tions mandate that the doors meet a certain test and be standard commercial products which carry a manufacturer's warranty; the drawings require insertion of the metal strips into the doors. Finding 6. According to Koll, no door could meet all these requirements; the strips, being mentioned in the drawings rather than the specifications, must therefore be read out of the contract. Indeed, in the current version of Koll's protean story of its door subcontractor's bid design, the subcontractor understood this on reading the solicitation and did not include a price for the strips. Finding 10.

Koll's theory is factually inconsistent with statements made by it and its subcontractor while work was progressing. Both firms maintained that the magnetic seals, as well as the metal strips, could not be provided without special design and voiding manufacturers' warranties. Finding 7 & n. 3. The seals were mandated by specification—and without the corresponding metal strips, these seals would not work. Finding 6. Thus, to the extent there was any inconsistency in contractual requirements, it was among specifications, not between specifications and drawings. Koll (or more precisely, its subcontractor, WBH) was admittedly aware of this problem before bidding. The best spin that can be put on Koll's position is that the contract was marred by a patent ambiguity. Such a circumstance raises a duty to inquire; having failed to ask GSA about the problem before bidding, the contractor must lose on its claim for an equitable adjustment. *Interstate General Government Contractors, Inc. v. Stone*, [38 CCF ¶ 76,446], 980 F.2d 1433 (Fed. Cir. 1992); *see also Plaza Maya Limited Partnership*, GSBCA 9086, 91-1 BCA ¶ 23,425, at 117,499 (1990). This rule holds true regardless of how Koll constructed its bid. *Id.* GSA is entitled to a credit for deleting from contract work the requirements to install magnetic seals and to inlay metal strips in the doors.

We turn now to the determination of the appropriate amounts of the three elements of the price adjustment. GSA is due a credit for the deletion of the metal strips and magnetic seals; the agency must pay an extra amount for the addition of the replacement means of sealing the door openings, which we have found to be weatherstripping. *See* Finding 9. The value of two of these elements is clear: the parties agree that the cost of the metal strips is $6.50 per linear foot, and the contracting officer's price of fifty cents per linear foot for weatherstripping is not in dispute. Findings 12, 14.

The contracting officer used a figure of $10.50 per linear foot for the magnetic seals. Findings 11, 13. This number may be appropriate for magnetic seals on metal doors, but we credit the statements made by WBH executives, including through an affidavit, that magnetic seals for wood doors—the kind at issue here—are very different and much less expensive. Finding 13. The list price for the magnetic seals required by the contract for these wood doors was four dollars per linear foot. *Id.* According to subcontractor WBH, the per linear foot price that it would actually have had to pay for these seals is much less; it is $1.29, $1.62, or $1.50, depending on the date one chooses. *Id.* No proof (such as an affidavit from a supplier) has been produced for any of these discounted prices, however. In the absence of any justification for selecting a price other the one in the manufacturer's catalog, we find that the figure of four dollars per linear foot should be used for the magnetic seals.

The parties have slightly different methods of calculating the markups to be applied to the base amounts for the three elements involved in the equitable adjustment. Findings 3, 5. GSA's method is acceptable to Koll for adjusting the price for conditions two through five. Finding 4. The same markups should be applied to this adjustment as well. *Singleton Construction Co.*, GSBCA 9614, et al., 90-3 BCA ¶ 23,125, at 116,109, and cases cited therein.

We are now able to determine the appropriate amount of adjustment to the contract which should result from GSA's agreement to accept weatherstripping instead of magnetic seals and corresponding inlaid metal strips on the condition one wood doors. The base amount for this change (line 1 in Finding 3) is 2,390 linear feet times the following sum: fifty cents per linear foot for the weatherstripping, less four dollars per linear foot for the magnetic seals, less $6.50 per linear foot for the metal strips. The product (2,390 × $10) is a credit of $23,900 to GSA. With markups (lines 2-14 in Finding 3), the total credit to GSA for condition one doors is $39,150.

The parties agree that Koll was entitled to an increase of $11,627 in the contract price as a result of the changes designated conditions two through five. The net credit to GSA for conditions one through five is consequently $27,523.

GSA actually took a credit for these conditions amounting to $53,951. This credit is $26,428 larger than the one to which the agency is entitled.

Digitized by Google

Decision

The appeal is GRANTED IN PART. GSA shall remit to Koll $26,428, plus interest from the date on which the contracting officer received the claim dated September 9, 1992, as per the Contract Disputes Act of 1978, 41 U.S.C. § 611 (1988).

[¶ 26,502] Diplomatic Painting & Building Services Co., Inc. v. General Services Administration

GSBCA No. 12031, October 19, 1993. Contract No. GS-11P-90-MJC-0071.

Interpretation of Contracts—Clear Meaning—Summary Judgment.—The government was entitled to a downward adjustment in the contract price for the full amount of a decrease in minimum wages, because the contract did not contain a limitation on downward price adjustments. Following the exercise of an option of a custodial services contract, the Department of Labor issued a new wage determination that required the contractor to pay 39 percent less than the minimum it was originally required to pay. The contract provided that upward price adjustments were limited to no more than 6 percent, but it contained no limitation upon downward price adjustment. Consequently, the government decreased the contractor's monthly price in accordance with the wage determination. The contractor contended that it was reasonable to incorporate a limitation on downward adjustments. However, given the lack of any limitation, a reasonable contractor could not have inferred that any limitation existed, and there was no reasonable reading of the contract that would permit a conclusion that it was ambiguous.

Interpretation of Contracts—Trade Usage—Other Government Agencies.—The government was not bound by another government agency's interpretation of a contract clause, because the interpretation of the clause in a particular manner on one occasion by another agency does not establish a trade practice. A custodial services contractor alleged that a contract clause had been interpreted by another agency to include a limitation to downward price adjustments even though the clause provided only an upward price adjustment limitation. However, another agency's interpretation of the clause had no influence on the outcome of this appeal, and evidence of how another agency viewed the clause did not establish that there was a course of dealing between the contractor and the instant agency.

Mistakes—Relief After Award—Reformation.—Reformation to include a 6 percent limitation on downward price adjustments was not appropriate, because there was no evidence that the government had ever agreed to a 6 percent limitation upon contract price reductions. Following the exercise of an option of a custodial services contract, the Department of Labor issued a new wage determination that required the contractor to pay 39 percent less than the minimum it was originally required to pay. The contract provided that upward price adjustments were limited to no more than 6 percent, but it contained no limitation upon downward price adjustment, and the government decreased the contractor's monthly price by 39 percent. However, the purpose of reformation is to give effect to the true agreement of the parties. The contract clause at issue anticipated that wage determination rates might decrease, and the clause expressly assigned to the contractor the risk of a decrease.

For the appellant: Enrique Balseiro, Bethesda, Maryland. For the government: Richard R. Butterworth, Jr., Office of General Counsel, General Services Administration, Washington, D.C.

Before DEGRAFF, NEILL, and HYATT, Administrative Judges.

DEGRAFF, Administrative Judge: Both parties move the Board for summary relief. Because there are no material facts in dispute and because General Services Administration (GSA) is entitled to judgment as a matter of law, GSA's motion for summary relief is granted and the motion of Diplomatic Painting & Building Services Co, Inc. (Diplomatic) is denied. The appeal is consequently denied.

Findings of Fact

On November 9, 1990, GSA issued an invitation for bids to supply custodial services for a building located in Washington, D.C. The proposed contract was for a one-year term, with four one-year option periods. The invitation explains that the successful bidder would be required to pay its employees the minimum wages and fringe benefits incorporated in a wage determination issued by the Department of Labor, pursuant to the Service Contract Act of 1965, 41 U.S.C. § § 351-358 (1988). Appeal File, Exhibit 1.

Section B of the invitation explains that, if GSA were to exercise any of its options, GSA would adjust the contract price pursuant to clause 552.222-43, Fair Labor Standards Act and Service Contract Act—Price Adjustment (Multiyear and Option Contracts) (June 1986). Clause 552.222-43 provides that, when an option is exercised, "[e]ighty percent of the monthly option price(s) will be adjusted upward or downward based on the percentage increase or decrease in the minimum hourly wages and fringe benefits to be paid under this contract." In order to determine the percentage increase or decrease in the minimum hourly wages and fringe benefits to be paid, the clause provides that GSA will compare the wage determination applicable to the initial contract period with the wage determination applicable to the option period. Finally, the clause provides that upward price adjustments are limited to no more than six percent. The clause does not contain any express limitation upon downward price adjustments. Appeal File, Exhibit 1.

Consistent with clause 552.222-43, section B of the invitation directs bidders not to include in their bids any allowance to cover increased costs for which contract price adjustments might be made pursuant to the price adjustment clause. Clause 552.222-43 requires bidders to certify that they have not included in their bids any allowance for increased costs for which a contract price adjustment might be made. The invitation does not prohibit bidders from including in their bids an allowance for downward contract price adjustments. Appeal File, Exhibit 1.

Diplomatic was the successful bidder and, on January 30, 1991, the parties entered into contract GS-11P-90-MJC-0071. Appeal File, Exhibit 1. During the initial year of the contract, from February 1, 1991, through January 31, 1992, wage determination 75-0098 was effective. Appeal File, Exhibits 1, 4. On September 17, 1991, the Department of Labor issued wage determination 86-1245. GSA exercised its option for one one-year period, from February 1, 1992, through January 31, 1993, and modified the contract to incorporate the new wage determination for the option period.[1] Appeal File, Exhibit 2. The new wage determination required Diplomatic to pay its employees a minimum amount for wages and fringe benefits that is thirty-nine percent less than the minimum amount that wage determination 75-0098 required Diplomatic to pay. Appeal File, Exhibits 2, 4.

On February 4, 1992, GSA notified Diplomatic that, due to the thirty-nine percent decrease in applicable minimum wages and fringe benefits, GSA was decreasing Diplomatic's monthly price in accordance with clause 552.222-43 of the contract. Appeal File, Exhibit 2. GSA decreased Diplomatic's price from $51,214.07 per month to $35,235.28 per month. Appeal File, Exhibits 2, 4.

As a result of GSA's actions, on April 30, 1992, Diplomatic submitted a certified claim to the contracting officer. Diplomatic asserted that GSA's actions were contrary to the terms of the contract which, by reasonable interpretation and by implication, contains a six percent downward adjustment limitation. Diplomatic also asserted that GSA's actions were contrary to its past dealings with the National Archives and Records Administration (Archives).[2] Diplomatic asserted that the Department of Labor's wage determination did not accurately reflect prevailing wages in the Washington, D.C. area, and requested that GSA ask the Department of Labor to revise its wage determination. Appeal File, Exhibit 3.

On June 17, 1992, the contracting officer issued a decision upon Diplomatic's claim. The decision explains that the contracting officer adjusted the contract price in accordance with contract clause 552.222-43. Attached to the decision is an explanation of the contracting officer's computations. In the decision, the contracting officer states

[1] The appeal file does not state the date that GSA exercised this option.

[2] The National Archives and Records Administration interpreted clause 552.222-43 as containing a limitation upon downward contract price adjustments equal to the clause's express limitation upon upward contract price adjustments. Supplemental Appeal File, Exhibit 1. There is no evidence to suggest that GSA was aware of this interpretation until Diplomatic submitted its claim letter.

Digitized by Google

that the parties' contract contains no six percent downward adjustment limitation, and also states that a contract between Diplomatic and another government agency is irrelevant to the interpretation of a contract between Diplomatic and GSA. Appeal File, Exhibit 4.

On September 18, 1992, Diplomatic filed its notice of appeal with the Board. We assume that this filing was timely, given that GSA has not argued otherwise.[3]

GSA filed a motion for summary relief on April 15, 1993. Diplomatic asserted that it needed additional discovery in order to oppose GSA's motion. We denied GSA's motion on May 18, 1993, in order to provide Diplomatic with the opportunity to conduct its discovery.

On June 9, 1993, GSA filed a second motion for summary relief. In its motion, GSA asserts that this appeal presents only an issue of contract interpretation and that it is entitled to prevail. GSA argues that clause 552.222-43 is clear and that it does not include a six percent downward adjustment limitation. In addition, GSA argues that the interpretation of clause 552.222-43 by Archives is not binding upon GSA. GSA also asserts that it has consistently interpreted clause 552.222-43 as containing a limitation upon upward contract price adjustment, and not containing a limitation upon downward contract price adjustments. Attached to GSA's motion is an affidavit from the author of clause 552.222-43, who states that the clause was drafted in order to protect the Government from exorbitant wage increases during the option years of contracts. The author states that the clause has never been interpreted by GSA as limiting downward adjustments to contract price.

