogatories directed to Mr. Alter, eliciting information about the current condition of the corporation and the identification of its officers. Mr. Alter shall be charged to respond thereto within 20 days of his receipt of service, and advised that the corporation is risking dismissal of its appeal with prejudice for failure to respond. Counsel for respondent shall cause the respondent to deliver a copy of such notice and the interrogatories to Mr. Alter. Respondent's counsel shall advise the Board and appellant's counsel of the date on which Mr. Alter received said notice."

The directed actions having been taken, both firms which entered appearances on behalf of the appellant have now renewed their Motions for Leave to Withdraw and the respondent has renewed its Motion to Dismiss.

Counsel for the respondent has advised the Board in its renewed Motion to Dismiss that Mr. Alter was served with the interrogatories directed in paragraph 2 of the Board's Order (*supra*) on June 10, 1993. All counsel involved advise that they have received no response from Mr. Alter.

On May 14, 1993, Frankfurt, Garbus, in compliance with paragraph 1 of the Board's Order, effected service of counsels' Motion to Withdraw upon the registered agent of Manhattan House C.T.C.,[1] as well as upon the New York Department of State Division of Corporations.[2] No response has been received.

Frankfurt, Garbus further advises that the registered agent for Manhattan House is Michael Young, Esq., said to be a former principal of Manhattan House and one of the attorneys who represented Mr. Alter in the criminal proceeding.[3] Mr. Young made no response.[4]

Upon reviewing the detailed facts as set forth in the Motions submitted by Frankfurt, Garbus, by Swidler, Berlin, and by the Justice Department,[5] which relate their efforts to carry out the Board's Order, the Board is satisfied that appellant's counsel have done all that they can, and all that they are legally required to do, to notify both Manhattan House C.T.C. and Mr. Alter of the pending motions to dismiss for lack of prosecution and for the withdrawal of both firms as counsel.[6]

MOTION TO DISMISS

This appeal was filed on April 28, 1989. The appellant was Manhattan House C.T.C., a corporation; it was not Mr. Alter or any other individual. On August 1, 1989, proceedings were stayed upon request of both parties until completion of a grand jury investigation. Mr. Alter was indicted in June, 1990. He entered a plea of guilty and in April, 1992 was sentenced to five years' incarceration. He remains incarcerated.[7]

[1] The Certified Mail receipt therefor is Exhibit F to the Frankfurt, Garbus Motion.

[2] Swidler, Berlin Motion, pp. 2-3.

[3] Frankfurt, Garbus Motion, ¶ 12.

[4] Frankfurt, Garbus Motion, ¶ 26.

[5] The efforts which have transpired since our initial decision have been spelled out in detail in the Motions; they will not be repeated at length here,

[6] Swidler, Berlin also advises that on March 24, 1993, the Secretary of State of the State of New York dissolved Manhattan House C.T.C. Inc. pursuant to section 203-A of the New York Tax Law. Motion to Withdraw, Exhibit C. Dissolution for failing to file a report does not *per se* disqualify a litigant from proceeding before the Board. See *Allied Production Management, Inc. and Richard E. Rowan, JV*, DOTBCA No. 2466, 92-1 BCA ¶ 24,585 (1991) and *Mather Construction Company v. United States* [18 CCF ¶ 81,686], 201 Ct. Cl. 219, 475 F.2d 1152 (1973).

Counsel argues that, until sentenced, Mr. Alter could take no action regarding this appeal without waiving his Constitutional rights against self-incrimination. Regardless of whether or not that was a valid excuse for the appellant corporation not prosecuting the appeal prior to sentencing,[8] the fact remains that Mr. Alter was sentenced in April, 1992 and some sixteen months have elapsed since then with no action being to prosecute the appeal and, because of the refusal of Mr. Alter or anyone else involved with the corporation to respond to counsel, no action appears imminent.

Counsel also argues that so long as Mr. Alter remains in prison, he is unable to participate in the prosecution of the appeal. Counsel have not referred the Board to any precedents that a corporate plaintiff has a right to suspension of civil proceedings which it has initiated, due to the incarceration of one of its officers.[9] Our research has disclosed none.

In an earlier case where an appellant sought to indefinitely postpone trial, we stated:

> "This Board has held that under the Contract Disputes Act[10] not only the contractor but also the United States has a right to a speedy adjudication. *Inslaw, Inc.*, DOTBCA Nos. 1609, 1673, 1775, 1828, 89-3 BCA ¶ 21,901 (1989) at 110,203-110,204.[11] The legislative history of that Act clearly evidences a legislative intent that contract disputes be adjudicated expeditiously, and the text of Act section 8(e) does not distinguish between United States and contractor in laying its mandate upon the Board. Even apart from the Contract Disputes Act, the United States just as any other party defendant has a right to a reasonably prompt adjudication regardless of the financial capacity of the litigant seeking relief. *Deuterium Corporation v. United States*, 21 Ct. Cl. 132 (1990).
>
> "To indefinitely postpone the trial of the issues which Inslaw itself freely chose to place before the Board over six years ago is to deprive the United States of its right to a speedy adjudication. Every day which passes increases the probability that an adjudication cannot be based on testimony from witnesses having fresh memory of what has transpired,[12] as well as increasing the respondent's potential liability for interest under section 12 of the Contract Disputes Act of 1978, 41 U.S.C. § 611."

Inslaw, Inc., DOTBCA Nos. 1609 *et al.*, 92-1 BCA ¶ 24,550 (1991) at 122,504-122,505 (some footnotes omitted).

In our initial Opinion, we rejected the appellant's argument that the incarceration of the corporation's president warrants a suspension of proceedings; we again reject it for the reasons there stated. The words quoted above from *Inslaw, Inc.* apply with equal force in the instant appeal.

The failure of the corporation or its incarcerated president to respond to the documents served upon them by their own counsel, documents warning that the appeal will be dismissed, is strong evidence that the appellant corporation is not willing to pursue the appeal. The corporation and its president have received adequate notice that the Board was about to dismiss the appeal for its failure to prosecute. Accordingly, the Board grants the respondent's Motion to Dismiss.

MOTION FOR LEAVE TO WITHDRAW

In our initial Opinion on the Motions, we refused to allow the appellant's counsel to withdraw because we were not satisfied that

[8] A party plaintiff may not claim a Fifth Amendment privilege and simultaneously insist that its suit proceed. *Afro-Lecon, Inc. v. United States* [34 CCF ¶ 75,291], 820 F.2d 1198, 1205 (Fed. Cir. 1987).

[9] We pointed this out in our original opinion. The fact that counsel still have not noted any such precedent is good indication that incarceration of an officer is not an excuse for a corporation failing to prosecute civil litigation.

[10] See section 8(e) of the Act, 41 U.S.C. § 607(e): "An agency board shall provide to the fullest extent practicable, informal, expeditious, and inexpensive resolution of disputes, and shall issue a decision in writing or take other appropriate action on each appeal submitted, and shall mail or otherwise furnish a copy of the decision to the contractor and the contracting officer." (Footnote in original).

[11] For the effect of this statutory right to a speedy adjudication, from a contractor's perspective, see: *TDC Management Corporation*, DOTBCA No. 1802, 90-3 BCA ¶ 23,248 (1990); *TDC Management Corporation*, DOTBCA No. 1802, 88-1 BCA ¶ 20,242 (1987) at 102,470; *Time Contractors JV*, DOTBCA No. 1669, 86-2 BCA ¶ 19,003 (1986) and cases discussed therein. (Footnote in original).

[12] See *TDC Management Corporation*, DOTBCA No. 1802, 91-2 BCA ¶ 23,815 (1991) especially at page 119,254 and footnote 1, and many of the Findings of Fact, regarding the effect of the passage of time upon witnesses. (Footnote in original).

Digitized by Google

they had made proper effort to contact their client, who in the Board proceedings was and is Manhattan House C.T.C., Inc., not Mr. Alter. We insisted that proper notice be served upon the clients. We recognized that the effect of withdrawal would be to essentially strip the appellant of representation when on the verge of a dismissal with prejudice. Therefore, we refused to allow withdrawal at that time.

Since then, counsel have satisfied the procedural requirements. They have served the registered agent of the corporation and, with respondent's cooperation, have had documents formally served upon the corporation's president. Due to the failure of their client to respond or otherwise cooperate, both of appellant's counsel have demonstrated good cause for being relieved of their duty to represent Manhattan House.

Accordingly, there is no longer any reason why counsel should not be allowed to withdraw. The Board determines that Swidler, Berlin and Frankfurt Garbus are to be allowed to withdraw.

DECISION

The Motion by the respondent that the appeal be dismissed for failure to prosecute is granted. The appeal is dismissed with prejudice.

The Motions by C. Joel Van Over, Esq. and Swidler and Berlin and by Arthur J. Ginsburg, Esq. and Frankfurt, Garbus, Klein & Selz that they be allowed to withdraw are granted. The Recorder shall note such withdrawal on the docket. Such withdrawal shall be deemed to be as of the issuance of this Opinion with regard to C. Joel Van Over, Esq. and Swidler and Berlin. The withdrawal of Arthur J. Ginsburg, Esq. and Frankfurt, Garbus, Klein and Selz shall be deemed effective as of the 120th day after their receipt of this Opinion.

Provided, however, that the respondent is directed to serve a copy of this decision upon Mr. Alter within 30 days of receipt, and that Mr. Ginsburg is directed to mail a copy of this decision, certified mail return receipt requested, to the registered agent for the corporation within 30 days of receipt. Proofs of such service shall be filed by each with the Board.

[¶ 26,357] Lorene Mullins and David Hamilton

ENG BCA No. 6016, July 21, 1993. Lease No. DACW63-1-90-0710.

Modifications—Constructive Changes—Government Duty to Cooperate.—Although two grazing rights lessees never obtained the benefit of their lease because of flooding and the actions of timber contractors, the government was not liable for constructive changes to the lease, because no government action was contrary to the provisions of the lease and the government did not fail in its duty to cooperate. The land was essentially unusable because of damage to fencing caused by flooding and by the timber contractors. Under the terms of the lease, the lessees, not the government, were responsible for repairing the fences damaged by flooding. Although the government belatedly ordered the timber contractors to repair fences damaged during timber removal, the lessees did not inform the government of the timber contractors' failure to repair the fences.

For the appellant: Lavender, Rochelle, Barnette & Dickerson, Texarkana, Arkansas, by Jerry Rochelle and Shannon Tuckett. For the government: Frank Carr, Chief Trial Attorney, Washington, D.C., and Jane Holt-Duecaster, Government Trial Attorney, Forth Worth, Texas.

Before JOCKISCH and SOLIBAKKE, Administrative Judges.

JOCKISCH, Administrative Judge: Appellants seek an equitable adjustment in the amount of $10,948 because of the alleged Government actions under grazing Lease No. DACW63-1-90-0710. The parties elected to proceed under Board Rules 12.3, Accelerated Procedure, and 11, Submission Without a Hearing. The record which includes the Complaint, Answer, Rule 4 file, video tape, affidavits, and briefs was closed at the end of April, 1993.

FINDINGS OF FACT

1. During 1990, Mrs. Lorene Mullins and Mr. David Hamilton, her son, (hereinafter Appellants or lessee) were the highest bidders for the lease of Parcel No. 2, 210 acres of grazing land, at Wright Patman Lake,

©1994, Commerce Clearing House, Inc.

Digitized by Google

Texas. Lease No. DACW63-1-90-0710 was entered into between Appellants and the Government for Parcel No. 2 for a term of three years at a rental cost of $424 per year.

2. The following lease terms are pertinent to this appeal.

Granting Clause: That the Secretary of the Army, by virtue of the authority contained in Title 10, United States Code, section 2667, and for the consideration hereinafter set forth, hereby leases to the party of the second part, hereinafter designated as the lessee, for a term of three (3) years beginning September 1, 1990, and ending August 31, 1993 but revocable at will by the Secretary of the Army.

* * *

4. That the lessee has inspected and knows the condition of the leased property and it is understood that the same is hereby leased without any representation or warranty by the Government whatsoever, and without obligation on the part of the Government to make any alterations, repairs, or additions thereto.

* * *

5. That, subject to the limitations of Condition No. 23 hereof with respect to the restoration of the leased property, all portions of the leased property shall at all times be protected and maintained in good order and condition by and at the expense of the lessee.

* * *

7. *That the right is hereby reserved to the United States, its officers, agents, and employees, to enter upon the said premises at any time for any purpose necessary or convenient in connection with river and harbor and flood-control work, to remove timber therefrom, and to flood the leased premises whenever necessary, and the lessee shall have no claim for damages of any character on account thereof against the United States or any officer, agent, or employee thereof.* [Emphasis added]

* * *

15. (a) That, except as otherwise provided in this lease, any dispute concerning a question of fact arising under this lease which is not disposed of by agreement shall be decided by the said officer, who shall reduce his decision to writing and mail or otherwise furnish a copy thereof to the lessee. The decision of the said officer shall be final and conclusive unless, within 30 days from the date of receipt of such copy, the lessee mails or otherwise furnishes to the said officer a written appeal addressed to the Secretary of the Army. The decision of the Secretary or his duly authorized representative for the determination of such appeals shall be final and conclusive unless determined by a court of competent jurisdiction to have been fraudulent, or capricious, or arbitrary, or so grossly erroneous as necessarily to imply bad faith, or not supported by substantial evidence. In connection with any appeal proceeding under this condition, the lessee shall be afforded an opportunity to be heard and to offer evidence in support of its appeal. Pending final decision of a dispute hereunder, the lessee shall proceed diligently with the performance of the contract and in accordance with the said officer's decision.

(b) This Condition does not preclude consideration of law questions in connection with decisions provided for in paragraph (a) above: Provided, that nothing in this Condition shall be construed as making final the decision of any administrative official, representative, or board on a question of law.

* * *

16. That this lease may be terminated by the lessee at any time by giving to the Secretary of the Army, through the said officer, at least sixty (60) days' notice in writing provided that, in case of such termination, no refund by the United States of any rental theretofor paid shall be made, and provided further, that in the event the said notice is not given at least sixty (60) days prior to the rental due date, the lessee shall be required to pay the rental for the period or term shown in Condition No. 1 hereof.

* * *

22. That the lessee will cooperate in programs for the management and improvement of fish and wildlife and hunting. Hunting and fishing and other recreational activities as approved by said officer are permitted in accordance with all applicable Federal, State and local laws for the protection of fish and game, except in prohibited areas designated by the said officer.

* * *

28. That *in the event the United States* revokes this lease or *in any other manner materially reduces the area covered thereby or materially affects its use by the lessee prior to the date of expiration thereof, an equitable adjustment in the rental paid or thereafter to be paid under*

Digitized by Google

this lease shall be made. ... [Emphasis added].

* * *

32. Prior to conducting *any initial activity* on site, the lessee will make an appointment with the Reservoir Manager, Wright Patman Project Office, to discuss use of the leased area. [Emphasis in original].

* * *

37. The lessee will be responsible for restricting his livestock to his leased area and will prevent the trespass of other livestock at all times. The lessee will therefore be required to maintain surveillance of fences and perform repairs as needed to assure that fences are adequate to control livestock. The materials used for repairs will be the same type and quality as those required in the new fence specifications (available from project office). All materials used for such repair will become the property of the Government. The lessee will also make repairs to any fences, gates or other appurtenances which are damaged as a result of his operation.

* * *

41. Parcel No. 2 contains approximately 210 acres. Grazing is allowed by no more than 40 AU [animal units] at any one time yearlong. The stocking rate and period of grazing may, however, be revised by the Government in accordance with Condition No. 39 above. As a portion of the consideration to be provided by the lessee for the use of this parcel, *the lessee shall mow approximately 130 acres of open area each year.* The area to be mowed shall be designated by Project Office personnel and shall be cut between June 1 and August 31 of 1991, 1992 and 1993. [Emphasis added].

* * *

3. Because of heavy rains, the leased grazing area was covered with flood water from April through August, 1990. In the fall of 1990, the Government entered into timber sale contracts to remove trees stressed by the flood waters. (R.4, Tab 9).

4. Mrs. Mullins, one of the lessees under subject lease and a previous priority lessee under Government regulations, was aware of the need for Government timber contractors to cross leased land to harvest the timber. The operation of the timber contractor was the normal method of timber cutting operation, which had been previously performed in a like manner on the leased property in previous years. (Aff., Gov. Exh No. 1). This entailed the timber contractors' cutting fences for their operation, which fences were to be repaired by them when the timber removal was completed for the year. Mrs. Mullins' previous lease from September 1, 1987, through August 31, 1990, did not contain the underlining of the phrase *"any initial activity"* as is found in condition 32 of the present lease. The Government emphasized the notification requirement because Mrs. Mullins had not used the leased area during her previous lease. (R.4, Tabs 3, 6).

5. In December, 1990, Mr. Hamilton, the other lessee under subject lease, noted to the Government the inadequate repair of fences by the timber contractor. Mr. Hamilton asserts he informed Don Crutcher, owner of the timber cutting firm, and Danny Kellam, Government Project Forester, but not the Reservoir Manager that he had intended to place livestock on the leased land during January, 1991, until he discovered fences in disrepair. Repair of the fences was the responsibility of the timber contractor and/or Corps. (App. Brf. pp. 5; Gov. Exh. G-5). Additional fence repair was performed by Government project personnel and completed in February, 1991. By the time of the fence repair in February, 1991, Appellants had entered into another lease to graze their livestock until August, 1991. During the first half of 1991, Appellants had made no repairs to fences which were in disrepair and were their responsibility to repair under this lease. Appellants had *not* coordinated their intended actions with the Reservoir Manager as required by Clause 32 of the lease. (See Finding 2; Aff. Murtishan, Reservoir Manager, Gov. Exh. G-5).

6. By affidavits, both Crutcher and Kellam deny being told by Mr. Hamilton in November, 1990, of his intent to graze cattle beginning in January, 1991. Mr. Kellam asserts as supporting evidence that no such conversation occurred: (1) that the flood had destroyed the grass growing on the leased land so as to make it unfit for grazing cattle until at least mid-summer 1991; (2) that had there been such a conversation, he would have remembered it and taken immediate action to inform his superiors because Appellants' intent to graze cattle would have been a significant change from the previous years when Appellants did not use the leased premises. Condition 32 of the lease made special emphasis of the need for the lessee to contact the Reservoir Manager "prior to conducting *any initial activity,"* with which condition the lessee never complied. (Affidavit Kellam & Crutcher, Gov. Exhs. G-3, 4).

©1994, Commerce Clearing House, Inc.

Digitized by Google

7. In June, 1991, the timber contractor had moved back into the area to cut the remaining timber under its contract with the Government. The lessee had previously been informed of the scheduled timber cutting. During August, 1991, Mr. Hamilton informed the Government that the timber contractor was knocking and cutting down fences, destroying his pasture, and crossing his grazing lease area. He requested that all repairs be made by December 1, 1991, so he could use the leased land for grazing. The Respondent asserts that Appellants, again, never coordinated their planned activity on the leased land with the Reservoir Manager as required by Clause 32 of the lease.

8. Upon investigating the Appellants' complaints about the timber contractor, Respondent informed Appellants of their responsibility to repair the fences damaged by the flood of 1990 before livestock could be released in the area and of their obligation to mow the 130 acres of land. Also, Respondent directed the timber contractor to repair before December 1, 1991, the fences that it had damaged when providing itself access to the area and to avoid skidding or decking (stacking logs on pasture land to await removal) which was damaging the pasture area. (Aff. Wengier, Gov. Exh. G-1). Repairs were made and completed by the timber contractor and by the Government project office, which deducted its costs for repairs from the timber contractor's performance deposit. The area was ready for cattle grazing by November 22, 1991, except for fence repairs not done, which were the obligation of Appellants. The lessee had lost the use of approximately 3 to 5 acres of the 210 acres of pasture area in the lease because of damage to the land by the timber contractor. (G-3, Kellam Aff.)

9. Hamilton asserts that he made the fence repairs which were his responsibility, in August and October, 1991. Appellants' video tape shows some fences which were repaired by Appellants during this time frame. However, according to the Respondent, the fences damaged by the flood of 1990, which were the responsibility of the lessee to repair, were never repaired. (Aff. Crutcher, Gov. Exh. G-4). Respondent's representatives, when performing site investigations in August and November, 1991, noted at least eight places where fences, whose repair was the responsibility of Appellants, had not been repaired. (Aff. Wengier, Kellam; R.4, Tab 16-Pictures 2, 3, 4 & 6). These repairs would have been required before placing grazing animals on the leased land.

10. During 1991, Appellants mowed 130 acres as they were required to do by Clause 41 of the lease. On September 18, 1991, the lessee paid the $424 annual rental for the lease from September 1, 1991, through August 31, 1992.

11. By letter dated October 29, 1991, Appellants requested that the Government make them whole for alleged losses suffered during the term of the lease up to that time. These included:

$2,600	Mowing 130 acres at $20/acre
200	Transporting livestock in January, 1991
300	Leasing other land in January, 1991
200	Transporting livestock in August, 1991
1,000	Leasing other land in August, 1991
3,000	Mowing of other land lease[d] as agreed in January, 1991 (150 acres at $20/acre)
200	Expected cost of moving back on Government land
400	Time lost from work plus long distance telephone expenses

They asserted these losses were incurred because the Respondent's timber contractor did not maintain the fences and used the pasture land on which to stack logs. (R.4, Tab. 19).

12. By letter dated December 19, 1991, the Appellants "rescinded" their lease and asked for an equitable adjustment as the "nonbreaching" party. (R.4, Tab 24). In January, 1992, Respondent confirmed from both signers of the lease their intent not to utilize the leased lands. (R.4, Tab 25). A Contracting Officer's decision was issued on June 18, 1992, essentially denying Appellants' claim but providing reimbursement as provided for under the lease because of the reduction of the 210 leased acres by the use of 5 acres of the leased land by the timber contractor. (R.4, Tab 2).

13. Respondent refunded Appellants' rent paid for the year September 1, 1991, to August 31, 1992, and $2.50 for the lost use of 5 acres for the three months of June, July, and August, 1991.

14. In their Complaint filed with the Board on December 8, 1992, Appellants increased their damage request to $10,948 as follows:

Digitized by Google

$2,600	Mowing 130 acres at $20/acre (Summer 1991)
200	Transporting livestock in January 1991
300	Leasing other land in January 1991
200	Transporting livestock in August 1991
1,000	Leasing other land in August 1991
3,000	Mowing of other land lease[d] as agreed in January 1991, (150 acres at $20/acre)
400	Time lost from work plus long distance telephone expenses
848	Rent payment of Government land
100	Materials to repair fences
300	Labor to repair fences
500	Attorney's fees for letters written to Government
1,500	Attorney's fees for preparation of appeal

DECISION

After reviewing the facts of this appeal, the Board has considerable sympathy with Appellants' frustrations in their attempt to utilize the leased land for the purposes they intended when they entered the lease. *However,* the Board must decide the issues raised by Appellant under the terms and conditions of the lease executed by the parties. For the following reasons, Appellants cannot prevail.

The Board finds Respondent's actions to have been in accordance with its rights under the clear provisions of the lease. First, Appellants were put on notice that the leased property is as-is, with no obligation in Respondent "to make any alteration, repairs or additions thereto." Appellants understood that fence damage, other than that caused after the execution of the lease by agents of Respondent, was their responsibility to repair, which they did not do until at least October, 1991, according to their own calculation, and which they never did according to Respondent's conclusions after contemporaneous site investigations. The leased land could not be used for grazing until the fences were repaired, as to which the best evidence is that they were never fully repaired by Appellants.

Second, the Respondent reserved the right to enter onto the leased premises to perform "flood control work, to remove timber therefrom, and to flood the leased premises whenever necessary." When Respondent takes such actions, the lease states that, "the lessee shall have no claim for damages of any character on account thereof against the United States or any officer, agent or employee thereof." Thus, Appellants were on notice of the potentiality that events could occur, as they did, which would restrict their use of the leased area. Respondent's actions taken through its timber contractor were within the terms and conditions of the Appellants' lease.

Third, the lease required the lessees to "mow approximately 130 acres of open area each year," between "June and August 31 of 1991, 1992, and 1993." Thus, Respondent's insistence on the 1991 mowing by Appellants was simply enforcement of a lease condition.

In their brief, Appellants do not substantively challenge either the lease conditions or Respondent's interpretation of the conditions; but Appellants' focus is upon the issues of "good (bad) faith" dealings between the parties and of the "implied duty of cooperation and noninterference" by the Government.

As consistently stated by courts and boards, there is a "presumption that public officials act 'conscientiously in the discharge of their duties' . . . and it requires 'well-nigh irrefragable proof' to induce the court to abandon the presumption of good faith dealing." *Kalvar Corporation, Inc. v. United States* [22 CCF ¶ 80,737], 211 Ct. Cl. 192, 543 F.2d 1298 (1977); *Monarch Enterprises, Inc.,* VABCA Nos. 2239, 2296, 86-3 BCA ¶ 19,281.

It is important to note that the lease requirements were properly implemented and enforced by Respondent. Appellants could have utilized the leased property as intended by promptly taking the repair action required for the fences for which they were responsible and by providing timely and appropriate notification of when they intended initially to use the leased area, as stated in the lease. Appellants have not shown "bad faith" and we find no "bad faith" dealings on the part of Government officials in administering the lease.

On the issue of cooperation and noninterference, we note that the principle involved here has also been called the "implied duty of cooperation and noninterference which is inherent in any contract." *S/A. Healy Co. v. The United States* [24 CCF ¶ 82,317], 576 F.2d 299, 306 (Ct. Cl., 1978). However, "The duty to cooperate is not a duty to relax contract requirements." *Banks Construction Co. v. United States* [11 CCF ¶ 80,556], 176 Ct. Cl. 1302, 364 F.2d 357 (1966); *International Dictating Services of Boston, Inc.,* VABCA No. 2014, 88-3 BCA ¶ 21,182.

Digitized by Google

In the lease which is the subject of this appeal, there are specific clauses that put the lessees on notice of potential timber cutting on and around the leased premises. The Respondent did nothing more than invoke the rights reserved by these clauses, as could have been anticipated, for appropriate reasons, and in a manner normal for the industry. Respondent took actions when appropriate, even though Appellants did not comply with the letter of the lease conditions, to permit them to use the leased premises had Appellants themselves performed as the lease required. We find no actions on Respondent's part which violated the implied duty of cooperation and noninterference. *See Robert R. Marquis, Inc.*, ASBCA No. 38438, 92-1 BCA ¶ 24,692; *Toombs & Co. Inc.*, ASBCA Nos. 34590, *et al.*, 91-1 BCA ¶ 23,403.

Whether Appellants put themselves into the position to use the leased land by repairing the fences they were required to mend, or coordinated their intended activity on the leased land with the Reservoir Manager as required by the contract, which factual issues are not fully resolved by the record before the Board, is immaterial to the result in this appeal, as Appellants have demonstrated no action by Respondent outside the terms and conditions of the lease.

At the time Appellants rescinded the lease, Respondent was in compliance with the terms and conditions of the lease. This is not to say that Appellants may not have incurred costs in mowing, mending fences, or entering into additional leases as a result of Respondent's exercise of its rights under the lease, but is to say that there is no condition of the lease which provides for the relief requested by Appellants and that Respondent has not violated the terms of the lease, but rather has acted in accordance with the terms of the lease and has provided Appellants compensation in accordance with those terms.

We note that under Condition No. 16 of the lease the Government appears to have the right to retain the rental payment made by the lessee for the 1991-1992 lease year. However, since the Government, apparently, determined that it would be equitable to refund the lease payment for that year and prorate the 5 acre lack of availability to the lessee for the 1990-1991 lease year, the Board sees no reason to disturb Respondent's equitable decision.

For the above stated reasons, the decision of the Contracting Officer is affirmed, and the Appeal is DENIED.

[¶ 26,358] Lane Construction Corporation

ENG BCA No. 5834, September 22, 1993. Contract No. 1E0103.

Site Conditions—Inspection—Wetland Requirements.—A bridge construction contractor's claim for delay resulting from the inability to place construction cranes efficiently was denied because the placement problems were the result of the need to obtain a permit to locate the equipment in a wetland area. That the area surrounding the bridge was a wetland area was readily ascertainable from a site inspection.

Site Conditions—Weather—Contract Provisions.—A claim that a total of four days' rain delay over two months constituted a compensable differing site condition was denied because the contract specifically stated that no claim for rain delay would be permitted for delays of fewer than four days in one month and five days in the next.

Delays—Suspension of Work—Traffic Control.—For purposes of the Suspension of Work clause of a bridge construction contract, the government's suspension of work on the night of a professional hockey game for fear of adversely affecting unusually heavy traffic generated by the game was unreasonable, even though the government's concern for traffic was understandable, because the order to suspend work directly contradicted the contract's promise of site access during certain nighttime hours. Under the clause, suspension of work is compensable only if the suspension was "unreasonable."

Delays—Suspension of Work—Traffic Plan Reformulation.—A bridge construction contractor was not entitled to compensation for delays resulting from a suspension of work while the government formulated a new traffic control plan, because the contractor's inability to perform under the contract's traffic plan was the cause of the need to develop a

Digitized by Google

new plan. The contractor was unable to complete each night's scheduled work during the time allowed by the contract, resulting in massive traffic jams in the morning. Suspension of work for several days while the government developed a new schedule was reasonable.

Delays—Sequence and Scheduling—Traffic Plan.—A bridge construction contractor was not entitled to additional compensation for delays resulting from the government's order to limit the amount of work to be undertaken during each night, because the contractor had demonstrated its inability to do a greater amount of work in the time allowed. The contractor's inability to perform under the original contract schedule resulted in nightly lane closures far longer than permitted by the contract, with ensuing massive traffic jams during the morning rush hour. The government reasonably ordered the contractor to undertake only a limited amount of work each night to ensure that traffic lanes would open on schedule.

For the appellant: Maloney & Burch, Washington, D.C., by J. Thomas Burch, Jr., and William T. Bennett. For the government: Robert L. Polk, General Counsel, and Patrick F. Crow and M. Lee Johnson, Washington Metropolitan Area Transit Authority, Washington, D.C.

Before FRENZEN, SOLIBAKKE, and PETROWITZ, Administrative Judges. Separate opinion concurring in part and dissenting in part by Administrative Judge Petrowitz.

FRENZEN, Administrative Judge: This is a timely appeal from a decision by the Contracting Officer denying a claim by Appellant for 18 days of additional time for contract performance and $51,206 in costs. In the post-hearing brief, the claim is adjusted to 13-1/2 days of delay and $32,954.74. The project at issue is a part of the Washington, D.C. mass transit system. The dispute involves construction of a bridge over the Capital Beltway at the Greenbelt (MD) Metrorail station. The Board has jurisdiction by virtue of the standard Disputes clause in the contract.

FINDINGS OF FACT

1. WMATA contract 1E0103 with Appellant called for, among other things, a five span bridge over the Capital Beltway (Interstate Route 95). The bridge connects the parking lot of the Greenbelt Metrorail station with the Beltway. (R.4, Tab 3; C.O. Finding 1).

2. The Contract, entered into on April 7, 1988, included the following General Provisions and other requirements that are relevant to this appeal:

General Provisions

Article 3—CHANGES

a. The Contracting Officer may, at any time, without notice to the sureties, by written order designated or indicated to be a change order, make any change in the work within the general scope of the Contract . . .

* * *

b. Any other written order or an oral order, which terms as used in this Paragraph b. shall include direction, instruction, interpretation or determination from the Contracting Officer, which causes any such change, shall be treated as a change order under this article, provided that the Contractor gives the Contracting Officer written notice stating the date, circumstances and source of the order and that the Contractor regards the order as a change order.

* * *

e. If the Contractor intends to assert a claim for an equitable adjustment under this article, he must, within 30 days after receipt of a written change order under Paragraph a. above or furnishing of a written notice under Paragraph b. above, submit to the Contracting Officer a written statement setting forth the general nature and monetary extent of such claim, unless this period is extended by the Authority. The statement of claim hereunder may be included in the notice under Paragraph b. above.

* * *

Article 5—TERMINATION FOR DEFAULT, DAMAGES FOR DELAY AND TIME EXTENSIONS.

* * *

d. The Contractor's right to proceed shall not be so terminated nor the Contractor charged with resulting damage under the following circumstances:

(1) If the delay in the completion of the work arises from unforeseeable causes beyond the control and without the fault or negligence of the Contractor, including, but not restricted to, acts of God, acts of

©1994, Commerce Clearing House, Inc.

Digitized by Google

the public enemy, acts of the Authority in its contractual capacity, acts of another contractor in the performance of a contract with Authority, fires, floods, epidemics, quarantine restrictions, strikes, freight embargoes, unusually severe weather, or delays of subcontractors or suppliers at any tier arising from causes other than normal weather beyond the control and without the fault or negligence of both the Contractor and such subcontractors or suppliers.

(a) Unusually severe weather conditions:

[1] Pursuant to paragraph d. (1) above, the Authority will use the following table as the basis for determining allowable time extensions to the Contract for unusually severe weather conditions and the impact of such weather at the construction site.

[2] The column below labeled WORK DAYS represents work-day delays which may be expected in each month named within the Washington Metropolitan Area, based on a five-day work week:

MONTH	WORK DAYS
January	4
February	4
March	4
April	5
May	5
June	2
July	2
August	3
September	2
October	3
November	4
December	4

[3] Time extensions for weather delays during a given month will be allowed only for actual work days in excess of those numbers listed above and only when those excess days of delay affect the current critical path(s) leading to specified Contract completion or milestone dates.

* * *

Article 13—CONDITIONS AFFECTING THE WORK.

a. The Contractor shall be responsible for having taken steps reasonably necessary to ascertain the nature and location of the work, and the general and local conditions which can affect the work or the cost thereof. Any failure by the Contractor to do so will not relieve the Contractor from responsibility for successfully performing without additional expense to the Authority ....

Article 22—SUSPENSION OF WORK

* * *

b. If the performance of all or any part of the work is, for an unreasonable period of time, suspended, delayed or interrupted by an act of the Contracting Officer in the administration of this Contract, or by his failure to act within the time specified in this Contract, or if no time is specified, within a reasonable time, an adjustment shall be made for any increase in the cost of performance of this Contract, excluding profit, necessarily caused by such unreasonable suspension, delay or interruption and the Contract modified in writing accordingly. However, no adjustment shall be made under this article for any suspension, delay or interruption to the extent:

(1) that performance would have been so suspended, delayed or interrupted by any other cause ... or

(2) For which an equitable adjustment is provided for or excluded under any other provision of this contract.

* * *

Article 36—SITE INVESTIGATION.

a. The Contractor acknowledges that he has investigated and satisfied himself as to the conditions affecting the work including, but not restricted to, those bearing upon transportation, ... handling and storage of materials; ... roads; ... uncertainties of weather, river stages, tides or similar physical conditions at the site, the conformation and conditions of the ground, the character of equipment and facilities needed preliminary to and during prosecution of the work ....

Section 101, General Requirements

Article I Contract Documents:

* * *

D. Definitions:

* * *

3. Terms:

... the following terms ... shall be accorded the meanings assigned below:

* * *

e. Engineer: Authorized Representative of the Contracting Officer.

f. Jurisdictional authorities: State, federal and local authorities ... having jurisdiction over work to which reference is made.

* * *

Article III Contractor:

* * *

D. Construction Procedures:

* * *

Digitized by Google

11. Maintenance of Traffic

a. The Contractor shall be responsible for maintaining traffic and for erecting and maintaining traffic control devices, as required by the jurisdictional agency of the area where the work is to be performed and in accordance with the applicable provisions of the Manual on Uniform Traffic Control Devices (MUTCD) published by the U.S., Department of Transportation, Federal Highway Administration.

* * *

d. Redirecting traffic: Channeling and shifting of traffic lanes as well as barricading of traffic in connection with this work will be subject to approval of the jurisdictional agency.

e. Temporary closing: Prior to the temporary closing to traffic of part of any street, sidewalk or other access or prior to changing traffic patterns from those shown, approval shall be obtained from the appropriate jurisdictional agency by the Contractor at least 30 days prior to the time such closures and changes are to be made. Deviations from this will be for a bona fide emergency only and as approved by the jurisdictional agency.

* * *

k. (2) The construction work for the erection of structural steel for the entrance ramp to Interstate Route 95 bridge will only be permitted between the hours of 3:00 A.M. to 6:00 A.M. During this time the Contractor will be permitted to close the eastbound and or westbound roadways of Interstate Route 95 for 15 minute intervals while the structural steel is being lifted into place. Once the steel is in place and sufficiently supported, traffic can then be allowed to flow again even though part of the newly erected steel may extend over the travel lanes. The Contractor shall open the eastbound and/or westbound roadways of Interstate Route 95 to traffic until there are no backups prior to another 15 minute closing. The Contractor may allow steel (supported) to hang over the travel lanes, at no time is he allowed to swing the steel over the traffic. The Contractor shall submit request for approval to close the eastbound and/or westbound roadways of Interstate Route 95 prior to the erection of structure [sic] steel for the Entrance Ramp to Interstate Route 95.

l. Work on Interstate Route 95 that requires a lane(s) closure shall not be performed the day before and the day after a holiday, including the holiday itself, or on weekends between 6:30 P.M. on Friday through 9:00 A.M. on Monday unless otherwise approved. If during the summer months traffic backs up on southbound Interstate 95 due to a lane closure on Fridays from 12:00 noon to 6:30 P.M., the Contractor will be directed to reopen the closed lane until there are no backups prior to another closing.

* * *

o. Throughout the period of construction, traffic will be maintained by implementing a phase Traffic Control Plan approved by the jurisdictional authority.

p. No work shall begin on any stage of construction until all the required traffic control devices for that stage, indicated on the approved plans, are complete in place. Compliance with specify [sic] precautions contained herein shall not relieve the Contractor of his primary responsibility to take necessary measures to protect and safeguard the work.

q. The Contractor shall notify and gain approval in writing from the Engineer, 48 hours in advance of changing a Traffic Control Phase. All approved changes to the Traffic Control Plans shall be submitted to the Engineer.

r. The Engineer may modify or expand on the methods of traffic control specified and to [sic] restrict working hours if, in the opinion of the Engineer, the Contractor's operation is detrimental to traffic during peak periods. The Engineer may alter lane configurations and require the Contractor to remove or relocate traffic control devices accordingly.

* * *

(R.4, Tab 3).

3. Appellant originally subcontracted the steel erection for the 5-span bridge to Syphax Steel Company, Inc. of Washington, D.C., but that company ceased doing business prior to the time for performance and a new subcontract for the same work and based on the Syphax proposal was awarded to Newnan Enterprises, Inc., also of Washington, D.C. (C.O. Finding 10; Tr. 1-30-31, 81).

4. The five span bridge is 675 feet in length and consists of four parallel structural girders connecting an abutment and a pier or connecting two concrete piers, and supporting a concrete deck. The bridge passes above the traffic lanes of the Capital Beltway. (C.O. Findings 1, 2).

©1994, Commerce Clearing House, Inc.

Digitized by Google

5. The District Engineer, State Highway Administration, Maryland (MHA), wrote Appellant on November 9, 1988 and "approved" proposed hours for steel erection over Interstate 95 to be 11:00 p.m.—4:00 a.m. in lieu of 3:00 a.m.—6:00 a.m. (R.4 Supp., Tab 48).

6. The President of the steel erection subcontractor (Newnan) did not visit the site until shortly before commencing work after both the Contract and Subcontract had been signed. A representative of Syphax did visit the site prior to submitting its proposal to Appellant. (Tr. 1-82).

7. Appellant submitted a CPM schedule that was approved by Respondent on November 2, 1988. This schedule indicated that erection of the bridge steel had an early start date of December 5, 1988, a late start date of December 21, 1988, an early finish date of February 7, 1989, and a late finish date of March 10, 1989. This schedule was never revised in spite of substantial delays that later occurred. (C.O. Finding 11; Tr. 3-50). The time for contract completion was, however, extended to July 27, 1990. (Finding 8, *infra*).

8. The contract specified an original contract performance time of 540 calendar days, which put the contract completion date at October 21, 1989. This completion date was extended by 85 days to January 14, 1990, by Modification No. 4 covering PCO No. 4—Pier Misalignment to Entrance Ramp Bridge. Contract Modification No. 12 further extended the time for contract performance by 194 calendar days to July 27, 1990, and increased the contract amount by $352,356 to compensate for delay by WMATA in obtaining a Wetlands Permit (PCO No. 12) without which bridge construction could not begin. In fact, Substantial Completion Inspection for the Contract occurred on July 27, 1990. (Exhs. R-8, R-12-14).

9. On March 14, 1990, Newnan met with representatives of Lane, Maryland State Highway Administration and Respondent in the office of the WMATA Resident Engineer to discuss aspects of the steel erection plan. (R. Supp. R.4, Tab 36).

10. The MHA Project Engineer approved a Traffic Control Plan at the March 14 meeting that varied from the Maintenance of Traffic provisions of the Contract. This Plan stipulated that for erection of structural steel over the Beltway, the Contractor could begin closing traffic lanes, one at a time, beginning at 10:00 p.m., with full closure of all 4 lanes achieved no earlier than 11:00 p.m. Closure of all 4 traffic lanes could not exceed 15 minutes at a time and all lanes were to be fully reopened not later than 5:00 a.m. The 15 minute rule could be exceeded when there was no traffic buildup. No steel erection work was to be performed during bad weather. This meeting was attended by Mr. Raj Puri, WMATA Resident Engineer and six other WMATA representatives, officers or employees. The meeting was conducted in the office of the WMATA Engineer and the minutes of the meeting were written on a WMATA Memorandum form. (Supp. R.4, Tabs 36, 54).

11. On March 22, 1990, Newnan began erecting structural steel. (C.O.Finding 17; Supp. R.4, Tab 47).

12. Appellant's witness, Mr. Bulware, testified that Newnan's work on the project was delayed a total of one-half day over the period of March 27 and 28, 1990, because of restrictions on the positioning of cranes needed to hoist the steel beams for span E. (Tr. 2-78). He said it was a permit problem, and not that the ground was unsuitable. Mr. Satterfield, another of Appellant's witnesses, testified that he observed no site problems when he visited the site prior to drawing the crane location plan. (Tr. 1-169).

13. Respondent's witness testified that its Inspector's Daily Reports (IDRs) contained no indication that restrictions on crane positioning were delaying Newnan's progress on the indicated dates. The IDRs of March 27 and 28 are consistent with this testimony. March 29 shows no contract work because of rain. (Tr. 3-32; Supp. R.4, Tab 47).

14. A contract drawing showed the boundaries of the construction area and the borings indicated the soil conditions that would most likely be encountered. The borings indicated soft ground. One boring indicated high level ground water. Surface conditions could also be observed in the course of a site visit. (Tr. 3-154-156).

15. Appellant claims April 6, 1990, as a rain day. The IDR for that date states that scheduled bolting up and torquing operations were conducted during the day shift. Apparently steel erection during the swing shift was the only work affected by rain on that day. (Tr. 1-136-144; R. 4, Tabs 21, 47).

16. On April 10, 1990, steel erection was cancelled because of wind and rain conditions. There was a "rainout" on April 30. (Tr. 1-185; R.4, Tab 43).

17. During the night shift on April 9, 1990, Newnan made its first attempt to set steel

Digitized by Google

beams between piers 2 and 3 (span C), which required work above the outer loop of the Beltway. This effort was aborted almost at the start because Newnan did not have the proper "spreader bars" with which to hoist the long curved beams onto the bearing pads atop the piers and abutments. (Tr. 1-184-185; C.O. Finding 17; R.4, Tab 47).

18. On April 11, 1990, steel erection over the Beltway was cancelled by the Maryland Highway Administration because of heavy traffic resulting from a hockey game at the Capital Center. (Tr. 1-186-1-187; C.O. Finding 18).

19. On April 12, 1990, steel erection over the Beltway was not permitted by the Contract because it was the day before a state holiday. There is no Newnan Daily Field Report for this date. (R.4, Tab 43, and see below).

20. April 13, 1990, was Good Friday, which is a holiday in Maryland. (Tr. 3-83; R.4, Tab 2).

21. April 14 and 15, 1990 fell on a Saturday and Sunday.

22. During the night between April 16 and 17, 1990, Newnan began erecting the first steel beams over the outer loop of the Beltway in span C. The plan called for the erection of two beams each consisting of two girders spliced end to end, to be hoisted onto piers. Once the first beam was in place, the work had to continue until the second beam was in place and secured. Traffic on all lanes of the Beltway had to be halted while the two beams were being hoisted into place and secured. The erection of these two beams did not go smoothly with the result that all lanes of the Beltway were closed for most of the night in violation of the contract requirements. There was one traffic accident on site that caused a brief delay. Appellant's witness, however, said, when asked what else happened:

> [j]ust the length of time in setting things up, positioning, making the bolts. Fifteen minutes is usually a reasonable time to make the splice. It just didn't go together.

Although one lane of the Beltway was reopened at 5:30 a.m. on April 17, 1990, all of the lanes were not open until 8:15-8:30 a.m., the middle of the morning rush hour, resulting in a traffic backup estimated to be 13 to 17 miles. (Supp. R. 4, Tabs 43, 56; C.O. Findings 25, 26; Tr. 1-190-194; 3-102).

23. After this traffic tie-up, the Maryland Highway Administration (MHA) told Newnan that everything would be reviewed and the bridge work was shut down. MHA's purpose was to review the situation in the wake of the traffic problems. Newnan was, however, able to continue day-shift work such as bolting up splices and diaphragms and welding bearing pads that did not require closure of Beltway lanes. (R.4, Tabs 43, 47, 56; Tr. 2-88-89; C.O. Finding 27).

24. On April 20, 1990, the Assistant District Engineer of the Maryland Highway Administration, Mr. Warnick, issued a directive amending the original Traffic Control Plan and limiting the erection of steel for the overpass to one girder per night on the nights of April 24 and 26, 1990. Mr. Warnick visited the work site promptly after the April 17 traffic tie-up became apparent. He testified that the one girder per night policy was based on what the Contractor said it could do. The directive also specified that one girder per night could be erected on the nights of April 30, and May 1, 2 and 3, 1990, but required that splices had to be completed not later than 2:00 a.m., otherwise the night's operation would have to be aborted. (Supp. R.4, Tab 55; Tr. 3-114-115).

25. There is testimony that there was a State directive to keep all Beltway lanes open until 12:30 a.m. the night of April 23-24, because of a hockey game. Newnan's operations that night consisted of bolting up splices and diaphragms. (IDR., 4/23, R.Supp. R.4, Tab 47; Tr. 2-90). No hockey delay claim is made for this night.

26. During the night shift on April 24-25, Newnan erected beam 2 in span C and on April 26-27 erected beam 1 in span C, both without any problems. (Tr. 2-91-2-92; Exh. R-6).

27. Appellant's witness testified that on April 24 and 26, 1990, Newnan's progress was delayed a total of one day because of an MHA restriction allowing the placing of only one spliced beam over the Beltway during the night shift on those dates. Appellant claims it would have been possible to place two beams on each of those nights without exceeding the restrictions on closure of Beltway lanes. (Tr. 1-205-207).

28. Appellant's Post Hearing brief also claims April 25, 1990, as a Hockey delay, with no citation to the record. (Br., p. 10). The Final decision agrees the Hockey game was on April 25, 1990, but asserts Appellant was not delayed. (Finding 32). Appellant's Daily Field Reports filing does not have an entry for April 25, 1990. The IDR shows some work activity for Newnan on April 25-26, 1990. (R.4, Tabs 43, 47). There is testi-

©1994, Commerce Clearing House, Inc.

Digitized by Google

mony (Mr. Satterfield, Project Manager, Newnan) that Newnan could not erect steel on April 25, but it was not in response to a question about hockey, but about some contretemps at a meeting of the parties. There is also testimony (Mr. Boulware, Field Superintendent, Newnan) that the 25th was a "hockey . . . night." (Tr. 1-217; 2-91).

29. The beams over the inner loop of the Beltway, span B, were erected during the weekend nights of April 28 and 29, 1990. All lanes of the inner loop of the Beltway were closed a part of the night on those two dates, and traffic was diverted onto side streets by Maryland traffic authorities during the closure. (R.4, Tabs 47, 58; Tr. 2-59-62, 229-230).

30. The use of the detour was based on a decision by the MHA. The Field Superintendent for Newnan recommended to Mr. Warnick of the MHA that work on a Friday, Saturday, or Sunday, when more time was available, would be the way to avoid new traffic problems. (Tr. 2-141-142; 3-120).

31. A handwritten WMATA memorandum notes the proposed work hours for April 25 through Sunday, April 29, including a notation of Newnan plans to work "until 10—11:00 A.M." and asserts that the schedule was "provided by FARID HAMAD, project Engineer for Lane . . . and has Maryland State Highways concurance [sic]". (R.4, Tabs 38, 58).

32. Newnan's Project Manager, Mr. Satterfield, testified that fifteen minutes is usually a reasonable time to make a splice, and that a fifteen minute interval would "just take coordination" to erect steel. (Tr. 1-194; 2-62-63).

33. Although the Resident Engineer was willing to grant Appellant five days of uncompensated time extension for completion of contract performance (1 day Hockey, 4 days MHA review) the Contracting Officer's Final Decision denied Appellant any time extension because, he said, it was concurrent with a time extension previously granted. He referred to Modification 4, (Part 1A) which was signed in November and December, 1989. (R.4, Tabs 2 (Findings 6 and p. 15), 13; Exh. R-14).

34. Appellant claims Hockey game delay costs for April 11 and April 25. We find that there was a compensable delay only for April 11. (Finding 18). For that date the evidence supports a direct cost of $625 for crane rental. Newnan calculated overhead costs at $690.89 per day, but made no attempt to allocate between this and other work. There is evidence of other work by Newnan, and we allocate $345.45 to April 11. The allowable cost for April 11 is therefore $970.45. (Tr. 1-267, 2-16; R.4, Tab 23, Exhs. A-2, A-6-A-7).

35. Contract Modification No. 4 dealt with corrective work on certain bridge piers. It provided a price increase and provided that it was "a full accord and satisfaction for all costs and time of performance" related to the actions of the modification. Contract Modification No. 12 dealt with the "Wetlands Permit Delay Costs" and it, also, was a "full accord and satisfaction" for all costs and time of performance for the actions of the modification. (Exhs. R-13-R-14).

36. Newnan presented a "Consolidated claim" to Appellant and the WMATA Contracting Officer by letter of September 25, 1990, making no mention of a plan to start work in June or July. It complained of various delays, including April 10, Rain and April 30, Rain. It placed the second hockey game delay as April 26. It did not mention impossibility. (R.4, Tab 11).

37. WMATA obtained "some type of permit" from the State of Maryland in order to construct the bridge. (Tr. 3-123).

DECISION

The claims being asserted by Appellant involve the erection of steel for a vehicular bridge over the heavily traveled Capital Beltway. The bridge forms part of a ramp connecting the Greenbelt Metrorail Station and the Commuter Rail Station with the Beltway. These facilities are all located in the State of Maryland.

Because this bridge is in Maryland, the contract incorporated some State inspired or mandated restrictions on the erection of structural steel over the traffic lanes of the Beltway. Respondent obtained a permit for the bridge construction from the State (Finding 37), and the permit might have been conditioned on the application of these restrictions. The restrictions nevertheless were subject to some periods of guaranteed access to the worksite for the Contractor. See Article III-D.11, Maintenance of Traffic, Subparagraph k(2) which permits traffic lane closure, with certain limitations, between the hours of 3:00 a.m.—6:00 a.m. (Finding 2). In due course the MHA approved a change of the hours when closure was permitted to the period 11 p.m.—4 a.m. (Finding 5). This, and subsequent decisions by the MHA, were effective in controlling the contractor's actions, at least on a *de facto* basis. It is obvious that in all, or nearly

Digitized by Google

all cases, WMATA was aware in a timely way of these MHA actions.

Two lengthy delays in the start of the bridge construction occurred that were not the fault of Appellant or its subcontractor. The effect of this was to shift the period of bridge construction from the winter months of 1988-89 to the spring months of 1990. (Findings 7-11).

The Wetlands Delay

Appellant makes a claim for a differing site condition for "undisclosed restrictions ... for Wetlands." Pursuant to a revised schedule, Appellant's subcontractor (Newnan) began erecting structural steel on March 22, 1990. (Finding 11). Newnan now claims that the work was delayed a total of one-half day during March 28th and 29th by its inability to position cranes efficiently on "wetland areas." We note that Newnan did not visit the site before bidding the job (Finding 6), but Mr. Satterfield, an employee of Newnan, who drew up the crane location plan, did visit the site at that time, and testified that he observed no problems with the site. (Finding 12). The evidence shows soil borings that revealed a high level of ground water and soft ground. (Finding 14). Also, the IDRs do not have any indication that Newnan had difficulty with cranes. (Finding 13). One of Appellant's witnesses testified that there was no problem with unsuitable ground, but that there was a problem with the permit. (Finding 12). We conclude that adequate information was reasonably available to Newnan regarding ground conditions that might have caused site restrictions on crane placement so that its bid and work plan could have accommodated them. Evidence in support of this claim is generally lacking. This part of Appellant's appeal is DENIED.

Rain Delays

The Appellant makes a somewhat unfocused claim for rain delays on March 29-30, April 6 ($1/2$ day), and April 10 and 30 for "an aggregate delay of four and one-half days, with a net delay of two days." This is clearly not allowable under the contract's General Provisions 5 and 22 (Finding 2) which, when considered together, require weather delay to exceed a certain minimal level (four days for March and five for April) before delay is excusable. Appellant says, nevertheless, that it planned to do the work in drier summer months and was thrown into the wet months by earlier WMATA delays. Therefore, presumably, it should not be subject to the limitations of GP 5 and 22 for March and April. However, there is uncertain evidence as to Appellant's plan. While Newnan's President testified that Newnan planned the bridge work for June and July (Tr. 1-65-66), Appellant's written plan shows bridge spans being erected in the winter (Finding 7), a time of greater moisture. This conflict is not resolved in the record. We further note that at the time of Newnan's formal claim to the WMATA Contracting Officer, it mentioned only April 10 and 30 as rain delays. (Finding 36). Our findings support only April 10 and 30, and possibly March 29 as, indeed, being rainy enough to preclude work. (Findings 13, 16). Three days of rain delay would not require extensions under the contract even under the dry summer month plan theory. The rain delay claim is, in sum, not credible for all of these reasons and is DENIED.

MHA Delays

Appellant makes various claims for delay (hockey game traffic—April 11 and 25), traffic plan impossibility, delays for review of that plan (April 12, 17-20, 23) and restrictions on performance (April 24, 26, 28-29).

Hockey

MHA effectively prohibited work on the night of April 11th apparently because of concern over heavy traffic expected from spectators at a professional hockey game in the vicinity of the project. There is also a claim for a hockey game for April 25, but the evidence for this date is lacking. (Findings 18, 28). The contract guaranteed to the contractor a limited, but genuine, right of access to the work site in Article III-D.11 (Finding 2), and the later adjustment of the hours for traffic closure preserved this right. While WMATA did not cause this suspension, where a contract guarantees site access, suspensions such as those caused by the MHA here, where there is indication of cooperation between Respondent and MRA (Findings 10, 37), should be analyzed as constructive suspensions occurring under *Fruehauf Corp. v. United States* [25 CCF ¶ 82,426], 218 Ct. Cls. 456, 470; 587 F.2d 486 (1978). Looking to the clause that deals with this topic, SUSPENSION OF WORK (Finding 2), we note that it requires compensation for "unreasonable" suspensions. The question then becomes whether the hockey delay was reasonable.

While it is understandable that MHA would have concerns over unusual traffic volumes from the hockey crowds, its action directly conflicts with the contract's promise of site access, and arises from conditions

©1994, Commerce Clearing House, Inc.
Digitized by Google

outside the control of the contractor. This is a situation where the entire delay of one day is unreasonable. *Chaney & James Constr. Co. v. United States* [14 CCF ¶ 83,407], 190 Ct. Cl. 699, 713; 421 F.2d 728 (1970).

We have considered the possible application of Article III D.11.r. (Finding 2) which permits the "Engineer" to modify traffic plans and restrict working hours during peak periods. The "Engineer" is defined as the Contracting Officer's representative by the Definitions subsection of the General Requirements (*id*). This action was by the MHA, and unlike the other delays subject to MHA directive, it did not arise from problems in Contractor performance or contract administration. We conclude that the hockey game delay for April 11 only is unreasonable.

Impossibility

The impossibility claim is not credible. The claim appears to be that the fifteen minute closure period of the contract was insufficient to do the work. However Newnan's own project manager testimony does not support such a theory. (Finding 32). This claim does not appear in the Newnan letter of September 25, 1990, and is not mentioned in the complaint. We do not need to address the jurisdictional question that Respondent raised. The claim has no merit.

Traffic Plan Review

Delays for review of the traffic plan arose because the MHA effectively shut down the work for certain periods, claimed by Appellant to be April 12, 17-20 and 23.

The principal event related to this claim is the difficulty Newnan had when it began steel erection on April 16/17, 1980. (Finding 22). This resulted in a lane closure much longer than permitted by the contract, and an extensive traffic backup. This problem was caused by Newnan's own difficulties in steel erection. MHA then issued a suspension order, to review the situation. (Finding 23). On April 20, MHA issued a revised plan that would limit Newnan to the erection of one girder per night. Thus, the operation was effectively suspended for a period of time and then subject to the one girder per night rule for certain dates. An MHA representative testified that the one girder limitation was based on what the contractor said it could do. (Finding 24).

Again, there is no apparent WMATA action involved in causing these events. It involves the contractor and the State. Again, however, we analyze the suspension and the partial suspension (one girder rule) as a constructive suspension under the contract. *Freuhauf, supra.* Here, we believe the burden is on Respondent to show that the suspension was reasonable because it had the best access to the state agency, the MHA, that initiated and enforced the suspension. *Santander Constr. Co.,* ASBCA No. 15882, at p. 56,334, 76-1 BCA ¶ 11,798. The evidence shows the time of suspension was reasonably spent. The traffic tie-up caused by Newnan's initial efforts was massive. A traffic problem of this size causes or contributes to a sense of anger and helplessness in large numbers of commuters and travelers. The tie-ups are a severe problem of modern life and should be avoided at all cost. The evidence shows that the MHA responded to the tie-up almost immediately, investigating on the site. Its next step was to request a plan of erection procedures from the contractor. Given the need for information from the contractor and review within the MHA bureaucracy, it was reasonable to use a period after the major traffic jam of April 16-17 to April 24 to develop, review and approve procedures to avoid a second jam. The one girder limitation was also a reasonable initial step to restart the operation, and evidence indicates the limitation had the contractor's support, at least initially. These suspensions were reasonable and this part of the claim is DENIED.

April 12 was a day before a state holiday and work that required lane closure was not permitted by the contract. (Findings 2, 19). The claim for April 12 is also DENIED.

Change in Sequence

The balance of the claim is for "restrictions on performance" (April 24, 26 and 28-29). April 24 and 26 claims are for alleged costs because of a one girder per night limitations, and as indicated above, this part of the claim is DENIED.

The claim for April 28-29 is for an alleged WMATA order to change the sequence of work for these dates, a weekend. The claim is for overtime and double time. The evidence shows this work, which involved the use of a detour and a longer duration of closing of the traffic lanes, was based on a decision by the MHA, not WMATA. As before, WMATA curiously points to the State as the agency-in-charge of this phase of the work and says it, WMATA, did not cause it. Be that as it may, a constructive change can occur if the Government observes a change occurring. *W. Southard Jones, Inc.,* ASBCA No. 6321, 61-2 BCA ¶ 3182. Here, it is clear WMATA was aware of the change in work

Digitized by Google

(Finding 31), although there is no indication of a timely notification that the Contractor regarded the change as compensable. We believe that the contractor either recommended the change or readily acquiesced in it as a way to complete the work efficiently. (Finding 30). The weekend work provided benefit to both parties. It freed the contractor from some limitations of night time work and the 15 minute limit. It benefited WMATA by an earlier effective completion of the work. These circumstances suggest that there was a tacit agreement that the change in sequence would be accomplished without affecting price. *Bruce-Andersen Co.*, ASBCA No. 28125, 83-2 BCA ¶ 16,892. We conclude that this sequence adjustment was for the benefit of both parties and is not compensable. This part of the claim is DENIED.

Summary

The appeal is SUSTAINED for the hockey game delay for April 11 in the amount of $970.45. (Finding 34). In all other respects, it is DENIED.

OPINION BY ADMINISTRATIVE JUDGE PETROWITZ CONCURRING IN PART AND DISSENTING IN PART

I concur with the Majority in its decision on the Wetlands Delay Claim. I do, however, part company with the Majority on the basis of its reasoning regarding the Rain Delay Claim and the delay claims associated with actions of the Maryland Highway Administration (traffic plan review and modification, hockey game restrictions and steel erection restrictions), though the end result I reach on quantum does not differ greatly from that of the Majority.

Delays Because of Rain: Appellant advances the argument that its subcontractor based its bid on a minimum number of expected rain days because bridge erection was originally scheduled for the summer months, whereas the work actually was performed during the spring months of the following year as the result of Respondent-caused delays. Appellant argues that its subcontractor thus had to absorb the cost of the greater number of rain days to be expected during the spring months and was, therefore, prejudiced by Respondent's delay.

The simple manner of disposing of this claim is to point out that it has no factual basis because the subcontractor's approved Part 2 CPM submittal scheduled bridge erection for the *winter* months that have almost as many expected rain days as do the Spring months and not for the summer months as Appellant alleges. Furthermore, giving Appellant every benefit of the doubt, I find that a total of only four rain days was experienced during March and April, 1990, well below the total that should have been expected in the subcontractor's estimate. I concur with the Majority that this claim should be DENIED.

Delays at the Direction of the Maryland Highway Administration:

I read the Maintenance of Traffic provisions of the Contract (Special Provisions, Section 101, III-D-11) as giving the MHA Traffic Engineer authority to "modify or expand on the methods of traffic control ... and restrict working hours" if the Contractor's operations were detrimental to traffic during peak periods. This, coupled with the provisions of the approved Traffic Control Plan, gave the MHA ample justification for suspending steel erection from April 17th to the 20th while the agency conducted a review of the traffic control situation following the massive traffic jam that occurred on the morning of April 17th. The evidence clearly indicates that the traffic tieup was at least partly the fault of Appellant's subcontractor. The MHA directive limiting steel erection to one beam per night on April 24th and 26th was also justified by the same facts.

The closing of the inner loop of the Beltway all night on April 28th and 29th gave the subcontractor uninterrupted periods during which to finish erecting steel over the roadway and, therefore, resulted in a cost benefit even though the work was performed at premium labor rates. I join the Majority in denying these elements of Appellant's claim.

The order by the MHA precluding Appellant's subcontractor from erecting steel until after 12:30 a.m. on the three nights that hockey games were played effectively prevented the subcontractor from erecting any steel over the Beltway on those nights. I note that Appellant's claim covers only two of those nights. My interpretation of the Contract provisions conferring traffic control authority on the MHA even to the extent of restricting working hours during peak traffic periods appears to me to be adequate justification for the action taken. I would, therefore, deny Appellant's claim based on disruption caused by the hockey games.

Having determined that Respondent was not at fault for any of events for which Appellant claims compensation, I conclude that Appellant's appeal must be DENIED.

[¶ 26,359] Geo-Con, Inc.

ENG BCA Nos. 5749, 5976, August 31, 1993. Contract No. DACW45-89-C-0024.

Performance—Specifications—Performance v. Design Specifications.—Specifications for stabilizing sludge as part of a contract to clean up a hazardous waste site were design specifications, rather than performance specifications, because the contract stressed the effort and expertise expended by the government in drafting the highly detailed procedures to be followed and made the procedures mandatory by stating that the contractor "shall use" the specified formula to achieve stabilization of the sludge. Language stating that the formula might require some adjustment was not sufficient to change the mandatory specifications from design specifications to performance specifications. The contractor was entitled to additional compensation when the specified formula failed to achieve stabilization of the sludge.

Site Conditions—Contract Indications, Category I—Indication of Conditions.—A contractor's claim that off-gassing at a hazardous waste site constituted a differing site condition was denied because the contract clearly indicated that off-gassing was a serious problem that had been encountered at the site under an earlier contract. The contract was replete with warnings about the seriousness of the problem. An offhand remark by a government representative during a postaward meeting involving other issues was not sufficient to offset the contract's clear warnings.

Site Conditions—Contract Indications, Category I—Subsurface Conditions.—A claim that subsurface rocks, boulders, and hard lenses, and the intermingling of sludge with such materials constituted a differing site condition was rejected because the contract stated that a previous contractor had encountered difficulties with such materials, and the contract's boring logs and test wells clearly indicated the presence of rocks and hard materials intermingled with sludge. The contract description, containing 142 pages of boring logs, gave more than adequate notice of the subsurface conditions to be expected.

Site Conditions—Contract Indications, Category I—Hazardous Waste Identification.—The need to use pH testing to distinguish hazardous waste from other excavation materials was not compensable, despite a contractor's assertion that the contract indicated that the materials could be distinguished by color, because the materials were identifiable as such until intermingled by the contractor's excavation methods. Further, the contract required the contractor to conduct pH testing of all materials regardless of whether they were identified as hazardous waste.

Performance—Voluntary Work—Contractor's Convenience.—A contractor that stabilized all materials excavated from a hazardous waste site rather than merely stabilizing sludge as required by the contract was not entitled to additional compensation, because the need to stabilize all materials resulted from the contractor's excavation methods. After the failure of its initial plans to segregate sludge from other materials during excavation, the contractor chose to excavate with a dragline, which mixed all the materials together. The need to stabilize all such materials resulted from the contractor's business judgment, in which it concluded that stabilization of all materials was more efficient than efforts to segregate sludge from other waste.

For the appellant: Starfield & Payne, Fort Washington, Pennsylvania, by Michael H. Payne and Joseph A. Hackenbracht, Jr. For the government: Frank Carr, Chief Trial Attorney, Washington, D.C., and Richard P. White, Government Trial Attorney, Baltimore, Maryland.

Before JOCKISCH, SOLIBAKKE, and SHERIDAN, Administrative Judges.

JOCKISCH, Administrative Judge: Appellant asserts that it encountered differing site conditions and defective specifications during its attempt at performing the sludge stabilization required by the contract and that the Government ordered a change to the contract-specified compaction requirements for stabilized material. The Contractor appealed the Contracting Officer's decision which disposed of the claim issues for the year 1989 on July 11, 1990; however, because of certain developments and at the

Digitized by Google

request of the parties, the Board canceled the scheduled hearing date of September 23, 1991, and dismissed the appeal on March 27, 1991, pursuant to Board Rule 30, which allowed for reinstatement to the Board's docket within three years. On January 8, 1992, at Appellant's request, the appeal was reinstated. At that time, the parties informed the Board that a second Contracting Officer's decision and appeal based on the same essential factual issues as the reinstated appeal for the year 1989 but for the years 1990 and 1991 would be forthcoming. These consolidated appeals by Geo-Con, Inc. are based upon essentially the same general factual allegations for the years 1989 ($1,770,804.11) and 1990 and 1991 ($1,308,073.74). The Contractor appealed this subsequent decision on June 12, 1992. Following a two week entitlement only hearing in December, 1992, briefing of the issues was completed by the parties in July, 1993.

FINDINGS OF FACT[1]

General

1. Invitation for Bids (IFB) No. DACW45-88-B-0092, Bruin Lagoon Superfund Site, Bruin Borough, Pennsylvania, was issued on July 25, 1988. (R.4, Tabs 3, 4, and 51). On August 11 and 30, 1988, the Government provided for site visits. (R.4, Tab 4). During a site visit, prospective bidders could see sludge, stiff and hard material, rocks, the small work area available, and the closeness of houses to the site. (Tr. 549-551). Among those attending both site visits was Mr. James Wallwork of Geo-Con, Inc. (hereinafter Geo-Con). (R.4, Tab 4). Because of various amendments to the bid invitation, the bid opening was finally set for October 6, 1988.

2. Prior to any cleanup, the site, which occupied approximately 6 acres, was an open earthen-diked lagoon containing approximately 35,000 cubic yards of asphaltic sludge and 575,000 gallons of acidic liquid supernatant. (R.4, Tab 19, 1 N-1). The site, which was ranked as the third most hazardous site on the Superfund National Priorities List, had been the subject of an earlier remedial contract which was terminated for convenience following a major off-gassing incident. Following termination of the remedial contract, an Environmental Protection Agency (EPA) emergency response contractor backfilled the opened lagoon area with stabilized sludge and soil. (Tr. 446; R.4, Tab 19, 1 N-1; Exh. R-1).

3. The EPA determined that the site required further study before remediation could be continued. Two consultants, Weston Engineers and GAI Consultants (GAI), conducted field investigations; and GAI, under contract to the Omaha District of the Corps of Engineers, prepared plans and specifications for completing the remedial action, after reviewing the previous study effort and after conducting extensive testing of the site. (Ex. R-89; Tr. 655-657). GAI developed a "mix" design/stabilization process in an attempt to produce a stable material; that process was included in the contract specifications for the Contractor's use.

4. The *Commerce Business Daily* announcement and the Notice to Prospective Bidders described the project as including "gas monitoring during site activities, gas venting/collecting/treating ..." (R.4, Tabs 3, 4, 51; Ex. R.74, 75). In order to assure against violent gas emissions, such as the one which shut down the first remedial attempt in 1984, gas vent wells were to be constructed by the Contractor prior to starting construction. (R.4, Tab 25). Further, gas collection and treatment systems were to be installed "prior to any lagoon disturbances." (R.4, Tab 25 pp. 2C-1). Workers were to wear "Level B" protective equipment which included a full face mask with supplied air and a protective suit, and the Contractor was required to establish and maintain an air monitoring system. (R.4, Tab 9 pp. 1D-30). There were 142 pages of drill logs provided in IFB and all the borings were within the limits of excavation. A majority of these boring logs showed off-gassing during the drilling, which would be typical and expected when "acid" sludge is being exposed to air or neutralizing treatment. (R.4, Tab 41; Tr. 924).

5. The major work activity in the project was the stabilization of the contaminated material, referred to as "sludge." The contaminated material was specifically identified in the solicitation as either a "black sludge and waste," or a "yellow waxy waste." (R.4, Tab 30, 2H-4).

6. The specifications required that, when backfilled, the stabilized sludge was to meet the following criteria:

a) pH between 9 and 11.5

b) water content less than 32 per cent

[1] References to the transcript, to exhibits, and to other documents provided the Board by the parties are for illustrative purposes only and are not exhaustive.

©1994, Commerce Clearing House, Inc.

Digitized by Google

c) compacted density of 100% of optimum in place moisture content density

d) unconfined compressive strength of 2.0 tsf.

7. The specifications indicated that the Government had developed a method by which the performance requirements identified above could be achieved. Paragraph 2.2 of Section 2H of the specifications stated:

2.2 *Bench Scale Studies.* Two bench scale laboratory sludge stabilization studies were performed. After reviewing the previous mix designs from the site remediation and laboratory studies, a preliminary study of forty (40) mixes were [sic] investigated. These mixes used varying ratios of the sludges, soil, fly ash, lime and/or cement to make a stabilized material that would have the strength to support a cap and neutralize the sludge....

8. The Contract Mix Designs were characterized as guidelines to be adjusted in the field and identified as follows:

The following are the mix designs for the black sludge/waste and the waxy sludge/waste... Should the Contractor choose to use his own mix design he shall submit prior evidence to the Contracting Officer that his mix provides equivalent performance.

Material	Volume cy	Unit Weight #/cf	Mix Design by Weight Sludge/Soil/Hydrated Lime
Black Sludge/Waste	19,000	74	1 : 1.5 : 0.12
Yellow Waxy Waste (R.4, Tab 30).	1,800	76	1 : 3.0 : 0.12

9. Although the solicitation permitted the contractor to develop its own mix design for sludge stabilization, Appellant decided during the bidding process that it would be "prudent" to follow the Government's mix design stated in the bid invitation, particularly considering the amount of time, effort, and expense the Respondent spent in developing the mix design. (Tr. 156, 247, 248, 666-672). Geo-Con considered the mix design in the invitation for bids as a design specification, "a recipe you should follow," which was developed to meet certain performance criteria. (Tr. 1284). Geo-Con assumed that the Government and its consultants had developed the mix design on a "worst case" scenario. However, the mix design was based upon the composite readings from several borings, which produced a mix design for the average material to be encountered rather than the worst case scenario. (Tr. 769-771; Exh. A-52).

10. The soil, or bulking agent, required by the mix design was to be obtained on-site from the excavation of the two designated areas. The bulking agent was to be used as needed to stabilize the black sludge and yellow waxy waste. The excavation quantities in the specifications totaled 81,400 cubic yards. The bid schedule separated this quantity into a base bid amount of 73,250 cubic yards and a contingent overrun quantity of 8,140 cubic yards of excess overburden. The specifications provided for the stabilization of an anticipated 20,800 cubic yards of sludge or waxy waste. The Government estimate anticipated mixing 20 cubic yards of sludge/waste per mixing pit, which would require 1272 mixings to stabilize the estimated amount of sludge. (Tr. 694-696; Exhs. A 4, 35).

11. Geo-Con Inc. is an experienced hazardous waste remediation contractor. The company specialized in, among other things, stabilization of superfund sites. Approximately 60% of the Contractor's work involved environmental projects, with a major portion being hazardous waste sites. (Tr. 15; Exh. A-1).

12. Geo-Con prepared its bid anticipating from the specifications that the contaminated material would be readily identifiable by color and that, based upon the cross sections provided, the materials were to a large extent segregated and could be excavated separately. The cross sections indicated the top of rock to be relatively smooth and continuous. The Appellant considered that heavy scraping equipment would achieve the necessary cleanliness of the rock face, that dump trucks could transport the various sludges and soil to mixing pits, that the blending of sludge, soil, and hydrated lime would be performed by backhoes with power harrows, that the neutralized sludge would be backfilled into the excavation or stockpiled, and that, while the total quantity of material to be excavated could vary, the specifications provided for the stabilization of 20,800 cubic yards of sludge or waxy waste. (R.4, Tab 107).

13. Based upon the number of mixing pits and the size of the equipment it planned to

Digitized by Google

use, Geo-Con estimated that the sludge stabilization would be accomplished in approximately 73 work days, which would require an average processing rate of approximately 285 cubic yards of raw sludge and 715 cubic yards of bulking material per work day. Because of the small batch size, the specified reagent ratios, and the installation of gas vents, Geo-Con anticipated no significant air quality problems ("off-gassing") would be encountered. (R.4, Tab 107). Geo-Con planned to use two mixing pits instead of the one anticipated by the Government and to mix approximately 50 cubic yards of material (not just sludge) per pit. (Tr. 50-51).

14. Geo-Con stated it relied heavily, almost exclusively, on the cross sections contained in the contract drawings in preparing its bid. (Tr. 24-25). It interpreted the cross-sections as assuring a bidder that the waste material was located in discrete, segregable areas and deposited in "delineated layers of various types of waste." (Tr. 185-186). The Government states that the profiles (cross-sections) indicated a mix of material, contamination spread throughout the site, and contained notes to inform prospective bidders to refer to the boring logs to ascertain the site condition at localized areas. (R.4, Tabs 43, 44). Further, the Government points out that notes on Drawing No. 8, Sheet 8, Construction Sequence, state, "the existing lagoon does *not* contain a homogenous material *but rather intermingled* pockets of wastes and soils *of different consistencies.*" (Emphasis supplied). Additionally, Respondent notes that the Bruin Lagoon material was not in a natural condition but was man-made with the dumping interspersed and that previous work at the site intermingled the materials. Appellant was aware of all of this prior to bidding. (Tr. 1119).

15. During a site visit, Appellant saw "oily patches" intermingling on the surface area of the site and heard the details of the problems experienced by the previous stabilization contractor. (Tr. 18, 19).

16. When originally preparing its bid Appellant's estimator, James Wallwork, scheduled the project for two construction seasons and planned to use a pug mill mixing technique to perform the stabilization work. (Tr. 729-783). However, Robert Brandt, Wallwork's supervisor, and Christopher Ryan, president of Geo-Con, believed that the estimate prepared would not be competitive and changed the concept for performing the stabilization and "knocked" a year off anticipated project performance, which reduced the bid to be submitted by over a million dollars. (Tr. 781-784). At the time Geo-Con submitted its bid, Appellant asserts it anticipated commencing sludge stabilization at the end of April, 1989, and completing the contract work in one construction season.

17. Appellant's stated plan of operation on which it bid anticipated excavating 1000 cu. yds. of material a day of which only a portion would require stabilization. (Tr. 179-182). This would allow Geo-Con to complete stabilization in 73 days. (Tr. 35-37). Respondent notes that Appellant's bid papers show a potential subcontractor providing a bid to Appellant based on treating the total 81,390 cu. yds. and Appellant's work sheets indicated an intent to stabilize 73,250 cu. yds. at the rate of 1000 cu. yds. per day. The 20,800 cu. yd. figure of the estimated amount of sludge stated in the bid invitation is not found in Appellant's estimate. (Ex. A-3). Geo-Con intended to use a large hydraulic excavator, a number of off-road dump trucks, a 225 type excavator (backhoe) and a front end loader to accomplish the project. (Tr. 50-51, 253-354; Exh. A-3). This method required the capability selectively to excavate clearly definable pockets or layers of sludge/waste material, and the capability to mix 50 cu. yds. of material in a mixing pit. (Tr. 53, 54). Appellant stated that, when it prepared its bid it did not expect significant off-gassing. (Tr. 280-281, 1285-1287).

18. Geo-Con felt it would be a good marketing tactic for the company to have cleaned-up the third ranked superfund site, and the job was attractive to it as it was "in its own backyard." (Tr. 784-785).

19. Bids were opened on October 6, 1988. (R.4, Tab 51). The apparent low bidder was Geo-Con, Inc. at the firm fixed price of $3,982,387. (R.4, Tab 51). Since the Government estimate was $4,998,271, $1,015,884 greater than Geo-Con's bid, Geo-Con requested a meeting to discuss its bid. The meeting was held in Omaha, Nebraska, with Government personnel, on October 26, 1988. (R.4, Tabs 49 and 50). During these discussions, Geo-Con and Government representatives discussed many issues. One issue raised by Geo-Con was that of "off gassing." (Tr. 45, 56, 817-820; R.4, Tab 49). The Government refused to rule out the possibility of "off gassing" in the mixing pits, but it explained to the contractor that it had attempted to minimize the possibility for "off gassing" in the mixing pit during stabilization activities by the careful development of reagent mixes

©1994, Commerce Clearing House, Inc.

Digitized by Google

and batch sizes. (Tr. 810, 811; R.4, Tab 49). Further, the Respondent indicated that it did not expect a catastrophic release of gas, as had occurred during performance of the first remedial contract, because of requirements to provide gas vents prior to commencement of excavation. (Tr. 810-812, 819, 822). The best evidence does not indicate that Respondent assured Appellant that there would be no off-gassing problems. During these discussions, it became apparent that the primary reason for the difference in Geo-Con's bid and the Government estimate was Geo-Con's intent to complete all sludge stabilization work in one construction season, while the Government anticipated the need to use two seasons and the entire 608 days stated in the contract for job performance. (Tr. 808, 809; R.4, Tabs 49 and 50). The Government representative believed the equipment Geo-Con had selected was too big and heavy to perform at the limited work site available and on the material it would encounter. (Tr. 807).

20. Subsequent to this meeting, Appellant confirmed its bid. (Tr. 150-151; Ex. R-77). The contract was then awarded to Appellant on November 22, 1988. (Tr. 55-56; R.4, Tabs 3 and 51). The contract required Appellant to remove, stabilize, and backfill various hazardous sludge materials at the Bruin Lagoon Superfund Site, Bruin Borough, Pennsylvania. Notice to proceed with the work was issued on January 4, 1989. (R.4, Tabs 3 and 6).

21. The following contract clauses are relevant to this appeal:

A. General Provision:

1. G.P. 45, Disputes

2. G.P. 47, Differing Site Conditions

3. G.P. 48, Site Investigations and Conditions Affecting the Work

4. G.P. 58, Schedule for Construction Contracts

5. G.P. 59, Specifications and Drawings for Construction

6. G.P. 60, Changes

7. G.P. 63, Inspection and Construction

8. G.P. 68, Default

9. G.P. 71, Modification of Proposals—Price Breakdown

10. G.P. 74, Pricing of Adjustments

11. G.P. 76, Certification of Overhead Costs

B. Special Clauses:

1. *COMMENCEMENT, PROSECUTION, AND COMPLETION OF WORK.*

The Contractor shall commence work under this contract within ten (10) calendar days after the date of receipt by him of Notice to Proceed, prosecute said work diligently, and complete the entire work ready for use not later than 608 calendar days after receipt of Notice to Proceed. The time stated for completion shall be to final project acceptance by the government but does not include the one year of post-closure activities. The Contractor shall also be responsible for one year of post-closure activities which shall commence from the government's official acceptance of the construction.

1.1 *Start Work.* Evidence that the Contractor has started procurement of materials, preparation and submission of shop drawings, preparation of subcontracts, and other preparatory work will satisfy the requirement that work commence within ten (10) calendar days after receipt of Notice to Proceed. Therefore, work need not be commenced at the construction site within ten (10) calendar days (based on FAR 52.212-3).

2. *LIQUIDATED DAMAGES—CONSTRUCTION.*

2.1 *Failure to Comply.* If the Contractor fails to complete the work within the time specified in the contract, or any extension, the Contractor shall pay to the Government as liquidated damages, the sum of $560 for each day of delay. The work shall be all construction activities performed for final project acceptance by the government but does not include the one year of post-construction site maintenance.

* * *

2A. *ORDER OF WORK.* The Contractor shall follow the general construction sequencing below.

(1) Contractor preparation/submission/approval of all required plans to the Contracting Officer. The Contracting Officer may consider partial plan submission/approval to provide for non-hazardous mobilization and support activities prior to full plan approval.

(2) Approval from the Contracting Officer to begin on-site work.

* * *

(4) Gas venting, collecting and treating.*

* * *

(9) On-site stabilization/neutralization of remaining unstabilized sludge and bedrock.*

* * *

Digitized by Google

* Indicates hazardous work.

* * *

5. *PHYSICAL DATA.* Pursuant to CONTRACT CLAUSES clause:

"Site Investigation and Conditions Affecting the Work," information and data furnished or referred to below are furnished for general information only and the Government may not be held liable for any interpretation or conclusions drawn therefrom by the Contractor.

* * *

5.2 *Weather.* Weather conditions shall have been investigated by the Contractor to satisfy himself as to the hazards likely to arise therefrom. Complete weather records and reports may be obtained from the local U.S. Weather Bureau.

* * *

11. *TIME EXTENSIONS FOR UNUSUALLY SEVERE WEATHER.*

11.1 *Anticipated Weather Delays.* This clause specifies the procedure for the determination of time extensions for unusually severe weather under the authority of the CONTRACT CLAUSE entitled "Default (Fixed-Price Construction)." The listing below defines monthly weather conditions for the contract period and is taken from Department of Commerce publication "Climatological Data Annual Summary, Volume 88, No. 13."

* * *

15. *CONTRACTOR QUALITY CONTROL (CQC).* In conformance with the requirements of CONTRACT CLAUSES clause: "Inspection of Construction," the Contractor shall establish and maintain an effective Quality Control Program.

* * *

27. *CONTRACTOR PREPARED NETWORK ANALYSIS SYSTEM (NAS).*

27.1 The progress chart to be prepared by the Contractor pursuant to the CONTRACT CLAUSE entitled "SCHEDULE FOR CONSTRUCTION CONTRACTS" shall employ a network analysis system as described below. Implementing this system for the planning and scheduling of construction shall be the responsibility of the Contractor.

* * *

28. *TIME EXTENSIONS FOR UNUSUALLY SEVERE WEATHER.*

* * *

C. Technical Provisions

(1) Section 1C, Environment Protection, Paragraph 2, which generally requires the contractor to submit and have approved a plan for environmental pollution control prior to beginning any work and to meet with the representatives of the Contracting Officer to discuss this plan;

(2) Section 1C, Environment Protection, Paragraph 9, Dust Control;

(3) Section 1D, Safety, Health and Emergency Response, Paragraph 1.1, which states in part:

"*The Bruin Lagoon Site consists of about a 6-acre fenced site with approximately 4 acres contaminated with oily wastes.* These wastes are derived from the manufacture and refining of oil materials. *The major site hazards are high acidic soil and some organic materials.* Stabilization of the site has been attempted in the past. *In May 1984, a toxic gas was released from the site when a layer of lagoon material was penetrated...*" (Emphasis supplied).

(4) Section 1D, Safety, Health, and Emergency Response, Paragraph 5, *et seq.*, describes the personnel protective program and the levels of personnel protection required based upon the work being accomplished;

(5) Section 1D, Safety, Health and Emergency Response, Paragraph 12.9, Action Levels, states the requirements for the contractor when contaminants are encountered at the levels cited;

(6) Section 1D, Safety, Health and Emergency Response, Paragraph 13, Site Specific Compound Summary, which provides information concerning the chemical compounds expected to be found in the lagoon, exposure limits applicable to these compounds, physical properties of these compounds, and an EPA model of the release of certain gases;

(7) Section 1E, Contractor Chemical Quality Control Section (CCQCS), Paragraph 2.6.1, identifies chemical tests to be accomplished during remedial construction. The last test listed is: "Stabilized Waste (pH measure on-site)." Table 1E-1 of this section, which starts on page 1E-45 of the specification, also details required testing. On page 46, Stabilized Waste is shown as being required to be tested for each 50 cubic yards of placement, and its pH is to be determined;

(8) Section 1G, Definitions, provides definitions of terms used in the contract;

(9) Section 1N, Summary of Work, generally describes the history of the Bruin La-

©1994, Commerce Clearing House, Inc.

Digitized by Google

goon Site and what work is to be accomplished. Paragraph 3.2.4.1 of this section warns of sludge migration and "oozing." Paragraph 3.2.4.2 discusses gas venting. Paragraph 3.2.4.3 describes the general mix to be used for two types of waste and informs the contractor that adjustment of these formulas will be needed to meet the specified pH criteria. The provision also specifies that quick lime will not be used, and that when mixing sludges and wastes a pH range of 9 to 11.5 is to be maintained.

(10) Section 1P, *Measurement and Payment,* describes the various items of work included within the contract, and how they are to be measured for payment purposes. Paragraph 4.2(a) describes the materials to be excavated as *black oily tar, black coal/ash wastes, yellow waxy sludge,* previously stabilized sludge, and common soil to be mixed for stabilization. (Emphasis supplied).

(11) Section 1Q, Special Project Procedures required because of the potentially hazardous nature of the work. Approval of the plans listed within this section is a prerequisite for project startup.

(12) Section 2C, Pre-Construction Gas Vent Wells, Paragraph 1 states:

"*GENERAL.* This section describes the well drilling procedure, gas collection, and treatment requirements that the contractor shall implement prior to and during lagoon stabilization. Materials, for construction of the gas vent wells, are described in Section: Monitoring Well Installation.

1.1 Due to the fact that prior stabilization activities encountered *violent gas emissions,* the contractor shall install the gas collection and treatment system prior to any lagoon disturbances. (Emphasis supplied).

1.2 This section shall be implemented to help minimize any sulphur dioxide (SO_2) and hydrochloric acid (HCL) releases which could adversely affect site personnel, surrounding residences and the environment . . .";

(13) Section 2H, Sludge Stabilization, is the specification which describes most of the actual work required under the contract. Paragraphs 1.3, 1.5, 1.5.1, and 1.5.2 were deleted by Amendment 0001 to the solicitation;

(14) Section 2H, Sludge Stabilization, Paragraph 1.4.4, *et seq.,* which describes the *use of environmental foam in the event the contractor encounters hazardous gas emissions* of a certain level; (Emphasis supplied).

(15) Section 2H, Sludge Stabilization, Paragraph 1.9 which lists the estimated quantities as follows:

Black Sludges and Wastes	19,000 c.y.
Yellow Waxy Wastes	1,800 c.y.
Previously Stabilized Sludges	20,500 c.y.
High pH Soil	47,600 c.y.
Existing Dike Embankment	23,500 c.y.

1.10 The proposed excavation quantities associated with lagoon stabilization include:

Black Sludges and Wastes	19,000 c.y.
Yellow Waxy Wastes	1,800 c.y.
Incidental Stabilized Sludge and Soil (Assuming 1H:1V Sideslopes)	60,600 c.y.

(16) Section 2H, Sludge Stabilization, Paragraph 2. *MIX FORMULA,* particularly Subparagraph 2.3 Mix Design, which states:

"*The following are the mix designs for the black sludge/waste and the waxy sludge/waste. The design mix shall be used as a guideline and may need to be adjusted during the stabilization process because of the variation in the sludge consistency.* The sludge and soil should be mixed initially followed by the addition of lime . . ."; (Emphasis supplied).

(17) Section 2H, Sludge Stabilization, Paragraph 3.1.2 Performance Objectives, particularly,

"To provide effective remote mixing stabilization of the sludge, *the mix as recommended in Paragraph 2.3 or mix which provides equivalent performance may be used.* The processing/mixing procedures must be developed and optimized in the contractor's stabilization plan . . ."; (Emphasis supplied).

(18) Section 2H, Sludge Stabilization, Paragraph 3.1.2.2, particularly:

"The final neutralized product shall achieve decreased acidity of the stabilized sludge. Field testing procedures shall be utilized to confirm that the neutralized sludge mixture has a pH greater than 9.0 and less than 11.5 (EPA SW846 method 9045).";

(19) Section 2H, Sludge Stabilization, Paragraphs 3.1.2.4 and 3.1.3.8 discuss what standard of compaction is to be gained for the stabilized sludge, particularly,

Digitized by Google

"The remote stabilized mixture shall then be compacted in maximum 8-inch loose lifts with a roller into the previously excavated area after it has attained the physical characteristics as specified in Paragraph 3.1.2. The compaction shall be 100% of the density obtained by ASTM D 698 at the in place moisture content and pocket penetrometer reading of unconfined compressive strength of 2.0 tsf.";

(20) Section 2H, Sludge Stabilization, Paragraph 3.1.4 identifies certain kinds of waste, which can be compacted in the stabilized sludge.

(21) Section 2H, *Sludge Stabilization,* Paragraph 3.2., *Bedrock Neutralization,* provides the following:

"Bedrock, once exposed by excavation, shall be neutralized by placing a 6 inch layer of crushed aggregate limestone and ground agricultural limestone directly on top of the bedrock. Once in place, backfilling operations may begin . . . .

3.2.3. Based on earlier findings, it is anticipated that the ground water table in the northeast section of the lagoon will be on the order of one (1) to three (3) feet above the surface of the bedrock. In this area the limestone aggregate layer shall be placed to the level shown on the Drawing. If needed, additional aggregate shall be placed to sufficient thickness such that its top surface is at least six (6) inches above the water level, thereby precluding the backfilling of stabilized waste into the ground water."

(22) Section 2H, *Sludge Stabilization,* Paragraph 5, *Sampling, Testing and Quality Control,* Subparagraph 5.4 provides the following:

"If the results of the quality control sampling and testing indicate that the performance objectives of Section 3.1.2 are not being achieved, the design mix shall be adjusted until the performance criteria are achieved. The adequacy of the inplace stabilized sludge must be evaluated by the Contracting Officer. . . ."

(23) Appendix A to the contract specifications, Supplemental Field Investigations Data, contains 142 pages of drilling and well logs. These logs generally identify sludges, rocks, debris, etc., present in the soil and provide data as to the hardness of the material.

D. Contract Drawings

(1.) Drawing No. 2, Sheet 2, Existing Features and Boring Location Plan, provides an overview of the Bruin Lagoon, the location of the borings, and existing contours. The second note on the right hand side of the drawing states that boring logs are to be found in the specifications at Appendix A. The boring logs and contract drawings describe the existing conditions as containing "rock fragments, rock, crust, boulders, cobbles, other hard materials and hard clays," and describe hardness of the material in terms of "blow counts."

(2.) Drawing No. 3, Sheet 3, Existing Sections, provides two material profiles located on Sheet No. 2. Materials identified include: *black tar-like sludge, oily ash-like waste, soil/sludge mix, black, oily tar-like and ash-like waste, and a yellow waxy paste.* (Emphasis supplied).

(3.) Drawing No. 4, Sheet 4, Existing Sections, 2 of 2, provides much of the same type of information as found on Sheet 3. Both Drawing Nos. 3 and 4 contain the following note

NOTE:

THE GEOLOGIC SECTIONS PRESENTED IN THIS DRAWING ARE INTENDED ONLY AS VISUAL AIDS REPRESENTING GENERALIZED SUBSURFACE CONDITIONS INTERPRETED FROM BORING LOGS *PROJECTED* TO SECTION LINES. SOME INCONSISTENCIES IN SURFACE AND BEDROCK ELEVATION AT INTERSECTING SECTION LINES HAVE RESULTED FROM THE BORING-PROJECTION METHOD OF INTERPRETATION. *SEE BORING LOGS FOR CONDITIONS ENCOUNTERED AT SPECIFIC LOCATIONS.* (Emphasis supplied).

CONDITIONS ENCOUNTERED DURING EXCAVATION MAY VARY FROM THOSE SHOWN HERE.

(4.) Drawing No. 5, Sheet 5, Erosion and Sedimentation Control Plan, contains notes about the construction sequence, and the hydrology of the site.

(5.) Drawing No. 7, Sheet 7, Construction Plan, shows, in the upper right hand corner, legends for four different kinds of waste identified on the drawing to the left. The note on the right hand bottom of the page states:

"The excavation limits shown here are approximate limits based on available data. In the event that unstabilized waste is encountered at the boundary shown, the excavation and stabilization shall continue as far as required beyond the limits shown

©1994, Commerce Clearing House, Inc.
Digitized by Google

until unstabilized waste is no longer encountered...";

(6.) Drawing No. 8, Sheet 8, Construction Sequence, contains general notes on the right hand side of the drawing. Note 1 informs the contractor of the need to have movable barriers to contain raw sludge in the excavation pits. Note 2 states:

"*The existing lagoon does not contain a homogenous material but rather intermingled pockets of wastes and soils of different consistencies.* The contractor shall be responsible for choosing his own equipment type and size to complete the excavation, stabilization and backfill." (Emphasis supplied).

E. Appendix A is one hundred and forty-two pages of data taken from borings made on the project site. The generalized cross-section on drawings Nos. 3 and 4 were taken from this data, with specific reference to see the borings for specific data at a particular location. Examples of the detailed information found on the boring logs are as follows:

(1) Numerous references to the "Soil Density-Consistency or Rock Hardness" as hard, medium, stiff, very stiff, very dense, etc.

(2) Various "blow counts" showing material to be anywhere from soft to very hard.

(3) Many descriptions detailing the intermixing of material such as "Dr. grayish brown Silt, some sand, grades moist to saturated with some black ash like material; "Yellowish brown Silt, and Sand tr. black ash like material; "Black tar like material, very plastic and sticky," "Clay-like material medium to highly plastic, very sticky, saturated with occasional fabric-fibers, tr. wood, tr. ash like material, some white sticky material (possible caisco)," etc.

(4) Considerable number of repetitive and informative remarks such as "Boring terminated because of vast quantities of tar like material being augured up," "Some Blocky Structure," "Blk. Tar-Like waste on Fracture Faces," "Auger Refusal." Numerous SO_2 and H_2S gas releases while performing borings were noted on a scale as ">50,>399, OF (off scale)."

ENG BCA No. 5749

22. Following the preconstruction conference of December 9, 1988, and the notice to proceed of January 4, 1989, Appellant submitted the contract-required plans which included the sludge stabilization plan and the network analysis system. (Tr. 57-61; Exh. A.5,6). The network analysis schedule showed a completion date of October 10, 1989, reflecting Appellant's intention to complete the work in one construction season. Appellants's Sludge Stabilization Plan, as submitted on January 27, 1989, stated an intent to mix sludge, bulking material and lime with backhoes equipped with Standard buckets, while reserving the right to use other equipment to insure proper mixing. (R.4, Tab 53). The critical path shown on the network analysis system submitted on February 2, 1989, included the sludge stabilization effort. The plans were returned without approval and with comments. Geo-Con's submittals were incomplete. The Safety, Health, and Emergency Response Plan (SHERP) was returned with 233 comments requesting clarification or additional information. (Tr. 646, 647). Many of the same comments were made on successive Geo-Con submissions. (Tr. 648, 649).

23. By letter dated February 7, 1989, sent in response to Appellant's comments concerning the preconstruction conference, Respondent stated that Paragraph 2.3 of Section 2H, *Sludge Stabilization,* of the contract, indicates, "the design mix shall be used as a guideline and may need to be adjusted during the stabilization process because of the variation in the sludge consistency." The Government went on to state, "If work performed exceeds the scope of work under Section 24, then a modification will be issued under the applicable Contract clauses. Merely changing the size or formula of the mix, in accordance with Section 24, does not constitute a change to the contract." (R.4, Tab 67). Appellant did not respond to Respondent's statement at that time. At a meeting on February 23, 1989, to discuss the Respondent's comments, Appellant accepted Respondent's comments except for an issue concerning removal of existing sewer and water lines which is not a part of this appeal. (R.4, Tab 57).

24. The contract plans and specifications indicated that sludge stabilization was to be performed in Area 1 and then in Area 2. Following the completion of the site work in Area 1 and the installation of the remote recording equipment, sludge stabilization could commence. Appellant planned to commence sludge stabilization on April 10, 1989; but, because of various problems, including getting necessary approvals of plans, it did not begin stabilization until June 26, 1989. (Tr. 94; R.4, Tab 107). However, mobilization had begun around March 23, 1989. (Ex. R-102). Government representatives at the

Digitized by Google

project site recommended to Geo-Con that it use the southeast corner of the site for its material storage area as was indicated on the contract drawings. (Tr. 554, 555). However, Geo-Con used this area to set up its trailer complex. (Tr. 553). This required Geo-Con to stockpile excavated material along the perimeter of Area 2 when it commenced its major excavation, which resulted in an intermingling of backfill and waste material, a restricted traffic flow in an already constrained area, and a surcharge which pushed waste material into areas already excavated. (Tr. 554, 926-927).

25. Appellant commenced excavation of small test pits which revealed little sludge and mostly bulking agent with a pH greater than 12. (Tr. 61-63). On June 26, 1989, Appellant began mass excavation of Area 1. (Exh. R-101). On June 28, 1989, during a job site meeting, Appellant notified the Government of the presence of rocks in the excavation. (R.4, Tab 65, 66, 68, and 74).

26. The specifications provided the quantities, in cubic yards, of the black sludge/waste and yellow waxy waste that Appellant should expect to encounter. The Contract included cross-sections of the areas to be excavated detailing the location and extent of the contaminated material. The cross-sections summarized Respondent's interpretation of the results of earlier subsurface exploration. The cross sections showed the area extent and depths of the pockets of material classifications black sludge/waste and yellow waxy waste which required neutralization. However, during the July 5, 1989 progress meeting, Appellant informed Respondent that it was having difficulty in distinguishing raw sludge from bulking material, as the material in place allegedly differed from the contract-stated black oily or yellow waxy description. (Tr. 61-63). Respondent's construction representative for quality assurance testified that the materials were visually identifiable and were found as to be expected from the cross sections and borings. (Tr. 975, 1003).

27. Appellant was required by the specifications to identify sludge material by pH sampling in order to determine the proper mixture. Low pH was to be treated as if it were the yellow waxy material. (Tr. 301-319). The pH testing was more time consuming than visual identification.

28. Appellant planned on using a large hydraulic excavator to remove the different materials. Appellant stated that it would be able to excavate the materials separately because the materials allegedly were shown to be to a large extent segregated. Appellant anticipated that sludge stabilization would be accomplished in about seventy-three work days, or about three months. However, the sludge was not found in large deposits but was encountered in thin discontinuous "marbleized" layers intermingled throughout the excavation area. (Tr. 954-956).

29. Appellant had planned to excavate and stabilize approximately 1000 cu. yds. of material a day, however during the first month it treated no more than between 300-400 cu. yds. per day. (Tr. 276, 855, 856). Appellant indicated that the reason for this low production was because the material was not found in distinct, segregated pockets but in fact in a "marbleized" condition. (Tr. 954, 956). Respondent, who did not consider the production low for what it considered to be a two year project, indicated that Geo-Con's problems were the result of unsuitable and too much equipment for the limited work area of the site, equipment downtime, particularly the large DMAG which was down more than it was operable, poor site plan, lack of management oversight, uncoordinated work effort, equipment collision, abuse of equipment by inexperienced operators, and numerous heat stress rest breaks as the cabs of the equipment were not air conditioned. (Tr. 555-557, 928, 1065, 1068). Respondent supports its position with contemporaneous diary entries made by Robert Brandt, Appellant's group manager, which stated in essence as follows:

a. Brandt indicating work at site disorganized and that Obenauf, project manager, was ineffectively managing the site.

b. Ryan complained to Brandt of men taking excessive time on breaks, of poor uncoordinated equipment movement, and a general lack of enthusiasm and told Brandt to "kick it and make it go."

c. Ryan and Brandt discussed need for second shift, additional supervision, and a good operations manager.

d. Operator causing problems—switch after lunch. Job seems fragmented, needs direction.

e. Work uncoordinated, lack of direction, trucks sitting, loaders cannot get to pits, trucks in one another's way (Tr. 264, 268, 269, 270, 929, 1028; Exhs. R-8, 10, 13).

30. The contract-recommended sequence of work was for excavation to proceed in Area 2 from the west side to the east side in three stages. (Exh. R-86, Sheet A; R.4, Tab 47). By following the contract-recommended sequence, the Contractor could have used

©1994, Commerce Clearing House, Inc.
Digitized by Google

each zone as a working platform and stockpile area while excavating the adjacent zone. Geo-Con did not follow the contract-recommended sequence, which caused a limiting of the work area available for equipment movement. (Tr. 558-560).

31. Geo-Con encountered additional problems in its stabilization effort such as: (1) lack of appropriate clean up of bedrock; (2) 1:1 slope not maintained which caused some material to fall into the excavated area; (3) lime stockpiles were not maintained causing shortages for mixing operations; (4) lack of water control on the site caused rain to make site a quagmire and unworkable. (Tr. 932, 1070-1072).

32. As most of the material excavation had a pH over 12, it was classified under the contract as bulking material and could not be used for backfill. Appellant stocked the bulking material to use eventually with the low pH sludge. This would bring the pH of the combined material to less than 12 and make it suitable as backfill. (Tr. 462-465).

33. On August 8, 1989, the Corps allowed high pH material, which had been stockpiled, to be used as backfill, provided:

> Stabilized sludge with a pH greater than 12.5 can be placed on an occasional basis only, provided the Contractor mixes lower pH material during compaction efforts with the sheepsfoot roller. This mixing requirement also applies to any material placed as backfill that has a pH of 11.5 to 12.5.

34. The sludge material encountered varied significantly in pH values which made the design mix stated in the contract to achieve the required pH inapplicable in certain situations. (Tr. 62, 63, 276).

35. Appellant continued to encounter numerous rocks and a "hardened crust" up to 5 feet thick which made its plan of excavation using backhoes with rotary-mining attachments unworkable. Appellant eventually utilized backhoes with a standard bucket to mix the material. (Tr. 215).

36. While Appellant excavated in Area 1, concentrations of contaminated sludge began to seep from beneath the existing protective dike on the east side. This area was outside the limits of excavation shown on the contract drawings. The Respondent decided not to increase the work area and directed Geo-Con to spread lime over the contaminated area before backfilling. There was no provision in the contract for this work.

37. On August 1, 1989, Appellant began placing stabilized material into the excavation in Area 1.

38. The specification in Section 2H, Paragraph 3.1.3.8, required that the stabilized material was to be placed in the previously excavated area and compacted in eight inch lifts, and that "the compaction shall be 100% of the density obtained by ASTM D698 at the in place moisture content...". During the review and approval of the Sludge Stabilization Plan, Geo-Con asserts it was directed to change the compaction criteria from in-place moisture content density to "... 100% of maximum dry density as determined by ASTM D698." (App. Exhibit 32). However, Respondent asserts that Geo-Con, itself, had proposed the 100% of maximum dry density in its stabilization plan. (Tr. 862, 867; R.4, Tab 53). This stricter criteria allowed Appellant to save time by eliminating the need to test the material to determine the moisture content. (Tr. 864). The Government permitted Geo-Con to use the stricter test. (Tr. 863).

39. The contract also required that the backfill material was to have a water content of less than 32% as determined by ASTM D2216.

40. As backfill proceeded, Appellant found that the material which had been stabilized did not meet these two criteria. The stabilized sludge contained liquids, other than water. Appellant reworked the lifts of material, adding dry bulking material. In some instances, Geo-Con placed dry bulking material in an attempt to "dry out" the fill. Numerous QA/QC reports indicate that the material could not be compacted at all if the moisture content exceeded 24 percent. When the moisture content was above 24 percent, the material would pump. When the stricter test could not be met, Appellant went back to the contract-required test. (Tr. 864).

41. The backfill operation proceeded at a rate much slower than had been planned. Since Area 1 was designated in the contract as the stockpile area for material removed from Area 2, sludge stabilization in Area 2 could not proceed until the Area 1 fill was completed.

42. The Area 1 fill was completed on August 16, 1989. The volume of material to be excavated from Area 2 was more than six times the volume to be excavated from Area 1, and the limited work site precluded the complete excavation of Area 2 before beginning the backfilling of Area 2. Appellant's

Digitized by Google

plan of operation divided Area 2 into three portions, as follows:

> The next [after Area 1 completed] area containing material requiring treatment is located in the western one-third of the northern lagoon portion . . .
>
> The contract portion that is adjacent to the eastern third will be worked next . . .
>
> The last raw sludge source is located along the eastern dike of the lagoon.

43. Appellant encountered the same subsurface conditions in Area 2 as in Area 1. The sludge allegedly was not visually identifiable, and the quantities of sludge were significantly less than anticipated. The amount of bulking agent greatly exceeded the amount anticipated, and Appellant had to stockpile the material in case it was needed as bulking material later. In addition, the pH of the material was in excess of the required pH of backfill thus rendering it unusable until after it was mixed with low pH contaminated sludge.

44. With the difficulties it had experienced in Area 1 and the difficulties which it was continuing to experience in Area 2, the possibility of completing the project in one year appeared unlikely. In addition, as the sludge stabilization work was temperature dependent, the remaining time available during the 1989 construction season was limited. The contract required that: (App. 37)

> No stabilized sludge shall be mixed or placed if the temperature of the materials either in-place or in the stockpile is less than 45° F.

45. This temperature requirement effectively limited the performance of sludge stabilization to the months of April through October.

46. With the loss in productivity during July and August, Geo-Con accelerated its efforts to try to complete sludge stabilization before winter weather precluded the work. Geo-Con added one mixing pit and expanded the size of the existing pits, effectively doubling the work area, and brought on a second shift, doubling the daily work time. The second shift began operation on August 15, 1989. (App. Exh. 38).

47. On August 16, 1989, Geo-Con notified the Corps that it was raising the pH of the contaminated material by using the stockpiled high pH bulking material instead of adding lime. (App. Exh. 35). Geo-Con was subsequently directed by the Corps to add lime without regard to the resulting pH of the material. The Corps confirmed this when it commented on the minutes of the August 16, 1989 meeting, as follows: (App. Exh. 40)

> Any batch of material containing sludge must be mixed with hydrated lime to neutralize and stabilize the material.

The Respondent indicated that the addition of lime was not necessary to raise pH, but would resolve the problems associated with compacting the stabilized sludge during backfill operations.

48. At this time, Geo-Con discovered that the pH was dropping in the stockpiled material. (App. Exh. 42). At a meeting of August 28, 1989, the Corps directed Geo-Con to spread a layer of lime and work it into the lift when placing material from the stockpile. (App. Exh. 43).

49. By the beginning of September, the original concept of segregating the materials and then applying different specific dosages in a discriminate manner had given way to wholesale treatment of everything with massive dosages of the ingredients in the mix formulas, indiscriminately raising pH to change the materials from acids to bases.

50. When it did not encounter sufficient quantities of sludge in the first third of Area 2, Appellant widened the scope of its excavations. At the September 6, 1989, progress meeting, Geo-Con stated that: (App. Exh. 36)

> Excavation is now proceeding eastward toward the NE corner of the lagoon. Once the NE corner is finished, the excavation will proceed toward the south. This move is being made in an attempt to find low pH sludge. To date, no large pockets of raw sludge have been found.

51. Appellant alleged that the enlargement of the excavation beyond the planned area prevented backfilling of the excavated areas with stabilized material, required the sludge which was found to be stockpiled, hindered movement around the site, and caused double handling of the material, forced the equipment movers back and forth searching for sludge, and disturbed the ground surface until the ground would not support the equipment which would then bog down.

52. While excavating raw sludge on September 11 and 12, 1989, and at times thereafter, Appellant experienced "off-gassing" of potentially hazardous gasses that met or exceeded the stated minimum levels for gas in the contract specifications which would require Appellant to take precautionary actions . . . (Tr. 319-320; R.4, Tabs 65, 66, 90, 92 and 93). In lieu of covering the affected

©1994, Commerce Clearing House, Inc.

Digitized by Google

areas with environmental foam identified in paragraph 1.4.4 of Contract Technical Provision Section 2H, Sludge Stabilization, the Government permitted Appellant to smother the gasses with bulking material. (Tr. 1062-1063; R.4, Tab 65 No. 63, 66, and 93).

53. Five times in September, on the 11th, 12th, 26th, 27th and 29th, Geo-Con stopped all work and evacuated its employees. (App. Exh. 46). Off-gassing occurred when during the Contractor's excavation sludge materials were exposed. (Tr. 319). The contractor's dragline method of excavating exacerbated the off-gassing. (Tr. 1059-1063).

54. On September 30, 1989, Geo-Con notified the Corps of the continuing impact of the "off-gassing": (App. Exh. 47)

> Due to the unusual high readings of gas (HCL and SO_2) in the active work area, Geo-Con was instructed to do the following:
>
> Real time monitoring is to be performed in the bottom of the excavation pit ... every thirty minutes during construction operations. If equipment has to be stopped it will be done to perform this monitoring.
>
> If readings of gas exceed action levels, the excavated area is to be immediately covered, active work areas shut down, personnel evacuated and report readings to the Contracting Officer and await further instructions.
>
> Time for these delays will be logged and if additional costs are incurred by Geo-Con, a request for additional compensation will be submitted.
>
> (Tr. 278-279).

55. As efforts to perform sludge stabilization continued, gas emissions on October 2, October 3, October 5, October 6, and October 10, 1989, stopped operations. (App. Exh. 48).

56. With the onset of colder weather which would restrict and eventually preclude the sludge stabilization process, Geo-Con, at a special meeting on October 12, 1989, notified the Corps that it was shutting down the project until warmer weather. (Tr. 889; App. Exh. 49). Geo-Con proceeded to backfill the excavated area, seal exposed sludge areas with a layer of stabilized material, grade the stockpiles, and grade and ditch the site to direct runoff into the sedimentation basins. Geo-Con began removing its equipment and, except for a skeleton crew, its personnel. (App. Exh. 50).

57. At the job site meeting of October 12, 1989, Appellant informed the Government it would be submitting a claim for various differing site conditions, including the existence of "large rocks" in the bulking material, the pH of the material, the "absence" of sludge, and the off-gassing. (R.4, Tabs 93 and 102).

58. On November 14, 1989, the Corps confirmed its position taken at the October 12, 1989, meeting that it did not see a basis for an equitable adjustment to the contract for the problems Geo-Con experienced in stabilizing the sludge during the 1989 construction season, and advised Geo-Con to pursue relief under the "Disputes" clause. (App. Exh. 51).

59. Correspondence between the Contractor and the Government concerning the alleged differing site conditions continued during the remainder of 1989. (R.4, Tabs 97, 98, and 101). During a special progress meeting held on December 4, 1989, Geo-Con notified the Government it would be submitting a claim for the various differing site conditions discussed above, and added an assertion that it could not identify and segregate materials to be stabilized from bulking and previously stabilized material. (R.4, Tabs 103 and 106). This meeting was the first written notice provided by Geo-Con to the Government concerning its alleged inability to identify materials by color.

60. Modification P-00007 to the contract was issued on January 29, 1990. (R.4, Tab 116). This modification granted Appellant a 16-day time extension for unusually severe weather during the sludge stabilization process in 1989.

61. On February 22, 1990, Appellant submitted a claim which alleged differing site conditions relating to rocks, lack of segregated materials, absence of sludge, off-gassing, delays and problems with identifying materials, and requested $1,770,804.11 in compensation. (R.4, Tabs 107 and 108). Although this claim was certified in accordance with the Contract Disputes Act, the certification required by Contract Clause 76, for overhead costs, was not provided. (R.4, Tabs 3, 107, and 108). Following docketing by the Board as Appeal No. 5749, Appellant, on August 15, 1990, filed a Complaint with the Board. On March 27, 1991, at the request of the parties, the Board issued an Order of Dismissal Without Prejudice with right of reinstatement. On January 8, 1992, at the request of Appellant, the Board reinstated Appeal No. 5749.

ENG BCA No. 5976

62. The findings of fact stated previously in ENG BCA No. 5749 are incorporated into ENG BCA No. 5976 as background of the continuing dispute between the parties for the years 1990 and 1991.

63. By letter dated February 9, 1990, Appellant reiterated its problems encountered in 1989 and submitted a revised work plan. (R.4, Tab 68). Geo-Con proposed going to an in-situ "shallow soil mixing" method to stabilize the site and to minimize off-gassing. (Tr. 83-87; Exhs. A-13, A-20). On March 2, 1990, Respondent rejected the proposal as this method had never been used with acidic sludge, could not scrape and seal the bedrock, and could not stabilize hard material. (Tr. 907-908). Following a series of meetings, Geo-Con submitted a revised sludge stabilization plan which the Corps approved. Geo-Con proposed a change in methodology for sludge stabilization in 1990. Instead of large hydraulic excavators, a Manitowoc 3900 dragline with a four cubic yard bucket would excavate, premix, and place the material in the mixing pits. The use of this machine placed the operator over one hundred feet from the source of any off-gassing. The boom length gave the dragline an ample area from which to collect the necessary materials for proper mixing. Secondly, the dragline operation would have the effect of premixing the sludge and soils during its excavating cycle. The dragline operator would attempt visually to balance the proportions of sludge and bulk in accordance with the specification requirements as the pit was loaded. During pit loading operation, a front-end loader would shuttle lime from a silo to the mixing pit. After the pit was loaded, an hydraulic backhoe would mix the materials in the pit to combine the sludge, bulking soils and lime. While the material was being mixed by the backhoe, the dragline would load a second pit with soil and sludge. In May 1990, Appellant began the mixing of sludge in the mixing pits. (Tr. 98-100, 275; Exh. 146; R.4, Tab 69). Geo-Con had removed Mr. Obenauf and replaced him with Mr. Brandt as project manager and Mr. Workman as superintendent. (Tr. 210, 228, 231). Geo-Con's productivity increased in the second year over its first year efforts. (Tr. 230-232).

64. On June 11, 1990, Respondent informed Appellant that contentions of differing site conditions must be provided prior to Appellant's disturbing the site and alleged that when it went to investigate the Appellant's numerous alleged differing site conditions the sites had been disturbed preventing investigation. (R.4, Tab 69). Geo-Con continued to insist that it could not utilize the specified mix design to achieve the required results, which made for considerable remixing. (Tr. 100, 326). Respondent insisted that part of the problem was that Geo-Con's mixes did not comply with contract requirements, were poorly performed, and that the recipe should be adjusted by the Contractor to achieve the desired pH results. (Tr. 63, 240, 1049-1051).

65. On June 15, 1990, the Respondent allowed stockpiling of sludge at pH levels above 11.5 as the pH levels of the stabilized sludge had generally gone down over a period of time. (R.4, Tab 69).

66. By letter dated June 20, 1990, Appellant reported the results of bench scale tests of five segregated types of sludge: black solid hard sludge, white waxy sludge, grey sludge, black tarry sludge, and black coal fine sludge. Each was mixed with bulking agent and lime under the "recipe" prescribed by Section 2H, Paragraph 2.3, of the contract specifications. All five failed to meet the pH levels of 9 to 11.5. Four black hard solid sludge, white waxy sludge, black tarry sludge, and black coal fine sludge were not brought up to the required pH range; and one, grey sludge, exceeded the range. (R.4, Tab 70). The results of the bench scale tests were reported as follows:

1. Black Solid Hard Sludge—This material was likened to tar and at times required ripping to excavate from the area. A total of eleven samples were extracted of this material which exhibited a pH range of 0.45 to 1.16. The average pH of this material after throwing out both the low and high readings was 0.61, or almost as acidic as pure sulfuric acid which has a pH of 0.3.

2. Yellow or White Waxy Sludge—This material appeared to be the yellow waxy waste identified in the Specification. Six samples of this material were extracted which exhibited a pH range of 1.63 to 12.10. The average for this material, after throwing out both the low and high readings, was a pH of 7.99.

3. Black, Tarry Sludge (sometimes characterized as waxy or containing white or grey specks)—This material was softer than the black solid sludge in Item No. 1 and also tended to be a higher pH than Item No. 1. Sixteen samples of this material were extracted and a pH range of 0.52 to 6.59 was recorded. An average pH for this material, after throwing out both the low and high range readings, was 1.47.

©1994, Commerce Clearing House, Inc.

Digitized by Google

4. Black Coal Fines—This material, granular in nature, appeared to be a coal or coking waste and may have been the carbonaceous soil noted in TAT Well #4 and was readily excavated. Twenty samples of this material were extracted which exhibited a pH range of 0.58 to 2.75. An average of this waste, after throwing out the low and high range, was 0.71.

5. Other wastes encountered included a grey sludge with a pH of 1.19 to 1.48, a yellow tarry sludge with a pH of 1.07, and a muddy sludge with a pH of 0.10 to 1.22.

67. On June 21, 1990, the Respondent's consultant, GAI Consultants, Inc. ("GAI"), stated the conclusions of a previously made site visit. (R.4, Tab 71). It reported that the recipe was working, albeit requiring occasional overdosing with lime and remixing of batches. However, Appellant contended that the "mix design" in the specifications did not provide the expected results, on many occasions. Respondent countered that Appellant's charging of the mixing pits was not consistent and mix proportions were not according to design.

68. On July 2, 1990, a second bench scale study was conducted by Appellant. This time six batches of sludge using the specified recipe were tested. (R.4, Tab 72). All but one of the treated batches fell below the required pH range of 9 to 11.5. One, gray with black streaks, exceeded it. None fell within range.

69. At the progress meeting of July 5, 1990, Appellant reported it had achieved the proper pH range with the use of additional lime and announced a revised plan to use a dragline. The Government agreed to the plan. (R.4, Tab 73).

70. On July 10, 1990, Respondent questioned Appellant's use of a D-9 loader in places where it contended a D-68P would have been more efficient. (R.4, Tab 69).

71. On July 17, 1990, the Government permitted the stabilization of sludge at pH levels of seven (7) or above, provided that the pH of backfill was also at an acceptable level. (R.4, Tab 69).

72. In the middle of July, 1990, Appellant encountered two layers of "black, solid, hard sludge" which its excavating equipment could not penetrate. The material varied from 3 to 7 feet in thickness. Eventually Appellant used a "dozer" to break up the material in order to remove the material to the mixing pits for stabilization. (R.4, Tab 79). Boring logs and drawings pertaining to the areas where the material was encountered indicated hard, stiff materials and crusts were to be expected. (Tr. 1116, 1121).

73. During the mixing cycle of the black, solid, hard sludge, temperature in the mixing pit generally reached 152F or higher. After the mixing was complete, the highest pH level of the 11 bench scale tests was 1.88 with an average of 1.4 which was well below the required minimums. In order to achieve the proper pH levels, Appellant reduced the amount of sludge and provided greater quantities of bulking agent and lime.

74. During the breaking up of the black sludge, the initial mixing which raised the temperatures of the mixed product, and the later addition of large amounts of bulking agent and lime, significant off-gassing resulted which required the Contractor to take appropriate actions under the contract.

75. At the same time, Appellant was encountering major amounts of yellow/white waxy, black tarry and black coal/cokering waste sludge. With each of these sludges, Appellant found great difficulty in reaching the prescribed pH levels, which it blamed on the sludges not being homogenous or not having consistent chemical characteristics, on the contract-stated recipes not producing the required results, on the bulking agent not having the required high pH, and on the heat generated by the mixing process. Appellant alleges that the above problems were in conflict with what Respondent had indicated in the contract. Respondent replied to Appellant's allegations that nothing encountered was not as stated in the contract and that Appellant never gave notification of the alleged differing site conditions or problems in sufficient time for investigation before the area was disturbed. (R.4, Tab 80).

76. Off-gassing continued as a major source of contention between the parties in 1990. Appellant claimed that off-gassing occurred much more often than was to be expected, that at least 23 times during the 1990 season work had to stop for a minimum of 60 minutes because of off-gassing, that the alleged Government direction to use bulking agent to cover the gasses rather than the contract-required foam only trapped the gases and did not relieve the problem, and that the Government disapproved the Contractor's proposed solution because it did not want to admit to an off gassing differing site condition. (R.4, Tabs 78, 81, 83, 84, 85, 86, 87).

77. During the 1990 construction season, Respondent and Appellant jointly instituted a system for reporting incidents in an attempt to quantify the impact on the work of

Digitized by Google

remixing, material variability, and off-gassing. One hundred and twenty-eight incident reports were issued for the 1990 season, seventy-one of the reports concerned off-gassing. Respondent insisted that only the actual lost time for individual incidents was to be recorded. No impact was acknowledged by the Government.

78. The Respondent brought in GAI consultant (GAI) to review the off-gassing problem, and GAI found the problems stated by the Contractor to be "exaggerated." (R.4, Tab 88). Respondent informed Appellant that it was reporting shut-downs due to off-gassing when other reasons existed, that some of the Contractor's monitoring devices were either not working or calibrated in error, and that the Contractor's air monitoring system had been deficient in both 1989 and 1990. (R.4, Tabs 94, 95, 98, 99, 100).

79. The Contractor continued to assert in 1990 that it was unable to classify sludge by color and had to resort to pH testing to determine mixing ratios. (R.4, Tab 79).

80. Appellant alleges that the work was affected by six significant impacts in 1990: material variability that required substantial remixing of batches; hard lenses of material not identified in the plans or borings that required substantial ripping by a large bulldozer before it could be excavated; substantial off-gassing of the excavated materials that necessitated stringent control measures and frequent work stoppages; material not segregated which required treatment of essentially all excavated material instead of only the portion defined by the project specifications; weather and temperature restrictions; and disruption of the work caused by delayed restart of productive operations following any incident of work stoppage.

81. As noted on incident reports, twenty-seven "pit remixes" were required between May 24 through July 12, 1990, because of low pH.

82. On July 13, the Government disregarded the contract defined pH range and permitted "overdosing" with lime to reach an acceptable stabilized product. No additional costs for remixing are claimed by Appellant after July 13, 1990.

83. As noted on incident reports, forty-five hard cement-like lenses of dense material requiring "ripping" machinery to remove were encountered by Appellant during the 1990 season.

84. Appellant continued to experience off-gassing of HCL (hydrochloric acid) and SO_2 (Sulfur dioxide) during the 1990 stabilization work. As noted on incident reports, 71 off-gassing actions occurred in 1990.

85. Sludge identification continued as a problem for Appellant in 1990, and it mixed approximately 72,310 cu. yds. of material, essentially all the material at the site.

86. According to the National Climatic Service, 1990 was the wettest year on record in the project area. Appellant's operations were delayed because of the wet weather. All work stoppages, for whatever cause, increased standby time and decreased productivity, which Appellant estimated as a 40% loss of efficiency for 1990.

87. Appellant returned to complete the job in 1991. Substantial completion was accepted as of July 17, 1991. By contract modifications, Respondent extended the scheduled contract completion date to November 9, 1990. Respondent had withheld $140,000 (250 days560) in liquidated damages. (Answer 155, 157).

88. Appellant submitted three claims for the 1990, and 1991 work effort.

a. $350,185.25 and 59-day time extension for the 1990 delays and costs;

b. $957,888.46 and 194-day time extension for the 1991 delays and costs;

c. $140,000 remission of liquidated damages.

89. The Contracting Officer decision denying all of the claims was issued on June 10, 1992. This was appealed by the Contractor on June 12, 1992.

POSITIONS OF THE PARTIES

Appellant contends that the specifications were design specifications wherein Respondent warrants satisfactory performance if Appellant complies with the contract requirements; that the design mix provided in the specifications for the Contractor's use did not perform as indicated; that significant off-gassing encountered by the Contractor during project work was unexpected and in conflict with indications in the contract; that rocks and hard lenses were unexpectedly encountered; that the visual identification of sludge material indicated in the contract was impossible and only pH sampling could identify the sludge; that the sludge was found in thin, discontinuous layers rather than the bulk quantities indicated in the contract; that liquid other than water prevented the Contractor from meeting the changed stabilization requirement of Respondent; that concrete-like dense sludge

©1994, Commerce Clearing House, Inc.

Digitized by Google

lenses were encountered because of the previous terminated work at the site and were not indicated in the specifications; that the type of sludge and the pH of the sludge and bulking material varied greatly from the consistency expressed in the contract specifications; that virtually all of the excavated material had to be treated and mixed, as compared to approximately 56 to 62% specified in the contract; that sludge came into the work area from outside the contract-defined work area; that the Contractor's site investigation did not reveal a project site so different from that stated in the specifications; and that the above differing site conditions, defective specifications, and changes caused a decrease in contractor efficiency and extended contract performance into three construction seasons rather than the one planned by the Contractor when bidding the job.

Respondent counters that the specifications were performance type which provided a specified formula, to be adjusted as necessary, for sludge stabilization; that the mixing formula when adjusted for the pH of the sludge, worked as contractually designed; that off-gassing was a problem to be expected as stated in the contract documents and as noted in the termination of the previous contract for sludge stabilization at this project site; that the borings, cross-sections, and contract drawings clearly forewarned Appellant to expect rocks, hard lenses and stiff concrete like material; that the sludge *was* visually identifiable; that the Contractor always planned and expected to perform pH testing to develop the proper formula for the particular sludge stabilization; that the contract plans and specifications detailed the sludge as being in thin, discontinuous layers, as well as in bulk pockets, as actually was found by the Contractor at the site; that Appellant, not Respondent, changed the compaction stabilization requirement in order not to have to test for water content; that the dense concrete-like layers encountered by Appellant were readily foreseeable by Appellant prior to bid on the basis of a proper site investigation, a careful review of the plans and specifications, and a review of the information available about the previously terminated contract; that the contract imparted to a Contractor the expectation of encountering various levels of pH at the project site and of the need to adjust the mixing formula to compensate for these variances; that Appellant mixed virtually all the material excavated because it believed this would be more efficient than segregating the material; that the contract provided for extension of the area to be stabilized in order to account for sludge from outside areas; and that there were no differing site conditions, Type I or II, no defective specifications, no changes, and no impacts on the Contractor's job performance because of the fault of Government design, action, or inaction.

DECISION

There exist numerous separate issues to be resolved in this appeal. Under the mantle of differing site conditions, defective specifications and change allegations hides the paramount issue of actual *impact* on Appellant's operations in stabilizing the "sludge" at the project hazardous waste site. As detailed in the following, Appellant and Respondent each prevail on certain of the distinct issues. As the appeal is here solely on entitlement, the quantum result from this decision reflecting the *impact* on Appellant's operations either will be negotiated by the parties or adjudicated later by this Board.

A number of the arguments presented by the parties can be characterized as "double-edged swords." For instance, does the fact that a previous contract for the same work was terminated for the convenience of the Government provide the Government with superior knowledge of the site or alert the Contractor as to the site conditions and the significant problems encountered by the previous contractor? By asserting significant time impact associated with issues on which it does not prevail does the Contractor limit recovery as to the issues on which it does prevail because of concurrent delays? This later issue may make negotiation of the appropriate equitable adjustment difficult.

As in many cases, there is much posturing by the parties in support of their positions; however, in this appeal, as is usually the case, the contract plans and specifications are generally the key elements determining the result as to each of the issues presented to the Board.

Before considering the specific issues raised by the parties, the Board notes that the record, as detailed in the findings of fact, is replete with evidence of Appellant's misreading the contract plans and specifications, misjudgment, intentionally under bidding by $1,000,000, poor work plans, poor construction equipment, poor excavation procedure, poor excavation work, and, initially, poor construction management. Appellant's obvious enthusiasm and aggressiveness to secure this contract led it to make judgments which, at best, were overly optimistic and, at worst, ignored the

Digitized by Google

clear warnings provided in the contract specifications and drawings. These factors have considerable impact and influence on the Board's ultimate decisions.

Mixing Formula

The Respondent provided in the contract specifications a mixing formula to stabilize the sludge which Appellant was directed—"shall use"—to use unless Respondent approved another formula requested by Appellant. Appellant reasonably relied upon Respondent's formula, particularly in the face of Respondent's stressing in the contract specifications the amount of time and effort that it and its consultant had taken in developing the formula in part based upon its experience on the previously terminated contract to provide sludge stabilization at this site. It was reasonable for Appellant to believe, after all the effort expended by Respondent and its consultants to develop the proper "recipe," and after considering the history of the earlier attempted remedial work at the site, that the mix design was developed to handle the "worst case scenarios" at the site, not just the average conditions for which, it later was revealed, the mix recipe was actually designed. Thus, Appellant reasonably relied upon the contract-stated mixing formula when it bid to perform the sludge stabilization.

Respondent's eventually allowing the use of a significant surcharge of "lime" in the mixing process in order to accomplish the stated performance results strongly suggests that the mixing formula was not adequate for complete job performance.

Respondent's argument that the contract specifications were performance and not design specifications is not supported by the record. Though the specifications state that the formula may require adjustment to meet the stated performance requirements, the specifications also state that the Contractor "shall use" the formula for mixing and stabilization of the sludge. Thus, considering all the effort expended by Respondent in determining the mixing formula, of which effort Respondent informed prospective bidders, the Appellant was reasonable in expecting the mixing formula, with possibly *minor* fine tuning, to produce the performance results for which it was designed by Respondent.

When the Government specifies a specific procedure for implementation, the Contractor has a right to rely on that procedure to accomplish the intended results, if the procedure is properly followed by the Contractor. An implied warranty runs from the Government to the Contractor that the detailed design specification, if followed, will produce an acceptable result. *See United States v. Spearin*, 248 U.S. 132 (1918); *J.D. Hedin Construction Co., Inc.*, 171 Ct. Cl. 70, 347 F.2d 235 (1965); *Lionsgate Corporation*, ENG BCA No. 5391, 91-1 BCA ¶ 23,368. When the mixing formula provided by Respondent did not produce sludge stabilization results which met the performance results specified in the contract and extensive remixing by Appellant was required, Appellant had encountered a defective specification. It is entitled to an equitable adjustment for the additional costs it expended to overcome the effects of the failure of the specified mixing formula.

Off-Gassing

Appellant's position that off-gassing was an unanticipated problem, because of the Government's thorough work in creating the mixing formula and because of the Government's knowledge from the previous contract, is not supported by the record before the Board. First, the most significant off-gassing problems encountered by Appellant were not in the mixing process but were encountered during the excavation at the site. The contract specifications clearly forewarned a potential bidder, the Contractor, of "violent" off-gassing problems encountered by the contractor at the site under the previously terminated contract.

Further, the contract specifications are replete with warnings of off-gassing concerns and with methods to combat the potential significant and serious off-gassing at the site. Some of these contract warnings, directions and requirements concerning the likelihood of a contractor encountering significant off-gassing while performing the excavation and stabilization work at the project site are as follows: a. Level B protection equipment required for Contractor personnel during excavation and stabilization work; b. Elaborate air monitoring system required to be continuously operating during site work; c. Gas vent wells required at all times during the work at the site; d. Boring logs indicating off-gassing when drilling performed; e. Special project procedures required for health and safety concerns at the site; f. Acidic sludge waste to be treated, from which a reasonably experienced contractor would expect the strong potential for off-gassing; g. Third ranked superfund site, where the original stabilization contractor was terminated for convenience because of a significant off-

©1994, Commerce Clearing House, Inc.

Digitized by Google

gassing incident. When read as a whole and when the information provided in the specific provisions of the contract is taken into account, it is incredible that the Contractor would not have expected the potential for significant or serious off-gassing problems at this site.

Appellant's assertions that the off-gassing constituted either a Type I or II differing site condition, or rendered the specification defective, are without merit. Obviously, from above, the contract clearly and unambiguously forewarned the Contractor of the potential for significant off-gassing and a reasonably experienced Contractor dealing with the excavation and stabilization of acidic sludge waste would expect off-gassing to occur. There was no superior knowledge within the possession of Respondent withheld from Appellant as to the potential of off-gassing at this project.

Appellant's efforts now to attach great significance to a brief discussion with Government representatives after bid is unavailing. The focus of the meeting was the reason for Appellant's significantly low bid, which centered upon the issue of Appellant's intent to complete the project in one construction season and the type of equipment it proposed using. The Government representatives were estimators, not experts on sludge excavation and stabilization process, and they did not and could not provide a warranty of no significant off-gassing to be expected during the project work. This purported understanding by Appellant is totally countered by the specifications which clearly detail and warn of the potential for significant off-gassing and by the experience of this Contractor who reasonably should have expected off-gassing problems when dealing with highly acidic wastes.

Rocks/Boulders/Hard Lenses/Concrete Like Material

A reading of the boring logs, test wells and contract specifications do not support Appellant's contention that it was led to expect essentially an easy homogenous excavation effort at the site. Besides the warning in the contract specifications of the difficulties encountered by the previous contractor at the site, the boring logs and test wells clearly indicate the presence of rocks, boulders and significantly hard material to be excavated at the project site. (See Finding 21E(1) & (2).). The specifications warn the Contractor of the need to provide and to adapt the necessary equipment to perform the excavation of the various materials expected to be found at the project site. A site inspection prior to bid would have revealed the presence of cobbles and outcroppings of hard and stiff materials. (Finding 1)

This record simply does not support the reasonableness of Appellant's alleged view of an easy and routine excavation and stabilization project. From the lessons learned from the previous excavation and stabilization contract at this site and from the detailed (142 pages of logs) description of the site provided in the contract specifications, the Appellant should reasonably have expected a difficult excavation effort and the site conditions actually encountered.

Bulk Sludge/Lenses/Sludge Intermingling

Appellant's assertion that the contract documents misled it into assuming that the sludge/waste would be found in discrete, severable pockets ready for segregated excavation is in conflict with contract plan and specification when read as whole and when giving meaning to all portions of the contract without making significant sections of the specifications and drawings mere surplusage.

Appellant's sole reliance on cross sections based on projections from borings to support its allegations is not convincing considering the considerable additional data found in the contract specifications and drawings. First, it was obvious that the cross sections were interpolations of the boring data furnished. Even the sections themselves would not be interpreted by a reasonable, experienced contractor to warrant clearly definable pockets of segregated sludge; nor would a reasonably experienced contractor ignore the rest of the contract specifications and drawings to create an interpretation that the interpolated cross sections exactly defined the area.

The contract boring data clearly shows an intermixing of lenses of various materials, as well as some limited pockets of material. (Finding 21D(6)). Appellant ignored the boring data. The specifications clearly state that the Contractor should expect intermixed lenses of non-homogenous material throughout the project site. (FF 14). Appellant ignored the clearly stated specification language, if the language conflicted with its view of the cross-sections. The history of the project site, known to Appellant, clearly shows a man-made condition which had been reworked over time, including the excavation effort of the first remedial contractor, which would cause the site materials to

Digitized by Google

become intermingled. Appellant ignored this history.

When the contract is read as a whole giving meaning to all parts, Appellant's assertion that it reasonably expected the sludge material to be in bulk quantities in defined areas of the project site is not supportable. Though some cross sections indicate that some sludge would be found in definable bulk quantities, the contract plans and specifications clearly forewarned the Contractor that the sludge material would be scattered, varying in consistency, differing in pH values, and found in intermixed lenses throughout the project site and non-homogenous. (Findings 14, 21D(6)).

A reasonable contractor would *not* have expected from the plans and specifications a simple excavation of carefully segregated material. The sludge material was found at the project site as described in the contract plans and specifications.

Color Identification

Appellant's position that it was unable to identify the waste materials by color, black or yellow, as described in the contract specification and that it was required to utilize pH testing to determine what was waste/sludge is not supported by the record.

First, Respondent's testimony at the hearing, supported by convincing photographic evidence depicting site conditions prior to and during the actual excavation and stabilization effort, clearly indicates that the site conditions were as depicted in the contract specification. The photographs showed "intermingled pockets of sludge, soil and previously stabilized material" of different consistencies, and the sludge/waste was identifiable as the "black tar-like sludge, oily ash-like sludge, soil/sludge mix, black, oily tarlike and ash-like waste, and a yellow waxy paste" stated in the contract.

Second, Appellant was apprised in the contract of the need for pH testing of the sludge/waste material, since the stabilized material was required to fall within certain performance characteristics of pH values. Thus, the requirement for pH testing of the sludge/waste material was stated in the contract whether or not the sludge could be identified by color. A reasonably experienced contractor, as Appellant, performing sludge stabilization for acidic sludges would know of the need to perform pH testing to determine the pH values of the material it was stabilizing and to assure the stabilized material met the contract parameters.

Mixing 100% of Excavation

Appellant's position that it *had to* mix and treat all the material on site rather than just the 20,800 cubic yards of estimated sludge is not supported by the evidence. This position taken by Appellant is an outgrowth of its assertion that it expected to be able to excavate clearly distinct pockets or layers of sludge/waste and that it could not identify the sludge/waste by the color indications in the contract. The Board notes its discussion of these two issues previously and will not reiterate it here.

Besides having found against Appellant's assertions on the two issues noted above, the Board finds that it was Appellant's excavation practice and its use of *its* business judgment which led it to mix and treat most of the material it excavated. From the beginning of the project Appellant's excavation plan caused problems: a. The heavy and large equipment it employed was unsuitable for the project site; b. The stockpiling of material at the restricted work site caused surcharging of the contaminants into other soils; c. Some stockpiled material fell back into the excavated areas causing additional contamination; d. The excavation was performed in a macro manner intermingling the sludge/ waste with the other soils, rather than using more discrete and selective excavation techniques.

After the problem of its excavation technique was made obvious, Appellant elected not to excavate selectively but to use a dragline which, by its very nature, intermingled the various materials at the site. Appellant was the party who decided that it was more efficient and economical to excavate and mix essentially all the site material rather than selectively to excavate the sludges, which would be slower and would require discrete stockpiling and sorting. This was Appellant's choice as a business decision and was not required by the contract documents or Respondent. Therefore, Appellant must live with that choice and cannot prevail on this issue.

Compaction Requirement

The parties do not disagree on the soil compaction requirement in the contract or on the actual events that took place in the field. Their disagreement lies in why the events took place. Appellant alleges the Government changed the contract compaction requirements to a more stringent one, while the Government asserts the Contractor voluntarily used the more stringent compaction standard in order to expedite its work, as

©1994, Commerce Clearing House, Inc.

Digitized by Google

detailed testing would not be required to determine whether the compaction requirement in the contract was being met when the more stringent compaction requirement was being performed.

The evidence produced by the parties at the hearing supports Respondent's position. Appellant has produced no evidence of Respondent's changing the contract requirement for the standard for compaction or provided a reason why Respondent would want to change the compaction requirement. Conversely, Respondent has adduced evidence that the first time the more stringent compaction requirement was indicated was in Appellant's sludge stabilization plan, that Respondent merely approved the plan, and that Appellant had a self interest in time saving by compacting to the high standard, which did not require the sampling and testing as did the contract-required less stringent standard.

Further, the Board finds support for Respondent's position because no modifications were issued changing the contract compaction requirement or changing back to the original contract compaction standard after Appellant experienced difficulty meeting the more stringent standard and since Appellant began using the more stringent standard immediately in its job performance without requesting a change order or giving any indication it considered that the Respondent was changing the contract standard at the time.

Appellant's voluntary effort for its own purpose does not constitute a change by Respondent even though Respondent allowed Appellant to attempt to compact the material to a standard more stringent than contractually required.

SUMMARY

Though all of Appellant's contentions of differing site conditions, defective specifications or changes are not supported by the record, Appellant's assertion concerning the "mix recipe," as stated above, is found supportable by the Board. Thus, the Appeal is SUSTAINED IN PART and DENIED IN PART, as detailed above.

The Appeal is returned to the parties for negotiation of an equitable adjustment in accordance with the above decision and the following observations. Though it is obvious that Appellant suffered some delay and impact because of the failure of the detailed mixing formula stated for use by Respondent, the delay impact must be considered against the concurrent delay impacts caused by the off-gassing which Appellant should have expected, the Contractor inefficiency and difficulty because of its apparent erroneous assumptions of no rock, boulders, and hard material, the erroneous expectation that sludge would be found only in easily distinguishable bulk quantities, the difficulty it encountered in meeting contract compaction requirements and its own inefficient operation. Respondent should release to Appellant the amount of liquidated damages assessed by it which relate to the delay in contract completion caused by the specified "mixing formula." If the parties cannot negotiate an equitable adjustment under these guidelines within 120 days, the Contracting Officer shall issue a unilateral determination within 180 days of the date of this decision. Either party may then request the appeal be returned to the Board's docket.

[¶ 26,360] White & McNeill Excavating, Inc.

IBCA No. 3108-F, September 23, 1993. Contract No. 4-CC-60-00830.

Attorney Fees and Costs Under Equal Access to Justice Act—Prevailing Party—Board Raised Issue.—Even though the board rather than the contractor raised the issue upon which a contractor prevailed in its appeal, the contractor was entitled to award of attorney fees because the evidence presented by the contractor and its claims led the board to the issue upon which the board based its decision in favor of the contractor.

Attorney Fees and Costs Under Equal Access to Justice Act—Substantial Justification—Burden of Proof.—The government failed to meet its burden of proving substantial justification for its position in litigating a contractor's appeal, because the government failed to show that it was reasonable for it to have continued to enforce a defective specification after it determined that the specification was unnecessary to carry out the intent of the contract. Further, the government had no reasonable basis for its

Digitized by Google

contention that the contractor had suffered no harm as a result of the defective specification.

Attorney Fees and Costs Under Equal Access to Justice Act—Amount—Successful to Unsuccessful Claims.—A contractor was entitled to the award of 10 percent of attorney fees incurred in one appeal and 56 percent of the fees incurred in a second appeal, because those percentages represented the successful versus unsuccessful claims submitted in the two appeals. In the absence of sufficient records to determine how many hours were expended on each issue, the board based the fee awards on the *pro rata* share of successful to unsuccessful claim amounts.

For the appellant: Winston & Cashatt, Spokane, Washington, by L.H. Vance, Jr. For the government: Gerald R. Moore, Department Counsel, Billings, Montana.

Before ROME and PACKWOOD, Administrative Judges.

ROME, Administrative judge:

BACKGROUND

I *Fees and Expenses Sought*

White & McNeil Excavating, Inc. (WME) has applied under the Equal Access to Justice Act (EAJA), 5 U.S.C. § 504 (1988), for an award of a portion of its attorney fees and expenses incurred in three aspects of prosecuting its appeal, as follows: $10,317.10 in connection with its success in *White & McNeil Excavating, Inc.*, IBCA No. 2448, 92-1 BCA ¶ 24,534 (*WME I*), in proving part of a riprap specification defective; $3,937.50 related to a quantum remand issue decided in *White & McNeil Excavating, Inc.*, IBCA No. 2448, 93-1 BCA ¶ 25,286 (*WME II*);[1] and $1,600 incurred for its EAJA application.

The *WME I*-related amount claimed is about 10 percent of WME's incurred fees and expenses (at allowable EAJA rates and with certain deductions) and is based upon the proportion of WME's ultimate recovery in *WME II* after remand, $35,358.11, to the total it had sought in *WME I*, $351,234. WME has not apportioned the amount it seeks based upon its efforts on remand, although it was not fully successful; it had sought $63,442.11, based upon two contentions, and recovered only the $35,358.11, as we elaborate upon below.[2]

II. *The Appeal—WME I*

WME appealed from the contracting officer's decision denying its claims in connection with riprap work performed under a dike repair contract with the Bureau of Reclamation (BOR). After reducing its claim at hearing, WME sought $351,234, alleging that BOR wrongfully had precluded it from exploring alternatives to the contract-specified quarry; BOR had superior knowledge about alleged quarry deficiencies; there was a Type I or a Type II differing site condition; BOR's rejection of WME's riprap work and requirement for rework was untimely; and BOR's riprap specifications were defective and its rework requirement a contract change.

In *WME I* the Board denied WME's claims, except to the extent that it found a portion of the riprap specification to constitute a "bottleneck," as WME had alleged, and to be unreasonable in practice. WME and BOR had spent at least 10 percent of their litigative and heard efforts on the defective specification issue.

Moreover, during contract performance, BOR never conceded officially that the specification was defective or unreasonable in any part. BOR's designer had changed the standard BOR specification for the riprap at issue but, although it could have been done at the time the design changes were being considered, BOR did not plot the "bottleneck" effect of the changes until after the contract had issued and after WME had accomplished its initial riprap placement. It was after WME had placed the riprap, and BOR had directed rework because the riprap failed to meet specifications, that BOR determined that the "bottleneck" portion of the specification was not necessary to design intent.

BOR did not notify WME about this determination, however. Indeed, BOR continued to stress to WME that all specification for placement remained in place and continued to enforce the specification for placement purposes. Although BOR ultimately

[1] Both *WME I* and *WME II* were affirmed by the court of appeals: *White & McNeil Excavating, Inc. v. Secretary of the Interior*, Fed. Cir. No. 93-1013 (May 5, 1993) (*affirmed mem.*).

[2] In addition to the amounts stated, the *WME I* and *WME II* claimed and awarded amounts included interest under the Contract Disputes Act, 41 U.S.C. § 611.

©1994, Commerce Clearing House, Inc.

Digitized by Google

relaxed the bottleneck portion of the specification for acceptance purposes, it never relaxed it for payment purposes, as it appeared from the record in *WME I*, and as WME confirmed on remand.

At hearing, BOR continued to defend its riprap specification, and to deny that it had caused WME damage, although its design expert admitted that the bottleneck was not reasonable. In fact, for a follow-on contract, BOR changed the specification to omit the bottleneck.

The Board found that WME had failed to meet riprap specification requirements, even if the defective portion were not considered, and that WME's own actions in delay testing, rather than the bottleneck, had resulted in the need for rework. The case was a close one, however, and WME's efforts were effective in proving that the specification was defective in part.

In the overall context of its claims that the specification was defective and the rework requirement unjustified, WME presented documentation which suggested that BOR had taken payment deductions for placed riprap that did not satisfy the bottleneck portion of the specification. WME was seeking payment for all of its riprap placement and rework efforts, and, thus, had not isolated any particular payment deduction on account of the bottleneck portion of the specification, but it was WME's efforts that led to the Board's quantum remand in *WME I*, issued on November 4, 1991, with the following direction:

> Nevertheless, although the bottleneck did not cause BOR to be liable for WME's rework costs, it was unreasonable, as established. Therefore, any payment deduction for placed quantities that did not satisfy the unreasonable restriction would itself be unreasonable and not within BOR's contract rights * * * to deduct or refuse to pay for nonconforming work. If there was such a deduction, and there appears to have been [citation to fact findings], the parties are to calculate the appropriate upward adjustment, including interest, within 90 days of the date of this decision, and BOR promptly is to pay WME accordingly. Once payment is made, or if there was no deduction, BOR is to file a motion to dismiss this appeal with prejudice * * *.

92-1 BCA at 122,443.

III. *The Remand—WME II*

On December 13, 1991, WME's counsel submitted documentation to BOR's counsel demonstrating that payment deductions had been taken based upon WME's failure to satisfy the unreasonable "bottleneck." WME sought $63,442.11 in compensation for those deductions and in payment for 2,380 tens of hauled riprap that BOR had alleged was wasted in WME's grizzly operation and WME contended was placed properly. Alternatively, WME sought $35,358.11 for the payment deductions based upon the defective portion of the specification alone. Upon subsequent inquiry by WME's counsel, BOR's counsel advised that WME's materials had been forwarded to the contracting officer.

When, after more than 90 days had passed from the date of *WME I* and WME had not received any response or proposal from BOR on the remand issue, on February 14, 1992, WME filed a motion to approve its damage calculations, supported by documentation. BOR responded on March 12, 1992, with a motion to dismiss denying any entitlement. BOR included a complete set of certain BOR notes upon which WME had relied, and offered the calculations and assumptions of BOR's counsel (albeit not in affidavit or declaration form). BOR did not provide any information or affidavit or declaration from the author of the notes, the contracting officer, or anyone else involved with the contract.

In *WME II*, the Board noted that BOR's primary focus during contract performance had been upon the elimination of rock that did not satisfy the bottleneck's strictures; that this had contributed greatly to BOR's requirement for removal of placed riprap, additional hauling and additional placement; and that the evidence demonstrated that BOR had aimed to eliminate bottleneck-related rock from its payment base. We found that WME had failed to prove that BOR's waste contentions were incorrect, but that it had established payment deductions properly based upon the defective part of the riprap specification, in the claimed amount of $35,358.11.

IV. *Procedural Course of WME's EAJA Application*

On December 4, 1991, while the remand was in progress, WME filed an EAJA application for $143,178.64 in attorney fees and expenses. By order of December 10, 1991, the Board directed the parties to attempt to resolve the fee application along with the

Digitized by Google

remand issue. The Board granted the parties an additional 30 days to negotiate the fee matter, but stressed that nothing in the order was to serve as a basis for delay in paying WME any amount due pursuant to *WME I* and the remand. On February 19, 1992, after WME had filed its motion to approve its damage calculations, and it was apparent that the parties had failed to resolve any quantum issue through negotiation, the Board dismissed the EAJA application as premature.

After the Board issued *WME II* on July 24, 1992, deciding the remand issue, WME refiled and supplemented its application on August 12, 1992, substantially reducing its claimed fees and expenses. By letter of August 27, 1992, appellant advised that it would supplement its EAJA application to comply with the Board's rules and did so on September 2, 1992. However, on October 20, 1992, the Board received notice that WME had appealed to the Federal Circuit from the Board's decisions. We dismissed the refiled EAJA application without prejudice to reinstatement within 30 days of final disposition of appellant's appeal. *See* 5 U.S.C. § 504(a)(2).

The Board's decisions were affirmed on May 5, 1993, and we reinstated WME's EAJA application by order of May 21, 1993, pursuant to its motion and its representation that it would not appeal further.

DISCUSSION

I. *Prevailing Party*

[1] EAJA provides that, in an adversary agency adjudication, fees and other expenses incurred by a qualifying prevailing party,[3] other than the United States, in connection with the proceeding, are to be awarded to that party, unless the adjudicative officer finds that the position of the agency was substantially justified or that special circumstances make an award unjust. 5 U.S.C. § 504(a)(1). BOR has not alleged, and we do not find, any special circumstances that would make an award unjust. Hence, we consider only whether WME was a prevailing party and, if so, whether BOR's position nonetheless was substantially justified.

EAJA does not define the term "prevailing party" but its legislative history makes it clear that prior judicial interpretations of the term should be applied. *Austin v. Department of Commerce*, 742 F.2d 1417, 1419 (Fed. Cir. 1984). The Supreme court established in *Hensley v. Eckerhart* 461 U.S. 424, 433 (1983), addressing the concept of prevailing party under the Civil Rights Attorney's Fees Award Act of 1976, 42 U.S.C. § 1988, that a litigant is deemed to be a prevailing party if it succeeds on any significant issue which achieves some of the benefit it sought in bringing suit. This definition has been applied repeatedly in EAJA cases, *e.g.*, *Austin*.

Under appropriate circumstances, a contractor may be a prevailing party for EAJA purposes even if it recovers as little as 10 percent of the total amount claimed. *Delfour, Inc.*, VABCA Nos. 2049E, *et al.*, 90-3 BCA ¶ 23,066 at 115,817; *Crown Laundry & Dry Cleaners, Inc.*, ASBCA Nos. 28889, *et al.*, 87-3 BCA ¶ 20,034. *See also Jackson Engineering Co.*, ASBCA No. 36220, 91-3 BCA ¶ 24,178 (although denying an EAJA application because the Government proved its position substantially justified, the Armed Services Board of Contract Appeals first found the appellant to be a prevailing party based upon a pre-hearing settlement which gave it only 8.8 percent of the amount it claimed).

BOR states that WME was not a prevailing party in any sense because the Board, while partially accepting WME's defective specification theory, rejected the argument that the defective specification caused any of appellant's claimed costs. BOR asserts that the issue of whether there had been any deduction from payment quantities had not been raised by either party. However, WME had claimed strenuously during contract performance and at hearing that it was not being treated fairly regarding placed riprap and the re-work requirement; that the riprap specification was defective; and that it had not been paid properly for rock placed, and re-placed. As noted, it was documentary evidence concerning placement and payment, relied upon by WME, that prompted the remand. In our judgment, the remand issue arose out of, and was linked to, WME's overall claims that the defective specification had caused it monetary damage.[4]

[3] To qualify for an EAJA award, a corporate entity must have a net worth of less than $7,000,000 and employ 500 or fewer persons. 5 U.S.C. § 504(b)(1)(B). WME has averred that it meets these requirements and BOR does not dispute its qualifications.

[4] Moreover, the Interior Board has stated previously that an appellant can be a prevailing party even if the Board granted relief that was not based upon a theory proffered by the appellant. *R&R Enterprises*, IBCA No. 2664-F, 90-3 BCA ¶ 23,039 at 115,671. Some Boards have held differently in

©1994, Commerce Clearing House, Inc.

Digitized by Google

II. *Substantial Justification*

[2] Once a qualified litigant has been determined to be a prevailing party, the burden shifts to the Government to prove that its position was substantially justified. *Salisbury & Dietz, Inc.*, IBCA No. 2382-F, 89-3 BCA ¶ 21,981 at 110,559. Whether an agency's position was substantially justified is to be determined based upon the administrative record as a whole. 5 U.S.C. § 504(a)(1). The Government must establish substantial justification in the context of the litigation and the administrative action or inaction upon which the adversary adjudication was based. *Devine v. National Treasury Employees Union*, 805 F.2d 384, 386 (Fed. Cir. 1986); *Kos Kam, Inc.*, ASBCA No. 34684, 88-3 BCA ¶ 21,049. The Government's position is substantially justified if it is justified to a degree that could satisfy a reasonable person, which is to say that it has a reasonable basis in law and in fact. *Pierce v. Underwood*, 487 U.S. 552, 565-66 (1988).

We find that BOR has not met its burden to prove substantial justification. BOR's actions in failing to plot the effect of its specification until after the contract issued and after initial placement by WME; in continuing to enforce its specification for placement purposes even after it had determined that the bottleneck portion was not necessary to design intent; in denying that its riprap specification was defective; and in denying that the bottleneck caused WME any monetary damage, including after remand by the Board, did not have a reasonable basis in fact and were not substantially justified.

III. *Determining Award*

A. *Discretion and Apportionment*

[3] The Supreme Court has stressed that, as with other fee awards, the trial forum has discretion in determining the amount of an EAJA award. *Immigration & Naturalization Service v. Jean*, 496 U.S. 154, 151, 165-66 (1990). *See Hensley v. Eckerhart, supra*, 461 U.S. at 437. "[T]he most critical factor is the degree of success obtained." *Id.* at 436.

When a prevailing litigant has less than complete success against the not-substantially-justified Government, the courts and Boards have used various approaches in determining the appropriate amount of an EAJA award. Although not required, and not always appropriate, apportionment methods can be applied. One acceptable method of apportionment is based upon the amount of time expended on the issue or issues upon which the litigant prevailed. *Community Heating & Plumbing Co. v. Secretary of the Navy*, Fed. Cir. No. 92-1362 (8/20/93) (1993 U.S. App. Lexis 21450). Another acceptable method of apportionment, when circumstances warrant, is based upon the degree of recovery to the total recovery sought. *See Sardis Contractors*, ENG BCA No. 5256-F, 90-3 BCA ¶ 23,010.

WME has advocated the latter pro rata approach for its efforts in *WME I*, seeking 10 percent of certain incurred fees and expenses otherwise allowable under EAJA. It has eschewed any pro-rata approach for its efforts in *WME II*, however.

We find a 10 percent-based award, set forth below, for allowable fees and expenses incurred by the applicant in *WME I* to be reasonable based both upon the proportionate amount of WME's ultimate recovery, $35,358.11, to the amount sought, $351,234, and upon the apparent amount of effort spent on the issue leading to its partial recovery after remand. *See Salisbury & Dietz, supra*, at 110,561.

For consistency, we also apply the pro rata approach to the fees sought on account of applicant's efforts expanded in *WME II*. However, there is not enough in the record upon which to base a "time expended" allocation between WME's successful proof on remand that BOR wrongly deducted payment amounts on account of the failure to satisfy the defective portion of the riprap specification, and its unsuccessful claim that BOR incorrectly categorized properly placed riprap as waste. Accordingly, we base this part of our award, below, upon the proportion of the recovery in *WME II*, $35,358.11, to that sought in *WME II*, $63,442.11, which is 56 percent.

(Footnote Continued)

the context of deciding whether the Government was substantially justified in defending against an appellant's claims. *See Seaman Marine Co.*, ASBCA No. 36579, 91-1 BCA ¶ 23,653; *Murphy Brothers, Inc.*, DOT BCA No. 1836, 87-1 BCA ¶ 19,500 at 98,570-71. (In the relevant part of each case the appellant prevailed, but upon a contract provision that neither party considered or argued; the Board found the Government substantially justified in opposing the appellants' claims). We do not expand upon this issue because we have found that WME's recovery was linked to its defective specification claims and presentations to the agency during contract performance and at hearing.

B. *EAJA Application Fees*

[4] The successful applicant also is entitled to fees incurred in the prosecution of the EAJA application. *Schuenemeyer v. United States*, 776 F.2d 329, 333 (Fed. Cir. 1985). Moreover, once the Government has failed to prove its position substantially justified on the underlying merits, there is no additional substantial justification defense to an EAJA application. *Immigration & Naturalization Service v. Jean, supra.*

C. *Amount of Award*

[5] BOR's October 13, 1992, opposition to WME's EAJA application included some valid objections, most significantly that the application requested fees and expenses pertaining to WME's efforts in advancing its claim prior to the contracting officer's decision. Such costs are not deemed to be part of the adversary adjudications covered by EAJA. *Levernier Construction, Inc. v. United States* [37 CCF ¶ 76,202], 947 F.2d 497 (Fed. Cir. 1991) *Northwest Piping, Inc.*, IBCA No. 2642-F, 90-1 BCA ¶ 22,446. WME replied to BOR's objections on October 29, 1992, modifying its application either to eliminate, to allocate correctly, or, in our estimation, to support as proper, amounts contested by BOR.

BOR urges that WME has not adequately segregated costs pertaining to the defective specification issue and that its time sheets specifically identify only a small portion of time allotted to the issue. However, as we have noted, it is apparent from the overall record that WME spent at least 10 percent of its time on the defective specification question and we have applied a prorata, rather than a segregated, approach. It is clear from WME's law firm's time records that much of its efforts, including discovery, trial preparation, exhibit review, briefing, correspondence, telephone calls, and the like, were intermingled and covered various matters pertaining to WME's appeal. We find this, nonetheless, to be specific as to date, time expended, general type of service and by whom it was performed, and to be sufficiently detailed to support an EAJA award. *See Gracon Corp.*, IBCA No. 2582-F, 90-1 BCA ¶ 22,550 at 113,186.

We note that WME has not sought attorney fees in excess of the statutorily-authorized basic rate of $75 per hour, *see* 5 U.S.C. § 504(b)(1)(A), although the normal billing rate of the two attorneys principally involved is $125 per hour. Regarding paralegal and law clerk work, many Boards allow recovery only at the cost to the law firm and not at regular billing rates, as the Interior Board has held. *Gracon, supra* at 113,188; *Francis Paine Logging*, AGBCA No. 91-156-10, 92-3 BCA ¶ 25,043.

We do not elaborate upon the proper rates for paralegals and law clerks because here, while the paralegal's normal billing rate is $50 per hour, WME only seeks compensation at the rate of $35 per hour. It seeks compensation for its law clerks' time at $30 per hour, although we have not located any reference to their normal billing rates. WME has not stated that the paralegal and law clerk amounts sought are their costs to the law firm, but BOR has not objected to the claimed rates; they are reasonable; we infer that they approximate the law firm's associated costs; and we accept them as allowable under EAJA.

Finally, as to WME's claim for fees in connection with its EAJA application, it seeks $1,600, but only 5.2 attorney hours (5.2×$75 = $390) and 5.6 paralegal hours (5.6×$35 = $196), for a total of $586 in costs, are presented as supported by time sheets. The balance represents the estimate of appellant's counsel, not contained in any affidavit or documentation submitted to the Board, and we reject it due to appellant's failure of proof.

DECISION

Accordingly, WME's EAJA application is granted in part, as follows: $10,317 (rounded) for its successful efforts in *WME I;* $2,205 (rounded) for its successful efforts *WME II* ($3,938 (rounded)×56 percent); and $586 for its EAJA application efforts, for a total of $13,108.

[¶ 26,361] Interwest Construction

VABCA Nos. 3724, 3890, September 20, 1993. Contract No. V101DC-0048.

Interpretation of Contracts—Heating and Cooling—Cooling Capacity Requirements.—Under a building renovation contract calling for the supply of water-cooled chillers, a contractor's contention that the specifications for chillers were ambiguous with

 ©1994, Commerce Clearing House, Inc.

Digitized by Google

respect to the cooling capacity required of the chillers after they had been converted to a low ozone depletion refrigerant was rejected because the specifications, when read with the drawings, indicated the cooling requirements after conversion. The government insisted that chillers had to produce 900 tons of cooling capacity before and after conversion to the new refrigerant. Because the specifications did not specifically mention that the converted cooler must meet the 900-ton requirement, the contractor contended that chillers had to meet the 900-ton requirement only before conversion. The specifications, however, stated that the contractor was to provide components matched to ensure that performance "will meet" requirements depicted on the drawings, which included the 900-ton requirement. The term "will meet" could not be restricted to the present capacity of the chiller without creating a void in the future cooling capacity requirements.

Interpretation of Contracts—Heating and Cooling—Omitted Language.—Under a building renovation contract calling for the supply of water-cooled chillers, the board concluded that the government's omission of language in the guide specification regarding the cooling capacity for the chillers after conversion to a new refrigerant did not render the contract ambiguous, because the contract documents were adequate to place the contractor on notice of the cooling capacity requirements after conversion. The government insisted that the chillers have a 900-ton cooling capacity before and after conversion to a new low ozone depletion refrigerant. The contractor's chillers, although compliant with the 900-ton requirement before conversion, failed to meet the 900-ton requirement after conversion. The board noted that if the omitted language had in fact been included in the guide specification, any doubt as to the required cooling capacity after conversion to the new refrigerant would have been removed. The omission, however, did not result in an ambiguity with respect to the cooling capacity after conversion, because the contract notified the contractor of the cooling capacity requirements.

For the appellant: Van Cott, Bagley, Cornwall & McCarthy, Salt Lake City, Utah, by Eric C. Olson. For the government: Kenneth MacKenzie, Trial Attorney, Phillipa L. Anderson, Deputy Assistant General Counsel, and William E. Thomas, Jr., Assistant General Counsel, Washington, D.C., for the Department of Veterans Affairs.

Before ROBINSON, ANDERS, and KREMPASKY, Administrative Judges.

ROBINSON, Administrative Judge: This opinion addresses two appeals brought by Interwest Construction ("Interwest" or "Contractor") on behalf of a mechanical subcontractor, M-T Enterprises ("M-T"), from adverse decisions by a Contracting Officer ("CO") for the Department of Veterans Affairs ("VA").

VABCA No. 3724 is an appeal from the CO's final decision which rejected Appellant's interpretation of certain contract terms relating to the required cooling output of two chillers. Briefly stated, Appellant contends that the applicable chiller specification was ambiguous with respect to the need for maintaining 900 tons of cooling capacity after a future conversion to one of the several refrigerants posing less threat to the ozone layer. While that particular claim involved only a question of contract interpretation which was at least arguably ripe for adjudication, the subsequent Complaint filed with the Board indicated that costs had been incurred since the CO's final decision. Because Interwest's claim now included $72,293 allegedly attributable to additional costs of supplying the disputed chillers, and because the CO had never received a quantified and certified claim by the Appellant, the parties recognized the jurisdictional problems presented. In order to avoid undue delay in litigation, the Appellant presented a certified claim for $72,293 to the CO, which was promptly denied in a final decision. That decision was then appealed to the Board and assigned Docket No. VABCA-3890. Consequently, VABCA No. 3724, having been rendered moot, is dismissed with prejudice.

A hearing was held in Washington, D.C. The record for decision consists of the one volume transcript of the hearing, together with the Government's Rule 4 file (tabs 1 through 7), Appellant's supplement (tabs 8 through 15), and the CO's final decision denying Interwest's certified claim (tab 16). Counsel for both parties filed pre-hearing briefs. The Appellant filed a supplemental brief following receipt of the transcript.

FINDINGS OF FACT

On July 5, 1991, the VA issued an Invitation for Bids ("IFB") for Project No. 660-139 at its Salt Lake City, Utah, Medical Center. The IFB's description of the project was to: "EXPAND/RENOVATE BUILDING NO. 1, PHASE I." This phase included general construction and asbestos abatement. (R4, tab 1)

The low responsive bidder, Interwest Construction, was awarded Contract No. V101DC-0048, in the total amount of $8,386,000. Interwest then subcontracted with the firm of M-T Enterprises for the mechanical work required by the contract. M-T arranged with the York International Corporation ("York") for supply of the required chillers. York dealt with M-T through its sales representative, Long & Associates ("Long").

The term "chiller" refers to a large-capacity commercial or institutional air conditioning unit. Such a unit consists of three basic components: a condenser, an evaporator, and a compressor (a pump). The evaporator collects heat from inside the building, which is then "exchanged" by the condenser with the outside air. The compressor moves a closed system refrigerant between the evaporator and the condenser. As a result of the constant exchange of the inside and outside air by these three devices, and the consequent temperature differentials of the refrigerant, there is a temperature transfer to an internal system of water pipes. These pipes then carry the "chilled" water throughout the building. (Tr. 15-16)

The following contract provisions are relevant to this dispute:

SPECIFICATION SECTION 15650
REFRIGERATION EQUIPMENT (HVAC)

2.1 CENTRIFUGAL WATER CHILLERS:

A. General: Where centrifugal chillers are shown on the drawings rotary screw chillers are acceptable. Provide complete package including evaporator, condenser, compressor, motor, starter, oil heater and cooler, economizer or intercooler, operation and safety controls, purge system and evacuation system receiver and piping if controlled above atmospheric pressure, refrigerant piping, instrument and control piping and auxiliaries necessary for safe, controlled automatic operation of equipment. *Provide components matched to ensure that performance will meet requirements shown on the drawings.* ARI tolerances will not be allowed in the determination of chillers' ability to meet specified requirements. (Emphasis added)

* * * * * *

P. Refrigerant and Oil: Provide sufficient volume of dehydrated refrigerant and lubricating oil to permit maximum unit capacity operation before and during tests. Refrigerant charge lost during the warranty period due to equipment failure shall be replaced without cost to the Government.

1. *The chillers shall be either furnished with refrigerants [with] an ozone depletion factor (ODF) of .05 or less, or have the capability of conversion to refrigerants HCFC-123 or HFC-134a at a later date.* The chillers shall have been successfully tested and operated on the new refrigerants for a minimum of one year. The manufacturer shall certify in writing that all components of the chillers that come into contact with the new refrigerants such as seals, o-rings, motor windings, etc., are fully compatible with the new refrigerant and that all pressure components are rated for the pressure developed by the new refrigerants. Conversion to new refrigerants shall not require replacement or modification of any [major] components such as compressors, condenser, evaporator, drive mechanism, gaskets, seals and o-rings. (Emphasis added)

Paragraph 2.1.C of Contract Section 15650 provides, *inter alia,* that the chiller "[u]nit shall be open or hermetically sealed type using one of the halogenated hydrocarbon gasses as refrigerant." During the bidding period, several of these hydrocarbon refrigerant gasses were commercially available. Three of these gasses, HCFC-123, HCF-134a (also referred to during the hearing, as "R-123" and "R-134a"), and R-22, have an ozone depletion factor of .05 or less ("low ODF"). The other refrigerant gasses then commercially available, R-11 and R-12, have ODF factors that are greater than .05 ("high ODF"). (Tr. 21-24)

Contract Drawing H-3 consists of equipment schedules which contain the necessary performance criteria. The schedule for the two water cooled chillers sets out the necessary information for chiller performance, including *900 tons of cooling capacity,* at maximum power input, for each unit. (R4, tab 7)

In addition to the foregoing technical provisions, the contract contains the usual clauses required by the Federal Acquisition Regulations ("FAR"), including Section

©1994, Commerce Clearing House, Inc.

Digitized by Google

01001.1.1.44—FAR 52.236.21, SPECIFICATIONS AND DRAWINGS FOR CONSTRUCTION. That clause states, *inter alia*, that: "Anything mentioned in the specifications and not shown on the drawings, or shown on the drawings and not mentioned in the specifications, shall be of like effect as if shown or mentioned in both."

The VA prepares standard guide specifications for various aspects of hospital construction. At page 15650-8 of this guide specification relating to chillers (R4, tab 13), a close variation of previously-quoted Contract clause 2.1.P.1 is set out, followed immediately by subparagraph 2, which states that: "The chillers with future conversion capability shall meet the following requirements:" Relevant to this dispute is clause (c) of the guide specification, *not* made a part of the contract, which states that:

> After the conversion, the chiller shall meet the requirements for total cooling capacity and maximum power consumption at full load as shown on the equipment schedule. Chiller performance shall be factory tested, rated and certified on HCFC-123 and HFC-134a in accordance with the edition of ARI standard 550 in effect on the date of equipment shipment or shall be demonstrated by the manufacturer in an equivalent field test following the conversion.

The only evidence of the Appellant's (or its subcontractors') awareness of the existence of this clause in the VA guide specification is the statement of a York official that he discovered the provision *after* the dispute arose, during subsequent discussions with VA officials. This individual was not personally involved in the original preparation of York's bid to Long/M-T. (Tr. 66-68)

York provided a price quote for the two chillers, through Long, to M-T. The Prime Contractor, Interwest, then based its bid to the VA, in part, on the total price quoted by M-T for mechanical work required by the contract. Altogether, M-T received quotes from three firms relative to the chiller packages. The price spread among the three quotes was 3% and 5%. There is no record that any of the bidders or potential subcontractors for this project ever sought clarification of the chiller specifications and drawings prior to opening of bids. (R4, tab 12)

Interwest transmitted its chiller submittal package to the VA on January 15, 1992. The narrative information in this submittal disclosed that the Contractor would provide York "CodePak" centrifugal liquid chillers capable of operating with R-11 or R-123 refrigerant. The attached performance data sheets identified the chiller as Model #YTK7K6F2-CAF, having a maximum load of 900 tons at 100% power. According to the data sheets, this particular model chiller would utilize the R-11 refrigerant. (R4, tab 2)

The architect/engineering firm ("A/E") retained by the VA reviewed the submittal. It recommended disapproval of the chiller submittal package for failure to demonstrate that this particular York chiller could be converted to operate with a low ODF refrigerant at a 900 ton capacity. The A/E based its recommendation, concurred in by the VA, on interpreting Specification Section 15650 and Drawing H-3 to allow the Contractor the option to initially install chillers with a low ODF (.05 or less) refrigerant or to install chillers capable of utilizing such a refrigerant (without major modifications) in the future. Under their interpretation, the specification and the drawing, when read together, require that the current refrigerant, *as well as any future low ODF refrigerant* utilized by the chillers, allow for 900 tons of cooling capacity. (R4, tabs 2,3)

The York Model YTK7K6F2-CAF with R-11 refrigerant was convertible to the (low ODF) R-123 refrigerant. Other firms' chillers, using R-12, were convertible to the (low ODF) R-134a refrigerant. When converted to the R-123, however, there is no dispute that the cooling capacity of the York chiller drops to a maximum load of 747 tons. This information was contained in the Contractor's resubmission dated February 19, 1992. The VA rejected that submission because the future use of R-123 refrigerant would result in a cooling capacity of less than the required 900 tons. (R4, tab 3; tr. 23)

The Contractor defended its selection of the York Model YTK7K6F2-CAF chillers in subsequent correspondence with the VA. A letter from Long, dated March 23, 1992, explained how and why it priced this particular model in its pre-bid quote to M-T:

> In preparing its proposal regarding the VA Expand/Renovation of Building #1 Phase 1, Long & Associates read paragraph 2.1(A) and (C) as requiring a unit that was open or hermetically sealed using one of the halogenated hydrocarbon gasses as refrigerant. The components making up the "complete package" were to be "matched" so that performance would meet the "requirements shown on the drawings." Long understood that the unit, using haloge-

Digitized by Google

nated hydrocarbon gases, had to meet such performance requirements at the time of delivery and start-up. The specification clearly states that the chiller shall produce 900 tons with CFC-11. Thus, we proposed an R-11 refrigerant and two York centrifugal chillers each having a 900 ton capacity.