On June 15, 1993, Diplomatic filed a motion to compel GSA to respond to certain of Diplomatic's discovery requests. GSA agreed to provide Diplomatic with information from GSA's regional offices concerning GSA's interpretation of clause 552.222-43. On June 24, 1993, and July 14, 1993, GSA provided Diplomatic and the Board with declarations signed by persons in each region who know whether, and to what extent, GSA has made downward adjustments to contract prices, based upon clause 552.222-43. The declarations establish that, in regions where downward adjustments have occurred, GSA has *not* interpreted clause 552.222-43 as containing a limitation upon those adjustments.[4]

On August 6, 1993, Diplomatic filed its opposition to GSA's motion for summary relief and a cross-motion for summary relief. In its brief, Diplomatic contends that clause 552.222-43 is latently ambiguous, given that GSA and Archives interpret the clause differently; that Archives' interpretation is more fair than GSA's interpretation; that Diplomatic's interpretation of the clause is reasonable; that no meeting of the minds occurred concerning the meaning of the clause because GSA never considered what action it would take if wage determination rates were lowered; and that the contract should be reformed.[5]

On August 27, 1993, GSA filed its reply to Diplomatic's opposition to GSA's motion for summary relief and its opposition to Diplomatic's motion for summary judgment. GSA noted that Diplomatic's assertion that the contract should be reformed is based upon cases involving mistakes in bids. GSA also noted that Diplomatic had never before presented any argument concerning mistake in bid.

On September 16, 1993, Diplomatic filed its reply to GSA's opposition to Diplomatic's motion for summary relief. Diplomatic asserts that GSA knew or should have known that Diplomatic's bid was based upon a mistaken belief, shared by GSA, that wage determination rates would not be lowered. Diplomatic argues that, due to this mistake, GSA is reaping a windfall and that reformation of the parties' contract is appropriate.

Discussion

Summary relief is appropriate when there are no genuine issues of material fact in dispute and when the moving party is entitled to judgment as a matter of law. Rule 8(g); *CRC Systems, Inc. v. General Services Administration*, GSBCA 11173, 93-2 BCA ¶ 25,842. We agree with GSA that the issue

[3] The appeal file contains no evidence to establish when Diplomatic received the contracting officer's decision.

[4] On July 16, 1993, GSA supplemented its motion for summary relief by submitting these eleven declarations as an exhibit to its motion.

[5] Diplomatic also asserts that, although the minimum wages and benefits that it is obligated to pay have decreased, its labor-related expenses (payroll taxes, unemployment compensation insurance, worker's compensation insurance, liability insurance) have increased, and Diplomatic claims that it is entitled to payment for these increased expenses. We do not address Diplomatic's assertion because Diplomatic has never submitted a claim to GSA requesting payment for these amounts.

Digitized by Google

presented in this appeal is one of contract interpretation and such a question is one of law, not of fact. Further, we agree with GSA's reading of clause 552.222-43. The clause is clear and does not include a six percent downward adjustment limitation. There is simply no reasonable reading of the clause which will permit us to conclude that it is ambiguous or that it incorporates any limitation upon downward adjustments. Given the express limitation upon upward adjustments and the pointed lack of any such limitation upon downward adjustments, a reasonable contractor could not have inferred that any limitation upon downward adjustments existed. *Hills Materials Co. v. Rice* [38 CCF ¶ 76,454], 982 F.2d 514 (Fed. Cir. 1992). We also agree with GSA that, if Diplomatic takes issue with the wage determination, it must present its case to the Department of Labor. *JL Associates, Inc. v. General Services Administration*, GSBCA 11922, 93-3 BCA ¶ 25,939.

We do not find any of Diplomatic's arguments convincing. The interpretation of clause 552.222-43 by Archives does not influence the outcome of this appeal. Diplomatic had no reason to assume that GSA would interpret the clause in a manner consistent with another government agency and in a manner inconsistent with the terms of the clause itself. Similarly, Diplomatic had no reason to suppose that GSA would be bound by another government agency's interpretation of the clause. Evidence of how Archives viewed the clause at issue does not establish that there was a course of dealing between GSA and Diplomatic. The fact that Archives had, upon one occasion, interpreted the clause in a particular manner does not establish a trade practice. *Mission Van and Storage, Inc.*, GSBCA 7386, 85-1 BCA ¶ 17,814, *aff'd reconsideration*, 85-2 BCA ¶ 18,032.

We also reject Diplomatic's argument that GSA is reaping a windfall and that Archives' interpretation of clause 552.222-43 is more fair than is GSA's interpretation. Diplomatic has offered no evidence to support its allegation that GSA is reaping a windfall. As for what is fair, Diplomatic's and Archives' interpretation of the clause could easily achieve a result that is unfair to the Government: As Diplomatic reads the clause, even though it was entitled to reduce its workers' wages and fringe benefits by thirty-nine percent, GSA was entitled to reduce a portion of the contract price by only six percent. According to the Department of Labor's determination, Diplomatic could have substantially reduced wages and fringe benefits and still been able to hire workers to perform the contract. It is not unfair to require Diplomatic to pass through to GSA the benefit of the Department of Labor's determination or, if Diplomatic believes that the Department of Labor's determination is wrong, to require Diplomatic to complain to the Department of Labor.

Finally, we do not agree that the contract should be reformed to include a six percent limitation upon downward price adjustments. If both parties entered into this contract relying upon a mistaken belief as to a basic fact, the contract could be reformed in order to make its terms conform to the true state of the facts. The purpose of reformation is to give effect to the true agreement of parties, and reformation is not appropriate unless there is convincing evidence that the parties agreed to be bound in accordance with the terms that Diplomatic seeks to establish. *Atlas Corp. v. United States* [36 CCF ¶ 75,810], 895 F.2d 745 (Fed. Cir.), *cert. denied*, 498 U.S. 811 (1990). If, as Diplomatic asserts, there was no meeting of the minds, then reformation is definitely not appropriate. As for Diplomatic's assertion that the parties were mistaken in their belief concerning whether wage determination rates would decrease, there is no evidence that either party held any particular belief concerning what might happen to wage determination rates. There is also no evidence that GSA ever agreed to a six percent limitation upon contract price reductions. The contract clause at issue anticipated that wage determination rates might decrease and the clause expressly assigns to Diplomatic the risk of a decrease. We have no basis for reassigning the risk that Diplomatic assumed when it entered into the contract.

Decision

For the reasons stated above, GSA's motion for summary relief is GRANTED and Diplomatic's motion for summary relief is DENIED. The appeal is consequently denied.

[¶ 26,503] Calvin Harris dba Harris Electric, Linda Harris dba C&L Electric

PSBCA Nos. 3392, 3393, 3394, October 26, 1993. Contract Nos. 059990-91-B-W001, 059990-91-P-0361, 05990-91-P-1212.

Procedure, Boards—Dismissals—Default Converted to Termination for Convenience.—An appeal involving the propriety of the default termination of a contract was dismissed as moot, because the contracting officer's voluntary conversion of the default termination to a termination for the convenience of the government rendered moot the only issue ripe for the board's consideration. The only issue before the board was the validity of the default termination. When, as in this appeal, the actions of a party or the parties to an appeal resolve all the issues properly before the board, the appeal becomes moot.

For the appellant: Gagen, McCoy, McMahon & Armstrong, Danville, California, by Patrick J. McMahon and Michael P. Candela. For the government: Robert E. O'Connell, San Bruno Field Office, United States Postal Service, San Bruno, California.

Before MENEGAT, COHEN, and FINN, Administrative Judges.

MENEGAT, Administrative Judge: Respondent has filed a Motion to Dismiss these appeals, contending that they are moot because the contracting officer has converted the three default terminations which underlie these appeals to terminations for convenience. Appellant opposes the motion, arguing that the appeals should be sustained instead of dismissed. For purposes of this motion we make the following findings of fact.

Findings of Fact

1. Calvin Harris d/b/a Harris Electric held two contracts and Linda Harris d/b/a C&L Electric one contract with the Postal Service for providing electrical maintenance, repair and alteration services to the Postal Data Center at San Mateo, California (Appeal File for PSBCA No. 3392 ("AF 3392") Tab 26; AF 3393 Tab 7; AF 3394 Tab 6).

2. By substantially identical letters dated October 19, 1992, the contracting officer terminated each contract, giving as the reason: "Failure to allow U.S. Postal Service representatives to have access to and examine pertinent records, documents, papers or other records involving transactions related to this contract as required by Clause B-14, 'Examination of Records' ...." (AF 3392 Tab 39; AF 3393 Tab 17; AF 3394 Tab 18).

3. Each termination was appealed, and Appellants' complaint, addressing all three of the contract terminations, was docketed on January 21, 1993, with separate docket numbers assigned to the appeal for each contract. In the complaint, Appellants contended the terminations for default were wrongful and sought special damages totaling $358,000, damages in excess of $100,000 for Appellants' severe emotional pain and suffering, costs and attorney fees (Complaint ¶ 13-15 and Prayer). None of Appellants' claims for monetary damages have been presented to the contracting officer.

4. On August 11, 1993, the contracting officer wrote virtually identical letters to Appellants converting each of the three October 19, 1992 terminations for default to terminations for convenience:

> "I have decided that it is in the best interest of the Postal Service to withdraw the October 19, 1992 termination for default ... and instead terminate that contract for the convenience of the Postal Service. Therefore, in accordance with the [termination for convenience clause] the Contract is terminated for convenience effective October 19, 1992...." (Exhibit A to Respondent's Motion to Dismiss)

Each letter requested that Appellants submit a claim in accordance with the termination for convenience provisions of the contract. Appellants have not filed termination for convenience claims with the contracting officer.

5. On August 20, 1993, Respondent filed its Motion to Dismiss, based on the contracting officer's conversion of the terminations for default to terminations for convenience.

Decision

Respondent argues that the contracting officer's conversion of the terminations for default to terminations for convenience affords Appellants all the relief they could have obtained in these appeals and that, therefore, the appeals are moot and should be dismissed with prejudice. Respondent relies on two of our prior decisions, *Alta Construction Co.*, PSBCA No. 1463, 90-3 BCA ¶ 22,966, and *Atterton Painting & Construction, Inc.*, PSBCA No. 2696, 90-2 BCA ¶ 22,681, to support its arguments that these appeals are moot as the terminations for default have been withdrawn.

Appellant opposes the motion to dismiss, arguing that the contracting officer's conversion of the default terminations to terminations for convenience is a concession that the original terminations for default were

©1994, Commerce Clearing House, Inc.

Digitized by Google

improper and that, consequently, the Board should sustain the appeals. Appellants rely on *Telimed Health Systems, Inc.*, ASBCA No. 42886, 92-1 BCA ¶ 24,401, in which the Armed Services Board of Contract Appeals followed the course urged by Appellants. Appellants also point out that we did not dismiss the appeals in either *Alta* or *Atterton*, the cases Respondent relies upon.