Further along in paragraph 2.1, in sub-part (P), Long read that the chillers must use a refrigerant with an ozone depletion potential (ODP) factor of .05 or less or be convertible to refrigerants HCFC-123 or HCFC-134a at a later date. The York chillers submitted can be converted to HCFC-123. Long did not read paragraph 2.1 or any other part of the specifications as setting a level of performance for the converted chillers. Sub-part (P) speaks in detail of the performance of the converted chiller but neglects to mention performance requirements. As a consequence, in putting together the proposal, Long (and we suspect all the other suppliers) offered chillers that met the requirements on the drawings without regard to how the performance might change upon conversion.

(R4, tab 4)

The letter from Long also stated that the R-11 replacement (R-123) was not as efficient as R-11, and that as of March, 1992, 90% of all centrifugal chillers were furnished with R-11 refrigerant. The letter further explained that because of the open drive configuration of the proposed York chiller, a motor failure would not contaminate the R-11 refrigerant. Because of this, there would be no need to replace the refrigerant over the expected life of the chillers. Long concluded its letter by requesting that the VA either admit that the chiller specification was vague and release the proposed chillers for production or consider issuing a change order for a "more efficient and environmentally safe" York chiller model utilizing (low ODF) R-22 refrigerant.

Despite this letter from Long and subsequent correspondence from the Contractor supporting the use of the York Model YTK7K6F2-CAF with R-11 refrigerant, the CO refused to approve what he considered to be a deviation from the clear contractual requirement that, no matter what refrigerant was to be used initially, the chillers had to produce 900 tons of cooling capacity before *and after* any subsequent conversion to a low ODF refrigerant. (R4, tab 6)

The Contractor then solicited quotes from Long and the Trane Corporation ("Trane"), for chillers having low ODF refrigerants which could deliver the 900 tons of cooling capacity demanded by the VA. The most advantageous price was that quoted by Long for the York chillers using R-22 refrigerant. These chillers were eventually installed at the hospital for what Appellant claims to be an additional cost of $72,293, including markups. (R4, tabs 10, 12, 14 & 15)

The General Sales Manager of York's Applied Systems Division testified that at the time this project was bid (late 1991), none of the six manufacturers of commercial/institutional chillers could produce such equipment which would operate at a 900 ton cooling capacity after conversion to a low ODF refrigerant. (Tr. 42-43) On the other hand, he stated that at the time of bidding, York *was* manufacturing the (more expensive) chiller model which utilized the low ODF refrigerant, R-22, and which the Contractor ultimately installed under protest. (Tr. 21-24)

York's General Sales Manager explained that the York Model YTK7K6F2-CAF chiller, as originally bid (through Long to M-T), was so designed that the R-11 refrigerant would not escape and would remain enclosed within the chiller for the useful life of that equipment. At the time of bidding, moreover, he was aware of no (statutory/regulatory) requirement for installed systems with R-11 to be converted to a low ODF refrigerant at any time in the future. (Tr. 34-35)

The (low ODF) R-22 refrigerant is under higher pressure than the (high ODF) R-11, requiring more expensive high pressure equipment involving thicker containment vessels with heavier special welds. The lower pressure R-11 refrigerant required less expensive equipment which could be converted to house (low ODF) R-123. Such a conversion would result in a reduced cooling capacity, however. York considered it advantageous to both itself and to the VA to bid the less expensive chiller since there was no technical or regulatory basis for believing that the R-11 refrigerant (delivering the requisite 900 tons of cooling capacity) would have to be replaced over the useful lives of the two chillers. (Tr. 37-43)

This witness conjectured, as did individuals from Long and M-T, that the other two firms (Carrier and Trane) which had submitted chiller price quotations to M-T prior to the bid opening, must have made the same assumptions as Long and York. That is, that since the specification did not specifically contain the 900 ton capacity requirement for

©1994, Commerce Clearing House, Inc.

Digitized by Google

converted equipment, the only thing that the VA was essentially interested in was a chiller currently capable of delivering 900 tons. Because conversions were not technically feasible, all of those individuals concluded that the two competitors bid with the less expensive high ODF refrigerant systems in order to be competitive. The only basis for these conclusions, however, was the fact that the Trane and Carrier bids were within 3% and 5% of the York bid. Appellant offered no independent corroboration of this speculation, from either Trane or Carrier. (R4, tabs 4, 11, 12; tr. 66)

DISCUSSION

In the opening paragraph of his post-hearing brief, Appellant's Counsel cites the following three evidentiary bases for concluding that the specifications were latently ambiguous in failing to put prospective bidders on clear notice of the capacity requirements for chillers after conversion to a low ODF refrigerant:

(a) the [VA's] failure to address the issue of capacity after conversion anywhere in the specifications issued;

(b) the [VA's] failure to use the available guide specification that explicitly disclosed the capacity requirements upon conversion;

(c) the uniform failure on the part of all Project bidders to propose chillers consistent with the [VA's] current interpretation of the capacity requirements.

Taking these arguments one at a time, we begin by observing that Appellant's statement in (a) is not entirely accurate. While it is true that Section 15650, Part 2.1.P, of the specification makes no mention of the need for the converted chillers to meet the 900 ton load requirement, Part 2.1.A, a clause of *general* application, states that the Contractor is to: "Provide components matched to ensure that performance will meet requirements shown on the drawings." In our view, this performance requirement of Contract Drawing H-3 (900 tons) supplied whatever specifics were otherwise missing from Part 2.1.P of the specification. The term "will meet" cannot be restricted to the present capacity of chillers supplied under the contract. To make such an interpretation would leave the decision of the future cooling capacity of the chillers (after any refrigerant conversion) entirely up to the bidders. That interpretation would simply not be consistent with the plainly expressed specification requirement to follow performance criteria on Drawing H-3, and is not reasonable. A coordinated reading of the applicable specification and drawing, as called for by FAR 52.236.21, SPECIFICATIONS AND DRAWINGS FOR CONSTRUCTION, gives a contractor a complete picture of what is being asked for by the Government. Any failure by a contractor to read and consider these provisions and their interaction is a risk that cannot be transferred to the Government. *Hol-Gar Manufacturing Corp. v. United States* [10 CCF ¶72,885], 169 Ct. Cl. 384, 395 (1965). *Hoffman Construction Company, Inc.*, VABCA No. 1787, 83-2 BCA ¶16,636; *M.A. Mortenson Company*, VABCA No. 2435-36, 88-3 BCA ¶20,895; *Shumate Constructors, Inc.*, VABCA No. 2772, 90-3 BCA ¶22,946. We do not consider the contract to be at all ambiguous with respect to the 900 ton cooling requirement.

Closely associated with this ambiguity argument is Appellant's position that the contract gave bidders an *option* which did not then exist. Specification Section 15650.2.1.P states, in this regard, that: "The chillers shall either be furnished with refrigerants [with] an ozone depletion factor (ODF) of .05 or less, or have the capability of conversion to refrigerants HCFC-123 or HFC-134a at a later date." The available evidence indicates that the second option was technically impossible during the mid-to-late 1991 bidding period (and continues to be), because existing systems utilizing high ODF refrigerants would have required major modifications simply not technically practicable (and prohibited by the terms of clause 2.1.P.1) to accommodate low ODF refrigerants while still providing 900 ton peak loads. The York model could not be converted to use a low ODF refrigerant with 900 tons cooling capacity, because of the higher pressure requirements of the associated equipment.

The Appellant's argument ignores the fact that the first option *was then available* to York utilizing a chiller model with the low ODF refrigerant, R-22. It would have cost more money for York to bid a chiller with this low ODF refrigerant/900 ton capacity. But if, as its witness testified, York's competitors were equally incapable of furnishing a convertible chiller per the second option, these firms would likewise have had to price the more expensive low ODF chillers in their pre-bid quotations to M-T. If all the chiller manufacturers chose the first option, the only one then available, York (and Long and M-T) would have suffered no competitive disadvantage in choosing a chiller with refrigerant option number one.

Digitized by Google

To reiterate, the Board concludes that the first option available in the above-discussed specification was entirely achievable at the time of bidding for this VA project. The fact that the second option was not technically possible simply reinforces the need to choose the first option or to alert the VA to the problem with option number two, seeking guidance with respect to the VA's intentions. What the Contractor could not do, but what it did do, was to choose a third option which the terms of the contract would not support—to give the VA a chiller using high ODF refrigerant which could not be converted to low ODF refrigerant without reducing the contractually required 900 ton cooling capacity. York provided convincing testimony that its high ODF refrigerant in Model #YTK7K6F2-CAF would not need replacement over the life of the chiller, thus making any future conversion unnecessary. That may well have been the case, but that is not what the VA asked for, nor for that matter, what some future law or regulation could conceivably mandate. It is not up to bidders to substitute their judgment for the Government's. So long as the requirements are clearly stated and achievable (as in option number one), the Government is entitled to demand strict compliance with the terms of its contracts. *Bhanderi-Davis-Eckert (A Joint Venture),* VABCA No. 3475, 93-1 BCA ¶ 25,456 at 126,790.

The Appellant's other two arguments are essentially an effort to convince the Board that there is extrinsic evidence which establishes that the contract is, in fact, ambiguous and that its interpretation was consistent with the VA's intention as interpreted by other bidders as well.

The failure by the VA to include the omitted language from its guide specification is unfortunate, but not fatal to its position. That omitted clause reads, *inter alia:* "After the conversion, the chiller shall meet the requirements for total cooling capacity and maximum power consumption at full load as shown on the equipment schedule." While the inclusion of this language certainly would have removed all doubt as to the Government's needs, the language in Clause 2.1.A, as discussed above, was adequate to put any contractor on notice that the 900 tons was a constant performance requirement. If any bidder thought otherwise, it was under a duty to make an inquiry prior to submitting quotes or bids for the VA's project. As we have stated, Appellant's assumption that the 900 ton requirement could be dispensed with after conversion to a low ODF refrigerant, without any minimum cooling criteria to be supplied, creates *an obvious void* in the necessary information. A bidder who proceeds without seeking clarification does so entirely at its own risk and must bear the consequences if its assumptions are incorrect. *See, e.g., A & A Insulation Contractors, Inc.,* VABCA No. 2766, 92-2 BCA ¶ 24,829 at 123,882 (citations omitted).

With respect to the unused VA guide specification, the Appellant has offered no contention nor evidence that some prior course of dealing would have led its subcontractor(s) to believe that the VA's (unexplained) decision to not insert that clause in this particular specification meant that the 900 ton requirement was not applicable after a future refrigerant conversion. According to the record, York's General Sales Manager only became aware of the provision well after the bidding period, while discussing the dispute with VA officials.

The Appellant's third point, that other potential subcontractors had based their price quotations to M-T on the same assumptions as made by Long and York, is simply not supported by the facts established by the record. All of the testimony and evidence supporting this speculation relies on the price spread between the original York, Trane and Carrier quotes for the equipment. In the absence of first-hand testimony or explanation for the Trane and Carrier price quotations to M-T, the Board is constrained from drawing the particular conclusion urged by Appellant. Moreover, such an interpretation, even if shared by all three bidders, does not overcome the clear contract language pertaining to post-conversion cooling capacity.

DECISION

For the above-stated reasons, the appeal previously docketed as VABCA No. 3724 is dismissed as moot, and the appeal in VABCA No. 3890 is denied.

[¶ 26,362] Dawson Construction Co., Inc.

VABCA No. 3558, September 15, 1993. Contract No. V101C-1133.

Modifications—Reduction in Requirements or Prices—Scope of Deduction.—A deductive change under a contract to construct an outpatient facility at a military installation was properly calculated by the government, despite the contractor's contention that the deduction included costs for work for which it was not responsible, because the deductive change included only the costs of installing x-ray equipment, a task the contractor was required to perform under the contract. The government elected to use the manufacturer, rather than the contractor, to install the equipment. Although the government viewed the contract as requiring the contractor not only to install but also to test and adjust the equipment, it decided, for reasons not readily apparent on the record, not to include these costs within its deductions. In view of the fact that the deduction did not include testing and adjustment costs, the contractor's contention that it was not responsible for these costs and that the contract terms were ambiguous regarding its obligations to perform these tasks was not pertinent to the government's calculation of the deduction.

Modifications—Reduction in Requirements or Prices—Cost of Substituted Performance.—The government's calculation of a deductive change for deleted work involving the installation of an x-ray machine was proper because the actual cost of the deleted work, which was performed by the manufacturer of the x-ray equipment, was available and was found to be reasonable. The manufacturer provided the hours required by its technicians to install the equipment. The number of hours was adjusted downward by the government to account for time spent by the manufacturer in performing certain tasks, such as testing and adjusting the equipment, for which the contractor was not responsible. In view of the government's reliance on the manufacturer's cost information, the board found that the government had provided ample proof of the cost of the deleted work and that this cost was reasonable.

For the appellant: Tom Dawson, President. For the government: Sonya M. Cromwell-Singleton, Trial Attorney, Phillipa L. Anderson, Deputy Assistant General Counsel, and William E. Thomas, Jr., Assistant General Counsel, Washington, D.C.

Before McMICHAEL, ANDERS, and PULLARA, Administrative Judges.

McMICHAEL, Administrative Judge: This is a timely appeal from a contracting officer's final decision on a Government deductive change order deleting certain work related to the installation of Government furnished X-ray equipment. To resolve this dispute, we must determine the proper scope of the deductive change and whether the costs associated with that work were reasonable.

The parties have elected to waive their hearing rights and to submit their cases on the record, pursuant to Board Rule 11. Following extensive supplementation of the record, as provided by Board Rules 11 and 13, the parties submitted simultaneous briefs, followed by supplementary briefs. The record in this appeal consists of the Pleadings; the Rule 4 Appeal File, as supplemented (R4, tabs 1—20); the Government's Supplement to the Record (Exh. G-1 through G-25); the parties' briefs, with attachments; and their supplementary briefs, also with attachments. In addition, the Board, *sua sponte*, has introduced and tabbed as Exh. B-1, a copy of a November 22, 1985, letter from E.C. Ernst, Inc. to the Contractor (this letter was part of the record as Exh. G-197 in *Dawson Construction Company, Inc.*, VABCA Nos. 3306-3310, appeals which arose out of the same contract, but which were heard separately from the appeal currently before us).

FINDINGS OF FACT

On April 6, 1983, the Veterans Administration (VA, now the Department of Veterans Affairs) awarded Contract No. V101C-1133, for the construction of an outpatient addition, the relocation of a spinal cord injury unit and general renovations at the VA Medical Center (VAMC) in Miami, Florida, to Dawson Construction Company (Dawson or Contractor). (R4, tab 2) The Contract had an initial price of $16,508,396 and a completion date of not later than 1,275 days after issuance of the Government's Notice to Proceed, which was received on April 22, 1983. (R4, tabs 2-3) Dawson subcontracted certain electrical por-

Digitized by Google

tions of the Contract work to E.C. Ernst, Inc. (Ernst), an electrical subcontractor. (Exh. G-6)

As part of the Contract requirements, Dawson was to install VA provided X-ray equipment in certain Clinical Addition examination rooms. In other rooms, however, the VA assumed responsibility for both supplying and installing the electrical equipment. To distinguish between such situations, Contract Drawing 1-2, "Abbreviations and Interior Signage," indicated that where the VA bore responsibility for providing and installing such equipment, the equipment would be designated with the two letter marking, "V.V.," whereas, where the VA agreed to provide the equipment, but the Contractor bore responsibility for installing same, the two letter marking "V.C." was used. Where the Contractor was to both provide and install equipment, the two letter designator, "C.C." was used. (Exh. G-16)

Contract Drawing 1-3, "Drawing Information," indicated that different equipment drawing symbols were also to be utilized to distinguish between VA and Contractor responsibility regarding electrical equipment installation. Under the architectural symbol subheading "Equipment," Contract Drawing 1-3 indicates that VA supplied and installed equipment (V.V.) was designated by the use of broken dashed line enclosures (- - - -); VA supplied and Contractor installed equipment (V.C.) was designated by alternating dashed dotted line enclosures (— . — .); and Contractor supplied and installed equipment (C.C.) was designated by continuous line enclosures (——). Adjacent to each enclosure, the appropriate two-letter marking was also provided. (Exh. G-16)

Portions of the Contract specifications also addressed the question of whether the VA or Dawson was responsible for installing VA supplied electrical equipment, in this case, VA supplied X-ray equipment. Specification section GR-20, "GOVERNMENT FURNISHED EQUIPMENT," for example, states in pertinent part:

> A. Equipment furnished by Government to be installed by Contractor will be furnished to Contractor at Station.
>
> * * * * *
>
> D. Equipment furnished by Government will be delivered in "knock down" condition in accordance with existing commercial practices, complete with all fittings, fastenings, and appliances necessary for connections to respective services installed under contract.
>
> 1. *Completely assemble and install such equipment in place ready for proper operation* in accordance with specifications and drawings.
>
> 2. Conduit, wiring and raceway systems for X-ray Equipment are shown on accompanying contract drawings .... Obtain detailed layout information from Resident Engineer when equipment has been purchased by Government.
>
> 3. Government will furnish services of an installation engineer to *supervise assembly* and *installation* of X-ray Equipment. (emphasis added)

(Exhs. G-1, G-2)

Similarly, Section 854 of the Contract specifications, captioned "RADIOLOGY ELECTRICAL SYSTEMS," at subsection 854-5, "SYSTEM INSTALLATION," states in pertinent part:

> F. The VA will furnish the X-ray equipment and the services of a manufacturer's representative to *technically supervise* the *installation, connection, adjustment and testing of the equipment.* Except for the X-ray equipment in the Cardio-pulmonary Unit, *install, connect, adjust and test the X-ray equipment as directed by the Resident Engineer.* (emphasis added)

(Exh. G-20, Section 854-5, SYSTEM INSTALLATION; App.'s Br., Attach. at 5)

Significantly, in connection with the present appeal, Section 854-5 sets forth not only a Contractor obligation to install the relevant X-ray equipment, but also a duty to connect, adjust and test that equipment. As the remaining findings of facts and our ensuing legal analysis will demonstrate, the distinction between the Contractual requirements to *install,* versus *test,* the relevant X-ray equipment, lies at the heart of the dispute in this appeal.

Slightly more than two years after initial Contract award, on August 9, 1985, Jeffrey P. Salvin, the VA's Senior Resident Engineer (SRE) assigned to the project, forwarded a letter to Buddy Rogers, Dawson's Project Manager, requesting that Dawson provide the Government, for each room referenced: 1) the anticipated installation time for the X-ray equipment; 2) the anticipated number of installation personnel required; and 3) the approximate installation starting date. Salvin represented that this information was necessary to properly determine the appropriate number of Picker International, Inc. (Picker) employees needed to supervise Dawson's installation of Picker X-ray equipment in Radiology Rooms 1D-147, 1D-151, and 1D-152, and to assist Salvin in

©1994, Commerce Clearing House, Inc.

Digitized by Google

coordinating the timing of Dawson's and Picker's work. (Exh. G-5) Picker was the manufacturer with whom the VA decided to contract to provide the VA supplied X-ray equipment required by this Contract.

On October 7, 1985, Rogers responded to SRE Salvin's request, indicating that, while Dawson's electrical subcontractor, E.C. Ernst, had yet to convey its estimate concerning the amount of manpower needed to *install* the VA supplied Picker X-ray equipment, Dawson independently estimated that six Ernst employees, working simultaneously in each of the three radiology rooms, would require a total of three weeks to install the Government provided X-ray equipment. (R4, tab 5 at 4)

Rogers followed his October 7, 1985, communication to the Government with a letter to James McConlogue of Ernst, dated October 8, 1985, revealing a pre-existing dispute between Dawson and its electrical subcontractor concerning Ernst's obligation to install the Picker equipment. Rogers' language, quoted in part below, provides some measure of the depth of the parties' disagreement:

> If you [Ernst] weren't so asinine, and a little more assiduous in the examination of the contract documents and your contract, you would readily see the purpose of my letters requesting your *installation time* for the Picker equipment. Especially after Dawson has expended so much of our valuable time reiterating the same to you. This redundancy will cease with this letter. Anew, I repeat the following:
>
> 1. Your contract includes all the contact documents.
>
> 2. Your contract includes all electrical work.
>
> 3. The V.C. items are shown on drawing 1-73.
>
> * * * * *
>
> There will be no change order for this work. You are hereby directed to perform this work, under Picker supervision, with six (6) men for three weeks working simultaneously in each room. You are to provide all labor required to complete this work. (emphasis added)

(Exh.G-6)

Contract Drawing 1-73, "1/4" SCALE PLAN—PORTIONS OF AREA 2, FIRST FLOOR," referred to in Dawson's letter above, depicts, in pertinent part, Radiology Rooms 1D-147, 1D-151, and 1D-152, and contains both the two-letter marking codes and the differing equipment drawing symbols described previously. All electrical equipment contained in the designated rooms, with the exception of a mobile monitor and a waste disposal unit in Room 1D-147, as well as a waste disposal unit in Room 1D-152, prominently bear the two letter marking, "V.C.," indicating that the equipment was to be provided by the Government, but installed by the Contractor. The excepted equipment bears the two letter marking "V.V.," indicating that VA supplied, VA installed equipment was intended in the indicated areas.

On October 17, 1985, Rogers forwarded a request to SRE Salvin, requesting that all VA supplied equipment which Dawson was to install in the radiology rooms be delivered to the VAMC Miami. Rogers' request specified that Dawson was "not requesting Picker equipment at this time, but all other V.C. equipment." (Exh.G-7).

On November 13, 1985, Margaret Smith of the VAMC's Supply Service, the departmental component responsible for purchasing and obtaining the Government provided X-ray equipment in this project, contacted SRE Salvin and informed him that, in purchasing the Picker X-ray equipment under a separate contract, the Supply Service had also purchased factory installation services. Because Picker was also contractually required to install the X-ray equipment, the Government elected to use Picker, the manufacturer, rather than Dawson, to install the equipment. Concomitantly, the Government's need to provide the services of a manufacturer's representative to supervise the X-ray equipment installation was no longer necessary, inasmuch as Picker would be installing the equipment. (Exh. G-10) Dawson's responsibilities regarding the X-ray equipment, after preparatory construction work, would thus be limited to final clean up and trash removal during and after installation. (Exh. G-22)

This determination led to SRE Salvin's issuance of Field Proceed Order 5D, on November 13, 1985. There, Dawson was instructed to incorporate the following change into the scope of the Contract work:

> Delete *installation, connection, adjustment, and testing* of V.A. furnished X-ray Equipment as specified by Sect. 854, para. 5.F, except as follows:
>
> A) Final Cleanup
>
> B) Trash Removal
>
> This Proceed Order is issued in accordance with Clause 3 of the General Provisions of the Contract and the matter of contract

Digitized by Google

price and time will be subject to equitable adjustment as provided therein .... Pending the issuance of a Change Order, the contract price (*for fiscal purposes*) is being decreased by the amount of Ten Thousand Dollars and No Cents ($10,000.00). (emphasis added)

(R4, tab 5)

In a memorandum to the VA Project Supervisor, provided the same day, SRE Salvin estimated that the total credit for the deduct order would be $18,000, utilizing information supplied by Dawson in its October 7, 1985, letter. Salvin arrived at the $18,000 figure by adopting Buddy Rogers' estimate that fifteen Ernst employees, working fifteen days, would be required to install the X-ray equipment in Rooms 1D-147, 1D-151, and 1D-152, for a total of 90 man days of labor, and then multiplied this figure by a $200 daily cost figure separately arrived at by Salvin. (R4, tab 5; Exh. G-22) After careful review of the record, we have been unable to ascertain precisely how SRE Salvin arrived at the $200 daily cost figure, but note that Dawson has never challenged the reasonableness of that estimate. Significantly, while the language of FPO 5D talks of deleting the "installation, connection, adjustment, and testing" of the X-ray equipment, Salvin's deduction estimate was premised only on Rogers' estimate of the Ernst time required to *install* the equipment as multiplied by an hourly rate. (R4, tab 5 at 4)

Ernst subsequently asserted its position that it bore no responsibility for installing X-ray equipment, in a letter to Dawson dated November 22, 1985. There, Ernst responded to an earlier Dawson directive that it "re-define [its] position regarding contract drawings 1E-91 and 1-E92 [sic] in respect to the installation of the X-ray equipment." Ernst steadfastly refused to change its position explaining that it "[could] not be any more explicit than [our] 10-18-85 letter delineates," and that "contrary to Dawson's statements [Ernst did] not agree that *installing, connecting* and *testing* the X-ray equipment [were] part of [its] subcontract." (emphasis added) (Exh. B-1) Ernst concluded by requesting that Dawson respond to a VA letter dated October 23, 1985, with a request for a change order for the disputed items and by indicating to the Government that "negotiations on these items were put on hold awaiting [Dawson's] resolution [of this issue]." (Exh. B-1) The October 23 letter is not part of the record before us. The X-ray equipment was subsequently installed, with the installation being observed by members of the VA's resident engineer staff. (Exh. G-21)

On August 29, 1986, in response to a request from Maggie Smith that Picker provide the VA with documentation detailing the actual number of hours spent by its employees installing the X-ray equipment, Ted Schenk, Picker's Account Executive, attached Service Manager Larry Trobough's breakdown of hours, indicating that 1,164 hours had been required to install the X-ray equipment. (Exhs. G-9, G22) Trobough visited the site once a week during the installation and his calculation was based on an analysis of service tickets utilized by Picker to track the number of hours spent performing this job. (Exh. G-20) SRE Salvin took Picker's figures as the starting point for his estimate and then adjusted the 1,164 hour figure downward to 944 hours to exclude a reasonable amount of time for "calibration, start-up and testing, for which Dawson was not responsible." (Exh. G-22) Salvin then forwarded his estimate for the deleted work to Project Director Len Romano via a memorandum dated September 10, 1986. In that memorandum Salvin suggested that, given Picker's familiarity with its own equipment, "[h]ad the [testing, adjustment and start-up] work been performed by Dawson (Ernst) the hours expended would have been much *greater* due to the inherent unfamiliarity with the Picker equipment." (Exh. G-11) (emphasis added) Notwithstanding this observation, however, Salvin made no upward adjustment in the estimated number of installation hours. He proceeded to calculate the value of the deleted work as $21,013.44, based on the actual rate paid to electricians of $18.55 hour, plus 20% for overhead and profit, multiplied by 944 hours. (Exhs. G-9, G-11, G-22) Thereafter, Salvin requested that a Unilateral Change Order (UCO) in the amount of $21,013.44 be issued and that FPO 5D be canceled. (Exh. G-11) In a subsequent affidavit, dated June 7, 1993, Salvin reconfirmed his initial determination to deduct 220 hours from Picker's 1,164 hour total, and thereby continued to keep the time associated with the calibration, start-up and testing of the X-ray equipment out of the VA deductive change order. (Exh. G-24)

In mid-to-late September 1988, the VA adjusted its internal estimate of the Contract deduction, which had previously been set at $10,000 for fiscal purposes, upwards to $18,000, to comport with the figure which SRE Salvin had originally estimated in his October 7, 1985, memorandum. This deter-

mination was memorialized in a September 16, 1988, letter from VA Project Manager Robert B. Eidson, to Dawson's new Project Manager, Ralph P. Weathers, as well as in a September 16, 1988, interoffice memorandum from Eidson to Contracting Officer (CO) Nathan Johnson. (R4, tabs 6-7)

The matter of the valuation of the deductive change associated with FPO 5D, was also the subject of correspondence commencing with a November 16, 1988, letter from Eidson to Dawson Project Manager Weathers. There, Eidson noted that FPO 5D's initial valuation of $10,000 had been increased to $18,000 by Salvin, based on manpower information supplied by Buddy Rogers. (R4, tab 9) Weathers responded to Eidson on November 22, 1988, disputing the additional $8,000 contract price deduction being proposed by the VA concerning FPO 5D. Weathers asserted that critical path method (CPM) records already reflected the "value of a $10,000.00 credit which we feel is more than adequate to cover this cost." As part of its demands, Dawson sought payment of, among other things, the additional $8,000 proposed for withholding, or, in the alternative, the issuance of a contracting officer's final decision. (R4, tab 10)

No final decision was rendered and the matter remained outstanding. On February 8, 1989, in response to an inquiry from the United States Fidelity & Guaranty Company (USF&G), Dawson's performance surety, Eidson indicated that, as of September 14, 1987, the Contract work had been accepted at a total Contract price of $17,971,188.95. Eidson noted that, Contract acceptance notwithstanding, several issues remained outstanding and that, as a result, $34,616 in funds were being withheld from payment. (R4, tab 12)

Approximately 5 years after the issuance of FPO 5D, on September 27, 1991, Unilateral Change Order 2T (UCO 2T) was executed by VA Contracting Officer Nathan Johnson, in the amount of an $18,000 deduction to the Contract price. UCO 2T ordered Dawson to proceed with the following change in work:

> Furnish labor and material necessary to delete the *installation, adjustment, and testing* of VA-furnished X-ray Equipment as specified by Section 854, Paragraph 5.F, except for final cleanup and trash removal—
>
> at a decrease in the contract price, in accordance with the provisions thereof, by the sum of Eighteen Thousand Dollars ($18,000.00). (emphasis added)

(R4, tab 13)

This document provides the only record evidence regarding the Contracting Officer's interpretation of the contractually required work, since CO Johnson has not submitted an affidavit concerning how he interpreted the Contract regarding the adjustment, calibration and testing of the X-ray equipment.

Dawson responded to UCO 2T on October 18, 1991, indicating its belief that UCO 2T must have been issued in error, "as all the change orders on this project were settled some four years ago." Dawson requested CO Johnson's rescission of the change order or, in the alternative, some clarification as to why such a late issuance had occurred. (R4, tab 14)

Johnson responded on October 31, 1991, reaffirming the propriety of UCO 2T, and indicating that the unilateral change had been intended to supersede FPO 5D, for which Dawson had "never responded" to repeated requests for a credit proposal, despite Government requests "on several previous occasions." (R4, tab 15) Dawson's response, dated December 23, 1991, once again rejected, as improper, the issuance of UCO 2T, disagreed with the additional $8,000 deduction, "for reasons stated in Mr. Tom Dawson's letter of November 12, 1991," and asked that a contracting officer's final decision be rendered. Dawson's November 12th correspondence is not part of the record before us. (R4, tab 16)

On February 5, 1992, CO Johnson issued a final decision, stating that his determination regarding UCO 2T was "unchanged," that FPO 5D had been "outstanding" since October 1988, and that the $18,000 credit taken in reference to UCO 2T was based on "manpower data provided by Mr. Rogers." Johnson additionally indicated that he found no evidence of a "settlement" between Dawson and SRE Salvin on the costing of the credit charge and concluded that the fact that the proceed order "remained unresolved" until the issuance of UCO 2T was "evidence that there had been no agreement concerning the final pricing of this modification." (R4, tab 17) Dawson timely appealed the final decision on March 2, 1992.

Addressing the installation issue, Robert Squillante, who now works for the VA as a Biomedical Engineer, but was formerly the Picker installer for the X-ray equipment in issue, enumerated the following installation activities which Picker performed:

Digitized by Google

We, Picker, uncrated the X-ray equipment. We carried it to the Chest and Fluoroscopy rooms. We used Picker lifting equipment to mount ceiling rails on the Dawson installed unistruts. We drilled and set anchors in the floor to bolt the X-ray tables. We used equipment to align the X-ray tables to the drilled holes. We further bolted controls to the floor. We ran the 480 volt disconnect to the centroid which is the central power source for the X-ray equipment. Dawson supplied the wiring which supplied electricity to the 480 volt disconnect. We ran wire to the different components of the X-ray equipment. We calibrated, tested and balanced the X-ray equipment. The calibration involved adjusting the equipment to certain parameters.

(Exh. G-25)

Squillante directly controverts Dawson's contention that it played a significant role in the installation and that it "furnish[ed] carpenters and laborers to assist in the uncrating and bolting down in place of the X-ray equipment." (Exh. G-25) Squillante's affidavit is supported by an affidavit from Thanh K. Tran, who, as the VA Resident Engineer assigned to this job, spent 75% of his time on field inspection and personally observed Picker installing the X-ray equipment at issue. Tran observed Picker performing the installation in the rooms in issue. (Exh. G-21)

A careful examination of the relevant daily logs discloses no evidence that Dawson's workers assisted in uncrating and bolting down the Picker X-ray equipment. While the August 1, 1985, through December 18, 1985, daily logs are replete with entries detailing certain Ernst and Dawson work in the radiology rooms, nowhere in the daily logs is there any indication that Dawson or Ernst performed or assisted in the performance of the installation work detailed in Robert Squillante's rebuttal affidavit. (Exh. G-19)

DISCUSSION

Following the filing of this appeal, both parties submitted opening and rebuttal briefs, with the Government extensively supplementing the evidentiary record. Contractor focused primarily on disputing its initial obligation to provide the testing, balancing and calibration services for the Picker X-ray equipment. Dawson suggested that the specifications were ambiguous concerning its obligation to test, adjust, balance, and calibrate the equipment, and that it "relied on the standard practices in the industry as relate to X-ray equipment and prepared [its] bid accordingly." While Dawson alludes to a trade practice, the effect of which is that construction contractors are not ordinarily tasked with testing X-ray equipment, it neither explains the nature of, nor provides affidavit or documentary evidence of, the trade or standard industry practice being alleged. Dawson's trade practice representation, we note, is at variance with its purported initial conclusion "that installing, connecting and testing the X-ray equipment [were] part of [Ernst's] subcontract." Consistent with its apparent shift in position, Contractor also now suggests that the majority of the costs associated with the deductive change order did not involve installation or connection, but were for "the testing, adjusting, balancing and calibration of the equipment [for] which Dawson was not responsible."

The Government argues that the Contract is unambiguous and trade practice cannot be used to vary its clear terms. It did not comment on Dawson's vague assertion that it bid according to standard industry practice. Instead, the Government argues that the deduction for installation and connection was reasonable and that it did not take credit for the effort in testing, adjusting, balancing and calibrating the equipment.

Whether the Contract terms are ambiguous regarding the Contractor's obligations to test, adjust, balance and calibrate the X-ray equipment is not pertinent to this appeal, and does not affect our ultimate decision. The facts reveal that the Government calculated its deduction based solely on the hours it took Picker to *install* its equipment. It did not include in the deductive change the costs associated with Picker's testing, adjusting, balancing and calibrating its equipment. The reasoning for the Government's decision not to deduct these costs is not readily apparent from the record. Clearly, at the time he estimated the deduction, SRE Salvin wrote that he believed that Dawson *was not* responsible for the calibration, start-up, and testing. However, when issuing FPO 5D he not only specifically deleted installation, but also *connection, adjustment and testing* from the listing of Dawson's contractual obligations. So too, UCO 2T issued by the Contracting Officer deleted the installation, *adjustment and testing* of the X-ray equipment from the scope of the Contract work. It would appear that the VA concluded that in this particular contract there was a requirement for Dawson to adjust and test the equipment,

©1994, Commerce Clearing House, Inc.

Digitized by Google

but decided not to include the costs associated with this work in its deduction. In any event, whatever standard industry or trade practice may exist with respect to X-ray equipment testing responsibility is not material given the facts before us. The costs attendant to the deductive change order were solely associated with the *assembly* and *installation* of the Picker X-ray equipment. While the 1,164 hour figure reported by Picker in August 1986 initially may have included time spent by its employees testing, balancing and calibrating Picker X-ray equipment, SRE Salvin subsequently reduced that number by 220 hours to eliminate the time associated with testing, balancing and calibrating the Picker X-ray equipment.

Dawson has never argued that a trade practice exists regarding the *installation* of X-ray equipment. Accordingly, even if proven, Contractor's proposed custom and trade practice defense does nothing to rebut the 944 hour figure associated with Picker installation time, a subject which we consider below. The determinations whether the Contract is ambiguous, whether a cognizable trade practice exists, or whether the trade practice could be used to interpret this Contract would not affect the amount of this deduction. Accordingly, we have not, and need not consider these issues here.

Notwithstanding Contractor's initial acknowledgment of its contractual obligation to install the Picker X-ray equipment, however, Dawson has also, since the onset of this litigation, subtly changed its position regarding the equipment installation issue. In essence, Contractor now contends that by providing "rough-in electrical and raceway system[s] for the X-ray equipment; certain mechanical rough-in; carpenters and laborers to assist in the uncrating and bolting down in place; miscellaneous metals in the ceiling to support the overhead arms of the X-ray equipment; and coordinated the layout of the rooms where the X-ray equipment was installed," Dawson, in fact, *installed* the equipment for which the Government now seeks an $18,000 deductive credit.

In response to Contractor's amorphous definition of the term "installation," the Government proffered Robert Squillante's rebuttal affidavit, which directly controverts Contractor's allegation that the latter assisted in the uncrating and bolting down in place of the Picker X-ray equipment. Because Squillante's sworn affidavit testimony is not opposed by countervailing affidavit evidence and otherwise appears to be trustworthy, we find it more compelling than Contractor's unsubstantiated allegations. *Schoenfeld Associates, Inc.*, VABCA Nos. 2104, *et al.*, 87-1 BCA ¶ 19,648 at 99,472-3; *Nat'l. Helium Corp. v. United States*, 219 Ct. Cl. 612, 613 n.3 (1979). The only indication that Contractor played a role concerning the X-ray equipment's installation pertains to the "rough-in" work, set forth above, which we have determined was associated with Contractor's preliminary X-ray construction obligations. This conclusion is supported by the daily logs, concerning which, as we previously indicated in our findings of facts, we have made a careful review. Based upon that review, we found no indication that Contractor or its subcontractors assisted in the installation of the new X-ray equipment or in the relocation of the old. Having determined that Dawson did not perform any of the X-ray equipment *installation* work required by the Contract, the Government is entitled to a reasonable credit for the full deletion of the work.

We now turn to the pricing of this deduction. It is well-established that the Government bears the burden of proving its entitlement to equitable adjustments associated with deductive change orders. *Blount, Inc.*, VABCA No. 3236, 93-1 BCA ¶ 25,474 (*citing Nager Elec. Co., Inc. v. United States* [16 CCF ¶ 80,367], 194 Ct. Cl. 835, 853, 442 F.2d 936, 946 (1971)); *State Mechanical Corporation*, VABCA No. 2797, 91-2 BCA ¶ 23,830; *Zurfluh Enterprises, Inc.*, VABCA No. 1941, 85-1 BCA ¶ 17,789. Where actual cost data is both available and reasonable, such data should be utilized in calculating the proper measure of quantum. *Nager*, 194 Ct. Cl. at 851-53, 442 F.2d at 945-46; *see also Jen-Beck Associates*, VABCA Nos. 2107, *et al.*, 87-2 BCA ¶ 19,831 at 100,324. Regardless of whether actual or estimated costs form the starting point of our damages analysis, however, "the measure of the equitable price adjustment is the difference between the reasonable cost of performing without the change or deletion and the reasonable cost of performing with the change or deletion." *Zurfluh*, 85-1 BCA at 88,908 (citations omitted).

Here, where the deleted work was actually performed, and the actual costs of assembling and installing the relevant Picker X-ray equipment have been tracked and provided by the equipment's manufacturer, our damage analysis is greatly simplified. As indicated earlier, Picker stated that its technicians had required 1,164 hours to install the X-ray equipment at issue here. SRE Salvin

Digitized by Google

subsequently adjusted this figure downwards to 944 hours, to account for time Picker spent testing, adjusting and starting-up the equipment, for which both parties initially agreed the Contractor was not responsible. The lower hourly figure was then multiplied by the Contract rate paid to electricians, $22.26/hour, to arrive at an estimated Contract deduction figure of $21,013.44. This figure was subsequently communicated to the VA's Project Supervisor, Len Romano, in SRE Salvin's letter, dated September 10, 1986, wherein the latter sought rescission of FPO 5D and the issuance of a unilateral change order in its place. The 944 hour figure did not, however, take into consideration Picker's familiarity with its own equipment, which presumably would have increased the total hours required if Contractor had been compelled to install the equipment.

Accordingly, we find that the Government has offered ample proof of its incurred costs which we find to be reasonable. We also note that here, the VA credit was less than the $21,013.44 deduction it could have justifiably taken, derived from the time Picker spent *actually* performing the work. Dawson failed to proffer any form of alternative pricing in opposition to the Government's *prima facie* showing. Based on the record before us, the Government has met its burden of proving its deductive credit of $18,000, and we deny the appeal.

DECISION

Accordingly, for the reasons set forth above, the Appeal of Dawson Construction Co., Inc., is hereby denied.

[¶ 26,363] Allstate Products Company

ASBCA No. 43988, September 13, 1993. Contract No. F05600-90-C-0016.

Site Conditions—Consequences of Differing Condition—Amount of Adjustment.—In reconsidering an appeal in which the government conceded that the installation of a flat roof gutter underneath existing roofing materials was a differing site condition, the board found that the adjustment for the differing site condition included the cost of preparing the revised installation drawing because the differing site condition required the revision. The cost of delay in installing the gutters, on the other hand, was not recoverable by the contractor, because this delay was not caused by the differing site condition but by the contractor's request to change the gutter material and by its delay in submitting the revised installation drawing. Although the incompatibility of the existing roofing materials and the flat roof gutter might have created a problem for the government, performance of the work as specified was not impossible, nor did it excuse the contractor from performing the work as specified.

For the appellant: Lawrence J. Green, Littleton, Colorado. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Robert C. Allen, Trial Attorney.

Before FREEMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

Revising and affirming 93-3 BCA ¶ 26,032 on reconsideration.

FREEMAN, Administrative Judge: Allstate Products Company (Allstate) moves for reconsideration of our decision of 12 April 1993 on its flat roof gutter and leaking roof/soffit shimming claims.

On the flat roof gutter claim, the Government admitted that the attachment of the old gutter underneath the roofing materials was a differing site condition. This condition required cutting away the old gutter, leaving a remnant flange in place and fitting the new gutter around the flange. Unilateral Modification P00004, issued 4 December 1990, granted Allstate a price increase for the cost of this additional work. Our decision sustained the determination in Modification P00004. Allstate, however, contends that it was unable to proceed with the gutter work until Modification P00004 was issued, and that it is entitled to costs of delay and disruption as measured by total costs of performance.

When the differing site condition on the flat roof gutters was first noted in August 1990, the Government's project engineer, Lt. Manley, went to the site, discussed the matter with Allstate's representatives and agreed with Allstate's proposed fix of cutting

©1994, Commerce Clearing House, Inc.

Digitized by Google

away the old gutter (tr. 3/565-66). Lt. Manley at that time also told Allstate to submit a revised drawing for installation of the new gutter around the remnant of the old gutter. Allstate had previously submitted an installation drawing for the new gutter with the old gutter completely removed. The Government did not immediately agree with Allstate that the attachment of the old gutter to the roofs was a differing site condition. Nevertheless, Allstate knew how it was to perform the work after the discussion with Lt. Manley in August 1990.

The subsequent delay in installation of the new gutters was not caused by the differing site condition, but by Allstate's proposals to change the new gutter material, and by its delays in submitting a revised installation drawing. Allstate alleges that a change in material was required by the differing site condition because the remaining piece of the old aluminum gutters would cause rapid corrosion of the specified steel for the new gutters. This incompatibility of materials might have created a maintenance problem for the Government, but it did not make performance of the work as specified impossible or impractical, nor did it excuse Allstate from performing the work as specified. By letter dated 23 August 1990, Allstate was expressly instructed to "continue work using approved materials (such as 24 gauge gutter) until the Contracting Officer gives written approval for use of any materials you propose to change."

On 24 August 1990, Allstate submitted alternative change order proposals to use either 26 gauge steel or aluminum gutters. The stated reason for these proposals was that the specified 24 gauge steel gutters had a long delivery lead time and "would extend the (contract) completion time by 15 to 20 weeks." On 5 September 1990, the contracting officer disapproved both proposals with the comment that the 26 gauge steel proposal would be acceptable if the credit to the Government were increased to $2,284. By FAX message dated 10 September 1990, Allstate agreed to the credit proposed by the Government, but refused to provide revised shop drawings and installation instructions because "[w]e do not want the obligation or the liability for the design criteria."

Installation of the new gutters was a simple matter of fitting the interior side under and behind the flange remaining from the old gutters. This did not require a "redesign" of the gutter system and was well within the scope of the specification requirement for submittals. Allstate's original submittal on the gutters dated 11 July 1990 included a detailed installation drawing. See exh. A-101. To the extent not expressly required by the specification section on gutters, the revised installation drawing was properly required by the Government under specification section 01300, paragraph 1.02 A. which stated in relevant part: "The Contracting Officer may require submittals in addition to those listed when deemed necessary to adequately describe the work covered by the contract."

The cost of preparing the revised drawing is compensable because the revision was required by the differing site condition. But the cost of Allstate's delay in submitting the drawing is not. There was nothing in the Differing Site Conditions clause or elsewhere in the contract which prevented Allstate from proceeding with the work as specified after notice of the condition was given to the Government. A change in the new gutter material, while perhaps desirable, was not required by the differing site condition, and the Government was clearly within its rights to require a revised installation drawing. Moreover, the fact that the specified 24 gauge gutter had a long delivery lead-time was Allstate's responsibility and not the Government's. *See National Construction Co.,* ASBCA No. 26234, 83-2 BCA ¶ 16,793 at 83,483.

On 28 September 1990, Allstate was again directed to proceed with installation of the specified 24 gauge steel gutters until a change was approved. Again it failed to do so and it did not submit a revised installation drawing until 17 October 1990. Moreover, it did not complete all required submittals for its proposed change to 26 gauge steel until 31 October 1993. The AF Form 3000 required by specification section 01300, paragraph 1.02, and the color sample required by specification section 07631, paragraph 1.02 were not submitted until that date. The 26 gauge steel gutter proposal was approved on 1 November 1990, but Allstate still did not proceed with the work. On 13 November 1990, it submitted a new proposal to provide aluminum gutters at "no extra cost." That proposal was approved on 14 November 1990, and the gutters were completed in early December 1990. On these facts it is clear that the delay in completing the new gutters was not the result of the differing site condition on the old gutters.

Allstate also requests reconsideration of our denial of the leaking roof/soffit shim-

Digitized by Google

ming claim. However, it presents no new fact or argument that was not previously considered. The warping of the existing soffit should have been apparent from site inspection prior to bidding. Shimming the furring strips for the new soffit panels was a necessary detail of work in the circumstances present and was required for a workmanlike installation of the new soffit panels. See tr. 3/576. As such it was required by the omissions paragraph of the Contract Drawings, Maps and Specifications clause and by the Material and Workmanship clause.

On reconsideration, we find that the adjustment for the differing site condition on the old gutter should include the cost of preparing the revised installation drawing in addition to the costs allowed in Modification P00004. Our decision on the appeal is otherwise affirmed in all respects.

[¶ 26,364] Eraklis Eraklidis dba Hercules Painting Company

ASBCA No. 43720, September 8, 1993. Contract No. N62474-88-D-7831.

Procedure, Boards—Reconsideration—Issues Raised Elsewhere.—A contractor's motion for reconsideration of an appeal involving the right of the government to recover amounts for liquidated damages and repair work was denied because the contractor raised issues that were not pending in the instant appeal. The issues raised by the contractor had been the subject of a final decision in a related appeal in the United States Court of Appeals for the Federal Circuit.

For the appellant: Eraklis Eraklidis, President. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and John S. McMunn, Trial Attorney, Naval Facilities Engineering Command, San Bruno, California.

Before PAUL, SPECTOR, and RUBERRY, Administrative Judges.

Affirming 93-3 BCA ¶ 26,002 on reconsideration.

PAUL, Administrative Judge: On 19 April 1993, we issued a slip opinion in this appeal in which we denied appellant Eraklis Eraklidis' (Hercules) contention that the Navy was not entitled to recover amounts for liquidated damages and for screen repairs performed with respect to the buildings which were the subject of the underlying contract. We had previously issued a decision, *Eraklis Eraklidis d/b/a Hercules Painting Company,* ASBCA No. 40110, 91-3 BCA ¶ 24,188, *recon. denied,* 92-1 BCA ¶ 24,689, in which we denied Hercules' appeal from a termination for default of its contract for "Indefinite Quantity Painting" at the Naval Air Station, Moffett Field, California. Hercules appealed our earlier decision to the United States Court of Appeals for the Federal Circuit which affirmed the Board in an unpublished slip opinion dated 21 October 1992. Hercules did not appeal the Federal Circuit's ruling.

Hercules has filed a timely motion for reconsideration of our decision in the present appeal. However, the motion does not deal with the issues of liquidated damages and screen repairs which are pending before the Board. Instead, Hercules harks back to the question of its termination for default which was the subject of the earlier appeal. Our appellate court has uttered the final word on this matter, and we are in no position to reopen the record in that case.

CONCLUSION

We have reconsidered our decision and affirm it.

[¶ 26,365] Mike Albert Leasing, Inc.

PSBCA Nos. 3342-3369, July 30, 1993. Contract No. 114382-86-V-A135.

Contract Types—Vehicle Rentals—Burden of Coming Forward.—The board affirmed its ruling that the government was liable for damage to rental vehicles, even though the government argued that the board had not determined whether the damage was

 ©1994, Commerce Clearing House, Inc.

Digitized by Google

ordinary wear and tear, because the government first had to satisfy its burden of coming forward with evidence concerning the issue of its negligence. The cause of damage, when known, is a factor to be considered in determining whether damage exceeds ordinary wear and tear. For example, damage that gives the appearance of being "parking lot dings" might be considered ordinary wear and tear if caused by the doors of adjacent parked cars in public parking lots, but it might not be so considered if known to be caused by impacts from government carts or other equipment. In these appeals, the government was in a unique position to provide evidence relevant to both elements of the determination of its liability for damage.

For the appellant: Tim A. Graham. For the government: William A. Campbell, Jr., United States Postal Service, Atlanta, Georgia.

Before BROCHSTEIN, Administrative Judge.

Affirming 94-1 BCA ¶ 26,282 on reconsideration.

BROCHSTEIN, Administrative Judge: Respondent, United States Postal Service, has filed a motion asking for reconsideration of that portion of the Board's Opinion dated March 4, 1993, which found Respondent liable for damage characterized as "outward dings" in vehicles leased from Appellant, Mike Albert Leasing, Inc., for use in Fort Lauderdale, Florida.[1]

In the original Opinion, the Board concluded that the nature of the outward dings was such that it was reasonable to conclude that the damage occurred while the vehicles were actually in use by Postal Service personnel. Accordingly, the Board determined that it was reasonable to shift to Respondent the burden of coming forward with evidence with respect to the cause of the damage. Since Respondent failed to offer any such evidence, the Board concluded that Respondent was liable for the cost of repairing the damage.

In its reconsideration motion, Respondent argues that the Board failed to make a determination that the damage exceeded ordinary wear and tear before deciding to hold Respondent liable for the cost of repairing "outward dings." Respondent contends that the basis of the Board's Opinion was that because the damage occurred while the vehicles were being operated by Postal Service personnel, Respondent was in a unique position to be able to address whether the damage in question resulted from Postal Service negligence. Respondent argues that it does not hold a similarly unique position with respect to determining whether the damage in question exceeded ordinary wear and tear. Accordingly, Respondent contends that before shifting the burden of coming forward with evidence with respect to the issue of Postal Service negligence, the Board was obligated to decide that the damage in question exceeded ordinary wear and tear. Respondent argues that it was not necessary to determine the cause of the damage in order to address the issue of ordinary wear and tear.

Appellant argues that while the contract at issue here did not contain a definition of ordinary wear and tear, the Postal Service has since revised its vehicle lease contracts to include such a definition:

> In no event will the Postal Service be responsible for ordinary wear and tear which includes damage to vehicles from flying rocks and debris, substandard streets and roads, minor dents and scratches to the sides of vehicles from the doors of other vehicles in parking lots and garages, inclement weather conditions and the regular passage of time.

Appellant argues that this definition shows that the Postal Service does not consider mail tray damage and cargo damage to be normal wear and tear.

Although not stated by the Board in those precise terms, Respondent is correct in concluding that the basis for the Board's shifting of the burden of coming forward with evidence in this instance is Respondent's "unique position" to have information concerning the cause of the damage. Respondent is incorrect, however, in arguing that a determination of whether damage is beyond ordinary wear and tear is independent of a determination of the cause of the damage. On the contrary, the cause of the damage, where known, is a factor to be considered in determining whether damage exceeds ordi-

[1] The motion is limited to reconsideration of the Opinion in docket nos. 3342, 3343, 3345, 3348-3355, and 3357.

Digitized by Google

nary wear and tear. For example, damage which gives the appearance of being "parking lot dings" might be considered ordinary wear and tear if caused by the doors of adjacent parked cars in public parking lots, but might not be so considered if known to be caused by impacts from Postal Service carts or other equipment.

Accordingly, Respondent's argument that the Board must first determine that damage is beyond ordinary wear and tear before deciding to shift the burden of coming forward with evidence to Respondent is not accepted. Contrary to Respondent's argument, in these appeals it was in a "unique position" to provide evidence relevant to both elements of the determination of its liability for damage. Having failed to do so, it remains liable for the cost of repairs.

Accordingly, having reconsidered those portions of the Opinion questioned by Respondent, the Opinion is affirmed.

[¶ 26,366] Analytical Management, Inc. v. Department of the Navy

GSBCA No. 12549-P, September 9, 1993.

Protests, GSBCA—Jurisdiction—Automatic Data Processing Equipment.—The board dismissed a protest for lack of jurisdiction because it pertained to asbestos surveying, rather than to automatic data processing equipment or services.

For the appellant: James F. Nicol, President. For the government: Royanne C. Bailey, Office of Counsel, Naval Sea Systems Command, Arlington, Virginia.

Before LABELLA, PARKER, and DEGRAFF, Administrative Judges.

LABELLA, Administrative Judge: The Board has received a protest from Analytical Management, Inc., stating that it wishes to protest a contract award made by Hercules Incorporated, Hercules Aerospace Company, for an asbestos survey contract at the Allegany Ballistics Laboratory, a facility of the Department of the Navy.

Because the matter appears to involve an award by other than a Government agency and pertains to asbestos surveying rather than to automatic data processing equipment or services, on August 24, 1993, the Board issued an order to show cause why this protest should not be dismissed for lack of jurisdiction. Protester failed to respond to the order.

The Board's protest jurisdiction is limited by statute to procurements involving the acquisition of automatic data processing equipment and services (ADPE). 40 U.S.C. § 759(a), (f) (1988). ADPE is defined to include equipment "used in the automatic acquisition, storage, manipulation, management, movement, control, display, switching interchange, transmission, or reception of data or information." 40 U.S.C. § 759(a)(2)(A). Moreover, the Board has no jurisdiction to entertain protests of subcontracts awarded by managing and operating prime contractors. *U.S. West Communications v. U.S.* [37 CCF ¶ 76,142], 940 F.2d 622 (Fed. Cir. 1991).

Decision

Protester was instructed to show cause why this matter should not be dismissed for lack of jurisdiction on or before August 30, 1993. Since we have not received a response from protester, this protest is, therefore, **DISMISSED** for lack of jurisdiction.

[¶ 26,367] Riverfront Guard Service, Inc. v. General Services Administration

GSBCA No. 9836, September 17, 1993.

Procedure, Boards—Failure to Prosecute—Absence from Hearing.—An appeal was dismissed for failure to prosecute because the contractor failed to appear at the hearing set for the merits of its case and subsequently failed to submit its case on the record or to tender an excuse. The contractor was ordered to show cause why the case should not be dismissed for failure to prosecute, and it failed to respond in any manner.

©1994, Commerce Clearing House, Inc.

Digitized by Google

For the appellant: Paul Lynch, New Castle, Pennsylvania. For the government: Robert J. McCall, Office of Regional Counsel, General Services Administration, Philadelphia, Pennsylvania.

Before DEVINE, HYATT, and DEGRAFF, Administrative Judges.

DEVINE, Administrative Judge:

ORDER

Appellant requested that a hearing on the merits of its case be held in Pittsburgh, PA. The Board complied with the request and convened the hearing; however, appellant failed to appear. Appellant offered no excuse for its absence. Appellant then requested and received two weeks to submit its case on the record. Appellant failed either to submit its case or tender an excuse.

On August 31, 1993, appellant was ordered to show cause, on or before September 10, 1993, why its case should not be dismissed for failure to prosecute. To date, appellant has failed to respond in any manner.

Decision

Accordingly, the appeal is DISMISSED WITH PREJUDICE FOR FAILURE TO PROSECUTE.

[¶ 26,368] JL Associates, Inc.

ASBCA No. 45941, September 28, 1993. Contract No. N62477-90-D-0133.

Interpretation of Contracts—Clear Meaning—Weight Class of Trucks.—A contractor was entitled to an equitable adjustment under a contract for providing drivers for government-furnished trucks, because the contract stated unambiguously that three trucks were in the weight class qualifying as "medium" for driver classification purposes whereas the trucks were in fact in the weight class qualifying as "heavy." The contractor was required to pay its drivers at the heavy truck rate and was entitled to compensation for the extra cost.

Interpretation of Contracts—Ambiguities, Patent—Prebid Reliance.—Although specification representations for truck weight class were in conflict, a contractor was not entitled to an equitable adjustment for providing drivers at the heavy truck rate for two trucks, because it failed to prove actual reliance on the inaccurate specification in bidding. Appendix D of the solicitation showed the trucks in the heavy class whereas Appendix G showed them in the medium class. The contractor did not prove reliance on the Appendix G representation.

For the appellant: Sigvart Sande, Executive Vice President. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Stirling Adams, Trial Attorney, Naval Facilities Engineering Command, Washington, D.C.

Before FREEMAN and RIISMANDEL, Administrative Judges.

FREEMAN, Administrative Judge: JL Associates, Inc. (JL) claims a price adjustment of $10,560.38 for alleged Government misrepresentation of the payload of Government-furnished trucks under a transportation services contract. The parties have submitted the appeal for decision under Rule 11. We sustain the appeal in part and remand to the parties for settlement of amount.

FINDINGS OF FACT

1. The contract was awarded to JL on 27 September 1990 for the operation and maintenance of transportation and civil engineering support equipment (CESE) at the Patuxent River Naval Air Station. The specified services included, among other things, providing drivers for Government-furnished trucks.

2. The specific trucks to be driven were to be selected by JL from a CESE inventory at Attachment J-C3c-2 of the contract. The CESE inventory identified the trucks and other equipment by "USN" serial number and by an equipment code. Specification section C.2.h stated that "CESE is further defined in NAVFAC P-300." The P-300 document, among other things, gave "payload" and "rated capacity" for the various truck codes.

Digitized by Google

3. The contract required JL to pay workers on the contract no less than the prevailing rates set forth in the applicable Department of Labor (DOL) wage determination. The applicable wage determination required higher wages and fringe benefits for "heavy" truck drivers than for "medium" truck drivers. The DOL Service Contract Act Directory of Occupations defined a "medium" truck as a truck with a rated capacity from 1 1/2 to four tons, and a heavy truck as one with a rated capacity over four tons.

4. JL selected a number of trucks from the J-C3c-2 CESE inventory with equipment codes 0445 and 0449. Appendix D of NAVFAC P-300 showed payloads of over four tons for Code 0445 trucks, but Appendix G of the same document showed a "rated capacity" of two tons for the same code. Appendix D showed payloads of four tons or less for Code 0449 trucks. Appendix G showed a rated capacity of two tons for that code. (See exh. G-1, pages D-4, G-2, G-3 and the "NOTE" on G-7)

5. On 6 August 1992, JL submitted a claim to the contracting officer for the additional cost of providing heavy truck drivers on 11 trucks having an actual payload in excess of four tons, but which were allegedly misdescribed as trucks with payloads of four tons or less in the J-C3c-2 CESE inventory and P-300 document.

6. On 16 October 1992, JL reduced its claim to eight trucks allegedly misdescribed. However, only five of those eight trucks appear in the Attachment J-C3c-2 CESE inventory with equipment codes. Two of those five trucks (USN Nos. 95-27625, 95-27628) were coded 0445. The other three (USN Nos. 95-23470, 95-28066, and 95-28067) were coded 0449.

7. JL alleges generally but has failed to prove by affidavit, contemporaneously prepared bid estimating worksheets, or other documentation that it in fact relied on the equipment codes and their definitions in P-300 in preparing its bid estimate for drivers for the contract.

8. By letter dated 2 February 1993, the contracting officer denied JL's claim. This appeal followed.

DECISION

JL is entitled to a price adjustment for the three trucks coded 0449. They were unambiguously misrepresented in the J-C3c-2 CESE inventory and in the NAVFAC P-300 document as being in the weight class qualifying as medium for driver classification purposes. They were in fact in the weight class qualifying as heavy, and JL was required to pay their drivers at the heavy truck rate.

JL is not entitled to an adjustment for the two trucks coded 0445. The specification representations as to their weight class were conflicting. Appendix D of NAVFAC P-300 showed them as in the heavy class while Appendix G showed them in the medium class, and JL has failed to prove actual reliance in bidding on the Appendix G representation. See, *D.E.W., Inc.*, ASBCA No. 35172, 92-1 BCA ¶ 24,548 at 122,497.

The appeal is sustained as to the three trucks coded 0449 and remanded to the parties for determination of amount. The appeal is denied in all other respects.

[¶ 26,369] Total Property Services of New England, Inc.

ASBCA No. 45883, September 21, 1993. Contract No. N62467-91-C-3433.

Interpretation of Contracts—Clear Meaning—Clarification.—A contractor had no reasonable basis for waiting for clarification of a requirement for replacing lights, because the contracting officer expressly directed the replacement of all lights at the start of that phase of work. The contractor withdrew its claim for the costs of replacing the lights and sought only the costs of delay in clarifying the requirement. The contractor's initial contention that the solicitation was ambiguous was not reasonable, because both the general description of the work and the amendment indicated that more than one light in each building was to be replaced and the requirements in the drawing notes applied to all lights. Therefore, a delay for clarification was neither excusable nor compensable.

Delay—Approval Delays—Piecemeal Submittal.—Although the government did not complete a review of submittals within the period prescribed by a contract for the repair and alteration of warehouse buildings, a contractor was not entitled to compensation for the delay, because the piecemeal submittal of additional data during the review period extended

 ©1994, Commerce Clearing House, Inc.

Digitized by Google

the period. The contract called for the installation of new overhead doors and required the contractor to submit manufacturer's data and installation instructions. Specifications allowed the government 15 working days after receipt to review a submittal. Although the government did not respond within 15 days of the initial submittal, it responded within three days of the last submittal, well within 15 working days of receipt of the last item.

Delay—Causation—Delay in Issuing Revisions.—A contractor was entitled to a time extension and relief from liquidated damages because the government was responsible for a delay in the installation of frames and doors under a contract for the repair and alteration of warehouses. The government did not timely issue a change order authorizing metal frames, even though it was not disputed that the existing wooden door frames were incompatible with new steel doors. However, the contractor was entitled to delay costs only for the period in which there was no concurrent contractor delay.

For the appellant: Thomas F. Patch, Plymouth, Massachusetts. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Alan R. Caramella, Trial Attorney, Naval Facilities Engineering Command, Washington, D.C.

Before FREEMAN and RIISMANDEL, Administrative Judges.

FREEMAN, Administrative Judge: Total Property Services of New England, Inc. (TPSNE) appeals the denial of its claims for a price increase and time extension under a building repair and alteration contract. We sustain the appeal in part.

FINDINGS OF FACT

1. The contract was awarded to TPSNE on 19 June 1991 for repair and alteration of warehouse buildings 99 and 100 at the Naval Coastal Systems Center, Panama City, Florida. The specified work was to be performed in three phases. Phase A is not at issue in this appeal. Phase B was to begin on 2 September 1991 and be completed by 9 December 1991. Phase C was to begin on 10 December 1991 and be completed on 11 December 1991.

2. The contract specified liquidated damages for delay in completion of $100 per day for Phase B, and $50 per day for Phase C. The contract further provided that "In the event that more than one phase of the work is in arrears at the same time, damage will be assessed concurrently." TPSNE began Phase B on 4 September 1991 and substantially completed it on 12 February 1992. There is no record of when Phase C was started but it was deemed completed by the Government for liquidated delay damages purposes at the same time as Phase B.

3. On 17 June 1992, the Government assessed liquidated delay damages against TPSNE for 65 days delay in completion of Phase B (9 December 1991—12 February 1992) and for 63 days delay in completion of Phase C (11 December 1991—12 February 1992). Both warehouse buildings remained occupied and in full use by the Government while the Phases B and C work was performed. The building manager for the Government testified that the building occupants and TPSNE worked around each other and that TPSNE cleaned its work areas every day.

4. On 1 July 1992, TPSNE submitted a request for a time extension of 113 days and a price increase of $29,900 under the contract. This request was denied by the resident officer in charge of construction (ROICC) on 10 September 1992. The request was submitted as a claim to the contracting officer on 25 September 1992. It was denied by final decision of the contracting officer on 22 February 1993. In its complaint on appeal, TPSNE claimed $8,500 for replacing high intensity discharge (HID) light fixtures, $6,500 for Government delay, and a 113-day time extension. At hearing, TPSNE withdrew its claim for the cost of replacing the HID light fixtures, but continued to press claims for alleged Government delays in (i) clarifying the HID lighting requirement, (ii) reveiwing the overhead door submittals, and (iii) authorizing installation of metal door frames.

5. Contract drawing E-1 showed 22 HID lights in Building 99, and nine HID lights in Building 100. The HID lights in Building 100 were also designated by the circuit they were on. Two were marked as circuit "a" lights. Seven were marked as circuit "b" lights. One of the otherwise identically marked HID lights in Building 99 had the word "typical" written beside it and a reference to drawing note 4. One of the seven circuit "b" HID lights in Building 100 had the word "typical" written beside it and a reference to drawing note 11.

6. Drawing Note 4 stated in relevant part: "Remove existing stem mounted H.I.D. in-

Digitized by Google

dustrial type high bay fixture and install new metal halide fixture ...." Drawing Note 11 stated in relevant part: "Remove existing H.I.D. low bay lighting fixture and associated receptacle, conduit and wire. Install new metal halide fixture ...." Specification section 01011 at paragraph 2 required the removal and replacement of the HID "fixtures" in both buildings. Amendment 0003 to the solicitation, issued 26 April 1991, stated that: "The correct number of existing stem mounted HID light fixtures to be removed is 18 ...." The "stem mounted fixtures" were the HID light fixtures in Building 99.

7. TPSNE alleges that the requirement to replace the HID lights was limited to the one light in each building marked "typical" on Drawing E-1. However, its project manager admitted at hearing that its bid estimate for Building 99 included the cost of replacing all of the HID lights in that building (tr. 31). TPSNE first asserted its interpretation of the lighting requirement to Mr. Peckham, the construction representative, and to Lieutenant Pollard, the contracting officer on 6 September 1991. Lieutenant Pollard told TPSNE to replace all the lights and if it disagreed with his decision to write a letter to the ROICC. Lieutenant Pollard's directions are reported on TPSNE's daily report to inspector (DRI) for 6 September 1991.

8. On 12 September 1991, TPSNE wrote to the construction representative, Mr. Peckham, repeating the argument previously made on the HID lighting requirements, and requesting a "constructive change directive." Mr. Peckham was not the ROICC and had no authority to overrule the direction previously given by the contracting officer, Lieutenant Pollard. On 30 November 1991, TPSNE was again directed to replace all of the HID lights in both buildings as specified by the contract. The new lights were received on or about 15 December 1991 and their installation was completed on or about 9 January 1992.

9. The contract required installation of two new overhead doors in Building 99, and three in Building 100. Submittal of manufacturer's data, installation instructions etc. was required for these doors. Specification section 01300 at paragraph 1.5.3 allowed the Government 15 working days after receipt to "review" a "relatively simple" submittal. TPSNE submitted some, but not all, of the required data for the doors on 25 September 1991, 3 October 1991, 8 October 1991 and 16 October 1991. The first of these submittals was received by the Government on 1 October 1991. The last was received on 21 October 1991. All of the submittals were disapproved by the resident engineer on 24 October 1991. The disapproval with a list of the deficiencies in the submittals was faxed to TPSNE on that same day. A resubmittal was made on 28 October 1991 and was approved on 4 November 1991.

10. The contract required two new metal personnel doors in Building 100. However, it did not specify new door frames. The existing frames were made of wood and would not support the weight of the metal doors. On 4 September 1991, TPSNE notified the Government that the existing frames were wood. On 17 September 1991, the Government requested a cost estimate for providing metal frames. The requested estimate was provided on 8 September 1991, and on 21 October 1991, TPSNE submitted manufacturer's data on metal frames. The submittal was approved on 12 November 1991, but approval of the submittal did not authorize TPSNE to proceed with the change. As of 20 January 1992, the Government had still not issued a change order or otherwise directed the installation of metal door frames. On 2 and 3 February 1992, TPSNE installed the metal frames without direction in order not to delay the work. The doors, door hardware, drywall studs and drywall around the doors, which were dependent on prior installation of the frames, were installed between 3 and 12 February 1992. TPSNE's contemporaneously prepared DRI's show that on 3 February 1992 it was also installing sprinkler heads and valves for the fire protection system. No Government-responsible causes for the delay in installing those items have been shown.

DECISION

TPSNE's interpretation of the HID lighting requirements as requiring replacement of only one light in each building was not reasonable. The general description of the work in the specifications and Amendment 0003 to the solicitation clearly indicated that more than one light in each building was to be replaced, and the requirements in drawing notes 4 and 11 applied to all lights of the same type as those marked "typical." *Mountain States Mechanical, Inc.*, ASBCA No. 35250, 91-2 BCA ¶ 23,779, at 119,100. The contract was ambiguous as to replacement of the two circuit "a" lights in Building 100. However, TPSNE withdrew its claim for the cost of replacing the lights, and now seeks only the cost of delay in clarifying the

©1994, Commerce Clearing House, Inc.

Digitized by Google

requirement. The contracting officer, Lieutenant Pollard, expressly directed the replacement of all HID lights on 6 September 1991 at the start of the Phase B work. TPSNE had no reasonable basis for waiting for further "clarification" thereafter. The subsequent delay in procuring and installing the HID lights was neither excusable nor compensable.

On the overhead doors delay claim, the review period for the first submittal, received by the Government on 1 October 1991, ended on 23 October 1991. However, the piecemeal submittal of additional data items on the doors during this review period extended the review period to 15 working days after the last item was received. The last item was received on 21 October 1991. The review was completed and the results were faxed to TPSNE on 24 October 1991, well within 15 working days of receipt of the last item.

On the door frames delay claim, the Government is responsible for the delay installing the frames and doors and completing the adjacent areas through 12 February 1992. It is not disputed that the existing wooden door frames were incompatible with the new steel doors, and that the Government did not timely issue a change order authorizing metal frames. TPSNE is accordingly entitled to a time extension and relief from liquidated delay damages through 12 February 1992. However, since there were other delays for which TPSNE was responsible concurrent through 3 February 1992 with the Government-responsible delay, TPSNE is entitled to delay costs only for the period 4 February to 12 February 1992. See Findings 8 and 11 above. The appeal is sustained to the extent indicated and is in all other respects denied.

[¶ 26,370] Rex Systems, Inc.

ASBCA No. 45874, September 30, 1993. Contract No. N00104-90-C-M245.

Interpretation of Contracts—Contract as a Whole—Uncited Clause.—A contract clause was not the controlling standard for determining if the government took an unreasonably long period of time to review and approve a minor deviation request, because the clause was not referenced anywhere in the contract documents. The contractor stipulated that the clause was not cited in the contract, but contended that it was applicable because it superseded the contractually cited clause when it was issued. However, no portion of a contract may be rendered meaningless, useless, inexplicable, or without purpose unless no other interpretation is possible. Accepting the contractor's contention would render meaningless the contract clause that was included for determining the reasonableness of the government's review and approval.

Delays—Approval Delays—Deviation Request.—An appeal seeking an equitable adjustment for alleged government delay in approving a deviation request was sustained because the government provided no explanation for taking 92 days to approve the deviation request except to say that the length of time was not unreasonable. However, the government's contention that the delay was not unreasonable was contradicted by its earlier unilateral determination to extend the contract, assumedly as compensation for the delay in approving the deviation request. The board was left with no alternative but to conclude that the contractor's performance was disrupted for the time alleged because the government addressed neither the reasonableness of the time it took to review the request nor its unilateral contract extension.

For the appellant: Nathan & Associates, Eagan, New Mexico, by Dale C. Nathan. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Gary P. Van Osten, Trial Attorney, Navy Ships Parts Control Center, Mechanicsburg, Pennsylvania.

Before ELMORE and RIISMANDEL, Administrative Judges.

ELMORE, Administrative Judge: Rex Systems, Inc. (Rex or appellant) seeks an equitable adjustment in the amount of $1,660.98 for alleged "Government delay in approving [Rex's Request for] Deviation D0001 [RFD] and First Article Approvals" (R4, tabs 11, 13). The appellant has elected to utilize the Board's ACCELERATED procedure. A one-day hearing was held and entitlement only will be decided (tr. 7).

Digitized by Google

SUMMARY FINDINGS OF FACT

On 17 September 1990, Rex was awarded negotiated contract N00104-90-C-M245 (M245) to manufacture and deliver to the Government 78 Vertical and Horizontal Deflection Driver Printed Wiring Board Assemblies (PWB) at a contract price of $23,322.00 (R4, tab 1). The contract incorporated Federal Acquisition Regulation (FAR) clause 52.233-1, Disputes (APR 1984).

The contract, Section C, paragraph C-14, informed prospective bidders that submissions of requests for deviations and waivers should be made in accordance with MIL-STD-481A, "Configuration Control—Engineering Changes, Deviations and Waivers" and "[w]hen engineering changes or revisions do not affect any of the factors in 5.2 (of MIL-STD-481A] they shall be authorized (or disapproved) by the Government QAR or by the CAO (Contract Administration Office)...." (R4, tab 1)

Rex acknowledged its awareness, prior to submitting its bid, of the specification requirement/statement that "[m]ilitary specifications and standards cited herein shall be used in the revision indicated" and that "[n]o deviation from or waiver to this specification should [sic] be permitted without prior written authorization by the Government." The contract documents further advised Rex that "[a]ny reference to Teledyne Electronics ... as approval authority ... required to manufacture and test this item shall be changed to Naval Sea Logistics Center, Mechanicsburg, PA." (R4, tab 1; tr. 58-60)

Drawing 136645, Revision E, Sheet 2 of 2, Notes 2 and 15 informed prospective bidders that plastic laminate, blue in color, was to be procured from an approved supply source (R4, tab 3, exh. A-3; tr. 29-31). Rex, prior to bidding, identified three sources for the laminate, two of whom refused to submit a quote due to their inability to meet the rhodium plating requirement. Rex awarded the laminate PWB subcontract to Accurate Engineering Corp. (Accurate). Rex was neither informed nor aware at the time it awarded the subcontract to Accurate that there was a problem with getting the blue laminate for the PWBs. (Exh. A-5; tr. 31, 72-74)

Rex, to comply with the contract requirement for a first article submittal, submitted on 2 July 1991 five blue laminate PWBs accompanied with Accurate's "Certificate of Conformance." The Government approved the first article items. There was no mention either from Accurate to Rex or from Rex to the Government that the blue laminate would not be available in the future. (Tr. 31-32, 36)

Rex, upon getting first article approval, ordered from Accurate the remaining laminate PWBs which, when received, were "natural" in color. Rex, upon inquiring into the color disparity, was informed by Accurate on or about 23 January 1992 that the color was changed by a Government engineering change order (ECO), and it "didn't have to comply with the blue color, that they had allowance to supply natural in the place of blue." (Tr. 36-38) On 6 February 1992, Accurate informed Rex the laminate color change did not result from an engineering change proposal (ECP), that the document Accurate relied on for the information was "an internal [Teledyne] document only," but the only difference in the material is the pigment and blue was available but only in large quantities (exh. G-1; tr. 65). Rex opined to Accurate that because Rex was not informed of the color change beforehand, a deviation would have to be requested which would take "60 to 90 days for a reply which holds up [Rex's] contract and [Accurate's] invoice" (exh. G-1).

On 3 February 1992, Rex requested Government's approval for a "minor deviation" allowing the use of natural color PWBs. Accompanying the request was a copy of Teledyne's internal memorandum to "Printed Wiring Board Manufacturers" that "natural color flame retardant epoxy laminate (FR4GFN) is an acceptable substitute for the blue flame epoxy laminate (FLGF Blue Color) as currently specified on Teledyne Electronics Drawings." (R4, tab 5) Nothing in the memorandum indicated that the Government was either aware, or approved, of this color change. The Government's QAR, QAE and ACO, recommending approval for the deviation, forwarded the request to the Defense Contract Management Area Operations (Defense Logistics Agency), Milwaukee, Wisconsin for review and determination (R4, tab 7). The request was forwarded to the PCO at SPCC Mechanicsburg and was finally accepted after approval by the cognizant technical personnel (R4, tabs 8-10).

The Government on 5 May 1992 issued unilateral modification P00006 approving and incorporating into the contract Rex's requested deviation to use natural colored laminate PWBs at no change in the total contract price and a new delivery date of "92 JUN 30" in lieu of "92 May 08" (R4, tab 2).

©1994, Commerce Clearing House, Inc.

Digitized by Google

No explanation was offered why the review and approval required a total of 92 days.

On 28 August 1992, Rex submitted a claim for alleged delay occasioned by the Government's failure to timely approve the deviation request and for delay in the Government's failure to timely approve the First Article Test Report/Test Samples.* Rex contended it submitted its minor deviation request on 3 February 1992; that minor deviations, in accordance with MIL-STD-481B, paragraph 5.3.3 [sic, 5.2.3], should have been approved within 30 days after receipt, that approval was not given until 5 May 1992. Rex claimed entitlement to $1,660.98 for a sixty-two day delay it experienced in prosecuting the contract (R4, tab 11).

Rex stipulates that MIL-STD-481B, dated 15 July 1988, is not cited anywhere in contract M245 but contends it is applicable because it superseded the contractually cited MIL-STD-481A when issued (exh. A-2; tr. 69). Rex was unable to establish it possessed MIL-STD-481B prior to submitting its bid (tr. 78).

MIL-STD-481B states in pertinent part as follows (exh. A-2):

> 5.2.3 *Deviation review and approval.* Unless otherwise specified in the contract, minor deviations which do not affect any factor listed in 5.2.1 shall be approved (or disapproved) for the Government by the CAO. Deviations affecting one or more of the factors listed in 5.2.1 can be authorized only by the PCO or their authorized representative. Requests for deviations shall be processed within 30 calendar days of receipt by the Government.

MIL-STD-481A provides as follows (R4, tab 4):

> 5.6 [Deviation] Review and Approval
>
> 5.6.1 Unless otherwise specified in the contract, deviations which do not affect any factor listed in 5.2 shall be authorized (or disapproved) by the CAO.
>
> 5.6.2 Deviations affecting one or more of the factors listed in 5.2 can be authorized only by the PCO or his authorized representative. The concurrence of the military activity responsible for technical requirements, (or in the case of a MIPR the requiring department), shall be obtained before authorizing a deviation.

On 16 December 1992 the contracting officer issued a "final decision" denying Rex's claim for an equitable adjustment stating the approval time was not overly excessive, and acceptance of nonconforming supplies does not call for price modification unless it appears that the savings to the contractor in fabricating the nonconforming supplies will exceed the cost to the Government of processing the modification, or the Government's interests otherwise require a modification (R4, tab 13).

On 19 March 1993 Rex appealed the CO's adverse decision (R4, tab 14).

DECISION

It is black letter law that an appellant, to prevail, has the burden of proving its affirmative claim and establishing its entitlement to an equitable adjustment by a preponderance of the evidence. *Planning and Human Systems, Inc.*, ASBCA No. 29725, 90-2 BCA ¶ 22,821, *recon. den.*, 90-3 BCA ¶ 23,098.

Rex contends that MIL-STD-481B, although not referenced anywhere in the contract documents, is the controlling standard for determining if the Government's review and approval of its minor deviation request was unreasonably long. The record is unclear as to when Rex came into possession of MIL-STD-481B. Should we determine that it was in Rex's possession prior to its bid submittal, we must then also conclude that Rex was, or should have been, aware of an existing and patent ambiguity, that this MIL-STD was a different version from the one cited in the contract. Where a contractor has actual knowledge of a patent ambiguity, there is a duty to seek clarification prior to bidding. *Westerchil Construction Company*, ASBCA No. 35191, 88-2 BCA ¶ 20,528 and cases cited. Rex failed to seek clarification and, accordingly, would not be entitled to an equitable adjustment. *Ranco Construction, Inc.*, ASBCA No. 39050, 90-1 BCA ¶ 22,614.

We note also that the present state of the law is that no portion of the contract may be rendered meaningless, useless, inexplicable or without purpose unless no other consideration is possible. *Sylvan Service Corporation*, ASBCA No. 36193, 89-2 BCA ¶ 21,819. Accepting Rex's contention we would render meaningless, useless and without purpose the contract clause requiring that "military specifications and standards cited [in the

* It would appear that Rex elected not to pursue its claim for delay by the Government in approving the First Article Test Report/Test Sample for it was not addressed at the hearing or in appellant's brief.

Digitized by Google

contract] herein shall be used in the revisions indicated" and apply the standard of the succeeding MIL-STD. We can find no authority, and appellant has not cited any, which supports our rewriting the terms of the contract.

To prevail, Rex must show that, under the processing prescribed by MIL-STD-481A, the time for the Government's review and approval of deviation request D0001 was unreasonably lengthy. Rex's only stated basis for the delay claim is that the Government review and approval took longer than the 30 days called out in MIL-STD-481B, a standard not applicable to this contract. Although Rex has proven its performance on the contract was disrupted it has failed to prove it is entitled to delay costs for 62 days as claimed.

The Government, on the other hand, has provided no explanation for its taking 92 days to approve the deviation request except to say the length of time taken was not unreasonable. We find this contention contradicts the Government's unilateral determination that Rex's contract be extended 54 calendar days, from 8 May to 30 June 1992, assumedly as compensation for the delay in approving the deviation request. The Government, having neither addressed the reasonableness of the 92 days it took to review and approve the deviation request nor its unilateral contract extension of 54 calendar days leaves us no alternative but to conclude Rex's contract performance was disrupted for a total of 54 calendar days.

Accordingly, the appeal is sustained in part as indicated above and the matter is remanded to the contracting officer for negotiation of quantum. Although Rex's computation of its alleged entitlement is based on the Eichleay formula, we cannot concur with Eichleay's use under the circumstances of this case. See, *Interstate General Government Contractors, Inc.*, ASBCA No. 43369, 92-2 BCA ¶ 24,956, *aff'd., Interstate General Government Contractors, Inc. v. Stone, Secretary of the Army* [38 CCF ¶ 76,446], No. 92-1430 (Fed. Cir. June 11, 1993); *Daly Construction, Inc. v. Garrett, Secretary of the Navy* [39 CCF ¶ 76,572], No. 92-1154 (Fed. Cir. September 15, 1993).

[¶ 26,371] Deep Run Salvage

ASBCA No. 45152, September 23, 1993. Contract No. 27-1090-073.

Contract Disputes, Certification—Failure to Certify—Premature Appeal.—Although a claim was uncertified as the result of a facially defective certification at the time the contracting officer issued a decision, the claim was not dismissed for lack of jurisdiction, because no useful purpose would have been served by dismissing or suspending the technically premature appeal. Under an amendment to the Contract Disputes Act, the defects in the language of the purported claim would not deprive the board of jurisdiction; however, the appeal was docketed prior to the date of the amendment's enactment and therefore the amendment did not affect the claim. Proper certification filed after the contracting officer issued a final decision on the then uncertified claim did not retroactively render the claim properly certified. However, the facts of the appeal presented a compelling case for retaining jurisdiction, inasmuch as filings by both the government and the contractor subsequent to the docketing of the appeal made it clear that both parties sought a board decision on the merits of the claim.

Sales of Government Property—Buyer's Remedies—Summary Judgment.—A government motion for summary judgment seeking the denial of an appeal alleging that the government breached a contract by failing to release the scrap material described in the solicitation was denied, because triable questions of fact existed. Facts relating to the accuracy of the description of the material, both during the inspection period and at the time the property was tendered to the contractor were in dispute. The government's motion for summary judgment alleged that the disputed facts were immaterial because of liability limiting provisions in the contract that restricted the government's maximum liability to refund of the purchase price. However, liability limiting clauses do not always restrict the purchaser's remedy or otherwise curtail the damages remedy that is applicable to breach of contract.

 ©1994, Commerce Clearing House, Inc.

Digitized by Google

For the appellant: James P. Casper, Sr., Managing Partner. For the government: Matthew Pausch, Trial Attorney, Defense Reutilization & Marketing Service (DLA), Battle Creek, Michigan.

Before GROSSBAUM, RUBERRY, and THOMAS, Administrative Judges.

GROSSBAUM, Administrative Judge: This dispute involves one item of a surplus sales contract awarded in July 1991 to appellant, Deep Run Salvage (sometimes Deep Run), a partnership located in Martins Ferry, Ohio. Appellant alleges that the Government breached the contract with respect to this item by failing to release the material (scrap aluminum) described in the solicitation on which appellant had bid.

The appeal is taken from a contracting officer's decision denying Deep Run's claim for damages in the amount of approximately $76,000. Pursuant to Rule 5(b), the Government moves to dismiss this appeal with prejudice for failure to state a claim upon which relief can be granted or, in the alternative, for summary judgment denying the appeal on the merits. Appellant opposes the motion. Since matters outside the pleadings have been presented and need to be considered, we treat the motion as one for summary judgment. *See* Fed. R. Civ. P. 12(b).

Without alluding specifically to our jurisdiction, the Government also alleges and argues that appellant's

> claim should be denied [sic] because Appellant never properly certified his claim pursuant to the Contract Disputes Act until after a final decision was issued by the Contracting Officer.

(Gov't Memorandum in lieu of Answer, ¶ 42). An allegedly improper certification of a contractor's more than $50,000 monetary claim under a contract to which the Contract Disputes Act (CDA) (41 U.S.C. §§ 601 *et seq.*) applies affects the jurisdiction of this Board. Therefore, although not promptly filed as a motion addressed to the Board's jurisdiction, as required by Rule 5(a), the Government's allegation and argument concerning appellant's Improper claim certification must be considered before we can rule on motions going to the merits of the appeal.

A. *Jurisdiction*

In June 1991 the Defense Reutilization and Marketing Service (DRMS) issued an invitation for bids (IFB) for Sale No. 27-1090, consisting of surplus metal and nonmetallic scrap, with a bid opening date of 18 July 1991. More than 80 separate items of scrap materials, situated at various locations, were described in the solicitation. (R4, tab 1)

Deep Run submitted bids on several items described in the IFB, including Item 57, described as comprising 673,041 pounds of aluminum scrap, located in a specified building at the Defense Depot Annex in Piketon, Ohio (R4, tabs 1, 3).

Deep Run's bid of $.0212/lb. for Item 57 ($14,268.47) was the highest of three bids received by DRMS. On 25 July 1991 the DRMS office in Columbus, Ohio, awarded Deep Run Contract No. 27-1090-073, covering Item 57 and two other items. (R4, tab 5)

After award, Deep Run's managing partner paid the award balance due and went to Piketon, Ohio, to pick up the property. According to Deep Run, government personnel refused to release the material it had bid on and instead provided glass material that did not contain aluminum. (R4, tabs 7, 24)

Between July 1991 and May 1992 Deep Run and the Government exchanged extensive communications concerning Deep Run's grievance. (R4, tabs 6—42) Under letter to the contracting officer dated 26 May 1992, Deep Run provided factual data to support its revised request for damages in the amount of $76,212.30. This letter did not include a certification as required by CDA section 6(c)(1), 41 U.S.C. § 605(c)(1). (R4, tab 44)

By July 1992 the parties' discussions had reached an impasse and the Government clearly disputed any liability to appellant and the amount requested by appellant. In a letter to Deep Run dated 17 July 1992, the contracting officer analyzed the 26 May 1992 request and asserted that "there is no authority under the contract to consider your request." The contracting officer concluded her letter by reminding Deep Run that a CDA certification must be provided for its "request to be considered as a claim" and "before a final contracting officer's decision can be issued." (R4, tab 46)

At the end of a 22 July 1992 letter to the contracting officer reasserting its claim, Deep Run's managing general partner, James P. Casper, Sr., signed the following certification applying "to my claim dated 26 May 92":

> I assure you my claim is made in good faith, and supporting documents and statements are true.

Digitized by Google

> I firmly believe the government is liable to compensate us [for] lost business opportunity [*i.e.*, Deep Run's characterization of the requested damages].

Mr. Casper's signature was followed by a Notary Public's acknowledgment. (R4, tab 47)

In a letter to Deep Run dated 9 September 1992, the contracting officer acknowledged the purported claim certification in Deep Run's 22 July letter but questioned whether this certification complied with the CDA and advised that "proper certification is a jurisdictional requirement of both the Armed Services Board of Contract Appeals and the U.S. Claims Court." Nevertheless, in that same letter the contracting officer denied Deep Run's claim for additional compensation and, using language substantially as prescribed by FAR 33.211(a)(4)(v), characterized her letter as "the final decision of the Sales Contracting Officer," which may be appealed to the ASBCA or may serve as the basis for bringing an "action directly in the United States Claims Court." (R4, tab 52)

In a 25 September 1992 letter to the deputy head of the DRMS procuring activity, Deep Run reiterated its claim and enclosed a summary claim computation and a certification signed by Mr. Casper, the text of which conformed to the language set forth in 41 U.S.C. § 605(c)(1). At the end of the covering letter, Mr. Casper stated that, if the enclosed certification

> is still not proper I would appreciate some one sending me literature detailing "proper certification." In the meantime I will have notified ASBCA of a pending appeal of [the contracting officer's] decision.

(R4, tab 53)

The deputy head of the procuring activity acknowledged receipt of Deep Run's 23 September letter and attachments thereto and expressed regret that the sale dispute could not have been resolved amicably. The response concluded with the observation that:

> The matter now falls solely within the cognizance of the Contracting Officer and the Armed Services Board of Contract Appeals. Accordingly, I have forwarded your correspondence to [the contracting officer] for action.

(R4, tab 54) The contracting officer never issued a new decision and does not appear to have taken any other action on Deep Run's claim after the claim correspondence, including Deep Run's proper certification, was forwarded to her for action.

Meanwhile, on 2 October 1992 the Board received a letter from Deep Run which attached the contracting officer's 9 September decision and stated:

> Please take notice that our company is appealing [the attached] decision . . .
>
> I would appreciate if you would send us whatever literature you have available so that we can file our claim properly.

Based on the foregoing notice, on the same day the Board docketed the matter as ASBCA No. 45152.

DECISION ON JURISDICTION

There is no dispute that, as Deep Run's managing general partner, Mr. James P. Casper could properly execute required claim certifications. *See* FAR 33.207(c)(2)(ii). However, the language of the purported claim certification at the end of his 22 July 1992 letter fell short of conforming to the text appearing in 41 U.S.C. § 605(c)(1), especially with respect to the second prong of the canon. Such a departure from that talismanic invocation normally dooms the effectiveness of the attempted certification. *See, e.g., Bontke Brothers Constr. Co.*, ASBCA No. 39437, 92-1 BCA ¶ 24,611; *C&S Carpentry Services, Inc.*, ASBCA No. 42987, 92-1 BCA ¶ 24,449; *Patty Precision Products Co.*, ASBCA No. 25338, 83-2 BCA ¶ 16,606 (fatal irregularities in certification language); *but cf. Heyl & Patterson. Inc. v. O'Keefe* [38 CCF ¶ 76,475], 986 F.2d 480, 483 (Fed. Cir. 1993) (applying "substantial compliance" test set forth in *United States v. General Electric Co.* [31 CCF ¶ 72,180], 727 F.2d 1567, 1569 (Fed. Cir. 1984)).

Under an amendment to the CDA adding a new subparagraph (6) to CDA section 6(c), 41 U.S.C. § 605(c)(6), the defects in the language of appellant's purported claim certification would "not deprive a court or an agency board of contract appeals of jurisdiction over that claim." Federal Courts Administration Act, Pub. L. 102-572, § 907(a)(1)(B), 106 Stat. 4518 (enacted 29 October 1992). However, the instant appeal was docketed on 2 October 1992 and the foregoing amendment does not affect "those claims which, before such date of enactment, have been the subject of an appeal to an agency board of contract appeals . . ." *Id.* § 907(a)(2).

Since Deep Run's 22 July 1992 purported certification was facially defective, its pending "claim" was uncertified at the time the

©1994, Commerce Clearing House, Inc.

Digitized by Google

contracting officer issued her 9 September 1992 decision. Despite appellant's sincere and continued efforts to certify its claim properly, the proper certification submitted by Mr. Casper on 25 September 1992, after the contracting officer issued her decision on Deep Run's then uncertified claim, "does not retroactively render the claim properly certified." *DMS,* ASBCA No. 43595, 92-2 BCA ¶ 24,952 at 124,356.

Nevertheless, in *Carmona Industrias Electricas, S.A.,* ASBCA No. 42996, 93-3 BCA ¶ 25,975 (decided 6 April 1993), as in this case, the contracting officer never issued a decision after the claim was properly certified. We there observed:

> The appeal to this Board, which took place prior to certification, was premature at the time taken. Although the appeal was premature when originally taken, subsequent filings by the appellant with the Board make it clear that appellant is seeking a Board decision on the merits of [the] claim

(slip. op. at 6) and denied the Government's motion to dismiss for lack of jurisdiction.

The facts before us present as compelling a case for retaining jurisdiction over this technically premature appeal as those described in *Carmona.* In particular, filings by both the Government and appellant subsequent to the docketing of this appeal make it clear that both parties are seeking a Board decision on the merits of the claim. Cf. *Emerson Electric Co.,* ASBCA No. 31184, 86-2 BCA ¶ 18,979 at 95,855-57 (no useful purpose would be served by dismissing or suspending premature appeal).

Accordingly, we retain jurisdiction over this appeal.

B. *Motion for Summary Judgment*

We next consider the instant motion going to the merits of the appeal. Facts relevant to this motion are summarized in the numbered paragraphs (¶ s) below.

1. The IFB for Sale No. 27-1090 incorporated by reference the DRMS Sale by Reference pamphlet. The following relevant General Sale Terms and Conditions were set forth in Part 2 of the pamphlet and became incorporated in the instant contract:

1. INSPECTION.

The bidder is invited, urged, and cautioned to inspect the property prior to submitting a bid. Property will be available for inspection at the places and times specified in the Invitation.

2. CONDITION AND LOCATION OF PROPERTY.

Unless otherwise provided in the Invitation, all property listed therein is offered for sale "as is" and "where is." Unless otherwise provided in the Invitation, the Government makes no warranty, express or implied, as to quantity, kind, character, quality, weight, size, or description of any of the property, or its fitness for any use or purpose. Except as provided in Conditions No. 12 and 14 or other special conditions of the Invitation, no request for adjustment in price or for rescission of the sale will be considered. *This is not a sale by sample.* (Emphasis in original).

* * *

12. ADJUSTMENT FOR VARIATION IN QUANTITY OR WEIGHT.

Unless otherwise provided in the Invitation, ... when the property is sold by "weight," the Government reserves the right to vary the weight tendered or delivered to the Purchaser by 25 percent. The purchase price will be adjusted upward or downward in accordance with the unit price and on the basis of the quantity or weight actually delivered....

* * *

14. RISK OF LOSS.

Unless otherwise provided in the Invitation, the Government will be responsible for the care and protection of the property subsequent to it being available for inspection and prior to its removal. Any loss, damage, or destruction occurring during such period will be adjusted by the Contracting Officer to the extent it was not caused directly or indirectly by the Purchaser, its agents, or employees. At the discretion of the Contracting Officer, the adjustment may consist of rescission. With respect to losses only, in the event the property is offered for sale by the "lot," no adjustment will be authorized under this provision unless the Government is notified of the loss prior to removal from the installation of any portion of the lot with respect to which the loss is claimed.

15. LIMITATION ON GOVERNMENT'S LIABILITY.

Except for reasonable packing, loading, and transportation costs (such packing, loading, and transportation costs being recoverable only when a return of property at Government cost is specifically authorized in writing by the Contracting Officer) the measure of the Government's liability in any case where liability of the Govern-

Digitized by Google

ment to the Purchaser has been established shall not exceed refund of such portion of the purchase price as the Government may have received.

* * *

22. WITHDRAWAL OF PROPERTY AFTER AWARD.

The Government reserves the right to withdraw for its use any or all of the property covered by this contract, if a bona fide requirement for the property develops or exists prior to actual removal of the property from Government control. In the event of a withdrawal under this condition, the Government shall be liable only for the refund of the contract price of the withdrawn property or such portion of the contract price as it may have received.

* * *

32. GUARANTEED DESCRIPTIONS.

Notwithstanding any other provisions of this Invitation for Bids to the contrary and subject to the limitations and conditions set [sic] in our subparagraphs a and b below, all of which are of the essence, the Government guarantees to the original Purchaser of the property that the property delivered or offered for delivery under any contract resulting from this Invitation for Bids will be as described in the Invitation for Bids.

(a) That if a misdescription is determined to exist prior to removal of the property from Government control, that the sole and exclusive remedy available to the Purchaser will be refund of the purchase price of the property as to which such misdescription exists, or such portion thereof as the Government may have received.

(b) That if a misdescription is determined to exist after removal of the property from Government control, then the Government will make an adjustment in the purchase price paid for the property commensurate with the market value of the property actually received. . . .

(c) . . . however, the Government will accept return of any property determined to have been misdescribed, to a location specified by the Contracting Officer at the Purchaser's expense, and refund to the Purchaser the purchase price or such portion thereof as the Government may have received, provided timely notice of the misdescription has been furnished to the Contracting Officer . . .

(d) The foregoing guarantee is in lieu of all other guarantees, expressed or implied, and all other obligations on the part of the Government to deliver or offer for delivery property as described in the Invitation for Bids and shall not entitle the Purchaser to any payment for loss of profits or any other money damages, special, direct, indirect, or consequential, nor shall any recovery of any kind against the Government under this provision be greater in amount than refund of the purchase price of the specific material found to have been misdescribed. THE GOVERNMENT DOES NOT WARRANT THE MERCHANTABILITY OF THE PROPERTY OR ITS FITNESS FOR ANY USE OR PURPOSE.

(R4, tab 2)

2. The IFB for Sale No. 27-1090 described Item 57 as follows:

> 57. ALUMINUM, SCRAP: Including countermeasure and roll assembly chaffs. Approximately 50% of weight paper.
>
> Inside—Bldg. PB2, South Rear Wall—SCL D1D A*B—In crates & packaging (which are included in weight & sale)
>
> 673,041 POUNDS

(R4, tab 1)

3. On or about 9 July 1991 a Deep Run representative traveled to Piketon, Ohio, to inspect and obtain samples of Item 57. According to appellant's representative, at that time Government officials showed him a roll of aluminum chaff located on the premises as an example of Item 57 and gave him samples of the material. (R4, tab 24)

4. On 29 July 1991, after receiving the award for Item 57 and paying the balance due, Deep Run's managing partner, Mr. Casper, brought his truck to the depot at Piketon, Ohio, to pick up the property. According to Mr. Casper, officials at the depot gave him glass, not aluminum scrap as described in the IFB. (R4, tabs 7-9)

5. Mr. Casper promptly reported this situation to a DRMS Sales Contracting Officer (SCO). On 30 July 1991 he brought the material to the DRMS regional office in Columbus, Ohio, where the SCO undertook to arrange for inspection of the material. (R4, tabs 7, 9)

6. Initially, Deep Run sought specific performance of the sales contract. On 30 July 1991 Mr. Casper submitted to the SCO a writing purporting to be "OUR CLAIM FOR ITEM #057 ON SALE # 27.1090 CONTRACT #27.1090.073 FOR 673,041 LBS, OF ALUMINUM SCRAP AT .0212 PER LB." Deep Run persisted in requesting delivery of the allegedly promised aluminum scrap throughout 1991. However, by February 1992 Deep Run began asserting a monetary claim for breach of contract damages, con-

©1994, Commerce Clearing House, Inc.

Digitized by Google

sisting mainly of out-of-pocket expenses and "Lost Business Opportunity." (R4, tabs 6, 24, 27, 33).

7. Meanwhile, DRMS representatives insisted that Item 57 had been correctly described prior to being offered for sale and was not misrepresented during the inspection period. The same representatives also suggested that samples of aluminum that were not for sale may have been given out during the Inspection period. DRMS' denial of any alleged misdescription was based on a physical Inspection of Item 57 conducted "prior to [the item] being offered for sale." (R4, tabs 29, 34, 46). Nothing in the record indicates the results of inspections performed on the material from Item 57 brought by Mr. Casper to the DRMS regional office in Columbus, Ohio, on 30 July 1991, or if any such inspections were ever performed.

8. In April 1992 the SCO cancelled contract 27-1090-073 with respect to Item 57. During April and May 1992 DRMS approved and processed a refund to Deep Run of the more than $14,000 purchase price of the cancelled item. (R4, tabs 37, 40, 43).

9. In a 21 April 1992 letter to the SCO, Deep Run indicated its unwillingness to accept a refund of its purchase price for fear of waiving its right to claim damages for "lost business opportunity." The SCO's 30 April reply to Deep Run requested additional documentation to support claimed costs and assured Deep Run that rejecting the refund of its purchase price was not required to preserve its claim rights. (R4, tabs 39, 41). Subsequent correspondence between the parties, as described in Part A of this opinion, led to this appeal.

DISCUSSION

Summary judgment may not be granted unless the record shows "that there is no genuine issue as to any material fact and that the moving party is entitled to a judgment as a matter of law." *See* Fed. R. Civ. P. 56(c).

In this appeal, facts relating to the accuracy of the description of Item 57, both during the inspection period and at the time the property was tendered to Deep Run, are clearly in dispute. In particular, genuine issue exists concerning: the composition of the samples shown and given to Deep Run's representative in early July 1991 and what Deep Run's representative was told about them by DRMS personnel; the composition of the property tendered to Deep Run on 29 July 1991 as Item 57 and the extent, if any, to which it differed from the item described in the IFB; and, if the tendered property differed significantly from the description, how and why such difference came about. (¶ s 3, 4, 7)

The essence of the Government's motion is that the foregoing ostensibly disputed facts are immaterial because of liability limiting provisions in the contract, especially the Limitation on Government's Liability and the Guaranteed Descriptions clauses. According to the Government, these clauses restrict the Government's maximum potential liability in surplus sales contracts "to a refund of the purchase price [paid for the property], which the Government has already provided." (Gov't mot. at 7-8)

Nevertheless, the liability limiting clauses on which the Government relies do not always restrict the purchaser's remedy to return of the contract price or otherwise "curtail the damages remedy that is generally applicable to breaches of contract." *See Harry Thuresson, Inc. v. United States* [17 CCF ¶ 81,068], 453 F.2d 1278, 1283 (Ct. Cl. 1972); *Freedman v. United States,* 320 F.2d 359 (Ct. Cl. 1963). Moreover, a purchaser's recovery might not be limited to the purchase price where "'arrant indifference tantamount to a lack of good faith [by the Government has] been shown," *Chesapeake Salvage Corp.,* ASBCA No. 24861, 81-1 BCA 15,020 at 74,326, or where enforcement of the liability limitation would be unconscionable. *See Mighty Mouse Fish Co.,* ASBCA No. 25381, 82-1 BCA ¶ 15,763, *den. motion for reconsid.* 83-2 BCA ¶ 16,550.

When considering a summary judgment motion we are obliged to draw inferences favorable to the nonmoving party, appellant herein. The record before us leaves unresolved questions as to whether the property tendered to Deep Run as Item 57 was actually aluminum scrap (which had simply been misdescribed as to weight, type of materials included, or percentage of waste) or was some different material that had been substituted for the item described in the IFB. If the property was simply misdescribed, appellant's remedy would be limited by the Guaranteed Descriptions clause.

On the other hand, the unjustified substitution of some entirely different material than described in the solicitation might constitute a material breach outside the Guaranteed Descriptions clause or might even be treated as a constructive cancellation or withdrawal of the described item, bringing the Withdrawal of Property After Award

Digitized by Google

clause into play. Under the latter clause, the Government may be liable for breach of contract damages unless it can establish that "a bona fide requirement for the property develop[ed] or exist[ed] prior to actual removal of the property from Government control." *See Peck Iron and Metal Co., Inc. v. United States* [20 CCF ¶ 82,040], 496 F.2d 543 (Ct. Cl. 1974).

Drawing inferences favorable to appellant we discern the existence of triable questions of fact that preclude the entry of judgment for the Government as a matter of law.

The Government's motion for summary judgment is denied and the parties are directed to prepare for hearing.

[¶ 26,372] C&N Contractors, Inc.

ASBCA No. 44549, September 22, 1993. Contract No. DABT10-90-C-1833.

Contract Disputes, Certification—Authority—Senior Company Official in Charge.—A contractor's project manager was a proper person to certify a claim because the project manager was solely responsible for the performance of the contract, was physically present at the site, and exercised full authority to bind the corporation on the contract. The board noted that the Federal Courts Administration Act of 1992, which modified the certification requirements of the Contract Disputes Act, does not apply to claims that were the subject of an appeal to a board of contract appeals before October 29, 1992. The contractor filed notice of appeal with the board on May 15, 1992. In determining whether an individual is a senior company official, the board looked to a person's rank and managerial responsibilities at the time of certification. The project manager's position was one tier below the highest company official, and although the contract manager had no responsibility outside of the contract, the contract represented approximately 50 percent of the contractor's gross revenues.

For the appellant: Smith, Currie & Hancock, Atlanta, Georgia, by Jane Broadwater Long. For the government: Col. Riggs L. Wilks, JAGC, Chief Trial Attorney, and Maj. Donald L. Powers, JAGC, Trial Attorney.

Before STEMPLER, RUBERRY, and SPECTOR, Administrative Judges.

STEMPLER, Administrative Judge: The Government moves to dismiss this appeal for lack of jurisdiction, alleging that appellant failed to properly certify its claim under the Contract Disputes Act of 1978 (CDA), 41 U.S.C. § 605(c)*. The Government contends appellant's project manager, who signed the certification in question, was not a "senior company official" as required by Federal Acquisition Regulation (FAR) § 33.207(c)(2).

STATEMENT OF FACTS

The Government awarded C & N Contractors, Inc. (C & N), an Alabama corporation located in Birmingham, Alabama, contract No. DABT10-90-C-1833 on 27 September 1990 to rehabilitate latrines at Fort Benning, Georgia. The total amount of the contract was $557,000. In November 1991, C & N submitted a certified claim to the contracting officer, totalling $72,247.41, for additional work allegedly not covered by the contract. The contracting officer failed to issue a decision after C & N petitioned for, and the Board issued, an order directing the contracting officer to render his decision. After the Government failed to comply with the Board's order, C & N appealed the deemed denial of its claim to the Board. The Government subsequently filed this motion to dismiss, alleging that C & N's claim certification was improper.

C & N contends that its project manager, Mr. Samford, who executed the claim certification, was a senior company official with primary responsibility for the execution of the contract and a physical presence at the site. The Government contests that Mr. Samford was a senior company official, while conceding that he was primarily responsible for the execution of the contract

* Although the Federal Courts Administration Act of 1992, P.L. No. 102-572, 29 Oct. 1992, modified the certification requirements of the CDA, 41 U.S.C. § 605(c), it does not apply to claims that have been the subject of an appeal to a board of contract appeals before 29 October 1992. § 907(a)(2), 106 Stat. 4518. Appellant filed its notice of appeal with the Board on 15 May 1992.

©1994, Commerce Clearing House, Inc.

Digitized by Google

and that he had the requisite presence at the site.

Mr. Samford is a director of Glade Contracting Corp. (GCC). C & N hired, as employees, Mr. Samford and 12 of GCC's employees to perform the contract. Mr. Samford was appointed C & N's on-site project manager. The position of project manager, in C & N's small organization, was one tier below the highest company official. Mr. Samford had full authority to bind C & N with respect to the contract, did sign all the modifications for the contract, and was solely responsible for the performance of the contract. C & N's annual gross revenue was approximately $1,000,000. It employed between 12 and 30 persons during performance of the contract. Upon conclusion of the contract, Mr. Samford and the other GCC employees, left C & N's employ.

DECISION

Proper claim certification is jurisdictional (*Universal Canvas v. Stone* [37 CCF ¶ 76,370], 975 F.2d 847 (Fed. Cir. 1992)) and the contractor bears the burden of proving that a proper individual has certified under FAR 33.207(c)(2)(i). *Fidelity and Deposit Company of Maryland,* ASBCA No. 40327, 91-1 BCA ¶ 23,312. In deciding whether an individual is a senior company official, we look to a person's rank and managerial responsibilities with the organization at the time of certification. *J.A. Jones Construction Company,* ASBCA No. 40625, 92-3 BCA ¶ 25,212. We hold that Mr. Samford was a proper person to certify C & N's claim. Mr. Samford was solely responsible for the performance of the contract, was physically present at the site, and exercised full authority to bind the corporation on the contract. His position in C & N's small organization was one tier below the highest company officer and was sufficient to make him a senior company official. While it is true that Mr. Samford had no responsibility outside of this contract, the contract represented approximately 50% of C & N's gross revenues and Mr. Samford supervised between 33% and 100% of C & N's employees. Mr. Samford clearly meets the test to be a senior company official. *All Star Maintenance, Inc.,* ASBCA No. 42832, 93-3 BCA ¶ 26,034, 16 April 1993; *Holmes & Narver, Inc./Morrison-Knudsen Company, Inc. (a joint venture),* ASBCA No. 40111, 91-3 BCA ¶ 24,235; *M.A. Mortenson Co.,* ASBCA No. 39978, 91-1 BCA ¶ 23,558.

CONCLUSION

The Motion is denied.

[¶ 26,373] American Marine Decking Services, Inc.

ASBCA Nos. 44440, 45418, 45419, September 21, 1993. Contract Nos. N00123-88-D-0011, N00123-88-D-0295, N00123-88-D-0282.

Contract Disputes, Claims—Statement Adequacy—Future Intent.—Although a contractor was found to have submitted a claim for variations in estimated quantities for the second option year of its contract, the board refused to find that the contractor had filed a similar claim with respect to the base year and the first option year, because the contractor's claim to the contracting officer was expressly for the second option period and merely stated a future, not present, intent to file a claim for the base year and first option year.

For the appellant: Kenneth A. Kopf, Rancho Bernardo, California. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Michael R. Nevarez, Trial Attorney, Office of the General Counsel, Western Division Trial Team, San Bruno, California.

Before LUSSIER, RUBERRY, and SPECTOR, Administrative Judges.

LUSSIER, Administrative Judge: The subject appeals are taken from a contracting officer's decision denying American Marine Decking Systems, Inc.'s (appellant or AMD) claim for an equitable adjustment under the above referenced contracts. The Government has filed a motion to dismiss the appeals in part, striking from the amended complaint appellant's claim for monies related to the base and to the first option year of each contract. The Government contends that the Board has jurisdiction to decide these appeals only insofar as they relate to the second option year.

STATEMENT OF FACTS FOR JURISDICTIONAL PURPOSES

1. Appellant was awarded the three referenced contracts to perform removal and replacement of deck covering. Separate line

Digitized by Google

items for various items of work for a base year, and for two option years, were specified with estimated quantities of work given for each item. Both options were exercised by the Government for each contract. The standard REQUIREMENTS clause in FAR 52.216-21 was incorporated by reference in all three contracts.

2. After performance appellant submitted a claim to the contracting officer by a letter dated 23 January 1992. The letter stated that the claim was being submitted "pursuant to the Contract Disputes Act of 1978 and the Disputes Clause in the contracts and in accordance with the Act, AMD hereby requests a final decision on its claim within the statutorily required time." It enclosed an "Attachment A," an "Attachment B" and a "Certification." The Board file does not contain attachments A or B, but does contain a CDA certification from appellant's president, dated 10 February 1992, and a one page document entitled "Computation" which appears to present a formula for calculating quantum.

3. The claim letter alleges certain factual background related to the estimates versus the actual work ordered:

> Option year 2 [for Contract 0011] ran from March 1990 to March 1991. During that Option year, the Government's total estimated extended price for all quantities for all CLINs was $762,060.00. During that option period, the actual invoiced total price for all CLINs was only $488,770.26—or only 64.14% of the estimated quantities that the government provided for the contractors to rely on in their bidding.
>
> Option year 2 [for Contract 0295] ran from October 1990 to September 1991. During that Option year, the Government's total estimated extended price for all quantities for all CLINs was $404,100.00. During that option period, the actual invoiced total price for all CLINs was only $7,500.00—or only 1.8% of the estimated quantities that the government provided for the contractors to rely on in their bidding. (During the base year for this contract, the Government only ordered 1.2% of the total estimated quantities, and during the first option year, the government ordered NO work at all! This comes to only 1.03% of the total years' estimated quantities).
>
> Option year[sic] [for Contract 0282] ran from October 1990 to September 1991. During that Option year, the Government's total estimated extended price for all quantities for all CLINs was $952,050.00. During that option period, the actual invoiced total price for all CLINs was only $159,414.60—or only 16.7% of the estimated quantities that the Government provided for the contractors to rely on in their bidding. (During the base year for this contract, the Government only ordered 12.5% of the total estimated quantities, and during the first option year, the government ordered 36.4% of the estimated quantities. This comes to only 21.9% of the total estimated quantities.

4. After reciting this background the claim letter then discusses, under a section entitled "CLAIM", various Board of Contract Appeals decisions granting claims for variations from estimated quantities whether because of negligent estimates or diversion of work. This is followed by a section entitled "QUANTUM" which briefly discusses a GSBCA decision and concludes with the following pertinent paragraphs:

> Following the relief granted contractors under similar cases, AMD claims that an adjustment under the changes clause is authorized, or alternatively, relief under the termination for convenience clause to realign the CLIN prices is appropriate.
>
> The supporting calculations for the quantum under the changes clause (and case law) are contained in Attachment A. The supporting calculations for the quantum under the termination for convenience clause (and case law) are contained at Attachment B.
>
> Based on these calculations, AMD claims that it is entitled to an equitable adjustment pursuant to and under the contracts in an amount of $894,597.54 ($180,275.82 for #011; $475,581.24 for #931 [sic]; and $238,740.48 for #295). Since AMD had to wait until the Agency issued no more delivery orders to assess its claim, this figure is a final one under these contracts. AMD will be submitting similar claims for the Base and first Option years under each contract.

5. Not receiving a final decision of the contracting officer, appellant filed an appeal to this Board on 14 April 1992 from a "deemed denial" of its claim under 41 U.S.C. 605(c)(5). On 15 April 1992, the contracting officer issued her decision on appellant's 23 January 1992 claim. In it she characterized the claim as one for an equitable adjustment of $894,597.54 covering the second option year for all three contracts, and correctly stated "AMD also advised the Navy that it

©1994, Commerce Clearing House, Inc.
Digitized by Google

intended to submit similar claims for the base year and first option year under each contract." She concluded that due care was exercised in preparing the estimates and that no diversion of work occurred. She denied the claim.

6. The Complaint filed in these appeals on May 1992 was a consolidated complaint which repeated in essence the allegations in the claim. The request for relief was simply stated "Appellant claims it has been damaged and is entitled to recover in the amount of $894,597.54, plus interest." In December 1992 appellant filed an amended Complaint in which it added the following allegation. "... During the Base Year of Contract 0011, the Agency ordered only 63.5% of the Estimated Quantities; during the first option year, ordered only 57.22% of the Estimated Quantities; and during the second option year ordered only 64.13%—substantially less than those set forth by the Agency in its RFP, and upon which Appellant relied." It also amended it request for relief by changing the amount claimed to $2,368,913.32 plus interest.

7. In May 1993, appellant further amended its Complaint to change its request for relief to now read: "Appellant claims it has been damaged, utilizing a breach of contract calculation, in the amount of $2,368,913.32 plus interest; or in the alternative, utilizing a partial termination for convenience/constructive change calculation, in the amount of $874,877.00 plus interest."

8. The Government concedes entitlement, but not quantum, as to the Second option year for contracts 0282 and 0295.

DECISION

The Government's position in support of its motion is simply that the appellant never filed a claim for the base and first option years with the contracting officer, in the absence of which the Board has no jurisdiction. Appellant does not dispute the principle but contends that such a claim was filed with the contracting officer. Both parties cite a number of cases involving the nature and form of a CDA "claim." None are helpful here.

In essence, appellant asks us to find it filed a claim because it explained its theory of relief and gave the formula, from which the Government could deduce what the "similar" monetary claim it intended to file would be. To state the proposition condemns it. Appellant's claim to the contracting officer is expressly for option year two. It specifically states that appellant "will be" submitting similar claims for the base and first option years, thus we cannot find it was currently submitting such claims. By any interpretation, it expresses a future, not present, act.

There could be many reasons why the present intent to submit a future claim might not come to fruition. The choice was appellant's, not the Government's. It did not do so, and cannot now do so by amendment to its Complaint.

Accordingly, we grant the Government's motion to partially dismiss, and strike the amendment to the complaint insofar as it attempts to include a claim for the base and first option years.

[¶ 26,374] Koehlke Components, Inc.

ASBCA Nos. 44354, 44625, September 22, 1993. Contract No. DLA900-91-D-5119/0001.

Methods of Procurement—Purchase Orders—Lapsing of Order.—Although the 36 electrical components tendered by a contractor under an indefinite delivery purchase order for 100 such units were accepted by the government, the board determined that the offer for the remaining 64 units had lapsed because the contractor failed to tender delivery of the full quantity of units after the specified time. The government's purchase order did not confer any rights on either party. The purchase order was an offer for a unilateral contract that could be accepted by the contractor's rendering the specified performance. In reaching its determination that the offer for the remaining units lapsed by the contractor's failure to deliver the full quantity ordered, the board was influenced by the fact that the contractor had not requested an extension of the delivery date and did not appear to have the remaining units ready for inspection on the specified date.

Methods of Procurement—Purchase Orders—Item Price.—In determining the price of 36 electrical components that were tendered by a contractor and accepted by the government under a purchase order for 100 such items, the board ruled that the contractor

Digitized by Google

was entitled to the price set forth in the order, not the discount price stated in the invoice, because the discount price was applicable only to quantities of 100 or more and the government accepted only 36 units. The government could have assured itself of the discount price by agreeing to extend the offer delivery time to permit the contractor to deliver the remaining 64 units, but it chose not to do so.

For the appellant: Shulman & Hall, Dayton, Ohio, by Thomas G. Kramer. For the government: Michael J. Kraft, Trial Attorney, Defense Electronics Supply Center, DLA, Dayton, Ohio.

Before LUSSIER, RUBERRY, and THOMAS, Administrative Judges.

LUSSIER, Administrative Judge: ASBCA No. 44354 is an appeal from a decision of the contracting officer confirming cancellation of a purchase order contending the order had lapsed. ASBCA No. 44625 is a claim for amounts appellant claims are due and owing on supplies accepted by the Government under the cancelled order. The parties have elected to waive oral hearing and submit the appeals on the record under Board Rule 11. Each has filed a brief and reply brief.

FINDINGS OF FACT

1. The Defense Electronics Supply Center (DESC) issued a Request for Quotations (RFQ) on 28 March 1991 requesting quotations for furnishing 67 electrical components described as "Contact, Electrical" in accordance with a specified drawing.

2. The RFQ contained Defense Logistics Agency Regulation clause 52.213-9002, "Indefinite Delivery Purchase Order (IDPO) Agreement (Feb 1990)", whereby the appellant agreed that:

> [I]f an order is placed for the solicited quantity, the Government may place additional orders for the item(s) covered by this Request for Quotations, at the same price quoted for the solicited quantity, for any order issued, within a quantity range of 12 to 140 units* within 1 year from the date of that purchase order. Such orders will be issued no more frequently than 3 times per quarter. The aggregate total dollar value of orders issued shall not exceed $25,000. In no event shall the Government be obligated to place subsequent orders under this agreement. The initial purchase order will contain the terms under this agreement. The initial purchase order will contain the terms and conditions of this agreement, including this provision, and subsequent purchase orders will cite the initial purchase number. The contractor agrees to advise the Contracting Officer, in writing, at any point in time it determines that it cannot accept subsequent orders under this agreement.

3. The clause contained a section for the quoter to include prices for additional increments. This section was filled in by appellant as follows:

*ADDITIONAL INCREMENTS	PRICE—UNIT PRICE
12 to 29	$112.63
30 to 49	$112.63
50 to 99	$ 93.85
100 to 140	$ 77.38

4. The RFQ specifically advised that it was "a request for information and quotations furnished are not offers." Appellant (KCI) submitted its quotation on 1 April 1991. Its quote specified a unit price of $93.85 for the 67 units and a "price break" of $77.38 for a quantity of 100 units. Appellant also checked boxes indicating inspection and acceptance were to be at origin, with standard item inspection to be at its subcontractor's plant (Hughes Connecting Devices in Irvine, California), and packaging inspection and acceptance to be at the contractor's plant.

5. On 21 May 1991, Diane Jackson, a contracting officer with DESC, issued Form DD1155 as a combined purchase order (DLA900-91-D-5119)/delivery order (0001). On page 1 of the order the same breakdown of prices for various quantities was shown as appeared on appellant's quote. It showed these as "FOB destination". Item 10 on page 1 provided for delivery to "FOB Point" by 27 December 1991. On the continuation sheet, the figure "67" was crossed out and next to it was written the figure "100". The unit price was listed as $71.38, and "amount" as $7738.00. At the bottom of the sheet, a "Parcel Post/Freight Address" was shown as "Defense Depot Richmond, De-

©1994, Commerce Clearing House, Inc.
Digitized by Google

fense General Supply Center, Richmond, Va". The order further provided that item inspection would be at Hughes Aircraft, Irvine, California, by the Government's Santa Ana office, and packaging inspection and acceptance would be at Koehlke Components, Inc., Centerville, Ohio, by the Government's Dayton office.

6. The purchase order expressly provided that "the contractor hereby accepts the offer represented by the numbered purchase order as it may previously have been or is now modified, subject to all the terms and conditions set forth, and agrees to perform the same". It did not require appellant to signify acceptance by signing the purchase order.

7. On 7 October 1991, appellant wrote requesting a no cost modification to the contract to change the place of item inspection from the Hughes facility in Irvine, California to a Hughes facility in Tijuana, Mexico. The letter advised that although all component parts were manufactured in the United States the assembly takes place in Mexico (R4, tab 5). When the product was ready for inspection, the Santa Ana inspection office, responsible for inspections at Hughes' Irvine facility, refused to proceed insisting that an inspection had to take place first at Tijuana. The Government office responsible for inspections in Tijuana was the San Diego office. To accomplish this change in inspection point a modification to the contract was required by the inspector (app. exh. 3; R4, tab 13).

8. On 21 October, the Government asked for a $300 price reduction to issue the modification, which appellant orally agreed to on 31 October (R4, tabs 5, 6). It is the testimony of the DESC contract specialist that $300 is a standard DESC administrative cost charged for changes requested by contractors (Munday deposition p. 12). Based on a contemporaneous note on 23 October, we find that appellant was also asked whether it needed a delivery extension and replied it did not. Irrespective of whether appellant could have asked for the change earlier, and we do not know that it could, the Government understood that the inspection change, if it was to mean anything, would have to take place soon enough to permit timely delivery (see Munday deposition p. 14).

9. On 4 November, appellant faxed its agreement "to pay the $300 for the confirming modification" for changing the inspection point (R4, tab 6). The modification states the agreement in terms of the Government changing the inspection point in return for appellant's agreement "to a bulk fund decrease of $300.00. As a result the total amount of the order is changed to $7,438.00." (R4, tab 8)

10. On 18 November, appellant sent another fax requesting issuance of the modification (R4, tab 7). The record indicates that on that date the contracting officer signed the modification which states its "effective date" is 27 November 1991 (app. exh. H). The "effective date" was explained by the contract specialist at DESC to mean the date the modification actually left DESC (Deposition of Sharon Munday, p. 25). An unsigned "advance copy" was not dispatched to appellant until 27 November. The modification is a unilateral modification not requiring appellant's signature. Appellant received the "advance copy" on 2 December and immediately faxed it to Hughes (app. exh. 4).

11. The record is very sparse on the details but it supports our finding that the Government inspector received his copy of the modification on 16 December 1991 and on that date inspected 36 units (R4, tab 13). These units were apparently shipped to appellant's facility in Centerville, Ohio, because on 27 December 36 units were accepted there by the Government inspector and shipped to the General Supply Center in Richmond (R4, tab 14). By 27 December appellant had committed itself to purchasing the remaining 64 units from Hughes (app. exh. 4). However, the Government no longer needed the items and the DESC contract specialist contacted appellant by phone on 30 December 1991 to ascertain the status of shipments and discuss a no-cost cancellation of the order. Appellant refused to agree to a no-cost cancellation (R4, tab 9; app. exh. 4). There is no evidence to show that appellant ever asked for an extension of delivery date prior to that time. Appellant advised that it would deliver 25 units by 3 January 1992 and complete the order by 30 January 1992. We note, however, that the testimony of the Hughes employee responsible for this order is that "by January 9, 1992 the remaining [64] units were in Tijuana awaiting inspection" (Deposition of M.J. Kimball p. 2). It would appear that the 64 units were not available for inspection on 16 December 1991.

12. On 31 December 1991, the contracting officer faxed appellant a notice advising that the delivery order "has lapsed pursuant to its own terms as a result of KCI's failure to deliver the full quantity of material by 27 December 1991, and [that] the Government

Digitized by Google

will not accept late delivery of any material under this order". Appellant was asked for disposition instructions for any units that may already have been shipped (R4, tab 11).

13. On 3 January 1992, the 36 units appellant had shipped were received by the Defense General Supply Center, Richmond, Va. Appellant invoiced these at $2,485.68, which amounted to a unit price of $77.38 per unit (× 36 = 2,785.68 less the $300 reduction in price in the Modification) (R4, tab 14).

14. On 27 January, appellant wrote to the contracting officer asking for a decision under the Contract Disputes Act. It asserted that the unreasonable insistence upon a contract modification being issued as a prerequisite to inspection in Tijuana, and the delay in issuing a modification, prevented appellant from delivering the material on 27 December 1991. It contended that the Government was estopped from asserting lapse of the delivery order and its attempt to do so was a breach of contract. It demanded reinstatement of the order and inspection of the items remaining to be shipped.

15. The contracting officer wrote to appellant on 20 February 1992 confirming her decision that the 64 units were cancelled. She advised, however, that the 36 shipped units would be accepted and paid for by the Government (R4, tab 13). Neither the contracting officer nor her contract specialist who negotiated the modification believe that there was any delay in issuing it. Both consider the time frame normal (Deposition of Sharon Munday, p. 22; Deposition of Deborah Duffy, p. 35). The appeal from this decision is ASBCA No. 44354.

16. On 6 March 1992, appellant wrote to the contracting officer regarding the 36 units accepted by the Government (R4, tab 16). It claimed it was not obligated to pay the $300 it agreed to for the modification because the modification was not timely issued. It also claimed it was entitled to be paid for the 36 units at $112.63 instead of $77.38 as the latter price was quoted only for 100 units or more. It specifically requested a decision under the Contract Disputes Act within 60 days, which was never issued. The appeal from the deemed denial of this claim is ASBCA No. 44625.

DECISION

Appellant's brief in ASBCA No. 44354 seeks a remand to the contracting officer for payment under the theory of termination for convenience of a bilateral contract. See *ITT Defense Communications Division*, ASBCA No. 13420, 69-1 BCA ¶ 7548; *Klass Engineering, Inc.*, ASBCA No. 22052, 78-2 BCA ¶ 13,236, *modified and aff'd on reconsid.*, 78-2 BCA ¶ 13,463.

It is clear that the Request for Quotations was simply a request for information and appellant's quotation was not an offer permitting acceptance by the Government. By the same token, the Government's purchase order/delivery order itself did not confer any rights on either party. It did not invite a written acceptance but rather was an offer for a unilateral contract which could be accepted by appellant rendering the specified performance, in the absence of which the offer would lapse. *Sunshine Cordage Corporation*, ASBCA No. 38904, 90-1 BCA ¶ 22,382, *aff'd on reconsid.*, 90-1 BCA ¶ 22572; *Klass Engineering, Inc., supra.*

When the Government negotiated a $300 reduction in price for the issuance of the modification which it considered necessary before it would inspect at Tijuana, it obligated itself to issue the modification in a timely manner. Inspection took place in Tijuana on 16 December and this permitted shipment from appellant's Ohio facility on 27 December. However, there is no evidence to show why only 36 units were inspected. We have a nexus between the issuance of the modification and the date of the Tijuana inspection, but we have no nexus between the issuance of the modification and the limited number of units inspected on 16 December. In this respect we are influenced by the twin facts that appellant never asked for an extension in the delivery date prior to 30 December 1991 and that it has not established, by evidence we would assume would have been available to it, that it had units, in addition to the 36 units it tendered, ready for inspection on 16 December 1991, which the Government refused to inspect.

In view of its actions, we hold the Government acceptance of the delivery of these 36 units is binding upon it. Apart from the fact that the Government inspected and accepted the items on 27 December in Ohio, the subsequent 6 day delivery delay to destination is attributable to the Government's delay in providing inspection. Furthermore, on 20 February 1992, the contracting officer accepted those units. As to the remaining 64 units, we hold the offer lapsed under the case law cited above. Accordingly, ASBCA No. 44354, the claim based upon a termination for convenience theory for the undelivered 64 units, is denied.

The alternate claim by appellant in ASBCA No. 44625 relates to the price it is

©1994, Commerce Clearing House, Inc.

Digitized by Google

entitled to for the 36 accepted units should it not prevail on ASBCA No. 44354. We hold it is entitled to the price set forth in the order, namely $112.63. In this regard, we attach no significance to appellant's 29 January 1992 invoice at the $77.38 unit price, since this invoice was concurrent with its contemporaneous (27 January 1992) demand that it be allowed to deliver the remaining 64 units. The $77.38 unit price was obviously a quantity discount price, applicable only to quantities of 100 or more. Having accepted the 36 units, the Government could have assured itself of that price by agreeing to extend the offer delivery time to permit appellant to deliver the remaining 64 units. It chose not to do so. ASBCA No. 44625 is sustained on the merits to the extent that appellant is entitled to be paid at the price of $112.63 per unit for the 36 units, less the $300 it agreed to for the change in origin inspection point.

SUMMARY

ASBCA No. 44354 is denied.

ASBCA No. 44625 is sustained.

[¶ 26,375] Intram Company

ASBCA No. 44159, September 23, 1993. Contract No. N62470-88-C-4425.

Interpretation of Contracts—Repair and Maintenance—Service Call v. Inspection.—Under a repair and maintenance contract for a fire alarm system, the contractor's interpretation that minor repairs were compensable as service calls and were not part of the daily inspection and testing requirements was rejected because the contract, when read as a whole, clearly required that minor repair work be performed during inspection and testing to keep the equipment functioning properly. The bid schedule clearly included repair and maintenance work outside the separate line item for service calls. The contract further directed the contractor to a military maintenance manual and a national fire protection code, which required repair work to remedy problems discovered during inspections. The service call specification, on the other hand, contemplated work specifically ordered by the government rather than repair and maintenance work identified by the contractor during routine inspection and testing.

For the appellant: Lewis B. Bibb, Owner. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and John Adam Dietrich, Trial Attorney.

Before DUVALL, RUBERRY, and SPECTOR, Administrative Judges.

DUVALL, Administrative Judge: This appeal is from the contracting officer's final decision denying appellant's claim for an equitable adjustment for minor repair work accomplished during daily inspection and testing of the fire alarm system in a Navy hospital. Appellant contends that service calls should have been issued for the performance of the work. The Government contends that performance of minor repair work during inspection and testing fell within the fixed contract price. The Government also contends as separate grounds for denial of the claim that appellant failed to meet the Changes clause notice requirements and that appellant also failed to demonstrate injury. Entitlement only is at issue.

FINDINGS OF FACT

On 30 September 1988 appellant was awarded a contract for maintenance and repair of the fire alarm system at the Naval Hospital, Portsmouth, Virginia for the total firm fixed price of $66,920. The initial contract term was for one year. The contracting officer exercised two options for yearly renewal; the third and final year of the contract expired on 30 September 1991. The General Requirements clause of the Contract Schedule and Specifications included: "performing emergency work and routine service work; performing preventive maintenance; performing routine recurring work such as testing and repair of the Fixed Fire protection and warning systems at the Naval Hospital."

The contract bid schedule included the following items, with appellant's unit and total prices:

Digitized by Google

		Annual Quantities	Unit Price	Total Amount
	* * *			
0001AF	Inspections, tests, maintenance and repair of Fire Alarm Systems Control and Auxiliary equipment.			
	(20) Pedestal Pull Boxes	80	50	$4000
	(106) Pullboxes	424	10	$4240
	(109) Visuals	436	10	$4360
	(Section C, para C.13 and C.20)			
	* * *			
0001AJ	Service calls:			
	Emergency	34	100	$4300
	Routine	9		
	(Section C, para C.7)			
	TOTAL PRICE FOR CONTRACT LINE 0001			$66,920
	(Contract subline items 001A thru 001AJ)			

According to appellant, when service calls exceeded indicated annual quantities, it was entitled to an equitable price adjustment for the additional work.

"Maintenance" and "repair" were defined in the specification as follows:

C.2.5 Maintenance—The day-to-day, periodic, or scheduled work required to preserve or restore a facility or equipment to a condition that it can be effectively utilized for its designed purpose. It includes work to prevent damage or the deterioration of a facility that otherwise would be more costly to restore.

C.2.16 Repair—The restoration of a facility or equipment to a condition that allows it to be used for its designed purpose. Repair may require overhaul, reprocessing, or replacing parts or materials that have deteriorated because of use or time.

Pertinent portions of Specifications C.13 and C.7 respectively stated:

C.13 *FIRE ALARM SYSTEMS:*

The contractor shall schedule and conduct all tests and inspections of the Fire Alarm Systems in accordance with this specification. The inspections and test procedures shall conform to NAVFAC-MO-117 and the current National Fire Protection Association Codes. The Fire Alarm Systems shall consist of, but not [sic] limited to, the following:

a. Fire Alarm Control Panels

b. Manual Pull Stations (Pedestal-mounted Pull Boxes)

c. Smoke Detectors

(1) Ceiling-type connected to a coded Fire Alarm Loop.

(2) Ceiling-type—120 Volt-Non-coded-Electrically-powered.

(3) Duct-Detector—controls shut-down of Air-Handlers.

(4) Automatic Door Closures—Door Closures contain hydraulic and electric parts. Closures shall be maintained as a total unit.

d. Fire-pumps: Electric

e. Heat Detectors

f. Sprinkler Pressure and Flow Switches

g. Carbon-Dioxide Systems (Pressure-Cylinder—Hose & Reel type and portable cart system)

h. Dry-Chemical Extinguishing System Activation Switches

C.7 WORK CLASSIFICATION:

* * *

c. *Service Calls:* Service calls shall be classified as emergency or routine and shall be so designated by the Contracting Officer or authorized Government representative at the time of Contractor notification. Contractor shall maintain a record log of all service calls and shall provide the Contracting Officer a summary of all service calls, by classification, received during the previous month.

(1) *Emergency Service Calls:* Service calls shall be classified as emergency when the work consists of correcting failures which constitute an immediate danger to personnel or property. The Contractor shall respond to emergency calls 24 hours a day, seven days a week, within two (2) hours during normal working hours, and within three (3) hours during all other times. The Contractor shall correct the emergency condition before departing the

©1994, Commerce Clearing House, Inc.

Digitized by Google

job site. The Contractor shall be required to maintain sufficient off-the-shelf materials to support emergency requirements, after which time completion requirements will be in accordance with routine classification.

(2) *Routine Service Calls:* Service calls will be classified as routine when the work does not qualify as an emergency call. Routine calls shall be completed within five (5) working days after receipt of the call. Routine calls shall be accomplished during regular working hours, unless permission to work outside these hours has been granted by the Contracting Officer. On occasion, the Contractor may be expected to perform some calls after hours as directed by the Contracting Officer.

Specification C.13 did not specify the frequency of fire alarm and automatic sprinkler system inspections. However, NAVFAC MO-117, MAINTENANCE OF FIRE PROTECTION SYSTEMS, included a table of the frequencies of various tests and inspections. The applicable National Fire Protection Association Code (NFPA 1221, 1988 Edit.) included the following pertinent provisions in the Testing paragraph (3-1.5):

3-1.5.1.1 Tests and inspections shall be made at intervals not less frequent than those specified in this standard.

3-1.5.1.3 All apparatus shall be restored to normal condition as promptly as possible after each test or alarm for which the apparatus functioned.

3-1.5.1.4 Where supervisory devices or tests indicate that trouble has occurred anywhere on the system, the operator shall *take appropriate steps to repair* the fault or, if this is not possible, isolate the fault and notify the official responsible for maintenance. [Emphasis added].

The contract included the standard Changes-Fixed Price clause (FAR 52.243-1, ALT. I).

The fire alarm system specification in the follow-on contract did not reference the publications named in the quoted specification (C.13) in appellant's contract, but specified the frequency of inspections and, under "daily" inspections included the requirement to "Perform maintenance and repair in response to a symptom or suspected malfunction."

Appellant did not anticipate daily inspections when it bid on the contract. Appellant was informed that daily inspections were required shortly after work on the contract began. Appellant employed Control Systems, Inc. to do the inspection work. (Tr. 2/6, 7, 56) Control Systems personnel performed minor repairs and adjustments while making the daily inspections. On infrequent occasions, they would ask the Government's Quality Assurance Representative (QAR) whether he would consider an item of work to be appropriate for a service call rather then work to be performed as part of the daily inspection. There is no indication in the record that Control Systems personnel ever disputed the QAR's determination, or generally complained about having to perform minor repair work as part of the daily inspection (tr. 2/82, 83).

Approximately a month and a half before expiration of the contract on 30 September 1991, appellant ended its association with Control Systems, Inc., and the responsibility for inspections was assumed by appellant's field superintendent. He would ask Government personnel for a service order in connection with such repair work, and they would respond that no service order was required (tr. 2/53, 54).

A typical example of a minor repair or adjustment which, according to the Government, was required to be performed without additional compensation as part of the inspection and testing requirement, but which appellant considered as requiring issuance of a service call, was malfunctioning of the spring device which automatically closed doors when activated by the fire alarm system. When, during inspection, a door was found closed when it was supposed to be in an open position, the spring device could be reset with a turn of a screw, which could be accomplished in less than a minute (tr. 1/146, 147).

On 9 September 1991 appellant made a written request for a suspension of the daily inspections. The request was promptly denied by the Officer in Charge of Construction (OIC). (Gov't exh. 3; app. exh. 1)

In a written response to the OIC's letter, dated 18 September 1991 appellant questioned whether the contract required daily inspections and, for the first time, complained in writing about having to perform minor repairs during daily inspections, without issuance of a request for a service call. Appellant advised that it could find no such requirement in the contract (app. exh. 3).

On 11 October 1991 appellant submitted a claim of $45,000 for performance of repair services during daily inspections during the life of the contract. Appellant's claim as-

Digitized by Google

serted that "no specific requirement concerning minor repairs to equipment during daily inspections can be found in this section [Section C] of the contract." Appellant submitted three additional equitable adjustment claims at the end of the contract, as follows:

$15,600	—	Weekly sprinkler system inspections,
$75,000	—	daily fire alarm inspections and;
$4,560	—	repair and inspection of six additional fire alarms systems.

The last claim resulted in a bilateral modification awarding the amount claimed. On 28 May 1992 the contracting officer issued a final decision finding appellant entitled to an equitable adjustment for the daily fire alarm and weekly sprinkler system inspection claims in the amount of $18,718, and a unilateral modification was issued increasing the contract price by that amount. This decision was not appealed. The amount awarded included total miscellaneous material costs in connection with daily fire alarm inspections, before markups, of $800.00. The balance of the increase for the fire alarm claim was for labor and markups. (Gov't. exh. 12)

On 9 December 1991 the contracting officer issued a final decision denying the equitable adjustment claim for minor repair work during daily fire alarm inspections. Appellant appealed the decision on 20 February 1992.

Appellant paid Control Systems, Inc. $1,625 twice a month. Appellant estimated that $300 of this was allocable to minor repairs and maintenance, and multiplied this amount times 50 weeks per year, times three years, to arrive at the $45,000 claim. Appellant's claim was audited by the Government following appeal. The auditor found no documentation to support the claim, and no way of determining how much was spent for minor repairs and maintenance (Gov't exh. 13, tr. 2/93, 103). The required reports submitted by appellant during the contract period failed to disclose the quantity of minor repair work performed during the contract period (tr. 2/131, 132).

DECISION

Appellant's interpretation of the contract, that minor repairs and adjustments identified during daily inspections should be compensated as service calls and are not part of the daily inspection and testing requirements, violates the basic precept of contract interpretation that a contract must be read as a whole, so as to give meaning to all of its provisions if possible, rather than rendering certain provisions useless or inoperative. *Hol-Gar Manufacturing Corporation v. United States* [10 CCF ¶ 72,885], 169 Ct. Cl. 384, 395; 351 F 2d 972, 979 (1965).

We note that Line Item 0001AF of the contract bid schedule required quotation of a fixed price for "Inspections, tests, maintenance and repair of Fire alarm Systems Control and Auxiliary Equipment." Thus, the bid schedule clearly contemplated and the fixed contract price included repair and maintenance work outside the separate line item for service calls, which was limited to a specific annual quantity. Line Item 0001AF referenced Specification Paragraph C.13, which directed the contractors to current National Fire Protection Association Codes and a Navy maintenance manual. The fire code testing paragraph required repair work to remedy problems discovered when testing during inspections. The service call specification, on the other hand, clearly contemplated work specifically ordered by the Government, rather than repair and maintenance work identified by the contractor during routine inspection and testing. Appellant's contention that the latter work demands a service call order is contrary to the clear intent of the contract terms when read as a whole.

The fact that the Government clarified the contract requirements in the follow-on contract has no bearing on interpretation of this contract. Subsequent remedial measures are not evidence of liability (Fed. R. Evid. 407).

Having decided against appellant on the threshold interpretation question, we need not address the lack of notice and lack of injury defenses raised by the Government.

The appeal is denied.

[¶ 26,376] Planning & Human Systems, Inc.

ASBCA No. 44013, September 22, 1993. Contract No. HEW-105-77-1059.

Cost Limitations—Notice Adequacy—Proof of Mailing.—A cost-plus-fixed-fee contractor was not entitled to an increase in the contract ceiling price to reflect increased overhead costs, despite its contention that a letter sent to a government contract specialist notified the government of the expected overrun, because there was no direct evidence that the letter had been sent and there was no indication any such notice had been given to the agency. Even if the letter had been given to the agency, it would have been ineffective as notice, because it failed to meet the Limitation of Cost clause requirements of advising the contracting officer that a total cost overrun was expected and of giving a revised estimate of total performance costs.

Cost Limitations—Waiver of Limitations—Proof.—A contractor's contention that the government had waived the notice requirement for an overrun under a cost-plus-fixed-fee contract was rejected because the contractor failed to establish that the contracting officer or the contract specialist was aware of the overrun in question. A reference to prior conversations, contained in the contractor's request for funding that was submitted just before the expiration of the contract, was not sufficient to show that the government officials were aware of the overrun. The government subsequently raised the contract ceiling to cover the overhead increases for prior years included in the same request, but it did not fund the amount in dispute. Testimony by the contractor's president that the original contracting officer had made an oral commitment to fund the contractor's actual overhead rates was uncorroborated.

Cost Limitations—Overhead—Negotiated Overhead Rate v. LOC Clause.—A contractor was not entitled to be paid overhead costs in accordance with its actual overhead rate for the final year of its contract, because any final payments the contractor sought were subject to the terms of the Limitation of Cost clause. Contract requirements regarding the negotiation of final overhead rates did not provide an exception to the cost ceiling and notice requirements under the LOC clause. In the absence of unforeseeability, waiver, or estoppel, the government was not obligated to fund the final year overrun, even though the contractor may have assumed it would be funded. The government did in fact increase the contract cost ceiling for overhead increases in other years. The contractor assumes the risk of nonfunding when the requirements of the Limitation of Cost clause are not strictly adhered to.

For the appellant: Dr. Frances Georgette, President. For the government: Dalton Phillips, Trial Attorney, Department of Health and Human Services, Washington, D.C.

Before DUVALL, RUBERRY, and SPECTOR, Administrative Judges.

DUVALL, Administrative Judge: This dispute concerns the contracting officer's denial of appellant's claim for an increase in the ceiling price of this cost plus fixed fee contract for increased overhead costs occurring during the last year of the contract. The denial was based on failure to meet the notice requirements of the contract Limitation of Cost clause. Appellant contends that it provided a limitation of cost notice prior to contract expiration and, alternatively, that the contracting officer waived the notice requirement and rendered the notice requirement "nugatory." According to appellant, the contracting officer had knowledge of the claimed overrun and had agreed to pay it, while directing appellant to continue to work.

FINDINGS OF FACT

1. Effective on 30 September 1977 appellant was awarded a negotiated cost-plus-fixed fee contract pursuant to Section 8(a) of the Small Business Act. The contracting agency was the Office of Human Development Systems (HDS) of the Department of Health, Education and Welfare (now HHS). After several yearly renewals, the contract expired on 29 September 1981. Appellant was to provide training and technical assistance to fourteen Head Start programs and to develop manuals for use by other Head Start projects. The contract Statement of Work described the project as "an experimental/demonstration program in providing preventive mental health services in Head Start programs."

Digitized by Google

2. Article IX, ESTIMATED AND ALLOWABLE COST, fixed the total estimated cost of the contract at $140,166.00 plus a fixed fee of $9,812.00. The clause also provided that allowable indirect costs under the contract would be established by the Negotiated Overhead Rates Clause, but included a provisional rate at the beginning of the contract of 101.51% of total direct labor and fringe benefits.

3. Pursuant to modification 3, effective 30 September 1980, the total estimated cost plus fixed fee obligated under the contract was raised to $708,384. This amount consisted of estimated cost of $662,041 and a fixed fee of $46,343.

4. The contract General Provisions included the following:

Clause No. 3—LIMITATION OF COST

(a) It is estimated that the total cost to the Government for the performance of this contract, exclusive of any fee, will not exceed the estimated cost set forth in the Schedule, and the Contractor agrees to use his best efforts to perform the work in the Schedule and all obligations under the contract within such estimated cost. If, at any time, the Contractor has reason to believe that the costs which he expects to incur in the performance of this contract in the next succeeding 60 days, when added to all costs previously incurred, will exceed 75 percent of the estimated cost then set forth in the Schedule, or if, at any time, the Contractor has reason to believe that the total cost to the Government for the performance of this Contract, exclusive of any fee, will be greater or substantially less than the then estimated cost hereof, the Contractor shall notify the Contracting Officer in writing to that effect, giving the revised estimate of such total cost for the performance of this contract.

(b)... [T]he Government shall not be obligated to reimburse the Contractor for costs incurred in excess of the estimated cost set forth in the Schedule, and the Contractor shall not be obligated to continue performance under the contract (including actions under the Termination clause) or otherwise to incur costs in excess of the estimated cost set forth in the Schedule, unless and until the Contracting Officer shall have notified the Contractor in writing that such estimated cost has been increased and shall have specified in such notice a revised estimated cost which shall thereupon constitute the estimated cost of performance of this contract. No notice, communication, or representation in any other form or from any person other than the Contracting Officer shall affect the estimated cost of this contract. In the absence of the specified notice, the Government shall not be obligated to reimburse the Contractor for any costs in excess of the estimated cost set forth in the Schedule, whether those excess costs were incurred during the course of the contract or as result of termination. When and to the extent that the estimated cost set forth in the Schedule has been increased, any costs incurred by the Contractor in excess of the estimated cost prior to such increase shall be allowable to the same extent as if such costs had been incurred after the increase; unless the Contracting Officer issues a termination or other notice and directs that the increase is solely for the purpose of covering termination or other specified expenses.

Clause No. 5—NEGOTIATED OVERHEAD RATES

(a) Notwithstanding the provisions of the clause of this contract entitled "Allowable Cost and Fixed Fee," the allowable indirect costs under this contract shall be obtained by applying negotiated overhead rates to bases agreed upon by the parties, as specified below.

(b) The Contractor, as soon as possible but not later than 90 days after the expiration of his fiscal year, or such other period as may be specified in the contract, shall submit to the Contracting Officer, with a copy to the cognizant audit activity, a proposed final overhead rate or rates for that period based on the Contractor's actual cost experience during that period, together with supporting cost data. Negotiation of overhead rates by the Contractor and the Contracting Officer shall be undertaken as promptly as practicable after receipt of the Contractor's proposal.

(c) Allowability of costs and acceptability of cost allocation methods shall be determined in accordance with paragraph (b) of the clause of this contract entitled "Allowable Cost and Fixed fee."

(d) The results of each negotiation shall be set forth in a modification to this contract, which shall specify (1) the agreed final rates, (2) the bases to which the rates apply, and (3) the periods for which the rates apply.

(e) Pending establishment of final overhead rates for any period, the Contractor shall be reimbursed either at negotiated provisional rates as provided in the contract, or at billing rates acceptable to the Contracting Officer, subject to appropriate adjustment when the final rates for that period are established. To prevent substantial over or under payment, and to apply either retroactively or prospectively, (1) provisional rates may, at the request of either party, be revised by mutual agreement, and (2) billing rates may be adjusted at any time by the Contracting Officer. Any such revision or negotiated provisional rates provided in the contract

©1994, Commerce Clearing House, Inc.

Digitized by Google

shall be set forth in a modification to this contract.

(f) Any failure by the parties to agree on any final rates under this clause shall be considered a dispute concerning a question of fact for decision by the Contracting Officer within the meaning of the "Disputes" clause of this contract.

* * *

Article XXII, Technical Direction, of the contract provides in relevant part:

B. Technical direction must be within the general Statement of Work stated in the contract. The Project Officer does not have the authority to and may not issue any technical direction which (i) constitutes an assignment of additional work outside the general scope of the contract; (ii) constitutes a change as defined in the contract clause entitled "Changes"; (iii) in any manner causes an increase or decrease in the total estimated contract cost or the time required for contract performance, (iv) changes or waives any of the expressed terms, conditions, or specifications of the contract; (v) interferes with the Contractor's right to perform the terms and conditions of the contract; (vi) gives supervision to the contractor's employees.

* * *

E. If, in the opinion of the Contractor, and [sic] instruction or direction issued by the Project Officer is within one of the categories as defined in (i) through (vi) above, the Contractor shall not proceed but shall notify the Contracting Officer in writing within five (5) working days after the receipt of any such instruction or direction and shall request the Contracting Officer to modify the contract accordingly ....

5. In April, 1981 Mr. Larry Davis, a HHS cost analyst, conducted a cost review to establish final indirect cost rates for the three year period 1 October 1977 to 30 September 1980, and a provisional rate for the fiscal year ending 30 September 1981. This was followed by a bilateral modification (Mod 4) amending article IX with respect to overhead as follows:

[I]ndirect costs shall be reimbursed at the final negotiated indirect cost rate of 107.38%, applicable to total direct labor dollars and fringe benefits for the period 10-1-77 thru 9-30-78, 63.94% for the period 10-1-78 thru 9-30-79, 94.66% for the period 10-1-79 thru 9-30-80; and at the provisional rate of 105.75% effective 10-1-80 thru 9-30-81 until amended.

6. The bilateral modification (effective date 15 April 1981) was signed by appellant's president, Dr. Frances Georgette, Phil J. Aravanis, as "contracting officer," Contracts Branch, HHS, and by a representative of the SBA. The agreed upon provisional rate for FY 81 was the best estimate both parties could come up with at that time.

7. On 6 May 1981 appellant's executive vice president, Ms. Jane L. Watson, drafted and signed the following letter to "Mr. Phil J. Aravanis, Contract Specialist":

In accordance with Clause No. 3—Limitation of Cost, of the General Provisions, this is to notify you that the costs we expect to incur in the performance of this contract in the next succeeding sixty (60) days, when added to all cost previously incurred, will exceed seventy-five percent (75%) of the estimated costs set forth in the contract.

(Tr. 198; app. supp. R4, tab 7)

8. There is no direct evidence that the letter was placed in the mail and we are unable to find that it was given to HHS (See findings 23, 24, *infra*).

9. Notwithstanding the fact that Mr. Aravanis signed mod 4 as "contracting officer," we conclude from the preponderance of the evidence before us that he was a contract specialist, without contracting authority with respect to this contract during the last fiscal year, and that the contracting officer during this period was Mr. Ben Sharp (app. supp. R4, tabs 7, 8; GR4, tab 2—Mod. 4, 5; tr. 153, 189). Neither Messrs. Aravanis, Sharp nor the cost analyst, Mr. Davis, appeared as witnesses at the hearing.

10. On or about 20 May 1981, appellant submitted a voucher in the amount of $56,884.41, which included $48,346.97 for overhead for fiscal years 77-78, 78-79 and 79-80, in accord with the April 1981 modification of the final overhead rates for those years. At that time, the cumulative total of expenditures was within the ceiling limit. The voucher was processed and paid shortly after receipt (tr. 146; app. exh. 29).

11. On 22 September 1981, seven days before the expiration of the contract, Ms. Watson sent the following letter to "Mr. Ben Sharp, Contracting Officer":

This is to request additional funds for the above referenced contract for:

1) The fringe and overhead differential between the provisional rates and the audited rates for the 1977, 1978, 1979, and 1980 fiscal years. The contract was modi-

Digitized by Google

fied to incorporate these approved rates by Modification Number 4. The amount of the difference between the provisional and audited rates was invoiced and paid; however, the modification was never implemented to add the additional funds to the contract.

2) Additional funds to pay the difference between provisional fringe and overhead rates for fiscal year 1981, set in April 1981, and actual rates determined with a nine month experience base.

The purpose of this letter is to request that a modification be put through now, as the contract funds have run out. *We first discussed this in July, then again in August, at which time you said that Mr. Aravanis had given you our file and that you had to review it.* Attached is the cost breakdown for the modification and the figures for the nine-month fringe and overhead rates. [Emphasis added]

We would also like to request permission to continue to invoice in excess of the current contract dollars, and be paid now for the period 8/15 through 9/30/81.

12. At the hearing on the appeal Dr. Georgette gave the following response to a question from the presiding Administrative Judge as to whether modification 4, which raised overhead rates, also raised the ceiling price:

DOCTOR GEORGETTE: No, it did not. It did not change the ceiling, but when the Government says it—you know, we're four years of dealing with, you know—this man was new. Mr. Anthony was new. We'd been dealing with [Phil Aravanis] and Ben Sharp on this contract for—respectively for a four year period. Now, *when those people say to me "were going to pay you,"* I believed them. Of course, I did. They kept their word before. There was originally a ceiling in that contract. Jim Offord, who originally signed the contract said to me—when he put it in as a ceiling I said "Jim, I can't live with that." And he said to me "if you exceed that, we will make an adjustment to your actual rates" and they did. But, the contract officers who had been there all that time did in fact do that in modification four. They changed it to the actual and he had promised that and they did it. [Emphasis added]

(Tr. 201, 202)

13. Mr. Offord was the contracting officer who signed the original contract in September 1977. It is not clear from the record when he left this position and there is no evidence to corroborate his alleged oral commitments. We cannot find that such commitments were made.

14. The only evidence that the contracting officer during the 1981 fiscal year, Mr. Ben Sharp or, for that matter, the contract specialist, Mr. Phil Aravanis had been apprised of an overrun and may have indicated a willingness to pay for it is the underscored language In the 22 September 1981 letter and in Dr. Georgette's quoted testimony. This is insufficient evidence to support a finding that either one was aware of, or promised to pay for, the increased overhead costs which are the subject of this dispute.

15. On 23 September 1981, the HHS project officer, Dr. Phyllis Stubbs, sent appellant a critique of the final report submitted by appellant pursuant to the contract. The critique contained comments suggesting changes and expansion in several areas. The final paragraph read:

The above comments reflect our views on the strengths and weaknesses of the draft CFMH Final Report. We offer this technical direction in support of your production of the CFMH Final Report.

16. On 11 December 1981, HHS issued a bilateral modification (Mod. 5) increasing the total estimated cost by $52,420.00. This modification increased the total estimated cost plus fixed fee from $708,384 to $760,804. The purpose of the modification was to add funds to cover further additional cost arising from the adjustment of indirect cost rates that were previously incorporated into the contract as modification 4. Mr. Ben Sharp signed modification 5 as the HHS contracting officer.

17. On 16 June 1983 the Defense Contract Audit Agency issued an audit report on indirect expense rates for the fiscal years ending 30 September 1981 and 1982 in connection with appellant's cost reimbursement contracts, including this contract. The report determined an overhead rate of 209.07% for the fiscal year ending September 1981.

18. The audit report noted that appellant maintained a job order cost accounting system which was considered adequate for the accumulation, segregation, and recording of costs incurred under Government contracts (app. supp. R4, tab 3; tr. 6, 8, 113). Specifics relating to appellant's accounting system are not included in the report and do not appear elsewhere in the record.

19. A copy of the report was forwarded to appellant by Mr. Davis, the HHS cost analyst, on 28 June 1983. In a covering letter he

©1994, Commerce Clearing House, Inc.
Digitized by Google

advised appellant that "ultimately the agency on [sic] Operating Division (OPDIV) with the preponderance of the money will negotiate an overhead rate with you." Mr. Davis later identified that agency as the Health Care Finance Administration (HCFA), indicating that he would accept the same rate for the contract which is the subject of this dispute (tr. 65, 66).

20. The next day appellant submitted a voucher for an additional payment of $77,385.01 over the contract cost ceiling amount. Virtually the entire amount of the claimed increase was for increased overhead for FY 81, utilizing an overhead rate of 209.07%.

21. Appellant experienced a contraction of business activity during the second half of FY 81. In the third quarter the Government stopped work on one of the appellant's five then current Government contracts. In July (4th quarter), work on another contract was stopped. Both contracts were later cancelled. Appellant had written a number of proposals for new contracts during the second quarter of FY 81; many of these solicitations were cancelled without contracts being awarded. In appellant's past experience, 73% of its Government contracts had been awarded during the last quarter of the fiscal year. This experience was not repeated in 1981. New business and the accompanying expected 4th quarter increase in the labor base did not materialize. Appellant's direct labor and fringe benefit base was reduced during the 1981 fiscal year, as reflected by the following figures:

	1st Qtr	2nd Qtr	3rd Qtr	4th Qtr
Total dir. labor & Fringe	$114,265	$92,663	$62,861	$27,307

(App. supp. R4, tab 19)

22. In the face of the loss of labor base, appellant made efforts to cut back on expenses. Office space was sublet. Twelve people were let go in an effort to reduce overhead expenses. Only Dr. Georgette, Ms. Watson, and two other key persons remained in overhead (app. supp. R4, tab 19; tr. 105-108).

23. On 16 June 1984 the contracting officer, Mr. Joel B. Anthony, whose involvement with the contract began some two years after it expired, issued a final decision denying the claim as represented by appellant's 29 June 1983 voucher in the amount of $77,385.11 based solely on appellant's failure to supply the notice required by the Limitation of Cost clause. Prior to issuance of the final decision, he made a thorough search for an LOC notice. None was found (tr. 183).

24. A meeting was held with appellant to discuss the decision on 24 August 1984. Appellant argued that it had made efforts to reduce overhead costs during FY 81, and that the claim was justified under the negotiated overhead rates clause, which, appellant contended, was an exception to the LOC clause. Appellant did not contend that the LOC clause notice had been given. No mention was made of the 6 May 1981 LOC notice letter. That letter first surfaced when appellant submitted it to the Board as a proposed exhibit prior to the hearing on the appeal held in July 1992. There is no indication in the record that at the meeting appellant contended that the notice requirement had been waived.

25. The Government took the position that appellant's records did not reflect any result from such cost reduction efforts. As a result of the meeting the contracting officer let his final decision stand, and so advised appellant by letter dated 24 August 1984. Appellant filed a notice of appeal with the ASBCA on 15 September 1984.*

26. The Health Care Finance Administration (HCFA) of HHS had two contracts with appellant. One concerned hospital administration and the other medicaid reimburse-

* On 29 September 1986 the Board granted the Government's motion to dismiss the appeal for lack of proper certification. The Board found that the claim of $77,385.01 arose under the latest renewal of the contract, extending performance from 29 September 1980 to 29 September 1981 and as such was subject to the Contract Disputes Act of 1978 (41 U.S.C. 601 et. seq.) The appeal was dismissed without prejudice to the filing of a new appeal after a duly certified claim was submitted to the contracting officer, and a final decision rendered 87-1 BCA 19,381, Mot. for Recon. denied, 87-3 BCA 20,027).

On 15 January 1992 appellant appealed from the contracting officer's failure to issue a decision, which appeal was docketed by the Board. The recertified claim was submitted to the contracting officer on 8 February 1990 (tr. 101).

Digitized by Google

ment. Work on these contracts terminated in 1982. Appellant had given notice of a cost overrun with respect to these contracts prior to their expiration (tr. 127-129). In supplemental Agreements of Settlement for both contracts signed in March 1985, HHS agreed to increases in the contract price based on an overhead rate for FY 81 of 199% which was accepted by appellant. On 29 February 1984 another agency of HHS, the Health Resources and Services administration, issued a Notice of Indirect Cost Rates for yet another contract with appellant (232-80-0035) which established a final overhead rate of 209.07% for the period 1 October 1980 through 31 July 1981 (app. supp. R4, tab 15).

DECISION

We are unable to conclude that appellant satisfied the general prerequisite to recovery of an overrun of giving effective notice thereof prior to incurrence of such costs, as required by the Limitation of Cost (LOC) clause of the contract. At the outset, we are unable to find that the 6 May 1981 "notice" was ever given to the Government. Even if it had been given, it would have been ineffective because it failed to meet the LOC clause requirements of advising the contracting officer that a total cost overrun was expected, and of giving a revised estimate of total performance costs. Under the terms of the clause there is no obligation to reimburse costs in excess of the estimated costs unless such notice is given. The 22 September 1981 letter, also deemed an LOC notice by appellant, was ineffective because it was sent just seven days before contract expiration, or after most, if not all, of the overrun had already occurred.

Another prerequisite for recovery established by the clause, a responsive written notice from the contracting officer increasing the contract's estimated cost, was also not satisfied in connection with either of these letters from the appellant.

The bar to recovery for overruns imposed by noncompliance with the LOC clause requirements has been overridden only in instances where the contractor, during performance, has no reason to believe that an overrun would occur (see *General Electric Company v. United States* [16 CCF ¶ 80,284], 440 F2d 420 (Ct.Cl. 1971), or where the equitable doctrines of waiver and estoppel allow for recovery (See *Hughes Aircraft Corporation,* ASBCA No. 24601, 83-1 BCA ¶ 16,396, at 81,516-17).

Appellant does not argue, and we cannot find on the record before us, that the overrun of overhead costs was not ascertainable during approximately the second half of FY 1981 when the claimed costs were incurred. In fact, the appellant's waiver argument, largely predicated on the Government's alleged foreknowledge, would contradict such a position.

With respect to appellant's waiver (or estoppel) contentions, we note that the burden is on the contractor to prove waiver and estoppel. Appellant has not met its burden. We have found that appellant has failed to establish that either the contract specialist or the contracting officer was aware of the overrun which is the subject of this claim, or promised to pay for it. In this connection, we note that the ceiling was in fact raised to accommodate increased overhead costs, although not the amount in dispute, in a modification issued over two months after the contract expired.

The technical direction offered by the project officer shortly before expiration of the contract in no way served to increase the total estimated contract costs. This is proscribed by article XXII of the contract. Moreover, the Government's cost analyst's post award indications that a higher overhead rate would be accepted were not binding on the Government, since he had no authority to waive the contract's funding limitations.

We note in this regard that the contractual notice requirements under the LOC clause are separate from the contractual requirements regarding negotiation of final overhead rates. Accordingly, any final payments appellant seeks are subject to the terms of the LOC clause regardless of the final overhead rate negotiations by appellant. *Kirschner Associates, Inc.,* ASBCA No. 24958, 81-1 BCA ¶ 14,834.

Finally, the fact that other HHS agencies funded overhead overruns in other contracts in accordance with final negotiated rates does not operate as a waiver of the Government's right to apply LOC requirements here. We have consistently held that each claim for funding must stand on its own. *General Time Corporation,* ASBCA No. 18962, 75-2 BCA ¶ 11,462, and cases cited therein.

While appellant may have assumed that the overrun would ultimately be funded, absent a clear showing of unforeseeability or of waiver and estoppel, the Government is not so obligated, and the contractor assumes the risk of non-funding when the requirements

©1994, Commerce Clearing House, Inc.
Digitized by Google

of the Limitation Of Cost clause are not strictly adhered to. (See *Hughes Aircraft, supra*).

The appeal is denied.

[¶ 26,377] Technical Services—K.H. Nehlsen GmbH

ASBCA No. 43869, September 29, 1993. Contract No. DJA37-87-C-0381.

Conflicts of Interest—Government Personnel—Incompatibility with Government Duties.—Under a contract to provide boiler firing services, the government's refusal to allow a contractor to hire a government employee to fire the boilers was improper, because the government failed to demonstrate that this individual's employment with the government disqualified him from holding such a position under the terms of an executive order. The executive order, in prescribing the standard of conduct applicable to military and civilian personnel, stated that military personnel could not engage in outside employment that was incompatible with the performance of their government duties. The government asserted that the employment of the individual would have created a conflict of interest in violation of the executive order. However, the government failed to provide proof that the individual's duties with the government were inconsistent with the proposed duty of firing boilers. Requiring the contractor to employ a person other than the government employee at additional costs was a constructive change to the contract that entitled the contractor to an equitable adjustment.

Modifications—Constructive Change—Hire of Government Personnel.—Under a contract to provide boiler firing services, the government's refusal to allow a contractor to hire a government employee to fire the boilers and the contractor's subsequent employment of another person at additional costs was a constructive change because the government failed to demonstrate that this individual's employment with the government disqualified him under the terms of an executive order from holding a position with the contractor. The executive order stated that military personnel could not engage in outside employment that was incompatible with the performance of their government duties. Although the government argued that the employment of the individual created a conflict of interest in violation of the executive order, it failed to prove that the individual's duties with the government were inconsistent with the proposed duty of firing boilers.

Risk Allocations—Risk of Loss—Sabotage v. Inept Operation.—A contractor was responsible for damage to boilers under its contract to provide boiler firing services, even though it was uncertain whether the damage to the boilers was caused by sabotage or inept operation, because the contractor was responsible for the damage under either theory of causation. Because neither the government nor the contractor contended that the damage was due to normal wear and tear on the boilers, the board determined that the damage was caused either by sabotage or by negligent operation by the contractor's employees. If the damage was caused by inept operation, the contractor remained responsible under the Government-Furnished Property clause. The Government Building clause made the contractor responsible for repairs resulting from its failure to use care in avoiding damages to government equipment. If the damage was caused by sabotage, the contractor would have been found to have assumed the risk of such loss under the terms of the contract. The contractor was required under the Government-Furnished Property clause to secure and protect the area and to ensure against such a loss.

Modification—Scope of Contract—Relocation of Storage Area.—The costs of moving coal from a basement storage area to a new exterior storage area were compensable to a contractor under its contract to provide boiler firing services because the relocation of the storage area resulted in extra work. During the contract performance period, the government began a process of converting the building's heating system from coal-fired boilers to a centralized system, and the contractor was directed to move the coal from the basement to the new outside storage area.

For the appellant: Matthews Law Office, Sulzbach, Germany, by Leodis C. Matthews. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Capt. Patrick J. Lamoure, JAGC, Trial Attorney, HQ, USAREUR & 7TH Army.

Before SHACKLEFORD, RUBERRY, and RIISMANDEL, Administrative Judges.

SHACKLEFORD, Administrative Judge: This is an appeal from the contracting officer's failure to issue decisions on several claims. Hearing was held in Mannheim, Germany. Only entitlement is at issue. Both parties have filed post-hearing briefs and appellant has filed a reply. We have jurisdiction under the Contract Disputes Act (CDA), 41 U.S.C. § § 601 *et seq.*

FINDINGS OF FACT

On 21 September 1987, Contract No. DAJA37-87-C-0381 (the contract) was awarded to Technical Services-K.H. Nehlsen GmbH (TS or appellant) in the total estimated amount of DM 892,770.00. Under the contract TS was to provide non-personal boiler firing services at various locations in the Federal Republic of Germany.

As awarded, the contract was for a one-year period (1 October 1987 to 30 September 1988) with two one-year options. However, due to difficulties experienced by TS in obtaining the services of qualified boiler firemen and due to delay in award of the contract, commencement of work was delayed until 1 November 1987 and the incumbent contractor, PAE, was awarded a four-week contract extension.

Paragraph 1.12.6 of the Contract's Statement of Work, provided that:

> The contractor has to keep all mechanical rooms, electrical distribution rooms, motor control centers, chemical storage areas, etc. under his control locked or otherwise secured at all times.

Paragraphs 2.15, 2.16 and 2.17 of the Statement of Work covered maintenance and repairs to be performed by the contractor, as follows:

> 2.16 *LEVEL I WORK:*
>
> Preventive or annual recurring maintenance/repairs performed according to checklists prepared by the contractor and on a scheduled basis to prevent malfunction breakdown in deterioration of the equipment or facilities.
>
> 2.17 *LEVEL II WORK:*
>
> Unscheduled maintenance/repair work limited to a maximum of 16-man-hours as estimated by Engineering Performing Standards (EPS), specific definet [sic] limits in section C-5 or DM 500[.]00 in reimbursable parts, materials and supplies.
>
> 2.18 *LEVEL III WORK:*
>
> Unscheduled maintenance/repair work in excees [sic] of 16-man-hours as estimated by EPS, specific definet [sic] limits in section C-5 or DM 500.00 in reimbursable parts, materials and supplies.

Level I work consisted of preventive maintenance[1] and annual recurring maintenance[2] both of which were included in the contract price for the basic work. Level II work is generally described in section 5.4 of the Statement of Work as minor unscheduled repairs not exceeding the manhours set forth in ¶ 2.17. Level III work is generally described in section 5.4 as unscheduled major repair work exceeding the manhour threshold set forth in ¶ 2.18 above. Both Levels II and III were reimbursable work.

The contract included the short form Government Property clause (FAR 52.245-4) which provided in part as follows:

> (c) Upon delivery of Government-furnished property to the Contractor, the Contractor assumes the risk and responsibility for its loss or damage, except—
>
> (1) For reasonable wear and tear;
>
> (2) To the extent property is consumed in performing this contract; or
>
> (3) As otherwise provided for by the provisions of this contract.

The contract also included the Protection of Government Buildings, Equipment, and Vegetation clause (FAR 52-237-2) which provided as follows:

> The Contractor shall use reasonable care to avoid damaging existing buildings,

[1] Paragraph 2.24 of the Statement of Work defined preventive maintenance as "systematic maintenance of componence [sic] of a system or a piece of equipment in order to extend the live [sic] of the equipment and to minimize break downs."

[2] Paragraph 2.2 of the Statement of Work defines annual recurring maintenance as "that work performed on an annual schedule which has been submitted to the appropriate office. Recommendations of the equipment manufacturer or of a recognized standard of the industry predominant in trade[]must be fulfilled. Annual recurring work is seasonal work completed prior to the maximum utilization of the item."

©1994, Commerce Clearing House, Inc.

Digitized by Google

equipment, and vegetation on the Government installation. If the Contractor's failure to use reasonable care causes damage to any of this property, the Contractor shall replace or repair the damage at no expense to the Government as the Contracting Officer directs. If the Contractor fails or refuses to make such repair or replacement, the Contractor shall be liable for the cost, which may be deducted from the contract price.

Section H-11 of the contract required TS to carry an insurance policy as follows:

A Comprehensive General Liability with a minimum lump sum coverage of *DM 200,000.00* against material damages; and *DM 1,000,000.00* against personal injuries or damage occuring [sic] within the service system. [Emphasis in Original]

In September 1990, appellant filed several claims with the contracting officer. On 26 September 1990, the contracting officer acknowledged receipt of the claims and advised that they were undergoing evaluation. On 3 July 1991, the contracting officer wrote to TS, referred to the claims which are the subject of this appeal, advised of the Government's tentative position on some, asked for additional information on others and, finally, advised that upon receipt of documentation, a final decision would be issued. We have no evidence of whether the additional information was ever provided.