The only issue properly before the Board in these appeals is the validity of the terminations for default. None of the claims set forth in Appellants' complaint have been presented to the contracting officer for decision, and, therefore, the Board lacks jurisdiction to consider them. 41 U.S.C. § 605(a); *Paragon Energy Corp. v. United States*, 645 F.2d 966, 971 (Ct. Cl. 1981); *Spotless Janitorial Services*, ASBCA Nos. 44365 et al., 93-2 BCA ¶ 25,873; *James H. Foster*, PSBCA No. 3152, 93-1 BCA ¶ 25,362; *Lou Faro Leasing, Inc.*, PSBCA No. 2889, 91-2 BCA ¶ 23,668; *Wayne R. Hilf*, PSBCA No. 2800, 91-1 BCA ¶ 23,628.[1]

The only remaining issue is whether the appeals as they relate solely to the terminations for default should be dismissed, as Respondent urges, or sustained, as Appellants urge, now that the contracting officer has voluntarily converted the terminations to terminations for convenience. When, as in these appeals, actions of a party or the parties to an appeal resolve all issues properly before the Board, the appeal becomes moot. *Alta Construction Co., supra; Atterton Painting & Construction, Inc., supra.* Under such circumstances, dismissal is appropriate. *Richard R. Wilson*, PSBCA No. 3409, May 7, 1993; *H.H. Christian Co.*, AGBCA No. 82-120-1, 83-1 BCA ¶ 16,335; *see Alta Construction Co., supra; Atterton Painting & Construction, Inc., supra.*[2]

In *Atterton Painting & Construction, Inc.*, we did not dismiss the appeal because although the contracting officer had withdrawn the termination for default, he had not withdrawn the Postal Service's assertion of a right to withhold the unpaid balance due under the contract. The appellant had appealed the withholding of contract funds as well as the termination for default. Therefore, we suspended proceedings on the issue that remained before the Board, the unpaid contract funds, to allow the submission and consideration of a termination for convenience claim. Likewise, in *Alta Construction Co.* there remained before the Board the appellant's monetary claim for bonds and legal fees which had been made to the contracting officer and implicitly denied in the contracting officer's final decision that the appellant had appealed. For that reason the Board did not dismiss the appeal in *Alta Construction Co.*

In these appeals, however, the only issue properly before the Board was the propriety of the terminations for default. The contracting officer's voluntary conversion of those to terminations for convenience renders moot the only issue that was ripe for our consideration. As there is nothing further for the Board to consider and, unlike in *Atterton* and *Alta*, there is no reason to retain these appeals on our docket, the appeals of the terminations for default are dismissed

[1] As we have no jurisdiction over these claims absent their prior presentation to the contracting officer, we make no finding regarding their validity. We have held in the past, however, that damages for emotional pain and suffering, damages arising from tort independent of the contract and punitive or exemplary damages are generally not recoverable in contract dispute actions before the Board. *Eg., Onice Ulmer*, PSBCA No. 2938, 91-2 BCA ¶ 23,991 *aff'd on recon.* 91-3 BCA ¶ 24,345; *Roger Dean Barrett*, PSBCA No. 2490, 89-3 BCA ¶ 22,220; *Paul A. Mason*, PSBCA No. 1473, 86-3 BCA ¶ 19,142; *Shorthaul Trucking Co.*, PSBCA No. 1046, 84-1 BCA ¶ 17,012, 1985 WL 16706, June 18, 1985. Additionally, Appellants' request concerning attorney fees is premature. *American Federal Contractors, Inc.*, PSBCA No. 1359, 87-2 BCA ¶ 19,848. Attorney fees are authorized under the Equal Access to Justice Act, as amended, 5 U.S.C. § 504, to qualified applicants who are prevailing parties in Board proceedings. If Appellant qualifies, an application under the Act and implementing regulations (39 C.F.R. Part 960) may be filed with the Board within the statutory time period after the Board's decision becomes final. *R&W Construction Co., Inc.*, PSBCA No. 2357, 90-1 BCA ¶ 22,381.

[2] As Appellants have pointed out, the Armed Services Board of Contract Appeals in similar circumstances has sustained appeals rather than dismissed them. *See Telimed Health Systems, Inc.*, ASBCA No. 42886, 92-1 BCA ¶ 24,401; *Information Systems and Network Corp.*, ASBCA No. 41514, 92-3 BCA ¶ 25,049. We see no difference in the effect of the method of disposal, and we will follow our precedent, on which the parties are entitled to rely.

Digitized by Google

with prejudice. *See Richard R. Wilson, supra.*

The other claims asserted in Appellants' complaint are dismissed without prejudice for lack of jurisdiction. *See supra* note 1.

[¶ 26,504] Danrenke Corporation

VABCA Nos. 3601E, 3721E, 3722E, 3736E, October 29, 1993. Contract No. V691C-1297.

Attorney Fees and Costs Under Equal Access to Justice Act—Bar to Claims—General Release by Contractor.—A general release executed by a contractor under a settlement agreement did not bar the contractor's claim for attorney fees and expenses under the Equal Access to Justice Act, because the release barred only claims arising under the contract and the claim under the EAJA derived from a statutory right independent of any rights granted either by the contract or by the Contract Disputes Act. The parties could have provided for an EAJA award in their settlement agreement or could have otherwise agreed to foreclose application for any EAJA award. In this case, however, the government failed to meet its burden of proving that the parties agreed during the settlement discussion that an EAJA application would be precluded under the executed settlement agreement.

Attorney Fees and Costs Under Equal Access to Justice Act—Prevailing Party—Settlement Agreement.—Although a contractor's appeal involving the propriety of a default termination was settled by an agreement of the parties, the contractor was nevertheless considered a prevailing party under the Equal Access to Justice Act, because it achieved the major benefit it sought. As a result of the agreement, the default termination was rescinded and converted to a no-cost termination for convenience. Likewise, the contractor prevailed on a government claim for a credit due as a result of a deductive change, because the government waived payment for the change.

Attorney Fees and Costs Under Equal Access to Justice Act—Substantial Justification—Default Termination.—In an appeal settled by agreement, the board determined that the government's position in issuing a notice of default termination was not substantially justified, because the government offered no explanation of why its decision to terminate the contract for default was justified. In agreeing to settle the appeal, the government rescinded the default termination and converted it to a no-cost termination for convenience. The government contended that because the "no-cost" termination for convenience was agreed to by the parties, it was justified in taking such action. The government's contention, however, was not considered by the board to be sufficiently compelling to establish that the government's position was substantially justified.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Prelitigation Expenses.—In determining the amount of attorney fees due a contractor under its Equal Access to Justice Act claim, the board deducted fees that were incurred prior to the contracting officer's final decision, because these fees were not considered to be incurred in connection with the adversary adjudication. The efforts of a contractor or its attorney in presenting a claim that ultimately results in an appeal and subsequent litigation before the board are work performed in connection with routine claims processing, not an adversary adjudication.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Prelitigation Consultant Costs.—Consultant costs incurred prior to the contracting officer's issuance of a final decision were not recoverable by a contractor under the Equal Access to Justice Act, even though these costs were necessary to the preparation of the case, because there was no evidence to support the contractor's contention that the services were related to the adversary adjudication, as opposed to the administration of the contract. The consultant did not testify as an expert witness, and there was little proof of his services or that the services were necessary to the litigation.

Attorney Fees and Costs Under Equal Access to Justice Act—Prevailing Party—Unsuccessful Motion.—Attorney fees associated with the preparation and draft-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ing of a motion for summary judgment, as well as the secretarial costs incurred in preparing the motion, were not recoverable by a contractor under its Equal Access to Justice Act application, because the contractor could not be considered a prevailing party with respect to the motion. The board found that the government's opposition to the motion was justified and denied the motion because of the existence of genuine issues of material fact and law.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Secretarial Costs.—Secretarial costs that were included in the hourly rate charged by an attorney when his efforts required a secretary were recoverable by a contractor under its Equal Access to Justice Act application, because the combined hourly rates did not exceed the statutory ceiling of $75 per hour. Secretarial charges are not separately recoverable under the EAJA as allowable attorney expenses, because those services are considered an office overhead expense typically subsumed in the attorney's hourly rate. Here, the attorney added a $15 secretarial charge to his normal $60 per hour fee and billed his client $75 per hour.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Miscellaneous Expenses.—Miscellaneous expenses incurred by an attorney for postage, Federal Express mailing, and binders were recoverable by a contractor under its Equal Access to Justice Act application, because there was sufficient detail in the itemized statements of costs and invoices for the board to determine the reasonableness of the costs.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Corporate Expenses.—Corporate expenses incurred by a corporate contractor, including telephone expenses, mailing charges, photocopying expenses, and expenses for copying drawings, were not recoverable under the Equal Access to Justice Act, because most corporate expenses are not recoverable where, as here, the contractor was represented by counsel.

Attorney Fees and Costs Under Equal Access to Justice Act—Amount—Apportionment.—In determining the amount of fees due a contractor that had succeeded in one appeal in having a default termination converted to a no-cost termination for convenience but that did not prevail in another appeal relating to retained funds, the board apportioned recovery of fees on a 50-50 split because the record did not enable the board to separate the expenses associated with the two related appeals. In resolving these two appeals, both parties relinquished portions of their positions, the government, its default action, and the contractor, its termination costs and retained funds associated with the allegedly defective work on which the government based its default.

For the appellant: Harold C. Malloy, Austin, Texas. For the government: John M. Manfredonia, Trial Attorney, Phillipa L. Anderson, Deputy Assistant General Counsel, and William E. Thomas, Jr., Assistant General Counsel, Washington, D.C.

Before PULLARA, MCMICHAEL, and ROBINSON, Administrative Judges.

PULLARA, Administrative Judge: Danrenke Corporation (Danrenke or Applicant), has filed a timely Application (Appl.), pursuant to the Equal Access to Justice Act (EAJA or Act), 5 U.S.C. §504, to recover attorney fees and other expenses incurred in connection with its litigation of the above-captioned appeals which were settled without hearing. The Department of Veterans Affairs (VA or Government) filed a Reply to Applicant's EAJA Application (Gov't Rply.). Thereafter, the Applicant filed a Rebuttal (Appl. Rebuttal) and a Supplement in support of its Application (Appl. Supp.).

The Applicant has asserted that it meets the eligibility requirements of EAJA with respect to its net worth and number of employees, and has provided adequate supporting evidence in that regard. The Government has not contested that assertion and stipulates that Applicant's net-worth exhibits establish its eligibility as a "party" in accordance with 5 U.S.C. §504(b)(1)(B). The Board finds that Danrenke is an eligible Applicant with respect to its business status.

The parties are in disagreement with respect to whether the EAJA application itself is barred by the terms of the Settlement Agreement entered into by the parties and whether the Government's position was substantially justified. Also, the Government

Digitized by Google

contests the amount of attorney fees and costs.

FINDINGS OF FACT

The underlying appeal was taken from a Contracting Officer's final decision dated March 25, 1992, which terminated for default the Contractor's right to proceed with performance of certain electrical renovations at the VA Medical Center (VAMC), in Los Angeles, California. (R4, tab 80) The Appellant, Danrenke, was awarded a fixed price subcontract by the VA through the Small Business Administration (SBA), pursuant to Section 8(a) of the Small Business Act. The Notice to Proceed was issued on February 7, 1991, and the Contract completion date was July 5, 1991. (R4, tab 19) Two time extensions were issued during the course of performance, which extended the completion date to August 14, 1991. (R4, tabs 34 and 46)

Danrenke alleged that the work was essentially completed on time, however, the VA and Danrenke engaged in numerous meetings and exchanged correspondence from August 1991 to January 1992, concerning whether certain work had been performed in accordance with the Contract specifications and National Electrical Code (NEC). (R4, tab 49-75) The parties disagreed as to whether some work needed to be replaced and whether Danrenke was entitled to final payment.

In a letter dated January 23, 1992, the VA notified Danrenke of nine conditions that the Government considered to be deficiencies in violation of the NEC, and endangering performance of the Contract. Danrenke was informed that if these conditions were not cured within 10 days after receipt of the notice the Government might terminate the Contract for default. (R4, tab 73) Danrenke responded in a letter dated January 31, 1992, that seven of the alleged deficient items were not deficient, and that as to two of the items, an on-site meeting should be arranged between the parties. Danrenke further stated that:

> [W]e have a serious disagreement as to interpreting the contract requirements. The nine citations are vague, ambiguous, and unsubstantiated with contractual references. We cannot determine from your letter precisely what it is you would have us do in order to "cure" these alleged conditions .... When we receive your direction, we will prepare our monetary claim covering your added requirements.

(R4, tab 74 at 6, ¶ 4)

On February 5, 1992, the VA met with Danrenke and SBA and was asked by the SBA to identify each of the deficiencies with a code violation. The VA electrical engineer stated that he could cite each deficiency but it would take at least a week. (R4, tabs 75-76) Thereafter, at a meeting held with Danrenke and SBA on February 27, 1992, the VA identified and discussed each violation by NEC code number and provided information regarding said violations. Three alleged deficiencies were deleted by the VA. The parties visited the site and Danrenke was shown the location of the remaining alleged deficiencies. The Contractor was "asked to correct all deficiencies and complete the job." (R4, tab 77) The Contractor disagreed that there were any outstanding deficiencies.