As of 1 December 1991, no final decision had been issued and, on that date, the contractor filed an appeal from the failure of the contracting officer to issue a decision. Each claim is discussed below.

Findings of Fact—Extra Personnel Costs at Schneeberg

On 28 October 1987, a meeting was held between Government and TS officials to discuss the readiness of TS to begin contract work on 1 November with enough qualified personnel. While a determination was made at the meeting that TS was prepared and capable of beginning work, TS was advised that its plan to utilize a Government employee, who worked for the using activity, to fire the boilers at Schneeberg would not be allowed. It was the Government view at that time that it would be illegal for a Government employee to be paid both by a contractor and the Government for work completed in the same hours. The Government took this position even though the employee in question, Mr. Rappel, had performed these services for the predecessor contractor while also employed by the Government.

It later developed that the Government misunderstood the extent to which TS intended to utilize Mr. Rappel. In fact they planned to use his services only in the early morning prior to his going to work for the Government and in the late afternoon, after completion of his workday for the Government. The misunderstanding as to the extent to which Rappel would be used emanated from a Government misunderstanding as to the contract requirements. The position taken originally was based upon the mistaken impression that the contract required a person to operate the boiler at Schneeberg 24 hours per day when in fact the contract only required the plant to operate 24 hours per day.

As the Government refused to approve Rappel, TS proceeded to hire another individual to work at Schneeberg at greater expense than it would have incurred to pay Rappel and on 15 September 1990, filed a claim for DM 42,750 for such additional expense.

DECISION

Allowing TS to hire Rappel, the Government contends, would have caused a conflict of interest to arise in violation of Executive Order 11222. Appellant counters that Rappel had performed the very same work for the prior contractor while employed by the using activity and that the Government was aware of appellant's intention to use Rappel when the contract was awarded.

Section 201 of Executive Order 11222 states in pertinent part as follows:

(a) Except in accordance with regulations issued pursuant to subsection 9(b) of this section, no employee shall solicit or accept, directly or indirectly, any gift, gratuity, favor, entertainment, loan, or any other thing of monetary value, from any person, corporation, or group which—

(1) has, or is seeking to obtain, contractual or other business or financial relationships with his agency;

(2) conducts operations or activities which are regulated by his agency; or

(3) has interests which may be substantially affected by the performance or nonperformance of his official duty ....

The Department of Defense has implemented Executive Order 11222 in 32 C.F.R. Part 40 (July 1, 1989 edition), by prescribing the standards of conduct applicable to mili-

Digitized by Google

tary and civilian personnel. Section 40.4(b)(11), Outside employment of DoD personnel, provides as follows:

> DoD personnel may not engage in outside employment or other outside activity, with or without compensation, that is not compatible with the performance of their Government duties, may reasonably be expected to bring discredit upon the Government or DoD Component concerned, or is otherwise inconsistent with the requirements of part [sic]. This includes the requirement to avoid actions that reasonably may be expected to create a conflict of interest or the appearance of conflict of interest.

The Government alleges that the mere fact that Rappel was employed by the using activity is sufficient to disqualify him from holding employment with a DoD contractor under the executive order. The implementing regulation, however, requires more than that. It requires incompatibility with Government duties or at least the appearance of a conflict of interest. There is simply no proof here that Rappel's duties with the using activity were inconsistent with his proposed before and after-hours duties of firing boilers. In fact, we have no evidence of the nature of Rappel's Government job.

The Government has demonstrated no valid basis under Executive Order 11222 or under its implementing regulations to bar the employment of Rappel by TS. In addition, we question whether the Government could even preclude a contractor from hiring a Government employee inasmuch as the executive order and its implementing regulations are restrictions on the activities of employees, not restrictions on contractors. Neither party has pointed to any clause in the contract, and we have found none, that gives the Government the right to preclude the employment of Rappel by TS so long as he was technically qualified to perform the duties.

Requiring TS to employ a person other than Rappel at additional cost was a constructive change to the contract which entitles TS to an equitable adjustment to its contract. The matter is remanded to the contracting officer to negotiate quantum.

Findings of Fact—Alleged Sabotage in Buildings 263 and 684

Several days prior to turnover of heating plants at Grafenwoehr, Vilseck and Bindlach, the Government instituted an emergency operating plan in anticipation of possible problems "due to the negative attitude of the boiler firemen" of the then current contractor with respect to the new contractor firm. TS was unsuccessful in hiring the employees of the predecessor contractor as they were dissatisfied with the employment terms offered.

Josef Lissman was the Government boiler inspector responsible for Vilseck which included the boilers in buildings 263 and 684. Building 684, which had an automatic coal fired boiler, was adjacent to building 263 which had a semi-automatic coal fired boiler. Lissman knew that TS was not going to be able to hire the firemen of the predecessor firm and was concerned about the new firemen's ability to operate these highly modernized systems. In anticipation of the turnover, therefore, he observed the operation of the systems for a week prior to turnover and satisfied himself that they were operating satisfactorily.

On the evening of 31 October 1987, Lissman arrived at buildings 263/684 at approximately 1700 hours, talked to the PAE employees there, asked if they knew of any problems and determined that the systems were operating automatically and at the correct temperature. At 2300 hours, Lissman inspected the boilers again, assuring himself that everything was operating properly. Subsequently, Klaus Barro Nehlsen (Nehlsen), TS's vice president, and other TS personnel arrived. They observed the boiler in 263, determined that everything was at the proper setting and operating properly. At this joint inspection in conjunction with turnover, the lights were working and the coal feed system was operating properly. In addition, the coal bunker was half filled, the floor was dry and the coal chute was half filled. Lissman then padlocked building 263, left the lights on in the coal bunker and the boiler house and went with the TS personnel to building 684.

The automatic system in building 684 included devices called bimetal relays (often spelled relais), which protect the motors from overheating. Certain values on the motors correspond to the values on the relays and a button is used to adjust the relays to correspond to the values on the motors. At the turnover inspection the bimetal relays had not been changed and were working properly. During the inspection, a TS employee began to make adjustments to the relay buttons but at Lissman's direction changed them back to their proper settings. When the buttons are switched randomly and wrongly, the sequence of automatic operation is affected and the heating plant can

©1994, Commerce Clearing House, Inc.
Digitized by Google

be damaged, but it is not clear how that occurs.

The system in building 684 was controlled from a number of switchboards which the parties referred to as "luminous boards." These luminous boards controlled three boilers, the transportation system for the coal feeding and a complete transportation system for ash removal from all three boilers. Green lights on the luminous boards signified that the system was operating properly and running automatically. Red flashing lights would signify that there was trouble or damage to the boards. In Lissman's inspection on the night of turnover, there were only green control lights which indicated the system was running automatically.

In building 684 burned coal is removed by a hoist which works automatically. Large pieces of burned coal, known as slag, are removed from the three boilers in 684 by a horizontal conveyor belt which transports the slag to a crusher which reduces its size and transports the smaller slag by way of a vertical conveyor belt to be fed into a large container. This large container is emptied every several days. A redundancy was built into the system such that there were two vertical belts, the second designed to begin operation if the first failed or became clogged. At the turnover inspection the ash removal system was operating properly and was still operating properly, according to Lissman, when he left the area at 0800 hours the morning of 1 November 1987. The second branch of the vertical system was not inspected on the evening of takeover.

Karl Plum was the initial TS employee responsible for 263 and other boilers in the area. Plum was relieved about 0600 in the morning of 1 November 1987 by Karl Baumann. Plum advised Baumann that in 263, the lights were not working and the coal transportation system was not operating. The light problem was corrected later in the afternoon when Army engineers replaced fuses which were defective. Baumann later that same day inspected the coal feeder and found it was filled with coal fines and water. Baumann corrected the problem by removing the coal from the feeder by hand. The nature of the clog in the system made it impossible to use a shovel to remove the fines and water. It was Baumann's judgment that the high percentage of fines placed in the feeder were placed there deliberately.

During the two days the feeder was inoperable, the boiler was fed manually by loading buckets of coal and feeding it into the burners with shovels.

Nehlsen testified that during the day on 1 November 1987, the second vertical slag removal system in building 684 was found to have been clogged and damaged even though he says TS had not used that system. TS cleaned and repaired the vertical system and the Government refused to compensate them for it because it was considered to be normal cleanup work. Nehlsen testified that the amount of work involved went beyond the 16 hour limit of level I and level II repairs and they have not been paid for that work.

On 13 December 1987, TS advised the Government in writing about the foregoing problems with the heating plants at Vilseck, and stated that in 684 the bimetal settings on the controls were out of phase with the motors and that boiler regulators and electronic controls had been readjusted between visits to the boiler. Nehlsen considered these situations to have resulted from sabotage.

The Government conducted an investigation of the foregoing and concluded as follows:

> 3. At the turnover of the contract the heating plant #263 was operatable [sic]. According to the contractor's site manager, this heating plant is presently working without problems. Since, the heating plant has a very sensitive coal and de-ashing system, it is probable that the conveyer [sic] was jammed due to unexperience [sic] of operating personnel.
>
> 4. All keys of the heating plants have been turned-over from the previous contractor. It is questionable that persons from outside readjust controls and settings. The contractor was advised to install new locks at the boiler room doors.

On 15 September 1990, TS filed a claim for DM 3,495 for costs incurred due to the alleged sabotage at boiler #263, stating as follows:

> On 1. Nov. '87 shortly after take over someone with an unaccounted key took access to the boilerhouse at #263.
>
> This person
>
> —removed the fuses of the lighting circuits
>
> —filled up the coal-feed with dust and dirt and water
>
> The local authorities were not prepared to consider this a repair case and refused a repair order.

Digitized by Google

The local management was only too much after establishing a case of "breach of contract" to hold it against us. We therefore could not stop our work at #263 but had to get the coal feed operational again and put our men to work accordingly.

There is no clause in the contract to which we have to remedy such obvious cases of sabotage or to consider this a minor repair. We therefore invoice the US-Government the normal rates of the open market.

By letter of 10 September 1990, TS requested payment of DM 4,495 for the repair of damages to boiler 684 at Vilseck alleged to have been caused by sabotage by unknown persons in which:

1. the bimetal-relais settings were changed to higher or lower values.

2. The luminous board for the operation of coal feed, slack crusher, ash disposal was not working properly.

3. The right branch of the vertical ash removal system was jammed and full of ash and slack.

Decision—Alleged Sabotage at Buildings 263 and 684

Appellant argues simply that damages to equipment in buildings 263 and 684 were caused by sabotage and are therefore compensable as an equitable adjustment under the Changes clause of the contract. The Government does not challenge the logic of appellant's theory, it merely argues that appellant failed to prove the damages resulted from sabotage, and failed to show its own employees were competent to operate the equipment. The Government believes the damages were due to TS employee error. At the time the premises were turned-over to TS, all systems were operating properly. Neither party has cited any authority for its respective position either under the contract or under case law. Appellant believes, but did not prove, that damages to the equipment were due to sabotage. The Government believes, but did not prove, that the damages were due to employees of TS improperly operating the equipment. Since neither party contends the damages were due to normal wear and tear on the equipment and there is no evidence it was, we find the damages to be due to either sabotage or negligent operation of the system by TS employees. In either event, appellant may not prevail.

If the cause was inept or negligent operation of the equipment by appellant's personnel, the appellant must bear the costs. The Government-Furnished Property clause places the risk and responsibility for loss on appellant subject to three exceptions, only one of which, reasonable wear and tear, is arguably applicable here. Since we have found the damages were not due to reasonable wear and tear, the risk and responsibility for damages remains with appellant. In addition, under the Protection of Government Buildings clause, the contractor was to use reasonable care to avoid damages to the equipment, and upon its failure to do so, is charged with responsibility for repairing or replacing the damage at no cost to the Government.

If we were to find, as appellant urges, that the damages were the result of sabotage, appellant still would not prevail. In addition to the assumption of risk and responsibility mandated by the Government-Furnished Property clause, paragraph 1.12.6 of the Statement of Work required the contractor to keep premises under its control locked or secured at all times. Section H-11 of the contract required TS to carry a comprehensive liability insurance policy including material damage. Thus, if someone entered the premises and damaged the equipment on purpose, TS assumed the risk and responsibility for that loss; TS was required under 1.12.6 to secure and protect the area and TS was required under the contract to insure against that loss.

Thus, whether the cause was inept operation or sabotage, appellant bears the burden of any expense as it is responsible under either theory. The claims for damages due to alleged sabotage at buildings 263 and 684 are denied.

Findings of Fact—Building 263, Inoperable Equipment 9/88—4/89

On 15 September 1990, TS filed a claim with the Government for DM 14,430 for alleged extra work expended to repair machinery in building 263 from September 1988 to April 1989. The explanation for this extra cost is set forth in the letter as follows:

In early '88 the EIP at #263 was extremely shaky, worn out and in parts not operational any more. Because of this the local US-Management wanted to abandon operation fast as possible and to convert to district heat.

It is quite understandable that no more money was spent on summer overhaul and repairs.

When operation was to start again on 20. Sept. 1988 we had to face the fact, that the semiautomatic motor driven ash and slack

©1994, Commerce Clearing House, Inc.

Digitized by Google

disposal was beyound [sic] repair. Therefore ash and slack had to be removed by hand from the boiler and be hand carried to the slack container outside the boiler house.

This extra work had to be performed until 19. April 1989, when the semiautomatic coal feed broke down completely and consequently the coal fired boiler was replaced by an oil fired boiler. In the meantime the operation had to be stopped temporarly [sic] because the motor of the airvent blew up and had to be rewound. This was between 24. Dec.—30. Dec. 1988.

DECISION

The Government contends that the repairs performed were caused in part by operational errors of the TS personnel working on the machinery. Appellant does not discuss this issue in either its initial or reply brief, and thus we are not fully cognizant of its theory of recovery. In any event, we conclude that appellant has failed to demonstrate that the repairs were other than Level I preventive maintenance repairs, which were included in the base price of the contract.

Findings of Fact—Extra Work, Buildings 475/478, July-Nov 1988

Buildings 475 and 478 were heated by a coal fired boiler in the basement of one or both of the buildings. The record is unclear as to whether there was one boiler for both buildings or whether there was a common basement. In any event, the boiler was fired by coal which was stored in bins in the basement 10 to 12 meters from the boiler itself. The coal was transported from the interior bin by shoveling it into coal wagons which were moved the 10 to 12 meters to the boiler and loaded easily into the boiler. This interior storage area was protected from rain and snow.

During the contract performance period, the Government began a process of converting to district heat, a system of heating several buildings in an area from a central heating plant. Buildings 475 and 478 at Vilseck were among the first buildings to be connected to that new system. The basement area in which the coal was stored was slated to be used for instrumentation associated with the new district heating, and in order to install those instruments, the coal which was stored in the basement was moved to the outside, about 6 to 8 meters from the buildings. This storage area was unprotected from rain and snow.

The Government installed a coal chute to facilitate transporting the coal from the outside storage area into the building housing the boiler. The plan was that coal would slide down the chute and into a coal wagon which could be pushed directly to the boiler and loaded into the heating system. The chute was not used, however, because it was too flat, with insufficient angle for the coal to slide down. The contrary testimony of Mr. Baur, a former disgruntled TS employee, was not credible. TS had to hand carry fuel from the coal storage area outside the building into the boiler room in the basement.

This diversion from normal operations lasted from 28 July 1988 until 22 November 1988, and caused the incurrence of some additional labor effort, the amount of which is unclear from the record.

On 15 September 1990, TS submitted a claim to the Government for DM 14,260 for alleged extra work expended from July to November 1988 at buildings 475 and 478 in Vilseck. The explanation for this extra cost is set forth in the claim as follows:

The local US-Management closed the coal bins at #475 and #478, Vilseck, on 28th July '88 to make room for the installation of substations for district heat.

The result was, from 28th July '88 until 22nd Nov. '88 the fuel had to be handcarried from coal piles outside the buildings into the boilerrooms in the basements.

Wooden coal chutes installed by the engineers department were of no help at all.

For similar reason the ash hoists were not operational. So ash and slack had to be removed by hand from the boilerrooms to the ash-containers outside.

This caused 3 times the hours needed normally to feed the boilers and to dispose of ash and slack.

On top of this our personnel requested extra pay for the much harder work. For July, Aug., Sept., Oct. '88 we could fend this off. For Nov. '88 we had to agree to a "Erschwerniszulage" of DM 2,50 per hour worked in #475 and #478.

Decision—Coal Chute at Buildings 475 and 478

As our findings indicate, the chute was not installed at a proper angle to be of any usefulness at reducing the amount of effort necessary for transporting coal from the exterior of the structure to the basement boiler room. While we acknowledge the testimony of Baur who stated the chute was properly installed, we do not believe that workers would simply ignore a properly installed chute and choose a method that involved more work.

Digitized by Google

We deny any recovery for additional work associated with ash removal as appellant has failed to prove entitlement and neither party discusses the issue in the briefs. While the record supports a conclusion that more work resulted from the closing of the coal storage area in the basement and moving it to the exterior, the record is inconclusive as to the extent of that extra labor. We therefore remand the matter to the contracting officer to negotiate quantum.

SUMMARY

The claim for extra personnel costs at Schneeberg is sustained. The claims for costs to repair equipment damaged by alleged sabotage to equipment in buildings 263 and 684 are denied. The claim for extra labor costs associated with inoperable equipment in building 263 is denied. The claim involving the coal chute at buildings 475 and 478 is sustained with respect to the additional cost of moving coal from the outside storage area to the boiler to the extent it exceeds the cost that would have been incurred had the storage area remained in the basement; but is denied with respect to the claim for extra costs of ash removal. Those matters sustained are remanded to the contracting officer to negotiate quantum.

[¶ 26,378] Paragon Dynamics, Inc.

ASBCA No. 43618, September 16, 1993. Contract No. N00104-89-C-G051.

Quality—Testing—Test Parameters.—Under a contract for circuit card assemblies, a contractor's contention that a change in the specification test parameters for transistor components was necessary was rejected because it was clear that the government's existing test parameters could be met. A change to the drawing was not warranted, because the components had been manufactured over a 20-year period without problems with the specifications or test requirements.

Performance—Specifications—Request for Deviation.—Although the government's electrical engineer recommended approval of a requested deviation from the tolerances for transistors under a contract for circuit card assemblies, the government's refusal to approve the deviation was not an abuse of discretion, because the contracting officer's determination that a waiver was the appropriate means of relaxing specifications was reasonable. At the time of the requested deviation, the majority of the transistor components had been manufactured. Furthermore, the requested deviation was made by the contractor after 100 to 150 of the components had been completed but rejected. With respect to the completed components, the contracting officer reasonably concluded that a waiver rather than a deviation from contract requirements was appropriate. The fact that the government's electrical engineer found the request for the deviation technically acceptable and recommended approval did not bind the contracting officer.

Delay—Approval Delay—Request for Deviation.—Although the government was slow in acting on a contractor's request for a deviation under a contract for circuit card assemblies, it was not responsible for the tardy response to the request, because its approval of the request was not necessary to correct a defective specification, and the contractor was able to continue production and testing under the contractually mandated procedures. While the deviation request was pending, the contractor continued to produce and ship the majority of the components.

For the appellant: Ronald E. Giroux, Vice President. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Kim Lantz Yoder, Trial Attorney, Navy Ships Parts Control Center, Mechanicsburg, Pennsylvania.

Before DUVALL, RUBERRY, and THOMAS, Administrative Judges.

DUVALL, Administrative Judge: Appellant seeks an equitable price adjustment of the contract for alleged cost increases associated with the contracting officer's disapproval of a requested deviation from specification tolerance requirements for testing of a transistor. The transistor was a component of the circuit card assemblies produced under the contract. Appellant contends that the specification was defective and that the disapproval and delay in acting on the deviation request were arbitrary, capricious, unreasonable and constituted a failure to cooperate with the appellant. Appellant also alleges that the Government failed to disclose superior knowledge in the form of revisions to drawings that were in existence during the contract period but not sent to appellant. Appellant elected to proceed on the available record, without a hearing, pursuant to Board Rule 11.

©1994, Commerce Clearing House, Inc.

Digitized by Google

FINDINGS OF FACT

On 8 December 1988 the Government awarded appellant a contract for 1602 circuit card assemblies for a total contract price of $134,119.44.

Contract drawings 2626162 and 2530733 required the use of a transistor, part number 2N3302 as part of the assembly. These drawings were revised following award of this contract. The Government denies, and appellant has failed to establish, that such revisions had any bearing on the dispute which is the subject of this appeal (Govt. exh. 2). *

On 9 April 1990 the contract was partially terminated for the convenience of the Government for a quantity of 324 units.

In February 1991 appellant advised the Government electronics engineer that it was considering submission of an Engineering Change Proposal (ECP) for what it thought were problems in the inherent tolerances in the transistor. The engineer recommended that a Request for Deviation (RFD) be submitted instead of an ECP. That recommendation was based on his conclusion that a technical change to the drawings was not warranted because of the over 20 year history of manufacture of the assembly without problems with the specifications or test requirements (Govt. exh. 2).

On 12 February 1991 appellant submitted the RFD requesting relation of tolerances required by the specifications. Appellant indicated that "The expanded test range for block 23 is required for the inherent tolerance found in transistor 2N3302". (R4, tab 11) The request was made for the entire remaining contract quantity of 1278 circuits assemblies. No change in contract price was indicated in the form.

In early April 1991 Government technical personnel recommended approval of the deviation (R4, tab 12).

In May 1991 the Government's Quality Assurance Representative prepared a DD Form 1998, COMMENTS ON WAIVER, DEVIATION OR ENGINEERING BEQUEST, in which he concurred with the contractor's request. He noted on the form that "100+" units pending disposition of this request". (R4, tab 14) This comment was based on a conversation with appellant's Quality Assurance Manager, who told him that 100 to 150 had been rejected and set aside for later re-evaluation. (Govt. exh. 3). Prior to the February 1991 RFD proposal, 140 units plus first article units had been shipped. Subsequent to the RFD submittal, another 125 were shipped in February 1991. During the months of March, April and May of 1991 600 additional units were shipped. These units were accepted as complying with the specifications. The QAR assumed from the response of the appellant's Quality Assurance Manager that there were remaining 301 units left to be delivered and that they had been completed. (Govt. exh. 3)

On 17 June 1991, the contracting officer, after discussing the recommendation with the Government QAR, determined that, despite technical approval of the deviation, a deviation of the total contract quantity would be inappropriate. She concluded that since, as she had been told, all manufacture was completed, a waiver was the appropriate means of relaxing specifications and that it should be accompanied by an offer of consideration.

Appellant requested reconsideration of the RFD disapproval on 28 June 1991, and also requested a copy of the Form 1998 under the Freedom of Information Act. After discussing the matter with appellant's president on 17 July 1991 the contracting office responded to appellant's 28 June 1991 request with a letter affirming the disapproval. The letter also constituted a "show cause" letter warning that, since appellant had failed to complete contract performance in the time specified in the contract, consideration was being given to termination of the contract for default.

Appellant responded on 1 August 1991 with a claim for a time extension and an equitable price adjustment of $11,366.06. Appellant contended that a change in the specification test parameters was necessary, that the disapproval of its RFD was arbitrary, capricious and unreasonable, and that it was entitled to compensation for delay in the Government's response to the RFD.

In its response, appellant acknowledged that there were 301 units left to be delivered, but advised (and we so find) that not

* In a "complaint" filed in connection with what the Board considered an amendment to its claim (as discussed, *infra*) appellant took issue with the Government's position that the version of drawing 2530733 which was part of its contract required use of a "selected" transistor. A selected transistor is a purchased item guaranteed to meet required test parameters. Appellant requested that the Board require the Government to file an answer to the complaint. The Board denies the request because the issue of whether or not a "selected" transistor was required is not material to our decision.

Digitized by Google

all of these units had been manufactured. Appellant stated that the items that did not pass were being held pending approval of the RFD, and that manufacture of the remaining items had been put on hold for the same reason. Appellant then advised that "Due to the problem being with a Government specified component, and since all items have not been manufactured, PDI has no intention of submitting a waiver". Appellant did not state, and the record does not disclose, how many of the 301 units remained to be manufactured at this time (R4, tab 22).

On 7 October 1991 appellant appealed the deemed denial of its claim to the Armed Services Board of Contract Appeals. On 12 December 1991 the contracting officer issued a final decision denying the claims.

The contract was not defaulted, and was ultimately completed in May 1992. Contract records indicate that after cleaning and retesting, 80 percent of the 100 to 150 units set aside for retesting passed the acceptance criteria without the need for a deviation or waiver of contract requirements (Govt. exh. 3). We find that appellant has failed to establish that a relaxation of specification tolerance requirements was required.

On 26 August 1992 appellant submitted an additional claim, in the amount of $20,678.00, to the contracting officer for alleged increased production costs arising out of the failure to approve the RFD. The deemed denial of this claim was appealed to the Board. The Board considered this claim as an amendment to the instant claim, since it arose from the same cause of action, and dismissed the second appeal. (ASBCA 45262, 93-2 BCA ¶ 25,781).

DECISION

In its brief appellant has attacked the accuracy of some statements contained in sworn affidavits placed in evidence by the Government. We give no credence to such allegations, which are unsupported by the record, and have made findings based on material statements in the affidavits, in the absence of contradictory evidence. Both parties were provided the opportunity to supplement the record.

Appellant has failed to establish that it was entitled to a change in the transistor test parameters. It is clear from the record that the Government's test parameters could be met. Consequently, the general rule of contract law that the Government is entitled to strict compliance with contract requirements is applicable here. *Granite Construction Co. v. United States* [37 CCF ¶ 76,290], 962 F2d 998, 1007 (Fed. Cir. 1992).

Appellant also has not met its burden of demonstrating that failure to approve the deviation request was an abuse of discretion or an actionable failure to cooperate. Our findings show that, although not all of the assemblies required by the contract had been manufactured before the contracting officer disapproved the request, the majority were, and the request was originally made by appellant in the context of some 100 to 150 assemblies that had been completed but rejected. With respect to these and other completed assemblies, a waiver rather than a deviation was appropriate. Moreover, the contracting officer's requirement for consideration was appropriate, whether or not required by regulation, since appellant was seeking a relaxation of attainable contract requirements. The contracting officer was in no way bound to grant a deviation simply because Government technical personnel found the proposal technically acceptable and recommended its approval.

We also hold that appellant has failed to establish entitlement to delay damages. While the Government was slow in acting on the deviation request, we have held that the Government is not responsible for tardy responses to requests for deviations or waivers when such an action is not necessary to correct a defective specification (as was the case here) and the contractor's production and testing can proceed under the contractually mandated procedures. *Salisbury Special Tool Co.*, ASBCA No. 37530, 89-2 BCA ¶ 21,838. Here, appellant continued to produce and ship the majority of the assemblies while the deviation request was pending.

Finally, appellant's superior knowledge argument provides no basis for recovery, since appellant has failed to show that undisclosed drawing revisions made after award would have had any bearing on the subject matter of this claim.

The appeal is denied.

ASBCA No. 43499, September 28, 1993. Contract No. F08651-90-D-0012.

Contract Disputes, Contracting Officer's Decision—Effect of Decision—Evidentiary Value.—Under a requirements contract for logistics material control activity functions, the government was liable for a portion of the contractor's claim regarding an ambiguous understatement of the estimated pickup and delivery element of work, because it failed to offer any evidence to rebut the contracting officer's decision allowing the contractor's claim. Although the contractor had not agreed to accept the amount allowed, the contracting officer's decision constituted an evidentiary admission by the government sufficient to establish liability. However, the contractor was not entitled to recover for any excessive pickup and delivery work during the remaining two option years of the contract. The record did not show that the government exercised its options to enter into these two contracts. The board concluded that the contracting officer's statement acknowledging the contractor's entitlement to prospective equitable adjustments with respect to these two periods of future contract performance was premature and speculative.

Interpretation of Contracts—Ambiguities, Patent—Duty to Seek Clarification.—Under a requirements contract for logistics material control activity functions, a contractor was not entitled to an equitable adjustment for the costs incurred in performing the researching and processing work associated with base supply nonaccountable equipment and supply requests, because the performance work statement's and technical exhibit's omission of estimated quantities for researching and processing work raised a patent ambiguity that imposed on the contractor a duty to inquire. By entering into the contract without protest, the contractor adopted the government's interpretation of the contract. Moreover, the contractor failed to show that it reasonably relied on its proffered interpretation.

For the appellant: R.T. Strickland, President. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Michael F. Copley, Trial Attorney.

Before GRUGGEL, RIISMANDEL, and RUBERRY, Administrative Judges.

GRUGGEL, Administrative Judge: Appellant seeks compensation in the total amount of $181,633.20, representing an amount ($45,408.30) for the original one-year contract period and each of three one-year option periods, contending the estimated workload with respect to "pickups and deliveries" and Base Supply nonaccountable equipment/supply requests was grossly understated. Only entitlement is at issue (tr. 12-13). A one-day hearing was scheduled and held. Appellant did not attend the scheduled hearing (tr. 4-6, 66). Appellant also did not submit a brief with respect to its appeal. Pursuant to Board Rule 19, we deem appellant to have submitted its case on the record under Board Rule 11 (tr. 3, 66).

FINDINGS OF FACT

1. Contract No. F08651-90-D-0012, a fixed-price, small business set-aside, requirements contract principally for the performance of the Logistics Material Control Activity (LMCA) functions at the Air Force Armament Test Laboratory (AFATL), Eglin Air Force Base, Florida, was awarded to appellant on 8 November 1989 after formal advertising and under sealed bid procedures as prescribed by the Federal Acquisition Regulation (tr. 14-15; R4, tab 1). Appellant agreed to perform the LMCA functions at Eglin AFB during the initial contract year (1 February 1990—30 January 1991) at a price of $170,605.12 per year. In accordance with the contract provisions, the Government was entitled to exercise three additional one-year options for appellant's performance of the LMCA functions as follows: 1 February 1991—30 January 1992, $168,338.44 per year; 1 February 1992—30 January 1993, $170,354.84 per year; 1 February 1993—30 January 1994, $172,363.36 per year (*id.*). The Government exercised its option to extend appellant's performance for the first option-year (R4, tab 2). The evidentiary record is silent as to whether the Government ever exercised its options for the last two option-years of the contract.

2. The contract contained the standard Ordering (FAR 52.216-18 (APR 1984)), Delivery—Order Limitations (FAR 52.216-19 (APR 1984)), Requirements (FAR 52.216-21 (APR 1984)), Interest (FAR 52.232-17 (APR 1984)), Prompt Payment (FAR 52.232-25 (APR 1989)), Disputes (FAR 52.233-1 (APR 1984)), Changes—Fixed Price (FAR 52.243-1

Digitized by Google

(AUG 1984)) ALTERNATE I (FAR 52.243-1 (APR 1984)), Pricing of Adjustments (DOD FAR SUP 52.243-7001 (APR 1984)), Not-To-Exceed Cost Agreement (AFSC FAR SUP 52.243-9001 (APR 1987)) and Changes Not Requiring Monetary or Delivery Schedule Adjustments (AFSC FAR SUP 52.243-9002 (APR 1987)) contract clauses (R4, tabs 1, 2).

3. The contract included Performance Work Schedule (PWS) No. F77DOL 7180001, dated 1 July 1987 (R4, tabs 1, 3). The PWS contained the following, pertinent provisions:

Section C-1

General

1.1 SCOPE OF WORK. The contractor shall provide all personnel, equipment, tools, materials, supervision, and other items and services necessary to perform the Logistics Material Control Activity (LMCA) function as defined in this Performance Work Statement (PWS) except as specified in Section C-3 as Government furnished property and services at the Air Force Armament Laboratory (AFATL), Eglin Air Force Base, Florida. The contractor shall perform to the standards in this contract. The estimated quantities of work are listed in Technical Exhibit 2, Workload Estimates.

* * *

1.12 PHASE-IN PERIOD. The period thirty (30) days prior to conversion to a contractor operation is designated the phase-in period is [sic] to allow the contractor to have certain key personnel on-site to observe the Government operation and make preparation for conversion to a contractor operation. Responsibility of the operation of the LMCA remains with the Government during the phase-in period.

1.12.2 It is recommended that the contractor have key personnel on-site in their respective areas during the phase-in period. The job title and on-site dates of contractor key personnel shall be addressed in the Contractor Technical Proposal. The total cost for the phase-in period shall be indicated in the Bid Schedule.

* * *

2.2.14 Contractor Operated On-Base Civil Engineer Service Store (COCESS): A civil engineer maintenance and repair parts store located in or near the base civil engineer maintenance shop area. It is operated under contract by a commercial firm, normally as an extension of the firm's main hardware and supply operation. Sales are made exclusively to authorized Air Force representatives.

* * *

2.2.77 Table of Allowance (T/A): An equipment allowance document which prescribes basic allowances of organizational equipment . . . .

* * *

SECTION C-5

SPECIFIC TASKS

* * *

5.3 CUSTOMER SUPPORT UNIT (CSU) FUNCTION. The contractor shall:

5.3.1 Process all requests for supplies and equipment. (AFSCR 57-8, paragraph 3-1)

* * *

5.3.2 Research all supply and equipment requests.

* * *

5.3.2.2 Determine possible sources of supply and any special processing procedures or requirements for other base activities' coordination for such items as Contractor Operated Civil Engineering Service Store (COCESS), Special Purpose Recoverables Authorized Maintenance (SPRAM), EAID, medical, photographic, individual equipment, automatic data processing (ADP) hardware and software, munitions items, or tools.

5.3.2.3 Determine the availability of the requested item from organizational resources, holding areas or logistic support stocks. If the item is available from in-house assets, fill the requirement.

5.3.2.4 Maintain a part number file . . . or use an automated system . . . and process each request.

5.3.2.5 Stamp or mark each document to show that all research actions have been completed.

* * *

5.3.3.1 Process the request to the supply source via the proper standard method.

5.3.3.2 . . . assign a document number to each request submitted through Base Supply.

* * *

5.3.8.1 Process adjustment requests to Base Supply.

* * *

5.3.11 Process COCESS and medical supply requests. (DOL OIs 67-1 and 67-7)

* * *

©1994, Commerce Clearing House, Inc.

Digitized by Google

5.4 **EQUIPMENT CONTROL UNIT (ECU) FUNCTION.** The contractor shall:

* * *

5.4.3 Prepare and process equipment requests.

5.4.3.1 For budget code "Z" requests, obtain all necessary external coordinations.

5.4.3.2 Screen the appropriate listings and holding areas for assets to satisfy the request.

* * *

5.4.3.4 Process Base Supply computer transactions and clear or reprocess rejected computer transactions.

* * *

5.4.4 Maintain files of allowable allowance source documents. Validate the authorization using the applicable allowance source document. Review and validate the SBSS [Standard Base Supply System] and EMAS [Equipment Management Accounting System] P009 and Q10 listings—Load the appropriate Allowance Source Code.

5.4.6 When required, prepare and process AF Forms 601 to HQ AFSC/LGSE for approval.

5.4.7 Maintain suspense files for Base Supply [equipment] transactions until processing is confirmed.

* * *

5.4.23 Process equipment shipments. (AFSCR 67-8, Paragraph 4-20)

5.5 **MATERIAL HANDLING UNIT (MHU) FUNCTION.**

* * *

5.5.7 Pick up and deliver compressed gas cylinders.

* * *

5.5.9 Provide pick-up and delivery service.

(R4, tab 3) The contractual scheme thus delineates the respective responsibilities of the CSU and the ECU with respect to the researching and processing of equipment and supply requests (*id.*). The above-quoted portions of PWS ¶ 5.3 (CSU Function) and PSW ¶ 5.4 (ECU function) establish that the CSU involves particularized researching (*e.g.*, ¶ C-5.5.3.2 and quoted sub ¶ s) and processing (*e.g.*, ¶ s C-5.5.3.1, C-5.5.3.3.1, C-5.5.3.11) functions with respect to supply requests as well as equipment requests (*id.*). On the other hand, the above-quoted portions of PWS ¶ 5.4 establish that the ECU involves separate researching (*e.g.*, ¶ C-5.5.4 "Review and validate") and processing functions (*e.g.*, ¶ s C-5.5.4.3, C-5.5.4.6) only with respect to equipment requests (*id.*). Finally, the contract documents contained in the evidentiary record do not define the terms accountable equipment, non-accountable equipment or item (*id.*).

4. Technical Exhibit 2 (Workload Estimates) of the PWS provides, in pertinent part:

TYPE OF SERVICE	ESTIMATED WORKLOAD
Process Equipment Requests:	
AF Forms 601	
Review and sign	53 requests per month
Research allowances in TAs [Tables of Allowances]	200 allowances per month
Budget Code "Z" requests	5 requests per month
Furniture requests	15 requests per month
Equipment loans	2 loans per month
* * *	
Direct Procurement Actions (AF Form 9):	
Review, prepare, sign, and process	125 requests per month
* * *	
Contractor Operated On-Base Civil Engineer Service Store (COCESS):	
Prepare and submit requests	4 requests per month
* * *	
Medical Supply Requests:	
Order items from hospital	3 requests per month
* * *	
Pick-up and Delivery:	
Load, deliver, and unload property	400 items per month
* * *	

Digitized by Google

Item Research:	
Review documentation	250 documents per month
Research requests	250 requests per month

* * *

MILEAGE FROM THE LMCA TO LABORATORY PICK-UP AND DELIVERY POINTS

FROM	TO	TRIPS PER MONTH	ROUNDTRIP MILEAGE
Building 13	Site A-15 (Island)	10	56
Building 13	HERD Facility (Bldg 1200)	20	10
Building 13	Range 64	10	50
Building 13	Navy Base, Pensacola	2	108
Building 13	Fort Walton	2	16
Building 13	Niceville	2	8

(R4, tab 3) Technical Exhibit 2 separately identifies 53 AF Forms 601, 5 Budget Code "Z" and 15 furniture requests as well as 2 equipment loan requests per month as discrete work requests involving the processing of specified types of equipment transactions (*id.*; R4, tabs 3, 9-10; tr. 19-30, 32-34, 48-57). Technical Exhibit 2 also separately identifies 125 Direct Procurement (AF Form 9), 4 COCESS and 3 Medical Supply requests per month as discrete work requests involving the processing of specified types of supply transactions (*id.*). Technical Exhibit 2 does not specifically identify or quantify the researching or processing of Base Supply nonaccountable equipment and supply requests as two discrete sub-categories of work (*id.*). Technical Exhibit 2, as indicated by the above format thereof, specifically identifies the researching of 200 allowances in connection solely with the reviewing/signing of 53 AF Forms 601 equipment requests per month (*id.*). As also indicated above, the researching of 250 "item" requests is specifically identified in Technical Exhibit 2 as a separate aspect of the contract work (R4, tab 3).

5. The LMCA services that are the subject of the instant contract were previously performed by "15 full-time [Air Force] employees (8 civil service and 7 military personnel)." (R4, tab 5; tr. 19) The Air Force's "most efficient organization to perform the LMCA function is 11 full time civil service employees" (*id.*).

6. The Government estimate of the cost to perform the LMCA services that are the subject of the instant contract was approximately $335,900 per year (tr. 63-64; R4, tab 4). The second low bidder's offer was approximately $254,610.70 per year (*id.*). The third low bidder's offer was approximately $259,154.92 per year (*id.*). Other bidders' offers ranged from $356,625.00 per year to $549,600.00 per year (*id.*).

7. By letter dated 19 January 1989, the contracting officer had requested that appellant "review your worksheets in support of your bid and if you feel you can perform the service at the offered unit prices ... [provide] a written verification of your bid prices" (R4, tab 15). By letter dated 21 January 1989, appellant stated that "cost data to support bid prices has been reviewed and I am confident that services delineated in the Performance Work Statement can be performed at the offered prices" (R4, tab 16).

8. The Government's 10 February 1989 preaward survey recommended to the Small Business Administration (SBA) that no award be made to appellant "as it is obvious that [appellant] does not understand the PWS and does not have the required expertise ..." (tr. 31-42; R4, tab 4). The Government's primary concern centered upon appellant's proposed use of 5 employees to perform the work *vice* the 15 individuals who were then currently performing the LMCA work at a monthly manhour rate per person of 160 (*id.*; tr. 26). Appellant provided the pre-award survey team with its proposed manhour estimate: LMCA chief—74 manhours/month; ECU chief—133 manhours/month; CSU chief—148 manhours/month; and, 2 MHU employees—158 manhours each/month (*id.*; R4, tab 17). The evidentiary record does not contain either appellant's actual bid estimate or its working papers in support thereof. The preaward survey team contemporaneously informed appellant that the Air Force was utilizing 15 individuals to perform the LMCA work (tr. 36, 42).

9. By letter dated 23 February 1989, the SBA informed appellant that the contracting officer proposed to reject appellant's

©1994, Commerce Clearing House, Inc.

Digitized by Google

bid on the basis of nonresponsibility due to inadequate technical ability and lack of adequate manning (R4, tab 17). The SBA stated:

> Applying for a [Certificate of Competency] involves a comprehensive review of your ... bid, estimates, plans ... by production specialists ... from this office. To qualify for a COC you must present ... your detailed production plans outlined by operation. ... [Y]ou should remember that the burden of proof concerning competency rests with you.

(*Id.*)

10. By letter dated 1 March 1989, appellant requested that the SBA issue a Certificate of Competency to appellant (R4, tab 18). By letter to the SBA dated 13 March 1989, appellant stated that "[g]iven the workload as delineated in Technical Exhibit 2 ..., I am confident of my ability to perform the specified tasks with the five (5) personnel named in INITIAL STAFFING, previously provided" (tr. 45-6; R4, tab 19). Appellant reiterated its confidence in its ability to perform the LMCA "requirements of [the] solicitation" (*i.e.*, the PWS and Technical Exhibit 2) in its 15 March 1989 letter to the SBA:

> A very thorough analysis of the workload to be performed has been conducted. There is no doubt in my mind that the stated tasks can be performed with the personnel previously proposed. However, if there are any misunderstandings of the level of effort required to perform the projected workload, and if additional labor is required, I agree to provide the additional employees.

(Tr. 46-48, 56-58; R4, tabs 20, 21). In this regard, appellant did not rebut the sworn testimony of the Government representative who performed the pre-award survey and the Small Business Administration's representative who performed the certificate of competency investigation that Mr. Strickland (appellant's President) repeatedly stated throughout the 1 March 1989—1 October 1989 time period:

> [W]ith the Government inefficiencies, [appellant] can do it a lot better .... [H]e really wanted the contract, and he would hire the additional labor that he needed in order to get the contract, to perform it, it being his first [Government contract].

(Tr. 4-6, 47-8, 66)

11. By letter dated 15 March 1989 to the contracting officer, the SBA stated that it intended to issue a certificate of competency to appellant with respect to subject contract (R4, tab 5). The contracting officer subsequently opposed, in writing, the SBA's decision to issue the certificate of competency stating, *inter alia*, the following concerns regarding the inadequacy of appellant's proposed manning levels and appellant's failure to fully consider the technical work requirements of the PWS:

* * *

> (3) RTS Data Corporation's entire proposal is based on the Government's work load estimates described in technical exhibit 2 of the PWS. It does not appear RTS Data Corporation took into account the specific requirements of the PWS as stated in Section C-5. The figures in technical exhibit 2 are only estimates and cannot be relied on to be firm and unvarying work loads. By using the workload estimates in technical exhibit 2 solely as the basis for their proposal, RTS Data Corporation overlooked certain critical elements required by the PWS. Though not all inclusive, listed below are some PWS Section C-5 requirements which require significant manhours to accomplish that RTS Data Corporation failed to consider when making their proposal:
>
> (a) Process all requests for supplies and equipment (PWS Section C-5, paragraph 5.3.1). This requirement is one of the major functions of an LMCA operation. Other than identifying manhours for direct procurement actions (AF Forms 9), RTS Data Corporation did not address this requirement anywhere in their proposal.

* * *

> (e) Process Base Supply [equipment] computer transactions (PWS Section C-5, paragraph 5.4.3.4).

(R4, tab 5; tr. 65-66) The evidentiary record establishes that the Government had, on previous occasions, repeatedly informed appellant that appellant's estimated man hours of work appeared to be inadequate when compared with the Government's prior experience and estimate (findings 7-9; tr. 48-59).

12. The SBA reacted to the contracting officer's opposition to the issuance of the COC to appellant by "faxing" a comparison of the Government's estimated manhours of effort necessary to perform the contract and appellant's corresponding estimate to appellant on 17 August 1989 (tr. 48-61; R4, tabs 23-24). The evidentiary record establishes that appellant had furnished its manhour estimate to the Government sometime prior

Digitized by Google

to 17 August 1989 (*id.*). Comparison of the 17 August 1989 Government manhour estimate with appellant's corresponding manhour estimate shows, *inter alia*, the following:

Type of Service	Estimated Workload	AFATL (manhours/mo.)	RTS (manhours/mo.)
Process Equipment Requests:			
AF Form 601			
Review and sign	53 requests per month	160.14	22.00
Research allowances in TAS	200 allowances per month	200.35	16.67
Budget Code "Z" requests	5 requests per month	10.92	2.08
Furniture requests	15 requests per month	0.30	6.25
Equipment loans	2 loans per month	12.00	0.81
	* * *		
Direct Procurement Actions (AF Form 9)			
Review, prepare, sign and process	125 requests per month	63.06	52.08
	* * *		
Contractor Operated on-Base Civil Engineer Service Store (COCESS)			
Prepare and Submit Requests	4 requests per month	9.32	2.00
	* * *		
Medical Supply Requests			
Order Item From Hospital	3 requests per month	1.26	1.30
Item Research:			
Review Documentation	250 documents per month	21.10	20.03
Research Requests	250 requests per month	65.02	20.03
	* * *		
Pickup and Delivery			
Load, Deliver and unload Property	400 items per month	192.00	120.00

(R4, tabs 4, 10, 23) The Government estimate portion of the 17 August 1989 manhour comparison furnished to appellant also identified the PWS ¶s that were applicable to each subcategory of work set forth on Technical Exhibit 2 and also provided the specific, estimated manhours attributed by the Government to the performance of each such PWS work provision (*id.*). As indicated above, appellant's manhour estimate indicates that appellant planned to expend: (a) 22.00 manhours per month in accomplishing the work associated with reviewing and signing the estimated monthly quantity of 53 AF Forms 601 equipment requests; (b) a total of 16.67 manhours per month in order to "research" 200 equipment allowances per month, associated with the 53 AF Forms 601 equipment requests, in the Tables of Allowances (TAs); and, (c) 20.03 manhours per month in order to research 250 "item research" requests per month (*id.*). The Government estimate portion of the 17 August 1989 manhour estimate comparison specifically references, *inter alia*, ¶s C-5.5.1.1, C-5.5.1.14, C-5.5.4.3.2, C-5.5.4.3.4 and C-5.5.4.16 of the PWS under the "AF Forms 601, Review and sign—53 requests per month" sub-category and estimated that approximately 164 manhours per month were anticipated by the Government in order to perform these aspects of the equipment request processing work (R4, tab 23). The referenced PWS ¶s identify specific processing functions associated with equipment requests including the processing of Base supply equipment computer transactions (R4, tabs 3-4, 10, 23). The Government estimate specifically references, *inter alia*, ¶C-5.5.4.4. of the PWS under the "Research Equipment Requests, AF Forms 601, Research Allowances in TAs, 200 allowances per month" subcategory and estimated that 200.00 manhours per month were anticipated in order to perform this aspect of the equipment request processing work. ¶C-5.5.4.4 identifies the Tables of Allowances equipment research/validation functions associated with equipment requests (*id.*). The Government estimate also references, *inter alia*, ¶s C-5.5.3.2.2—C-5.5.3.2.5 and C-5.5.3.3.2 under the "Item Research, Research requests—250

©1994, Commerce Clearing House, Inc.

Digitized by Google

requests per month" subcategory and estimated that approximately 65 manhours per month were anticipated by the Government in order to perform these aspects of the supply processing work (R4, tab 23). The referenced PWS ¶s identify specific research functions associated with supply requests, including the assignment of a document number to each request submitted through Base Supply (R4, tab 3).

13. After reviewing and analyzing the manning level comparison (finding 12, supra), Appellant informed the SBA, by letter dated 18 August 1989, that:

> 1. Through automation, and the maintenance of a complete, up-to-date library of applicable publications, the research functions of "Research Allowances in TA's" (200 man hours) and "Research Request" (65 man hours) can be drastically reduced.
>
> 2. Through conscientious scheduling. [sic] Pick-up and Delivery time (209 man hours) can be reduced. The need for more than one (1) employee in making pick-ups and deliveries will be closely monitored. Each individual assigned to the MHU Section will be a qualified driver.
>
> 3. "Process Receipts" time (126.37 man hours i.e. 6.32 man hours per day) seems excessive for the volume of transactions processed.
>
> 4. Maintenance of the Administrative and Janitorial Stock (82.43 man hours i.e., 4.12 man hours per day) seems excessive.
>
> 5. There is nothing in the projections that significantly alters my own opinion of the work effort required to perform the overall LMCA function.
>
> All the LMCA functions will be closely monitored during the early phase of the contract to ascertain the adequacy of the initial staffing[.] Adjustments will be made, if necessary.
>
> I remain confident that through the use of highly skilled, functionally flexible Supply Specialists, cross trained in the various functions of the LMCA, RTS Data can fulfill the contract requirements as previously stated.

(Tr. 50-57; R4, tab 24) The sworn testimony of the SBA representative who performed the COC investigation and appellant's written communications to the SBA establish that appellant's president and said SBA representative repeatedly examined, in detail, "the [performance] work statement" requirements, including the specific references to Base Supply equipment and supply requests contained in the 17 August 1989 Government manhour projection, for the purpose of ascertaining whether appellant's proposed manning levels adequately provided for the performance of all aspects of the work described in the PWS Technical Exhibit 2 (tr. 44-61; R4, tab 24; findings 7-12). This detailed investigation together with the information contained in the 17 August 1989 estimated manhours comparison and appellant's repeated assurances to the Government that it understood the work requirements of the PWS establishes that, by 18 August 1989 and prior to contract award, appellant knew or should have known that the Government interpreted the PWS/Technical Exhibit 2 provisions as requiring the researching and processing of all supply and equipment requests including, *inter alia,* all Base Supply equipment and supply requests (*id.*). The evidentiary record does not establish that appellant ever questioned any Government representative either as to whether the PWS and Technical Exhibit 2 required performance of the Base Supply non-accountable equipment and supply request work involved herein or as to the omission of estimated quantities of such work in Technical Exhibit 2. The evidentiary record also fails to establish either that appellant ever attempted to withdraw/revise its original bid price or changed its basis of the bid price at either the time of bid submission or at the time appellant submitted its above quoted 18 August 1989 letter. Appellant's failure to inquire and/or increase its bid price coupled with its contemporaneous assertions that it "really wanted the contract" and would hire "additional labor that [it] needed to get the contract, to perform the contract ... it being [appellant's] first Government contract" (findings 7-12), establishes that appellant exercised its business judgment and voluntarily assumed the risk of performing subject contract for its original bid price in accordance with bargained for terms of the contract. Except for the limited indications in the 18 August 1989 letter quoted hereinabove, the evidentiary record does not contain any contemporaneous documents that establish appellant's interpretation of the contract requirements for the work at issue as of 18 August 1989.

14. The SBA issued the Certificate of Competency to appellant on 2 October 1989 (tr. 60-61; R4, tab 25) thus effectively mandating that subject contract be awarded to appellant for the initial one-year performance period (R4, tab 4).

Digitized by Google

15. In accordance with the contract provisions, appellant began phase-in work on 2 January 1990—30 days prior to 1 February 1990, the date for commencing actual contract performance—with the Government personnel who were performing the LMCA services (R4, tabs 9, 10).

16. By letter to the contracting officer dated 17 January 1990, appellant requested that "the Contract Price for [subject] Contract be increased by the amount of $72,430.68 per year for the life of the Contract" due, *inter alia,* to the alleged failure of the Government to expressly quantify "Logistics Stock" and "Base Supply" requests in Technical Exhibit 2 of the PWS (R4, tab 9). Appellant acknowledged the PWS required that both types of requests were to be researched and processed (*id.;* finding 3). Appellant's uncertified, unsworn 17 January 1990 claim alleges that appellant's bid price was based on appellant's alleged pre-contract award interpretation that the contract only required performance of work involving a maximum of 43 Base Supply and Logistic Stock requests because that work, although not expressly quantified, was included in Technical Exhibit 2:

> It was affirmed during the Preformance [sic] Conferance [sic] conducted 14 January 1989 that the difference between the 207 requests referenced in the Exhibit 2 of the Performance Work Statement and the 250 requests processed through Item Research consisted of requests for Base Supply items and requests for items from the Logistics Support Stocks. This was also the reasoning that the Contractor deduced from the information provided when determining the level of effort required to perform the LMCA function.

(R4, tab 9). Examination of appellant's pre-17 August 1989 manhour estimate does not establish that appellant accounted for the performance of any researching/processing work with respect to "Base Supply" equipment and supply requests (R4, tabs 10, 23). The evidentiary record does not establish: (a) the nature of the "Preformance [sic] Conferance" [sic] referred to by appellant in its 17 January 1990 letter to the contracting officer; (b) the identity of the attendees at said meeting; (c) that said meeting occurred on 14 January 1989 or any other date; or, (d) the identity/capacity of the individual who "affirmed" the interpretation of "[Technical] Exhibit 2" set forth in appellant's 17 January 1990 letter. The evidentiary record also does not establish that the aforesaid interpretation was ever communicated to the Government at any time prior to 17 January 1990. Appellant's pre-17 August 1989 manhour estimate does not establish that appellant planned to perform any processing work with respect to the 43 alleged "Base Supply" and "Logistics Stock" requests (R4, tabs 4, 10, 23). The evidentiary record does establish that, subsequent to appellant's 17 January 1990 letter, appellant has not asserted that the Government ever "affirmed", acknowledged or otherwise concurred with the interpretations set forth in appellant's 17 January 1990 letter (R4, tabs 1, 9 - 25; Complaint).

17. By letter dated 28 January 1991, appellant submitted its certified claim for a reduced equitable adjustment of $45,408.30 per contract performance year—*i.e.,* a total equitable adjustment amount of $181,633.20 (R4, tab 10). The reduced amount of appellant's claim stems from appellant's withdrawal of the allegedly understated "Logistic Stock" requests element thereof (*id.;* R4, tab 9 at pp. 46-49). Appellant's 28 January 1991 certified claim changes the underlying rationale of its earlier 17 January 1990 claim by stating that appellant's bid price was based on appellant's alleged pre-contract award interpretation that the contract did not require the performance of any work involving Base Supply non-accountable equipment and supply requests because "none were specified in Technical Exhibit 2 . . ." (*id.*). Appellant explained the basis of its claim, as follows:

> 12. . . .
>
> a. Statistics accumulated from 19 months of operations reflect that an average of 282 Base Supply non-accountable equipment and supply requests are processed per month. See Enclosure 1. None were specified in Technical Exhibit 2, Workload Estimates, of the Solicitation.
>
> b. Statistics accumulated for the period 1 May 1990 thru 30 August 1990 reflect that an average of 838 items per month are delivered to customers. This is more than double the amount of 400 items indicated in the Solicitation Workload Estimates. See Enclosure 2.
>
> c. Attached as enclosure 3 is an extract of the Contractor's actual level of effort worksheets used when preparing to bid on the contract. Note that the norm used, regardless of type of request, was 35 minutes of administrative processing time per request, i.e. 10 minutes of review-research time and 25 minutes of other administrative processing. Note also that an average

©1994, Commerce Clearing House, Inc.
Digitized by Google

of 18 minutes per item was used in the estimate for delivery time.

* * *

13. It is the opinion of the Contractor that when the Appendix 2 Workload Estimates were generated the Base Supply non-accountable equipment and supply requests and the related customer delivery requirement for this type request were erroneously omitted from the estimates.

14. At bid time the Contractor had no reason to question the Government's ability to state the workload estimates. Much of the AFATL operation is of a research and development nature and it seemed perfectly feasible that most of the supply type items would be obtained through direct purchase, as opposed to obtained from Base Supply.

(R4, tab 10) The evidentiary record does not establish the actual amount of manhours expended by appellant during performance with respect to the research/review and processing work associated with either the supply/equipment request work involved herein or the specified types of supply/equipment request work delineated on Technical Exhibit 2. Appellant's statement in subparagraph 12.c of its certified claim is not substantiated by the pre-17 August 1989 manhour estimate[1] it furnished to the Government (finding 12) since said estimate indicates: (a) 15 or 20 minutes of research/review and 25 minutes of processing per each of the 53 estimated AF Forms 601 requests; and, (b) 10 minutes of research/review and 30 minutes of processing per COCESS request (R4, tabs 10, 23).

18. By final decision dated 7 June 1991, the contracting officer allowed the portion of appellant's claim wherein appellant asserts that the PWS understates the "Pickup and Delivery" estimated workload (R4, tab 12). The contracting officer acknowledged the existence of a compensable ambiguity and stated, *inter alia:* "I have as a result of this ambiguity, determined an equitable adjustment is due you of $7,631.19 per year ... [based upon] doubl[ing] the workload estimate for pickup and delivery to 800 ..." (*id.*). The Government has not proffered additional documentary evidence or testimony with respect to this portion of the contracting officer's decision. The only evidence proffered by appellant with respect to actual "pickups and delivery" work relates only to the May-August 1990 time period (finding 22, *infra*). The contracting officer denied the remainder of appellant's claim on the basis "that the PWS in conjunction with the Technical Exhibits correctly states our requirements" (*id.*).

19. By letter to this Board dated 3 September 1991, appellant timely appealed the contracting officer's final decision (Bd. correspondence file).

20. The basic, unsworn rationale[2] now proffered by appellant in support of its appeal herein is that Technical Exhibit 2 (Workload Estimates) allegedly establishes a maximum of 250 "customer requests input to the [LMCA]." (Complaint at encl 1) In addition, according to appellant's allegations, it "was perfectly clear" that Technical Exhibit 2 establishes a maximum of 207 "LMCA requests output to sources of supply" comprised of (a) 75 specified equipment requests: AF Forms 601—53 requests per month; Budget Code "Z" requests—5 requests per month; furniture requests—15 requests per month; Equipment loans—2 loans per month; and, (b) 132 specified supply requests: Direct procurement requests (AF Form 9)—125 requests per month); COCESS requests—4 requests per month; and, Medical Supply requests—3 requests per month (*id.*). The remaining "LMCA requests output to sources of supply" are not specifically identified in Technical Exhibit 2 but, according to appellant's allegations, cannot exceed 43 ("the difference between requests researched (input)"—250—and "requests processed (output)"—207) (*id.*). Appellant alleges:

> At bid time, the Contractor saw no reason to question these [Technical Exhibit 2] statistics. An additional 43 requests was clearly indicated. The exact makeup of these 43 additional requests was not of major concern to the Contractor.

(Complaint at 1-3) Appellant thus seeks an equitable adjustment to compensate it for its additional costs incurred while performing the research/processing work associated with the actual quantity of Base Supply non-accountable equipment and supply requests that exceeded the estimated monthly quantity of 43 unidentified equipment and supply requests that allegedly inhered in Technical Exhibit 2 (Complaint at 1-2).

[1] The evidentiary record does not contain any other version of appellant's manhour estimate.

[2] (As best as can be determined by this Board in view of the appellant's unexplained failure to appear at the duly scheduled hearing with respect to this appeal (tr. 4-6, 66)).

Digitized by Google

21. During calendar year 1989, Government employees operated the LMCA and processed an average of 280 Base Supply non-accountable equipment and supply requests per month (tr. 10-12; R4, tab 10; AR4, tab 2). During the 1 February 1990—31 August 1990 time period, appellant operated the LMCA and processed an average of either 282 or 287 Base Supply and non-accountable equipment requisition requests per month (tr. 10-12; R4, tab 10; AR4, tab 4). The evidentiary record does not establish the existence of any significant variance during appellant's 1 February—31 August 1990 performance as between the estimated and the actual quantities of the specific types of equipment and supply requests identified in Technical Exhibit 2. The evidentiary record is silent as to whether appellant's performance after 31 August 1990 involved performance of "excessive" Base Supply non-accountable equipment/supply request work.

22. During the 1 May 1990—31 August 1990 time period, appellant delivered an average of 838 items per month to customers (tr. 10-12; R4, tab 10; AR4 tab 6).

23. As we have stated, appellant failed to proffer any sworn, oral testimony at the hearing of this appeal (tr. 4-6, 66). On the other hand, Mr. Vanta, the author of the PWS and Technical Exhibit 2 and the former chief of the LMCA during 1989, testified under oath that the estimated monthly figure of 200 researches of equipment allowances in the Tables of Allowances was intended to include researching the Tables of Allowances in connection with the acquisition of 73 new, accountable items of equipment per month—*i.e.* AF Form 601 equipment (53), Budget Code "Z" equipment (5) and Furniture (15) (tr. 23-4). The remaining 127 (200 minus 73) researches of allowances in Tables of Allowances was intended to relate to "transfers of [non-accountable] equipment" which did not "require a document to [transfer]" but did require research "to see whether the gaining activity was authorized the piece of equipment" (tr. 20-24). In this regard, his testimony does not address the format of Technical Exhibit 2 which depicts a direct relationship only between "review and sign" 53 AF Forms 601 requests per month and "research [200] allowances per month in TAs" (finding 3). Mr. Vanta also testified that the sub-category of 200 researches of equipment allowances in the Tables of Allowances was intended to relate only to the category entitled "Prepare and Process Equipment Requests" contained in Technical Exhibit 2 and was not intended to relate in any way to the subcategory of 250 research requests set forth under the separate category entitled "Item Research" (tr. 25-29). Mr. Vanta further testified that he intended for the "250 Item Research" requests to represent "[Base Supply non-accountable equipment and supply requests). They did not include the Process Equipment items or any other category [*i.e.* direct procurement, COCESS and medical supplies]" (tr. 24-30). In this regard, Mr. Vanta's testimony does not adequately explain, by reference to PWS/Technical Exhibit 2 provisions or custom or trade practice, why a reasonable bidder should have realized that the "Item Research" category applied only to the estimated research effort associated with the work at issue in this appeal.

DECISION

The Government contends in its Brief that the portion of the contracting officer's decision which acknowledges that the "Pickup and Delivery" element of Technical Exhibit 2 was ambiguously understated (finding 17) "is not supported by the evidentiary record. The contract was never modified and the [a]ppellant never agreed to accept the $7,631.19 as payment for its claim. Therefore, the [a]ppellant should not be entitled to recover the $7,631.19 per year that the contracting officer would have allowed." (Gov't br. at 31-32).

The "evidentiary admission by the Government", as a result of the contracting officer's final decision (finding 18), sufficiently establishes the Government's liability herein for the portion of appellant's claim that asserts entitlement to an equitable adjustment based upon the ambiguous understatement of the estimated pickup and delivery element of work during the initial year and final option-year of contract performance. *See: Wilner v. United States,* No. 92-5161, slip op. at 5-13 (Fed. Cir.) 24 May 1993 12 FPD ¶46. In this regard, we note that the Government has failed to offer any evidence to rebut the validity of appellant's pickup and delivery claim that relates to these two years year of contract performance (*id.*). This aspect of the appeal is sustained.

With respect to the portion of appellant's claim for excessive "pickup and delivery" work during appellant's performance of the remaining two option years of the contract, our *de novo* review reveals that the evidentiary record does not contain any evidence

©1994, Commerce Clearing House, Inc.

Digitized by Google

whatsoever that establishes that the Government exercised its option(s) to enter into these two contracts (findings 1, 14, 22). We, therefore, conclude that the contracting officer's statement acknowledging appellant's entitlement to prospective equitable adjustments with respect to these two periods of future contract performance is premature and speculative inasmuch as said statement is necessarily without basis in the evidentiary record and deny the remainder of appellant's "pickup and delivery" aspect of its appeal.

We next address whether appellant is entitled to an equitable adjustment for its costs incurred in performing the researching and processing work associated with Base Supply non-accountable equipment and supply requests.

Appellant correctly acknowledges that the PWS required the performance of researching and processing work with respect to all equipment and supply requests, including the Base Supply non-accountable equipment and supply requests at issue herein (findings 3, 16). However, Technical Exhibit 2, as set forth in the solicitation, does not specifically identify or quantify the research and processing work associated with the performance of Base Supply non-accountable equipment and supply requests (findings 4, 16-17, 20). According to appellant's present, unsworn assertions, it reasonably based its bid price upon performing the work involved herein by assuming that the difference between the quantity of "requests researched (input)" and "requests processed (output)" identified in Technical Exhibit 2 was the Base Supply non-accountable equipment and supply request work involved in this appeal (finding 20).

The Government asserts that Technical Exhibit 2, read in conjunction with the PWS, includes estimated quantities of the disputed work that approximate appellant's actual experience (finding 23). The Government also contends, in the alternative, that the contract was patently ambiguous with respect to the estimated quantities of the work involved herein. Since appellant failed to inquire about said ambiguity prior to contract award, the Government argues that appellant's claim is precluded. Finally, the Government argues that appellant has not established that it relied upon its now proferred interpretation thus precluding its claim.

We have examined the PWS and Technical Exhibit 2 and are convinced that the interpretations proferred by the parties are not reasonable. Appellant's 28 January 1991 interpretation that only the specific work identified in Technical Exhibit 2 was required to be performed is unreasonable since it fails to account for the PWS requirements that all supply and equipment requests, including all Base Supply equipment and supply requests, must be researched and processed and fails to account for the fact that appellant had previously acknowledged that the very work at issue in this appeal was required by the PWS (findings 3, 16, 20). We also note that by mid-August 1989, prior to contract award, appellant knew or should have known that the Government interpreted Technical Exhibit 2 as requiring significant manhours for the performance of the Base Supply equipment and supply request work involved herein (findings 12, 13). Moreover, appellant's alleged interpretations as respectively set forth in its 17 January 1989 letter and its Complaint, that Technical Exhibit 2 only required the performance of some combination of 43 "Logistics Stocks" and "Base Supply" or some combination of 43 "Base Supply non-accountable equipment and supply request work" are equally unreasonable since neither Technical Exhibit 2 nor appellant's manhour estimate directly or indirectly accounts for processing work associated with for the 43 "unidentified" requests (findings 4, 12, 16, 17). Finally, the Government's interpretation that Technical Exhibit 2, *per se,* includes researching and processing of 127 unidentified equipment requests and 250 unidentified supply requests is unreasonable since it ignores the format of Technical Exhibit 2, ignores the PWS requirements which establish that both the CSU and ECU involve different research efforts with respect to each equipment request and does not persuasively explain, by reference to PWS provisions, custom or trade practice, how a reasonable bidder could reasonably be expected to so interpret Technical Exhibit 2 (findings 3, 23).

Instead, our review of the PWS in conjunction with Technical Exhibit 2 convinces us that any reasonable person (*e.g.,* lay person or prospective bidder) would have initially concluded, prior to receipt of the 17 August 1989 manhour estimate comparison, that estimated quantities for the performance of research and processing work in connection with Base Supply non-accountable equipment and supply requests are obviously not set forth directly or by clear and reasonable implication (findings 3-4, 12-13). In our view, this omission constituted a patent ambiguity that imposed a duty to inquire upon appel-

Digitized by Google

lant. Appellant has failed to establish that it ever communicated such an inquiry to the Government at any time prior to contract award (finding 13). Our findings that by mid-August 1989 appellant knew or should have known that the Government believed that estimated quantities of such work were included in Technical Exhibit 2, that the Government had repeatedly questioned the adequacy of appellant's proposed manhour estimate and that appellant never withdrew or revised its bid price even after it was or should have been aware of the Government's interpretation further highlight appellant's disregard of its duty to inquire (findings 7-13). Appellant's failure to inquire bars this aspect of its claim for an equitable adjustment *See: Arrow, Inc.,* ASBCA No. 41330, 94-1 BCA ¶ 26,353, 16 September 1993 at 28. Moreover, it is well established that, by accepting the award and entering into the contract without protest or reservations, the expressed, 17 August 1989 interpretation of the Government became the adopted interpretation of both appellant and the Government. *Cf., Caraco Construction Company,* ASBCA No. 34754, 88-3 BCA ¶ 20,912 and cases cited therein.

Our determination is further buttressed by appellant's failure to adequately prove that it reasonably relied upon its now proferred interpretation. Appellant's manhour estimates which are contained in the evidentiary record suggest only that prior to 17 August 1989, appellant planned to perform the tasks identified in Technical Exhibit 2 by expending specified quantities of manhours (findings 7-12). After appellant's receipt and review of the 17 August 1989 manhour estimate comparison, appellant knew or should have known that the Government interpreted Technical Exhibit 2 as requiring performance of all supply and equipment research and processing work required by the PWS, including all Base Supply non-accountable equipment and supply requests (finding 13). Appellant may have thereafter decided, *inter alia,* that no additional effort, in terms of manhours and cost, was necessary to perform the Base Supply equipment and supply request work identified by the Government in its 17 August 1989 estimate or appellant may have ignored the Government's interpretation. Appellant's bid price amounts were never changed and the evidentiary record simply does not establish the basis of appellant's continuing to maintain its bid prices after it received the Government's detailed, 17 August 1989 estimate. Appellant's failure to prove that it reasonably relied upon its now-proferred interpretation compels denial of this aspect of its claim. In this regard, we also note that appellant proferred at least two mutually exclusive interpretations of the contract's requirements with respect to the work involved in this appeal thus further undermining any conclusion that appellant's bid was based upon either interpretation. Instead, the preponderance of the evidence that we have been able to glean from the confusing evidentiary record before us convinces us that appellant exercised its business judgment and voluntarily assumed the risk of performing the contract for a stated price in accordance with the bargained for terms of the contract (finding 13).

For the foregoing reasons, we deny appellant's claim for compensation with respect to its performance of the Base Supply non-accountable equipment and supply request work.

The appeal is sustained to the extent indicated, but otherwise denied.

[¶ 26,380] Triax Pacific, Inc.

ASBCA No. 41891, September 16, 1993. Contract No. N62474-89-C-1175.

Mistakes—Relief After Award—Reformation.—Under an invitation for bids for building repairs, a contractor was not entitled to reformation in connection with a mistake in bid, because at the time of award, the contracting officer had no reason to suspect an error in the contractor's bid and thus had no duty to request verification of the low bid. The record did not show that the contractor's bid was out of line with the closely grouped bids of the second, third, and fourth low bidders. Moreover, the contractor assumed the risk of its roofing subcontractor's mistaken quote, which resulted in the bid mistake, by failing to investigate a dramatically higher roofing quote that it received after bid opening and before contract award.

For the appellant: Timothy Miguel Willardson, Alpine, Utah. For the government: Arthur H. Hildebrandt, Chief Trial Attorney, and Wayne O. Hadland, Trial Attorney, Navy Facilities Engineering Command, San Bruno, California.

Before JAMES, RUBERRY, and RIISMANDEL, Administrative Judges.

JAMES, Administrative Judge: This appeal arises from a contracting officer's final decision denying Triax's 29 January 1990 certified claim for contract rescission, or reformation and a $218,000 price increase, due to an alleged mistake in Triax's bid. Our 15 September 1992 interlocutory decision, *Triax Pacific, Inc.*, ASBCA No. 41891, 93-1 BCA ¶ 25,441, denied respondent's motion for summary judgment because the record at that time had insufficient facts for us to conclude as a matter of law that the contracting officer had no constructive notice of a mistake in Triax's bid. Jurisdiction of this appeal lies under the Contract Disputes Act of 1978, 41 U.S.C. §§ 601 *et seq.* By agreement of the parties, both entitlement and quantum are in issue (tr. 1/6-7). After three days of hearings in Salt Lake City and Seattle, both parties submitted post-hearing briefs.

FINDINGS OF FACT

1. On 28 July 1989 respondent issued solicitation N62474-89-B-1175 (the "IFB") for bids to be submitted by 29 August 1989 for repairs to Building 13 at Whidbey Island Naval Air Station, Washington (R4, tab 1).

2. The IFB's specification No. 12-89-1175 included (a) Section 07220, "ROOF INSULATION"; (b) Section 07530, "ELASTOMERIC SHEET ROOFING SYSTEM," in which ¶ 2.1.1 specified "Hypalon membrane"; and (c) Section 07600, "FLASHING AND SHEET METAL" (R4, tab 1).

3. Respondent's Public Works Engineering (PWE) branch prepared a $1,284,000 Estimated Cost of Construction (ECC) for Work Orders 3 and 4 for the IFB work on Building 13 in December-January 1988-89, and used it to negotiate an architect-engineer design fee and to budget funds. The ECC did not change thereafter. (Tr. 2/85, 131-34, 156, 179-80, 218-20)

4. In early 1989 PWE selected the Tsang Partnership as respondent's architect-engineer to design and to estimate the cost of the Building 13 repairs and construction. Tsang's 3 February 1989 "15 Percent Design Submission" estimated $1,362,574 for Work Order 3 (but had no estimate for Work Order 4). It estimated Division 7 roofing costs for 23,400 square feet at $148,087, and Division 15 mechanical costs, at $388,571, nearly all in terms of square feet. (Exh. A-38; tr. 2/136, 143, 146) The 15 Percent Design estimate exceeded the ECC for Work Order 3. Therefore, Tsang deleted paving ($86,000) and furring, window blinds and insulation work ($46,000+) (exh. A-10, A-19; tr. 2/140-48, 172, 181, 224).

5. Tsang's 28 June 1989 "Final Design Submission" estimated $1,347,720 for Work Orders 3 and 4, including Division 7 roofing costs at $120,577 for 23,720 square feet and Division 15 Mechanical costs at $306,601 in terms of "E" (each), "LF" (linear feet), and "LB" (pounds) (exh. A-37; tr. 2/124-25, 130, 143, 177). Page 2 of the Final Design Submission (Exhibit A-37) contains a $40 error in the cost subtotal. Some Division 15 section numbers in specification 12-89-1175 and Exhibit A-37 do not match. Materials and work estimated in A-37 §§ 15612, 15711 and 15907 correspond to specification 12-89-1175, §§ 15355, 15651 and 15996. Vibration and insulation work in specification 12-89-1175, §§ 15200 and 15250, are found in A-37 §§ 15711 and 15895. Specification 12-89-1175, § 15011, defines document requirements not estimated in A-37. (Exh. A-37; R4, tab 1). We find no significant discrepancy between the materials and work in the A-37 Final Design Submission and in specification 12-89-1175.

6. Respondent's 18 August 1989 estimate for the IFB was $1,347,720, the same as Tsang's final estimate (R4, tabs 3, 6; tr. 2/130, 156).

7. In 1982 Triax had installed a roof similar to the hypalon membrane roof the IFB specified for building 13 (tr. 1/37). Before bidding on the contract in dispute here, James Vallett, Triax's vice president and estimator, read the IFB specifications, knew the type of roofing specified, visited the construction site and as a result thereof revised Triax's bid price (R4, tab 11; tr. 1/36-37, 79-81, 97). The other bidders also made prebid site visits (tr. 2/87). The record contains no evidence whether any of the other bidders had or had not performed any previous work on Whidbey Island Naval Air Station or any repairs comparable to the IFB repairs on building 13.

8. Triax's 21 August 1989 letter to its prospective subcontractor Ray LaVoie requested price quotations on IFB

Digitized by Google

specification sections 07530, 07600 and 07220 (R4, tab 4).

9. On 29 August 1989 Ray LaVoie gave Triax price quotes by telephone of $16,000 for IFB item 07530, $15,480 for item 07600, and $12,000 for item 07220, totalling $43,480 (R4, tab 11; LaVoie affidavit, ¶ 4).

10. Triax included LaVoie's "numbers" in Triax's IFB bid (tr. 1/118-19). Triax's 27 December 1989 computer printout was designated "Triax's original bid documents." Its "ESTIMATE" and "SUBCONTRCT" [sic] columns contained $16,000 for item 07530, $15,480 for item 07600, and $12,000 for item 07220. (R4, tab 11; tr. 1/73)

11. At the 29 August 1989 IFB opening, the bid prices and respondent's pre-bid estimate were:

Bid Price	Bidder	Bidder's Location
$1,347,720	Respondent's estimate	
$1,370,000	Triax Pacific, Inc.	Alpine, UT
$1,589,000	Tempo Construction	Bellingham, WA
$1,620,000	P&L General Contr's	Oak Harbor, WA
$1,622,900	J. P. Francis & Assoc.	Kent, WA
$4,784,280	Allied Production Mgt.	Vacaville, CA

Triax's lump sum low bid was not broken down by specification or work items. It varied from respondent's pre-bid estimate by 1.63%, from the second low bid by 13.78%, and from the average of the second, third and fourth low bids by 14.94%. (R4, tab 5; tr. 1/69)

12. A day or two after bidding and two weeks before contract award, Triax received from a roofing contractor a quote "dramatically higher" than LaVoie's quote (tr. 1/120, 126). Triax's bid estimator Kayl W. Smith tried to obtain a written confirmation of LaVoie's $43,480 price quotation without success (R4, tab 11). Smith could not recall whether he obtained any confirmation prior to contract award to Triax (tr. 1/94). Triax gave respondent no pre-award notice of any suspected error in the roofing cost in its bid.

13. Catherine J. Collins, the contracting officer for the IFB, sought no current bid or market price information on the Building 13 repair work, since it was new, not follow-on work, and was unlike any other job (tr. 2/87-88). She knew of no economic conditions impacting bid prices in the Seattle area in August of 1989 (tr. 2/82, 84). At the 100% Design Submission stage she reviewed the specification's Division 1 and the drawing list against a Navy "guide specification." Before bidding she was unaware of any budget-motivated reduction of Tsang's work scope for IFB repairs. After bid opening she had no actual knowledge of any mistake in Triax's bid or in PWE's estimate. She testified that since Triax's price was not out of line with the Government estimate or the second low bid, she had no reason to suspect a bid mistake. (Exh. G-2; tr. 2/10-14, 77-78, 82, 87, 229).

14. Irene D. Thomas, the assigned contract specialist for the IFB, testified that:

> Prior to receiving a letter from Triax ... we had no reason to believe that there was a problem .... I remember when I opened the bids thinking that there were several contractors I had never seen before. So the fact that an apparent low was one I had never heard of before, from out of state, just led me to believe either someone was attempting to buy the bid, someone had knowledge that there was an opportunity there to get into the local area. Since we had never done any work with Triax, I thought maybe they just wanted government business. So there are a lot of different reasons why someone would come in relatively low. So there was no reason for me to believe that there was anything wrong with that particular bid.
>
> * * *
>
> Q: When someone from out of state, or you're not familiar with him, does that ever prompt you to ask for a verification more than ... if the person were a local bidder?
>
> A: Not necessarily ... if you see someone from out of state, I think the first reaction, if their bid is low, is that they probably didn't do a site visit, and that might be one of the problems. But other than that ... that would not give us reason to ask for verification more than anyone else ....
>
> * * *
>
> Q: You mentioned buying the bid .... inasmuch as Triax's bid was over the government estimate, would you characterize it a[s] being a low bid?
>
> A: In comparison to the others it was obviously low. But because it was higher than the government estimate, that to me was not necessarily a red flag at all.

(Tr. 3/10, 13-14, 15, 17).

Digitized by Google

15. The PWE architectural branch chief, Willard Aldridge, testified that he had no indication of any error in the Government cost estimate and no reason to suspect an error in Triax's low bid. He checked the significant cost items in the Government estimate for errors in quantities and unit costs. (Tr. 2/218, 229-32).

16. Tsang Partnership's design architect Lee Davenport was unaware of any errors in Tsang's IFB cost estimate (tr. 2/184).

17. Respondent did not ask Triax to verify its bid price and executed contract N62474-89-C-1175 (contract 1175) on 14 September 1989 at Triax's $1,370,000 bid price (R4, tab 2; tr. 2/58-59, 3/9).

18. On 4 December 1989, when Triax was preparing submittals, approving and ordering materials, Ray LaVoie first notified Triax of his roofing bid mistake. Triax's 6 December 1989 letter notified respondent of LaVoie's mistake, requested rescission or reformation of contract 1175 and stated, "When the overhead costs and markup actually used in Triax's bid are applied to [LaVoie's $150,000 mistake], the total error in Triax's bid caused by this amounts to $219,000." (R4, tab 9; exh. A-35; tr. 1/45, 123) The dollar difference between the low and second low bids is exactly $219,000. Triax also made a judgmental error of an undisclosed amount in the mechanical area of its IFB bid price, but made no claim therefor because it believed it could not be remedied (tr. 1/140).

19. Triax's 27 December 1989 letter to respondent submitted a Ray LaVoie affidavit of even date stating that he discovered his Whidbey Island roofing bid error on about the first of December 1989; at the time of his 29 August 1989 telephone quote to Triax, his left eye cataract, undiagnosed loss of motor control and pressure to submit three other bids caused him to confuse a $193,000 Whidbey bid with a $43,480 Fernley, Nevada, swimming pool bid; he considered adding $10,000 to his Whidbey bid, but decided upon a rounded amount of $193,000; and the Fernley specifications are "kind of similar" to the Whidbey specifications. LaVoie stated:

> I have spent a substantial amount of time since I discovered the mistake looking for my bid documentation to prove the error and how it was made. I have been able to locate the sheet of paper on which I actually calculated what I intended to bid. I had used the plans and specifications to determine what was required and then applied the cost of doing each work element to the area affected. I have not been able to find the scratch sheets that I used for adding up the amounts but the sheet I have is where I actually figured the bid. I am continuing to look for the other papers.

(R4, tab 11)

20. Triax's 27 December 1989 letter to respondent submitted what it represented were three "original documents of LaVoie's quote," stating:

		Profit	
		Overhead & Dump	20,000.00

The document 3 figures total 113,000. The sum of 80,656 on document 2 and 113,000 on document 3 is 193,656. Triax represented that document 3 is the reverse of document 2. (R4, tab 11) We find that the writing on the left on unlined paper on documents 2 and 3 was written by the same person, and the writing on the right on lined paper was written by another person(s) and superimposed on the unlined paper by photocopying. We assign the lined paper portion no probative weight.

21. Construction specifications use common section numbers for similar kinds of work (exh. A-30; tr. 1/62, 123). The Fernley, Nevada, swimming pool specification and its section numbers are not in evidence. LaVoie did not explain why documents 2 and 3 omit a § 07600 sheet metal price. He did explain that "Hy" means "hypalon" and the "287" or rounded "300" factor in document 3 by which he derived labor, insulation and roofing estimates, is the "square." (R4, tab 11) One roofer's square is 100 square feet. Thus, 287 squares are 28,700 square feet, somewhat more than the 23,400 or 23,720 square feet Tsang estimated (findings 4, 5), but not grossly discrepant. The probative portions of documents 2 and 3 corroborate that they were LaVoie's intended Whidbey roofing bid.

22. In early January 1990 Triax sought respondent's decision on its request to rescind or reform contract 1175. Respondent denied that request on 26 January 1990. (R4, tabs 12-15, 17)

23. Triax submitted to respondent a 29 January 1990 claim for $218,000 certified by its president William M. Nixon (R4, tab 18). Triax later stated that such amount was erroneous and recomputed a $181,188 difference between the mistaken and intended roofing bids, or $165,000 plus bond and insurance cost (exh. A-36; tr. 1/146-51).

24. Cal Stevens, Triax's contract 1175 superintendent; Lee Davenport; Paul Cook, Assistant Resident Engineer in Charge of Construction; and a man from Scholton Roofing, Triax's actual roofing subcontractor, conferred on 24 April 1990. According to Stevens' 18 June 1992 affidavit, after Cook left the conference, Davenport told Stevens that the Government estimate was mistaken by more than $100,000 due to mechanical cost errors of which the Navy was aware before bid opening (exh. A-34). Stevens testified that he immediately wrote down his recollection of that statement (tr. 1/30-31, 52-53, 55). No April 1990 record of such conversation by Stevens is in evidence, only his June 1992, post-litem affidavit.

25. Davenport and Cook testified that they left the conference at the same time (tr. 2/186, 210-11). Davenport denied that he told Stevens that respondent's IFB estimate was in error after the conference and that respondent was aware of an error in its estimate (exh. G-3; tr. 2/185-86).

26. Considering the foregoing conflicting testimony and its relative corroboration, we find that the alleged April 1990 Stevens-Davenport conversation does not prove a $100,000+ mistake in Tsang's Division 15 cost estimate.

27. Appellant completed performance of contract N62474-89-C-1175 (exh. A-33; tr. 1/46, 71, 135).

28. On 10 August 1990 Triax received the contracting officer's 8 August 1990 final decision denying its claim (R4, tab 20). Triax timely appealed that final decision to the Board on 5 November 1990 (R4, tab 21).

29. Ray LaVoie died on 18 May 1992 (exh. A-32) before the hearing.

DECISION

The regulations with respect to a contracting officer's duty to examine bids for mistakes and a contractor's right to correct a mistaken bid are set forth in our interlocutory decision, 93-1 BCA at 126,692-93. We summarize here the salient regulatory requirements:

> FAR 14.406-1: [C]ontracting officers shall examine all bids for mistakes. In cases ... where the contracting officer has reason to believe that a mistake may have been made, the contracting officer shall request from the bidder a verification of the bid, calling attention to the suspected mistake.
>
> * * *
>
> FAR 14.406-4(b): [A]gencies are authorized to make a determination—
>
> (1) To rescind a contract;
>
> (2) To reform a contract (i) to delete the items involved in the mistake or (ii) to increase the price if the contract price, as corrected, does not exceed that of the next lowest acceptable bid under the original invitation for bids ....

©1994, Commerce Clearing House, Inc.

Digitized by Google

(c) Determinations under subparagraphs (b)(1) and (2) above may be made only on the basis of clear and convincing evidence that a mistake in bid was made. In addition, it must be clear that the mistake was . . . if unilaterally made by the contractor, so apparent as to have charged the contracting officer with notice of the probability of the mistake.

Since contract 1175 has been performed (finding 27), deleting the roofing work or rescinding the contract cannot be done. The only relief available, if Triax proved its elements, is reformation. To reform contract 1175, Triax must prove by clear and convincing evidence: (1) a mistake in fact occurred prior to contract award; (2) the mistake was a clear-cut clerical or mathematical error or misreading of the specifications and not a judgmental error; (3) prior to award the Government knew or should have known that a mistake had been made; (4) the Government's request for bid verification, if any, was inadequate; and (5) proof of the intended bid was established. *Triax Pacific, supra,* 93-1 BCA at 126,693.

There is no real dispute that Ray LaVoie confused his Whidbey and Fernley swimming pool roofing bids and quoted the wrong price to Triax on 29 August 1989 (findings 18, 19), which wrong roofing price Triax included in its bid to respondent on the IFB (finding 10), establishing reformation element (1). LaVoie's quoting from the wrong paper (finding 19) was not judgmental; it was akin to a clerical error, establishing reformation element (2). Since respondent requested no verification of Triax's bid (finding 17), reformation element (4) is not applicable; the question is whether respondent had a duty to request it. While not absolutely conclusive, LaVoie's affidavit and bid papers substantiate his intended $193,000 bid (findings 19-21), establishing reformation element (5).

The dispute centers on whether respondent knew or should have known that Triax made a mistake in its bid, reformation element (3). All bidders made a pre-bid site visit; in 1982 Triax had installed a roof similar to the roof specified by the IFB; and there is no evidence whether any other bidder performed any previous work at Whidbey Island Naval Air Station or repairs comparable to the IFB repairs (finding 7). Contracting Officer Collins (a) sought no current bid or market price information on the IFB repair because it was new, not follow-on work, and was unlike any other job; (b) knew of no economic conditions impacting bid prices in the Seattle area in August 1989; and (c) had no actual knowledge of a mistake in Triax's $1,370,000 lump sum bid, which had no price breakdown by specification or work item, or an error in PWE's IFB cost estimate (findings 10, 13). Contract specialist Thomas testified that "there was no reason for me to believe that there was anything wrong with [Triax's] bid" (finding 14). She conjectured that Triax may have bid low to buy in, or because it did not make a site visit (*id.*). Her unsubstantiated conjectures are not proof that she suspected a mistake in Triax's bid, despite Triax's argument to the contrary.

Triax argues that the contracting officer should have suspected a mistake because Triax's bid was out of line with the closely grouped bids of the Washington State second, third and fourth low bidders, and she should have known that the PWE estimate was erroneous by $100,000+. Such arguments are not supported by record evidence. All bidders made site visits and there is no proof that the Washington State bidders were more familiar with Whidbey Building 13 repairs than Triax (finding 7). From their in-state proximity to the work site one cannot infer that Triax's lower bid was suspect (finding 14). There is no convincing evidence that respondent's estimate was erroneous by $100,000+ (findings 5, 13-16).

When the low bid was within one percent of the Government estimate and the contracting officer had no actual knowledge of any mistake in the low bid or in the Government estimate, then, absent facts which reasonably would alert one to suspect a mistake in bid, such as prior costs for an identical construction project, the contracting officer has no duty to ask the low bidder to verify its bid or to review the Government estimate for error. *Howard DeLozier Construction, Inc.,* PSBCA No. 928, 81-1 BCA ¶ 15,007.

Similarly, in *RMB Manufacturing Co.,* ASBCA No. 24232, 81-1 BCA ¶ 15,157, the Government estimated $26,150 and received three bids: $28,357, $36,998 and $47,868. The Government rejected the low bid as nonresponsive and awarded to the second low bidder. The contracting officer did not believe that the second low bid was out of line since it exceeded the Government estimate. He suspected no mistake and sought no verification from the awardee. The awardee contended that the Government estimate was inaccurate. We denied relief, concluding, 81-1 BCA at 74,991:

Digitized by Google

> Even assuming *arguendo* that the Government estimate [was] inaccurate, appellant overlooks the fact that it is not a . . . guarantee of accuracy. As the Comptroller General has noted, a low bidder "has no right to assume that a Government estimate is any more accurate than any of the other bids." . . . B-194610, 80-1 CPD ¶ 242 [59 Comp. Gen. 363 (1980)].

The decisions in which there were higher bids grouped within a close range do not help Triax. In *MKB Manufacturing Corp.*, 59 Comp. Gen. 195 (1980), three bids were below the Government's estimate; the low bid was 28 percent below the Government estimate; the low and second low bids differed by 25 percent; and the low bid and the average of the next three low bids, grouped within less than 14 percent, differed by 42 percent. The Government sought no verification. The Comptroller held that there was constructive notice of a mistake. Triax's facts are distinct. No bid was lower than respondent's estimate. Triax bid only 1.63 percent higher than the Government estimate, 13.78 percent lower than the second low bid, and 14.94 percent lower than the average of the second-fourth low bids (finding 11).

In *Hankins Construction Co. v. United States*, 838 F.2d 1194 (Fed. Cir. 1988), the Government received three low bids (Hankins' $1,280,000 low bid to $1,353,000) and three high bids ($2,446,000 to $2,298,922). Hankins' bid included a $340,000 sprinkler subcontract bid. After bid opening but before award, Hankins received a $999,999.98 sprinkler bid, which it ignored as "fictitious." The Government verified no bid. After contract award, the sprinkler subcontractor discovered and reported a major mistake. Hankins argued that the Government had reason to suspect a mistake because of the unusual clustering of bids and because Hankins' bid fell well below the Government estimate (not disclosed in the reported decision). The Federal Circuit court held that Hankins assumed the risk of its sprinkler subcontractor's mistake because it failed to investigate thoroughly why the mistaken sprinkler bid was so much lower than the belated sprinkler bid, citing *Restatement (Second) Contracts*, § 154(b) (1981). The existence of two other bids of roughly the same amount tended to confirm the reliability of Hankins' bid, rather than to raise a suspicion about it, and in the preceding two years bidders had typically bid below the Government estimate.

We hold that under the facts and circumstances we have found, prior to award respondent did not know, nor should it have known, that a mistake had been made in Triax's bid, and, therefore, respondent had no duty to seek verification of that bid. We also hold that Triax assumed the risk of LaVoie's mistaken roofing subcontract quote because it failed to investigate thoroughly the "dramatically higher" roofing quote it received a day or two after bid opening, two weeks before award of contract 1175 (finding 12).

We deny the appeal.

[¶ 26,381] Federal Boiler Company

ASBCA No. 40314, September 23, 1993. Contract No. F08650-89-C-0043.

Acceptance of Performance—Alternatives to Rejection—Price Reduction.—Under a contract for the installation of hot water boilers with water treatment systems, the government was entitled to a price reduction for its qualified acceptance of nonconforming filters rather than termination of the contract, despite the contractor's contention that the specified system was not necessary to the boilers, because the evidence showed that the specified filters performed a return water filtration function not addressed by other systems. The contractor failed to provide any evidence in support of its contention that the specified system was incompatible with the other boiler requirements. The government was entitled to realize the savings incurred as a result of the contractor's performance in a less costly manner than required by the contract. However, the government failed to show entitlement to damages or liquidated damages associated with late delivery.

For the appellant: John W. Pike, Vice President. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Diana S. Dickinson, Trial Attorney.

Before YANNELLO, RUBERRY, and SPECTOR, Administrative Judges.

©1994, Commerce Clearing House, Inc.

Digitized by Google

YANNELLO, Administrative Judge: Issues of entitlement only are before the Board. A hearing was held after which post-hearing briefs were filed.

FINDINGS OF FACT

The solicitation for the subject contract called for installation of 4 hot-water boilers, 2 30-HP boilers and 2 50-HP boilers. The specifications described a York Shipley boiler, and provided for substitution of an "equal" product, setting forth the required characteristics. Essentially, some characteristics of the boilers can be summarized as follows:

> Water Treatment: Boiler shall be equipped with a complete 4-quart chemical feeder package *and* a bag filter *equal to* Rosedale Model 8 bag filter with dual-stage straining/filtering action (one a strainer basket, the other a filter bag basket); other features: 3" flanged connections, 30" basket depth, 150-PSI rated housing, baskets 40 mesh lined, bag 40 to 80 micron size, and housing made of 316 stainless steel. [Emphasis supplied]
>
> The solicitation further required that:
>
> Bidders offering an "equal" product must submit descriptive literature in accordance with DOD FAR SUP 52.230-7000, "Brand Name or Equal" (Section L), with their bid.

Appellant's bid, prepared by Kris Iyengar and signed by John Pike, was submitted on 11 October 1988. A cover letter to this bid noted that the offer varied from the specifications in certain respects (the product offered did not bear the "U/L B" label but did conform to U/L requirements; the burners did not have a triple oil nozzle arrangement). The bid and accompanying documentation did *not* state that the boilers did not have a Rosedale Model 8 bag filter or equivalent, nor did it describe a Guardian filter system. Messrs. Iyengar and Pike, while acknowledging that the boilers required by the Government were standard products, stated that they had not heard of the Rosedale bag filters and/or were not familiar with a chemical feeder package. Appellant did not inform the Government that it did not intend to provide a Rosedale bag filter or equivalent.

As described by the Government, the boilers had two distinct treatment systems. The purpose of the chemical feeder package was to allow the boiler operator access to the waterside of the system in order to feed water-treatment chemicals into the boiler; this package contained a bag to strain out particles in the feeding process. The Government agrees that the chemical feeder package furnished by appellant conformed to contract requirements. The purpose of the Rosedale water treatment filter package described in the contract was to remove impurities from the complete heating system including the system return water; this system did not have to be attached to the boiler. It is this system which is at issue here.

Appellant believed the specification, requiring the Rosedale Model 8, to be in error, but did not address any pre-bid inquiry to the Government.[1] Nor is there any record of inquiry by any bidders concerning the requirement.

The Government initially rejected appellant's bid because of the two described exceptions or deviations from the specifications. Appellant responded, but did not raise the matter of the Rosedale bag filters; bid consideration was extended through March 1989. The contract was awarded on 8 March 1989, and the boilers were to be delivered within 60 days.

The contract contained the standard CHANGES (FAR 52.243-1) clause, and incorporated by reference the INSPECTION OF SUPPLIES—FIXED-PRICE (FAR 52.246-2 (Jul 1985)), RESPONSIBILITY FOR SUPPLIER (FAR 52.246-16 (Apr 1984)), and WARRANTY OF SUPPLIES OF A COMPLEX NATURE (FAR 52.246-18 (Apr 1984)) clauses.

On 7 April 1989 appellant requested a 36-day extension (12 days due to alleged late receipt of the contract [2] and 24 days due to supplier delays for which the contractor would not consider a deduction in contract price).

[1] Mr. Iyengar's testimony, that he contacted Government personnel to get information about the Rosedale bag filters, is not persuasive inasmuch as he could not identify the personnel contacted and such records as exist and/or were produced before the Board do not memorialize or corroborate any such inquiry. It is found that appellant's first request for literature on the Rosedale bag filters was 18 August 1989.

[2] The contractor contemporaneously acknowledged receipt of the contract on 20 March 1989. During hearing, appellant alleged that receipt was on a later date but, in response to the Board's invitation to supplement the evidentiary record, appellant has offered no evidence in support of this contention.

Digitized by Google

On 11 April, appellant received from a supplier, Combustion Heat & Power, Inc., a quote and descriptive literature for a Guardian Model No. VTF-2 bypass feeder with Filter Bag Kit Model No. FBK-2. On 12 April, appellant requested a quote from Klenzoid, Inc., for the product described in the contract.

On 19 May, the Government issued a Show Cause Notice. Appellant responded on 26 May stating that it had scheduled delivery of the boilers for 12 June; it cited as a reason for the delay, the delay of its suppliers or subcontractors. Appellant also offered to supply additional factual information which the Government requested on 1 June; this information was not forthcoming.[3]

On 12 July, appellant promised delivery of the boilers within days. On 19 July, appellant provided the TCO with further information concerning its subcontractor's delay.

The four boilers were delivered on 20 July 1989. On 24 July the contracting officer (CO) discussed with appellant the failure of the boilers to meet the specifications (particularly with respect to the Rosedale Model 8 bag filters). Appellant acknowledged that it had not complied with the specifications but stated that it had provided a product standard within the industry, specifically, one with a Guardian treatment unit.

On 18 August 1989, following the controversy about the boilers furnished by appellant, appellant asked for literature concerning the Rosedale system; this information was furnished by the Government on 24 August and 5 September.

The Guardian system furnished by appellant had a 3/4-inch rather than a 3-inch flanged connection. The Guardian system contained only one basket and did not contain a second or a filter basket. The Guardian housing was black (or carbon) steel, not stainless steel. Appellant's Mr. Iyengar had not personally compared the Guardian characteristics with the contract requirements but had relied upon his supplier's representation of equivalency.

In late August and early September 1989, the CO notified appellant that, in order to mitigate damages, it was considering acceptance of appellant's boilers with a reduction in the contract price. Appellant was given an opportunity to correct the deficiencies in its boilers but, on 15 September, declined to do so stating that it believed the Rosedale Model 8 bag filters to be unnecessary.

On 28 September 1989, the Government issued a unilateral contract modification reducing the contract price by $15,899.75. Of this, about $1,300 was assessed for late delivery and the remaining $14,599.79 was assessed for the cost of obtaining and installing the Rosedale Model 8 bag filters (based on a quote from a manufacturer of that system, Waco Industries, of $3,613.30 per filter plus installation).

Appellant contested the price reduction and demanded payment in a claim letter of 2 November,[4] and a final decision was issued by the CO on 22 November 1989. On 31 January 1990, appellant appealed from that decision.

As of the submission of this appeal for decision, no Rosedale Model 8 bag filters have been supplied. The Government has installed the 2 30-HP boilers without the Rosedale Model 8 bag filters (apparently due to funding constraints); the 2 50-HP boilers have been stored (apparently due to other civil engineering priorities at the base).

Issues of entitlement only are currently before the Board.

DECISION

There is no real dispute here that the contract required four boilers with water treatment systems containing Rosedale Model 8 bag filters, or that appellant did not supply such Rosedale systems.[5] Thus, the Government has made a *prima facie* showing of entitlement to a reduction in the contract

(Footnote Continued)

In a contract modification of 16 May, the contract completion date was extended 12 days or until 19 May.

[3] On 19 June, the Government sent a form to appellant, identifying the boilers required under the contract and requesting a response by 2 August. On 6 July 1989, the Government terminating contracting officer notified the appellant that consideration was underway to terminate the contract for default. In view of subsequent developments, the Government stopped further consideration of contract termination.

[4] During hearing, appellant's personnel contested the reasonableness of this price but had not actually priced such filters; appellant has offered no evidence in this regard.

[5] Appellant has made no showing that the Guardian chemical treatment package which it did supply fulfilled the purpose of or was otherwise equivalent to the specified water treatment with Rosedale Model 8 bag filters; indeed appellant acknowledges that its system was not equivalent to Rosedale.

©1994, Commerce Clearing House, Inc.

Digitized by Google

price for its acceptance of the non-conforming goods.

Appellant has contended that the Rosedale system was not necessary to the boilers. However, the evidence establishes that the Rosedale system performed a function not addressed by the boilers or other appurtent systems (*i.e.,* filtration of return water).

In a similar context, appellant also contends that it did not expect to furnish the Rosedale system because it was incompatible with the other specified boiler requirements; however, appellant offers little if any support for this contention. Moreover, assuming, without deciding, that this were the case, the specification requirements for two incompatible products would render the specification patently ambiguous and would require a pre-bid inquiry from appellant. Absent such inquiry, appellant cannot now be heard to contend that the Rosedale system was not required.

Appellant also contends that the Government is not entitled to reduce the contract price, by reason of the contractor's failure to provide the Rosedale Model 8 bag filters, because the Government has not been damaged thereby, has not in fact installed the filters, and has incurred no increased costs. This contention too is wide of the mark. We have held that, when a contractor performs in a less costly manner than required by the contract, the Government is entitled to realize these savings; the change in cost of performance to the contractor, and not damages to the Government, is the basis of adjustment (even when the contractor's bid did not anticipate incurrence of the costs). *See, e.g., Davis Constructors, Inc.,* ASBCA No. 40630, 91-1 BCA ¶ 23,394; *Anderson (Bruce) Co. Inc.,* ASBCA Nos. 29412 et al., 89-2 BCA ¶ 21,872.

Appellant has argued that, should the Board find that the Rosedale Model 8 filters are required by the contract, appellant should be given an opportunity to supply them rather than sustain a reduction in the contract price. We reject this contention in view of the ample opportunity previously afforded the contractor to correct the deficiencies in its performance.

Finally, we turn to the Government's arguments concerning its eventual qualified acceptance of appellant's non-conforming goods, by way of mitigation, rather than electing to terminate the contract. We agree that such decision by the Government was proper and was timely exercised without any waiver by the Government of its rights under the contract.

However, with respect to its reduction in the contract price of about $1,300 which it attributes to "late delivery," some questions do arise. The Government has pointed to no provision in the contract for liquidated damages. Likewise, it has asserted no basis for a finding of actual damages by reason of the late delivery (such as, for example, rental of temporary boilers pending delivery).

Accordingly, the Government has not shown that it is entitled to a price reduction by virtue of the late delivery.

CONCLUSION

Based on the foregoing, the appeal is sustained to the extent that the Government reduced the contract price by reason of late delivery, and is otherwise denied. The matter is referred to the parties for a computation of quantum plus interest as provided in the Contract Disputes Act from the date the Government received appellant's claim of 2 November 1989.

[¶ 26,382] Service Engineering Company

ASBCA No. 40275, September 27, 1993. Contract No. N00033-84-C-001.[1]

Quality—Reasonableness of Standard—Absence from Contract.—Under a ship repair contract, the government's direction to the contractor to correct a noticeable declivity appearing at the center line of the deck constituted a constructive change because the government failed to prove that the deck was outside the limits of acceptable marine practice. The contract contained no declivity tolerance requirements, but it did require that all workmanship under the contract be in accordance with the best commercial marine

[1] In the four decisions we have issued thus far, we inadvertently used the contract number for the Master Ship Repair Contract (N00033-70-C-078). Job Order No. N00033-84-3-001 was the contract number assigned to the SPICA overhaul.

Digitized by Google

practice. The contract did not define "best commercial" or "good" marine practice. The government took the position that a military standard could be used as a guide to what constituted good marine practice. The deck, as installed, was not within the tolerance of this standard. The board, however, refused to impose this standard on the contractor, because the standard did not appear in the contract. If the government wanted this standard to be the baseline of what constituted the best marine practice, it should have referred to the standard in the contract specifications. Further, the government failed to prove that the declivity resulted from the contractor's welding or underdeck installations.

Pricing of Adjustments—Actual Costs—Deck Repair.—In determining the amount of recovery due a ship repair contractor for complying with a directive to repair a declivity in the deck span, the contractor was allowed to recover its stated labor hours because the hours claimed by the contractor were found to be a reasonable estimate of the labor hours expended in effecting the deck repair. The overtime labor hours claimed by the contractor were denied by the board because the estimate of overtime hours was supported by no more than a generalized estimate from the ship superintendent.

Interpretation of Contracts—Plumbing, Pipes, and Welding—Pipe Installation.—Under a ship repair contract calling for the installation of an aviation fuel system, a contractor's interpretation that it could install vent lines for water ballast tanks along the extreme upper side of the tanks rather than through the top of the tanks was rejected because the contract, when considered as a whole, required the installation of the vent lines through the top of the tanks. In installing the vent lines for the ballast tanks, the contractor was required to meet American Bureau of Shipping regulations, which required vent pipes to be located at the highest part of the tank. The contractor's installation of the vent lines at the uppermost side of the tanks was not considered by the board to be at the highest part of the ballast tanks. Further, the contractor's reliance on a specification provision stating that all pipe lines should enter as near to the top of the tank as practicable was not justified. This provision, when read in context, applied to fluid-carrying pipes, and the vent pipes in question were not fluid-carrying pipes.

Interpretation of Contracts—Plumbing, Pipes, and Welding—Insulation of Pipes.—A ship repair contractor's position that it was not required to insulate vent pipes that had been rerouted through reefer areas was rejected because the contract clearly required that surfaces exposed to refrigerated spaces, such as the reefer area, were to be insulated. To correct installation deficiencies, the contractor rerouted vent pipes to water ballast and storage tanks through the reefer areas. The contractor's ship superintendent conceded that any time a vent line went into a reefer space, the vent line had to be insulated.

Interpretation of Contracts—Plumbing, Pipes, and Welding—Pipe Guards Installation.—A ship repair contractor's interpretation that it was not obligated to install pipe guards unless the contract documents specifically identified the locations where the pipe guards were required was rejected because the piping specifications generally described the need for pipe protections. The piping specifications provided that all pipes exposed to damage from mechanical equipment, including trucks and forklifts, were to be adequately protected. It was clear from a reading of this specification that pipe guards were to be installed at various locations where potential damage to the installed piping system was likely to occur.

Modifications—Bar to Claims—Scope of Agreement.—Under a ship repair contract, the government's contention that a contract modification providing for the replacement of a leaking drainage line barred the contractor's claim for the costs of cleaning up the leak in the deck area where the leak occurred was rejected because there was no indication that the parties intended the modification agreement to cover the cleanup work. There was no indication that the parties' negotiators discussed the cleanup matter prior to reaching agreement on the price of the modification.

Pricing of Adjustments—Particular Costs—Cleanup Costs.—In calculating the amount of a price adjustment due a ship repair contractor for cleaning up water after a drainage leak, the board found that the contractor had established that it had cleaned up the water leakage twice a day for 16 days. The government contended that the hours

©1994, Commerce Clearing House, Inc.
Digitized by Google

claimed by the contractor for cleanup were not shown as a part of the hours included in a modification providing for the replacement of the leaking drainage line. There was no reason for the cleanup hours to be shown as part of the modification, however, because the cleanup work was not part of the modification.

Performance—Secondary Obligations—Repair and Maintenance.—Although a ship repair contractor contended that a portion of the vessel's ventilation system was inoperable when the vessel was delivered, it was not entitled to recover repair costs incurred to make the system operable, because it failed to overcome the presumption that the ventilation system became defective while in its care. Since the specifications required that the contractor conduct a survey of the vessel's equipment and systems when the vessel was delivered for upgrade, it was presumed that any defects found in the equipment occurred while the equipment was in the contractor's care. The contractor conceded that it had checked the hood fans of the ventilation system but that it had not checked the hood washdown system, the emergency shutoff system, or the main controller. In the course of rendering the system operable, the contractor repaired a junction box in the main controller, rewound a damper solenoid in the hood system, and tightened loose lugs and wires. The contractor alleged that these deficiencies were pre-existing but offered no credible proof that the main controller or hood system was inoperable when the vessel was delivered.

Performance—Secondary Obligations—Radar Equipment Repair.—A ship repair contractor was responsible for correcting deficiencies in the vessel's radar system, even though there was no indication that it had caused the radar failure, because it failed to overcome the presumption that the radar system became defective while in its care. In view of the fact that the contractor was given the opportunity to conduct a predelivery survey and to note defects on the vessel, a presumption arose that the defects found in the vessel's radar system occurred while the vessel was in the contractor's care. It was shown that the vessel's radar and navigational systems were working when the vessel was turned over to the contractor. In the absence of evidence to the contrary, the board concluded that the short circuit that caused the radar failure occurred when the vessel was in the contractor's care.

Performance—Directions by Government—Relocation of Lights.—Under a ship repair contract, the government's direction that the contractor relocate deck edge lights in accordance with a new drawing was found to be a constructive change because the government failed to explain what was wrong with the drawing the contractor used to locate the deck lights. A government inspector determined that the deck light locations shown in the original drawing were incorrect and that unless they were corrected, the helicopter deck would not be certified by Naval Air System Command. The government inspector, however, did not testify regarding the problem with the drawing. Without an explanation of what was wrong with the original drawing, which the specifications directed the contractor to follow, the board concluded that the government direction was a change.

Interpretation of Contracts—Electrical Work—Lineup Light Bars.—The government's direction that a ship repair contractor modify extended lineup light bars on the deck to make them movable and thereby readily accessible for maintenance was not a constructive change, because the contract, when read as a whole, clearly required that the light bars be accessible for work, repair, and maintenance. The Electrical Systems clause stated that all electrical equipment be readily accessible for repair and removal. The Access and Maintenance clause required that equipment be designed and constructed to permit ready access to all parts for inspection, operation, maintenance, and repair. Although the extended light bar installation specification did not specifically refer to these clauses, the General Conditions clause clearly stated that these clauses set out minimum requirements to be followed for all work under the contract.

Property—Government-Furnished Equipment—Components.—The costs incurred by a ship repair contractor in repairing government-furnished components needed to make the vessel's lighting and visual approach system operable were recoverable because the government-furnished components were found to be defective. Upon testing the lighting and visual approach system, the contractor found that the system did not work. The contractor isolated the problem to defects in certain government-furnished components, such as a flash

Digitized by Google

sequencer, several motor driven variable transformers, and a glide scope indicator. There was no indication that the contractor improperly installed the components.

Property—Government-Furnished Equipment—Incompatible Equipment.—The costs incurred by a ship repair contractor in attempting to hook up 60 hertz and 400 hertz wind speed indicator components were recoverable, because these government-furnished components were not compatible. The government insisted that the 400 hertz wind speed indicator equipment could have been connected to 60 hertz equipment, but the record did not support the government's position. The government's expert conceded that it was unusual for equipment to have input and output of different frequencies.

Modifications—Bar to Claims—Inclusion in Release.—A ship repair contractor's claim for costs incurred in attempting to hook up incompatible government-furnished components for a wind speed indicator was not barred by the release contained in a bilateral modification regarding the components, because the problem of the incompatible components did not come about until after the execution of the contract. At the time the parties executed the modification, the contractor did not know that the equipment delivered by the government would be a mixture of incompatible components. Given the government's failure to deliver its part of the bargain, the contractor's claim was not barred by release.

For the appellant: Seyfarth, Shaw, Fairweather & Geraldson, San Francisco, California, by D. Whitney Thornton II. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, Stephen R. O'Neil, Associate Chief Trial Attorney, Stephanie Cates-Harman, Senior Trial Attorney, and Alan W. Mendelsohn, Trial Attorney, Military Sealift Command, Washington, D.C.

Before TING, RUBERRY, and RIISMANDEL, Administrative Judges.

TING: Administrative Judge: This is the fifth (hence the "5-" designations in our findings below) of many decisions which we will issue concerning the claims, known as Requests for Equitable Adjustment (REAs), submitted by Service Engineering Company (SECO), arising out of the overhaul of a Military Sealift Command (MSC) vessel known as the USNS SPICA. The background of this overhaul was set out in our first decision, *Service Engineering Company,* ASBCA No. 40272, 92-3 BCA ¶ 25,106, and will not be repeated here.

This decision deals with REA Nos. 8, 121, 115, 120, 24, 6, 53 and 105. These REA claims and many other REA claims were submitted to the MSC contracting officer. The contracting officer never issued a decision. By letter dated 20 October 1986, SECO appealed to the Board upon the contracting officer's failure to issue a decision. The Board deemed SECO's various REA claims as having been denied by the contracting officer, and docketed the appeal as ASBCA No. 33787.[2]

Thereafter, the parties agreed to litigate the REAs grouped by Items of the specifications. With few exceptions, mainly to accommodate witnesses, each REA was separately heard to its conclusion before commencing on the litigation of another REA. For purposes of briefing and decision, the Board assigned ASBCA No. 40275 to the 8 REAs in this decision.

FINDINGS OF FACT

REA No. 8

5-001. Section 500 of the SPICA specifications related to "HELICOPTER FACILITY UPGRADE." Item No. 501, "Overall Intent, Scope and General," provided, in part, as follows:

> It is the intent of this Item to outline the steps necessary to update the existing ship's helicopter installation to meet the following levels and classes of helicopter operations as defined in Naval Air Systems Command (NAEC 91122) "Air Capable Ship Aviation Facilities" Bulletin 1E All helicopter facility modifications accomplished by the Contractor shall meet or exceed the current certification requirements for the levels/classes/helicopter listed below, and shall be shown certifiable by the Contractor to the COMSC CONREP and the Naval Air Engineering Center (NAEC)....
>
> * * *

(Exh. G-3 at 501-1)

[2] We dismissed ASBCA No. 33787 as duplicative by order dated 19 March 1993.

5-002. Item No. 502 of the specifications required SECO to remove the existing 02 Deck structure and replace it with a new deck structure. Item 502.H., "TESTING," provided, in part, that:

> 2. All work accomplished by this Item shall be shown certifiable by the Contractor to the COMSC CONREP and the Naval Air Engineering Center (NAEC).

(Exh. G-3 at 502-11)

5-003. Item 502.E.1. provided:

* * *

> All materials and workmanship shall be subject to inspection and approval of the COMSC CONREP at all times. Workmanship and materials found to be defective, not in conformity with *good marine practice*, regulatory requirement, or not in accordance with this Specification and its associated approved plans shall be cause for rejection and removal. (Emphasis added]

(Exh. G-3 at 502-5)

5-004. Clause 5, "INSPECTION AND MANNER OF DOING WORK" of the Master Ship Repair Contract (N00033-70-C-0078) provided that:

> (b) Unless otherwise specifically provided in the job order ... all workmanship ... in the performance of work ... shall be in accordance with the rules and requirements of the American Bureau of Shipping, the U.S. Coast Guard, and the American Institute of Electrical Engineers, in effect at the time of the Contractor's submission of bid ... and the *best commercial marine practices* .... [Emphasis added)

(R4, tab 135)

5-005. SECO subcontracted the fabrication of the helicopter deck structure to Kaiser Steel Corporation (Kaiser) (exh. G-170S). The deck structure was installed in four separate sections. Each section covered the width of the vessel and weighed between 25 to 40 tons. (Tr. 22/125-26) The deck was designed to slope away water (tr. 22/136).

5-006. Section 1 and Section 2 of the deck were welded together at Frame 26 of the vessel. Section 2 and Section 3 were welded together between Frames 19 and 17. (Tr. 22/170, 73) Sections 2 and 3 of the deck were welded together in early November, 1984 (tr. 22/126, 128-29).

5-007. After Sections 2 and 3 were welded together, the Chief Mate of the vessel complained to MSC that "there was a dip in the deck where the butt between the 2 and 3 sections came together" (tr. 22/131). This "dip" occurred "at center line of the helo deck out 10 feet ... to the port and 10 feet to the starboard" side of the vessel in the no-camber areas of the deck (tr. 22/131). It was a gradual "dip" that went down fore and aft in the deck plating (tr. 22/132; see sketch, exh. A-64).

5-008. Two representatives from Kaiser visited the vessel to evaluate the problem on 8 November 1984. According to the SECO Project Officer's diary, neither SECO nor Kaiser knew to what tolerances the deck sections were built (app. supp. R4, tab 135 at 37). It was determined that there was a "dip" or declivity of "almost an inch and half maximum on the port side and approximately an inch maximum on the starboard side" (app. supp. R4, tab 135 at 38; tr. 22/224). SECO and Kaiser agreed that the "dip" was "noticeable" (tr. 22/223).

5-009. The CONREP arranged to have an NAEC representative visit the vessel the next day, 9 November 1984. The NAEC representative brought with him "a graph that had deck frames, distances along one side and inches along another side" (tr. 22/228). The graph showed that for the deck thickness involved and 24-inch distance between frames, a tolerance of between $1/4$-inch and $3/8$-inch would be allowed. Based on this graph, and the measurements taken between frames, the NAEC representative found that the deck "was within tolerance." According to the SECO Project Officer's diary, the NAEC representative stated that "he knew of no reason NAEC wouldn't certify the deck with the dip" (app. supp. R4, tab 135 at 39).

5-010. The CONREP confirmed during the hearing that the NAEC representative did not have a reference to measure whether the "dip" was acceptable over the span of the deck. However, based upon measurements "between frames ... none of the deformation between frames was out of NAEC tolerance." Although the NAEC did not certify the deck that day, the CONREP acknowledged that the NAEC representative "could find no rationale to not certify the deck when the time came because of that particular problem" (tr. 22/278).

5-011. The CONREP's diary contained the following entry for 9 November 1984:

* * *

> Deformation found in helo deck was actually within limits set by NAEC. Don Cooper, NAEC rep. in Alameda, saw and

Digitized by Google

participated in measurement. Actually the deformity doesn't look that bad—The ship's force are [sic] clamoring that it looks like a ski jump—They're expecting perfection and doing some after the fact engineering.

(R4, tab 143 at 123)

5-012. By letter dated 12 November 1984, the CONREP advised SECO that notwithstanding the NAEC's finding, the quality of the deck was "unacceptable." The CONREP took the position that "the flaw is not entirely in the deck plating but in the underdeck structure ... and outside the limits of acceptable marine practice." The CONREP stated that if the deficiency was not rectified by Kaiser, "SECO must bear the responsibility of the consequences." (App. supp. R4, tab 8 at exhibit No. 2)

5-013. The Government offered no proof that any underdeck structure contributed to the "dip" in the deck. There is no evidence that the weight of the deck sections caused the "dip" (tr. 22/256). Nor did SECO's welding cause the "dip" because, if that were the case, "the dip would've been just between the frames" (tr. 22/249).

5-014. SECO advised the CONREP by letter dated 13 November 1984 that it "will take immediate steps to make that area ["the deck seam area between pieces number two (2) and three (3)"] more nearly level," and that the work "may be the subject of a future REA" (app. supp. R4, tab 8 at exhibit No. 3).

5-015. In the meantime, the CONREP was apparently attempting to locate a tolerance to which SECO could be required to comply. His diary for 16 November 1984, reflected this effort:

* * *

Attempts to locate acceptance guidelines for deck structure dishing have been futile. NAVSEA has none, NAEC has none, ABS & USCG have none and we don't address it in our specifications.

* * *

(R4, tab 143 at 128)

5-016. In a letter dated 20 November 1984, the CONREP advised SECO that "Deviation Standards do exist for the acceptability of Helicopter Deck new construction." The CONREP referred to MIL STD 1689 SH. According to the CONREP, this standard required a tolerance of 1/4 inch in a situation, as in this case, where "the deep beam is 24 inches and the span of the dishing was approximately 20 feet." (App. supp. R4, tab 8.1; tr. 22/237)

5-017. There is no dispute that MIL STD 1689 SH was not referenced in the SPICA specification (tr. 22/237). The Government's expert witness acknowledged at the hearing that if MSC wanted MIL STD 1689 SH as a guide of "what good marine practice would be," it would have been "preferable," to refer to the standard in the specifications (tr. 22/301-02)

5-018. SECO advised the CONREP by letter dated 23 September 1984 that it was unable to find MIL STD 1689 SH in the specifications (app. supp. R4, tab 8.2).

5-019. By letter dated 26 November 1984, the CONREP advised SECO that MIL STD 1689 SH was provided in response to SECO's inquiry of what constituted "good marine practice," and not as a standard to which SECO must contractually comply. The CONREP stated that he had rejected the deck for the following reasons:

SECO was apparently not convinced that the consequential accumulation of water in and the movement of heavy lifts across the deck deformation would constitute an inconvenience to MSC. The CONREP rejected the structure both for said inconvenience and for the fact that the deck was an eyesore that one should normally expect the contractor to rectify without question.

(App. supp. R4, tab 8.4)

5-020. There is no evidence that the "dip" caused water to accumulate on the deck. SECO explained that "that portion of the deck is sloped away. And it's all going to drain off to the drains around the perimeter of the helo deck" (tr. 22/150, 239). There is no evidence that the "dip" impeded the movement of heavy lifts on the deck.

5-021. Agreeing with SECO that in the absence of a more definitive tolerance in the contract documents, "normal Navy standards" would apply, the Government's expert witness asserted in his report introduced during the course of the hearing that the standards referred to in NAVSEA 099-LP-097-4010, *i.e.*, NAVSEA 0900-LP-014-5010 and NAVSHIPS 0900-000-1001 should apply. These Navy publications are said to set out the following maximum deck deflection standards over the span of the deck:

©1994, Commerce Clearing House, Inc.

Digitized by Google

Deflection or Unfairness

STANDARD	24" spacing	36" spacing	Max. shown
MIL STD 1689 SH	1/4"		
0900-LP-014-5010	1/8"	1/4"	1/2"
0900-000-1001	3/8"	5/8"	3/4"

(Exh. G-108A, REA No. 8 at 12)

5-022. We find that the SPICA specifications did not require SECO to comply with "normal Navy standard."

Deck Repair

5-023. To correct the "dip" in the deck, SECO had to cut the welding between Sections 2 and 3 "all the way through" (tr. 22/159). In addition, SECO had to cut the structural members below and install temporary supports. SECO then jacked up the deck with a 50-ton hydraulic jack, and proceeded to "heat the plating and ... bend it up" (tr. 22/160). After the deck had been made more "fair," SECO had to "reconnect all the steel structures" (tr. 22/161).

5-024. SECO's repair effort took "a couple of weeks and multiple shifts"—day and swing shifts (tr. 22/161). SECO did not eliminate the "dip" totally. MSC ultimately accepted a 3/4-inch "dip" on the portside, as opposed to the original 1 1/2-inch "dip" (tr. 22/279).[3] The CONREP conceded that in light of the fact that he did not have a "specific handle" on the deck tolerance, he would have "liked to have accepted the inch and half dip." He accepted the 3/4-inch dip because it "didn't look quite so bad" (tr. 22/279). He testified further that he did not accept the original deck installation because the Chief Mate and the SPICA crew were the ones that "had to live with this" (tr. 22/280).

Impact

5-025. When the deck repair was being performed, SECO had to reassign 30 to 40 men who would otherwise be working in the areas below the deck (tr. 22/162, 167). The installation of studs for insulation, hangers for electrical wireways and piping runs had to be postponed (tr. 22/162).

Claim

5-026. SECO by letter dated 28 October 1985, designated as REA No. 8, claimed $29,689 as increased costs in repairing the helicopter deck. SECO contended that the specifications did not reference MIL STD 1689 SH, and that the CONREP's requirement that the deck structure not exceed 1/4-inch in tolerance was in excess of the contract requirement, constituting a constructive change for which it was entitled to an equitable adjustment. (App. supp. R4, tab 8) Pursuant to SUPSHIP, San Francisco's instructions, SECO, in 1986, removed from REA No. 8 the cost component relating to disruption. This cost component was ultimately consolidated with other disruption equitable adjustment requests in REA No. 132. (Tr. 22/121-22) REA No. 8 was revised to $20,281 by letter dated 14 June 1989 (app. supp. R4, tab 8.4; tr. 22/121-22). At the hearing, SECO corrected a $250 error and revised its claim to $20,007 (tr. 22/123).

Quantum Proof

5-027. Of the $20,007 claimed, $320 was for materials. No invoices or material requisition chits were submitted in support of the material costs claimed.

5-028. "Just about every craft," including "boilermakers, shipfitters, welders, electricians, riggers, laborors, painters" were involved in the deck repair (tr. 22/165).

5-029. Based on the information furnished to him, and his own observations of the repaired areas, SECO's Contract Administrator, whom we have found to be a credible and competent estimator (see findings 3-034 to -035, ASBCA No. 40274), estimated that 484 labor hours would have been consumed in the repair effort. (Tr. 22/163, 258)

5-030. The various trades had to "cut loose Seams & Butts" of the affected deck sections, fabricate "strongbacks" and protect the areas underneath the deck. After the deck had been "jacked" up, SECO's trades had to rebevel and reweld the seams and butts, and prime and paint the repaired areas. SECO then had to remove the temporary strongbacks before cleaning up. Based upon the contract administrator's estimate, and the lack of serious challenge from the Government, we find 484 labor hours to be reasonable in effecting the deck repairs.

5-031. The contract administrator estimated that 100 labor hours of overtime were

[3] The record is not clear to what extent, if at all, SECO corrected the "dip" on the starboard side.

Digitized by Google

incurred. The overtime claimed was supported by no more than a generalized estimate from the ship superintendent. Without any corroborating evidence, we find that the evidence is insufficient to support a finding that overtime hours were incurred and, if incurred, were incurred specifically in connection with the deck repair work which is the subject of REA No. 8.

5-032. In our third SECO decision (ASBCA No. 40274), we found that "For purposes of equitably adjusting those REAs for which we find entitlement, we will apply a composite labor rate of $34 an hour" (see finding 3-009, ASBCA 40274).

DECISION

The new helicopter deck SECO was required to install had to be "certifiable by the Contractor to the COMSC CONREP and the Naval Air Engineering Center (NAEC)." The deck SECO installed contained a "noticeable" "dip" or "dishing" occurring at the center line where Sections 2 and 3 of the deck were welded together, and extending 10 feet to the port and starboard sides of the vessel. It was determined that Sections 2 and 3 of the deck, as installed, had a maximum declivity of almost $1\frac{1}{2}$ inches on the port side and approximately 1-inch maximum on the starboard side (finding 5-008).

The SPICA contract contained no declivity tolerance requirements over the span (*i.e.*, 20 feet in this case) of the deck. Nor has the Government shown that NAEC, American Bureau of Shipping ("ABS"), or U.S.C.G. had any such guidelines. (See findings 5-010, -015). The NAEC apparently did have a deck tolerance standard between individual frames. Based on that standard, the NAEC determined that the deck "was within tolerance," and certifiable (findings 5-009, 010).

The CONREP nevertheless required SECO to repair the deck because it was "outside the limits of acceptable marine practice" (findings 5-012, -019).

As for "good marine practice," Clause 5 ("INSPECTION AND MANNER OF DOING WORK") of SECO's Master Ship Repair Contract required all workmanship in the performance of work to be in accordance with "the best commercial marine practice," and Item 502.E.1. of the specifications stated that workmanship and material found to be defective and not in conformity with "good marine practice" would be rejected. Neither the Master Ship Repair Contract nor the SPICA specifications defined "best commercial" or "good" marine practice.

The Government took the position that MIL STD 1689 SH could be used as a guide as to what constituted "good marine practice" (finding 5-017). This standard allowed a $\frac{1}{4}$-inch tolerance for the 20-foot deck span with 24-inch frames (finding 5-021). We cannot impose on SECO the requirements of MIL STD 1689 SH. This standard was not referenced in the SPICA specifications (finding 5-017). As the CONREP himself recognized, MIL STD 1678 SH was not a standard to which SECO must contractually comply (finding 5-019). Furthermore, the Government expert witness conceded that if the Government wanted MIL STD 1689 SH to be the baseline of what constituted "good marine practices," it would have been "preferable" to refer to the standard in the specifications (finding 5-017).

The Government alleged but failed to prove that SECO's underdeck installations or welding caused the "dip" (finding 5-013). The Government also failed to prove that the "dip" accumulated water or impeded the movement of heavy lifts across the deck (finding 5-020). From a workmanship standpoint, there is insufficient evidence for us to conclude that Sections 2 and 3 of the deck were not installed in accordance with "good marine practice" or "best commercial marine practice."

The Government next argues that SECO must install the deck in accordance with "normal Navy standards." The Government contends that "normal Navy standards" for deck deflection were set forth in several Navy publications such as NAVSEA 099-LP-097-4010, NAVSEA 0900-LP-014-5010 and NAVSHIPS 0900-000-1001 (finding 5-021). We cannot impose upon SECO standards that are not required in its contract.

We conclude that the Government has failed to prove that Sections 2 and 3 of the helicopter deck, as originally installed, were not certifiable by the NAEC or otherwise not in accordance with "good marine practice." Therefore, the government-directed corrective repairs to achieve a higher standard of tolerance was a constructive change as to which SECO is entitled to an equitable adjustment. *Williams & Dunlap, General Contractors*, ASBCA 6145, 1963 BCA ¶ 3834 (imposition of excessive tolerances permitted recovery of additional costs); *AGH Industries, Inc.*, ASBCA No. 25848, 26535, 85-1 BCA ¶ 17,784.

In accordance with our previous decision, we disallow $320 in material costs for lack of proof. *Service Engineering Co.*, ASBCA No. 40274, 93-1 BCA ¶ 25,520 at 127,112. We also disallow 100 labor hours of overtime for insufficient proof. We have held in this connection that generalized conclusory, unsupported opinion type testimony does not demand weight when the testimony is little more than self-serving conclusion. *Newell Clothing Co.*, ASBCA No. 28306, 86-3 BCA ¶ 19,093, *aff'd, Newell Clothing Company, Inc. v. United States*, 818 F.2d. 876 (Fed. Cir. 1987) (table).

Digitized by Google

We have found 484 labor hours to be a reasonable estimate of the labor hours expended in effecting the deck repair (finding 5-031). Accordingly, we hold that SECO is entitled to an equitable adjustment in the amount of $18,102 computed as follows:

Labor, 484 hours × $34	$16,456
Profit @ 10 percent	1,646
Total	$18,102

Section 12 (41 U.S.C. § 611) interest on this amount is to run from 1 November 1985, the probable receipt date of REA No. 8 by the Government (see finding 5-026) until paid.

FINDINGS OF FACT

REA No. 121

5-033. Section 500 of the SPICA specifications pertained to "Helicopter Facility Upgrade." Item 510 required SECO to install an aviation fuel system known as the "JP-5" Fuel System (exh. G-3 at 510-1). The JP-5 Fuel System was used for fueling and defueling helicopters (tr. 23/11).

5-034. As part of the JP-5 Fuel System, SECO was required to build four tanks—two storage tanks and two service tanks—from an existing water ballast tank, a pump room and pumping facilities to pump fuel up to the flight deck of the vessel (tr. 23/11).

5-035. The JP-5 tanks were located on the No. 4 and No. 5 Decks below the No. 7 Lift Trunk and Reefer Boxes "H" and "K" between frames 55 to 60 (exh. A-14; tr. 23/12-13). The storage tanks contained fuel not yet purified; the service tanks contained useable fuel (tr. 23/30).

5-036. The water ballast tank required two vent lines. Each of the storage and service tanks required one vent line (tr. 23/35). A vent pipe permits air and gases to be displaced to the atmosphere, thereby preventing pressure build-up in the tank (tr. 23/45, 60).

5-037. The JP-5 Fuel System was schematically shown in Guidance Drawing COMSC Dwg. T-AFS 9-800-4845739 (Guidance Drawing 5739). There is no dispute that Sheet 3 of the Guidance Drawing showed vent pipes, referred to as "Air Escape & Overflow" lines, "coming through ... the tops of the tanks and up to the bell mouths" on the No. 1 Deck (exh. G-106; tr. 23/16-17).

5-038. Item 201, "Regulatory Bodies, Standards And Certificates," of the SPICA specifications required that "The ship as modified and redelivered to the Government shall comply with ... the requirements of the various regulatory bodies and rules in issue at the time of the contract." Included among the regulations listed was the "Rules for Building and Classing Steel Vessels" of the American Bureau of Shipping, or ABS (exh. G-3 at 201-1).

5-039. ABS § 36.39, Vent Pipes, provided in part, as follows:

> 36.39.1 General
>
> In all vessels the structural arrangement in double-bottom and other tanks is to be such as to permit the free passage of air and gases from all parts of the tanks to the vent pipe. Tanks having a comparatively small surface, such as fuel-oil settling tanks, need be fitted with only one vent, while tanks having a comparatively large surface are to be fitted with at least two vent pipes, one of which is to be located at *the highest part of the tank* ... All vent and overflow pipes on the open deck are to terminate by way of such return bends.

(Emphasis added); (app. supp. R4, tab 121, exhibit No. 2).

5-040. SECO understood "the highest part of the tank" to mean side discharge near the top of the tank was acceptable because the ABS Vent Pipe provision "doesn't say through the top" (tr. 23/81).

5-041. Item 510.E.3.a. of the SPICA specifications provided:

> All pipe lines entering JP-5 storage or JP-5 services tanks shall enter as near to the top of the tank as practicable. Where pipe lines emanate from the tanks at such a level that they will be subject to a static head of JP-5 in the tank, they shall be installed with positive closing valves located at the tank or where the pipeline enters the JP-5 Pump Room ....
>
> * * *

(Exh. G-3 at 510-4) Based upon the evidence in the record, we find that this provision, when read in context, applied to fluid-carrying pipes. Vent pipes are not fluid-carrying pipes. (Tr. 23/185)

5-042. As shown by the original working drawings, M. Rosenblatt & Son, Inc. (Rosenblatt), SECO's design engineer on the SPICA overhaul project, designed the storage, service and water ballast tank vent pipes through the top of the tanks as shown in Guidance Drawing 5739. The original "through-the-top" working drawing was approved by MSC and ABS (tr. 23/22).

5-043. There was no problem routing the vent pipes from the top of the service tanks. According to SECO, Rosenblatt's layout

Digitized by Google

with respect to the water ballast and storage vent pipes was not "practicable" because they would run into interferences in the reefer spaces, and "out at the shell of the ship" (tr. 23/17-18, 64).

5-044. SECO's ship superintendent responsible for the helicopter facility upgrade suggested that a better routing for the water ballast and storage tanks would be to install the vent pipes "through the side bulkheads [of the tanks] rather than through the top platings of the tanks. The vent pipes would then be routed to an area between the lift trunk and outside the reefer boxes. By routing the pipes in that manner, there would be a "straight shot from the fourth deck all the way up without any bent pieces of pipe" (tr. 23/19).

5-045. SECO's ship superintendent testified that he discussed the suggested vent pipe routing with Rosenblatt, as a result of which Rosenblatt revised the already approved working drawings (tr. 23/68, 94). The revised working drawings were said to have been approved by MSC and ABS (tr. 23/7, 53). The allegedly approved revised working drawings were said to have been returned to Rosenblatt between 3 December 1984 and 7 January 1985 (tr. 23/122-23).

5-046. SECO did not put into evidence the allegedly approved revised working drawing. The Government disputes its existence. The Government referred to Rosenblatt's Design Liaison Memorandum (DLM) which traced the monthly status of development of working drawings including those for "JP-5 Mods. Incld. Helo Upgrade." The DLMs showed that only one set of JP-5 drawings were developed and approved by MSC and ABS (tr. 23/182; app. supp. R4, tab 121.6 to 121.9). We find that SECO has not shown, by a preponderance of the evidence, that MSC and ABS approved its alternate routing of the vent pipes.

5-047. SECO immediately began work on the JP-5 Fuel System when the vessel arrived. Fitting vent pipes began in mid-October 1984. (Tr. 23/13) SECO completed the installation of vent pipes in late December 1984 or early January 1985 (tr. 23/31).

5-048. On 10 January 1985, MSC, referencing Guidance Drawing 5739, issued Deficiency Report (DR) No. 140. The DR stated:

> Vents for #1, #2 JP-5 Storage Tks ... have not been installed according to the above Dwg & do not meet ABS 36.39.1 Reg.

(App. supp. R4, tab 121, exhibit No. 3)

5-049. On 11 January 1985, MSC issued DR No. 141. This DR stated:

> Vents for the water ballast tank aft of the JP-5 tanks are not installed IAW ABS regulations 36.39.1.

(App. supp. R4, tab 121, exhibit No. 4)

5-050. SECO responded to both DRs on 15 January 1985. The responses stated that "Contractor will investigate and make any required repairs/alterations" (app. supp. R4, tab 121, exhibit Nos. 3 and 4). SECO began ripping out the water ballast and storage tank vent lines within a day or two after receipt of the DRs (tr. 23/86, 98).

5-051. As originally installed, the storage tank vent pipes were not installed through the top of the tanks, but installed through the side bulkheads of the tanks. SECO's Project Officer testified that the vent lines entered the storage tanks on the inboard bulkheads at "approximately a half an inch below the top of the tank. And [the pipes] extended into the tank approximately a half an inch" (tr. 23/199). By routing the storage tank vent lines from the side bulkheads, SECO was able to bypass the interferences in the reefer spaces (exh. A-65).

5-052. SECO also installed the vent lines of the water ballast tank from its side bulkhead. By doing so, SECO was able to go "around the corner of the reefer boxes" and bypassed the interferences inside the reefer spaces. (Tr. 23/25, 44, 51-52; exh. A-65).

5-053. To accomplish the tank-top vent line installation for the JP-5 storage tanks required by MSC, SECO had to remove the installed piping from the tank bulkheads and weld them closed with steel inserts. Installation of vent pipes on top of the tanks required "removal of all of the refrigeration, bulkheads, battens, decking material and all the insulation behind them." The pipes were then routed into the reefer spaces, traversed across the ship into the lift trunk and tied into the vent pipes already installed there. After installation, the storage tanks had to be re-tested, and painted with a "three coat paint system." The newly routed vent pipes had to be hydrostatically tested again. (Tr. 23/40-42; exh. A-65)

5-054. To accomplish the tank-top installation for the water ballast tank required by MSC, SECO had to route the vent pipes through the reefer boxes on the No. 3 and No. 4 Decks, and the cargo hold on the No. 2 Deck (tr. 23/24, 52).

5-055. The two JP-5 service tanks were located directly underneath the lift trunk. Thus, there was no need to route their vent

©1994, Commerce Clearing House, Inc.

Digitized by Google

pipes around the reefer box interferences. The service tank vent lines were installed through the top of the tanks, as Rosenblatt had originally designed. (Tr. 23/40)

5-056. Vent pipes are located at the highest point of a tank because "that's where the air is going to be displaced upon the filling of fluid" (tr. 23/183). Vent pipes installed on the side of a tank may be partially blocked. Partial blockage would have diminished the effectiveness of the vent. Furthermore, vent pipes are sized "to allow for escape of gases at a certain rate" (tr. 23/184). Based on these engineering reasons, we find the Government expert's testimony to the effect that it is unusual to install vent pipes on the side bulkheads of tanks to be persuasive. We find that vent pipes are normally installed through the top of tanks.

5-057. By letter dated 5 August 1986, SECO submitted a claim, in the amount of $101,411. The claim, designated as REA No. 121, was for costs allegedly incurred in rerouting the storage and water ballast tank vent lines as a result of DR Nos. 140 and 141. SECO alleged that its original installations locating the vent pipes "at the highest point in the tanks along the extreme upper side of the tanks" complied with ABS § 36.39.1. (app. supp. R4, tab 121). SECO contended that the Government's direction to reroute the vent pipes constituted a constructive change to the contract. SECO acknowledged at the hearing that REA No. 121 was a direct cost claim with no associated impact costs (tr. 23/8).

5-058. The contracting officer never issued a decision. By letter dated 20 October 1986, SECO appealed to the Board upon the contracting officer's failure to issue a decision. The Board deemed SECO's various REA claims, including REA No. 121, as having been denied by the contracting officer and docketed the appeal as ASBCA No. 33787. After the hearing, REA No. 121 and 7 other REAs were assigned ASBCA No. 40275 for purposes of briefing and decision.

DECISION

There is no dispute that in installing the vent lines for the JP-5 storage tanks and the water ballast tank, SECO was required to meet ABS requirements. ABS § 36.39.1 required vent pipes to be located at "the highest part of the tank" (finding 5-039). The Government required SECO to install the storage and water ballast tank vent pipes through the top rather than through the side but near the top of the tanks. SECO contends that the Government misinterpreted the ABS requirement, and that installing the vent pipes along the extreme upper side of the tanks complied with contract requirements.

We do not agree with SECO's contentions. SECO's Project Officer acknowledged that the vent pipes entered the storage and water ballast tanks "approximately a half an inch below the top of the tank" (finding 5-051). Half an inch below the top of the tanks is not "the *highest* part of the tank." We note that Rosenblatt, SECO's design engineer, agreed with our interpretation. As reflected in its approved working drawing, Rosenblatt designed the vent pipes to go through the top of the JP-5 storage and service tanks, as well as the water ballast tanks as schematically shown in Guidance Drawing 5739, Sheet 3 (finding 5-042).

SECO alleges that Rosenblatt subsequently revised the working drawings to provide for side entry, and that the revised drawings were approved by MSC and ABS. We do not find this allegation credible, in light of SECO's failure to put into evidence the alleged revised drawing or any other supporting documentation. The Government has shown that only one set of working drawings was approved by MSC and ABS. (Finding 5-046)

Nor are we persuaded that Item 510.E.3.a. permitted SECO's original side installation. The pertinent language that SECO relied upon states "All pipe lines entering JP-5 storage or JP-5 service tanks shall enter as near to the top of the tank as practicable." We observe that the quoted language by its terms did not apply to the water ballast tank. We agree with the Government that when read in context, the language applied to fluid carrying pipes "subject to a static head." Vent pipes were not subject to any static head. (Finding 5-041) Even if the provision could arguably apply to the JP-5 storage tanks, SECO has not shown that it was impracticable to run the vent pipes through the top of the storage tanks. As demonstrated by SECO's successful re-routing of the storage vent lines through the reefer spaces, although tank-top installation required more work, it was not impracticable.

We conclude that by requiring SECO to correct its original installation, the Government was merely requiring SECO to perform in accordance with contract requirements.

The water ballast tank was designed with two vent lines. Although SECO has not raised the issue, we have not overlooked that ABS § 36.39.1 required only one vent

Digitized by Google

pipe "to be located at the highest part of the tank." While the ABS regulation clearly required at least one vent pipe to be installed through the tank top, it did not prohibit both from being so installed. When Rosenblatt originally designed the installation, both water ballast tank vent pipes were to be installed through the tank top (finding 5-042). Tank top installation was also shown in Guidance Drawing 5739 (finding 5-037). The Rosenblatt design was approved by MSC as well as ABS (finding 5-042). In the absence of evidence to the contrary, we assume that Rosenblatt was aware of the ABS requirements and had an engineering reason for its design. Therefore, on the basis of the record before us, we cannot conclude that requiring both water ballast tank vent lines to be installed through the top of the tank constituted a constructive change.

Accordingly, the claim which is the subject of REA No. 121 is denied.

FINDINGS OF FACT

REA No. 115

The Vent Pipes Insulation Claim

5-059. Item 207 of the SPICA specifications pertained to "INSULATION AND LAGGING." Item 207.H. specified "INSULATION AND LAGGING FOR PIPING AND MACHINERY." Item 207.H.5.a., "Application of Insulation and Lagging—Low Temperature (−30 to 125 Degrees Fahrenheit)" provided, in part, that:

> Surfaces with a temperature of −30 to 55 degrees Fahrenheit shall be insulated to the minimum thickness listed in tables 207A, 207A1, 207B, 207B1, 207C and 207C1.

(Exh. G-3 at 207-7)

5-060. As originally designed by Rosenblatt, the water ballast and JP-5 storage tank vent pipes would traverse through the reefer spaces (tr. 23/239). SECO's ship superintendent in charge of the helicopter facility upgrade conceded that, when a vent pipe goes through a reefer space, the pipe would have to be insulated (tr. 23/220, 23).

5-061. To correct its water ballast and JP-5 storage tank vent pipe installations as a result of DR Nos. 140 and 141, SECO rerouted the water ballast and storage tank vent pipes through the reefer spaces. In doing so, it did not insulate them. Between 27 February and 17 March 1985, MSC issued a number of deficiency reports to the effect that SECO had failed to insulate the vent pipes in reefer box "K" (see DR Nos. 326, 327, 559 and 561; exh. G-108A, REA No. 115 at tab 8).

5-062. To correct the deficiencies stated in the DRs, SECO insulated over 40-feet of vent pipes installed inside the reefer spaces (tr. 23/208).

The Pipe Guard Claim

5-063. Item 210 of the SPICA specifications pertained to "Hull Piping." Item 210.A. provided, in part, that:

> All piping subject to mechanical damage shall be adequately protected. All guards shall be bolted in place so that they may be removed for repairs to piping.

(Exh. G-3 at 210-1)

5-064. The specifications classified "Overflows, Air Escape, And Sounding Tubes" (Item 210.C) as part of "Hull Piping" (exh. G-3 at 210-4 and -5). We find that the JP-5 vent pipes (for air escape) and sounding tubes are "hull piping."

5-065. Item No. 211 of the SPICA specifications pertained to "Pressure Piping." Based on the Government expert report, we find that helicopter JP-5 fueling and defueling lines are pressure piping (see exh. G-108A, 92A No. 115 at 6).

5-066. With respect to pressure piping, Item 211.A.2., "Installation," provided in part that:

* * *

> All pipe exposed to damage shall be adequately protected . . . .

(Exh. G-3 at 211-3)

5-067. On 13 February 1985, MSC issued DR No. 256 which stated:

> Hold 4 2 to port of elev trunk, forklift/cargo guards not installed around new sounding tubes/vent lines (cement has already been poured on deck making installation difficult.)

(exh. G-108A, tab 8)

5-068. On 17 March 1985, MSC issued DR No. 562 which stated:

> JP-5 piping (vent?) next to #2 lift port must be protected. The freeze box doors hit it now, #3 & 4 decks.

(Exh. G-108, REA No. 115 at tab 8)

5-069. The purpose for installing pipe guards is "to prevent mechanical damage to the pipes from objects [such as a forklift] running into and bending or denting the pipes and breaking it" (tr. 23/212, 34, 41).

5-070. As a result of the deficiency reports issued by MSC, SECO custom fabricated and

©1994, Commerce Clearing House, Inc.

Digitized by Google

installed the pipe guards at various JP-5 locations where potential damage to the installed JP-5 piping system was likely to occur (tr. 23/212, 17).

5-071. Helicopter fueling and defueling lines traverse from the JP-5 tanks up through the spaces between the lift trunk and the outside bulkhead of the reefer boxes from the No. 4 Deck to the cargo hold on the No. 2 Deck. From there, the fueling and defueling lines "traversed aft to go to the helo deck area where the servicing nozzles and things were." To protect these lines, SECO "put guards in those areas where MSC wanted guards placed because they thought damage could result to the piping." (Tr. 23/213)

5-072. Approximately 40-feet of pipe guards were installed to protect the overhead fueling and defueling pipes traversing aft in the No. 2 Deck cargo hold to "prevent [the pipes] from getting dented" (tr. 23/217-18).

5-073. A mechanical guard was installed to protect the sounding tubes in the No. 2 Deck cargo hold area (tr. 23/213).

5-074. In addition, to correct the deficiency identified in DR No. 256, SECO installed pipe guards around the JP-5 vent lines in Hold No. 4, No. 2 Deck, port of the elevator trunk (tr. 23/212).

5-075. SECO does not contend that the pipe guards it was required to install were unnecessary.

5-076. By letter dated 23 May 1986, SECO submitted a claim, designated as REA No. 115, in the amount of $19,672, for having to fabricate and install "protective steel enclosures for approximately 108 linear feet of the systems piping." SECO contends that the specifications failed to "unambiguously" designate the exact locations of the required pipe guards, and to the extent it was required to fabricate and install them, the Government had constructively changed the contract. SECO's cost estimate included a line item for "Insulate (2) Vent Lines." (App. supp. R4, tab 115) At the hearing, SECO revised its claim downward to $13,221 (app. supp. R4, tab 115.2). The contracting officer never issued a decision. REA No. 115 was appealed under the same circumstances as other REAs already discussed.

DECISION

The Vent Pipe Insulation Claim

SECO contends that since Item 510 of the specifications (JP-5 Fuel Facilities) neither itself contained an insulation requirement nor specifically referred to Item 207 (pertaining to insulation requirements of the vessel), it had no obligation to insulate the vent pipes in the reefer spaces (tr. 23/242). In our first SECO decision, we considered and rejected a similar argument made and held that requirements of a contract must be determined from reading the contract as a whole. *Service Engineering Co.*, ASBCA No. 40272, 92-3 BCA ¶ 25,106 at 125,182, *citing Hol-Gar Mfg. Corp. v. United States*, 351 F.2d 972 (Ct. Cl. 1965).

Item 207.H.5.a. of the specifications clearly required that surfaces in refrigerated spaces such as reefer "K" be insulated. SECO's ship superintendent conceded that any time a vent line goes into a reefer space, the vent line must be insulated. In this case, in order for SECO to properly install the water ballast and JP-5 storage tank vent lines, it had to route them through the reefer boxes. It follows that insulating the reefer space vent lines was a part of the contract work, not compensable as a constructive change. We note that if SECO had installed the water ballast and JP-5 storage tank vent lines as originally designed by Rosenblatt, it would have had to insulate the reefer space vent lines.

The Pipe Guard Claim

SECO appears to be arguing that unless the contract documents specifically identified the locations where pipe guards were required, it was not obligated to install them even though they may be required to protect the pipes from damage. We cannot accept this argument. It is sufficient that the piping specifications such as Item 210.A. and Item 211.A.2. generally describe the need for pipe protection.

In this case, SECO was required to install pipe guards to protect (1) JP-5 fueling and defueling lines, (2) JP-5 sounding tubes, and (3) JP-5 vent pipes.

Helicopter fueling and defueling lines are pressure piping. Item 211.A.2. clearly required that they be protected (finding 5-066). Vent pipes and sounding tubes are hull piping (finding 5-064). Item 210.A. required that they be protected (finding 5-063).

We conclude that the pipe guards SECO installed were required by the contract. There was, therefore, no constructive change.

Accordingly, the claims which are the subject of REA No. 115 are denied.

Digitized by Google

FINDINGS OF FACT

REA No. 6

5-077. Item 502 of the SPICA specifications pertained to "HELICOPTER DECK STRUCTURE." Under this item, SECO was required to remove the existing 02 Deck structure and replace it with a new deck structure. (Exh. G-3 at 502-1)

5-078. As part of the Item 502 work, SECO had to install two large steel beams. These beams were to be welded in place with support stanchions. (Tr. 25/88)

5-079. Fire Station 2-62 was located on the No. 2 Deck, aft, near the forward bulkhead of the petty officers' lounge (tr. 25/87). There is no dispute that Item 502 did not require any repairs to the fire station (tr. 25/89). So that the beams could "go across" the vessel, the existing sprinkler system piping that went aft from the fire station into the lounge area had to be removed and later reinstalled (tr. 25/88).

5-080. When SECO removed the joiner bulkhead around the fire station, it became obvious that there had been a leak there "for some time" (tr. 25/89). The leak occurred at "the back side of a drain pipe that was associated with the firestation" (tr. 25/90). There is no dispute, and we find, that the leak existed prior to SPICA's arrival at SECO on 7 September 1984 (tr. 25/101, 113).

5-081. In our third SECO decision (ASBCA No. 40274), we found that Item 111.B. of the specifications, as amended by Addendum VI, required the parties to conduct a joint survey to ascertain the operational status of all equipment and systems onboard the vessel prior to delivery of the vessel to SECO. A joint survey was conducted. The survey report, however, could not be found (see findings 3-078 to -083). Inasmuch as the fire station leakage was inside an enclosed fire station locker, and at the back side of a drain pipe, and the leak was discovered only upon removal of the joiner bulkhead to allow access of two large beams, we find that SECO could not reasonably have been expected to discover the leak during the pre-delivery survey in any event.

5-082. Item 111.B. also provided that:

* * *

> The Contractor shall clean the entire ship on a daily basis. All parts of the ship shall be kept in a clean and sanitary condition. All debris and garbage shall be removed daily (including Saturdays, Sundays and holidays)....
>
> * * *

(Exh. G-3 at 111-2)

5-083. By CIR No. 248 dated 26 September 1984, SECO advised MSC that:

> In the process of draining down the sprinkler system (Station 2-6-2) to modify it, we discovered the $1\frac{1}{4}$" drainline to be holed thru & leaking. We suggest renewing drainline from deck flange to valve with new piping. We therefor [sic] request a C/O to do this. This station not useable as is.

(App. supp. R4, tab 6, exhibit No. 1)

5-084. MSC apparently acknowledged that a change was in order. It responded by CRO No. 382 which stated "A change order will be issued to fix the pipe under category 'B'" (app. supp. R4, tab 6, exhibit No. 1). Under the so-called "B" category items, MSC was entitled to draw upon "B" items during contract performance at unit prices SECO proposed to obtain the contract (tr. 25/92-93).

5-085. On 28 September 1984, MSC issued Work Statement No. 1679-088 (W/S No. 088). It required SECO to provide all labor and material to:

> Install a new drainline at sprinkler stat. 2-6-2 from deck flange to valve. With new $1\frac{1}{2}$ schedule 80 Galvanized Steel Piping approximately $3\frac{1}{2}$ feet long, includ. New union, Flange, gasket and bolt. Prine [sic] and paint red to match existing.

(App. supp. R4, tab 6.1)

5-086. The parties were unable to reach agreement on a price for the W/S No. 088 work. On 11 October 1984, 16 days after the leak was discovered SECO finally agreed to accept $806 for the W/S No. 088 work (tr. 25/106; app. supp. R4, tab 6.1). No fire station repairs were performed in the meantime. SECO's Project Officer explained that during the early stages of the overhaul, he was following the CONREP's instructions "that Change Orders were not to be worked until such time as there was an agreed price—a pre-priced Change Order" (tr. 25/106).

5-087. The work described in W/S No. 088 and 22 other work statements were subsequently definitized and settled by a bilateral modification—JOM No. 5. JOM No. 5 increased the contract price by $148,520, of which $806 was for W/S No. 088. JOM No. 5, signed by SECO's authorized Contract Administrator on 27 November 1984, con-

©1994, Commerce Clearing House, Inc.

tained at Paragraph 4, the following standard Navy release clause:

> 4. The change in delivery dates, price, or cost and fixed fee described above is considered to be fair and reasonable and has been mutually agreed upon in full and final settlement of all claims *arising out of this modification* and any other modification or change orders indicated above, including all claims for delays and disruption resulting from, caused by, incident to such modifications or change orders.

(Emphasis added) (exh. G-169 at tab 5)

5-088. SECO's Project Officer described the fire station leak as "more than a drip and not a spurt" (tr. 25/90). Concerned that the water leak might damage the tiles in the lounge area, SECO built a dam with putty and attempted to contain the water seepage with plywood (tr. 25/91). Between 26 September 1984, when the leak was first discovered, and 11 October 1984, when the parties agreed on price on W/S No. 088 (16 days), SECO used laborers to "re-duct-tape" the plywood and clean up twice a day (tr. 25/94-95). Shutting off the water was not an alternative. For fire safety, the parties had agreed that SECO was "to keep the firemain sprinkler system charged at all times during the overhaul" (app. supp. R4, tab 6).

5-089. By letter dated 28 October 1985, SECO submitted a claim, designated as REA No. 6, in the amount of $1,781. The claim was to recover the costs incurred "to continuously monitor and clean the deck area around Fire Station 2-6-2." (App. supp. R4, tab 6) The contracting officer never issued a decision. REA No. 6 was appealed under the same circumstances as other REAs already discussed.

5-090. SECO subsequently revised its claim to $1,269. The amount was derived by charging 2 hours for labor a day at $34 per hour for 16 days. SECO also added $10 for material, $56 for overtime, and profit at 10 percent. (App. supp. R4, tab 6) There is no documentary proof of the materials claimed. SECO's justification for the 4 hours of overtime claimed was that the clean-up "spans a weekend" and it had to pay a $14.12 premium for weekend labor (tr. 25/119, 128). According to the Government, SECO's own Manpower Utilization Report showed no "premium hours" for W/S No. 088 (tr. 25/129-130). We find, however, that clean-up work was not the same as W/S No. 088 work. There is no evidence that the scope of work specified by the Government included clean-up.

DECISION

Entitlement

The Government raised the affirmative defense of release, contending that the fire station clean-up claim is barred by JOM No. 5. We do not agree. The standard Navy release clause by its terms bars only "all claims arising out of this modification." In this case, the modification as specified in W/S No. 088 provided for the replacement of a leaking drainline. The drainline leak itself was a pre-existing condition; it did not result from, nor did it arise out of the modification to replace the leaking drainline. Once the drainline was repaired, the leak stopped. We conclude, therefore, that SECO's clean-up work was not barred by the JOM No. 5 release clause.

Nor are we persuaded that the parties intended W/S No. 088 or JOM No. 5 to cover the costs of the clean-up. There is no evidence that the parties' negotiators discussed the matter prior to reaching agreement on price on 11 October 1984 or prior to execution of JOM No. 5 in late November, 1984.

The Government contends next that the clean-up was a part of SECO's Item 111 "Delivery, Care And Redelivery Of The Ship" responsibilities. The joint survey of "the operational status of all equipment and systems" of the vessel under Item 111.B. had been lost. Thus, neither MSC nor SECO was able to establish whether the fire station leakage was noted when the SPICA was delivered to SECO on 7 September 1984. Inasmuch as the fire station leakage was inside an enclosed fire station locker, and the leakage was only discovered upon removal of the joiner bulkhead, we conclude that SECO could not reasonably have discovered the leak during the predelivery survey in any event.

Nor are we persuaded by the Government's reliance on Item 111.B. of the specification which required SECO to clean the entire ship on a daily basis. When read in context, that provision clearly applied to debris and garbage generated during the course of the overhaul. Leaking fire station water, required to be maintained for fire safety, was not the type of clean-up contemplated by the item 111.B. clean-up provision.

We conclude that SECO's clean up of the fire station water leaks was above and beyond the requirements of its contract. SECO is, therefore, entitled to an equitable adjustment.

Digitized by Google

Quantum

Because of their disagreement on price, it took 16 days (26 September through 11 October 1984) to resolve what the Government conceded to be a valid change to the contract (W/S No. 088). On the record before us, we cannot conclude that either party was responsible for the delay. In light of the CONREP's instruction not to work on changed work until there had been an agreement on price, we believe SECO was justified in not repairing the leak until after 11 October 1984. We also believe that SECO prudently cleaned up the water twice a day to prevent water damage to the vessel. We conclude that SECO has established by a preponderance of the evidence that it cleaned up the water leakage twice a day for 16 days. In view of the need to "re-duct-tape" the plywood, we consider one hour for each clean-up reasonable.

SECO's justification for the 4 hours of overtime was that the clean-up work "spans a weekend," and that it had to pay $14.12 extra an hour for premium time. The Government's only challenge was that SECO's Manpower Utilization Report showed no "premium hours" for W/S No. 088. We have found, however, that the water clean-up work was not a part of W/S No. 088. Accordingly, there was no reason for the clean-up hours to be shown as a part of the W/S No. 088 hours. Based on the evidence in the record, we allow 4 hours of premium time for SECO's weekend clean-up effort.

There is no documentary support for the $10 incurred for materials. Consistent with our previous holding, we disallow the $10 claimed for materials. *See Service Engineering Co.*, ASBCA 40274, 93-1 BCA ¶ 25,520, at 127,112.

We conclude that for REA No. 6, SECO is entitled to an equitable adjustment in the amount of $1,258, computed as follows:

Labor	
16 days × 2 hours × $34	$1,088
Weekend premium hours	
$14.12 × 4 hours	56
Subtotal	$1,144
Profit at 10 percent	114
Total	$1,258

In connection with REA No. 6, SECO is entitled to $1,258 with CDA interest running from 1 November 1985 until paid.

FINDINGS OF FACT

REA No. 24

5-091. In our third SECO decision, we made a number of findings which are pertinent to this REA. For convenience, these findings are summarized here: To avoid arguments at the end of the overhaul, MSC amended Item 111.B. of the specifications to require a joint survey of all equipment and systems aboard when the SPICA arrived at SECO's facility. Although not all equipment and systems were checked, a 3-day joint survey was conducted beginning 7 September 1984 when the vessel was delivered to SECO. SECO subsequently submitted an arrival condition report of the joint survey to MSC. According to the CONREP, "everything on the list survey was found operable except that which was noted." The arrival condition survey report has been lost. (See findings 3-077 to -080, -083, *Service Engineering Co.*, ASBCA No. 40274, 93-1 BCA ¶ 25,520)

5-092. This REA concerned the vessel's Gaylord hood systems in (1) the Officers' Pantry located on the 01 level, and (2) the Crew's Galley on the No. 1 Deck (tr. 24/207; exh. A-14). A Gaylord hood is the termination point of an exhaust vent system. An exhaust fan, a KPK foam washdown, and an emergency shut-off system were all parts of the Gaylord hood fire fighting systems installed on the SPICA. (Tr. 24/270, 333, 25/17, 33)

5-093. SECO only checked the fans of the Gaylord hood systems during the joint survey. There is no dispute that the fans worked and that they worked at the time of re-delivery of the vessel. SECO did not test the washdown system. (Tr. 24/303-04; 25/7, 8) To determine that the entire Gaylord hood system worked, SECO would have had to test the washdown system, the emergency shut-off, and the Main Controller (tr. 25/28).

5-094. Item 502 of the SPICA specifications required SECO to "remove the existing No. 2 Deck structure and replace it with a new structure" (exh. G-3 at 502-1).

5-095. In the Officers' Pantry, all of the equipment, the Gaylord hood washdown controller, the piping, the ventilation ducts and the cabling were removed. The fan for the Gaylord hood system, and the Main Controller, however, were not removed (tr. 24/327, 44, 25/12, 15). The Gaylord hood itself was removed in sections and stored by SECO (tr. 24/327).

©1994, Commerce Clearing House, Inc.

Digitized by Google

5-096. In the Crew's Galley, the Gaylord hood system was not removed (tr. 24/344).

5-097. Item 111.B., "Care Of The Ship," provided, in part:

* * *

> The Contractor is responsible for the entire ship, including layup of all equipment and parts of the ship not affected by the modification, from the time the ship is delivered to the Contractor until it is accepted for redelivery by the COMSC CONREP. All ships parts, equipment, systems, etc., damaged or destroyed by the Contractor shall be repaired or replaced at the Contractor's expense.

* * *

(Exh. G-3 at 111-12)

5-098. After the new helicopter hangar was installed, SECO found, during re-installation of the Officers' Pantry Gaylord hood system that there were no "internal components" to the washdown enclosure (tr. 24/271). In discussing the matter with the SECO electrician who originally took the Gaylord hood system apart, SECO's ship superintendent was told that the controller box had no internals or "guts" when the vessel arrived (tr. 28/272-73). According to SECO, the Gaylord hood would work even without the washdown enclosure "as long as the fan, the exhaust system itself, is running" (tr. 24/275).

5-099. SECO reported the missing "internals" to MSC. By CIR No. 678, dated 14 February 1985, SECO advised as follows:

> We find that during removal of "Gaylord Hood" wash down controller the timer & selector switch was not mounted in controller box. Request C/O to trouble shoot & make system operable.

(App. supp. R4, tab 24 at exhibit No. 2)

5-100. MSC responded by CRO No. 1006, which stated:

> No work statement required. The Contractor is responsible for repairing damaged equipment IAW Item 502.E.1. Note that the arrival inspection found no problems with gaylod [sic] hood or any control boxes.

(App. supp. R4, tab 24 at exhibit No. 2)

5-101. On 20 February 1985, the SPICA's Chief Electrician issued DR No. 293.[4] This DR stated:

> The Gaylord and vent system, main galley and officers' Gaylord and vent Ex. system (that's exhaust system) not in proper operational condition. System was working before AFS upgrade.

(Tr. 24/286)

5-102. As a result of DR No. 293, SECO put together a crew, consisting of electricians, pipefitters and sheet metal workers to troubleshoot the Gaylord hood systems (tr. 24/289).

5-103. In the Officers' Pantry, SECO found a problem in the damper solenoid. The solenoid was disconnected and "rewound" in SECO's shop (tr. 24/348). By getting the solenoid fixed, SECO was able to make the vent and exhaust systems operable. (Tr. 24/291, 348) Having received no change order from MSC, SECO did not repair the internals or "guts" of the washdown system (tr. 24/291).

5-104. From the Officers' Pantry, SECO's trouble-shooting crew went on to the Crew's Galley. There, after 3 or 4 days of troubleshooting, a dispute arose between SECO and the ship's force electricians (tr. 24/292). According to SECO, when its electricians were troubleshooting the Main Controller of the Gaylord hood systems, they found a ship's force electrician making repairs in a junction box on the same loop as the Main Controller (tr. 24/293-94). SECO alleged that the ship's force was actually "completing repairs that were problems that were [there] before the ship came in" (tr. 24/294).

5-105. SPICA's Chief Electrician was said to have accepted responsibilities for the Crew's Galley, and SECO did not, thereafter, follow through with any repairs to the controller (tr. 24/294-95). SECO did not call its own electrician or the two MSC electricians involved in the incident to testify. We cannot determine whether what they were alleged to have said had any basis in fact. We find SECO's allegations of pre-existing deficiencies in the Main Controller not supported by credible first-hand proof. SECO's trouble-shooting crew did, however, find some loose wires and tighten up lugs in the process of troubleshooting the Gaylord hood system in the Crew's Galley (tr. 25/351).

5-106. By letter dated 24 November 1985, SECO submitted a claim, designated as REA No. 24, in the amount of $11,909. SECO al-

[4] DR No. 293 is not part of the record evidence. The content of DR No. 293 was read into the record (tr. 24/286).

Digitized by Google

leged that the Gaylord hood systems in the Officers' Pantry and the Crew's Galley were inoperative when the SPICA was delivered to SECO. SECO contended that "MSC's direction for SECO to undertake ... repairs constitutes a constructive change order for which SECO is entitled to be compensated" (app. supp. R4, tab 24). The contracting officer never issued a decision. REA No. 24 was appealed under the same circumstances as other REAs already discussed. SECO subsequently revised its claim to $8,513 (tr. 24/266; app. supp. R4, tab 24).

DECISION

SECO contends that the Gaylord hood systems in the Officers' Pantry and Crew's Galley were inoperable when the SPICA was delivered to SECO in September, 1984.

Item 111.B. of the specifications required that the parties conduct a joint survey of the vessel's equipment and systems when it was delivered for upgrade. The purpose for the survey was to avoid the type of disputes that are now before us. SECO concedes that it only checked the Gaylord hood fans. SECO did not check the Gaylord hood washdown system, the emergency shut-off system and the Main Controller. There is no evidence that it was impossible to check these Gaylord hood subsystems had SECO elected to do so. Had SECO noted the disputed deficiencies it later found, it would not have been held responsible for any repairs or troubleshooting to render the Gaylord hood systems operable.

As it turned out, SECO was not asked to furnish or repair any missing parts to the Main Controller. In the course of trying to make the Gaylord hood systems on the Officers' Pantry and the Crew's Galley operable, SECO did have to tighten some loose lugs and wires and "rewound" a damper solenoid. We consider such work to have been a part of re-installation routines to meet its redelivery obligations under Item 111.B.

In our third SECO decision, we said with respect to REA No. 3, that:

> ... SECO had the right to check and to take exception to all equipment and systems that it did not wish to take responsibility for upon delivery of the ship. In this case, a joint survey of the SPICA's operating system was conducted while the ship was en route to SECO from Oakland. After the ship arrived at SECO, the joint survey continued for 3 days. There is no evidence that the Main Regulator Valve was defective when the ship was turned over to SECO....
>
> We conclude that, to the extent that the Main Steam Regulator Valve and the two scullery valves were found defective, after the vessel had been in SECO's custody for over 6 months, it must be presumed that the valves became defective while in SECO's care....

Service Engineering Co., ASBCA No. 40274, 93-1 BCA ¶ 25,520 at 127,124-25.

As in REA No. 3, the presumption is not here overcome by the evidence in the record. We have found SECO's allegations of pre-existing deficiencies in the Gaylord hood system not supported by credible first-hand proof. There is no evidence that the damper solenoid of the Officers' Pantry Gaylord hood system or the Main Controller of Galley Gaylord hood system were inoperable when the vessel was delivered to SECO in September 1984. Therefore, SECO was required to redeliver the Gaylord hood systems in the same operable condition in which they were received.

Accordingly, the claim which is the subject of REA No. 24 is denied.

FINDINGS OF FACT

REA No. 53

5-107. As part of the SPICA upgrade, SECO was required to furnish and outfit a new TACAN (Tactical Air Navigation) Room. Item 505.D., "Removals," of the specification provided:

> Remove the cables in the cableway, starboard side of the mast, frame 120, 05 Deck and above which are in way of new TACAN Room as follows. Disconnect and remove the power cables to the three AS-390/SRC antennas on the yardarm. Disconnect the remaining cables from navigation lights, etc. on the mast and remove to a point below the overhead of the new TACAN Room. Reserve for reconnection to a new J-box in the TACAN Room overhead.

(Exh. G-3 at 502-2)

5-108. By CIR No. 246 dated 24 September 1984, SECO advised MSC that in addition to the cables to be removed as directed in Item 505.D., there were a waveguide run to "x" band radar antenna and a heliax cable run to "s" band radar antenna. Inasmuch as neither the waveguide nor the heliax cable could be re-installed through use of a junction box, SECO requested that the following additional work be directed:

©1994, Commerce Clearing House, Inc.

Digitized by Google

2.1. Disassemble waveguide run in way of TACAN Rm. installation.

2.1.1. Modify waveguide sections between transmitter 04 lvl. and mast. Reinstall waveguide.

2.2. Disconnect and remove heliax cable in way of TACAN installation; reroute and reconnect.

(R4, tab 169.2)

5-109. In response, MSC issued Work Statement No. 505-086 (W/S No. 086) on 26 September 1984. It stated:

The Contractor shall provide all labor and material to accomplish the following work:

1. Disassemble waveguide run in way of Tacan Rm. After the Tacan Rm. installation[,] re-install the waveguide run.

2. Disconnect and remove Heliax cable in way of Tacan Installation. Re-route and reconnect after Tacan Rm. Installation.

(R4, tab 169.2)

5-110. Thereafter, the parties negotiated and agreed on $2,540 as the price for W/S No. 086. W/S No. 086 and 19 other negotiated W/Ss were settled by a bilateral modification—JOM No. 2—in October 1984. JOM No. 2 contained, as Paragraph 4, the standard Navy release clause. (Exh. G-169.2; tr. 25/146, 48, 244)

5-111. On the SPICA, the Signal Shelter and the TACAN Room were located between frames 122 and 117 on the 05 level (tr. 25/151). These rooms sit atop the vessel's chartroom located approximately at frame 125 "behind the wheelhouse . . . on the starboard side" on the 04 level. (Tr. 25/151-52)

5-112. The 10 CM and 3 CM radar antennas were located "roughly 30 feet above the 06 level" slightly in front of the TACAN mast (tr. 25/151, 195).

5-113. A "waveguide" projects images down from a radar antenna to the radar screen (tr. 25/148). There were two types of waveguides on the SPICA: a 10 CM waveguide and a 3 CM waveguide. The 10 CM waveguide used a heliax cable as a transmitter (tr. 25/149). The 3 CM waveguide transmitted images by means of a rectangular "solid-type tube" (tr. 25/148). There is no dispute concerning the 3 CM radar (tr. 25/173-74).

5-114. The 10 CM radar heliax cable came down the starboard side of the mast, penetrated the overhead and the deck of the TACAN room, "then wove itself down into the overhead of the chartroom, down and into the connector box" (tr. 25/160). The heliax cable penetrated the overhead and deck in a "stuffing tube." The tube was "packed with a stuffing to prevent . . . leakage through and holds the cable in place" (tr. 26/161).

5-115. To implement W/S No. 086, SECO disconnected the 10 CM heliax cable from the radar panel in the chartroom. The cable was pulled through the stuffing tube onto the deck in the 05 level where it was laid out, rolled up in large coils, wrapped in plastic designed to keep "dust, dirt and moisture out," and "placed it up on the antennas [mast] as it was coiled up." (Tr. 25/146-47, 224, 246) The end piece of the cable was separately wrapped with electrical tape and arranged to point downward (tr. 25/185, 225).

5-116. The 10 CM heliax cable remained in its covered condition from late September 1984 until March 1985 when SECO was ready to re-install it (tr. 25/148, 201). SECO's ship superintendent in charge of the installation of the Signal Shelter and the TACAN room testified that in March 1985, he saw no damage to the plastic wrap (tr. 25/253). The end of the cable was still wrapped in tape (tr. 25/254).

5-117. During the course of the overhaul, SECO was working in the vicinity where the wrapped heliax cable was strapped to the mast. SECO was installing a mast to hold the TACAN antenna and was "beefing up" the platform (tr. 25/198-99). There is, however, no evidence that SECO in any way damaged the plastic wrapping or the heliax cable contained therein.

5-118. Upon re-installation of the heliax cable in March, 1985, a "distorted picture" was obtained on the 10 CM radar screen (tr. 25/164). When advised of the radar problem, the CONREP instructed SECO to "get a radar technician in to trouble-shoot the system" (tr. 25/165).

5-119. SECO used its own electronics technicians to check out the radar system first, and then contacted Baytronics Corporation (Baytronics), a Bay Area contractor specializing in marine electronics (tr. 25/165).

5-120. Baytronics, with the assistance of SECO personnel, worked on the 10 CM radar on or about 20 March 1985 (tr. 25/217). Baytronics's 27 March 1985 invoice (for $1,632) recorded what was done to correct the radar distortion:

Energized unit. Found no picture on crt. Isolated problem to MTR. T/S found no video signal. Isolated problem to Magnatron. Remove maggie & found water (from

Digitized by Google

wave guide) throughout front end assy. Remove assy & maggie. Cleaned & dried assy. Installed new maggie & reinstalled front end assy. Tuned IF assy. TESTED—SAT.

Found leakage in wave guide at ant.—appeared to be leaking for sometime.

(App. supp. R4, tab 53)

5-121. No one from Baytronics testified. Based on the testimony of SECO's ship superintendent, and Baytronics' diagnoses above, we find that the 10 CM radar distortion was caused by a "short-out" in the Magnatron. This short was caused by condensation in the heliax cable. The condensation was caused by a leak at the base of the antenna. (Tr. 25/167, 173) Baytronics sealed the leak with silicone (tr. 25/167).

5-122. As one of its defenses, the Government invoked the "Care Of The Ship" provision of the contract. Item 111.B. provided, in part, the following:

* * *

The Contractor is responsible for the entire ship, including layup of all equipment and parts of the ship not affected by the modification, from the time the ship is delivered to the Contractor until it is accepted for redelivery by the COMSC CONREP. All ships parts, equipment, systems, etc., damaged or destroyed by the Contractor shall be repaired or replaced at the Contractor's expense.

* * *

The Contractor shall be responsible for the protection of the ship's interior, including but not limited to, machinery, piping, electric cables, insulated refrigerated storerooms, compartments, bulkheads, decks and ducting from weather, fire, damage by shipyard personnel, theft, dirt, foreign substances, etc.

(Exh. G-3 at 111-2 to 3)

5-123. There is in evidence a series of DRs each indicating water problems somewhere aboard the vessel.[5] Except with respect to DR No. 417, none of the DRs show water intrusion anywhere near the chartroom where the 10 CM radar was located.

5-124. DR No. 417 was dated 7 March 1985, just two weeks prior to discovering distortion in the 10 CM radar. An overhead leak was identified on the 04 Deck, near Frame 122 (exh. G-178). The location is identified as "six feet after the chartroom and inboard by about 12 feet" (tr. 25/234). According to DR No. 417, overhead leaks occurred "after long, steady rain." The report indicated that SECO corrected the problem on 25 March 1985, after repacking the stuffing tube through which water had leaked. (Exh. G-178) We find that the leaks identified in DR No. 417 are sufficiently close in time and place to have caused the accumulation of condensation in the Magnatron.

5-125. There is no evidence that the ship's radar system was found to be inoperable or was showing distorted images in the arrival condition report submitted by SECO after the three-day pre-delivery survey. To the contrary, the radar and the ship's navigational system were working when it was delivered to SECO in September 1984 (tr. 25/206, 226). Based upon expert testimony, we find that it was unlikely that the heliax cable or the Magnatron had water in them when the vessel arrived. If that had been the case, the 10 CM radar would have shown distortions at that time (tr. 25/245).

5-126. By letter dated 15 January 1986, SECO submitted a claim, in the amount of $4,877, designated as REA No. 53. SECO contended that it was "entitled to be reimbursed for the costs that it and its subcontractor, Baytronics, incurred in troubleshooting and repairing the 10 cm Radar." SECO maintained that the radar failure was not attributable to it but was caused by "a seal leak in the antenna and not by SECO's pulling back of the cable during the TACAN installation" (app. supp. R4, tab 53). The contracting officer never issued a decision. REA No. 53 was appealed under the same circumstances as other REAs already discussed. SECO subsequently revised its claim to $3,974 (app. supp. R4, tab 53).

DECISION

When SECO re-installed the heliax cable to the 10 CM radar in the chartroom, it was discovered that the radar was receiving distorted images. The Government contends that SECO is responsible for the repairs because the heliax cable might have been damaged during the time it was stored in plastic wraps on the mast of the vessel. We have found that there is no evidence that SECO in any way damaged the plastic wrapping or the heliax cable wrapped inside (finding 5-117).

We have found that the 10 CM radar distortion was caused by a "short-out" in the

[5] See Exh. G-171 (DR No. 042), G-172 (DR No. 047), G-173 (DR No. 55), G-174 (DR No. 100), G-175 (DR No. 114), G-176 (DR No. 235), G-177 (DR No. 244); tr. 25/230-34.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Magnatron. The short was caused by condensation in the heliax cable. The condensation came about as a result of a leak at the base of the antenna. (Finding 5-121)

The REA before us is controlled by the result reached in *Service Engineering Company*, ASBCA No. 40274, 93-1 BCA ¶ 25,520. In that case, we held, in connection with REA No. 3, where SECO was given the opportunity to conduct a pre-delivery survey and to note any defects on the vessel, it was presumed that certain valves which were later found to be defective, became defective while the vessel was in SECO's care.

In connection with this REA, the evidence shows that the vessel's radar and navigational systems were working when the vessel was turned over to SECO in September 1984. In the absence of evidence to the contrary, we conclude that the antenna seal began to leak when the vessel was in SECO's care. We conclude therefore, that it was SECO's responsibility to repair the leak and the 10 CM radar at its expense.

Accordingly, the claim which is the subject of REA No. 53 is denied.

FINDINGS OF FACT

REA No. 120

Deck Edge Light Relocations

5-127. Item 513 of the SPICA specifications pertained to "Lighting And Visual Approach" (LVA). It required SECO to install visual landing aid equipment and material in accordance with the requirements of Reference 1 through 30. (REA No. 120, exhibit No. 3 at 513-1, 3).

5-128. As a part of the LVA system, SECO was required to install 13 helicopter deck edge lights. NAEC Drawing 80020-621927—Visual Landing Aids Installation—Clearance Requirements (NAEC Drawing 1927) was applicable to the installation of these deck edge lights (tr. 24/10-11). NAEC 1927 was not a generic drawing; its "T-AFS-8 Configuration" designation showed that it was specifically drawn for the SIRIUS class vessel (tr. 24/238-39). The SPICA was a sister ship of the SIRIUS.

5-129. NAEC Drawing 1927 was sufficient, by itself, to fix the locations of the deck edge lights. The drawing provided locations "in a longitudinal sense by measuring from . . . the back end of the hangar, as the beginning reference point . . . starting 18 inches aft of that bulkhead" (tr. 24/242).

5-130. Even prior to the arrival of the SPICA at MSC's facility in September 1984, MSC had instructed SECO to use NAEC Drawing 1927 to locate lights. By CIR No. 179, SECO advised MSC that there was a conflict between the Guidance Drawing location of OVBD floodlights with the location shown on the NAEC Drawing 1927. MSC responded by CRO No. 284, stating "NAEC 621927 has dimensions on the dwg. for the lights and should therefore be used" (exh. G-108A, REA No. 120, exhibit No. 3).

5-131. SECO began installation of the deck edge lights in mid-January 1985 (tr. 24/11, 113). SECO positioned the deck edge lights in accordance with NAEC Drawing 1927 (tr. 24/13, 15, 18, 112-13, 22). Installations were made without working drawings (tr. 24/219). No working drawings for the installation of the deck edge lights were prepared (tr. 24/237).

5-132. To install a deck edge light, SECO had to drill or burn a hole at the proper location. The housing for the light had to be welded in place. Electricity for the light was fed from transformers and cables installed below deck. (Tr. 24/90)

5-133. When installation of the deck edge lights was 90 percent complete, a disagreement developed between an NAEC inspector and the MSC Assistant CONREP (tr. 24/12). The NAEC inspector had a problem with the locations where some of the deck edge lights were placed (tr. 24/16). The Assistant CONREP took the position that the correct edge light locations were shown in NAEC Drawing 1927 (tr. 24/118). The NAEC inspector took the position that the edge light locations shown in NAEC 1927 were incorrect and unless corrected, the helicopter deck would not be certified (tr. 24/114-15, 119).

5-134. Neither the Assistant CONREP nor the NAEC inspector testified. What was wrong with the deck edge light locations as reflected in NAEC Drawing 1927 remained unexplained.

5-135. SECO was subsequently directed to install the deck edge lights in accordance with a new drawing. This new drawing "moved the lights six to eight inches either forward [or] aft of where the [NAEC Drawing 1927] put them" (tr. 24/123-24). This drawing was described as "a binder sheet of paper with a drawing on it" (tr. 24/119-21). This new drawing is not in evidence.

5-136. When MSC's direction to relocate the deck edge lights came, SECO had already installed the lights, and the wiring

Digitized by Google

underneath. The transformers had been welded in place and banding of the cables had been accomplished (tr. 24/240).

5-137. Out of the 13 deck edge lights, SECO had to relocate 10. In addition, SECO had to relocate seven connection boxes or transformers. (Tr. 24/160-61) Those lights that had to be moved were moved between six to eight inches fore or aft (tr. 24/150, 246).

5-138. To relocate the installed edge lights, SECO had to remove the lights and save the fixtures used. The existing openings had to be blanked off. New penetrations through the deck had to be cut. The light fixtures had to be re-welded back into the new deck locations. In addition, some but not all of the below-deck transformers and cabling had to be moved. (Tr. 24/126, 150-51)

5-139. Relocation of the deck edge lights took between two to three weeks (tr. 24/126). SECO used between three to five electricians. In addition, pipefitters, welders, painters and laborers were also used (tr. 24/126). The helicopter deck, including the deck edge lights was ultimately certified by NAEC (tr. 24/26).

5-140. The Government contends that SECO should not be allowed to recover because it failed to prepare working drawings in accordance with Item 103.D.1. (see exh. G-3 at 103-2). The Government expert conceded that the information in NAEC 1927 "appeared to be sufficient to at least spot the locations of the lights" (tr. 24/219). Even though working drawings might show how the light housing attached to the deck and how electrical connections were made (tr. 24/220), we find that the only problem identified by the NAEC inspector related to the need for fore and aft relocations of some of the deck edge lights. There were no other installation problems. Without an explanation from the Government as to why NAEC 1927 was incorrect, we cannot find that SECO could have avoided the light location problem had it installed them in accordance with working drawings.

5-141. The Government does not dispute that SECO was required to relocate some of the deck edge lights after they were installed. As in the case of other REAs, SECO's trades that worked on the re-installation did not keep records of the additional effort required of them. Based upon information furnished by those who had first-hand knowledge of the work involved, SECO's Contract Administrator estimated that (1) 240 labor hours of various trades (including welders, shipfitters, painters, electricians and laborors) would have been consumed in relocating 10 lights; (2) 112 labor hours of various trades would have been consumed in relocating 7 transformers; (3) 112 labor hours would have been consumed in relocating cables; and (4) 240 labor hours would have been consumed in furnishing and installing 10 deck inserts. The total labor hours claimed was 704 hours.

5-142. The bulk (or 67 percent) of the hours claimed (474 hours) were electrician hours. Electricians typically worked in pairs (tr. 24/132, 346). In light of testimony in the record that between three to five electricians were used, we find it is fair to consider that four electricians were used during the entire light relocation period. Furthermore, in light of testimony that it took 2 to 3 weeks to correct the problem, we consider 480 total electrician hours or less to be reasonable (4 men × 8 hours × 15 days). The Government did not challenge the reasonableness of the hours said to have been incurred by the supporting trades. We find them (230 hours) to be reasonable. At $34 per hour, we find that SECO incurred an estimated additional labor cost of $23,936 ($34 × 704 hours) (exh. A-68)

5-143. SECO claimed $1,560 in material costs. Such costs are not supported by invoices or shop chits. (Exh. A-68; tr. 24/182) Although SECO's electrical leadman testified that he believed that he was working "eight hours a day, six days a week" (tr. 24/127) at the time, there is no evidence that any overtime hours were attributable to the relocation of the deck edge light relocation effort.

Extended Lineup Light Bars

5-144. Item 101.D.1.b. of the SPICA specifications provided:

> D. *GENERAL CONDITIONS AND DEFINITIONS*
>
> * * *
>
> b. Section 200, General Requirements, Technical, sets forth in detail the minimum requirements (procedures, techniques, materials, etc.) to be followed for all work covered by this Specification. All work performed by the Contractor under this Job Order shall comply fully with the technical requirements outlined in Section....

(Exh. G-3 at 101-2)

©1994, Commerce Clearing House, Inc.

Digitized by Google

5-145. Item 213 of the specifications pertained to "Electrical Systems." It provided, in part:

A. *GENERAL*

1. *Intent and Scope*

It is the intent of this Item to describe the general requirements as a whole for electrical work covered by this Specification.

* * *

2. *Arrangement of Equipment*

All electrical equipment shall be located so as to be *readily accessible for repair and removal,* and to reduce to a minimum the danger that equipment may be damaged by other systems in the vicinity. Equipment shall be protected from possible sources of heat, water, steam, or other hazardous substances.

(Emphasis added) (exh. G-3 at 213-1)

5-146. Item 202 pertained to "ACCESS AND MAINTENANCE REQUIREMENTS." It provided in part, that:

The structure and layout of the machinery and *equipment shall be designed and constructed to permit ready access to all parts for inspection, maintenance, operation, and repair* without disturbance of other structure or equipment....

(Emphasis added) (exh. G-3 at 202-1)

5-147. As part of the LVA system under Item 513, SECO was required to install two extended nine-foot lineup light bars at the stern of the vessel. The lineup bars with lights were used to provide helicopter pilots orientation for landing when the helicopter approached the vessel from the rear (tr. 24/45, 68).

5-148. The LVA equipment was required to be installed in accordance with the requirements of Reference 1 through 30 of Item 513. Reference 2 was "NAVAIRSYSCOM (NAEC 91122)—Air Capable Ship Aviation Facilities." Paragraph 12.4.6.2, "AFT EXTENDED LINEUP LIGHTS (RED)" provided as follows:

A vertical drop-line light bar assembly shall be installed aft and extended below the flight deck level. When mounted outside a ship's hull, the light bar assembly *may* be portable. The light bar requires a single step-down transformer which shall be wired to a dimmer control.

(App. supp. R4, tab 120, exhibit No. 4)

5-149. Six evenly spaced low voltage lights were mounted on a steel channel which was mounted on a steel foundation hung vertically down from the end of the helicopter deck (tr. 24/27). The low voltage sealed beam lights normally last for a year (tr. 24/127-28).

5-150. SECO installed the lineup light bars in late January or early February 1985 (tr. 24/28). As originally installed, the lineup light bars were not "portable." Portability means that the light bars were built so that they were moveable in themselves (tr. 24/30).

5-151. The Assistant CONREP directed SECO to make the lineup light bars portable (tr. 24/33). To render the lineup light bars portable, SECO plug-welded the existing holes, mounted the lights on a 10-foot aluminum channel, and milled a "long slot" on both sides of the channel. This permitted the aluminum channel to slide up and tilt-over over the top of the helicopter deck. (Tr. 24/37-38) This modification took about a week to accomplish (tr. 24/39).

5-152. SECO conceded that the lineup lights of the light bars must be accessible. In this case, SECO took the position that access by ladders, doors, manholes, scuttles or bolted plates was not feasible (tr. 24/107).

5-153. SECO took the position however, that its original lineup bar installation did provide ready access. According to SECO, for the first three lights on the bars, one could reach them by jumping into the safety net around the helicopter deck. With respect to the next three lights, they are accessible by means of a boatswain's chair. (Tr. 24/67) On the SPICA, the safety net was installed some 40 to 50 feet above water (tr. 24/67). The safety net was not designed for the purpose of allowing the ship's force to maintain the lineup lights.

5-154. A boatswain's chair is a wooden seat suspended over the side of a ship by ropes. It is used for "reaching difficult areas over the side of a ship for work, repair maintenance, painting." (Tr. 24/128)

5-155. Based on the evidence in the record, we do not find that a boatswain's chair provided ready access to the lights on the lineup bars. Using a boatswain's chair is usually "a two to three men operation." Men have to put on safety harnesses. (Tr. 24/71, 74) With a portable lineup bar, burnt-out bulbs can be changed in 20 minutes; using a boatswain's chair would take "[p]robably an hour" (tr. 24/82). There is also some question as to whether a boatswain's chair can be used safely when the ship is underway (tr. 24/36).

Digitized by Google

5-156. SECO provided no boatswain's chair as part of the lineup light bars. According to the Government, even if a boatswain's chair was provided, access to the lineup bars still could not be readily obtained because the boatswain's chair would have to be set up (tr. 24/62).

5-157. SECO estimated that it incurred over 300 labor hours and $450 in material costs in rendering the lineup light bars portable (app. supp. R4, tab 120).

LVA Government Furnished Equipment (GFE)

5-158. Item 110 of the SPICA specifications pertained to "RECEIPT, CARE AND HANDLING OF GOVERNMENT FURNISHED MATERIAL." Item 110.B. provided in part:

B. *RECEIPT OF MATERIAL*

* * *

2. The Contractor shall inspect the GFM at the time of receipt and note any damage or other adverse condition. The Contractor shall notify the COMSC CONREP immediately of any observed damage.

* * *

F. *REPORTS*

* * *

3. *Damage Report*

a. Any damage to GFM in the Contractor's care shall be immediately reported to the COMSC CONREP for joint survey.

b. The Contractor shall prepare a damage report outlining the damage conditions which led to the damage, and the proposed method of repair. Concurrence of the COMSC CONREP is required prior to initiation of recommended repairs.

* * *

(Exh. G-3 at 110-1 and 3)

5-159. We find that Item 110 did not require SECO to conduct any tests upon receipt of the GFE to ascertain whether there was any internal damage to the equipment not readily observable.

5-160. For Item 513 (LVA), Item 110 listed 27 items of GFE. This REA concerned four of the items:

* * *

	QTY
8. Motor Driven Variable XFMR, 22 amperes	2
9. Motor Driven Variable XFMR, 10 amperes	5
* * *	
11. Glide Scope Indicator System Kit (Automatic Bus Transfer or ABT)	1
* * *	
13. Flash Sequencer	1

* * *

(Exh. G-3 at 110-6 and 7)

5-161. The evidence showed that the foregoing GFE was kept in SECO's "receiving cage" and delivered to the vessel when needed (tr. 24/136). SECO's electrical leadman involved in the installation of the GFE testified that he first saw the GFE when it landed on the flight deck. The GFE were in shipping crates and on pallets. No damage to the shipping crates was observed. During installation of the GFE in question, no damage to the exterior of the equipment was observed. (Tr. 24/132-33)

5-162. SECO began installing the LVA system in January 1985 (tr. 24/92-93). No tests of the GFE were conducted until SECO was "lighting off things" in March 1985 when installation of the LVA system was completed (tr. 24/93, 149).

5-163. Upon testing of the entire LVA system, SECO found that the system did not work. Troubleshooting isolated the problem to (1) the flash sequencer, (2) three of the seven motor-driven variable transformers (or VARIACs for short), and (3) the Automatic Bus Transfer (ABT) of the Glide Scope Indicator. (Tr. 24/41)

5-164. The lineup lights were flashing out of sequence. SECO traced the problem to the flash sequencer (tr. 24/131). SECO found wires disengaged from the switches and wired to the "wrong locations on terminal boards" (tr. 24/148).

5-165. With respect to the VARIACs, SECO found that the motors would not turn. Consequently, SECO had "no control over dimming the lights" (tr. 24/131).

©1994, Commerce Clearing House, Inc.

Digitized by Google

5-166. With respect to the ABT, SECO found internal wiring problems which caused the transformer not to switch to emergency power upon loss of power (tr. 24/96, 132).

5-167. When the Assistant CONREP was told about the defective GFE, he took the position that it was SECO's responsibility to repair them (tr. 24/40).

5-168. The Government offered no proof that SECO failed to install the GFE components properly.

5-169. Repairs to the defective GFE were accomplished in March 1985 (tr. 24/41, 133). Based upon information furnished to him, SECO's Contract Administrator estimated that 40 electrician hours would have been consumed in repairing each of the 3 defective GFE's. In addition, it was estimated that SECO spent 40 electrician hours to troubleshoot and isolate the LVA problems to the GFE in question. (Exh. A-68) The Government did not challenge the reasonableness of the hours claimed. We find that SECO had incurred $5,600 ($34 × 160 hours) in labor costs in repairing the GFE.

5-170. SECO also claimed $150 in material costs. As in other cases, SECO provided no supporting invoices or shop chits (exh. A-68).

5-171. By letter dated 6 June 1986, SECO submitted a claim, in the amount of $62,099, designated as REA No. 120. SECO contended that it was entitled to an equitable adjustment for (1) relocating 10 deck edge lights, (2) modifying the extended lineup light bars for portability, and (3) repairing defective GFE to render the VLA system operable. (App. supp. R4, tab 120) SECO counsel stated at the hearing that there was no project impact associated with REA No. 120 (tr. 24/7). The contracting officer never issued a decision. REA No. 120 was appealed under the same circumstances as other REAs already discussed. SECO subsequently revised its claim to $50,692 (exh. A-68).

DECISION

The Deck Edge Light Relocation Claim

There is no dispute that the SPICA specifications required SECO to install deck edge lights in accordance with NAEC Drawing 1927. NAEC Drawing 1927 was not a generic drawing but one drawn specifically for the SIRIUS-class vessel to which the SPICA belonged. Furthermore, deck edge light locations could be determined longitudinally by reference to NAEC Drawing 1927.

SECO used NAEC Drawing 1927 to fix the locations of 13 deck edge lights. When installation was 90 percent complete, the MSC Assistant CONREP directed SECO to relocate 10 of the deck edge lights. The evidence shows that a NAEC inspector had determined that the deck edge light locations shown in NAEC Drawing 1927 were incorrect. SECO subsequently received from MSC a new drawing. SECO relocated 10 of the lights by six to eight inches either fore or aft from their previously installed locations.

Neither the Assistant CONREP nor the NAEC inspector testified at the hearing of this REA. We are left with no explanations as to what was wrong with NAEC Drawing 1927 which the specifications specifically directed SECO to follow.

Without such explanation, we conclude that the Government constructively changed the contract when it directed SECO to relocate a number of the installed edge lights so that it could receive NAEC certification of the helicopter deck.

We are not persuaded by the Government's argument to the effect that, had SECO prepared working drawings, it could have avoided the light location problems. While a shop drawing might show additional installation details, there is no showing that it could have corrected the alleged fore-and-aft dimension errors in NAEC Drawing 1927. We note that the Assistant CONREP for MSC had maintained that the correct edge light locations were shown in NAEC Drawing 1927. Moreover, there was no requirement that NAEC approve any edge light working drawings even if they had been prepared.

We conclude that clear proof of injury exists, and the evidence is sufficient for us to make a reasonable and fair approximation of the damages. *Dawco Const., Inc. v. United States* [37 CCF ¶ 76,056], 930 F.2d 872, 882 (Fed. Cir. 1991); *Service Engineering Co.*, ASBCA No. 40274, 93-1 BCA ¶ 25,520 at 127,112.

We have no problems with the labor hours (230) estimated to have been incurred by the various support trades. We have found 480 electrician hours reasonable. We conclude that SECO is entitled to an equitable adjustment of $23,936 ($34 × 704 hours) in labor costs for having been required to relocate 10 deck edge lights and their associated electrical components. (See findings 5-141 to -142)

SECO's material costs of $1,560 are not supported by invoices or shop chits. In accordance with our holding in *Service Engineer-*

Digitized by Google

ing Co., ASBCA No. 40274, 93-1 BCA ¶ 25,520 at 127,112, SECO's claim for material costs is denied. SECO's claim for overtime hours is also denied for lack of support.

The Extended Lineup Light Bars Modification Claim

SECO was required to modify the lineup light bars to make them portable so that there would be ready access to change the lights when necessary. Item 213 of the specifications required all electrical equipment to be located so as to be "readily accessible for repair and removal" (finding 5-145). Item 202 required equipment to be designed and constructed to "permit ready access" (finding 5-146).

SECO contends that there was nothing in Item 513, of which the installation of the extended lineup light bars was a part, that required compliance with Items 202 and 213. We have rejected the same argument SECO raised in the past, and we reject it now. We have said in our first SECO decision that the requirements of a contract must be determined from a reading of the contract as a whole. *Service Engineering Co.*, ASBCA No. 40272, 92-3 BCA ¶ 25,106 at 125,182. Furthermore, even though Item 513 did not specifically refer to Item 202 or 213, Item 101.D.1.b. stated in no uncertain terms that Section 200 (which included Items 202 and 213) set out the minimum requirements "to be followed for all work covered by this Specification."

SECO argues next that, in any event, there was ready access to change the lights of the lineup bars as originally installed. SECO argues that ready access is obtainable by using a boatswain's chair. We do not agree. The evidence shows that using a boatswain's chair would be a "two to three men operation," requires set up and takes an hour to change the lights. In our view, such a procedure did not meet the requirement of ready access.

We conclude that the Government did not constructively change the contract requirement by requiring SECO to modify the extended lineup light bars to make them portable, and thereby provide ready access for maintenance. Accordingly, SECO's claim arising out of the modification of the extended lineup light bars is denied.

The Defective GFE Claim

Based on the evidence in the record, we conclude that the (1) flash sequencer, (2) the VARIAC transformers and (3) the ABT of the Glide Scope Indicator were defective. Therefore, we hold that SECO is entitled to an equitable adjustment for repairing the defective GFE. We have so held in connection with REA No. 19 (A/C units in the helicopter support spaces). *Service Engineering Co.*, ASBCA No. 40272, 93-1 BCA ¶ 25,520.

We conclude that clear proof of injury exists, and the evidence is sufficient to make a reasonable and fair approximation of the damages. *Dawco Const., Inc. v. United States* [37 CCF ¶ 76,056], 930 F.2d 872, 882 (Fed. Cir. 1991); *Service Engineering Co.*, ASBCA No. 40272, 93-1 BCA ¶ 25,520 at 127,112.

We conclude that SECO is entitled to $5,600 ($34 × 160 hours) for troubleshooting and repairing the defective GFE. SECO's claim for material costs is denied.

Summary

Under REA No. 120, SECO is entitled to $32,490 computed as follows:

Relocating Deck Edge Lights	$23,936
Repairing GFE	5,600
Subtotal	$29,536
Profit at 10 percent	2,954
Amount due SECO on REA No. 120	$32,490

As for REA No. 120, SECO is entitled to $32,490, plus CDA interest running from 9 June 1986 until paid.

FINDINGS OF FACT

REA No. 105

5-172. Item 505 of the SPICA specifications required SECO to install a Type F Wind Direction and Speed Indicator (wind speed indicator). The wind speed indicator was listed as part of the GFE MSC was to furnish. (Exh. G-3 at 505-2) The wind speed indicator was to be installed on top of the helicopter control room and hooked into an existing British system (tr. 26/4).

5-173. Before the SPICA was delivered to SECO in September 1984, SECO was advised by Rosenblatt that the GFE specified was not compatible with the existing British wind speed indicator system (tr. 26/4).

5-174. By CIR No. 202, SECO recommended to MSC that the existing indicator

©1994, Commerce Clearing House, Inc.

Digitized by Google

be "reinstalled in the new helo control RM and reconnected as existing" (app. supp. R4, exhibit No. 2).

5-175. MSC did not respond to CIR No. 202. Instead, it issued W/S No. 505-084 (W/S No. 084). W/S No. 084 required SECO to "furnish" and install a "Wind, Speed and Direction Indication System to accomodate [sic] Two Government Furnished Type 'F' Transmitters." SECO was told that the components required were available from Belfort Instrument Company. (App. supp. R4, exhibit No. 3)

5-176. SECO did not understand what MSC wanted in W/S No. 084. It provided MSC a sketch and asked MSC to clarify what was required (tr. 26/15).

5-177. According to MSC, W/S No. 084 was issued to correct the incompatibility between the British and American wind speed indicator systems, and require SECO to furnish and install an entire American wind speed indicator system (tr. 26/153). In addition, W/S No. 084 was issued because MSC could not locate its Government-furnished wind speed indicator components (tr. 26/154, 155).

5-178. Subsequently, SPICA's crew found the wind speed indicator components (tr. 26/154). As a result, on 5 October 1984, MSC issued W/S No. 097. W/S No. 097 cancelled W/S No. 084. W/S No. 097 required SECO to:

* * *

2. Install a Government Furnished Wind Direction and Speed Indicating System including (1) Type "F" Detector, (1) Transmitter, (2) Indicators and Contractor Furnished Selector Switch and Associated Cabling.

3. *Install the Detector IAW Item 505, in the same approximate location as the existing Detector.* Install the transmitter in the Pilot House. Install the indicators, one in the Pilot House and *one in the Helo Control House* IAW Guidance Dwg. T-AFS-9-800-4845709 [emphasis in original].

* * *

5. Retain the existing British WS&D Indicating System. Box off the heads to the Station #9 indicator and turn over the removed indicator to the Chief Engineer as spare.

(App. supp. R4, exhibit No. 4; tr. 26/18, 58)

5-179. A few days later, on 9 October 1984, MSC modified W/S No. 097, eliminating Paragraph 5 and replacing it with the Paragraph 6 which stated as follows:

6. Install Two 12" × 12" fixed windows in the FWD Bulkhead of the Control Room, Port and Starboard of the door and sufficiently high for the Operator to view the Helicopter during operations.

(App. supp. R4, exhibit No. 5; tr. 26/57, 58)

5-180. The parties reached agreement with respect to the price of W/S No. 097 on 23 October 1984 in the amount of $21,821 (app. supp. R4, tab 105.1; tr. 26/19). The parties' agreement was subsequently confirmed in writing on 7 November 1984 (app. supp. R4, tab 105.1; tr. 26/20).

5-181. At the time W/S No. 097 was negotiated and priced, MSC had not delivered the GFE wind speed indicator components (tr. 26/21). The GFE was delivered to SECO sometime in late November 1984 (tr. 26/22).

5-182. MSC delivered the GFE wind speed indicator components to SECO in November 1984. What SECO received consisted of (a) a 60 hertz detector; (b) a 400 hertz transmitter; and (c) two 60 hertz indicators. (Tr. 26/23, 25, 62, 105, 162) According to SECO, what should have been furnished by MSC was all 400 hertz equipment. MSC also did not furnish any technical manual for installation. (Tr. 26/23)

5-183. The CONREP stated that he would attempt to obtain the technical manual and instructed SECO to proceed to install the furnished equipment in the meantime (tr. 26/24).

5-184. By January 1985, it became clear to SECO that it could not install the wind speed indicator system to make it work (tr. 26/30). Around the third week of January, 1985, SECO decided to hire Golden State Marine, to install the wind speed indicator system. As of the third week of January, 1985, wiring of the wind speed indicator system was completed. The detector was mounted on the mast. The indicator was mounted in the pilot house. The transmitter was installed. (Tr. 26/31)

5-185. Shortly after SECO hired Golden State Marine, MSC furnished SECO a 400 hertz detector. No technical manual was furnished, however. (Tr. 26/32-33). After MSC furnished the 400 hertz detector, SECO had to remove the 60 hertz detector already installed on the yard arm and replace it with the 400 hertz detector (tr. 26/41). Part 2 of SECO's claim was for this replacement work. Welders and shipfitters were used in the replacement effort (tr. 26/5, 7, 40).

51-186. In February 1985, Golden State Marine wrote SECO seeking instructions as

Digitized by Google

to how to electrically connect the wind speed indicator equipment furnished (tr. 26/35). MSC finally furnished a technical manual but took the position that proper electrical hook-up was SECO's responsibility. (Tr. 26/35) The manual, however, did not tell SECO how to connect a 400 hertz detector, a 400 hertz transmitter and a 60 hertz indicator (tr. 26/36).

5-187. As finally completed by Golden State Marine, there were two wind speed indicator systems installed aboard the SPICA: an American system consisting of entirely 400 hertz components, and a redundant 60 hertz British system (tr. 26/45-46).

5-188. After SECO and Golden State Marine installed the 400 hertz wind speed indicator system in March, 1985, they "still could not get a signal from the detector to the indicators" (tr. 26/41). After troubleshooting and investigating for 3 days, SECO found that the spline gear in the 400 hertz transmitter was inoperative (tr. 24/42, 87-88, 91).

5-189. The CONREP acknowledged that repairs to the spline gear were performed and took the position at the time that SECO should do whatever was necessary to render the wind speed indicator system operative (tr. 26/42). In mid-March 1985, SECO fabricated a new spline gear and installed it. The Government's expert acknowledged that the defect in the transmitter could not be discovered upon receipt of the GFE. (Tr. 26/40, 192)

5-190. It took SECO's electricians and machinists three to four days to repair the spline gear (tr. 26/89). It was necessary to get up on the mast of the vessel and check all connection points and tighten them (tr. 26/88).

5-191. On 24 April 1986, SECO submitted a $13,605 claim, designated as REA No. 105. The claim alleged that uncertainties and installation problems relating to the wind speed indicator resulted in extensive delay and disruption to SECO's contract performance. The claim further alleged that the GFE the Government furnished was defective resulting in additional troubleshooting and installation expenses. (App. supp. R4, tab 105) The contracting officer did not issue a decision. REA No. 105 was appealed under the same circumstances as other REAs.

5-192. At the hearing, SECO abandoned its delay and disruption impact claim (tr. 26/80-81). It refined its claim into 3 parts: (1) costs allegedly incurred in troubleshooting due to the lack of installation manual; (2) costs allegedly incurred in replacing the already installed 60 hertz equipment with 400 hertz equipment; and (3) costs allegedly incurred in troubleshooting and repairing the spline gear in the 400 hertz transmitter (tr. 26/5-8).

5-193. As in other REAs, SECO did not keep contemporaneous written records of the additional costs incurred. At the hearing, SECO revised its claim to $7,816. SECO estimated its claim by its contract administrator whom we have previously determined as an experienced and qualified estimator. The estimate was based upon his observation of the work completed and interviews with those who had first-hand knowledge (tr. 26/47).

5-194. Of the $7,816 claimed, SECO estimated that it incurred $50 in incidental material in fabricating the new spline gears (tr. 26/128). As in other REAs, the claim was not supported by invoice or shop chits.

5-195. SECO also claimed an estimated 47 labor hours in overtime. There is no evidence that SECO was working on the wind speed indicator specifically, only that the overtime was incurred during February 1985 when SECO's trades were working 10-hour days (tr. 26/126). We find insufficient support to allow overtime.

5-196. There is no dispute that SECO investigated and found a defective spline gear and subsequently repaired it. Thirty (30) machinist hours, 10 electrician hours and 2 quality control hours were estimated to have been incurred in repairing the defective spline gear. We find 40 labor hours would reasonably have been incurred in repairing the spline gear. There is no support for the quality control hours.

5-197. The Government contends that SECO could have connected 400 hertz wind speed detector equipment to 60 hertz equipment. This contention was not supported by the evidence in the record. The Government's expert conceded that "it is not usual for equipment to have input and output of different frequencies" (tr. 26/183). We find that the Government failed to furnish suitable GFE. In addition, we find that the Government also failed to furnish the proper installation manuals. These failures required SECO to spend labor hours troubleshooting the wind speed indicator system. SECO estimated that seven or eight days total was spent in researching the problem and attempting to hook up the wind speed indicator. The evidence also showed that SECO's electricians worked in pairs.

©1994, Commerce Clearing House, Inc.

Digitized by Google

(Tr. 26/124) In light of the foregoing evidence, we find that SECO reasonably estimated that 120 labor hours would have been incurred in troubleshooting and trying to make the wind speed indicator system work. The 120 labor hours included the time required by welders, shipfitters and electricians in changing out the 60 hertz detector on the mast.

5-198. The Government contends that SECO's claims in REA 105 were released by a bilateral modification—JOM No. 4 (Gov't. br. at 31). The work described in W/S No. 097 and a number of other work statements were subsequently definitized and settled by a bilateral modification—JOM No. 4. JOM No. 4, dated 29 November 1984, contained the following standard Navy release clause:

* * *

> The change in delivery dates, price, or cost and fixed fee described above is considered to be fair and reasonable and has been mutually agreed upon in full and final settlement of all claims arising out of this modification and any other modification or change orders indicated above, including all claims for delays and disruption resulting from, caused by, incident to such modifications or change orders.

(Exh. G-169 at tab 4)

DECISION

The specifications required SECO to install a GFE wind speed indicator. MSC could not find the GFE components and issued W/S No. 084 requiring SECO to furnish and install a wind speed indicator system. MSC subsequently located the GFE wind speed indicator components and issued W/S No. 097 to cancel W/S No. 084.

MSC furnished a mixture of 60 hertz and 400 hertz wind speed indicator equipment. MSC also failed to furnish a technical installation manual. As a result, SECO experienced difficulty in connecting the wind speed indicator components. It expended labor hours in trouble-shooting and investigating ways to make the system work.

In REA No. 105, SECO claimed the costs of (1) attempting to hook up the incompatible wind speed indicator components furnished by MSC; (2) replacing a 60 hertz indicator already installed on the mast of the vessel with a 400 hertz indicator; and (3) repairing the spline gear in the 400 hertz transmitter.

The Government contends that 400 hertz equipment could have been connected to 60 hertz equipment. Based upon the evidence in the record, we have rejected this contention. (Finding 5-197)

The Government contends next that SECO's claims are now barred by release, pointing to the standard Navy release clause contained in a bilateral modification—JOM No. 4. We have found that at the time the parties agreed upon price with respect to W/S No. 097 in late October and early November 1984, the Government had not delivered the GFE. The GFE was delivered in late November 1984. (Findings 5-180, -181) Meanwhile, JOM No. 4 was executed by the parties at about the same time, 29 November 1984 (finding 5-198). The problem of equipment incompatibility did not surface until January and February 1985. Thus, at the time the parties executed JOM No. 4, SECO did not know that the GFE MSC promised to deliver would be a mixture of 60 and 400 hertz components and incompatible with each other. Inasmuch as MSC did not deliver its part of the bargain, we conclude that SECOs claim was not barred by release.

We conclude that, as a result of the unsuitable and defective GFE (including spline gear) furnished, SECO suffered financial injury and the evidence is sufficient for us to make a reasonable and fair approximation of the damages. *Dawco Const., Inc. v. United States* [37 CCF ¶ 76,056], 930 F.2d 872, 882 (Fed. Cir. 1991); *Service Engineering Co.*, ASBCA No. 40274, 93-1 BCA ¶ 25,520 at 127,112.

In accordance with our prior holding in *Service Engineering Co.*, ASBCA No. 40274, 93-1 BCA ¶ 25,520 at 127,112, we conclude that SECO is not entitled to recover unsupported material costs and overtime (findings 5-194, 195).

We conclude that SECO is entitled to recover 120 labor hours for attempting to install incompatible wind speed indicator equipment and for replacing the already installed 60 hertz indicator with the 400 hertz indicator (finding 5-197). We conclude also that SECO is entitled to 40 labor hours for repairing the spline gear (finding 5-196).

At $34 per labor hour, we conclude SECO is entitled to $5,984, plus CDA interest running from 28 April 1986, computed as follows:

160 hrs × $34	=	$5,440
Profit at 10%	=	544
Total		$5,984

Digitized by Google

CONCLUSION

As for REA No. 8, SECO is entitled to $18,102, plus CDA interest running from 1 November 1985 until paid.

The claim which is the subject of REA No. 121 is denied.

The claims which are the subject of REA No. 115 are denied.

As for REA No. 6, SECO is entitled to $1,258 plus CDA interest running from 1 November 1985 until paid.

The claim which is the subject of REA No. 24 is denied.

The claim which is the subject of REA No. 53 is denied.

As for REA No. 120, SECO is entitled to $32,490 plus CDA interest running from 9 June 1986 until paid.

As for REA No. 105, SECO is entitled to $5,984 plus CDA interest running from 28 April 1986 until paid.

[¶ 26,383] Bell-Boeing Joint Venture

ASBCA No. 39681, September 23, 1993. Contract No. N00019-83-C-0166.

Contract Disputes, Relief Available—Estoppel—Contractual Basis.—A contractor's claim for costs allegedly incurred as a result of its detrimental reliance upon a prior determination concerning compliance with Cost Accounting standards was not barred as a matter of law, because the claim was based on contract, not on statutory entitlement. Although the U.S. Supreme Court has held that equitable estoppel will not lie against the government for payment of money contrary to a statutory appropriation, the U.S. Court of Appeals for the Federal Circuit in *Burnside-Ott Aviation Training Center v. U.S.*, 38 CCF ¶ 76,479, refused to extend that decision to equitable estoppel claims based on contract.

For the appellant: Crowell & Moring, Washington, D.C., by Terry L. Albertson and Linda S. Bruggeman. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and John A. Dietrich, Trial Attorney.

Before TING, RUBERRY, and SPECTOR, Administrative Judges.

Reconsideration denied for 93-2 BCA ¶ 25,791.

TING, Administrative Judge: The Government has moved for Senior Deciding Group reconsideration of the Board's decision of 27 May 1993. In that decision, the Board denied the Government's cross motion for summary judgment on the basis that Bell-Boeing might still be able to recover its FSD proposal preparation costs "if it could demonstrate that [it] reasonably relied to its detriment upon the 1981 CAS determination" *slip op.* at 14.

Citing *Office of Personnel Management v. Richmond,* 496 U.S. 414, 110 S. Ct. 2465, 110 L.Ed. 2d 387 (1990) ("OPM v. Richmond"), the Government contends that our decision was erroneous as a matter of law and contrary to the proposition that "estoppel does not lie in monetary claims against the Government because it would allow the Executive to usurp Congress' powers under the Appropriations clause" (motion at 2).

The Government (Navy) through the Department of Justice had unsuccessfully raised the same defense in *Burnside-Ott Aviation Training Center, Inc. v. United States* [38 CCF ¶ 76,479], 985 F.2d 1574 (Fed. Cir. 1993). In *Burnside-Ott,* the Federal Circuit reversed the Claims Court decision which had barred Burnside-Ott's equitable estoppel claim as a matter of law based on *OPM v. Richmond.*

In *Burnside-Ott,* the Federal Circuit refused to extend *OPM v. Richmond* to equitable estoppel claims based on contract. The Court stated:

> The Claims Court improperly relied on *Richmond* to conclude that Burnside-Ott's equitable estoppel claim is barred as a matter of law. In particular, the Claims Court erred in concluding that *Richmond* stands for the proposition that equitable estoppel will not lie against the government for any monetary claim. The *Richmond* holding is not so broad. *Richmond* is limited to "claim[s] for the payment of money from the Public Treasury *contrary to a statutory appropriation.*" 496 U.S. at 424 (emphasis added). . . .
>
> * * *

©1994, Commerce Clearing House, Inc.

Digitized by Google

Burnside-Ott's assertion of a right to payment of money from the Public Treasury, however, is not based upon a statutory entitlement. Burnside-Ott's assertion is instead based upon its *contract* with the Navy. Nor does Burnside-Ott claim entitlement contrary to statutory eligibility criteria, as did *Richmond.* Thus, neither the holding nor analysis in *Richmond* is applicable in this case, and Burnside-Ott's equitable estoppel claim is not barred as a matter of law because of *Richmond.* Equitable estoppel may or may not apply in this case depending on facts yet to be established.

(Emphasis added) 985 F.2d at 1581

Bell-Boeing's claim in this case is based on contract, not statutory entitlement. Therefore, *Burnside-Ott* and not *OPM v. Richmond* applies here. We have recently followed *Burnside-Ott* in denying the Government's (Navy's) motion for summary judgment on the basis of issues relating to equitable estoppel. *See Thiokol Corporation Strategic Operations,* ASBCA No. 45348, 93-3 BCA ¶ 26,180 (decided 24 June 1993) *slip op.* at 4.

In light of the foregoing precedents, the Chairman has denied the Government's request for Senior Deciding Group review. The Government's motion for reconsideration is, for reasons stated, denied.

[¶ 26,384] Richards Construction Company

AGBCA No. 88-156-1, September 30, 1993. Contract No. 50-03R6-5-L0050.

Pricing of Adjustments—Proof—Reasonable Basis for Computation.—The government's contention that a contractor failed in its burden to prove damages was rejected because the contractor furnished the board with a reasonable basis for computation. The board found that it was reasonable to use the hourly rates negotiated between the parties as part of a modification for work for which it found the contractor to be entitled, and the hours claimed were obtained from time cards, daily diaries, and certified payrolls, which together constituted adequate proof of quantum. The contractor was not required to prove its damages with absolute certainty.

Contract Disputes, Interest—Starting Date—Adequacy of Claim.—Interest was payable on items for which the contractor requested a final decision from the date of a communication labeled an "invoice," because all the elements of a claim were present at that time. Two weeks prior to its request for a final decision, the contractor submitted a letter that included a list of the items that were in dispute. On the date of this "invoice," the disputed items were claims for purposes of the Contract Disputes Act because the contractor had asserted in writing with sufficient specificity a right to additional compensation, the government had disputed that right, and the contractor had communicated a desire for a contracting officer's decision.

Modifications—Reduction in Requirements or Prices—Delay in Giving Notice.— Although the government allegedly waited four days to notify the contractor that certain work was being deleted, a contract reduction was appropriate because the government is not required to pay for items deleted from the contract. The contractor did not challenge the reasonableness of the amount of the deduction. The four-day delay, which included a weekend, did not amount to an unreasonable suspension of work for which the contractor should be compensated.

Modifications—Changes—Contractor's Request.—The government was not responsible for the costs of tree trimming, because tree trimming was not a performance element or required for performance of a contract, but it was done for the contractor's convenience to expedite progress and to protect its equipment. The contractor did not show that work could not progress with tree limbs present. Although the government was not obligated to trim the trees, it gave permission to the contractor to trim the trees itself.

Modifications—Authority of Government Agents—Government Inspectors.—The government was not bound by an inspector's request to modify a Forest Service contract, because only the contracting officer was authorized to make changes to the contract. The record indicates that the inspector believed the change was necessary, but the

Digitized by Google

contractor failed to show that the inspector was authorized to make changes. The contractor also failed to show that the contracting officer required the change or ratified the inspector's direction.

Delay—Causation—Contractor's Error.—A contractor was not entitled to the costs of a four-hour delay, because the delay was necessary to discuss construction of a trail head that did not meet specifications. The contractor would have encountered the delay caused by the discussion in any event and was not entitled to further compensation.

Modifications—Changes—Notice to Contractor.—A contractor was entitled to compensation for unproductive time because the government changed the contract and failed to inform the contractor of the changes or to provide copies of the new plans before the contractor began work. In a contract for the construction of a trail head, the government alleged that the contractor could not have been delayed, because the first item of work was to compact and test the subgrade, and the contractor had not begun that work. However, the stakes did not match the plans in the contractor's possession, indicating that the contractor was prevented from starting to compact the subgrade or from doing other than preliminary tasks.

Modifications—Bar to Claims—Accord and Satisfaction.—A modification did not act as a bar to a contractor's claim for delay costs, because the evidence showed that the parties did not intend for the modification to cover the costs associated with the delay and wasted costs for work performed prior to the issuance of new plans. In order to find accord and satisfaction, there must be agreement between the parties in satisfaction of a claim that is in dispute. The test to be applied is the objective manifestation of intent. In this case, by its terms, the modification covered new plans but did not identify work the contractor had performed under the original plans; there was no reference in the modification to delay or wasted costs, the contractor continued to press the claim, and the government continued to consider it, even after execution of the modification.

Modifications—Constructive Changes—Order to Correct Deficiency.—A government requirement that a contractor patch holes for a second time on campground surfaces was not a constructive change, because the contract was clear in stating that patching was required prior to applying a bituminous surface treatment and that the contractor had first patched the campground more than a month prior to the application of the treatment. The government did not direct the timing of the patching, and under the terms of the contract, the contractor was responsible for the work until final acceptance. There was no basis on which to conclude that the second round of patching was extra work for which the contractor should be compensated.

Modifications—Changes—Contractor's Request.—The government was not responsible for the costs of applying sand on a campground, even though the application was not required by the contract, because the government did not require the contractor to apply sand, but rather it allowed the contractor to apply sand to expedite progress. Five days were necessary for curing the prime coat before the application of a bituminous surface treatment; the contractor wanted to place the surface treatment four days after the application of the prime coat. In order to allow the contractor to do so, the inspector required the application of sand to cover areas of the prime coat that were not completely cured.

Site Conditions—Contract Indications, Category I—Reliance.—A contractor reasonably relied on plans indicating that the narrowest roads in a campground were 14 feet wide, because it was not apparent from a site visit and in preliminary work that concrete posts lining many of the roads were too close together to allow equipment to pass between them. The contractor was entitled to compensation for post removal and for the extra work and delay caused by the errors in the plans regarding road width, including equipment and delay time for the paving equipment, and for overhead and profit based on agreed equipment rates and job records.

Modifications—Constructive Changes—Refusal to Approve.—The use of high-pressure washing to prepare campgrounds for a new bituminous surface treatment layer was beyond the minimum standards demanded by the terms of the contract and constituted a

©1994, Commerce Clearing House, Inc.

Digitized by Google

constructive change. Although the government averred that no constructive change occurred, because the contracting officer's representative did not order the extra work, the COR's refusal to approve the surface for the application of the new surface treatment until the contractor used the high-pressure washing in effect constituted a direction to use that method. The imposition of this standard for cleaning the surface was not required by the contract or normally used in jobs of similar character and thus entitled the contractor to compensation. The government's contention that the contractor should have performed the work in a more efficient manner was also rejected because the government presented no evidence that an alternative method would have resulted in lower costs.

Pricing of Adjustments—Actual Costs—Contractually Required Element.—The costs of using a power broom were excluded from a price adjustment for a contractor's extra costs of meeting a standard beyond contract obligations in preparing a surface for a new bituminous treatment, because the contractor failed to show that its brooming costs were not required by the contract. Under a contract to repair campgrounds and trails, the government improperly refused to accept the contractor's preparation of a campground surface until the contractor cleaned the surface by pressure washing. The contractor included the costs of brooming the surface as part of its costs for extra work resulting from the government's improper requirement. However, the contract obligated the contractor to remove loose dirt and other material.

Performance—Specifications—Adequacy.—The absence of a construction tolerance class for the construction of a road did not entitle a contractor to compensation, because the lack of a tolerance did not require the contractor to expend extra effort. A contract for the repair of campgrounds and trails required only reasonably close conformity to drawings because working tolerances were not specified. The contract specified that the work and the materials were required to be in reasonably close conformity with lines, grades, cross sections, dimensions, and material requirements shown on the drawings. Although the contractor alleged that it was necessary to work to a closer tolerance than might have been required, the one example cited demonstrated that the government accepted a road meeting the most lenient tolerance, even though it deviated from the stakes by as much as three feet.

For the appellant: Datsopoulos, MacDonald & Lind, P.C., Missoula, Montana, by Dennis E. Lind. For the government: Marcus R. Wah, Office of the General Counsel, U.S. Department of Agriculture, Missoula, Montana.

Before SETO, EATON, and DOHERTY, Administrative Judges.

SETO, Administrative Judge: This appeal arose under Forest Service, U.S. Department of Agriculture (USDA) contract No. 50-03R6-5-L0050, the Seeley Lake Chip Seal, on the Lolo National Forest in Montana. The Forest Service awarded the contract to Richards Construction Company (Appellant) on September 16, 1985, in the amount of $138,888.60.

During performance of the contract Appellant claimed entitlement to several items of additional compensation because of changed conditions and extra work. These items were the subject of claims in September of 1986 and February of 1987, totalling $44,329.73. The claims included:

Deleted Brooming	$ 1,082.00
Tree Trimming	1,000.35
Construction of Kellyhump	345.60
Morrell Falls Trailhead Delay	1,177.20
Morrell Falls Trailhead Unproductive Time	5,011.20
Patching, Big Larch Campground	1,113.75
Blotter Material	864.00
Post Removal, Seeley Lake Campground	2,134.62
Additional Cleaning, Big Larch Campground	23,801.38
Dumpster Aprons	845.78
Obstructions in Subgrade	3,072.60
Tolerance	2,953.80
Sorting Garbage from Borrow Pit	927.45
Total	$44,329.73

Digitized by Google

The Contracting Officer (CO) denied all the claims in a letter dated December 10, 1987.

A hearing was held on this appeal in Missoula, Montana, on October 27-28, 1992. The Board has jurisdiction under the Contract Disputes Act (CDA), 41 U.S.C. §§ 601-613.

The Board has substantially adopted the opinion of its Chief Counsel, M. C. Shager.

FINDINGS OF FACT—BACKGROUND, QUANTUM, AND INTEREST

1. The Forest Service awarded contract No. 50-03R6-5-L0050 to Appellant on September 16, 1985, in the amount of $138,888.60 (Appeal File (AF) D-30). The contract covered the Seeley Lake Chip Seal on the Lolo National Forest in Montana (AF D-29), and consisted of roadbed reconditioning, aggregate base course, and bituminous surface treatment (BST, also known as "chip seal") at Big Larch Campground, Seeley Lake Campground, and the Seeley Lake Ranger Station, and trailhead road loop and parking construction at the Morrell Falls Trailhead (AF D-33). The contract required the contractor to begin performance within 10 calendar days after receiving the Notice to Proceed and to complete performance within 340 calendar days (AF D-29, 57). The Forest Service modified the contract five times. The final contract value, after modifications, was $156,073.78. (AF D-1 through D-25.)

2. The contract incorporated *Forest Service Standard Specifications for Construction of Roads and Bridges* (1979 edition) (*Standard Specifications*) by reference (AF D-35). The contract contained the SUSPENSION OF WORK (Federal Acquisition Regulation, 48 C.F.R. (FAR) 52.212-12), DIFFERING SITE CONDITIONS (FAR 52.236-2), SITE INVESTIGATION AND CONDITIONS AFFECTING THE WORK (FAR 52.236-3), PERMITS AND RESPONSIBILITIES (FAR 52.236-7), and CHANGES (FAR 52.243-4) clauses (AF D-57, D-63, D-64, D-65, D-68).

3. The contract was substantially complete on July 2, 1986 (AF E-45). Final acceptance occurred on July 10, 1986 (AF E-46). Appellant expended extra effort so that the campgrounds would be usable for the July 4 holiday (Transcript (Tr.) 64-65).[1]

4. As a part of the negotiation of Modification No. 2, the CO and Appellant negotiated and agreed to the proper rates of compensation to be used for eguipment and for overhead and profit. The CO evaluated Appellant's costs in arriving at these agreed rates. The parties agreed to a figure of 35 percent for overhead and profit based on Appellant's cash statement of operation for the year ending November 30, 1985. The CO agreed to an overhead rate higher than customary because there was no separate allowance for a supervisor on the job. (AF D-13 through D-21; Tr. 266-67.) The hourly amounts that Appellant used in presenting its claim were the figures for eguipment and overhead and profit that had been negotiated with the Forest Service for Modification No. 2 (Tr. 246). In determining the exact figures for each claim, Appellant used its daily logs, time cards, and certified payrolls to arrive at the hours expended on the activities (Tr. 91-92; Appellant's (App.) Exhibit (Ex.) 3, 4).

5. On several occasions during performance of the contract, Appellant claimed entitlement to compensation for extra work (AF F-2, F-6, F-7, F-11, F-14, F-15, F-17 through F-19). The Forest Service explicitly disputed aspects of these claims (AF F-6, F-7; *see* Findings of Fact (FF) 25, 27, *infra*). On September 8, 1986, Appellant presented the Forest Service with an "invoice" requesting compensation for these disputed items of additional work, *i.e.*, tree trimming, Morrell Falls Trailhead delay, Morrell Falls Trailhead unproductive time, patching, blotter material, post removal, and additional cleaning at Big Larch Campground[2] (AF B-9). On September 21, 1986, Appellant requested a CO's decision on the invoice (AF F-20). The CO denied compensation for all the items in a letter dated September 26, 1986. The letter was not designated a CO's final decision. (AF F-21, F-22.) After several meetings at which the parties further discussed payment for the extra work, and which resulted in no resolution, Appellant submitted a claim dated February 2, 1987 (AF C-14).

[1] The contract required the campgrounds to be completed by July 2 (AF D-57). The extra cleaning required on the Big Larch Campground, however, necessitated the extra effort to meet this deadline. *See* Discussion of Additional Cleaning, Big Larch Campground, *infra*.

[2] The invoice requested compensation for other items as well. The Forest Service subsequently paid Appellant for these other items, and they are not at issue here.

©1994, Commerce Clearing House, Inc.

Digitized by Google

The February claim included:[3]

Deleted Brooming	$ 1,082.00
Tree Trimming	1,000.35
Construction of Kellyhump	345.60
Morrell Falls Trailhead Delay	1,177.20
Morrell Falls Trailhead Unproductive Time	5,011.20
Patching, Big Larch Campground	1,113.75
Blotter Material	864.00
Post Removal, Seeley Lake Campground	2,134.62
Additional Cleaning, Big Larch Campground	23,801.38
Dumpster Aprons	845.78
Obstructions in Subgrade	3,072.60
Tolerance	2,953.80
Sorting Garbage from Borrow Pit	927.45
Total	$44,329.73

(AF B-1 through B-8.)

The CO denied compensation for every item in Appellant's claim on December 10, 1987 (AF C-1). Appellant filed its appeal on January 26, 1988 (AF B-1). Although not in chronological order, the Board will address Appellant's claims in the same order Appellant presented them.

DISCUSSION—BACKGROUND, QUANTUM, AND INTEREST

The Government alleges that even if the Board finds entitlement in this case, Appellant has completely failed in its burden to prove damages. The Government cites *Wunderlich Contracting Co. v. United States* [11 CCF ¶ 80,069], 173 Ct. Cl. 180, 351 F.2d 956 (1965) for the proposition that Appellant bears the burden of proof. The Board agrees that Appellant bears the burden of proving quantum, but notes as well that the court in *Wunderlich* stated:

> A claimant need not prove (its) damages with absolute certainty or mathematical exactitude. It is sufficient if [it] furnishes the court with a reasonable basis for computation, even though the result is only approximate.

Wunderlich, 173 Ct. Cl. at 199, 351 F.2d at 968 (citations omitted).

The Government here complains that Appellant's claimed amounts are mere allegations without proof. In Modification No. 2, however, the parties negotiated the hourly rates for equipment to be used for compensating Appellant for extra work, as well as overhead and profit. The Board finds it reasonable to use these figures for any additional work for which the Board finds entitlement. Appellant obtained the hours claimed for the various items from its time cards, daily diaries, and certified payrolls (FF 4). The Board finds this to constitute adequate proof of quantum.

Appellant requested interest on its claims from September 8, 1986. The Board thus addresses when the "claim" was filed for purposes of the CDA. Some of the items included in Appellant's letter of September 8, 1986 were disputed at the time of that letter, *i.e.,* tree trimming, Morrell Falls Trailhead delay, Morrell Falls Trailhead unproductive time, patching, blotter material, post removal, and additional cleaning at Big Larch Campground (FF 5).

Appellant requested a final decision less than 2 weeks later. Notwithstanding the fact that Appellant labeled the communication an "invoice," the Board finds that these disputed items were the subject of a CDA claim on September 21, 1986, when Appellant requested a final decision, because all the elements of a claim were present at that time. *See generallv Transamerica Ins. Corp. v. United States* [38 CCF ¶ 76,374], 973 F.2d 1572 (Fed. Cir. 1992) (the elements of a CDA claim are (1) the contractor has asserted in writing with sufficient specificity a right to additional compensation, (2) the Government has disputed that right, and (3) the contractor has communicated a desire for a CO's decision). The remaining items were not in dispute and made the subject of a written demand for a sum certain until Appellant's letter of February 2, 1987;[4] they became the subject of a CDA claim on that date.

[3] *See* note 2, *supra.*

[4] The claim items from the September 8, 1986 claim were restated in this letter because the CO consistently refused to pay them.

Digitized by Google

FINDINGS OF FACT—DELETED BROOMING AT SEELEY LAKE AND BIG LARCH CAMPGROUNDS

6. *Standard Specifications* Section 410.09 requires final brooming of the entire BST surface after the end of the maintenance (application) period to remove "excess aggregate."

7. Final brooming was not a line item in Appellant's contract (AF D-31, 32).

8. In areas where traffic will proceed at low speed, it is less important to perform a final brooming because low speed traffic is not likely to throw the excess aggregate up on the windshields of following traffic. In addition, final brooming will remove some of the desired aggregate. (Tr. 97.)

9. The weather was wet after the completion of the chip seal application at the Seeley Lake and Big Larch Campgrounds, which resulted in longer than usual curing time. Appellant began to perform final brooming in these areas, but the less-than-complete curing would have resulted in damage to the BST surface if brooming had continued. (Tr. 97.)

10. As stated above (FF 3), the contract was substantially complete on July 2, 1986 (AF E-45). On July 10, 1986, the Forest Service decided to wait until the following Monday, July 14, 1986, to determine whether to delete the final brooming (AF E-46, 47). Appellant was required to keep the broom available until the Forest Service made its decision (Tr. 99-100).

11. The Forest Service determined that excess aggregate was not a problem because of the low-speed traffic, and instructed Appellant not to perform the final brooming. The Forest Service thus deducted $1,082 from Appellant's final payment, the amount it estimated this operation would have cost. (Ex. 1 to App. Complaint; AF C-8.) The Government estimated that this work would take 8 hours (AF C-61). Appellant's subcontractor owned the broom. Appellant paid for this extra possession of the broom. (Tr. 99-100.) Appellant did not provide information on this cost, but was willing to be repaid the amount deducted from the final contract payment.

DISCUSSION—DELETED BROOMING AT SEELEY LAKE AND BIG LARCH CAMPGROUNDS

The Forest Service need not pay for items deleted from the contract. *Porshia Alexander of Am.*, GSBCA No. 9604, 91-1 BCA ¶ 23,657. The contract deduction was thus appropriate. Appellant did not challenge the reasonableness of the amount of the deduction, but rather claimed that no deduction should be allowed because the Forest Service waited 4 days to notify it that the brooming was deleted. In these circumstances, mere delay in deleting the brooming does not negate the appropriateness of the deduction for work not performed.

The Forest Service delay in deleting the brooming, which included a weekend, does not rise to an unreasonable suspension of work for which Appellant should be compensated. This is especially true where wet conditions required the Forest Service to take additional time to make this decision (FF 9). This delay, therefore, does not require compensation. In addition, Appellant's willingness to settle for the amount the Forest Service deducted from the contract price does not provide an adequate measure of the damages Appellant sustained from the suspension.

The claim is denied.

FINDINGS OF FACT—TREE TRIMMING

12. Contract provision C-16(a) stated:

> The Contractor shall preserve and protect all structures, equipment, and vegetation (such as trees, shrubs, and grass) on or adjacent to the work site, which are not to be removed and which do not unreasonably interfere with the work required under this contract. The Contractor shall only remove trees when specifically authorized to do so, and shall avoid damaging vegetation that will remain in place.

(AF D-66.)

13. On May 7, 1986, Appellant expressed concern to the Forest Service that the branches of several trees were hanging over the road in the Seeley Lake Campground and obstructing its equipment. Although the inspector did not necessarily agree that the branches constituted an obstruction, the Forest Service offered to remove the offending branches if Appellant flagged them. (Ex. 3 to App. Complaint; AF E-7.)

14. The Forest Service did not cut the branches, but gave Appellant permission to cut them itself, which it did (Tr. 107-108, 249). Appellant claimed $1,000.35 for trimming the trees, which consisted of 3 hours of grader time, 6 hours of loader time, 6 hours for a saw, and 6 hours of labor. Appellant included the grader time because it had to avoid the branches and then redo those areas (Tr. 108-109).

©1994, Commerce Clearing House, Inc.

Digitized by Google

DISCUSSION—TREE TRIMMING

Trimming the trees was not a performance element or required for performance of this contract; Appellant requested that the trees be trimmed for its convenience to expedite its progress and to protect its equipment.[5] Appellant has not shown that work could not progress in the presence of the tree limbs. The Forest Service was thus not obligated to trim the trees, but gave Appellant permission to trim the trees itself. Because trimming the trees was not necessary for contract performance, the Forest Service is not responsible for these costs.

The claim is denied.

FINDINGS OF FACT—CONSTRUCTION OF KELLYHUMP

15. The contract called for the portion of the road past the new trailhead at Morrell Falls to be obliterated by scarification to a depth of 2 inches and for grass to be planted (AF D-31, D-48; Tr. 111). Appellant placed Forest Service-provided reflectors at the end of the usable road to alert visitors that the old road was no longer to be used. Nevertheless, individuals continued to knock down the reflectors and drive the old road to save a walk of a few hundred yards to the Falls. (Tr. 112.)

16. The inspector believed that some action needed to be taken to prevent the vehicles from destroying the seeding Appellant had done. The inspector requested Appellant to build a "kellyhump" with sides steep enough to prevent four-wheel-drive vehicles from entering the old road. (Tr. 113, 292.) Appellant constructed the kellyhump and requested compensation of $345.60, which included 2 hours for a loader and bulldozer, plus overhead and profit (Tr. 114).

17. The contract provides in Section C-21 - Changes, that the CO may, by written or oral order, make changes within the general scope of the contract for which the contractor will be compensated (AF D-68).

DISCUSSION—CONSTRUCTION OF KELLYHUMP

The Government argues that it is not bound by the inspector's request because only the CO was authorized to make changes to the contract, citing *Morrison-Knudsen Co.*, ASBCA No. 16483, 72-2 BCA ¶ 9733. Although the record indicates that the inspector believed the kellyhump was necessary, Appellant has not shown that the inspector was authorized to make changes to the contract. Appellant failed to show that the CO required Appellant to build the kellyhump, or ratified the inspector's direction.

The claim is denied.

FINDINGS OF FACT—MORRELL FALLS TRAILHEAD DELAY

18. On May 8, 1986, the inspector painted the edges of the designed roadway and parking areas at the Morrell Falls Trailhead. The inspector noted that Appellant did not clear to the clearing flags in the overflow parking area. (AF E-9.)

19. On May 10, 1986, Appellant returned to the trailhead to continue working. The paint and flags did not match the work Appellant had done. Appellant then called the Forest Service to inform it that Appellant could not decipher how it wanted construction to progress. (Tr. 117, 120.)

20. After discussions between Appellant and the CO's Representative (COR) on May 12, 1986, the parties decided to leave the widths essentially as Appellant had constructed them and to allow Appellant to complete the remaining work in the same manner as the work already completed. Appellant alleges that this result was necessary to keep from needlessly scarring the natural setting. (AF E-13; Tr. 117.)

21. Appellant claimed compensation for 4 hours' delay for its grader, roller, and loader as a result of not being able to work on May 10, 1986, a total of $1,177.20 including overhead and profit (Tr. 118).

DISCUSSION—MORRELL FALLS TRAILHEAD DELAY

Appellant's construction at the trailhead did not match the plans (FF 18). After discussing this situation with the Appellant, the Forest Service agreed to allow Appellant's construction to remain. The Forest Service, however, would have been within its rights to insist either that Appellant construct the trailhead to the plans or, if the construction was adequate for its intended purpose, to reduce the contract price. *Granite Constr. v. United States* [36 CCF ¶ 76,290], 962 F.2d 998 (Fed. Cir. 1992), *cert. denied,* 113 S. Ct. 965 (1993). The Forest Service's actions thus saved Appellant addi-

[5] Trees in a national forest accessible for pre-bid observation cannot constitute a differing site condition. *Wilson Constr., Inc.*, AGBCA No. 89-178-1, 92-2 BCA ¶ 24,798; *Schmalz Constr., Ltd.*, AGBCA Nos. 86-207-1, 86-229-1, 91-3 BCA ¶ 24,183.

Digitized by Google

tional work, and Appellant would have encountered the delay caused by the discussion in any event. In such circumstances the Board finds that Appellant is not entitled to further compensation.

This claim is denied.

FINDINGS OF FACT—MORRELL FALLS TRAILHEAD UNPRODUCTIVE TIME

22. The Forest Service issued a Notice to Proceed on October 14, 1985 (AF C-6). The pre-work meeting was held on November 7, 1985. During the pre-work meeting, Appellant indicated that it intended to begin work on the Morrell Falls Trailhead the following week. (AF C-6, C-21; Tr. 63-64, 121-22, 359.) Appellant's daily diaries for November 11 through 14 indicated that Appellant moved into the Morrell Falls site with numerous pieces of equipment, plowed snow to the site, opened the borrow pit, inspected the site, and began clearing and grubbing (AF C-23, C-24, C-25). When Appellant arrived at the site on November 11, 1985, the plans and staking did not match. Appellant was unable to reach Forest Service personnel until November 13, 1985, when it reached the COR at home. (Tr. 122, 327, 360.) Appellant's diaries noted that the "plans don't agree with" the site and that "Mike" (the COR) stated during a telephone call on November 13 that "new drawings make changes in parking loop; he will get plans to us tomorrow" (AF C-23, C-25). Although the Forest Service had modified the plans approximately a week before Appellant arrived on site and started work, the Forest Service did not provide Appellant with the new plans before Appellant started work (Tr. 360). The Forest Service acknowledges that it changed the trailhead layout without Appellant's knowledge (Tr. 327-28).

23. The Forest Service's staking at the site matched the revised plans that the Forest Service provided to Appellant on November 14, 1985. The Forest Service also performed additional staking. Although Appellant was able to perform some work during this period, the equipment it brought to the site was not used productively for a number of hours because the staking and plans did not agree. (AF C-23, C-24, C-25, C-29; Tr. 124.) If the plans and staking had agreed, Appellant would have spent this time placing and compacting the subgrade (Tr. 126).

24. The CO acknowledged that only approximately 1 day's useful work was completed during this period (AF C-9, F-7).

25. Appellant requested compensation for 30 hours of unproductive time on November 25, 1985 (AF F-2).

26. On December 11, 1985, the Forest Service issued Modification No. 1, which formally substituted the plans for the Morrell Falls Trailhead. The modification substituted sheet 10 of the plans and changed the quantities in the line items for clearing and grubbing, excavation placement, borrow excavation, hauling, and seeding associated with the new sheet, for a net increase in price of $475.01. The modification was issued under the authority of the Changes clause and stated:

> Refer to the contract plans;
> Delete sheet 10 and substitute the attached sheet for the original.
> The following items will be changed due to the above change.
>
> | | |
> |---|---|
> | Item 201(01) – increase quantity by (+) 0.27 acre with same unit cost of $2500/acre | (+) 675.00 |
> | Item 203(06)3 – decrease quantity by (–) 2.11 sta. with new unit cost of $335.66/sta. | (+) 1360.01 |
> | Item 203(08)3 – decrease quantity by (–) 272 c.y. with same unit cost of $5.00/c.y. | (–) 1360.00 |
> | Item 205A(02) – decrease quantity by (–) 248 c.y.m. with same unit cost of $0.50/c.y.m. | (–) 124.00 |
> | Item 625(05) – decrease quantity by (–) 0.38 acre with same unit cost of $200/acre | (–) 76.00 |
> | Net changes this modification | (+) 475.01 |

(AF D-22 through 25.) The modification contained a printed statement that it covered the work *to be* performed, prices to be paid, and contract time as shown, but contained no language constituting a release (AF D-24) (emphasis added).

27. The CO and Appellant met to review and discuss Appellant's November 25 claim on January 9, 1986. The CO determined that at most the FS could have contributed to inefficient work by two pieces of Appellant's equipment during the time before Appellant received the new plans. (AF F-6.) On March 14, 1986, the CO formally denied Appellant's November 25 claim. The CO denied any liability for extra costs Appellant incurred during this time. (AF F-7.) As discussed in FF 5, *supra*, the Forest Service and

©1994, Commerce Clearing House, Inc.

Digitized by Google

Appellant continued to discuss and evaluate this claim as a part of Appellant's other claims.

28. Appellant claimed $5,011.20 for this unproductive time: two dump trucks for 10 hours each ($1,080), a dozer and loader each for 16 hours ($2,432), and two pick-up trucks for 20 hours each ($200), plus overhead and profit of 35 percent (Tr. 133).

DISCUSSION—MORRELL FALLS TRAILHEAD UNPRODUCTIVE TIME

The Forest Service changed the layout of the trailhead and prepared new plans before work began on this contract. It knew when Appellant intended to begin work, yet failed to inform Appellant of the changes or provide copies of the new plans before Appellant began work. The Government does not dispute that Appellant's equipment was on the site for the 4 days at issue, and the CO acknowledged that only 1 day of work was completed during this time (FF 24). Absent contradictory information, Appellant was entitled to rely on the plans in the contract. *See United Dominion Indus.,* ASBCA No. 43338, 92-2 BCA ¶ 24,911; *C.F.I. Constr. Co.,* DOTCAB Nos. 1782, 1801, 87-1 BCA ¶ 19,547. Appellant is entitled to compensation for its unproductive time.

The Government claims that Appellant could not have been delayed because the first item of work in this area was to compact and test the subgrade, and Appellant had not begun such work during this time. The changes to the layout of the work, however, and the fact that the stakes did not match the plans in Appellant's possession, indicate that Appellant was, in fact, prevented from starting to compact the subgrade or from doing other than preliminary tasks.

The Government also claims that Modification No. I operated as an accord and satisfaction regarding this issue.[6] Accord and satisfaction is an affirmative defense; as such the Government bears the burden of proof: *Community Heating & Plumbing Co.,* ASBCA Nos. 37981, *et al.,* 92-2 BCA ¶ 24,870, *aff'd,* 987 F.2d 1575 (Fed. Cir. 1993). An accord and satisfaction requires proper subject matter, competent parties, meeting of the minds of the parties, and consideration. *Mil-Spec Contractors, Inc. v. United States* [34 CCF ¶ 75,412], 835 F.2d 865 (Fed. Cir. 1987). This generally means that:

> To reach an accord and satisfaction there must be mutual agreement between the parties in satisfaction of a claim or demand [that) is a bona fide dispute.

Chantilly Constr. Corp., ASBCA No. 24138, 81-1 BCA ¶ 14,863 at 73,397 (citations omitted).

At issue here is whether a meeting of the minds existed, so that the agreement was mutual. The test to be applied on this issue looks not to the parties' subjective intent, but to the objective manifestation of that intent. *Keel & Assoc.,* VABCA No. 3769, 93-3 BCA ¶ 26,044, 1993 WL 135428 (April 28, 1993). Important evidence of the parties' intention is the contract document itself. *American Tel. & Tel. Co., Fed. Sys. Advanced Technologies,* DOTCAB No. 2479, 93-3 BCA ¶ 26,250, 1993 WL 290113 (July 27, 1993). The Forest Service issued Modification No. 1 under the authority of the Changes clause and substituted sheet 10 of the plans; the modification thus covered all the line items of work *changed* by that sheet (FF 26). By its terms the modification covered the new plans and associated changes necessitated thereby, but did not identify work Appellant performed attempting to begin construction under the original plans prior to receiving the new plans. *Chantilly Constr. Corp.,* ASBCA No. 24138 81-1 BCA ¶ 14,863 at 73,397. There was no reference in the modification to delay or wasted costs. *See Westerhold v. United States,* 28 Fed. Cl. 172 (1993).

Although the language of the modification itself serves an important evidentiary function, the focus of the analysis remains the intent of the parties. *NRM Corp. v. Hercules, Inc.,* 758 F.2d 676 (D.C. Cir. 1985). Here, a strong indication of the parties' intent is reflected by the fact that Appellant continued to press the claim, and the Forest Service continued to consider it, after execution of the modification (FF 27). This constitutes evidence that the parties did not intend the modification to satisfy Appellant's claim. *Community Heating & Plumbing Co. v. Kelso* [38 CCF ¶ 76,488], 987 F.2d 1575 (Fed. Cir. 1993); *Western Commerce Corp.,*

[6] The Board notes that its Rule 6(b) requires affirmative defenses to be pleaded in the Government's Answer. This was not done in this case. It would thus be within the Board's discretion to refuse to consider this late argument. *Solar Foam Insulation,* ASBCA No. 46278, 94-1 BCA 26,288, 1993 WL 306767 (August 6, 1993); *Eagle Contracting, Inc.,* AGBCA No. 88-225-1, 92-3 BCA ¶ 26,018, *reconsideration denied,* AGBCA No. 92-197-R, 93-1 BCA ¶ 25,320.

Digitized by Google

AGBCA Nos. 85-146-1, 85-147-1, 87-2 BCA ¶ 19,914.

In this appeal the Board is faced with evidence that the parties did not intend the modification to cover costs associated with work prior to issuing the new plans, and a dearth of evidence that they did so intend. In such circumstances, the Government's after-the-fact testimony that it intended the modification to cover wasted costs is unavailing. The Board finds that the modification did not act as an accord and satisfaction.

Appellant's claim essentially requests compensation for 2 days' wasted effort for several pieces of equipment based on agreed equipment rates and job records (FF 4). The Board finds this reasonable. The claim is thus granted in the amount of $5,011.20.

FINDINGS OF FACT—PATCHING, BIG LARCH CAMPGROUND

29. Note 2 on the Typical Sections and Notes for the Big Larch Campground stated in part:

> All holes in the existing BST surface shall be patched with acceptable asphaltic material and rolled with a smooth-wheeled roller or a two-axle, power-patching roller.

(AF D-113.)

30. The contract specified that the Big Larch Campground could be closed to the public for up to a maximum of 3 days, but not on successive weekends (AF D-57; Tr. 208). The contract's PERMITS AND RESPONSIBILITIES clause stated that "[t]he Contractor shall also be responsible for all materials delivered and work performed until completion and acceptance of the entire work" (AF D-65).

31. On May 16, 1986, Appellant patched holes in the Big Larch Campground. At the end of this operation, the inspector did not see any holes remaining to be patched. (AF E-19.)

32. Appellant alleges that the Forest Service required it to patch additional holes on June 23, 1986. Appellant complains that the presence of the public between its patching operation on May 16 and June 23 resulted in additional damage to the surface. (Tr. 135, 210.) Appellant was aware that the contract specified that the campground could not be closed for the time it took to complete the project (Tr. 211). Appellant claimed $1,113.75 for the additional patching, including overhead and profit (Tr. 138).

DISCUSSION—PATCHING, BIG LARCH CAMPGROUND

The contract is clear that patching was required prior to applying the BST surface. The contract is likewise clear that the campground would remain open to the public during most of Appellant's performance; it was not reasonable for Appellant to expect that the public would not use the campground while it was open. There is nothing in the record to suggest that the Forest Service directed the timing of the patching, *i.e.*, told Appellant to patch the campground more than a month prior to the application of the BST. Under the terms of the contract (FF 30), Appellant was responsible for the work until final acceptance, which occurred on July 10, 1986 (FF 3). In such circumstances, there is simply no basis on which to conclude that the second round of patching was extra work for which Appellant should be compensated.

This claim is denied.

FINDINGS OF FACT—BLOTTER MATERIAL

33. The *Standard Specifications* do not contemplate the application of blotter material in a BST project. Blotter material (sand) is contained in a separate section of the *Standard Specifications*, Section 408—Prime Coat; such material is used to cover unabsorbed bituminous material. Blotter material is considered a pay item under Section 408. The *Standard Specifications* for BST, Section 410.07, require at least 5 days for curing of the prime coat (surface preparation treatment) before application of the BST surface, unless a shorter period is approved.

34. Although not clear from the record, it appears that Appellant placed the prime coat on the Seeley Lake Campground on June 22, 1986 (AF E-32).

35. The inspector's diary for June 25, 1986 indicated that the Seeley Lake Campground needed blotter material (AF E-34).

36. On June 26, 1986, Appellant placed sand on the Seeley Lake Campground (AF E-35). The inspector's diary for June 26 indicated that Appellant intended to apply the BST on that date but ran into problems with the refinery delivering the oil to the site (AF E-35). Appellant testified that the Forest Service instructed it to place blotter material, but did not identify the Forest Service employee who gave the instruction (Tr. 140).

37. Appellant claimed $864 for placing the blotter material, including equipment, sand, labor, and overhead and profit (Tr. 141).

©1994, Commerce Clearing House, Inc.

Digitized by Google

DISCUSSION—BLOTTER MATERIAL

Five days for curing the prime coat are necessary before application of a BST surface (FF 33). The record indicates that Appellant wanted to place the BST surface 4 days after application of the prime coat. In order to allow Appellant to do so, it appears the inspector required application of sand to cover areas of prime coat that had not completely cured. It thus appears that the Forest Service allowed Appellant to apply sand in order to expedite its progress, rather than required it to apply sand not called for in the contract. Because application of the sand was for Appellant's convenience rather than extra work required by the Forest Service, the Forest Service is not responsible for these costs.

The claim is denied.

FINDINGS OF FACT—POST REMOVAL, SEELEY LAKE CAMPGROUND

38. The Typical Sections and Notes for the Seeley Lake Campground showed three roadway widths: 24 feet with total width including shoulders of 26 feet, 16 feet with a total width of 18 feet, and 12 feet with a total width of 14 feet (AF D-115). Sheet 5 of the plans showed the road in sections B to E and G to H to have a total width of 14 feet including shoulders (AF D-114, 115).

39. There were concrete posts lining many of the roads in the Seeley Lake Campground that were not shown on the plans. The fact that the posts existed, however, was obvious from a visual inspection. Nothing in Appellant's site visit, or in its preliminary work in the campground, alerted it to the fact that the posts might be closer together than the 14-foot road width indicated on the plans. (Tr. 143, 255.) Appellant did not include in its bid any amount for removing the posts (Tr. 146).

40. Appellant's chipper would not fit between the posts in road sections B to E and G to H, where in some cases the posts were only 12 feet apart (Tr. 144-45). The inspector's daily diary for June 27, 1986 indicated that a delay was caused by barrier posts being too close together to allow the chip box to pass between them, and that the Appellant used a backhoe to pull them out (AF E-36).

41. Appellant claimed $2,134.62 for the extra work and delay resulting from this problem, including backhoe for 8 hours, 18 hours of labor, distributor for 2 hours, chipper and rollers for 1 1/2 hours, chockers and slings at a total price of $85, and 35 percent overhead and profit (Tr. 147).

DISCUSSION—POST REMOVAL, SEELEY LAKE CAMPGROUND

The plans showed that the narrowest roads in the Seeley Lake Campground were 14 feet wide, including shoulders. Appellant should have been able to rely on this representation in preparing its bid without conducting its own measurements. *Simpson Constr. Co.*, VABCA No. 3176, 91-1 BCA ¶ 23,630 at 118,391.

The posts in sections B to E and G to H were not 14 feet apart; some were as close together as 12 feet. In its site visit and in its preliminary work on this campground, Appellant did not notice that the posts were so close together (FF 39). It was not until Appellant attempted to move the chipper over the roads that the problem became apparent. This condition thus escaped Appellant's reasonable attention.

Appellant is entitled to compensation for the extra work and delay caused by the errors in the plans regarding the road width. Appellant claimed 8 hours for a backhoe and 18 hours of labor to conduct this work, equipment, delay time for the paving equipment of 1 1/2 and 2 hours, and overhead and profit based on agreed equipment rates and job records (FF 4). These costs appear reasonable. The claim is granted in the amount of $2,134.62.

FINDINGS OF FACT—ADDITIONAL CLEANING, BIG LARCH CAMPGROUND

42. The contract required that all surfaces that had previously received BST treatment were to receive another BST surface over the full width of the previous treatment (AF D-113). Before application of the BST, a clean surface must be prepared to allow the chip seal treatment to adhere to it (Tr. 26, 185). The *Standard Specifications*, Section 410.07, require that "loose dirt and other objectionable material shall be removed from the existing surface" before application of the BST. The customary method of preparing for a chip seal job is to blade,[7] broom,

[7] Appellant's expert testified, however, that in his 45 years of experience he has never needed to use a blade to prepare a surface for a chip seal project (Tr. 19).

Digitized by Google

sweep, and wash[8] the surface (Nicholson Dep. at 18), or to use a blower on the surface (Tr. 15). If the material cannot be removed with a power broom, it provides a sufficient surface for a chip seal application (Nicholson Dep. at 15, 22, 44, 46, 64, 65). A surface requiring power washing prior to being acceptable for chip seal treatment in this area was unheard of and unexpected (Nicholson Dep. at 25, 27, 28; Tr. 21, 23, 24, 70, 351).

43. The *Standard Specifications* for BST, Section 410, require the same equipment as in Section 409.07, Seal Coat, *i.e.*, a distributor for heating and applying bituminous material; a rotary power broom and/or blower, drag broom, or blade-mounted broom; a minimum of one steel-wheel roller and one pneumatic-tire roller (or two pneumatic-tire rollers where approved); and self-propelled aggregate spreaders.

44. Appellant's site visit consisted of a drive-through of the area, with stops to check conditions more closely outside the vehicle by kicking and scraping (Tr. 56-58, 188-89). Appellant noticed nothing that would pose an unusual problem (Tr. 58-59, 69, 192-93). The sole other bidder on this job did not recall that the site appeared to be unusual for this area, and believed that only blading or brooming would have been necessary to prepare the surface (Nicholson Dep. at 14, 19, 33, 36). The color of the areas where problems occurred was very similar to those where no problems occurred (Tr. 350).

45. On June 25, 1986, Appellant began to broom the Big Larch Campground; the Forest Service inspector noted that the broom was "not doing job" (AF E-34). From June 25 through July 2, 1986, the inspector's daily diaries indicated that Appellant was cleaning this area, and that the cleaning was not to the COR or inspector's satisfaction (AF E-34 through 41). Appellant broomed the surface numerous times in attempting to prepare the surface to the satisfaction of the Forest Service (Tr. 75, 87, 353). The result of the brooming was a "dusting" effect (Tr. 193). Appellant also used a blade, but even this was insufficient to achieve a surface acceptable to the Forest Service (Tr. 80, 354). Appellant eventually used high-pressure washers to prepare the surface (Tr. 84, 357). Although the COR did not specifically require use of high-pressure washing, he would not approve the surface until Appellant used this procedure (Tr. 319, 357-58). The blading and pressure washing removed portions of the previous BST layer (Tr. 83, 86). Appellant informed the Forest Service that such high-pressure washing was additional work for which it would request compensation (Tr. 85).

46. Appellant agreed that the surface immediately after initial brooming would not have been conducive to adhesion of the specified oil emulsion (Tr. 74, 195). Use of another grade of emulsion than that specified, or application of a prime coat before the emulsion, however, might have produced satisfactory results (Tr. 21, 38, 71). The COR testified that he did not consider any other solution to the problem because it was not his responsibility to direct Appellant's work (Tr. 355). The COR on this project had no previous experience on a BST job applied over an existing BST surface (Tr. 344).

47. Appellant claimed $23,801.38 ($17,630.65 plus $6,170.73 overhead and profit) as compensation for the extra work required to clean the surface. As discussed above (FF 4, *supra*), the hours were taken from diaries, time cards, and payroll records; the hourly rates were those negotiated by the parties. Appellant claimed the following time:

Equipment	Hours
Backhoe	26
Dump truck	12
Labor	145.5
Supervisor	71
Foreman	17
Broom	21
Water trucks	78
Broom operator	21
Grader	11.5
Pumper	74
Pickups	120
Lowboy	3.5

(AF B-6, 7.) The amount Appellant claimed for the broom and broom operator was $1,790.25. The supervisor, for whom Appellant claimed 71 hours at $2,662.50, was Appellant's president (AF B-6; App. Ex. 3).

DISCUSSION—ADDITIONAL CLEANING, BIG LARCH CAMPGROUND

Prior to application of the new BST layer, the contract required Appellant to clean the old BST of loose dirt and other objectionable material. The contract did not require Appellant to remove the existing BST layer

[8] "Wash" in this context means using a water truck with nozzles like a street sweeper, rather than using water under high pressure (Nicholson Deposition (Dep.) at 18). Mr. Nicholson was the sole other bidder on this contract, and had performed "dozens" of chip seal jobs (Nicholson Dep. at 6).

itself. (FF 42.) In using the high-pressure washing, however, Appellant removed a portion of the existing BST surface (FF 45). This was extra work not required by the contract and constituted a constructive change, *i.e.,* performance ordered by the Government that was beyond the minimum standards demanded by the terms of the contract. *OFEGRO,* HUDBCA Nos. 88-3410-C7, 89-4469-C7, 91-3 BCA ¶ 24,206.

Cleaning down into the existing BST layer was not required by the contract's requirement to remove objectionable material. The contract required cleaning sufficient to allow adhesion of the new BST application. Testimony of an individual well experienced in this business indicated that if surface material cannot be removed from an existing BST surface by brooming, the surface is suitable for application of another BST surface (FF 42).

Although the Government claims that no constructive change occurred because the COR never "ordered" the extra work, the COR's refusal to approve the surface for application of the new BST until Appellant used high-pressure washing in effect constituted direction to use that method. A direct order is not necessary. *See Al Johnson Constr. Co. v. United States* [36 CCF ¶ 75,850], 20 Cl. Ct. 184 (1990). Testimony of individuals experienced in paving work in the Missoula area uniformly indicated that the necessity of using power washing equipment to remove excess material from a BST surface was unheard of (FF 42). The imposition of this standard for cleaning the surface, which was not required by the contract or normally used on jobs of similar character, entitles the Appellant to compensation. *Robert E. Moore Constr.,* AGBCA No. 85-262-1, 90-2 BCA ¶ 22,803.

Because the Board finds Appellant entitled to an equitable adjustment for the constructive change to the contract, we need not discuss whether a differing site condition existed as claimed by Appellant.

The Government alleges that Appellant should not be compensated for this work because it could have performed the work in a more efficient manner. The Government alleges, for example, that use of a small "bobcat" might have been more efficient than use of a blade to scrape the surface. The Government presented no evidence, however, that this would have resulted in lower cost. The record shows that Appellant worked essentially night and day to complete this cleaning so that the campground could be open for the July 4 holiday. While circumstances might exist where a contractor's recovery is limited because of inefficient work, the Board does not believe this is such a situation.[9]

The Government also argues that some of Appellant's employees were performing tasks in other locations at the same time as the claimed work was being performed. This, alleges the Government, indicates that Appellant's calculations are inaccurate. Contrary to the Government's allegation, Appellant did not claim that all its employees were working on the cleaning during the period from June 26 through July 2, 1986, but rather stated that all its claimed costs during this time related to this work. The fact that employees were working in more than one location does not negate the claimed work.

The damages claimed by Appellant, taken from time records and based on agreed hourly rates (FF 4) appear reasonable. The Board finds, however, that deductions are appropriate from Appellant's damage calculation. The record shows that Appellant should have expected to broom the surface prior to placing the new BST surface. The record is not clear that the brooming claimed by Appellant was other than that required by the contract. The Board thus deducts $1,790.25 from Appellant's claimed figure. The Board also believes that Appellant's president, who was acting as supervisor, would have been on the site even if no problem with cleaning had occurred. Appellant appears to have claimed all the time its president was on site during this time. The Board finds this inappropriate, as a supervisor's cost is in the nature of overhead. *See Jack L. Olsen, Inc.,* AGBCA No. 87-345-1, 93-2 BCA ¶ 25,767. In addition, the overhead and profit rate of 35 percent was determined in part by the fact that it was

[9] The Government argues, as well, that the Site Investigations and Conditions Affecting the Work clause precludes Appellant's recovery. This clause states that, in bidding, Appellant represents that it has taken steps reasonably necessary to ascertain the nature and location of the work. This type of broad exculpatory clause does not preclude recovery where a contractor has demonstrated entitlement to compensation for changed work. *Foster Constr. v. United States* [15 CCF ¶ 84,163], 193 Ct. Cl. 587, 435 F.2d 873 (1970); *Blaze Constr. Co.,* IBCA No. 2863, 91-3 BCA ¶ 24,071. In addition, Appellant's investigation of the nature and location of the work would not have alerted it to the possibility of being required to perform additional work.

Digitized by Google

intended to cover the cost of supervision (FF 4). The supervisor's time in the amount of $2,662.50 is deducted in its entirety. This claim is thus granted in the amount of $17,790.17 ($17,630.65 − $4,452.75 = $13,177.90 × .35 overhead and profit).

FINDINGS OF FACT—DUMPSTER APRONS

48. Refuse dumpsters in the Seeley Lake Campground sat on concrete pads that were attached to the roadways with sloping asphalt aprons (AF E-17; Tr. 150). The dumpster aprons were apparent on viewing the site (Government Ex. 3).

49. Note 1 of the Typical Sections and Notes for the Seeley Lake Campground stated that the existing asphalt surfaces were to be scarified to a depth of 2 inches (AF D-115; Tr. 145). Appellant was concerned that scarification of the edges of the dumpster aprons might result in pulling them out of place (AF E-7), which in fact occurred with one dumpster apron on May 12, 1986 (AF E-12).

50. The Forest Service and Appellant agreed that the aprons would remain in place; Appellant thus took extra time to avoid the edges of the dumpster aprons (Tr. 151-52). Appellant claimed $845.78 for this extra work (Tr. 156).

DISCUSSION—DUMPSTER APRONS

The dumpster aprons were apparent on inspection of the campground; Appellant should have been aware of the aprons' existence and have included in its bid a sufficient amount to complete this work. The dumpster aprons did not constitute a differing site condition or result in work not contained in the contract.

The claim is denied.

FINDINGS OF FACT—OBSTRUCTIONS IN SUBGRADE

51. Appellant claims it encountered several stumps and a wire in the subgrade in the Seeley Lake Campground and Morrell Falls Trailhead, and that these obstructions caused Appellant to spend extra time on the work (Tr. 156-59). The inspector's diary indicated that Appellant dug up a light-duty wire at the entrance to the Seeley Lake Campground on May 7, 1986 (AF E-7). Appellant claims that these obstructions were discussed with the CO and an agreement was reached to work around them on May 12, 1986. Appellant admits that some of the stumps at the Morrell Falls Trailhead were apparent on its site visit. (Tr. 157.) Appellant did not submit its daily diaries supporting these claimed problems.

52. The CO's Inspection Report for May 12, 1986, contains the notation that "downed logs" existed in the area to be filled at the Big Larch Campground, and that Appellant would provide a price for removing the logs and hauling them to the dump. The CO also noted that the thin wire torn out at the Seeley Lake Campground should not be replaced. (AF E-43, 44.) The record is inadequate to determine whether Appellant provided a price for moving logs to the dump and whether the moving took place.

53. Contract Modification No. 1 included an increase in clearing and grubbing in the Morrell Falls Trailhead, which, under the contract included dealing with stumps (AF D-24, 31).

54. Appellant claimed $3,072.60 for extra work required to deal with the underground obstructions (Tr. 159).

DISCUSSION—OBSTRUCTIONS IN SUBGRADE

Although Appellant claims that it encountered numerous obstructions, the record does not support this conclusion. Appellant failed to prove snagging one wire would result in a delay to the progress of the work. The Board finds, as well, that Appellant was compensated by Modification No. 1 for the stumps apparent at the site visit at the Morrell Falls Trailhead. The record is simply inadequate for the Board to conclude that further obstructions existed that caused delays or extra work. Appellant has thus failed in its burden to demonstrate entitlement to compensation for obstructions.

The claim is denied.

FINDINGS OF FACT—TOLERANCE

55. Section 203.16 of the *Standard Specifications,* Construction Tolerances, contains six levels of road tolerance labeled A through F, with A being the strictest. This section states that "[t]he tolerance class shall be *as* SHOWN ON THE DRAWINGS" (emphasis added).

56. Contract Section E-5, Conformity with Drawings and Specifications, stated:

> Unless working tolerances are specified, all work performed and materials furnished shall be in a reasonably close conformity with lines, grades, cross sections, dimensions, and material requirements shown on the drawings, indicated in the

©1994, Commerce Clearing House, Inc.
Digitized by Google

specifications or designated on the ground. "Reasonably close conformity" is compliance with reasonable and customary manufacturing and construction tolerances.

(AF D-95.)

57. The contract drawings contained no tolerance class (AF D-110 through D-122). Appellant did not notice this fact until after the Forest Service awarded the contract (Tr. 221).

58. Appellant requested a tolerance class from the Forest Service because the tolerance determines the effort a contractor must expend and thus is a cost factor (Tr. 162-63). Appellant claims the absence of a tolerance in this contract forced it to expend extra effort to reach a closer tolerance than might have been required (AF 164).

59. At the Morrell Falls Trailhead, the Forest Service approved the road although it deviated from the stakes by as much as 3 feet (*see* Morrell Falls Trailhead Delay Claim, *supra*) (Tr. 161-62).

60. Appellant claimed $2,953.80 as compensation for the extra work expended by not having a tolerance class for this job (Tr. 165).

DISCUSSION—TOLERANCE

The *Standard Specifications* do not require a tolerance class, but state that if one is included it shall be as shown on the drawings. The contract contemplated that tolerances would not be specified, and thus required "reasonably close conformity" with the drawings. The Forest Service was not required to provide Appellant with a tolerance.

Although Appellant alleged that it was necessary to work to a closer tolerance than might have been required, the one instance cited by Appellant demonstrated that the Forest Service accepted a road meeting the most lenient tolerance (FF 59). The contract's lack of a tolerance did not require Appellant to expend extra effort in constructing the roads, and thus caused Appellant no damage. In addition, Appellant could not have relied on the lack of tolerance class when preparing its bid, because Appellant was unaware of this fact until after award.[10]

This claim is denied.

FINDINGS OF FACT—SORTING GARBAGE FROM BORROW PIT

61. The borrow source designated for this contract was the "Old Dump Pit" (AF D-121). Forest Service personnel referred to this pit as the "Old Dump Pit" (AF E-13). People in the area know this area as the old dump (Tr. 222).

62. Appellant admits that it was aware that the pit was a former dump because it had used this pit when it originally built these roads in 1979, and had encountered trash at that time. Appellant claims that it encountered garbage in the pit that it did not expect even after its previous experience with this pit and its site investigation. (Tr. 166-67, 225.)

63. Appellant claimed $927.45 for the additional time required to sort the trash from the pit (Tr. 170).

DISCUSSION—SORTING GARBAGE FROM BORROW PIT

With a name such as the "Old Dump Pit," it was unreasonable for Appellant to expect not to find trash in this borrow source. This is especially so where Appellant had prior experience finding trash in the same pit.

This claim is denied.

DECISION

The claim for Morrell Falls Trailhead unproductive time is granted in the amount of $5,011.20; the claim for post removal on the Seeley Lake Campground is granted in the amount of $2,134.62; and the claim for additional cleaning at the Big Larch Campground is granted in the amount of $17,790.17, with interest to run on all three claims from September 21, 1986. The remainder of the claims are denied.

In its brief Appellant also requested payment of attorneys' fees. The award of attorneys' fees and expenses requires specific statutory authority such as the Equal Access to Justice Act (EAJA), 5 U.S.C. § 504, and a separate application by a prevailing party. EAJA, and USDA's implementing regulations at 7 C.F.R. § § 1.180 *et seq.*, prescribe requirements for recovery, one of which is that the decision must be final. 7 C.F.R.

[10] In any event, had Appellant been aware of the lack of a specified tolerance, under Appellant's theory it would have submitted a higher bid.

Digitized by Google

§ 1.193(a). This decision is not yet final; the claim is dismissed as premature. *See Baldwin/Thomas Designers and Planners*, AGBCA No. 92-103-3, 92-2 BCA ¶ 24,787.

[¶ 26,385] **Delfour, Inc.**

VABCA Nos. 3803, 3832, 3897, 3901, October 6, 1993. Contract No. V523C-1050.

Labor—Davis Bacon Act—Withheld Funds.—A construction contractor's assertion that the contracting officer had no right to withhold payments otherwise due the contractor against its liability for payment of back wages until a court of competent jurisdiction had found the contractor to have violated wage rate requirements was without merit, because the contract provided that the contracting officer could, upon written request of the Department of Labor, withhold amounts necessary to pay back wages. The contractor's position was that it did not violate the Davis-Bacon wage requirements. The board was without jurisdiction to determine whether the contractor had paid the proper wages.

Labor—Disputes Concerning Labor Standards—Default Terminations.—Although the board did not have jurisdiction over a contractor's assertion that it had not violated the Davis-Bacon wage requirements, the board did have jurisdiction over the contractor's assertion that the government breached the contract by terminating the contract for labor standards violations, because at the heart of the termination of a contract for default are the parties' contractual rights and obligations, not the enforcement or administration of wage provisions. Further, even though the Disputes Concerning Labor Standards clause provides that resolution of disputes concerning labor standards will be under Labor Department procedures and not under the Disputes clause, the Contract Termination-Debarment clause simply provides that a breach of the labor standards provision may be ground for termination of the contract. An appeal of a default termination of a contract for violation of labor provisions is not a dispute concerning labor standards; therefore, the issue of the agency's default termination of the contractor by reason of the contractor's alleged labor violations was properly before the board under both the Contract Disputes Act and the Disputes clause.

Contract Disputes, Claims—Quantum—Sum Certain.—Although the board had jurisdiction over portions of a contractor's appeal that were defenses to the agency's default termination claim, it was without jurisdiction over portions of the appeal concerning the contractor's entitlement to monetary judgments for delay, changes, and breach of contract, because the contractor's claim did not include a sum certain. The contractor's first letter demanded a final decision on a litany of eight broad categories of government failures and contained no monetary claims. Three days later, the contracting officer's response to the contractor's letter requested more specificity of the contractor's claims in order to permit him to render a final decision. The contractor responded to the contracting officer's request by referring him to the entire contract correspondence file while maintaining its willingness to meet for the purposes of resolving the problems it had identified.

Contract Disputes, Claims—Statement Adequacy—Termination Claim.—Although the board did not have jurisdiction over a contractor's initial assertion of its claim on the ground that the claim lacked a sum certain and was not certified in accordance with the Contract Disputes Act, the board did have jurisdiction over the contractor's termination claim because it met the four jurisdictional prerequisites to a valid claim. The contractor had placed the agency on clear notice that it believed the agency to be in breach of contract the contractor took the extreme measure of threatening to walking off the project and the agency had taken the equally extreme measure of terminating the contract for default. The contractor's subsequent submission of a certified claim for amount due it resulting from the alleged breach of contract provided the agency with adequate notice of both the basis and amount of the contractor's claim and obligated the contracting officer to respond to the claim as provided for in the CDA. The board rejected a contention by the agency that the termination claim was nothing more than a premature termination settlement proposal under the Termination for Convenience clause.

For the appellant: Gaetano J. DeLuca, Hingham, Massachusetts. For the government: Paul A. Embroski, Office of General Counsel, Washington, D.C., Department of Veterans Affairs, Phillipa L. Anderson, Deputy Assistant General Counsel, and William E. Thomas Jr. Assistant General Counsel, of Counsel.

Before KREMPASKY, ANDERS, and PULLARA, Administrative Judges.

KREMPASKY, Administrative Judge: Respondent, Department of Veterans Affairs ("VA" or "Government") has filed a Motion to Dismiss Counts III and IV of Appellant's, Delfour, Inc. ("Delfour"), nine count Complaint in VABCA No. 3832 for lack of jurisdiction. In addition, the Board, *sua sponte*, on July 15, 1993, ordered Delfour to show cause why the quantum portion of Counts I, VII and VIII and all of Counts II, III, IV, and V of its Complaint should not be dismissed for lack of jurisdiction.

On May 24, 1993, the Board received and docketed as VABCA No. 3832, Delfour's appeal from the VA's May 18, 1993, termination of Contract No. V523C-1050 for default. On June 2, 1993, the Board received Delfour's Complaint in VABCA No. 3832; the VA's Answer and Motion to Dismiss were both filed on July 9, 1993. Delfour responded to the Motion to Dismiss and the Order to Show Cause on August 10, 1993. The VA replied to the Appellant's responses to the Motion and Order on August 30, 1993.

By Order dated July 15, 1993, the Board consolidated VABCA No. 3832, for the purpose of further processing, with the appeal in VABCA No. 3803 and suspended all proceedings in the two appeals except for the parties' responses to the Motion to Dismiss and Order to Show Cause. The appeal in VABCA No. 3803, docketed on March 9, 1993, is from a Contracting Officer's final decision denying Delfour's $15,109 equitable adjustment claim relating to flooring installation under Contract No. V523C-1050.

On September 29, 1993, the Board received and docketed five appeals of the CO's deemed denial of Delfour's monetary claims relating to the VA's alleged breach of contract. These appeals were docketed as VABCA Nos. 3897-3901. By Order, dated October 1, 1993, the Board consolidated these appeals with the appeals in VABCA Nos. 3803 and 3832 for further processing and incorporated the relevant counts of the Complaint and Answer in VABCA No. 3832 as the pleadings in those appeals.

Appellant maintains that we have jurisdiction over the entirety of its Complaint in VABCA No. 3832 and over VABCA Nos. 3897-3901 since Delfour is simply responding to the Government's default claim. The VA avers that we have jurisdiction only over the portions of the Complaint in VABCA-3832 dealing with the propriety of the termination for default.

The record before the Board consists of the Complaint and Answer in VABCA No. 3832 (cited as "Cmplnt. Cnt. __, ¶__" or "Answer. Cnt. __ ¶__"); the Appeal File (cited as "R4, tab __") consisting of 252 exhibits (Exhibits 1-180 were submitted by the Government and Exhibits 181-252 were submitted by Delfour); the VA's Motion to Dismiss; Delfour's Response to the Motion to Dismiss; Delfour's Response to the Order to Show Cause; Government's reply to Appellant's Response to the Motion to Dismiss; and, the Government's Response to the Order to Show Cause. For the purposes of this opinion, we will consider the applicable portions of the Complaint and the entire Appeal File submitted for VABCA No. 3832 as the record in VABCA Nos. 3897-3901. References to the Federal Acquisition Regulations ("FAR") and the Department of Veterans Affairs Acquisition Regulations ("VAAR"), refer, respectively, to the acquisition regulations published in 48 C.F.R. Chapters 1 and 8.

FINDINGS OF FACT FOR THE PURPOSES OF RULING ON THE JURISDICTION OF THE BOARD

The following findings of fact are made for the purposes of this decision only.

Contract No. V523C-1050 ("Contract") for the renovation of the animal facility at the VA Medical Center, Boston, Massachusetts ("VAMC Boston") was awarded to Delfour on October 5, 1992. The Contract was a firm fixed-price construction contract with an initial Contract price of $294,928. (R4, tab 4)

The Notice to Proceed with the construction was received by Delfour on October 23, 1992; the Contract provided for completion 300 days after this date. Thus, the initial Contract completion date was August 19, 1993. (R4, tab 5).

The Contract contained the usual provisions found in VA construction contracts including the following clauses:

WITHHOLDING OF FUNDS, FAR 52.222-7 (FEB 1988);

Digitized by Google

CONTRACT TERMINATION-DEBARMENT, FAR 52.222-12 (FEB 1988);

DISPUTES CONCERNING LABOR STANDARDS, FAR 52.222-14 (FEB 1988);

DISPUTES (ALTERNATE I), FAR 52.233-1 (DEC 1991);

TERMINATION FOR THE CONVENIENCE OF THE GOVERNMENT (FIXED-PRICE) (ALTERNATE I), FAR 52.249-2 (APR 1984)

DEFAULT (FIXED-PRICE CONSTRUCTION), FAR 52.249-10 (APR 1984). (R4, tab 180)

On March 26, 1993, the Regional Administrator of the U.S. Department of Labor Employment Standards Administration, Wage and Hour Division ("DOL") notified the VA Contracting Officer ("CO") that it was investigating whether Delfour's wage payments complied with the applicable requirements of the *Davis-Bacon Act*. In light of this investigation, DOL requested that the CO withhold $12,840 from payments due Delfour under the Contract "until the matter of back wages is resolved." DOL increased its withholding request to $30,877 on May 13, 1993. (R4, tabs 120, 165)

On March 31, 1993, Delfour submitted its Payment Requisition ("PR") No. 4 in the amount of $8,875. The CO, in an April 6, 1993, letter, cited the DOL's withholding request and informed Delfour that the entire amount of PR No. 4 was being withheld. Delfour's response, by letter dated April 15, 1993, requested the payment of the full amount requested in PR No. 4 and stated that it would not proceed with the work until such payment was made. (R4, tabs 121, 122, 133)

Responding to Delfour's letter, the CO issued a Cure Notice on April 19, 1993. (R4, tab 136) Delfour replied to the Cure Notice with an April 26, 1993, letter stating that Delfour would proceed with the work if the VA would release certain areas of the project site for construction. (R4, tab 143)

In an April 27, 1993, letter, entitled: "Resolution of Problems, Contract Administration, Request for a Written Decision", Delfour stated, in pertinent part, as follows:

> With reference to the above captioned project, subject and pursuant to the Contract Disputes Clause, Title 41 USCA Section, 601-613, inclusive, the contractor, Delfour, Inc., herein requests a written decision from the contracting officer in regards to the following:
>
> 1. government's failure to process paperwork;
> 2. government's failure to approve shop drawings and/or submittals;
> 3. government's failure to turn over work areas;
> 4. government's failure to process change order requests;
> 5. government's failure to answer and attempt to resolve and/or respond to ongoing job problems;
> 6. government's failure to timely process payment requests;
> 7. government's issuance of defective and/or incomplete specifications;
> 8. government's overall administration of the contract.

(R4, tab 145)

The CO responded to this request for final decision on April 30 as follows:

> Acknowledgment is made of your request for a written decision from the Contracting Officer in regards to the various ways the Government has allegedly failed to proceed administratively or otherwise. To assist in generating a decision, please provide the Contracting Office with specific supporting documentation so that the issues may be properly addressed. (R4, tab 150)

On the same day, responding to the CO's request, Delfour suggested that the CO review all of Delfour's Contract correspondence to ascertain the specifics of its claim. Delfour concluded this letter by stating its willingness to meet to resolve the problems outlined in its correspondence.

(R4, tab 151)

Delfour submitted PR No. 5 on May 3, 1993, in the amount of $8,000. On May 13, 1993, the CO informed Delfour that the validity of $7,000 of PR No. 5 was being questioned and that payment of the remaining $1,000, acknowledged by the VA as otherwise being due, was being withheld pursuant to the DOL request. (R4, tabs 152, 166)

By letter, dated May 13, 1993, Delfour informed the CO that it considered the VA to be in breach of the Contract because of the VA's failure to release areas on the 2nd floor of the building for Delfour's performance, the VA's failure to process Delfour's pay requisitions, change order requests, shop drawings, and Contract submittals in a timely manner. Because of these alleged breaches of contract, Delfour asserted that it had no choice but to leave the project. In its letter, Delfour stated that it was "tabulat-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ing" its costs resulting from the Government's breach and that it would submit those costs for payment upon their calculation. (R4, tab 169)

In a letter dated May 17, 1993, entitled: "Monies due Delfour," Delfour, referencing its May 13, 1993, letter, detailed four categories of claims for which it was owed $171,778.27. The four categories included: Contract Balance, Work and Materials Not Paid For, Change Order Work, and Delays. The May 17 letter neither demanded a CO's final decision nor was it accompanied by a *Contract Disputes Act (CDA)* claim certification. (R4, tab 171)

The VA terminated the Contract for default by letter dated May 18, 1993; as stated in the letter, the reasons for the default termination were "[f]or failure to perform the contract in accordance with the requirements thereof by abandoning the project as you stated you would in your letter dated May 13, 1993, and violating the *Davis-Bacon Act* as has been determined by the Department of Labor." (R4, tab 172)

On May 19, Delfour furnished a letter to the VA which stated:

> In accordance with our letters and our requests that areas be released so that our work can move forward, and in spite of your failure to comply, Delfour is still ready, willing and able to complete its work. The areas included in Phase II and III of the contract must be released so that our work may proceed forthwith. This request, in addition to our other needs to get this project moving, are detailed in our many letters to you.
>
> Please advise our office when you will vacate these areas so that we may enter and complete our work. (R4, tab 173)

The Government replied to Delfour's May 19 letter by stating, in a letter dated May 21 and received by Delfour on May 25, 1993:

> The Contracting Office is in receipt of your faxed letter dated May 19, 1993, stating "Delfour is still ready, willing and able to complete its work." You are hereby notified that the Government remains by it's Notice of Termination for Default dated May 18, 1993. (R4, tabs 174, 175)

Delfour responded on May 26, 1993, stating:

> Referencing your letter dated May 21, 1993, postmarked on 5-24-93 and received by our office on May 25, 1993, our only comment is that this has been your attitude throughout this project. Your continued refusal to act in the best interest of the government is the reason why this project has been plagued with the problems it has. (R4, tab 175)

Delfour appealed the default termination to the Board; the appeal was received and docketed as VABCA No. 3852 by the Board on May 24, 1993.

On May 25, 1993, Delfour submitted its "Termination Claim" to the CO as follows:

> Pursuant to the Code of Federal Regulations please accept the following as Delfour's Termination Claim.
>
Contract Balances	
Pay Requisition No. 4	$ 8,875.00
Pay Requisition No. 5	8,000.00
Work in Progress	45,000.00
Change Order Work	63,828.07
Costs of Delays	87,825.20
Claim for Losses	
Due for Governments Breach and Improper Termination	2,000,000.00
TOTAL TERMINATION CLAIM	$2,213,528.27

The "Termination Claim" was certified in accordance with the requirements of the *Contract Dispute Act (CDA).* (R4, tab 176) The CO has yet to respond to the "Termination Claim."

Delfour filed its nine count, 67 paragraph Complaint in VABCA No. 3852 on June 2, 1993. Count I of the Complaint asserts that Delfour's performance was delayed because of the VA's refusal, in breach of the Contract, to allow Delfour access to the work site from October 26-December 7, 1992. This count demands $12,000 for "delay damages." (Cmplnt. Cnt. I, ¶ ¶ 1-11)

Count II alleges the VA's breach of the Contract by reason of the VA's unreasonable failures to discharge its responsibilities to properly administer the Contract. These unreasonable actions by the VA, it is asserted, hindered Delfour's performance. Delfour placed the VA on notice that the VA's unreasonable actions jeopardized completion of the Contract; in the face of this notice the

Digitized by Google

VA improperly terminated the Contract. (Cmplnt. Cnt. II, ¶ ¶ 12-27)

In Counts III and IV of the Complaint, Delfour asserts its right to be paid for PR Nos. 4 and 5 and that the VA's failure to pay the PRs in full was improper. (Cmplnt. Cnts. III & IV, ¶ ¶ 28-42)

Count V alleges that Delfour had satisfactorily completed work on the Contract for which it is entitled to be paid for $45,000. (Cmplnt. Cnt. V, ¶ ¶ 43-46)

Delfour alleges Contract changes in Count VI not recognized by the VA. Delfour claims entitlement to payment of $63,828.07 as an equitable adjustment for this extra work (Cmplnt. Cnt. VI, ¶ ¶ 47-50)

Count VII asserts the VA's delay, for numerous reasons, of the project from October, 1992-May, 1993. For this delay, Delfour claims $87,825.20. (Cmplnt. Cnt. VII, ¶ ¶ 51-57)

Delfour alleges the VA's wrongful, bad faith termination of the Contract in Count VIII. Also asserted is Delfour's claim for $2,000,000 for damages suffered by Delfour as a consequence of the VA's wrongful termination. (Cmplnt. Cnt. VIII, ¶ ¶ 58-63)

Finally in Count IX, Delfour asserts that VA wrongfully terminated the Contract for default solely to avoid responding to the changes and questions raised by Delfour. (Cmplnt. Cnt. IX, ¶ ¶ 63-67)

On July 9, 1993, the Government filed its Answer to Count's I, II, V, VI, VII, VIII, and IX and its Motion to Dismiss Counts III and IV for lack of jurisdiction.

DISCUSSION

We face, once again, the problem of determining whether an appellant has met the jurisdictional prerequisites necessary to permit us to adjudicate what is obviously a serious dispute between the parties arising out of the Contract. In making our determination, we look to the requirements placed upon an appellant for the submission of claims and the concurrent obligations of the VA to issue a final decision under the CDA, 41 U.S.C. § § 605-613 and the regulatory implementation of the CDA in FAR 33.201 together with the applicable Contract clauses.

In this case, we must look at Delfour's submissions to the CO and the CO's actions in the 31 day period between April 27-May 27, 1993, to determine our jurisdiction. During this period each party took numerous actions. Delfour requested a final decision on numerous alleged Government Contract administration "failures." Delfour asserted that the VA had breached the Contract, due to which, Delfour was leaving the project and for which it would quantify its damages at a later date. The CO informed Delfour that he was considering terminating the Contract for default. Delfour informed the VA that it was owed $171,778.27 for the VA's breach of contract. The VA terminated the Contract for default. Delfour told the VA that it was still willing to complete the project. The VA rejected Delfour's offer to complete and reiterated its termination. Delfour appealed the default termination to the Board. Finally, Delfour submitted its $2,213,528.28 "Termination Claim" to the VA.

We examine this intense flurry of activity over an approximate period of one month to determine whether the monetary demands contained in the Complaint in Delfour's appeal of the VA's default termination are properly before the Board. In doing so, we must first define the relevant parameters with which we must deal in this case. There is no question that the VA terminated the Contract for default by a proper final decision of the CO and that Delfour has filed a timely appeal of that final decision with the Board. However, here, we also have a circumstance where, along with the appeal of the default termination, Delfour has included in its pleading submitted in VABCA No. 3832 monetary claims, not apparently considered in the final decision terminating the Contract for default, relating to its allegations of breach of contract.

The Contract DEFAULT (FIXED-PRICE CONSTRUCTION) clause contains no provisions for monetary recovery by an appellant. The Contract provides that, if a default termination is adjudged improper, the termination will be converted to one for the convenience of the Government. In that case, Delfour's monetary recovery will be measured under the Contract TERMINATION FOR THE CONVENIENCE OF THE GOVERNMENT (FIXED-PRICE) (ALTERNATE I) clause. Here we have a circumstance where Delfour has clearly claimed that the VA has breached the Contract and where Delfour has demanded damages based upon its breach claim.

Delfour's claims for damages resulting from the alleged breach of contract are separate and distinct from the appeal of the default termination and Delfour's assertion that the default termination was improper because of the VA's breach of contract. That the jurisdictional requirements, in VABCA

©1994, Commerce Clearing House, Inc.
Digitized by Google

No. 3832, over the appeal of the default termination, including Delfour's breach defense, have been met, do not, in themselves, satisfy the jurisdictional prerequisites necessary for our jurisdiction to decide Delfour's affirmative money claims arising out of the alleged breach. *The Sharman Co., Inc. v. United States* [39 CCF ¶76,567], No. 92-5150, 1993 WL 309171 (Fed. Cir. Aug 17, 1993). Consequently, we must examine the record to determine whether Delfour's monetary demands meet the necessary prerequisites to our exercise of jurisdiction over those demands.

Before embarking on the discussion of our jurisdiction to consider Delfour's damage claims, two counts of Delfour's Complaint relate to issues involving the administration of the Contract labor provisions. Since there are separate jurisdictional issues involved in our ability to consider labor disputes, we will first deal with the two counts of Delfour's Complaint relating to the Contract labor provisions.

COMPLAINT COUNTS III AND IV, PR NOS. 4 AND 5

In Counts III and IV of the Complaint, Delfour demands full payment of its PR Nos. 4 and 5, a total of $16,875. The VA withheld payment of these PRs based on a notice from DOL to withhold an initial amount of $12,840, later increased to $30,877, against Delfour's potential liability for payment of back wages due to Delfour's failure to pay required *Davis-Bacon Act* wage rates to its work force.

Delfour maintains that the VA had no right to withhold payments otherwise due Delfour against its liability for payment of back wages until Delfour had both exhausted its appeal rights provided in 29 C.F.R. Parts 5, 6, and 7 and after a court of competent jurisdiction had found Delfour to have violated wage rate requirements. Consequently, Delfour maintains that the Board has jurisdiction over Delfour's payment claims, under the CDA and the *Prompt Payment Act.*

Appellant misapprehends the VA's rights under the Contract to withhold payments for back pay. The applicable terms of the Contract provide, *inter alia,* that: "The Contracting Officer shall ... upon the written request of an authorized representative of the Department of Labor, withhold ... from the Contract ..." amounts "... as may be considered necessary ..." to pay back wages. Nothing in the terms of this Contract requires that there be final judgment of liability for payment of back wages before the CO can withhold payments against potential wage liabilities. We thoroughly explored the issue of Government withholding of contract payments based on a notice directing such withholding from DOL and the Board's jurisdiction over matters relating to issues of the administration and enforcement of labor standards in *Sealtite Corporation,* VABCA No. 2398, 86-3 BCA ¶19,173 where the Board held that the DISPUTES CONCERNING LABOR STANDARDS clause precluded our jurisdiction over a dispute involving the withholding of contract payments due to the contractor's underpayment of wages. Here, Counts III and IV are grounded entirely on Delfour's position that it did not violate the Contract *Davis-Bacon* wage requirements. As we expressed in *Sealtite,* we are without jurisdiction to determine whether or not Delfour paid the proper wages; therefore we have no subject matter jurisdiction over Counts III and IV of the Complaint in VABCA No. 3832. In addition, Delfour on September 29, 1993, appealed the deemed denial of its May 25, 1993, claim for payment of PR Nos. 4 and 5 which the Board docketed as VABCA No. 3897. For the reasons expressed above, we dismiss VABCA No. 3897.

However, the dismissal of Counts III and IV of the Complaint in VABCA No. 3832 and VABCA No. 3897, does not preclude our jurisdiction over the issue of whether the VA's termination for default based on Delfour's labor violations was proper. The DISPUTES CONCERNING LABOR STANDARDS clause provides that resolution of "disputes concerning labor standards" will be through DOL under the procedures contained in 29 CFR Parts 5, 6, and 7 and not the Contract DISPUTES clause. In contrast, the CONTRACT TERMINATION-DEBARMENT clause simply provides that a breach of the labor standards provision may be grounds for termination of the contract. Regulatory guidance for dealing with labor disputes and contract termination for labor violations is provided at FAR 22.406-10 and 22.406-11. FAR 22.406-10 provides instructions to COs on the handling of labor standards disputes through DOL procedures. That guidance identifies six "areas of possible differences of opinion" that may be encountered in the enforcement of construction labor standards; termination of a contract for labor standards violations is not one of these six areas. FAR 22.406-11 distinguishes termination of contracts for labor standards violations from those listed in FAR 22.406-10 by requiring only that a CO notify DOL instead of requiring that appeals of such actions be

Digitized by Google

forwarded to DOL for its action. At the heart of the termination of a Contract for default are the parties' contractual rights and obligations, not the enforcement or administration of wage provisions. Therefore, an appeal of a default termination of a contract for violation of labor provisions is not a dispute "concerning" labor standards and, therefore, the issue of the VA's default termination of Delfour by reason of Delfour's alleged labor violations is properly before us under both the CDA and the Contract DISPUTES clause. *Burnside Ott Aviation Training Ctr., Inc.*, 985 F.2d 1574, 1580 (Fed. Cir. 1993); *Sealtite, supra.* at 96,966-67; *Corban Industries, Inc.*, VABCA Nos. 2181, 2559T, 88-3 BCA ¶ 20,843.

COMPLAINT COUNTS I, II, V, VI, VII, VIII, AND IX

In these six counts of its Complaint, Delfour includes demands for a total of $2,208,653.27 for delays, changes, completed work in place, and breach of contract damages. At the outset, we note that we see no question of our jurisdiction concerning the portions of the Complaint asserting Government delays and the VA's breach of contract as *defenses* to the VA's default termination claim. Here, we are concerned with our jurisdiction over the portions of the Complaint concerning Delfour's entitlement to monetary judgments for delays, changes and breach of contract.

Our appellate jurisdiction is predicated on the existence of an appeal from a CO's actual or deemed final decision during a valid claim. A claim on which a final decision is based must meet certain prerequisites. For a valid claim to exist, at least three conditions must be satisfied: 1) a contractor must assert in writing, with sufficient specificity as to any amount claimed, its right to seek additional compensation; 2) the government must dispute that right; and, 3) the contractor must communicate a demand for a contracting officer's final decision. *George Hyman Construction Company, Inc.*, VABCA No. 3677, 93-2 BCA ¶ 25,823; *Transamerica Ins. Corp., Inc. v. United States* [38 CCF ¶ 76,374], 973 F.2d 1572 (Fed. Cir. 1992). For claims exceeding $50,000, a proper certification must also be provided. *Ball, Ball & Brosamer, Inc. v. United States* [35 CCF ¶ 75,681], 878 F.2d 1426, 1428 (Fed. Cir. 1989); *W.H. Moseley Co. v. United States* [29 CCF ¶ 82,467], 677 F.2d 850, 852 (Ct. Cl.), *cert. denied*, 459 U.S. 836, 103 S.Ct. 81 (1982).

There are four documents on which our jurisdiction over Delfour's monetary demands will stand or fall: 1) the April 27, 1993, demand for final decision on a variety of issues; 2) Delfour's May 13, 1993, notice to the VA that it considered the VA to be in breach of contract and that Delfour was leaving the project; 3) the May 17, 1993, "Monies Due Delfour" letter to the CO; and 4) the May 25, 1993, "Termination Claim."

Delfour's April 27 letter demanded a final decision from the Contracting Officer on a litany of eight broad categories of "government failures." This letter contained no monetary claims. Three days later, the CO's response to Delfour's letter requested more specificity of Delfour's claims to permit him to render a final decision. Delfour cavalierly responded to CO's request by referring him to the entire Contract correspondence file while maintaining its willingness to meet for the purposes of resolving the problems it had identified.

Delfour's April 27 letter was not a valid claim since it included no "sum certain" for what were, by their very nature, monetary claims. *George Hyman, supra.; Winding Specialists Co.*, ASBCA No. 37765, 89-2 BCA ¶ 21,737. Moreover, the claims made in the letter were too vague and general to meet the necessary specificity prerequisites for a claim that would obligate the CO to issue a final decision. *Bridgewater Construction Corp.*, VABCA Nos. 2866 *et al.*, 90-2 BCA ¶ 22,764; *R&R Enter.*, ASBCA No. 41382, 91-2 BCA ¶ 23,707. Thus, the April 27 letter cannot support our jurisdiction over the monetary demands in Delfour's Complaint.

On May 13, 1993, Delfour explicitly notified the VA that it considered the VA to be in breach of the Contract and, as a result, Delfour was terminating its performance. The May 13 letter contained no monetary demand; rather, it informed the VA that Delfour would be submitting its costs resulting from the breach at a later date. Because of the absence of a monetary demand in a sum certain, Delfour's May 13 letter cannot serve as a claim under the CDA. The letter serves only as a notice to the VA of Delfour's exercise of its common law right to unilaterally abandon its performance because of the Government's material breach of the Contract. RESTATEMENT (SECOND) OF CONTRACTS § 237 (1981).

On May 17, Delfour, citing its May 13 letter noticing the breach, submitted a detailed tabulation of costs for the VA's payment. Ostensibly a quantification of the breach claim, the May 17 letter, in conjunction with the May 13 letter could have served as a valid CDA claim but for the fact

©1994, Commerce Clearing House, Inc.
Digitized by Google

that the total demand was $170,000. The claim, being in excess of $50,000, was statutorily required by the CDA to be certified. It was not. The absence of certification precludes our jurisdiction.

In response to the VA's default termination of May 18, 1993 and subsequent to its appeal of the default termination, Delfour submitted its "Termination Claim" on May 25, 1993. The claim was for $2,213,528.27 and was accompanied by the appropriate CDA certification. The CO has never responded to this claim.

The May 25, 1993, "Termination Claim" meets the four jurisdictional prerequisites noted above for a valid claim. In making this determination we look at the totality of the parties' communications relating to the claim. *George Hyman, supra.*

At the time Delfour's May 25 claim was submitted, Delfour had already, in its May 13 and May 17 letters, asserted that the VA had breached the Contract, exercised its common law right to cease performance because of the breach, and submitted to the VA the amount to which it felt it was entitled as a result of the breach. Subsequent to these assertions by Delfour, the VA terminated the Contract for default by a final decision grounded, in part, on a rejection of Delfour's claim that it had a right to cease performance because of the VA's alleged breach.

In the context of this record, where: Delfour had placed the VA on clear notice that it believed the VA to be in breach of contract; Delfour took the extreme measure of walking off (or at least threatening to walk off) the project; and the VA had taken the equally extreme measure of terminating the Contract for default, Delfour's submission of the May 23 certified claim for amounts due it resulting from the alleged breach of contract provided the VA with adequate notice of both the basis and amount of Delfour's claim and obligated the CO to respond to the claim as provided for in the CDA. *Contract Cleaning Maintenance, Inc. v. United States*, 811 F.2d 586 (Fed. Cir. 1987); *George Hyman, supra.; Bill Strong Enter., Inc.*, ASBCA No. 42946 *et al.*, 93-3 BCA ¶ 25,961.

The VA asserts that we have no jurisdiction over the monetary claims because Delfour's May 25 claim is nothing more than a premature termination settlement proposal under the Contract TERMINATION FOR CONVENIENCE OF THE GOVERNMENT clause. The VA bases its assertion on paragraph (c) of the Contract DEFAULT (FIXED-PRICE CONSTRUCTION) clause providing that the rights and obligations of the parties will be determined under the TERMINATION FOR CONVENIENCE OF THE GOVERNMENT clause if the Contractor was not in default. The VA concludes that these two provisions must be read collectively and preclude a contractor from asserting a monetary claim when a contract has been terminated for default until a final determination on the propriety of a default termination has been reached.

We reject the overreaching interpretation suggested by the Government. The Contract DEFAULT clause cannot be used to limit rights provided by the CDA permitting a contractor to submit a claim arising under a contract and to obtain resolution of that claim before either a Board of Contract Appeals or the United States Court of Federal Claims simply because the Government decides to issue a default termination. Paragraph (c) of the DEFAULT clause specifies, as a matter of contract agreement, that a contractor is entitled to a monetary recovery if it did not default on its contract and the method by which such recovery will be measured. The DEFAULT clause does not preclude a contractor from asserting a monetary claim resulting from an improper default termination. Moreover, since a breach of contract claim by a contractor does not arise out of the DEFAULT clause, that clause can not be used to prevent a contractor from asserting a claim for breach damages.

Consequently, upon receipt of Delfour's May 25 certified claim, the CO was obligated to either issue a final decision or to inform Delfour when a final decision was going to be issued within 60 days of its receipt of Delfour's claim. The record does not reveal when the CO received the claim. However, assuming a reasonable period for delivery to the CO, we determine that the claim was in the hands of the CO not later than June 1, 1993. Thus, the CO was obligated to respond to the claim by July 30, 1993. No such response was made.

Our jurisdiction over an appeal, for the most part, is determined on the facts existing at the time an appeal is filed. *See Sharman*, 1993 WL 309171, at *4. This appeal was filed May 18, 1993, the date of mailing (see Rule 1), and, on its face, was an appeal solely from the Government's default termination on that date. On May 18, Delfour had not yet submitted a valid monetary claim which could support our jurisdiction over the monetary claims in this appeal.

Digitized by Google

Thus, we have no jurisdiction in VABCA No. 3832, over Delfour's monetary claims. However, any issues of our jurisdiction over the monetary claims asserted in the Complaint in VABCA No. 3832, were rendered moot with Delfour's submission of the appeals of the CO's deemed denial of Delfour's May 25, 1993, claims. Consequently, Delfour's monetary claims are properly before us in VABCA Nos. 3898-3901.

DECISION

For the foregoing reasons the Government's Motion to Dismiss Counts III and IV of the Complaint in the Appeal of Delfour, Inc., VABCA No. 3832 under Contract No. V523C-1050 is GRANTED. Since Delfour has reiterated the same demands made in Counts III and IV of the Complaint in VABCA No. 3832, for payment of the amounts withheld at the direction of the Department of Labor in the appeal docketed at VABCA No. 3897, the appeal in VABCA No. 3897, in addition to Counts III and IV of the Complaint in VABCA No. 3832, are DISMISSED, pursuant to Rule 5, for lack of subject matter jurisdiction.

With the docketing of Delfour's appeals in VABCA Nos. 3798-3901, Count I, ¶ 11; Count V; Count VI; Count VII, ¶ 57; and Count VIII of the Complaint in VABCA No. 3832 are DISMISSED as moot. Appellant, Delfour, Inc.'s monetary claims arising out of the Department of Veterans Affairs alleged breach of contract and improper default termination are properly before the Board in the appeals in VABCA Nos. 3798-3901.

Therefore, the Board now has before it the following appeals arising out of Contract No. V523C-1050:

DOCKET NO.	DESCRIPTION	AMOUNT
VABCA No. 3803	Dex-O-Tex Flooring	$ 14,422.00
VABCA No. 3832	Default Termination	N/A
VABCA No. 3898	Work In Progress	45,000.00
VABCA No. 3899	Change Order Work	63,828.07
VABCA No. 3900	Cost of Delays	87,825.20
VABCA No. 3901	Breach of Contract Damages	2,000,000.00

The Board will, by separate Order, issue instructions for the further processing of these appeals.

[¶ 26,386] River Road Construction, Inc.

ENG BCA No. 6040, September 29, 1993. Contract No. DACW29-91-C-0007.

Interpretation of Contracts—Contract as a Whole—Meaning to Every Part.—Under an embankment placement contract, a contractor was not entitled to an equitable adjustment for placement of uncompacted fill, because the contract, read as a whole, clearly and unambiguously indicated that the cost of the fill included uncompacted wave berm fill and the contract provisions were susceptible to only one reasonable interpretation. The bid invitation, as amended, clearly stated that the two feet of uncompacted fill measured perpendicularly to the gabion bottom slope were considered gabion bedding and, as such, were included in the square yard cost for fill. Although the contractor contended that the contract raised a patent ambiguity regarding payment for uncompacted fill, the contractor failed to seek clarification of any alleged conflict in the specifications.

For the appellant: Moore, Costello & Hart, Minneapolis, Minnesota, by William M. Beadie. For the government: Frank Carr, Chief Trial Attorney, Washington, D.C., and Joseph A. Towers and Anthony C. Occhipinti, Government Trial Attorneys, New Orleans, Louisiana.

Before JOCKISCH, SOLIBAKKE, and KETCHEN, Administrative Judges.

JOCKISCH, Administrative Judge: In this timely appeal under the Contract Disputes Act of 1978, River Road Construction Inc., Appellant, seeks to recover $118,995 for the placement of "23,799 cubic yards (cu.yds.) of uncompacted fill within the upper two feet under the gabion," because of alleged ambiguous Government specifications. The parties elected to process the appeal under Board Rule No. 11, Submission Without a Hearing.

©1994, Commerce Clearing House, Inc.
Digitized by Google

The record before the Board, which includes the Complaint, Answer, Rule 4 file, stipulations, and briefs, was closed in the middle of September, 1993. The parties have stipulated that, if the Board finds entitlement for Appellant, the Respondent will pay Appellant $118,995 plus Contract Disputes Act interest as full compensation. (Stip. No. 3).

FINDINGS OF FACT[1]

1. The invitation for bids for "New Orleans to Venice, La., West Bank Mississippi River Levee, Hurricane Protection Levee, First Enlargement, B/L Sta. 624+70 to 764+00, Plaquemines-Parish, La.," was issued on August 10, 1990. The work consisted of "clearing and grubbing; placing of semicompacted and uncompacted embankment; armorment of uncompacted wave berm using riprap/stone or gabions; mulching, fertilizing, and seeding; cutting, splicing, and driving steel sheet piles; surfacing of levee crown; and other incidental work." (Stip. No. 6).

2. Three amendments were issued to the solicitation. (Stip. No. 7). The one pertinent to this appeal was amendment No. 002, which stated in pertinent part the following:

C2L-7. MEASUREMENT. Measurement shall be by the square yard of gabion placed as per the drawing and specifications. *Two feet (measured perpendicular to the gabion bottom slope) of uncompacted wave berm fill is considered gabion bedding and as such is included in the square yard cost of the armorment gabions. This fill will not be measured for payment.* (Emphasis added).

C2L-8. PAYMENT. *Payment for all work done in accordance with this section of the specifications shall be made at the applicable contract unit price per square yard for "Armorment, (Gabion)." Price and payment shall constitute full compensation for furnishing all plant, labor, equipment and material including the* gabion baskets, stone, anchors, filter cloth, *uncompacted earth material,* foundation preparation, placing the filter cloth, anchoring, placing and fabrication of gabion baskets and filling the gabions to the required grade and tolerances as per the specifications and drawings. (Emphasis added).

Further, Amendment No. 002 eliminated the entire existing Section C2L-Embankment Protection and replaced it with an entirely new Section C2L-Embankment Protection, of which the above quoted paragraphs were a part. Also, in Amendment No. 002, bid Item No. 0005AC, Armorment (Gabion), was renumbered as Item No. 0005 under Option No. 2. Appellant bid on Option No. 2.

3. Contract DACW29-91-C-0007 was awarded by the Government to River Road Construction, Inc. on November 6, 1990, in the amount of $3,578,390. Notice to proceed was issued on December 11, 1990. The start of work was delayed until March 25, 1991, because of high river stages. Appellant completed the project on December 30, 1992. (Stip. No. 4).

4. Besides the usual General Provisions which were included in the contract, the following contract provisions are pertinent to this appeal:

a. "Bidding Schedule," as bid by Appellant:

Item No.	Description	Estimated Quantity	Unit	Unit Price	Est. Amt.
0001.	Mobilization and Demobilization	Lump Sum	LS	—	161,675.00
0002.	Clearing and Grubbing	Lump Sum	LS	—	175,000.00
0003.	Embankment, Semicompacted Fill	266,000	CY	6.00	1,596,000.00
0004.	Embankment, Uncompacted Fill	97,000	CY	5.00	485,000.00
	Option 1				
0005.	Armorment				
* 0005AA.	Armorment (Riprap/Stone)	50,000	TONS	—	—
* 0005AB.	Armorment (Bedding Material)	13,000	CY	—	—
	Option 2				
* 0005.	Armorment (Gabion)	39,800	SY	25.00	995,000.00
0006.	Mulching	28	AC	680.00	19,040.00
0007.	Fertilizing and Seeding	45	AC	300.00	13,500.00

[1] The parties have agreed that essentially all the facts pertinent to this appeal are not in dispute and that the issue before the Board is one of contract interpretation.

b. Technical Provisions

(1) Section C2D-Embankment * * *

* * *

Part 3-Execution

* * *

C2D-15. MEASUREMENT.

C2D-15.1 *Embankment and Berms*

C2D-15.1.1 *Unless otherwise specified,* semicompacted fill, uncompacted fill and required fill and backfill materials of any description specified in this section except inspection ditch backfill as specified in C2D-9 and the tie-in embankments specified in C2D-14 will be measured for payment by the cubic yard, and quantities will be determined by the average end area method. The basis for the measurement will be cross sections of the areas to be filled taken prior to clearing, grubbing, and vegetation removal operations and the theoretical design cross sections of the completed levee constructed within the specified tolerance. (Emphasis supplied).

(2) Section C2L-Embankment Protection, particularly paragraphs C2L-7, Measurement, and C2L-8, Payment. *See* Finding No. 2.

5. After Appellant commenced work under the contract, the Government's project engineer computed quantities for each of the major pay items listed in the Bid Schedule. He included all uncompacted fill (including the upper two feet immediately under the gabion) under Bid Item No. 0004-Embankment, Uncompacted Fill. (Stip. No. 9). Thereafter, River Road learned that the Government would not pay for the upper two feet of uncompacted fill supporting the gabion under Bid Item No. 0004, as it considered the cost of that quantity of fill to be within the unit price to be paid for each square yard of gabion placed under Bid Item No. 0005. (Stip. No. 10).

6. By letter dated December 6, 1991, Appellant requested payment for all uncompacted fill used as bedding beneath the gabions placed on the wave berm, under Item No. 0004, Embankment, Uncompacted Fill. The Contractor asserts that the cost for the two feet of uncompacted fill under the gabions was covered in Item No. 0004 of his estimate. Appellant's letter stated, in part, the following:

> We have recently been made aware that the two feet of uncompacted fill that lies directly beneath the gabion will be deducted from the pay quantity for bid item No. 0004 Embankment, Uncompacted Fill. You are making that deduction because you are treating the cost of placing that two feet of fill as included in our unit price for bid item No. 0005 Armorment (Gabion).
>
> Our bid unit prices assumed payment in full for all uncompacted fill actually placed. Our unit price for gabion did not include anything for underlying uncompacted fill . . . .
>
> *When you issued Addendum 2 you changed the specified method of measuring the gabion quantity for payment (by including the underlying two feet of uncompacted fill) but you made no corresponding changes to the specified method of measuring uncompacted fill for payment, no changes to the drawings and no change to the estimated quantity of uncompacted fill shown in the Bid Schedule.* Therefore, even after Addendum 2, the contract continued to provide that payment would be made for *all* uncompacted

©1994, Commerce Clearing House, Inc.

Digitized by Google

fill placed to the extent of the lines and grades shown on the drawings. Furthermore, the drawings, including Detail K (the typical section for gabion armorment), did not denote either the two feet of gabion bedding or any change in the lines and grades defining the limits of uncompacted fill ....

However, when you wrote in the change to section C2L-7 (adding two feet of underlying fill to the gabion unit price) you did not make any of the necessary corresponding changes to the specifications, drawings or bid schedule covering placement of uncompacted fill. As a result, the two sections are inconsistent at best and, at worst, would lead to double payment for two feet of fill ....

With the confusion created by these specifications, we ask that you pay us in full for placement of all uncompacted fill as defined by ¶ C2D-15 at our unit price for bid item No. 0004. Paying us for less than actual quantities would be contrary to the specifications and a change for which a claim could be made .... (Emphasis supplied).

(R.4, Tab C-11).

7. By letter dated January 24, 1992, the Respondent denied Appellant's request, in part, as follows:

Theoretical quantity computations for Pay Item No. 4, Embankment, Uncompacted Fill, was computed without the measurement of gabion bedding material. As clearly stated in Amendment 002, which you acknowledged on September 10, 1990, there will be no measurement for the 2-foot of uncompacted wave berm fill located directly under the gabion baskets and all costs associated with said fill is to be included in the square yard cost of the armorment gabions.

Note 13 on Drawing 5 of 22 refers to cut sections in the vicinity of levee setbacks and states that the gabion armorment will be placed directly on the cut section. Note 14 on Drawing 5 of 22 refers to semicompacted fill within the wave berm in the vicinity of the turnaround area. As detailed on the actual cross section rolls, no gabion armorment is required to be placed on this semicompacted fill ....

Furthermore, the contract clear[ly] outlines measurement and payment of embankment quantities and does not create confusion as you indicate ....

(R.4, Tab C-12).

8. By letter dated March 17, 1992, Appellant claimed a "maximum estimated amount" of $132,666 for payment of the uncompacted fill placed under the gabions, certified the claim, and requested a Contracting Officer's final decision. (R.4, Tab C-13).

9. At a meeting held on April 23, 1992, Appellant referenced data from the Government's Engineering Division which was used to compute the amount of uncompacted fill needed for Item No. 0004. The data showed only 77,500 cubic yards were needed for Item No. 0004; and, since the advertised quantity was for 97,000 cubic yards, Appellant contended the remaining 19,500 cubic yards were for the two feet of fill required under the gabions. Respondent stated that the 77,500 cubic yards was the computed yardage needed for item 0004, but a factor for settlement was applied to raise the quantity to the advertised estimate amount of 97,000 cubic yards.

10. Appellant requested and Respondent granted a review of the contract documents and the design quantities used to compute the contract quantities on the subject contract. Included in the material reviewed was a complete copy of the data used to compute the quantity of material needed for Item No. 0004, showing a settlement factor of 25% having been added to the 77,500 cubic yards to bring the quantity to 96,875 cubic yards. This figure was rounded to 97,000 cubic yards, representing the advertised contract quantity under bid Item No. 0004, Embankment, Uncompacted Fill. (R.4, Tab C-14).

11. By letter dated May 20, 1992, Appellant requested that it be allowed to review contract documents from several different contracts that required armorment of the wave berm by riprap/stone or gabion. (R.4, Tab C-15). Because of the volume of the documents requested, Respondent informed the Appellant that such a request should be made under the Freedom of Information Act (FOIA). By letter dated June 11, 1992, Appellant requested the information under FOIA. (R.4, Tab C-16).

12. After reviewing the various records, the Appellant informed the Respondent, by letter dated August 31, 1992, that it still believed the Government was in error, and that it should be paid for all uncompacted fill used as bedding beneath the gabions under Item No. 0004, Embankment, Uncompacted Fill. (R.4, Tab C-18). Appellant noted that Respondent changed *Option 2* of the bid schedule on later contracts to include an item for uncompacted fill used in connection with armorment gabion construction rather

Digitized by Google

than include uncompacted fill and gabion construction in one unit price. The change was reflected as follows:

Item No.	Description	Estimated Quantity	Unit	Unit Price	Est. Amt.
	Option				
* 0006AC	Armorment (Gabion with Stone)		SY		
* 0006AD	Armorment (Additional Uncompacted Fill)		CY		
* 0006AE	Armorment (Additional Fertilizing & Seeding)		AC		

(R.4, Tab C-11; Stip. No. 13).

13. Following an exchange of correspondence in September, 1992, the Contracting Officer, on November 30, 1992, issued his final decision denying the Contractor's claim. (R.4, Tab B). Appellant timely appealed. (R.4, Tab A).

POSITIONS OF PARTIES

Appellant postulates that: (1) in spite of the language contained in Amendment No. 002 to the invitation for bids, a reading of the contract document as a whole leads to only one reasonable interpretation, which is that all uncompacted fill would be paid for under Item No. 0004, Embankment Uncompacted Fill, of the bid schedule; (2) the only interpretation of the contract other than as stated in (1) above would be that payment would be made twice under Items No. 0004 and 0005 of the bid schedule which would be unreasonable; (3) since Respondent did not change any other parts of the contract plans and specifications, such as the estimated amount of uncompacted fill in the contract, the intent of Respondent was to pay for all uncompacted fill under Item No. 0004; (4) the contemporaneous interpretation of Respondent's project engineer confirmed Appellant's interpretation of the plans and specifications; and, (5) the Respondent's changes in later contracts to reflect another method of payment for uncompacted fill located under the gabion armorment option clearly illustrates the confusion/ambiguity created by the specifications in the contract which is the subject of this dispute.

Respondent counters that: (1) Amendment No. 002 is clear and unambiguous in requiring a bidder (Appellant) to include the two feet of uncompacted fill in the bid price for gabion armorment; (2) Appellant's interpretation requiring payment for the two feet of uncompacted fill under both Item No. 0004, uncompacted fill, and Item No. 0005, armorment (gabion), would create an obvious patent ambiguity for which Appellant had a duty to inquire; (3) Respondent did not change the other parts of the specifications, such as the estimated amount of uncompacted fill, in the amendment because it always intended to have the two feet of uncompacted fill under the gabion included in the gabion armorment bid Item No. 0005; (4) the project engineer did not agree with Appellant's position that the two feet of uncompacted fill under the armorment was to be paid for under Item No. 0004, uncompacted fill, and, even if he did, he had no authority to change a clear contract requirement; (5) Respondent changed later contracts to include a specific price for the uncompacted fill under the gabion armorment option because it had made a decision to break out this item from the armorment cost.

DECISION

Though a number of ancillary issues have been raised by the parties, the appeal's key is whether the bid invitation as amended clearly and unambiguously required a bidder to include the cost of placing the two feet of uncompacted fill located beneath the gabion armorment in Item No. 0005, Armorment (Gabion), of the unit price schedule. In their briefs, both parties assert the same general legal concepts as being applicable to this appeal. These are:

(1) The contract must be read as a whole, giving meaning to all parts so as to make none of the provisions mere surplusage.

(2) The doctrine *contra proferentem* requires that a latent ambiguity be construed against the drafter (Respondent), and its corollary that an obvious, patent ambiguity places a duty of inquiry upon the bidder (Appellant).

The Board concludes that Respondent's position is the more persuasive. The language of Amendment 002 is clear, unambiguous, and susceptible to only one reasonable interpretation. Paragraph C2L-7, Measurement, of Amendment No. 002, states clearly

©1994, Commerce Clearing House, Inc.
Digitized by Google

and unambiguously that the two feet of uncompacted wave berm fill, measured perpendicular to the gabion bottom slope, is considered gabion bedding and, as such, is included in the square yard cost for armorment gabion. It further states that, "this fill will not be measured for payment." It is difficult for the Board to imagine a clearer direction to a bidder. Appellant was on notice of the above requirement as it was highlighted as a pre-bid amendment to the specifications. The payment provision, C2D-15.1.1, on which Appellant relies, begins with the expression "Unless otherwise specified," which placed a prospective bidder on notice of potential changes to the general requirement in that payment provision in/by other sections of the bid invitation.

Also, Paragraph C2L-8, Payment, states that payment for all work on the armorment gabions under Option 2, Armorment (Gabion), will be included in the "contract unit price per square yard for 'Armorment (Gabion),' ... including the ... uncompacted earth material ..." Again, the Board finds clear and unambiguous this direction to a potential bidder (Appellant) as to where the cost for the two feet of uncompacted fill beneath the gabion armorment is to be included in the unit price schedule.

In its brief, Appellant asserts that,

> "All the Government's trying to do [by Amendment 0002] is move this two feet of fill from one pay item to another, like a pea under a shell. Why? There is no apparent reason."

However, whether the Government had a good reason or not is not the issue. The issue is whether the Government clearly and unambiguously accomplished its intent to have the fill under the gabion armorment bid and paid for under the unit price for armorment gabion. Appellant asserts, in its reply brief, that a bidder would need to understand Respondent's "subjective intent" in order to understand the amendment. The Board, however, finds the amendment clear and Appellant's attempts to create a conflict and/or ambiguity by ignoring the clear and concise statement in the amendment forced.

As the contract specifications are clear and unambiguous, provide meaning to all parts of the contract without conflict, and give all words their normal, accepted meaning, there exists no ambiguity to be construed against the drafter of the contract. *See Hol-Gar Manufacturing Corp. v. United States* [10 CCF ¶ 72,885], 169 Ct.Cl. 364, 351 F.2d 972 (1965); *Perini, Horn, Morrison-Knudsen, (JV)*, ENG BCA No. 4621, 87-1 BCA ¶ 19,545. *United States v. Johnson Controls, Inc.* [31 CCF ¶ 71,374], 713 F.2d 1541 (Fed. Cir. 1983).

Though the Board's decision is concluded by the previous conclusions and discussion, the Board will address briefly other issues raised, as the parties have spent considerable time and effort on them.

Appellant's attempt to create a latent ambiguity fails from its own presentation. If, as it asserts, Amendment No. 002 would require the Government to pay for the same uncompacted fill under the gabion armorment twice in the bid schedule as Uncompacted Fill and as Armorment (Gabion), and if, as it asserts, it determined that the Government would have changed other parts of the contract if it really meant Amendment No. 002 to mean what it said, the Appellant has created and recognized an obvious inconsistency and/or ambiguity by its interpretation. Obviously, as observed by Appellant, the Government did not intend to pay twice for the same material. At this juncture, Appellant had the duty to inquire, if it had in fact made such interpretation of Amendment No. 002. *See S.S. Mullen Inc. v. United States* [12 CCF ¶ 81,590], 182 Ct. Cl. 1, 9 (1968); *Henry Shirek d/b/a/ Shirek Construction Company*, ASBCA No. 28414, 86-1 BCA ¶ 18,560; motion for recon. denied, 87-1 BCA ¶ 19,392; *George E. Newsom v. United States* [29 CCF ¶ 82,417], 676 F.2d 647, 649 (Ct.Cl. 1982).

When Appellant did not request clarification from the Respondent of its interpretation of the patent ambiguity or conflict in the specifications, it accepted the risk of choosing between the conflicting requirements it interpreted into the specification and the consequences of its choosing incorrectly or differently from the Government (drafter). *See HRH Construction Corp. v. United States* [15 CCF ¶ 83,780], 192 Ct.Cl. 912 (1970); *See Beacon Construction Co. v. United States* [9 CCF ¶ 72,018], 161 Ct.Cl. 1 (1963); *Lord & Sons Construction, Inc.*, ASBCA No. 42700; 93-1 BCA ¶ 24,346; *Master Mechanical Contractors, Inc.*, ASBCA No. 33304, 87-2 BCA ¶ 19,799; *Newsom v. United States* [29 CCF ¶ 82,417], 676 F.2d 647, 230 Ct.Cl. 301 (1982); *Monarch Painting Corporation v. United States* [35 CCF ¶ 75,623], 16 Cl.Ct. 290 (1989).

Appellant's further assertion that the contemporaneous interpretation of Respondent's project engineer, being consistent with Appellant's interpretation, demonstrates the validity of its position, is unavail-

Digitized by Google

ing. Since Appellant's assertion of a latent ambiguity has been found by the Board to be unreasonable, the project engineer could give it no validity.

Appellant also asserted that Respondent's change in the bidding schedule for pricing uncompacted fill located under the gabion armorment in later contracts supports its view that the bidding schedule in this contract was ambiguous. At most, Respondent simply took a reasonable step to make clearer that which was already clear to avoid future litigation. Further, the Respondent did not clarify an alleged ambiguous specification, rather it changed entirely the concept of pricing the uncompacted fill located under the gabion armorment. Respondent's actions do not support Appellant's assertion of a recognition of an ambiguous specification. *See Martin Lane Co. v. United States* [15 CCF ¶ 83,669], 193 Ct.Cl. 203 (1970); *River Equipment Co., Inc.*, ENG BCA No. 5934, 93-2 BCA ¶ 25,804; *Weiss Pollution Control Corporation*, ENG BCA No. 3505, 76-1 BCA ¶ 11,925.

SUMMARY

As the specifications are clear, unambiguous, and susceptible to only one reasonable interpretation, Appellant's Appeal is DENIED.

[¶ 26,387] ViGYAN, Inc., and Modern Technologies Corporation v. National Aeronautics and Space Administration; United International Engineering, Inc., I-NET, Inc., and NYMA, Inc., Intervenors

GSBCA Nos. 12545-P, 12556-P, September 3, 1993. Solicitation No. 3-349555.

Protests, GSBCA—Protective Order—In-House Attorney.—The in-house attorney and vice president of a protester/intervenor was granted access to protected material because he neither engaged in nor gave advice regarding the competitive decisionmaking of his corporation. The nature of the advice he provided as in-house attorney, as described in his detailed request for access, did not constitute advice on competitive decisionmaking. His role in reviewing solicitations was limited, he did not advise the corporation on whether to respond to solicitations, and he did not participate in proposal preparation. Rather, he advised the corporation on how to comply with statutory and regulatory requirements. It was found that his position as sole in-house attorney and vice president did not necessarily impose upon him the role of competitive decisionmaker. Allegations of other protesters that his status inevitably involved advice and participation in the corporation's pricing, marketing, and other decisions were rejected because the allegations were based solely on perceptions of this individual's status and were contradicted by the statements contained in the request for access.

For the protester/intervenor, ViGYAN, Inc.: Barton, Mountain & Tolle, McLean, Virginia, by John R. Tolle, William B. Barton, Jr., and William T. Welch. For the protester/intervenor, Modern Technologies Corporation: Fried, Frank, Harris, Shriver & Jacobson, Washington, D.C., by James J. McCullough, Joel R. Feidelman, and Deneen J. Melander. For the government: Sumara M. Thompson-King, Office of the General Counsel, National Aeronautics and Space Administration, Washington, D.C., and Jerald J. Kennemuth, Office of the Chief Counsel, Lewis Research Center, Cleveland, Ohio. For the intervenor, United International Engineering, Inc.: Uhrig, Munger & Howard, Huntsville, Alabama, by Don A. Howard. For the intervenor, I-NET, Inc.: David W. Wells, Vice President and General Counsel, and Arent, Fox, Kintner, Plotkin & Kahn, Washington, D.C., by Richard J. Webber and John J. O'Brien. For the intervenor, NYMA, Inc.: Manatt, Phelps & Phillips, Washington, D.C., by James H. Roberts III, Suzanne M. Dohrer, and Martin Shulman.

Before GOODMAN, Administrative Judge.

GOODMAN, Board Judge: On August 20, 1993, ViGYAN, Inc. (ViGYAN) filed the instant protest challenging the award of a contract by the National Aeronautics and Space Administration (NASA or respondent) to NYMA Corporation (NYMA) pursuant to solicitation no. 3-349555. On August 25, 1993, Modern Technologies Corporation (MTC) filed its protest of the same contract award. NYMA, United International Engineering, Inc. (UIE), and I-NET Corporation (I-NET) have intervened in both protests,

©1994, Commerce Clearing House, Inc.
Digitized by Google

and ViGYAN and MTC have also intervened in each other's protests. The protests have been consolidated by the Board.

This matter comes before the Board on the request for access to protected material made by I-NET's general counsel and vice president, Mr. David W. Wells. ViGYAN, NYMA, and respondent oppose the Board's granting Mr. Wells access to protected material.

Mr. Wells' application for access to protected material reads in relevant part:

1. I serve as Vice President and General Counsel for I-NET. In that position, my responsibilities include providing general legal advice to I-NET. Specifically, if I-NET is in a position where legal advice is needed, I render that advice. Typically these situations involve areas of contract performance, Federal and state tax questions, human resource matters, or interpretation of Federal regulatory issues. When a situation arises, I will advise the President of the Company and the company then makes a reasoned decision as to how to proceed. Where appropriate, I will engage and manage outside counsel.

2. My role in reviewing solicitations is very limited. Specifically, I will review requests for proposals or invitations for bids to determine what level of legal compliance is required. For example, if the Service Contract Act applies to a specific RFP, I will then advise the President of the Company to ensure that the proposal team complies with the Service Contract Act in its proposal. As another example, if the Solicitation discusses security clearances, I would inform the President or the Security Officer to ensure that the proposal team makes arrangements for the proper security clearances.

3. I do not participate or advise I-NET in determining whether to submit a proposal in response to the RFP.

4. I do not provide advice or participate in the proposal preparation process for I-NET. I have no role in the pricing, product design, or product selection for I-NET. Further, I am not otherwise involved in the preparation or structure of proposals or bids submitted by I-NET. Additionally, I do not participate in meetings or discussions where assessments of potential competitors or their products occur concerning any Federal procurements.

5. I am never involved in deciding whether I-NET should enter into teaming, OEM, subcontract, or other agreements. I review the respective agreements from a legal perspective to determine whether there are any problems legally with I-NET's entering into any given agreement.

6. My position does not involve participation in "competitive decision-making" for I-NET. For purposes of the foregoing statement, the term "competitive decision-making" is used in the sense as discussed in *U.S. Steel Corporation v. United States,* 730 F.2d 1465, 1468 (Fed. Cir. 1984).

7. I do not have, nor do I expect to have, any problems upholding the terms of the Board's Protective Order. While I know I-NET's employees who work in marketing, pricing, and contract functions, and while many of them work in the same building in Bethesda, Maryland, I do not participate or provide advice to those individuals concerning their job functions.

8. I have previously been granted access to protected material in connection with prior protests before the Board. *See International Data Products Corp. v. Dept. of Health and Human Services,* GSBCA 12269-P, 93-2 BCA ¶ 25,807 1993 BPD ¶ 44; *Challenger Engineering, Inc. v. Defense Information Systems Agency,* GSBCA No. 12207-P, 93-2 BCA ¶ 25,769 (access granted under protective order dated December 11, 1992).

9. I agree that my access to protected materials will be limited to information received orally or viewed in the offices of Arent Fox Kintner Plotkin & Kahn, or during a hearing, deposition, or other related proceedings. At no time will I maintain physical possession of protected materials in I-NET's offices.

Request for Access to Protected Material of David W. Wells at 1-4.

ViGYAN opposes Mr. Wells' application because I-NET is a small business and "therefore is likely to make greater use of in-house counsel on competitive legal issues." ViGYAN Objection to Request for Access to Protected Material Filed by David W. Wells at 3. ViGYAN also expresses concern that in Mr. Wells' role of advising the president of I-NET with respect to ensuring that I-NET's proposal team complies with the Service Contract Act when responding to solicitations, his actions may directly impact I-NET's competitive decisionmaking.

NYMA bases its opposition to Mr. Wells' request for access to protected material on the assertion that because Mr. Wells is the sole in-house attorney and is also a vice pres-

Digitized by Google

ident of I-NET, and because his interaction with other I-NET personnel is extensive, this "... by any reasonable definition, makes him a decisionmaker." NYMA Inc. Objection to Request for Access to Protected Material Filed by I-NET, Inc. at 2.

NASA's opposition to Mr. Wells' request for access to protected material is based on its contention that Mr. Wells' position as vice president and general counsel "... must inevitably involve advice and participation in motions pertinent to the corporation's pricing, product design, marketing or other decisions." Respondent's Objection to Intervenor I-NET's Request for Access to Protected Material at 1-2.

I-NET argues that Mr. Wells, in his current capacity as general counsel and as vice president, was granted access to protected material in prior protests, including *International Data Products Corp. v. Department of Health and Human Services,* GSBCA 12269-P, 93-2 BCA ¶ 25,807, 1993 BPD ¶ 44, and that the objecting parties have not raised sufficient grounds for excluding Mr. Wells from having access to protected material in this protest.

Discussion

Whether in-house counsel is precluded from having access to protected material is determined by whether counsel is engaged in competitive decisionmaking, i.e., advising or participating in any or all of the client's decisions such as pricing or product design, made in light of similar or corresponding information about a competitor. Such a determination cannot be made to exclude an individual from having access to protected material solely based upon the individual's status as in-house counsel. Rather, a determination must be made as to whether an unacceptable opportunity for inadvertent disclosure exists, based upon a review of the facts in each case. *U.S. Steel Corp. v. United States,* 730 F.2d 1465 (Fed. Cir. 1984). The standard to be applied in making such a determination is not whether in-house counsel has regular contact with individuals involved in competitive decisions, but instead whether counsel renders advice and participates in competitive decisionmaking. *Matsushita Electric Industrial Co. v. United States,* 929 F.2d 1577 (Fed. Cir. 1991)

We recently granted Mr. Wells access to protected material in *International Data Products Corp.* based upon substantially identical representations as have been made by Mr. Wells in this protest. The Board has reviewed Mr. Wells' request for access to protected material in the instant protest, and concludes that Mr. Wells has demonstrated that he neither engages in nor gives advice regarding the competitive decision making of his corporation. The arguments put forth by ViGYAN, NYMA and respondent contain assumptions based solely upon Mr. Wells' status as in-house counsel which do not provide a factual basis for their assertions that Mr. Wells is engaged in competitive decisionmaking. There has been no showing that I-NET's size makes it more likely that I-NET will make use of Mr. Wells on competitive legal issues, as alleged by ViGYAN. Mr. Wells' position as sole in-house attorney and a vice president and interaction with other I-NET personnel does not necessarily impose upon him the role of competitive decisionmaker, as alleged by NYMA. Similarly, NASA's allegation that Mr. Wells' status "must inevitably involve advice and participation in motions pertinent to the corporation's pricing, product design, marketing or other decisions" is speculative assumption based solely upon Mr. Wells' status and contradicted by the factual statements contained in Mr. Wells' request for access to protected materials.

Mr. Wells has established the requisite factual basis for being granted access to protected material in the instant protest. The nature of the advice he provides as general counsel as detailed in his request for access does not constitute advice on competitive decisionmaking. His role in reviewing solicitations is limited. He neither participates nor advises the company in determining whether to submit a response to a solicitation. He does not provide advice or participate in proposal preparation. Mr. Wells does not suggest the products or determine pricing to be included in a proposal. Rather, he advises I-NET on how to comply generally with statutory and regulatory requirements.[1]

[1] ViGYAN expresses concern as to Mr. Wells' statement that if the Service Contract Act applies to a solicitation, he advises the "... President of the Company to ensure that the proposal team complies with the Service Contract Act." Such general, cautionary advice as described by Mr. Wells does not equal the level of activity discussed in *Advanced Management Inc.,* GSBCA 11851-P, 1992 BPD ¶ 150, 92-3 BCA ¶ 25,108, cited by ViGYAN. In that case, a senior administrator was denied access to protected material because he took specific action which affected the contents of the firm's proposals, that included calculation of burden rates and advice as to the extent to which

©1994, Commerce Clearing House, Inc.

Digitized by Google

The fact that Mr. Wells has regular contact with those who are engaged in competitive decisionmaking is not of itself a basis for denying one access to protected material. Mr. Wells has proposed that he would review protected material at the offices of outside counsel, and would not review such protected material at I-NET's offices. Under such circumstances, the Board finds that allowing Mr. Wells access to protected materials would not create an unacceptable risk of inadvertent disclosure. *Matsushita Electric Industrial Co.; Grumman Data Systems Corp. v. Department of the Air Force,* GSBCA 11635-P, 92-2 BCA ¶ 24,999, 1992 BPD ¶ 1. Accordingly, we grant Mr. Wells access to protected material under the terms he has proposed.

ORDER

The Board overrules the objections of VIGYAN, NYMA, and respondent and GRANTS the application of David W. Wells, Esquire, for access to protected material. As he has proposed, Mr. Wells' access to protected material "will be limited to information received orally or viewed in the offices of Arent Fox Kintner Plotkin & Kahn, or during a hearing, deposition, or other related proceedings." Request For Access to Protected Material at 3. Physical possession of protected material will not be maintained in I-NET's offices.

[¶ 26,388] Systems Resources, Inc. v. Department of the Navy; Defense Priority Equipment Reconditioning Corporation

GSBCA No. 12536-P, September 13, 1993. Solicitation No. M67443-92-R-0002.

Selection of Contractor—Evaluation Factors, Disclosure—Cost Savings Adjustment.—A solicitation for maintenance support services for ADPE that failed to disclose the fact that a cost savings adjustment would be applied to those portions of an offeror's technical proposals that exceeded requirements was improper because the cost savings adjustment was a significant factor in the evaluation of the competitive proposals. Under the Competition in Contracting Act, a solicitation for competitive proposals must include a statement of all significant factors that the agency reasonably expects to consider in evaluating proposals. The solicitation here provided that technical proposals would be evaluated only on an acceptable/unacceptable basis. There was no indication that the evaluation committee would look beyond that articulated rating system and examine whether an offeror's technical proposal exceeded the stated requirements. In finding that the cost savings adjustment was in fact a significant factor requiring disclosure, the board noted that offerors would have structured their proposals differently and included additional features in their proposals if this cost savings factor had been disclosed.

Selection of Contractor—Evaluation Factors, Disclosure—Added Value.—A procuring agency's contention that a solicitation for maintenance support services preserved the agency's discretion to determine whether any added value in a potential offeror's technical proposal was worth a cost adjustment was rejected because the solicitation did not alert offerors to the fact that the government intended to consider enhancements in technical proposals and, thereby, conduct a technical/price tradeoff. The government pointed to an amendment to support its position that the solicitation evinced its intent to consider proposals that provided added value. The amendment stated that proposals would be rated as either acceptable or unacceptable and that there was no explicit relationship between cost and technical considerations. This could only have led a prudent potential offeror to believe that there would not be a tradeoff between technical and cost factors. Similarly, the mere fact that the solicitation specifically stated that the award would be made to the offeror whose proposal represented the best value could not reasonably have informed offerors that there would be a technical/price tradeoff.

(Footnote Continued)

corporate benefits were "benefits" for purposes of the Service Contract Act, both of which had a bearing on the company's cost proposals.

Digitized by Google

Timeliness of Protest, GSBCA—Knowledge of Basis—Cost Savings Factor.—A protest alleging that a solicitation failed to disclose that a cost savings adjustment would be applied to technical proposals was timely because the protester had no way of knowing that the cost savings adjustment would be applied until after it was notified of the award. The government's position that the protest involved alleged improprieties in the solicitation that were apparent before the closing time for receipt of proposals was a misinterpretation of the protester's complaint. The basis of the complaint was that an undisclosed cost saving adjustment factor was applied in making the award. The protester did not even know that the cost savings factor would be applied until after the award. Thus, the impropriety the protester alleged was not apparent before initial proposals were due.

For the protester: Doyle & Bachman, Washington, D.C., by Gerard F. Doyle, Scott A. Ford, Ron R. Hutchinson, and Alexander T. Bakos. For the government: Charles M. Stinger and Jill A. Eggleston, Defense Finance and Accounting Service, Kansas City, Missouri, and Robert T. Cali and George N., Brezna, Office of Counsel for the Commandant, U.S. Marine Corps, Department of the Navy, Arlington, Virginia. For the intervenor, Defense Priority Equipment Reconditioning Corporation: Blumenfeld, Kaplan & Sandweiss, St. Louis, Missouri, by Jeffrey L. Michelman and Timothy T. Sigmund.

Before LABELLA, NEILL, and DEGRAFF, Administrative Judges.

LABELLA, Administrative Judge: Systems Resources, Inc. (protester) has protested the proposed award of a contract by the Department of the Navy, Marine Corps Support Activity (respondent), and has filed a motion for summary relief. The respondent has filed a cross-motion to dismiss the protest for untimeliness. As explained below, we grant protester's motion in part and deny respondent's motion.

Background

Terms of the Solicitation

Respondent issued Solicitation No. M67443-92-R-0002 on June 15, 1992 for procurement by negotiation of maintenance support services for automated data processing equipment (ADPE). The procurement requires the furnishing of supplies and services required to maintain the equipment items listed in the solicitation. Protest File, Exhibit 7.

The solicitation required offerors to submit separate technical and cost proposals. Protest File, Exhibit 7. Section M-5.2 of the solicitation stated that the technical and cost proposals would be evaluated separately. Protest File, Exhibit 7. The technical proposal would be reviewed in detail to determine if it met all mandatory requirements and would be assigned a technical rating of either "ACCEPTABLE" or UNACCEPTABLE". Protest File, Exhibit 7.

An acceptable proposal was defined as:

> . . . meets minimum RFP [request for proposal] requirements and is acceptable. The approach is generally comprehensive and complete in all details. There are no significant deficiencies. The methodology is presented in sufficient detail to assure the probability of meeting the requirement with little risk of disruption of operation, increase in costs or degradation of performance.

Id.

An unacceptable proposal was defined as:

> . . . not comprehensive and complete in all detail. It fails to achieve one or more of the requirements. It is highly likely to cause significant disruption of operations, increase in costs or degradation of performance.

Id.

Cost proposals were evaluated on the basis of a thirty-six month life cycle. *Id.* The total evaluated cost of each offer was the basis for determining the low offered price. *Id.*

Section L.20 of the solicitation contained Alternate III of the standard Federal Acquisition Regulation (FAR) clause found at 48 CFR 52.215-16, which is required to be included in all requests for proposals when it is anticipated that award will be made without discussion on the basis of initial proposals. The clause provides that the Government intends to evaluate proposals without discussion and may accept other than the lowest offer. Protest File, Exhibit 7. The contract is to be awarded to the responsible offeror whose offer would be "the most advantageous to the Government, cost or price, and other factors, specified elsewhere in this solicitation, considered." *Id.* Section M-10 of the solicitation went on to state that the award would be made to "[t]he offeror whose proposal meets all mandatory requirements, is determined to be technically

©1994, Commerce Clearing House, Inc.
Digitized by Google

acceptable and represents the best value to the Government." *Id.*

In Amendment No. 2 to the solicitation, the contracting officer provided written responses to the following questions regarding the solicitation:

> 1. Section M, Source Selection: How will the technical rating be used in the award decision?
>
> Response: Each proposal will receive a technical rating of "Acceptable" or "Unacceptable". Those offers which are determined to be technically acceptable will be included in the cost evaluation. Award will be made to an offeror whose proposal is most advantageous to the Government.
>
> 2. What is the relationship between technical and cost?
>
> Response: There is no explicit relationship between costs and technical considerations.

Protest File, Exhibit 7.