In a letter dated March 5, 1992, Danrenke informed the VA that there were no deficiencies, furnished a letter in support of its position from the cable manufacturer, and stated:

> Danrenke has completed the project; the installation has operated in accordance with the contract requirements since August 3, 1991; it represents a good job by the contractor under the circumstances, and we deserve to have the work accepted and our final bill paid. Danrenke strongly believes that the information contained in this letter is sufficient to bring this contract to a conclusion. It was our expressed preference to resolve our differences amicably thereby avoiding the necessity to escalate our disputes to the Veterans Administration Board of Contract Appeals. We have taken much time to research and consult with the appropriate authorities concerning the alleged deficiencies and by doing so, we have incurred costs beyond the scope of the work required for our contract. Please give this matter your immediate attention so that this contract can be concluded. Regretfully, if the Government insists on compliance with orders to complete work not required or substantiated by the contract, we will proceed to the board for the resolution of these matters.

(R4, tab 78)

On March 16, 1992, the VAMC's Chief, Engineering Service, informed the Contracting Officer by memorandum, that he did not agree with Danrenke's justifications

©1994, Commerce Clearing House, Inc.

Digitized by Google

provided in the above-mentioned March 5, 1992 letter, and recommended that the Contracting Officer take appropriate action to correct the deficiencies noted above. (R4, tab 79) Thereafter, in a letter dated March 25, 1992, the Contracting Officer notified Danrenke that its right to proceed with performance under the Contract was terminated for default. The default notice was considered effective immediately. The Contracting Officer further informed Danrenke that:

> [Y]ou have taken no action to correct the remaining five (5) deficiencies listed in my "CURE LETTER" dated January 23, 1992. Per your request, references of NEC Code Violations were supplied to you at our meeting on February 27, 1992. We disagree with all the justification provided as none of the responses satisfied the requirements of the contract drawings and specifications as documented. As a result the following deficiencies still exist (items b, d, e, f, and g).

(R4, tab 80)

The Contractor's Notice of Appeal of the Contracting Officer's final decision for termination for default was received by the Board on April 28, 1992, and assigned appeal number VABCA No. 3601. The Contractor alleged that the decision was erroneous for the following reasons:

> 1. The contractor is not in default and to the extent, if any, there has been any nonconformance with the terms and conditions of the subject contract, such occurred beyond the control and without the fault or negligence of the contractor;
>
> 2. Deficiencies cited by the Contracting Officer are not deficiencies but are perceived as such because the Contracting Officer has construed the contract requirements erroneously;
>
> 3. Deficiencies, if any, were the result of actions by the Government in its contractual capacity in preparing, or having prepared for it, defective specifications and drawings for the contract work;
>
> 4. The Contracting Officer breached her duty to aid the contractor in its performance by refusing to inform the contractor precisely what the Government wanted the contractor to do in order to correct the alleged deficiencies.

(Notice of Appeal at 1)

The Contractor had also previously submitted claims in the amount of $1,645.32 for an alleged change order concerning an additional 150 amp breaker (VABCA No. 3721) and $5,883.11 for final payment (VABCA No. 3722), in November 1991. (R4, tab 67) On April 1, 1992, the Contracting Officer denied Danrenke's demand for $1,645.32, stating that she had previously denied the request for a change proposal in a meeting held on July 8, 1991 and by letter dated July 10, 1991. (R4, tab 81) In so deciding, the Government reasoned that although it had instructed Danrenke that a breaker was not needed, Danrenke nevertheless purchased and installed the breaker. Therefore, Danrenke's proposal was denied. The Contracting Officer also informed Danrenke that its demand for final payment was denied because the work wasn't performed in accordance with the specifications and drawings and an inspection determined that the work was unacceptable due to many deficiencies. These appeals were docketed on July 7, 1992, and assigned docket numbers VABCA Nos. 3721 and 3722, respectively, and consolidated.

On July 9, 1992, the Appellant filed a Motion for Summary Judgment asserting that there were no genuine issues as to any material facts, that it was entitled to judgment as a matter of law, and that the termination for default should be converted to a termination for the convenience of the Government. The Contractor asserted that the Contracting Officer waived the schedule and completion date of the Contract by insisting that correction of alleged deficiencies be made by the Appellant after the Contract completion date had passed and that the Appellant relied on such waiver to its detriment. Danrenke also argued that the Contracting Officer's "cure notice" provided no specific directions as to what Danrenke should do to cure the alleged deficiencies, and that the Contracting Officer did not set a new completion date for performance. Finally, Danrenke alleged that the Contracting Officer failed to consider Federal Acquisition Regulations (FAR) pertaining to factors the Contracting Officer should consider before issuing a termination for default.

In response, the Government asserted that Danrenke did not complete the work in a professional manner and abandoned the job by refusing to take corrective action as directed by the VA. It further contended that the Contracting Officer acted within a reasonable time and did not waive the completion date. The Government also denied that its "cure notice" was deficient, or that the Contracting Officer failed to consider the FAR provisions relating to termination for default.

Digitized by Google

Thereafter, in a letter dated August 10, 1992, Contracting Officer Helen Rivers informed the Appellant that the Government was asserting a claim against Danrenke for a credit owed under the Contract in the amount of $17,205.04 due to the Contracting Officer's "determination that as a result of a deductive change, Danrenke was no longer required to install the #500 mcm wires at Building 114." The Contractor was informed that this was the Contracting Officer's final decision and that payment should be made within 14 days. On August 12, 1992, the Appellant responded to the Contracting Officer's claim asserting *inter alia*, that Danrenke had installed the wires in Building 114, that the installation had been certified, and that the certification acknowledged that the services and articles were received and a progress payment had been made. Government counsel responded by facsimile on August 13, 1992, that the Contracting Officer's decision inadvertently mistook Building 114 as the location where the wiring was not installed rather than the actual location, Building 117. The Contractor's attorney was informed that the VA was investigating the matter and would revise the Contracting Officer's final decision to the extent necessary. However, rather than await the Government's investigation or further response to this issue, on August 18, 1992, Danrenke filed a Notice of Appeal (VABCA No. 3736).

In the meantime, on August 18, 1992, the Board issued a decision denying the Appellant's Motion for Summary Judgment. We held that there were factual issues raised as to whether the Appellant, in not proceeding, would have done so if clearly directed or had abandoned performance of the Contract. The Board also determined that although the cure notice lacked specificity, there were questions of fact as to whether Danrenke still did not understand what the VA expected to be corrected after several meetings and discussions ensued following the issuance of the cure notice. We also rejected the Appellant's argument that the failure of the Contracting Officer to set a new schedule or delivery date was a violation of FAR 49.402-3(c) since this was a construction contract rather than a supply contract. There were also questions of fact as to the extent if any that the Contracting Officer failed to comply with various FAR provisions.

On August 20, 1992, the Board received from the Government, by facsimile, a memorandum notifying us that the parties had agreed to settle the appeals. (Gov't Rply., Exh. 3) Thereafter, the parties took steps to convert their agreement into writing. The Government submitted a proposed settlement agreement to Danrenke which included in pertinent part the following language:

> 2. Respondent agrees to convert the termination for default of Contract No. V691C-1297 to a termination for convenience at no fu[r]ther cost to either party.
>
> 3. Respondent hereby releases Appellant from any and all claims, future and present, arising out of Contract No. V[691C-1297]. This includes, but is not limited to, excess reprocurement costs, deductive change order work, and all other claims.
>
> 4. Appellant hereby releases Respondent from any and all claims, future and present, arising out of Contract No. V[691C-1297]. This includes but is not limited to, change order work, reimbursement of contract retainage, and all other claims.

(Gov't Rply., Exh. 1)

On September 1, 1992, Danrenke provided its version of a proposed settlement agreement to the Government which included in pertinent part the following language:

> 2. Respondent agrees to convert the termination for default of Appellant under Contract No. V691C-1297 to a termination for convenience of the Government at no further cost to either party hereto.
>
> 3. Respondent agrees to and does hereby release Appellant from any and all claims whatsoever, present and future, arising out of or relating to Appellant's performance of Contract No. V691C-1297, including, but not limited to, claims for excess reprocurement costs and deductive change order.
>
> 4. Appellant agrees to and does hereby release Respondent from any and all claims whatsoever for loss or damages arising out of the performance of Contract No. V691C-1297, including claims for change order work and reimbursement of contract retainage.

(Gov't Rply., Exh. 2).

Further negotiations took place but ultimately the Government Counsel and Contracting Officer executed the Appellant's September 1 version of the settlement agreement, on September 2 and 8, 1992, respectively. The agreement was forwarded to the Appellant and signed by Keith Howell on September 14, 1992. (Appl., Exh. B) Where-

Digitized by Google

upon, on September 23, 1992, Attorney Malloy forwarded to the Government *another redraft* of his proposed settlement agreement, this time reserving the Appellant's right to assert its claim "for reimbursement of contract retainage in the amount of $5,883.11." The Government refused to sign the redraft. (Gov't Rply., p. 4 and 5, Exh. 4) Ultimately, Attorney Malloy signed his September 1 draft of the settlement agreement on September 28, 1992. (Appl., Exh. B) The fully executed settlement agreement, referred to in our further discussion as the Settlement Agreement, was filed with the Board on October 6, 1992, as an attachment to the EAJA Application.

It is noted that the draft settlement agreements which were circulated among the parties, and the Settlement Agreement which was ultimately executed, did not make specific reference as to whether the Applicant was precluded from submitting an EAJA Application to this Board. Although the Government asserts that "Respondent informed Appellant that the final version of the settlement agreement precluded all claims whatsoever, including attorneys fees," (Gov't Rply. at 2) there is no documentation verifying this assertion nor is there evidence that Danrenke orally agreed to this request or intended for the settlement to include said fees and costs.

Thereafter, on November 4, 1992, Danrenke submitted an "Application for Fees and Expenses" seeking $6,635.33 in attorney fees, $2,675 for consultant fees, $393.75 for secretarial costs, and $574.24 for miscellaneous costs such as postage, telephone calls, photocopying and federal express mailings, for a total EAJA claim of $10,278.32. (Appl.) (The Application incorrectly totaled the amount of attorney fees and expenses as $9,994.57.) The Application is based, in part, on an hourly rate of $60 per hour for Attorney Malloy's legal services. The Applicant asserted that it was the prevailing party and that the Government's position was not substantially justified. The Government submitted a Reply in opposition to Danrenke's Application and asserted that said Application was barred under the terms of the Settlement Agreement and that the Applicant had not shown that the Government's position was not substantially justified. The Government also contested the amount of attorney fees and costs.

The Applicant subsequently filed a Rebuttal to the Government's Reply and a Supplement to its EAJA Application. In its Supplemental EAJA Application, the Applicant acknowledged that it did not prevail on the monetary claims pursued in VABCA Nos. 3721 and 3722. Therefore, Danrenke's counsel deleted 4.5 hours in attorney fees attributable to the drafting of its Complaint and Amended Complaint and 3.25 hours in secretarial services for typing these documents. (Appl. Rebuttal at 7, Appl. Supp. at 1). The Applicant's supplement also included an additional claim of $1,736.25 for 26.25 hours in attorney fees for preparing its Rebuttal and 10.75 hours for secretarial services. Therefore, the fees and costs claimed in this EAJA proceeding total $11,302.07.

DISCUSSION

The first issue we must address is whether Danrenke's Application for attorney fees and costs pursuant to the Equal Access to Justice Act is barred by the negotiated settlement entered into by the parties. The parties disagree as to whether attorney fees and costs were precluded under the settlement. Each party contends that the language contained in the Settlement Agreement is "unambiguous" in support of their opposing opinions as to whether the final settlement addressed attorney fees and costs.

Applicant's attorney alleges that the revision to the Government's proposal, wherein the phrase "arising out of Contract No. V691C-1297" was deleted and the words "arising out of *the performance* of Contract No. V691C—1297" were inserted, created a "major change to the draft" proposed by the Government and that the purpose of the changed language was "to eliminate from release, costs and fees associated with the processing of the appeal of the Appellant." (Appl., Exh. C) The Applicant asserts that "[i]t is clear and unambiguous that the release specifically applies only to claims of the Respondent *arising out of (not relating to) peformance* under the contract." (Appl., Claim at 2, ¶ 1) (Emphasis added.)