Award of the Contract

Initial technical and cost proposals were submitted to the contracting officer on September 21, 1992. The Source Advisory Committee (SAC) found that both Defense Priority Equipment Reconditioning Corporation's (DPER's) and protester's proposals were technically acceptable and were equal in most respects. Protest File, Exhibit 4. SAC's report went on to note that DPER's proposal exceeded the Government's minimum needs in some areas. *Id.*

SAC also conducted a cost comparison of the two proposals. *Id.* On the basis of the initial proposals, protester's life cycle cost was lower than DPER's. *Id.* However, SAC went on to assign a dollar value to the aspects of DPER's technical proposal which exceeded the Government's minimum needs and applied this cost savings adjustment to DPER's life cycle cost. *Id.* When the cost savings adjustment was subtracted from DPER's life cycle cost, DPER became the low offeror. SAC did not apply a cost savings adjustment to protester's life cycle cost. *Id.*

In a letter dated August 11, 1993, protester was notified that DPER would be awarded the contract. Protest File, Exhibit 3. Protester was informed that its proposal was technically acceptable and met the Government's requirements. *Id.* However, the letter added that DPER's proposal "exceed[ed] the Government's requirements and offered the best overall value to the Government, price and other factors considered." *Id.*

Discussion

Protester's Motion for Summary Relief

This protest involves alleged violations of the Competition in Contracting Act of 1984 (CICA), 10 U.S.C. §§ 2301-2305, and regulations derived therefrom. In protests, summary relief is granted only if there is no genuine issue of material fact and the moving party is entitled to judgment as a matter of law. *C3, Inc.*, GSBCA 10066-P, 89-3 BCA ¶ 22,053, at 110,949, 1989 BPD ¶ 189, at 11. The material facts relevant to protester's motion are not in dispute.

Disclosing Factors to be Considered in Evaluating Proposals

The CICA provides that agencies must obtain full and open competition when conducting a procurement for property or services. 10 U.S.C. § 2304(a)(1) (1988). A solicitation for competitive proposals must include at a minimum:

> (A) a statement of—
>
> (i) all significant factors which the head of the agency reasonably expects to consider in evaluating . . . competitive proposals (including cost or price); and
>
> (ii) the relative importance assigned to each of those factors[.].

10 U.S.C. § 2305(a)(2) (1988). The FAR provides:

> The solicitation shall clearly state the evaluation factors, including price or cost and any significant subfactors, that will be considered in making the source selection and their relative importance . . . . The solicitation shall inform offerors of minimum requirements that apply to particular evaluation factors and significant subfactors.

48 CFR 15.605(e) (1992). The agency must award the contract to the responsible source whose proposal is most advantageous to the Government, "considering only price and the other factors included in the solicitation." 10 U.S.C. § 2305(b)(4)(D) (1988).

In the instant case, the Marine Corps did not comply with the statutory and regulatory mandate that all significant factors to be considered when evaluating competitive proposals and the relative importance of these factors be disclosed to offerors. The solicitation provided that technical proposals would be evaluated on an acceptable/unacceptable basis only. There was no indication that SAC would look beyond the articulated rating system and examine whether, and by how much, an offeror's technical proposal exceeded the Govern-

Digitized by Google

ment's needs as described in the solicitation. Moreover, not only did SAC examine whether the technical proposals exceeded the Government's needs, but it then assigned a dollar value to the aspects of the proposal which it determined exceeded the requirements of the solicitation and discounted the offered price by that amount. Again, the fact that SAC would be assessing a cost savings adjustment to the proposals was not disclosed to the offerors. In fact, respondent's responses to vendor's questions which were included in the amendment to the solicitation indicated that there would not be such a tradeoff, as there was to be no relationship between cost and technical considerations.

The Board has held that any factor which significantly contributes to how a potential offeror structures its proposal or which affects the selection of an awardee should be disclosed in the solicitation. *Systemhouse Federal Systems, Inc.*, GSBCA 9313-P, 88-2 BCA ¶ 20,603, at 104,122, 1988 BPD ¶ 33, at 13. The fact that SAC would be examining the technical proposals to determine whether they exceeded the requirements of the solicitation and would be assigning a dollar value to those elements is such a significant factor. Offerors may structure their proposals differently and may include additional features in their proposals based on this knowledge. The proposal an offeror submits based on the terms of this solicitation could be markedly different than the proposal which may have been submitted if the evaluation factors and cost savings adjustment had been disclosed. Thus, the fact that proposals would be examined to determine if they exceeded the requirements of the solicitation and the fact that a cost savings adjustment would be applied to those elements which exceeded the requirements should have been disclosed in the solicitation.

Best Value

Respondent argues that the solicitation specifically states that the award would be made to the offeror whose proposal represents the best value to the Government, and not to the offeror who had the lowest priced, technically acceptable offer. The respondent contends that various contract provisions demonstrate the Government's intent to evaluate terms of proposals which provided added value and to compare that added value against the terms offered in other proposals. Among the contract provisions cited by the respondent to support its argument is Amendment No. 2 of the solicitation. The contracting officer issued the amendment to respond to questions concerning how the technical aspects of the proposal would be rated and the nature of the relationship between cost and technical. As quoted above, respondent's replies indicated that technical proposals would be rated either acceptable or unacceptable and that there was "no explicit relationship between cost and technical considerations." Protest File, Exhibit 7.

Rather than preserving the evaluating team's discretion in determining whether any added value in a proposal was worth an increase in cost as respondent argues, the amendment could only have led a prudent potential offeror to believe that there would not be a tradeoff between technical and cost factors. In these circumstances, more than a mere reference to the phrase "best value" was needed in order to alert potential offerors that there would be a tradeoff between cost and technical factors. In order to comply with CICA's mandate that all significant factors be disclosed, the agency needs to articulate, directly or indirectly, that it intends to consider enhancements in the technical proposals and thus conduct a technical/price tradeoff. Without any elaboration by the agency, potential offerors could not reasonably have understood best value to mean there is a tradeoff or how the relevant factors would be assessed in the tradeoff

An example of a solicitation which elaborated on these factors in a best value procurement is found in *Lockheed Missiles & Space Co. v. Department of the Treasury*, GSBCA 11776-P, et al., 93-1 BCA ¶ 25,401, 1992 BPD ¶ 155, *aff'd sub nom. Lockheed Missiles & Space Co. v. Bentsen* [39 CCF ¶ 76,563], No. 92-1566 (Fed. Cir. Aug. 30, 1993) (*TMAC II*). In *TMAC II*, Lockheed Missiles and Space Co., Inc. (Lockheed) and International Business Machines Corp. (IBM) protested the award of the Treasury Multi-User Acquisition Contract (TMAC) by the Department of the Treasury, Internal Revenue Service (IRS) to AT&T Federal Systems (AT&T). TMAC was a procurement of office automation systems and software, as well as maintenance and support services. *TMAC II*, 93-1 BCA at 126,498, 1992 BPD ¶ 155, at 2.

The TMAC solicitation included an evaluation scheme which provided, in part:

> Award will be made to that offeror whose proposal, containing the combination of technical, management and support, and cost features, offers the best overall value to the Government. The Government is more concerned with obtaining superior

©1994, Commerce Clearing House, Inc.

Digitized by Google

technical (technical and management and support) features than making award at the lowest price. Award will be determined by comparing differences in the value of technical features with difference in overall cost to the Government (overall cost to the Government includes the offeror's prices for equipment, software, maintenance, support and any other solicited[)]. However, the Government will not make an award at a significantly higher overall cost to the Government to achieve slightly superior technical features.

TMAC II, 93-1 BCA at 126,498, 1992 BPD ¶ 1551 at 2. The TMAC solicitation put all potential offerors on notice that a best value procurement was intended and that technical features were more important than cost considerations. In fact, the IRS awarded the contract to AT&T because of its technical features even though its evaluated cost was over one-half to three-quarters of a billion dollars more than that of Lockheed and IBM, respectively. *TMAC II,* 93-1 BCA at 126,508, 1992 BPD ¶ 155, at 4.

Furthermore, respondent's oblique reference to best value does not put offerors on notice that a cost savings adjustment would be applied to elements of the technical proposals which exceeded the requirements of the solicitation. Potential offerors were not made aware that technical proposals would be evaluated to determine if they exceed the requirements of the solicitation, let alone that a cost savings adjustment would be applied to the factors that did exceed the requirements. Given this fact, it is difficult to believe use of the phrase "best value" adequately informed potential offerors as to the nature of the evaluation in which respondent engaged.

While respondent argues that the Government's intent to conduct a best value procurement was evident from the provisions of the solicitation, this intent was ambiguously stated at best. Clearly, there was confusion about the meaning of best value in reference to this solicitation or there would not have been questions concerning how the technical evaluation would be used in the award decision and the relationship between technical and cost factors. Respondent may have tried to rectify the situation by issuing Amendment No. 2, but its efforts to shed light on the subject effectively rendered meaningless any previous passing reference in the solicitation to best value. Respondent is not precluded from conducting a best value procurement, but must put all potential offerors on notice that this is what is intended.

Respondent's Motion to Dismiss Due to Untimeliness of the Protest

Respondent filed a motion to dismiss the protest for untimeliness. Based on its contention that the solicitation was clearly for a best value procurement and in accordance with Rule 5(b)(3)(i) of the Board's Rules of Procedure, the respondent argues that protests based on alleged improprieties in a solicitation which are apparent before the closing time for receipt of initial proposals must be filed prior to closing time of initial proposals. Thus, says respondent, protester should have filed its protest prior to September 21, 1992, in order to contest the language of the protest.

As in *Systemhouse Federal Systems,* respondent's arguments misinterpret the nature of protester's complaint.

> The basis for [SRI's] protest is that "hidden criteria" were applied to its offer. [Protester] could not have known, prior to closing time for receipt of initial proposals, that the [cost savings adjustments] would be applied in the manner that they were [or that they would even be applied in the first instance]. Thus, the impropriety that [protester] alleges were not apparent before initial proposals were due.

Systemhouse Federal Systems, GSBCA No. 9313-P 88-2 BCA, ¶ 20,603 at 104,120, 1988 BPD ¶ 33, at 10-11.

The appropriate rule to be applied is Rule 5(b)(3)(ii), which provides that "[a] protest, other than one covered in subparagraph (b)(3)(i) of this rule, shall be filed no later than 10 days after the basis for the protest is known or should have been known, whichever is earlier." Because protester could not have known that the technical proposals would be evaluated as they were, or that a cost savings adjustment would be applied, until after being notified that DPER would be awarded the contract, the protest is timely. Respondent's motion to dismiss is denied.

Decision

For the reasons stated above, protester's motion is GRANTED IN PART and respondent's motion is DENIED. Respondent must revise its solicitation to provide clear notice that it will be conducting a best value procurement in which technical enhancements over the Government's minimum requirements will permit a cost/technical tradeoff, if this is what respondent intends. Respondent shall then obtain revised proposals from all offerors.

Digitized by Google

In its motion, protester essentially requested that a directed award be granted. However, a directed award is not the proper relief in this case. The proper relief is for respondent to revise its solicitation and for offerors to resubmit proposals on the basis of the revised solicitation.

[¶ 26,389] Global Radon Testing Services, Inc. v. General Services Administration

GSBCA No. 12517, August 27, 1993.

Timeliness of Appeals to Boards—Filing—Ninety Day Deadline.—A contractor's appeal seeking a price adjustment for alleged extra work was untimely because the contractor did not file the appeal until 139 days after receiving the contracting officer's final decision. Although it was clear that the appeal was filed 144 days after the final decision was written, it was not clear as to when the final decision was actually received. Under the circumstances, the board presumed that receipt of the final decision occurred five days after the decision was mailed.

For the appellant: Paul Jarrett, President. For the government: Emily C. Hewitt, General Counsel, General Services Administration, Washington, D.C.

Before DANIELS, PARKER, and NEILL, Administrative Judges.

DANIELS, Administrative Judge: After performing work under a contract for the provision of diagnostic radon mitigation surveys of several Government buildings, the contractor, Global Radon Testing Services, Inc. (Global), asked the General Services Administration (GSA) to pay $2,801 more than the contract amount of $5,170. Global contended that it had performed work additional to what was required by the contract, and that the extra sum represented the fair value of that work.

By letter dated March 8, 1993, the GSA contracting officer refused to pay more than the contract amount. He contended that the work for which Global requested $2,801 was within the scope of the contract. The letter, citing the Contract Disputes Act of 1978, 41 U.S.C.A. §§ 601-613 (West Supp. 1992), advised Global that the firm could appeal this contracting officer's decision to this Board within ninety days of its receipt. The letter further advised Global that it could alternatively contest the decision by filing suit in the Court of Federal Claims within one year of the date of receipt. *See* 41 U.S.C.A. § 609(a) (West Supp. 1992).

On July 30, the Board received a letter from Global, dated July 27, enclosing the contracting officer's decision and asking that we expedite payment of the contested amount. Attached to this letter is a compendium of documents entitled "How Someone at GSA, Atlanta Is Raping a Small Business While Trying to Cover His Bureaucratic Posterior."

We docketed Global's letter as an appeal of the contracting officer's decision. In so doing, we directed Global's attention to the statutory requirement that an appeal to a board of contract appeals be filed "[w]ithin ninety days from the date of receipt of a contracting officer's decision." 41 U.S.C. § 606 (1988). We ordered Global to show cause why the appeal should not be dismissed because it was filed too late.

In response to our order, Global's president stated that he has "done everything possible to work with GSA" and that even after the contracting officer's decision was issued, he "was led to believe [by GSA officials] that there was no reason to file a complaint with the Board." The president concluded, "I would feel very relieved if I could get my day in court."

Unfortunately for Global, that day cannot come before this tribunal. The statutory deadline for filing an appeal with a board of contract appeals has been strictly construed by the Court of Appeals for the Federal Circuit, because the authorization to make the filing is a waiver of sovereign immunity. A late-filing divests the board of jurisdiction to consider the case on its merits. *Cosmic Construction Co. v. United States* [30 CCF ¶ 70,732], 697 F.2d 1389 (Fed. Cir. 1982); *Elden-Rider, Inc.*, GSBCA 8643, 90-2 BCA ¶ 22,878, at 114,901, *aff'd*, 935 F.2d 281 (table) (Fed. Cir. 1991); *George's Lawn & Rental Service, Inc.*, GSBCA 10087, 89-3 BCA ¶ 22,081. Global did not file this appeal until 144 days after the contracting officer's

©1994, Commerce Clearing House, Inc.

Digitized by Google

decision was written. We have no evidence as to when the decision was actually received. In such circumstances, we presume that receipt occurred five days after mailing. *Berkshire Computer Products,* GSBCA 11539-P, 92-1 BCA ¶ 24,587, at 122,686, 1991 BPD ¶ 302, at 4 (citing *Maykat Enterprises, N.V.,* GSBCA 7346, 84-3 BCA ¶ 17,510, at 87,213). We cannot consider an appeal filed 139 days after receipt, no matter how significant its allegations.

Decision

This appeal is DISMISSED FOR LACK OF JURISDICTION.

[¶ 26,390] Metropolitan Technical Services, Inc. v. Defense Information Systems Agency; Computer Management Corporation, Intervenor

GSBCA No. 12490-P, September 3, 1993. (The text below is the redacted version issued to the public on September 14, 1993.) Request for Proposals No. DCA-100-93-R-0042.

Protests, GSBCA—Interested Party—Responsiveness.—An intervenor's motion to dismiss a protest on the ground that the protester, having failed to present a proposal that complied with certain requirements, was not an interested party was denied as premature because the contracting officer had not determined that the protester's proposal was noncompliant. In fact, the government had not indicated to the board that it concurred with the contentions stated in the intervenor's motion to dismiss. In light of the absence of a government determination on the issue of noncompliance, coupled with the government's silence with respect to these matters, the board determined that the awardee's allegations of noncompliance were not ripe for review.

Protests, GSBCA—Procedure—Striking Amended Complaint.—A government motion to dismiss four additional counts of a protester's amended complaint was granted because the issues presented in the amended complaint were not relevant to the resolution of the original protest complaint. The allegations of the amended complaint, such as noncompliant equipment, improper evaluation, and failure to acknowledge amendments to the solicitation, did not need to be proven by the protester in order for the protester to prevail in the protest. If the protester prevailed on the issue of noncompliant equipment raised in the original complaint, the government would be directed by the board to reevaluate the protester's proposal and make an award consistent with the terms of the solicitation. Conversely, if the protester did not prevail in its original protest complaint and the board determined that the government had properly evaluated the protester's proposal, the protester, having been found to be a noncompliant offeror, would lack standing to raise the allegations contained in the amended complaint.

For the protester: Elizabeth N. Forgotson, Bethesda, Maryland, and Johnson & Roche, McLean, Virginia, by Jon E. Shields. For the government: Roger B. Sabin, Eileen P. Manley, and Capt. Daniel M. Kline, Office of General Counsel, Defense Information Systems Agency, Arlington, Virginia. For the intervenor, Computer Management Corporation: Kinosky & Associates, Arlington, Virginia, by Barbara S. Kinosky and Dale M. Race.

Before GOODMAN, DEVINE, and NEILL, Administrative Judges.

GOODMAN, Administrative Judge: On July 8, 1993, Metropolitan Technical Services, Inc. (MTS or protester) protested the award by the Defense Information Systems Agency (DISA or respondent) of a contract pursuant to RFP DCA-100-93-R-0042 (the solicitation) for personal computers. The awardee, Computer Management Corporation (CMC or intervenor), has intervened in this protest as an intervenor of right. On August 5, 1993, protester filed an amended protest complaint.

Protester's amended complaint incorporates by reference the allegations of its original protest complaint and includes four additional counts. CMC has filed a motion to dismiss the original protest complaint, as well as the four additional counts of the amended complaint. Respondent has also filed a motion to dismiss the four additional counts of the amended complaint. As discussed below, the Board denies intervenor's motion to dismiss the original protest complaint and dismisses, *sua sponte*, the amended complaint.

Digitized by Google

Background

The Solicitation

1. The solicitation calls for 200 486/33 ET personal computer systems or equal, and is a total set-aside for small business. Pursuant to 48 CFR 15.610(a) (Federal Acquisition Regulation (FAR) 15.610(a)), the contract was to be awarded without discussions. Closing date for receipt of proposals was originally February 18, 1993. Protest File, Exhibits 2, 3, 4, 7.

2. The solicitation contains a list of salient characteristics[1] for the equipment to be procured, which includes:

> 486/33E Mid size tower w/16MB RAM on the motherboard; expandable to 64MB on the motherboard
>
> baseline performance requirements: Norton computing index 72+, Disk Speed 10+
>
> 21 inch, .28 dot pitch, flat display multifrequency color monitor with 1024 × 768 resolution
>
> 256 color display video card; SVGA adapter with 1MB VRAM
>
> Mid Tower full metal case

Protest File, Exhibit 2.

3. The solicitation was amended three times. Amendment 0001, dated January 25, 1993, responded to several pre-closing vendor questions. Protest File, Exhibit 3. Amendment 0002, dated February 16, 1993, extended the closing date to March 9, 1993. Protest File, Exhibit 4. Amendment 0003, dated February 25, 1993, extended the closing date to March 16, 1993. Protest File, Exhibit 7.

Evaluation of Proposals

4. offerors responded to the solicitation. offerors, including protester, submitted price proposals lower than CMC's price, but were determined to be technically unacceptable.[2] Protest File, Exhibit 14 at 3.

5. According to the contracting officer, a "sanitization process" was performed by which all references to price were removed from the proposals before the proposals were reviewed by the technical evaluation team. Protester's Memorandum of Points and Authorities in Response to Intervenor's Motion to Dismiss, Exhibit A at 12-13, 48-49.[3]

6. Mr. Thomas F. Bennett, the chairman of the technical evaluation team that evaluated the technical proposals, described the evaluation procedures as they related to the MTS proposal. Protester's Memorandum of Points and Authorities in Response to Intervenor's Motion to Dismiss, Exhibit B at 62-63; Deposition of Thomas F. Bennett (Bennett Deposition) (August 4, 1993) at 62-63, 76-99.

The MTS Proposal

7. The MTS proposal contains a cover letter dated March 15, 1993. This letter reads, in relevant part:

> Enclosed you will find technical specifications for components comprising the quoted system. All components meet or exceed the requirement in Exhibit A (salient characteristics), and the questions and answers sections of the amendments.
>
> We have also tested our assembled system using

Protest File, Exhibit 8.

8. The MTS proposal also contains the salient characteristics sheet from the solicitation with handwriting by MTS on the sheet, together with seven pages of descriptive literature. The salient characteristics sheet contains a reference to a "mid size tower" and "mid tower full metal case." Protest File, Exhibit 8.

9. The March 15, 1993, cover letter from MTS and the salient specifications sheet with handwriting by MTS on the sheet, together with the seven pages of descriptive literature, was transmitted from the contracting officer to the technical evaluation team. Protester's Memorandum of Points and Authorities in Response to Intervenor's Motion to Dismiss, Exhibit A at 48-49.

10. According to Mr. Bennett, the evaluation team considered the MTS cover letter and the MTS annotated salient characteristics sheet as part of the MTS technical pro-

[1] The list of salient characteristics was prepared by Mr. Thomas F. Bennett, the chairman of respondent's technical evaluation team. Deposition of Thomas F. Bennett (Bennett Deposition) (August 4, 1993) at 12.

[2] The other offerors were found to be technically unacceptable because

[3] To support its response to the motions to dismiss, protester submitted portions of the depositions of the contracting officer, Ms. Barbara G. Redina, and the chairman of the technical evaluation team for the solicitation, Mr. Thomas F. Bennett. The Board requested complete copies of the depositions.

Digitized by Google

posal. Protester's Memorandum of Points and Authorities in Response to Intervenor's Motion to Dismiss, Exhibit B at 62-63.

11. Unless contradicted by other technical specifications provided by protester, the evaluation team's methodology was to accept the salient characteristics sheet as indicating that the components listed in the salient characteristics were offered by MTS. Nothing in the descriptive literature submitted by MTS contradicted either the annotated salient characteristics sheet or the cover letter, nor did either indicate that MTS did not offer the components listed therein. Protester's Memorandum of Points and Authorities in Response to Intervenor's Motion to Dismiss, Exhibit B at 25-28, 30-33, 77-81; Protest File, Exhibits 8, 9, 37.

12. In the descriptive literature supplied by MTS in its proposal, the manufacturer of the hard drive included the phrase "[s]pecifications subject to change without notice" at the bottom corner of its description of the product. Protest File, Exhibits 8 at 39th unnumbered page, 37 at 4th unnumbered page. Likewise, another manufacturer printed on its description of the monitor "Specifications Subject to Change Without Notice." *Id.*, Exhibits 8 at 44th unnumbered page, 37 at 9th unnumbered page.

13. MTS alleges that it submitted separate technical and cost proposals as required by section L-500(b) of the solicitation. Protest File, Exhibit 2 at 25th unnumbered page; Protester's Memorandum of Points and Authorities in Response to Intervenor's Motion to Dismiss, Exhibit C.

Evaluation of the MTS Proposal

14. The technical evaluation team determined MTS's proposal was technically unacceptable because rather than a . Protest File, Exhibit 12.

15. The technical evaluation team's finding that MTS's proposal was technically unacceptable was based upon its determination that the only indication of in the MTS technical proposal was on the technical specification sheet for the Main Board, where, included among the list of technical components or characteristics, was a reference to . Protest File, Exhibit 28.

16. After reviewing the entire technical specification sheet for the mainboard, the technical evaluation team determined that the specification of the referred to the size of the , not just to the . As such, the technical evaluation team determined that MTS was offering a rather than a as required by the solicitation. Protest File, Exhibit 28.

17. The chairman of the technical evaluation team did not know at what point the team terminated its evaluation of protester's technical proposal. Bennett Deposition at 99.

18. Mr. Bennett testified that a could fit into a and that there is no requirement that a be installed in any particular Bennett Deposition at 87.

The Original Protest Complaint

19. Protester alleges in its original protest complaint that it submitted a technically compliant proposal. It alleges that it did not offer a and that the Government misevaluated the proposal. Complaint ¶¶ 8-10.

The Amended Protest Complaint

20. Protester's amended complaint incorporates by reference the allegations of its original protest complaint and includes four additional counts. Count I of the amended complaint alleges that CMC did not offer a compliant video graphics adapter. Count II alleges that respondent improperly accepted CMC's proposal because CMC acknowledged an amendment without returning all pages of the amendment. Count III alleges that respondent required an expensive large memory component but would accept a less expensive component with a smaller memory, i.e., that respondent stated that it required 1Mb VRAM but actually would accept 1Mb Video RAM. Count IV alleges that respondent improperly determined that CMC's proposal complied with specifications for the Norton computing index.

Discussion

CMC has filed a motion to dismiss the original protest complaint and a motion to dismiss the amended complaint. CMC's motion to dismiss the amended complaint incorporates its arguments from its motion to dismiss the original protest complaint. Respondent has also filed a motion to dismiss the amended complaint. For purposes of clarity, we will consider the motions of the

Digitized by Google

parties as they relate to the allegations of the original protest complaint and the four additional counts of the amended complaint.

The Original Protest Complaint

The basis of CMC's motion to dismiss the original protest complaint is that MTS is not an interested party, and, therefore, lacks standing, because the MTS proposal is nonresponsive. *United States v. IBM Corp.*, 892 F.2d 1006 (Fed. Cir. 1989).[4] CMC, citing *RGI, Inc. v. Department of the Navy*, GSBCA 11752-P, 93-1 BCA ¶ 25,402, 1992 BPD ¶ 156, argues further that even though the Government did not list all of the numerous deficiencies in its evaluation of the MTS proposal, this Board has a duty to determine whether or not a protesting party is compliant.

CMC's motion to dismiss does not address the allegation of the protest complaint, i.e., that protester and that respondent erroneously interpreted the MTS proposal to offer a . CMC's motion assumes *arguendo* that protester "supplied the proper tower and was totally compliant in that respect."[5] Intervenor's Motion to Dismiss at 2. CMC asserts instead that this protest must be dismissed because the MTS proposal is noncompliant in other respects, as MTS allegedly did not propose to provide or left unspecified the following requirements listed in the solicitation:

CMC also alleges that restrictive language stating "subject to change without notice" contained in the descriptive literature which was included in the MTS proposal as to the Hard Drive and the monitor, Finding 12, renders the proposal noncompliant, as this language makes the proposal a conditional offer. Finally, CMC alleges that the MTS proposal is noncompliant because protester failed to submit separate cost and technical proposals.

In *RGI, Inc.*, upon which CMC relies in its motion, this Board found protester's proposal noncompliant despite a contrary conclusion by the contracting officer. The instant protest is distinguishable from the situation presented to the Board in *RGI*.

In the instant protest, CMC alleges that the Government did not review protester's proposal further once it determined that protester had not offered and, therefore, found protester noncompliant only on one salient characteristic. Intervenor's Motion to Dismiss at 4. The chairman of the technical evaluation team contradicted this allegation, stating that he did not know at what point the team terminated its evaluation of protester's technical proposal. Finding 17.

Unlike the situation in *RGI, Inc.*, the deficiencies in the MTS proposal alleged by the intervenor have not been the subject of a contracting officer's determination. We find it significant that, with regard to the intervenor's allegations of noncompliance, respondent has neither determined the MTS proposal noncompliant for these reasons, nor moved to dismiss the protest on these grounds. In fact, respondent has not indicated to the Board that it concurs in the arguments stated in intervenor's motion to dismiss. In light of the absence of respondent's evaluation of the proposal on these issues and its silence with regard to these matters in this protest, we find intervenor's allegations of noncompliance to be premature and certainly not ripe for review in conjunction with this protest.

In further support of its motion to dismiss the protest complaint, CMC states that "[t]here were vendors who were found to meet the technical requirements in the solicitation .... In order for Protester to prevail it must prove not only that its technical proposal was fully compliant with the solicitation, but it must also prove that the other vendors are not compliant." CMC's Motion to Dismiss at 6. This statement is erroneous. To prevail in this protest,

[4] CMC argues that the issue is responsiveness, as this is a negotiated procurement awarded without discussions pursuant to FAR 15.610(a). We will discuss the issue in terms of offeror compliance with the terms of the solicitation.

[5] CMC has not established the correctness of respondent's determination that the MTS proposal is noncompliant because it offered a
The list of salient characteristics submitted by MTS indicated a
This list was considered part of the technical proposal by the evaluation team. Findings 8-10. The technical evaluation team interpreted the phrase
even
though Mr. Bennett testified that a mainboard could fit into a mid-size or full-size tower. Finding 18. The record for this protest remains unclear as to respondent's basis for considering the phrase in the descriptive literature of the mainboard to be a reference to the

©1994, Commerce Clearing House, Inc.

Digitized by Google

MTS need only prove that the contracting officer erred in the conclusion that MTS offered a baby tower and was, therefore, noncompliant. The other five offerors whose offered prices were lower than CMC's price have already been found noncompliant by respondent. Finding 4. If protester's proposal is determined to be compliant, protester is the lowest-priced, technically-compliant offeror. Protester need not prove that all other vendors which were found to be compliant were, in fact, not compliant. *RMTC Systems, Inc. v. Department of the Army*, GSBCA 12303-P, 93-2 BCA ¶ 25,890 1993 BPD ¶ 83 (Mar. 18, 1993).

For the foregoing reasons, we deny CMC's motion to dismiss the original protest complaint.

The Amended Protest Complaint

In counts I through IV of the amended protest complaint, protester alleges that the video graphics adapter offered by CMC was noncompliant, that CMC failed to properly acknowledge one of the amendments to the solicitation, that respondent's requirement for the memory of the video graphics adapter was overstated, and that respondent improperly evaluated CMC's proposal with regard to the requirement of the Norton computing index.

CMC and respondent have moved to dismiss the amended complaint on various grounds. We have reviewed the allegations of these counts, together with the procedural posture of the protester in this appeal, and have determined that these counts need not be resolved in the context of this protest.

If this Board determines that respondent improperly evaluated protester's proposal as to the issue of the offered, protester will prevail in its original protest complaint. Respondent would be directed by the Board to reevaluate protester's proposal and make an award consistent with the terms of the solicitation, or, if it determined that the solicitation did not reflect respondent's needs, revise the solicitation to accurately reflect its current justifiable needs, or otherwise proceed in accordance with statute and regulation. The allegations of the amended complaint need not be proven by protester to prevail in this protest, and are, therefore, not relevant to the resolution of the original protest complaint.

Conversely, if protester does not prevail in its original protest complaint, and this Board determines that respondent properly evaluated protester's proposal and that the MTS proposal is noncompliant, protester, as a noncompliant offeror, will lack standing to raise the allegations contained in the amended complaint.

Accordingly, the Board dismisses, *sua sponte*, the amended protest complaint as not relevant to this protest. For the foregoing reasons, we need not address intervenor's and respondent's motions to dismiss the amended complaint.

Decision

Intervenor's motion to dismiss the original protest complaint is DENIED. The amended protest complaint is DISMISSED, *sua sponte*, by the Board.

[¶ 26,391] Integrated Systems Group, Inc. v. Department of the Army

GSBCA No. 12489-P, September 10, 1993.

Responsiveness—Deviations from Requirements—Used Equipment.—A protester's offer of used equipment under a solicitation for automatic data processing equipment did not render the bid nonresponsive, because there was no indication in the solicitation that offerors were required to provide new equipment or to obtain advance permission from the contracting officer before offering used equipment. The government read several solicitation clauses as requiring the offeror either to obtain the contracting officer's permission to offer used equipment or to provide new equipment if permission was not given. The clauses relied upon by the government, however, related to disclosure requirements, which were designed to ensure that the contracting officer knew whether an offeror was providing new or used equipment. The protester was found to have complied with these clauses by clearly disclosing its intent to furnish used equipment.

Digitized by Google

For the protester: Skolnick & Leishman, Derwood, Maryland, by Shelton H. Skolnick. For the government: Vera Meza, Department of the Army, Alexandria, Virginia.

Before DEVINE, DANIELS, and LABELLA, Administrative Judges.

DEVINE, Administrative Judge: The Government issued a solicitation for automated data processing equipment. Protester bid used equipment, labelling it as such in its offer. The Government found the bid to be nonresponsive because protester had offered used equipment without first getting the contracting officer's permission to do so. The Government has made no award.

Findings of Fact

On December 28, 1992, the Department of the Army issued an invitation for bids in connection with its acquisition, on behalf of a foreign government, of certain automated data processing equipment and related software. Protest File, Exhibit 1. As stated in its bid, protester offered equipment that "is used, refurbished, warranted as new." Protest File, Exhibit 4. The Army rejected protester's bid as nonresponsive on the ground that the offered equipment was not new, and that the offer of used equipment had not been authorized in advance by the contracting officer. Government's Brief at 4. Both sides point to certain badly written clauses of the Federal Acquisition Regulation incorporated into the solicitation by reference, to support their respective views.

The first is FAR 52.210-5, NEW MATERIAL (APR 1984) (hereinafter Clause 5), which reads:

> Unless this contract specifies otherwise, the Contractor represents that the supplies and components, including any former Government property identified under the Used or Reconditioned Material, Residual Inventory, and Former Government Surplus Property clause of this contract, are new, including re-cycled (not used or reconditioned) and are not of such age or so deteriorated as to impair their usefulness or safety. If the Contractor believes that furnishing used or reconditioned supplies or components will be in the Government's interest, the Contractor shall so notify the Contracting Officer in writing. The Contractor's notice shall include the reasons for the request along with a proposal for any consideration to the Government if the Contracting Officer authorizes the use of used or reconditioned supplies or components.

The second is FAR 52.210-6, LISTING OF USED OR RECONDITIONED MATERIAL, RESIDUAL INVENTORY, AND FORMER GOVERNMENT PROPERTY (APR 1984) (hereinafter Clause 6), which reads:

> (a) If the offeror proposes to furnish items or components which are used or reconditioned material, residual inventory resulting from terminated Government contracts, or former Government surplus property, the offeror shall provide the following information as an attachment to the offer: a complete description of the items or components; quantity; name of Government agency from which acquired; and date of acquisition, if applicable. No used, reconditioned, residual inventory, or former Government surplus property other than that listed on the attachment shall be furnished under the resulting contract unless authorized in writing by the Contracting Officer.
>
> (b) All items to be furnished under the resultant contract must comply with the terms and specifications contained in the contract.

The third is FAR 52.210-7 USED OR RECONDITIONED MATERIAL, RESIDUAL INVENTORY, AND FORMER GOVERNMENT SURPLUS PROPERTY (APR 1984) (hereinafter Clause 7), which reads:

> (a) The Contractor shall not furnish any item or component which is used or reconditioned material, residual inventory resulting from terminated Government contracts, or former Government surplus property, unless such item or component was listed in the applicable attachment to the offer and approved by the Contracting Officer or unless otherwise authorized in writing by the Contracting Officer.
>
> (b) All items or components furnished under this contract shall comply with the terms and specifications contained in the contract.

The Government reads Clauses 6 and 7 as requiring the offeror to have the contracting officer's permission to offer used equipment before it sends in a bid. The Government contends that since protester did not do so, it was bound to offer only new equipment, as required by Clause 5.

Protester says simply that Clause 6 allowed it to propose used equipment "by its clear language." Protester's Brief at 3.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Discussion

The language of the clauses that the Government relies on simply does not support the Government's view of what is required with respect to an offer of used equipment.

The first sentence of Clause 5, dealing with new material, says, in essence: "unless this contract specifies otherwise, the Contractor represents that the supplies and components, ... are new ...." The use of the word "contract" where only the word "solicitation" makes any sense aside, this language can only mean that unless the offer says otherwise, the contractor must offer new goods. Protester passes this hurdle without difficulty. It made clear from the outset that its equipment was second hand.

The second sentence says, in essence, that if the contractor feels that used equipment can do the job the contractor should tell the contracting officer about it in writing. The language is curious, but a written offer to supply used equipment surely conveys, at least implicitly, the contractor's belief that used equipment will do the job.

The third sentence is equally curious. It speaks of a requirement that the contractor's "notice" shall give reasons for the "request," although the two are the same, and implies that since the equipment is second hand, a price break is in order. This, of course, makes little sense since presumably any price break will already have been reflected in the amount of the original offer. This sentence also appears to require that the offer of used equipment must be authorized by the contracting officer. Presumably, the contracting officer will show his approval of used equipment by accepting the offer (if the bid is low). He cannot reject it, because the solicitation does not call for new equipment. Nowhere in the clause is there any indication that equipment clearly labelled as used requires the advance permission of the contracting officer before a responsive offer can be made.

The next two clauses to be considered are very similar to one another in language. Both have two paragraphs labelled (a) and (b), and both (b) paragraphs use identical language to require that whatever is furnished under "this contract" comply with the contract's specifications.

The (a) paragraphs are also quite similar. Clause 7(a) in essence forbids an offeror from offering "used or reconditioned material, residual inventory resulting from terminated Government contracts or former Government surplus property, unless such item or component was listed in the applicable attachment to the offer and approved by the Contracting Officer or unless otherwise authorized in writing by the Contracting Officer." Clause 6(a) says about the same thing, but it also requires that an offeror proposing used, residual inventory, or Government surplus property must not only list it but also describe it in some detail.

What we have already said with respect to Clause 5 also applies to Clauses 6 and 7. We find all three to be primarily disclosure requirements. They are designed to insure that the contracting officer knows who is offering new equipment and who is not, and what the offered equipment consists of. Once the disclosure is made the offeror has complied with these clauses. Thereafter the contracting officer is free to accept the most competitive bid, but may not reject non-new goods as non-responsive solely because they are not new, unless the solicitation calls for only new equipment. That is not the case in the solicitation before us. *Integrated Systems Group, Inc. v. Department of Commerce,* GSBCA 12420-P, 93-3 BCA ¶ 26,321, 1993 BPD ¶ 215 (July 16, 1993).

Decision

The protest is **GRANTED.** The suspension order heretofore entered lapses by its terms.

[¶ 26,392] OAO Corporation v. General Services Administration; Computer Data Systems, Inc., and CBIS Federal, Inc., Intervenors

GSBCA No. 12484-P, September 3, 1993. (The text below is the redacted version issued to the public on September 14, 1993.)

Protests, GSBCA—Jurisdiction—Reverse Protests.—The board's protest jurisdiction encompasses the so-called "reverse protest," in which an awardee challenges the retraction of a contract award rather than the making of one, because reverse protests address the same issues as conventional protests. In both types of protests, the protester raises alleged violations of procurement law and challenges an agency's decision not to award

Digitized by Google

a contract to the protester. Although the decision not to contract with the protester came in the form of a termination for convenience in this case because the government had already awarded the contract, that form did not alter the fundamental nature of the protest. Form does not govern over substance.

Selection of Contractor—Personnel—Key Personnel Availability.—The government was entitled to terminate the contract of an awardee that had misled the government about the current status and availability of its proposed key personnel, because the deception invalidated the award. The solicitation required that certain key personnel be employed by or be under employment agreement with the awardee at the time of the award; this was a mandatory, highly material requirement and was reiterated throughout the solicitation. The awardee failed to inform the government when several of its proposed key personnel left its employ, and it maintained, inaccurately, that stale commitment letters from some of the former employees constituted valid employment agreements. The awardee thereby violated a mandatory solicitation requirement, rendering the award improper.

For the protester: Williams & Connolly, Washington, D.C., by Terrence O'Donnell, F. Whitten Peters, Ari S. Zymelman, Stephen D. Raber, Kevin M. Hodges, Eric J. Moss, and John T. Parry. For the government: Seth Binstock, Pamela J. Reiner, Tenley A. Carp, and John Sawyer, Office of General Counsel, General Services Administration, Washington, D.C. For the intervenor, Computer Data Systems, Inc.: Charles B. Machion and Robin McCune and Doyle & Bachman, Washington, D.C., by Gerard F. Doyle, Scott W. Woehr, and Alexander T. Bakos. For the intervenor, CBIS Federal, Inc.: Susan Warshaw Ebner and Petrillo & Hordell, Washington, D.C., by Joseph J. Petrillo, Jessica C. Abrahams, and Laurel A. Heneghen.

Before PARKER, HENDLEY, and HYATT, Administrative Judges.

PARKER, Administrative Judge: OAO Corporation's contract to provide automatic data processing (ADP) support services was terminated for convenience by the General Services Administration (GSA) as a result of GSA's admitted violations of statute and regulation in connection with the award. OAO protests the termination, maintaining that the original award was proper in all respects. GSA, with the help of two offerors which have intervened in the protest, maintains that its original grounds for terminating the contract were correct. In addition, GSA and the intervenors argue that the termination was proper because OAO's proposal did not comply with material requirements of the solicitation and, thus, was not eligible for award.

We need go no further than to agree with GSA and the intervenors that OAO's proposal was not eligible for award. OAO misled the Government as to the status and availability of its proposed key personnel. In addition, OAO failed to comply with solicitation provisions requiring that such personnel be "employed by, or under employment agreement" with the offeror, and that the employees be available for assignment on the date of award. As described more fully below, OAO failed to comply with these requirements with respect to six of the seven individuals to which the requirements were addressed.

Because OAO's proposal did not comply with these key solicitation requirements, OAO should not have received the award. Termination of the contract was thus appropriate.

Findings of Fact

1. On November 21, 1991, GSA solicited proposals for ADP technical support services for Federal agencies in a geographical area known as the Central Zone. The solicitation contemplated award of a requirements type contract with fixed labor rates, and was for a one-year period, with four one-year options. Protest File, Exhibit 1. Approximately 700 contractor personnel will perform the services for this contract, which is worth in excess of $150,000,000.

2. The contract was awarded to OAO on June 1, 1993. On June 11, Computer Data Systems, Inc. (CDSI), protested the award. CDSI claimed that it had been misled during price discussions in that the contracting officer induced CDSI to raise its prices and then awarded the contract to a lower-priced offeror. CDSI also alleged that OAO's rates were unreasonably low, that GSA had misevaluated CDSI's proposal, and that OAO was ineligible for award because its proposed Program Manager was not available for assignment to the contract. Protest File, Exhibit 286. Shortly thereafter, CBIS Federal Inc. (CBIS) also filed a protest. CBIS alleged

©1994, Commerce Clearing House, Inc.

Digitized by Google

that OAO's prices were unreasonable and unrealistic. *Id.*, Exhibit 288. Two other losing vendors, CTA, Inc., and ARC Professional Services, intervened on the side of the protesters.

3. On June 17, GSA terminated the contract with OAO. Protest File, Exhibit 290. On June 28, GSA, CDSI, CBIS, ARC and CTA filed a Joint Stipulation of Dismissal with the Board. The Joint Stipulation provided in pertinent part as follows:

> The Parties jointly stipulate that GSA evaluated the offers in a manner inconsistent with the evaluation criteria during the competition for the Contract and that this constitutes a violation of the Competition in Contracting Act. In addition, GSA stipulates that it (i) failed to conduct meaningful discussions with the offerors during the competition for the Contract; and (ii) provided information which reasonably led offerors to believe that if changes were made in their rates for skill categories included in the requirement, that such changes would improve the offeror's chances for award, while in actuality, the offeror's chances for award were negatively affected as a result of making such changes. GSA stipulates that the above constitute violations of the Competition in Contracting Act of 1984.

The Board dismissed the protests as the protesters and the Government requested. *Computer Data Systems, Inc. v. GSA*, GSBCA 12455-P et al., 1993 BPD ¶ 179 (June 30, 1993). OAO, which had intervened on GSA's side, did not participate in the settlement or the request for dismissal. On July 2, 1993, OAO filed the instant protest, contesting GSA's decision to terminate the contract.

Solicitation Requirements

4. Section C of the solicitation (the statement of work) stated that:

> Certain senior professional and managerial personnel are essential for successful contractor performance. The contractor shall assign specific individuals, by name, to the key positions of Program and Group Managers. Key personnel shall be available for full-time assignment under this contract on the award date of the contract.

Protest File, Exhibit 1 at C-16. Similarly, section C.9.1.a provided that "[t]he proposed Program Manager and the Group Manager(s) shall be available for assignment to this contract on the effective date of the contract, and remain in their respective positions for a minimum of twelve (12) months." *Id.* at C-17.

5. The solicitation contained six technical evaluation criteria, one of which was "Personnel":

> This area will be evaluated as a whole as acceptable or unacceptable. To be acceptable, an offer must have acceptable resumes for all required positions.
>
> (1) Individual resumes must be submitted for the Program Manager (1), and the Group Managers (6), that will be assigned initially to the contract.... All resumes submitted must meet the minimum requirements for the offeror to be evaluated as acceptable in this factor. The Offeror and individual shall certify that the information on each resume is true and complete, and that the individuals named shall be available for assignment on the date the contract is effective.
>
> ....
>
> (4) If any of the following conditions are not met, the resume will be evaluated as unacceptable:
>
> ....
>
> (c) Is employed by, or under employment agreement, with the firm,
>
> (d) Is committed by the firm to be provided, if required, on the award date of the contract; for Program Manager and Group Managers, for the first twelve months of the contract.

Protest File, Exhibit 1 at L-15—L-16. According to the contracting officer, the solicitation did not permit award of the contract to an offeror which did not have the Program Manager and the Group Managers available on the date of award. Transcript at 1284-86, 1288.

The Program Manager

6. In its initial proposal of February 19, 1992, OAO proposed as its Program Manager. Mr. Sherrer was at that time an OAO employee and had agreed orally to serve as Program Manager in the event OAO won the contract. Transcript at 493. OAO submitted Mr. Sherrer's resume, which stated that he was currently an OAO employee, and was "available immediately." Protest File, Exhibit 14. The proposal further stated that OAO's key personnel "are willing and committed to be available on the award date of the contract and for the first twelve months of the contract." *Id.*, Attachment G at 6-1.

7. Mr. Sherrer resigned from OAO by letter of February 15, 1993. The letter stated:

Digitized by Google

> I will not be continuing my employment with OAO upon completion of my five year employment contract. Accordingly, I tender my resignation effective 3/7/93.

CDSI Protest File Supplement, Exhibit 36. On March 15, Mr. Sherrer went to work for a company called Calspan, in Tullahoma, Tennessee. *Id.*, Exhibit 41. OAO never informed GSA (by updating his now-incomplete resume, or otherwise) that Mr. Sherrer was no longer an OAO employee, even though OAO submitted two subsequent best and final offers (BAFOs). Transcript at 933-34. OAO did not propose a substitute Program Manager (prior to award), either.

8. OAO never discussed the Program Manager position with Mr. Sherrer again until May 31, three days after OAO was informed that it had been awarded the contract. Transcript at 209, 503, 731. OAO's Senior Vice President called Mr. Sherrer on May 31 to discuss the contract award and Mr. Sherrer's availability to serve as Program Manager. The next day, OAO's Senior Vice President called the contracting officer and told her that Mr. Sherrer was "unavailable" because he was working for another company. *Id.* at 282.[1] The Senior Vice President sensed that the contracting officer was disappointed. *Id.* at 751. Nevertheless, OAO confirmed the notification in a letter of June 1, which stated that "Mr. Sherrer is no longer available for this assignment." CDSI Protest File Supplement, Exhibit 37. OAO brought a substitute Program Manager to the "kickoff" meeting with GSA on June 4.

9. On June 7, OAO's Senior Vice President attempted to set up a face-to-face meeting with Mr. Sherrer. Transcript at 750. The meeting occurred on June 15, four days after CDSI had filed its protest alleging, among other things, that OAO was ineligible for award because its proposed Program Manager was unavailable. On the same date, two weeks after award of the contract, OAO entered into a employment contract with Mr. Sherrer. CDSI Protest File Supplement, Exhibit 39. The agreement provides for a salary of for the first year and for the second year. This is and thousand dollars, respectively, more than Mr. Sherrer is paid at Calspan.[2] The employment agreement also provides that OAO will reimburse Calspan for Mr. Sherrer's relocation from Pasadena, California, to Tullahoma, Tennessee, and pay up to an additional for a further relocation from Tullahoma to Huntsville. *Id.* These terms were all proposed by Mr. Sherrer and OAO accepted them without negotiation. According to OAO's Senior Vice President, OAO's President agreed to the terms because he is "very fond of Mr. Sherrer." Transcript at 765.[3]

The Group Managers

10. In January of 1992, OAO's Senior Vice President sent by electronic mail the following message to OAO's President and its Chief Operating Officer:

> The RFP for the 700-person job requires us to provide resumes for the PM [Program Manager] and nine GMs [Group Managers]. We are resuming [sic] Jim Sherrer for the PM position.
>
> ....
>
> The nine GMs have to have 10+ years of experience in the business including two years managing at least 20 people performing both business and scientific software development tasks in diverse locations. This is a difficult requirement and we have looked throughout the company to find nine that qualify .... *When we win the job, it is our intention to do everything we can to hire the incumbent managers, since that is far less costly than moving these individuals and certainly less disruptive to our current operations.*
>
> The scoring for the resume section is pass or fail. If we fail, we are essentially out of the competition, so we do not want to skimp onn [sic] the talent ....

CDSI Protest File Supplement, Exhibit 13 (emphasis added).[4]

---

[1] OAO's Senior Vice President and Mr. Sherrer went to great lengths to explain that Mr. Sherrer was under an oral employment agreement and thus "available" immediately to perform the contract. Moreover, according to OAO's Senior Vice President, when he told the contracting officer that Mr. Sherrer was unavailable, he really did not mean it in that sense. *See* Transcript at 733-38. The facts, however, speak for themselves. We simply do not find OAO's after-the-fact explanations to be credible.

[2] Although Mr. Sherrer was paid a similar salary when he worked for OAO in Pasadena, California, he was surprised that OAO agreed to pay him so much to work in Huntsville, Alabama, where the cost of living is much lower. He had expected, and would have accepted, much less. Transcript at 510, 530, 538, 554, 764.

[3] In its proposal, OAO had proposed a salary of approximately per year for the Program Manager, which is the Transcript at 537, 764.

[4] As it does with virtually every event involved in this case, OAO attempts to "explain away" the significance of this message. OAO's Senior Vice

©1994, Commerce Clearing House, Inc.

Digitized by Google

11. In its initial proposal of February 19, 1992, OAO proposed six Group Managers, as required by the solicitation (as amended). At that time, all six were OAO employees; five of the six were currently working on OAO's Western Zone contract with GSA. Transcript at 720-21. All had agreed that OAO could propose them for the Central Zone contract.

12. In the Summer of 1992, OAO lost the Western Zone contract to CDSI. Five of OAO's six proposed Group Managers were laid off. Transcript at 720-21. OAO never informed GSA (either by correcting their now-incomplete resumes, or otherwise) that these five proposed Group Managers were no longer employed by OAO, even though OAO went through extensive negotiations and submitted two subsequent BAFOs. OAO did not propose substitute Group Managers, either.

13. When the five proposed Group Managers left OAO's employ in early July 1992, OAO had them sign letters of commitment. Four of the letters said exactly the same thing:

> This confirms my commitment to work for OAO as a Group Manager on the GSA Central Zone Business/Science Contract. This agreement is contingent upon OAO being awarded the contract by GSA.

Protester's Exhibit (Lohfeld) 8. The fifth letter said substantially the same thing. *Id.* The letters of commitment were not signed by OAO, and do not contain any terms of employment such as salary, benefits, start date or duration.

14. Three of the proposed Group Managers, Messrs. do not believe that they have employment agreements with OAO. They consider their letters of commitment as an indication of their willingness in 1992 to consider offers from OAO for a Group Manager position on the Central Zone contract. Transcript at 1354, 1361 , 1372-76, 1378 1405 . Mr. who has a tenuous job situation, believes that he has some sort of agreement with OAO. *Id.* at 835, 1803-06.[5] Mr. the fifth of the laid off Program Managers, did not testify.

15. Even though OAO continued to propose these people for the Group Manager positions ("willing and committed to be available on the award date of the contract"), OAO never followed up to see whether these former employees were still available to work on the contract. The proposed managers (with one possible exception) were not even contacted until after award—almost a year after they had left OAO. Transcript at 828, 1354, 1374, 1407; Protester's Exhibit (Lohfeld) 8. The current availability of the proposed Group Managers is varied and at present uncertain.

Discussion

Jurisdiction

This protest is what is commonly referred to as a "reverse" protest. Such protests involve a challenge by the contract awardee to an agency's decision to terminate a contract based upon improprieties in the award process. GSA argues that the Board lacks protest jurisdiction over challenges to such terminations, even where the propriety of the award underlies the determination to terminate. We disagree.

We have held that the Brooks Act "permit[s] an interested party to file with ... [the Board] a complaint against an agency's termination of an ADPE contract for the convenience of the Government based upon a determination by the agency that the procurement process failed to conform with law." *Diversified Systems Resources, Ltd.*, GSBCA 9493-P, 88-3 BCA ¶ 20,897, 1988 BPD ¶ 119. Thus, the Board's jurisdiction includes the so called "reverse" protest:

> We hold that a protest, as that term is defined in the Brooks Act, encompasses an objection by an interested party to the retraction as well as the making of an award of a contract, where the retraction is based on an agency determination that improprieties occurred in the procurement pro-

(Footnote Continued)

President explained that the message was not reflective of OAO's actual intentions and that OAO understood that this language was not consistent with the solicitation. Transcript at 715, 814. Like many other of OAO's "explanations," this one strikes us as an after-the-fact rationalization, rather than a credible explanation.

[5] Although Messrs. and currently work for CDSI on the Western Zone contract, the Board finds their testimony to be highly credible. In the Board's opinion, these mid-level employees answered each question honestly and appeared to be under no pressure from CDSI. The Board also found the testimony of Mr. to be credible. After listening to all of the testimony on this subject, we cannot help but feel that each individual's perceptions as to whether he had an employment agreement with OAO depended to a large extent on the degree to which that person desired the job.

> cess. This holding recognizes that in effect, the agency, where such a retraction has occurred, has already objected to the award, and the awardee is simply challenging the agency's objection. The case is thus here on precisely the same issues on which it would be here if the award had been made to another firm and that protester had elected to protest that. The fundamental issue is in both situations whether the award was made in accordance with applicable statutes and regulations. The protester still bears the burden of proving its case by a preponderance of the evidence, but the Brooks Act entitles it to be heard.

88-3 BCA at 105,655, 1988 BPD ¶ 119 at 7. As we pointed out in *Diversified,* the General Accounting Office has, for many years, been deciding such protests. *See, e.g., Service Industries, Inc.; Merchant's Building Maintenance Co.,* B-183535, 75-2 CPD ¶ 345 (Nov. 24, 1975); *Norfolk Shipping and Drydock Corp.,* B-219988.3, 85-2 CPD ¶ 667 (Dec. 16, 1985).

Here, as in many "regular" protests, a disappointed offeror (OAO) is challenging an agency's (GSA's) decision not to award it a contract. The fact that GSA's decision came in the form of a termination for convenience (because GSA initially awarded the contract to OAO) does not change the fundamental nature of that challenge. To dismiss such a protest for lack of jurisdiction would inappropriately emphasize form over substance—something we are confident that the Congress, in enacting the Brooks Act, did not intend for us to do. GSA's motion is denied.

The Merits

OAO maintains in this protest that the award was made in accordance with statute and regulation and, thus, should not have been terminated by GSA. We hold that the termination was proper. As discussed below, we find that OAO's proposal was ineligible for award and should not have been accepted. OAO misled GSA as to the status and availability of its proposed key personnel. In addition, OAO's proposal failed to comply with material requirements of the solicitation.

The solicitation required each offeror to submit seven resumes as part of its proposal. These seven people would be supervising approximately 700 people involved in performing a contract worth more than $150,000,000. The solicitation required that the resumes be certified as "true and complete," and that "the individuals named shall be available for assignment on the date the contract is effective." Finding 5. The solicitation further provided that a resume would be unacceptable if the proposed person was not "employed by, or under employment agreement with, the firm" and "committed by the firm to be provided, if required, on the award date of the contract ...." *Id.*

In its initial proposal, OAO told GSA that its proposed Project Manager and its six proposed Group Managers were employees of OAO and were "willing and committed to be available on the award date of this contract and for the first twelve months of the contract." Findings 6, 11. This may well have been true at the time OAO submitted its initial proposal.

Things changed drastically during the course of the procurement, however. OAO's proposed Project Manager and five of the six proposed Group Managers left OAO to work for other companies. Findings 7, 12. Yet OAO said nothing about it to GSA. OAO did not update the now-incomplete resumes or otherwise inform GSA during negotiations or in either of OAO's two BAFOs. *Id.* OAO simply let GSA believe that its key personnel were still employed by OAO and "willing and committed to be available on the award date of the contract and for the first twelve months of the contract." In fact, they were neither.

In *RGI, Inc. v. Department of the Navy,* GSBCA 11752-P, 93-1 BCA ¶ 25,402, 1992 BCA ¶ 156, a case remarkably similar on its facts to the instant case, we held:

> When a significant segment of the evaluation of a technical proposal is based upon the qualifications of the proposed key personnel, offerors must determine that the personnel they propose are, in fact, available. Merely to assume that former employees are available to return to their former employment, based on information months old, is not reasonable.

93-1 BCA at 126,514, 1992 BPD ¶ 156 at 8. In *RGI,* the Board followed numerous Board and Comptroller General decisions which have invalidated contract awards on the basis that the awardee proposed key personnel it had no assurance that it could deliver. *See Sterling Federal Systems, Inc.,* GSBCA 10381-P, 90-2 BCA ¶ 22,802, 1990 BPD ¶ 70; *Electronic Data Systems Federal Corp.,* GSBCA 9689-P, 89-2 BCA ¶ 21,655, 1989 BPD ¶ 69, *aff'd in part, vacated in part sub nom. Planning Research Corp. v. United States* [38 CCF ¶ 76,383], 971 F.2d 736 (Fed.

Cir. 1992); *CBIS Federal, Inc.*, B-245844, 92-1 CPD ¶ 308 (Mar. 27, 1992) (assumption that proposed personnel would be available for contract performance because offeror heard nothing to the contrary was unreasonable); *Mantech Field Engineering Corp.*, B-245886, 92-1 BPD ¶ 309 (Mar. 27, 1992) (failure of awardee to ascertain current availability of proposed personnel invalidated award; offeror has responsibility to determine whether its proposed personnel are available when proposal is evaluated on the qualifications of those individuals); *see also Omni Analysis*, B-233372, 89-1 CPD ¶ 239 (Mar. 6, 1989) (an offeror's failure to inform an agency that a proposed key person is no longer available and to provide a substitute constitutes a misrepresentation warranting a termination, even though it is not clear if the selection decision would have been different had the offeror accurately reflected the true status of the key person).

Here, notwithstanding its protestations to the contrary, OAO had no reasonable assurance that its proposed Program Manager and five of its six proposed Group Managers would be available to perform the contract. All of them had other jobs, and OAO had not spoken to most of them in almost a year. Finding 15. This was precisely the situation we found in *RGI* to render that firm ineligible for award.

OAO argues that the solicitation did not really require the proposed personnel to be available on the date of award because there was not enough work for all of them to do during the contract transition period. Even if OAO's reading of the solicitation could be considered reasonable, which neither we nor the contracting officer consider it to be, OAO's proposal still failed to comply with the availability requirements. Given the employment situations that existed prior to award, OAO could not reasonably have believed that its key personnel were available *at all*, much less on the date of award.[6]

OAO also maintains that key personnel availability was not a mandatory requirement of the solicitation. Under OAO's theory, OAO's failure to assure the availability of proposed key personnel should result in at most a point reduction in its technical score, points being the number of points assigned to the "Personnel" section. Again, we agree with the contracting officer and disagree with OAO. First, the requirement that proposed key personnel be available on the date of award was not confined to the "Personnel" section, which was worth technical points; the requirement appeared throughout the solicitation. *See* Findings 4, 5. More important, however, is the mandatory nature of the solicitation language. The solicitation uses the terms "shall" and "must" throughout when referring to the personnel availability requirement. *Id.* In a contract for services of this magnitude, it is hard to imagine a provision more material than one which requires the offeror to have acceptable key personnel available to work on the contract.[7] OAO's failure to ensure that its proposed key personnel were in fact available rendered its proposal unacceptable.

OAO's proposal was unacceptable for another reason—its proposed Program Manager and five of its six Group Managers were not "employed by, or under employment agreement, with the firm," as required by the solicitation. OAO maintains that its oral agreements with the proposed Program Manager and Group Managers while they were employees of OAO constituted employment agreements which continued to exist after the employees left OAO. OAO views the letters of commitment signed by the Group Managers as confirmations of those oral employment agreements. The terms of the employment agreements are said to include a "reasonable" salary and "standard" benefits.

OAO did not have "employment agreements" with either its proposed Program Manager or its proposed Group Managers. First, we point out that OAO uses actual employment contracts; the proposed Program Manager had one before he resigned from OAO, and he has one now. Findings 7, 9. Mr. Sherrer's current employment agreement was signed by both Mr. Sherrer and OAO, and it sets forth Mr. Sherrer's salary, the duration of the agreement, and his bene-

[6] We do not view the fact that OAO ultimately was able to "buy back" its proposed Program Manager as proving that he was available. *See Informatics, Inc.*, 57 Comp. Gen. 217 (1978), 78-1 CPD ¶ 53 (it is inappropriate to take note of an offeror's post-selection recruitment efforts when these personnel were not committed at the time of award). If offerors were permitted to propose personnel without regard to preaward availability, the integrity of the procurement process would be destroyed.

[7] Under OAO's theory, for example, a contractor could fail to propose *any* personnel for the Program Manager and Group Manager positions and still win the contract award on points. Such a reading of the solicitation is unreasonable.

Digitized by Google

fits, including his two relocation allowances. Finding 9. At the time of award, however, Mr. Sherrer did not have one of these agreements; in fact, when he left OAO, the two parties never again discussed the status of Mr. Sherrer's oral agreement to serve as Program Manager for the Central Zone contract. Mr. Sherrer simply went on to his new job at Calspan. Finding 7. We reject OAO's self-serving characterization of Mr. Sherrer's status at the time of award as being under an "employment agreement."

The proposed Group Managers were in similar situations. As OAO employees, they agreed to serve as Group Managers in the event OAO won the contract. When they left, however, at least three of them reasonably considered their letters of commitment to be nothing more than indications of their willingness to consider offers from OAO. Finding 14. Such an unsettled situation is entirely consistent with OAO's original plan to hire as many incumbent managers as possible, after award. Finding 10.

Read in the context of the entire solicitation, the requirement for employment agreements for non-employees of the offerors was a method of attempting to assure that the Government would actually receive the services of the personnel upon which it based its award decision. OAO's stale commitment letters did not serve that purpose. We agree with the contracting officer that an employment agreement is something more than a commitment letter. Transcript at 225.

Decision

GSA's decision to terminate OAO's contract was reasonable. OAO misled GSA as to the status and availability of its proposed key personnel. In addition, OAO's proposal failed to comply with material requirements of the solicitation and was, therefore, ineligible for award of the contract. Accordingly, the protest is **DENIED.**

[¶ 26,393] Dawson Construction Co., Inc. v. General Services Administration

GSBCA No. 12480, September 20, 1993. Contract No. GS-07P-91-JXC-0117.

Protests, GSBCA—Procedure—Dismissal with Prejudice.—In a case in which a contractor had filed a claim for an equitable adjustment but in which the contract had not been completed and additional claims were expected, the board dismissed the contractor's appeal with prejudice, because the contracting officer had pledged in writing that he would reconsider the contractor's claim in light of more complete and accurate information expected to be available after contract completion and would issue a new decision at that time. When the contracting officer issues a new decision and if the contractor does not agree with that decision, the contractor may then appeal from the new decision.

For the appellant: Smith, Currie & Hancock, Atlanta, Georgia, by Patrick A. Thompson. For the government: Gerald L. Schrader, Office of General Counsel, General Services Administration, Washington, D.C.

Before HYATT, DEVINE, and DEGRAFF, Administrative Judges.

HYATT, Administrative Judge: This appeal is of a contracting officer's decision denying appellant's claim for an equitable adjustment under the Changes clause of a contract for construction work in the U.S. Courthouse in Denver, Colorado. The contract giving rise to the claim, GS-07P-91-JXC-0117, has not yet been completed, and additional claims are expected to be asserted by appellant. Completion of contract work is not expected to take place until some time in the early spring of 1994. Both parties would like to postpone the pursuit of this appeal until such time as the contract has been completed and Dawson's claims can be considered as a whole.

The parties differ, however, in their proposed approaches to this objective. Respondent has filed a motion to dismiss the appeal without prejudice. The basis for this request is that the contracting officer has formally rescinded his decision in a letter explaining that the merits of Dawson's claim should more properly be considered upon contract

©1994, Commerce Clearing House, Inc.
Digitized by Google

completion when the full effect of alleged delays can be ascertained.[1]

Appellant opposes respondent's motion, expressing concern that its rights may nonetheless be affected by dismissal of the appeal at this time. Appellant would prefer that the Board suspend the appeal until such time as the contract has been completed and all claims arising out of it have been presented to the contracting officer for decision.[2]

After considering the stated concerns of the parties, and the Board's interest in judicial efficiency and economy, we conclude that it is appropriate to follow the approach taken in *PRC, Inc. v. Department of Commerce*, GSBCA 11979-COM (Sept. 1, 1993), and dismiss this action with prejudice. We believe that neither respondent nor appellant will suffer any disadvantage as a consequence of this action. Respondent's contracting officer has pledged in writing that he will reconsider appellant's claim in light of more complete and accurate information expected to be available after contract completion and will issue another decision at that time. When the contracting officer issues a new decision, and if appellant does not agree with the new decision, appellant may appeal from the new decision. Under these circumstances, we believe it is proper to dismiss this appeal with prejudice.

Decision

Accordingly, this appeal is **DISMISSED WITH PREJUDICE.** Rule 28(b). This dismissal does not operate as an adjudication upon the merits of the underlying claim, however.

[¶ 26,394] Electronic Data Systems Corporation v. Department of Energy; Unisys Government Systems, Inc., Intervenor

GSBCA No. 12454-P, August 16, 1993. (The text below is the redacted vesion issued to the public on September 14, 1993.)

Selection of Contractor—Personnel—Compensation Plan.—An incumbent's appeal alleging that offerors' compensation plans should have been evaluated as part of the scoring of technical proposals, as well as in the cost evaluation, was denied because the incumbent's argument rested on unconvincing expert testimony comparing the successful offeror's rates for exempt professional employees with current compensation charged by the incumbent on its contract. The government evaluated offerors' compensation plan summaries rather than the total compensation offered, which was fully in accord with the terms of the RFP.

For the incumbent: Kaye, Scholer, Fierman, Hays & Handler, Washington, D.C., by Ronald K. Henry, Peter C. Condron, and Laura E. Jehl. For the government: Paul L. Lewis and Patricia D. Graham, Office of Assistant General Counsel for Procurement and Finance, Department of Energy, Washington, D.C. For the intervenor, Unisys Government Systems, Inc.: McKenna & Cuneo, Washington, D.C., by C. Stanley Dees, Thomas C. Papson, Victoria McEneney, and and Mark J. Meagher.

Before BORWICK, HENDLEY, and DEGRAFF, Administrative Judges.

---

[1] Respondent urges that the rescission of the contracting officer's decision which prompted Dawson's appeal avoids any concerns that might properly be raised by appellant in light of the decision in *Inslaw, Inc.*, DOT BCA 1609 et al., 92-1 BCA ¶ 24,550 (1991). In that decision, the Department of Transportation Board observed, in dicta, that a dismissal without prejudice might have the effect of forever terminating an appellant's right to litigate at the board once the ninety day appeal period established under the Contract Disputes Act had passed. 92-1 BCA at 122,501-02.

[2] On September 9, 1993, the Board convened a telephonic conference of the parties in an attempt to reconcile their positions. The Board informed counsel that in a similar matter, the parties were willing to dismiss an appeal with prejudice as a result of the contracting officer's withdrawal of his decision. This was because the appellant would still be able to appeal any subsequent contracting officer's decision involving its claim. *PRC, Inc. v. Department of Commerce*, GSBCA 11979-COM (Sept. 1, 1993). Counsel for appellant indicated that, while he understands the Board's position, he still could not agree to dismissal, either with or without prejudice. He added, however, that he would appreciate inclusion of language recognizing the right to appeal a new decision, similar to that used in *PRC, Inc.*, should the Board elect to adopt this approach here.

BORWICK, Administrative Judge:

Background

On June 11, 1993, Electronic Data Systems Corporation (EDS) protested the award of a contract under Request for Proposals No. DE-RP01-92EI21967 (RFP) by the Energy Information Administration of the Department of Energy (EIA) to UNISYS Government Systems, Inc. (Unisys). Protester filed a seven count complaint, but the allegations as refined revolve around five issues: (1) Alleged "wage busting" of compensation to be paid to professional employees exempt from the provisions of the Service Contract Act; (2) unequal treatment of escalation rates; (3) organizational conflict of interest; (4) uncompensated overtime hours and (5) evaluation of corporate references. EDS alleges that respondent's technical and cost evaluations did not recognize the alleged "wage busting," accorded different treatment to EDS escalation rates, did not downscore Unisys' technical proposal for organizational conflict of interest, did not score corporate references and did not give EDS proper credit for uncompensated overtime. The first issue was the primary issue.

We deny the protest. Unisys' evaluated price was lower than EDS evaluated price. EDS has not proven that Unisys' lower evaluated price was due to "wage busting" of professional employees. In fact, the record shows that direct labor costs proposed by Unisys and EDS were

EDS has not proven that it is entitled to prevail on the other issues.

Findings of Fact

The Terms of the RFP

1. The scope of work of the RFP required the successful offeror to provide support maintenance and operation for respondent's mainframe system, associated personal computers, a related data communications facility, and related local area networks. Protest File, Exhibit 3, Attachment B at 2-4.[1] The successful offeror was also to provide software and equipment maintenance and inventory maintenance for respondent's facility. *Id.* Additionally, the successful offeror was to propose options and recommendations for evaluating, ordering, installing, repairing and maintaining information systems and automated support systems to satisfy respondent's informational requirements. *Id.* The RFP contemplated a cost plus award fee contract for a base year and four option years. Protest File, Exhibit 2 at 2.

2. Respondent estimated 199,020 (plus or minus ten percent) direct productive labor hours would be required to perform the services required. Protest File, Exhibit 2, ¶ B.007 at 3. The RFP specified 107 positions for the base year (growing to 125 positions at option year four), in 40 labor categories. *Id.*, Section J, Attachment 1 at 000409-418.

3. Section L of the RFP set forth the proposal format required of each offeror. Section L.47 (Preparation of Technical/Business Proposals) states in part that, "In order that your Technical/Business Management Proposal may be evaluated strictly on the merit of material submitted, *no contractual cost information is to be included in your Technical/Business Management Proposal.*" Protest File, Exhibit 3, ¶ L.047 at 99.

4. Section L.049 (Preparation of Cost Proposals) stated in part that, "The Cost/Price Proposal .... *Contractual cost information is not to be included in the Technical Proposal.*" *Id.*, ¶ L.049 at 109. Labor rates for proposed individuals and categories were to be put in the cost proposal. *Id.*

5. The evaluation factors read in pertinent part:

M.0001 *GENERAL*

....

(b) Award will be made to that responsible offeror whose offer, conforming to this RFP is considered most advantageous to the Government, considering the evaluation criteria in this Section M.

....

M.006 *OVERALL RELATIVE IMPORTANCE OF EVALUATION CRITERIA*

(a) The Technical and Business Management proposal is of greater importance than the cost proposal. However, if, after evaluation of the Technical and Business Management and cost proposals, two or more competing proposals are within the competitive range, evaluated probable cost to the Government may be the deciding factor for selection, depending on whether

[1] Page number citations are to exhibit page numbers. Where there are no exhibit page numbers, citations are to Bates Stamps numbers.

©1994, Commerce Clearing House, Inc.

Digitized by Google

the most acceptable proposal (excluding cost consideration) is determined to be worth the cost differential, if any.

Protest File, Exhibit 2.

6. The evaluation criteria for the technical and business management proposals were, in descending order of importance:

(1) Capability and Experience

(2) Corporate Resources

(3) Key Personnel

(4) Project Management

Protest File, Exhibit 3, ¶ M.006(b) at 125-26.[2]

7. Section M.009 described the basis for the application of the evaluation criteria. Capability and experience "will be evaluated on the basis of the demonstrated experience and performance on both past and current contracts similar in both size and scope as solicited by this RFP." The evaluation would place particular emphasis on experience in the areas of supporting Multiple Virtual Systems (MVS) and Virtual Machine (VM) operating systems. *Id.*, ¶ M.009.

8. The Corporate Resources criterion would be evaluated on the basis of:

> [A]vailability of personnel resources and staffing, including additional resources for special situations. The evaluation will consider the ability to provide and retain the required number of qualified resources by labor category; the offeror's commitment to and accomplishment of staff training and development; the offeror's labor relations and compensation plan; the offeror's overall management system organization.

Id.

9. Key personnel:

> will be evaluated based on their qualifications as demonstrated by education, technical, and professional experience (to include demonstrated leadership capabilities and experience necessary to perform as a key person) relevant to the Statement of Work and generic position descriptions, and the timely availability and commitment of the key personnel proposed.

Id.

10. Paragraph M.013 of the RFP concerns the evaluation of compensation plans for professional employees. Because of the importance of this section to the issues presented, we set it forth in full:

> (1) Recompetition of service contract may in some cases result in lowering the compensation (salaries and fringe benefits) paid or furnished professional employees. This lowering can be detrimental in obtaining the quality of professional services needed for adequate contract performance. It is therefore in the Government's best interest that professional employees, ... be properly and fairly compensated. As a part of their defined proposals, offerors will submit a total compensation plan setting forth salaries and fringe benefits proposed for the professional employees who will work under the contract. The Government will evaluate the plan to assure it reflects sound management approach and understanding of the contract requirements. This evaluation will include an assessment of the offeror's ability to provide uninterrupted high quality work. The professional compensation proposed will be considered in terms of its impact upon recruiting and retention, its realism, and its consistency with a total plan for compensation. Supporting information will include data, such as recognized national and regional compensation surveys and studies of professional, public and private organizations, used in establishing the total compensation structure.
>
> (2) The compensation levels proposed should reflect a clear understanding of work to be performed and should indicate the capability of the proposed compensation structure to obtain and keep suitable qualified personnel to meet mission objectives. The salary rates or ranges must take into account differences in skills, the complexity of various disciplines, and professional job difficulty. Additionally, proposals envisioning compensation levels lower than those of predecessor contractors for the same work will be evaluated on the basis of maintaining program continuity, uninterrupted high-quality work, and availability of required competent professional service employees. Offerors are cautioned that lowered compensation for essentially the same professional work may indicate lack of sound management judgement and lack of understanding of the requirement.

[2] By amendment 0001, respondent reduced the number of key personnel from 19 to 3, and restructured the evaluation criteria to reflect the reduction in key personnel. The corporate resources criterion became the second most important, where before it had been third. *Compare* Protest File, Exhibit 2 *with* Protest File, Exhibit 3.

Digitized by Google

(3) The Government is concerned with the quality and stability of the work force to be employed on this contract. Professional compensation that is unrealistically low or not in reasonable relation to the various job categories, since it may impair the Contractor's ability to attract and retain competent professional service employees, may be viewed as evidence of failure to comprehend the complexity of the contract requirements.

(4) The compensation plan may be utilized during the Government's evaluation of proposals under evaluation Criterion 2, Corporate Resources.

Protest File Exhibit 3, at 128-29.

EDS Proposal

11. In the corporate resources portion of its BAFO, EDS

Unisys Proposal

Acquiring the staff to fulfill the contract

12. In the corporate resources portion of its BAFO, Unisys outlined its strategy for acquiring the staff to fulfill the requirements of this contract.

Retaining the staff to fulfill the contract

13. In the corporate resources portion of its BAFO, Unisys outlines its strategy for retaining the staff necessary to fulfill the requirements of this contract.

14.

15.

16. Prior to submission of its BAFO, Unisys received a list of questions/clarifications from the Department of Energy (DOE).

17. In response, Unisys stated:

Id.

Evaluation Methodology

18. Respondent used formal source selection procedures in conducting the procurement. The Source Evaluation Board (SEB) evaluated the technical and business portion of the offerors' proposals, determined a competitive range of three offerors, and based upon its evaluation, made recommendations to the Source Selection Official (SSO) for award. The SSO adopted the position of the SEB and determined that Unisys is "a responsible offer, whose offer is most advantageous to the Government." Protest File, Exhibit 45 at 4.

Scoring Plan

19. The technical and business evaluation was based upon a point scoring system. A corresponding system of descriptive adjectives was matched with the numeric point score. The technical and business evaluation scoring system for rating the technical and business criteria is as follows:

10 = Excellent
8 = Above Average
5 = Average
2 = Below Average
0 = Unsatisfactory

Protest File, Exhibit 43 at 23.1.[3]

20. The SEB weighted the technical criteria. Capability and experience was the highest rated criterion and worth 50% of the technical and business score. *Id.*, Attachment 6 at 6-1. Corporate resources was the second highest rated criterion and was worth 30% of the technical and business

[3] A detailed analysis of each rating level is at Protest File, Exhibit 43, Attachment 4 at 6-8.

©1994, Commerce Clearing House, Inc.

Digitized by Google

score. *Id.* Key personnel and project management were valued as the lowest rated criteria and were each worth 10% of the technical and business score. *Id.*

21. Section M.010 of the RFP states that, "cost proposals will be evaluated, but not point scored, to determine the probable cost to the Government. The determination will take into consideration allowability, allocability, reasonableness, realism, and the risks associated with the proposed costs." Protest File, Exhibit 3.

Team Makeup

22. There were seven members of the SEB, of which four were voting members. The voting members consisted of two Computer Specialists, a Supervising Survey Statistician and the Contracting Officer. Protest File, Exhibit 43 at 11. The SEB also had a number of nonvoting procurement, cost, and legal advisors. *Id.*

Evaluation Results

SEB Report

23. The SEB evaluated the BAFO cost proposals against the cost criteria in section M (M.010) of the solicitation taking into account the written and oral discussions and the findings of the person who performed the initial cost analysis. Protest File, Exhibit 43 at 23.1, subpart n.

24. The SEB conducted its technical and business evaluation, applying the ten point scoring system to the four criteria stated in section M.009 of the solicitation. When the final scoring was completed, the SEB combined the technical scores and the cost proposals on a summary scoring form. The scoring form listed the offerors' technical and business scores and proposed and evaluated probable cost.[4] Protest File, Exhibit 43, Attachment 6 at 6-1. The information contained in the scoring form was incorporated into a table of final rankings, which the SEB prepared. The SEB's summary comparison of the final rankings of the top two offerors is as follows:

Offeror	Technical Initial	Rating Final	Proposed Initial $	Costs Final $	Evaluated Cost $
Unisys					
EDS					

Protest File, Exhibit 43 at 5.1.

25. The SEB report states that Unisys and EDS both had the same final technical rating of . *Id.* However, the Evaluated Cost $ column demonstrates that EDS evaluated cost to the Government was $ more than the Unisys evaluated cost ( ). *Id.*

SEB Evaluation of Corporate Resources

26. The SEB Chairman testified that the SEB examined the quality and stability of the proposed workforce in its technical evaluation by examining an offeror's corporate resources. Transcript at 141. The SEB Chairman stated that no comparison between EDS' and Unisys' cost or salary proposals was conducted in evaluating the corporate resources criterion.

27. To consider the quality and stability of an offeror's corporate resources, the SEB considered ability to hire, retain and fill vacancies; training methods and development; fringe benefit plans; compensation plans summaries; management systems and organizational plans. Transcript at 141-42. All of those factors were taken into consideration for the corporate resources factor. Transcript at 141. Specifically, in order to examine the offerors' compensation without looking at their cost proposals, the SEB evaluated the offerors' compensation summaries. Transcript at 141-142. This analysis included the use of surveys that the offerors based their salaries upon. Transcript at 142. The analysis also included a consideration of the reported escalation rates for raises. Transcript at 144.

28. For example, the information in Unisys' corporate resources portion of its BAFO included

See generally Protest File, Exhibit 39 at II.A-2 through II.A-27.

29. Paragraph L.047(b)(I) of the RFP required vendors to provide contract references listing at least three but not more than five of the offerors' most recent computer facilities management contracts, similar in

[4] Unisys' scoring form is at Protest File, Exhibit 43, Attachment 10 at 000235. EDS' scoring form is at Protest File, Exhibit 43, Attachment 10 at 000234.

Digitized by Google

size and scope to the proposed contract. Protest File, Exhibit 2 at 100. All offerors in the competitive range received generally good references, with the personnel interviewed stating they would hire the contractors again. Protest File, Exhibit 44. The SEB did not use affirmative or negative remarks in scoring proposals, as those remarks were considered subjective. The corporate references were used to substantiate data in the offerors' proposals as to the offerors' capability and experience. Although the overall criteria (in this case capability and experience) were point scored, the individual elements were not. Protest File, Exhibit 44; Transcript at 166.

Cost Proposals and Subsequent Analysis

30. The RFP specified that direct labor hours were to be proposed in accordance with labor categories and labor hour requirements set forth elsewhere in the RFP. Protest File, Exhibit 3, ¶ L.0491.(c). The RFP indicated that a category or composite rate could be used for unnamed individuals, with named individuals being "separately identified." *Id.*, Exhibit 2, ¶ L.049 at 111.

31. EDS proposed

32. After the issuance of Amendment 0001, reducing key personnel and increasing the importance of the corporate resources criterion, respondent directed EDS

33.

34. In its initial proposal, Unisys proposed

35. Defense Contract Audit Agency (DCAA) conducted an evaluation of the offerors' direct labor categories. The SEB referenced the DCAA report in its cost analysis. Protest File, Exhibit 42. The information included a "BAFO Rate Confirmation Worksheet." *Id.* The worksheet contained DCAA's evaluation of the offerors' labor categories. For the Unisys proposal, DCAA determined that Unisys' direct labor rates, *Id.*, Attachment to Memorandum to the Record at 1. A comparison of the direct labor rates proposed by Unisys and the base rate that DCAA calculated was compiled into a table, which showed:

Direct Labor: FPRA Labor Category	Base Rate Prop.	Base Rate DCAA

Id. The same analysis was conducted for Unisys' subcontractor, . *Id.* DCAA stated that, "all direct labor rates sampled conform to recently audited and approved rates. . . ." *Id.* A table was compiled that compared the proposed base rate and the DCAA base rate. *Id.* The table stated:

Direct Labor: FPRA Labor Category	Base Rate Prop.	Base Rate DCAA

©1994, Commerce Clearing House, Inc.

Digitized by Google

Id.

36. The contracting officer conducted his own cost evaluation, separate from DCAA. He established an average hourly labor rate per labor category by averaging the rates per category by the thirteen offerors. He then compared each offeror's labor rate per category against the average for that category. Transcript at 221. He concluded that one offeror (not Unisys) was significantly low within all labor categories it had proposed. One offeror was high. The remaining offerors were within a reasonable range of the averages that were calculated and their offers reflected fair and reasonable prices. Transcript at 524. He discerned that the difference between EDS' and Unisys' proposals amounted to $ per hour. The difference between EDS and Unisys' subcontractor was $ per hour. Transcript at 224.

37. Unisys' and EDS' evaluated cost data were as follows:

	Unisys' Evaluated Cost	EDS Evaluated Cost
Direct Labor Cost		
Overhead Cost		
Subcontract		
Other Direct Costs		
Purchases Burden		
General & Admin. (G&A)		
Base Fee		
Award Fee		
Facilities Capital Cost of Money (FCCM)		
-Labor		
-G&A		
Total Estimated Cost Plus Award Fee		

Protest File, Exhibit 43 at 58 & 60. The contracting officer, based upon the DCAA audit and his own analysis, concluded that EDS and Unisys had offered fair and reasonable pricing. Transcript at 229, 233.

Uncompensated Overtime

38. The RFP provided that uncompensated overtime would be evaluated as part of the cost proposal. The RFP stated that use of uncompensated overtime must be adequately supported to receive full consideration in the evaluation of the cost proposal. Protest File, Exhibit 2, ¶ L.051 at 119. There was no technical evaluation of uncompensated overtime and the contracting officer testified that there was no guarantee that a successful contractor would actually give respondent uncompensated overtime hours. Transcript at 283-84.

Source Selection

39. The SSO had been an *ex officio* member of the SEB, but ceased to be a member of the SEB after his assumption of the duties and responsibilities of SSO. Protester's Exhibit 6 at 1. The SSO received and evaluated the SEB report and attended a formal presentation regarding the award of this contract. *Id.* at 2. The SSO selected the Unisys proposal for contract award. *Id.; see also,* Protest File, Exhibit 45 at 4.

The Experts

Intervenor's First Expert

40. Intervenor's first expert was qualified to testify in the areas of compensation, compensation as it applies to high-tech industries, and construction, development and analysis of surveys of compensation. *See* Intervenor's Exhibit 10, Resume of Michael Burniston.

Unisys' Benefits

41. The expert compared and contrasted the benefit programs of Unisys and EDS based upon their benefits handbooks. Transcript at 608. This comparison included pension benefits, 401K benefits, stock purchase plans, medical plans, prescription drug plans, other additional medical plans, dental, vision, sick leave, short and long term disability, life and accident insurance, and retiree medical benefits. Intervenor's Exhibit 15. The expert found that both EDS' and Unisys' benefits package: "have the kind of benefits that an employee would view as almost a minimum condition of employment...." Transcript at 615.

Unisys Direct Compensation (Salaries)

42. The expert analyzed the labor rates for professional labor categories against market rates for similar work. To perform this analysis, the expert examined eleven compensa-

Digitized by Google

tion surveys. Intervenor's Exhibit 11 at 1-2. He matched the RFP's labor categories to the survey's labor categories based upon job descriptions (not job titles) as stated in the RFP. Intervenor's Exhibit 12. Column one of the exhibit lists the job code. *Id.* Column two represents the RFP labor category and specifically the title that was in the RFP job descriptions. *Id.* Column four lists the survey that matches the title of the position in the third column.[5] *Id.* The expert then derived the average of the three median salary rates for the applicable labor category. *Id.*

43. The comparisons of Unisys' proposed labor category rates and their corresponding market rates are set forth in intervenor's exhibit 13. The expert took the Unisys rate bid for each labor category and compared it to the average of the three median market rates for that labor category. *Id.* From this comparison, the expert derived Unisys' overall average for exempt employees which was of the average median market rate. The expert also concluded that Unisys' overall average for non-exempt employees was of the average median market rate. *Id.*[6]

44. A similar process was conducted for Unisys'subcontractor Intervenor's Exhibit 14.
The expert concluded from these figures that, "the compensation ... portrayed and proposed by Unisys [is] within the line of prevailing market practices, and adequate to attract and retain qualified personnel to fill the labor categories." Transcript at 581.

Expert's Conclusions

45. The expert found that,
both compensation in the form of direct compensation and overall benefits that are being proposed and provided to employees of Unisys are in line with competitive practices. They are certainly consistent with prevailing market practices and in my view well position the organization to attract and retain qualified people to fill the job categories.
Transcript at 616-17.

Intervenor's Second Expert

46. Intervenor's second expert (a Certified Public Accountant) was qualified as an accountant and an expert in evaluation of cost proposals. Transcript at 731-32. The expert analyzed the cost data submitted in EDS' and Unisys' BAFOs, the DCAA report and the SEB report. *Id.* at 734-35. The SEB report listed the evaluated costs of the offerors.

47.

48. The expert compiled the evaluated cost data into a summary sheet to demonstrate that Unisys' and EDS' direct expenses were similar and that no wage-busting occurred. Intervenor's Exhibit 17. The summary, with all figures listed in millions of dollars, is as follows:

[5] For example, the exhibit's analysis of job code 1 (the Access Control Clerk as stated as a labor category in the RFP), states that there are three surveys with a job that possesses the same or similar job description. Intervenor's Exhibit 12. Those surveys are the Washington Personnel Association Salary Survey, the TCF 1992 Benchmark Survey, and the Wyatt Technical & Skilled Trades 1992. *Id.* The exhibit lists the corresponding survey job titles (Security Guard, Security Guard B and Security Guard Jr.) and lists the salary rate the position pays at the median 50th percentile ( ).

[6] For example, on page 3 of intervenor's exhibit 13, the first job code and labor category listed is the Access Control Clerk. Intervenor's Exhibit 13 at 3. The "FLSA" column states whether an employee's status is exempt or non-exempt. *Id.* The "number of employees" column states the number of employees in this job category required by the RFP. *Id.* The "UGS (Unisys Government Systems) Curr Rate" column shows the average salary Unisys' bid stated it would pay an employee in this labor category. *Id.* The "Mar '93 50th %ile Rt" column lists the average median market rate for the job category as of March 1993. *Id.* The March 1993 rate is the rate that was calculated in intervenor's exhibit 12. For the Control Access Clerk the market rate is . *Id.* The Unisys average rate of pay for an employee in this labor category is . *Id.* The "UGS/50%" column calculates the percentage difference that the Unisys average rate varies from the median market rate. *Id.* Since the median market rate is for the Access Control Clerk and the Unisys average bid rate is , the "UGS/50%" difference is *Id.* On average, for that labor category, Unisys is paying of the median market rate. *Id.* Using the same methodology, the expert then compared market rates for each category and arrived at an average for exempt and non-exempt employees. *Id.*

Id. The "Direct Costs" row in the summary includes the direct labor cost,[7] the subcontractor cost and the other direct cost from the offerors' evaluated cost data. Transcript at 738. The "Indirect Costs" row includes the overhead, General and Administrative costs (G&A), the purchasers' burden and the G&A rate from the offerors' evaluated cost data. *Id.* at 738-39. The "Fee" row is the award fee from the offerors' evaluated cost data. *Id.* The first two columns of the summary list the corresponding figures for Unisys and EDS. Intervenor's Exhibit 17. The "Unisys Price Advantage" column represents the difference in price between EDS' and Unisys' cost figures as defined in the exhibit.

49.

8

50. The expert also calculated the amount of indirect costs per dollar of direct labor for both EDS and Unisys and presented a comparison of the results. Intervenor's Exhibit 19.

Protester's First Expert

51. Protester's first expert prepared a chart and a series of exhibits, comparing the average EDS BAFO wage rates and the average Unisys BAFO wage rates to the current compensation of the employees performing under the existing contract. Protester's Exhibit 4. The chart compares "current compensation without raises to the two offers planned and budgeted compensation plans for the professionals that they are proposing." Transcript at 392.

52. The analysis determined that the average rates paid by Unisys were lower than the actual rate paid to incumbent personnel currently performing under the contract for every year of the contract. Transcript at 392. The analysis determined that the average rates paid by EDS begin lower, but, in later years of the contract, exceed the actual compensation paid to employees currently performing under this contract. *Id.* The expert concluded that the variance from current compensation between EDS' and Unisys' proposals "is a difference.... On the

53. Although the expert calculated this difference, he was not sure he included all incumbent personnel in his computation of current compensation, which is the basis for his comparison. *Id.* at 439-40. Further, the expert is comparing average rates to actual rates. Average rates, because they are merely an average assessment of the wage rates, do not necessarily compare or correlate directly to an actual rate, because some employees are paid above the average rates and some below the average rates.

[7] Direct labor costs are "the costs that would specifically be used in the performance of the contract as opposed to direct labor which are the general management kinds of things." Transcript at 734. "[E]ach offeror proposed direct labor hours. ... Under the rules, those are charged directly to the contract because they can get identified with the contract." *Id.* This type of a charge does not include fringe benefits, which "is an overhead factor which is later added to the direct labor hours." *Id.*

[8] A comparison of the Unisys and EDS difference in Labor Overhead, G&A, Fee and Facilities Capital is placed in a percentile format as intervenor's exhibit 18.

Digitized by Google

54. Intervenor's second expert examined the chart and accompanying data and concluded that, "it's a comparison of an awarded contract against an incumbent salary. It's not a comparison of salaries against the market and here the definition of market, which is where you would expect Unisys and other contractors to have to go to get these services, and the talent to recruit people, is the marketplace." Transcript at 765.

55. Intervenor's second expert also testified that the analysis conducted by protester's first expert, "[i]s not a comparison of compensation plans. It's a comparison of the costs of compensation, which are wholly different things and I think no place more than fringe benefits underscores that problem more dramatically." Lastly, the intervenor's second expert evaluated the chart and accompanying data as "a comparison with plant-wide bid rates, which are all employees against incumbent salaries which are basically singular employees. On average you will have in these proposals the incumbents have the higher salary level than the plant-wide rate, ... I would not represent this analysis to be any kind of a comparison of compensation found in the marketplace." *Id.*

Protester's Second Expert

56. Protester's second expert, called in rebuttal, was qualified as an expert in compensation levels and the computer services industry. Transcript at 808. The expert stated that the intervenor's first expert survey, "fell very short of what I would need in order to make a good determination" of whether an employer has the compensation package necessary to attract, retain and motivate employees. *Id.* The expert concluded that, "Unisys' compensation as proposed under the RFP would not be sufficient to attract, retain and motivate the quality of staff that appeared to be called for under all the exhibits that I looked at." *Id.* at 810.

57. The expert stated that intervenor's first expert's statistical analysis did not include a discussion with the client, did not include getting any other information about what was important on this program and only relied upon the RFP and its job descriptions to determine what was required to do the survey matches. *Id.* at 812. The expert stated that the reasonable starting-point for determining what is the market rate would be to examine the incumbent's (EDS') wage rates. However, the expert admitted that EDS' average bid rates were lower than its own current incumbent's salary rates.

58. The expert also challenged the strength of the intervenor's first expert's survey matches. However, the expert was only able to review two of the eleven surveys relied upon by intervenor's first expert. *Id.* at 821. The expert also challenged using the percentage variance from a median market rate as an indicator of a company's position in the marketplace. *Id.* at 826-27. However, the expert did not verify every survey and job category match that intervenor's first expert made. *Id.* at 835. The expert testified that out of twenty-five matches he recalled examining, only five concerned him. *Id.* at 836.

59. Intervenor's first expert, in surrebuttal, testified that many of the eleven surveys he premised his analysis upon are available to those who participated in the surveys and to nonparticipants. Transcript at 851. In addition, many of the surveys are for sale to the public by the intervenor's first expert's company. *Id.* Therefore, protester's assertion that only two surveys were readily available is inaccurate. In spite of his criticism of intervenor's expert's statistical analysis and methodology, protester's expert admits that intervenor's first expert's survey, "followed practices that are fairly common in the industry for compensation. ..." Transcript at 809.

Organizational Conflict of Interest

60. The RFP required offerors to disclose all relevant facts concerning any past, present, or currently planned interest ... relating to the work to be performed ... bearing on whether the offeror has a possible organizational conflict of interest. ... Protest File, Exhibit 2, ¶ K.26 at 13. The RFP also required organization conflict of interest documents to be provided as part of the offer (Volume I), but separate from the technical and cost portions of the offer. Protest File, Exhibit 2, ¶ L.046 at 97. The offerors provided the information in Volume 1 of their proposals. Protest File, Exhibits 7 and 23.

61. The SEB concluded that "any possible conflict of interest which may develop during the performance of this contract by any of the offerors will be identified and appropriately avoided ...." Protest File, Exhibit 43. The Source Selection Decision noted avoidance of conflict of interest by inclusion of Clause H.020 *Confidentiality of Information*, Clause H.025 *Energy Information Administration Data*, and Clause H.040

Hardware and Software Exclusion Clause. Protest File, Exhibit 45.[9]

Discussion

Wage Busting and Related Issues

The central issue of "wage-busting" is found in Counts IV, V, VI and VII of the protest complaint. Protester's first argument is that respondent failed to evaluate the compensation plans as required under M.009 and M.013 of the RFP. Protester's Posthearing Brief at 59. This is a restatement of Count V (failure to follow evaluation criteria). We understand protester's argument to be that respondent's technical evaluators were required under the RFP *as part of the scoring of technical proposals* (as well as in the cost evaluation) to evaluate the compensation plans of the offerors. EDS is the incumbent contractor for the facility management contract. Finding 31. EDS argues that the SEB was required by paragraph M.013 to compare the offerors' compensation plans against the compensation of the incumbent contract. Such a comparison, says EDS, should have resulted in a lower score for Unisys' technical proposal based upon alleged lower compensation proposed by Unisys for professional exempt employees.

Protester is correct that the SEB did not evaluate the compensation plans in scoring technical proposals; the SEB evaluated offerors' compensation plan summaries, rather than the total compensation offered. Finding 27. This was fully in accord with the terms of the RFP. The RFP in paragraph L.047 advised offerors that, "In order that your Technical/Business Management Proposal may be evaluated strictly on the merit of material submitted, *no contractual cost information is to be included in your Technical/Business Management Proposal.*" Paragraph L.049 of the RFP further advised offerors that contractual cost information was not to be included in the technical proposal. Findings 3, 4.

The SEB reviewed the summaries in conducting the technical evaluation, including salary surveys the offerors based their compensation summaries upon and wage escalation rates. Findings 27, 28. Protester has not shown that the SEB failed to apply the required criteria in conducting its technical evaluation.

Protester relies on the language of paragraph M.013 as requiring the technical scoring of compensation plans. In support of its interpretation, protester focuses on the references to "evaluation" or "evaluate" throughout that paragraph. Protester's Post-Hearing Brief at 60-61. Indeed, paragraph M.013 speaks of evaluation "to assure [the compensation plan] reflects sound management approach and understanding of the contract requirements." Finding 10. This is fully in accord with the Federal Acquisition Regulation, which provides that cost evaluation is to be used "to determine the offeror's understanding of the work and ability to perform the contract." 48 CFR 15.608(a)(1) (1992).

Furthermore, the RFP's subparagraph four of paragraph M.013 states that, "the compensation plan *may* be utilized during the Government's evaluation of proposals under evaluation Criterion 2, Corporate Resources," Finding 10, *i.e.*, the technical evaluation. Respondent reserved the discretion to use compensation plans during the technical evaluation, but nothing in the RFP required the SEB to evaluate and score the compensation plans.

Protester also argues that respondent's cost evaluation was flawed in that it did not recognize Unisys' alleged "wage-busting." This is Count IV. The legal standard applicable to cost evaluations is settled. The Board will not disturb the Government's cost analysis unless clearly unreasonable. *Program Resources, Inc.*, GSBCA 8879-P, 87-2 BCA ¶ 19,816, at 100,253, 1987 BPD ¶ 65, at 13. In this case the evidence does not establish that Unisys intended to "wage-bust," or that its compensation was unrealistically low.

Unisys based its compensation on its established salary range derived from actual salaries. Finding 14. The contracting officer made a comprehensive cost-analysis, deriving an average wage rate for all labor categories as bid by the thirteen offerors in the procurement. He found Unisys' rates, as well as others, were within a reasonable range of averages of all offerors. He concluded that one offeror (not Unisys) was significantly low within all labor categories it had proposed. Finding 36. The DCAA has also verified Unisys' direct labor category bid rates, which the contracting officer relied upon. Findings 35, 37.

[9] The last clause prohibits the successful contractor from providing to the Government hardware or software which is manufactured, produced, licensed or distributed by the contractor. Protest File, Exhibit 2, ¶ H.040 at 44.

Digitized by Google

The experts intervenor and respondent called at the hearing confirmed the reasonableness of the contracting officer's analysis. The expert compensation witness testified that Unisys' exempt direct labor rate was of the average median market rate for comparable or similar labor categories. Finding 43. The expert's testimony was convincing and credible, and not successfully rebutted by EDS' rebuttal expert. EDS' second expert only looked at a part of the data relied upon by the intervenor's first expert. EDS' second expert also relied upon the incumbent contractor's compensation as his starting point. Findings 57, 58

Paragraph M.013 of the RFP, however, did not make "current compensation" the lodestar for any determination of cost reasonableness; thus EDS' expert's methodology was flawed from the outset. The lodestar is broader, *i.e.,* that professional employees be "properly and fairly" compensated. Finding 10. To make that determination, a variety of sources may be used, including "recognized national and regional compensation surveys," "studies of professional, public and private organizations." *Id.* The paragraph warns that proposals envisioning compensation levels "lower than those of predecessor contracts" will be evaluated for program continuity and uninterrupted high quality work. But that does not enshrine the wages paid by the immediately preceding contractor as the benchmark for cost reasonableness. The Government did not so constrain itself in the RFP.

Unisys' evaluated direct labor costs totalled of direct labor plus per subcontract). Finding 37. EDS' direct labor costs totalled (direct labor costs of plus subcontract cost of . Finding 37. There is a (relative to the size of the contract) difference of in the evaluated direct labor costs as recorded by the contracting officer. Unisys' expert accountant established the difference in direct labor cost of taking into account direct labor, subcontract and other direct labor costs. Findings 48, 49. This expert testified that the cost difference lay in EDS' costs. Findings 49, 50. This testimony was persuasive and unrebutted.

In the past, we have found "wage busting" (and an unreasonable cost determination) when (1) the awardee's direct labor costs for various skill levels ranged between 13 and 38 percent below the Government estimate for those levels, (2) when the labor costs fell substantially below General Schedule (GS) wages for comparable skills, and (3) when performance of task orders on underpriced contracts revealed performance problems in retaining and recruiting employees. *Planning Research Corp.,* GSBCA 10697-P, 91-2 BCA ¶ 23,881, at 119,622-24 and 119,628, 1991 BPD ¶ 82, at 10-12, 15. Here, protester's case did not present the plethora of evidence presented in *Planning Research.* Protester's case rests on unconvincing expert testimony comparing Unisys' rates for exempt professional employees against current compensation charged by EDS on its incumbent contract. Findings 51, 52. That testimony did not demonstrate that the cost evaluation was unreasonable. Therefore, the allegations of "wage busting" are insupportable.

Uncompensated Overtime Hours

Count I alleges defective technical evaluation of EDS' proposal. EDS faults the SEB for failing to give credit in the technical evaluation for the uncompensated overtime it proposed. Uncompensated overtime, however, was to be evaluated in the cost proposal. Finding 38. Furthermore, the contracting officer was properly skeptical of credit for uncompensated proposals given EDS has not made a showing that it should have been given credit in the technical evaluation for uncompensated overtime.

In Count VI, EDS alleges among other things failure to conduct meaningful discussions based on the wage busting issue. Protester alleges in this count that respondent determined Unisys' proposal was technically superior to EDS', giving more weight to price factors than to technical factors. This allegation is baseless. The SEB determined the two proposals to be technically equal. Finding 24. The allegation also assumes the truth of the remaining wage-busting allegations, *i.e.,* that Unisys' proposal should have been scored lower for "wage-busting." But, we conclude that there was no wage busting.

Unequal Treatment of Escalation Rates

In Count III of the complaint, EDS complains that the SEB erroneously imposed different burdens on EDS and Unisys by causing EDS to offer a higher escalation rate than Unisys. This was not the case. The Government requested escalation of labor rates from EDS, but did not dictate the rate EDS should use. EDS chose its own rate of Finding 32. The SEB was thus able to evaluate both proposals on a

©1994, Commerce Clearing House, Inc.
Digitized by Google

common basis as both offerors proposed escalation. Finding 34.

Organizational Conflict of Interest

In Count II (iii), EDS alleges that respondent did not downgrade Unisys in the technical evaluation for alleged conflict of interest. EDS alleges that organizational conflict of interest is a matter for the technical evaluation. The provisions of the RFP provide, however, the organizational conflict of interest was a matter to be separately considered. Finding 60. EDS does not allege that Unisys has a conflict of interest. Rather, it argues that the SEB should have considered the "disabling [e]ffect" that conflicts of interest would have on the ability of Unisys to perform "one of the major functions named in the RFP's scope of work." Protester's Post-Hearing Brief at 72. That function is a recommendatory function; the successful contractor is to propose options and recommendations for evaluating, ordering, installing, repairing and maintaining information systems and automated support systems to satisfy respondent's informational requirements. Finding 1. The presence of the conflict of interest clauses, Finding 61, assures the respondent of the contractor's objective opinion in any recommendation it may make. Protester has not identified any disabling effect that the SEB should have taken into account in evaluating proposals.

Evaluation of Corporate References

In Count I, EDS alleges respondent conducted an improper technical evaluation of EDS' proposal. EDS alleges that the respondent erred in not point scoring corporate references. The SEB evaluated each criterion through use of point scores but did not score each element comprising a criterion. This was true of the corporate references as well. Finding 29. The RFP did not require point scoring of individual elements comprising each criterion. Under paragraph M.009 of the RFP, capability and experience "will be evaluated on the basis of the demonstrated experience and performance on both past and current contracts similar in both size and scope as solicited by this RFP." Finding 7. The RFP did not limit the SEB's discretion on the precise use of the substantiating data. The SEB did not act improperly in its treatment of corporate references. The SEB acted reasonably in its analysis of the corporate references portion applicable to the capability and experience criterion.

Miscellaneous Counts

In Count I of its protest complaint, EDS alleged that respondent under-evaluated EDS' proposal by failing to give adequate consideration to EDS' superior performance on past contracts. In Count II (i) protester alleges that respondent over-evaluated Unisys' proposal by failing to downgrade the proposal for alleged lack of personnel qualified and personnel experienced in the unique requirements of the contract. In Count II (ii), EDS alleged that Unisys was not downgraded for alleged lack of experience and familiarity with various hardware and software features unique to the contract. In Count II (iv), EDS alleges that Unisys was not downgraded for inferior past performance on similar contracts. These issues were not addressed at the hearing or in protester's post-hearing submissions. These counts are denied for lack of proof.

In Count III, EDS alleges that respondent failed to give appropriate credit to EDS' proposal for an indirect rate ceiling. This issue was withdrawn at the prehearing conference of July 20.

Decision

The protest is DENIED. The suspension of respondent's delegation of procurement authority lapses by its terms.

[¶ 26,395] Wood & Company v. Department of the Treasury

GSBCA No. 12452-TD, September 9, 1993.

Interpretation of Contracts—Construction Contracts—Roofing.—Although a contract's very general description of the demolition phase of a construction project did not explicitly direct the contractor to remove all existing shingles from a roof, the contractor was required to do so because the contract, taken as a whole, indicated that the roof was to be completely reshingled. The reasonable interpretation of the contract's directive to provide fiberglass shingles over the entire roof was that all of the old shingles had to be removed and new fiberglass shingles installed. Contract drawings and the practice of experienced roofing contractors supported this interpretation. The fact that portions of the roof

Digitized by Google

were fortuitously covered with fiberglass shingles did not excuse the contractor from removing and replacing those shingles.

For the appellant: Milton A. Wood, President. For the government: David H. Brunjes, Office of the Legal Counsel, Federal Law Enforcement Training Center, Glynco, Georgia.

Before DANIELS, Administrative Judge.

DANIELS, Administrative Judge: The Department of the Treasury's Federal Law Enforcement Training Center in Glynco, Georgia, awarded to Wood & Company (Wood) a contract in the amount of $310,012 to renovate a building so that the structure could serve as a child care center. Appeal File, Exhibit 1. During construction, Wood maintained that the contract did not "address the responsibility of procedure for the removal/disposal of the existing roof shingles and metal eave drip." *Id.*, Exhibit 8. The agency responded that removal of those items was necessary to perform work which was clearly specified in the contract. *Id.*, Exhibit 9. Wood ultimately removed and replaced the old shingles and drip edge, but submitted a claim for the cost of the work. Letter from respondent to Board (Aug. 2, 1993); Appeal File, Exhibit 13. The amount of the claim was originally $13,977; Wood later pared it to $9,129 and then to $8,827.24. Appeal File, Exhibits 13, 15; Appellant's Brief at 10-11.

The contracting officer denied the claim, and Wood appealed his decision to this Board. Appeal File, Exhibit 17; Notice of Appeal (June 8, 1993). The Board must now decide whether the removal and replacement of the old shingles and drip edge are encompassed within the contract, or whether the Government's direction to perform this work constitutes a change for which Wood should receive an equitable adjustment. If we decide this question in the contractor's favor, we must also determine the amount of the adjustment.

Because the amount in dispute is $10,000 or less, Wood was entitled to have this case decided under the small claims procedure. The contractor chose to have the Board follow this procedure. Thus, the case is being decided by a single judge within 120 days of the election, and this decision is final but non-precedential; the decision may only be set aside if tainted by fraud. 41 U.S.C. § 608 (1988); Rule 13 (48 CFR 6101.13 (1992)).

We conclude that the Government's interpretation of the contract is reasonable and that the contractor's is not. Accordingly, we deny the appeal of the contracting officer's decision.

Findings of Fact

The contract contains two sweeping statements regarding demolition. In one place, the document says that demolition "generally consists of the following," after which it does not mention anything about the roof. Appeal File, Exhibit 1 at 001. In another place, the contract says that "[t]he Contractor shall perform all demolition work as necessary to incorporate the Scope of Work as indicated on the drawings and specified herein." *Id.* at 033.

The contract contains portions entitled "DEMOLITION," "SHINGLE ROOFING," and "FLASHING AND SHEET METAL." None of these parts contains any specific mention of removal of existing roof coverings or installation of new shingles or drip edge on any particular parts of the building. Appeal File, Exhibit 1 at 033-36, 111-12, 117-21. The "DEMOLITION" provision does contain a general direction which reads, "Remove existing masonry partitions, frames, etc., to the extent required to join in new construction." *Id.* at 034.

Drawing A-5 shows a Roof Plan, which contains the note, "FIBERGLASS SHINGLES OVER EXISTING & NEW ROOF." That drawing and number A-7 both show sections of the roof, with the note "FIBERGLASS SHINGLES & ROOFING FELT ON $^5/_8$" PLYWOOD SHEATHING" pointing to them. They also show, at the edge of the roof, "PREFIN ALUM DRIP EDGE." Drawing A-6 shows existing features of the building—sanitary vent pipes—with instructions for installing metal flashing, roofing felt, and shingles around them. Appeal File, Exhibit 1.

The drawings use the term "existing" not only with respect to the roof, chimney, and vent pipe, but also in several other places. Drawing A-6, for example, designates some brick and windows as "existing," but other items, including fiberglass shingles and an aluminum drip edge, without that prefatory word. In other places, the drawings show interrelationships between existing and new features. Drawing A-5 shows a foundation plan with the note "CONC. TOPPING OVER EXISTING SLAB"; and Drawing A-7 shows a wall jamb with the note "$1^1/_2$" ×

©1994, Commerce Clearing House, Inc.
Digitized by Google

1 1/2" × 1/8" ALUM ANGLE FROM FTG TO SILL SECURE TO EXISTING BRICK WITH EXP. BOLTS." Appeal File, Exhibit 1.

Neither the contract's specifications nor its drawings indicates the composition of the shingles which were on the roof as it existed prior to renovation under this contract. Indeed, Wood admits that it did not know, prior to contract award, what type of shingles were on the roof. Appeal File, Exhibit 8; Appellant's Brief at 4, 8.

The contract requires the contractor to provide a warranty of the roof system being installed. Appeal File, Exhibit 1 at 027-28, 111. According to experienced roofing contractors, when new shingles are to be installed abutting existing shingles, the contractor should weave one into the other; "[t]he manufacturer will not warrant new shingles over existing." Declaration of William M. Greene (Aug. 4, 1993) ¶ 5 (submitted by Wood); *see also* Affidavit of C.D. Smithson (Aug. 25, 1993), Affidavit of L. Edwin Rock (Aug. 25, 1993) (submitted by the Government).

Discussion

This contract, like most, could have been written more clearly than it was. As Wood suggests, the document contains very general statements about demolition which do not mention anything specific about the roof. If the document had contained statements like "all existing roofing shall be completely removed and replaced" or "demolition work includes removal of all shingles, felt, and metal eave drips," the dispute now troubling the parties could have been avoided. This does not help us, however, to come to a conclusion about what the document as it was written could reasonably be read to mean.

The instrument directs the contractor to "perform all demolition work ... as indicated on the drawings." The critical note on those drawings is "FIBERGLASS SHINGLES OVER EXISTING & NEW ROOF." The contractor would have us believe that this means that when work is completed, there must be fiberglass shingles over the entire roof—both the existing and newly built portions of that part of the structure. Because the existing roof was fortuitously covered by fiberglass shingles, Wood contends, the contractor did not have to remove and replace those shingles in order to comply with the contract's instruction. The Government maintains that the note requires the contractor to install new shingles over the whole roof.

We agree with the Government that reading the contract as a whole, the only reasonable meaning of the statement "FIBERGLASS SHINGLES OVER EXISTING & NEW ROOF" is that the contractor must remove the existing roof coverings and install new ones. The drawings show that some architectural features are "existing" and should remain. Fiberglass shingles are not among them, however; thus, they are presumably to be new. This conclusion is strengthened by the fact that the drawings prescribe interconnections between existing and new architectural features in several places; by directing that fiberglass shingles be over the existing as well as new parts of the roof, the Government was asking for the installation of new shingles throughout. Indeed, the drawings in two places give specific directions for the installation of the shingles—first, over the roof generally, and second, where existing vent pipes protrude through the roof. The contractor could not ensure that the shingles (and associated felt and flashing) are installed in accordance with these directions unless it installs the items itself. Further, as experienced roofing contractors know, new shingles cannot be laid over existing ones without voiding the warranty which Wood was required to provide; thus, the direction to install new shingles necessitates the removal of the old ones. Finally, the contract contains no information about the composition of the shingles on the portions of the roof which are to remain on the building. Consequently, a prudent contractor bidding the job could not expect to find fiberglass shingles on the existing roof; the firm would have to base its price on the possibility that all old shingles would have to be removed and replaced.[1]

[1] The parties have submitted affidavits which conflict as to this conclusion. We find the statement made by the contractor referenced in the affidavit submitted by the Government to be more credible as a matter of common sense, notwith-

Digitized by Google

Decision

The work for which Wood claims an equitable adjustment was required by the contract. The fixed price that the parties agreed on initially as fair compensation for the entire job encompasses the work in dispute. The appeal is therefore **DENIED.**

[¶ 26,396] Carl W. Poole v. General Services Administration

GSBCA No. 12320, September 21, 1993.

Sales of Government Property—Misdescription—Notice Requirement.—A contractor's notice to the government that surplus government property had been misdescribed was timely filed because it was submitted within 15 days of the date that the property was most probably removed from the delivery site. The contractor provided motel and rental car receipts to establish the likely date of removal of the property. The government offered no evidence to support its contention that the contractor removed the property 19 days prior to submitting the notice.

Sales of Government Property—Misdescription—Misdescription Discovered After Removal.—Although government property was misdescribed in a contract to sell surplus government pagers by lot, the remedies of contract rescission and refund of the purchase price were not available to the dissatisfied purchaser, because the misdescription was discovered after the pagers had been removed from the delivery site. The misdescription was obvious and could have been discovered in a reasonable prebid inspection of the pagers. Thus, unless there had been a change in the lot between the time of inspection and delivery, the purchaser was bound by its original inspection. Furthermore, the contract's description warranty clearly stated that when items were purchased by lot, no refund was permitted after removal of the lot.

For the appellant: Carl W. Poole. For the government: George U. Lane, Office of Regional Counsel, General Services Administration, Atlanta, Georgia.

Before WILLIAMS and NEILL, Administrative Judges.

WILLIAMS, Administrative Judge: In this appeal a purchaser of surplus pagers seeks rescission of his contract with the General Services Administration (GSA) and a full refund of the purchase price, $788.83. Appellant Carl W. Poole filed his notice of appeal on February 24, 1993, and elected the accelerated procedure on March 29, 1993. The parties have presented their cases on the record.

Findings of Fact

In early August 1992, respondent issued invitation for bids (IFB) number 4KFBPS92058 for the sale of 70 lots of miscellaneous property. At issue here is item 007 described as "ONE LOT CONSISTING OF 14 EA PAGERS, MOTOROLA PAGEBOY II, 4 EA PAGERS, MOTOROLA DEMENSION IV." Appeal File, Exhibit 2. Many of the other lots were described as "estimated to contain" the stated quantities. *Id.*

The IFB specified that lots 007 through 009 were located at Montgomery, Alabama, and could be inspected from August 10 until August 20, 1992. Appeal File, Exhibit 2. The IFB indicated the quantity of item 007 as "1 LT." *Id.*

The IFB contained the following relevant terms and conditions:

1. INSPECTION.

The Bidder is invited, urged, and cautioned to inspect the property prior to submitting a bid. Property will be available for inspection at the places and times specified in the Invitation.

2. CONDITION AND LOCATION OF PROPERTY.

Unless otherwise provided in the Invitation, all property listed therein is offered for sale "as is" and "where is." Unless oth-

(Footnote Continued)

standing the fact that that statement is hearsay. *See* Affidavit of C.D. Smithson (Aug. 25, 1993).

©1994, Commerce Clearing House, Inc.

Digitized by Google

erwise provided in the Invitation, the Government makes no warranty, express or implied, as to quantity, kind, character, quality, weight, size, or description of any of the property, or its fitness for any use or purpose. Except as provided in Conditions No. 12 and 14 or other special conditions of the Invitation, no request for adjustment in price or for rescission of the sale will be considered. *This is not a sale by sample.*

....

12. ADJUSTMENT FOR VARIATION IN QUANTITY OR WEIGHT.

Unless otherwise provided in the Invitation, when property is sold by a unit other than "weight," the Government reserves the right to vary the quantity tendered or delivered to the purchaser by 10 percent; .... The purchase price will be adjusted upward or downward in accordance with the unit price and on the basis of the quantity ... actually delivered. Unless otherwise specifically provided in the Invitation, no adjustment for such variation will be made where property is sold on a "price for the lot" basis.

....

14. RISK OF LOSS.

Unless otherwise provided in the Invitation, the Government will be responsible for the care and protection of the property subsequent to it being available for inspection and prior to its removal .... With respect to losses only, in the event the property is offered for sale by the "lot," no adjustment will be authorized under this provision unless the Government is notified of the loss prior to removal from the installation of any portion of the lot with respect to which the loss is claimed.

Appeal File, Exhibit 2A.

The Description Warranty stated:

The Government warrants to the original purchaser that the property listed in the invitation for bids will conform to its description. If a misdescription is determined before removal of the property, the Government will keep the property and refund any money paid. If a misdescription is determined after removal, the Government will refund any money paid if the purchaser takes the property at his or her expense to a location specified by the Contracting Officer. *NO REFUND WILL BE MADE UNLESS THE PURCHASER SUBMITS A WRITTEN NOTICE TO THE CONTRACTING OFFICER WITHIN 15 CALENDAR DAYS OF THE DATE OF REMOVAL THAT THE PROPERTY IS MISDESCRIBED AND MAINTAINS THE PROPERTY IN THE SAME CONDITION AS REMOVED.* After property has been removed, no refund will be made for shortages of property sold by the "LOT". This warranty is in place of all other guarantees and warranties, expressed or implied ....

Appeal File, Exhibit 2.

Appellant submitted a bid of $788.83 as his total bid price for item 007 on August 26, 1992. Appeal File, Exhibit 3. Appellant indicated on the bid that he had inspected the property. *Id.* On August 27, 1992, GSA awarded contract number GS04F92FBEE230 to appellant. Appeal File, Exhibit 5. The Notice of Award directed appellant to present payment by September 7, 1992, and to remove the property by September 17, 1992. *Id.* The notice indicated that this property was located at the VA center in Montgomery, Alabama. *Id.* Appellant was located in Charlotte, North Carolina.

On September 14, 1992, appellant appeared at the VA in Montgomery, Alabama, to accept delivery of the pagers. Appellant's Record Submission, Attachment. Upon inspection of the property at delivery, appellant found thirteen Pageboy II pagers and five Demension IV pagers instead of fourteen Pageboy II pagers and four Demension IV pagers as listed in the IFB. Appellant informed the VA's property custodian that the quantities did not conform to the description in the IFB, and the custodian replied: "It doesn't matter, you will have to take them anyway." Declaration of Diana D. Poole (June 1, 1993). GSA Form 27A, the Purchaser's Receipt and Authority to Release Property, was signed by appellant and annotated to correct the pager quantities as thirteen Pageboy II and five Demension IV. Appeal File, Exhibit 6.

By letter dated September 24, 1992, appellant requested that GSA's contracting officer refund the purchase price, due to the misdescription of the pagers. Appellant stated:

This will serve to notify you that the property listed as lot number 007 was misdescribed. The description reads, "One lot consisting of 14 ea pagers, Motorola Pageboy II, 4 ea pagers, Motorola Demension IV".

The lot consisted of 13 ea pagers, Motorola Pageboy II, 5 ea pagers, Motorola D[e]mension IV. I noted the discrepancy when the items were removed, but was

Digitized by Google

told that the total quantity was 18 as was in the bid package.

I believe the item was misdescribed as a brief scan of other items in the bid package will show that other lots have "one lot *est to contain* . . . ." before the quantity. Lot number 007 did not have "estimated to contain" but instead read "one lot consisting of . . .".

I will agree that if the description had read "est to contain", I would have no reason for discussing this issue; however, the listing was very specific.

I am therefore requesting permission/approval to return the lot as directed by the Contracting Officer and obtain a refund for the purchase price.

Appeal File, Exhibit 7.

On November 25, 1992, the contracting officer issued his final decision denying appellant's request for rescission. Appeal File, Exhibit 12.

Discussion

Appellant seeks rescission of his contract on the ground that the pagers were misdescribed in the IFB. Respondent contends that appellant is not entitled to rescission because (1) notice of the alleged misdescription was untimely and (2) under the Description Warranty no refund would be made for shortage of property sold by lot.

Did Appellant Submit Timely Notice of the Misdescription?

The Description Warranty emphasized that no refund would be made unless the purchaser submitted written notice of the misdescription within fifteen calendar days of the date of removal. Appellant claims that he timely submitted a notice that the pagers were misdescribed on September 24, 1992, by letter to the contracting officer, within fifteen days of his removal of the pagers on September 14, 1992. Appeal File, Exhibit 7. Respondent contends that appellant removed the pagers on September 9, 1992, and that the contracting officer did not receive the notice required under the Description Warranty until September 28, 1992, thus making appellant's notice untimely. Respondent's Record Submission at 3-4.

Respondent's argument fails for lack of proof. Respondent contends without any evidentiary support that delivery occurred on September 9, 1992. Appellant has proffered motel and rental car receipts which indicate that delivery likely occurred in Montgomery, Alabama, on September 14. Appellant's Reply Record Submission, Attachment.

Is Appellant Entitled to a Rescission of the Contract Due to a Misdescription of the Pagers?

Appellant seeks rescission and a refund because the IFB described fourteen Pageboy II pagers and four Demension IV pagers, but appellant actually received thirteen Pageboy II pagers and five Demension IV pagers.

Appellant's claim fails. First, appellant should have detected that one Pageboy II pager was missing during the inspection.[1] Appellant does not claim that what he saw at the inspection is different than what he received at delivery. Complaint; Appellant's Record Submission. Nor is there any suggestion in the record that an intervening event altered the mix or quantities of the pagers in lot 007 between the time of inspection and delivery. Appellant's contention is rather that he first noticed that lot 007 was misdescribed at delivery. It is well established that purchasers cannot recover under a misdescription claim for deficiencies that could reasonably have been observed in a proper inspection of the property to be purchased. *Garrett J. Veenstra*, GSBCA 7251, 85-2 BCA ¶ 18,127, at 90,982 ("Appellant's claim of misdescription appears groundless in light of the general rule that, absent latent defects, a bidder is bound by its own inspection." (quoting *Richard A. Guthrie*, GSBCA 5721, 81-2 BCA ¶ 15,163, at 75,014)); *Doris A. Lahage*, GSBCA 7321, 84-2 BCA ¶ 17,498, at 87,155; *Mary E. Mullins*, GSBCA 6726, 83-2 BCA ¶ 16,589, at 82,493. Here, the identity and manufacturer of the pagers was readily ascertainable upon inspection, as is evidenced by appellant's observation at delivery.

Moreover, under the terms of the Description Warranty, appellant is not entitled to a refund once he removed the property, because the pagers were sold by lot. *Sheldon Aircraft Products Corp.*, ASBCA 12905, 68-2 BCA ¶ 7163, at 33,196. The Description Warranty explicitly stated that "After the property has been removed, no refund will be made for shortages of property sold by the 'LOT.'" Appeal File, Exhibit 2. Here, although appellant discovered the discrepancy at delivery, he took possession of the

[1] The only evidence to suggest that appellant actually travelled to Alabama and performed an inspection is the checkmark on appellant's bid indicating "bidder has inspected the property." Appeal File, Exhibit 3.

©1994, Commerce Clearing House, Inc.

Digitized by Google

lot and removed the pagers. Appeal File, Exhibit 6.

Appellant further claims that he was "forced to accept delivery against his better judgment" because the property custodian advised him he "had to take [the pagers] anyway" and appellant believed the property custodian was the GSA's contracting officer's representative. Appellant's Record Submission at 5. This misadvice, while unfortunate, does not entitle appellant to a refund. The VA property custodian's statement, as interpreted by appellant, was inconsistent with the clear, emphatic terms of the IFB, which were incorporated into the contract, that once property sold by lot was removed, no refund could be made. These terms of the IFB reflect the Government's legitimate concern that it would be problematic to ascertain the quantity in a given lot, once the lot was removed from the Government's possession.

Decision

For the foregoing reasons, appellant's appeal is DENIED.

[¶ 26,397] Federal Computer Corporation v. Department of the Navy

GSBCA No. 12221-C(12012-P), August 27, 1993.

Protests, GSBCA—Costs of Bid and Proposal Preparation—Stipulated Compensation.—Pursuant to stipulation, a protester was awarded a reasonable sum for wasted proposal preparation costs and attorney fees incurred in preparing the claim for those costs. In the underlying protest, the board had determined that a good portion of the protester's proposal preparation costs were wasted as a result of the government's violations of procurement law. The board was guided by the parties' agreement in fixing the precise amount of wasted costs. In light of that agreement, it would have been an inappropriate use of resources to secure expert testimony on the issue.

For the protester: Doyle & Bachman, Washington, D.C., by Gerard F. Doyle and Scott A. Ford. For the government: Ellen D. Washington, Information Technology Acquisition Center, Department of the Navy, Washington, D.C.

Before DANIELS, LABELLA, and PARKER, Administrative Judges.

DANIELS, Administrative Judge: Pursuant to 40 U.S.C. § 759(f)(5)(C) and Board Rule 35, Federal Computer Corporation (FCC) has moved us to declare it entitled to the costs of filing and pursuing a protest in which it was a prevailing party, *Centel Federal Systems, Inc. v. Department of the Navy,* GSBCA 12011-P, et al., 93-2 BCA ¶ 25,648, 1992 BPD ¶ 359, as well as costs the firm incurred in preparing its proposal in the subject procurement.

At the request of FCC and the respondent, the Department of the Navy, we bifurcated the case. On July 14, 1993, we granted FCC virtually all the costs it claimed as being associated with filing and pursuing the case—$257,930.71. *Federal Computer Corp. v. Department of the Navy,* GSBCA 12221-C(12012-P), 1993 BPD ¶ 192.

We now consider the firm's request for proposal preparation costs and associated attorney fees. The Board determined in *Centel,* 93-2 BCA ¶ 25,648, 1992 BPD ¶ 359, that in conducting the procurement in question, the Navy had violated requirements of statute and regulation in three specific ways which, taken together, were prejudicial to FCC and its fellow-protester. FCC has asked that we award it $2,694,608 in proposal costs that were allegedly wasted as a direct consequence of those violations. *See Centel Federal Systems, Inc. v. Department of the Army,* GSBCA 11315-C(11238-P), 92-2 BCA ¶ 25,000, 1992 BPD ¶ 102; *Recognition Equipment Inc.,* GSBCA 9408-C(9363-P), 89-1 BCA ¶ 21,281, 1988 BPD ¶ 228. FCC has also asked for reimbursement of attorney fees which relate to the preparation of the claim for proposal costs. Protester has identified such fees as being in the amount of $12,012.50. We also now consider whether FCC should be granted $1,687.50 in attorney fees that relate to proposal costs, but which FCC characterized as protest costs. In ruling on protest costs earlier, we deferred review of the last amount until writing this opinion.

With regard to the costs of proposal preparation itself, FCC used a two-step process to calculate the costs at issue. First, it documented the total costs it actually incurred in each of four stages of proposal development—solution formation and team forma-

Digitized by Google

tion, live test demonstration preparation and performance, proposal development and negotiations, and best and final offer. Then FCC's president made estimates, based on his knowledge of the procurement, of the percentage of the costs at each stage which were wasted as a result of the Government's violations of law that were identified in the Board's decision in the underlying protest. The attorney fees sought are documented in appropriate detail.

The Navy agrees that FCC is an appropriate interested party for the purpose of entitlement to reimbursement of proposal preparation costs. The parties have agreed that FCC is entitled to an award of $2,014,100, inclusive of attorney fees, stemming from costs that protester incurred.

In the underlying protest case, FCC was one of two firms which challenged the Navy's contract award. We have already determined that FCC's fellow-protester, now known as Cordant, Inc., wasted a considerable part of its proposal preparation costs as a direct consequence of the Navy's improper procurement actions. We found that as a result of these violations of law and the Navy's decision to continue the procurement under revised terms, rather than award a contract to the lowest-priced offeror, each protester must make significant changes to its proposal and perform second live test demonstrations. In fixing the precise amount that Cordant wasted consequent to the violations, we were guided by the parties' agreement that the number they proposed represents reasonable compensation for Cordant's wasted efforts, irrespective of the outcome of the procurement. We explained that we would have no way to determine the correct percentage to apply to each of the categories of cost specified in the motion, apart from expert testimony, and because the parties had agreed on a total, we considered that securing such testimony would be an inappropriate use of resources. The amount specified for Cordant was virtually identical to the amount that FCC and the Navy now jointly request be awarded to FCC. *Cordant, Inc. v. Department of the Navy,* GSBCA 12226-C(12011-P), 94-1 BCA ¶ 26,275, 1993 BPD ¶ 210 (July 30, 1993).

For the reasons given in *Cordant,* we determine that FCC is entitled to an award, and that the sum stipulated by the parties as appropriate reimbursement for wasted proposal preparation costs and related attorney fees is reasonable.

Decision

FCC's application for reimbursement of costs incurred in preparing its proposal in the subject procurement, and associated attorney fees, is **GRANTED IN PART.** We award to FCC $2,014,100, to be paid, without interest, from the permanent indefinite judgment fund, 31 U.S.C. § 1304 (1988). 40 U.S.C. § 759(f)(5)(C) (1988).

[¶ 26,398] Centennial Leasing v. General Services Administration

GSBCA No. 12037, September 15, 1993. Contract No. GS-00F-9034A.

Default, Grounds—Delivery Failure—Causation.—The government met its burden of proving that grounds existed for a termination for default, because the contractor admitted that it failed to deliver the vehicles specified in the contract and further admitted that its failure to acquire the necessary financing resulted in its inability to fulfill the delivery orders. The government has the burden of proving the grounds for a termination for default, and it established the basis for the termination with the contractor's admissions.

Defaults, Excuses—Financial Problems—Credit.—A lender's failure to provide supplemental financing to the contractor to purchase vehicles necessary to fill contract delivery orders did not excuse the default, because it is the responsibility of the contractor to have the money to finance contract performance, even if a lender fails to advance funds through no fault of the contractor. The contractor had a stable line of credit sufficient to finance the initial two items awarded under the contract and gambled that it could obtain enough funds to purchase the remaining vehicles it was obligated to lease to the government. The death of the lender's chief operating officer was not an act of God and did not constitute an excuse justifying nonperformance. The contractor was responsible for securing financing, regardless of whether earlier credit had been withdrawn.

Digitized by Google

For the appellant: Sam Zalman Gdanski, Montebello, New York. For the government: Michael D. Tully, Office of General Counsel, General Services Administration, Washington, D.C.

Before BORWICK, LABELLA, and HYATT, Administrative Judges.

BORWICK, Administrative Judge:

Background

This appeal involves an indefinite quantity requirements type contract for the lease of automobiles and light trucks. On December 6, 1991, the General Services Administration (GSA), respondent, awarded contract line items 5 and 7 (five passenger sedans and twelve passenger vans) of contract No. GS-00F-9034A to Centennial Leasing Corporation (Centennial). On December 9, 1991, the contract was modified to include contract line items 3, 13, and 16 (mid-size sedan, compact pickup, and delivery van, respectively). On August 14, 1992, the contracting officer required appellant to show cause as to why it should not be terminated for default for failure to deliver vehicles leased by numerous delivery orders. Appellant's excuse for failure to perform was its inability to secure financing to purchase the vehicles. The contracting officer terminated the contract for default on September 1, 1992. Centennial appealed.

Appellant argues that the contracting officer should not have terminated the contract for default; that any default was excused because of failure of performance of its creditors or due to an act of God. It also maintains that Centennial had the financing in place to perform the contract within two weeks of default. For the reasons stated below, we deny the appeal.

Findings of Fact

Precontractual Matters

In response to the solicitation for offers, Centennial submitted an offer with an estimated dollar value of $2,175,780. The contracting officer of respondent's Automotive Commodity Center had received an unsatisfactory pre-award financial report on Centennial from respondent's credit and finance branch. The contracting officer thus determined that Centennial was not responsible and, on October 30, 1991, sought a certificate of competency from the Small Business Administration (SBA). Appeal File, Exhibit 9. On December 6, 1991, after considering the matter, SBA granted a certificate of competency for $530,880 for items five and seven only. Appeal File, Exhibit 11. On December 6, respondent awarded a contract for those items to Centennial. Transcript at 9.

The Automotive Commodity Center desired to award additional items. Appeal File, Exhibit 12; Transcript at 10. On December 3, Centennial wrote the contracting officer that it had secured from Sparta Auto Leasing $3,800,000 in addition to its existing credit line of $2,176,000. Appeal File, Exhibit 16. Centennial stated that Sparta would "act only as a bank" and that Centennial would utilize the Sparta line of credit when it had exhausted the existing credit line of $2,176,000 from National Westminster Bank of New Jersey. *Id.*[1] Based on that letter, the Automotive Commodity Center awarded three additional line items, i.e. 3, 13, and 16—mid-size sedan, compact pickup, and delivery van, respectively—to Centennial without requesting a certificate of competency from SBA. Transcript at 22-23, 31. The estimated value of these line items was $855,360. Appeal File, Exhibit 5.

Contract Terms

The contract provided that the lease period for the vehicles was for a period of twelve months from the date of delivery of each vehicle, with an option to extend each lease separately for two additional twelve month periods. Appeal File, Exhibit 5 at 5. The contract required the delivery of the vehicles to be made "at the point(s) specified within 90 days after receipt of order." Appeal File, Exhibit 3 at 15.

The Default clause of the contract, as incorporated by reference through GSA Form 3507, states:

> (a)(1) The government may ... by written notice of default to the Contractor, terminate this contract ... if the contractor fails to—
>
> (i) Deliver the supplies or to perform the service within the time specified in this contract or any extension[.]
>
> ....

[1] The financing arrangement consisted of Sparta providing a line of credit by borrowing $3.8 million from a financial institution and turning the funds over to appellant as needed. Transcript at 68-69. In return for the line of credit, Sparta was to receive 50% of the profits from the lease of the vehicles to the Government. *Id.* at 84.

Digitized by Google

(g) If, after termination, it is determined that the Contractor was not in default, or that default was excusable, the rights and obligations of the parties shall be the same as if the termination had been issued for the convenience of the Government.

Appeal File, Exhibit 3 at 4; Supplemental Appeal File, GSA Form 3507 at 22.[2]

Loss of Supplemental Financing

On January 21, 1992, Sparta's chief operating officer died. Appeal File, Exhibit 16. Following that death, appellant's president testified that he received initial assurances that, "there would be no problem in . . . providing the line of credit." Transcript at 48. He testified that as a result of the death, the financial institutions from which Sparta was to borrow the $3.8 million eventually decided to withdraw from the arrangement. *Id.* Appellant's president testified that in April of 1992, it became apparent that Sparta would not provide the supplemental financing; consequently, appellant's president sought other sources of financing.

As of May of 1992, appellant had delivered and paid for $2,200,000 worth of cars, trucks, and vans, and it had outstanding orders for vehicles worth $1,800,000 more. Transcript at 50. Appellant's president attempted to secure financing from "every major financial institution" in San Francisco, Chicago, and Atlanta but was unable to secure financing. *Id.* at 54-55. The General Motors Acceptance Corporation was willing to provide financing, but not on terms that would provide appellant with a profit under the lease. *Id.* at 56-58.

Performance Resulting in Default

As early as March 24, 1992, complaints were filed with respondent concerning appellant's failure to perform under the contract. Appeal File, Exhibit 18. A total of 37 purchase orders for vehicles were placed by customer agencies and departments that appellant failed to timely fulfill. Appeal File, Exhibits 19-54; Transcript at 63. Appellant admitted that, by its own calculations, Centennial failed to deliver approximately 100 vehicles under the contract. Transcript at 80-81.

In June of 1992, appellant contacted the contracting officer and explained that it was having some financial problems and expected to have "cleared them up within a week or so." Transcript at 15. However, the complaints concerning appellant's performance continued through the summer of 1992. *See generally* Appeal File, Exhibit 18.

Termination for Default

On August 14, 1992, the contracting officer sent appellant a "show cause notice," advising appellant that the Government was considering terminating the contract for default. Appeal File, Exhibit 15. The notice gave appellant the opportunity to provide a written account justifying deficiencies in contract performance. *Id.*

On August 24, 1992, appellant, responding to the show cause letter, stated that "Sparta . . . has not been able to honor its funding commitment to Centennial." Appeal File, Exhibit 16. In addition, appellant stated that "I believe that we are close to having funding in place. However, I cannot guarantee that this additional funding will be secured by Centennial . . . ." *Id.* On August 26, 1992, appellant sent supplemental information to the contracting officer that stated, "the line of credit with Sparta could not be honored by the corporation." *Id.*

On September 1, 1992, the contracting officer terminated the contract for default, stating that:

> the explanation presented in your letter is not considered to be an excusable delay as defined in the Federal Acquisition Regulation . . . . Your right, therefore, to proceed with performance of the contract is hereby terminated for default pursuant to FAR 52.249-8(a)(1)(i), [for] failure to deliver the vehicles in the time specified.

Appeal File, Exhibit 17.

On September 15, 1992, appellant's president informed respondent that appellant had secured credit from Tilden Commercial Alliance of New Jersey (Tilden) in the amount of $3,000,000, and sought rescission of the termination. Appellant supplied no proof of a firm financial commitment from Tilden to appellant. Complaint, Exhibit dated September 16, 1992, Facsimile Attachment. The contracting officer decided that because of chronic delivery problems and the non-delivery of vehicles it was not in the best interests of the Government to rescind the termination for default. Transcript at 18. Appellant filed its timely notice of appeal on September 18, 1992.

Discussion

The burden of proving the grounds for a termination for default is upon the Government. *M&T Construction Co.*, ASBCA 42750, 93-1 BCA ¶ 25,223, at 125,636. Appellant admitted that it failed to deliver approximately 100 vehicles specified in a total of thirty-seven purchase orders issued under the contract. Appellant admitted that its failure to acquire the necessary financing to fulfill the requirements of the contract resulted in its inability to fulfill the delivery orders. Respondent has established a basis for the default termination.

Sparta's failure to provide supplemental financing to purchase the vehicles required to fill the delivery orders does not excuse Centennial's default. As we have previously held:

> The law is generally, that it is the responsibility of contractors to have the cash to finance their contract performance .... This is as true of borrowed money as of cash in the bank and is true even when the lender fails to advance the funds through no fault of the contractor.

Yucca, a Joint Venture, GSBCA 6768, et al., 85-3 BCA ¶ 18,511, at 92,971 (citations omitted). Here, appellant had a stable line of credit sufficient to finance the initial two items awarded under the contract, but gambled it could obtain enough funds to purchase the remaining vehicles it was obligated to lease to the Government. When the gamble failed, appellant was financially overextended and found itself unable to perform.

Appellant claims its default is excused by an "act of God," *i.e.* the death of Sparta's chief operating officer. The illness or death of key contractor or subcontractor personnel is not a valid excuse justifying nonperformance, nor is it considered an act of God, as the contractor assumes the responsibility of employing and utilizing a competent work force. *Yankee Telecommunications Laboratory, Inc.*, ASBCA 25240 et al., 85-1 ¶ 17,786, at 88,873. Appellant is also responsible for securing financing, regardless of whether earlier credit has been withdrawn. *Yucca; Katzdorn Construction & Co.*, AGBCA 87-265-3, 87-2 BCA ¶ 19,929, at 100,838-39. The unfortunate passing of Sparta's chief operating officer was not the cause of appellant's default; appellant's inability to obtain secure financing caused the default.

Finally, appellant represented—without proof—that yet another source of financing had been secured. In light of the past unsuccessful history of the financing of this contract, the contracting officer did not act unreasonably in refusing to rescind the default termination based upon that representation.

Decision

The appeal is DENIED.

[¶ 26,399] Integrated Systems Group, Inc. v. Department of Commerce

GSBCA No. 11974-C(11921-P), August 25, 1993.

Protests, GSBCA—Costs of Protest and Attorney Fees—Corrective Action.—A protester was awarded the costs of pursuing a protest, as well as the costs of replying to the government's opposition to the protester's cost motion, even though the agency took only eight days to rectify the mistake that led to the protest, because the Competition in Contracting Act provides simply that the board may award costs when a protest is sustained. The board declined an invitation to follow the General Accounting Office's practice of awarding protest costs only when agencies unduly delay taking corrective action in the face of a clearly meritorious protest. The board has not adopted rules that parallel those adopted by GAO with respect to awards or protest costs. GAO's rules intend generally to restrict protest cost awards when an agency acts promptly, while preserving the discretion to make such awards when the facts and circumstances suggest that it took an inordinate amount of time for voluntary corrective action to occur. The board, however, routinely grants the costs of successful pursuit of a protest.

For the protester: Shelton H. Skolnick, Derwood, Maryland. For the government: Jerry A. Walz, Mark Langstein, and Kenneth A. Lechter, Office of the Assistant General Counsel for Finance and Litigation, Department of Commerce, Washington, D.C.

Before HYATT, BORWICK, and WILLIAMS, Administrative Judges.

Digitized by Google

HYATT, Administrative Judge: Pursuant to Rule 35, protester, Integrated Systems Group, Inc. (ISG), filed a timely motion for the recovery of its costs of pursuing the underlying protest. Respondent, the Department of Commerce (DOC), argues that protester should not be awarded its protest costs because the agency promptly settled with protester once it realized that the agency procurement office had misread the protester's response to its Commerce Business Daily (CBD) synopsis. We disagree with respondent, and award ISG protest costs in the amount of $2,155.

Background

On July 7, 1992, ISG filed a protest at the Board challenging the award of a contract to Sylvest from the Sun Microsystems GSA Schedule. A pre-hearing conference was held on July 13, 1992. On July 14, 1992, protester's counsel visited respondent's offices in order to review the procurement file. At this time, it was discovered that the agency procurement office had misread protester's response to its CBD notice and that protester's was lower than the schedule price. Respondent promptly agreed to cancel the award and solicit competitively. Respondent's Response to Motion for Costs at 2; Protester's Reply to Respondent's Response at 1-2.

On July 16, 1992, the parties filed a joint stipulation with the Board asking that the protest be granted. In accordance with the stipulation, the Board granted the protest. *Integrated Systems Group, Inc. v. Department of Commerce*, GSBCA 11921-P, 1992 BPD ¶197 (July 24, 1992). As provided under the settlement agreement of the parties, the issue of protest costs was to be determined pursuant to the procedures provided by Board Rule 35.[1]

On August 17, 1992, protester filed a motion to recover $1,255 in costs related to this protest. On September 21, 1992, protester amended its claim to total $2,155, reflecting additional attorney fees of $900 expended in replying to respondent's opposition to protester's cost motion.

Discussion

Respondent, quite correctly, points out that it acted quickly and efficiently to correct its error and resolve this protest.[2] Accordingly, instead of awarding ISG its protest costs, respondent urges that the Board should take the opportunity to announce its intention to follow the practice of the General Accounting Office (GAO), which routinely holds that the award of protest costs is appropriate only where agencies unduly delay taking corrective action in the face of a clearly meritorious protest. Respondent points out that under GAO precedent, the eight days required to resolve this protest would not constitute "undue delay" and that the agency's quick actions should be deemed to obviate the payment of protest costs.[3]

At the outset, it should be noted that we do not regard this protest as an instance in which protester succeeded in showing nothing more than a minor technical violation of procurement regulations. Protester's complaint was valid and resulted in achieving the full measure of success sought by protester—the opportunity to compete for the award. The fees claimed are reasonable and are sufficiently documented.

We fully agree that the agency acted with commendable celerity in rectifying the mistake that led to the protest. The GAO cases respondent cites are based on regulations not applicable to our proceedings, however.[4] Although the Competition in Contracting Act

[1] 48 CFR 6101.35 (1992).

[2] Indeed, we have no doubt that respondent's quick action was largely contributory to the minimal amount of attorney fees that were incurred in the pursuit of this protest.

[3] Respondent also submits an affidavit of the contracting officer stating that had protester contacted her immediately after award she would have voluntarily taken corrective action without the need for the filing of a protest. We do not disbelieve the contracting officer; however, the pursuit of a voluntary resolution with the agency, although encouraged, is not, under our case law, a condition precedent to an award of fees for successful pursuit of a protest. There are many reasons, including the desire to obtain an immediate suspension of the procurement so as to preserve the opportunity for meaningful relief, which may motivate the protester to file a protest with the Board without first exploring resolution with the agency.

[4] Following the enactment of the Competition in Contracting Act of 1984 (CICA), GAO promulgated a regulation expressly providing that costs would not be awarded when an agency took corrective action prior to issuance of a ruling. Subsequently, GAO amended its regulation to provide that it "may" award costs, even if corrective action is taken by an agency prior to issuance of a ruling, if GAO finds that the agency delayed unduly. As the cases explain, GAO's cost regulation is intended generally to restrict protest cost awards when an agency acts promptly, while preserving the discretion to make such awards when the facts and circumstances suggest that it took an inordinate

©1994, Commerce Clearing House, Inc.
Digitized by Google

(CICA) addresses protests at both the Board and GAO, the Act creates significant distinctions in the protest processes in these two forums. *Compare* 31 U.S.C. §§ 3551-3556 (1988) *with* 40 U.S.C. § 759(f) (1988). These distinctions relate, inter alia, to such matters as the time frames in which protests must be processed, the availability of a suspension of the procurement and the effect of the tribunal's decision. Although the wording of the sections relating to an award of costs is similar, the legislative history of CICA reveals a distinction in the Congressional intent for administration of this aspect of the legislation as well. In alluding to the Board's authority to award costs, the conference committee report accompanying CICA indicates simply that the Board may award costs when a protest is sustained. It is more explicit in discussing the authority of the Comptroller General, stating that "the Comptroller General will declare monetary awards only in cases where the agencies have unfairly excluded vendors from procurements, and not in cases involving minor technicalities.[5] H.R. Rep. No. 861, 98th Cong., 2d Sess. 1431, 1437, *reprinted in* 1984 U.S.C.C.A.N. 2119, 2125.

The Board has not promulgated rules that parallel those adopted by GAO with respect to awards of protest costs, nor has it adopted such a practice in its cases. In contrast, the Board routinely grants the costs of successful pursuit of a protest in similar situations. For example, in *Communications Resource Group, Inc. v. General Services Administration,* GSBCA 11038-C(10998-P), 92-2 BCA ¶ 24,769, 1992 BPD ¶ 29, the Board granted reasonable protest costs where a protest was dismissed eight days after being filed as a result of the agency's prompt initiation of corrective action.

We are not persuaded by respondent's contention that an award of costs in this case would eviscerate the discretionary nature of the Board's authority to make cost awards to successful protesters. Because the Brooks Act provides that the Board "may" award protest costs, the Board has recognized that an award of attorney fees need not be automatic merely because protester has established a violation of regulation or statute. *See, e.g., Computervision Corp.,* GSBCA 8838-C(8709-P), 87-2 BCA ¶ 19,818, 1987 BPD ¶ 70 (protester's motion for costs denied when it prevailed only on a threshold issue that allowed it to be heard on a substantive issue which it ultimately lost). The Board has, furthermore, construed this language to require it to consider both entitlement and amount even where a protester has prevailed. In the case at hand we are persuaded that it is appropriate to make an award and that the amount requested is reasonable and properly supported.

Decision

Protester's motion for costs is **GRANTED.** Protester is awarded $2,155. This award may be paid, without interest, from the permanent indefinite judgment fund, 31 U.S.C. § 1304 (1988). 40 U.S.C. § 759(f)(5)(C) (1988).

[¶ 26,400] Litton Systems, Inc., Intervenor v. Department of Transportation and Department of Defense

GSBCA No. 11915-C(11736-P/11745-P), September 17, 1993.

Protests, GSBCA—Costs of Protest and Attorney Fees—Timeliness of Motion for Costs.—An intervenor's motion for the recovery of proposal preparation costs in connection with protests against a procurement for voice band switching boxes was dismissed as untimely because the intervenor did not file its motion within the 30-day period following issuance of the board's decision sustaining the protests. The intervenor did not

(Footnote Continued)

amount of time for voluntary corrective action to occur. 4 CFR 21.6(e) (1992); *Marinette Marine Corp.,* B-245130.2, 92-1 CPD ¶ 298; *Oklahoma Indian Corp.,* B-243785.2, 91-1 CPD ¶ 558.

[5] Although the Board has not explicitly stated it will not award protest costs in "cases involving minor technicalities," as a practical matter the result is the same, since the Board will not grant a protest based on a showing of a de minimis error in the procurement or in the absence of a showing of prejudice to the complaining protester. *See, e.g., US Sprint Communications Co. v. Department of Defense,* GSBCA No. 11769-P, 93-1 BCA ¶ 25,255, 1992 BPD ¶ 165, *aff'd per curiam,* No. 92-1470 (Fed. Cir. July 15, 1993) (table); *Corporate Jets, Inc.,* GSBCA 11049-P, 91-2 BCA ¶ 23,998, 1991 BPD ¶ 111; *Andersen Consulting,* GSBCA 10833-P, 91-1 BCA ¶ 23,474, 1990 BPD ¶ 396, *aff'd,* 959 F.2d 929 (Fed. Cir. 1992).

Digitized by Google

show that it had good cause to delay filing the motion. The obstacles cited by the intervenor as barriers to timely filing applied equally to protesters that filed timely cost applications.

For the intervenor: Pettit & Martin, Washington, D.C., by David V. Anthony, Michael W. Clancy, and Richard P. Rector. For the Department of Transportation: Richard J. McCarthy, John R. McCaw, Jr., and Anthony L. Washington, Office of the Chief Counsel, Federal Aviation Administration, Washington, D.C. For the Department of Defense: Roger B. Sabin and Capt. Richard B. Wingate, Office of General Counsel, Defense Information Systems Agency, Arlington, Virginia, and Clifton M. Hasegawa, Virginia Farrier, and Douglas G. White, Defense Commercial Communications Office, Defense Information Systems Agency, Scott Air Force Base, Illinois.

Before HYATT, NEILL, and WILLIAMS, Administrative Judges.

HYATT, Administrative Judge: Pursuant to Rule 35, Litton Systems, Inc., an intervenor in the protests of Denro, Inc. and Westinghouse Electric Corporation, has moved for the recovery of proposal preparation costs that it alleges were wasted as a result of agency actions that the Board overturned in deciding those protests. Respondent, the Federal Aviation Administration (FAA),[1] opposes Litton's application on two grounds: 1) the application was not timely filed under the Board's rules and 2) Litton, an intervenor supporting the FAA's position, is not a "prevailing party" under the Board's precedent. Because we find that the application was not timely filed, we do not address the substantive issue of whether an intervenor that supported the Government's position in the underlying protest is eligible to recover its wasted proposal preparation costs.

Background

On May 29, 1992, the Board granted the consolidated protests of Denro, Inc. and Westinghouse. These protests challenged the exclusion of these companies from the competitive range of an FAA procurement for voiceband switching boxes. As a result of the Government's initial determination that Denro and Westinghouse should be excluded from the competitive range of the procurement, the remaining competitor, Litton, had effectively been selected for award. Accordingly, Litton intervened in the protests in support of the Government's position.

In its decision on the merits of the protests, the Board held, inter alia, that the operational capability demonstrations (OCDs) involving Denro and Westinghouse were improperly conducted and that, thereafter, their proposals were unfairly evaluated as to the ability of their products to meet the Government's requirements. *Denro, Inc v. Department of Transportation,* GSBCA 11736-P, et al., 93-1 BCA ¶ 25,315, 1992 BPD ¶ 196. One of the options presented to the Government in the Board's decision was that of conducting another round of OCDs, which the Government ultimately elected to do.

The Board's decision in *Denro, Inc.* was issued on May 29, 1992. Litton filed its cost motion on July 2, some 34 days after the Board's decision was provided to the parties. The motion was limited to a request for the recovery of proposal preparation costs associated with the operational capability demonstrations (OCDs) and the post-OCD discussion process to the extent Litton's efforts were wasted as a result of the Government's violations of law. Litton characterized its motion as "premature," noting that the costs claimed are approximate and that the actual amount of wasted costs would not be determinable until such time as the Government had selected a course of further action in the procurement. Thus, the costs were not certified, and Litton reserved the right to supplement and update its motion as appropriate.

Discussion

The Board's Rule 35(b)[2] sets forth the following procedure for the filing of a motion seeking an award of protest costs:

> Within 30 days after a decision sustaining a protest, an interested party may submit a motion, with supporting documentation and certification of accuracy, requesting the Board to issue an order requiring respondent to pay the costs described in paragraph (a) of this rule.

[1] This procurement was conducted by the Defense Information Systems Agency, Defense Commercial Communications Office (DECCO), on behalf of the FAA, a component of the Department of Transportation. The FAA has conducted all proceedings pertinent to this cost case, however, and we thus refer to the FAA as the responding party throughout.

[2] 48 CFR 6101.35(b) (1992).

©1994, Commerce Clearing House, Inc.

Digitized by Google

Because Litton did not file its motion within the thirty-day period following issuance of the Board's decision sustaining the protests of Denro and Westinghouse, the FAA contends that its motion must be dismissed for lack of timeliness. Litton urges that the thirty-day time limit set forth in Rule 35 is not mandatory and should be waived by the Board in this case.

The Board has previously held, in similar circumstances, that a cost motion that was not timely filed should be dismissed for that reason. *Emulex Corp.*, GSBCA 9357-C(9259-P), 89-1 BCA ¶ 21,349, 1988 BPD ¶ 276. In *Emulex*, the successful protester filed a motion to recover costs several days after the expiration of the thirty-day period following issuance of the Board's decision. In that case, protester's counsel had misread the date of the decision and argued that the Government was not prejudiced by the error. The Board flatly rejected this contention, holding that the plain language of the rule sets a deadline and that that deadline must be strictly applied:

> We have in Rule 35(b), acting in accordance with statutory authority, set a time limit on the filing of motions for costs. This rule is clear; regardless of its caption or the intent of the drafters, the rule without doubt sets a limit of thirty days after a decision sustaining a protest in which to submit a motion for protest costs. Furthermore the rule is appropriate for and is specific to protest proceedings. In fairness to all parties in all actions before us, we adhere to the time limits which we have established. We will not enlarge the time for the filing of a motion for costs unless a party shows good cause for enlargement. Any other conclusion would foster disrespect for our rule regarding timeliness of cost motions.

89-1 BCA at 107,625, 1988 BPD ¶ 276 at 4.

Here, Litton merely states that in light of the Denro and Westinghouse filings, seeking proposal preparation costs, it filed essentially an "informational" motion intended to alert the Government that it has a claim.[3] What is not explained, however, is why this informational filing could not have been filed within thirty days of issuance of the Board's decision, so as to comply with the rule's purpose of notifying the Government within that time frame of its potential liability. Although Litton points out that it could not, with the limited information available, provide a certified claim in that period, it does not demonstrate that it could not have filed a protective application, which it did only a few days later anyway. *Cf. Trimble Navigation, Ltd. v. Department of Transportation*, GSBCA 11692-P, 93-1 BCA ¶ 25,341, 1992 BPD ¶ 62 (filing of "protective" preaward protest is preferable to awaiting a debriefing in order to obtain further details to support protest). The obstacles cited by Litton as barriers to filing sooner—that the Government had not yet selected a course of action, that the extent of costs incurred could not be calculated with certainty so as to permit their "certification," and that the decision, issued under protective order, was not yet available to the principals of Litton—applied equally to the protesters.[4] We note, however, that both protesters filed timely cost applications and neither of these parties was in any better posture to ascertain what costs had been wasted given that the Government had not yet chosen what course it would pursue to continue the procurement. Absent a more persuasive explanation from Litton as to why it had "good cause" to delay the filing of this motion, we have no reasonable basis

[3] Litton characterizes the request for wasted proposal preparation costs as premature, apparently relying on the Board's observation in its underlying decision that Westinghouse's request, made in its post-hearing brief, that the Board declare it entitled to recover proposal preparation costs, was possibly premature in light of the options available to the FAA. This issue was thus deferred for resolution in conjunction with any cost application that might be filed by Westinghouse. 93-1 BCA at 126,133 n.28, 1992 BPD ¶ 196 at 44 n.28. This statement was not intended to provide, nor could it reasonably be construed as, an extension of time to file such a motion beyond the thirty-day period established under our rule.

[4] The unavailability of complete cost information generally does not discourage successful protesters from filing within thirty days with a request for leave to supplement the motion with updated accurate information. Indeed, information on the cost of preparing the cost petition itself is rarely, if ever, available as of the original filing. Requests for leave to supplement the initial filing are thus customarily granted by the Board.

Digitized by Google

for extending the deadline established in the rule.

Decision

This cost application is **DISMISSED AS UNTIMELY FILED.**

[¶ 26,401] LaSalle Bank Northbrook v. Department of the Treasury and General Services Administration

GSBCA No. 11896-TD, September 1, 1993.

Procedure, Boards—Parties—Real Party in Interest.—Under a lease of copiers, the board granted a contractor's petition requesting the contracting officer to issue a decision on the contractor's claim for convenience termination costs and denied the Internal Revenue Service's motion to dismiss, despite the IRS's contention that it was not a real party in interest, because the record showed that the terminated purchase order was an open market order for which the IRS was responsible, rather than an order under a GSA schedule contract. The schedule contractor was not involved in any phases of the leasing transaction. The IRS did not provide any documentation indicating the schedule contractor's involvement in the invoice and payment process.

Contract Disputes, Claims—Settlement Proposal—Failure to Agree.—Under a lease of copiers, the board granted a contractor's petition requesting that the contracting officer issue a decision on the contractor's claim for convenience termination costs and denied the Internal Revenue Service's motion to dismiss the case, because the IRS's extraordinary delay in responding to the petitioner's settlement proposal ripened into a claim. Under the Federal Acquisition Regulations, the petitioner's termination for convenience settlement proposal became a bona fide disputed claim for a sum certain.

For the petitioner: Altheimer & Gray, Chicago, Illinois, by Julie Swanson. For the Department of the Treasury: Christopher K. Bullard, Office of General Legal Services, Internal Revenue Service, Mid-Atlantic Region, Philadelphia, Pennsylvania. For the General Services Administration: John E. Cornell, Office of General Counsel, General Services Administration, Washington, D.C.

Before NEILL, PARKER, and BORWICK, Administrative Judges.

NEILL, Administrative Judge: This petition was filed by LaSalle Bank Northbrook on June 19, 1992. The petition is a request for the Board to issue an order directing a contracting officer at the Department of the Treasury to render a decision on a termination for convenience settlement proposal which the petitioner submitted to the Department of the Treasury, Internal Revenue Service (IRS) in August 1990. The transaction in question is for the lease of Toshiba copiers.

On June 25, 1992, the Board directed the IRS to issue a contracting officer's decision on the matter in question. On August 6, 1992, the IRS brought a motion asking the Board to dismiss this case.

The principal argument raised by IRS in support of its motion to dismiss is that the contract, in relation to which this claim arises, was a general schedule contract awarded by the General Services Administration (GSA). Respondent IRS claims to have been nothing more than an ordering agency under that contract. IRS maintains that the termination for convenience which occurred was the result of directions received from GSA directing ordering officers to terminate for convenience certain purchase orders issued under the contract.

The Board did not immediately rule on IRS' motion to dismiss. Based on representations made in that motion, however, it added GSA to these proceedings and requested GSA to issue a contracting officer's decision on the claim. GSA thereupon made a limited appearance for purposes of objecting to our jurisdiction. Counsel for GSA pointed out that no claim had been presented to the GSA contracting officer by the schedule contractor. Counsel for GSA did, however, take the useful and additional step of referring this matter to the GSA schedule contracting officer for review. This led to the issuance on September 18, 1992, of a letter from the contracting officer to counsel for the petitioner. In that letter, the contracting officer explains in detail why he has concluded that

©1994, Commerce Clearing House, Inc.

Digitized by Google

the purchase order which was terminated for convenience was not issued pursuant to a schedule contract but rather amounted to an open market order for which the IRS and not GSA is responsible.

On November 20, 1992, the Board issued an order to IRS and petitioner to show cause why, in light of the GSA contracting officer's determination, IRS rather than GSA is the real party at interest in the transaction to which the current dispute relates. During the following month of December, both petitioner and IRS filed replies. This prompted further inquiry from the Board to which both parties have also replied. Based on the information provided thus far for the record, the Board concludes that the GSA is not a proper party to this proceeding and that the IRS is. Accordingly, the IRS motion to dismiss is denied and the petition is granted.

Findings of Fact

1. The GSA Federal Supply Schedule (FSS) contract, number GS-00F-03105, with Toshiba American, Inc. (TAI) is for a contract period of October 13, 1987 to September 30, 1990. An FSS contract price list issued by TAI specifies the products which were available to ordering agencies under that contract. IRS Reply of December 10, 1992, Exhibit 1.

2. This TAI schedule contract price list includes the following instructions on placing orders:

> All orders placed under this Contract must be issued to Toshiba America, Inc., Copier Products Division—Attn: GSA, 9740 Irvine, [sic] Blvd., Irvine, California 92718.
>
> To place an order through one of the TOSHIBA DEALERS Listed on pages 49-58 the order must be forwarded to TAI (address listed above) but issued to TAI, c/o dealer's name and address, so it can be properly filled [sic] and invoiced under this Contract. Orders placed directly with a dealer are OPEN MARKET and, as such, this contract Number MAY NOT be used. No deviation from the terms (pricing, discount, warranty, etc.) specified in this schedule is authorized. Any prices or terms other than as stated herein are Open Market and this Contract Number MAY NOT be used. All contract items will be supplied by Toshiba Copier Products Division.
>
> OPEN MARKET ORDERS MUST COMPLY WITH GSA PROCUREMENT REGULATIONS.

IRS Reply of December 10, 1992, Exhibit 1 at 4.

3. The TAI schedule contract price list also contains the following provision regarding payment:

> Invoices will be submitted directly to all ordering agencies by TAI. All checks must be made payable to TAI and no other name shall appear for payment. Payment must be sent directly to TAI Copier Products Division, Attn. GSA, 9740 Irvine Blvd., Irvine, California 92718, or as indicated on the TAI invoice.

IRS Reply of December 10, 1992, Exhibit 1 at 4.

4. One of the dealers listed in TAI's schedule contract price list was: Executive Copy, Inc., P.O. Box 2380, One Allison Drive, Cherry Hill, NJ, 08034. IRS Reply of December 10, 1992, Exhibit 1 at 55.

5. On October 18, 1988, the IRS issued purchase order MA-89-0339-V. IRS Reply of December 10, 1992, Exhibit 2. The purchase order referenced contract number GS-00F-03105 and was signed by Ms. Gladys Wiggins. *Id.* The purchase order was for the lease of four copiers for a one-month period and the lease of eleven copiers for a twelve-month period. *Id.* These items are described under Special Item Numbers (SIN) 51-55 of the contract price list. *See Id.,* Exhibit 1. The order was issued to:

> TOSHIBA AMERICAN INC.
> C/O EXECUTIVE COPY
> ATTN: S. MURPHY
> MARLKRESS RD & ALLISON DRIVE
> CHERRY HILL, NJ 08034

Id., Exhibit 2.

6. Counsel for IRS, in response to an express inquiry from the Board, states:

> There is no evidence in the agency's file to suggest that its personnel ever forwarded a copy of the purchase order to Toshiba America, Inc. in California. The agency has no evidence to suggest that Executive Copy did either.

IRS Submission of June 9, 1993, at 2.

7. The record for this case contains a Fiscal Term Rental Agreement (FTRA) consisting of two parts. The first is a "Notice of Acceptance" signed by Ms. Cass Ryan, Facilities Manager for IRS' Philadelphia district office. The second part is a "Form GL51340." Both the first and second part of the FTRA show Executive Copy to be the

Digitized by Google

"Vendor, Rentor [sic], Lessor or Supplier." IRS Reply of December 10, 1992, Exhibit 3.

8. The FTRA "Notice of Acceptance" is signed by Ms. Ryan but is undated. It references purchase order MA-89-0339-V (*see* Finding 5) and refers to that purchase order for a description of the equipment covered by the agreement. It states in part:

> As evidenced by this Notice of Acceptance, we acknowledge receipt, in good condition and satisfactory installation, of all the items as described in the above referenced Purchase Order or as described below and acknowledge the same to be in good working order and satisfactorily installed. We acknowledge and accept ther [sic] terms of form GL51340 (FISCAL TERM RENTAL AGREEMENT), and verify that "Vendor" has fully and satisfactorily performed each, every, and all covenants and conditions to be performed by it.

IRS Reply of December 10, 1992, Exhibit 3.

9. The form GL51340 shows a signature by Ms. Ryan which is dated November 14, 1988. It likewise references purchase order MA-89-0339-V.[1] It states in part:

> This agreement is effective as of the earlier of the date of the above referenced Purchase Order, (hereinafter the "Purchase Order") or, the date of issuance by Customer of a Notice of Acceptance. The execution of said Purchase Order constitutes acceptance by Customer of all terms and conditions of this Agreement and the collateral agreements incorporated by reference herein. Acceptance of the Purchase Order by Vendor constitutes acceptance of the price and term of agreement provisions of the Purchase Order which are incorporated by reference herein, and no other terms and conditions of said Purchase Order shall apply.

IRS Reply of December 10, 1992, Exhibit 3. The FTRA has an acceptance block bearing the signature of a David Fossler, Director of Government Accounts at Executive Copy, and dated November 14, 1988. *Id.*

10. Ms. Ryan, the IRS Facilities Manager, has subsequently stated in a recent memorandum to counsel that she signed the FTRA because the Government Account Representative for Executive Copy stated that the signed rental agreement would allow prompt delivery of the copiers to IRS. She also has stated in the same memorandum that she signed the form knowing that she was not a contracting officer and believing that the form was only to obtain delivery of the copiers. IRS Reply of December 10, 1992, Exhibit 11.

11. The GSA schedule contracting officer states that the terms set forth in the FTRA signed on November 14 by IRS and Executive Copy differ from schedule contract provisions. For example, the FTRA contains a liquidated damages clause which is not contained in the TAI contract price list. This clause states that:

> upon occurrence of any default ... vendor is entitled to recover immediately as liquidated damages and not as a penalty any unpaid rent which accrued on or before the occurance [sic] of the default, plus an amount equal to the difference between the present value (as of the date of default) of the total rents due for the unexpired terms.

Petitioner's Submission of October 2, Enclosure 2 at 3 (unnumbered). The GSA contracting officer writes: "No such agreement is present in the GSA contract." Contracting Officer's Determination of September 17, 1992, at 2. Furthermore, the FTRA has the following provision which effectively negates all different or conflicting provisions appearing in the TAI schedule contract:

> This Agreement and the collateral documents referred to herein set forth the entire Agreement and understanding of the parties in respect of the transactions contemplated hereby and relating to the subject matter hereof. No representation, promise, inducement or statement of intention has been made by Vendor which is not embodied in this Agreement or in the documents referred to herein and neither Vendor nor Customer shall be bound by or liable for any alleged representations, promise, inducement or statement of intention not so set forth.

Petitioner's Submission of October 2, Enclosure 2 at 4 (unnumbered).

12. On November 18, 1988, shortly after the FTRA was executed, David Fossler, the Director of Special Programs at Executive Copy, wrote a letter to the IRS Facility Manager, Cass Ryan, stating that the letter was to recap a discussion regarding the new program for the copiers. Among other things, the letter stated that the purchase order should be amended to read "Issue To:

[1] We note that it does, however, incorrectly state that the date of this purchase order is October 21, 1988, rather than October 18.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Executive Copy for items #5 thru #15. Also add five year price protection per form GL51340." Petitioner's Submission of June 10, 1993, Exhibit A.

13. On November 23, 1988, Ms. Margaret Mannion, a contracting officer for the IRS, issued the first modification to purchase order MA-89-0339-V. This modification, which adds two Toshiba copiers, does not contain the changes requested by Executive Copy and described in the finding immediately above. Like the original purchase order, however, this modification references contract number GS-00F-03105 and is issued to:

TOSHIBA AMERICAN INC.
C/O EXECUTIVE COPY
ATTN: S. MURPHY
MARLKRESS RD & ALLISON DRIVE
CHERRY HILL, NJ 08034

IRS Reply of December 10, 1992, Exhibit 4.

14. Petitioner has submitted, for the record, a letter purportedly sent by Ms. Ryan at IRS to Executive Copy and dated November 29, 1988. The letter references purchase order MA-89-0339-V of contract number GS-00F-03105. It states that section 7, which identifies the contractor, is amended to read "Executive Copy." Toshiba America is to be referenced "as the manufacture [sic] only." The letter further states that "[p]ayments are to made only to Executive Copy, Inc." Petitioner's Submission of June 10, 1993, Exhibit C.

15. Both IRS and petitioner have submitted documentation indicating that during the first half of December 1988, the agreement between Executive Copy and IRS was assigned, at least in part, to Great Lakes Financial Services and subsequently to LaSalle Bank Northbrook. The documentation is incomplete and leaves many questions unanswered. What is significant, however, for purposes of this decision, is that there is no mention of TAI as a party to the assigned contract in any of the material provided by the parties regarding these assignments. *See* Petitioner's Submission of June 10, 1993, Exhibit B; IRS Submission of June 9, 1993, Exhibits 2, 3.

16. A typewritten note on the final page of the copy of the original purchase order MA-89-0339-V in the possession of petitioner reads: "Items No 5 thru 15 will be invoiced by Executive Copy Inc." Unnumbered Enclosure in Petitioner's Initial Submission of June 11, 1992. IRS has submitted a letter from its files which was purportedly sent to IRS from Executive Copy. It is dated December 12, 1988. It advises IRS that the assignment to LaSalle Bank was a partial assignment of only items five to fifteen and entitles LaSalle to no more than $3,786 per month per system. All other amounts due are to be sent to Executive Copy. IRS Submission of June 9, 1993, Exhibit 2 at 2 (unnumbered).

17. Petitioner has provided examples of invoices covering some of the leased copiers. They appear to have been issued after the partial assignment and are issued by "Executive Copy, Inc. C/O LaSalle Bank Northbrook." Petitioner has also submitted copies of two U.S. Treasury checks payable to Executive Copy, C/O LaSalle Bank Northbrook. However, because the amounts shown on the checks do not correspond to the amounts shown on the invoices submitted, it is unclear whether they represent payment for use of the equipment said to have been leased to IRS in this case. Petitioner's Submission of June 10, 1993, Exhibit E.

18. Petitioner has also submitted for the record a letter purportedly sent by Ms. Ryan of IRS to Executive Copy and dated December 13, 1988. Possibly this letter was provided in conjunction with the assignments which were being carried out at the time. The letter states that Ms. Ryan "has the right to negotiate and enter into Fiscal Term Rental Agreements with [Executive Copy], and that Gladys Wiggins is authorized to sign Purchase Orders on behalf of the Internal Revenue Service." This letter, however, is not written on IRS stationery, but rather on a piece of paper bearing Executive Copy's name. Petitioner's Submission of June 10, 1993, Exhibit F.

19. In December 1988, Congress imposed trade restrictions which prohibited United States governmental agencies from procuring products or services from Toshiba Corporations. Executive Order 12661, dated December 27, 1988, specifically prohibited contracts between agencies of the United States and Toshiba Machine Company (and its subsidiaries) and Toshiba Corporation (but not its subsidiaries). In response, GSA's Office of Acquisition Policy directed that any contract with the sanctioned organizations that was awarded after June 30, 1987, must be canceled.[2] IRS Reply of December 10, 1992, Exhibit 5.

[2] The IRS alleges that GSA may have acted improperly in terminating the contract with Toshiba America, Inc. because Congress mandated sanctions against Toshiba Corporation, not against

Digitized by Google

20. On March 3, 1989, a GSA contracting officer unilaterally modified contract number GS-OOF-01305. IRS Reply of December 10, 1992, Exhibit 5 at 2 (unnumbered). The modification included a deletion of orders under SIN 51-55 which were the copier rental plans at issue. *Id.* at 3 (unnumbered). The effective date of the modification was thirty days from the date of issuance. *Id.*

21. On April 5, 1989, Ms. Gladys Wiggins, a contracting officer for the IRS, issued modification three to purchase order MA-89-0339-V. IRS Reply of December 10, 1992, Exhibit 6. This order was issued to the same address as shown on the original purchase order and modification one of that order.[3] This third modification canceled the remaining copier rentals "due to cancellation of GSA contract." *Id.* A fourth purchase order modification, dated April 18, 1989, provided that the leased copiers were to be removed by April 17, 1989. *Id.*, Exhibit 7. That modification of the purchase order also changed the "remit to" address to Executive Copy, c/o LaSalle Bank Northbrook. *Id.*

22. By letter dated August 13, 1990, counsel for petitioner submitted to IRS Procurement Officer, Ms. Gladys Wiggins, a termination settlement proposal in the amount of $245,851.26. The record also contains a letter dated October 22, 1990, transmitting a copy of the proposal to Ms. Cass Ryan at the IRS Consolidated Procurement Branch in Philadelphia. Correspondence submitted by petitioner indicates that during the course of 1991, inquiries were made by counsel for petitioner regarding the status of the proposal. A letter dated February 15, 1991, from counsel for petitioner to an IRS regional counsel mentions review of the proposal by the IRS Washington office. Unnumbered Enclosure in Petitioner's Initial Submission of June 11, 1992.

23. The chief of the small purchase section of the Philadelphia district of the IRS states in a declaration, which is neither sworn to nor provided under penalty of perjury, that in February 1991, she had a phone conversation with counsel for petitioner regarding a claim in the amount of $245,851.26, allegedly for wrongful cancellation of a purchase order issued under contract GS-OOF-03105. She further states that she forwarded copies of both the order and the modification canceling it to the GSA contracting officers responsible for the TAI schedule contract. They are said to have assured her "the IRS had acted exactly as GSA had advised," and that the IRS was "fully justified in canceling Toshiba America." This section chief states that she then passed this information on to counsel for petitioner. Shortly thereafter, she advised him that she was turning the matter over to the Office of General Legal Services. IRS Reply of December 10, 1992, Exhibit 10.

24. By letter dated June 11, 1992, counsel for petitioner requested this Board to direct the IRS contracting officer to render a decision on LaSalle's settlement proposal. Shortly thereafter, by letter dated June 30, 1992, counsel also provided the Board with a certification of its termination claim. The letter transmitting this certification to the Board shows a copy (with enclosures) was sent to IRS Procurement Officer, Gladys Wiggins, as well.

Discussion

The principal issue raised by this petition and IRS' motion to dismiss the case is whether we are dealing here with a transaction under TAI's schedule contract with GSA or with an open order transaction for which IRS would be responsible.

A good deal of time has been spent developing the record on this issue. Upon review of the information and documentation submitted by the parties, we conclude that the transaction in question was not one which occurred under the TAI's schedule contract with GSA.

We arrive at this conclusion first and foremost because the schedule contractor, TAI, is conspicuous by its absence from virtually all phases of the leasing transaction. The contract price list expressly requires that purchase orders—even those to be ultimately filled by local dealers—be sent to TAI's offices in Irvine, California. Users are advised that orders placed directly with a dealer will be considered open market orders and not orders issued under the schedule contract. Finding 2. In response to the Board's inquiry, IRS has been unable to

(Footnote Continued)

Toshiba America, Inc. IRS Reply of December 10, 1992, at 10.

[3] IRS counsel, in response to an inquiry from the Board, reports that the agency has no copy of modification 2 to purchase order MA-89-0339-V nor does it know whether there ever was one. He explains that there may have been an error in the numeration of the modifications. IRS Submission of June 9, 1993.

©1994, Commerce Clearing House, Inc.

Digitized by Google

demonstrate that purchase order MA-89-0339-V was ever placed with TAI's offices in Irvine. Finding 6.

We also note that TAI does not appear to have been involved in the invoicing or payments made in conjunction with the lease of the Toshiba copiers. The schedule contract price list states that all invoicing shall be done by TAI and all payments will be made to TAI or as indicated by TAI on its invoice. Finding 3. By order dated May 4, 1993, the Board asked IRS to provide documentation regarding the entity actually invoicing and seeking payment for the use of the leased equipment.

IRS initially indicated that the payment documentation was in storage but would be recalled. To date, however, no documentation has been provided by IRS indicating involvement of TAI in the invoice and payment process. Petitioner, on the other hand, has provided copies of invoices from Executive Copy C/O LaSalle Bank and copies of checks which possibly were sent in payment of invoices issued for use of the copiers leased to IRS. Finding 17. Although we find the Treasury checks inconclusive, the invoices are highly persuasive—as is the notation on petitioner's copy of the original purchase order indicating Executive Copy would invoice for items "5 thru 15." Finding 16. In the absence of any evidence to the contrary, we conclude that TAI was simply not involved in the invoicing and payment process associated with the leasing of the Toshiba copiers.

Our conclusion that the TAI schedule contract was not involved in the lease of the copiers, however, is based not only on the apparent absence of the schedule contractor from the leasing transaction but also on the conspicuous presence of Executive Copy as a would-be principal party to the leasing transaction. We have been provided with no evidence which convinces us that TAI either directly or indirectly through its agent accepted purchase order MA-89-0339-V. On the contrary, the record indicates that Executive Copy, TAI's "man" on location in Cherry Hill, effectively made off with what otherwise would have been TAI's business under the schedule contract. Executive Copy required the use of its own contract form, the FTRA. Findings 7, 8, 10, 12. This form substituted its terms and conditions for any other—including, therefore, those of any general schedule contract. It likewise nullified all terms and conditions of the purchase order except those relating to the price and the term of the agreement. Findings 9, 11. Not only was Executive Copy insistent on itself being one of the two principal parties to the leasing transaction, it would appear that IRS' Facility Manager had no objection and was willing to modify the original purchase order to reflect this.[4] *See* Findings 12, 14.

Finally, documentation provided by IRS and the petitioner indicates that the contract which is said to have been entered into by IRS and Executive Copy was assigned to Great Lakes Financial Services of America and subsequently to LaSalle Bank. Again, no mention is made of TAI in any of this documentation.[5]

We have no reason to doubt that the leasing agreement between IRS and Executive Copy was terminated because the IRS procurement official sincerely believed that it was a TAI schedule contract transaction. Furthermore, it may well be that the GSA schedule contracting officers, when consulted in 1991, reenforced this mistaken belief. *See* Findings 21, 23. Nevertheless, none of these individuals had the occasion to analyze the leasing transaction in the detail and to the degree which counsel and the Board have in this proceeding.

Given the record, as developed for this proceeding, we are now convinced, for the reasons set out above, that the leasing of the Toshiba copiers by IRS was not a schedule contract transaction. The original purchase order certainly pointed in that direction. Some IRS procurement clerks may well have continued to operate on the assumption that the leasing was being done under the TAI contract. It is obvious, however, that the purchase order quickly became derailed and led not to a transaction under the

[4] We draw no conclusion for purposes of this decision regarding the legal import of this letter or other documents allegedly signed by the IRS facility manager. We rely on this and similar documents solely to conclude that neither Executive Copy nor its customer contact considered that TAI had any interest whatsoever in the leasing transaction in question.

[5] The record for this proceeding does not provide us with sufficient information to determine whether these assignments have been carried out in accordance with applicable statute and regulation. Neither has that issue been put in controversy here by IRS. For purposes of this decision, therefore, we simply rely on the fact that there is no evidence that the schedule contractor, TAI, was actively involved in any way in either of the alleged assignments.

Digitized by Google

schedule contract but to an arrangement involving only IRS and Executive Copy. Accordingly, we find IRS to be the real party in interest in this case. We, therefore, rescind our earlier action adding GSA to these proceedings. The motion previously brought by IRS to dismiss this case is denied.[6]

Before granting petitioner's request, however, there is the additional question of whether the matter concerning which petitioner seeks a contracting officer's decision is in fact a "claim" as that term is used in the Contract Disputes Act (CDA).

It is well established that a dispute is a necessary prerequisite to a valid claim under the CDA. *Dawco Construction, Inc. v. United States* [37 CCF ¶ 76,056], 930 F.2d 872 (Fed. Cir. 1991). In particular, it has been recognized that this applies to termination for convenience settlement proposals, which generally are nothing more than an initial step for opening negotiations and do not normally, at that early juncture, represent a final demand for a contractor's final decision on what is proposed. *Mayfair Construction Co. v. United States* [35 CCF ¶ 75,450], 841 F.2d 1576 (Fed. Cir. 1988).

This is not to say, however, that a settlement proposal cannot become a bona fide claim, as that term is used in the CDA, and become the basis of a dispute between the parties. To determine whether this has occurred, we must look to the facts of each case. In a section dealing expressly with disputes and appeals, the Federal Acquisition Regulation (FAR) provides a definition of "claim" for purposes of that section. It is said that any routine request for payment may be converted to a claim for dispute or appeal purposes by written notice to the contracting officer "if it is disputed either as to liability or amount or is not acted upon in a reasonable time." 48 CFR 33.201 (1992). We find that in this case, IRS' extraordinary delay in responding to petitioner's proposal is ample evidence that it has, by now, with the submission of the petition which is the subject of this proceeding, ripened into a claim for purposes of a dispute or appeal. *See* Findings 22-24.

Where a disputed claim is for money, as in this case, the demand must also be for a sum certain. *Essex Electro Engineers, Inc., v. United States* [37 CCF ¶ 76,304], 960 F.2d 1576, 1581 (Fed. Cir. 1992). Petitioner's proposal requesting the specific amount of $245,851.26 satisfies this requirement.[7] *See* Finding 22.

In conclusion, we are convinced that petitioner's termination for convenience settlement proposal has become a bonafide claim, as that term is defined in the FAR section relating to disputes and appeals. For the reasons set out above, we are also of the opinion that this claim arises in relation to a transaction for which IRS and not GSA is accountable.

Decision

IRS' motion to dismiss is **DENIED.** The petition of LaSalle Bank Northbrook asking that we direct the IRS contracting officer to issue a decision on LaSalle's claim for termination for convenience costs is **GRANTED.** It is **ORDERED** that an IRS contracting officer issue a decision on the claim by September 30, 1993. A failure to issue this decision within the period herein prescribed will be deemed to be a decision denying the claim, and will authorize the commencement of an appeal before this Board or a suit on the claim before the United States Court of Federal Claims pursuant to the Contract Disputes Act, 41 U.S.C. §§ 605(c)(5), 606, or 609, as appropriate.

---

[6] An alternative argument raised by IRS for dismissal of this case is that petitioner's "appeal" has been "filed outside the 90 day limit prescribed by the Contract Disputes Act of 1978." Motion to Dismiss at 3. We reject this argument since this proceeding does not involve an appeal but rather a petition for a decision from which petitioner may or may not elect to appeal.

[7] We recognize that until the recent amendment of the CDA, it would also be necessary for a claim of this magnitude to be certified before we could direct a contracting officer to render a decision on it. In this case, a certification has been provided. Finding 24. If its adequacy were to be successfully challenged, however, this would still not deprive us of jurisdiction over the claim. Defects in certification no longer deprive a board of contract appeals of jurisdiction over a claim provided the claim has not been the subject of an appeal prior to October 29, 1992. 41 U.S.C. § 605(c) (1988), *amended by* Federal Courts Administration Act of 1992, Pub. L. No. 102-572, § 907, 106 Stat. 4518-19 (1992).

[¶ 26,402] Grigor E. Atoian v. General Services Administration

GSBCA No. 11481, August 24, 1993.

Contract Disputes, Claims—Quantification—Lost Profits.—A lessor's claim under its lease of an office building to the government was dismissed for lack of jurisdiction because the lessor never submitted to the contracting officer a written demand for a specific amount of lost profits. Neither the lessor's letters to the government nor his complaint clearly stated the amount that the lessor sought. Although the lessor's board filing contained his first and only clear statement of the sum allegedly due from the government, a document filed with the board does not constitute a claim submitted to a contracting officer. Even if the complaint or the board filing could be deemed a claim, the board would not have jurisdiction over the uncertified claim in excess of $50,000.

For the appellant: Grigor E. Atoian. For the government: Michele M. Feher, Office of Regional Counsel, General Services Administration, San Francisco, California.

Before DEGRAFF, DEVINE, and HENDLEY, Administrative Judges.

DEGRAFF, Administrative Judge: Based upon a dispute between the parties concerning a lease, appellant claims that he is entitled to recover in excess of $500,000 from respondent. Although the contract between the parties is governed by the Contract Disputes Act, appellant never submitted a claim to the contracting officer. Because the submission of a claim is a statutory prerequisite to our review, count 2 of the appeal, which is the only count remaining, is dismissed for lack of jurisdiction.

Findings of Fact

On January 30, 1987, the General Services Administration (GSA) awarded a contract to Grigor Atoian for the lease of an office building in North Hollywood, California. Appeal File, Exhibit 1. The lease contract, which provides that it is subject to the Contract Disputes Act, 41 U.S.C. §§ 601-613 (1982) (CDA), contains a Disputes clause which establishes how the parties intend to resolve all disputes arising under or related to the contract. The Disputes clause defines a "claim" as a "written demand or written assertion by one of the contracting parties seeking, as a matter of right, the payment of money in a sum certain ..." The Disputes clause provides that any claim made by Mr. Atoian must be submitted to the contracting officer for a written decision. The clause also requires that, if Mr. Atoian wishes to submit a claim exceeding $50,000, he must certify that the claim is made in good faith, that supporting data are accurate and complete to the best of his knowledge and belief, and that the amount requested accurately reflects the contract adjustment for which he believes GSA is liable. Supplemental Appeal File, Exhibit 24.

GSA terminated the lease contract in January 1990. Appeal File, Exhibit 3. On March 20, 1990, Mr. Atoian submitted a claim letter to the contracting officer in the amount of $33,093.71, for necessary repairs to the office building. In his letter, Mr. Atoian notes, "I would appreciate your earliest attention to this matter, as you know the premises are vacant and can not be rented under the present condition." Supplemental Appeal File, Exhibit 17.

In an April 17, 1990 letter to a GSA employee other than the contracting officer, Mr. Atoian states, "I need to get the funds from GSA as soon as possible in order to repair the damages and be able to start marketing the property, meanwhile I am sustaining tremendous amount of losses due to unmarketable property." Supplemental Appeal File, Exhibit 18. Mr. Atoian wrote to the contracting officer on May 10, 1990, and asserts in his letter, "I need the funds immediately in order to repair all the damages on the building so that it is marketable. As it stands, the premises are vacant and I am sustaining great losses each day." Supplemental Appeal File, Exhibit 19.

Mr. Atoian again wrote to the contracting officer on June 20, 1990, and stated, "The bills are mounting and our reserve account is depleted as the property has had to remain empty for several months now. I have enclosed copies of utilities bills and shut-off notices. Each day we are delayed furthers our losses." Supplemental Appeal File, Exhibit 20. On October 8, 1990, Mr. Atoian wrote to a GSA employee other than the contracting officer, "The building cannot be rented without the itemized repairs and this loss of revenue for the last 10 months is causing acute financial problems." Supplemental Appeal File, Exhibit 21.

Digitized by Google

In a February 5, 1991 letter to a GSA employee other than the contracting officer, Mr. Atoian maintains, "I need to repair all damages left behind by [the government tenant], in order to be able to market and lease the space. I had to come up with mortgage payments during the last 14 months to keep the property from going into foreclosure. . . ." Supplemental Appeal File, Exhibit 22. Finally, on May 22, 1991, Mr. Atoian wrote to a GSA employee other than the contracting officer, "I have been unable to lease the said premises because of the extensive damage caused by [the government tenant] to the building. I need funds to pay for the necessary repairs. I will also hold GSA responsible for all rent loss and mortgage payments from January 1990 till receipt of payment." Supplemental Appeal File, Exhibit 23.

GSA's contracting officer treated Mr. Atoian's March 20, 1990 letter which sought $33,093.71 in repair costs due to Government damage to the premises as a claim submitted pursuant to the contract's Disputes clause. In a letter dated June 27, 1991, the contracting officer denied Mr. Atoian's claim. Appeal File, Exhibit 13. On September 25, 1991, Mr. Atoian filed this appeal with the Board.

The complaint that Mr. Atoian filed here on November 22, 1991, contains four counts. Count 1 contains Mr. Atoian's challenge to the June 27, 1991 contracting officer's denial of Mr. Atoian's March 20, 1990 claim for repair costs. Count 2 is denominated by Mr. Atoian in his complaint as "Loss of Income." On March 22, 1993, the parties stipulated to the dismissal, with prejudice, of counts 1, 3, and 4, based upon a settlement agreement. Only count 2 remains before the Board for decision. In count 2 Mr. Atoian alleges that, because GSA failed to respond favorably to his March 20, 1990 claim within 60 days, he was unable to effect repairs to his office building and, thus, unable either to rent the building to another tenant or to sell the building. In his complaint, Mr. Atoian states, "I am claiming the amount of $5,000 per month, from January 10, 1990 until the date of the payment. . . . The actual loss of income, after mortgage, insurance, etc. would be between $8,000 to $10,000 per month, totaling $180,000 for a year and half. Therefore, my total negative on the property has run about $15,000 a month for the same period, amounting to $270,000." Complaint, at 6. In a July 8, 1993 filing with the Board, Mr. Atoian states that the amount of his claim is $12,533 per month, from January 1990 until the date that he receives payment. Appellant's Reply in Opposition to the Government's Motion for Summary Relief.

Discussion

The CDA, which governs the lease contract at issue here, requires that "[a]ll claims by a contractor against the government shall be in writing and shall be submitted to the contracting officer for a decision." 41 U.S.C. § 605(a). Consistent with the CDA, the contract between GSA and Mr. Atoian defines a claim as a written demand for a sum certain which is submitted to the contracting officer. In addition, if a contractor's claim exceeds $50,000, the CDA and the contract require that the contractor certify the claim in a particular manner. 41 U.S.C. § 605(c). Because Mr. Atoian never submitted a claim which meets these requirements to the contracting officer, the Board lacks jurisdiction to entertain this appeal.[1]

Although some of the letters that Mr. Atoian sent to GSA mention lost revenue, none contains a demand for a specific amount of lost profits or a demand for payment. Similarly, although the complaint that Mr. Atoian filed in this appeal requests payment for lost profits, the complaint does not clearly state the amount that Mr. Atoian seeks. Mr. Atoian's July 8, 1993 Board filing contains his first and only clear statement of the sum that he believes is due from GSA. But, a document filed with the Board does not constitute a claim submitted to the contracting officer. Because Mr. Atoian never submitted a claim to the contracting officer, we lack jurisdiction to entertain this appeal. In addition, even if either the complaint or the July 8, 1993 filing could be considered to be a claim, we would lack jurisdiction because Mr. Atoian seeks an amount in excess of $50,000 and he never fulfilled the certification requirements of the CDA and the contract.

[1] In its answer to Mr. Atoian's complaint, GSA asserts that count 2 is not properly before the Board because Mr. Atoian never submitted a claim for lost profits to the contracting officer for decision. Answer at 1, 5. Although GSA never filed a motion to dismiss count 2, we are obligated to

©1994, Commerce Clearing House, Inc.

Digitized by Google

Decision

For the reasons set forth above, count 2 of the appeal, which is the only count remaining, is **DISMISSED FOR LACK OF JURISDICTION.**

[¶ 26,403] Northern Virginia Service Corporation v. Department of the Treasury

GSBCA No. 10842-TD, September 10, 1993.

Contract Types—Fixed-Price—Indefinite Quantity Contracts.—Under a fixed-price janitorial services contract that estimated there would be a population of between 2,500 and 4,000 persons in the building being serviced, a contractor did not show that a population increase constituted either a breach of contract or a constructive change, because it did not demonstrate that the increase in population required it to expend efforts disproportionate to the risks it assumed under the fixed-price contract. Services were not described in terms of population; payment under the contract was not population dependent. The contractor did not demonstrate that the estimate was established improperly or that it was misled by the estimate. Moreover, the contractor grounded its calculation of quantum on its own conservative estimate of the number of hours required to perform the basic services rather than on the estimated range.

For the appellant: Dykema Gossett, Washington, D.C., by Katherine S. Nucci. For the government: Sherry L. Travers, Regional Counsel, Internal Revenue Service, Southwest Region, Dallas, Texas.

Before VERGILIO, LABELLA, and GOODMAN, Administrative Judges.

VERGILIO, Administrative Judge: On September 19, 1990, the Board received this appeal from Northern Virginia Service Corporation. Northern Virginia was a contractor with the respondent, the Department of Treasury, Internal Revenue Service (IRS), providing janitorial and related services. The contractor claims entitlement to $87,944.08 in increased costs incurred in providing basic services because of population increases in the building over the life of the contract. The contractor premises its claim on breach of contract, and, alternatively, constructive change. The contracting officer denied the claim in its entirety.

The contractor has failed to establish either a breach of contract or a constructive change. The underlying solicitation represented the building population as an estimate—a range of 2,500 to 4,000. The fixed-price contract required the contractor to provide basic—specified daily and periodic—services. Services were not described in terms of population; payment under the contract was not population dependent. The contractor has not demonstrated that the estimate was established improperly, or that it was misled by the estimate. Moreover, the contractor has not demonstrated that the increases in population required it to expend efforts disproportionate to the risks it assumed under the fixed-price contract. The contractor grounds its calculation of quantum on its own conservative estimate of the number of hours required to perform the basic services (as it takes the difference from actual expenditures of labor and estimates of material), and, in essence, inappropriately attempts to convert the fixed-price contract into a cost-reimbursement contract for its labor and supplies exceeding those in its bid estimate. Accordingly, the Board denies the appeal.

Findings of Fact

The solicitation

1. The General Services Administration (GSA) issued a sealed bid procurement to obtain a contract for an initial twelve-month period and two optional twelve-month periods. Appeal File, Exhibit 1. The contractor was to provide all management, supervision,

(Footnote Continued)

determine whether we possess jurisdiction to entertain this appeal.

Digitized by Google

manpower, equipment and supplies necessary to perform described janitorial and related services at a specified Internal Revenue Service (IRS) building. *Id.* at 11 (¶ C.1).

2. The services were of two types: (1) basic—daily and periodic cleaning and activities, and (2) additional—those "used to satisfy the Government's short term nonrecurring needs for service." Appeal File, Exhibit 1 at 8 (¶ B.3). Basic services were to be priced as a single, dollar figure on a yearly basis; additional services were to be priced on a yearly basis as hourly rates for supervisory and productive labor. *Id.* at 7 (¶ B.2), 8 (¶ B.3).

3. The solicitation describes the "contract effort required":

> A. *General:* Bidders/offerors are cautioned that the daily productive man-hour guidelines set forth below may be less than that which they will require to perform all of the daily and periodic work requirements. The determination of the total daily productive man-hour requirements for the performance of all services herein specified as well as all other cost factors above those associated with the daily productive man-hours specified is the sole responsibility of the bidder/offeror. Nothing in this provision should be construed as being contrary to this bidder/offeror responsibility.
>
> B. *Daily Productive Man-Hour Guidelines:*
>
> (1) The Government *estimates* that approximately 153 daily man-hours of productive labor, exclusive of supervisory work, will be required to satisfactorily accomplish the work called for in this contract. This base guidelines figure of 153 daily hours of productive labor is included as a *guideline only,* to assist the contractor in planning and executing the work. It is of the utmost importance that the contractor utilize skilled and productive manpower in order to satisfactorily furnish the required level of ser[]vices.

Appeal File, Exhibit 1 at 11 (¶ C.2).

4. Regarding the "services required," the solicitation dictates that the "contractor shall provide the services outlined, at the frequencies specified in the Task and Frequency Chart ... in accordance with the Cleaning Work and Quality Requirements described[.]" Appeal File, Exhibit 1 at 11 (¶ C.3.A). Moreover,

> The building areas to be serviced are described [in Exhibit 1]. The figures contained in Exhibit 1 are approximate and are estimates of the building statistical data. The contractor is responsible for verifying dimensions and quantities. The data contained in Exhibit 1 in no way modifies the "Site Visit" clause on the GSA Form 3501[.]

Id. (¶ C.3.B). The referenced "Exhibit 1" is captioned "building information" and provides, among other items: *"Number of Occupants:* 2,500 to 4,000." "Note: Square feet and number of occupants are approximate figures." *Id.* at 68 (§ J, Exhibit 1).

5. The solicitation contains the Federal Acquisition Regulation (FAR) clause, FAR 52.214-6 (APR 1984), captioned "Explanation to Prospective Bidders":

> Any prospective bidder desiring an explanation or interpretation of the solicitation, drawings, specifications, etc., must request it in writing soon enough to allow a reply to reach all prospective bidders before submission of their bids. Oral explanations or instructions given before the award of a contract will not be binding. Any information given a prospective bidder concerning a solicitation will be furnished promptly to all other prospective bidders as an amendment to the solicitation, if that information is necessary in submitting bids or if the lack of it would be prejudicial to other prospective bidders.

Appeal File, Exhibit 1 at 119 (¶ 4).

6. The solicitation also contains the Changes clause, FAR 52.243-1, alternate I (APR 1984). Appeal File, Exhibit 1 at 51.

The contract

7. Northern Virginia was the incumbent contractor (under a 153 minimum daily productive hour contract) at the time of bid preparation and submission. Transcript at 39-40; Agency Answer (¶ 17). An employee of Northern Virginia claims to have made oral inquiry of GSA personnel prior to bid submission, and to have been told that the contract would stay the same. Transcript at 9-10, 30. The record does not support the conclusion that the inquiry focused on the building population over the life of the new contract. Moreover, the stated response fails to recognize a distinction between the existing contract (minimum hour) and that being competed (no minimum level of effort). Although the president of (and preparer of the bid for) Northern Virginia testified that population is relevant to pricing, *id.* at 45, Northern Virginia obtained no written verification of the alleged statements. *Id.* at 107-09; Respondent's Exhibit 2 at 4 (¶ 3.c).

©1994, Commerce Clearing House, Inc.

Digitized by Google

The solicitation was not amended to alter its terms or otherwise specify a more definite population of the building over the life of the new contract.[1]

8. Northern Virginia formulated its bid based upon performance utilizing 90 productive man-hours of effort daily. Transcript at 48; Appellant's Exhibit 5. It bid a constant rate for the three years. Appeal File, Exhibit 1; Transcript at 317. Although the solicitation nowhere made reference to historical populations (or their relevancy), Northern Virginia presumed that, on average, the population would be in the 2,400 to 2,550 range, thus at or below the very low end of the estimated range. Transcript at 42, 58, 104, 121. Northern Virginia submitted the lowest-priced bid. The price was below the GSA estimate; the closest-priced bid viewed by GSA to be responsive was more than twenty-five percent greater than Northern Virginia's. Appeal File, Exhibits 6, 2.

9. Given the price disparity, GSA sought a bid verification from Northern Virginia. Northern Virginia intentionally projected fewer productive hours than those estimated in the solicitation. Northern Virginia verified this and its bid in writing and through a conversation with GSA personnel. Appeal File, Exhibits 2-5.

10. GSA awarded a contract to Northern Virginia; the initial twelve-month period was December 1, 1984, through November 30, 1985. Appeal File, Exhibit 1.

Performance

11. Performance under the contract began December 1984. For the preceding twelve months, the average monthly population of the building was 2,790, with a monthly minimum of 2,248 and maximum of 3,219. Appellant's Exhibit 14.[2] For the initial twelve months of performance, the average monthly population of the building was 3,387, with a monthly minimum of 2,475 and maximum of 4,223 (the single instance of the population exceeding 4,000). *Id.* During the first month of performance, the population was 2,475, the contractor utilized, on average, at least 95 productive labor hours per day to perform the basic services. Appellant's Exhibits 14, 16.

12. GSA exercised the first option under the contract, extending the performance date through November 30, 1986. Appeal File, Exhibit 8. GSA exercised the second option under the contract, extending the performance date through November 30, 1987. *Id.*, Exhibit 12. With an effective date of December 1, 1986 (the start of option year two), GSA transferred the contract to the IRS. Appeal File, Exhibit 13.

13. A bilateral contract modification, with an effective date of August 1, 1987, reduced by 5,500 square feet the space to be cleaned and, under the contract terms, the associated contract amount for the basic services (from $29,302.91 to $28,875.56). Appeal File, Exhibit 30. The record does not suggest the number of daily productive man-hours the contractor had utilized for the deleted space.[3]

14. A bilateral contract modification was signed by the contractor and IRS on February 2 and 4, 1988, respectively, with an effective date of December 1, 1987. Appeal File, Exhibit 34. The modification extended the contract from December 1, 1987, through May 31, 1988, with the option to continue on a month-to-month basis as needed, subject to possible adjustment as a result of a collective bargaining agreement. The modification specified six months of basic services at $29,302.91 per month. *Id.* The modification contains some other alterations not here relevant and notes that "All other terms and conditions remain the same." While the modification makes no mention

[1] The president of Northern Virginia testified that at a post-award, pre-performance conference GSA provided verification of the anticipated constant population. Transcript at 116 ("I was told that the population was going to remain constant. I was told that mechanics in the boilerplate GSA spec was going to be the same, and I was told that there was no additional things that I should be concerned [with] or that would have a major cost impact on me."), 53.

[2] Although the contractor suggests in its post-hearing brief, at 36 n. 2, that these figures represent population totals in addition to the building cleaning, the record does not support the suggestion. Appellant's Exhibits 6, 7, 12; Transcript at 66-67, 73-74.

[3] Neither party has alluded to this modification—as affecting this claim or otherwise. The record does not enable the Board, with any degree of certainty, to extrapolate a number of hours to perform the deleted efforts. The record establishes no relationship between the level of effort on the deleted area and the average charge per square foot which was deleted; nor does it reasonably suggest the cost of supplies associated with the deleted efforts. The record suggests that the deduction was not taken in some months, and was taken based upon a miscalculation of space (6,500 square feet) in other months—in all, the contractor appears to have been overpaid by $815.85. Appeal File, Exhibits 38, 40, 43, 44, 46, 48, 50, 51, 54.

Digitized by Google

of the contractor reserving a right to reprice the basic services for the period covered by the bilateral modification, it also fails to recognize the space deduction noted in Finding 13. *Id.* As anticipated in the modification, three subsequent contract modifications extended the period of the contract—two for two months and one for four months (through July 31, 1988, then September 30, 1988, and then January 31, 1989) at the stated monthly price. *Id.*, Exhibits 39, 45, 52. The last modification was signed as a bilateral agreement. *Id.*, Exhibit 52. Performance under the modified contract ceased on December 31, 1988. *Id.*, Exhibits 54, 55.

Claim to IRS

15. By letter dated March 21, 1989, after performance had ceased, the contractor informed the IRS that the contractor "has an existing claim against this contract." Appeal File, Exhibit 56.[4]

16. By letter dated June 25, 1990, the contractor submitted to IRS a "claim for an equitable adjustment in the amount of $87,944.08 for increased costs incurred under" the IRS contract. The contractor claims to have incurred increased costs in furnishing labor and supplies as a result of the increase in government personnel at the building. Appeal File, Exhibits 56, 57. The claim consists of four basic elements: (1) additional labor (burdened with, e.g., taxes, FICA, and benefits); (2) additional supplies; (3) general and administrative overhead (at 6%); and (4) profit (at 6%). *Id.*

17. The contractor calculates the labor hours to be reimbursed as follows:

(1)	actual payroll hours	77.070.56
(2)	additional services	−12,229.19
(3)	total hours	64,841.37
(4)	bid hours for 25 months	−57,240.00
(5)	total hours to be reimbursed	7,601.37

Appeal File, Exhibit 56 at 1882. The initial entry is the sum of hours in its payrolls (see Finding 21) paid during the months of the IRS contract; however, the initial payrolls utilized reflect work performed under the GSA contract. The figure includes supervisory, productive and non-productive (vacation/sick/holiday) hours incurred to perform basic and additional services. *Id.* at 1883; Appellant's Exhibit 16. From that figure, the contractor subtracts hours reimbursed separately as additional services. From the result, the contractor subtracts approximately (explained in the following finding) the number of productive and supervisory hours it projected in formulating its bid. The contractor concludes that it expended 7,601.37 total additional hours caused by the population changes.

18. In its calculations, to its advantage, the contractor makes no adjustment in lines (2) or (4) for non-productive hours attributable to performing the basic or additional services (non-productive hours are included in line (1)). To its disadvantage, the contractor represents its bid labor hours, line (4), by utilizing 260 productive days per year, not 252 as it utilized in formulating its bid. The following reflects parallel calculations after (a) burdening line (2) hours for additional services with the associated proportional non-productive hours, and (b) making the adjustments for line (4) non-supervisory labor such that on a payroll basis, twenty-three 90-hour days per month of non-supervisory labor are used (encompassing productive and non-productive hours), as bid:

(1)	actual payroll hours	77,070.56
(2)	additional services	−13,393.87
(3)	total hours	63,676.69
(4)	bid hours for 54 payrolls	−60,230.77
(5)	total hours to be reimbursed	3,445.92

This total, 3,445.92, represents productive and non-productive non-supervisory hours over 54 pay periods. This averages 58.26 productive hours per pay period, or 6.01 productive hours per day, which is 6.68 percent greater than the contractor's daily estimate of 90, a figure which reflects no allowance

[4] A settlement agreement entered into in early June 1990 between the contractor and GSA recites that by letter dated August 8, 1985, the contractor presented a claim to the GSA contracting officer for alleged additional work performed (for the period December 1984 through July 1985) due to an increase in the number of IRS employees in the building to be cleaned. The contracting officer denied that claim by decision dated March 14, 1986. By letter dated August 7, 1989, the contractor presented a claim to the GSA contracting officer for additional costs for extra labor and supplies for period December 1985 through November 1986. Although the contracting officer denied each claim, GSA reimbursed the contractor for essentially its requested amounts through the settlement agreement which, by its terms, relates only to that portion of the contract administered by GSA and effects "a full settlement and mutual release of all existing and/or potential claims, and causes of action relating to and/or arising under" the GSA contract. Appeal File, Exhibit 56, Settlement.

Digitized by Google

for increased labor over the three-year life of the contract.

19. The record suggests that the contractor spent more money for supplies on average over successive years of the GSA/IRS contract, Appeal File, Exhibit 59, even when already reimbursed costs of supplies for additional services are subtracted. However, testimony and documentary evidence do not persuasively establish what portion, if any, of those increased costs may be directly attributable to population increases, and not, for example, attributable to increased prices (given that the contractor formulated its bid with a constant supply cost over the three-year contract life). Transcript at 67-68, 87, 317; Appeal File, Exhibit 59; Appellant's Exhibits 5, 11.

Additional information

20. During the 25 months here at issue, the average population of the building was 4,253. For the December 1986 through November 1987 period, the average monthly population of the building was 4,268, with a monthly minimum of 3,593 and maximum of 5,038 (for 2 consecutive months); 5 months were in the 3,000s, 5 months in the 4,000s, and 2 months at 5,038. For the December 1987 through November 1988 period, the average monthly population of the building was 4,279, with a monthly minimum of 3,467 and maximum of 5,050; 3 months were in the 3,000s, 8 months in the 4,000s, and 1 month at 5,050. Appeal File, Exhibit 65. The average monthly population of the building over the 49 months of performance (with the 5-month period of May through September 1986 not considered, because figures are not in the record) was 3,940. *Id.;* Appellant's Exhibit 14. Similarly calculated, 3,814 was the average monthly population for the 36 months of the original contract.

21. For each two-week pay period, the contractor's payroll summary reveals the total hours of productive and supervisory labor expended in performing the basic services of the contract, and the additional services (denoted as extra or overtime[5]), as well as hours attributable to vacation/sick/holiday. Appellant's Exhibit 16; Transcript at 92-95. Thus, to perform basic services, for each twelve-month period under the GSA/IRS contract, the contractor utilized the following average number of productive and supervisory hours per pay period (the numbers are approximate given that pay periods overlapped between each contract year):

Years	84/85	85/86	86/87	87/88
Average	1109.3	1115.5	1109.7	1115.3

Appellant's Exhibit 16. Subtracting 160 hours per pay period of supervisory labor, Appellant's Exhibit 5, yields the following averages for productive labor for basic services per pay period:

Years	84/85	85/86	86/87	87/88
Average	949.3	955.5	949.7	955.3

The contractor bid a constant of 872.3 productive labor hours per pay period over the three-year life of the contract. *Id.*

22. The record does not demonstrate that the GSA or IRS was or should have been aware at the time of issuing the solicitation or of entering into the GSA contract that the likely average monthly population would be at the high end of (or above) the estimate during many months of performance. E.g., Appellant's Exhibits 12, 14, 15, 18.

23. Throughout the life of the contract, the IRS did not explicitly add to or modify any of the daily or periodic tasks to be performed under the basic services. Although an increase in the population of a building may necessitate the expenditure of more labor hours and supplies to perform janitorial services, Transcript at 18, 31, 33-35, the contractor has not convincingly demonstrated that, when the population (monthly or yearly) exceeded the estimate range, it incurred additional costs which were not compensated under the additional services portion of the contract.

Discussion

The contractor maintains that it is entitled to compensation of $87,944.08 for furnishing allegedly extra labor and supplies during the twenty-five month IRS portion

[5] There are no overtime hours in any instance when "extra" hours are not indicated, Appellant's Exhibit 16; hence, the Board concludes that the overtime hours are attributable to the additional services.

Digitized by Google

of the contract to perform the basic services. The contractor raises two alternative theories of recovery: breach of contract and constructive change. Under the first theory, it asserts that the extra custodial services generated by the larger population at the building exceeded the scope of the contract and the contractor's reasonable expectations. Under the second theory, it maintains the basic services to be performed with the population increase entailed efforts and expenses in addition to those encompassed in its contract.[6]

The claim focuses upon the provision of basic services under what the contractor characterizes as the changed condition of significantly increased building populations. Contending that the larger populations required it to expend more labor and supplies than it calculated in its bid, the contractor notes that its claim is discrete from any compensation it may have received for labor or supplies for the provision of "additional" services.

The claim of entitlement focuses on the population estimate contained in the solicitation and contract. The contractor contends that the estimate was inaccurate and established improperly. Further, the contractor asserts that the increased populations exceeded the terms of the contract, either so significantly as to constitute a breach or enough to constitute a constructive change.[7]

Breach

The record does not demonstrate that the estimate was knowingly or negligently determined. *Womack v. United States* [12 CCF ¶81,795], 182 Ct. Cl. 399, 389 F.2d 793 (1968); Finding 22. Nor does the record suggest that the contractor was misled by the estimate. In formulating its bid, the contractor intentionally departed from the population estimate found in the solicitation. The contractor chose to prepare its bid relying upon historical data (garnered as the incumbent contractor) not referenced in the solicitation, and presumed that the population would average at or below the lower-end of the estimate range. Contrary to the express notice in the solicitation that oral explanations would not be binding, Finding 5, and despite the solicitation's broad population range, Finding 4, the contractor maintains that it relied upon oral assurances (one prior to bid submission and the other after award) that the population would remain fairly constant over the contract life. Finding 7. The contractor did not seek an amendment specifying a more definite population, nor did it make provision for variations in the population within the estimated range. Therefore, it is not fully credible for this contractor to assert after award that population constituted a critical element in calculating cleaning rates and pricing the contract.

The contractor has not established that the population estimate contained in the solicitation and contract (2,500-4,000) was substantially inaccurate. Over the three-year life of the original contract, the monthly average was approximately 3,814; over the entire forty-nine month period, the average was approximately 3,940. Finding 20. Over the twenty-five months here at issue, the monthly average was 4,253. *Id.* As discussed below, the record does not demonstrate that the efforts and supplies required to perform the basic services to accommodate the population in excess of the estimate increased so as to be outside the scope of the fixed-price contract.

Constructive change

The contractor contends that the increased populations constructively changed the contract because it had to expend more labor and supplies in performing the services. The contractor has failed to demonstrate that it performed work in addition to the contract requirements or at a cost in addition to what the contract reasonably encompassed. *Mr. Klean's Janitor & Mainte-*

[6] The agency has not pursued theories of accord and satisfaction or estoppel. Transcript at 327. Accordingly, without a developed factual record, the Board does not reach the possible effect of the bilateral contract extensions being consummated when the building populations were known and a fixed, monthly price established without reservation for adjustment. Nor does the Board address how the assertion of breach squares with the contractor knowingly entering into bilateral contract extensions.

[7] If either of the contractor's theories for recovery is correct, any awardee under the solicitation would be entitled to relief given the population increase. The analysis would apply equally to the actual contractor and to any of the higher-priced bidders, even though the latter may well have formulated its bid in recognition of the population and man-hour estimates in the solicitation. The higher-priced bidders may have better provided for the risks inherent in the contract, while the contractor improperly attempts to shift those risks because of its lower price. Its bid price does not create the starting point for an analysis of the scope of the contract.

Digitized by Google

nance Service, Inc., GSBCA 9010, 91-2 BCA ¶ 23,683.

The contractor entered into a firm, fixed-price contract for the provision of basic services. Once its bid was accepted, compensation was not to be dependent upon, or fluctuate with, the building population. The agency has not altered the basic services to be provided—in terms of the daily or periodic tasks to be performed. The solicitation represented the population range as an estimate, not as a "not to exceed" figure. The contractor assumed the risks of reasonable changes in the population of the building.

The contractor has not demonstrated that the increases in the population required it to provide labor or supplies in excess of what the contract required. The solicitation expressed the building population as an estimate of 2,500 to 4,000. Over the initial three-year contract period and over the entire contract period, the average monthly population was within that range. Finding 20. Over the twenty-five months here at issue, the monthly average was 4,253, or slightly greater than 6% over the upper end of the range for each month. The record does not suggest that such a variance in population in a fixed-price janitorial services contract is unreasonable or unusual.

The quantum portion of the claim also fails to evince a constructive change. The contractor expended relatively few hours in excess of its estimate, which was made for a constant population at or below the lower end of the estimate. Utilizing the numbers in the contractor's claim, as adjusted to conform to its bid, the contractor expended approximately 3,446 productive hours over its bid of 63,677. Finding 18. That is an additional 5.4% of productive effort. The contractor has not attempted to demonstrate what portion, if any, of those efforts may be attributable to population variances up to the upper end of the estimate range.

Viewed another way, the recovery sought appears excessive. Given the monthly average of 4,253 over the twenty-five month period here at issue, the contractor provided services to a population of 6,325 (253 × 25) in excess of the upper estimate figure. This represents less than the population for two months' performance within the estimate. The contractor has not asserted that overall there is a one-to-one correspondence between the increase in population and performance of basic services; the increases in population did not alter the frequency of daily or periodic cleaning. However, the contractor claims $87,944.08, or the equivalent of performance for three months under the contract. This comparison does not enhance the reliability or reasonableness of the contractor's claim. The actual productive hours expended, Finding 21, show no significant change in effort due to the population variations.

The contractor's claim does not fully recognize the risks inherent in the fixed-price contract, with estimates being represented as just that. In formulating its bid, the contractor chose to rely on information not contained in the solicitation, while downplaying the significance of the population and man-hour estimates contained therein. Although the contractor expended more labor and provided more supplies than it anticipated, the contract obligated the contractor to provide those services. The contractor has failed to demonstrate that the contract was constructively changed.

Decision

The Board **DENIES** the appeal.

[¶ 26,404] Centric/Jones Constructors

IBCA No. 3139, October 1, 1993. Contract No. 9-CC-32-00510.

Acceptance of Performance—Rejection of Nonconforming Items—Burden of Proof.—A contractor was entitled to an equitable adjustment for costs incurred in performing tests on an already installed cable, because the government failed to prove that the work it rejected was not in compliance with specifications. The government averred that it had properly rejected the cable because it had been damaged by oil that had leaked into it and that its rejection of the cable, despite the rejection's questionable basis, required the contractor to replace the cable in its entirety and then to file a claim for the cost of the entire replacement. However, the burden of proof in inspection and rejection cases is upon the government to demonstrate that the work is not in compliance with the specifications.

Digitized by Google

Acceptance of Performance—Rejection of Nonconforming Items—Economic Waste.—A contractor was entitled to an equitable adjustment for costs incurred in performing tests on an already installed cable, because the government ignored the doctrine of economic waste in requiring the contractor to replace cable in its entirety. The government contended that it had properly rejected the cable because it had been damaged by oil that had leaked into it. However, it failed to consider the view of the manufacturer that the silicon oil involved was an inert insulating oil that could not have changed the cable's electrical characteristics.

Quality—Reasonableness of Standards—Burden of Proof.—The government was liable for the costs of tests it required on a fully installed, buried, high voltage electrical cable system because the tests were neither specified by the contract nor recognized by the industry. The government had the burden of proving that the contractor's work failed to meet specifications. In this case, the government feared that the cable might have been damaged by the leakage into it of an unknown quantity of inert insulating oil. The board held that the government's rejection of the work was simply to coerce the contractor into making the additional tests. The government could not require the contractor to perform additional tests, at its own expense, that were not consistent with industry standards. The government cannot insist upon performance of additional tests for the sake of its own satisfaction after a contractor has reasonably objected to their validity.

For the appellant: W. H. Hinton II, Vice President. For the government: Daniel L. Jackson, Department Counsel, Phoenix, Arizona.

Before PARRETTE and PACKWOOD, Administrative Judges.

PARRETTE, Administrative Judge: On January 21, 1993, the contractor, Centric/Jones Constructors, appealed from a final decision (unilateral modification No. 157, dated October 16, 1992), of the Bureau of Reclamation (BOR) Contracting Officer (CO), denying it an equitable adjustment in the amount of $39,744 for costs incurred in performing a.c. high potential and partial discharge tests on an already installed 115-Kilovolt (kV) a.c. cable serving the Snyder Hill/Black Mountain Pumping Plants and Switchyard, Tucson, Arizona, under Specification No. DC-7761, of the Central Arizona Project.

Appellant's Complaint was filed on February 17, and BOR's Answer on March 22, 1993. On June 16, appellant moved to supplement the appeal file with 169 pages of relevant materials that were inexplicably omitted from the appeal file prepared by the CO. That motion is granted. After an unsuccessful effort to resolve the dispute by Alternative Disputes Resolution (ADR) methods and some confusion over the need for a hearing (hereinafter discussed), the appeal was submitted to the Board for decision on the record.

The bases for the CO's denial were that BOR had properly rejected the cable inasmuch as insulating oil had leaked into it from the defective cable terminators before the contractor had replaced them, that the cable had been thereby damaged, and that the contractor had voluntarily agreed to the proposed additional electrical tests as a condition of BOR's acceptance of the damaged cable.

Appellant, however, argued that BOR had given no explanation or proof of its contention that the cable was functionally damaged by the oil, that the tests BOR then required were not recognized as valid for any purpose by the high voltage cable industry (a point which BOR's expert in effect conceded), and that, in any event, BOR had determined that the cable passed the tests. On the basis of the entire record, the Board concluded that appellant's contentions were accurate and consistent with applicable case law, and it finds for appellant in the full amount claimed.

Findings of Fact

1. In 1988, BOR contracted for the construction of a project known as the Snyder Hill/Black Mountain Pumping Plants and Switchyard, in Tucson, Arizona. Installation of a 115 kV power cable system, including the cable and cable terminators, was part of the constructing requirements.

2. The general contractor for the project was Centric/Jones Constructors ("Centric-Jones"). Centric-Jones contracted with an electrical subcontractor, Gardner Zemke Company ("Gardner Zemke"), to install the electrical work. Gardner Zemke in turn contracted with Brugg Cable ("Brugg") to furnish a 115 kV power cable system.

©1994, Commerce Clearing House, Inc.

Digitized by Google

3. In September 1990, the 115 kV power cable system was installed. It was satisfactorily tested and was accepted for permanent energization in early October of 1990.

4. The only test specified in the contract for this installed high voltage cable was a direct-current high potential (hi-pot) test (not an a.c. test), set forth in Specification Paragraph 14.4.1.d(3): "(3) After the above cable has been installed, it shall be given a direct-current, high-potential test per AEIC CS7-82, section J, and at test voltage in accordance with AEIC CS7-82, cable C1 for XLP cable."

5. In April 1991, silicon oil leaks from cable terminators ("potheads") were discovered. The leaking potheads were satisfactorily repaired.

6. BOR feared that the pothead leaks might have caused either damage to the cable because of incompatibility between the silicon oil and the cable, or impairment of the electrical performance of the cable, but it never offered evidence that the contract requirements for the cable had not been met or that the leaking potheads had damaged the cable.

7. On October 15, 1991, the Government rejected the cable. However, it said that it would accept the cable if further tests indicated that the cable would have "little probability of problems" from the oil in the cable. It specified an a.c. high potential and an a.c. partial discharge test.

8. The Contractor protested that the Government's failure to accept the cable was an improper rejection, that the proposed a.c. partial discharge test was outside the scope of the contract, and that the test was useless because it would not prove or disprove contract compliance and cable integrity.

9. On November 7, 1991, the Contractor requested compensation for performance of the required tests, but the Government denied the request.

10. On November 18 and 19, 1991, an a.c. hi-pot and partial discharge test was performed on the cable. BOR concluded that the cable had "passed" these tests.

11. The a.c. partial discharge test on the 115 kV installed cable was unreasonable because:

a. The test neither proved nor disproved damage to the cable caused by leaking silicon oil from the terminators.

b. The test was an unorthodox test not recognized in the high voltage cable industry for *installed* cable.

c. The test is not mentioned in the applicable high voltage cable standards of AEIC, IEEE, or NEMA, as an acceptable test for *installed* cable.

d. Before this test, the electrical subcontractor had never performed or been asked to performed an a.c. partial discharge test on its already installed high voltage cable. It did not include costs for this test in its bid.

e. For installed high voltage cable, the only test recognized by the cable industry, by the standards, or by the contract specifications was a d.c. (not an a.c.) test.

f. The partial discharge measurements were meaningless. The test report stated: "Hipotronics, Inc. [the test equipment supplier and a.c. tester] does not acknowledge the partial discharge values noted during the Snyder Hill-Black Mountain High Voltage test as accurate nor do they support any conclusions derived from it."

g. BOR did not specify the "pass/fail" criteria it intended to use in evaluating whether the cable passed the a.c. partial discharge test.

12. The test report documented the questionable test methods used. It stated that:

a. The test engineer said the test set was not clean enough or adjusted for partial discharge measurements.

b. Ambient PD readings fluctuated between 7 and 15 (max) pico coulombs.

c. Power was not properly filtered.

d. Testing was performed during working hours with welders and other high current electrical equipment in the area.

e. Difficult to find a frequency bank without a spike in it.

f. The base of terminations could have had corona.

g. No measurements of temperature, humidity, wind velocity or any other atmospheric phenom were taken. Dust was being blown on the terminations during the test.

It is unknown if these partial discharge readings indicate much about the cable system. Since the readings are all pretty much the same, you could infer that the installations are similar but still not know if the system is viable.... Trying to detect partial discharges in the cable or termination is impossible because of the changing ambient conditions. [Emphasis omitted.]

13. The a.c. partial discharge test was more stringent than the d.c. test specified in the contract.

Digitized by Google

14. The cost to the contractor of performing the additional tests not required by the contract was $39,744.

Discussion

This appeal was one of several originally filed on January 15, 1993, under the Board's accelerated procedures. Had it then been submitted for a decision on the record, it might have been decided long ago. At the Board's urging, however, the parties initially attempted to settle the case by means of voluntary ADR methods, with commendable success as to the other appeals involved in the same contract. But when the ADR discussions relating to this appeal proved unsuccessful, and after appellant had properly supplemented the record with various essential documents that the CO had neglected to provide, procedures for the appeal's timely resolution began to bog down. We attribute much of the obfuscation to Department counsel. A few examples may suffice.

First, in Department counsel's first Affirmative Defense, as set forth in his March 16, 1993, answer to appellant's Complaint, at paragraph 35 on page 6, he states the following:

> 35. In proposing to accept proof through a test, *at the Contractor's expense*, of the serviceability of the nonconforming cable, the Contracting Officer applied the correct legal test to wit: "In the absence of a specified test method, any reasonable method may be applied so long as the test method reasonably determines compliance with specifications and does not impose a more stringent standard. * * * Appellant has the burden of proving the unreasonableness of the test method." *Appeal of Ball, Ball & Brosamer*, IBCA No. 2103-N, 93-IBCA [sic] 25,287 at p. 125,982 (citation omitted). [Emphasis added.]

This assertion by Department counsel is forcefully repeated in his May 26, 1993, Motion for Summary Judgment at paragraph 20 on page 5; in his Reply in Support of Appellee's Motion for Summary Judgment on page 10; and again in his Brief for Decision on the Record on page 4.

Unfortunately for the Government, the sentences before the quotation make clear that the reasonable test method referred to may be one that the *Government* undertakes and pays for, and not necessarily one at the contractor's expense as counsel alleges. The preceding sentences state: "In any case, *the contract* adds that, in addition to tests outlined in the specifications, *the Government can test* the materials at any time during contract performance for contract compliance. The manner of testing is not specified." (Emphasis added.) The case cited in (but omitted from) the quotation also makes clear that the decision is referring to testing at Government expense. *Ball, supra,* 93-1 BCA at 125,982.

The Government's Answer (at 42, page 7) asserts that the contract provides for the Government to charge the contractor any additional cost of inspection or test when prior rejection makes reinspection or retest necessary. The implication, of course, is that the cable was rejected for objective and valid reasons. In fact, however, the Government rejected the cable because the contractor would not agree to an additional test that it thought was both necessary and useless. As the contractor notes on page 16 of the Memorandum of Response to the CO's Final Decision, which accompanied its Notice of Appeal, "[i]n this case, the Government was not using the tests as a basis for rejection—it had already improperly rejected the cable. It was using the test as a basis for acceptance."

Department counsel, however, vigorously defended BOR's clearly improper rejection procedure, an action that presumably generated some of appellant's concern that an evidentiary hearing might ultimately be necessary. For example, in Department counsel's Motion for Summary Judgment, at paragraph 32 on page 7, he states that:

> The gravamen of Centric-Jones appeal is its allegation that "the Bureau directed the contractor to perform an 'alternating current' ('a.c.') partial discharge test on the already installed cable," Complaint at par. 7, and that this alleged direction constituted a change to the contract. *See* Complaint at par. 14. *The subject allegations are false and thus the instant appeal should be denied.* [Emphasis added.]

Counsel then spends 2½ pages arguing that BOR's rejection of the cable, despite the rejection's questionable basis, clearly required the contractor to replace the cable in its entirety and then to file a claim with BOR for the cost of the entire replacement—totally ignoring the doctrine of economic waste, for example, as well as the view of the manufacturer that the silicon oil involved was an inert insulating oil that could not have changed the cable's electrical characteristics.

What makes Department counsel's persistence particularly egregious is that by the time of his July 29 Brief for Decision on the Record, not only had appellant (in a July 2

©1994, Commerce Clearing House, Inc.

Digitized by Google

Memorandum in support of its Motion for Summary Judgment) cited a leading Court of Claims' decision in *Southwest Welding & Manufacturing Engineering Co. v. United States,* 188 Ct. Cl. 925, 413 F.2d 1167 (1969), but the contract press had also recently called the bar's attention to the Federal Circuit's (CAFC) reaffirmation of *Southwest* in a May 24, 1993, nonprecedential decision, *Merando v. Stone,* 93-1019. The CAFC specifically cited Note 7 of *Southwest,* which states:

> This concept of the burden of proof in these "inspection and rejection" cases [i.e., that the contractor is obliged to demonstrate acceptability after the Government routinely decides that something is not up to standard] *is not supported by the case law.* When the Government rejects work as being not in compliance with its specifications, the Boards of Contract Appeals have held that the burden is upon the Government to demonstrate that fact [citing example cases, including *Hardeman-Monier-Hutcherson,* ASBCA No. 11785, 67-1 BCA par. 6210, which was also relied on by appellant].

This footnote was also quoted in full on page 8 of appellant's July 2 Memorandum in Support of its Cross-Motion for Summary Judgment. Thus, Department counsel's subsequent assertions that BOR's unexplained rejection of the cable was proper leave much to be desired.

A second example of Department counsel's questionable advocacy was his continued representation that the Government was not liable for the cost of the test because it was the same test that the contractor had proposed before the Government's rejection of the cable, and BOR merely accepted the proposal as a solution to the problem of the allegedly damaged cable. Thus, he says, the test was reasonable, the contractor was bound by its proposal, and the Government was not liable for the cost of the test. But, in fact, the record makes clear that the contractor had merely suggested the test because it believed that it could be performed with some a.c. equipment already on the site.

Department counsel insisted that BOR merely gave the contractor the option of performing an a.c. test instead of replacing the "damaged" cable—an option which the contractor freely chose. Thus, in counsel's words, "[t]he Contractor elected to perform the a.c. Hi-Pot test in lieu of removing the nonconforming cable and replacing it with cable meeting the contract requirements and thus the Contractor is not entitled to payment for performing the test" (Answer, paragraph 43, at 7). *See also* paragraph 19, Government Motion for Summary Judgment, and pages 12-14 of the Government's Reply in Support of its Motion for Summary Judgment. The latter memorandum states, at page 13:

> The Bureau submits that the contractor cannot now make a credible claim of the inappropriateness of the test *that the contractor itself recommended and agreed to.* The "reasonableness" of the test performed in this case is *established by the fact that the contractor and the subcontractor suggested the very test that was performed.* [Emphasis added.]

Even in his final Appellee's Brief for Decision on the Record, Department counsel again asserts (paragraphs 12 and 13, pages 3 and 4) that:

> Appellant, through its subcontractor Gardner Zemke, suggested the A/C Hipot test, AF Vol. 2 at 21-21 [sic], to which Appellee agreed. Nokes Affidavit, *supra,* at par. 9. Subsequently, Appellant refused to perform the partial discharge portion of the A/C Hipot test to which Appellant had agreed and Appellee agreed to perform the partial discharge test. Nokes Affidavit, *supra,* at pars. 12-13.

Paragraph 9 of the Nokes affidavit merely states that Nokes wrote to the contractor on *August 20,* 1991, stating that the "AC hipot test as described in Gardner Zemke's letter dated July 24, 1991, would be acceptable." Paragraphs 12-13 state that in an *August 28* meeting, the contractor refused to perform the partial discharge portion of the a.c. Hipot test "originally suggested by" Gardner Zemke, and that BOR said it would do so if the contractor would perform the simultaneous a.c. withstand (*i.e.,* hi-pot) test.

In actuality, the cable manufacturer, knowing that BOR wanted the cable circuits retested after the necessary repairs had been made to the leaking terminators, suggested to Gardner Zemke on June 26, 1991, the possibility that the circuits could be tested *using the Southern California Edison (SCE) equipment already on the site.* That proposal was duly conveyed to BOR, which accepted it by the August 20 letter, in which it also prohibited the contractor from performing the d.c. test that was called for by the contract since any further d.c. testing might reduce the operating life of the cable.

By August 21, however, it was already clear that the SCE equipment was not capa-

Digitized by Google

ble of performing the a.c. hi-pot test that BOR wanted, and the cable manufacturer promptly declined to pay for the rental of any other testing equipment because it did not believe that any further tests were reasonable or necessary. But as early as a September 5 meeting, BOR (Nokes) told representatives of the contractor, subcontractor, and the manufacturer unqualifiedly that the installed cable would not be accepted without an a.c. test.

On September 11, 1991, the Gardner Zemke notified the contractor that it considered BOR's refusal to accept the cable to be an improper rejection, and stated its position and that of the manufacturer that no further tests were necessary and that an a.c. partial discharge test was useless because it would not prove or disprove contract compliance or cable integrity, thus being unreasonable. The letter went on to state:

> Gardner Zemke will comply with the directions of the Bureau to proceed with tests not required by the contract. However, we request written directive to perform whatever tests should be performed, with expected measurements resulting from those tests.
>
> We expect USBR to pay for the costs of any tests unless they reveal that the cable is not in compliance with the contract documents. We will keep track of the costs and submit them for payment.

BOR responded with an October 15, 1991, letter rejecting the cable, stating: "Without further testing, the cable is unacceptable and must be replaced. Reclamation will, however, accept the cable if further tests indicate that there is little probability of problems resulting from the oil being in the cable." BOR failed, however, to state what criteria it would use to decide whether the cable system was satisfactory, which the subcontractor had requested. Accordingly, the subcontractor, in a November 7 letter to the contractor, stated that "[w]e are proceeding with these tests under protest, and our letter dated September 11, 1991, stands as written." As it turned out, there was only one firm in the United States that had equipment able to perform the newly required a.c. hi-pot test, and its report stated that it did not "acknowledge the partial discharge values noted * * * as accurate nor do they support any conclusion derived from it." BOR nevertheless somehow concluded that the cable system had passed the tests.

Under the circumstances, it can hardly be said that the contractor voluntarily agreed to perform any a.c. test of the installed cable system other than one using the SCE equipment already available on site; its position was abundantly clear to anyone reading the correspondence involved. Moreover, as appellant notes in its Final Brief at page 6, "[w]hen the cable passed the government's directed test, it eliminated the justification for rejection," and the costs of the test became the Government's to pay. Finally, if there were any further doubt about the unreasonableness of requiring an a.c. test on installed cable, it could have been resolved by a more careful perusal of the July 8, 1993, affidavit of the Government's own expert, Vernon Nokes, who concludes by saying:

> 21. An A.C. partial discharge test is a recognized test for testing high voltage cable in the factory by the contract provisions. *While the A.C. partial discharge is not a test normally performed in the field* (as distinguished from the factory) due in part to the difficulty of maintaining a stable testing environment, *there is no recognized test* to determine whether the characteristics of a cable has been adversely affected through the unexpected presence of a foreign fluid. [Emphasis added.]

Thus, the upshot of this case is simply that the Government was worried that the cable *might* have been damaged by whatever oil (*i.e.*, the same insulating oil in which the ends of the cable are immersed within the terminators to protect the cable!) leaked into the cable, and it therefore rejected the cable without specifying the nature of the damage it feared. It then solved the problem by requiring the contractor to perform a novel test, one not accepted by the industry, without specifying the criteria for acceptance. In any event, the cable somehow passed the test.

In our view, this is a case that never should have come before this Board. The Government should have settled it as best it could.

But there is more. In its May 26, 1993, Motion for Summary Judgment, the Government asserted that there were no genuine issues of material fact to be resolved. Appellant, however, was concerned that certain facts were still in dispute, so it requested an oral hearing. But on June 1, in submitting proposed alternative hearing dates to the Board, Department counsel again asserted that an evidentiary hearing was unnecessary.

After appellant on July 2 submitted its own Cross Motion for Summary Judgment,

©1994, Commerce Clearing House, Inc.

Digitized by Google

however, and after telephone conference calls by the Board on July 8 and 9 to the parties to ascertain whether an oral hearing was really necessary, Department counsel promptly submitted a reply brief arguing that the affidavits of appellant's experts were insufficient, as a matter of law, to support its motion, since the two experts who gave the affidavits were not on site at the time the tests took place and thus lacked personal knowledge of them. Further, Department counsel argued, there were now issues of fact as to whether the oil leaks had damaged the cable, whether the required tests were a change in the contract, and whether BOR had acted properly in requiring assurances from the contractor that its repairs were adequate. Thus, it appeared that Department counsel also now wanted a hearing.

It was not until the Board made another telephone conference call on July 22, 1993, that it was successful in getting both parties to agree that the appeal could be decided on the record after the submission of final legal briefs. In the Board's view, it was more than a little unorthodox for the Government first to allege in its motion that there were no issues of material fact to resolve, and then to decide that there were issues once appellant had submitted its own summary judgment motion. It is not clear to the Board why the Government should expect to have it both ways.

In summary, despite the somewhat overzealous defense of BOR by Department counsel, it is abundantly clear that BOR rejected the cable after it was installed and energized without giving any satisfactory reason for doing so, and that it then required the contractor to perform an arbitrary and expensive test not recognized by the high voltage cable industry in order to persuade the Government to rescind the rejection. Even after the cable system had allegedly "passed" the unrecognized field a.c. tests, however, the Government refused to compensate the contractor for their costs.

[1] We hold that the Government has the burden of proving that a contractor's work has failed to meet specifications. *Southwest, supra; Ball, supra; Sevcon,* IBCA No. 2862, 92-2 BCA ¶ 24,872; *Bruce Anderson Co.,* ASBCA 29411, 88-3 BCA ¶ 21,135. Where, after due repairs by the contractor to cable terminators that are found to have been leaking after their installation, the Government rejects a fully installed, buried, high voltage a.c. electrical cable system simply because it feared that the cable might have been damaged by the leakage into it of an unknown quantity of inert insulating oil from the faulty terminators, and where the purpose of the Government's rejection was simply to coerce the contractor into making additional tests that were neither specified by the contract nor recognized by the cable industry, the Government must pay the cost of the tests.

[2] Even if the Government had a sufficient basis for its concern that the cable had been damaged by the leakage of the insulating oil, it could not require the contractor at its own expense to perform additional tests that were not consistent with industry standards, tests that both the contractor and the Government subsequently agreed were ineffective, unless it paid for the tests. The Government cannot arbitrarily insist upon the performance of additional tests for the sake of its own satisfaction after the contractor had reasonably objected to their validity. *Ball, supra.*

Decision

Accordingly, the contractor is entitled to an equitable adjustment in the amount of $39,744, plus interest from April 15, 1992, in accordance with the provisions of the Contract Disputes Act of 1978.

[¶ 26,405] Jamco Constructors, Inc.

VABCA Nos. 3271, 3516T, October 5, 1993. Contract No. V501C-339.

Interpretation of Contracts—Ambiguities, Latent—Reliance on Own Interpretation.—A construction contractor that sought to excuse its delay by arguing that when it bid it reasonably believed it could proceed with demolition while it completed the necessary submittals for approval was not successful, because the contractor did not show that it relied on its interpretation at the time it bid the contract. The evidence as to how the contractor bid the contract was vague and indefinite.

Digitized by Google

Interpretation of Contracts—Construction Contracts—Phasing.—A construction contractor's argument that it reasonably interpreted a contract to permit demolition work prior to submission of submittals for approval was denied because the contract provided that the submittal process must be completed prior to the start of construction. The original solicitation divided the work into three phases, with Phase I devoted solely to submittals. In response to a prospective bidder's specific question as to whether Phase I could be accomplished while Phase II and Phase III were in progress, the government responded, "No, Phase I must be completed before Phase II can start . . . ." The contractor's argument that its interpretation was supported by a provision stating that work done prior to submittal approval was done at the contractor's risk was not persuasive, because the provision created a patent ambiguity.

Defaults, Grounds—Failure to Progress—Discretion of Contracting Officer.—A default termination for failure to progress on a construction contract for operating room expansion work at a medical center was converted to a termination for the convenience of the government because the contracting officer abused his discretion in terminating the contract for default. The contracting officer, administering his first contract following completion of schooling for his position, terminated the contract because of the demand for surgical suites and because he felt that the take-over contract would last a very short period of time and that the take-over contractor would finish in a very timely manner. A fair and reasonable judgment, however, would have required some determination as to the amount of time it would have taken either the contractor or a take-over contractor to complete the work. Any estimate of the time it would have taken the contractor to finish the project was initially dependent on deciding how much had been completed to date.

For the appellant: Fairfield, Farrow, Hunt, Reecer & Strotz, Albuquerque, New Mexico, by Raymond R. Flowers. For the government: Charlma O. Jones, Trial Attorney, Phillipa L. Anderson, Deputy Assistant General Counsel, and William E. Thomas, Jr., Assistant General Counsel, Washington, D.C., for the Department of Veterans Affairs.

Before McMICHAEL, PULLARA, and ROBINSON, Administrative Judges.

McMICHAEL, Administrative Judge: In VABCA No. 3271, Jamco Constructors, Inc. (Jamco or Contractor) appeals the default termination of its contract with the Department of the Veterans Affairs (VA or Government) for an "OPERATING ROOM EXPANSION" at the VA Medical Center in Albuquerque, New Mexico. In a companion case, VABCA-3516T, the Contractor seeks convenience termination costs. Should the termination for default be converted to one of convenience, the parties have stipulated that the quantum is $60,004. (Tr. 3)

Appellant argues that any failure to complete the work by the adjusted Contract completion date should be excused, primarily because of the Government's refusal to permit construction to begin prior to completion of the submittal process. Irrespective of excusable delay, Jamco also argues that the termination for default was an "abuse of discretion" because the VA was "relying on erroneous information" when it made its decision.

The record in these appeals consists of the Appeal file in VABCA-3271 as supplemented (R4, tabs 1-49), the Appeal File in 3516T (3516T R4, tabs 1-18), and a transcript of a hearing held in Albuquerque (Tr. 1-408) together with exhibits introduced by the parties (Exhs. A-1 to A-13; G-1 to G-3; and B-1 to B-15). Both parties have filed post hearing briefs.

FINDINGS OF FACT

On June 30, 1989, the VA Medical Center in Albuquerque, New Mexico issued Solicitation No. IFB 501-50-89 requesting bids on or before August 1, for a project entitled "OPERATING ROOM EXPANSION," which was described in GENERAL REQUIREMENTS SECTION (01010)1.2 as follows:

> Work includes removal of flooring, ceilings, architectural specialties and selected other items. New Construction consists of new HVAC, plumbing and medical gas systems, including chiller and air cooled condenser, lights, surgical lights, surgical facility boom (big reach) units, new power outlets, flooring, ceilings, painting, and other items identified within the construction documents.

(R4, tab 23)

The contract was estimated by the VA to cost between $500,000 and $1,000,000. GENERAL REQUIREMENTS Section 1.4, Operations

©1994, Commerce Clearing House, Inc.

Digitized by Google

and Storage Areas, provided for phasing requirements in paragraph G as follows:

> Phasing: To insure such executions, Contractor shall furnish the Resident Engineer with a schedule of approximate phasing dates on which the Contractor intends to accomplish work in each specific area of the site, building or portion thereof. In addition, Contractor shall notify the Resident Engineer two weeks in advance of the proposed date of starting work in each specific area of site, building or portion thereof. *The submittal process must be completed prior to the start of construction.* Arrange such phasing dates to insure accomplishment of this work in successive phases mutually agreeable to Medical Center Director, Resident Engineer and Contractor as follows:
>
> PHASE I—SUBMITTALS
>
> PHASE II—PHASE I CONSTRUCTION
>
> PHASE III—PHASE II CONSTRUCTION

(emphasis added)

On July 26, 1989, the VA issued Amendment #1 to the IFB which extended the bid date to August 11, added certain new provisions, and provided copies of answers to questions posed by a prospective bidder. (3516T R4, tab 1) This amendment, which was received by the Contractor prior to bid, added provisions at the end of GENERAL REQUIREMENTS Section 1.4.G., quoted above, which defined Phase II construction as that shown on the drawings as "Area A" and Phase III construction as that listed on the drawings as "Areas B C & D." It further provided that the installation of the Chiller and Condenser "outside of the immediate area" of the above listed Areas, was to be "independent of all Phasing except ... 'Phase I—Submittals' shall be completed before any work on the following phases starts." The amendment further provided that all work in Phase II "shall be completed including final inspection and punch list items before the next phase [III] will be allowed to start."

Attached to the Amendment were the questions submitted by a prospective bidder and VA's responses thereto. Question 2.A. asked the VA to define the areas of work for the various phases which prompted the amendment outlined above. Question 2.B. asked if Phase I could "be accomplished while Phase II and III are in Progress?" The VA's written response was:

> No, Phase I must be completed before Phase II can start and Phase II must be completed before Phase III can start.

(3516T R4, tab 1)

The IFB provided that the contract was to be completed within 180 days of the Notice to Proceed. Amendment #1 also added a liquidated damages provision of "$700 for each day of delay" beyond the contract completion date, utilizing standard language found in Federal Acquisition Regulation (FAR) section 52.215-5.

At bid opening conducted on August 11, 1989, Jamco was determined to be the low bidder. On September 27, 1989, Bruce Johnson, who had just arrived at Albuquerque to begin his first assignment following completion of the contracting officer training program, notified Jamco that the VA had awarded the firm the Contract in the amount of $598,700. (R4, tab 3; tr. 353) At the time of Contract award, Jamco was performing two other contracts at the Albuquerque VAMC. One contract for approximately $500,000 involved the installation of a Magnetoencephalography (MEG) unit in the radiology area of the hospital. (Tr. 77) The other involved the installation of a new emergency generator exhaust. Neither contract involved working in areas where there were surgical procedures or critical patients. (Tr. 183-84; 238-40)

The Contract specifications for the Operating Room Expansion contained the usual provisions found in VA construction contracts, as provided by Federal Acquisition Regulation (FAR), 48 CFR Part 52, and as supplemented by VA Acquisition Regulation (VAAR) in Part 852. Included in the GENERAL CONDITIONS Section (01001) is clause 1.43, MATERIAL AND WORKMANSHIP (F[AR] 52.236-5) (APR 1984) which provides, in pertinent part:

> (b) The Contractor shall obtain the Contracting Officer's approval of the machinery and mechanical and other equipment to be incorporated into the work ... When required by this contract or by the Contracting Officer, the Contractor shall also obtain the Contracting Officer's approval of the material or articles which the Contractor contemplates incorporating into the work ... *Machinery, equipment, material, and articles that do not have the required approval shall be installed or used at the risk of subsequent rejection.* (emphasis added)

Also included in the GENERAL CONDITIONS is clause 1.51, SPECIFICATIONS AND DRAWINGS

Digitized by Google

FOR CONSTRUCTION (FAR 52.236-21 (APR 1984)) which provides in paragraph (e), with respect to shop drawings that are required to be submitted by a Contractor, that:

> The Contracting Officer will indicate an approval of [sic, or] disapproval of the shop drawings and if not approved as submitted shall indicate the Government's reasons therefor. *Any work done before such approval shall be at the Contractor's risk.* (emphasis added)

A preconstruction conference was held on October 11, at which the Notice to Proceed was issued and received by the Contractor, thus establishing the Contract completion date as April 9, 1990. (R4, tab 6) VA representatives at the meeting included Contracting Officer (CO) Bruce Johnson, Michael McQuade, the Contracting Officer's Technical Representative (COTR), and Dr. Fred Bold, an anesthesiologist who attended as a representative of the VA surgical team. (3516T R4, tab 4; tr. 260) Jamco's Project Manager, Joe Mullins, attended for the Contractor, as did two representatives from Gardner-Zemke, the mechanical subcontractor. (3516T R4, tab 4)

Mullins had worked in construction since 1964, although the MEG contract and the Operating Room Expansion were his "first federal" government contract projects as a prime contractor. (Tr. 15) He testified that he had worked as a subcontractor on VA contracts on about 5 or 6 previous occasions. (Tr. 76) Asked if his experience was "consistent on those contracts with regard to phasing submittals and demolition," Mullins said it was, explaining:

> [D]ue to the Government's lengthy and very detailed submittals, it is not uncommon for us to *order* materials, and if we feel like those materials meet the specifications/requirements, to release them for shipment *prior to their approval* ... (emphasis added)

(Tr. 82)

The Contracting Officer conducted the preconstruction meeting by proceeding through items set forth in a standard form letter prepared several days prior to the conference. (Tr. 355,370-71) The letter which was then formally transmitted to Jamco by certified mail outlines the "items ... discussed at the preconstruction meeting." Under *"Responsibilities of the Contractor,"* paragraph 3.c. notes that a "cost breakdown was to be submitted ... within thirty (30) days of receipt of the Acceptance letter," while "detailed and realistic" progress charts were due "within ten (10) calendar days of the Notice to Proceed." Paragraph 3.g. further notes that submittals are to be furnished "timely and in a manner as to not delay timely completion of the project."

Although he made no notes of the meeting, CO Johnson testified that he recalled it was "stressed very strenuously that we need the submittals ... before the construction started." Johnson said he knew it "was a very tight schedule" and, that it would take an "extreme amount of coordination to accomplish disposition" of a contract involving an operating suite. He asked Project Manager Mullins at the preconstruction conference "if this was going to be a problem with the contract and his reply was 'no.' " (Tr. 360)

In advance of the preconstruction meeting, COTR Michael McQuade had also prepared a letter to Jamco which dealt with many of the areas covered by the Contracting Officer's letter. (Tr. 269) McQuade, who has a degree in fire protection and safety engineering, was originally employed by the VA in areas unrelated to construction. For only about two years immediately preceding this Contract he had been employed as a VA engineering technician. (Tr. 177-78, 234) During that time he served as a COTR on about 10 projects, although this Contract was the first in which he encountered any "performance problems." (Tr. 235) McQuade also served as COTR on Jamco's generator exhaust project but not on the MEG contract. (Tr. 183-84) During the administration of this Contract McQuade generally prepared Engineering Service's correspondence concerning this Contract for the signature of Ronald Richter, the Chief Engineer.

At the preconstruction conference the COTR went over the points set forth in the letter. Paragraph 6 of the letter concerning submittals "requested that all submittals be assembled into a single package and delivered within 30 days of the notice to proceed." (3516T R4, tab 8) McQuade testified that he informed the Contractor that the VA "would require submittals to be complete before construction could begin," and that Mullins voiced no objection at the meeting to furnishing the submittals within 30 days. (Tr. 181, 184)

McQuade also testified that Dr. Bold was concerned that the Contractor understood the necessity of working around medical gas bottles and wanted to "stress the importance of the dust barrier and what procedures would be used in changing out med gas bot-

©1994, Commerce Clearing House, Inc.

Digitized by Google

tles." (Tr. 261) Project Manager Mullins was apprised that because this was a "most sensitive project" in which the Contractor would be "invading the clean areas of a surgical complex ... [d]ust control was a paramount issue," as were "[n]oise, vibrations, anything that would affect an operation and the performance of surgery." (Tr. 182)

Finally, COTR McQuade's preconstruction conference letter to Jamco provided in paragraph 15 that:

> Request for final inspection shall be submitted at least 15 days in advance of the requested date. The 180 day period of construction will include time for correction of final inspection punch list items.

(R4, tab 8)

Jamco's proposed Contract Progress Schedule dated October 1, was received by the VA on October 16, 1989. (3516T R4, tab 16) It listed work activities in biweekly intervals. It showed work commencing on October 6, 1989, and completion on April 6, 1990. Under the proposed schedule submittals were to be completed in four weeks, half of them in the first biweekly period ending October 20, and the remainder in the next two week segment ending November 3, 1989. Under the proposed schedule about 20% of the demolition work was also planned to be accomplished in the second biweekly segment ending November 3.

This schedule was rejected by the VA on October 17, with directions to resubmit the plan in weekly rather than biweekly segments and to insert a "15 day time frame ... at the end of Phase II construction to allow for the punch list." (3516T R4, tab 17) The Contractor was informed that it could not commence work on Phase III until all Phase II construction "including the punch list is 100% complete." Additionally, McQuade directed that Jamco's Progress Schedule be adjusted to reflect another 15 days at the end of the Contract for the "final punch list" of Phase III, erroneously believing that the Contract provisions gave him authority to require such a reserved time period.

At some point a revised schedule was submitted which listed work progress in weekly segments. (3516T R4, tab 18) In dollar value terms, about 44% of the work was assigned to Phases I and II and 55% to Phase III. Phase I processing time for submittals still showed a four week period, the final 25% of which was scheduled to be completed in the fourth week (October 30-November 3). Week 4 was also shown as the commencement of Phase II (also known as "Phase I Construction"), for which completion was scheduled at the end of Week 14, (January 14, 1990). Weeks 15 and 16 were reserved for Phase II punch list work. Phase III work was shown as commencing in Week 17 with completion occurring in week 27 (January 29-April 13).

Approximately 10% of the scheduled demolition (a 6 week activity which represented 3.26% of the total project cost) was also shown being accomplished in the same week as the final 25% of the submittals were furnished. Mullins said he planned to begin demolition on Monday, October 30. (Tr. 17) But the VA did not permit him to begin the Phase II work on that date because the Phase I submittal process had not been completed. (Tr. 119) Jamco's *first* few submittals had been furnished only days before on October 25 and 26. (3516T R4, tab 5)

On November 14, CO Johnson wrote to Jamco that submittals were not being furnished in a "timely manner." He wrote that of "sixty-six (66) required submittals only eighteen (18) have been submitted with seven (7) of them being rejected." (R4, tab 9) Asserting that if the slow rate of submittals continued the Contractor would be "hard pressed to complete the project on time," he said "*no* work shall begin until *all* submittals are approved," and reminded Jamco that the Contract contained a $700 per day liquidated damages provision. The CO asked Jamco for a "schedule for finishing your submittals and when you plan to start construction." The Contractor made no written response and the Contracting Officer does not recall any verbal response. (Tr. 355-56)

COTR McQuade kept detailed, if not always accurate, records concerning when submittals were made and what actions were taken thereon. As of December 22, his records indicated that approximately half of the required submittals had not been furnished and approved. (3516T R4, tab 5) Notwithstanding that the Phase I submittal process had not been completed, the Contractor was allowed to begin demolition work on December 11, after McQuade, prompted by concerns that the completion date would not be met, recommended that the CO permit Phase II work to commence. (Tr. 22, 188) Demolition thus began 61 days after Notice to Proceed and 42 days after the planned starting date in the Contractor's Construction Schedule.

CO Johnson again wrote to Jamco on December 26, asserting that the Contractor was only 10% complete when it was scheduled to have completed 40.5% of the Contract. The source of these percentage figures is un-

Digitized by Google

known and appears inaccurate. According to information inserted by COTR McQuade onto Jamco's Contract Progress Schedule, the Contractor had, on a dollar value basis, completed 4.2% of the Contract against a scheduled completion rate of 35% for the week ending December 29, 1989. (3516T R4, tab 18) By comparison, the Contract Progress Report for the period ending December 31, which is based on information supplied by Jamco, shows actual and scheduled completion rates of 6.3% and 35%, respectively. Whatever the correct percentages, the disparity between actual and planned was sufficient to cause the Contracting Officer to direct the Contractor to "accelerate your work force to assure completion as scheduled." (R4, tab 10)

Jamco made no written response to CO Johnson's direction to accelerate, although Project Manager Mullins recalled talking to the Contracting Officer and explaining that "we had all the people on the job that could safely work in that small area during demolition." The CO responded that he needed to "get a new schedule." Mullins, noting that Phase II work commenced on December 11, instead of October 30, asked if he could "revise our schedule and show this as lost time and push it out." (Tr. 26) When told no, he responded that without a time adjustment anything he prepared would be "an unrealistic schedule and I don't know how to do it." (Tr. 400-01) The actual time for demolition took 6 weeks which was what Jamco had scheduled in its Contract Progress Schedule. (3516T R4, tab 18)

In a January 10, 1980 memorandum to the Contracting Officer, Chief Engineer Ronald Richter expressed his concern that the Contract would not be completed on time. He said that a number of submittals had not been received and that of those 63 submittals that had been received, there was a "19% rejection ratio." Although observing that the Contractor had been permitted to begin Phase II demolition prior to completion of the Phase I submittal process, he said it did "not seem likely that the Contract will be completed on time." Instead of the originally scheduled April 9, 1990 completion date, he believed that the Contract would not be finished until September 12, 1990, 156 days late. The Board is unable to determine the method by which this estimate was made or its reasonableness. If such an estimate were correct, it would mean that Jamco would be facing liquidated damages in the amount of $109,200. (R4, tab 11)

On January 26, CO Johnson wrote to Jamco noting that there had been no response to his letter directing acceleration of work. He said he was "enclosing a list of submittals . . . that have not been submitted or need to be resubmitted." He concluded his letter by stating:

> Since you are about 26% behind schedule and the contract completion date is still April 9, 1990 please prepare a updated progress schedule on how you intend to meet this deadline and submit it to me for approval.

(R4, tab 12)

No revised progress schedule was furnished. (Tr. 382) However, Jamco did respond on February 6, the day actual new construction under Phase II began, concerning VA's list of items that had not yet been submitted for approval. The Contractor listed 12 of the Contract's boiler plate specification sections for which, contrary to the Contracting Officer's assertion, it claimed no submittals were required under the VA's construction plan. (R4, tab 13) This list was reviewed by the VA's Architect-Engineer who concurred with the Contractor's position with respect to 8 of those 12 items. (R4, tab 14)

As work progressed during January and February, a number of changes were ordered by the VA. Supplemental Agreement (SA) #1, resulting from a proposal submitted by Jamco on January 5, deleted the requirement for new fixed windows and allowed the reuse of existing windows. The Government accepted the Contractor's credit proposal of $2,810.31 with no change in time. (3516T R4, tab 6) SA #2, involving extra concrete work and the construction of a new stud wall increased the Contract price by $1,376.33 and granted a 7 day time extension as requested by the Contractor's January 24, 1990 proposal. The Supplemental Agreement was signed by both parties in early February and contains the following clause:

> RELEASE OF CLAIMS: This change [which] represents full and final compensation for money and time hereby releases the Government from any and all liability under this contract for further equitable adjustment attributable to such facts or circumstances giving rise to the "Proposal for Adjustment" for this change in work.

(3516T R4, tab 7)

Efforts to level the existing floor of the new anesthesia area encountered difficulties requiring "removal of the areas of concrete which are too high." (3516T R4, tab 8)

Jamco, in a January 29 proposal, requested $6,116.36 to do the work and noted that "three (3) days time for this is probably the minimum required." The Contractor sought a Contract extension of 10 days "[d]ue to the time already passed to determine the method and cost to accomplish this change." The Chief Engineer recommended $4,633.50 which the Contracting Officer adopted together with a 10 day Contract extension. SA #3, which was executed by the parties on February 23, contained the RELEASE clause quoted above. Subsequently, SA #6 increased the compensation for the SA #3 change work by another $420.49. (3516T R4, tab 11)

The Contract called for the relocation of existing duct boxes which would have required shutting down the operating room. To avoid this shutdown, the VA requested on January 3, a proposal for installation of three new duct boxes in the Anesthesia Workroom. On January 30, Jamco requested $4,782.42 for this changed work which represented its mechanical subcontractor's proposal with general contractor markup. (3516T R4, tab 9) Gardner-Zemke's proposal showed only equipment cost and no additional labor costs or time required to accomplish the change. It did inform Jamco that delivery of the units would occur three weeks after the subcontractor was told to order the units. In its proposal to the VA, Jamco had said that the change would "require a 28 day time extension to accomplish the work." The Chief Engineer in a memorandum to the Contracting Officer recommended approval of the requested cost increase but advised that no additional days be given because "there is no additional work involved, only a rescheduling of work that would have to be performed." SA #4, signed by the parties on February 20 increased the Contract by the requested $4,782.42 and provided that "[t]here is no time extension warranted for this change." The standard RELEASE clause language was also included. Questioned at the hearing, COTR McQuade conceded that this change involved "more labor than what was originally planned." (Tr. 214) He was unable to recall why he had not recommended a time extension. (Tr. 306-07)

SA #5 covered additional valves and zone valves desired by the VA and contained the standard RELEASE clause language. On February 5, 1990, Jamco had forwarded the proposal of Gardner-Zemke, to which it had added a standard markup, requesting $2,989.44. The mechanical subcontractor had indicated in its proposal to Jamco that the work would require 5.3 man-hours for which it was seeking "zero days for performing the additional work." In submitting the proposal to the VA, however, Jamco stated that it would "require ten additional days to the contract time to accomplish this work." (3516T R4, tab 10) In a February 7 internal memorandum to the Contracting Officer recommending acceptance of the proposal, the Chief Engineer stated that "[t]en (10) additional days will be required for the completion of this work. This time will cover ALL TIME LOST TO DATE through the request of the VA." SA #5, itself, however, makes no reference to VA work stoppages, and simply states that there will be a "time extension of ten (10) days to accomplish this work."

COTR McQuade testified that he had requested the Contractor to include in its proposal the time lost to date due to various occasions when the VA would not permit Jamco to work. (Tr. 215) Early in the Contract he had asked Jamco to keep a daily log of when it "was shutdown at the request of the hospital" so that when there were "an appropriate number of days, we would make an adjustment by supplemental agreement or time extension, which we did." (Tr. 204) In this connection, the daily logs indicate that on December 18, 1989, demolition work was shut down at 2:30 p.m. because of excessive dust arising from the Contractor's trash chute. (3516T R4, tab 15) Shifting winds which operated in a "vortex fashion" led the VA to "shut him down until we could wet down this pile of dirt." (Tr. 203) Eight hours were lost on January 2, 1990, and 5 hours on January 5, due to heart surgery. Another 8 hours were lost on January 20, because of eye surgery. Surgery again resulted in approximately 6 hours lost on January 22, 8 hours on January 24, and approximately 2 hours on February 3. (3516T R4, tab 15)

Additional time was granted for "work stoppage" in SA #7 which was issued in early May. Previously, on March 27, the VA had requested a proposal from Jamco to substitute a gypsum wall board system for the specified lathing and plastering. Jamco's proposal was for a net credit of $295.40 with no reference to time. The Contracting Officer accepted Jamco's credit proposal and additionally granted an 8 day time extension "for work stoppage caused by Government requests . . . for delays from February 7, 1990 to May 2, 1990." (3516T R4, tab 12) How these delays were calculated is not known with precision, although the daily logs do show work stoppages of approximately 7

Digitized by Google

hours on March 5, 2 hours on March 16, and nearly 7 hours on March 26, 1990. (3516T R4, tab 15) The time extension granted by SA #7 adjusted the Contract completion date to May 14, 1990.

SA #8, increasing the Contract by $945.96 and extending the Contract performance period by seven days to May 21, was proposed by the Government in mid-May but returned by Jamco unsigned on May 31. This change originated in a March 30 proposal from the Chief, Anesthesia Section, to remove counters and cabinets in the Anesthesia Workroom and replace them with shelving and C-lockers. Jamco responded on April 9, with a $568.79 proposal principally composed of material costs together with 6 hours of labor costs. In its proposal Jamco said that it would need an "additional 14 days to the Contract time to complete this change." (3516T R4, tab 13) In its recommendation to the Contracting Officer dated April 11, the Engineering Service approved the proposed costs but said that only 7 days would be required to complete the work. (Tr. 219) The daily logs indicate that work on the change order encompassed by SA #7 occurred on April 11, 12, 13, and 14. The change order was completed when the C rails were installed April 25.

In Jamco's May 31 letter refusing to sign the Supplemental Agreement, the Contractor claimed—apparently for the first time—that it was entitled to "extended overhead" in the daily amount of $266.95. It noted "[i]n addition ... our change proposal requested 14 additional days and the Modification has only 7 days." At the hearing, Guy Hankins, vice president of Jamco testified that he had requested 14 days because it was "going to take us ten days to get this rail locker and ... [i]t's going to take 14 days to get it all done." (Tr. 153) He claimed VA officials had verbally agreed to give him the 14 days he sought. (Tr. 90) Asked if it was his current position that Contract performance as a whole was extended by 14 days as a result of the change, Hankins was less positive, stating "I don't know without sitting down and doing a critical path." (Tr. 152) He added:

> [W]e don't have a job on critical path. If I could do a critical path I could see if it would fit in and it would push it out or wouldn't push it out. If it's not critical then it wouldn't push it out.

(Tr. 154)

As Contract performance proceeded, VA officials continued to be concerned about the lack of progress. Each VA Contract Progress Report for the months ending October 1989 through April 1990 listed the work progress as "Unsatisfactory." (Exh. A-3 through A-9) The Progress Report for the month of February 1990 which followed the Contracting Officer's January 26 direction to "accelerate," listed a completion rate of 36% against a scheduled rate of 60.3%. While the report noted that "[w]ork has picked up over the past month" it predicted that the Contract would not be completed prior to August 3. (Exh. A-7) The Progress Report for the month of March showed actual/scheduled completion rates of 51.4%/90% and estimated final completion in "mid-September." (Exh. A-8)

The Progress Report for the month of April showed an adjusted Contract completion date of May 1 and a September 15 estimated Contract completion date. (Exh. A-9) The VA report stated that the Contractor had earned $432,990 of an adjusted Contract price of $610,064. Jamco was thus 71% complete at a time when it should have finished the job. Notwithstanding the 71% figure listed under "Actual Percent Completion," the COTR under the remarks section asserted that the Contract was "only 51% complete." This figure was apparently arrived at by deleting costs for "Unused Materials Prev[iously] Paid For" from the calculations. It should be noted that a comparison of "Work in Place" ($333,800) with the "Current Contract Amount" ($610,065), which excludes material paid for but not installed, actually produces a 54.8% completion rate.

As part of the Progress Report, the Chief Engineer asserted that material was "slow in getting to the job site," that "labor is insufficient to perform this job," and that the job was "poorly organized and managed." McQuade testified that "he would inform Jamco's job superintendent on a regular basis" that there was insufficient manpower devoted to the project.

CO Bruce Johnson said he had "intensive extensive" discussions with VA attorneys and engineering personnel over what course of action to take. (Tr. 362) Among the options considered were "assessing liquidated damages ... terminating for convenience at the time the Contractor completed ... Phase I construction [Phase II] and/or termination for default." (Tr. 358) He said he was concerned that:

> if we assessed liquidated damages against the Contractor that by the time he ran out of money which would have been proba-

©1994, Commerce Clearing House, Inc.

Digitized by Google

bly, been half through the period of time into the project that he would simply walk off.

(Tr.358)

He informed Jamco's surety that he was considering default and that he had "written several letters ... that there had not been any response." (Tr. 362)

The FAR provisions found in 48 C.F.R. Part 49.402-3, PROCEDURE FOR DEFAULT provide in subsection (f) that:

The contracting officer shall consider the following factors in determining whether to terminate a contract for default:

(1) The terms of the contract and applicable laws and regulations.

(2) The specific failure of the contractor and the excuses for the failure.

(3) The availability of the supplies or services from other sources.

(4) The urgency of the need for the supplies or services and the period of time required to obtain them from other sources, as compared with the time delivery could be obtained from the delinquent contractor.

(5) The degree of essentiality of the contractor in the Government acquisition program and the effect of a termination for default upon the contractor's capability as a supplier under other contracts.

(6) The effect of a termination for default on the ability of the contractor to liquidate guaranteed loans, progress payments, or advance payments.

(7) Any other pertinent facts and circumstances.

On May 2, CO Johnson issued a SHOW CAUSE NOTICE stating:

Since you have failed [sic] to perform ... within the time required (May 14, 1990), the Government is considering terminating the contract under the provisions for default to this contract.

Pending a final decision in this matter it will be necessary to determine whether your failure to perform arose from causes beyond your control and without fault or negligence on your part.

Accordingly you are given the opportunity to present, in writing, any facts bearing on this question ... by May 4, 1990.

(R4, tab 15)

Jamco's president, Gwen Mullins, responded in a letter dated May 7, 1990, asserting:

We do not agree that May 14, 1990 is the completion date of this project. The start of construction was delayed from October 11, 1989, until December 11, 1989, by the VA, which amounts to sixty-one (61) calendar days for which we are entitled to an extension of time.

In addition ... we have experienced delays for stoppage of work by Hospital personnel, due to emergency surgeries, etc.

(R4, tab 16)

At the hearing Guy Hankins attempted to support this position by testifying that, notwithstanding the Contract provisions requiring that Phase I submittals be completed prior to commencement of Phase II Construction, he believed Jamco was authorized to proceed with construction absent submittals—subject only to the "risk of subsequent rejection"—based on GENERAL CONDITIONS SECTION clauses 1.43 and 1.51, cited *supra*, and "past practice." He testified that:

[E]ven though the specifications and the addendum says that the submittal process will be completed prior to the start of construction, in my opinion it did not mean we could not start demolition ... There's not one single piece of material in that demolition that requires approval ... there's nothing to stop a contractor from performing that six weeks of demolition while you're getting submittals and the other materials there.

(Tr. 84)

By requiring a 30 day period for submittals plus specific scheduled time for punch list review, the Government made it "totally 100% impossible to do that job in 180 days." (Tr. 84)

Mullins concluded her May 7, 1990 letter by asking the Contracting Officer to "consider this letter under the disputes clause of the contract for an extension to time and cost ... for sixty-one (61) calendar days making the completion date July 5, 1990."

Following receipt of Jamco's response to the SHOW CAUSE NOTICE, the Contracting Officer met with COTR McQuade and Chief Engineer Ronald Richter to discuss the matter. He did not find the letter to be an "adequate response" because the project was "not manned properly ... not given the attention that the other two projects were given." (Tr. 364) Nor did he accept Jamco's argument about submittal delays because contractors were "told up front and during the preconstruction conferences that the submittal processes needed to be completed before construction started." (Tr. 365)

Digitized by Google

A meeting of the parties was held on May 18, 1990. Guy Hankins and Joe Mullins attended for Jamco. In addition to Contracting Officer Johnson and COTR McQuade, the local District Counsel for the VA was also present. (R4, tab 18) According to the memorandum of the meeting prepared by VA Project Supervisor Bill Lawrence, who was also in attendance, Hankins complained that the Contract completion time was "not reasonable" and that Jamco had been delayed in the completion of the Contract because of "unwarranted enforcement of the submittal clause of the specifications." CO Johnson responded that Jamco's problems stemmed from its "failure to supply submittals in a timely manner, failure to adequately man the project and failure to respond to government attempts to accelerate the work progress." He alluded to an April 5 meeting in which he said the Contractor had stated the project would be accelerated although in fact it was not. The CO also asked why Jamco had not responded to earlier letters requesting acceleration, and the memorandum asserts that Hankins replied that he didn't know.

Hankins then suggested that if the 61 day time extension was granted they "would drop the claim for monetary compensation due to the same." Asked if Jamco was "claiming any further delays for which they have not been compensated," the memorandum records that Hankins said no. (At the hearing, however, Hankins denied that the question was asked and further asserted that VA officials were aware that there were "other claims for time extensions at that point in time." (Tr. 104)) The memorandum further relates that CO Johnson stated that in light of Jamco's past performance he didn't believe that it would meet the new Contract completion date even if the 61 day extension was granted. It was pointed out that if a 61 day extension was granted the adjusted Contract completion date would be July 21, 1990. With the COTR estimating a September 15 completion date at the earliest, Jamco would be facing liquidated damages in excess of $40,000 and thus would "not have the incentive to perform the contract."

At the meeting, Jamco officials apparently made no direct response to this assertion, but in a letter dated May 21, the Contractor claimed that it could complete the Contract by July 21, because "major long-term lead items of materials are on the jobsite" and Phase III construction "does not require [the] extensive demolition work" encountered in Phase II. (R4, tab 19) A "final inspection" of Phase II had been conducted on May 11 and although some punch list items remained, Jamco noted that Phase III mechanical and electrical work had "already started" and that:

> As of May 20, 1990, the contract is 76% completed, of which 13% represents materials stored on the jobsite and 63% represents work complete to date. As you can see a majority of the actual work under Phase [III] expressed in dollars is materials. Therefore your hypothetical completion date of September is totally erroneous.

(R4, tab 19)

These percentage rates were consistent with the VA's Contract Progress Report for the period ending May 31, 1990, which listed the project as 77.7% complete and, after backing out materials paid for but not installed, showed a 64.7% rate for "Work in Place." (Exh. A-10)

In its May 21 letter, Jamco conceded that there were delays in completing Phase II construction but said there were "mitigating circumstances created due to the unavailability of materials and the fact that we lost almost one month due to stoppages of work created by the hospital."

CO Johnson, COTR McQuade, and other engineering personnel met once again, this time to discuss Jamco's response. McQuade did not believe the Contractor was entitled to a 61 day extension, nor that Jamco would come close to completing the Contract even if the additional time was granted. Nor did he believe that less "demolition time" would be required for Phase III than for Phase II, as asserted by Jamco. He said that the work required was not really demolition, but "disassembly" where:

> You had to take apart things without disturbing what was on the other side of the 5/8ths inch sheet rock with somebody on an operating table ... There wasn't a mass of material that had to be removed but there was a quantity of material that had to be removed ... in a very delicate fashion ... [which] in my opinion was more labor intensive.

(Tr. 225-26)

Under the Contract Progress Schedule submitted by Jamco, Phase II demolition was shown to occupy 4 weeks (20 working days) and cost $19,500. Phase III demolition also had a 4 week schedule and a cost of $8,400 assigned to it. (3516T R4, tab 18) The replacement contractor actually accom-

©1994, Commerce Clearing House, Inc.
Digitized by Google

plished demolition activities in under 3 weeks (13 work days). (3516T R4, tab 15 Daily Logs)

The COTR said it was his own "personal opinion" that it would take "upwards of 250 days at the present rate of construction" based on "[w]hat they had accomplished to date and how many men they had on the job and what their intentions appeared to be." (Tr. 223) He believed that Jamco's other contract work at the Medical Center was "conflicting with the work they were doing" in this Contract. (Tr. 223) He said work on this Contract was:

> so sporadic it was like stop and go. They had two other jobs on station and they were using the same crew for all three jobs. If you look at the certified pay [rolls] that will be borne out. It was a daily thing that I would talk to my counterpart, Ed Hoover, and we'd find out where the Jamco people were and who was working on what job today.

(Tr.346)

Asked what was the "principal factor" that lead him to conclude that termination of Jamco was in the best interest of the Government, COTR McQuade responded, "[n]onresponsiveness to official inquiries. Lack of man loading. Poor performance on the job." (Tr. 347) McQuade said he "figured another contractor could be more diligent, if he didn't have the other two jobs on the station." (Tr. 315)

CO Johnson said that there was a "consensus of opinion" to terminate for default after looking at the options of convenience termination and liquidated damages. (Tr. 366) He concluded that this would be in the best interest of the Government:

> [b]ecause of the seriousness and the demand for the surgical suites and we felt like that the take-over would be a *very short period of time* and it would . . . finish in a very timely manner. (emphasis added)

(Tr. 367)

On May 25, 1990, the Contracting Officer issued his final decision defaulting the Contractor and denying Jamco's request for a 61 day time extension due to the "government's action in requiring compliance with the submittal process clause of the contract." (R4, tab 20) After a lengthy recital of events which had occurred during Contract performance, CO Johnson asserted that although the "completion date with appropriate time extensions was May 21, 1990," the Contractor had "only completed 50% of the construction portion of the project." The 50% completion figure was apparently derived from Progress Report #6 for the period ending April 30, 1990. Comparing "Work in Place" and "Current Contract Price" the correct completion rate for April 30 was actually 54.8%. Asked about this discrepancy at the hearing, the Contracting Officer agreed with the suggestion that he "just sort of round[ed] off" the April figure to arrive at the 50% rate he used. (Tr. 370) Based on this information, the Contracting Officer concluded that:

> Even if sixty-one days were added to the contract, making the completion date about July 5, 1990, [sic, July 21, 1990] the Government does not believe that Jamco had adequately manned the job site to finish the contract. In failing to respond to my directive to accelerate the project, in an effort to get the job back on schedule, Jamco had indicated its unwillingness to prosecute the job.
>
> Therefore, the remaining portion of Phase I as it relates to submittals, Phase II, to the exten[t] it is incomplete and Phase III itself . . . is terminated for default based on Jamco's failure to make progress to insure timely completion and ultimate failure to meet contract completion date of May 21, 1990.

(R4, tab 20)

By letter dated May 25, the same day as the Termination for Default, Jamco made a request for $6,139.78 and 23 days for "increased costs and a performance time protraction" due to the VA's "failure to move cabinets" in the basement of a building where the new chiller was to be installed. (R4, tab 46) The Contractor's request, concerning an item scheduled for Phase III, was made on March 20, but the VA did not respond until April 12. COTR McQuade conceded that the biomedical staff was unwilling at the time to move the cabinets which occupied the space where the chiller was to be placed. (Tr. 349) But, he maintained that installation of piping and electrical work necessary to operate the system could have been completed during that period of time, and prior to placing the chiller. This sequence of work was challenged by Joe Mullins, however, as being as "hard to do" and less efficient. (Tr. 209-211; 401-02)

At the hearing, Guy Hankins testified that the chiller:

> involved a lot of money and a lot of work . . . and was going to [serve] the new operating rooms . . . it wasn't critical today, [but] since we only had 75 days . . . [on

Digitized by Google

> Phase III], it could have very easily have become critical. So we always plan to install those as soon as they come in because later on down the road it gets to be the critical items of work.

(Tr. 100)

There was also considerable discussion at the hearing concerning how much work remained to be done when the Contract was terminated and the time it would take the Contractor to complete it. Jamco's Contract Progress Schedule showed Phase III work, which commenced with demolition work, as requiring 71 days to complete. While Phase III represented 55% of the original project costs, the Contract Progress Report for the period ending May 31 shows a 77.7% "Actual Percent Completion" leaving only a 22.3% non-completion rate. (Exh. A-10) Eliminating materials paid for but not installed, the same report shows 64.7% of the "Work in Place" thus leaving a balance of 35.3%. COTR McQuade, who inserted handwritten percentage completion figures on Jamco's Contract Progress Schedule as work progressed had written that the Contractor was only 56% complete as of May 31, 1990. McQuade was unable to explain the discrepancy between this figure and the 64.7% figure derived from the May 31 Contract Progress Report. Asked where he got the 56% completion rate he responded "I cannot remember how I came up with the number." (Tr. 294)

On May 18, COTR McQuade estimated that it would require the Contractor at least 120 days to complete Phase III as well as any remaining items from the previous phases. By May 25, his estimate inexplicably changed and he now thought that it would take upwards of 250 days for the Contractor to complete. Asked how it arrived at this estimate, McQuade responded that "I don't remember . . . I can't answer that." (Tr. 314) Pressed on the matter, he said he "had some numbers and some—it's kind of mathematical calculations but I have no idea where they are now . . . I never put them in the record." (Tr. 347) For his part, CO Johnson testified that he concluded that it would take Jamco "200 plus days" to complete the Contract which was "the opinion that was given to us by the engineering department." (Tr. 385)

Johnson acknowledged that he had no evidence at the time of termination that Jamco was "either unwilling or unable" to finish the Contract, but was convinced that a follow-on Contractor would complete the Contract more expeditiously. (Tr. 397) In this connection, COTR McQuade had estimated that it would take any follow-on Contractor 180 days to complete the Contract. (Tr. 316) But McQuade, who believed for some unexplained reason that it was inappropriate to convey such information prior to a default termination, did not volunteer this estimate to the Contracting Officer and can not recall any questions concerning the matter. (Tr. 344-45) CO Johnson testified that he was not aware of this estimate prior to his termination decision. Asked if this information "would have altered your view at all in terms of your course of action," CO Johnson replied: "Yes, it would have." (Tr. 399)

Following termination, Jamco's surety, Contractor's Bonding and Insurance Co. (CBIC) took over the Contract and, in turn, hired Mike Sims Building Construction (Sims), a "very small contractor" to finish the Contract. (Tr. 110) Although Sims was working for CBIC, he reported to Jamco's Guy Hankins. (Tr. 111) In the takeover agreement entered into with CBIC on June 18, 1990, the VA granted 160 days from June 19, 1990 within which to complete the Contract. (R4, tab 12; tr. 112). CO Johnson said that in determining how many days were to be given to Sims, they took into consideration that:

> He was going to be brand new, he was unfamiliar with the whole hospital . . . [and there was a need to] indoctrinate him into the . . . VA way, to the rules and regulations. We had to allow time for the mobilization. Time to get his materials together and do the actual construction and then the punch list items.

(Tr. 367-68)

Three days were allotted for punch list work on Phase II, leaving 157 days for Phase III work which Jamco had originally planned to do in 71 days. Sims was not permitted to start Phase III work until July 10 because the "anesthesiology people couldn't vacate their existing workrooms" due to a "tremendous" surgical workload. (Tr. 313)

During performance of Phase III some 13 change orders and 2 time extensions were issued, which increased the Contract price by $94,563 and extended Contract performance time by another 145 days. (Exhs. A-11; B-1 to B-15) The bulk of the costs and time awarded concerned the installation of additional special electrical power outlets in operating rooms known as isolated power units (IPU's). These February 1991 changes (SA #15-21) were ordered, according to COTR McQuade, because "heart operations are

©1994, Commerce Clearing House, Inc.

Digitized by Google

changing dramatically year to year and we're required to have more electrical equipment ... [which] in an operating room means an isolated power unit." (Tr. 229) While the need for most of the additional IPU's "wasn't discovered until we got into the operating rooms" following termination, McQuade acknowledged that he was aware of desired IPU additions with respect to Operating Room #5 in April 1990. (Tr. 228-29) McQuade had prepared a letter to Jamco dated April 20, 1990, requesting a cost proposal but this was never signed or presented to the Contractor because of funding constraints at the time. (Tr. 230) These changes were issued during the takeover and ultimately became SA #20, which was executed on February 22, 1991, in the amount of $21,164 plus 20 days. (Exhs. A-11;B-14)

The Contract work was completed under the takeover agreement on August 9, 1991, 441 days after the termination of Jamco's Contract. (Tr. 131)

DISCUSSION

I.

GENERAL CONDITIONS, Section 1.59, DEFAULT (FIXED-PRICED CONSTRUCTION) (FAR 52.249-10) (APR 1984) provides, in pertinent part, that:

> (a) If the Contractor refuses or fails to prosecute the work ... with the diligence that will insure its completion within the time specified ... or fails to complete the work within this time, the Government *may*... terminate the right to proceed.
>
> * * * * *
>
> (c) If, after termination of the Contractor's right to proceed, it is determined that the Contractor was not in default, or that the delay was *excusable,* the rights and obligations of the parties will be the same as if the termination had been issued for the convenience of the Government. (emphasis added)

In its Notice of Termination, the VA Contracting Officer, perhaps unsure of whether the adjusted Contract period had actually expired, informed the Contractor that it was terminated for default "based on Jamco's failure to make progress to insure timely completion and ultimate failure to meet contract completion date of May 21, 1990." Whether the completion date had been reached when the contract was terminated is not central to the dispute here. That is, there is no question that as of May 21, the Contract was not complete and could not have been completed even if the date had been extended for additional change order time which Jamco claims was warranted.

The Contractor's inability to complete was not a result of disputed time associated with change order work, but flowed from its delayed start of construction. Jamco claims that it was unable to complete the Contract in a timely manner, principally because the "contracting officer failed and refused, in violation of the contract and contrary to this agency's previous practices, to allow Appellant access to the site and to proceed with work thereby causing unavoidable delays." (App. Br. at 13) It argues that the "provisions of the contract as to submittals were contradictory," pointing to provisions "allowing the contractor to proceed at his own risk." Jamco cites *Vogt Brothers Mfg. Co. v. United States* [9 CCF ¶ 71,991], 160 Ct. Cl. 687 (1963) for the proposition that "[c]ontradictory provisions are generally construed against the party who drafted the provisions." In further support of its position, the Contractor argues that based on "previous experiences" with respect to the other two contracts it had at the Albuquerque Medical Center, it believed it could proceed with demolition while it "completed the necessary submittals." (App. Br. at 14) The Government responds that there is no evidence that Appellant relied in its bid on an interpretation which would permit construction prior to submittals, an interpretation which is, in any event, "totally unreasonable based on the language" of the specifications and Amendment No. 1 thereto. The Government further argues that Appellant "did not establish any prior course of dealing" with respect to VA submittal/construction practices. (Gov't Br. at 31-32)

We find the Government's arguments to be persuasive. The evidence as to how the Contractor bid the Contract is vague and indefinite at best. In order to recover under the rule of *contra proferentum,* a Contractor must show that he relied on that interpretation at the time it bid the contract. *Snack Time Foods, Inc.,* VABCA No. 3729, 93-2 BCA ¶ 25,825 *citing Fruin-Colnon Corporation v. United States* [36 CCF ¶ 75,923], 912 F. 2d 1426, 1430 (Fed. Cir. 1990). Jamco's passive and acquiescent conduct at the preconstruction meeting, where the Government reiterated and emphasized the "all submittals before construction" requirement, does nothing to bolster Jamco's contention that it had interpreted the Contract in a different manner at the time it bid the job. In addition, Jamco's own Contract Pro-

Digitized by Google

gress Schedule shows the initial four weeks devoted to submittals, with demolition work beginning only in the fourth week on October 30. By its own plan 21 calendar days were exclusively devoted to submittals with no construction activity planned. (In its brief, Appellant has dismissed this 21 day period as simply "attempt[ing] to cooperate with the Contracting Officer by agreeing to a schedule delaying start." (App. Br. at 15))

Nor can we find that the interpretation now proffered by Appellant is a reasonable one. The original solicitation divides the work into three phases, with Phase I devoted solely to SUBMITTALS. The Contract provides that the "submittal process must be completed prior to the start of construction." In response to a prospective bidder's specific question as to whether Phase I could "be accomplished while Phase II and III are in progress," the VA responded in Amendment No 1, "*No, Phase I must be completed before Phase II can start ....*" (emphasis added)

This language is clear and unequivocal. *See Wiggins Plumbing & Heating Co., Inc.*, VABCA No. 2937, 90-1 BCA ¶ 22,461; *Gaffny Plumbing & Heating Corp.*, VABCA No. 1820, 86-2 BCA ¶ 18,987. At best, Appellant's construction of "boiler plate" language stating that work done prior to submittal approval is done "at the Contractor's risk" creates a patent ambiguity rather than the latent ambiguity present in the *Vogt Brothers* case. When a contractor is confronted with a "discrepancy of significance, he must consult the Government's representatives if he intends to bridge the crevasse in his own favor." *Beacon Construction Co. v. United States* [9 CCF ¶ 72,018], 314 F.2d 501, 504 (Ct. Cl. 1963). The "existence of a patent ambiguity *in itself* raises the duty of inquiry, regardless of the reasonableness *vel non* of the contractor's interpretation." *J.F. O'Healy Construction Corp.* VABCA Nos. 2784, 2858, 91-1 BCA ¶ 23,320 at 116,995, *citing George E. Newsom v. United States* [29 CCF ¶ 82,417], 676 F.2d 647, 649 (Ct. Cl. 1982).

Although the Government eventually allowed the Contractor to begin work on December 11, 1989, prior to completion of the submittal process, Appellant's erroneous contract interpretation produced a 42 day delay in its Contract Progress Schedule. It was this 42 day delay in the original 180 day Contract (Jamco calculates the delay as 61 days measuring from the Notice to Proceed) that created the hole from which the Contractor was never able to extricate itself. Jamco concedes as much in its brief when it states that "there was no way to submit a revised progress schedule that was credible without some rational adjustment to performance time to reflect the initial delay in providing access to the work site." (App. Reply Br. at 27)

In addition to the initial construction delay, the Contractor has also pointed to certain changes and stop work orders by the Government which it claims extended the performance time and hence are an excuse to the default. Although it was granted 42 days under Supplemental Agreements for changes and stop work orders, it maintains that Contract performance was delayed even more, principally for 23 days due to the Government's failure to move cabinets promptly to permit the chiller installation. Another 15 days of delayed Contract performance is claimed with respect to plastering problems. An examination of the record, however, reveals that the Appellant has not persuasively shown that the Contract performance was in fact extended as claimed. Indeed, in the case of the chiller delay, Guy Hankins' testimony conceded that the "work wasn't critical" but only that it "could very easily have become critical." With respect to other claimed delays he was also unsure that the Contract performance period had been extended, saying he wouldn't know "without sitting down and doing a critical path."

The burden is on the Appellant to establish the existence of excusable delay. *Associated Refrigeration and Air Conditioning Inc.*, VABCA Nos. 1970, 2141, 86-2 BCA ¶ 18,932. General statements alleging delay "absent any showing through use of updated CPM schedules, Logs or credible and specific data or testimony, will not suffice to meet the burden." *Preston-Brady Co., Inc.*, VABCA Nos. 1892, *et al.*, 87-1 BCA ¶ 19,649 at 99,520. There must be more than a simple showing that some cause could have delayed the contract completion work." *Santa Fe, Inc.*, VABCA Nos. 1943-46, 84-2 BCA ¶ 17,341 at 86,411. In short, "[t]here must be evidence to show the objective impact of such cause on the work ... the Appellant has the burden of establishing by a preponderance of the evidence not only the existence of ... delay, but also the extent to which completion of the contract work as a whole was delayed thereby." *AB-Tech Construction, Inc.*, VABCA No. 1531, 82-2 BCA ¶ 15,897 at 78,823-11. We conclude that Appellant has not met that burden of establishing excusable delay sufficient to obviate its default status.

©1994, Commerce Clearing House, Inc.

II.

The more important and difficult question presented, however, is not the default status of the Contractor, but whether the VA properly exercised its discretion in deciding to terminate the Contract. Appellant argues vigorously that the default termination was an abuse of discretion founded on manifestly erroneous information. For its part, the Government argues that the Contracting Officer "considered alternatives to terminating for default," and "properly exercised his discretion by carefully evaluating the performance under the Contract and considering most of the factors set forth in FAR 49.402-3(f)." It maintains that the Board should not substitute its judgment for that of the Contracting Officer who acted reasonably in light of what was known "at the time the decision was made." (Govt Br. at 28-29)

We begin our analysis by noting that:

> The default clause does not say that the Government "shall" or "must" terminate the contract in the event of default, only that the Government "may" terminate it. Not only is the contracting officer to consider whether or not the default is excusable, but the regulations require him to consider at least seven factors in addition to the default in deciding whether or not to terminate the contract. "The existence of discretion is undeniable." *Schlesinger v. United States* [12 CCF ¶ 81,097], 182 Ct. Cl. 571, 581 390 F.2d 702, 707 (1968). If the contracting officer was improperly influenced by plaintiff's competitor or by anyone else to terminate the contract for default rather than to exercise his own independent judgment in light of the factors set out in the regulations, it would represent an abdication rather than an exercise of his discretion.

Fairfield Scientific Corporation v. United States [26 CCF ¶ 83,881], 611 F.2d 854, 862 (Ct. Cl. 1979).

In *Darwin Construction Company, Inc. v. United States* [33 CCF ¶ 75,063], 811 F.2d 593, 596 (Fed. Cir. 1987), the court reversed a contract appeals board decision which had held that it "could not inquire into the motives or judgment of the contracting officer in electing to terminate the contract for default, once the Government determined that the contractor was in technical default." It quoted with approval lower court and earlier Court of Claims decisions that held "while the contracting officer had the discretionary authority to terminate the contract, 'the exercise of that discretion must be fair and reasonable, not arbitrary or capricious.'" *Darwin* 811 F. 2d at 597 (citations omitted).

As our Board said in *Executive Elevator Service, Inc.*, VABCA No. 2152R, 87-3 BCA ¶ 20,083:

> *Darwin* ... makes clear the authority of Boards of Contract Appeals under the Contract Disputes Act of 1978 to set aside terminations for default where they find that the contracting officer has not acted "fairly and reasonably," *i.e.*, where his action was "arbitrary and capricious."
>
> The Court specifically ruled that, in order to overturn a default termination, the Board need not require another layer of proof that the contracting officer acted in bad faith. In our opinion, this does not change the well established rule that Government officials are presumed to have acted properly in their official capacities (that has always been a rebuttable presumption); that the right of contracting officers to terminate for default is a discretionary authority; and that Boards of Contract Appeals will not substitute their discretion for that of the contracting officer (Boards had consistently ruled that, while they will not substitute their judgment or discretion for that of the contracting officer, they will examine the circumstances and determine whether there was an abuse of that discretion, *i.e.*, was it exercised fairly and reasonably).

The exercise of discretion involves more than a *pro forma* check off of factors drawn from FAR 49.402-3(f). It presupposes an active and reasoned consideration of available and sometimes contradictory information. Various factors must be evaluated and the totality of circumstances weighed by the Contracting Officer in arriving at a decision which "has the most serious consequences for a contractor." *Executive Elevator Service*, VABCA No. 2152, 87-2 BCA ¶ 19,849 at 100,438. While that decision ultimately reached may not be the one that the Board would have made, it will not be disturbed if it is the product of genuine consideration of the relevant information at hand.

In the exercise of this independent judgment, it is both permissible and natural for a contracting officer to seek the opinions of others concerning matters which ultimately help shape his decision. *Nuclear Research Corporation*, 814 F.2d 647 (Fed. Cir. 1987). But a contracting officer may not abdicate his responsibility by accepting any opinion offered without subjecting it to some analysis—particularly where he is, or should be,

Digitized by Google

aware of information which calls that opinion into question.

The need for scrutiny is heightened in the case before us where the Contracting Officer, administering his first contract following completion of schooling for this position, relied heavily upon the advice and opinion of a Technical Representative who possessed limited contracting experience, and who was encountering his first "performance problems" in contract administration.

Finally, see *Monaco Enterprises v. United States,* 907 F.2d 159, 9 FPD ¶ 88, at 3, 1990 WL 86270 (Fed Cir. 1990) where the Federal Circuit in an unpublished decision overturned a default termination where there was "no showing that the contractor was unable or unwilling to perform, that the work was urgently needed, or even that a substitute contractor was likely to complete the system *more* expeditiously."

With these principles in mind, we now turn to the Contracting Officer's consideration of FAR 49.402-3(f)(4) which directs him to consider:

> The urgency of the need for the supplies or services and the period of time required to obtain them from other sources, as compared with the time delivery could be obtained from the delinquent contractor.

In this connection, the Contracting Officer testified that he concluded termination would be in the best interest of the Government:

> [b]ecause of the seriousness and the demand for the surgical suites and we felt like that the take-over would be a *very short period of time and it would* . . . finish in *a very timely manner.* (emphasis added)

The need for surgical suites appears self evident. To reach a fair and reasonable judgment, necessarily requires some determination as to the amount of time it would take either Jamco or a take-over Contractor to complete the work. Any estimate of the time it would take Jamco to finish the project was initially dependent on deciding how much had been completed to date. Relying on a 54.8% completion rate for the end of April, which he "just sort of round[ed] down" to 50%, the Contracting Officer made no attempt to ascertain what had been completed during May or to reconcile contradictory (and essentially accurate) information submitted by the Contractor four days prior to the termination action which showed a 63% completion rate.

Nor does there seem to have been any comparison by the CO of Jamco's Phase II progress once construction actually began with its own Progress Schedule for that phase. While it was somewhat behind its Phase II schedule, its actual progress tends to support Jamco's general thesis that it was the delayed start of construction rather than construction performance itself which was the root of its failure to complete.

VA Estimates of completion time for Jamco were equally suspect and unexamined. On May 18 the COTR was estimating it would take 120 days for Jamco to complete the remainder of the project for which the Contractor had scheduled 71 days. Seven days later the COTR's estimate had more than doubled to 250 days by some method that he was at an utter loss to explain. The record discloses no inquiry on the part of the Contracting Officer to examine the reasons for these wildly disparate estimates, but only an uncritical acceptance of the longer time period proffered by the COTR.

If the way in which the Contracting Officer reached his conclusion about how much time it would take Jamco to finish is suspect, the methodology by which he determined that another contractor would take a "very short period of time . . . to finish in a very timely manner," is completely unexplained, let alone justified. The COTR, who had concluded that it would take any follow-on contractor 180 days to complete, was never questioned about the matter. This is of critical importance here, where the Contracting Officer has testified that had he known of this estimate it would have altered his view about his "course of action."

Nor has the Government advanced any evidence of support for its other purported rationale for termination: that the Contractor would abandon the project because of pending liquidated damages. We observe, first, that the amount of potential liquidated damages was dependent on an estimate of how much Jamco had completed to date and how long it would take to finish. We need not reiterate the Contracting Officer's deficient inquiry into this subject. Second, the record itself is devoid of any evidence supporting abandonment by Jamco. Indeed, the Contracting Officer testified that, at the time of termination, he had no evidence that Jamco, which had two other ongoing and apparently successful projects at the hospital, was either "unable or unwilling" to finish the Contract.

We thus conclude that the Contracting Officer abused his discretion by failing to make

©1994, Commerce Clearing House, Inc.

Digitized by Google

an adequate inquiry prior to terminating the Contractor for default.

DECISION

For the foregoing reasons, the appeal of the termination for default in VABCA-3271 is granted and is converted into a termination for the convenience of the Government. In VABCA-3516T, the appeal of the claim for convenience termination costs, the Appellant is awarded $60,004 as stipulated by the parties, together with interest as authorized under the Contract Disputes Act.

[¶ 26,406] Allied Painting & Decorating Co.

ASBCA No. 43287, October 1, 1993. Contract No. F04666-85-C-0017.

Procedure, Boards—Reconsideration—Arguments Already Considered.—A housing and maintenance contractor's motion for reconsideration of a decision involving an issue of whether the contractor was entitled to reimbursement of state sales taxes paid on materials used in performance was denied, because the contractor merely reiterated arguments that were fully considered in the original decision. The contractor's motion simply recapitulated and cited selective findings of fact from the original decision while ignoring other findings.

For the appellant: Robert E. Losch, P.C., Washington, D.C., by Robert E. Losch. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Capt. Wayne D. Loosbrock, USAF, Trial Attorney.

Before ELMORE, RUBERRY, and RIISMANDEL, Administrative Judges.

ELMORE, Administrative Judge: Appellant has moved for reconsideration of the Boards's decision of 8 July 1993 in the above-captioned appeal. The Government has responded in opposition.

Appellant contends the Board erred in determining

> [T]he Appellant "bears the obligation to determine if a waiver of state . . . sales tax is available before it submits its bid"

and in concluding

> that by "[a]ccepting Allied's interpretation of paragraph 1.17 we would negate and make inexplicable and useless" subpart (b) of FAR Clause 59.229-3, Federal, state, and Local Taxes (APR 84), which states that "the contract price includes all applicable . . . State, and local taxes."

The Board has reviewed the appellant's arguments in support of its motion and finds no new matters which were not fully considered in reaching the original decision. Appellant's motion simply recapitulates and cites selective findings of fact from the original decision while ignoring other findings and is found not to be persuasive.

Appellant contends that the Board erred in a number of its findings of fact. The Board has reviewed these findings and finds the reported errors inconsequential to the decision. However, for clarity of the record we make the following changes:

Finding 11—the reference to "penalties" is deleted and substituted with "interest."

Footnote 2 is revised to read, "The attachments referred to at R4, tab 11 are attached to Mr. Losch's letter of 5 September 1991 and found in the Board's correspondence file." (Neither Mr. Losch nor the Government argues the attachments affect the Board's decision and the Board, upon reviewing them in light of appellant's reconsideration motion, has found them inconsequential).

Finding 19 is found to be accurate and no change is required. The claim letter states, in pertinent part, "The amount of the claim is revised from $117,353.27 to $127,847.26. The reason for the claim increase of $10,493.99 is that in submitting the original claim we failed to include 15% for overhead and profit on the California Sales Tax and interest assessed on materials purchased under Contract Item No. 1."

Appellant has further contended:

> The Board, in sustaining Appellant's claim for sales taxes assessed on the cost of reimbursable materials under Contract Item No. 2, stated that such reimbursement was "subject to compliance with the provisions of FAR 31.205-41(a)(2) and (b)(3)." The provisions cited by the Board appear to be inapplicable. Subpart (a)(2) relates to taxes "upon which a claim of

Digitized by Google

illegality or erroneous assessment exists'. Subpart (b)(3) pertains to taxes "from which exemptions are available to the contractor directly, or available to the contractor based on an exemption afforded the Government". In the instant appeal, there was no claim of illegality or erroneous assessment, and no exemption from sales tax was available directly to the Appellant or to the Government. The Board also erred in not allowing interest on the sales tax assessed by the State of California on the reimbursable materials under Contract Item No .2.

The Board revises it original reference to FAR 31.205-41(a)(2) and (b)(3) by deleting the references to (a)(2) and (b)(3) and substituting "as applicable."

Addressing appellant's reference to interest, the Board notes the matter was remanded to the parties for settlement of quantum which includes interest, if applicable. Should the parties be unable to reach settlement on that portion of the appeal which the Board sustained, then appellant need only notify the Board of the impasse and file an appeal for quantum.

Except as amended above, the appellant's Motion for Reconsideration is denied and the Board's original decision is affirmed.

[¶ 26,407] JEM Development Corporation

ASBCA No. 45912, October 5, 1993. Contract No. N62467-88-C-2743.

Liquidated Damages—Amount—Penalties.—The assessment of liquidated damages against a contractor under a construction contract to repair identified transformers at a military facility was proper, despite the contractor's contention that the liquidated damages provision constituted an unenforceable penalty, because there was no indication that the liquidated damages bore no reasonable relation to potential damages for delay. The government selected the rate of liquidated damages from its contracting manual, which was a part of the government's procurement regulations. The government's use of the manual was presumed to be proper because the very purpose of the manual was to establish a reasonable estimate of the potential loss that the government was expected to incur as a result of any delay. The proper use of the manual provided a sufficient basis on which to infer that the liquidated damages rate was reasonable.

Liquidated Damages—Propriety of Assessment—Negotiated Amount.—A contractor's contention that liquidated damages were not intended in view of the fact that the amount of such damages was not negotiated by the parties was rejected, because the parties were not required to negotiate the clause. When the government issues an Invitation for Bids, it contains the terms the government is requesting offers on. When a contractor returns its bid, it is making an offer containing the terms of the Invitation for Bids. Negotiation on any particular clause is not required to make it effective.

For the appellant: Daniel T. Moore, Popular Bluff, Missouri. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Anthony M. Dowdle, Trial Attorney, Naval Facilities Engineering Command, Washington, D.C.

Before STEMPLER and SPECTOR, Administrative Judges.

STEMPLER, Administrative Judge: This is a timely appeal from a contracting officer's decision refusing to return $4,000 in liquidated damages assessed under the subject contract. Appellant has elected to proceed pursuant to Rule 12.3. A hearing was held and both parties have filed briefs. The Contract Disputes Act is applicable.

FINDINGS OF FACT

1. On 29 September 1989, as a result of sealed bidding, the Navy and JEM Development Corporation (JEM) entered into contract No. N62467-88-C-2743. The firm fixed-price construction contract in the amount of $82,000 called for JEM to repair and paint identified transformers and associated gear at the Naval Air Station Complex, Key West, FL. The contract called for performance to commence on 13 October 1989 and to be completed by 10 February 1990. The con-

©1994, Commerce Clearing House, Inc.

Digitized by Google

tract provided that for every calendar day JEM failed to complete the work within the time specified in the contract, JEM would be assessed $100 in liquidated damages. The $100/day figure was arrived at by using the NAVFAC Contract Manual, P-68, which sets $100/day as the liquidated damages to be charged for contracts of this size and type (R4, tabs 1, 2; exh. G-2; tr. 17, 23).

2. The contract work involved a four-step procedure: (1) cleaning the rust by brushing or sanding, (2) applying a rust inhibitor by brush or spray, (3) applying a primer by spray, and (4) applying a final paint coat by spray (tr. 12-13, 50-51).

3. On 4 February 1990, 6 days before the completion date of the contract, JEM started work (exh. G-1).

4. On 25 February 1990, JEM's superintendent reported to the Government inspector that it was unable to perform spraying on transformers 41, 43 and 44 (T-41, 43, 44) because a ship was docked at this location and he was concerned overspray would hit the ship. The report indicates wind speeds to have been 15-20 mph (exh. G-1; tr. 17-18).

5. On 26 February 1990, the Government inspector spoke to JEM's supervisor about the problem at T-41, 43 and 44. JEM was concerned that overspray would be carried to the ship and JEM would be held responsible. The inspector saw no problem, for if JEM considered it to be too windy, JEM could build windbreaks, as it was required to do by §09010, ¶3.9.3 of the specification if winds were in excess of 20 mph (tr. 18-20; R4, tab 1).

6. On 26 February 1990, the Government called JEM's president (Mr. Dilks) in Missouri to discuss the possibility of JEM's workers going home for a week. The Government said that was fine with it, but that liquidated damages would continue to accrue. Mr. Dilks said that he would fight that matter at a later date but that JEM's work was being held up by the presence of a ship near some of the transformers and JEM was concerned that the wind would blow overspray onto the ship (R4, tab 16).

7. On 26 February 1990, JEM performed step 3 on T-44, even though the ship was still at the same location. JEM's report describes the wind conditions as "windy 15 to 20 mph and gusty" (exh. G-1).

8. Sometime in this timeframe, JEM's superintendent spoke to JEM's president about the overspray problem. Mr. Dilks testified that putting up wind screens was discussed but it was decided not to because on another contract a windscreen had not been effective and JEM had to pay for some overspray damage. It was Mr. Dilks' testimony that the ship was not close enough to the transformers to be a problem unless the wind was blowing at a certain undetermined speed (tr. 38-39, 54-55).

9. On 27 February 1990, JEM's on-site superintendent (Mr. Minchew) informed the Government inspector that JEM's workers were going home for two weeks. The inspector testified that Mr. Minchew stated the reason for leaving was that he missed his family. Mr. Minchew did not testify (R4, tab 17; tr. 21-22; exh. G-2).

10. On 28 February 1990, the Government wrote JEM stating that liquidated damages were being accrued and requesting JEM advise the Government immediately as to when the workers would return (R4, tab 18).

11. Much of the work JEM performed when it returned could have been performed during the period its workers had returned home (tr. 23, 64; exh. G-1).

12. On 14 March 1990, JEM returned to work. On this date, JEM's report to the inspector indicates that JEM could not spray at T-43 and T-44 because the ship was located there and would not be moved until 21 March. The wind conditions were described by JEM as "wind" (tr. 22-23; exh. G-1).

13. On 15 March, JEM performed steps 3 and 4 on T-41. The wind conditions were described as "wind" by JEM's report (exh. G-1).

14. JEM's report of 16 March 1990 states that it was unable to work on T-43 and T-44 because of the presence of the ship. JEM reported wind conditions as "windy" (exh. G-1).

15. No wind was reported by JEM on 18 or 19 March, but JEM still reported on 19 March that it was unable to work on T-43 and T-44 because of the presence of the ship (exh. G-1).

16. The ship left on 21 March 1990 and JEM performed the work on T-43 and T-44. JEM's report described the wind conditions as "wind" (tr. 63; exh. G-1).

17. On 22 March 1990, work under the contract was accepted (R4, tab 21; tr. 17).

18. JEM performed work on other transformers on each date that it reported it could not work on T-43 and T-44 (exh. G-1).

19. JEM never painted under this contract using windscreens (tr. 59).

Digitized by Google

20. The Government inspector inspected the site twice a day during the period contract performance was open and filled out daily reports (tr. 24).

21. On 23 July 1990, the Government wrote JEM, stating that liquidated damages would be assessed for 40 days at the contract rate of $100/day unless JEM could provide evidence that a time extension was justified (R4, tab 28).

22. On 30 July 1990, JEM responded, stating:

> I have contended, and still do so, that the major reason for delay on this contract was caused by the Navy. The case in point being that the contract required sandblasting material of which I was unable to find a source. Since you continued to require that I furnish the material you wanted, I made numerous requests to Ens. Green for a source and he continually refused to do so. This delay, caused by you, in itself resulted in not only additional contract time extension requirement in excess of 40 days but increased costs.

(R4, tab 29)

23. The issue of responsibility for the sandblasting material delay was decided against JEM in *JEM Development Corporation,* ASBCA No. 42644, 92-1 BCA ¶ 24,451.

24. On 9 March 1992, JEM requested a contracting officer's decision on the liquidated damages issue, stating:

> Please be advised that the contractor requests the Contracting Officer's final decision on the following matters:
>
> 1. $4,000.00 Liquidated damages imposed. The imposition of liquidated damages was both arbitrarily [sic] unreasonable, liquidated damages constitute a penalty and have no reasonable relationship to any damages actually suffered by the government.

(R4, tab 46)

25. On 29 February 1993, the contracting officer issued his decision, denying the claim for the return of liquidated damages (R4, tab 49).

26. On 29 March 1993, JEM filed a timely notice of appeal (R4, tab 50).

CONTENTIONS OF THE PARTIES

JEM's position is that the liquidated damages should be returned, principally because these liquidated damages are a penalty and are unenforceable. JEM contends that the $100/day was not reasonable in the context of the contract and does not bear a reasonable relationship to the anticipated damages to the Government from a failure to complete the contract in a timely manner. Additionally, JEM argues that the parties did not intend to provide for liquidated damages because the amount was not negotiated. JEM also contends that the liquidated damages should be returned because the Government allegedly did not suffer any actual damages. Finally, JEM contends that an unspecified portion of the 40 days of delay is attributable to the presence of the ship near T-41, T-43 and T-44.

The Government denies that the liquidated damages are a penalty, contending that they were a reasonable forecast of the potential delay damages. The Government denies that actual damages are relevant but contends that nonetheless, it has demonstrated damage. The Government argues that the presence of the ship did not prevent progress on the contract and that the 40 day delay was due to JEM's actions.

DECISION

We will uphold liquidated damages provisions when they are fair and reasonable attempts to fix compensation for anticipated loss caused by delay in completion, if at the time of contracting actual damages are uncertain in nature and amount and if the amount bears a reasonable relationship to the anticipated loss. *Rivera-Cotty Corporation,* ASBCA No. 32291, 86-3 BCA ¶ 19,148. JEM has the burden of coming forward with evidence that the amount of the liquidated damages was an unreasonable forecast of the potential damages and that it bore no reasonable relation to potential damages for delay. *Jennie-O Foods, Inc. v. U.S.* [24 CCF ¶ 81,814], 580 F.2d 400 (Ct. Cl. 1978); *Rivera-Cotty, supra.* In the appeal before us, the Government selected the rate of liquidated damages from its contracting manual, P-68, for the nature and size of the contract. We have had experience with manuals from which a liquidated damage rate is selected for use in the contract and in particular, P-68. It is not necessary that the Government tailor-make the liquidated damages rate for each contract. *Young Associates, Inc. v. U.S.* [18 CCF ¶ 81,980], 471 F.2d 618 (Ct. Cl. 1973); *Brooks Lumber Company,* ASBCA No. 40743, 91-2 BCA ¶ 23,984. P-68 has been held to be a part of the Government's procurement regulations and we presume that resort to it is reasonable since its very purpose is to establish a reasonable estimate of the potential loss the Government is

©1994, Commerce Clearing House, Inc.

Digitized by Google

expected to incur as a result of delay. Independent proof is not necessary to establish the reasonableness of the liquidated damages rate. The proper use of P-68 is *prima facia* evidence that the liquidated damage rate was reasonable. *Brooks, supra; Orbas & Associates,* ASBCA Nos. 32922, *et al.,* 87-3 BCA ¶ 20,051. In the appeal before us, P-68 was properly applied and JEM has not persuaded us that the $100/day was an unreasonable forecast at the time of contracting. The actual damages shown by the Government (inspection and record keeping by the inspector) are administrative in nature. Administrative costs can be the basis for liquidated damages because it is a readily foreseeable cost if delay occurs but the amount is difficult to estimate accurately. *Rivera-Cotty, supra.*

JEM's contention that the Government did not incur actual damages is both factually incorrect and legally irrelevant. Actual damages need not be proven. *Rivera-Cotty, supra.*

JEM's contention that the parties did not intend to provide for liquidated damages because the amount was not negotiated between the parties is also without merit. There is no allegation that the liquidated damages clause was not properly included in the contract or that JEM was unaware of it. When the Government issues an Invitation For Bid, it contains the terms it is requesting offers on. When a contractor returns its bid, it is making an offer containing the terms therein. Negotiation on any particular clause is not required to make it effective. Indeed, we are unaware of any negotiation over any of the clauses of the contract, as is proper since the contract was awarded pursuant to sealed bidding.

While JEM's complaint and its position at the hearing were that the presence of the Government ship was responsible for an unspecified portion of the 40 days of delay, this position is all but abandoned in its brief. JEM's total argument on the point consists of:

> Although Appellant may be able to make a case that the delay in completing the job was not the fault of the Appellant, or at least not entirely Appellant's fault and thus there was an excusable or justifiable delay.
>
> Appellant does not see the need to pursue this course of action because the imposition of liquidated damages in this case cannot be sustained on behalf of the Government under any theory.

(App. br. at 2)

Even if this theory was not abandoned, it would fail. JEM started work only 6 days before completion was due. It failed to make any attempt to screen the ship from the painting and, indeed the painting continued at times even with the ship present. We are unconvinced that there was a causal connection between the delay and the presence of the ship.

CONCLUSION

The appeal is denied.

[¶ 26,408] Jorgensen Forge Corporation

ASBCA Nos. 45846, 45847, 45848, 45967, 45968, October 5, 1993. Contract Nos. N00024-86-C-4226, N00024-87-C-4322, N00024-89-C-4004.

Modifications—Bar to Claims—Summary Judgment.—A government motion for summary judgment regarding a contractor's claims for additional manufacturing costs was denied, despite the government's contention that the claims were the subject of a release, because there remained factual issues as to whether the release covered the additional manufacturing costs. In support of its position that the release was understood by both parties not to cover any claim for additional manufacturing costs, the contractor presented four affidavits.

For the appellant: Perkins Coie, Seattle, Washington, by Richard W. Oehler. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Robert Lieblich, Trial Attorney, Naval Sea Systems Command, Arlington, Virginia.

Before LUSSIER, RUBERRY, and SPECTOR, Administrative Judges.

LUSSIER, Administrative Judge: The Government has moved for summary judgment in these appeals contending that the claims for additional manufacturing costs underly-

Digitized by Google

ing all five of these appeals are the subject of binding, unqualified releases executed by appellant. Its motion contends that there are no material facts in dispute, and that the only question before the Board is one of interpretation of the language of the releases in the contract modifications, a question of law upon which it is entitled to judgment in its favor. Appellant has filed an opposition to the Government's motion for summary judgment. The appellant's opposition is supported by four affidavits in support of its position that the releases which appellant was asked to execute were understood by both parties not to cover any claim by appellant for additional manufacturing costs. Thereafter, by letter to the Board, the Government recognized that appellant "appears to have raised an issue of material fact." The letter expresses the Government's disagreement with the "version of history" set forth in the appellant's opposition and requests that a hearing be held on, and discovery be limited to, the release issue, and that proceeding with the merits of the claims await the Board's decision on the release issue.

DECISION

The Government's letter appears to be an implicit withdrawal of its motion for summary judgment, although it has not explicitly withdrawn that motion. In any event, we cannot grant the motion for summary judgment as it is evident there are genuine issues of material fact in dispute. The Board will grant summary judgment only if there is no genuine dispute as to a material fact and the moving party is entitled to judgment as a matter of law. *Mingus Constructors, Inc. v. United States* [33 CCF ¶75,126], 812 F.2d 1387, 1391 (Fed. Cir. 1987); *Willa Brokenbough Parties, Inc.*, ASBCA No. 26457, 82-2 BCA ¶15,929. All inferences drawn from the relevant facts must be resolved in favor of the non-moving party. *Dry Roof Corporation*, ASBCA No. 29061, 86-2 BCA ¶18,972.

The Government's motion to bifurcate the hearing and limit discovery, as well as an outstanding motion by appellant to compel discovery, will be dealt with by a separate Board order. The Government's motion for summary judgment is denied.

[¶ 26,409] Healy Tibbits Builders, Inc.

ASBCA No. 45269, October 4, 1993. Contract No. N62477-89-C-0053.

Payments—Anti-Assignment Statutes—Bankruptcy Proceeding.—An assignment of a government contract that resulted from an order of the bankruptcy court was excepted from the effects of the anti-assignment statutes as an assignment by operation of law, because the assignment did not create the risk that the government would be subject to multiple lawsuits. The purpose of the prohibition against unauthorized assignments of government contracts is to protect the government from fraud and multiple litigation. In making a determination of whether the anti-assignment statutes are applicable to a given assignment, the threshold question is whether the assignment is susceptible to the evils against which those statutes were enacted.

Payments—Anti-Assignment Statutes—Waiver by Course of Dealing.—The government waived its right to demand the protection of the anti-assignment statutes with respect to an assignment authorized by an order of a bankruptcy court, because the government acknowledged the assignment by virtue of its conduct. Prior to awarding the instant contract, the government knew that the contractor was in bankruptcy proceedings. The government was also aware that the contractor had entered into a sale agreement whereby another firm, the assignee, had agreed to purchase all its contracts. The contractor agreed to continue to perform the contract until the assignee obtained the necessary licenses. After the purchase of the contractor and the approval by the bankruptcy court, the contractor's personnel, equipment, and principal office remained essentially intact for the performance of the instant contract. Given the government's knowledge of the contractor's bankruptcy and the sale agreement, coupled with its acknowledgment of the working relation of the assignee and contractor during performance of the contract, the board determined that the government had waived compliance with the anti-assignment statutes.

For the appellant: Watt, Tieder, Killian & Hoffar, McLean, Virginia, by Robert G. Watt. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and John Dietrich, Trial Attorney.

Before YANNELLO, RUBERRY, and SPECTOR, Administrative Judges.

Introduction; Background

YANNELLO, Administrative Judge: Following the filing of the complaint, the Government, in lieu of an answer, filed a motion to dismiss this appeal for lack of jurisdiction. Essentially, the Government contends that the party contracting with the Government was Healy Tibbits Construction Company (hereinafter "HTC"), which continued to be the entity represented throughout contract performance as the contractor. Thus, the Government at no time had a contract with appellant Healy Tibbits Builders, Inc. (hereinafter "HTB"), no privity exists, and appellant has no standing to bring the appeal. Morever, if, at some time during performance, the contract was assigned to HTB, the Government was not informed and any purported assignment is asserted to be contrary to the anti-assignment statutes, 31 U.S.C. § 3721 (formerly § 203) and 41 U.S.C. § 15. In support of its motion, the Government cites, *inter alia, CBI Services, Inc.,* ASBCA No. 34983, 88-1 BCA ¶ 20,430.

Appellant has responded in opposition; the Government has not filed any reply.

SUMMARY FINDINGS

1.a. On 5 June 1989 the Government issued a solicitation for the construction of a Magnetic Silencing Facility Type III Degaussing Range at the Norfolk, Virginia, Naval Air Station.

b. On 7 August 1989, the Government informed HTC that, at a bid price of $2,533,000, it was the low bidder on the solicitation. The Government requested financial and other data demonstrating that HTC was responsible.

2.a. On 14 August, as a consequence of the insolvency of its parent company, Raymond International Builders, Inc. (hereinafter "Raymond"), HTC filed a petition for Chapter 11 relief in the U.S. Bankruptcy Court for the Southern District of Texas.

b. In response to the Government inquiry, HTC, on 31 August, provided lists of current and completed contracts, references, and a written notice that HTC's financing would be funded, bonded, and backed by Weeks Marine, Inc. (hereinafter "Weeks").

3. On 12 September, Weeks, Federal Insurance Company, Raymond and HTC as debtor-in-possession, entered into a Purchase and Sale Agreement whereby Weeks agreed to acquire all of the existing contracts of HTC, as well as those which had been bid but not yet started, and to complete these jobs. The attached list included the bid on the subject contract; likewise, HTC agreed to assign all such contracts. The Agreement further provided that, between the date of its execution and until approval by the Bankruptcy Court (or until Weeks could obtain all necessary licenses, whichever came later), HTC would continue to perform all active contracts. The effective date of the Agreement, subject to Bankruptcy Court approval, was 31 August.

4.a. On 13 September 1989, HTC, and its parent, Raymond, filed motions with the Bankruptcy Court to, *inter alia,* transfer HTC's executory contracts.

b. Thereafter further issues of responsibility were discussed between the Government, HTC, and Weeks. On 14 September, Weeks responded to Government inquiry and furnished the Purchase and Sale Agreement of 12 September, under which Weeks would acquire HTC, and its contracts, as of 31 August, subject to approval of the Bankruptcy Court. (Exh. A-7) The Government requested from Weeks additional financial information, and assurance of contract funding, which were furnished.

5. Having determined responsibility, the Government awarded the contract to HTC on 26 September 1989.

6. The Purchase and Sale Agreement of 12 September (retroactive to 31 August) was amended on 11 October. (This amendment presumably addressed the previously-inactive affiliate of Weeks, then known as Deepwater Construction Co., Inc. or "Deepwater." See also para. 7 below.)

7. On 11 October, the Bankruptcy Court issued its Order authorizing the sale of HTC's assets and assignment of its executory contracts to Weeks and Deepwater pursuant to the parties' Purchase and Sale Agreement dated (retroactively) 31 August as amended on 11 October. (Exh. A-11) The court's Order stated, in part:

> 4. Healy Tibbitts [Construction] be, and it hereby is, authorized, in accordance with the terms of the Sales Agreement, to assume and assign all of its rights and obligations under its executory contracts ... to Weeks or Deepwater, as the case may be, pursuant to § 365 of the Bankruptcy Code; *provided, however,* that
>
> (a) in the event Deepwater is the assignee of [HTC] executory contracts ..., Weeks and Deepwater shall be jointly and sever-

Digitized by Google

ally liable for ... satisfying future obligations thereunder and

(b) in the event that Weeks is the assignee of [HTC] executory contracts ..., Weeks shall be responsible ....

8. On 13 October, pursuant to the Bankruptcy Court order, HTC and Deepwater entered into an agreement whereby HTC was to be owned and operated by Deepwater, and HTC would continue to perform the contracts until Deepwater could obtain necessary licenses, at which time the contracts would be assigned to and performed by Deepwater (then, with a name change in which HTC would cooperate, doing business as HTB). (Exh. A-12, para. 6)

9. On 19 October, Deepwater amended its certificate of incorporation and changed its name to Healy Tibbits Builders, Inc. (Exh. A-13)

10. Following the purchase of HTC, its personnel, equipment, and principal office remained essentially intact for performance of the contract, with, however, different shareholders and board of directors of the entity doing business as (d/b/a) HTB.

11.a. From November 1989 to March 1991, invoices for payment were submitted by the contractor to, and approved by, the Government in the name of "HTC" by the former HTC project manager, and current HTB manager, Alan England.

b. During contract performance (for example, in exchanges between mid-1990 to mid-1991), the Government addressed various correspondence to, and received various correspondence from "HTB," including Alan England.

12. Beneficial occupancy of the contract facility occurred on or about 10 August 1990.

13. On 3 March 1991, a Government Contract Specialist, Iris Jenkins, furnished HTB with copies of regulations regarding novation agreements. Subsequently, counsel for HTB called the Specialist and suggested that such an agreement would be costly to his client. No Novation Agreement has been executed. (Exh. G-5)

14. a. On 12 March 1991, appellant submitted its claim for equitable adjustments, in the amount of over $2 million. The parties discussed the issuance of a final decision by the contracting officer.

b. In April 1991, the Government issued a unilateral modification assessing liquidated damages for 115 calendar days (citing a scheduled completion date of 17 April 1990 and beneficial occupancy on 10 August 1990) at $1,050 per day.

15. During the latter part of 1991, an audit was conducted by the Defense Contract Audit Agency (DCAA).

16. The parties continued to correspond while awaiting issuance of a final decision. The contractor requested a copy of the DCAA audit report but was advised this would not be released pending issuance of the final decision. The Government raised, for the first time, the issue of contractor identity in early April 1992. Appellant, through counsel, responded on 10 April 1992, summarizing the corporate transactions and providing copies of relevant documents, and offering any additional information or documentation which the Government may request, including any form of Novation Agreement if necessary.

17. A decision denying all but one portion of appellant's claim was issued on 24 September 1992, addressed to HTB.

18. In late October and mid-November 1992, the Government suggested that, pursuant to the DCAA audit, it would investigate whether there was any improper pricing in the subject claims, as well as in another unrelated contract ("Oceanside").

19. On 30 October 1992, HTB filed its notice of appeal to the Board; the complaint was filed on 7 December and, on 10 December, appellant served its first discovery request upon the Government.

DECISION

It is now well established that assignments which occur by operation of law are excepted from the provisions of the anti-assignment statutes, and that assignments incident to court-ordered bankruptcy proceedings constitute such assignments by operation of law. *See, e.g., Goodman v. Niblack,* 102 U.S. 556, 26 L.Ed. 229 (1880); *Keydata Corp. v. United States,* 205 Ct. Cl. 467 (1974); *Broadlake Partners,* GSBCA 10713, 92-1 BCA ¶ 24,699. As these cases illustrate, in determining whether the anti-assignment statutes apply the threshhold question is whether the assignment is susceptible to the evils against which the anti-assignment statutes were enacted; here, it is not. Since the assignment of the subject contract to appellant [1] was pursuant to Order of the bank-

[1] The assignment was to Weeks' affiliate, Deepwater which then, also as part of the same agreement which underlay the assignment, changed its name to, and is now doing business as, HTB. This

©1994, Commerce Clearing House, Inc.

Digitized by Google

ruptcy court, the Government will not likely be subject to suit by multiple claimants. Moreover, appellant did not merely seek to acquire a claim, or even potential claim, by virtue of the assignment; rather, it is the party directly interested inasmuch as it in fact performed much (indeed almost all) of the contract (and the Government was well aware at the time of award to HTC that the contract would be assigned to and largely performed by another).

Accordingly, we find the assignment here in issue, being one by operation of law, to be excepted from the anti-assignment statutes.[2]

The facts in this appeal are clearly distinguishable from those in *CBI, supra,* relied upon by the Government. That appeal involved an alleged assignment between the initial contractor, a subidiary company, and the assignee, another affiliate of the same parent company which was undergoing a restructuring. No copy of the alleged assignment was furnished to the Board and the appellant/assignee acknowledged that it did not have a document either authorizing or prohibiting the assignment of the contract. The assignment apparently occurred by virtue of a voluntary transfer of assets (unrelated to insolvency and/or the satisfaction of creditors and without cover of formal bankruptcy proceedings). As such, the Board there found that the assignment was not one by operation of law but rather fell squarely within the parameters of the anti-assignment statutes.

Moreover, it is also well established that the Government can waive the protection and procedures of the anti-assignment act by virtue of its overall course of conduct including knowledge and recognition of, and assent, to the assignment. *See, e.g. Tuftco Corp. v. United States* [27 CCF ¶ 80,097], 222 Ct. Cl. 277 (1980); *Patterson v. United States* [11 CCF ¶ 80,178], 173 Ct. Cl. 819 (1965); *Vertical Aviation Transport Systems, Inc.,* ASBCA No. 18266, 74-1 BCA ¶ 10,617; *Radiatronics, Inc.,* ASBCA No. 15133, 75-2 BCA ¶ 11,349; *Rodgers Construction, Inc. and Federal Insurance Company,* IBCA 2777 *et al.,* 92-1 BCA ¶ 24,503; and *CBI Services Inc., supra.*

In *CBI,* the Board addressed the question of whether the Government had waived compliance with the anti-assignment statutes by treating appellant as the contractor. In this respect *CBI,* and the cases cited above, establish that it is not any one event but rather a course of dealing which will determine whether Government conduct constitutes such a waiver, whether intentional or not. Among the events which may be examined are contract payments and modifications, delivery to and acceptance by the Government of completed work, and general course of dealing.

Here, we consider the Government's knowledge of HTC's bankruptcy and agreements for its purchase, subject to approval in bankruptcy proceedings, in evaluating HTC's bid prior to entering into the contract, as well as the Government's frequent acknowledgment of HTB as the contractor during performance, together with HTB's performance and completion of the contract, and acceptance by the Government, as establishing a course of conduct which constituted a waiver of the provisions of the anti-assignment statutes.

Thus, we conclude that HTB is the proper appellant here and the Board has jurisdiction to proceed.

(Footnote Continued)

mere change of name does not affect appellant's rights under the assignment. *See, e.g., Mancon Liquidating Corporation,* ASBCA No. 18304, 74-1 BCA ¶ 10,470. As an administrative matter, the Board chooses to retain the above caption of this appeal, rather than expanding to a fuller description of Deepwater Construction Co., Inc., *sub nom* Healy Tibbits Builders, Inc. *See, e.g., Bermite Division of Tasker Industries,* ASBCA No. 18280, 74-1 BCA ¶ 10,625 at 50,412.

[2] We note the Government's contention in its moving brief that:

> There is no evidence in the record, nor allegation in the complaint, that the apparent assignment of the contract to Healy Tibbits Builders, Inc. was the result of a bankruptcy decree, ... or any other transfer by operation of law. Thus the appellant has failed to allege a necessary basis for jurisdiction, and the Board should dismiss this appeal. [Br. at 6]

This argument is somewhat curious in view of the materials, including a proposed Purchase Agreement, furnished to the Government before award of the contract (see findings 2.b. and 4.b), and relied upon by the Government in determining financial responsibility of the bidder, not to mention the information furnished to the Government when the issue of contractor-identity was first raised (after contract completion, see finding 16). In any event, appellant's response to the Government's motion (to which the Government has not replied), and the attachments thereto, clearly provide such evidence and raise such contentions.

Digitized by Google

CONCLUSION

The Government's motion to dismiss for lack of jurisdiction is denied.

[¶ 26,410] Mindeco Corporation

ASBCA No. 45207, September 28, 1993. Contract No. DLA700-90-C-1924.

Defaults, Government Acts Excusing—Bad Faith—Proof of Intent.—A default termination was not set aside for bad faith, because there was no proof that the contracting officer's decision was motivated by bad faith. In order to rebut the presumption that public officials act conscientiously in the discharge of their duties, there must be "well-nigh irrefragable" proof of bad faith. "Well-nigh irrefragable" proof has been equated with evidence of some specific intent to injure. The record of the termination of a contract to deliver valves showed no evidence of any personal animosity on the part of the contracting officer toward the contractor or its owners, officers, or employees.

Defaults, Procedure—Government Decision—Best Interests of the Government.—A contracting officer reasonably concluded that it was in the best interests of the government to default-terminate a contract for the delivery of valves because the contractor's performance of the contract was poor. The contractor alleged that the termination was not in the best interests of the government, because the contracting officer put her subjective beliefs ahead of the objective interests. However, the contractor failed to meet the original delivery date and received four extensions, extending the delivery schedule from five months to 22 months, and had not completed the contract by the final delivery date.

Defaults, Procedure—Government Decision—FAR Factors.—The termination for default of a contract for the delivery of valves was not an abuse of discretion, because the contracting officer adequately considered all the factors in Federal Acquisition Regulation 49.402-3(f), either explicitly or implicitly. The contractor cited a 1992 ASBCA decision in which a termination for default had been overturned because the government had waived the delivery date. Moreover, in the cited case, the contractor had demonstrated a willingness and ability to perform. In this case, however, the delivery date had not been waived, and the contractor had not shown that it was willing and able to perform.

Defaults—Decision to Terminate—Administrative Discretion.—Although a contractor contended that the termination of its contract for default was improper because the contracting officer did not believe that she had other options, the termination was upheld because the record showed that the contracting officer knew that the contract could be extended but chose to terminate it instead. The record showed that the delivery date had been extended once by the contracting officer after she took over responsibility for the contract. The contractor had a long history of nonperformance, and the contracting officer's precipitance in issuing the termination did not prove that she did not exercise discretion.

For the appellant: Jerry M. Kaplan, General Counsel. For the government: Philip L. Brady, Trial Attorney, Defense Construction Supply Center (DLA), Columbus, Ohio.

Before TUNKS, RIISMANDEL, and RUBERRY, Administrative Judges.

TUNKS, Administrative Judge: This is an appeal from a contracting officer's decision partially terminating a contract for default for failure to deliver a quantity of valves. The parties have requested that this appeal be processed pursuant to Rule 11.

FINDINGS OF FACT

1. On 17 July 1990, the Government awarded a fixed-price supply contract for 223 valves to appellant. At award, the contract price was $89,133 and the delivery date was 14 December 1990. (R4, tab 1)

2. The contract incorporated FAR 52.249-8, entitled Default (Fixed Price Supply and Service) (APR 1984), by reference.

©1994, Commerce Clearing House, Inc.

Digitized by Google

That clause provides, in pertinent part, as follows:

(a)(1) The Government may, subject to paragraphs ... (d) below ... terminate this contract in whole or in part if the Contractor fails to—

(i) Deliver the supplies ... within the time specified ...;

* * *

(d) If the failure to perform is caused by the default of a subcontractor ... and if the cause of the default is beyond the control of both the Contractor and subcontractor, and without the fault or negligence of either, the Contractor shall not be liable for any excess costs for failure to perform ....

(R4, tab 1)

3. The contract did not contain a Progress Payments clause or an Advance Payment clause (R4, tab 1).

4. FAR 49.102(d) provides as follows:

(d) *Reinstatement of terminated contracts.* Upon written consent of the contractor, the contracting office may reinstate the terminated portion of a contract ... if it has been determined in writing that—

(1) Circumstances clearly indicate a requirement for the terminated items; and

(2) Reinstatement is advantageous to the Government.

5. FAR 49.402-3, entitled "Procedure for default," provides, in pertinent part, as follows:

(c) Subdivision (a)(1)(i) [of the Default clause] ... covers situations when the contractor has defaulted by failure to make delivery of the supplies ... within the specified time. In these situations, no notice of failure or of the possibility of termination for default is required to be sent to the contractor before the actual notice of termination (but see paragraph (e) below).

* * *

(e)(1) If termination for default appears appropriate, the contracting officer should, if practicable, notify the contractor in writing of the possibility of the termination....

(f) The contracting officer shall consider the following factors in determining whether to terminate a contract for default:

(1) The terms of the contract and applicable laws and regulations.

(2) The specific failure of the contractor and the excuses for failure.

(3) The availability of the supplies or services from other sources.

(4) The urgency of the need for the supplies ... and the period of time required to obtain them from other sources, as compared with the time delivery could be obtained from the delinquent contractor.

(5) The degree of essentiality of the contractor in the Government acquisition program and the effect of a termination for default upon the contractor's capability as a supplier under other contracts.

(6) The effect of a termination for default on the ability of the contractor to liquidate guaranteed loans, progress payments, or advance payments.

(7) Any other pertinent facts and circumstances.

6. On 9 January 1991, appellant requested an extension of the delivery date from 14 December 1990 to 28 June 1991 in exchange for a $250 reduction of the contract price (R4, tab 7). Appellant did not allege any excusable causes for its default. The Government issued Modification P00001 granting the extension on 14 January 1991 (R4, tab 2).

7. On 26 August 1991, appellant requested an extension of the delivery date from 28 June 1991 to 31 October 1991 in exchange for a no-cost cancellation of an open purchase order (R4, tab 8). No excusable causes were offered in support of the request. The Government issued Modification P00002 granting that extension on 27 August 1991 (R4, tab 3).

8. On 28 January 1992, appellant requested an extension of the delivery date from 31 October 1991 to 24 April 1992 in exchange for a $250 reduction of the contract price (R4, tab 9). Appellant did not allege any excusable causes for its failure to meet the 31 October 1991 delivery date. The Government issued Modification A00001 extending the delivery date as requested on 17 March 1992 (R4, tab 10).

9. By 21 February 1992, appellant had delivered 150 of the 223 valves required by the contract (Complaint, tab 2).

10. After determining that the Government no longer needed the valves, the contracting officer asked appellant if it would agree to a no-cost cancellation (R4, tab 13). Appellant refused (R4, tab 14).

11. On 2 June 1992, Ms. Spradlin, a newly assigned contracting officer, issued a show

Digitized by Google

cause notice to appellant in connection with the 24 April 1992 delivery date (R4, tab 15).

12. In reply, appellant requested an extension of the delivery date from 24 April 1992 to 31 July 1992 in exchange for a $250 reduction of the contract price (R4, tab 17). Appellant did not assert any excusable causes for its default. In her affidavit, Ms. Spradlin indicated that she extended the contract instead of terminating it out of concern that the Government might have waived the delivery date. (Spradlin Affidavit)

13. Ms. Spradlin issued Modification P00003 on 22 July 1992 extending the delivery date to 31 July 1992 (R4, tab 5).

14. Appellant did not deliver the 73 remaining valves by 31 July 1992 (R4, tab 6).

15. Ms. Spradlin's Memorandum of 10 August 1992 set forth the facts surrounding the default. Among other things, she indicated that there were 29 valves in stock, that there were no open purchase requests for the item and that the supplies were still required. The re-order point for the valves was -66. (R4, tab 22)

16. Ms. Spradlin terminated appellant's contract for default on 12 August 1992 without issuing a show cause notice (R4, tab 6).

17. On 12 August 1992, appellant forwarded a letter from its subcontractor to the Government which stated that the failure to deliver was "... due to incorrect machining with our outside vendor."

18. During a telephone conversation on 14 August 1992, appellant requested Ms. Spradlin to reinstate the contract on the basis that it could ship the valves within the week. Ms. Spradlin declined. (R4, tabs 26, 27)

19. Appellant timely appealed the termination and this appeal followed.

20. As of the filing of this appeal, the contracting officer has not issued a decision assessing reprocurement costs against appellant.

DECISION

Appellant argues that the default should be set aside because the contracting officer acted in bad faith, abused her discretion and failed to follow proper procedures in terminating the contract. In particular, appellant alleges that:

(1) the termination was not in the best interests of the Government;

(2) the contracting officer was not sufficiently familiar with the prior dealings between the parties to make the termination decision;

(3) the contracting officer did not follow the procedures set forth in FAR 49.402-3(f)(1)—(6);

(4) the contracting officer did not follow the proper procedures for reprocuring the valves;

(5) the contracting officer did not exercise discretion in making her decision as required by *Schlesinger v. United States* [12 CCF ¶ 81,097], 390 F.2d 702, 182 Ct.Cl. 571 (1968);

(6) The contracting officer abused her discretion by not reinstating the contract after the termination.

We uphold the termination for default. Each of appellant's arguments will be discussed below.

BAD FAITH

There is a well-established legal presumption that public officials act "conscientiously in the discharge of their duties." *Liebrach v. United States,* 147 Ct.Cl. 605, 612 (1959). In order to rebut that presumption, a contractor must present "well-nigh irrefragable proof" of bad faith. *Knotts v. United States,* 128 Ct.Cl. 489, 492, 121 F.Supp. 630, 631 (1954). Irrefragable proof has been equated with evidence of some specific intent to injure. For example, in *Knotts, supra,* evidence that a Government employee had been discharged so that her job could be given to a personal friend of the chief of the section was sufficient to render the discharge unlawful.

In this case, there is no evidence indicating that Ms. Spradlin's decision to terminate the contract was motivated by bad faith. Nothing in the record suggests that she terminated the contract to get rid of appellant, to give the contract to another contractor or to harm appellant financially, to name a few possibilities. There is no evidence of any personal animosity on the part of Ms. Spradlin towards appellant or any of its owners, officers or employees. *Cf. Darwin Construction Company, Inc. v. United States* [33 CCF ¶ 75,063], 811 F.2d 593 (Fed. Cir. 1987). This argument is without merit.

BEST INTERESTS OF THE GOVERNMENT

Appellant argues that the termination was not in the best interests of the Government because Ms. Spradlin "put her own subjective beliefs ahead of the objective" in termi-

©1994, Commerce Clearing House, Inc.

Digitized by Google

nating the contract. Given appellant's poor performance on this contract, Ms. Spradlin reasonably concluded that termination was in the best interests of the Government. The contract required delivery of 223 valves five months after award. After failing to deliver by the original delivery date, appellant requested and received four extensions, extending the delivery schedule from five months to 22 months. At no time did appellant assert that its failure to deliver was excusable. As of 21 February 1992, appellant had delivered 150 of the 223 valves. Between 21 February 1992 and 31 July 1992, the final delivery date, appellant did not deliver any valves. Following termination, appellant indicated that it could deliver the remaining 73 valves by 24 August 1992. On balance, we conclude that appellant's ability to deliver the remaining valves by 24 August 1992 was highly questionable. In addition, the Government had some valves in stock, its need for the valves fluctuated and there were no pending purchase requests for the item at termination.

Appellant further alleges that Ms. Spradlin was not sufficiently knowledgeable about the prior dealings between the parties, particularly issuance of Modifications P00001, P00002 and A00001, to make the termination decision. At the outset, we note that even if she had had no prior involvement with the contract, she could have properly terminated the contract based upon her review of the files and the advice of her staff. However, the termination decision was not Ms. Spradlin's only involvement with this contract. She issued the 2 June 1992 show cause notice relating to appellant's failure to meet the 24 April 1992 delivery date, made the decision to extend the 24 April 1992 delivery date rather than terminate the contract and issued Modification P00003 extending the delivery date to 31 July 1992. We conclude that Ms. Spradlin was sufficiently knowledgeable to make the termination decision.

FAR 49.402-3(f)

Appellant alleges that Ms. Spradlin either failed to consider or inadequately considered the factors listed in FAR 49.402-3(f)(1)-(6). Contracting officers have considerable discretion in making the termination decision and the failure to consider one or more of these factors does not necessarily invalidate a default termination. *Ruffin's A-1 Contracting, Inc.*, ASBCA No. 38343, 90-3 BCA ¶ 23,243; *Lafayette Coal Company*, ASBCA No. 32174, 89-3 BCA ¶ 21,963. Ms. Spradlin considered all the factors either explicitly or implicitly with the exception of a portion of factor number six. We conclude that she adequately considered the factors listed in FAR 49.402-3. Each factor will be discussed individually below.

(1) *Contract, Applicable Laws and Regulations.* Appellant criticizes Ms. Spradlin's decision because she "considered only the Contract Delivery Date of July 31, 1992." Under paragraph (a)(1)(i) of the Default clause, the Government acquired the right to terminate the contract immediately upon appellant's failure to deliver on 31 July 1992. No other delivery date was relevant to her determination.

(2) *Contractor's Specific Failure and Excuses.* Appellant argues that the termination was improper because the Government failed to determine if there were excusable causes before terminating the contract. Under paragraph (a)(1)(i) of the Default clause, the Government is not required to issue a show cause notice before terminating a contract for failure to deliver. *Sermor, Inc.*, ASBCA 29046, 87-1 BCA ¶ 19,568. Although FAR 49.402-3(d)(1) recommends that the contracting officer contact the contractor before issuing an (a)(1)(i) termination where practicable, it is not required. In this case, Ms. Spradlin knew that the delivery schedule had been extended four times at appellant's request and that appellant had not made any deliveries between 21 February 1992 and 31 July 1992. She also knew that appellant had not asserted any excusable causes for its failure to meet the 31 July 1992 delivery date or any of the prior delivery dates in its response to the earlier show cause notice. In its brief, appellant does not argue that the default was excusable. We conclude that Ms. Spradlin acted appropriately in terminating the contract without issuing a show cause notice.

(3) *Availability from Other Sources.* Appellant finds fault with the termination because Ms. Spradlin did not check to see if the valves were available from other sources before terminating the contract. In her Memorandum, she indicated that the Government had some valves in stock and that there were no open purchase requests. The Rule 4 documents also reflect that the need for the item fluctuated. The contracting officer adequately considered this factor in making her decision.

(4) *Urgency of Need and Time Required to Obtain.* Appellant argues that the contracting officer did not consider this factor. Ms. Spradlin's Memorandum indicated that the Government had 29 valves in stock, that

Digitized by Google

there were no open purchase requests and that the re-order point level was −66 valves. We conclude that the Government did not have an urgent need for the valves and could have obtained them from stock if necessary.

(5) *Essentiality of Contractor.* This was an $89,133 contract for 223 valves. Appellant was not essential to the Government acquisition program and the contracting officer's failure to include a statement to that effect in her Memorandum is without significance.

(6) *Guaranteed Loans, Progress Payments or Advance Payments.* The contract did not provide for advance payments or progress payments. Ms. Spradlin did not discuss guaranteed loans in her Memorandum.

Appellant cited *S.T. Research Corp.*, ASBCA No. 39600, 92-2 BCA ¶ 24,838, for the proposition that failure to consider the factors listed in FAR 49.402-3(f) constitutes an abuse of discretion. *S.T. Research* is not applicable here. The termination in *S.T. Research* was overturned because the Government had waived the delivery date. Here, the Government did not waive the delivery date. In *S.T. Research*, the contractor maintained "intensive efforts" to complete the work after the delivery date had passed from which the board concluded that the contractor was willing and able to perform. Appellant did not make "intensive efforts" to complete the contract either before or after the delivery date passed. The board criticized the contracting officer for not considering certain of the factors in terminating the *S.T. Research* contract, but the criticism was generated by the unique facts of that case, namely the contractor's demonstrated willingness and ability to perform. Those facts were not present here.

REPROCUREMENT

Appellant argues that the contracting officer failed to follow the proper procedures for reprocuring the valves. No contracting officer's decision has yet been issued assessing excess reprocurement costs against appellant. We do not have jurisdiction over this matter until such a decision is issued and appealed to the board.

EXERCISE OF DISCRETION

Citing *Schlesinger v. United States* [12 CCF ¶ 81,097], 390 F.2d 702, 182 Ct.Cl. 571 (1968), appellant argues that the termination was improper because the contracting officer "believed that her only option was to issue an immediate default termination." The record does not support this assertion. Ms. Spradlin issued a show cause notice in connection with appellant's failure to meet the 24 April 1992 delivery date and extended the delivery date to 31 July 1992. In her affidavit, she indicated that she extended the contract rather than terminate it because she was concerned that the Government might have waived the delivery date. The fact that there were only two days between Ms. Spradlin's termination Memorandum and the termination does not prove that she did not exercise discretion in terminating the contract. It more likely reflects appellant's long history of nonperformance Ms. Spradlin had no more reason to rely on the promised 24 August 1992 delivery date than on the earlier delivery dates appellant had predicted and failed to meet. We conclude that Ms. Spradlin knew that the contract could be extended, but chose to terminate it instead.

REINSTATEMENT

Citing the fact that it offered to deliver the valves by 24 August 1992, appellant argues that Ms. Spradlin abused her discretion by refusing to reinstate the contract pursuant to FAR 49.102(d)(2). As stated above, appellant's performance was so poor that it is difficult to see how reinstatement would have been advantageous to the Government. The length of time it took Ms. Spradlin to reach this decision is irrelevant.

The appeal is denied.

[¶ 26,411] Kimmins Contracting Corporation

ASBCA No. 44513, October 6, 1993. Contract No. F09650-89-C-0081.