The Government submits that the Appellant's agreement to release it from "all claims whatsoever" includes attorney fees and that the use of the phrase *"arising out of the performance"* of the Contract instead of the words *"arising out of [the] Contract"* did not alter the liabilities of the parties. (Gov't Rply. at 3). The Government further states that "[i]f Appellant truly believed that it had just rendered a 'major change' to the settlement agreement, it would have presumably told [the Government]. Instead, Appellant remained silent until filing its EAJA application, hoping that the Board

Digitized by Google

would later interpret the settlement agreement in its favor." (Gov't Rply. at 2, ¶ 2)

It is not disputed that the Applicant did not advise the Government that it wished to reserve the right to pursue legal fees. In fact, Government counsel contends that he verbally informed the "Appellant that the final version of the settlement agreement precluded all claims whatsoever, including attorney fees." (Gov't Rply. at 2, ¶ 2) The Government states that further evidence that the parties intended that all matters including attorney fees be settled is illustrated by the cover memorandum sent to the Board after settlement which stated all disputes under the Contract including all claims before the Board had been settled. (Gov't Rply., Exh. 3) The Government contends that since Danrenke never informed it that Danrenke would later seek attorney fees, "Respondent thus reasonably *assumed* that the settlement agreement would bar attorneys fees." (Gov't Rply. at 3, ¶ 3) (Emphasis added.)

In its Rebuttal, the Applicant did not respond to the Government's assertion that Danrenke had been informed that the final version accepted by the parties precluded attorney fees. Instead, Danrenke's counsel asserted that the Government failed to carry its burden of proof that the "settlement included an expressed bar to an EAJA application or that there was consideration for release." He further stated that the Government may not attempt to "vary, by parole evidence, the plain meaning of the words ... to create an unwritten, unspecified bar to appellant's EAJA application."

We disagree with the Applicant's attorney's contentions that its revised version is indisputably unambiguous as to exclude attorney fees from the release. However, we find that there is no compelling evidence that the parties specifically discussed the disposition of attorney fees in negotiations or that there was ever any meeting of the minds regarding this issue. Although the Government asserts that it informed Danrenke that the settlement included attorney fees, there is no evidence that Danrenke agreed to this request or intended for the settlement to include said fees. In fact, the Government's comment in its Reply—that because Danrenke never informed the Government that it would seek attorney fees, it *reasonably assumed* the Settlement Agreement would bar attorney fees—indicates that the parties did not discuss this issue or reach agreement as to whether fees were precluded.

The Government cites the appeal of *Nikiforos P. Kalfountzos,* in support of its position that attorney fees and costs should be barred by the executed settlement. In that case, the Department of Transportation (DOT) Board rejected an EAJA application on such basis but acknowledged that there was not unanimity among Boards on the question of whether a general release bars an application for fees under EAJA. In a concurring opinion, one Judge stated, "I read the EAJA as giving the prevailing party, even where a settlement has been reached, a separate statutory right to establish and recover attorney fees and other expenses, where the government's position has not been substantially justified." *Nikiforos P. Kalfoutzos d/b/a Engineered Electric,* DOTBCA No. 1819, 87-2 BCA ¶ 19,768 at 100,025.

The Armed Services Board of Contract Appeals (ASBCA) has, in our view, the better position that an application for attorney fees and expenses pursuant to EAJA derives from a statutory right independent from any rights granted by either the contract or the Contract Disputes Act. *PetroElec Construction Co., Inc.,* ASBCA Nos. 32999 *et al.,* 87-3 BCA ¶ 20,111. The Board reasoned that EAJA applications "do not constitute 'claims by a contractor ... relating to a contract,' which are required to 'be submitted to the contracting officer for a decision.' *See* 41 U.S.C. § 605(a)." *See PetroElec* at 101,840. Further, although the parties may provide for an EAJA award in their settlement agreement, the Government has the burden of proving that the parties made such a provision or otherwise agreed to foreclose application for any EAJA award. *Peter Kraus Versorgungstechnik GmbH,* ASBCA No. 27256, 87-2 BCA ¶ 19,880.

The Government has failed in the instant case to meet its burden of proving that the parties agreed during settlement discussions that an EAJA application would be precluded under the executed Settlement Agreement. We do not reach the question of whether the changes submitted by the Applicant's attorney altered the original proposal submitted by the Government as to the exclusion of attorney fees, because we find that the executed settlement did not preclude an application for such fees and costs. Pursuant to the above-mentioned independent statutory provisions a separate claim under EAJA may be pursued. Accordingly, we now turn to consideration of the EAJA application.

Digitized by Google

Prevailing Party

In order to recover fees and expenses under EAJA, Danrenke must be a prevailing party. *Siska Construction Co., Inc.*, VABCA No. 3381E, 92-1 BCA ¶ 24,730; *Delfour, Inc.*, VABCA No. 2049E, *et al.*, 90-3 BCA ¶ 23,066. Danrenke need not have prevailed on all of its claims; it need only show that it obtained some significant relief from the litigation. *Fletcher & Sons, Inc.*, VABCA No. 3248E, 93-1 BCA ¶ 25,472; *see also Preston-Brady Co., Inc.*, VABCA Nos. 1892E, 1991E, and 2555E, 88-2 BCA ¶ 20,574. The Government does not seriously contest that Danrenke is a prevailing party. It merely states that "the parties settled all disputes before the Board could hear the facts necessary to determine the validity of the termination for default." (Gov't Rply. at 4) Attorney fees and expenses are not precluded where the parties agree to settle a matter in lieu of further litigation. *Penn Environmental Control, Inc.*, VABCA Nos. 3599E, 3600E, 3725E, 94-1 BCA ¶ 26,326, 1993 WL 331797 (August 20, 1993). The fact that Danrenke obtained favorable results through settlement rather than through a decision on the merits is irrelevant, so long as there is a "causal connection between the relief sought, the relief obtained, and the settlement of the litigation." *Austin v. Department of Commerce,* 742 F.2d 1417 (Fed. Cir. 1984).

Danrenke achieved the major benefit it sought in VABCA No. 3601, and is a prevailing party because the termination for default was rescinded and converted to a "no-cost" termination for convenience. Likewise, the Applicant prevailed in VABCA No. 3736, because the Government waived payment for a deductive change in the amount of $17,205.04.

Danrenke was not a prevailing party in VABCA No. 3721, where it sought an equitable adjustment in the amount of $1,645.32; and in VABCA No. 3722, when it waived its Contract retainage claim for $5,883.11. It is noted that Danrenke has voluntarily withdrawn the 4.50 hours of attorney fees which it claims were associated with "VABCA Nos. 3601, 3721 and 3722." (Appl. Supp. at 1) Additionally, $10.24 in mailing expenses are associated with the deleted work. (Appl., Exh. D, at 2)

Substantial Justification

Once an applicant has demonstrated that it is a prevailing party, fees and expenses shall be awarded "unless the adjudicative officer of the agency finds that the position of the agency was substantially justified." 5 U.S.C. § 504(a)(1). The Government is "substantially justified" if it is clearly reasonable in asserting its position, at the agency level and during the adversary adjudication, in view of the law and facts. In making this determination, we consider the complete administrative record, not just the litigation position of the agency.

Whether the Government's position was substantially justified is "determined on the basis of the appeal record, as a whole, which was made in the appeal." EAJA Rule 14(a). Such determinations can be particularly difficult in cases like these, where the parties have entered into a settlement and the appeal record may not have been not fully developed. Nevertheless, it is the Government which bears the burden of proving that its position was substantially justified in VABCA Nos. 3601 and 3736, and it is in error when it asserts that the application must fail because the Appellant has "not shown that the Government was not substantially justified." (Gov't Rply. at 1) EAJA Rule 5, "STANDARDS FOR AWARDS," states:

> The burden of proof that an award should not be made to an eligible prevailing applicant because the Government's position was substantially justified is *on the Government.* (emphasis added)

See Marino Construction Co., Inc., VABCA No. 2752E, 92-2 BCA ¶ 25,015; *Blosam Contractors, Inc.*, VABCA No. 2187E, 88-3, BCA ¶ 20,942.

Thus, it is well established that the Applicant "has no burden to prove that the Government's position was not substantially justified." *Siska Construction Company, Inc.*, VABCA No. 3381E, 92-1 BCA ¶ 24,730 at 123,421. The Applicant is only required to allege that the VA's position was not substantially justified, which it has done. 5 U.S.C. § 504(a)(2). Danrenke alleged that the VA was not justified in issuing a termination for default where the Government's COTR certified all the work had been completed in accordance with the Contract requirements and Danrenke's request for six progress payments had been granted.

Rather than explain why its decision to terminate for default was substantially justified, the Government argued that because a "no cost" termination for convenience was agreed to by the parties, this was justification for the Government's actions. The Government did not address any of the arguments presented by Danrenke in its Application other than to state that because the Board denied the Appellant's Motion for Summary Judgment, and this matter was

Digitized by Google

settled without trial, the Board can not determine whether the VA was substantially justified. The denial of the Appellant's Motion for Summary Judgment does not indicate that the Government's position was substantially justified, only that there were material facts in dispute which, for purposes of the motion, the Board was required to resolve in favor of the non-movant Government. *Infotec Development, Inc.*, ASBCA Nos. 31809 and 32235, 92-2 BCA ¶ 24,817 at 123,782.

As noted, it is not the Applicant's burden to present evidence that the Government was not substantially justified, it is the Government's obligation to prove that it was substantially justified. In the instant case, based on the administrative record before us, and without the benefit of a hearing, we are unable to affirmatively conclude that the Government's position was substantially justified. Generally, an EAJA application may only be based on the record existing before a tribunal as a result of the documents entered and hearing of the case. *See Kos Kam, Inc.*, ASBCA No. 34684, 88-3 BCA ¶ 21,049 at 106,322. Where a case is disposed of as a result of a settlement or otherwise, before a hearing has been held, a different principle must apply because there is often little record upon which to rule on an EAJA application. The legislative history of the Act furnishes the following insight:

> When the case is conceded on the merits, dropped by the agency, or otherwise settled on terms favorable to the private party before any of the merits are heard, the court (or adjudicative officer) will determine whether the position of the government was substantially justified. The record in this instance will consist of the pleadings, affidavits and *other supporting documents* filed by the parties . . ..

H.R. Rep. No. 99-120 part I, 99th Cong., 1st. Sess. 13, reprinted in 1985 U.S. Code Cong. & Admin. News 141-42. (emphasis added) *See also Digital Services Group, Inc.*, DOT BCA No. 1817E, 93-1 BCA ¶ 25,358 at 126,303.

In the absence of any compelling Government argument, the Board finds that the VA has failed to establish that its position was substantially justified with regard to its actions in VABCA Nos. 3601 and 3736. *Gavette v. Office of Personnel Management*, 785 F.2d 1568, 1579 (Fed. Cir. 1986); *Industrial Refrigeration Service Corp.*, VABCA No. 2532E, 93-1 BCA ¶ 25,291. Accordingly, we find Danrenke is entitled to an award of reasonable fees and expenses on VABCA Nos. 3601 and 3736.

Recoverable Fees and Expenses

In determining whether certain fees and expenses are recoverable, we follow the applicable statutory provision, which states that the prevailing party in an adversary adjudication shall be awarded "fees and other expenses incurred by that party in connection with that proceeding." 5 U.S.C. § 504(a)(1). Danrenke's initial Application sought $10,278.32 for attorney's fees and expenses. (Appl.) In its Supplemental Application, Danrenke stated it did not prevail in VABCA "Nos. 3601, 3721 and 3722," and accordingly reduced its attorney fees and expenses by 4.5 hours attorney fees and 3.25 hours secretarial hours, for a total reduction of $318.75. It is not clear from the record before us why the Applicant stated it did not prevail in VABCA No. 3601, since the default termination was rescinded and converted to a "no-cost" termination for convenience. However, this question does not impact our decision because the Applicant's proposed reduction did not include any fees or expenses associated with VABCA No. 3601.