Interpretation of Contracts—Electrical Work—Additional Wiring.—A building renovation contractor was not entitled to additional compensation for having to provide extra wiring to accommodate a relocated deionizer, even though it argued that government-furnished deionizer wiring was spliced and was not long enough for the relocation use, because the contract required the contractor to provide adequate electrical wiring for the government-furnished equipment. The contract did not positively represent that electrical

©1994, Commerce Clearing House, Inc.
Digitized by Google

wiring was sufficient for the entire deionizer relocation. The contract required the contractor to verify and site-check all dimensions and to provide wire, cable, and conduit for all government-furnished equipment. The contractor had the pre-bid opportunity to ascertain the spliced condition and length of the existing deionizer wiring and thus to determine the extent to which it would need to provide additional electrical wiring.

For the appellant: George R. Robinson, Vice President. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Maria S. Kavouras and Michael F. Copley, Trial Attorneys.

Before JAMES, RUBERRY, and RIISMANDEL, Administrative Judges.

JAMES, Administrative Judge: This appeal arises from the contracting officer's denial of appellant's claim for an alleged Government change in deionizer electrical connections. We have jurisdiction under the Contract Disputes Act of 1978, 41 U.S.C. § § 601 *et seq.* Pursuant to Board Rule 11, the parties agreed to submit this appeal for decision on the record, consisting of the Rule 4(a) file, tabs 1-25; appellant's exhibits A-A through A-E; respondent's exhibits G-1 to G-65; and the affidavits of 29 April 1993 (respondent) and 7 May 1993 (appellant). Both parties submitted briefs. We decide entitlement only.

FINDINGS OF FACT

1. On 16 August 1989 the parties entered into firm fixed price contract F09650-89-C-0081 ("contract 81") for the repair and renovation of the Robins Air Force Base, GA, plating shop, building 142 (R4, tab 1).

2. Contract 81 incorporated by reference, *inter alia,* the FAR clauses 52.233-1 "Disputes" (APR 1984), 52.243-4 "Changes" (AUG 1987), and 52.245-2 "Government Property (Fixed Price Contracts)" (APR 1984), the last of which required the Government to deliver to the contractor:

> Government furnished property described in the ... specifications together with any related data and information that the Contractor may request and is reasonably required for the intended use of the property

and which required the contractor, if the Government-furnished property (GFP) is received in a condition not suitable for its intended use, to notify the contracting officer and

> as directed by the Contracting Officer and at Government expense, either [to] repair, modify, or return or otherwise dispose [of such property].

(R4, tab 1)

3. Contract 81's specification Section 01652, ¶ 2.3.4, required "Re-Installation of Deionized Water Unit complete and operational." Section 01005, ¶ 7, GOVERNMENT-FURNISHED PROPERTY, stated:

> Existing equipment in service shall be removed and relocated. The following is a list of Government furnished property and approximate amount: *ITEM* Deionized Water Unit *QUANTITY* One Package—Existing

(R4, tab 1).

4. Specification Section 17X, "Deionized Water System Installation Water Refining Company, Inc. DIH-18 High Flow Deionizer" in pertinent part provided:

> ¶ 1.2 Separation of these Specifications into Divisions and Sections is for convenience only and is not intended to establish limits of work.
>
> ¶ 1.3 ... The Contractor shall furnish all appurtenances necessary to properly install the equipment and place it in operation.
>
> * * *
>
> ¶ 2.1 The contractor shall install the Deionized Water System provided by the Government in accordance with the attached installation, operation and maintenance manual. The Contractor shall install all parts of the system including all tanks, valves, piping and controls. The system shall be installed such that, after the utility connections are made, the system shall operate in accordance with the operation and maintenance manual.
>
> * * *
>
> ¶ 4.3 Electrical Work: Electrical equipment and wiring shall be in accordance with SECTION [16B]: ELECTRICAL WORK. Electrical characteristics shall be as indicated in the operation and maintenance manual ... any controls wiring required for controls and devices, but not shown on the electrical plans, shall be provided under this section.

(R4, tab 1, spec. § 17X).

Digitized by Google

5. Specification Section 13, "INSTRUMENTATION TECHNICAL REQUIREMENTS," provided:

¶ 1.5 Examination of the site: The Contractor shall make a thorough examination of the site .... All dimensions shall be checked and verified by the Contractor at the site.

* * *

¶ 4.4 .... Before installing any wire or conduit, the Contractor shall obtain the exact equipment requirements and shall install wire, conduit, tubing, piping, valves, fittings, controls and other items of the correct size for the equipment actually installed.

* * *

¶ 7.5.1.2 Wiring shall be from terminal to terminal with no splices.

(R4, tab 1)

6. Specifications Section 16A, "GENERAL REQUIREMENTS, ELECTRICAL," provided:

¶ 10.2 Except as otherwise specifically noted, automatic-control wiring ... are not included in this Division [16, including Sections 16A-16E] of the specifications, but shall be furnished and installed under other sections of the specifications. Control wiring not shown on the Contract Drawings shall be furnished under the other sections of the specifications.

(R4, tab 1).

7. Specification Section 16B, "ELECTRICAL WORK," provided:

¶ 7.3 Conduit installation: ... Install conduit parallel with or at right angles to ceilings, walls, and structural members.

* * *

¶ 9.1 The contractor shall make connections to all Government-furnished equipment as indicated in the Contract Documents to make it operate as intended, including providing miscellaneous items such as plugs, receptacles, wire, cable, conduit, flexible conduit, and outlet boxes or fittings.

(R4, tab 1).

8. The deionizer operation and maintenance manual depicted by diagrams and described in written instructions the existing electrical wiring harnesses and plugs connecting the deionizer control panel, receptacles, valves, sensors and connectors. Neither that manual nor any contract 81 plan or drawing was an electrical elementary diagram or schematic; none specified deionizer wire lengths. (R4, tab 1, spec. § 17X, pp. 31, 33-35, 37, 39-42, 47 and 54; complaint & answer, ¶ ¶ 11, 12)

9. Respondent originally received the deionizer "as separate, unassembled component parts with the electrical cables unattached ... the electrical cables were in bundles." Respondent assembled and connected those parts, replacing some over the years, which resulted "in some splices in the existing cable." (Exh. G-62, ¶ ¶ 2-3)

10. Contract 81 drawings depicted (a) the existing GFP deionizer occupying a 6′ by 8 1/2′ space, with its neutralizing tank 20 feet, and the balance of parts 15 feet, from building 142's south wall (R4, tab 1, dwg. D-8) and (b) the relocated GFP deionizer occupying a 25.5′ by 7 1/2′ space with its neutralizing tank three feet, and the anion and cation tanks 25 to 28.5 feet, from building 142's south wall (R4, tab 1, dwgs. PR-3, PR-15).

11. At pre-bid site visits (a) on 19 April 1989, appellant's George Robinson saw the deionizer control wiring unplugged and coiled, with no evidence of splices; he brought no photographic equipment to the site (exh. A-E, ¶ ¶ 7, 9; exh. G-60 at 27; Robinson aff. of 7 May 1993, ¶ 2) and (b) on 18 May 1989, appellant's Robert Moody probably photographed the deionizer control wiring installed in "panduits" at right angles and parallel to the ceiling. (Keene aff. of 29 April 1993, ¶ 4, photo. 3; Robinson aff. of 7 May 1993, ¶ 5). The record contains no evidence that appellant on 19 April 1993 asked respondent to uncoil the electrical wiring to permit measuring its length, or on 18 May 1993 measured the length of that uncoiled and installed wiring.

12. Appellant's 19 September 1990 submittal, "Proposed Disconnect and Reconnect of Deionized Water System," to respondent sketched the relocated deionizer components "in the vicinity shown on Drawing PR-15" approximately at the inter-component dimensions shown on that drawing (exh. G-64).

13. Prior to 17 October 1990 appellant's electrical subcontractor W.H. Howell & Associates (WHH) requested as-built drawings of the deionizer electric control wiring from appellant and appellant requested such drawings from respondent. Respondent provided no such drawings and told appellant that such drawings did not exist. (Exh. A-A, ¶ 9-10; exh. A-D, ¶ 7)

14. On 15 or 16 October 1990 Dennis Keene, respondent's construction manager,

©1994, Commerce Clearing House, Inc.

Digitized by Google

inspected the deionizer with Robin Sauer, appellant's quality control manager. Keene's notes stated: "Showed him where units were in operation." On the next day Keene met with Sauer, Dean Carter, appellant's project engineer, and appellant's subcontractors Blue Ridge Mechanical (BRM) and WHH. William H. Howell saw many splices in the deionizer control wiring. According to appellant, Keene instructed appellant:

> to relocate the electrical wiring leaving it in tact [sic] as much as practical. The consensus ... was the system should be moved in as large of pieces as possible as there were no as-built drawings available for interconnection and/or elementary wiring diagrams .... WHH ... was instructed to disassemble only the minimum required.

(R4, tab 21; exh. A-A, ¶ 12; exh. A-B, ¶ 3; exh. A-D, ¶ ¶ 9-10; exh. G-60 at 27). According to Keene:

> [A]n agreement was reached between me, Kimmins, BRM, and WHH to relocate the [deionizer] system ... keeping the electrical wiring intact as much as practicable, provided the Contract specification were met. I stressed that even if the wire ... was reused, it had to be installed in accordance with Contract specifications.

(Exh. G-1, ¶ 5; R4, tabs 3, 4) Appellant's affiants do not deny Keene's statement, "provided the Contract specifications were met."

15. Appellant's 17 October 1990 letter proposed a deionizer relocation procedure to respondent. Its steps 3 and 9 were to disconnect the control and/or instrumentation wiring, to identify each wire prior to disconnection to assure proper reconnection, and to "relocate (if necessary) and reconnect all previously disconnected electrical connections including ... control/instrumentation wire restoring it to its previously wired configuration" (R4, tab 5).

16. Respondent's 19 October 1990 letter to appellant concurred with all 12 steps in appellant's 17 October letter except step 1, which is immaterial to this dispute (R4, tab 6).

17. Respondent turned over the deionizer to appellant on 19 or 22 October 1990 (R4, tabs 4, 6).

18. Appellant relocated the deionizer, including electrical wiring, between 22 and 25 October 1990 and successfully tested it in accordance with the operation and maintenance manual on 25 October 1990, after which it was available for Government use (exh. A-A, ¶ 13; exh. A-B, ¶ 5; exh. G-14 to G-24; R4, tabs 4, 12, 16).

19. On 25 October 1990 Dennis Keene observed deionizer wiring not in accordance with the specifications. On 27 October 1990 Keene told Robin Sauer that the deionizer wiring was not acceptable because the wires were not long enough for the relocated deionizer, had splices, and the panduit trays were lying on top of other components unsupported, and not at right angles. Keene's post-relocation photographs showed deionizer panduits installed at random angles. (R4, tabs 2, 4, 7; exh. G-1, ¶ ¶ 9-11; Keene aff. of 29 April 1993, ¶ ¶ 6-7, photos 14-15).

20. On 30 October 1990 the contracting officer directed appellant to replace existing deionizer electric wiring containing splices and to install all wires with panduit trays, firmly attached, rigidly supported, and routed using 90 degree angles. Appellant considered this to be a change order, as stated orally at the 30 October meeting and on 13 November 1990 in writing. (Exh. G-35, ¶ 45.10; R4, tab 8)

21. Government contract administrator Gene Lee's 28 November 1990 letter to appellant stated that the electrical portion of the relocated deionizer did not comply with specification § § 16A, ¶ ¶ 2.1, 5.2, 5.4 and 17X, ¶ 2.1 and directed appellant to correct noted deficiencies (R4, tab 10).

22. Appellant replaced the deionizer wiring between 3 and 5 December 1990 with Government-furnished special cable (exh. G-42 to G-47).

23. Appellant's 18 December 1990 letter to Gene Lee asserted that the deionizer "was relocated and wired in exactly the same state as it was turned over to KCC. This was agreed to in writing by the Government" (R4, tab 11).

24. Keene's internal memorandum stated that as relocated, the distance from the control box to each control system was increased by several feet; appellant reused existing wiring to connect the control box to each valve or sensor; and the wiring was too short to be installed properly (R4, tab 12).

25. Appellant's 22 January 1991 letter to respondent requested $1,444.34 for installing the deionizer "electrical work a second time," which it said was a constructive change (R4, tab 18).

26. The contracting officer's 25 January 1991 letter to appellant stated that (a) the Government interpreted appellant's 17 October 1990 proposal to restore the deionizer "to its previously wired configuration" to "mean arrangement of connections, not physical condition of the wire"; (b) appel-

Digitized by Google

lant's "reconnection of control wiring was not identical with that existing prior to the" deionizer's transfer to appellant; (c) respondent's 19 October 1990 concurrence in appellant's 17 October 1990 procedures "does not alter Kimmins [sic] requirement to comply with the specifications" and (d) appellant's claim was without merit (R4, tab 16).

27. Appellant's 9 January 1992 letter to respondent sought $1,959.68 for replacing "the existing panduit and existing wiring" (R4, tab 18).

28. The contracting officer's 24 February 1992 final decision denied appellant's deionizer rewiring claim (R4, tab 25; complaint & answer, ¶ 23).

29. On 8 May 1992 appellant timely filed its notice of appeal of the foregoing contracting officer's final decision (complaint & answer, ¶ 24).

DECISION

Appellant argues that the deionizer wiring was Government-furnished property which was spliced and not long enough for the relocated use, except when installed at odd angles over deionizer components, and that its only duty was to install GFP wiring "as is," not to provide and install the specified unspliced wiring, supported, and parallel with or at right angles to the structure. Appellant tacitly abandoned its original "changed conditions" claim and now asserts four grounds for entitlement: (1) the GFP wiring was unsuitable for its intended use, of which appellant gave prompt notice to the Government; (2) respondent did not furnish reasonably required "related data," *viz.*, as-built electrical wiring drawings; (3) the specification was defective because the GFP deionizer electrical wires were too short; and (4) respondent's order to replace spliced electrical wiring installed at random angles was a constructive change.

Appellant has the burden of proving unsuitable GFP, *Dayron Corporation,* ASBCA No. 24919, 84-1 BCA ¶ 17,213 at 85,710, or defective specifications, *Celesco Industries, Inc.,* ASBCA No. 21928, 81-2 BCA ¶ 15,260 at 75,547, or constructive change by Government order to replace wires, *Jack Austin & Associates,* ASBCA Nos. 20574 *et al.,* 78-2 BCA ¶ 13,500 at 66,106.

Appellant's contention that the deionizer electrical wiring was GFP is correct (finding 9). However, it does not follow that appellant had no duty to provide electrical wiring. Contract 81 did not positively represent that GFP electrical wiring was sufficient for the entire deionizer relocation. Contract 81 required appellant to verify and site-check all dimensions and to provide "wire, cable, conduit" for "all Government-furnished equipment" (findings 5, 7). To the extent that unspliced GFP electrical wiring was insufficient to relocate the deionizer, contract 81 required appellant to provide electrical wiring conforming to the specifications.

Appellant argues that to relocate the deionizer it needed to have as-built wiring drawings. Appellant requested as-built electrical wiring drawings from respondent, but was told that none existed (finding 13).

Appellant knew that the relocated deionizer space was larger than its former space and the deionizer components were considerably farther apart (findings 10, 12) and contract 81 required it to provide and install wire, cable and conduit for Government-furnished equipment (findings 5, 7). From these facts one can deduce that the GFP electrical wiring was not sufficient for the relocated deionizer. On its 19 April 1989 pre-bid site visit appellant did not see the length of, and splices in, the "coiled" GFP wiring (finding 11(a)). At the 18 May 1989 pre-bid site visit appellant photographed the uncoiled, deionizer wiring installed in panduits at right angles and parallel to the ceiling (finding 11(b)). Appellant did not seek to uncoil the wiring to permit its measurement on 19 April 1989 or to measure it as uncoiled and installed on 18 May 1989. Appellant needed no as-built electrical wiring drawings to determine the spliced condition and lengths of GFP wiring, and suffered no harm by not obtaining them. Appellant had the pre-bid opportunity to ascertain the spliced condition and length of the existing deionizer wiring and thus to determine the extent to which it would need to provide additional electrical wiring. Appellant's arguments that the GFP deionizer wiring was defectively specified and unsuitable for its intended use are unsound.

Appellant argues that on 16 or 17 October 1990 Dennis Keene instructed appellant to leave the electrical wiring intact as much as possible (finding 14), and respondent concurred in writing with its 17 October 1990 procedure to "relocate (if necessary) and reconnect all previously disconnected electrical connections including ... control ... wiring restoring it to its previously wired configuration" (findings 15, 16). Thus, appellant tacitly argues, respondent nullified the contract 81 duty to provide and install wiring without splices and parallel with or at right angles to the building structure.

©1994, Commerce Clearing House, Inc.
Digitized by Google

Keene's statement "to relocate the system ... keeping the electrical wiring intact as much as practicable" did not represent that all GFP electrical wiring could be relocated intact, that splices were acceptable and that no additional wiring would be needed. His statement that "if the wire ... was reused, it had to be installed in accordance with Contract specifications" was unrebutted. (Finding 14) Appellant's procedure to restore the electrical wiring "to its previously wired configuration" respondent reasonably interpreted to "mean arrangement of connections, not physical condition of the wire" (findings 15, 26(a)). The record contains no special definition of configuration. "Configuration" means the "relative disposition or arrangement of parts." (Websters's Third International Dictionary Unabridged, 1971 Ed.) Respondent reasonably understood "previously wired configuration" to mean previously wired connections parallel with or at right angles to the building structure, as appellant had seen the wiring on 18 May 1989. Neither "keeping the electrical wiring intact as much as practicable" nor "to its previously wired configuration" could reasonably have meant that the GFP electrical wiring alone, installed at random angles without proper support, would satisfy contract 81's wiring requirements.

We hold that respondent did not waive the specification requirements for conforming electrical wiring, and that appellant failed to sustain its burden of proof on its claim.

We deny the appeal.

[¶ 26,412] Compania Petrolera Nacional

ASBCA Nos. 43041, 43839, 43887, September 30, 1993. Contract No. DLA600-90-D-1003.

Foreign Acquisitions—Currency Used for Payment—Exchange Rate.—The Honduran Central Bank's issuance of a new currency exchange rate triggered a Price Adjustment clause that was correlated to changes in the Bank's officially published rate, although the new rate did not entirely supersede the existing official rate, because the new rate was issued in the Bank's official capacity and was applicable to the transactions contemplated by the contract. During the term of a contract with a Honduran fuel supplier, a new Honduran government came to power and authorized the Central Bank to establish a new interbank currency exchange rate that would coexist with the official exchange rate. The new rate was intended to terminate a longstanding government policy of unofficially subsidizing petroleum prices. The interbank rate was consistent with the real value of the Honduran currency used for virtually all commercial transactions. The preexisting official rate was retained only for the purpose of paying the Honduran national debt.

For the appellant: Pillsbury, Madison & Sutro, Washington, D.C., by Dale Church, Howard Lipper, and Julia A. Soyars-Berman. For the government: Howard M. Kaufer and Cynthia E. Segal, Defense Fuel Supply Center (DLA), Alexandria, Virginia.

Before DICUS, RUBERRY, and RIISMANDEL, Administrative Judges.

DICUS, Administrative Judge: These appeals arise from a contract for the supply of fuel in Honduras. The disputes center on whether certain actions by the government of Honduras changed the currency exchange rate. The parties have elected to proceed under Rule 11.

FINDINGS OF FACT—GENERAL

The Contract

1. Contract No. DLA600-90-D-1003 was awarded to Compania Petrolera Nacional (hereinafter sometimes "COPENA") on 28 December 1989. The contract incorporated the RFP and called for delivery of fuel through January 1991. The estimated dollar value of the contract was $13,748,106 (R4, tabs 1, 3).

2. Prices in the contract were in dollars for each of 29 line items which called for an estimated quantity of fuel at specific locations with numbered zones. The contract included the clauses Economic Price Adjustment (DFSC 1986 May) and Upward Ceilings on Economic Price Adjustment (DFSC 1984 APR), which limited increases to 40 percent of the base price. Part C of the former clause provides as follows:

Digitized by Google

PART C

(a) The prices payable under this contract for listed items shall be the base price for the listed item, increased or decreased by the same number of cents, or fraction thereof, as measured in U.S. dollars as the increase or decrease in the price reported in the most recent official publication of the Acuerdo/Decredo up to and including the dates of delivery. In order to calculate the price escalation/deescalation authorized under this clause the Official Publication will be adjusted to reflect the currency rate between the U.S. dollars and the applicable countries' currency rate in effect on the date of the change.

(b) If any of the reference price tabulations requires quantity conversions for economic price adjustment provisions, then the conversion factors specified in the clause entitled EVALUATION OF BUNKER AND BULK OFFERS, shall apply, unless otherwise specified in the schedule.

(c) For administrative purposes only, the award price will be the base price as adjusted to reflect reference price changes to the date of award.

REFERENCE PRICE TABULATION

Item No. (listed items)	Name of publication	Heading under which reference price is published and name of product	Location where reference price is applicable	Method of delivery applicable to the reference price	Reference price as of _____ (date) (exclude all taxes)
Jet Fuel	Acuerdo No. 519-86 dated 15 Jul 86				
Diesel Fuel	Acuerdo No. 198-86 dated 12 Mar 86				
Gasoline	Acuerdo No. 198-86 dated 12 Mar 86				

All fuel items in Honduras have their prices controlled by government decree (Acuerdo) issued by the Office of the Department of Economy and Commerce of the Republic of Honduras. The following "Acuerdos" are in effect:

Acuerdo No. 198-86 dated 12 Mar 86 effective 15 Mar 86 established the maximum sales prices for all fuel items by product, by zone of the country, and by type of seller. This Acuerdo was amended by Acuerdo No. 519-86 dated 15 July 86 effective on 1 Aug 86 which changed the price of the Av-Jet fuel only.

(d) When there is a change in the Acuerdo/Decredo the equation to escalate/deescalate the reference price is as follows:

Subtract the old Acuerdo/Decredo from the new Acuerdo/Decredo to find the change in the Acuerdo/Decredo prices. The change in the Acuerdo/Decredo divided by the applicable exchange rate in effect at the time of the change in the Acuerdo/Decredo equals adjustment in the Acuerdo/Decredo. The adjustment plus the current unit price equals the new unit price. In the event a simultaneous change occurs in both the Acuerdo/Decredo and exchange rate the adjustment affecting the exchange rate shall be computed first and then the resultant new unit price shall be used as the current unit price in calculating (the) new reference price.

(R4, tab 1)

3. The zones in the contract corresponded with zones in the referenced Acuerdos. The Acuerdos established maximum prices for various fuels in each of seven zones (R4, tabs 3, 65).

4. The price of fuel stated in the contract was based on an exchange rate of 2.00 Honduran Lempiras ("L.2.00") to 1.00 United States dollar ("$1.00") pursuant to clause I162.02, which provides:

I162.02 PAYMENTS—REVALUATION (DFSC 1986 MAY)

(a) The unit price in this contract is expressed in United States currency based on a rate of exchange of dlrs. 1.00 US dollar to *2.00 HONDURAN LEMPIRA*. Unless otherwise specified in the contract schedule, payment is in U.S. currency.

(b) However, with respect to payments in U.S. currency, in the event there is a fluctuation in the rate of exchange, a contract modification will be issued to adjust the unit price expressed in U.S. currency, by the full amount of the change, effective as to deliveries made on and after the date of such change in the exchange rate.

©1994, Commerce Clearing House, Inc.

Digitized by Google

(c) The modification will adjust the unit price expressed in U.S. currency to reflect the changed cost expressed in U.S. Dollars to equal the changed *HONDURAN LEMPIRA* based on the official publication of the exchange rate as published *by the BANCO CENTRAL DE HONDURAS.*

(d) When there is escalation/deescalation in the exchange rate the equation to escalate/deescalate the prices is as follows:

Convert the current unit price to desired currency by multiplying by the current exchange rate. Divide the converted currency by the new exchange rate, which will then equal the new unit price in U.S. dollars. In the event a simultaneous change occurs in both the Acuerdo and Exchange Rate the adjustment affecting the exchange rate shall be computed first and then the resultant new unit price shall be used as the current unit price in calculating the new reference price.

(R4, tab 1)

5. In addition to incorporating the RFP provisions, the contract contains *NOTES* in which specific mention is made of certain provisions. The following is included with respect to clause I162.02:

Clause I162.02: PAYMENTS—REVALUATION:

Payments will be made in U.S. currency. Any change in the exchange rate of two (2) Honduran Lempira to one (1) U.S. Dollar as published by the Banco Central de Honduras will be used to revaluate payments following the provisions of this clause.

(R4, tab 3)

Honduran Reform

6. On 3 March 1990 the government of Honduras issued Legislative Decree No. 18-90 (hereinafter "the Decree"). The Decree provides in relevant part:

LEGISLATIVE ACTION

"DECRETO" NUMBER 18-90

The National Congress

* * *

CONSIDERING: That it is of national convenience to introduce policies adjusting the structure of Public Finances, with the purpose of vitalizing the national economy, increasing the production and productivity of the agricultural, craft, and industrial sectors and consequently be able to attend effectively the areas of governmental action priority such as health, education and employment.

CONSIDERING: That it is equally in the national interest to reorganize the financial affairs of the State with the purpose of reducing the fiscal deficit which is currently impacting the Honduran economy negatively through a sharp inflationary pressure and a deterioration of the purchasing power of the Lempira. At the same time, it is pertinent to obtain a better administration and grasp of the fiscal resources of the State.

* * *

THEREFORE,

DECREES:

The following:

* * *

SECTION II

CUSTOMS VALUATION OF MERCHANDISE

ARTICLE 3.—For the application of the tariff duties contained in the Tariffs on Importation and Exportation and Other Taxes, the customs value will be that which results from converting into Lempiras the value expressed in foreign currency applying a valuation factor, based on the rate of interbank exchange, which the Banco Central de Honduras will periodically establish. The rate of the interbank exchange for currency, which will be valid for the period of time which the Banco Central de Honduras deems necessary, will be determined as a function of offer and demand, within the standards which the Directorate of the Banco Central de Honduras establishes, to the Banco will also correspond the determination of the sources and uses of the currency which will be eligible to operate in this interbank market.

(R4, tab 65)

7. Although an international market and other unofficial markets existed in which lempiras were exchanged at a rate of about L. 4.00 to $1.00, prior to the Decree the only exchange rate published by the Banco Central de Honduras ("the Central Bank") was L. 2.00 to $1.00 (R4, tabs 47, 66; Robinson deposition (Rob. dep.), at 11, 16). The Central Bank issued two resolutions to be effective 3 March 1990, the same date as the Decree. The first, Resolution No. 128-3/90, authorized the interbank market of foreign currency as follows:

Digitized by Google

Secretariat of the Directorate
March 5, 1990
NATIONAL BANKING SYSTEM
ALL THE REPUBLIC

Circular D-06/90

The Directorate of the Banco Central of Honduras, based on the Articles 342, third paragraph of the Constitution of the Republic; 2, 6, 16, 29, 30, 33 and 36 of the Law of the Banco Central of Honduras and Article 3 of Decreto No. 18-90 dated March 3, 1990, during its meeting of March 3, 1990, by means of Resolution No. 128-3/90, resolves:

1. To authorize the Banks of the National System, so that they may, at their own risk, operate in an interbank market of foreign currency, which will be subject to the following conditions:

a) The purchase price of the foreign currency in this market, will be determined by the banks depending on offer and demand, within a range which will not be superior nor inferior to 2.5% with respect to the Customs Valuation Factor, established by the Directorate of the Banco Central of Honduras.

Each Bank will exhibit for public viewing in their establishments, the purchase and selling prices of the day and these will apply to all.

The Banco Central of Honduras will publish on a weekly basis the averages of purchases and sales of each bank corresponding to the previous week.

b) Through the interbank market will be funneled:

i) Currency received by the Private Sector originating from exports of goods and services, including tourism, effective as of the date of the present Resolution. In the case of exports of goods, the Banks will require presentation of the corresponding export policy, which specifies the amount to be paid for the Temporary Tax on the Extraordinary Profit From Exports. The Banks will act as collectors of this tax according to a special regulation.

ii) Foreign currency originating from direct foreign investment and other capital income to the Private Sector.

iii) Foreign currency received by the Private Sector from external debt or from overseas transfers.

iv) Remittances from relatives or foreign currency which for any other reason individuals or private entities established in this country may receive.

c) The interbank market will handle:

i) Foreign currency for payment of imports of goods, after presentation of import permits issued by the Banco Central de Honduras.

ii) Foreign currency needed for travel expenses, education, health and other personal expenses in sums no greater than US $3,000.00.

iii) Foreign currency in amounts greater than US $3,000.00, which may be required by the Private Sector for repatriating investments, remitting profits, servicing the external debt not eligible for conversion and other overseas transfers; as long as the interested party presents an authorizing voucher from the Banco Central de Honduras.

2. Revoke all resolutions related to exchange matters which this directorate may have issued which may be opposed to the measures adopted by means of the present Resolution.

3. This Resolution will become effective starting at the time in which Decree 18-90 of the date of March 3 of one thousand nine hundred and ninety becomes effective.

(R4, tab 65)

8. Resolution No. 129-3-90 provides:

The Directorate of the Central Bank of Honduras, based on Article 342, paragraph three of the Constitution of the Republic; 2, 6, 16, 29, 30, 33 and 36 of the law of the Central Bank of Honduras and based on section a) of number 1) of the resolution No. 128-3/90 dated March 3, 1990, in session of March 3, 1990, by resolution No. 129-3/90, resolves:

1. To establish at Four Lempiras (L4.00) for One United States Dollar (US$1.00), the Customs Valuation Factor.

2. This value will be revised periodically by this directorate to adjust it to the price of currency in the inter-bank market and the evolution of the principal macroeconomic indicators of the country.

3. This resolution will enter into effect starting with the effective date of decree No. 18-90, dated March 3, 1990.

(R4, tab 15)

9. Thereafter, the Customs Valuation Factor relative to $1.00 was revised several times by the Central Bank in the amounts and with the effective dates as follows: 25

©1994, Commerce Clearing House, Inc.

Digitized by Google

May 1990, L. 4.20; 15 October 1990, L. 5.50; 19 November 1990, L. 5.40; 24 December 1990, L. 5.30 (R4, tabs 15, 27, 65, 67, 68).

10. The Honduran government published a document titled "Economic Reform Program Summary" which provides under "Exchange Rate Reform:"

EXCHANGE RATE REFORM

The GOH has enacted a sweeping reform of the exchange rate regime, the centerpiece of which is the clear decision to recognize the realities of the exchange rate situation. The Central Bank of Honduras (BCH) has adopted a sliding peg system of currency valuation, initially setting the domestic value of the US Dollar at 4 Lempiras (referred to as the custom valuation rate). This parity will be reviewed by the Board of Directors of the Central Bank of Honduras from time to time, in the light of the evolution of current economic conditions. Under the new system, commercial banks will be allowed to conduct foreign exchange transactions, except those related to official foreign indebtedness, within a two and a half percent band around the custom valuation rate.

The actual exchange rate will be a weighted average of the rates of all foreign exchange transactions carried out within the commercial banking system, although as already mentioned, the BCH will retain the right to vary the custom valuation rate in accordance with changing macroeconomic conditions. This basically means that the BCH will increase the rate if the current value proves too low to attract a large proportion of the export earnings currently being held outside the commercial banking system.

Each week the commercial banks will sell a given proportion of their dollar balances to the Central Bank at the free interbank exchange rate. The Foreign Exchange Option Certificates (CETRA) and the self-financing system for imports have been abrogated. Henceforth, all types of imports will be financed through foreign exchange transactions conducted in the interbank foreign exchange network, signifying an end to the long-standing policy of implicit and hidden subsidization of petroleum, basic grains, industrial inputs, and other key imports. Once properly functioning, the revamped foreign exchange regime should serve as: (1) an important stimulus for export production, and (2) an effective mechanism for rationalizing import demand.

(R4, tab 61)

11. Although the L. 2.00 to $1.00 exchange rate was never abolished, the record establishes, and we find, only two uses for that rate. It was used for purchase of dollars to pay the Honduran national debt and, until November 1990, in the pricing of international airline tickets (R4, tab 17; resp. exh. 1; 43887 R4, tab 7). According to the Central Bank's vice president, the interbank foreign currency exchange authorized by Central Bank Resolution No. 128-3/90 was "used to liquidate transactions for goods, services, and movement of foreign capital in general" (R4, tab 32; *see also* finding 26, *infra*).

Fuel Prices

12. On 28 March 1990 Acuerdo No. 120-90 was issued revising maximum fuel prices upward with an effective date of 10 April 1990. It provides in part:

SECRETARY OF THE ECONOMY AND COMMERCE

REPUBLIC OF HONDURAS

ACUERDO NO. 120-90

Tegucigalpa, County Seat of the Central District, 28 March of 1990.

THE PRESIDENT OF THE REPUBLIC

* * *

CONSIDERING: That by means of Legislative Decree No. 18-90 of 3 March 1990, published in the official newspaper "La Gaceta" on 12 March 1990, taxes were amended for the import of petroleum and its by-products, its form of customs valuation, and the tax on production and consumption.

CONSIDERING: That the Directorate of the Central Bank of Honduras by means of Resolution Nos. 128 and 129 dated 03 March 1990, published in the official newspaper "La Gaceta" on 13 March 1990, determined to approve the operations of the foreign exchange Interbank Market and established at four lempiras (Lps 4.00) for one dollar of the United States of America (US$1.00), the Customs Valuation Factor.

CONSIDERING: That the Customs Valuation Factor will be revised periodically by the Directorate of the Central Bank of Honduras in order to adjust it to the price

Digitized by Google

of currency in the Interbank Exchange Market.

CONSIDERING: That in accordance with the Legislative Decree No. 94 of 18 May 1983; Decree No. 41 of 29 May 1989 and its Regulations and Agreement No. 472-89 of 26 December 1989, the Executive Power is authorized to regulate the internal marketing of the products derived from petroleum.

THEREFORE:

* * *

FIRST:

* * *

SECOND: The prices established in the previous Article will be adjusted periodically when the price of the Currency in the Interbank Market, the Customs Valuation Factor, and the International Prices of Imported Petroleum and Fuel products change from the initial levels they are established at, which served as the basis for fixing the sales price of the fuel products of the fuels during the same period. The Petroleum Administrative Commission through the Offices of Economy and Commerce, will proceed through Executive "Acuerdo" to make an adjustment to the domestic sales prices, which will permit a compensation of the differences in the course of the following period.

(R4, tab 65)

13. Subsequent Acuerdos changed the price of fuel in 1990. Acuerdo No. 557-90 cited the Persian Gulf conflict as the cause of price increases (R4, tab 18). Acuerdo No. 626-90 increased prices due to freight rates (R4, tab 25). Acuerdo No. 666-90 decreased prices due to a reduction of petroleum prices in the international market (R4, tab 28). Both Acuerdo No. 557-90 and No. 666-90 contained Article 2 as in No. 120-90 (R4, tabs 18, 28, 65). By letter of 11 September 1992 the Secretary of the Honduran Secretariat of Economy and Commerce explained the foregoing price changes:

Responding to your fax received on the 11th of September of the current year regarding wanting to know the factors which affected the modifications to the prices of the Products Derived from Petroleum, on the dates of the 10th of April/90 (Acuerdo No. 120-90) and the 4th of October/90 (Acuerdo No. 557-90), 25th of November 1990 (Acuerdo No. 666-90) respectively. In relation to the preceding, I notify you as follows:

1. The first increase in prices of the Products Derived from Petroleum occurred on the 10th of April of 1990 (Acuerdo No. 129-90), as a consequence of the application by the Government of the Republic of the "Law of Structural Order of the Economy," as stated in Decreto No. 18-90 of the 12th of March of 1990, which consequently modified the Interbank Rate and the Customs Valuation Factor from Lps. 2.00 to Lps. 4.00 per dollar.

2. The second increase as stated in Acuerdo No. 557-90 occurred on the 4th of October of 1990 as a result of the crisis which developed in the Persian Gulf which consequently affected the price of petroleum in the International Market.

3. Through Acuerdo No. 666-90 of the 25th of November of 1990, the Government of the Republic reduced the price of products derived from petroleum due to a decrease in the price of Petroleum in the International Market.

(R4, tab 62)

ASBCA No. 43041

14. By letter of 16 April 1990 appellant advised respondent of Acuerdo No. 120-90. The letter, which enclosed a copy of the Acuerdo, pointed out that jet and diesel fuel had increased more than the 40% permitted by the contract. The letter concluded:

Legislative decree No. 18-90 dated March 3, 1990, and the Honduran Central Bank's resolutions Nos. 128 and 129 of March 3, 1990, effective March 13, 1990, mentioned on paragraphs 2 and 3 of "Acuerdo No. 120-90" revised, on all petroleum products, the airport duties, consumption and production taxes and, for purposes of assessing customs duties only, established a rate of exchange of four Honduran Lempiras to one U.S. Dollar, this does not however, in any way, alter the official exchange rate of two lempiras to one U.S. Dollar on which subject Contract is based.

(R4, tab 5) By separate letter of 16 April 1990 appellant provided the line item price changes (R4, tab 6).

15. Appellant learned of additional charges for the Petroleum Adjustment Fund and Consumption Tax not addressed in Acuerdo No. 120-90 and sent a letter dated 18 April 1990 to respondent advising that the prices previously provided were not accurate (R4, tab 7). By separate letter of 18 April 1990 appellant provided a copy of the Decree to respondent (R4, tab 8). Two letters dated 19 April 1990 followed outlining the

©1994, Commerce Clearing House, Inc.

Digitized by Google

new prices (R4, tabs 9, 10). This exchange culminated in appellant's request for an increase in the ceiling to 107 percent which was granted effective 10 April 1990, along with the increase in prices, by Modification P00008 (R4, tabs 11, 12).

16. Exxon Company, another fuel contractor operating in Honduras, sent the following letter dated 25 June 1990 to respondent:

> The purpose of this letter is to formally advise DFSC of several changes in Honduras that affect the prices payable under the subject contract. The first change, covered by Acuerdo 18/90 and effective March 12, 1990 affected the official exchange rate—from 2 Lemperas to 1 USD to 4 Lemperas [sic] to 1 USD, and the taxes, duties and fees payable under the contract.
>
> Effective April 10, Acuerdos 519/86 and 198/86 were replaced by Acuerdo 120/90. At the same time, the Honduran Government issued Resolutions 197/90 and 207/90 affecting fees payable to the Government. Lastly, by Resolution 291-5/90, effective June 1, 1990, the exchange rate changed again to 4.2 Lemperas [sic] to 1 USD.

(R4, tab 14) Thereafter, Exxon advised respondent of further changes in the exchange rate and the resulting changes in Exxon's fuel prices (R4, tab 14).

17. In September 1990 respondent obtained from the United States Department of State copies of Honduran Central Bank Resolutions 128-3/90 and 129-3/90 (R4, tab 15; *see* findings 7, 8). In a 19 September 1990 telephone conversation with appellant the contracting officer raised the issue of the applicability of the Resolutions to the contract. Appellant agreed to obtain from the Central Bank a statement confirming that the official rate of L. 2.00 to $1.00 had not changed, while asserting that, if the exchange rate had been changed, refunds would be forthcoming (R4, tab 16). However, in a 26 September 1990 telephone conversation appellant stated the Central Bank would not provide a document on the exchange rate. Another bank provided a statement that the 2 to 1 rate continued to be the official rate, but was used only for "the purchase of U.S. Dollars destined to pay capital and interest of the Honduran public external debt." (R4, tabs 16, 17)

18. Modification No. P00013, issued 2 November 1990, revised the contract prices retroactive to 10 April 1990 to reflect the rate of exchange between Honduran and U.S. currency effected by Central Bank resolutions 129-3/90 (10 April 1990 to 25 May 1990), 291-5/90 (25 May 1990 to 4 October 1990), and 604-10/90 (post 15 October 1990), and Acuerdos 557-90 and 560-90. The contract amount was reduced by $2,873,465 effective 15 October 1990 (R4, tab 21).

19. By letter of 15 November 1990 appellant refused to accept Modification No. P00013, "except for those based on an exchange rate of 5.50 to one according to which, we have been invoicing since the implementation of the Honduran Central Bank's Resolution 604-10/90 of October 11, 1990, which pairs the Bank's rate of currency exchange to the customs' value of Imports and Exports ... (and) is the only Official Publication which has modified the currency exchange rate ...." (R4, tab 23).

20. The contracting officer replied in a 28 November 1990 letter in which he explained that none of the Central Bank Resolutions state an official rate of exchange for Honduras, and that the "confusion of exact terminology" has led respondent to interpret the Resolutions as "in fact a change in the exchange rate, although the resolution does not specifically use that terminology." He also noted that other contractors and Government officials use the new rates (R4, tab 24).

21. After Modification No. P00014 revised prices further in accordance with Resolution No. 694-11/90 and Acuerdo Nos. 626-90 and 666-90, the contracting officer sent a letter dated 4 December 1990 to appellant demanding payment of $5,482,425.33 for overpayments made between 10 April 1990 and 15 October 1990. The overpayments were attributed to payments made during the referenced period under the L. 2.00 to $1.00 exchange rate (R4, tabs 29, 30).

22. By letter of 10 December 1990 appellant transmitted a statement of the Central Bank confirming that the "official exchange rate is TWO LEMPIRAS FOR EACH U.S. DOLLAR (L 2.00 × US $1.00), inasmuch as the same has not been modified according to the procedure established in Article 32 of the Law of the Central Bank of Honduras." The statement also confirmed that the then current L. 5.40 to $1.00) interbank exchange rate "is used to liquidate transactions for goods, services, and movement of foreign capital in general." (R4, tab 31) Thereafter, in a letter of 27 December 1990 appellant asserted that its practice of invoicing in accordance with Modification Nos. P00013 and P00015 does not imply acceptance of the prices as the exchange rate had not changed (R4, tab 33). This signalled a retreat from appellant's position in its 15 November 1990 letter (*see* finding 19).

Digitized by Google

23. The contracting officer notified appellant that he would consider the Central Bank statement (R4, tab 35). An affidavit from the Central Bank affirming the content of the 10 December 1990 statement (finding 22) was forwarded by appellant on 8 January 1991 (R4, tab 36). Thereafter the contracting officer contacted the State Department for advice and, after receiving support for his position that the L. 2.00 to $1.00 rate was only applicable to Honduran external debt, issued a final decision demanding $5,471,425.35 on 22 March 1991 (R4, tabs 38—40). COMPENA filed an appeal on 11 June 1991 (R4, tab 41).

ASBCA No. 43839

24. Appellant submitted a certified claim on 4 September 1991 in which $3,277,292.21 was claimed for underpayments based on an allegedly incorrect interpretation of the exchange rate, $1,578,499.64 for improper withholding of payments, $311.17 for underpayment on invoices 1454 and 1472, $2,141.17 for deductions on invoices 1428 ($1.309.27) and 1446 ($831.90), and $1,750.00 for damage to a vehicle. The total claim was $4,859,994.19 (R4, tab 43). The contracting officer denied the claims for $3,277,292.21 and $1,578,499.64. He granted the claims under invoices 1428, 1446, and 1454 after adjustments for the exchange rate, and denied the claim under 1472. The claim for vehicle damage, which was also denied by the contracting officer, has been withdrawn (R4, tabs 44, 80).

25. COMPENA filed its appeal on 2 December 1991. The appeal does not include the denial under invoice 1472 (R4, tab 45).

ASBCA No. 43887

26. In a 5 April 1991 letter the contracting officer demanded payment of appellant in the amount of $1,372,075.77 for tax exoneration credits (43887 R4, tab 5). Appellant responded on 9 July 1991, pointing out that certain tax credits had been taken (43887 R4, tab 6). Appellant followed up with a letter of 17 July 1991 forwarding a letter from the Central Bank asserting that the L. 2.00 to $1.00 exchange rate is the official rate since it has not been modified under Article 32 of the Honduran Central Bank's Law. However, the Central Bank conceded the rate is used only for "the payment of conversion operations of the external debt" and that the interbank rate is used for "liquidating transactions of goods, services, and movements of external capital in general." (43887 R4, tab 7)

27. After further explanation a final decision was issued demanding $1,529,310.50 for uncollected tax exoneration credits (43887 R4, tabs 8, 9). COMPENA filed an appeal on 13 December 1991 (43887 R4, tab 11). Appellant does not dispute respondent's entitlement to tax credits. It does, however, contest the amounts, which are dependent on the applicable exchange rate (app. br. at 18).

DECISION

The parties are in agreement that the only remaining issue under the claims in ASBCA Nos. 43041 and 43887 is whether the exchange rate between Honduran and United States currency applicable to the contract changed during performance. As the exchange rate issue is at the heart of ASBCA No. 43041, only that appeal will be addressed specifically.

In simplest terms, appellant argues that the L. 2.00 to $1.00 exchange rate never changed and, under the applicable contract terms, must be used to establish contract prices. Respondent argues that the issuance of the Central Bank resolutions constitutes a change under clause I162.02 notwithstanding the continued existence of the L. 2.00 to $1.00 rate. Although the parties interpret events differently, the essential facts are not in dispute.

Briefly stated, in 1990 the new government of Honduras by means of the Decree gave the Central Bank authority to establish an interbank currency exchange rate based on the Customs Valuation Factor without abolishing or directly changing the L. 2.00 to $1.00 rate (findings 7—9). The interbank rate/Customs Valuation Factor established by the Central Bank (initially L. 4.00 to $1.00) was consistent with the real value of Honduran lempiras, and was used for virtually all commercial transactions (findings 7, 10, 11). However, the L. 2.00 to $1.00 rate was retained for paying the Honduran national debt (findings 11, 26).

The contract states prices and provides for payment in dollars, but recognizes that price adjustments will be tied to Acuerdos which state the new prices in lempiras (finding 2). Thus, a means of converting the price from lempiras to dollars is established which contemplates changes in the exchange rate as an element of the conversion process (*id.*). The contract also recognizes that instability in the exchange rate between lempiras and dollars will affect payments, and stipulates that a modification will be issued in the event of such fluctuation (finding 4). The specific language of the contract is important to our

©1994, Commerce Clearing House, Inc.

Digitized by Google

resolution of the dispute, because it ties such contract modifications to changes "based on the official publication of the exchange rate as published by the Banco Central de Honduras." (Finding 4) Similarly, the NOTE paraphrasing clause I162.02 calls for revaluation based on "Any change in the exchange rate of two (2) Honduran Lempira to one (1) U.S. Dollar as published by the Banco Central de Honduras ...." (Finding 5) We believe the contract language is important because we think the record establishes beyond question that changes occurred in the exchange rate. The issue is whether the contract makes those changes applicable to payments made by respondent to appellant.

The change that occurred effectively established several rates. The Central Bank has responded to questions about whether the exchange rate changed by stating that the "official rate" has not been changed, but that it applies only to the retirement of Honduran external debt (finding 11, 26). For other purposes, the interbank rate applies (*id.*). The Honduran government in a publication summarizing reforms states unequivocally it "has adopted a sliding peg system of currency valuation, initially setting the domestic value of the US Dollar at 4 Lempiras (referred to as the custom valuation rate) ..." and that the interbank foreign exchange system signified "an end to the long-standing policy of implicit and hidden subsidization of petroleum ...." (Finding 10) The Honduran Secretariat of Economy and Commerce states the price changes in Acuerdo No. 129-90 were the result of the Decree, "which consequently modified the Interbank Rate and the Customs Valuation Factor from Lps.2.00 to Lps.4.00 per dollar." (Finding 13) The preponderance of the evidence in this record clearly establishes that the interbank rate/Customs Evaluation Factor applied to fuel prices. It even establishes petroleum subsidies as a specific target of exchange system reform.

The contract only recognizes changes to the exchange rate officially published by the Central Bank. The several resolutions issued by the Central Bank (findings 7—9) were under the authority given the Bank by the Decree (finding 6). We conclude, therefore, they were issued by the Bank in an official capacity, and were official publications as set out in clause I162.02. Moreover, while L. 2.00 to $1.00 continued to be an official rate of exchange in Honduras, its applicability was changed. As it no longer applied to fuel prices in Honduras, evidenced not only by statements of the Honduran government and the Central Bank but by contracts with another supplier (findings 10, 11, 13, 16. 26), we hold that a change in the exchange rate had occurred as contemplated by clause I162.02.

We believe this appeal is distinguished from the cases relied on by appellant. In *Truong Xuan Truc, et al. v. United States,* 212 Ct. Cl. 51 (1976), the contract was priced in dollars based on the contractors' proposals, but payment was made in piasters. Although the contract did not specifically establish a rate of exchange, proposals were submitted based on an exchange rate of 80 piasters to one dollar. The contract provided for payment at the legal rate of exchange in effect on the date approved invoices were presented. At the date of contract execution the Court found there were two legal rates of exchange consisting of a basic rate of 80 piasters to one dollar, which applied to the U.S. Government, and a consolidated premium rate of 118 piasters to one dollar, which did not. The latter rate was comprised of the 80 to 1 rate and a Vietnamese government subsidy of 38 piasters. During the course of contract performance, the U.S. Government was permitted to purchase piasters at the consolidated premium rate of 118 to 1. The plaintiffs sought to apply the premium to their payments under the contract, asserting that the legal rate of exchange had changed to 118 piasters to one dollar. The Court found that both the official rate of 80 to 1 and the consolidated premium rate of 118 to 1 existed at the time of contract award, but the parties had priced the contract based on the 80 to 1 rate. Thus, they had selected that as the rate of exchange applicable to payment under the contract. Moreover, as both rates existed at the time of contract award, there was no change in the exchange rate.

In contrast to *Truong Xuan,* the contract here explicitly provided for the 2 to 1 rate until that rate was changed and the change published by the Central Bank. That rate was the only official or legal rate in effect at the time of contract award. The record here persuades us that the exchange rate system was changed and the change published by the Central Bank so the 2 to 1 rate no longer applied to commercial transactions, including petroleum products, and the interbank rate/Customs Valuation Factor was made applicable. Moreover, appellant's argument that better rates than 2 to 1 were available in parallel markets at the time of contract award is not convincing as both prices and payment in the contract were in dollars. While respondent could arguably have writ-

Digitized by Google

ten the contract to provide for payment in lempiras and purchased lempiras outside of official Honduran channels, it is too speculative to be an appropriate consideration here.

Appellant also cites *Marubeni-Iida Co. Ltd. and Ohki Construction Co., Ltd., a Joint Venture,* ASBCA No. 16937, 72-1 BCA ¶ 9408. In that case a contract performed in Japan was priced in dollars but provided for payment in Yen "based upon the official rate current at time of payment." At the time of contracting the official exchange rate was 360 Yen to one dollar. A treaty existed which provided for payment by the United States armed forces at the "basic rate of exchange." *Id.* at 43,699. Subsequently, Japan allowed the Yen to float. A U.S.—Japanese Joint Committee agreed that through the Bank of Japan Yen would be made available to U.S. disbursing officers at the "majority rate," which was the rate at which the largest volume of dollars was transacted the day before. Payment was made by the United States at the majority rate of 337 Yen to one dollar and an appeal taken.

Appellant argued there had been no change in the exchange rate. The Board, in agreeing with appellant, considered several factors not in evidence here. First, it found that appellant was not on notice of the Joint Committee's authority to fix the rate of exchange. Second, it found that the Joint Committee's actions were in conflict with the treaty providing for payment at the "basic rate of exchange," which it found synonymous with "official rate," and that the Joint Committee had no authority to change the official or basic rate of exchange. Here, appellant was on notice of the Central Bank's authority to change the value of the lempira, and the authority under the Decree is not disputed.

The Board noted in *Marubeni-Iida* that "Japan retained the 'basic rate of exchange' ... Japan did not purport to take or in fact take, any direct action by legislation or otherwise, on existing public or private obligations expressing payment in terms of the 'basic rate of exchange' or the 'official rate of exchange.'" *Id.* at 43,707. Here, however, Honduras purported to and did in fact take action affecting private obligations expressing the L. 2.00 to $1.00 exchange rate. The Honduran government described its action as "a sweeping reform of the exchange rate regime ... initially setting the domestic value of the US Dollar at 4 Lempiras (referred to as the custom valuation rate)." (Finding 10) In summary, the Court in *Truong Xuan* and the Board in *Marubeni-Iida* found facts that persuaded them a change in the exchange rate had not occurred. Here we have found facts that persuade us there was a change in the Honduran exchange rate. Accordingly, the appeal in ASBCA No. 43041 is denied.

Since the outcome of the exchange rate issue determines the amounts at issue in the appeals in ASBCA Nos. 43839 and 43887, they are denied in accordance with the above discussion.

The determination of quantum in all three appeals is remanded to the parties.

[¶ 26,413] Progressive Tool Corp.

ASBCA No. 42809, October 4, 1993. Contract No. F34601-90-C-0020.

Defaults, Excuses—Subcontractor and Supply Problems—Alternative Sources.—A contractor's failure to meet a contract schedule for delivering jet engine shields was not excused by the manufacturing difficulties experienced by its supplier, because the contractor neglected to show that it made all reasonable attempts to locate an alternate supplier. Supply problems do not automatically excuse a contract default. A contractor must establish the unavailability of alternative sources of supply that would have permitted it to meet the contract's delivery schedule.

Defaults, Government Act Excusing—Schedule of Work—Oral Extension.—The government's alleged oral agreement to extend a delivery date that a contractor had missed did not preclude the government from subsequently issuing a default termination, because any reliance that the contractor may have placed in the alleged agreement was unreasonable. Just three days after the alleged agreement, the contracting officer issued a show-cause notice that made no reference to the agreement and clearly indicated that a default termination was still under consideration.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Defaults, Waiver—Delay in Terminating—Reliance.—A five-week interval between a notice to show cause and a default termination did not constitute a waiver of a contract's delivery schedule, because there was no indication that the contractor had relied on the delay to its detriment. No evidence was offered to show that the government encouraged the contractor to continue working past the delivery date or that it performed any substantial amount of work after that date. Moreover, although the time between the notice to show cause and the default termination was somewhat long, it was not shown to be unreasonable in the circumstances.

Defaults, Grounds—Delivery Failure—Best Interest of Government.—It was in the government's best interest to terminate a jet engine shield contract for default, although the contractor maintained that it would be able to deliver the urgently needed shields within three and one-half months of the contract's delivery date, because the government had made a reasonable determination that the contractor was unreliable. The contracting officer had offered the contractor an opportunity to explain its failure to meet the contract schedule and had rejected the contractor's explanation; this decision was upheld by the board. In view of the government's urgent need for the shields, the contracting officer was correct in concluding that a default termination would serve the government's best interests.

For the appellant: Robert Friss, Vice President. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Col. Billy Smith, Jr., USAF, Trial Attorney.

Before TUNKS, RUBERRY, and RIISMANDEL, Administrative Judges.

TUNKS, Administrative Judge: This is an appeal from a contracting officer's decision terminating a supply contract for default for failure to timely deliver a quantity of jet engine shields.

FINDINGS OF FACT

1. The Government awarded Contract No. F34601-90-C-0020 for 219 jet engine shields to appellant on 5 October 1989. At award, the contract price was $13,468.50 and the delivery date was 10 February 1990 (R4, tabs 1, 2).

2. The contract incorporated FAR 52.249-8, Default (Fixed-Price Supply and Services) (APR 1984), by reference. That clause provided, in pertinent part, as follows:

> (a)(1) The Government may, subject to paragraphs (c) and (d) below ... terminate this contract in whole or in part if the Contractor fails to—
>
> (i) Perform the work under the contract within the time specified in this contract or any extension;
>
> * * *
>
> (c) Except for defaults of subcontractors at any tier, the Contractor shall not be liable for any excess costs if the failure to perform the contract arises from causes beyond the control and without the fault or negligence of the Contractor....
>
> (d) If the failure to perform is caused by the default of a subcontractor at any tier, and if the cause of the default is beyond the control of both the Contractor and the subcontractor, and without the fault or negligence of either, the Contractor shall not be liable for any excess costs for failure to perform, unless the subcontracted supplies or services were obtainable from other sources in sufficient time for the Contractor to meet the required delivery schedule.

(R4, tab 1)

3. Appellant did not deliver the shields by 10 February 1990, but delivered 22 shields shortly thereafter (R4, tab 2).

4. At appellant's request, the Government extended the delivery date for the remaining 197 shields to 31 August 1990 in exchange for a reduction of $350 in the contract price (R4, tab 2).

5. Appellant did not deliver the 197 shields by 31 August 1990, but subsequently delivered 128 shields, leaving a balance of 69 (R4, tab 3).

6. At appellant's request, the Government extended the delivery date to 31 January 1991 in exchange for a reduction of $380 in the contract price (R4, tab 3).

7. Appellant did not deliver the remaining 69 shields by 31 January 1991 (R4, tabs 4, 5; Supp R4).

8. On 22 February 1991, the contracting officer called appellant and asked about the remaining 69 shields. Appellant indicated that the shields would be shipped by 31 March 1991 (Supp R4, Memo dtd 21 Feb 91).

Digitized by Google

As a result of that conversation, appellant allegedly concluded that the contracting officer had agreed to a new delivery date of 31 March 1991 (App. Final Br.). The contracting officer denies he agreed to such extension.

9. On 21 February 1991, the Item Manager expressed to the contracting officer "the urgency of finding a reliable contractor to furnish the needed parts" (DeYong Affidavit).

10. On 25 February 1991, the contracting officer issued a show cause notice which indicated that the Government was considering terminating appellant's contract for default and requested appellant to submit any excuses it had for nondelivery by 11 March 1991 (R4, tab 5).

11. Appellant answered the show cause notice as follows:

> 1) The balance of contract (69)Pcs.) being late was a result of material cracking and thinning during forming operations. New material was ordered and received on 17 Jan 91. During forming, 21 Pcs. were scrapped. As a result we again ordered new material in which we have received it [sic]. All material is now in production.
>
> 2) Delivery of 69 Pcs. is now in full production and is scheduled for 12 April 91.

(R4, tab 6)

12. Since the contractor had failed to meet two earlier delivery dates, the contracting officer concluded that appellant was not reliable. In addition, appellant's repeated delinquencies had a negative impact on the repair of the jet engines. After considering the foregoing facts, the contracting officer terminated the contract for default for failure to deliver on 8 April 1991. (DeYong Affidavit; R4, tab 4)

13. Appellant timely appealed the contracting officer's decision.

DECISION

It is undisputed that appellant did not deliver the 69 remaining shields by 31 January 1991. As a result, the burden of proof is on appellant to prove that its default was excusable. Appellant has failed to carry this burden.

Appellant's response to the show cause notice indicated that it did not deliver the shields because its supplier had experienced "material cracking and thinning during forming operations." Manufacturing problems do not automatically excuse a default. Under paragraph (d) of the Default clause, appellant was required to make all reasonable efforts to locate alternate sources of supply. *C&M Machine Products, Inc.*, ASBCA No. 43348, 93-2 BCA ¶ 25,748; *Free Flow Packaging Corporation*, GSBCA Nos. 3992, 4040, 75-1 BCA ¶ 11,105. Appellant has neither alleged nor proven that it attempted to locate an alternate supplier. Since appellant has not proven that the shields were unavailable, the default is not excusable.

Alternatively, appellant asserts that the default should be overturned because the contracting officer entered into an oral agreement with appellant on 22 February 1991 to extend the delivery date. The contracting officer denies that he agreed to an extension. Moreover, the Government issued a show cause notice to appellant on 25 February 1991, just three days after appellant's conversation with the contracting officer. The show cause notice clearly indicated that the contracting officer was considering terminating appellant's contract for default and made no reference to any agreement to extend the delivery date. Under these circumstances, any reliance appellant may have placed upon the alleged agreement of 22 February 1991 was unreasonable.

The contracting officer has a reasonable amount of time in which to decide whether or not to terminate a contract which is in default. What constitutes a reasonable length of time is determined on a case by case basis. In this case, the show cause notice was issued on 25 February 1991. Appellant replied to the show cause notice on 1 March 1991 and the contracting officer terminated the contract on 8 April 1991. Although the time between the show cause notice and the termination was somewhat long, there is no evidence that the Government encouraged appellant to continue working after the delivery date and there is no evidence that appellant performed any substantial work on the contract during that period. We conclude that the Government did not waive the delivery date.

Appellant lastly argues that the termination was not in the best interests of the Government because appellant could have delivered the remaining shields by 12 April 1991. This argument is without merit. The Government acquired the right to terminate the contract on 31 January 1991 when appellant failed to deliver. Although the Default clause did not require it, the contracting officer sent appellant a show cause notice soliciting excuses for nondelivery. The con-

©1994, Commerce Clearing House, Inc.

Digitized by Google

tracting officer rejected the excuses proffered by appellant, namely the manufacturing problems experienced by its subcontractor, and we have sustained that determination. In view of appellant's unreliability and the Government's urgent need for the shields, we hold that the contracting officer was correct in concluding that termination was in the best interests of the Government.

The appeal is denied.

[¶ 26,414] Sears Petroleum & Transport Corp.

ASBCA No. 41401, September 30, 1993. Contract No. DLA600-85-D-4744.

Contract Types—Economic Price Adjustment—Date of Delivery.—A contractor was to be paid at the rate in effect when it began pumping oil from its vessel, not when it gave notice that it was ready to pump, even though the contractor provided convincing evidence that in trade usage "delivery" of petroleum products occurs on the date and at the time of readiness, because the express terms of the contract provided otherwise. The contractor's barge was hooked up to the receiving line and gave notice of readiness 16 minutes before a price decrease became effective; the government did not give permission to discharge, and the actual movement of the oil from the vessel did not start until four minutes after the price decrease became effective. The unit price under the contract was to be adjusted weekly and was to be that in effect on the "date of delivery," under the Economic Price Adjustment clause. Regardless of the definition of "date of delivery" for any other purpose, for the purpose of pricing, which was controlled by the EPA clause, the date of delivery was the date and time the vessel began to discharge, which was undisputedly 12:05 a.m. the day after the downward price adjustment became effective.

For the appellant: Manes, Rifken, Frankel & Greenman, P.C., Syracuse, New York, by Sidney Manes. For the government: Howard M. Kaufer, Counsel, Defense Fuel Supply Center, DLA, Alexandria, Virginia.

Before LANE, RUBERRY, and FREEMAN, Administrative Judges.

LANE, Administrative Judge: This case involves an issue of contract interpretation.

Appellant had a firm fixed-price contract to deliver fuel oil f.o.b. destination. Pursuant to the Economic Price Adjustment clause, contract unit prices were to be adjusted weekly upward or downward based on certain published reference prices. Appellant gave notice of readiness to pump the shipment in issue at the prescribed destination sixteen minutes before a price decrease became effective, but discharge, or the actual movement of oil from the vessel, did not start until four minutes after the price decrease became effective.

The dispute over which unit price applies turns on which day was the "date of delivery." Appellant says that under trade practice, "delivery" occurs upon notice of readiness to pump. The Government says that "delivery" for the purpose of price adjustment under the EPA clause is conclusively defined by that clause as occurring on "the date and time the vessel begins to discharge."

The Government has moved for summary judgment. Appellant opposes the motion, asserting that there are material issues of fact in dispute.

We have concluded that all the material facts are undisputed; that the issue is purely one of contract interpretation that can be decided solely as a matter of law; and that the Government is entitled to summary judgment because the express definition of "date of delivery" in the EPA clause made the start of discharge the controlling event and rendered inapplicable any contrary understanding of "delivery" for other purposes under trade practice.

FINDINGS OF FACT

The following facts are undisputed.

I. *The Contract*

1. On 14 August 1985, the Defense Fuel Supply Center (DFSC) awarded appellant contract No. DLA600-85-D-4744. It was an indefinite quantity contract for delivery f.o.b. destination of various fuels to be ordered between 1 October 1985 and 30 September 1986, at firm fixed unit prices, subject to adjustment under the Economic

Digitized by Google

Price Adjustment (EPA) clause. (R4, tabs 1,2)

2. Included in the award was Item No. 0656-55 for delivery of an estimated 6,000,000 gallons of Burner Oil No. 6 by barge to the United States Military Academy, West Point, New York, at a unit price of $.54300. The specified destination was "INTO 8 INCH RECEIVING LINE." (R4, tab 1, at 6, 120, 198 clause F26; R4, tab 2, Award Sheet, at 01)

3. The standard F.O.B. Destination clause in the contract stated:

F(18)F F.O.B. DESTINATION (APR 1984)

(a) The term "f.o.b. destination," as used in this clause, means—

(1) Free of expense to the Government, on board the carrier's conveyance, at a specified delivery point where the consignee's facility (plant, warehouse, store, lot, or other location to which shipment can be made) is located; and

(2) Supplies shall be delivered to the destination consignee's wharf (if destination is a port city and supplies are for export), warehouse unloading platform, or receiving dock, at the expense of the Contractor. The Government shall not be liable for any delivery, storage, demurrage, accessorial, or other charges involved before the actual delivery (or "constructive placement" as defined in carrier tariffs) of the supplies to the destination, unless such charges are caused by an act or order of the Government acting in its contractual capacity. If rail carrier is used, supplies shall be delivered to the specified unloading platform of the consignee. If motor carrier (including "piggyback") is used, supplies shall be delivered to truck tailgate at the unloading platform of the consignee. If the Contractor uses rail carrier or freight forwarder for less than carload shipments, the Contractor shall assure that the carrier will furnish tailgate delivery if transfer to truck is required to complete delivery to consignee.

(b) The Contractor shall—

(1)(i) Pack and mark the shipment to comply with contract specifications; or

(ii) In the absence of specifications, prepare the shipment in conformance with carrier requirements;

(2) Prepare and distribute commercial bills of lading;

(3) Deliver the shipment in good order and condition to the point of delivery specified in the contract;

(4) Be responsible for any loss of and/or damage to the goods occurring before receipt of the shipment by the consignee at the delivery point specified in the contract;

(5) Furnish a delivery schedule and designate the mode of delivering carrier; and

(6) Pay and bear all charges to the specified point of delivery.

(R4, tab 1, clause F(18)F, FAR 52.247-34)

4. The Economic Price Adjustment clause in the contract stated:

B.19.19 ECONOMIC PRICE ADJUSTMENT (DFSC 1984 JUL)

The prices payable under this contract shall be adjusted upward and downward, in accordance with changes in published reference prices pre-selected by the Government for this purpose, and shown hereinafter, and in accordance with all other provisions of this Economic Price Adjustment clause. The Contractor warrants that the unit prices set forth in this contract do not include any contingency allowance to cover the possibility of increase(s) in the reference price(s) set forth below.

PART A

As used throughout this provision:

(a) The term "item" or "items" means the numbered line items of supply which are listed in section B of the solicitation Schedule and included in Section B of the contract award Schedule. These are the only items subject to price adjustment unless otherwise expressly provided for in the contract award.

(b) The term "base unit price" means the unit price offered for an item and included in the contract Schedule.

(c) The term "reference price" means that published reference price or combination of published reference prices pre-selected by the Government for price adjustment for individual items by product, market area and publication as specified in Part D below.

(d) The term "base reference price" means the pre-selected reference price for an item as published on *20 May 1985*. In the event one or more applicable reference prices are not (or were not) published on the date shown, then the term "base reference price" means the pre-selected reference price for an item as published on the

©1994, Commerce Clearing House, Inc.

Digitized by Google

date nearest in time prior to the date shown.

(e) The terms "published" and "publication" include the electronic pricing and information network of *Oil Price Information Service (OPIS)* provided through *PetroScan* for the two weeks that *OPIS* is not published.

(f) The term "date of delivery" means:

(i) the date and the time vessel begins to load where the contract calls for delivery at origin into tanker or barge;

(ii) the date and the time vessel begins to discharge where the contract calls for delivery at destination by tanker or barge;

(iii) the date and the time product commences to move past the specified f.o.b. point where the contract calls for delivery by pipeline;

(iv) the date product is received for all methods of delivery other than (i), (ii), or (iii) above.

PART B

Price adjustments under this contract shall be cent for cent with any increase or decrease occurring in the reference price applicable to a particular item (subsequent to the date on which the base reference price is established), with or without prior notice thereof from the Contractor.

(a) The determination of the price payable for each delivery of a particular item of supply shall be accomplished by adding to, or by subtracting from the base unit price, the difference between the base reference price and the published reference price applicable on the date of delivery.

(b) The reference price applicable on the date of delivery shall be the pre-selected reference price for the item as first published during the calendar week in which the delivery is made, or in the event there is no publication in that week, it shall be the pre-selected reference price for the item as last previously published.

(c) No upward price adjustment shall be due or apply to items of supply which were required in accordance with contract terms to be delivered prior to the effective date of such upward price adjustment, but delivered subsequent to such effective date, unless the Contractor's failure to make earlier delivery results from causes which are beyond the control of and without the fault or negligence of the Contractor, within the meaning of the Default clause of this contract, or is the result of an allocation made in accordance with the terms of the Allocation clause of this contract.

PART C

(a) The Contractor warrants that the prices to be invoiced hereunder for listed items shall be computed in accordance with these economic price adjustment provisions.

(b) In the event any applicable published reference price is discontinued or its method of derivation is altered substantially, or it otherwise consistently fails to reflect market conditions, this contract may be amended effective on the date such reference price is discontinued, altered, or began to consistently fail to reflect market conditions, to substitute a comparable reference price.

(c) Price changes issued pursuant to this clause are subject to the clause entitled UPWARD CEILING ON ECONOMIC PRICE ADJUSTMENT.

(d) The Contracting Officer shall issue a modification to the contract to reflect any price change pursuant to this provision.

PART D

REFERENCE PRICE LISTING

* * *

(R4, tab 1, clause B19.19)

5. The Barge Unloading Conditions clause in the contract stated in pertinent part:

F16 BARGE UNLOADING CONDITIONS (DPSC 1984 APR)

On items calling for delivery f.o.b. destination by means of barge:

(a) The supplies ordered hereunder shall be delivered, all transportation charges paid, to the destination specified in the Schedule....

(R4, tab 1, clause F16)

II. *Contract Performance*

6. On 28 January 1986, in accordance with contract clause F38(F), Ordering, West Point issued Delivery Order No. G8L2 to appellant for 1,176,000 gallons of Item No. 656-55, Burner Oil No. 6, to be delivered during week of 3 February 1986, at the contract unit price of $.54300 (R4, tab 5).

7. Pursuant to the order, appellant delivered 972,251 gallons to West Point. The specific timetable of events surrounding the delivery was as follows:

Digitized by Google

Sunday, 9 February 1986:

10:10 p.m. — Appellant's barge arrived at West Point.
10:30 p.m. — Appellant's barge was moored alongside the dock.
11:15 p.m. — Cargo hoses between the barge and the West Point receiving line were connected.
11:45 p.m. — The cargo was inspected and ready to discharge, and notice of readiness to discharge given to the Government.

Monday, 10 February 1986:

12:05 a.m. — Barge received permission to discharge and discharge of the oil commenced.
3:00 a.m. — Discharge of the oil finished.
3:10 a.m. — The cargo hoses were removed.
3:20 a.m. — The barge was released by the inspector.
5:00 a.m. — The barge left its berth.

(R4, tabs 6, 21; Taskasap Affid.)

8. As a result of unit price adjustments made pursuant to the EPA clause, the price for Item No. 656-55, Burner Oil No. 6, was $.492404 per gallon for the period 12:01 a.m. on 3 February to 12:01 a.m. on 10 February 1986 (R4, tab 3, Modification PA0017), and $.460857 per gallon effective at 12:01 a.m. on 10 February 1986 (R4, tab 4, Modification PA0018). Thus the unit price under the contract dropped $.031547 per gallon at 12:01 a.m. on 10 February, which would make the total price for the 972,251 gallons nearly $30,700 less if the 10 February unit price applied instead of the 9 February price.

9. On 21 February 1986, appellant invoiced DFSC for Delivery Order No. G8L2 at a unit price of $.49240 per gallon, which was the unit price in effect on Sunday, 9 February (rounded from six to five decimal places), for a total of $478,736.39 (R4, tab 7). On 26 March 1986 DFSC paid the full amount invoiced (R4, tab 8).

10. By letter to appellant of 3 November 1987, the DLA Accounting and Finance Center asserted that appellant owed the Government $30,667.71 on account of an overpayment on the 21 February 1986 invoice. The letter stated that (1) under the EPA clause, the date of delivery was determined by "the date and time the vessel begins to discharge where the contract calls for delivery at destination by tanker or barge"; (2) the barge commenced discharge on 10 February 1986; and (3) the price applicable to Item No. 656-55 on 10 February 1986 was $.460857 per gallon pursuant to Modification No. PA0018. The claimed amount of $30,667.71 was evidently arrived at by multiplying the difference between the unit price billed and paid ($.49240) and the unit price effective 10 February 1986 ($.460857), or $.031543, times the total quantity of 972,251 gallons. (R4, tab 9)

11. By letters of 13 November, 17 November, and 22 December 1987, appellant disputed the Government's demand, asserting that it had not been overpaid because its barge was ready and able to start discharging her cargo at 11:45 p.m. on 9 February 1986 but actual pumping did not start until orders to do so were received from West Point personnel at 12:05 a.m. on 10 February 1986 (R4, tabs 10-12).

12. By letter of 30 March 1990, the contracting officer disagreed with appellant's view on the basis that the twenty minutes the shore crew took to give permission to start discharge was irrelevant to the "date of delivery" as defined in the EPA clause. The letter asked if appellant intended to repay the Government. The letter reflected a slight miscalculation of the asserted overpayment by using the contract unit price of $.492404 in effect on 9 February 1986 (six decimal places) instead of the unit price of $.49240 (five decimal places) which appellant actually used to bill the Government. This resulted in an alleged overpayment of $30,671.60 instead of the previously calculated overpayment of $30,667.71. (R4, tab 13)

13. By letter of 2 April 1990, appellant reiterated its position, recited the absence of agreement, and asked that "the matter go to arbitration and be decided by an impartial party." (R4, tab 14) At that point if not before, a dispute existed between the parties over the Government's claim.

14. On 20 June 1990, the contracting officer issued a final decision claiming $30,671.60 from appellant (R4, tab 15). By letter of 23 July 1990 appellant filed a timely appeal with this Board (R4, tab 19).

©1994, Commerce Clearing House, Inc.
Digitized by Google

III. *Delay Not in Issue*

15. It is undisputed that the twenty-minute delay between appellant's readiness to discharge and the Government's giving of permission to discharge was not unusual and that the delay involved no malice or bad faith or calculated attempt to take advantage of the price change. Indeed, there is no evidence that either party knew there would be a price change or whether the price would increase or decrease at 12:01 a.m. on 10 February 1986.

IV. *Trade Practice*

16. Appellant has provided ample evidence, uncontradicted by the Government, that under the usage of the trade concerning the sale of petroleum products, the date of the notice of readiness is the controlling date of delivery with respect to questions of performance under an f.o.b. destination contract. (Tso Affid.; Taskasap Affid.; Eklof Affid.; Hurlin Affid.) We so find.

DECISION

I. *The Issue*

This case involves a question of contract interpretation. It presents a dispute over the proper unit price applicable to a shipment of oil delivered by barge f.o.b. destination to West Point. The unit price under the contract was to be that in effect on the "date of delivery," as adjusted weekly under the Economic Price Adjustment (EPA) clause. The problem is that the appellant's barge was hooked up to the receiving line and gave notice of readiness to discharge sixteen minutes before 12:01 a.m. when a price decrease (it later turned out) went into effect, while the Government gave permission to discharge and the pumping actually started at 12:05 a.m., four minutes after the price decrease became effective. Appellant asserts that the "date of delivery" under the contract, as interpreted in light of trade practice, was the date of notice of readiness. The Government asserts that the date of delivery was the date of start of discharge.

Appellant invoiced and the Government paid at the higher unit price, and the Government now claims a refund of the asserted overpayment.

The Government has moved for summary judgment.

II. *Criteria for Summary Judgment*

Summary judgment is appropriate only if there are no genuine issues of material fact and the moving party is entitled to judgment as a matter of law. All matters in the record, and all reasonable inferences to be drawn therefrom, must be construed liberally in favor of the party opposing the motion for summary judgment. *Engineering Metals Co.*, ASBCA No. 37525, 92-3 BCA ¶ 25,164, at 125,422 (and authorities cited). Questions of contract interpretation are appropriate for summary judgment where there is no genuine issue of material fact bearing on the interpretation. *Crawford Technical Services, Inc.*, ASBCA No. 36732, 89-2 BCA ¶ 21,783, at 109,607 (and authorities cited). Here, as in the *Crawford* case, mere allegations that the contract does not evidence the intent of the parties, without an offer of specific facts to show a genuine issue for trial, will not defeat summary judgment.

Appellant asserts that the contract is ambiguous and so requires inquiry into usage of trade. However, we have accepted appellant's affidavit evidence of trade practice, and more importantly, as discussed below, trade practice is not pertinent because the contract is unambiguous.

III. *The Merits*

The unit prices under this contract were adjusted weekly under the EPA clause.

Under Part B, paragraph (a) of the clause:

> The determination of the price payable for each delivery of a particular item of supply shall be accomplished by adding to, or by subtracting from the base unit price, the difference between the base reference price and the published reference price applicable on the date of delivery.

The "date of delivery" in turn was defined in Part A of the clause. It stated:

> As used throughout this provision:
>
> * * *
>
> (f) The term "date of delivery" means
>
> * * *
>
> (ii) the date and the time vessel begins to discharge where the contract calls for delivery at destination by tanker or barge;
>
> ....

In this case the contract called for delivery at destination by barge, and it is undisputed that the vessel began to discharge at 12:05 a.m. on 10 February 1986. Therefore, for purposes of the EPA clause, the "date of delivery" of the shipment in issue was 12:05 a.m. on 10 February 1986.

Under Part B, paragraph (a) of the clause, the price payable for the shipment was to be calculated at the original contract unit price, adjusted on the basis of the "published reference price applicable on the date of deliv-

Digitized by Google

ery." Under Part B, paragraph (b) of the clause:

> The reference price applicable on the date of delivery shall be the pre-selected reference price for the item *as first published during the calendar week in which the delivery is made* . . . .

(Emphasis added.) Thus the appropriate reference price published at any time during a given week was, for purposes of the EPA clause, applicable retroactively to deliveries earlier that week. The Government has agreed for purposes of this case, in light of its consistent prior practice, that each week started on Monday, not on Sunday. (Memorandum of Telephone Conference Call) Thus the lower reference price published during the week of Monday, 10 February 1986 applied retroactively to 12:01 a.m. on that date, not to 12:01 a.m. on Sunday, 9 February 1986.

According to contract modifications implementing the EPA clause, the unit price for the item in question was $.492404 for the week 3 February through 9 February 1986, and was adjusted downward to $.460857 effective at 12:01 a.m. on 10 February 1986.

We consider the foregoing provisions of the EPA clause clear and unambiguous on their face and uncontradicted by any other provision of the contract. Regardless of the definition of "date of delivery" for any other purposes, for the purpose of pricing, which is controlled by the EPA clause, the date of delivery was the date and time the vessel began to discharge, which was undisputedly 12:05 a.m. on 10 February 1986, after the downward price adjustment became effective.

Appellant has provided convincing evidence, which we have accepted for purposes of this motion, that according to the usage of trade, f.o.b. destination delivery of petroleum products occurs on the date and at the time of notice of readiness, which in this case was on 9 February 1986 when the higher unit price was in effect. However, Uniform Commercial Code section 1-205(4) provides:

> (4) The express terms of an agreement and an applicable course of dealing or usage of trade shall be construed wherever reasonable as consistent with each other; but when such construction is unreasonable express terms control both course of dealing and usage of trade and course of dealing controls usage of trade.

Restatement of Contracts (Second), § 203(b), is to the same effect. In this case the date of delivery as expressly defined in the EPA clause and the date of delivery according to trade practice are flatly inconsistent with each other. Under these circumstances, the express terms of the contract control.

Appellant in its argument emphasizes the f.o.b. destination term of the contract, asserting that f.o.b. destination merely required delivery to the wharf and that therefore delivery for all purposes was complete upon placement of the fuel oil at the wharf and the giving of notice of readiness in accordance with trade practice. The Government argues that while the F.O.B. Destination clause of the contract merely required delivery on board the carrier's conveyance to the destination consignee's wharf, the destination specified for the particular line item in issue was "INTO 8 INCH RECEIVING LINE." Thus the Government argues that the fuel oil was not "delivered" for any purpose until it passed into the receiving line. Under this interpretation, the fuel oil would actually be delivered only incrementally as it was pumped into the receiving line.

We need not and do not decide when delivery occurred for other purposes, such as timeliness under the Default clause or risk of loss under the Responsibility for Supplies clauses. For the purpose of pricing under the EPA clause, we hold that the "date of delivery" of the entire shipment of fuel oil took place upon the start of discharge, *i.e.*, 12:05 a.m. on 10 February 1986.

Appellant also suggests that this interpretation could not have been intended because it could create difficulty in determining exactly when delivery occurred, such as if the hose were clogged. Appellant has provided no evidence or offer of proof that that is a realistic possibility, and in any event it is beside the point. The contract clearly says what it says, and if that might create difficulty in some unusual circumstances in factually determining when discharge started and delivery thereby occurred, so be it.

Therefore appellant's billing and the Government's payment for the shipment in question at the 9 February 1986 unit price of $.49240 (rounded to five decimal places) instead of at the 10 February 1986 unit price of $.460857 were erroneous. Appellant was thereby overpaid by the difference between the total billed and paid amount of $478,736.39 and the total of $448,068.67 which should have been billed and paid, or $30,667.72.

©1994, Commerce Clearing House, Inc.

Digitized by Google

As a matter of law, the Government is entitled to recover payments erroneously made under a contract where the payment provisions of the contract are unambiguous, as distinguished from a discretionary or judgmental determination by the contracting officer. *Mercury Construction Corp.*, ASBCA No. 21534, 77-2 BCA ¶ 12,753, at 61,967 (and authorities cited); *Silverman v. United States* [24 CCF ¶ 82,330], 230 Ct.Cl. 701, 712, 679 F.2d 865, 871 (1982). Government acceptance of erroneous invoices does not entitle the contractor to retain payment erroneously billed at the wrong unit price any more than payment for performance not rendered. *See Government of the Virgin Islands of the United States*, ASBCA No. 30648, 88-1 BCA ¶ 20,265, at 102,572; *Coral Petroleum, Inc.*, ASBCA No. 27888, 86-1 BCA ¶ 18,533.

Therefore the Government is entitled to recover $30,667.72 on its claim against appellant in this case.

CONCLUSION

The contract is clear on its face as a matter of law that the "date of delivery" for pricing purposes under the EPA clause was the date and time of the start of discharge of the fuel oil from the barge. There are no material factual issues in dispute. The Government is entitled to summary judgment in its favor for $30,667.72 on its claim against appellant (which is $3.88 less than the amount claimed because of appellant's rounding from six to five decimal places in its billing).

The appeal is denied.

[¶ 26,415] Harris Manufacturing, Inc.

ASBCA No. 40434, September 30, 1993. Contract No. DLA100-87-C-0783.

Delays—Causation—Prior Contract.—A manufacturer of toxilogical agents protective aprons was not entitled to an equitable adjustment under the instant contract by reason of government-caused test delays on a prior contract, which allegedly delayed performance under the instant contract, because it was the contractor that delayed performance on the instant contract. Despite the test delays on the prior contract, the government did not direct or notify the contractor to change its performance on the instant contract. The contractor itself elected to delay proceeding with obtaining cloth samples, speculating that they could not be tested in sufficient time for delivery of end items in accordance with the delivery schedule. As a result, the contractor did not have sufficient quantities of material ordered to meet the first delivery dates if there had been no problem with testing. These intervening events precluded a finding that the testing delays for which the government was responsible caused the contractor's delay in the performance of the instant contract.

Delays—Causation—Cross-Contractual Relief.—A manufacturer of toxilogical agents protective aprons was not entitled to an equitable adjustment under its instant contract by reason of government-caused test delays on a prior contract, which allegedly delayed performance under the instant contract, because the effect of government actions that delayed performance on the first contract was generally not reasonably foreseeable on the second contract. Where there is a sufficiently close relationship between two contracts, the government may be found responsible in rare cases where both government culpability and proximate cause can be found. The contractor here argued that exceptional circumstances existed for granting cross-contractual relief because under the first contract the government knew of significant testing delays at the testing site and chose not to advise the contractor or other offerors. However, the contractor was also aware of testing delays occurring at the testing site at the time of entering into the second contract.

For the appellant: Saul, Ewing, Remick & Saul, Philadelphia, Pennsylvania, by Robert G. Fryling and Elizabeth A. Kaiser. For the government: Wayne J. Bober, Trial Attorney, Defense Contract Management District Mid-Atlantic (DLA), Philadelphia, Pennsylvania.

Before TODD, REITER, RUBERRY, and RIISMANDEL, Administrative Judges.

TODD, Administrative Judge: This appeal involves an equitable adjustment claim for Government delays in testing at the laboratory at the U.S. Army Armament Munitions and Chemical Command (Aberdeen) that occurred under one contract and allegedly

caused additional costs of performance of a second contract. A hearing was held before Administrative Judge Reiter who has participated in this decision. Only entitlement is before us for decision.

FINDINGS OF FACT

1. On 24 July 1987, the Defense Personnel Support Center (DPSC) awarded Contract No. DLA100-87-C-0664 (contract 0664) to appellant Harris Manufacturing, Inc. (Harris) for the manufacture and delivery of 15,900 Toxilogical Agents Protective Aprons (TAP aprons). The last quantities of completed satisfactory end items were due 22 January 1988. (Board exh. 1, Stipulated Facts [Stip.] ¶ ¶ 1, 2, 8)

2. On 24 September 1987, DPSC awarded Contract No. DLA100-87-C-0783 (contract 0783) to Harris for manufacture and delivery of 23,050 TAP aprons for $777,937.50. The contract was a fixed-price, negotiated contract. The first quantities of completed satisfactory end items were due 22 January 1988, and completion of all deliveries was scheduled for 22 May 1988. (Stip. ¶ ¶ 3, 4, 9; R4, tab 3)

3. Both contracts incorporated Military Specification MIL-C-12189G, dated 29 December 1986, governing butyl coated, toxicological agents protective, cloth (stip. ¶ 10; R4, tab 11).

4. Both contracts contained DPSC Clause E21, GOVERNMENT LABORATORY TESTING OF COMPONENTS AND END ITEMS FOR ACCEPTANCE PURPOSES (October 1983), which provides in pertinent part:

> [T]he contract delivery requirements are based on the assumption that, from the day of receipt of the samples at the Government laboratory to the date the completed test results are mailed to the contractor, the Government will require a total of . . . 30 working days . . . for toxicological tests. If these time frames are exceeded, the contract delivery schedule will be extended by the number of additional days taken to complete the testing, provided the contractor can establish that the delay in its delivery was caused by the Government exceeding the prescribed times. The foregoing provision for extension of the delivery schedules is exclusive and the Government shall not be held liable to suit for breach of contract by reason of any delay by the Government in providing these test results.

(Stip. ¶ 11) Both contracts also incorporated by reference the standard clauses, GOVERNMENT DELAY OF WORK (APR 1984) (FAR 52.212-15), and DISPUTES (APR 1984) (FAR 52.233-1) (R4, tab 8; stip. ¶ 13).

5. The two contracts were issued under separate solicitations and awarded as separate and distinct contracts (stip. ¶ 6). The Government considered the contracts separate, individual contracts for administration (tr. 2/16, 3/39-40). At the time of bidding for contract 0783, S. David Harris, appellant's president, who was responsible for the preparation of appellant's proposals, intended to perform the second contract after completion of the first contract based on the contract delivery schedules (tr. 1/29, 33, 77, 78, 96). Mr. Harris never intended to perform the two contracts simultaneously (tr. 1/97). In his best and final offer Mr. Harris did not indicate that he considered performance of contract 0783 related to contract 0664, and he did not tell the Government prior to award that the contracts were related (tr. 1/93).

6. Under both contracts the principal material used for the production of the TAP aprons was butyl coated, toxicological agent protective cloth that was required to be tested at the Government facilities at Aberdeen for permeability (stip. ¶ 10). The cloth samples were subjected to one test against permeation from G.B., which is a nerve gas, and another test against permeation from H.D., which is a blister agent (tr. 2/27).

7. Beginning in August 1987, and lasting until early 1988, Aberdeen had a backlog of testing to be performed (tr. 2/47-49). The first delays occurred in early 1987 (tr. 2/41). They were caused by large numbers of failures that required retesting, a shortage of personnel, and changes necessitated by environmental concerns (tr. 2/41-42, 3/16-17). Ms. Patricia Panzera, the contracting officer, knew about these problems from a trip to the facility on 14 August 1987 to discuss testing delays (exh. A-12; tr. 2/46-47, 3/20-26). The backlog at that time was 58 manweeks (exh. A-12; tr. 2/47-48). Aberdeen was taking measures to reduce the backlog with use of a service contractor and overtime and hiring of additional personnel (exh. A-12; tr. 2/69, 3/50).

8. During July or August of 1987, after receipt of contract 0664 and prior to the completion of negotiations for award of contract 0783, Mr. Harris became aware of problems with testing at Aberdeen (tr. 1/37-38, 47-48, 94). Archer Rubber Com-

©1994, Commerce Clearing House, Inc.

Digitized by Google

pany (Archer), a cloth supplier for contract 0664, gave information to appellant that testing at Aberdeen was backed up for months (tr. 1/38).

9. Appellant's first samples of butyl cloth submitted under contract 0664 were received for testing at Aberdeen on 6 October 1987 (stip. ¶ 17). There were delays exceeding the contractually allowed time for testing on the first two of four submissions made (tr. 1/168). There were no Government-caused delays prior to 6 October 1987 (tr. 1/81-82). Appellant incurred additional costs in performing contract 0664 because of the Government testing delays. All testing was complete on contract 0664 with results reported to Harris by 23 February 1988. (Stip. ¶ 17) Appellant received a day for day extension in the contract 0664 delivery schedule (tr. 1/130). Deliveries of acceptable end item TAP aprons under contract 0664 were completed 7 April 1989 (stip. ¶ 25). Appellant filed a claim for delay under contract 0664 that was settled by payment to the appellant of $30,063.13 (R4, tabs 9, 43; stip. ¶ ¶ 19-20).

10. Prior to award of contract 0783, appellant did not have a contract with any supplier to provide butyl cloth for contract 0783 (tr. 1/104-05). Appellant had obtained a quotation and identified a source of supply, but did not issue a purchase order to or obtain a binding offer from the supplier before award (tr. 1/102, 105, 177).

11. To meet delivery schedules in contract 0783, appellant was required to submit samples of butyl cloth for testing by mid-October 1987 (tr. 1/106-08). Harris had problems obtaining a material supplier to provide the butyl cloth in a timely manner (R4, tab 30). On 22 October 1987, Harris placed its first order for material with Gladwynne Textile Company (R4, tab 35; tr. 1/111). The material was to be shipped to Aldan Rubber for coating (R4, tab 36; tr. 1/112, 115, 117). Appellant did not expect that the material purchased would be shipped immediately to Aberdeen (tr. 1/109). Mr. Harris acknowledged that if these shipments of material had been made, he would not have had sufficient quantities to meet the first two delivery dates under contract 0783 (tr. 1/121).

12. By letter dated 11 January 1988, to the contracting officer, appellant stated its concern with the effect the testing delays were having on costing and scheduling both contracts 0664 and 0783 and requested a meeting (R4, tab 19; tr. 1/40, 3/41). Appellant had also alerted the Government to the delay problems before that date in telephone conversations (tr. 1/39, 41, 87, 89, 174). A meeting was held with the contracting officer at DPSC on 21 January 1988, to discuss the delays and obtain assistance in expediting the testing (R4, tab 20; tr. 1/42, 165, 174, 175, 3/30-31). DPSC contacted Aberdeen and was given priority for testing contract 0664 samples (R4, tab 20; tr. 2/44-45, 58, 72, 94, 3/41-42). Testing was expedited on contract 0664, and it was the opinion of the contracting officer that testing could also have been expedited on contract 0783 if samples were submitted (tr. 3/57).

13. In correspondence and discussions with the Government, Mr. Harris generally referred to both contracts 0664 and 0783 (R4, tabs 19, 21, 23, 25, 27, 34; exh. A-4; tr. 1/43, 54, 78, 2/15).

14. In early 1988, Ms. Cheryl Keitt, Government contract specialist, told Mr. Harris that he had to begin submitting samples for testing even though the testing was delayed on contract 0664 in order to meet the delivery schedule on contract 0783 (tr. 2/15-18). The Government did not direct appellant not to ship samples on contract 0783 (tr. 1/141, 2/16).

15. Mr. Harris had told Aldan Rubber to hold up production of butyl cloth for contract 0783 because the samples would not be tested before contract 0664 samples that were then at Aberdeen for testing and delayed (tr. 1/49-50, 176). Mr. Harris did not think it was sensible to pay for more material to be tested that could not be used while shipments were still being made under contract 0664 and there was a backlog of testing at Aberdeen (tr. 1/78, 142, 144). In a letter, dated 11 November 1988, submitted to the Contracting Officer in support of its claim, appellant explained:

> [W]e gave the order for cloth on 0783 to Aldan Rubber Co. in October 1987. It seemed prudent on our behalf not to push Aldan for deliveries since the whole testing system was backed up and any materials delivered by Aldan would have to be paid for, and since we would not be using this material until we completed 0664, we did not request any shipments.

(R4, tab 27) Appellant decided not to ship any cloth samples under contract 0783 to Aberdeen for testing until deliveries under contract 0664 were completed (tr. 1/141). These were independent business decisions made by Mr. Harris (tr. 1/142-45).

16. Aldan Rubber had production problems and, with the exception of one small lot, never supplied any coated cloth

Digitized by Google

(R4, tab 41; tr. 1/77). By letter, dated 12 August 1988, Aldan Rubber informed appellant that it would not perform its purchase order (R4, tab 24; tr. 1/122-23). Harris entered into a purchase order with Cotswald Industries on 14 December 1988 (R4, tab 38; tr. 1/133). Cotswald did not perform, and Harris then selected Archer as the supplier (tr. 1/136, 139).

17. Appellant's first samples of butyl cloth submitted under contract 0783 were received for testing at Aberdeen on 13 April 1989 (R4, tab 37; stip. ¶ 18; tr. 1/139-40, 148). Almost all the shipments under contract 0783 were tested within the time limits allowed by the contract (exh. A-7; stip. ¶ 18; tr. 1/57-58, 140). After performance of contract 0783 began, Harris did not experience any significant Government-caused delays or problems that were reason to file claims (tr. 1/87). Appellant's first deliveries of acceptable end item TAP aprons under contract 0783 were on 11 May 1989 (stip. ¶ 26).

18. Appellant experienced problems in the performance of contract 0783 that were not anticipated at the time of award. There was a labor shortage in the area where its plant was located, and adhesion problems on the cementability of the butyl cloth were encountered. (R4, tab 23) The adhesion problems were resolved on contract 0664 and did not have a significant impact on contract 0783 (tr. 1/157-58). Appellant was producing approximately 400 units per week at the time of award of contract 0783, and the delivery schedule in that contract called for production of more than double that number (tr. 1/152-54, 156). Appellant's actual production thereafter was approximately 600 units per week, which was not sufficient to comply with the delivery schedule in contract 0783 (stip. ¶ 25; tr. 1/153).

19. By letter dated 18 April 1989, Mr. Harris requested clarification of shipping instructions from the Contracting officer stating that contract 0783 was essentially a continuation of contract 0664 which had just been completed and the same procedures for shipping should be continued "as if it was essentially a single contract" (R4, tab 29).

20. By letter dated 5 June 1989, the contracting officer required submission of a revised delivery schedule with an offer of monetary consideration because the delays were not considered to have been Government-caused. The letter noted that the Government was then meeting the 30 working day time allowed by the contract for testing. (R4, tab 33; tr. 2/23, 3/44)

21. Deliveries of acceptable end item TAP aprons under contract 0783 were completed 16 August 1990 (stip. ¶ 26).

22. By letter dated 11 July 1988, appellant's certified claim for an equitable adjustment under the Delay clause in both contracts 0664 and 0783 was submitted. Appellant claimed the amount of $63,225 under contract 0783 for labor costs, unabsorbed overhead, and professional fees. (R4, tab 9; stip. ¶ 19) The period of delay claimed began 45 days after the 6 October 1987 submission of material under contract 0664 for testing and ended no later than 6 February 1988 (tr. 1/85-86). By letter dated 7 June 1989, appellant amended its claim under contract 0783 to include material costs and make adjustments based on actual costs incurred that increased the amount of equitable adjustment requested to $129,450 (R4, tab 34; stip. ¶ 21).

23. The contracting officer denied the claim by letter, dated 16 January 1990 (R4, tab 10; stip. ¶ 23). On 15 February 1990, appellant filed this timely appeal.

DECISION

Appellant claims an equitable adjustment in Contract 0783 for the additional costs incurred for work under Contract 0783 on the basis that the Government-caused delay which first affected contract 0664 in turn delayed the contract at issue, contract 0783. Appellant has stated that the question of cross-contractual liability is not at issue in this appeal, and the claim is "a typical delay claim" (App. Br. at 8, n. 1). Appellant has not, however, identified actions or inactions of the contracting officer in the administration of contract 0783 as the basis for such a claim under the Delay clause.

Appellant maintains its entitlement citing as authority the analysis of the Claims Court in *Neal & Co., Inc. v. United States* [34 CCF ¶ 75,366], 13 Cl. Ct. 282 (1987). In that case the contracts were for housing renovation in Kodiak, Alaska on a three-phased project. The contractor was notified that work on the Phase III contract could not begin until some or all of the Phase II buildings were completed. A claim for delay in completion of the Phase II contract was denied because the same contractor, Neal, was fully responsible for the delays that occurred. The claim under the follow-on Phase III contract was for increased costs allegedly resulting from the Government's failure to

©1994, Commerce Clearing House, Inc.

Digitized by Google

grant time extensions under the Phase II contract which forced an acceleration and performance of the renovation work in winter weather. Neal's fault in failing to complete the Phase II contract in a timely fashion was found to have caused the delay in beginning the Phase III contract. The Court denied recovery of damages for delay under the follow-on contract where the contractor was responsible for delay on the preceding contract. *Accord, Triax-Pacific, A Joint Venture,* ASBCA No. 36353, 91-2 BCA ¶ 23,724.

The Court's analysis in *Neal,* on which appellant relies here, was stated as follows:

> If the Phase II contractor had not been the plaintiff Neal, then the outcome would be different. The Phase III contractor would be compensated for its damages by the government and then the government would sue the Phase II contractor for its damages. Here, it is unnecessary to take those steps since the plaintiff is the cause of its own loss.

13 Cl. Ct. at 286-87. Appellant was not responsible for the delay under contract 0664, but appellant must establish that the Government-caused delay in completion of contract 0664 was the actual cause of the claimed delay costs under contract 0783. The burden is on appellant to establish the facts of liability, causation and resultant injury for proof of a compensable claim. *San Carlos Irr. and Drainage Dist. v. United States,* 877 F.2d 957, 959 (Fed. Cir. 1989); *G & H Machinery Co. v. United States* [35 CCF ¶ 75,638], 16 Cl. Ct. 568 (1989). In its administration of contract 0783, the Government did not direct or notify appellant to change its performance because of the testing delays on contract 0664 (finding 14). Appellant elected to delay proceeding with obtaining cloth samples for contract 0783 speculating that they could not be tested in sufficient time for delivery of end items in accordance with the delivery schedule in contract 0783. Appellant did not have sufficient quantities of material ordered to meet the first delivery dates if there had been no problems with the testing. These intervening events preclude our finding that the testing delays the Government was responsible for caused appellant's delay in the performance of contract 0783.

Appellant's second argument relates to whether cross-contractual relief should be granted here. The Government maintains that there was no linkage between the contracts, which were separate and legally distinct, and the Government cannot be held to have been the proximate cause of appellant's increased costs of performing the second contract. But even if contract 0783 can be considered a follow-on contract to contract 0664, each required compliance with its specific terms and conditions, including the calendar dates in the delivery schedules which were separately and independently stated.

The effect of Government actions delaying performance of one contract is generally not reasonably foreseeable on a second contract, but where there is a sufficiently close relationship between two contracts, the Government may be found responsible in rare cases where both Government culpability and proximate cause can be found. *General Dynamics Corp. v. United States* [25 CCF ¶ 82,730], 218 Ct. Cl. 227, 585 F.2d 457 (1979); *Sermor, Inc.,* ASBCA No. 30576, 33176, 33179, 94-1 BCA ¶ 26,302 (16 August 1993). Appellant argues in response to the Government's position that exceptional circumstances exist here for granting cross-contractual relief because the Government knew of significant testing delays at Aberdeen and chose not to advise Harris or other offerors (App. Reply Br. at 3). In this case, however, appellant was also aware of testing delays occurring at Aberdeen at the time of entering into contract 0783 (finding 8). Since appellant had information about the problems, we cannot find the Government's failure to disclose additional information that it had about the testing backlog to be exceptional circumstances for granting relief. *R.E.D.M. Corp. v. United States* [15 CCF ¶ 83,775], 192 Ct. Cl. 891, 428 F.2d 1304 (1970).

Even if the Government were responsible for delays on contract 0783, the remedy of a monetary adjustment, according to the Government, is not available. Appellant must show that the delays were not concurrent with other delays for which it was responsible, or there can be no recovery of monetary compensation. *Commerce International Co. v. United States* [9 CCF ¶ 72,781], 167 Ct. Cl. 529, 338 F.2d 81 (1964); *Cline Construction Company,* ASBCA No. 28600, 84-3 BCA ¶ 17,594. The contractor is responsible to determine the sources of supply prior to bidding and obtain assurance that the material needed to complete performance will be furnished. *Conquest Industries, Inc.,* ASBCA No. 38738, 90-3 BCA ¶ 23,090. Deliveries of end items were first due under contract 0783 in January 1988. There were no Government-caused delays after February 1988. Appellant was unable to obtain butyl cloth from any of its material suppliers until April 1989, and did not make deliveries until May

Digitized by Google

1989. We do not consider that appellant's efforts to minimize its costs by not purchasing cloth samples for contract 0783 were reasonable or prudent measures to mitigate the costs of delay. The supplier problems which occurred were the contractor's problem and responsibility and should not be attributed to the Government. *H.C. Machine Company*, ASBCA No. 32932, 89-1 BCA ¶ 21,247. The contractor is also responsible for having an adequate production capability to meet the contract delivery schedule which we have found was not sufficient (finding 18).

Appellant made a business decision not to buy materials and begin performance of contract 0783 and was unable to meet the delivery schedule without cloth from its suppliers. Appellant also decided to delay its deliveries on contract 0783 until completion of deliveries on contract 0664 without regard to the delivery dates provided in contract 0783. These delays cannot be attributed to the Government. Concurrent causes of delay preclude granting an equitable adjustment. Where both parties contribute to the delay, neither can recover damages unless there is a clear apportionment of the delay and expense attributable to each party. *William F. Klingensmith, Inc. v. United States* [32 CCF ¶ 72,527], 731 F.2d 805, 809 (Fed. Cir. 1984).

For the reasons stated above, the appeal is denied.

[¶ 26,416] Sauer, Inc.

ASBCA Nos. 39605, 39372, 39898, 43680, October 1, 1993. Contract No. N68248-84-C-4113.

Contract Disputes, Certification—Authority—Presence at Location.—Under a construction contract, a claim certified by a senior vice president who had unlimited authority for all construction bids and contracts in the area of the construction, was responsible for the contractor's bid on the contract, maintained close contact with and control of the work, and signed 60 out of 69 contract modifications was properly certified under the Contract Disputes Act, even though the government asserted that the vice president was at best an off-site representative, because at the time the claim was certified, there was no contract activity at the original construction site. The area of activity at the time of certification was where the project records were maintained. It was from this location that the final contract administration and closeout efforts took place. There was no question that the vice president was the senior official in charge at that site. Moreover, during the contract activity at the construction site, the vice president clearly had primary responsibility for the performance of the contract; he did not need to be in charge of the construction site.

For the appellant: Smith & Fleming, Atlanta, Georgia, by Kent P. Smith. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Brad L. Johnson, Trial Attorney.

Before WATKINS, RIISMANDEL, and RUBERRY, Administrative Judges.

WATKINS, Administrative Judge: The Government moves to dismiss these appeals for lack of jurisdiction asserting that the individual who certified appellant's claims does not appear to meet the requirements of the Contract Disputes Act of 1978 (CDA), 41 U.S.C. § 605(c). Since these appeals were filed prior to 29 October 1992, the modified certification requirements as enacted in the Federal Courts Administration Act of 1992, P.L. No. 102-572, 29 Oct 1992, do not apply. The Government alleges that appellant's Vice President and Division Manager of Sauer's Southeast Region, who signed the certification, was not a "senior company official in charge at the contractor's plant or location involved" as required by FAR § 33.207(c)(2)(i). A ruling on this motion was deferred pending the taking of oral testimony.

STATEMENT OF FACTS

The Government awarded this contract to appellant on 28 February 1986 under terms of which appellant was, among other things, to complete the interior of the Refit Industrial Facility building at the Naval Submarine Base, Kings Bay, Georgia, for a price of $7,399,000. Eleven claims have been filed as a result of various disputes arising under this contract. In ASBCA No. 39605, appel-

©1994, Commerce Clearing House, Inc.

Digitized by Google

lant submitted a claim on 18 December 1987 in the amount of $937,765.26 for alleged "work beyond contract scope, impact, acceleration, and extended overhead among others." This claim was certified by Mr. H. John Rowland, Jr., Branch Manager. By letter of 5 December 1988, appellant revised the total amount of the claim to $1,081,998.35. This certification was signed by Mr. Neil J. Wickersty, Vice President. Similarly, the certifications for the claims in ASBCA Nos. 39372, 39898 and 43650 were signed by Mr. Wickersty. Since the Government ordered Sauer off the site at Kings Bay, GA, in October 1987, all claims and certifications were submitted from the Jacksonville, Florida, office.

Mr. Wickersty has been employed by Sauer since 1974 and has been a vice president since 1 September 1978 (tr. 1/10). He has been a division manager of Sauer's Southeast Region since 1978 and, in that capacity, has continuously had unlimited authority for all construction bids and contracts in the Southeast Region (tr. 1/22). The Southeast Region encompasses both Kings Bay, Georgia, and Jacksonville, Florida. Mr. Wickersty's principal location was at the Jacksonville office. He was responsible for Sauer's bid on this contract and maintained close contact with and control of the work (tr. 1/10, 14). He signed the contract as well as 60 out of the 69 modifications to the contract (tr. 1/14). The remaining 9 were signed by Mr. Rowland, after he obtained the concurrence of Mr. Wickersty (tr. 1/14). Mr. Wickersty also signed, on behalf of Sauer as Principal, both the performance and payment bonds submitted on the contract.

Mr. Peter North was Sauer's first contract manager with his office at the Kings Bay, Georgia, site. He resigned from Sauer on 31 July 1987 and left the area. In short, Mr. North was no longer an employee of Sauer at the time the claims and the certifications were submitted in 1988 and later.

DECISION

Proper claim certification is jurisdictional (*Universal Canvas, Inc. v. Stone* [38 CCF ¶76,370], 975 F.2d 847 (Fed. Cir. 1992)) and the contractor bears the burden of proving that a proper individual has certified under FAR 33.207(c)(2)(i). *Fidelity and Deposit Company of Maryland,* ASBCA No. 40327, 91-1 BCA ¶23,312. In deciding whether an individual is a senior company official, we look to a person's rank and managerial responsibilities with the organization at the time of certification. *J.A. Jones Construction Company,* ASBCA No. 40625, 92-3 BCA ¶25,212. Mr. Wickersty clearly meets the test to be a senior company official. *M.A. Mortenson Co.,* ASBCA No. 39978, 91-1 BCA ¶23,558.

The Government contends that "Appellant's on-site representative, Mr. North, clearly held responsibility over the project." The Government argues that Mr. Wickersty was, at best, an "off-site" representative. However, at the time the certification was made in 1988 and later, there was no contract activity at the Kings Bay, Georgia, location. The remaining contract activity was at Jacksonville, Florida, where the project records were maintained. It was from this location that the final contract administration and closeout efforts took place. There is no question that Mr. Wickersty was the senior official in charge at that site. Moreover, during the contract activity at Kings Bay, Mr. Wickersty clearly "had primary responsibility for the performance of the contract;" he did not need to be in charge of the construction site. See *George Hyman Construction Co.,* ASBCA Nos. 44155 *et al.,* 93-2 BCA ¶25,870. *Cf., Robert E. McKee, Inc.,* ASBCA No. 42917, 92-2 BCA ¶24,976.

The Government's Motion is denied.

[¶ 26,417] M. Bianchi of California

ASBCA Nos. 37395, 37798, 42243, 42244, 42416, September 30, 1993. Contract Nos. DLA100-80-C-2290, DLA100-80-C-2972, DLA100-79-C-2894.

Value Engineering—Acceptance—Constructive Acceptance.—A contractor was not entitled to compensation for three of the four value engineering change proposals it submitted, despite its contention that the government constructively accepted the VECPs, because there can be no compensable constructive acceptance of a VECP under future contracts if a VECP was rejected without bad faith for the contract under which it was submitted. Consequently, since the VECPs were rejected under the contract without bad

Digitized by Google

faith on the part of the government, the contractor could not, as a matter of law, recover future contract royalties for those VECPs, even if they were implemented on future contracts. Moreover, the record did not show that any military specifications for which the contractor sought future contract royalties were changed because of the contractor's VECPs.

Value Engineering—Acceptance—Implementation.—A contractor was not entitled to compensation for a value engineering change proposal, even though it was accepted under the contract as an alternative provision, because it was not implemented by the contractor. There could be no future contract royalties under the terms of the contract because the basis for future contract royalties was clearly stated to be the unit cost reduction under the instant contract. There was no legal basis for the contractor to recover future contract royalties, even though the VECP had been accepted. Moreover, none of the future contracts for which it sought royalties was for the same items as those purchased in the contractor's contracts.

For the appellant: Petrillo & Hordell, Washington, D.C., by Michael A. Hordell and Laurel A. Heneghan. For the government: Thomas Hornak, Chief Trial Attorney, and John M. Logue and Patricia A. Papas, Trial Attorneys, Defense Personnel Support Center (DLA), Philadelphia, Pennsylvania.

Before AXELMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

AXELMAN, Administrative Judge: After being awarded three contracts for the production of articles of clothing for the military services, appellant submitted five value engineering change proposals (VECP's) thereunder which it contends the Government accepted directly or constructively and for which it now seeks royalties of approximately $180 million, as follows:

ASBCA No.	*VECP No.*	*Contract*	*Description of VECP*
37395	1380	DLA100-80-C-2290	Change thread for buttonhole gimp on women's pantsuit coats from silk to polyester*
37798	1280	DLA100-80-C-2290	Change interlining of women's pantsuit coats from hairwool, rayon, or cotton to Pellon non-woven material
42243	2181	DLA100-80-C-2972	Change interlining of men's all weather coats from fusible woven material to Pellon fusible non-woven material
42244	3380	DLA100-79-C-2894	Change interlining of enlisted men's raincoats from fusible woven material to Pellon fusible non-woven material
42416	2880	DLA100-80-C-2290	Change from separate size and identification labels for women's pantsuit coats to one combined label

Quantum, as well as entitlement, is at issue in each of the appeals.

FINDINGS OF FACT

I. *The Contracts*

A. *Contract No. DLA100-79-C-2894*

1. On 13 July 1979, the Defense Personnel Support Center (DPSC) of Philadelphia, Pennsylvania, Defense Logistics Agency (DLA), awarded appellant Contract No. DLA100-79-C-2894 for the manufacture and delivery of 43,000 Navy men's single-breasted polyester/cotton, poplin blue shade 3346 raincoats in accordance with military specification MIL-R-82290B(SA) for a unit price of $19.20 and a total contract price of $825,600 (R4, ASBCA No. 42244, tabs 1-4).

2. The contract also provided for an optional quantity of 21,500 units, which the Government ordered by Modification P00007 on 22 February 1980, at a unit price of $21.64, raising the contract quantity to 64,500 and increasing the contract price to $1,290,860 (*ibid.*, tab 5).

* VECP 1380 also contained a proposed change to use Oncore or cotton thread for all body construction of the coats instead of polyester and silk thread (finding 23, *infra*). However, appellant declared at the hearing of these appeals and thereafter that it was no longer pursuing its claim with regard to that proposed change (tr. 1/17-18; app. posthearing br. at 79, 312).

©1994, Commerce Clearing House, Inc.

Digitized by Google

3. Appellant delivered 43,952 units, but the remaining quantity of 20,548 units was terminated for default by Modification P00011 dated 29 October 1981 (*ibid.*).

B. *Contract No. DLA100-80-C-2290*

4. On 7 November 1979, DPSC awarded appellant Contract No. DLA100-80-C-2290 for the manufacture and delivery of 26,250 polyester/wool, tropical 10-ounce, blue shade 1578 Air Force women's pantsuit coats in accordance with Purchase Description ENEU 78-7 (subsequently superseded by MIL-C-87160) for a unit price of $34.37 and a total contract price of $902,212.50 (R4, ASBCA No. 37395, tab 1). The contract stated that it was a production test procurement for the purpose of determining whether the item described in ENEU 78-7 "can be manufactured in quantity production in accordance with accepted production practices" (*ibid.*, tab 3 at 63; tr. 1/89).

5. Appellant delivered 25,903 units which the Government paid for and regarded as contract completion on 9 December 1980 (tr. 9/62-63; exh. G-193).

C. *Contract No. DLA100-80-C-2972*

6. On 23 June 1980, DPSC awarded appellant Contract No. DLA100-80-C-2972 for the manufacture and delivery of 125,240 Army men's black cotton and polyester poplin cloth all weather coats with removable liners at a unit price of $31.92 and a total contract price of $3,997,366.40. The coats were to be manufactured in accordance with Limited Purchase Description 12-77A (DES 12-77A) dated 1 November 1978 (subsequently replaced by MIL-C-44030, dated 24 July 1980) using patterns dated 21 September 1979 issued by the United States Army Natick Research and Development Laboratory (Natick) and were to be delivered between 4 January and 3 June 1981 (R4, ASBCA No. 42243, tabs 3, 5; tr. 1/156).

7. Appellant delivered 38,146 coats under the contract, and the remaining 87,094 were terminated for default in late 1981 (R4, ASBCA No. 42243, tab 6).

D. *Value Engineering Incentive Clause*

8. All three of appellant's contracts contained the following value engineering incentive clause (R4, ASBCA No. 37395, tab 4; R4, ASBCA No. 42243, tab 1; R4, ASBCA No. 42244, tab 2):

J09 VALUE ENGINEERING INCENTIVE (DPSC 1978 Jan)

(a) **Application.** This clause applies to a Contractor developed and documented Value Engineering Change Proposal (VECP) which:

(i) requires a change to this contract to implement the VECP, and

(ii) reduces the overall costs to the cognizant Military Department without impairing essential functions or characteristics, provided that it is not based:

(A) solely on a change in deliverable end item quantities, or

(B) a change in R&D end item or test quantities due solely to results of previous testing under this contract, or

(C) solely on a change to the contract type.

(b) **Documentation.** As a minimum, the following information shall be submitted by the Contractor with each VECP.

(i) a description of the difference between the existing contract requirement and the proposed change, and the comparative advantages and disadvantages of each, justification when a function or characteristic of an item is being altered, and the effect of the change on the performance of the end item;

(ii) an analysis and itemization of the requirements of the contract which must be changed if the VECP is accepted and a recommendation as to how to make each change (*e.g., a suggested specification revision*):

(iii) a separate detailed cost estimate for both the existing contract requirement and the proposed change to provide an estimate of the reduction in costs, if any, that will result from acceptance of the VECP, taking into account the costs of development and implementation by the Contractor (*including any amount attributable to subcontracts in accordance with paragraph (h) below*);

(iv) a prediction of any effects the proposed change would have on collateral costs to the Military Department such as Government-furnished property costs, costs of related items, and costs of maintenance and operation.

(v) a statement of the time by which a contract modification accepting the VECP must be issued so as to obtain the maximum cost reduction, noting any effect on the contract completion time or delivery schedule, and

(vi) identification of any previous submission of the VECP, including the dates submitted, the agencies involved, the

Digitized by Google

numbers of the Government contracts involved, and the previous actions by the Government, if known.

(c) **Submission.** VECPs shall be submitted to the Procuring Contracting Officer (PCO). When the contract is administered by other than the purchasing office, a copy of the VECP shall be submitted simultaneously to the Administrative Contracting Officer (ACO). VECPs shall be processed expeditiously, however, the Government shall not be liable for any delay in acting upon any VECP submitted pursuant to this clause. The Contractor has the right to withdraw, in whole or in part, any VECP not accepted by the Government within the period specified in the VECP.

(d) **Acceptance.** The Contracting Officer may accept, in whole or in part, by contract modification either before or within a reasonable time after performance has been completed under this contract any VECP submitted pursuant to this clause. Until a contract modification applies a VECP to this contract, the Contractor shall remain obligated to perform in accordance with the terms of the existing contract. Contract modifications made pursuant to this clause will so state. The decision of the Contracting Officer as to the acceptance of any VECP under this contract (*including the decision as to which clause is applicable to the proposal if this contract contains both a "Value Engineering Incentive" and a "Value Engineering Program Requirement" clause*) shall be final and shall not be subject to the "Disputes" clause of this contract.

(e) **Sharing.** If a VECP submitted by the Contractor pursuant to this clause is accepted, the Contractor shall share in savings realized by the Government in accordance with the following provisions:

(1) Instant Contract.

(i) Definitions:

(A) Instant contract savings to the Contractor (ICS) is the unit cost reduction times the number of units affected in the instant contract. The proposed unit cost reduction includes estimated allowable Contractor development and implementation costs (CC). The Contractor's development and implementation costs include any subcontractor development and implementation costs and subcontractor incentive payments (*see (h) below*). For purposes of this clause, Contractor development costs are those costs incurred after the Contractor has identified a specific VE project and prior to acceptance by the Government.

(B) Government Costs (GC) are those DOD costs which directly result from development and implementation of the VECP, such as test and evaluation of the VECP, and any increased cost in DOD operations, maintenance, and logistics support.

* * *

(2) Concurrent Contracts.

(i) If the VECP accepted under this contract is also used on concurrent contracts of the purchasing office for essentially the same items, the Contractor shall be paid a share of any savings as calculated in (ii) below.

(ii) Calculations

(A) Determine the reduction in the price of each concurrent contract(s) as a result of incorporating the VECP.

(B) Subtract from the total amount in (A) any Government costs (GC) not yet offset (*if GC was greater than ICS*) in (e)(1)(ii)(C) or (D) above, and any increase in the instant contract price, i.e., if ICS was negative in (e)(1)(ii)(D), if the resulting number is positive, multiply it by 50% (*25% if this is a VEPRC*). Add this amount to the instant contract price.

(3) Future Contracts.

(i) Definition. The term unit cost reduction for future contract sharing shall be the unit cost reduction under this instant contract without deducting any cost of development or impletion [sic].

(ii) If the VECP accepted under this contract is used on future purchases of essentially the same item by the purchasing office, or its successor, the Contractor shall share in the savings on all affected end items scheduled for delivery not later than 3 years after acceptance of the first item incorporating the VECP, or until the originally scheduled delivery date of the last affected end item under the instant contract, whichever is later. When sharing on future contracts is expected, the Contractor shall be responsible for the following:

(A) Maintaining records adequate to support identification of the first delivered unit to which the VECP applies. These records are considered an integral part of contract documentation and shall be maintained for a period of three years after final payment on the contract under which the VECP was accepted.

©1994, Commerce Clearing House, Inc.

Digitized by Google

(B) Annotating the DD-250, Material Inspection and Receiving Report, which applies to the initial unit covered by the VECP with the following statement:

"This is the initial unit delivered which incorporates VECP NO. _____ _____, Contract Modification No. _____, dated _____ _____."

(iii) Calculations. At the time each eligible future contract is awarded:

(A) Determine the number of units scheduled to be delivered prior to expiration of the Contractor sharing period determined in (ii) above. Multiply this by the unit cost reduction as defined in (e)(3)(i).

(B) Subtract from the total amount in (A) any Government costs or instant contract increases not yet offset in (e)(1)(ii)(C) or (D), or in (e)(2)(ii)(B), or in other contracts awarded since acceptance of the VECP. If the resulting number is positive multiply it by 50% (*25% if this is a VEPRC*) and add the result to the instant contract price.

(f) Payment. The Contractor's concurrent and future contract shares should be paid upon modification of concurrent contracts or future contract award, or within six (6) months thereafter. However, any such payments are subject to the condition that to the extent the Government does not receive delivery of and accept all items on which the share is paid, the Contractor shall reimburse the Government the proportionate share of the payments. If this clause is modified to provide for lump sum payments, such payments shall be made upon modification of the instant contract.

II. *Appellant's Value Engineering Proposals (VECP's)*

A. *VECP 1280 (ASBCA No. 37798)*

9. In a letter to DPSC dated 3 December 1979 (R4, ASBCA No. 37798, tab 6), appellant submitted several VECP's under Contract 2290, including the following proposal which the Government subsequently designated as VECP 1280 (*ibid.*, tab 10):

1. *Change From:*
MIL-C-297F Cloth Interlining, Cotton Wrap and Spun Hairwool or Rayon Filling 12-1-79; $4.50 per yard 72" wide for Coat Fronts.

Change To:
Pellon Corp. fusable [sic] #3633, Color White, 45" wide at $.60 per yard.

Hair-Wool	.286 yards per garment 72 × 36 equals 2592 square inches Cost per square inch = .001736 658 square inch × .001736 = $1.14 per coat
Pellon	45" × 36" long = 1620 square inches. Cost per square inch = .000373 658 square inch × .000373 = $.25 per coat.
	Savings of $.89 per coat

10. An interlining is a piece of fabric that is sewn or fused between two other layers of fabric in parts of a garment, such as collars, cuffs, and pocket flaps, to give them body and stiffen them (tr. 5/187-88, 8/52).

11. Garment interlining material is either woven—that is, resulting from the weaving of yarns vertically and horizontally on a loom like the hairwool prescribed in Contract 2290—or non-woven—that is, resulting from the pressing together of fibers with some sort of resin or by heat to cause them to bond into a papery type configuration like the Pellon Corp. #3633 material proposed by appellant (tr. 1/23, 82, 131-32, 141-43, 156-57, 5/188, 6/83-84).

12. Both woven and non-woven interlinings can be sewn or fused into a garment (tr. 1/134, 5/188). A fabric like Pellon #3633, is fusible when an adhesive is applied to it and is joined to other material by a process of time, temperature, and pressure which melts the adhesive (tr. 3/17, 5/189-90, 8/28-29).

13. Non-woven fusibles were developed by Freudenberg, the parent company of Pellon Corp., in Germany in or before the 1960's and became generally accepted in the garment industry by the mid-1980's (tr. 3/64). DPSC began testing fusibles in the late 1960's to determine how they could be used in military clothing (tr. 6/133); and the Army Research and Development Center at Natick, Massachusetts, engaged in a continuous research, development, and experimentation program concerning the use of fusible fabrics for components of garments, including interlinings, from 1971 to 1983 and thereafter (tr. 5/170, 175-76, 193-94, 6/5-6, 16-17, 93-96, 136, 138, 192-200, 7/49, 9/115-21; exh. G-139, -143). All of the military services participated in the Natick program, including the Marine Corps (tr. 2/58, 6/13, 16-18, 133-34, 7/49, 116) which wrote the MIL-C-29365 (MC) specification, entitled "CLOTH, NONWOVEN: INTERLINING, FUSIBLE, NYLON AND POLYESTER, POLYAMID," around a Pellon product in February 1978 (exh. G-116,

Digitized by Google

-139; tr. 6/19, 35); and the military departments were fusing interlinings on approximately 15 items such as dress shirts, raincoats, service caps, and optional PX-type uniform coats in the mid to late 1970's (tr. 5/199-200; exh. G-125). Although the Government had tested 250 uniform coats in 1975-76 to determine the feasibility of fusible interlinings therein (tr. 6/5-6, 21, 133-34; exh. G-128) and had met with Pellon personnel at its factory in New England in the mid-1970's (tr. 6/17), it was not convinced in late 1979 that the desired quality of dress coats could be maintained with fusible interlinings (tr. 5/198-99, 6/57, 94-95). As stated by Mr. Bruce Snigger of the Fabric and Fabric Technology Division of Natick, in a 14 January 1980 memorandum to the chief of that division (exh. G-128):

> 2. A meeting was held on 7 December 1979 with Mr. D. Cerow, AUPO, to review the present status of the use of fusible interlinings and discuss where new uses can be introduced as presented in reference 1. Present from F&FT Branch, TR&ED were B. Snigger, E. Frederick, and R. Roth.
>
> 3. From the items identified in reference 1 as potential candidates for fusibles, it was agreed that the items listed in the attached table should be investigated and priorities were assigned as indicated.
>
> 4. The following comments are made concerning the categories selected for investigation:
>
> a. Coats (items 1-3)—A wear test was performed in 1975/1976 with 250 fused polyester/wool coats. Although 68 percent of the test subjects reporting to NARADCOM indicated preference of the fused coats, some of the test items exhibited delamination of fused areas. The number of faulty coats generated a reluctance to introduce fusibles into dress items at that time. However, with the growing popularity of fusibles in commercial items, and with the experience gained in-house and by outside contractors, a program has been initiated to evaluate improved fusibles in 25 men's coats in a small scale, closely monitored wear test which could include Army Uniform Board personnel. The coats will be made under "ideal" conditions (temperature, pressure and dwell time) with the fusing being done in the fusible supplier's laboratory. Crown Textile Co. has offered to furnish the fusibles and to assist in the fabrication of the coats.
>
> b. Shirts and Overblouses (items 4-7)—The question was raised as to whether fusing of the flaps would magnify the puckering of the pocket stitching because of the flaps' relative smoothness. Approximately six (6) shirts will be made with fused collars, cuffs, flaps and shoulder loops to determine what aesthetic differences result before and after laundering.
>
> c. Raincoats (items 8-10)—A document modification will be sent through AUPO to EPMO which will implement the fusing of raincoat collar stands as an alternate to the sewn-in marquisette. Fusing of the raincoat front with a suitable nonwoven fabric was also determined to be worthy of investigation. Sample coats will tentatively be made up at the Pellon Corporation Studio in New York and evaluated.
>
> d. Women's Uniforms (items 11 & 12)—These items are scheduled to be phased out. AUPO has indicated that changes to these items would not be feasible since they could be out of the system before any modifications were implemented.
>
> e. Coat, Men's, Woven Twill, Textured Polyester, AG 434—UQC S-2-75 (item 13)—Since this item already utilizes fusible interlinings, a document change is being prepared for the UQC Office through AUPO to include fusing of the cuff wigans. This will be completed in January 1980.
>
> 5. Total funding over a two year period should be approximately $60,000. Action is being taken to transfer funds from AUPO to establish a TR&ED task.

14. Delamination is the separation of a fusible interlining from the fabric to which it is fused (tr. 1/131, 3/17, 43-44, 8/27).

15. At the time appellant submitted VECP 1280, it was aware that the Marine Corps had prescribed fusible, non-woven interlinings in MIL-C-29365 (MC) in 1978 (tr. 2/58). Appellant itself had had no prior experience with Pellon non-woven fabrics (tr. 2/114, 126).

16. By letter dated 28 February 1980, while the Government was evaluating VECP 1280 (R4, ASBCA No. 37798, tabs 8-11), appellant proposed the following Pellon products for the Government's consideration as "additional alternate" products to be used for interlinings on the Air Force women's pantsuit coats "for this procurement and all like procurements" (*ibid.*, tab 12):

©1994, Commerce Clearing House, Inc.
Digitized by Google

Pellon #SG413 36" Non-woven Fusible $1.09½ per yard White
Pellon #SG413 36" Non-woven Fusible $1.16½ per yard Black

(or, a lighter version)

Pellon #SG313 36" Non-woven Fusible $0.85 per yard White
Pellon #SG313 36" Non-woven Fusible $0.91 per yard Grey

17. In a letter dated 12 March 1980 (*ibid.*, tab 14), appellant informed DPSC:

> Cost estimated for the difference between hairwool and fusible interlining, as referenced in letter to DPSC dated 03 Dec 79, is incorrect. Depending on the type fusible interlining used, the savings is not $.89 but, from $1.36 for SG413 to $1.62 with Pellon #3633, SG313 savings would be $1.49.
>
> Estimated labor savings by fusing are as follows:

Labor cost deleted

Hand Operations

A. Operation 4 (E)	Press undercollar	.046
B. Operation 4 (T)3	Baste collar 1/4" from edge to edge	.092
C. Operation 12(A)	Baste interlining to front	.092
D. Operation 14(A)	Press fronts	.092
E. Operation 14(B)	Trim front interlining	.092
F. Operation 21(C)	Baste diagonal rows across lapel	.198

Sewing Operations

A. Operation 4 (A)	Blindstitch collar lining	.055
B. Operation 4 (H)	Stitch top and side edges of collar	.055
C. Operation 13(A)	Blindstitch 6 rows on lapel	.11
D. Operation 14(DD)	Stitch interlining from armhole to shoulder seam	.11
E. Operation 21(F)	Blindstitch back of front facing to interlining	.22
F. Operation 27(C)	Sew shoulder loop interlining to edge	.11

Labor cost added

Fusing of parts .20

Total labor savings are:	Deleted operations	$1.272
	Minus added cost	.22
	Savings	$1.052

18. After evaluation by DPSC and the Air Force specification preparing activity and in accordance with their recommendation (*ibid.*, tabs 13, 16-18), the contracting officer, by letter dated 18 April 1980, disapproved VECP 1280, stating (*ibid.*, tab 19):

> VECP 1280—Proposal to use Pellon fusible in lieu of cotton warp and spun haircloth or rayon filling interlining material is not approved. We concur in the concept of using fusible interlining materials wherever applicable. However, one of the problems to be resolved before any action can be taken is to have test methods that yield reproducible data on which requirements can be based. Also, compatibility of the Pellon material and the base cloth to which it will be fused must first be determined. Detailed manufacturing procedures to insure control of time, temperature, and pressure during the fusing operation is of primary importance.

19. On 13 and 16 June 1980, appellant resubmitted VECP 1280, proposing respectively that Pellon #3633 and Pellon #SG413 be used in the manufacture of the pantsuit coats instead of hairwool or hair-rayon, and further stating that the proposal contemplated a reduction in cost on all like garments as well as the contract item (*ibid.*, tabs 20, 21; tr. 1/126-27).

20. The Government took no action on the resubmitted VECP, and appellant, through counsel, submitted a claim concerning VECP 1280, in the amount of $1,023,999.86, on 4 August 1988 (exh. A-1165).

21. On 17 October 1988, the appeal in ASBCA No. 37798 was initiated by appellant after failure of the contracting officer to issue a final decision on its claim.

B. *VECP 1380 (ASBCA No. 37395)*

22. Appellant's 3 December 1979 letter to DPSC (finding 9) also contained the following proposal under Contract 2290 which the Government subsequently designated as VECP 1380 (R4, ASBCA No. 37395, tabs 6, 7):

Digitized by Google

2. *Change From:*

V-T-301D Thread Silk 4/22/71 AM,2—4-19-73—$50.60 1750 yards per pound/Omit Completely.

Change To:

V-T-285 D Polyester—1750 yards $.65

Savings: $49.95 per pound

23. On 25 January 1980, appellant amended its proposal in the following letter to DPSC (*ibid.*, tab 8):

> Please refer to our Valued [sic] Engineering Recommendations dated 03 December 1979, Change #2.
>
> The information given to us by Gudebrod, Inc. regarding 1750 yards per pound, silk thread, is incorrect. We recommend the following change which will reflect the pounds as being accurate according to the management of Gudebrod, Inc.:
>
> *Change From:*
>
> V-T-301D Thread Silk 4/22/71 AM 2, 4-19-73 — $50.60 per pound
>
> Yield as follows: Type A 15,200 per pound
> Type B 12,480 per pound
> Type C 9,920 yards per pound (Gimp)
>
> *Change To:*
>
> *Threads, Inc.*
>
> | | | |
> |---|---|---|
> | Oncore 50 | MIL-T-43548 (To be used for all body construction including topstitching) | 7.02 per pound |

> | C | 50.60 | Threads, Inc. | 5.86 |
> | | $151.80 | | $19.18 |
>
> Savings: $132.62 per three (3) pounds

24. After evaluation, the Government disapproved VECP 1380, except the proposal to use V-T 280 cotton thread for button hole gimps (reinforcements) which it accepted, in Modification P00006, dated 20 May 1980, as an alternative to the ENEU 78-7 requirement for silk thread for gimps (tr. 1/98, 9/54-55; R4, ASBCA No. 37395, tabs 9, 10).

25. The allowance of V-T cotton thread as an alternative material for gimps was confirmed in Modification P00010 which was executed by appellant on 30 October 1980 and by the contracting officer on 3 November 1980 and contained the following provisions (*ibid.*, tab 11):

1. Pursuant to Clause J 09 entitled Value Engineering Incentive Clause the following changes are made to the specification requirements:

VECP #1380—para. 3.1.15 Gimp—At the end of the paragraph add "or the Gimp may be cotton type II, size 8 of V-T-280."

2. The contractor and the Government hereby agree that savings as a result of VECP #1380 will be $.0395 per unit for future contracts utilizing this change.

3. It is agreed that the contractor is entitled to 50% of the unit savings or $.01975 per unit for all items utilizing this change during the royalty period.

26. Appellant did not use the alternative V-T-280 cotton thread for gimps on the 25,903 units which it delivered under Contract 2290 between 24 September and 9 De-

©1994, Commerce Clearing House, Inc.

Digitized by Google

cember 1980 (exh. A-1074, G-194; finding 5; app. posthearing br. at 78).

27. There were no concurrent contracts for the item which was the subject of Contract 2290, and no other contractors which manufactured women's Air Force pantsuit coats for the Government after appellant's submission of VECP 1380 elected to utilize the alternative V-T-280 cotton thread for gimps (tr. 4/26-27, 35, 9/57-58).

28. Appellant received no royalties or other compensation for VECP 1380 (tr. 1/120).

29. In a letter dated 27 May 1988, appellant filed a claim in this matter, through counsel, in the amount of $1,036.88 for instant contract savings and indicated that the claim would be supplemented as it obtained further information concerning the implementation of VECP 1380 by the Government (exh. A-1166).

30. Appellant subsequently appealed from a failure of the contracting officer to issue a final decision on VECP 1380.

C. *VECP 2181 (ASBCA No. 42243)*

31. By letter dated 31 October 1980 (R4, ASBCA No. 42243, tab 7), appellant submitted to DPSC the following VECP under Contract 2972, which was subsequently designated as VECP 2181 (*ibid.*, tabs 8, 9):

> Regarding Clause J 09 Value Engineering, MBOC recommends the following change:
>
> *Change From*
>
> 100 percent cotton plain weave cloth which has a uniformly distributed dot system of a polyvinyl chloride/polyvinyl acetate type fusible adhesive applied to one side. (Per paragraph 3.2.9.1 of LP/P DES 12-77A)
>
> *Change To*
>
> Pellon product SG413 (#8325) non-woven fusible interlining.
>
> Note: Pellon Corporation has notified MBOC that #SG413 and #8325 applies to the same product. A decision is being finalized by Pellon Corporation management as to which number will pertain to the product.
>
> Please refer to DLA100-79-C-2894 correspondence on VECP #3380 and DLA100-80-C-2290 correspondence on VECP #1380 from DLA which contains all current data and testing accomplished by the Department of Defense.
>
> Cost savings can only be determined upon future evaluating by audit. MBOC will supply this information upon request in complience [sic] with Clause J 09.

32. After technical review and evaluation of appellant's proposal, the Army Natick Research and Development Laboratories determined that the interlining material proposed in VECP 2181 was acceptable as an alternative to the interlining material prescribed in the contract, and it recommended the approval of that VECP (*ibid.*, tab 8; tr. 6/24, 43, 51).

33. Natick's recommendation was adopted by the Government in unilateral Modification P00005 to the contract dated 31 March 1981, which provided (R4, ASBCA No. 42243, tab 6):

> 5. In addition, VECP #2181 has also been approved. The following changes are incorporated into the contract as changes to MIL-C-44030:
>
> CHANGES TO MIL-C-44030, 24 July 1980
>
> a. Page 1, paragraph 2.1, under Military Specifications, add: "MIL-C-29365—Cloth, Nonwoven, Interlining, Fusible, Nylon and Polyester, Polyamid."
>
> b. Page 4, paragraph 3.2.9.1, at the end of the paragraph add: "As an alternative a nonwoven fusible fabric conforming to class 3 material of MIL-C-29365 may be used as a fusible interlining. Testing for the nonwoven fusible shall be as specified in MIL-C-29365 (The woven fusible requirements contained herein for colorfastness, 3.2.9.3; fusing conditions, 3.2.9.4; bond strength, 3.2.9.5, and shrinkage, 3.2.9.6, shall not apply).
>
> 6. The contractor shall be entitled to 50% of the unit savings or [sic] any unit incorporating VECP #2181. Unit savings has not yet been determined for this VECP; modification will be issued to definitize the savings at a later date.
>
> 7. Contractor is obligated to annotate the DD Form 250 which applies to the initial unit covered by the VECP #2181.

34. A cost analysis of the proposed change, conducted by DPSC's Directorate of Manufacturing in late March 1981 disclosed that the change in interlining material proposed in VECP 2181 would effect neither an increase nor a decrease in production costs (tr. 5/81, 6/152-56; exh. G-140).

35. VECP 2181 was not implemented under Contract 2972, and appellant received no payments for VECP 2181 (tr. 1/162; exh. A-1042; app. posthearing br. at 289-90, 384, 443-44).

Digitized by Google

36. Appellant submitted its present claim in this matter, for an unspecified amount, on 3 August 1990 (R4, ASBCA No. 42243, tab 12) and subsequently appealed from a failure of the contracting officer to issue a final decision thereon (*ibid.*, tab 14).

D. *VECP 2880 (ASBCA No. 42416)*

37. On 22 January 1980, appellant submitted to DPSC a VECP, subsequently designated as VECP 2880, under Contract 2290, proposing that two labels prescribed in the contract for attachment to the pantsuit coats, one for size and one for contractor and personnel identification (tr. 1/165, 199, 5/114-15), be combined as suggested in a 10 December 1979 letter from its subcontractor, Star Printing Company, which stated (R4, ASBCA No. 42416, tabs 6, 7, 10):

> We enclose herewith 100 each of the labels required for your contract 2290 and can quote as follows for the labels as submitted:
>
> | | | | |
> |---|---|---|---|
> | 1. | 27,000 | 3" × 3" Type I Classes 1 & 10 labels | @$16.50 M |
> | 2. | 27,000 | Asst. $1\frac{1}{2} \times 1\frac{1}{4}$ Type I Class 2 labels plus 31 size changes | @ $5.25 M
@ $1.50 each |
> | | 27,000 | Asst. $3\frac{1}{2} \times 1\frac{5}{8}$" paper "bag insert" labels plus 31 size changes | @ $4.50 M
@ $1.50 each |
>
> Maury, if it is possible for you to combine label #1 and label #2 with $\frac{1}{4}$" sew in on four sides only, combination Type I Classes 1, 2 and 10 label, the price for 27,000 assorted $2\frac{5}{8}$" × $2\frac{3}{8}$" labels would be at $12.50 per thousand plus 31 size changes at $1.50 each. These labels would take the place of both 3" × 3" and the $1\frac{1}{2}$" × $1\frac{1}{4}$" label if you are able to convince the inspector that there is a cost saving by combining the two labels.
>
> We will hold up processing the balance of your order and would appreciate hearing from you at your earliest convenience how you want to handle the balance of this order.

38. After consideration and evaluation of VECP 2880, the Air Force Clothing and Textile Office, of Philadelphia, Pennsylvania, the specification preparing activity, reported that it did not concur in the proposal because the "size label is required to be placed so that it will be visible for both storage & issue purposes" (*ibid.*, tab 11).

39. By letter dated 2 April 1980 (*ibid.*, tab 12), the contracting officer informed appellant that VECP 2880 was not adopted for the reason stated by the specification preparing activity in its report.

40. VECP 2880 was not implemented on the subject contract, and appellant received no payment therefor (tr. 1/168, 171).

41. Appellant submitted its present claim, in an unspecified amount, for alleged constructive acceptance of VECP 2880 on 30 October 1990 and revised the claim on 26 November 1990 to an amount less than $50,000; and it has appealed from the failure of the contracting officer to issue a final decision thereon.

E. *VECP 3380 (ASBCA No. 42244)*

42. On 28 February 1980, appellant sent the following VECP to DPSC under Contract 2894, which was subsequently designated as VECP 3880 (R4, ASBCA No. 42244, tabs 6, 7):

> MBOC recommends the following change:
>
> *Change from:*
>
> Samuel Habers, QST, style #961/Facemate style #2320
> Fusible Interlining Woven. $1.05
>
> *Change to:*
>
> Pellon Corp., 36 inch SG413 Fusible Non-Woven 1.09\frac{1}{2}$ White
1.16$\frac{1}{2}$ Black
>
> This product has been proven to be highly successful in raincoats and all like garments for all outer-wear use.
>
> This product is especially good for garments that are exposed to rain or heavy water use. We have found that when the outer-shell becomes saturated, the SG413 does not defuse itself from the base fabric as easily as woven fusible facings. Its porus [sic] construction factors and its fusible properties are of a higher quality than woven products we have experienced in the past.

43. By letter to DPSC dated 7 April 1980, appellant amended VECP 3380 after learning that the Government intended to revise the provisions of MIL-R-82290B to replace the woven fusible interlinings with sewn-in hairwool woven cloth interlinings meeting the requirements of MIL-C-297, as follows (*ibid.*, tabs 8, 9, 15):

> . . . it has been brought to MBOC's attention that Woven Fusibles would be changed to a loose coat front, flap, collar and stand interlining.

©1994, Commerce Clearing House, Inc.

Digitized by Google

MBOC received a bid (DLA100-80-B-0542) that indicates MIL-C-297F Cloth, Interlining Cotton Warp and Hairwool. This product is $4.50 per yard (72 inches wide). The Hairwool will require hand trimming; added cost as follows:

1 Collar		.025
1 Stand		.025
2 Flaps	@ .02 each	.04
2 Coat Fronts	@ .06 each	.12

A total cost for hand trimming of .21c.

Machine setting time cost will increase as follows:

1 Collar		.015
1 Stand		.015
2 Flaps	@ .015 each	.03
2 Coat Fronts	@ .03 each	.06

A total increase cost of .12c per coat.

The above does not reflect arm flaps or epaulets. A cost increase can not be evaluated.

The percentage of shrinkage is flexable [sic] in the MIL-C-297F Cloth Interlining Cotton Warp and Hairwool. Patterns must be graded with an over-allowance to accommodate. This over-allowance can only be determined by the Pattern Maker and Engineering Department in the Government. Additional material of course will be necessary for the Hairwool Interlining.

The fabric cost difference is as follows:

a) Facemate Woven Style #2320	45 inches wide	$1.06	per yard
b) MIL-C-291F Cloth Hairwool/Cotton Warp	72 inches wide	4.50	per yard
c) MBOC recommends:			
Pellon Corp SC 413 Non-woven,	White	1.095	per yard
Pellon Corp SC 413 Non-woven,	Black	1.16½	per yard
(or) Pellon Corp SG 313	White	.85	per yard
Pellon Corp SG 313 Grey	36 inches wide	.91	per yard

The selection between SG 413 and SG 313 will determine the savings in this cost area.

Pellon SG 413 is heavier than SG 313. It is MBOC's opinion that SG 313 will accomplish an end product of quality finish and desired stiffness. It is also MBOC's position that bubbling will not occur because of the open weave construction of either SG 413 or SG 313. MBOC strongly suggests an indepth laboratory test on this product for all weather garments.

MBOC has made contact with the Pellon Corp to assume proper fusing. All fusing can be arranged if contractors do not have the proper fusing equipment.

This Valued Engineering Recommendation is for all like garments.

44. VECP 3380 was considered by the Navy Clothing and Textile Research Facility at Natick, Massachusetts, whose evaluation and recommendation (*ibid.*, tab 9) were adopted by the contracting officer and reflected in the latter's 14 October 1980 letter to appellant, as follows (*ibid.*, tab 10):

> Your Value Engineering Change Proposal 3380, recommending a nonwoven fusible interlining for man's raincoat under MIL-R-82290(SA) has been evaluated and final approval is still pending.
>
> Currently, the Navy, with the other military services, DCAS and DPSC are conducting a Fusible Interlining Development Program. The intent of this program is to develop a Government wide fool proof method of specifying fusibles, their requirements, application and testing in specifications.
>
> Since problems occurred with fusibles in raincoats in the past and since a program is currently underway, the Navy is withholding any adoption of fusible into the subject specification until the fusible interlining committee can agree on the adoption of specification verbage [sic] that is considered to be the best method of selecting, applying and testing the fusible.
>
> In view of the above, your VECP cannot be adopted at this time. We will inform you periodically regarding the progress of the fusible program.

45. By letter dated 15 October 1980 (*ibid.*, tab 11), appellant informed the contracting officer, with reference to VECP's 3380 and 1280:

> We have been advised by the Pellon Company that the progress for all branches of service has been verbally accepted and it is a matter of the time of processing the proper paper work to formalize the governments [sic] acceptance of the changes in the above reference [sic] VECP numbers.
>
> I would also like to advise you that for bookkeeping purposes, the numbers only are being changed by the Pellon Company to an 8,000 number series. SG313 is now

Digitized by Google

8313 and SG413 is now 8325. The fabric itself has not changed.

The Value Engineering, as previously stated, is to cover all branches of service and all applicable garments.

Cost calculation of savings can only be determined upon audit and evaluation in accordance with Value Engineering Claus [sic] J09 DPSC Jan.

46. The specification for the Navy enlisted man's raincoat, which was the subject of Contract 2894, was never changed to include non-woven fusible interlinings or other components, and the raincoat was "phased out" as an authorized item starting in May 1985, and replaced by an all weather coat (*ibid.*, tabs 13, 15, 17; tr. 7/160).

47. VECP 3380 was not implemented on the subject contract, and appellant received no payment therefor (tr. 1/149-50, 153).

48. Appellant submitted its present claim, in an unspecified amount, concerning VECP 3380 on 3 August 1990 (R4, ASBCA No. 42244, tab 12) and has appealed from a failure of the contracting officer to render a final decision thereon (*ibid.*, tab 14).

III. *Appellant's Claims*

A. *VECP's 1280, 2181, and 3380*

49. Appellant contends that its suggested changes to non-woven fusible interlinings in VECP's 1280, 2181, and 3380 were constructively accepted by the Government when the latter implemented the concepts in those proposed changes on subsequent specifications; that the Government confirmed the constructive acceptance of VECP's 1280 and 3380 when it accepted VECP 2181; that it had introduced the Government, through DPSC, to the non-woven fusible manufactured by Pellon Corp. or its functional equivalent; that it is entitled to royalties for future contracts of the Government for "essentially the same" items, which it defines, as it applies to VECP's 1280, 2181, and 3380, as "any item which contains (or would contain 'but for' MBOC's VECPs) an unsatisfactory interlining requirement that can be replaced with a nonwoven fusible, resulting in lower production or life-cycle costs, without a diminution of the changed item's essential functions or characteristics"; that it is also entitled to royalties for collateral savings which the Government realized as a consequence of its constructive acceptance of those VECP's; and that the Government acted in bad faith in denying that its VECP's, particularly VECP 2181, resulted in contractor savings (app. posthearing br. at 63-65, 310-12, 316-458).

50. Since the changes recommended in appellant's VECP's were not implemented under its contracts, appellant is claiming no instant contract savings therefor (*ibid.* at 289-90, 384, 443-44).

51. Nor is appellant claiming any royalties for concurrent contracts since it could find no information to show that its VECP's were used on any such contracts (tr. 4/44; exh. B of exh. A-1040, -1041, -1042).

52. In accordance with its definition of "essentially the same item," appellant seeks royalties for alleged Government savings on many contracts awarded by the Government embracing the following military specifications (exh. A-1, -1000 through -1042, -1094; tr. 1/136-37, 149-50, 159, 3/41; app. posthearing br., vol III):

S-82126	Woman's Marine Corps Dress Skirt
T-44047	Combat Trousers, Camouflage Pattern

53. Appellant selected the foregoing military specifications and the Government contracts referring to them after examination of the histories and specifications of several thousand contracts (tr. 1/99-100, 104-13). Employing consultants with expertise in engineering, computers, apparel manufacturing, methods-time-measurement with regard to clothing manufacture, and cost and pricing data (tr. 2/149-54, 3/9-15, 4/11-19, 23), appellant completed the formulation and quantification of its claims in late March 1992 in reports prepared by the Peter Elliott Accountancy Corporation (exh. A-1040, -1041, -1042; tr. 3/18-58, 105-61, 4/23-120) which contained cost figures for the following:

a. Appellant's estimate of labor and material savings by the Government on future contracts.

b. Indirect expense savings.

c. Profit.

d. Extended life savings—i.e., estimated savings on quantities that would have been scheduled for delivery but for implementation of the VECP's.

e. Maintenance savings.

f. Interest, both before and after the filing of appellant's claims.

g. Collateral savings and interest thereon.

h. Escalation—i.e., the adjustment of material costs to the midpoint period of performance (tr. 4/31-33).

i. Re-engineered costs for VECP 1280 reflecting an alternate royalty period of the highest three years of planned production because Contract 2290 was a production test contract (tr. 4/38-41).

54. The total amounts of appellant's claims for its three non-woven fusible interlining VECP's, as constructed by the Elliott Corporation, were (exh. A-1040, -1041, -1042):

VECP 1280		$68,629,052
VECP 2181		91,182,891
VECP 3380		17,013,187
	Total	$176,825,130

B. *VECP 1380*

55. Appellant contends that its suggestion in VECP 1380 that cotton gimp be used for button hole sewing was implemented by the Government in future contracts for approximately 32 "essentially the same" items as that purchased under Contract 2290, defining "essentially the same item" as "any item which contained (or would have contained) buttonholes prior to MBOC's VECP" (app. posthearing br. at 76, 287, 415; exh. A-1049 through -1074; tr. 1/99, 118).

56. Appellant seeks no collateral or concurrent savings in its claim for this VECP (tr. 1/18; exh. A-1074).

57. Appellant does not seek any instant contract savings since "Contract DLA100-80-C-2290 was modified to incorporate VECP 1380, however, the change was not implemented on that contract" (exh. A-1074 at A2, p. 1; finding 26; tr. 3/74; app. posthearing br. at 78).

58. The future contracts for which appellant seeks royalties for VECP 1380 embraced the following military specifications (exh. A-1, -1049 through -1074; tr. 1/107-12):

V-29389	Man's Scarlet Dress Vest

59. Appellant selected the foregoing military specifications and the Government contracts referring to them and prepared its claim for VECP 1380 in the same manner and with the same elements as for VECP's 1280, 2181 and 3380 (finding 53; tr. 1/99-100, 104-15, 4/23-42, 45; exh. A-1074), except that the Peter Elliott report for VECP 1380 contained no collateral savings or re-engineered costs (tr. 4/39; exh. A-1074).

C. *VECP 2880*

60. Appellant contends that VECP 2880, which suggested the combining of labels for pantsuit coats, was denied by the contracting officer "in bad faith and without a rational basis" (app. posthearing br. at 88) and that it was constructively accepted by the Government's utilizing the change in contracts involving the following 13 specifications for essentially the same item, which appellant defines as "any place that the Government is going to use the combination label" without restriction to any particular garment (*ibid.;* tr. 1/32, 168-71; exh. A-1, -1080 through -1092):

Digitized by Google

61. Appellant further contends that the first unit which incorporated VECP 2880 was delivered to the Government on 28 February 1984 and that therefore the royalty period for the VECP is from February 1984 to February 1987 (exh. G-308; app. posthearing br. at 89); that since Contract 2290 was a production test contract, with a low rate of production, a second, alternative royalty period, based on the highest 36 months of actual production, from April 1989 to April 1992, is applicable (*ibid.*); and that it is entitled to royalties for future contract savings totalling $250,575 (*ibid.* at vol III, attachment 1).

62. Appellant seeks no instant contract savings royalties since its proposed change was not implemented under Contract 2290 (exh. A-1093; tr. 1/168).

63. Nor does appellant seek any concurrent contract savings royalties or collateral savings costs (exh. A-1093).

64. Appellant prepared its claim for VECP 2880 in the same manner and with the same elements as for its other VECP's (findings 53, 59; exh. A-1093; tr. 4/63-67).

IV. *Pertinent Regulations*

A. *Collateral Savings*

65. Armed Services Procurement Regulation (ASPR) 1-1703.2 (1 July 1976), in effect at the time of award of the subject contracts, provided that the paragraph in the standard J09 Value Engineering Incentive clause entitling a contractor to share in collateral savings "may be excluded from a contract or class of contracts when the HPA [Head of the Procuring Activity] determines that the cost of computing and tracking collateral savings will exceed benefits to be derived."

66. Pursuant to that regulation, the paragraph in the standard J09 clause entitling a contractor to share in collateral savings was excluded from all of the contracts involved in these appeals (finding 8) as well as for subsequent DPSC contracts for the acquisition of clothing and textiles (tr. 9/103-07; exh. G-165, -166, -167, -171).

B. *Profit*

67. ASPR 1-1703.1(d), in effect at the time of award of the subject contracts, provided:

> On instant and future contracts the contractor's profit or fee shall be excluded when calculating the net savings.

C. *Alternative Royalty Period*

68. Appellant contends that because Contracts 2290 and 2874 were production tests contracts, it is entitled to future contract royalties for the time period prescribed in Defense Acquisition Circular (DAC) #76-26, dated 15 December 1980, which was in effect prior to the actual acceptance of VECP's 1380 and 2181 and the constructive acceptance of VECP's 1280, 2880, and 3380, as an alternative to the royalty period specified in the J09 clause of the contract (app. posthearing br. at 18). DAC #76-26 provided (exh. A-1146):

> (4) *Concurrent and Future Contract Savings.*
>
> *a.* .... If the instant contract is for low rate initial production or an earlier life-cycle phase, the future sharing period shall encompass scheduled deliveries, equal in number to the quantity required by the highest 36 consecutive months of planned production, based on the Five Year Defense Program (FYDP) or other planning documentation at the time the VECP is accepted.

V. *Additional Findings and Conclusions*

A. *VECP's 1280, 2181, and 3380*

69. In VECP 1280, appellant had proposed to change only the fronts of pantsuit coats and not other coat parts for which it seeks royalties (finding 9; tr. 6/140, 7/13, 9/22-23).

70. The fronts of women's pantsuit coats were never changed in military specifications to include non-woven fusible interlinings (tr. 6/139-40, 143-44, 147-48).

71. The change proposed in VECP 3380, from woven fusible interlining to Pellon non-woven fusible interlining, would not have produced any savings, but rather it would have increased the cost of the Navy enlisted man's polyester cotton raincoat since the proposed Pellon material cost ($1.095 per yard for white and $1.165 per yard for black) was greater than the cost of the woven material prescribed in the contract ($1.05 per yard) (finding 42; tr. 1/141, 146, 6/84-85, 156-58).

72. The raincoat which was the subject of Contract 2894 and VECP 3380 was phased out of the Government procurement system in 1985 (tr. 7/160).

73. The change in material proposed in VECP 2181, from woven to Pellon non-woven interlining in the Army man's polyester cotton all weather coat, which the Government accepted as an alternative (findings 32, 33), would have produced no cost savings since the cost of the Pellon material was the same as that for the interlining material pre-

Digitized by Google

scribed in the contract (tr. 1/162, 5/81, 6/83, 86, 152, 155-56; exhs. G-140, -141).

74. Contrary to appellant's contention (finding 49), it did not introduce the Government to the non-woven fusible manufactured by appellant. Before appellant had submitted its VECP's concerning Pellon products or otherwise suggested their use by the Government, the Government had met with Pellon personnel at the latter's factory, had written a specification, MIL-C-29365, around a Pellon product, and fully considered Pellon's non-woven fusible interlinings as part of its continuous research, development, and experimentation program concerning the use of fusible fabrics for garment components for all of the military services (findings 13, 15).

75. Non-woven fusibles had not been sufficiently developed by late 1979 to eliminate the likelihood of delamination and shrinkage during manufacture, particularly during fusing, and subsequently during laundering and dry cleaning processes (tr. 5/198-201, 6/57, 94-95, 135-36, 7/99, 122, 8/35-37; finding 13).

76. In the 1980's, improvements in technology, particularly with regard to fusion machines and resin-based adhesives developed for the fusion process, led the Government, as well as the textile industry, to make more extensive use of non-woven fusibles in the fabrication of wearing apparel and other textile products (tr. 3/63-64, 71, 161, 5/198-202, 6/81-82, 145, 8/16-17, 43-46).

77. Four days before appellant had submitted VECP 2181, the Government had completed a study of a Pellon non-woven fusible and had begun to draft changes to military specifications for all weather coats, as indicated in the following memorandum for the record dated 27 October 1980 by Natick's fusing program project officer (tr. 6/23, 38; exh. G-151):

> 1. A study of Pellon Corporation Style 8325 has been completed by the Seams Engineering Laboratory. The nonwoven style is compatible with the water repellent treated fabric used in the men's, women's and Jr. ROTC all-weather coats. No delamination of any samples was found, and the fused fabrics look outstanding, in my opinion, after laundering or dry cleaning.
>
> 2. In view of the above, I am drafting the necessary changes to the all-weather coat specifications (MIL-R-87110, MIL-R-43972 and MIL-R-43962A) to allow the nonwoven as an alternate to the present (woven) fusible. This decision was based on our testing, Pellon test results and acceptance by the Marine Corps and commercial manufacturers. In addition, a minimal cost savings should result when the nonwoven is used.

78. On the record before us, we are convinced that none of the military specifications for which appellant seeks future contract royalties (finding 52) was changed because of appellant's VECP's 1280, 2181, and 3380 (tr. 6/158-71, 177-78, 183-84, 7/9-43, 8/24-30, 43-47, 50). In fact, those working on the fusible program and garment specifications at Natick in the 1980's had never even heard of appellant (tr. 8/46).

79. Nor are we persuaded that the Government realized any cost savings on any future contracts involving those military specifications because non-woven fusibles, as opposed to other materials, were prescribed therein (tr. 6/151-53, 155-58, 169-71, 194). In this regard, we deem it highly significant that appellant produced no cost records of any contractor under any of those contracts to disclose how its manufacturing costs were affected by its use of non-woven fusibles.

80. We further conclude, after examination of the military specifications upon which appellant bases its claims for future contract royalties (finding 52), that none of those specifications dealt with an item which was essentially the same as the Air Force woman's pantsuit coat prescribed in Contract 2290 with regard to design, construction, purposes, and functions; that none of those specifications dealt with an item which was essentially the same as the man's cotton and polyester poplin cloth all weather coat prescribed in Contract 2972 with regard to design, construction, purposes and functions, with the exception of MIL-C-44030; and that none of those specifications dealt with an item which was essentially the same as the Navy enlisted man's single-breasted raincoat prescribed in Contract 2894 with regard to design, construction, purposes, and functions (exh. A-1000 through -1042; tr. 2/101-03, 3/23, 5/196, 8/31-34). Most of those specifications, such as those for belts, caps, coveralls, skirts, slacks, shirts, and combat wear, were not even for remotely similar items (tr. 5/196, 8/32-34; exh. A-1000 through -1042).

81. The revision to MIL-C-44030, which appellant alleges constituted implementation of its VECP 2181, only affected items delivered after 18 September 1984 (exh. A-1, -1029), more than three years after 14 May 1981 when appellant ceased operations on

©1994, Commerce Clearing House, Inc.

Digitized by Google

all Government contracts (exh. A-1042, attachment 5 at 2, 21).

82. We find in the record before us no evidence to persuade us that any future contractors for the production of garments in accordance with MIL-C-44030 elected to use the alternative non-woven fusible fabric for interlinings in accordance with the July 1980 amendment to that specification (finding 33) or, if they did, thereby effected any cost savings for themselves or the Government.

B. *VECP 1380*

83. None of the military specifications upon which appellant bases its claim for future contract royalties (finding 58) dealt with an item which was essentially the same as the Air Force woman's pantsuit coat prescribed in Contract 2290 with regard to design, construction, purposes, and functions; and most of them, such as those for trousers, helmet covers, jumpers, raincoats, skirts, shirts, slacks, and vests, were for items which were not even remotely similar to the pantsuit coat (exh. A-1049 through -1074; tr. 2/101-03, 3/23, 5/196, 8/31-34, 61-62).

C. *VECP 2880*

84. None of the military specifications upon which appellant bases its claim for future contract royalties (finding 60) dealt with an item which was essentially the same as the Air Force woman's pantsuit coat prescribed in Contract 2290 with regard to design, construction, purposes, and functions; and most of them, such as those for coveralls, trunks, parkas, sweaters, smocks, shirts, slacks, and trousers, were for items which were not even remotely similar to the pantsuit coat (exh. A-1080 through -1092; tr. 2/101-03, 3/23, 5/196, 8/31-34, 61-62).

D. *All of the VECP's*

85. The Clothing and Textile Directorate of DPSC has never awarded a *low rate* initial production contract, and all of its contracts have always been firm fixed price contracts (tr. 9/63-64).

86. We find no evidence in the record of these appeals to establish that any of the subject contracts was, or was intended to be, a low rate initial production contract within the meaning of DAC #76-26 (finding 68) or that the items procured in any of the subject contracts were involved in any Five Year Defense Program or other planning documentation at the time any of appellant's VECP's were accepted.

87. Although appellant alleges in its post-hearing brief that the Government acted in bad faith and without a rational basis in actions which it took concerning the VECP's which are the subjects of these appeals (findings 49, 60), we find no evidence in the record before us which supports that allegation, and we conclude that the Government's representatives acted in good faith and with good and rational cause in all of their actions with regard to those VECP's.

DECISION

Although appellant has expended years of effort, culminating in the many volumes of documentary evidence and the extensive testimony which it has presented to us in support of its claims in these appeals totalling approximately $180 million, we find those claims to be wholly without merit.

It is appellant's position that it is entitled to royalties because four of its five VECP's, 1280, 2181, 2880, and 3380, were constructively accepted by the Government when the latter implemented the concepts in those proposed changes on subsequent, or future, contracts (findings 49, 60).

That position, however, is invalid as to three of those VECP's since there can be no compensable constructive acceptance of a VECP under future contracts if a VECP was rejected without bad faith for the contract under which it was submitted. *John J. Kirlin v. United States* [34 CCF ¶ 75,354], 827 F.2d 1538, 1541 (1987); *M. Bianchi of California,* ASBCA Nos. 37029 and 37071, 93-1 BCA ¶ 25,309, at 126,089; *appeal docketed, M. Bianchi of California v. Cheney,* No. 93-1087 (Fed. Cir. 2 Dec. 1992).

Since VECP's 1280, 2880, and 3380 were rejected under appellant's contracts without bad faith on the part of the Government (findings 18, 39, 44, 47, 87), appellant could therefore, as a matter of law, not recover future contract royalties for those VECP's even if they had been implemented on future contracts.

Although VECP 2181 was accepted under Contract 2972 as an alternative provision, it was not implemented thereunder by appellant (findings 32, 35). Consequently, there was no unit cost reduction for that VECP under Contract 2972; and without such instant contract unit cost reduction, there can be no future contract royalties under the terms of the J09 clause of the contract (finding 8), since the basis of future contract royalties is clearly stated in that clause, at (e)(3)(i) and (iii)(A), to be "the unit cost reduction under this instant contract."

Digitized by Google

Thus, there is no legal basis for appellant to recover future contract royalties for VECP 2181 even though it had been accepted.

All of these appeals must be denied as to collateral savings since neither the J09 clause nor any other clauses in the subject contracts allow the contractor any compensation therefor (findings 8, 65, 66).

Furthermore, none of appellant's claims are supported by the facts surrounding them.

Three of these appeals, ASBCA Nos. 37798, 42243, and 42244, deal with VECP's (1280, 2181, and 3380) proposing contract changes to permit the use of Pellon fusible non-woven interlinings in various types of coats. However, it has been clearly established that at the time appellant submitted those VECP's, the Government was engaged—and had been for many years—in a research, development, and experimentation program concerning the use of fusible fabrics, including Pellon non-woven fusibles, for interlinings and other garment components; that appellant was aware of that program; that the Government had already used fusible non-woven interlinings in some garments; and that the Government had even written a specification for non-woven fusible interlinings around a Pellon product (findings 13, 15, 74, 77).

The record before us compels the conclusion that not a single military specification for which appellant seeks future contract royalties was changed because of any of appellant's interlining VECP's (finding 78).

Furthermore, we have found no evidence to persuade us that the use of non-woven fusible interlinings in any contracts involving the military specifications cited by appellant resulted in any cost savings to the Government (finding 79).

Appellant's claims for VECP's 1280, 2181, and 3380 are also unallowable because none of the future contracts for which it seeks royalties were for essentially the same items as those purchased in appellant's contracts, except those embracing MIL-C-44030 (finding 80), and we find no evidence to establish that any contractors who produced garments in accordance with MIL-C-44030 elected to use non-woven fusible fabric as an alternative material for interlinings or delivered any items to the Government within the three-year royalty period prescribed in the J09 clause of the contracts (findings 81, 82).

Likewise, ASBCA Nos. 37395 and 42416, dealing respectively with VECP's 1380 and 2880, cannot be sustained because none of the future contracts for which appellant seeks royalties in those appeals was for essentially the same item as that purchased in Contract 2290 (findings 83, 84).

The claim for VECP 1380 in ASBCA No. 37395 must also be rejected because no contractors which manufactured women's Air Force pantsuit coats after the submission of that VECP elected to utilize the V-T-280 cotton thread for gimps which was allowed as an alternative pursuant to the VECP (findings 24, 25, 27).

For the foregoing reasons, all of the subject appeals are denied.

[¶ 26,418] R&R Enterprises

IBCA Nos. 2833, 2860, 2897, October 1, 1993. Contract No. CC-9029-82-002.

Modifications—Novations and Change of Name Agreements—Approval of Corporate Status.—A contractor, a partnership, was not entitled to damages for alleged breach of contract for the government's failure to allow the transfer of a concession contract from the contractor to a proposed corporation, because the contractor did not have an absolute right to transfer the concession contract to the new corporate entity. The contractor acquired possession of the assets of the prior holder of a resort concession, on which the Small Business Administration held a lien as security for debt. The contractor did not assume the debt, but it took possession of the assets of the resort subject to the lien. The contractor decided to incorporate for business reasons before assuming the debt but failed to submit the details of the proposed corporation to the government. Although the government declined to take action on the incorporation request, the contractor was not harmed, because the SBA was willing to have the debt assumed by the contractor as a partnership.

Attorney Fees and Costs Under Equal Access to Justice Act—Board's Authority Under EAJA—District Court Litigation.—A claim for attorney fees and expenses incurred by a contractor in a federal district court was denied because the board does

 ©1994, Commerce Clearing House, Inc.

Digitized by Google

not have jurisdiction to decide a claim for costs incurred in another forum. The contractor incurred the expenses defending against the Small Business Administration's attempt to use federal offset procedures with regard to a judgment obtained by the contractor; however, the contractor presented no reasonable rationale as to why the board should be entitled to exercise such jurisdiction.

Contract Disputes, Jurisdiction—Boards of Contract Appeals—Statutory Claim v. Contract.—The government's motion to dismiss a claim for lack of jurisdiction on the basis that the ground for the claim was a statutory and not a contractual right was denied because the actions of government officials in applying the law are subject to the board's review. The contractor alleged that the government denied its right of preference as an incumbent concessionaire. However, the fact that the officials interpreted a statute relating to the preferential status of an incumbent did not allow them to avoid review by the board or courts. Most actions taken by contract administrators are for the purpose of applying various statutory and regulatory requirements to particular contracts.

Selection of Contractor—Competitive Advantage—Incumbent's Preference.—The government's alleged failure to give the preference to an incumbent contractor for a follow-on concession contract was not a ground for damages, because the incumbent contractor did not submit a responsive proposal and its right of preference was therefore extinguished. The government required that an applicant submitting an offer in response to the statement of requirements had to demonstrate the ability to resolve an existing debt issue with the Small Business Administration, and the incumbent contractor did not address the problem of the SBA lien on the resort property in its response.

For the appellant: Joseph J. Connolly, Lynwood, Washington. For the government: William D. Back, Department Counsel, Portland, Oregon.

Before PACKWOOD and PARRETTE, Administrative Judges.

PACKWOOD, Administrative Judge: These claims arose out of National Park Service (NPS) Concession Contract 9029-82-002 for the operation of the Diablo Lake Resort located in the Ross Lake National Recreation Area of the North Cascades National Park Complex. The appellant, R&R Enterprises, a State of Washington limited partnership, operated the Diablo Lake Resort with privately owned assets on ground space provided and assigned by the concession contract. The Diablo Lake resort consisted of 20 rental cabins, a resort store and utility building, a restaurant, and a marina. Thomas M. and Nancy J. Roberts purchased the resort assets from LMH Investments, Inc. (LMH), paying $45,000 in cash and executing a note to LMH for $325,000, on March 26, 1982. On March 31, 1982, the Roberts sold their interest in the resort to R&R Enterprises for two notes, one for $45,000 and the other for $328,000. On April 8, 1982, NPS cancelled the LMH concession contract and superseded it with a new concession contract with R&R Enterprises, CC-9029-82-002, effective through December 31, 1988.

The appeals, docketed as IBCA-2833, 2860, and 2897, all relate to contract number CC-9029-82-002. The first appeal involves a claim for $88,000 for an alleged breach of contract when NPS did not allow transfer of the concession contract from the R&R partnership to a proposed corporation. The second appeal, IBCA-2860, is for damages in the amount of $95,500 for expenses incurred in a court action involving an attempt by the Small Business Administration (SBA) to offset a judgment by this Board in R&R's favor for $50,000 in IBCA-2417 against an SBA lien on the assets of the Diablo Lake Resort. The third claim is for a total of $612,198 in damages alleged to have resulted from the failure of NPS to give preference to R&R and to award a follow-on concession contract after CC-9029-82-002 expired on December 31, 1988.

The three appeals were consolidated for the purpose of hearing, briefing, and decision. A 2-day hearing was held in Seattle, Washington. At the conclusion of the testimony offered by appellant, the Government rested without offering any testimony. Appellant requested and was granted permission to supplement the record with information regarding a pending Government motion to dismiss the third appeal, IBCA-2897, for lack of jurisdiction.

Digitized by Google

IBCA-2833

At the time R&R acquired possession of the assets of the Diablo Lake Resort in 1982, the previous holder of the concession, LMH, owed approximately $325,000 to SBA, which held a lien on the assets of the resort as security for the debt. R&R did not assume the debt, but took possession of the assets of the resort subject to the lien, and agreed to make payments of $4,100 per month to LMH, which in turn was supposed to use the money for payments to SBA. However, Melvin Heidi, owner of LMH, filed a petition in bankruptcy in December 1984 and R&R stopped making payments to LMH for fear that the payments would not be passed on to SBA for credit against the outstanding balanced owed by LMH. During the remainder of the concession contract (until December 31, 1988), R&R made no monthly payments nor did it deposit any payments in escrow for the payment of the loan.

During the summer of 1988, R&R held discussions with SBA regarding assumption of the debt which, with accrued interest, had now grown to more than $400,000. R&R agreed in principle to the assumption of the debt, but for business reasons decided it would not be wise to expose the partners in R&R to further personal liability in the event R&R did not obtain the new contract for the concession to operate the resort. SBA agreed to allow R&R to incorporate before assuming the debt and on September 5, 1988, R&R requested permission from the National Park Service to incorporate and transfer the concession contract to the new corporation to preserve for the corporation the benefits of incumbency when the time came to award the new contract to operate the concession. R&R failed to submit to NPS the details of the proposed corporation, such as the corporate charter and the proposed capitalization of the corporation. On September 26, 1988, NPS declined to take immediate action on the incorporation request from R&R and assumed that the request would be renewed with more detailed information in response to the soon-to-be-issued Statement of Requirements for the new concession contract.

Appellant has made no showing that it had an absolute right to transfer the concession contract to a new corporate entity without disclosure of adequate details regarding the new entity. NPS, on the other hand, had the responsibility to consider the public interest in any such transfer, where, as here, the amount of the lien against the assets of the resort greatly exceeded the value of the assets, and the only security NPS had that the resort would be operated was the personal liability of the partners of R&R. It was prudent of NPS officials to defer approval of the request for incorporation of R&R in order to obtain more details of the proposed corporation. There was no abuse of discretion on the part of the NPS officials.

Since SBA was willing to have the debt assumed by R&R as a partnership, the Board finds that the decision by NPS not to give immediate approval of the incorporation caused no harm to R&R. The claim for damages resulting from such action must therefore be denied.

IBCA-2860

In this claim, R&R asks the Board to assume jurisdiction over events which occured in a Federal District Court and to approve a claim for $95,500 for attorney's fees and expenses incurred by R&R to fight an attempt by SBA to use Federal Offset Procedure with regard to a $50,000 judgment obtained by R&R in IBCA-2417.

Appellant has offered no reasonable rationale as to why the Board should be entitled to exercise such jurisdiction. The claim is therefore dismissed for lack of jurisdiction.

IBCA-2897

The claims docketed under this appeal are based on appellant's allegation that it was denied its right of preference as an incumbent concessioner when the successor contract was entered into. The Government has moved the Board to dismiss this appeal for lack of jurisdiction, on the grounds that the right of preference is a statutory, not a contractual, right and that the actions of NPS officials in applying the law are not subject to the Board's review.

At the conclusion of the hearing, appellant requested and was granted permission to supplement its response to the Government's motion. However, when appellant offered its supplement, the Government fought vigorously to oppose allowing the submission into the record. Since the evidentiary record was closed at the conclusion of the hearing, appellant's supplement to its response to the Government's motion is received as argument, not as evidence.

The Government's argument with respect to its motion is not persuasive. The mere fact that NPS officials apply a statute relating to the preferential status of an incumbent does not grant them any special cachet.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Most of the actions taken by contract administrators throughout the Government are for the purpose of applying various statutory and regulatory requirements to particular contracts. Such actions are routinely reviewed by agency boards of contract appeals. There is no safe harbor for NPS to avoid review of its actions by this Board or the courts merely because it is interpreting a statute in relation to a contract. The Government's motion to dismiss this appeal for lack of jurisdiction is therefore denied.

Appellant's claims under this docket number, IBCA-2897, are based on the allegation that NPS failed to grant a right of preference to R&R in awarding a new contract for operation of the Diablo Lake Resort.

Thomas Roberts, a principal partner in R&R, was aware of NPS' concern about achieving a resolution of the debt to SBA, having been advised by the Deputy Regional Director in his letter of September 22, 1988, as follows: "The Park Service has been concerned for sometime about the increasing debt of the resort and its ability to meet future obligations. *Any applicant submitting an offer in response to the Statement of Requirements must demonstrate the ability to resolve this debt issue with the Small Business Administration.*" (Emphasis added.) And, in the Statement of Requirements (SOR), A.F. 18, NPS restated this requirement:

> Before the concession contract is to be negotiated with anyone, the proposed successor must be able to satisfy with the U.S. Small Business Administration, their first lien of any possessory interest described herein or other assets, including merchandise and inventory used or held for use in connection with the operations. Negotiations may be conducted directly with the U.S. Small Business Administration.

A.F. 18, p. 221.

Prior to March 13, 1989, when proposals for the new concession contract were due, appellant's counsel was advised (on March 10, 1989) by SBA Regional Counsel Marsha Beck as follows:

> As of February 22, 1989, the outstanding balance on this loan was $407,800.54. Our records indicate that your clients have not made a payment on this debt since December 27, 1984.
>
> In the past, SBA has agreed to an assumption of this loan by your clients, subject to various conditions. SBA further agreed to various modifications at the request of your clients. For one reason or another your clients failed to proceed with the assumption. The Seattle District Office has decided that further lack of payments on this loan cannot be tolerated and has chosen to initiate foreclosure proceedings.

A.F. 23, p. 332.

Also on March 10, 1989, the SBA advised appellant's counsel of the following by letter:

> As you will recall, you have advised Mr. Lovegren and myself in numerous telephone conversations that your clients have no desire to make any commitment to SBA unless they are first assured that they can obtain the necessary contract to operate the resort. My letter to you of January 5, 1989 confirmed that SBA ceased processing the Roberts' proposal when the Agency was advised that this was not an acceptable solution to the Park Service. Apparently, Mr. Roberts also believed that the Park Service decision rendered his proposal moot, as he stated in his letter of October 3, 1988 to the NPS that as a result of their decision his "agreement" with SBA was "useless and cannot be completed."
>
> Thereafter, since despite the foregoing and our numerous telephone conversations, you continued to insist on a formal response to the Roberts' proposal, I wrote you my letter of February 3, 1989. I am amazed that despite my letter of February 3, 1989 (which you neglected to send to [Regional Counsel] Ms. Beck), and our numerous telephone conversations, you still claim that you do not know whether SBA is willing to allow a corporation controlled by Nancy and Tom Roberts, the only assets of which would be the resort property SBA already has a lien on, to assume the SBA debt. I believe that I have responded straight forwardly verbally and in writing that the answer is "no". As I stated in my letter of February 3, 1989, "... We are not interested in pursuing any further workouts with the Roberts or any entity which they control." While this may not be the answer you wish to hear, nevertheless it is the Agency's official decision.

A.F. 24, p. 335.

In the response to the Statement of Requirements, R&R did not address the problem of the SBA lien on the resort property. The response contains the following statements:

> Concessioners should ... never question the reason for NPS directives, regulations,

Digitized by Google

or policies. When a concessioner follows guidelines they interface better with the NPS...

Recognize capabilities of NPS employees. NPS employees are better qualified, trained, and experienced at operating business enterprises than concessioners. NPS employees have sacrificed their opportunity to operate businesses in order to provide concessioners with the benefit of their experience, training, and expertise. Concessioners and the visiting public are incapable of recognizing what is best for them.

A.F. 25, p. 357.

After their decision that they would not assume the SBA debt as a partnership, the partners in R&R knew full well that a foreclosure of the SBA lien was imminent and that their days as concessioners at the Diablo Lake Resort were numbered. The heavy-handed irony in their response may be overlooked as a partial venting of their frustrations. The unfortunate fact, however, is that they were in a predicament of their own making. Their slide down the slippery slope of insolvency began when they purchased a failing operation at a high price and were able to operate it as long as they did only by neglecting to reduce the SBA debt and allowing it to increase to more than $400,000. The cautionary information from NPS in the SOR that "investors should be aware that the financial history together with a comparison with industry guidelines has revealed this resort will probably not be able to support a debt level exceeding $150,000" was a warning that would have been given to them at the time of the original purchase had they adequately consulted NPS about the sale. When the time came to submit a response to the SOR, R&R was not in a position to submit a responsive proposal, and they could do nothing to prevent the SBA foreclosure on the assets of the Diablo Lake Resort. These two circumstances extinguished any right of preference that R&R may have had as an incumbent concessioner under Concession Contract No. 9029-82-002.

The facts presented by R&R do not establish any basis for liability on the part of the National Park Service for the financial misfortunes resulting from the business decisions of R&R. Accordingly, the claims for damages are denied in their entirety.

[¶ 26,419] Patricia J. Stevens

PSBCA No. 3272, October 4, 1993. Contract No. HCR 84077.

Defaults, Excuses—Subcontractor and Supply Problems—Replacement Carrier.—A contractor's default under a highway transportation contract was not excused, despite the contractor's contention that the government interfered with a replacement carrier hired by the contractor to fill in while the contractor took a vacation, because the contractor failed to adequately monitor the replacement carrier's operation during the vacation period. The contractor could have ascertained any problems on the route through telephone contact with the replacement carrier. Even though the contractor alleged road construction and equipment problems, excusable grounds for performance deficiencies, it did not demonstrate excusable reasons for the carrier's departing the post office two to six hours late and the substantial missed deliveries, which were not shown to have resulted from a jeep breakdown or road construction.

For the appellant: Patricia J. Stevens. For the government: Harold E. Durham, United States Postal Service, San Bruno, California.

Before MENEGAT, COHEN, and FINN, Administrative Judges.

MENEGAT, Administrative Judge: Appellant, Patricia J. Stevens, has appealed the default termination of her highway transportation contract with the United States Postal Service, Respondent. This appeal is being decided on the record pursuant to 39 C.F.R. § 955.12.

FINDINGS OF FACT

1. On June 12, 1991, the Postal Service awarded contract HCR 84077 to Appellant for delivery and collection of mail on a highway contract route in Park City, Utah. The term of the contract was to run from July 1, 1991, to June 30, 1993 (Appeal File Tab ("AF") 8).

©1994, Commerce Clearing House, Inc.

Digitized by Google

2. The contract specified that Appellant would serve 290 delivery boxes and receive annual compensation of $12,977 (AF 8). By amendments to the contract, the number of boxes served was increased to 458 and the annual compensation to $17,370 (AF 1, 7). There were actually 481 boxes served by the route at the time the contract was terminated in June of 1992 (Appellant's supplemental evidence filed February 8, 1993, Exhibits ("Supp. Exhs.") 11, 12).

3. The contractor was required to deliver mail into customers' mail boxes (AF 8, "Basic Surface Transportation Services Contract General Provisions," PS Form 7407T, November 1988, paragraph ("GP") 4(b)(1)(i), Contract Section 13 E, Contract Attachment B) and collect outgoing mail (AF 8, GP 4(b)(1)(iii), Contract Attachment B) and "carry all mail tendered for transportation under this contract, whatever may be its size and weight, with certainty, celerity, and security." (AF 8, GP 4(a)).

4. The contract required that Appellant "give either personal or representative supervision over the operation of the route and must be easily contacted in the event of emergencies, to give personal or representative attention to the problem at hand" (AF 8, GP 8(a), Contract Section 19 A). The contractor remained responsible "for the faithful performance of the obligations assumed by him under this contract, whether or not he has entrusted the care and transportation of the mail to another." (AF 8, GP 8 (b)).

5. The contract was subject to termination for default by the contracting officer "[f]or Contractor's failure to perform service according to the terms of the contract." (AF 8, GP 16 (a)(1)).

6. The termination for default provision of the contract provided:

> "If, after notice of termination of this contract under the provisions of this Clause, it is determined for any reason that the Contractor was not in default under the provisions of this Clause, or that the default was excusable, the rights and obligations of the parties shall be the same as if the notice of termination has been issued pursuant to Clause 17." (AF 8, GP 12 (c)).

7. The contractor's sole remedy in the event of a termination for convenience during the first two years of performance was an indemnity payment equal to one-third of the annual rate under the contract (AF 8, GP 17, GP 12 (d)(1)).

8. The schedule for the route, as set forth in the original contract, required Appellant to depart the Park City Post Office by 10:00 a.m. and return to the post office at 1:00 p.m. (AF 8, Contract Attachment B). Through amendments recognizing the additional boxes on the route, the return time was adjusted to 1:50 p.m. before June, 1992 (AF 1, 7 p. 9).

9. To perform the route, Appellant customarily arrived at the post office at 7:30 a.m. to case the mail. Her husband arrived between 10:15 and 10:30 a.m., at which time they would load and depart in two vehicles to deliver the route. Appellant returned to the post office between 12:00 and 12:30 p.m. to case the third class mail for the next day, and her husband returned between 1:30 and 2:00 p.m. (Supp. Exh. 1 ¶ I(1)).

10. On June 13, 1992, a replacement carrier hired by Appellant performed the route. The carrier did not leave the post office until 2:00 p.m. and was unable to finish the route (AF 5 pp. 4, 5; Supp. Exh. 1 ¶ I(4)). On two previous occasions, this employee had failed to deliver the entire route, and Appellant's husband had completed delivery (Supp. Exh. 1 ¶ I(4)).

11. The Park City Postmaster and Superintendent of Postal Operations ("SPO") met with Appellant the following week to discuss the deficiencies that had occurred on June 13 (AF 5, p. 1; Supp. Exh. 1 ¶ ¶ I(4), II(2); Declaration of Michael M. Thurber, SPO, dated March 9, 1993 ("Thurber Decl.") ¶ 5). The postmaster specifically addressed the replacement contractor's failure to adhere to the contract schedule and failure to deliver all mail as required under the contract (Thurber Decl. ¶ 6; AF 5 p. 1). Appellant acknowledged the deficiencies and advised that she had fired the employee (Supp. Exh. 1 ¶ I(4)) and had available another substitute carrier to work for her (AF 5 p. 1). The postmaster asked that Appellant verify that any replacement would be fully trained and competent to meet all contractual obligations before being allowed to "solo" on the route (Thurber Decl. ¶ 6; AF 5 p. 1).

12. Appellant planned to be out of town on vacation beginning June 19, 1992, and arranged for the new replacement carrier to deliver the route (Supp. Exhs. 1 ¶ I(5), 14). This carrier had substituted for Appellant on the route a number of times in the past, and, during the week of June 15, Appellant and her husband conducted further training with her (Supp. Exhs. 1 ¶ I(5), 3 ¶ ¶ (2), (9)). They told the replacement to call them if there were any questions of an unusual nature or problems on the route (Supp. Exhs. 1

Digitized by Google

¶ II(9), 3 ¶ (9)). The record does not reflect how long Appellant intended to be away.

13. On Friday, June 19, Appellant's employee arrived at the post office at about 6:00 a.m., cased and loaded her mail and left the post office after 3:00 p.m. (Thurber Decl. ¶ 7; but see Supp. Exh. 3 ¶ (3)). During the time the replacement carrier was in the post office, the SPO spoke to her on a number of occasions, totalling about 15 minutes (Supp. Exh. 3 ¶ (2); Thurber Decl. ¶ 7). Some of the SPO's conversation was critical of Appellant's performance of the contract (Supp. Exh. 3 ¶ (2)). Appellant's employee finished delivering mail after 6:00 p.m. and returned to the post office before dark (Thurber Decl. ¶ 7; Supp. Exh. 3 ¶ (3)). On June 19 and on the other days she delivered the route she encountered delays resulting from construction on one of the roads she was required to travel (Supp. Exh. 3 ¶ (3)).

14. On Saturday, June 20, the replacement carrier cased mail until noon (Supp. Exh. 3 ¶ (4)). She was using Appellant's jeep, which broke down while she was on the route. As a result, she lost one-and-one-half hours getting it repaired, and completed delivery at about 7:00 p.m (Supp. Exh. 3 ¶ (4)) When the SPO discussed the route with Appellant's employee on Monday, June 22, she did not mention the mechanical problems with the jeep (Thurber Decl. ¶ 9). Appellant had had the jeep serviced within two weeks before she left for vacation (Supp. Exh. 6).

15. On Monday, June 22, the replacement carrier did not depart the post office until 4:00 p.m. (AF 5 p. 10). Appellant's jeep again broke down, and there were delays in getting it fixed (Supp. Exh. 3 ¶ (5)). She delivered mail until after dark, but did not complete the route (AF 5 pp. 2, 10; Supp. Exhs. 1 ¶ II(5), 3 ¶ (5); Thurber Decl. ¶ 13 and Exhibit D thereto). Also on June 22, the SPO received more than 20 calls from customers on Appellant's route complaining that they had not received mail delivery on Friday or Saturday, June 19 and 20, and on June 23, the post office received many calls from customers on Appellant's route complaining of missed delivery on June 22 (Thurber Decl. ¶ ¶ 10, 13 and Exhibit A thereto).

16. On June 23, two postal employees spent four-and-one-half hours assisting Appellant's employee in casing the mail (AF 5 p. 2; Supp. Exh. 3 ¶ (6); Thurber Decl. ¶ 12). As the postal employees were not familiar with the route and the casing area was not big enough to accommodate three people efficiently, their help was of questionable value (Supp. Exhs. 3 ¶ (6), 5; AF 5 p. 10). The carrier did not leave the post office until 2:00 p.m. The post office also provided at least an hour of delivery assistance on the route, and the route was finished at 6:00 p.m. (AF 5 p. 2; Supp. Exh. 3 ¶ (6)).

17. Before Appellant's employee left the post office to deliver the mail on June 23, the postmaster told her not to return the next day. The postmaster declined the employee's offer to use her own car instead of Appellant's jeep on the route the next day and declined her offer to give him the telephone number where Appellant could be reached (Supp. Exh. 3 ¶ (6)). When she returned to the post office that evening, the case for Appellant's route had been broken down and reconfigured to permit the route to be split in two so that it could be delivered by two highway contractors (*id.*).

18. On the evening of June 23, Appellant's employee called Appellant, who was still on vacation, and told her of the problems she had been encountering on the route and the postmaster's direction that she not return to deliver the route the next day (Supp. Exhs. 1 ¶ I (6), 3 ¶ (6)).

19. At Appellant's direction, her employee returned to the post office on June 24 and asked the postmaster to put his dismissal in writing, but he refused to do so and told her to leave (Supp. Exh. 3 ¶ (6)).

20. The postmaster described the deficiencies on the route in a letter addressed to Appellant dated June 23, 1993 (AF 5 p. 1-2). In that letter, he asserted that Appellant's actions constituted abandonment of the route. Appellant did not receive the letter before the contract was terminated. A copy of the letter was provided to the Salt Lake City Transportation Management Service Center.

21. The post office prepared a total of five "Contract Route Irregularity Reports," PS Form 5500, for June 19 through 23 (AF 5 pp. 6-12), but they were not given to Appellant or her employee before the termination, and Appellant was not given a formal opportunity to respond regarding the irregularities before the contract was terminated.

22. By a final decision dated June 24, 1993 (and received by Appellant June 27), the contracting officer terminated the contract for default effective the close of business June 24, 1993, "for failure to perform service according to the terms of the contract." (AF 4). In deciding to terminate the contract, the contracting officer did not characterize the contractor's failure to perform on June 24 as an abandonment of the contract or rely on

©1994, Commerce Clearing House, Inc.

Digitized by Google

an abandonment theory. *See* Declaration of Gordon W. Kirkham, December 14, 1992. Appellant appealed the final decision.

23. Before and after her termination, Appellant noted, and on many occasions, pointed out to Park City postal officials what she considered to be violations of contract requirements by other Park City highway contractors (Supp. Exhs. 1 ¶¶ I(1) & (2), III(2), (4)-(7), 2 ¶ (9), 13). Other contractors working from the Park City Post Office also received Forms 5500 showing performance deficiencies on their routes (Supp. Exh. 9).

DECISION

Appellant admits that the replacement contractor failed to meet all of the requirements of the contract but argues that, for the most part, the performance deficiencies were excusable and that those that were not excusable were insufficient to justify termination of the contract for default.

Respondent argues that the termination was proper as the delays in delivery and missed deliveries were serious violations of contract requirements and were not excusable. Respondent argues that Appellant was not entitled to an opportunity to respond to the route deficiencies as the deficiencies constituted "major irregularities" for which the contracting officer may terminate without affording a contractor an opportunity to respond.

The Postal Service has the burden of proving that the termination was justified, but once Respondent shows that Appellant failed to perform in accordance with the contract, the burden shifts to Appellant to present evidence of excusable causes, *Pamela J. Sutton,* PSBCA No. 1622, 88-3 BCA ¶ 21,031 at 106,237, or to show the termination was an abuse of the contracting officer's discretion, *Jesse A. Farmer,* PSBCA No. 2702, 91-3 BCA ¶ 24,181 at 120,941; *Quality Environment Systems, Inc.,* ASBCA No. 22178, 87-3 BCA ¶ 20,060 at 101,569.

Thus, the serious performance deficiencies, unless excusable, following by less than a week the specific warning to Appellant of Respondent's concern about service deficiencies stemming from Appellant's use of a replacement carrier, plus the absence of any assurance that service could be restored to the contract standard without application of additional postal resources justified the default termination.[1] *See John Michael Hall,* PSBCA No. 1311, 1985 WL 16596 (P.S.B.C.A.), May 15, 1985.

As excuses for the performance deficiencies, Appellant raises (1) road construction on the line of travel, (2) mechanical problems with her delivery vehicle, (3) interference with the replacement carrier by postal employees and other highway contractors working out of the Park City Post Office and (4) Respondent's failure to adjust the route time to recognize the actual number of boxes on the route. However, even accepting road construction, *see Brooks E. Cook,* PSBCA No. 1350, 86-3 BCA ¶ 19,073 at 96,361, and equipment problems, *see William Cimpi,* PSBCA No. 2695, 91-1 BCA ¶ 23,390 at 117,379, as excusable grounds for performance deficiencies, Appellant has not demonstrated excusable reasons for the carrier's departing the post office two to six hours late, (Findings 8, 13, 14, 16, 17) and the substantial missed deliveries on June 19, 20 and 22, which were not shown to result from the jeep breakdown or road construction (Findings 15, 16).

Appellant has not shown that Respondent interfered with the replacement carrier's performance of the route. Appellant claims that the SPO delayed the replacement carrier on her first day on the job by talking to her at length and criticizing Appellant's performance of the contract. That the SPO talked to the replacement on her first day would be expected, and his discussions could have caused no more than a minor delay, if any, and do not constitute interference. Appellant's argument that providing casing assistance on June 23 interfered with the replacement carrier is also rejected. Although the casing assistance may have been ineffective, in the face of the serious delays on the route over the previous three delivery days (regardless of cause), providing assistance on casing and delivery was reasonable. The postmaster's action in doing so does not show an effort to interfere with the replacement carrier, and there is no evidence the carrier was delayed by the casing assistance. Other than these two instances, Appellant has presented only conclusory and generalized allegations of interference, unsupported by specific proof and probative evidence, and these are not sufficient to

[1] The Postal Service was not obliged to take the replacement's inexperience into account by accepting performance that did not comply with the contract requirements or by continuing the additional supervision of and assistance to Appellant's employee to obtain performance that met the requirements of the contract. *See Arnette B. Fleming Hauling, Inc.,* PSBCA No. 2872, 91-2 BCA ¶ 23,868 at 119,567.

Digitized by Google

show Respondent interfered with Appellant's employee's performance. *See Fred A. Arnold, Inc.*, ASBCA Nos. 20150, 22154, 84-3 BCA ¶ 17,624 at 87,843.

Appellant has not shown that the replacement carrier's performance deficiencies resulted from there being more boxes on the route than reflected in the contract delivery time. Appellant had not requested a route adjustment, and there is no evidence Respondent would have refused one if requested. Moreover, Appellant has not shown that an adjustment in time to account for 23 additional boxes would have been sufficient to make an appreciable dent in the late departures and route completions or to affect the missed deliveries. Appellant has thus failed to demonstrate that the performance deficiencies of her replacement carrier were excusable.

Appellant argues that Respondent discriminated against her in that the deficiencies for which her contract was terminated were no more serious than those occurring on other highway contract routes out of the Park City Post Office. She contends that other highway contractors conspired to deprive her of the route and that they exerted undue influence over the postmaster which caused Park City postal officials to overlook performance deficiencies of the other contractors. Whether other contractors were also guilty of violations of their contracts has no bearing, in and of itself, on whether Appellant's contract was properly terminated. *See Pascal Redfern*, PSBCA No. 1512, 87-1 BCA ¶ 19,646 at 99,461 *aff'd on recon.* 87-3 BCA ¶ 19,983. Appellant's unsubstantiated suspicions and allegations of a conspiracy between postal officials and other contractors and of undue influence over the postmaster exerted by the other contractors do not establish that the termination of her contract stemmed from bad faith or bias on the part of postal officials. *See Spezzaferro v. F.A.A.*, 807 F.2d 169, 173 (Fed. Cir. 1986).

Appellant contends that the failure to give her an opportunity to respond to the allegations of deficient performance by the replacement carrier violated her due process rights afforded by the Constitution and that the termination of the contract before she was allowed ten days to respond to the allegations as provided in the Forms 5500 requires that the termination for default be overturned. After the failure of the previous replacement carrier to complete the route on June 13 and the subsequent meeting with the postmaster and SPO (Findings 10, 11), Appellant was on notice that Respondent would not tolerate serious service deficiencies resulting from use of a replacement carrier unable to perform the route in accordance with the terms of the contract. Appellant's contract does not guarantee her notice of deficiencies and an opportunity to respond in advance of a termination, and, as the 5500s were not given to Appellant before the termination, she did not receive a commitment from Respondent that she would have ten days to respond. *See Douglas Cremer*, PSBCA No. 3108, 93-2 BCA ¶ 25,965; *Harvey L. Monk*, PSBCA No. 995, 82-2 BCA ¶ 15,797. Therefore, termination based on the recurrence of such deficiencies and lack of assurance that acceptable performance would be restored is not invalidated by the Postal Service's failure to give the contractor advance formal notice of the termination. *See Homer J. Sappington*, PSBCA No. 3162, 93-3 BCA ¶ 26,042, 1993 WL 130171 (P.S.B.C.A.), April 13, 1993; *Marlena R. Antrim*, PSBCA No. 2149, 88-3 BCA ¶ 21,108 at 106,563. Additionally, Appellant was required by her contract to supervise the contract which included establishing adequate monitoring of the operation of the route whether or not she was performing it personally. Appellant could have ascertained the problems on the route through telephone contact with the replacement carrier.[2] That Appellant did not know of the problems on the route stemmed from her delegation of performance of the route to the replacement carrier, and did not result from any action of Respondent.

Respondent's termination of the contract without advance notice and an opportunity to respond does not violate Appellant's constitutional due process rights. Although Respondent failed to provide Appellant a formal opportunity to respond to the deficiencies before termination, Appellant has not been denied her rights under the Constitution as she has had an opportunity in this proceeding to raise, and we have considered, her explanations and arguments regarding the service deficiencies. *See Melvin R. Kessler*, PSBCA Nos. 2820, 2972, 92-2 BCA

[2] Notwithstanding Appellant's instructions to her employee that the employee call Appellant if she encountered any problems or questions of an unusual nature on the route (Finding 12), the employee inexplicably did not do so despite encountering what Appellant now contends were significant road construction delays, major mechanical problems with the delivery jeep and substantial interference from postal employees and other contractors.

¶ 24,857 at 123,997; *Shorthaul Trucking Co.*, PSBCA No. 1046, 1985 WL 16706 (P.S.B.C.A.), June 18, 1985.

Appellant argues but has not established that the termination of her contract violated other provisions of the Constitution. There is no evidence in the record to support her contention that her contract was terminated to stop complaints she had made about the Park City Post Office or in retaliation for her complaints, and thus there would be no basis for concluding she was denied any First Amendment protection that might be applicable to government contractors. Likewise, Appellant has made no showing that the termination of her contract violated any rights she might possess under the Fourth Amendment or the Equal Protection clause of the Fourteenth Amendment.[3]

Finally, Appellant challenges the postmaster's characterization of her actions as abandonment of the contract because the replacement carrier's failure to deliver on June 24 resulted from the postmaster's direction not to return to the post office even though the contract had not been terminated. However, in deciding to terminate the contract, the contracting officer did not rely on Appellant's failure to perform the contract on June 24 or the postmaster's characterization of Appellant's performance as an abandonment of the contract. Rather, the contracting officer terminated the contract for failure to perform service according to the terms of the contract. Based on the evidence presented, the contracting officer properly terminated for default Appellant's contract.

The appeal is denied.

[¶ 26,420] Jake Sweeney Auto Leasing, Inc.

PSBCA Nos. 3164, 3166, 3177-3179, September 1, 1993. Contract No. 381793-86-V-A172.

Contract Types—Vehicle Rentals—Bailment Principles.—A contractor's contention that its leased-vehicle contracts were mutual benefit bailment contracts under which the government, as bailee, was presumed to have negligently caused damage to the bailed property was rejected because the presumption urged by the contractor was inconsistent with contract language. The contract specifically stated that the contractor had the burden of proving that any damage to the leased vehicles was the result of negligence on the part of the government.

Contract Types—Vehicle Rentals—Proof of Negligence.—Although a contracting officer conceded that damage necessitating the repair of a leased vehicle was beyond ordinary wear and tear, a contractor was not entitled to recover on any portion of its claim for damage to vehicles leased to the government, because the contractor provided no evidence to show that the damage was caused by the negligence of the government's personnel.

For the appellant: Teri Geraci. For the government: John T. Farrell, Jr., Philadelphia Field Office, United States Postal Service, Philadelphia, Pennsylvania.

Before BROCHSTEIN, COHEN, and FINN, Administrative Judges.

BROCHSTEIN, Administrative Judge: Appellant, Jake Sweeney Auto Leasing, Inc., has appealed from contracting officer's decisions denying its claims for damage to vehicles leased by Respondent, United States Postal Service. These appeals are being decided on the record in accordance with 39 C.F.R. § 955.12.

FINDINGS OF FACT

1. Contract No. 381793-86-V-A172 was awarded to Appellant on August 7, 1986, and covered the lease of eight passenger vehicles for use in "Park & Loop" service at two stations in Cincinnati, Ohio. The term of the contract was from September 27, 1986, through October 25, 1991. (Appeal File Tab (AF) A).

[3] As Appellant has not shown that her Constitutional rights were violated, we need not address what, if any, relief the Board could grant based on violations of the Constitution. *See Paul A. Mason*, PSBCA No. 1357, 85-2 BCA ¶ 17,998, 1985 WL 16447, March 26, 1985; *M&M Services, Inc.*, ASBCA No. 28712, 84-2 BCA ¶ 17,405 at 86,688.

Digitized by Google

2. The contract contained the July 1980 version of PS Form 7476, "U.S. Postal Service, General Provisions for Vehicle Hire Contracts." Clause GP-6 of the General Provisions contained the following relevant language:

"LIABILITY PROVISIONS

(a) *Contractor's Vehicles.* The Postal Service shall be responsible for loss of, or damage to, the Contractor's vehicles while in its custody only when caused by the act or negligence of any officer or employee of the Postal Service acting in the scope of his employment .... In no event shall the Postal Service be responsible for ordinary wear and tear." (*Id.*)

3. Through a series of claims dated December 2, 1991, Appellant sought the cost of repairing damage to five of the vehicles which damage was alleged to have occurred during the contract term. As the basis for each claim, Appellant stated substantially the following:

"USPS had physical possession of vehicle. Damage was not present when vehicle was delivered. No reports have been submitted by USPS to explain damages."

Each of the claims was accompanied by two repair estimates, the lower of which reflected the amount of the claim. (AF B).

PSBCA No. 3164—Vehicle No. 11665

4. The PS Form 4577, "U.S. Postal Service Hired/Borrowed Vehicle Condition Report," related to this appeal showed dents on the right side and a broken front spoiler [valance] at the time the vehicle was returned to Appellant. Appellant's claim was in the amount of $243.00 and covered the repair of corresponding damage. In a decision dated February 3, 1992, the Contracting Officer denied the claim in its entirety. With respect to the damage to the right side, he concluded that there was no evidence of negligence on the part of the Postal Service and that the damage had not been shown to be outside ordinary wear and tear. With respect to spoiler damage, he concluded that the damage was outside ordinary wear and tear but that there was no evidence that the damage had been caused by an act or negligence of Postal Service employees. (AF B, D, E).

PSBCA No. 3166—Vehicle No. 11183

5. In this appeal, the Form 4577 reflected damage to the right front bumper and right front fender as well as small scratches on the left side door. The amount claimed was $162.00, covering repairs to the bumper and fender only. In a decision dated February 3, 1992, the Contracting Officer denied the claim on the basis that the damage covered by the claim had not been shown to be outside ordinary wear and tear or to have been caused by an act or negligence of a Postal Service employee. (AF B, D, E).

PSBCA No. 3177—Vehicle No. 11760

6. In this appeal, the Form 4577 showed a broken spoiler and dents and scratches on the rear of the vehicle. The claim requested $217.60 in payment for replacing the spoiler and repairing the rear hatch. In a decision dated February 4, 1992, the Contracting Officer approved the payment of $81.00 for damage to the hatch. As to damage to the spoiler, the Contracting Officer conceded that such damage was outside ordinary wear and tear but denied recovery based on the absence of a showing that the damage had been caused by an act or negligence of a Postal Service employee. (AF B, D, E).

PSBCA No. 3178—Vehicle No. 11671

7. The Form 4577 in this appeal noted dents and scratches on the front, rear, and right side of the vehicle. The claim, in the amount of $292.60, sought the cost of repairing the right rear quarter panel and rear body panel as well as the cost of replacing the front valance. In a decision dated February 3, 1992, the Contracting Officer concluded that the damage to the right rear quarter panel and rear body panel and the dent in the valance had not been shown to be outside ordinary wear and tear. Accordingly, he denied the claim in its entirety. (AF B, D, E).

PSBCA No. 3179—Vehicle No. 11668

8. In this appeal the Form 4577 showed dents on the left side, right front, left rear, the rear of the right side. Appellant's claim, in the amount of $226.00, sought the cost of repairs to the left door, right rear quarter panel, and right front bumper. In a February 3, 1992, decision, the Contracting Officer denied the claim in its entirety, concluding that Appellant had not shown the damage to be outside ordinary wear and tear or to be the product of Postal Service negligence. (AF B, D, E).

DECISION

In its Complaints,[1] Appellant argues that these contracts are mutual benefit bailment contracts under which Respondent, as bailee, is subject to a presumption that any damage to the bailed property was caused by Respondent's negligence. Appellant also argues that terms of the "Liability Provisions" [Finding 2] which limit Respondent's liability with respect to ordinary wear and tear are unenforceable. These arguments have been considered and rejected by this Board in *Jake Sweeney Auto Leasing, Inc.,* PSBCA Nos. 3091-3094, 3096, 3098, 3122, 3125, 93-1 BCA ¶ 25,363, where we concluded that the presumption urged by Appellant was inconsistent with the contract language and that the limitation on liability for ordinary wear and tear was enforceable. Those conclusions apply equally to the appeals here.

As the party seeking recovery, Appellant has the burden of proving that an act or negligence on the part of Respondent's personnel was the proximate cause of the damage to each vehicle and that the damage exceeded ordinary wear and tear. *E.g., Jake Sweeney Auto Leasing, Inc.,* PSBCA Nos. 2784-2788, 2791-2798, 91-3 BCA ¶ 24,278. Respondent argues that Appellant has failed to meet that burden.

In PSBCA Nos. 3164 and 3177 the Contracting Officer conceded that damage necessitating the replacement of a valance was beyond damage which could be considered ordinary wear and tear. However, Appellant has provided no evidence to show that such damage was caused by an act or negligence of Respondent's personnel. As to other damage in dispute in these appeals, Appellant has provided no evidence to show that any damage was beyond ordinary wear and tear or was caused by an act or negligence of Respondent's personnel. Thus, Appellant has failed to satisfy its burden of proof in these appeals.

The appeals are denied.

[¶ 26,421] N.J. Hastetter, Trustee for Thomas and Judith Hastetter

PSBCA No. 3064, September 1, 1993.

Procedure, Boards—Reconsideration—Letter as Motion.—In characterizing a contractor's letter relating to an earlier decision as a motion for reconsideration, the board denied the motion because the letter stated no grounds and furnished no information that would provide a basis for modifying the earlier decision.

For the appellant: N.J. Hastetter. For the government: Robert E. O'Connell, United States Postal Service, San Bruno Field Office, San Bruno, California.

Before BROCHSTEIN, COHEN, and FINN, Administrative Judges.

Reconsideration of 93-2 BCA ¶ 25,809 denied.

BROCHSTEIN, Administrative Judge: Appellant, N.J. Hastetter, has filed a letter dated July 20, 1993, with the Board, generally expressing dissatisfaction with the Board's June 15, 1993, Opinion (*Appeal of N.J. Hastetter, Trustee for Thomas and Judith Hastetter,* PSBCA No. 3064, 93-2 BCA ¶ 25,809). Although not specifically denominated a motion for reconsideration, we have treated the letter as such, since it was filed within the time allowed for such motions (39 C.F.R. § 955.30).

Appellant's letter states no grounds and provides no information which would cause us to modify our earlier Opinion. Accordingly, to the extent Appellant's letter may be considered a motion for reconsideration, the motion is denied and the Opinion is affirmed.

Appellant's letter also states that he wishes to file "two new Complaints," related to repairs demanded by the Postal Service on facilities in Brunswick, Missouri, and Archer City, Texas, apparently owned by his wife, Erica Hastetter. Appellant asks how to proceed with these complaints.

Under the Contract Disputes Act of 1978 (41 U.S.C. §§ 601-613), Appellant must first file any claims related to these facilities with the appropriate contracting officers. Under the Act, the contracting officer must issue final decisions, which may then be ap-

[1] Appellant did not file a brief.

Digitized by Google

pealed to this Board or to the Court of Federal Claims. At this time the Board lacks jurisdiction to consider Appellant's additional complaints.

[¶ 26,422] Buster Smith

AGBCA No. 93-152-1, October 25, 1993. Contract No. 0810-04-007641.

Sale of Government Property—Timber Sales—Resale of Uncut Timber.—Although a contractor alleged that the government intended to resell timber that the contractor failed to cut under its timber sales contract, thus reducing its damages, and to allow the contractor to bid on the resale, the board refused to order a resale of the uncut timber because the contractor failed to prove that the government intended to resell. The contractor asserted that the government's letter requesting the contractor to extend its letter of credit under the contract established the government's intent to resell. However, the government sought the extension to ensure that sufficient funds would be available to cover damages resulting from the contractor's failure to cut the timber. The contractor further alleged that it relied on oral representations by the contracting officer that it would be allowed to bid on the resale. Even if the timber had been resold, the contractor, having failed to complete the original contract, would have been prohibited by regulations from bidding. Consequently, the government was entitled to collect damages calculated in accordance with the contract provision applicable if the timber was not resold.

For the appellant: Hixson, Cleveland & Rush, Forth Smith, Arkansas, by Craig L. Cook. For the government: Marilyn J. Brown, Office of the General Counsel, U.S. Department of Agriculture, Little Rock, Arkansas.

Before EATON, HOURY, and GISH, Administrative Judges.

EATON, Administrative Judge: This appeal arises under the Spy Rock Timber Sale in the Pleasant Hill Ranger District of the Ozark-St. Francis National Forests, Arkansas. The Forest Service, U.S. Department of Agriculture, awarded contract No. 0810-04-007641 to Buster Smith of Vendor, Arkansas (Appellant), on September 22, 1989. The sale's original termination date, December 15, 1991, was extended to May 16, 1992.

Appellant constructed roads but did not cut any timber before the extended termination date. The Contracting Officer (CO) initially advised Appellant that the timber would be resold and allegedly told Appellant he would be permitted to bid on the resale. The Forest Service subsequently determined that due to an outdated environmental analysis, the timber would not be resold. The agency offset potential damages of $142,416.83 by the estimated resale value of the timber, $107,224.57, resulting in total damages of $35,192.26. Appellant had $48,648.08 in unused purchaser credit and unobligated cash in the timber sale account, so the Forest Service refunded $13,455.82 to Appellant. In a final decision dated January 14, 1993, the CO found that an additional $13,514.55 should be returned to Appellant, reducing damages to $21,677.71.[1]

On appeal, Appellant alleges that he relied on Government advice that the timber would be resold. Appellant seeks a Board order for resale, as well as remission of the remaining damages, alleging that the Forest Service appraisal on which they were based undervalued the timber and that purchaser credit earned for road construction was too low.

On August 11, 1993, the Government filed a Motion for Summary Judgment, citing the decision of the U.S. Court of Appeals for the Federal Circuit in *Madigan v. Hobin Lumber Co.*, 986 F.2d 1401 (Fed. Cir. 1993) (hereafter *Hobin*). Appellant opposes the Motion.

The Board has jurisdiction under the Contract Disputes Act, 41 U.S.C. § § 601-613.

---

[1] In a brief in support of an amended Complaint, Appellant states the amount of damages as $21,633.16. This discrepancy apparently is because Appellant substituted the amount of unused purchaser credit, $13,559.10, for the amount of interest on stumpage payments, $13,314.55, which the CO's final decision stated could be refunded to Appellant. (Correspondence File.)

FINDINGS OF FACT

1. The Forest Service, U.S. Department of Agriculture, awarded contract No. 0810-04-007641, the Spy Rock Timber Sale, to Appellant on September 22, 1989. The original termination date for the sale was December 15, 1991. (Appeal File (AF) Tab 51 page (p.) 67.)

2. The sale area covered approximately 3,000 acres in the Pleasant Hill Ranger District of the Ozark-St. Francis National Forests, Arkansas. It included an estimated 624 thousand board feet (MBF) of miscellaneous hardwood, ash, mixed oak, white oak, and northern red oak, for which Appellant bid $205 per MBF, or $127,920, and 284 hundred cubic feet (CCF) of miscellaneous hardwood and small roundwood for which Appellant bid $10 per CCF, or $2,840. (AF Tab 51 pp. 68, 69.)

3. Appellant twice requested extensions of the sale termination date: on September 5, 1991, he sought an unspecified number of additional days due to a depressed market (AF Tab 79 p. 31), and on September 18, 1991, he requested a 120-day adjustment due to wet weather the previous spring (AF Tab 81 p. 28). The CO granted Appellant a 61-day extension, finding that although Appellant had planned to begin operations on March 16, weather had prevented work until May 16, 1991. Time outside the normal operating season was not counted, so contract termination date, as extended, was May 16, 1992. (AF Tab 81 p. 26.)

4. The contract required construction or reconstruction of 2.61 miles of specified roads: No. 1003P, Mountain Creek, .52 miles of reconstruction; No. 94469A, Well Cave Hollow, .71 miles of construction; and No. 94669B (unnamed), 1.38 miles of reconstruction (AF Tab 51 p. 73). The Forest Service inspected and accepted these on June 25, 1992 (AF Tab 87 p. 20). Under contract Provision BT4.21, **Purchaser Credit,** Appellant earned $15,501 in purchaser credit for road construction and used $1,942 to pay for right-of-way timber (AF Tab 51 p. 81, Tab 90 p. 17, Tab 95 p. 2).

5. Contract provision WO-CT9.4—**Failure to Cut,** stated in pertinent part:

> In event of ... Purchaser's failure to cut designated timber on portions of Sale Area by Termination Date, Forest Service shall appraise remaining Included Timber ... Such appraisal shall be made with the standard Forest Service method in use at time of termination.
>
> Damages due the United States for Purchaser's failure to cut and remove Included Timber meeting Utilization Standards shall be the amount by which Current Contract Value, plus costs described below, less any Effective Purchaser Credit remaining at time of termination, exceeds the resale value at new Bid Rates. *If there is no resale, damages due shall be determined by subtracting the value established by said appraisal from the difference between Current Contract Value and unused Effective Purchaser credit* ...

(AF Tab 51 p. 111.) (Emphasis added.)

6. Except for clearing incidental to road construction, Appellant did not cut any timber before the contract expired (AF Tab 95 p. 1).

7. By letter dated June 3, 1992, the CO advised Appellant that he was no longer authorized to cut or remove timber from the sale area. The letter further stated:

> Refer to Contract Provision CT9.4 [sic] in your contract. The Forest Service will appraise and offer for sale the timber remaining on this sale. After the sale of the timber, damages will be computed. All cash and unobligated purchaser credit will be held until damages are paid.
>
> The letter of credit that serves as a performance bond [2] on this sale expires on June 15, 1992. Please have this letter of credit extended until December 15, 1992.

The letter did not state that Appellant would be permitted to bid on the resale. (AF Tab 85 p. 22.)

8. Appellant did not provide a new performance bond. The record includes a memorandum from the CO stating that sufficient cash remained in the sale account to cover any damages due to Appellant's default, so the CO had decided not to pursue the matter. (AF Tab 86 p. 21.)

9. The environmental assessment for the Spy Rock Sale had been approved on December 15, 1986 (AF Tab 54 p. 61). On September 21, 1992, the Forest Service Representative advised the Forest Supervisor that new documentation and a new decision to sell would be required before any resale (AF Tab 89 p. 18).

[2] The contract required a performance bond in the amount of $14,000 (AF Tab 51 p. 75).

Digitized by Google

10. By letter dated October 16, 1992, the CO advised Appellant that the sale would not be reoffered. The CO stated that the resale value of the timber had been determined by appraisal, using base period prices and costs in effect at the time of sale termination. The average overbid [3] for that quarter was added to the appraised price to determine estimated resale value. Damage calculations, in which volume and contract value of remaining timber were listed by individual species, resulted in the following:

Value of Remaining Timber	$ 128,710.00
Cost of resale	192.28
Interest on Stumpage Payments Not Received	13,514.55
Maximum Potential Damage	$ 142,416.83
Appraised Value at Termination	63,934.19
Estimated Overbid	43,290.38
Resale Value	$ 107,224.57
Maximum Potential Damages	$ 142,416.83
Less Resale Value	107,224.57
Total Damages	$ 35,192.26

Unused Purchaser Credit	13,559.10
Unobligated Cash on Hand	35,088.98
Refund Due Purchaser	$ 13,455.82

(AF Tab 91 pp. 14-16.)

11. The CO's October 16, 1992, letter was not identified as a final decision. *Id.* Appellant nevertheless appealed the damage assessment to the Board. The appeal was dismissed for lack of jurisdiction, since Appellant had neither refused to pay the damages nor paid and filed a claim with the CO. *Buster Smith,* AGBCA No. 93-115-1, 93-1 BCA ¶ 25,762. On October 30, 1992, counsel for Appellant wrote the CO, objecting to the calculation of damages; the CO treated this as a Contract Disputes Act claim (AF Tabs 96, 101).

12. In a final decision dated January 14, 1993, the CO advised Appellant that in view of the fact that the sale was not being reoffered, it had been improper to include in damages interest on stumpage payments not received. The CO stated that an additional $13,514.55 would therefore be refunded to Appellant. The CO otherwise found the damage assessment proper and denied the claim. (AF Tab 104.)

13. Appellant timely appealed. In an affidavit attached to an amended Complaint, Appellant declared that "on numerous occasions" he had been notified by the CO and other "agents of the Appellee" that he would be allowed to rebid and harvest the timber. With regard to damages, Appellant stated that in his opinion, based on 30 years of experience, timber prices were escalating and the value of the contract at the time in question would have been at least $142,416.83; that he had improved the sale area by building "two different paths for ingress and egress," costing more than $20,000; that the Government's cost of resale, and any loss due to delay and receipt of stumpage payments, was minimal; and consequently, that the Government had not in any way been damaged. (Affidavit of Buster Smith, July 3, 1993, Correspondence File.)

14. As indicated above, on August 11, 1993, the Government filed a Motion for Summary Judgment, arguing that no material facts are in dispute and that, as a matter of law, the Government properly calculated damages pursuant to contract provision WO-CT9.4—**Failure to Cut.** In support of its Motion, the Government cites the decision of the U.S. Court of Appeals for the Federal Circuit in *Hobin.*

15. In opposing the Motion, Appellant alleges that the Forest Service arbitrarily and capriciously used figures from an appraisal dated September 21, 1992, that are inconsistent with those used to compute damages. The Government points out that the Forest Service voided the appraisal referred to by Appellant (AF Tab 37 p. 161) and instead based damage calculations on an appraisal dated September 22, 1992 (AF Tab 39 p. 149). Appellant has not commented on the second appraisal.

DISCUSSION

Summary judgment is appropriate when no material facts are in dispute, so that the moving party is entitled to judgment as a matter of law. The moving party has the initial burden of demonstrating the absence of disputed material facts. In opposing the motion, the non-moving party must present more than "some" evidence to the contrary. If the evidence is not sufficiently probative, or is merely colorable, summary judgment is appropriate. *Cannon Structures, Inc.,* AGBCA No. 90-207-1, 93-3 BCA ¶ 26,059; *Borderland Spraying Serv.,* AGBCA No. 90-180-1, 92-3 BCA ¶ 25,129.

[3] The average overbid would be the average of the amount bid above minimum rates set by the Forest Service appraisal.

©1994, Commerce Clearing House, Inc.

Digitized by Google

For the reasons set out below, we find this case appropriate for partial summary judgment in favor of the Government with regard to entitlement to damages. The only material facts in dispute relate to quantum.

In *Hobin,* the Federal Circuit, construing a contract provision virtually identical to that in Appellant's contract *(see* Finding of Fact (FF) 5), held that even when the Forest Service had no present intent to resell timber, the contract entitled the Government to recover damages for failure to cut. The court reviewed an opinion of this Board, *Hobin Lumber Co.,* AGBCA No. 87-170-1, 91-3 BCA ¶ 24,213, in which we held that since the Forest Service intended to preserve a sale area as habitat for the Northern spotted owl, and the timber would therefore not be resold, no damages had been incurred. The court stated:

> Because the contract specifically provides that the government is entitled to recover in the event that the contractor does not cut the timber and the government does not resell it, and also provides the method by which the amount of recovery is to be determined, we reverse the Board's decision and direct it to grant summary judgment for the government . . .

Hobin, 986 F.2d at 1402.

In its Motion, the Government argues that the instant case is controlled by the Federal Circuit's conclusion that contracting parties must be held to their agreements, and that the Forest Service therefore need not reoffer the Spy Rock Timber Sale or prove actual damages in order to recover.

Although the Board requested both parties to address the applicability of *Hobin* to the instant appeal, Appellant has not done so. Instead, Appellant advances legal theories including promissory and/or equitable estoppel, denial of due process, denial of a property right, *i.e.,* the right to contract, and an arbitrary and capricious appraisal by the Forest Service.

Appellant first alleges that the CO's letter of June 3, 1992, regarding extension of the letter of credit, shows that the Forest Service intended to resell and to allow Appellant to bid. Although the letter pre-dated the Forest Service decision not to resell, Appellant merely infers that he would be permitted to bid; the letter did not so state (FF 7). The CO's request that Appellant extend the letter of credit, which would have expired before damages could have been calculated, is unrelated to and does not support such an inference. Rather, the CO sought the extension to ensure that sufficient funds would be available to cover damages due to Appellant's failure to cut, but did not pursue the matter because sufficent funds remained in the timber sale account. (FF 8.)

We find the request for extension of the letter of credit distinguishable from Government actions in *Louisiana-Pac. Corp. v. United States* [29 CCF ¶ 81,737], 227 Ct. Cl. 756 (1981). The Federal Circuit narrowly construed the holding of that case, finding that the only evident, and plausible, justification for creating an exception to the general rule that agreed-upon contract terms must be enforced was a Government attempt, during performance, to modify a timber sale contract. The Federal Circuit held that *Louisiana-Pac.* should only apply in the following limited circumstances:

> [W]here the government decides during the period of contract performance that it does not want all of the contract timber cut, where the government attempts to modify the contract . . . to limit the timber the contractor is otherwise required to cut, but the contractor refuses, and where the Government subsequently seeks to recover damages on that precise timber.

Hobin, 986 F.2d at 1405. In a footnote, the Federal Circuit noted that the holding in *Louisiana-Pac.* suggested that the court had applied some form of estoppel against the Government due to the Government's attempted modification of the timber sale contract. Finding no similar facts in *Hobin,* the Federal Circuit held that a similar estoppel theory did not apply in that case.

Nor does a similar theory apply in Appellant's case: there was neither a Government attempt to limit the amount of timber available to be cut nor a refusal by the contractor. Rather, Appellant's sale expired by its own terms with only right-of-way timber cut (FF 6). Appellant did not renew the letter of credit, so cannot claim detrimental reliance in having done so (FF 8). If, as Appellant argues, he relied on the CO's initial statement that the timber would be resold, and elected not to pursue other sales, that was a business judgment for which the Forest Service is not responsible. *See Robert O'Hair and O'Hair Constr. Co., JV,* AGBCA No. 82-115-1, 89-1 BCA ¶ 21,384.

Appellant next alleges that he relied on oral representations by the CO and other unidentified Forest Service officials that he would be allowed to bid. Appellant asserts that this also estops the Government from deciding not to resell. The argument is un-

Digitized by Google

availing. Even if the timber had been resold, applicable regulations would have prohibited Appellant's bidding. 36 CFR § 223.86, **Bid restriction on resale of non-completed contract,** states in pertinent part:

> (a) Except as otherwise provided in this section, no bid will be considered in the resale of timber remaining from any uncompleted timber sale contract from any person, or from an affiliate of such person, who failed to complete the original contract:
>
> (1) Because of termination for purchaser's branch;[4] or
>
> (2) Through failure to cut designated timber on portions of the sale area by the termination date, unless acceptance of such bid is determined to be in the public interest.

Appellant has neither alleged nor proved that the CO would have found a bid by Appellant in the public interest.

Even if we assume, *arguendo,* that Appellant was told he could bid on a resale, estoppel generally is not available to individuals who rely on incorrect legal advice from Government employees. *Walker Equip. v. Int'l Boundary and Water Comm'n,* GSBCA No. 11527-IBWC, 93-3 BCA ¶ 25,954; *Turner Constr. Co. v. General Services Administration,* GSBCA No. 11361, 92-3 BCA ¶ 25,115 and cases cited therein. Given the regulatory prohibition, any advice that Appellant would be allowed to bid was legally incorrect. Accordingly, we find the Government entitled to collect damages calculated in accordance with contract provision WO-CT9.4—**Failure to Cut.**

The only material fact in dispute is the amount of such damages. Appellant's affidavit, while lacking in specificity, raises a question as to the validity of the Forest Service appraisal. Appellant avers that timber prices were escalating; that the contract value would have been equal to or greater than the maximum potential damages calculated by the Forest Service; and that road construction has benefited the Forest Service to an extent greater than the amount of purchaser credit allowed. These disputed facts preclude summary judgment for the Government so far as quantum. We question, however, whether Appellant should be given credit for an estimated overbid (FF 10) when there is no resale in which such an overbid will be added to the appraised value of the timber.

With regard to Appellant's remaining assertions, consideration by this Board under the Contract Disputes Act is intended to provide contractors with due process and, at the same time, "informal, expeditious, and inexpensive resolution of disputes." 41 U.S.C. § 607(e). *See also Shelby Crop Ins. Corp.,* AGBCA No. 91-192-1, 92-3 BCA ¶ 25,069; *Summit Contractors,* AGBCA Nos. 81-252-1, 83-312-1, 84-1 BCA ¶ 17,227. Appellant in this case was afforded both notice of the Government's position and an opportunity to be heard. Appellant specifically declined a hearing and elected a decision on the written record.

As for the alleged denial of a property right, while there is arguably such a right once a contract has been awarded, there is no right to award of a Government contract. Except for specific restrictions imposed by statute, as part of its general authority to make contracts, the Government has the right, as do private individuals, to decide with whom and on what terms it will contract. *Old Hickory Serv.,* GSBCA No. 6259, 82-2 BCA ¶ 15,972 quoting *Perkins v. Lukens Steel Co.,* 310 U.S. 869 (1940).

Finally, remedies available to parties before the Board are the same as those available to litigants in the U.S. Court of Federal Claims, 41 U.S.C. § 607(d), and thus are generally limited to money damages and/or reformation or rescission of a contract. Regardless of environmental considerations, ordering the Forest Service to resell the timber is a form of equitable relief which the Board has no jurisdiction to grant. *Taeu Somsai,* AGBCA No. 92-181-1, 93-1 BCA ¶ 25,233.

By letter of today we are providing the parties with a schedule for supplementing the record with regard to the amount of damages. If the parties are able to settle this matter in the interim, so much the better.

RULING

The Government's Motion for Summary Judgment is granted with regard to entitlement. Following further submissions by the parties, the Board will rule on quantum.

---

[4] This appears to be a typographical error that should read "purchaser's breach." The term "branch," however, appears in the regulation as originally promulgated and numbered. 42 Fed. Reg. 28,257(1977), codified as 36 CFR 233.5(h)(1).

[¶ 26,423] Schmalz Construction Ltd.

AGBCA No. 92-177-1, October 25, 1993. Contract No. 50-82X9-3-041.

Reprocurement—Variations from Defaulted Contract—Changes in Requirements.—Excess reprocurement costs were properly assessed against a defaulted road construction contractor because the government met its burden of showing that the terms and conditions of the reprocurement contract were substantially the same as those in the defaulted contract. The default contractor did not show that reprocurement bidders increased their prices as a result of any alleged confusion resulting from the use of identical drawings for both contracts that perhaps caused bidders to think that all work shown on the drawings remained to be performed. The default contractor also failed to show that bidders increased their prices to cover the costs of clearing and grubbing. Although a resurvey of the remaining excavation would have been more precise than pay estimates as a method of calculating reprocurement excavation, the absence of a contractually mandated method of calculating remaining work entitled the government to use any reasonable method. Moreover, different circumstances, rather than different contract terms, justified the reprocurement contractor's allegedly more favorable treatment regarding road closures and its use of alternative gravel sources.

For the appellant: Fred Schmalz, President. For the government: Daniel B. Rosenbluth, Office of the General Counsel, U.S. Department of Agriculture, Denver, Colorado.

Before EATON, HOURY, and GISH, Administrative Judges.

EATON, Administrative Judge: This is an appeal from a Government claim for the excess costs of reprocurement for the Grand Mesa Roads Project, requiring approximately 9 miles of road construction in the Grand Mesa, Uncompahgre, and Gunnison National Forests, Colorado. The Forest Service, U.S. Department of Agriculture, awarded the contract, No. 50-82X9-3-041, to Schmalz Construction Ltd., of Gunnison, Colorado (Appellant) on May 25, 1983, in the amount of $675,044.20, but terminated it for default on January 30, 1986.

Appellant challenged the termination and itself claimed $12,289.51. In a decision dated July 17, 1991, *Schmalz Constr., Ltd.*, AGBCA Nos. 86-207-1, 86-229-1, and 86-255-1, 91-3 BCA ¶ 24,183 (hereafter *Schmalz*), the Board upheld the termination, granted Appellant 1 1/2 days and $616, and denied all other claims.

The reprocurement contract, awarded to G.R. Construction, Inc., of Grand Junction, Colorado (hereafter G.R. or the reprocurement contractor), had not been completed at the time of a hearing on the above appeals, so excess costs were not at issue. When G.R.'s contract also was terminated for default in June 1987, its surety agreed to take over, subcontracting the balance of the contract to Norm Gould and Sons, Inc., of Glenwood Springs, Colorado (hereafter Gould or the takeover contractor). Gould completed the project in September 1988.

On January 16, 1992, the Contracting Officer (CO) issued a final decision finding Appellant liable for $195,292.28 in excess costs and liquidated damages. Appellant timely appealed, arguing that the reprocurement contract did not accurately reflect work remaining at the time of the termination for default. Appellant alleged that the Forest Service had treated the reprocurement and takeover contractors more favorably than Appellant, and further alleged that Forest Service actions, including modifications to the reprocurement contract, had increased excess costs.

During pendency of the appeal, the Government reduced its claim to $118,733.53. A 2-day hearing was held in Denver, Colorado, on November 12 and 13, 1992. In post-hearing briefs, the Government moves to increase its claim by $92,250.49, the amount by which modifications increased the reprocurement contract price, and Appellant moves for reconsideration of the Board's decision on the termination for default.

The Board has jurisdiction under the Contract Disputes Act, 41 U.S.C. § § 601-613.

FINDINGS OF FACT

Background: The Termination for Default

1. The Forest Service awarded contract No. 50-82X9-3-041 to Appellant on May 25, 1983. The contract, known as the Grand Mesa Roads Project, required construction or reconstruction of approximately 9 miles of roads in the Grand Mesa, Uncompahgre, and Gunnison National Forests in Colorado.

Digitized by Google

Four different roads were involved: Trickle Park Road, 1.77 miles of reconstruction; Old Grand Mesa Road, 3.47 miles of reconstruction; Hay Park Road, 3.6 miles of new construction; and Young's Creek Reservoir Road, .24 miles of new construction. *See Schmalz*, 91-3 BCA at 120,949.

2. The original contract price was $675,044.20, and the original time for performance was 200 days. Modifications issued to Appellant increased the price to $701,439.80 and performance time to 228 days. The CO's final decision further increased the time by 34 days for unusually severe weather in 1983 and 1984. On appeal, the Board granted Appellant an additional 1 1/2 days, for a total of 264 1/2 days for performance. *Id.*

3. Work consisted of clearing and grubbing, excavation, installation of culverts and drainage ditches, crushing and placing gravel, and minor additional items such as installation of cattleguards, construction of a retaining wall, and seeding. *Id.*

4. The Forest Service terminated Appellant's contract for default on January 30, 1986. The CO found that Appellant had not made satisfactory progress in clearing and grubbing, and that except for a small amount of crushing done by another contractor from whom Appellant had purchased gravel, this work had not begun. *Id.* at 120,950. Pay Estimate No. 9, the final estimate issued to Appellant, showed that by the end of the 1985 season, Appellant had completed approximately 51 percent of the work in 108 percent of contract time. With 10 percent of earnings retained, Appellant had been paid $320,178.28. (Appeal File (AF) I, Tab 3 at 2, 3; Transcript (Tr.) II 96.) [1]

5. Appellant timely appealed the termination, alleging that excusable delays entitled it to extensions that would have allowed it to complete the project in a timely manner. Appellant additionally claimed $12,289.51 on the basis of alleged differing site conditions, unusually severe weather, and improper governmental acts. *Schmalz*, 91-3 BCA at 120,950.

6. In its decision of July 17, 1991, the Board found the default termination proper. As indicated above, it granted Appellant 1 1/2 days and sustained one claim for $616, but denied all other claims. *Id.* at 120,965.

The Reprocurement

7. For the reprocurement, the Forest Service did not survey or otherwise measure work completed by Appellant that had been paid for by designated quantities, for example, clearing and grubbing and excavation. Instead, quantities for the reprocurement contract were based on percentages shown in Pay Estimate No. 9. The estimate was in turn based on a Forest Service inspection on September 20, 1985, after work had been suspended for the season. (Tr. II 57, 103, 253, 254.)

8. The Forest Service solicited bids for the reprocurement contract under invitation No. R2-86-24, issued June 7, with opening on July 7, 1986 (AF II 26). Resolicitation had been put off from January until June to allow snow to melt before the Forest Service conducted a pre-bid meeting and "show me" tour on June 23, 1986 (AF II 51; Tr. II 145, 146, 261). A representative of G.R., the subsequent awardee, attended the pre-bid meeting (Tr. II 39; Government Exhibit (Gov't Ex.) 3).

9. The Forest Service received five bids and, on August 6, 1986, awarded reprocurement contract No. 50-82X9-6-039, in the amount of $553,152.80, to G.R. (AF II 47, 277-280). Performance was to be completed within 100 days of a Notice to Proceed, effective September 8, 1986 (AF II 47, 125).

10. During the 1986 season the Forest Service issued three modifications to G.R., increasing the contract price by $41,007.75, to a total of $594,160.55. Performance time was increased by 15 days to a total of 115. *See* Finding of Fact (FF) 54.

11. A pay estimate issued to G.R. for the period November 26, 1986, to January 5, 1987, showed that the reprocurement contractor had completed 16 percent of the work in 32 percent of available time (AF II 150). G.R. subsequently filed for bankruptcy and left the Grand Junction area without a forwarding address. On June 17, 1987, the Forest Service also terminated its contract for default. (AF II 24.)

The Takeover

12. In August 1987, Transamerica Premier Insurance Company (hereafter the surety), which had furnished G.R.'s payment and performance bonds, agreed to take over the contract. The takeover agreement stated,

[1] AF I refers to that covering the appeals of the default termination and Appellant's claims; AF II refers to that covering the appeal of excess costs. Transcripts are similarly distinguished. At the hearing on excess costs, the presiding judge advised the parties that they might rely on relevant evidence from the first hearing without reintroducing it during the second (Tr. II 9).

©1994, Commerce Clearing House, Inc.

Digitized by Google

among other things, that the surety would not be required to spend more than $553,000, the limit of the performance bond; that 78 days for performance remained; and that materials including a culvert, cattleguard grates, and pipe for a french drain would be furnished by the Government. (AF II 19-23.)

13. On August 4, 1987, the surety subcontracted with Gould to perform the balance of the work for $458,890 (Gov't Ex. 9). The Forest Service issued four additional modifications to the surety for work to be performed by Gould. These increased the contract price by $51,242.74 and time by an additional 20 days. *See* FF 55.

14. Gould completed work on September 10, 1988, and the CO approved final payment in the amount of $645,403.29 [2] on January 25, 1989. (AF II 157, 159.)

The Government's Claim: Excess Costs and Liquidated Damages

15. In calculating excess costs, the CO did not consider the effect of any modifications, which had increased the contract price by a total of $92,250.49 and time for performance by 35 days. Rather, the CO compared Appellant's contract price and performance time with the original reprocurement contract awarded to G.R. (Tr. II 93-98.)

16. In a final decision dated January 16, 1992, the CO notified Appellant that it was liable for $195,292.28 in excess costs of reprocurement (AF II 1).

17. The Government subsequently reduced its claim to $118,733.53, conceding that Appellant was not liable for the costs associated with an item covering gravel crushing and stockpiling from another defaulted contract that had been added to the reprocurement contract. G.R. had bid $75,491.75 for this item. (AF II 9; Tr. II 94; *see* FF 40.) The Government calculated its claim as follows:

Appellant's Contract, as Modified	$701,439.80
Payments to Appellant	320,178.28
Available for Reprocurement	$381,261.52
G.R. Constr. Contract	$553,152.80
	381,261.52
Excess Costs	$171,891.28
Costs Attributable to Defaulted Crushing Contract	75,491.75
Revised Excess Costs	$ 96,399.53
Liquidated Damages	$ 22,950.00[3]
	$119,349.53
AGBCA Award to Appellant	616.00
Government Claim	$118,733.53

(Gov't Ex. 5.)

18. Appellant timely appealed the final decision on excess costs, alleging that (1) the reprocurement contract did not accurately reflect the amount or type of work remaining at the time of the termination for default, so that the reprocurement and takeover contractors were paid for work Appellant already had completed; (2) the Forest Service treated these contractors more favorably than Appellant, for example, with regard to gravel sources, road closures, and contract time; and (3) Forest Service actions, including modifications to the reprocurement contract, increased excess costs. (Correspondence File.)

19. In its post-hearing brief, the Government moved to increase its claim by $92,250.49, the amount by which modifications increased the reprocurement contract price (Gov't Brief at 52).

20. In its post-hearing brief, Appellant moved for reconsideration of the Board's decision on the termination for default, arguing that new evidence demonstrates that the action was improper (Appellant's Brief at 42).

Similarities and Differences: Appellant's and the Reprocurement Contract and Treatment Thereunder

Scope of Work, Contract Drawings

21. Contract provisions covering scope of work (length of roads to be constructed or reconstructed) and type of work required (clearing and grubbing, excavation, installation of culverts and drainage ditches, crushing and placing gravel, installation of cattleguards, construction of a retaining wall, and seeding) were identical in both Ap-

[2] The final pay estimate was not based on the price of the contract between the surety and Gould. Rather, the estimate showed G.R.'s contract price, as modified, $594,160.55, plus $51,242.74, in modifications issued to the surety, for a total of $645,403.29. (AF II 157.)

[3] Appellant's contract specified liquidated damages of $300 a day (AF I, Tab 2 at 47). Appellant had been allowed 264 1/2 days for performance (FF 2). Of these, Appellant had used 241, so that 23 1/2 days remained. The Forest Service subtracted the 23 1/2 days from the 100 days originally allowed under the reprocurement contract to determine that Appellant owed liquidated damages for 76 1/2 days. (Tr. II 98; Gov't Ex. 5.)

Digitized by Google

pellant's and the reprocurement contract. (AF I, Tab 2 at 20; AF II 51.)

22. In both contracts, General Provisions for Public Work Contracts, § 30.3, Drawings, stated that drawings showed the "location, details, and dimensions of the work *to be performed*" (AF I, Tab 2 at 53; AF II 92) (emphasis added). Drawings also were identical. The CO's Representative (COR) testified that for the reprocurement, they were intended to show the desired end product; that revising them would have delayed the project for at least another year;[4] that the Schedule of Items showed work actually remaining; and that this also had been discussed at the pre-bid meeting and "show me" tour (Tr. II 34-36, 107; Gov't Ex. 7).

Standard Specifications

23. Forest Service Standard Specifications for Construction of Roads and Bridges, 1979 edition, were incorporated by reference in both contracts (AF I, Tab 2 at 12; AF II 46). However, Forest Service Standard Specifications for Construction of Roads and Minor Drainage Structures, issued in 1985, were effective by the time of the reprocurement and were also referenced in the reprocurement contract (AF II 51). Inclusion of the 1985 specifications was a mistake, and in case of questions during performance of the reprocurement contract, the parties consulted the 1979 version (Tr. II 32, 33).

Clearing and Grubbing; Merchantable Timber

24. Clearing and grubbing was paid on a per-acre basis under both contracts. The Schedule of Items in Appellant's contract listed an estimated 27.71 acres of clearing and grubbing for which Appellant bid $650 an acre, or $18,011.50. The reprocurement contract listed 2.74 acres, for which G.R. bid $1,000 an acre, or $2,740. (AF I, Tab 2 at 31; AF II 49.)

25. A Special Project Specification in both contracts showed the volume of merchantable timber designated to be cut as 232 thousand board feet (MBF). Appellant's contract required it to purchase all merchantable timber in the right-of-way for $1,392. (AF I, Tab 2 at 62; AF II 52.) About 50 MBF of merchantable timber, plus unmerchantable timber suitable only for firewood, remained at the time of the termination of Appellant's contract (Tr. II 52). The reprocurement contract merely required the contractor to dispose of all timber, either by removing it from Forest Service land or decking it at locations shown on contract drawings (AF I, Tab 2 at 62). Bidders attending the pre-bid meeting and "show me" tour were aware of the amount of timber remaining on the project site (Tr. II 23, 61-64).

Excavation

26. Both contracts included an item for Excavation, Placement Method 3. Appellant's contract called for an estimated 77,921 cubic yards for which Appellant bid $3.50 a yard. Modifications increased this quantity to 82,534 cubic yards. *Schmalz*, 91-3 BCA at 120,962. Pay Estimate No. 9 showed that Appellant was paid for 61,651 cubic yards of excavation (AF I, Tab 3 at 2).

27. The reprocurement contract called for an estimated 20,883 cubic yards (82,534 – 61,651) of excavation for which G.R. bid $4.50 a yard (AF II 49).

28. Forest Service Standard Specifications for Construction of Roads and Bridges, 1979 edition, at § 106.04—Payment, stated:

> One of the following methods of measurement for determining final payment is DESIGNATED on the SCHEDULE OF ITEMS for each pay item:
>
> (a) *Designed Quantities (DQ).* These quantities denote the final number of units to be paid for under the terms of the contract. They are based upon the original design data available prior to advertising the project . . . .

The Schedule of Items in both Appellant's and the reprocurement contracts indicated that excavation would be measured and paid for by designed quantities. The Standard Specifications, at § 203.17—Method of Measurement, further stated:

> When designed quantities are DESIGNATED in the SCHEDULE OF ITEMS as the method of measurement, the original design data has been established on the basis of the undisturbed ground surface elevations . . . .
>
> When actual quantities are DESIGNATED in the SCHEDULE OF ITEMS as the method of measurement, preliminary cross sections or comparable measurements will be taken of the undisturbed ground surface and quantities

[4] The year or more delay was unacceptable to the Forest Service because pending timber sales depended upon completion of the roads (Tr. II 110).

©1994, Commerce Clearing House, Inc.

Digitized by Google

finally measured in accordance with the following:

(a) When excavation is DESIGNATED as a pay item in the SCHEDULE OF ITEMS, final cross sections or comparable measurements will be taken of completed and accepted work.

29. Contract drawings showed that 35,796 cubic yards of excavation would be required for Hay Park Road (Gov't Ex. 7, Sheet 2). An expert engaged by Appellant surveyed this road in July 1986, spending approximately 4 weeks in the field with a crew of three. Using existing Forest Service benchmarks and slope stakes to establish the centerline and elevations of the road, the expert determined that Appellant had completed 9,797 cubic yards, or approximately 27 percent, more excavation than Appellant had been paid for on Hay Park Road: (*Schmalz*, 91-3 BCA at 120,962.)

30. Forest Service witnesses consistently testified that Appellant had been paid only for excavation correctly placed (Tr. I Vol. 2 318-320, Vol. 3 1-6, Vol. 4 116-122; Tr. II 40-42). Appellant's expert acknowledged that he had not determined whether the roads were underbuilt or overbuilt. Rather, he calculated the square footage for each cross section and the cubic yards between sections in order to measure total volume of earth moved by Appellant. The expert was not aware of contract requirements for finished road width or ditch depth. (Tr. I, Vol. 2 at 165-168, 170-173.)

31. At the 1992 hearing, the Government introduced an exhibit showing the original ground line, the road template as required by the contract, and the road as constructed by Appellant (Gov't Ex. 4). Appellant's expert had plotted some 200 cross sections. The Forest Service, using the expert's survey notes, randomly plotted 30 points between Stations 123+36 and 167+62 on Hay Park Road. (Tr. II 138, 139.) The Government's exhibit covered nine of these cross sections where Appellant had begun cuts up to 10 feet further from the centerline than required; had undercut by 2 or 3 feet; and had placed fill as much as 7 feet wider than required. Appellant objected to the exhibit on grounds that it lacked vertical and horizontal controls and because, at the hearing, the Government did not introduce evidence establishing that the expert's notes had been correctly extrapolated.[5] (Tr. II 41-43, 46, 48-55.)

32. Following the hearing, the Government engaged an independent engineering firm which verified the exhibit and made some corrections to it. The firm added a scale to the exhibit and provided an explanation of numbers, letters, and lines thereon. It found a mathematical error in the field notes for Station 149+59 which it stated would have resulted in Appellant's expert's computing more excavation than actually moved. (Ex. A to Gov't Post-hearing Brief).

33. Appellant's expert responded, among other things, that the final elevations required by the contract typically would include 8 inches of surfacing which had not been placed at the time of the survey, so that it was not unusual that the "Constructed by Schmalz" lines on the exhibit would be below finished grade. After reviewing field notes and cross sections, the expert could find no mistake in his figures for Station 149+59, and concluded that there might be a Forest Service survey error at this station. (Appellant's Response to Gov't Ex. A.)

34. There is conflicting evidence as to the time required to complete excavation. Appellant had alleged that on Hay Park Road, earthwork was 96 percent complete. Gould worked 10-hour days for 6 days a week, yet required 6 more weeks to complete excavation on Hay Park Road and an additional 4 weeks on Old Grand Mesa Road. (Tr. II 173, 174.)

35. In its decision of July 17, 1991, the Board did not address alleged differences in the amount of excavation completed and paid for, since it had not been a factor in the CO's decision to terminate Appellant's contract for default and had not been the subject of a claim by Appellant. *Schmalz*, 91-3 BCA at 120,962.

Government-Furnished Materials

36. In the reprocurement contract, the Forest Service indicated by use of reduced quantities in the Schedule of Items that materials for items to be paid on an actual-quantity or lump-sum basis, including culverts, cattleguards, a retaining wall, guard rails, and the arch culvert, had been purchased by Appellant and left on site (Tr. II 64, 106, 209, 210). For example, Appellant's contract called for furnishing and installing

[5] With the agreement of the parties, the presiding judge ruled that the Government might attach additional evidence to its Post-hearing brief, and that Appellant would have an opportunity to rebut such evidence (Tr. II 294).

Digitized by Google

two cattleguards; the reprocurement quantity was .62. G.R. bid a unit price of $5,000 and a total of $3,100 for this item. Appellant's contract similarly called for furnishing and installing a retaining wall; the reprocurement contract quantity was .5. G.R. bid a unit price of $5,000 and a total of $2,500 for this item. (AF I, Tab 2 at 31; AF II 49.) The Schedule of Items in the reprocurement contract did not include the notation GFM (Government-furnished material); however, the COR advised prospective bidders at the pre-bid meeting and "show me" tour that the Government would furnish the items (Tr. II 64, 67-70). As indicated below, Modifications No. 2 and 3 also clarified requirements regarding GFM. *See* FF 54.

Gravel Crushing and Stockpiling; Designated Sources

37. The Schedule of Items in Appellant's contract included an estimated 37,849 cubic yards of crushed aggregate under items for base course and surfacing (AF I, Tab 2 at 31). Young's Creek Pit, located at approximately the mid-point of Hay Park Road, was shown on contract drawings as the designated source (Gov't Ex. 7, Sheet 9).

38. In July 1985, Appellant notified the Forest Service of moisture problems encountered by another contractor in Military Park Pit. Appellant had been unable to move its crusher into Young's Creek Pit because of wet spots on Hay Park Road and because it had not yet installed a retaining wall and guardrail across Young's Creek Reservoir. On August 6, 1985, the Forest Service denied Appellant's request to use an alternate source because Military Park Pit was being used by the other contractor and Surface Creek Pit, the only other possibility, was in an area of heavy recreational use, carrying up to 200 vehicles a day. *Schmalz*, 91-3 BCA at 120,953, 954.

39. In its decision of July 17, 1991, the Board denied Appellant's claim for a 30-day extension based on an alleged inadequate gravel source. Although Appellant had purchased approximately 4,000 cubic yards of gravel, Appellant itself had done no crushing before the termination for default. The Board found that Appellant's performance had not proceeded to the point where it had encountered excess moisture or run out of rock in Young's Creek Pit. *Id.* at 120,952.

40. The Schedule of Items in the reprocurement contract included an estimated 33,967 cubic yards of crushed aggregate under items for base course and surfacing. It also included an item for crushing and stockpiling an additional 13,129 cubic yards that had not been in Appellant's contract. G.R. bid $5.75 a cubic yard, or $75,491.75, for the additional item. (AF II 49.) It covered work in the same general area under another contract that also had been terminated for default. Adding the item to the reprocurement contract was intended to lower excess costs because of reduced mobilization costs and economies of scale. (Tr. II 24, 26.)

41. In 1986, G.R.'s subcontractor determined that Young's Creek Pit did not contain enough suitable gravel (AF II 165, 282). G.R. was allowed to use Surface Creek Pit between September and December, which the Forest Service regarded as after the recreation season (AF II 171, 175; Tr. II 87-90).

42. The Forest Service and the surety agreed that Military Park Pit would be the source of remaining gravel to be crushed by the takeover contractor (AF II 288). This pit was subsequently determined to be inadequate (Tr. II 85, 86) and, as indicated below (FF 55), Gould was allowed to purchase gravel from a commercial source, receiving an additional $10.45 a cubic yard for this purpose.

Road Closures

43. Forest Service Standard Specifications for Construction of Roads and Bridges, 1979 edition, at § 104—Maintenance for Traffic, required existing roads that were undergoing improvement to be kept open to all traffic. During suspensions all roads were to be left in condition suitable for traffic, with the Forest Service responsible for maintenance due to permitted (public) use.

44. Appellant did not install gates on Hay Park Road during winter shutdowns because construction had not progressed to the point where the public could drive on it, except possibly with four-wheel drive vehicles. During the winter shutdown of G.R.'s contract, vandals pulled out a gate that G.R. had installed, and the Forest Service reinstalled it to prevent damage to the road. In 1988, Hay Park Road was easily passable, and public traffic posed safety problems for Gould's gravel trucks; the Forest Service therefore issued a total road closure. (Tr. II 80-82.)

45. A Special Project Specification in both Appellant's and the reprocurement contract stated that Old Grand Mesa Road might be closed to public traffic during reconstruction; however, it was to be kept open on weekends and holidays if the contractor was not working (AF I, Tab 2 at 60; AF II 102).

©1994, Commerce Clearing House, Inc.

Digitized by Google

Appellant did not work on weekends, so was required to keep the road open at such times. In 1986, G.R. installed and locked a gate near the beginning of Old Grand Mesa Road, and also installed and locked a cable with barricade at its junction with Hay Park Road. The Forest Service advised G.R. that the road would have to be kept open except when actually being worked on. Gould worked on weekends and was then allowed to close Old Grand Mesa Road. (AF II 163; Tr. II 75-79.)

Contract Time

46. The 100 days originally allowed for performance of the reprocurement contract were based on the fact that Appellant had been paid approximately half the contract price, and the Forest Service estimated that half the original time would be needed to complete the project (Tr. II 104).

47. Section 30.1, Contract Time and Suspension of Work, in both contracts, stated that time was to be charged beginning on the calendar day established by the CO's written Notice to Proceed or Resume Work Order. During periods of total suspension, the section stated, the CO might permit emergency work or minor operations not affected by or connected with the cause of the suspension. (AF I, Tab 2 at 52; AF II 91.)

48. In 1983, 1986, and 1987, Notices to Proceed were issued on dates mutually agreed to by the COR and the contractor; the COR's practice was to allow extra time for gearing up and moving in equipment during a contractor's first year (Tr. II 83).

49. In the appeal of the default termination, Appellant alleged that in 1985, the Forest Service had unilaterally ordered it to resume work when ground conditions, particularly at higher elevations, were too wet. The Board found that Appellant could have begun work at lower elevations and that a financial dispute with its excavation subcontractor was also a factor in preventing Appellant from resuming work as ordered on July 1, 1985. *Schmalz*, 91-3 BCA at 120,958.

50. In 1986, the Forest Service partially suspended G.R.'s performance on September 22, but permitted G.R. to continue crushing and stockpiling gravel and removing right-of-way logs until total suspension on December 8, 1986 (AF II 126, 127). The COR based the time counted during the suspension on the dollar value of items being worked on as a percentage of contract price (Tr. II 72, 73).

51. In 1987, the Forest Service issued a Notice to Proceed to Gould on August 5 (AF II 128), and suspended all work except crushing as of October 13 (AF II 129). On November 17, the Forest Service issued a total suspension, effective retroactively to October 13, 1987, on grounds of inclement weather (AF II 130). Gould continued work in the interim: the Forest Service daily diary for October 21, 1987, showed 16 men and equipment including a water truck, roller, grader, backhoe, and loader, on the project (AF II 254.)

52. In 1988, Gould was permitted to work beginning July 14, blading roads in order to dry them out and moving several loads of gravel in order to determine whether conditions were suitable for use of heavy equipment. Gould attempted to start crushing, found Military Park Pit too wet, and took approximately a week to find another gravel source (*see* FF 55). Performance was not formally resumed until August 17, 1988, so that Gould worked 35 days without charge to contract time. (AF II 256-265; Tr. II 84, 85, 113-115, 183, 184.) The COR did not believe ground conditions permitted Gould to resume work earlier because placing gravel requires a drier subgrade than clearing and excavating (Tr. II 116).

53. Appellant was granted extensions totaling 34 days for unusually severe weather. Neither G.R. nor Gould was granted any weather days. (Tr. II 72.)

Reprocurement Contract Modifications

54. The Forest Service issued three modifications to G.R.'s contract, as follows:

Modification No. 1, effective September 24, 1986, increased the quantity of aggregate to be crushed and stockpiled under the bid item from the other defaulted contract. It increased the contract price by $24,299.50 and performance time by 5 days. (AF II 27.)

Modification No. 2, effective December 5, 1986, among other things clarified the item covering cattleguards by requiring the contractor to install a concrete foundation for two Government-furnished cattleguard grates. The price for this item was increased from $3,100 to $4,246. Due to deletion of the last 836 feet of Young's Creek Reservoir Road (no longer needed after Young's Creek Pit was found inadequate), the modification reduced items covering excavation, crushed aggregate base, and reconditioning of the roadbed. Overall, the modification increased the contract price by $18,558.25 and performance time by 10 days. (AF II 28-31.)

Digitized by Google

Modification No. 3, effective December 11, 1986, deleted the retaining wall on Young's Creek Reservoir Road, also due to the change in gravel source. The contractor was to be paid for removal of a section of the wall that had been installed and approved, as well as for reshaping the reservoir. The modification reduced the contract price by $1,850, but did not change performance time. (AF II 32-34.)

Overall, modifications increased G.R.'s contract price by $41,007.75, or to $594,160.55, and performance time to 115 days (AF II 33).

55. The Forest Service issued four additional modifications to the surety, to be performed by Gould, as follows:

Modification No. 4, effective September 9, 1987, added a parking area and boat ramp on Young's Creek Reservoir Road, removal of five slides on Old Grand Mesa Road, and installation of an underdrain on the same road. It increased the contract price by $23,311.54 and performance time by 10 days. (AF II 35, 36.)

Modification No. 5, effective September 17, 1987, covered installation of prefabricated drainage structures on Hay Park Road. It increased the contract price by $26,013 and performance time by 5 days. (AF II 37, 38.)

Modification No. 6, effective August 17, 1988, covered construction of a leadout ditch, removal of five slides, and placement of riprap on Old Grand Mesa Road. It stated that "high moisture content has made the gravel sources on the Grand Mesa inadequate to crush." The contractor had located a commercial source, and due to additional hauling and watering costs, its unit price was increased by $10.45 a cubic yard, to be paid by actual instead of designed quantities. The surety was to contribute $10,000 of the additional cost. Overall, the modification reduced the contract price by $32,950.25 and increased performance time by 5 days. (AF II 41-43.)

Modification No. 7, effective September 2, 1988, showed the final quantity of crushed aggregate surfacing as 3,241 cubic yards. It increased the contract price by $33,868.45. (AF II 44.)

Modifications covering work by Gould totaled $51,242.74. They resulted in a final contract price of $645,403.29 and performance time of 135 days. (AF II 43, 44.)

DISCUSSION

Excess costs of reprocurement constitute a Government claim, requiring the Government to prove the following:

1. The reprocured supplies or services, and the terms and conditions of the reprocurement contract, were substantially the same as those in the original contract.

2. The Government acted to minimize costs by reprocuring within a reasonable time, using the most efficient method, and obtained a reasonable price (frequently discussed in terms of the Government's duty to mitigate damages).

3. The Government actually incurred excess costs, and the defaulted contractor's liability is a sum certain (requiring proof that the reprocurement contract has been completed and final payment made).

B&M Constr., Inc., AGBCA No. 90-165-1, 93-1 BCA ¶ 25,431. In this case there is no dispute that the reprocurement contract has been fully performed and payment made (FF 14).

The Government goes to great lengths to establish that, as completed, the Grand Mesa Roads Project was substantially the same as would have been constructed had Appellant completed it to specifications. "An eagle, soaring overhead," allegedly would have seen no difference. Appellant does not really contest this, but rather looks to alleged differences in the terms and conditions of the reprocurement contract. The issue, in our opinion, is most accurately stated as whether the differences—in either the completed project or the terms and conditions of the two contracts—were material.

Drawings and Specifications

Certainly the use of identical drawings for both contracts could have been confusing if bidders for the reprocurement thought that all work shown on the drawings remained to be performed. The Schedule of Items, however, showed actual quantities of work required, and a representative of G.R., the reprocurement contractor, was at the prebid meeting and "show me" tour, where remaining work also was discussed (FF 8, 22). The Government argues that revision of the drawings would have taken up to a year, delayed pending timber sales, and been inconsistent with its duty to mitigate damages by reprocuring within a reasonable time. Appellant's argument that bidders were confused by inclusion of identical drawings for both contracts, and consequently may have increased their prices, is not supported by

©1994, Commerce Clearing House, Inc.

Digitized by Google

testimony as to the understanding of any competitor for the reprocurement contract.[6]

As for differences between the 1979 and 1985 editions of Forest Service Standard Specifications, the Government asserts that the 1979 edition, applicable to Appellant's contract, was also used in case of questions during performance of the reprocurement contract (FF 23). Appellant has provided no evidence to the contrary.

Clearing and Grubbing; Merchantable Timber

The parties also disagree as to whether bidders for the reprocurement contract were misled by the fact that 232 MBF of timber were designated for cutting (FF 25). Appellant contends that bidders also may have increased their prices to cover disposal of such timber. The Government responds that the reduction in acreage from 27.72 to 2.74 was sufficient to alert bidders to the fact that there was less merchantable timber than stated, and that bidders also would have observed this during the "show me" tour.

We find that G.R.'s bid of $2,740 for clearing and grubbing, compared with Appellant's bid of more than $18,000 for the same work (FF 24), confirms that G.R. did not expect to have to cut 232 MBF of merchantable timber.

The requirement that the road construction contractor purchase right-of-way timber for $1,392, however, appeared only in Appellant's contract. The reprocurement and takeover contractors were allowed to take or leave approximately 50 MBF of merchantable timber, plus an unspecified additional quantity of unmerchantable timber suitable for firewood. (FF 25.) While this difference is not material enough to relieve Appellant entirely of liability for excess costs, it warrants a reduction in such costs. Appellant was charged $6 per MBF ($1,392 divided by 232 MBF) for merchantable timber. Excess costs should therefore be reduced by $300 ($6 × 50 MBF).

Excavation

Appellant argues that the Forest Service's use of Pay Estimate No. 9, and its failure to survey excavation remaining to be completed, resulted in the reprocurement and takeover contractors being paid for excavation Appellant already had done.

The Government responds that use of pay estimates to determine the amount of work completed is an accepted Forest Service practice, and that on eight prior occasions, Appellant or its representative accepted such estimates for progress payments. The Government also contends, as it did in the appeal of the default termination, that Appellant over- and under-excavated and has been paid for all excavation correctly placed. In addition, the Government argues that survey and redesign would have delayed reprocurement and increased costs, pointing out that Appellant's expert, with a crew of three, took a month to survey Hay Park Road alone. A similar survey of the entire project, the Government concludes, would have placed an undue burden on the Forest Service and, again, would have constituted a failure to mitigate damages.

The Government cites *Mark Smith Constr. Co.*, ASBCA Nos. 25058 and 25328, 81-2 BCA ¶ 15,306, for the proposition that value of work in place at the time of a termination for default may be determined by Government estimates of the percentage of completion. The decision is not directly on point. It deals only with payments to the contractor, and does not stand for the proposition that estimates for progress or final payments are equally valid for determining the amount of work remaining for a reprocurement. Appellant's acceptance of eight prior estimates for purposes of progress payments is, in our opinion, irrelevant, since quantity estimates used for partial payments are necessarily inexact and subject to subsequent adjustment and correction. *Guy F. Atkinson, Co.*, ENG BCA No. 4891, 87-3 BCA ¶ 20,063.

The Government also cites *Max D. Schenk, Inc.*, AGBCA No. 84-246-3, 85-1 BCA ¶ 17,802, in which a contractor's rough survey of excavation quantities, based on an aerial topographic map with built-in errors, is compared with more accurate Government measurements of staked cross sections. The decision is distinguishable and in fact supports Appellant, whose expert plotted 200 cross sections using Forest Service stakes and benchmarks (FF 29, 31).

We are not particularly impressed with Government Exhibit 4, which shows over-

[6] Neither party produced G.R., a reprocurement of the reprocurement contractor, or any other bidder as witness at the hearing on excess costs. Norm Gould appeared for the Government and was qualified as an expert in construction. This witness, however, bid only for the takeover contract and had no personal knowledge of events leading up to award to G.R or during performance in 1986. (Tr. II 155, 158, 178, 279.)

Digitized by Google

building or underbuilding on only nine cross sections. We find an admission against Appellant's interest, however, in its expert's acknowledgment that he surveyed all earth moved, with no knowledge of specifications for Hay Park Road (FF 31). In addition, if Appellant in fact placed 27 percent more excavation than it was paid for on Hay Park Road alone, we question why Appellant did not assert a claim for this work in the first appeals, litigated after the survey had been completed (FF 35).

Appellant's argument that Forest Service Standard Specifications for Construction of Roads and Bridges, 1979 edition, required the Forest Service to take "final cross sections or comparable measurements ... of completed and accepted work" is inapposite. The quoted section applies only when a Schedule of Items indicates that the method of measurement will be actual quantities. In Appellant's contract, the Schedule of Items clearly indicated that excavation would be measured and paid for by designed quantities. (FF 28.)

Undoubtedly resurvey and recalculation would have been more precise than use of the final pay estimate to determine reprocurement quantities. In *J.F. Whalen & Co.*, AGBCA Nos. 83-160-1 and 83-281-1, 88-3 BCA ¶ 21,066, this Board upheld a Government claim for the cost of such a resurvey, deemed "reasonably and necessarily undertaken" not only to determine payments due a defaulted contractor, but also to provide information to a surety and the reprocurement contractor. The instant case, where Appellant was given credit for most, if not all, completed work, is also distinguishable from *William A. Hulett*, AGBCA Nos. 91-230-3 *et al.*, 93-1 BCA ¶ 25,389, *reconsideration denied*, AGBCA Nos. 92-237-R *et al.*, 93-2 BCA ¶ 25,888, in which the Board recomputed a Government claim for excess costs because the Forest Service attributed no value whatsoever to partially completed work that was of benefit to the reprocurement contractor, and therefore refused to resurvey.

Nevertheless, we find that in the absence of a specific, contractually mandated method of calculating work remaining in the event of a default, the Forest Service was entitled to use any reasonable method. The method chosen by the Forest Service in this case was reasonable, particularly in view of the Government's countervailing duty to mitigate damages.

Government-Furnished Materials

Appellant asserts that bidders for the reprocurement contract also were misled by the Schedule of Items, which used percentages for cattleguards, a retaining wall, and the like, without specifically stating that materials for these items had been purchased by Appellant and were available on site. The Government responds that during the pre-bid meeting and "show me" tour, bidders were advised that these items would be Government-furnished.

As with clearing and grubbing, we find that G.R.'s bid prices indicate that G.R. understood it would not be required to furnish and install two cattleguards and a retaining wall (FF 36). As discussed below, subsequent changes in the contract price for Government-furnished materials, accomplished by modification, were not a factor in calculation of excess costs.

Gravel Crushing and Stockpiling; Designated Sources

Appellant to some extent attempts to relitigate its claim that Young's Creek Pit, the designated gravel source, was inadequate and constituted a differing site condition. The Forest Service denied Appellant's request to use alternate sources because in August 1985, recreational traffic was heavy in the area of Surface Creek Pit and another contractor was operating in Military Park Pit.

The Board initially found that Appellant had not attempted to crush gravel from the designated source, and therefore had not progressed to the point where it encountered a differing site condition. We stated, however, that different treatment of the reprocurement contractor might provide a defense to Appellant's liability for excess costs. *Schmalz*, 91-3 BCA at 120,954.

Now that the issue has been presented, we find the defense unavailing. G.R.'s subcontractor actually opened up Young's Creek Pit and established that it was inadequate. The Forest Service allowed G.R. to use Surface Creek Pit only between September and December, after the recreation season. (FF 41.) Gould subsequently determined that neither Surface Creek nor Military Park Pits were adequate (Military Park had become available because of the termination for default of the contractor operating there), and was allowed to purchase gravel from a commercial source (FF 50, 55). Different treatment was, therefore, due to different circumstances when the reprocurement and takeover contractors

©1994, Commerce Clearing House, Inc.

Digitized by Google

were permitted to use alternate sources for gravel.

Despite the fact that the Government deleted the cost of the additional crushing and stockpiling of gravel from the other defaulted contract from its claim (FF 17), Appellant continues to argue that it should not be charged for this item. Clearly Appellant is *not* being charged for this item, and its argument that the addition of this item to the reprocurement contract it may have impacted prices for other items is speculative at best. *See* footnote 6, *supra*.

Finally, the modification allowing Gould an increase in price for purchase of gravel from a commercial source also was not a factor in calculation of the Government's claim, and the increase in price was in any event absorbed at least in part by the surety (FF 15, 55).

Road Closures

Appellant alleges that the reprocurement and takeover contractors were treated more favorably with regard to road closures. In Appellant's case, however, construction on Hay Park Road had not progressed sufficiently to allow public traffic to pass; installation of gates during the winter shutdown was therefore unnecessary. By contrast, G.R. and Gould had progressed to a point where potential damage to the road and safety considerations made closures necessary. Appellant did not work weekends and was therefore required to keep Old Grand Mesa Road open. The Forest Service also required G.R. to keep this road open, despite two attempts to close it during 1986. Gould did work weekends, and therefore was allowed to close Old Grand Mesa Road at such times. (FF 44, 45.)

There is no evidence that if Appellant's construction had been further along, or if Appellant had worked weekends, it would not have been allowed to close the same roads. Road closures, therefore, were also the result of different circumstances and not due to material differences in contract terms and conditions.

Contract Time

Appellant to some extent also attempts to relitigate its claims regarding unusually severe weather and an alleged premature Resume Work Order for 1985. We will not reconsider these claims, which were asserted and decided against Appellant in our initial decision (FF 49). *See Dan F. Harrison Constr., Inc.*, ASBCA No. 42546, 93-2 BCA ¶ 25,914. We will, however, look at alleged disparate treatment of the reprocurement and takeover contractors with regard to contract time.

With regard to starting dates, G.R.'s Notice to Proceed was not effective until September 8, 1986, an ostensibly overlong delay from termination of Appellant's contract the previous January. The Government, however, explains the delay as due to the need to wait until late June to conduct a tour for prospective bidders, then allow sufficient time for preparation and evaluation of bids prior to award of the reprocurement contract on August 6, 1986. (FF 4, 9.) As for the takeover contractor, Gould's contract with the surety is dated August 4, 1987, and its Notice to Proceed was effective the following day (FF 13, 51). In 1988, however, from July 14 to August 17, a period of 35 days, Gould was permitted to blade roads, move gravel, and locate an alternate source before work was formally resumed. In addition, there is evidence that during suspensions, both G.R. and Gould were allowed to perform other than minor work without charge to contract time. (FF 50-52.)

If Appellant had similarly been allowed to resume work in mid-August 1985, instead of being ordered to resume work on July 1, or to work during suspensions without charge to contract time, Appellant would have had additional time remaining when its contract was terminated for default. We therefore find that liquidated damages should be reduced. Using the most objective figure available on the present record, we reduce liquidated damages by $10,500 ($300 × 35) to account for the 35 days Gould was allowed to work in 1988 before formal resumption of performance.

Reprocurement Contract Modifications

In calculating excess costs, the Government did not consider modifications issued to either the reprocurement contractor or the surety. Rather, it compared Appellant's contract price and performance time, as modified, with the original reprocurement price and time. (FF 15.) Because in this case the project as completed was substantially the same as that required by Appellant's contract, we assume that changes to the reprocurement contract were within the scope of Appellant's contract and, but for the termination for default, would also have been made to it. *Compare* the instant case with *B&M Constr., Inc., supra*, wherein modifications to the reprocurement contract, frequently made in the field and reduced to writing only after contract (cont'd)

Digitized by Google

completion, resulted in a substantially different project.

The deletion of the last 836 feet of Young's Creek Reservoir Road, for example, was not a material change in a project involving more than 9 miles of road construction. The retaining wall, required for access to Young's Creek Pit, presumably would also have been deleted from Appellant's contract had Appellant demonstrated that this gravel source was inadequate. When the Forest Service subsequently decided it wanted a parking area and boat ramp on Young's Creek Reservoir, these could have been added to Appellant's contract by modification.

Other modifications, covering removal of slides, correction of drainage problems, and Gould's purchase of gravel from a commercial source, were in response to differing site conditions encountered by Gould and confirmed by the Forest Service. (FF 54, 55.) In the previous appeals Appellant alleged that it had encountered differing site conditions, for example, wet spots on Hay Park Road; however, the Board found that surface water and Appellant's own construction methods, not subsurface water that constituted a differing site condition, had caused the problems. *Schmalz*, 91-3 BCA at 120,956.

The net result of modifications to the reprocurement contract was to increase the price by $92,250.49 (FF 54, 55). Appellant argues that excess costs should be decreased to reflect reductions in price accomplished by modification, but not increased to reflect corresponding increases. This argument is unreasonable and illogical.

Post-Hearing Motions

The Government's post-hearing Motion to increase its claim by $92,250.49 appears to be in response to Appellant's argument regarding reductions due to modifications. Since neither increases nor decreases in the contract price were considered, however, the Government's Motion fails.

Appellant's Motion for reconsideration of the Board's decision on the termination for default also fails. Some new evidence has been presented: as Appellant points out, we now know that a project originally planned for completion in three seasons in fact required six; that the reprocurement contractor also was terminated for default; and that there were some differences in terms and conditions of the reprocurement. Except as previously indicated, however, we do not find these differences material. We affirm our decision that the termination for default was proper.

Both Motions are denied.

Summary

We conclude that the Government has met its burden of proof that the terms and conditions of the reprocurement contract were substantially the same as those in Appellant's contract, and that the Government has adequately mitigated damages.

DECISION

Excess costs are reduced by $300 because the reprocurement and takeover contractors were not required to purchase right-of-way timber. Liquidated damages are reduced by $10,500 because Gould was allowed to work 35 days at the beginning of the 1988 season without charge to contract time. Appellant's total liability is therefore reduced to $107,933.53 ($118,733.53 – [$300 + $10,500]). The appeal is otherwise denied.

[¶ 26,424] Prairie Wood Products, Inc.

AGBCA No. 91-197-1, October 25, 1993. Contract No. 070185.

Procedure Boards—Parties—Merger.—A board of contract appeals had jurisdiction to hear a road construction contractor's claim, despite the fact that the contractor who brought the appeal had a different name than the contractor who signed the contract, because the two companies were functionally the same. The president of the company that signed the contract owned both companies, which were merged.

Subcontracting—Prime Contractor on Behalf of Subcontractor—Severin Doctrine.—The *Severin* doctrine did not bar a prime construction contractor's recovery on behalf of its road construction subcontractor, despite the government's contention that the government was not liable for any costs incurred by the subcontractor for which the prime contractor was not liable, because the government did not show that the subcontract contained a clause that specifically relieved the prime contractor of liability. Moreover, the

©1994, Commerce Clearing House, Inc.

Digitized by Google

evidence showed that the prime contractor was going to pay the subcontractor if it recovered under the appeal.

Sales of Government Property—Timber Sales—Road Construction and Purchaser Credit.—Under a timber sale contract that provided a contractor with purchaser credit for road construction to pay for the harvested timber, the contractor was not entitled to an adjustment in purchaser credit for changes in the road work in connection with inadequate designated aggregate sources, because the increased delay costs resulting from government action were outside the scope of the contract. Moreover, the parties stipulated that the contractor's delay claim was outside the scope of the clauses providing for adjustments to purchaser credits. The Designated Source clause provided for an adjustment in the contract price, rather than in purchaser credit, for an inadequate designated source.

Sales of Government Property—Timber Sales—Road Construction Specifications.—Under the Designated Source clause of a timber sale contract that included road construction for purchaser credit toward the harvested timber, a contractor was entitled to recover for delay caused by inadequate designated sources of aggregate, despite the drill hole log indications that much of the source material was not usable as road aggregate, because the government included a specification that guaranteed that the source would produce satisfactory material without requiring the removal of more than 10 percent of objectionable material. The road construction subcontractor could not meet the specified gradation and the required minimum sand equivalent without removing 30 to 50 percent of the objectionable material. The government failed to show that the specifications could be met by simply scalping away the objectionable material.

Sales of Government Property—Timber Sales—Damages.—Under a timber sale contract that included road construction for purchaser credit toward the harvested timber, a contractor was entitled to a portion of its claimed damages, including administrative costs, the costs of the subcontractor's consultants, and the subcontractor's downtime, plus profit, because the contractor showed that these damages were incurred in connection with delay caused by the contractor's inability to meet specifications using aggregate from a government-designated source. The portion of the appeal relating to the cost of the laydown crew that placed the crushed aggregate on the road was denied. The contractor did not show that the laydown crew was delayed by any government actions.

For the appellant: Cegavske, Johnston & Associates, P.C., Roseburg, Oregon, by Ronald S. Yockim. For the government: Owen L. Schmidt, Office of the General Counsel, U.S. Department of Agriculture, Portland, Oregon.

Before HOURY, EATON, and GISH, Administrative Judges.

HOURY, Administrative Judge: This appeal arises from contract No. 070185 between the Forest Service, U.S. Department of Agriculture and Prairie Wood Products, Inc.[1] (Appellant). The contract was for the sale of timber known as the Steamboat Sale from the Malheur National Forest in Oregon.

The contract contemplated that Appellant would construct and reconstruct specified roads and receive purchaser credit therefor. The purchaser credit could then be used in lieu of cash to pay for harvested timber.

The Forest Service designated a rock source for the road aggregate. Appellant subcontracted for the rock crushing and aggregate application on the roads. The subcontractor was unable to obtain aggregate meeting the specifications from the designated source.

After the subcontractor gave the Forest Service notice of its problems with the designated source, Appellant certified and filed a $173,914.83 claim for delay on behalf of its subcontractor. After the Contracting Officer (CO) denied the claim, Appellant filed a timely appeal.

A 2-day hearing was conducted October 27-28, 1992. The Board has jurisdiction under the Contract Disputes Act (CDA), 41 U.S.C. §§ 601-613.

[1] The contract was signed by Don R. Johnson as president of D. R. Johnson Lumber Company. Prairie Wood Products is a wholly-owned subsidiary of D. R. Johnson Lumber Company. *See* Finding of Fact (FF) 1, *infra*.

Digitized by Google

FINDINGS OF FACT

1. Contract No. 070185, the Steamboat Timber Sale, was awarded to the D. R. Johnson Lumber Company (Appeal File (AF) 110). Prairie Wood Products is a wholly-owned subsidiary of D. R. Johnson Lumber Company. Don R. Johnson was the owner of both companies and merged them. Prairie Wood Products, Inc., was an assumed business name. The Forest Service stipulated that Johnson Lumber Company and Prairie Wood Products, Inc., were functionally the same company. (Transcript (Tr.) 329-331.) Payments to the Forest Service were made by Prairie Wood Products, Inc. (Tr. 334).

2. The contract was awarded December 19, 1989, and has an expiration date of March 31, 1995 (AF 110).

3. The contract was for the sale of 8,600 MBF (thousand board feet) of timber from the Malheur National Forest in Oregon. To remove the timber, the contract required construction or reconstruction of 24 specified roads or road segments (AF 115; Contract clause B5.2 *Specified Roads*). When the roads were constructed or reconstructed, Appellant would earn purchaser credit that could be used in lieu of cash to pay for timber harvested from the sale (Contract clause B4.21 *Purchaser Credit*).

4. For road 2640, contract pay item 304(10) specified crushed aggregate, Grading D,[2] with a designed quantity of 16,620 cubic yards. The maximum purchaser credit for constructing this road, including the crushed aggregate, was $239,340.92. (AF 195-197.)

For road 2600877, contract pay item 304(10) specified crushed aggregate, Grading T, with a designed quantity of 175 cubic yards. The maximum purchaser credit for constructing this road, including the crushed aggregate, was $11,250.31. (AF 192-193.)

The contract specified the rock source for the aggregate as the Dry Fork Material Site. This source was designated on the project Vicinity Map—Steamboat Timber Sale (AF 116, 286, 290) and on the project drawings (AF 185, 342-343).

5. Forest Service Specifications for Construction of Roads and Bridges, as amended by special project specification 105.062, provide in pertinent part:

> *Designated Sources.* Sources of local materials SHOWN ON THE DRAWINGS are guaranteed to contain adequate materials meeting quality requirements. The Contractor shall determine the equipment, selection of material and processes required to produce the specified product. Unless otherwise SHOWN ON THE DRAWINGS, sources will not require removal of more than ten percent by volume of objectionable material [*see* FF 8] to meet contract requirements. When the quantity of material requiring removal exceeds the stated amounts, the Contractor shall immediately notify the Contracting Officer before proceeding further.
>
> * * * * *
>
> Should the designated source, due to causes beyond the control of the Contractor, contain insufficient suitable material, the Government will provide another source with an adjustment in contract price.

(AF 266.)

6. The Dry Fork Material Site is located in a geological area known as the Strawberry Mountain Volcanic. The materials were deposited by volcanic action beginning 15 million years ago. There were numerous eruptions and deposits over a 10-million-year period. The thickness of the deposited material ranged from 5 to 3,000 feet. (Tr. 285-286.) The Dry Fork Material Site had been used as a material source 20 to 25 years before the present contract, and a part of the site was exposed (Tr. 287, Appellant's Exhibit (App. Ex.) 93). There were $2\frac{1}{2}$ acres where the overburden had been removed and the rock was visible. Road 2640 was within 200 to 300 feet of the site. Another rock pit was 400 to 500 feet downslope where the rock was also visible (Tr. 476).

7. Prior to the contract, the Forest Service conducted an investigation of the Dry Fork Material Site. Five test holes were drilled 150 to 180 feet apart. A log of the borings was available to bidders. Photographs of the recovered material also were available (AF 342-343; Tr. 299; Government (Gov't) Ex.).

8. "Objectionable Material" was Variable Volcanic Interflow Material (VVIM). VVIM is the volcanic breccia—a mixture of volcanic ash, some hard and soft rock, and a lot of fines. This material is typical between lava flows, which are much harder, darker in color and more consistent in texture. The VVIM would not be suitable for crushing. The VVIM was generally at deeper levels

[2] The Grading specification should have been "T" instead of "D." Appellant voluntarily agreed to the correction at the outset of the contract, and none of the present claim pertains to the error (AF 171; Tr. 38-39). *See* FF 13.

©1994, Commerce Clearing House, Inc.

Digitized by Google

and the Forest Service plan was to use the material above the VVIM. (Tr. 477-478.)

9. The drill hole #1 log showed 53 percent recovery down to a depth of 18 feet 6 inches and VVIM below that depth. The drill hole #2 log showed 100 percent recovery to a depth of 18 feet and VVIM below that depth. The drill hole #3 log showed 100 percent recovery down to a depth of 9 feet 6 inches and VVIM below that depth. The drill hole #4 and #5 logs showed VVIM with no recovery. (AF 343.)

10. Appellant's expert witness conceded that the drill hole logs were representative of actual conditions because the logs showed a lot of variability (Tr. 311). It was, therefore, difficult to tell if the pit were useable, and a contractor would have to be very cautious (Tr. 299-300).

11. As stated in FF 2, Appellant was awarded the contract on December 19, 1989. Appellant visited the site, saw the pit, but did not look at or evaluate the core samples prior to bidding. The pit appeared to be what was represented. (App. Ex. 10-P-1 through 10-P-18 (minus 10-P-9); Tr. 366-368.) Appellant was familiar with road building only to a limited degree (Tr. 368).

12. On January 12, 1990, Appellant subcontracted the road work for roads 2640 and 2600877 to Judy M. Hilts for $211,024.69, "plus or minus add ons or deletions." Judy M. Hilts signed the contract. (App. Ex. 1-A.) Judy M. Hilts was the owner of H & L Construction and was authorized to sign contracts (Tr. 182-183, 201-202). H & L Construction was an assumed business name (Tr. 15-16, 202). Appellant assumed the subcontract was with H & L Construction (Tr. 358-359).

There were many other roads and road segments that were required to be constructed or reconstructed. These were not included in the subcontract and are not at issue in the appeal (AF 116).

13. The Grading T specification was a measure of the percentage of material passing through a series of different-size screens, as set forth below:

Screen Size	Road 2640 Percentage Passing	Road 2600877 Percentage Passing
1½		
1	100	100
¾		
½	64–86	71–91
⅜		
No. 4	40–60	43–60
No. 8	28–46	30–46
No. 30	16–28	16–28
No. 200	10–15	8–15

(AF 173-174, 283; Tr. 191.)

14. In addition to gradation requirements, the aggregate was required to meet a Sand Equivalent (SE) value of at least 35 (App. Ex. 5A Table 703-3). The SE is a test on that portion of the aggregate passing the No. 4 screen for materials 3/16 inch or less. A measured quantity of this material is placed in a plastic tube 15 inches long. An SE solution consisting of calcium chloride, formaldehyde and glycerin is added to the test material and the solution and material are agitated and then allowed to settle. Generally, the coarse material settles at the bottom of the tube with the finer gradations and fines remaining near the top. A weighted foot, consisting of a dish connected to a rod with a weight on top, is then placed in the tube. The weighted foot settles in the tube remaining a certain number of inches from the bottom of the tube. The distance from the bottom is converted to the SE number by empirical data. Generally, the lower in the tube the weighted foot settles, the lower the SE number. A road material with too low an SE would tend to become muddy quickly. (Tr. 227-232.)

Digitized by Google

15. Appellant's subcontractor had been in the rock crushing business for 24 years and had crushed rock for at least 70 to 80 jobs. Many of the jobs were in Baker, Willowa, John Day, and Grant counties in Oregon. The Dry Fork Material Site was in Grant County. (Tr. 17-19.) On March 15, 1990, Appellant's subcontractor began clearing operations to prepare the pit for the crusher plant (AF 366). On March 21, 1990, the crusher had been set up and the crushing operation was in progress. The subcontractor immediately began having problems meeting the SE requirement while at the same time meeting the gradation requirement for material passing the No. 200 screen. The Forest Service inspector told the subcontractor that the Forest Service engineering representative and "geo-tech" persons would be advised about these problems (AF 368).

16. On March 23, 1990, Appellant was authorized by the Forest Service engineering representatives to haul material from the Squaw Pit for purposes of blending with the material being produced from the Dry Fork Pit (AF 369). Appellant's subcontractor continued to have problems meeting the SE and gradation even with the blended material.

17. Pockets of material coating the rocks and embedded into the rock fractures and seams were causing the problem. When the impact crusher pulverized the rock, the objectionable material was incorporated in the end product. The objectionable material could not be scalped off. (Tr. 250-251, 571-572; App. Exs. 10-P-1, 10-P-2, 10-P-7, 97, 101-103.)

18. In attempts to solve the problem, the subcontractor made screen changes, scalped, excavated more selectively, and mixed material from another source.[3] Out of 20 samples, only one met both gradation and SE requirements (AF 420-437; Tr. 540-549).

19. The subcontractor concluded that if a satisfactory gradation were achieved, the SE would be unsatisfactory, and that if a satisfactory SE were achieved, the gradation would be unsatisfactory (Tr. 549-550). The subcontractor advised the Forest Service almost daily of the problems (Tr. 115).

20. On March 27, 1990, the Forest Service prepared a contract modification formalizing the agreement authorizing Appellant to utilize approximately 2,000 cubic yards of material in the Squaw Pit to blend with the material being produced at the Dry Fork Material Site. The contract modification increased the unit cost of the crushed aggregate from $11.63 per cubic yard to $11.92, an increase of $4,819.80 for the estimated quantity of 16,620 cubic yards. The modification was delivered to Appellant March 28, 1990, and signed by Appellant (not Appellant's subcontractor) April 3, 1990. The $4,819.80 increase was not paid in cash, but was an adjustment to purchaser credit as provided by clause C5.254 *Design Change* (AF 173). It is not apparent what if any payment adjustments were made between Appellant and the subcontractor.

21. On April 3, 1990, the Forest Service notified the subcontractor the specifications required daily SE test results to be delivered to the Forest Service, that the Forest Service had not been receiving these tests, and SE tests run by the Forest Service indicated that Appellant was not meeting the SE requirement (AF 353). The subcontractor considered the notice by the Forest Service as a shutdown of the crushing operations because of its inability to meet gradation and SE at the same time. The crusher and loader were down for repairs on April 3, 1990. (App. Ex. 6.)

22. It was possible to process the material from the Dry Fork Pit to meet the gradation and SE specifications if 50 percent of the excavated material were wasted (Tr. 262-269). The Government's expert did not know how "reasonable" it would have been to do so (Tr. 492-493).

23. On Wednesday, April 4, 1990, the crusher and loader remained out of service (AF 378-379). Inspection of the material stockpiles by Forest Service geotechnical personnel indicated that there were inconsistent sizes in the piles, but that the stockpiles could be used with proper rescreening. It was also noted that VVIM had been mixed with the rock to be processed. (AF 378.) On at least three occasions, the subcontractor's dozer was observed removing VVIM for blending purposes. One area was outside the designated development. (Tr. 479-481.)

24. On Monday, April 9, 1990, the loader remained broken down and out of operation. Although the crusher had been reassembled, the generator had broken down and the subcontractor was waiting for an electrician to arrive. The parties met at the site and continued to disagree about whether the pit material could be processed to meet the specifications. (AF 379-380.)

[3] The other source was apparently the Squaw Pit. *See* FF 16, *supra*.

Digitized by Google

25. As of Thursday, April 12, 1990, neither the loader nor the generator had been repaired but the loader was almost ready (AF 382). In an attempt to determine if the specifications could be met, the subcontractor hired outside consultants. They concluded that it was possible to meet the specifications if 30 to 50 percent of the material were wasted. The wasted material would not be acceptable as aggregate under the specifications. (Tr. 238-239, 308.) The subcontractor had attempted to process material from all areas of the pit but could not meet the SE and gradation specification. It considered further attempts as futile. (AF 383; Tr. 562-563.)

26. As of April 18, 1990, the subcontractor's generator had not been repaired. A generator had been rented and the subcontractor was in the process of hooking it up. (AF 384.)

27. Appellant's subcontractor could have corrected the equipment problems in a more timely manner, and could have immediately leased a generator and a loader if the equipment breakdowns had been the only cause of the delay. The subcontractor did not expedite correction of the equipment problems because crushing would have been futile until an agreement was reached with the Forest Service to reduce the specification requirements. (Tr. 167-171, 352-354.)

28. On April 19, 1990, a limited crushing operation was commenced. Test samples met the SE specification but the gradation failed. (AF 387-388.) Operational adjustments resulted in a lower, but satisfactory, SE and a higher, but failing, gradation (AF 388).

29. On April 23, 1990, the parties reached an oral agreement to reduce the SE requirement from a minimum of 35 to a minimum of 25. The subcontractor began crushing at full production on April 24, 1990 (AF 389). A contract modification was prepared the same date and signed by Appellant and the CO. In addition to reducing the SE, the Forest Service agreed to accept 7,850 cubic yards of material already crushed at $.27 per cubic yard. The Forest Service authorized use of this material for the roads. Purchaser credit was increased by $2,119.50. (AF 178; Tr. 355-358.) The parties discussed including the subcontractor's other costs and the consultants' expense but there was no agreement on these items (Tr. 355-358).

30. The Government cites testimony that while the subcontractor used a scalping screen, the scalped material was not removed and went into the end product (Tr. 56-57); however, this was only a selective portion of the testimony. The subcontractor did not remove the scalped material because the subcontractor could not meet the gradation requirements unless the fine material was used (Tr. 57-58). When Appellant did remove the scalped material, the SE requirement was met but gradation failed because there were too few fines (Tr. 544-545).

31. The Government cites testimony that Appellant did not waste *more than 10 percent* of what was crushed (Tr. 373-374). Again, this is very selective on the part of the Government. Only 10 percent was placed in the waste site because the Government accepted 7,850 cubic yards of unacceptable material for use on the roads (Tr. 374-376). Moreover, 2,000 yards were hauled in from another pit for purposes of blending because of the problems with the material at the Dry Fork Site.

32. The Government notes that the subcontractor testified that it did not take samples and make tests daily as required by the contract. The testimony referred to indicates the subcontractor took daily samples but did not run SE tests every day because gradation was not being met and, therefore, there was no need to run the SE test (Tr. 188-189).

33. As of April 24, 1990, the subcontractor was constructing road turnouts and blading the new road (AF 389). On April 25, 1990, the subgrade was approved for the placement of gravel from stations 492+00 to 532+90, a distance of 4,090 feet on road 2640 which was 10.07 miles long (AF 115, 390). This was the first indication that any of the subgrade had been approved for the placement of gravel. The contract required approval of the subgrade prior to the placement of gravel (Tr. 410-411). The subcontractor testified that although it had a laydown crew on site by April 4, 1990, it had to check its records as to whether any roadbeds had been approved for the placement of gravel (Tr. 198-199). Before April 9, 1990, ground conditions were too wet to even begin roadbed preparation. Preparation of the road for aggregate began April 12, 1990. (Tr. 408-409.)

34. By letter dated July 19, 1990, Appellant filed a certified claim in the amount of $108,618.83, comprised of the following elements:

Digitized by Google

Materials testing services	$ 4,150.83
Delay from April 4, 1990 to April 30, 1990	
14 days at 1,100 cubic yards per day for crushing at $6.76 per yard	104,104.00
The subcontractor asserted that:	
This matter has also lost us 14 days' time in laying and processing the rock on the road, in which we are not claiming	
	$108,254.83
Prime Contractor's Costs	364.00
	$108,618.83

(AF 517-525.)

The 1,100 average yards per day were derived from an analysis of the production under the present contract, other recent jobs, and what the subcontractor used in preparing its bid for Appellant's contract (Tr. 153-155). The production on the present contract was between 185 and 981 yards per day (Tr. 88-89). The $364 in prime contract costs are for 14 hours of administrative expenses (AF 535; Tr. 335, 339).

35. The $6.76 per cubic yard is derived as set forth below:

Crusher & Test Lab:	$300 per hour @ 10 hours=	$3,000.00
CAT D-8 W/Rippers:	$130 per hour @ 10 hours=	1,300.00
Loader 988-B 8 Yard Loader:	$130 per hour @ 10 hours=	1,300.00
Excavator 4300 Linkbelt:	$110 per hour @ 10 hours=	1,100.00
Total		6,700.00
11% profit		737.00
		7,437.00
$7,437 ÷ 1,100 yards per day		$ 6.76

(AF 534.)

36. By letter dated October 12, 1990, Appellant transmitted an increase in the subcontractor's claim for the laydown crew intentionally omitted by the subcontractor from the original claim. The laydown crew was charged at $4.24 per cubic yard for a total claim of $11 per cubic yard. The revised claim amount, including Appellant's add-on of $364, was $173,914.83. The payroll component of the subcontractor's claim was $15,827.16. (AF 533-542.) It is Appellant's intention to pay the subcontractor any amounts recovered in excess of the $364, but Appellant has no liability to pay the subcontractor if there is no recovery (Tr. 334-335).

37. The $6.76 per cubic yard rate claimed by the subcontractor for the crushing operation was the same cost used to arrive at the bid price for securing the subcontract. The equipment rates were Associated General Contractor (AGC) rates. (Tr. 153-155.) The $4.24 per cubic yard rate for the laydown crew was based upon the haul distance, the number of trucks, and the haul per load. The subcontractor did not charge for fire trucks, pickup trucks and lowboys, even though these were also in use. (Tr. 155-163.)

38. The subcontractor claims to have been effectively shut down by the Forest Service's April 3, 1990 Notice of Noncompliance (see FF 21) until April 24, 1990, the day after the parties agreed that subcontractor could place aggregate with a minimum SE of 25 instead of 35 (see FF 29). This is a period of 21 calendar days. The subcontractor claimed only 14 days because of weekends (Tr. 164-167).

39. Ground conditions were snowy and wet during the time of the asserted shutdown (Tr. 144-145). The subcontractor could not have moved its equipment to another job because it was too early in the year (Tr. 144).

40. The CO's position was that objectionable material could simply have been scalped away (AF 568). In denying the claim, the CO concluded:

> The pit cannot fail to meet gradation specifications for a crushed aggregate product unless it had no materials coarse enough to provide for the coarser screen sizes.
>
> * * * * *
>
> The Forest Service was not slow in its rendering a decision ... The Contractor never remedied noncompliance ... did not test samples as required ... was broken

©1994, Commerce Clearing House, Inc.

Digitized by Google

down for most of the 14 days being claimed as lost time....

(AF 560-570.)

41. Contract clauses C5.21 *Material Sources,* C5.251 *Variation in Quantities,* C5.253 *Physical Change,* and C5.254 *Design Changes* provide for increases or decreases in purchaser credit for events within the scope of these clauses.

The *Material Sources* clause provides for adjustments in purchaser credit when the weight/volume relationship between the designated source material and purchaser furnished material is prejudicial to the Forest Service. The *Variation in Quantities* clause provides for adjustments to purchaser credit based upon quantities furnished outside a 15 percent tolerance from the estimated quantities. The *Physical Change* clause provides for adjustments to purchaser credit based upon the cost of repairing such physical changes as landslides, washouts, fire damage, etc. The *Design Changes* clause provides for adjustments in purchaser credit when changes in design are necessary due to unexpected field conditions or revisions to the design are otherwise necessary to meet design standards or road stability requirements. (AF 131-133.)

The parties stipulate that the Appellant's claim is outside the scope of these clauses and that if the Board holds that Appellant is entitled to recover, the Forest Service must pay the Board's judgment, rather than adjusting purchaser credit. (Stipulation finalized Aug. 23, 1993.)

DISCUSSION

Jurisdiction

Although neither party has raised a question regarding jurisdiction, the Board must assure itself that jurisdiction does in fact exist. Section 7 of the Contract Disputes Act, 41 U.S.C. § 606, provides that "the contractor" may appeal the CO's decision to an agency board of contract appeals. The Act defines the "contractor" as "a party to a Government contract other than the Government." 41 U.S.C. § 601(4).

The present contract was signed by Don R. Johnson as president of D. R. Johnson Lumber Company. The contract set forth D. R. Johnson Lumber Company as the name of the purchaser. The appeal was brought by Prairie Wood Products, Inc. Consequently, there is a question as to whether Prairie Wood is "the contractor" within the meaning of 41 U.S.C. § 606. The presiding judge raised this issue prior to the hearing and requested the parties to stipulate to the matter or treat it in their briefs (Tr. 8).

It has been held that "the contractor" may not be a subcontractor with whom there is no privity of contract. *Erikson Air Crane Co v. United States* [32 CCF ¶ 72,392], 731 F.2d 810 (Fed. Cir. 1984); *United States v. Johnson Controls, Inc.* [31 CCF ¶ 71,374], 713 F.2d 1541 (Fed. Cir. 1983). Nor may "the contractor" be an assignee. *Produce Factors Corp. v. United States* [18 CCF ¶ 81,750], 199 Ct. Cl. 572 (1972); *United California Discount Corp. v. United States* [36 CCF ¶ 75,804], 19 Cl. Ct. 504 (1990); *Twin City Shipyard and Packer River Corp. v. United States* [36 CCF ¶ 75,952], 21 Cl. Ct. 582 (1990). However, "the contractor" may be a Miller Act surety to the extent the Government improperly disbursed funds to the prime contractor. *Balboa Ins. Co. v. United States* [33 CCF ¶ 74,051], 775 F.2d 1158 (Fed. Cir. 1985). In *Swan Wooster Eng'g, Inc.,* AGBCA No. 89-203-1, 94-1 BCA ¶ 26,287, 1993 WL 308740 (Aug. 13, 1993), we recently held that a dissolved corporation was "the contractor."

The Government stipulated that the two companies, D. R. Johnson Lumber Company and Prairie Wood Products, Inc., were functionally the same company. The evidence shows that Mr. Johnson is the owner of both companies and that they were merged (FF 1). We conclude that Prairie Wood Products, Inc., is "the contractor" and that the Board has jurisdiction over the present appeal.

Severin Doctrine

The Government asserts that except for the $364 incurred by Appellant (*see* FF 34) the Government is not liable for the alleged damages in the amount of $173,914.83, because these are costs incurred by the subcontractor for which Appellant is not liable, citing *Severin v. United States,* 99 Ct. Cl. 435 (1943), *cert. denied* 322 U.S. 733 (1944). Generally, the doctrine requires proof that the prime contractor has been damaged, not simply that the subcontractor has incurred additional costs.

The doctrine has been scaled back by decision and now generally allows recovery unless the subcontract contains a clause specifically relieving the prime contractor of liability. Moreover, it is the Government's burden to prove the subcontract contains such a clause. *Southern Constr. v. United States* [11 CCF ¶ 80,552], 176 Ct. Cl. 1339, 364 F.2d 439 (1966). See also *JAL Constr., Inc.,* AGBCA No. 80-185-3, 81-1 BCA ¶ 14,912.

Digitized by Google

We note that although the subcontract was signed by Judy M. Hilts, she represents H & L Construction. Appellant assumed that he was contracting with H & L Construction. (FF 12.) We conclude the subcontract was with H & L Construction. The Government has not shown that the subcontract contains an exculpatory clause. Our review indicates such a clause was not included. Moreover, the evidence indicates that Appellant will pay the subcontractor if Appellant recovers (FF 36). We conclude that the Severin doctrine does not bar recovery under the present facts.

Purchaser Credit

The contract required the construction or reconstruction of roads for the removal of timber. By performing this work, Appellant could earn purchaser credit as set forth in the contract. As long as purchaser credit was effective it could be used in lieu of cash to pay for the harvested timber (FF 3).

Certain contract clauses provide for adjustments to purchaser credit, as opposed to increases or decreases in the contract price for changes to the road work. Two contract modifications pertaining to the aggregate resulted in increases to purchaser credit. (FF 20, 29, 41.) However, increased cost for delay as a consequence of Government action or inaction appears to be outside the scope of these clauses. The parties, moreover, stipulated that Appellant's claim for delay is outside the scope of the clauses providing for adjustments to purchaser credits (FF 41). Finally, the *Designated Source* clause (FF 5) provides for an adjustment in the contract price (not purchaser credit) for an inadequate designated source.

Consequently, we concur with the Government's position that "if the Board orders payment to the purchaser under this appeal, ... the Government will locate funds to make the ordered payment" as opposed to adjusting purchaser credit (Gov't Brief, page (p.) 3).

Liability

Appellant was to earn $250,591.23 in purchaser credit for constructing roads 2640 and 2600877 (FF 4). Appellant subcontracted this task for $211,024.69 (FF 12).

The aggregate for the roads was required to meet certain gradation requirements and minimal SE requirements (FF 13, 14). A road with too low an SE will tend to become muddy quickly when wet (FF 14).

The contract specified the material source for the aggregate on the project vicinity map and on the project drawings (FF 4). This source was therefore a "Designated Source" within the meaning of specification section 105.062 in that the source was shown on the drawings (FF 5).

Section 105.062 provided that a designated source would not require removal of more than 10 percent by volume of objectionable material to meet contract requirements. If the quantity of material requiring removal exceeded 10 percent, Appellant was immediately to notify the CO. If in fact the inability of the designated source to produce suitable material was beyond the control of Appellant, the Government was obligated to provide another source and adjust the contract price (FF 5).

Appellant devoted considerable effort in attempting to prove that the Forest Service did an inadequate job of evaluating the Dry Fork Material Site for purposes of determining whether it could be made to produce aggregate meeting specifications. The evidence produced by Appellant was unpersuasive. (App. Brief, pp. 4-9.)

The Forest Service's evaluation of the designated source is largely irrelevant. The Forest Service has no legal obligation to evaluate a material source, even one that it designates. Where the Forest Service fails to evaluate a material source or where the evaluation is only cursory, however, the Forest Service can expect lower bid prices because of the greater risks imposed on a timber purchaser.[4]

A site visit and an evaluation of the drill hole logs produced by the Forest Service in this case indicated that much of the material was in fact not suitable for the road aggregate. Several drill hole logs showed no useable material recovery below certain levels and others showed no useable recovery whatever. Even Appellant's expert conceded that the logs were representative of the actual yield and that a bidder would have had to proceed very cautiously because the logs showed a lot of variability, and it was difficult to tell if the source were useable (FF 6-10). *See Gilchrist Timber Co.*, AGBCA No. 82-235-1, 85-2 BCA ¶ 18,106.

Notwithstanding the indications that much of the source material was not useable as road aggregate (or perhaps because of these indications), the Forest Service in-

[4] In a procurement contract, the Forest Service could expect higher bid prices.

©1994, Commerce Clearing House, Inc.

Digitized by Google

cluded specification section 105.062, which essentially guaranteed that the source would produce satisfactory material without Appellant having to remove more than 10 percent of objectionable material (FF 5).

Appellant's subcontractor was experienced, having performed 70 to 80 road jobs over a 24-year period, many in the same county as the Dry Fork Material Site (FF 15). From the outset, the subcontractor had problems achieving gradation within specification while at the same time meeting the required minimum SE. The subcontractor advised the Forest Service of these problems on March 21, 1990. (FF 15-19.)

On March 27, 1990, the Forest Service orally authorized use of aggregate from another pit to blend with that from the Dry Fork Material Site. The parties memorialized their agreement a few days later (FF 20). Appellant continued to have problems meeting the specifications and on April 3, 1990, the Forest Service notified the subcontractor that it was not delivering required daily SE test results and that tests conducted by the Forest Service on aggregate produced by the subcontractor indicated that the SE requirement was not being met. The subcontractor considered this notice a shutdown on the work because it was impossible to meet the gradation and SE requirements at the same time using aggregate from the Dry Fork Material Site (FF 21).

It is clear from the evidence that it was possible to meet the gradation and SE requirements if more than 10 percent of the objectionable material from the pit were wasted. However, even the Government's expert did not know how reasonable it would have been to do so (FF 18, 22, 25).

On April 23, 1990, the parties orally agreed to reduce the minimum SE requirement from 35 to 25. The parties' agreement was not an accord and satisfaction of Appellant's claims because the claims were discussed but no agreement was reached. Appellant began full production the next day, April 24, 1990 (FF 29).

Appellant filed a claim in the amount of $173,914.83, claiming delay for the 21-day period between April 3 and April 24, 1990. Appellant claimed only 14 days of delay instead of 21 days because of weekends included during this period (FF 36, 38).

For the reasons indicated in the Findings, we reject the Forest Service's assertions that the subcontractor failed to meet specifications because the subcontractor did not properly scalp (FF 30), that the subcontractor wasted less than 10 percent of objectionable material (FF 31), and that the subcontractor did not provide daily samples (FF 32). While there were occasions when the subcontractor mixed objectionable material with rock that was to be processed (FF 23), the subcontractor appeared to exhaust all possibilities for screening adjustments (FF 18) and use of material from selected areas of the pit (FF 25, 28).

The problem in meeting both gradation and SE was that the objectionable material coated and was embedded into the rock fractures and seams. This material could not be scalped and when the impact crusher pulverized the rock, the objectionable material was incorporated into the end product (FF 17). While screening could remove this material, the subcontractor would then fail either gradation or SE (FF 18, 19, 28). Although gradation and SE could both be achieved on rare occasions (FF 18), it was necessary to remove 30 to 50 percent objectionable material (FF 22, 25). The Forest Service position that the objectionable material could simply be scalped away and specifications met (FF 40) has not been supported. Therefore, to the extent Appellant proves damages, Appellant may recover pursuant to the *Designated Source* clause.

Damages

Appellant's claim of $173,914.83 is comprised almost totally of subcontractor expenses. Appellant claims $364 for 14 hours of administrative expenses for itself.

The subcontract portion of the claim includes $4,150.83 for consultants hired by the subcontractor to assist in determining how or whether it could meet the specifications (FF 25, 34). These expenses were incurred in April 1990, *i.e.,* during contract performance and 3 months prior to Appellant's initial claim submission in July. These expenses arose directly from Appellant's inability to meet specifications using material from the Government's designated source. Accordingly, we conclude they are not the unallowable cost of prosecuting claims against the Government. *See,* for example, *Owen L. Schwam Constr. Co.,* ASBCA No. 22407, 79-2 BCA ¶ 13,919, citing *Singer-Gen. Precision, Inc.,* 215 Ct. Cl. 281, 568 F.2d 695 (1977); *Bill Strong Enter., Inc.,* ASBCA No. 42946, *et al.,* 93-3 BCA ¶ 25,961, 1993 WL 243140 (June 28, 1993); Federal Acquisition

Digitized by Google

Regulation (FAR) 48 CFR § 31.205.47.[5] Accordingly, the appeal for these expenses is sustained.

The subcontractor claims $65,296 for the cost of the laydown crew that placed the crushed aggregate on the road ($173,914.83 – ($364 + $4,150.83 + $104,104); *see* FF 33-34). However, the evidence indicates that the contract required approval of the subgrade prior to the placement of the aggregate (FF 33). Ground conditions were snowy and wet during the shutdown (FF 39). Preparation of the road for aggregate did not begin until April 12, 1990. The first segment of the road was not approved for the placement of aggregate until April 25, 1990. This was after the subcontractor asserted it was shut down. We conclude that the laydown crew was not delayed by the actions of the Forest Service. This portion of the appeal is denied.

The balance of the subcontractor's claim is in the amount of $104,104. The subcontractor has selected a 14-working-day period between April 3 and April 24, 1990, when no aggregate production occurred. Appellant asserted its alleged lost revenues during this period as damages based upon a production rate of 1,100 cubic yards per day (FF 34-38). The subcontractor has not set forth extra time, effort and associated costs proximately resulting from its futile efforts to meet the Government's specifications beginning on March 21, 1990 (FF 21).

The Government complains that the subcontractor never achieved a production rate of 1,100 cubic yards a day and that the claim is therefore inflated (Gov't Brief, p. 9). The Government is partly correct in that job records under the present contract indicate a daily production of between 185 and 981 cubic yards (FF 34). However, it is hardly surprising that less than 1,100 cubic yards per day were produced because of the difficulties experienced by Appellant achieving gradation and SE. The 1,100 cubic yard amount was also derived from experience with prior contracts and was the amount upon which the subcontractor based its bid (FF 34).

The Government also complains that the subcontractor might have moved to a different job, but that it could not do so because of wet weather conditions, and that the subcontractor has therefore not proven that revenues were in fact lost (Gov't Brief, p. 10). There is evidence supporting the Government's position that the subcontractor might not have lost revenues[6] (FF 39). The Board, however, is not constrained to consider the claim for delay and lost revenues as presented.

Although the subcontractor characterized its claim as one for delay and lost revenues, the claim is based upon unproductive equipment and labor, plus profit, in the amount of $7,437 per day (FF 35). We, therefore, consider the subcontractor's claim on this basis.

The Government asserts that the subcontractor was not prepared to operate during the 14-day period because of equipment failure problems (Gov't Brief, p. 9). The evidence indicates considerable equipment downtime during the period of the alleged delay (FF 21, 23-26). Appellant and the subcontractor, however, testified that the equipment was not repaired in a more timely manner because it was futile to attempt to crush aggregate at the time. In addition, replacement equipment could have been leased immediately. (FF 27.)

While there is merit in Appellant's and the subcontractor's testimony, it is nevertheless clear that some unproductive time would have been experienced due to the documented equipment problems. Since we are unable to determine precisely how quickly the broken equipment could have been repaired or leased, we determine the damages based upon a jury verdict.

The crusher and loader were out of operation Wednesday, April 4 through Friday, April 6, 1990, or 3 work days. The generator and loader were out of operation from Monday, April 9 through Thursday, April 12, 1990, or 4 additional work days. While the loader was almost ready on April 12, 1990, the generator remained out of operation. If producing aggregate meeting the specifications had been feasible, we will assume that repair of the loader could have been expedited so that it would have been ready by the close of business on April 12, 1990. We will also assume that lease of the generator could have been expedited so that a generator could also have been available by close of business the same day. Therefore, the subcontractor is entitled to 7 days of equipment and labor downtime, plus profit, of $7,437 per day, or $52,059.

[5] It is recognized that the FAR is not applicable to the present contract because it is a sale.

[6] Mobilization to return to the present site after demobilization could be recovered in any event.

Digitized by Google

DECISION

The following portions of the appeal are sustained: Appellant's costs, $364; the subcontractor's consultants, $4,150.83; and the subcontractor's equipment and labor downtime, plus profit, $52,059. The balance of the appeal is denied.

[¶ 26,425] Sun Eagle Corporation

ASBCA Nos. 45985, 45986, October 15, 1993. Contract Nos. DACA09-90-C-0053, DACA09-91-C-0041.

Payments, Prompt—Interest—Penalty.—A contractor was entitled to Prompt Payment Act penalty interest on the combined total of two progress payment checks that were dated, signed, placed in an envelope for timely mailing, and then stolen by an independent courier service's employee before being mailed, because the government assumed the risk of nondelivery of the checks to the contractor. By issuing substitute checks, the government acknowledged that the statutory provision deeming that payment be made on the date that the checks were dated did not relieve it of the duty to tender the checks to the contractor. The government failed to prove its contention that holding the government liable for a third party's criminal acts would be too broad a construction of the Act's waiver of sovereign immunity.

For the appellant: Jennings & Haug, Phoenix, Arizona, by Carolyn M. Kaluzniacki. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Stephen E. Temmel, Engineer Trial Attorney, U.S. Army Engineer District, Los Angeles.

Before RIISMANDEL and RUBERRY, Administrative Judges.

RIISMANDEL, Administrative Judge: These appeals arise from the contractor's claims for interest penalty pursuant to the Prompt Payment Act, 31 U.S.C. §§ 3901-3907, as amended in 1988 (P. Law 100-496, 102 Stat. 2455) (PPA).

At issue is the application of the PPA where Government checks for progress payments were dated, signed, correctly addressed, and placed in an envelope for mailing in a timely manner, but were stolen by an employee of an independent contract courier service before delivery to the Government's mail room in another building where the placement of postage and mailing was to occur that same day. Payments were made several months later by replacement checks.

There are no material facts in dispute and the cases have been submitted for decision on the parties' cross-motions for summary judgments. An oral argument was held in a transcribed telephone conference call. Appellant elected to proceed under the Board's Rule 12.3 accelerated procedure.

ASBCA No. 45985 involves Contract No. DACA09-90-C-0053 for the construction of an Air Cargo Test Facility at Yuma Proving Grounds, Yuma, Arizona. ASBCA No. 45986 involves Contract No. DACA09-91-C-0041 for the construction of an Aircraft Engine Shop at Davis Monthan Air Force Base, Arizona. The contracts were awarded in 1990 and 1991 and were administered by the Army's Corps of Engineers.

The PPA provides that on construction contracts payment is due either 14 days after the date a request for a progress payment (proper invoice) is received by the Government agency, or on the date provided in the contract.

It provides further that interest "shall be paid for the period beginning on the day after the required payment date and ending on the date on which payment is made" (§ 3902(b)). The date the check is signed by the Government is deemed to be the date of payment, with the understanding that the check will be mailed or delivered immediately. Under the definition section at ¶ 5, the Act states:

> A payment is deemed to be made on the date a check for the payment is dated.

The same provision is included in OMB Circular A-125, as revised 21 December 1989 (54 Fed. Reg. 52706), which implements the PPA. It provides further in ¶ 4.n, *Making the payment,* that "[c]hecks will be mailed or transmitted on the same day for which the check is dated."

The Federal Acquisition Regulation (FAR) implementation in Part 32.9 prescribes the use of the clause at 52.232-27

Digitized by Google

but otherwise does not add to Cir. A-125 provisions.

Both contracts contain FAR Clause 52.232-27, PROMPT PAYMENT FOR CONSTRUCTION CONTRACTS (APR 89) (R4, tab 7). In accordance with FAC 84-55, the clauses were modified to establish the payment due date as 25 days after receipt of the payment estimate instead of the standard 14 days. (R4, tab 8) Section 10 of OMB Circular No. A-125, 54 Fed. Reg. 52700, December 21, 1989, and 31 U.S.C. 3903(a)(6)(A).

The arrangement under these contracts was for payments by check. We conclude from the contract terms in general (stating in Block 16 of the award that remittance be made to the address shown in Block 14—offeror's name and address) and the conduct of the parties that remittance/payment was to be made by mailing the check to the contractor's address as shown in Block 14, 461 North Dean Avenue, Chandler, Arizona 85226.

Under the Yuma Proving Grounds contract appellant submitted Payment Estimate No. 16 (a proper invoice) for $254,515 and under the Davis-Monthan contract Payment Estimate No. 7 (a proper invoice) for $77,484. The two invoices were received by the Government on 19 June 1992, and payment in full was authorized. Payment was due to be paid to Sun Eagle within 25 days, which would have been 14 July 1992. The two checks were signed and dated on July 14th, correctly addressed, and sealed in an envelope. Then they were given to an independent courier service for delivery to the Corps mail room in another building several blocks away, as was the usual procedure. The mail room employees of the Corps would place the appropriate postage on the envelopes and deliver them to the U.S. Postal Service.

The parties stipulated that the checks in question were stolen by an employee of the independent contract courier. They were never placed in the mail and were never delivered to Sun Eagle.

When payment was not received within 25 days and a few days for mailing, Sun Eagle immediately notified the Corps, first by telephone and then in writing. The Corps requested stop payment on the checks and the issuance of new checks. However, it was not until 15 December 1992, that the substitute checks were issued. The substitute checks contained no interest payment.

Thereafter, Sun Eagle filed a claim for interest under the Prompt Payment Act on the combined total of the two checks, *i.e.*, $331,999, and requested a final decision of the contracting officer in a letter of 7 January 1993 which was received at the Corps' resident office on 11 January. The Corps declined to rule on Sun Eagle's claim for payment of interest under the Prompt Payment Act, stating there was no precedent for making payment where the checks were stolen by an independent courier. The appeals followed from that refusal to issue a decision on the claim stated in the complaint to be $8,310.16.

Parties' Contentions.

Appellant argues that (1) the mere dating and issuance of a check does not constitute payment nor relieve the Government from liability for interest penalty pursuant to the PPA, and (2) the Government's duty to pay PPA interest penalty is not excused by the failure of its independent courier service to deliver the checks to the mail room.

In appellant's opinion actual delivery of a check is a conditional payment and the debt is not discharged until the check is presented for payment. It cites UCC § 3-802(1)(a) as well as legislative history of the PPA in support of this position. It argues further that the Government is responsible or liable for its subcontractor/courier service and appellant did not assume the risk of theft of the checks by the subcontractor.

The Government relies on the statutory language that the payment is "deemed to be made on the date" the check is dated. It interprets this to mean that the Congress intended the agencies to establish procedures to pay their bills on time and not ensure against theft after a check was dated. Having dated the checks in question within the contractually allowed 25-day period, no interest penalty commenced to accrue, notwithstanding the theft of the checks before their being mailed and non-receipt by appellant.

As a further argument Government contends that since the PPA is a waiver of sovereign immunity, it must be strictly construed in favor of the sovereign. In counsel's opinion to hold the Government responsible for the criminal acts of a third party after the check has been dated and thus preventing the envelope from receiving postage and placement in the U.S. mails would amount to an enlargement of the waiver of sovereign immunity beyond that which the statute requires.

Discussion.

Counsel submit that on these facts this is a case of first impression and that the Board's guidance is needed for the Government to pay interest in the subject cases.

We address first the Government's sovereign immunity argument. That the PPA waived sovereign immunity with respect to the "interest penalty" on late payments is not at issue. We are unable, however, to adopt the Government's narrow view that "the statute [PPA] only requires that Government agencies establish procedures to pay their bills on time." Although the Act was intended to provide agencies incentive to make timely payments, an underlying purpose of the procedures established to that effect was to reduce business concerns' reliance on borrowings to finance their performance on Government contracts. The cited case of *U.S. Department of Energy v. Ohio, et al.,* 112 S.Ct. 1627, 118 L.Ed.2d 255 (1992), is inapposite to the instant cases and does not mandate a different conclusion.

Both parties have cited the ruling of the U.S. Comptroller General in *Matter of Four Square Construction Company,* 64 Comp. Gen. 32 (1984), in support of their respective positions. In that case the check was issued within the allowable time period but, for unspecified reason, was not received by the addressee, and the replacement check was issued approximately 3-1/2 months later. In denying interest penalty under the PPA, the Comptroller General held that payment was made once the check was issued and the agency was not liable for payment of interest on the time it took to reissue the check since "the fact that Foursquare did not receive the original payment was not the fault of the contracting agency." No mention was made of the check having been mailed.

The Government suggests that since in the instant case the theft of the checks was outside the control of the Corps, the interest should be denied.

In appellant's opinion, the *Four Square* opinion should be limited to those cases "where payment is actually made, not merely dated because it was assumed in that case that the check was timely mailed." Therefore, it should not be followed here where the checks were NOT mailed but were stolen before they were placed in the U.S. mails. In support of this view appellant cites a later unpublished opinion of the Comptroller General (B-223857, dated 27 February 1987), 1987 West Law 010593 (C.G.). It was held therein that the Commodity Credit Corporation (CCC) was obligated to pay interest to contractors under the PPA on late payments even though the CCC was unable to make payments when due because of the temporary depletion of its borrowing authority. See also H. Rep. No. 784, 100th Cong., 2d Sess. 2021, reprinted in 1988 *U.S. Code Cong. & Admin. News* 3036, 3048-49.

Appellant interprets this ruling to establish that the PPA requires payment of interest even when non-payment is not due to Government's fault, as seems to be the case here.

We do not have to interpret the Comptroller General's rulings as these are not binding on the Board. Suffice to state that we are free to adopt his reasoning if found persuasive. We note, however, that the *Four Square* case did not involve theft of check before it was placed in the mail system.

The real issue in this case is which of the parties, the agency or the contractor, assumed the risk of the non-delivery of the checks to the contractor due to theft before they were placed in the U.S. mails.

The general rule in federal courts is that in the absence of an agreement otherwise, delivery of a check is a conditional payment and the discharge of the debt does not occur until the check has been presented to the drawee bank. *United States v. Forcellati,* 610 F.2d 25 (1st Cir.), *cert. denied,* 445 U.S. 944, 63 L. Ed. 2d 778 (1979). This is in conformance with UCC #3-802.

We have reviewed the legislative history of the PPA but have found no indication that Congress may have intended to change this judicially developed rule or establish a different rule for payments by check when interest penalty would be applicable against the Government or intended to insure contractors against all eventualities.

Legislative history of the PPA and its 1988 Amendments reflects the Congressional concern for Government contractors to receive payments in a timely manner. This was the main objective for establishing the elaborate procedure to assure this result.

Since the checks did not reach the U.S. mail because of their intervening theft by the Government's courier service, it would be inconsistent with the legislative objectives to transfer upon an innocent contractor the risk of non-delivery of payment checks in these circumstances. If there are equities to be considered, these clearly are on the side of Sun Eagle. The risk of non-delivery of the checks to the U.S. Postal Service re-

Digitized by Google

mained with the Government who trusted the courier service with the checks.

This conclusion is not inconsistent with the statutory provision that the payment is deemed to be made on the date the check is dated. We agree with appellant that this definition was included in the statute to provide an easily ascertainable date for the assessment of the interest penalty, for the purpose of calculating the interest. The dating of the check does not relieve the Government of the duty to tender the check to the contractor. See Renner, *Prompt Payment Act: An Interest(ing) Remedy For Government Late Payment,* 21 Pub. Cont. L.J. 177, 221-22 (1992), and authorities cited. Here the Government acknowledged this by issuing the substitute checks.

In view thereof we do not reach appellant's further contention that by analogy to the *respondeat superior* doctrine the Government is liable for the default of its courier service as its agent, even if this is not a tort case, and remained liable for these payments.

Conclusion.

We conclude accordingly that Sun Eagle did not receive the two payments on the dates when the original checks were issued by the Corps. The payment was made on 15 December 1992, the date when the replacement checks were issued. Under the terms of Sun Eagle's contracts payments were due on the 25th day after the receipt of the invoice which we established as 14 July 1992. Interest penalty started to accrue on the unpaid amounts of $331,999 on 15 July for 154 days until 15 December 1992. From that date until 11 January 1993 (the date the Government received appellant's CDA claim) interest penalty accrues on the accumulated interest. Pursuant to 41 U.S.C. §611, from that date until payment appellant is entitled to simple interest on the accumulated interest penalty amount.

The computation of the amount due appellant is remanded to the contracting officer.

The appeals are sustained in accordance with the foregoing discussion.

[¶ 26,426] Brown Marine Service, Inc.

ASBCA No. 45861, October 7, 1993. Contract No. N68860-91-C-0112.

Labor—Service Contract Act—Jurisdiction of Boards.—The board could not consider a contractor's assertion that the Walsh Healey Act, and not the Service Contract Act, applied to a contract, because board jurisdiction in Service Contract Act cases is limited. The government contended that the contractor had twice agreed to the inclusion of Service Contract Act wage determinations and was not entitled to additional compensation. However, determinations of coverage are left to the Department of Labor, which has the primary and final authority and responsibility for administering and interpreting the Act.

Labor—Price Adjustments for Changes in Wage Determinations—Contractor's Knowledge.—A contractor was not entitled to reimbursement for payment of Service Contract Act wages, because Department of Labor wage rate determinations are binding on a contractor whether or not it had actual notification. The government advised offerors that their offers could be amended by letter or telegram, and although it did not give them much time, at least one offeror raised its price. The contractor was afforded another opportunity to increase its prices during contract performance, but instead it executed a modification incorporating a current wage determination into the contract at no cost to the government. Although the contractor may not have understood the consequences of the amendments, relief cannot be granted on that basis, particularly where a statutory requirement such as the Service Contract Act is at issue.

For the appellant: S.J. Brown, Chairman/CEO. For the government: Arthur H. Hildebrandt, Chief Trial Attorney, and Kenneth J. Densmore, Trial Attorney, Chief of Naval Education and Training, Pensacola, Florida.

Before DICUS and RIISMANDEL, Administrative Judges.

DICUS, Administrative Judge: This appeal arises under a contract between appellant Brown Marine Service, Inc. and respondent Naval Air Station, Pensacola, Florida, for overhaul of two barges. The dispute has to do with inclusion of a Service Contract Act

©1994, Commerce Clearing House, Inc.

Digitized by Google

Wage Determination by Amendment 0004 to the solicitation and contract Modification P0002. The parties have elected to proceed under Rule 11 and appellant has elected to proceed under Rule 12.3.

FINDINGS OF FACT

1. Solicitation No. N88660-91-R-0100 was issued 21 August 1991 with a date for receipt of proposals of 1:00 p.m., 23 September 1991. The solicitation was for overhaul of two barges (R4, tab 1).

2. Three amendments were issued advising of the procurement's status as a 100 percent Small Business Set Aside and revising specifications. Amendment 0004 dated 27 September 1991 was issued to incorporate a Department of Labor Wage Determination under the Service Contract Act and relevant contract provisions, and a Certification of Procurement Integrity. The date for receipt of offers was extended to 1:00 p.m., 30 September 1991. Page one of the amendment advised offerors "If by virtue of this amendment you desire to change an offer already submitted, such change may be made by telegram or letter, provided each telegram or letter makes reference to the solicitation and this amendment, and is received prior to the opening hour and date specified." It also cautioned that offers could be rejected if the amendment was not acknowledged by the extended date (R4, tab 7).

3. Although dated 21 September 1991, Amendment 0004 was transmitted by FAX to appellant 29 September 1991, a Sunday. Appellant acknowledged receipt of the amendment by FAX dated 30 September 1991, and included an executed page one of the amendment. No changes to appellant's offer of $53,760.00 per barge dated 23 September 1991 were indicated (R4, tabs 8, 9, 14). Of the other offerors, the record establishes that one declined to sign the amendment and another raised its price (R4, tabs 6, 10, 11).

4. The contract was awarded to appellant at the price of $107,520.00, $53,760.00 per barge. Included by reference were the Disputes (1984 APR) and Service Contract Act, As Amended (1989 MAY) clauses. The latter clause makes the contract subject to the Service Contract Act of 1965, 41 U.S.C. 351, *et seq.*, and 29 C.F.R. part 4). The letter notifying appellant of award was dated 30 September 1991 and was acknowledged by appellant in a letter dated 4 October 1991. The contract was executed by the contracting officer and forwarded to appellant on 4 October 1991 (R4, tabs 12—14).

5. Modification P00002, executed by the parties 10 January 1992, amended the contract by incorporating a Department of Labor Wage Determination dated 18 September 1991 at no change in price (R4, tab 17). Appellant invoiced for the work at the contract price of $53,760.00 for the first barge on 5 February 1992 and 1 May 1992 for the second barge (R4, tabs 18—21). Checks representing payment of the full contract price were issued by respondent on 18 February 1992, 26 March 1992, and 26 May 1992 (R4, tab 22). There is no evidence that appellant reserved any claim prior to issuance by respondent of checks constituting the full contract price.

6. At a conference with the Department of Labor on 26 March 1992 appellant was advised that Service Contract Act wages had not been paid to certain employees. Thereafter, in November 1992, appellant paid those employees a total of $11,327.55 in back wages in compliance with the Service Contract Act (R4, tab 27; Affidavit of Reid S. Byers (Byers aff.), exh. 1).

7. Alleging that no wage determination had been received, and citing 48 C.F.R. § 22.404-9, appellant by letter of 11 November 1992 requested a price increase of $11,327.55 (R4, tab 23). The claim was denied in a final decision dated 26 January 1993. By letter of 15 February 1993 appellant requested reconsideration of its claim (R4, tab 25). When no answer was received a notice of appeal was filed on 17 March 1993.

DECISION

Appellant alleges it has been treated unfairly and that the Walsh Healey Act, and not the Service Contract Act, applies to the contract. Respondent argues that appellant twice agreed to the inclusion of Service Contract Act Wage Determinations in the contract and is not entitled to additional compensation.

Board jurisdiction in Service Contract Act cases is limited. We cannot, for example, consider appellant's assertion that the Walsh Healey Act, and not the Service Contract Act, applies to this contract. Such determinations are left to the Department of Labor under 4 C.F.R. § 4.101(b), which provides:

> The Department of Labor (and not the contracting agencies) has the primary and final authority and responsibility for administering and interpreting the Act, including making determinations of coverage.

Digitized by Google

Similarly, 29 C.F.R. § 4.187(f) specifically excepts disputes on violations of the Service Contract Act from the disputes clause of agency contracts. We may, however, determine whether payments made by appellant to comply with the Service Contract Act are reimbursable as a contract change. *Miller's Moving Co.*, ASBCA No. 43114, 92-1 BCA ¶ 24,707.

In this regard, we find appellant is not entitled to reimbursement. Amendment 0004 advised offerors that their offers could be amended by letter or telegram (finding 2). While it did not give much time to do so, at least one offeror raised its price (finding 3). Appellant was afforded another opportunity to increase its price during contract performance but chose to execute Modification P00002, which incorporated a current Wage Determination into the contract, at no cost to respondent. Although appellant may not have understood the consequences of Amendment 0004 and Modification P00002, it cannot be granted relief on that basis, particularly where a statutory requirement such as the Service Contract Act is at issue. *Federal Crop Insurance Corp. v. Merrill*, 332 U.S. 380 (1947).

Finally, as to appellant's contention that respondent did not give it adequate time to amend its offer, we have held that "DOL wage rate determinations under the Service Contract Act were binding on appellant whether it had actual notification thereof or not." *Miller's Moving Co., supra*, at 123,326. Accordingly, the appeal is denied.

[¶ 26,427] Bay Harbor Company, Inc.

ASBCA Nos. 45452, 45453, October 14, 1993. Contract No. N00604-87-D-A065.

Procedure, Boards—Prior Decisions—Amount v. Entitlement.—A contractor was permitted to adduce evidence on which delivery orders were to be reformed, even though the board had already issued a decision on entitlement, because there were no findings regarding which delivery orders were in question in the prior decision. Facts found, determinations made, and issues decided during entitlement litigation are *res judicata* and the law of the case during the quantum litigation. The government contended that the contractor could not relitigate which delivery orders were reformed in an appeal of quantum, because the government's right to reform the contract to correct a mistaken line-item prices sheet had been upheld in the board's earlier decision. However, the issue of which orders to include in the reduction arose during the quantum phase of the litigation, and the parties adduced new evidence.

Pricing of Adjustments—Proof—Burden of Proof.—The government was not entitled to reimbursement for overpayment for delivery orders that were pending when the government discovered a mistake on the contract award sheet, because there was unrebutted evidence that the contracting officer agreed to exclude the pending orders from the price reduction. The government had the burden of proving its claim that the amounts of principal and interest it demanded from the contractor were consistent with the contract provisions and were lawful.

Payments—Interest—Suspension of Interest.—A government employee's statement did not bind the government to suspend interest pending the outcome of litigation, because the statement was not a promise and the employee lacked authority to contract. Moreover, the Federal Acquisition Regulation prohibits contracts and arrangements for the deferment of collection of debts that provide that a government claim will not become due and payable pending decision on a dispute. There is also no regulatory provision permitting suspension of interest on contract debts by reason of post-appeal delays in calculating the indebtedness. The government had the burden of proving that the interest it demanded from the contractor was consistent with the contract provisions and was lawful; the government sustained its burden with respect to the suspension of interest and was therefore entitled to interest on the principal amount owed to it from an overpayment.

For the appellant: Marcia L. Anderson, Vice President. For the government: Arthur H. Hildebrandt, Chief Trial Attorney, and Elizabeth Bagwell, Trial Attorney, Naval Supply Center, Pearl Harbor, Hawaii.

Before JAMES, RUBERRY, and RIISMANDEL, Administrative Judges.

JAMES, Administrative Judge: In our decision on entitlement in *Bay Harbor Company Inc.*, ASBCA Nos. 41589, 41809, 92-3 BCA ¶ 25,210 ("Bay Harbor I"), we upheld respondent's right to reform the contract due to mistaken line item prices entered on the contract award sheet and denied both appeals. Familiarity with Bay Harbor I is assumed. In these quantum appeals the parties dispute whether (1) the prices of five delivery orders were to be reformed and (2) interest was suspended on the amount of the adjustment for any portion of the time before appellant paid the principal and interest amounts respondent demanded. The parties agreed to submit quantum for decision on the record pursuant to Board Rule II. The record in these appeals consists of the Bay Harbor I record; the ASBCA Nos. 45452 & 45453 Rule 4 file; the parties' affidavits; and respondent's brief. Appellant elected not to submit a brief.

FINDINGS OF FACT

1. Contract N00604-87-D-A065 contained (a) the FAR 52.232-17 INTEREST (April 1984) clause providing that

> (a) ... all amounts that become payable by the Contractor to the Government under this contract ... shall bear simple interest from the date due until paid unless paid within 30 days of becoming due. The interest rate shall be the interest rate established by the Secretary of the Treasury as provided in Section 12 of the Contract Disputes Act of 1978 ... which is applicable to the period in which the amount becomes due, and then at the rate applicable for each six-month period as fixed by the Secretary until the amount is paid.
>
> (b) Amounts shall be due at the earliest of the following dates: ... (2) The date of the first written demand for payment consistent with this contract ....

and (b) clause 110 requiring appellant to reject delivery orders exceeding stated limitations within three days after their issuance (R4, tab II; Bay Harbor I, R4, tab 4).[1]

2. Respondent issued (a) contract A065 delivery order ZZAV on 22 March 1990 for performance by 30 April 1990 and (b) delivery orders ZZBA, ZZBB, ZZBC and ZZBD on 4 April 1990 for performance by 28 May to 1 June 1990 (ASBCA Nos. 41589, 41809, App. Supp. R4, tab 3). In Bay Harbor I we found that "Appellant rejected no contract A065 orders for work" (finding 22).

3. Respondent's 16 April 1990 letter to appellant said that respondent had discovered an "administrative error" in contract A065 prices for items 0008AA and 0015AA due to entering the initial rather than BAFO rates for the two option periods, included delivery orders ZZAV, ZZBA, ZZBB, ZZBC and ZZBD among 18 item 0015AA delivery order prices it adjusted, requested appellant to repay $189,656.75 to respondent, and advised appellant, if it had any questions, to contact Richard Harr, who was not a contracting officer (R4, tab 18; Harr affid. ¶ 2).

4. In a 27 April 1990 meeting with Richard Harr and appellant's James Horst and Marcia Anderson, contracting officer Robert S. Kay said that respondent would pay $4.25 per square foot for delivery orders ZZAV, ZZBA, ZZBB, ZZBC and ZZBD (Horst affid. ¶ 10; Anderson affid. ¶ 3). Harr did not deny the foregoing, but stated that he does not remember Horst saying that appellant "would exercise its contract right to reject" those delivery orders (Harr affid. ¶ 9). Mr. Kay submitted no affidavit.

5. On 14 May 1990 Horst telephoned Harr and asked what appellant would be paid for delivery orders ZZAV, ZZBA, ZZBB, ZZBC and ZZBD. Harr replied $4.25 for item 0015AA. (Harr affid. ¶ 10; Horst affid. ¶ 10)

6. Appellant's 24 May 1990 letter to Richard Harr stated:

> As per our discussion on ... May 14, 1990, we are proceeding with PRC removal work issued to us under delivery orders ZZAY, BB, BC and BD with the understanding that we will be paid the contract price of $4.25 per square foot.
>
> After receiving your ... letter of April 16, 1990, we notified you by phone that we felt the $4.25 figure was correct and we continued with removal work that had already begun. As previously explained in our meeting of Friday, April 27, 1990, Bay Harbor accepted work orders in reliance upon the then stated contract price of $4.25 per square foot. If we had known that the government would subsequently issue a unilateral modification reducing ... line item 0015AA to $1.50 per square foot, we would have rejected the majority

[1] Unless otherwise stated, Rule 4 citations are to ASBCA Nos. 45452 and 45453 Rule 4 tabs.

of this work to the extent our contract would allow.

(R4, tab 21)

7. On 8 June 1990 Horst asked Harr about interest on appellant's claim. Harr replied that he "thought interest would stop until the appeal was resolved." (Harr affid. ¶ 13; Anderson affid. ¶ 9)

8. The contracting officer's 8 June 1990 final decision demanded reductions of $67,172.49 for item 0008AA and $63,268.18 for item 0015AA, totalling $130,448.67 and included delivery orders ZZAV, ZZBA, ZZBC and ZZBD among 13 item 0015AA delivery order prices reduced, with interest from the date of that demand and notified appellant that it might submit a proposal for deferment of collection within ten days after receipt of the demand for payment if the amount was disputed (R4, tab 1).

9. Appellant's attorneys' 19 June 1990 letter requested respondent to defer collection of the $130,448.67 allegedly due pending the outcome of the appeal process (Bay Harbor I, R4, tab 10). By awaiting our decision on Bay Harbor I before pressing for payment, respondent tacitly deferred collection of the debt.

10. Robert Kay's 8 August 1990 letter recalculated reductions of $63,274.37 for item 0008AA and $70,455.58 for item 0015AA, for a "total refund" of $133,729.95, and included delivery orders ZZAV, ZZBA, ZZBB, ZZBC and ZZBD among 14 item 0015AA delivery order prices reduced (R4, tab 2).

11. Respondent's (a) 8 August 1990 letter to appellant stated that at a 31 July 1990 meeting respondent proposed to appellant a settlement offer in which respondent would agree to $4.25/SF instead of $1.50 for delivery orders ZZBA, ZZBB, ZZBC and ZZBD, reducing the adjustment by $19,651.50 (without subtraction of the 1% discount respondent took)[2] to $114,078.42, and (b) 14 August 1990 letter revised its foregoing offer to appellant to include delivery order ZZAV, further reducing the adjustment by $9,779.22 (subtracting the 1% discount respondent took) to $104,299.20.[3] Neither letter mentioned payment of interest. (R4, tabs 22, 23)

12. Appellant noticed its appeal of the 8 June 1990 final decision on 31 August 1990. At the Bay Harbor I hearing on 5 November 1991, contracting officer Robert Kay testified as follows:

> Q: But the $130,000.00 that ultimately was determined to be the number that the government felt it was entitled to included money ... for work that was in progress at the time that this mistake was discovered, is that correct?
>
> A: That's correct. There were five work orders ... that were in progress at that time for line item 15AA.
>
> Q: And did the government make any attempt before issuing its final decision to determine what work orders Bay Harbor could have rejected under the contract and to give some consideration to Bay Harbor Company because of the lost opportunity to reject work?
>
> A: I believe that we indicated to Bay Harbor that they would be authorized to go ahead and complete those work orders at $4.25. And the main reason for this was because we were still in the fact-finding phase ... and more importantly we didn't want the ship sitting out there being delayed from completing their repairs while we were trying to figure out the exact dollar amount of the claim. So based on really our customer's need and to get the ships back out in the fleet, we authorized them to proceed.
>
> Q: But ... as part of the government's claim against Bay Harbor, you're now trying to change that $4.25 to $1.50 for the work that they did that was in progress at that time?
>
> A: I believe that's in our final claim. It's around $133,000.00.

(tr. 2/115-16; R4, tab 19)

13. On 29 June 1992 we denied the appeals in ASBCA Nos. 41589 and 41809.

14. Appellant's 27 July 1992 letter offered to repay $104,299.20 to respondent (R4, tab 4).

15. Respondent's 6 October 1992 letter rejected appellant's 27 July 1992 offer and stated that (a) $104,299.20 was respondent's settlement offer, which appellant's attorneys declined by a 22 August 1990 letter (not in the record) and (b) it offered to pay $4.25 for five item 0015AA orders in process when the error was discovered only if the dispute could be settled without litigation, which had not happened. Respondent demanded

[2] If the 1% discount is subtracted, the reduction is $19,454.98.

[3] That amount is $104,495.75 if the 1% discount is subtracted consistently from the adjusted item 0008AA and 0015AA prices.

$133,729.95 plus $26,416.45 interest as of 18 September 1992. (R4, tab 5)

16. Appellant's 30 October 1992 letter sent respondent a check for $104,299.20 and asserted that (a) James Horst told Robert Harr that he would reject delivery orders ZZAV, ZZBA, ZZBB, ZZBC and ZZBD if not priced at $4.25 per foot and Harr had agreed to price those orders at $4.25 long before respondent proposed any settlement amount; (b) in June 1990 Harr had told Horst that "interest stopped once the appeal was filed by us" and (c) interest should not accrue during respondent's delay from 29 June to 6 October 1992 to calculate the price adjustment, citing FAR 32.615 (R4, tab 7).

17. The only provision in FAR Subpart 32.6 which suspends or extends interest on contract debts is § 32.615, which provides:

> If delivery of the demands or notices required by the clause at 52.232-17, Interest, is delayed by the Government (e.g., undue delay after dating at the originating office or delays in the mail), the date of the debt and accrual of interest shall be extended to a time that is fair and reasonable under the particular circumstances.

Appellant submitted a detailed, substantive response to respondent's 8 June 1990 demand letter on 19 June 1990 (finding 9). We find no undue delay in receipt of respondent's demand letter.

18. Respondent's 10 December 1992 reply letter cited testimony showing that the parties knew that delivery orders for work in progress were included in the $133,000 price reduction respondent had calculated, stated that the FAR 52.232-17 INTEREST clause did not waive interest for any action of Government employees and acknowledged receipt on 2 November 1992 of appellant's $104,299.20 payment, of which respondent applied $78,489.55 to principal and $25,809.65 to interest, leaving a balance due of $55,240.40, with interest accruing at 7% (R4, tab 8).

19. Appellant's 14 December 1992 letter requested the Board to determine quantum on ASBCA Nos. 41589 and 41809 (R4, tab 9). On 23 December 1992 we docketed the quantum appeals as ASBCA Nos. 45452 and 45453.

20. Respondent's 3 [sic] January 1993 letter to appellant refers to a 4 January 1993 meeting and respondent's offer to waive additional interest if appellant repaid $55,907.83 by 8 January 1993 (R4, tab 10).

21. Appellant's 6 January 1993 letter to respondent sent $55,907.83 under protest to stop accrual of further interest and stated its disagreement with the final amount due to settle these appeals (R4, tab 14).

22. The Secretary of the Treasury established Section 12 Contract Disputes Act of 1978 (CDA) interest rates as follows:

Period	Rate	Fed. Reg. Cite	No. Cal. Days
Jan-June 1990	8.5%	54 F.R. 53798	23
July-Dec 1990	9.0%	55 F.R. 27743	184
Jan-June 1991	8.375%	56 F.R. 101	181
July-Dec 1991	8.5%	56 F.R. 30413	184
Jan-June 1992	6.875%	57 F.R. 428	182
July-2 Nov 1992	7.0%	57 F.R. 29559	124
3 Nov-Dec 1992	7.0%	57 F.R. 29559	59
1-4 Jan 1993	6.5%	57 F.R. 62418	4

23. Appellant's 24 March 1993 pleading for the first time sought interest on appellant's alleged "overpayment" to respondent. Appellant submitted no prior certified claim for such overpayment.

DECISION

Respondent has the burden of proving its claim that the amounts of principal and interest it demanded from appellant were consistent with the contract provisions and lawful. *International Gunnery Range Services, Inc.*, ASBCA Nos. 43134, 43135, 93-1 BCA ¶ 25,304 at 126,056.

Respondent argues that since in Bay Harbor I we found that appellant had not rejected any delivery order (finding 22 therein), appellant cannot relitigate which delivery orders were to be reformed in these quantum appeals, citing *International Gunnery Range, supra,* and *Maitland Brothers Co.*, ASBCA No. 29825, 85-3 BCA ¶ 18,234. Those decisions hold that in quantum litigation, facts found, determinations made and issues decided during entitlement litigation are *res judicata* or law of the case. In *International Gunnery* we rejected further evidence on the condition of trucks coming off the tactical and manned ranges. In *Maitland* we refused to relitigate the recovery of costs

Digitized by Google

beyond 22 December 1977, consistent with the entitlement finding setting that end date for cost recovery.

In Bay Harbor I we decided that respondent was entitled to reform the item 0008AA and 0015AA prices to the intended $2.50 and $1.50 unit prices (ASBCA 41589) and denied appellant's claim for the alleged constructive change from hydroblasting to mechanical PRC removal (ASBCA 41809). We made no findings about, and did not decide whether: (a) appellant had the right to reject delivery orders ZZAV, ZZBA, ZZBB, ZZBC and ZZBD, (b) the principal and interest amounts respondent demanded in June-August 1990 were consistent with the contract provisions, (c) the contracting officer agreed to exclude five pending delivery orders from the item 0015AA price adjustment, and (d) respondent agreed to suspend interest on the amount of the price reduction demanded. (See Bay Harbor I findings 25-29.) Those issues have arisen now and the parties have adduced new evidence thereon.

There is unrebutted evidence that contracting officer Robert Kay agreed to exclude the pending delivery orders ZZAV, ZZBA, ZZBB, ZZBC and ZZBD from the price reduction he sought after discovery of the mistake in preparing the contract award sheet (findings 4, 12). Excluding those five orders, the correct principal amount was $104,495.75 (finding 11). We need not decide whether appellant, three to five weeks after expiration of the three-day delivery order rejection period (finding 1(b)), had the right to reject the five orders. Respondent did not sustain its burden with respect to the principal amount. We hold that on 27 April 1990 the contracting officer unconditionally agreed to exclude those five orders (findings 4, 12). The condition that the parties settle rather than litigate the price reduction appears as an afterthought (findings 11, 15).