While acknowledging a reduction should be made in the amount of $318.75, the Applicant also modified its Application to increase attorney fees 26.25 hours ($1,575) and secretarial expenses 10.75 hours ($161.25), for services performed in preparing its EAJA Application and Rebuttal to the Government's Reply, for a total increase in fees of $1,736.25. (Appl. Supp.). Such an amendment is appropriate since it is well settled that attorney fees and expenses incurred in filing an application under the EAJA are compensable. *INS v. Jean*, 496 U.S. 154 (1990). Further, we allow EAJA applications to be updated to include fees and expenses incurred on the petition and defense thereof. *See Beta Systems, Inc. v. United States* [35 CCF ¶ 75,620], 866 F.2d 1404 (Fed. Cir. 1989); *Brewer v. American Battle Monuments Commission*, 814 F.2d 1564 (Fed. Cir. 1987); *Bridgewater Construction Corporation*, VABCA No. 2956E, *et al.*, 92-3 BCA ¶ 25,064; *Blosam Contractors, Inc.*, VABCA No. 2187E, 88-3 BCA ¶ 20,942.

Based on the initial Application and Supplemental Application, the Applicant now seeks a total of $8,371.58 in fees and expenses for Attorney Malloy (this amount includes secretarial and miscellaneous expenses expended by Attorney Malloy) minus $318.75 which the Applicant represents is associated with "VABCA Nos. 3601, 3721

©1994, Commerce Clearing House, Inc.

Digitized by Google

and 3722." The Applicant also seeks $2,675.00 in consultant fees for Mr. Healey and $574.24 for corporate expenses incurred by Danrenke Corporation in the litigation.

Addressing the fees for Attorney Malloy, the Applicant requests an hourly rate of $60 per hour for Attorney Malloy's legal services, which we find reasonable. We further note that, with limited exceptions, the Government does not contest the reasonableness of the hours spent by Attorney Malloy in this litigation. Except as set forth below we find the claimed hours to be reasonable.

Our review of the Application reveals that Attorney Malloy incurred approximately 5.75 hours time prior to the Contracting Officer's final decision defaulting Danrenke. Fees and expenses incurred prior to the receipt of the Contracting Officer's final decision are not recoverable. *Levernier Construction, Inc. v. United States,* 947 F.2d 497 (Fed. Cir. 1991); *Fletcher & Sons, Inc.,* VABCA No. 3248E, 93-1 BCA ¶ 25,472. As this Board has stated previously: "[t]he efforts of a contractor or its attorney in presenting a claim which ultimately results in any appeal and subsequent litigation before the Board are 'work performed in connection with routine claims processing,' and are not 'incurred in connection with the adversary adjudication.'" *Delfour Inc.,* VABCA Nos. 2049E, *et al.,* 90-3 BCA ¶ 23,066 at 115,813-14 (citations omitted). Based on the foregoing analysis we deduct $345 of attorney fees for the work Attorney Malloy performed preceding the final decision.

This would also preclude the Applicant's recovery of $2,675 in costs associated with Danrenke's claims consultant. EAJA allows the "reasonable expenses of expert witnesses, the reasonable cost of any study, analysis, engineering report, test, or project which is found by the agency to be necessary for the preparation of the party's case." 5 U.S.C. § 504(b)(1)(A). However, the Federal Circuit specifically disallowed consultant fees incurred prior to the contracting officer's final decision, even though those costs were necessary to the preparation of the case. *Levernier,* 947 F.2d at 501-02. See also *Fletcher & Sons, Inc.,* VABCA No. 3248E, 93-1 BCA ¶ 25,472 (consultant fees for services rendered prior to the final decision were not allowed). To the extent that such fees and expenses were incurred after receipt of the Contracting Officer's final decision, the record before us lacked the specificity to enable us to analyze the need for, and the reasonableness of, the consultant services. There was no evidence to support the Applicant's contention that the services were related to the adversary adjudication as opposed to being related to the administration of the Contract and the threatened default termination. Mr. Healey did not testify as an expert witness and we see little proof of his services or that the services were necessary to this litigation. In making this determination, it is also noted that a report was not made part of the appeal record. In fact, based on the record before us, it appears that the consultant never wrote a report. (Gov't Rply., Exh. 5, at 18, no. 5; Exh. 6, at 14, no. 5). The only documentary evidence we have in the record is Mr. Healey's invoice and a copy of the prospectus of Healey International. Based on the foregoing, there is insufficient evidence to recover for consultant fees even if some portions were incurred after the final decision.

Government counsel contends that the Applicant should not be reimbursed for 6.5 hours in attorney time and 1.5 hours in secretarial time spent in preparing Danrenke's Motion for Summary Judgment because the Appellant's Motion was denied. Summary Judgment is a separate and distinct phase of litigation. *Ellis v. United States,* 711 F.2d 1571, 1576 (Fed. Cir. 1983); *Porter v. Heckler,* 780 F.2d 920, 922 (11th Cir. 1986). In the appeal herein, we found that the Government's opposition to Danrenke's Motion for Summary Judgment was justified and denied the Motion because of the existence of genuine issues of material fact and law. Thus, Danrenke cannot be considered a prevailing party with respect to the Motion which was denied. *See American Federal Contractors, Inc.,* PSBCA No. 1359, 88-2 BCA ¶ 20,526. Based on the foregoing, attorney fees in the amount of $390 which represents 6.5 hours of services for drafting and preparing the summary judgment motion will be deleted from allowable fees. Similarly, secretarial charges in the amount of $22.50 (1.5 hours at $15 per hour) will be deleted from allowable fees.

So too, Attorney Malloy spent 1.5 hours ($90.00 at his hourly rate) and $9.95 in expenses in his unsuccessful attempt to redraft the Settlement Agreement already signed by his client. *See* Discussion, *supra,* at 11. Since he was not successful, we will not compensate him for this effort. *See Bridgewater Construction Corporation,* VABCA No. 2956E, *et al.,* 92-3 BCA ¶ 25,064 (attorney fees incurred after settlement of the appeal denied).

Digitized by Google

We now turn to the issue of the secretarial services. The Applicant claims it incurred $555.00 for a total of 37 hours of services provided by Attorney Malloy's secretary, at a rate of $15.00 per hour. From this amount the Applicant deducts $48.75 or 3.25 hours which it claims were associated with appeals in which it acknowledged it did not prevail. In addition, another $22.50 must be deducted as discussed above. Attorney Malloy asserts that since he does not employ a full-time secretary these charges represent a "reasonable rate." However, secretarial charges, whether reasonable or not, are not separately recoverable under EAJA as allowable attorney expenses because those services are considered an "office overhead expense, typically subsumed in the attorney's hourly rate." *Western Avionics, Inc.*, ASBCA No. 33158, 90-2 BCA ¶ 22,664 at 113,861. *See also Software Research Associates,* ASBCA No. 33578, 89-3 BCA ¶ 21,931 at 110,336; *Building Services Unlimited, Inc.*, ASBCA No. 33283, 88-2 BCA ¶ 20,611 at 104,154; *PetroElec Construction Co., Inc.*, ASBCA No. 32999 *et al.*, 87-3 BCA ¶ 20,111 at 101,844-45. Thus, deeming such charges to be subsumed as attorney fees means that the charges are recoverable in that category, subject to the statutory ceiling of $75 per hour. That is, we may consider Mr. Malloy as having charged his client at two rates: $60 per hour when his efforts did not require a secretary and $75 per hour when a secretary was needed. Since neither hourly rate exceeds the statutory ceiling of $75 per hour, both rates are allowable. We note that in the cases cited above, where secretarial charges were disallowed, the attorney's hourly rates, exclusive of secretarial charges, equalled or exceeded the ceiling. We agree that charges traditionally included in attorney fees cannot be separated out and recovered as "expenses" in order to avoid the statutory ceiling. However, that is not the situation here. To the contrary, under these limited circumstances, we are merely considering secretarial charges in their proper place—as part of allowable attorney fees up to $75 per hour. Had the attorney added the $15 per hour charge to his normal $60 per hour fee and billed his client $75 per hour, there would be no question that the $75 fee reflected legal services properly billed to Appellant. To deny recovery of the $15 per hour charge because Mr. Malloy separately itemized these occasional additional expenses (not otherwise a part of the overhead making up his fee) would be truly to elevate form over substance. We do not see that the EAJA compels such a result. Accordingly, we find secretarial charges of $483.75 ($555.00 – $48.75 – $22.50) eligible for recovery.

The Applicant seeks $136.58, for "miscellaneous expenses of litigation" incurred by Attorney Malloy for postage, Federal Express mailings, and binders. Copies of invoices were attached to the Application and listed on Attorney Malloy's time log. (Appl., Exh. D). Except where noted, these itemized statements of costs and invoices provide sufficient detail for this Board to determine their reasonableness. *Buckley Roofing Company, Inc.*, VABCA No. 3374E, 92-2 BCA ¶ 24,826. As specifically reduced by the amounts indicated earlier in this decision ($10.24 and $9.95), we find the Applicant's claimed miscellaneous expenses are reasonable and allowable under EAJA.

Finally, the Applicant seeks $574.24 for corporate expenses incurred by Danrenke Corporation in the four appeals, including telephone expenses ($256.17, from January 23 through August 13, 1992); Federal Express charges ($121.55, from April 24 through September 29, 1992); photocopying expenses ($130.23); and expenses for copying of drawings ($66.29). Based on our reasoning as stated earlier in this decision, the telephone expenses for January 23, and February 23, 1992 ($11.71 and $97.45, respectively) are not allowed because they were incurred prior to the receipt of the Contracting Officer's final decision. The remaining $465.08 of Danrenke corporate expenses are related to the litigation of the four appeals but are disallowed on other grounds as explained below.

Where the contractor is represented by counsel, as in this case, and except for costs of expert witnesses and test reports, studies or analyses, most corporate expenses are not recoverable. *See, Crooker v. EPA,* 763 F.2d 16 (1st Cir. 1985) (salaries of corporate officers and employees disallowed), *Fletcher & Sons, Inc.*, VABCA No. 3248E, 93-1 BCA ¶ 25,472, *ERG Consultants,* VABCA No. 3346E, 93-1 BCA ¶ 25,457; *M. Bianchi of California,* ASBCA Nos. 26362 *et al.*, 90-1 BCA ¶ 22,369 (corporate travel expenses disallowed), and *J.V Bailey Co., Inc.*, ENG BCA No. 5348-F, 91-3 BCA ¶ 24,350 (fees and travel for a corporate officer, costs for postage and Federal Express, costs for FOIA copies, photographs, labor for discovery and a fee for a employee witness not recoverable). In *J.V Bailey Co., Inc.*, the board allowed attorney fees and expenses (including copying, telephone and postage) but disallowed the contractor's corporate expenses which it

©1994, Commerce Clearing House, Inc.

Digitized by Google

characterized as "operating expenses of Appellant during the pendency of the appeal," and "a potpourri of various administrative expenses." While we have allowed recovery of minor corporate expenses under limited circumstances, such as where there was a *pro se* appellant, *Preston-Brady Company, Inc.*, VABCA No. 1992E, 88-1 BCA ¶ 20,446, that situation does not exist here. We note that even a *pro se* appellant cannot recover corporate salaries, *Preston-Brady Company, Inc.*, and *Crooker v. EPA*, 763 F.2d 16 (1st Cir. 1985).

Computation of Allowable Fees and Expenses

Danrenke stated in its Rebuttal that attorney fees and expenses were not assigned to each case separately because its request that the Government convert the termination for default to a termination for convenience was the "major common request" for relief under all the appeals. We are now tasked with determining what portion of attorney fees and expenses are appropriate where the Applicant has prevailed in two out of the four claims it appealed to this Board. It is not appropriate to award fees associated with VABCA Nos. 3721 and 3722, the appeals in which the Applicant did not prevail. *N & P Construction Co., Inc.*, VABCA Nos. 3283E & 3286E, 1993 WL 291674 (August 3, 1993)

A review of the $318.75 reduction proffered in the Supplemental Application reveals the deduction was solely associated with work relating to VABCA No. 3721, and represents the time spent drafting and typing the complaint and a related amended complaint. However, the Applicant did not attempt to calculate a reduction for VABCA No. 3722, in which it also did not prevail, or relate the "no cost" aspect of the settlement in VABCA No. 3601 to its Application.

For its part, the Government contends that the Applicant should not be entitled to any fees and expenses incurred in VABCA Nos. 3721 and 3722 since Danrenke relinquished these claims through settlement. The Government also asserts that it is impossible to ascertain from the Applicant's breakdown of attorney fees what portion of the total fees represented time spent on these two appeals, and argues that at least one half of the time spent on the entire litigation involved discussions between the parties and discovery which focused heavily on these claims "due to the close relationship between each claim." Government counsel argues that the Applicant's claim for Contract retainage (VABCA No. 3722) was a major issue under the default termination (VABCA No. 3601) because Danrenke was defaulted in part due to its refusal "to complete certain punch list items." Therefore, Government submits that one half of the total attorney fees and costs claimed ($4,997.28) should be denied.

As we already noted, in its supplemental EAJA Application, the Applicant acknowledged that it did not prevail on the monetary claims pursued in VABCA Nos. 3721 and 3722. Further, under the terms of the settlement, the Applicant gave up any right it might have to claim termination costs arising out of VABCA No. 3601. With regard to VABCA No. 3721, the Applicant deleted 4.5 hours in attorney fees attributable to the drafting of its Complaint and Amended Complaint and 3.25 hours in secretarial services for typing these documents. (Appl. Rebuttal at 7, Appl. Supp. at 1). *See also* discussion on Prevailing Party, p. 17, *supra.*

We note it is incumbent upon the Applicant seeking payment of fees and expenses to "keep records in sufficient detail that a neutral judge can make a fair evaluation of the time expended, the nature and need for the service, and the reasonable fees allowed." *Peter Kraus Versorgungstechnik GmbH*, ASBCA No. 27256, 87-2 BCA ¶ 19,880. Where the fee record lacks sufficient detail to enable us to allocate particular fees and expenses to a specific appeal we may apportion the fees and expenses. As this Board recently concluded in *N&P Construction:*

> There is no universal formula by which boards can apportion litigation costs among various constituent elements of one appeal or, for that matter, among several appeals which were litigated together and where, as in the instant litigation, the invoices do not distinguish which claims/appeals were involved in the services rendered. In such a situation, the board is expected to apportion such expenses in some rational relationship to the efforts actually expended, but tempered by an analysis of the results obtained in connection with each severable claim.

1993 WL 291674, at 10.

In the matter before us, $318.75 has already been apportioned to VABCA No. 3721, and found by the Board to be reasonable. The fees and costs associated with VABCA No. 3736, the deductive credit of $17,205.04 relinquished by the Government, are able to be severed from the Application. These fees and costs were incurred during an identifiable period from August 10 through 18, immediately preceding the settlement. A

Digitized by Google

close review of the Application, reveals that Attorney Malloy spent 8.5 hours of and incurred $2.52 postage responding to the issues, and ultimately appealing the issues raised in VABCA No. 3736. Accordingly, we separate out and award the Applicant $512.52 in fees and expenses associated with VABCA No. 3736.

We turn to the remaining two appeals, VABCA No. 3601, in which the Appellant succeeded through settlement in having the default termination converted to a "no cost" termination for convenience, and VABCA No. 3722, in which the parties agreed through the settlement that the Government had the right to retain $5,883.11 in Contract retainage. We agree with the parties' assertions that the facts and law pertinent to these two appeals are inextricably intertwined and unseverable. As earlier noted, the facts reveal that in determining to default Danrenke, the Contracting Officer looked at certain deficiencies which she alleged the Appellant failed to cure, and indicated that the Government would reprocure those services and hold Danrenke liable for excess costs. Ultimately, when Danrenke invoiced for the final payment under the Contract, the VA, by a final decision, refused payment claiming that "[a]n inspection of work determined that there were many deficiencies and work was not acceptable." This dispute was docketed as VABCA No. 3722.

In addressing these appeals during discovery, settlement negotiations, and its dealings with the Board, the parties invariably would have to address the magnitude of the deficiencies which served as the primary basis of the default action. By proving that the deficiencies did not exist, and that it was entitled to the $5,883.11 withheld, the Appellant could prove the default was not supported. It is noteworthy that in settling these two appeals both parties relinquished portions of their positions: the Government, its default action and Danrenke, its termination costs and the $5,883.11 associated with the allegedly defective work on which the Government based its default. We understand how difficult it sometimes is for an applicant to separate out the fees and expenses on such interrelated appeals. However, in cases such as these, it is also fair to apportion fees and costs. Appellant has made no attempt to give us a formula for apportioning the instant appeals. While the administrative record before us does not enable us to separate out the time and expenses associated with these two appeals, we can reasonably apportion the time and expenses, and we do so now. The Government has urged a fifty-fifty split of fees. Due to the symbiotic relationship between the two appeals, we find the Government position compelling and apportion the attorney fees (which includes Attorney Malloy's miscellaneous expenses) fifty-fifty, awarding the Applicant $3,311.94 for prevailing in VABCA No. 3601.

In conclusion, in the above captioned appeals, Danrenke seeks $8,371.58 in attorney fees and expenses, $574.24 in corporate expenses, and $2,675.00 in consultant fees. Set forth below is a summary of the Board's treatment of the fees and costs sought by the Applicant:

Attorney fees and expenses:

$8,371.58	This figure is the amount of attorney fees and expenses incurred in all four appeals per the Application and Supplemental Application and includes the fees of Attorney Malloy, secretarial expenses and other miscellaneous expenses incurred by Attorney Malloy. It does not include Danrenke corporate expenses or consultant fees.
(345.00)	Delete attorney fees of 5.75 hours spent preceding final decision.
(412.50)	Delete attorney fees ($390) and secretarial charges ($22.50) for unsuccessful Summary Judgment Motion in VABCA No. 3601.
(90.00)	Delete attorney fees of 1.5 hours incurred following settlement in an unsuccessful attempt to renegotiate the settlement.
(9.95)	Delete expenses incurred following settlement in an unsuccessful attempt to renegotiate the settlement.
(48.75)	Delete expenses for secretarial services related to appeals in which Appellant did not prevail.
$7,465.38	Total eligible attorney fees and expenses attributable to VABCA Nos. 3601, 3721, 3722 and 3736.

©1994, Commerce Clearing House, Inc.

Digitized by Google

(328.99)	Delete attorney fees ($318.75) and expenses ($10.24) for VABCA No. 3721, in which Appellant did not prevail.
$7,136.39	Total eligible attorney fees and expenses attributed to VABCA Nos. 3601, 3722 and 3736 and apportioned below:
$3,311.94	Total attorney fees and expenses apportioned to and **awarded** in VABCA No. 3601.
$3,311.93	Total attorney fees and expenses apportioned to and **disallowed** in VABCA No. 3722.
$512.52	Total attorney fees and expenses apportioned to and **awarded** in VABCA No. 3736.

Danrenke corporate expenses:

$574.24	Corporate expenses totally **disallowed.**

Consultant fees:

$2675.00	Consultant fees totally **disallowed.**

SUMMARY OF AWARD

Based on the foregoing discussion, Danrenke Corporation is awarded:

$3,311.94	Attorney fees and expenses in VABCA No. 3601.
512.52	Attorney fees and expenses in VABCA No. 3736.
$3,824.46	**Total award.**

[¶ 26,505] O.K. Johnson Electric Co., Inc.

VABCA No. 3464, November 10, 1993. Contract No. V677C-485.

Site Conditions—Unusual Conditions, Category II—Foreseeability.—Under a contract for the installation of cable trays in a hospital's ceilings, a contractor was not entitled to an equitable adjustment for the costs incurred in connection with an alleged Type II differing site condition caused by above-ceiling congestion, because it failed to show that the condition was unknown and of an unusual nature that differed materially from conditions ordinarily encountered and generally recognized as inherent in the contract work. Regardless of an alleged industry inspection standard, a reasonable prebid site investigation, as required by the Site Investigation clause, would have disclosed the above-corridor congestion. Although the drawing notes indicated that the straight line cable tray layouts could not be relied upon for bidding purposes, the estimator unreasonably based his bid on the fittings shown in the drawings. The estimator also unreasonably failed to use a ladder to investigate above the ceilings to determine the presence of any obstructions.

Pricing of Adjustments—Total Cost Method—Bid Reasonableness.—An electrical contractor's adjustment for rerouting wiring as a result of a differing site condition caused by above-corridor congestion and obstruction was measured under the jury verdict approach rather than under the total cost method because the cable tray installation component of the contractor's bid was unreasonable. The board relied on the government's more reliable computations, which included savings from the use of cheaper, smaller conduits in the congested areas, in calculating the adjustment of the difference between the reasonable cost of performing with the unforeseeable above-corridor conditions and without the conditions.

For the appellant: Stumbo, Hanson & Hendricks, Topeka, Kansas, by Gary H. Hanson. For the government: Sonya Cromwell-Singleton, Trial Attorney, Phillipa L. Anderson, Deputy Assistant General Counsel, and William E. Thomas, Jr., Assistant General Counsel, Washington, D.C.

Before ROBINSON, MCMICHAEL, and PULLARA, Administrative Judges.

ROBINSON, Administrative Judge: This appeal is from a final decision by the Contracting Officer ("CO"), denying the claim of O.K. Johnson Electric Co., Inc. ("OKJ" or "Contractor"), for costs incurred in connection with an alleged differing site condition. The Contractor contends that it encountered above-ceiling congestion which was

Digitized by Google

neither shown nor described in the contract, and which was beyond normal expectations for installation of cable trays. As a result, OKJ claims that its construction costs were increased by $157,756.47.

The Department of Veterans Affairs ("VA" or "Government"), in whose hospital buildings the cable tray installation was performed by the Appellant, defends against the claim by stressing that the pre-contract bid documents pointedly cautioned all bidders to avoid reliance on contract drawing depictions of cable tray routing (shown as straight lines), and to themselves ascertain the nature of existing conditions. The VA contends that, had OKJ made a reasonably thorough pre-bid site investigation, the Contractor would have discovered the existing congested conditions above the ceilings, and would have prepared its bid estimate to account for the difficulty of installing continuous cable trays in such congested spaces.

A hearing was held in Topeka, Kansas, where both entitlement and quantum were litigated. The record for decision in this appeal includes the transcript of the hearing (Vols. I through IV). Transcript Volume IV concludes with the recorded observations of several witnesses and the presiding judge during the course of a site investigation of two of the hospital buildings involved in this dispute. The post-hearing site visit was jointly requested by the parties. To the extent that this opinion reflects the observations made during the site visit, citation will be made to those portions of Volume IV which reflect such observations.

In addition to the hearing transcript, the Board's decision will be based upon evidence contained in the Government's Rule 4 Appeal File (R4, tabs 1 through 24), Appellant's supplements thereto (R4, tabs 101 through 122), together with several exhibits (G-1 through G-15) entered into evidence during the course of the hearing. Counsel for the parties filed post-hearing briefs addressing both entitlement and quantum issues.

FINDINGS OF FACT

The Solicitation

On June 30, 1989, the VA issued invitation for bids (IFB), No. 677-98-89, for "Telephone System Site Preparation" at its Topeka, Kansas Medical Center ("VAMC"). The medical center buildings in which the work was to be done were constructed in 1958. Buildings of that vintage often contain many items of equipment in the spaces between finished ceilings and the structural (concrete) slabs beneath the next higher floor level. For the balance of this decision, this space will be termed the "service area." At the Topeka hospital, the finished ceilings involved in this dispute were composed of lay-in tiles (2′ × 2′ and 2′ × 4′) which generally could be pushed up from below and removed (from their grid support system) for access to/inspection of the service areas above. (R4, tab 24; tr. II/411-12)

The IFB (and subsequent Contract) contained the usual clauses required of construction contracts by the Federal Acquisition Regulations (the "FAR"), including General Condition 1.41, "Differing Site Conditions (Apr 84)" (FAR 52.236-02) and General Condition 1.45, "Site Investigation and Conditions Affecting the Work (Apr 84)." (FAR 52.236-03) The latter clause reads as follows:

> (a) The Contractor acknowledges that it has taken steps reasonably necessary to ascertain the nature and location of the work, and that it has investigated and satisfied itself as to the general and local conditions which can affect the work or its cost, including but not limited to (1) conditions bearing upon ... the character of equipment and facilities needed preliminary to and during work performance. The Contractor also acknowledges that it has satisfied itself as to the character, quality, and quantity of surface and subsurface materials or obstacles to be encountered insofar as this information is reasonably ascertainable from an inspection of the site, including all exploratory work done by the Government, as well as from the drawings and specifications made a part of this contract. Any failure of the Contractor to take the actions described and acknowledged in this paragraph will not relieve the Contractor from responsibility for estimating properly the difficulty and cost of successfully performing the work, or for proceeding to successfully perform the work, without additional expense to the Government.
>
> (b) The Government assumes no responsibility for any conclusions or interpretation[s] made by the Contractor based on information made available by the Government. Nor does the Government assume responsibility for any understanding reached or representation made concerning conditions which can affect the work by any of its officers or agents before the execution of this contract, unless that understanding or representation is expressly stated in this contract.

Digitized by Google

The general scope of the Contract consisted of site preparation, in seventeen existing buildings, for a future telephone system to be installed by another entity (Bell South). This preparation was described, in Paragraph 1.2.A of the General Requirements, to include "general construction, alterations, mechanical and electrical work, utility systems, necessary removal of existing structures and construction." In addition to the above-ceiling installation of cable trays and/or conduits in most of the seventeen buildings, the project consisted of utilizing existing underground ducts to carry telephone lines from the outlying buildings to Building 1, the main hospital building. Within Building 1, an existing telephone room was to be demolished and rebuilt. In addition, new telephone closets were to be constructed on three floor levels (basement, 1st, 2nd). (R4, tabs 8, 22, 24; Exh. G-14)

The dispute underlying this appeal concerns a distinct portion of the Contract involving the installation of cable trays running the length of each corridor of the various buildings. These trays were to be installed in the service areas above those corridors. Although called "trays," these devices are actually completely enclosed rigid metal raceways (also called "wireways"), ranging in sizes of 4", 6", and 8" square, with one side hinged for access. On all of the Contract drawings showing the buildings' floor plans, the cable trays to be installed are depicted with straight lines down the middle of each corridor. However, on Contract Drawing No. 4 of 31, containing information pertinent to the project as a whole, the following General Note 8 states that:

> Cable tray layouts are *only diagrammatic and are not intended to show all required fittings, offsets and exact location.* Contractor shall field verify all obstructions and provide an installation which will fit within existing ceiling heights, etc. (Emphasis added)

(Exh. G-13)

The Pre-Bid Inspection

While the IFB made no provision for a Government conducted pre-bid site visit, the Bidders were nevertheless warned by the several FAR clauses in the contract to make themselves familiar with the conditions which would affect the work. Accompanying that warning, General Requirement 1.1.B stated that: "Visits to the site by Bidders may be made only by appointment with the Medical Center Engineering Officer."

An estimator for OKJ testified that he had made several unannounced visits to Topeka's VA Medical Center to inspect the premises. He was not accompanied by any VA personnel when he examined the service areas above the ceilings in the halls. He went to several of the corridors in the various buildings, although at the time of the hearing (3 + years later) the only two locations that he could recall with precision were one in Building 1 and one in Building 4. He described his several visits:

> Usually they would be on the way home, and I would come by and I would come in the hospital and I would walk in the halls and I would pop the ceiling up and shine my flashlight up in the ceiling and so I could see what was up there. ... Of the places that I [saw], there were some that had an awful lot of, for the lack of a term, equipment or material above the ceiling and some were very nice.

(Tr. IV/553-54)

The witness explained that he had used a rigid $8\frac{1}{2}" \times 11"$ notebook to lift the ceiling tiles and to slide them aside for viewing the service areas above with a flashlight. He stood on the floor, approximately eight to nine feet below the ceiling tiles. He did not bring a ladder with him nor seek to borrow one from any member of the VA staff. Being just under six feet in height, his view was necessarily limited to that which he could see by standing in place on the floor. This vantage point allows one an (oblique) sight line of approximately ten feet into the overhead area. (Tr. IV/553; 586; 678; II/348)

The estimator further explained that his use of the term "very nice" described those locations he saw, during his pre-bid visits, where there appeared to be sufficient clearance in the service areas to permit the installation of uninterrupted straight runs of wireway material. With respect to those "very nice" areas, he stated that they were what he would expect, comparing such areas to the Contract drawing representations in this manner:

> Well, the engineer had a straight line going down that hallway. He designed these plans and he got all of his information to draw these plans up with. So, on that basis I make the assumption that he has already done his investigation to show that this is the way that the thing is to run and there should be relatively no problem.

(Tr. IV/555)

The witness, when asked what level of difficulty he had anticipated as a result of

Digitized by Google

his several site investigations, replied that: "With what I saw, it would be average." (Tr. IV/557)

During one site visit, the estimator had contacted the hospital's Engineering Service, and been shown to a switch key room in connection with the installation of certain electrical equipment. He did not then inquire about anything relating to above-ceiling cable tray installations in the corridors of any of the buildings, nor did he ask (nor did the VA volunteer) whether there were any as-built drawings ("as-builts") of the hospital which were available for examination. (Tr. IV/552-53)

No as-builts had been furnished or mentioned in the IFB. At the hearing, the VA engineer revealed considerable knowledge of the kinds of equipment which were located in the above-ceiling service areas of the hospital buildings. He further testified that his office possessed some as-builts of the hospital buildings, and that they showed "[m]ost of [the locations of equipment above ceilings], you know, I couldn't say there was a hundred percent, but I'd say on different projects, yes, we have, you know, a layout of what's up there." Neither of the parties attempted to enter any of these pre-contract as-built drawings into evidence. (Tr. II/427-54; IV/629-30)

According to the President of OKJ, this particular project was one of the firm's larger jobs. It was also the Contractor's most extensive installation of wireways (between 10,000 and 12,000 lin. ft.) to that point. The Contractor's largest previous wireway installation had been at the Stormont Vail hospital in Topeka, where over 7,000 linear feet of four inch wireway had been installed above ceilings. He had not encountered congestion anywhere as severe as at the VAMC. This was the fourth or fifth job which OKJ had done at the Topeka VAMC over the preceding thirteen years. (Tr. II/168-92)

OKJ's President did not conduct a pre-bid site visit, although he did review the estimator's takeoff figures. He was aware of Note 8 of Contract Drawing 4 of 31, and acknowledged that one could not rely on the straight line depictions of wireway above corridors. He further stated that an estimator would have to put some factor into the bid to account for more offsets than were shown on the drawings. He would have expected the estimator to review the drawings and visit the site, taking a ladder with him. (Tr. II/193-196, 240)

Bid Preparation

The estimator who made these site visits had a considerable amount of experience in estimating commercial and institutional electrical construction, including other hospitals. He admitted to having "busted" an estimate on one of those projects. He subsequently prepared OKJ's cost estimate for the bid to the VA. Based upon his observations at the job site and his reading of the Contract specifications and drawings, the estimator performed a takeoff. He calculated the cost of all wireway materials to be $43,168.50. He estimated a total of 1,671(+) labor hours at a rate of $20.64, for a total labor price of $34,492.50. The total for this wireway work, excluding OKJ's markup, was $ 77,661.00 (Exh. G-5; tr. IV/536-37, 560)

In his bid, the estimator had included the costs for only thirteen 90° fittings for all of the cable trays on the project. He arrived at this figure by counting the number of 90° fittings that he saw on the Contract drawings. He did not see or include any 45° fittings. Soon after Contract award (and *before* this dispute arose), he ordered "maybe" one hundred of these 90° fittings, as well as "maybe" one hundred and twenty-five 45° fittings. (Tr. IV/584-90; Exh. G-5) When cross-examined on this matter, the witness testified as follows:

> The reason I didn't put it in my bid was because I didn't know how many I was going to have, to be exact, and I felt that it was just better to try to—I knew I was going to have to order more than what I had on my take-off, I'll be able to put it that way. When I did this and I did order more material, I ordered it because I didn't know how many I was going to have and I didn't want to put them in there because I thought—I'm not naive but I thought that I might be able to get by with [*i.e.*, use] as few fittings as possible and so that is why—this is one reason they weren't on here [his bid], and what I did have to start off with, I didn't think that was excessive.

(Tr. IV/591)

Notwithstanding his optimistic bidding assumptions with respect to the number of fittings needed for the cable trays, the estimator had been aware of Note 8 of Contract Drawing 4 of 31 prior to the time of his bid estimate. He understood that the essence of the Note was that the straight line depictions of cable tray corridor runs on the plans were not a guarantee that the wireways could actually be run straight from one end

©1994, Commerce Clearing House, Inc.
Digitized by Google

of a corridor to the other. He was equally aware that not all necessary offsets/fittings were shown on these plans. (Tr. IV/543-46, 549)

At another part of his testimony, the estimator (in explaining his bid price for only 13 fittings), stated that he was reluctant to bid more fittings for fear that the electrical foreman would arrive on the job and question "Why all the fittings?" In the estimator's own words: "[S]o that's why, because when the people install a job, they are more or less deciding—*they are designing it then because it hasn't been designed before.* They have to get it into the best accessibility that they have, and you don't try to buy any more material than you have to." (Emphasis added) (Tr. IV/677)

Post-Award Problems

There were five bidders for this project. The base bid prices (high to low) were as follows: $1,573,042, $1,072,000, $1,067,200, and $994,240, with OKJ's low responsive bid at $978,175. The VA awarded the contract to OKJ for its base bid price and the notice to proceed was received by the Contractor on January 17, 1990. (R4, tabs 1, 4, 5)

On August 1, 1990, the CO notified the Contractor that he was concerned that the site preparation project might not be finished by the contract completion date of October 15, 1990. He attributed the problem to undermanning of the job, requesting that OKJ advise as to whether the project was on schedule or if additional resources were contemplated to meet the October 15 date. (R4, tab 9)

In a letter dated September 12, 1990, the Contractor responded to the CO's concerns by stating, *inter alia:* "[T]he hallways where the 4×4, 6×6, & 8×8 [inch] Wireway is to run, is so obstructed and congested that the installation has tripled our labor, fittings, supports and practically halted our progress." The letter was signed by the Contractor's President, Mr. James Mylnek. (R4, tab 10)

A series of letters ensued, culminating in OKJ's certified claim for $157,756.47—attributed solely to additional wireway installation costs. The Contractor contended that the area had been inspected prior to bid but that "lifting out ceiling tile in excess of 10,400 feet prior to bid time was unfathomable." It characterized the congestion as a differing site condition involving "unknown physical conditions at the site which differ from those ordinarily encountered." (R4, tabs 8-18)

The Contractor sought the difference between the labor hours bid for wireways (1,671.17 hrs. for $34,493) and the labor hours actually expended for that work (6,939.50 hrs. for $143,230.91). It also sought the difference between the price bid for wireway materials at $43,168.50, and the $57,106.54 actually expended. OKJ ultimately installed 565 more fittings than it had bid for this project. (Tr II/222-23; R4, tabs 110, 111)

In his final decision denying this claim, the CO pointed to the drawing note which cautioned that the straight lines depicting future cable tray installation above corridors were diagrammatic only and did not show "required fittings, offsets and exact locations." Further, the CO stressed the Contractor's duty to conduct an adequate prebid site investigation in accordance with the warning in (FAR) Clause 52.236-03, General Condition 1-45 of the contract, titled "Site Investigation and Conditions Affecting the Work." The first sentence of that clause reads, inter alia, that: "The Contractor acknowledges that it has taken steps reasonably necessary to ascertain the nature and location of the work, and that it has investigated and satisfied itself as to the general and local conditions which can affect the work and its cost...." (R4, tab 24)

At the hearing, the Contractor's electrical foreman explained that the contract entailed the installation of cable trays running the length of each corridor. These cable trays would then connect to smaller conduit servicing the individual rooms along each corridor. Bell South would use this system of ducts to carry telephone cable under a later VA contract. The cable tray comes in ten foot sections of hinged metal boxes, which are installed "end to end" with coupling devices requiring eight bolts per connection. Prior to actually starting work (but after contract award), the journeyman electrician member of a two-person team of installers (journeyman and helper) will remove enough ceiling panels so that he can stand on a stepladder and inspect the service area (about 4 feet in height, width of corridor—12 feet+). Having observed the existing equipment, including sheetrock firewalls, he selects the most favorable route for running the cable tray within the service area in such a manner as to avoid as many cuts or bends (90° or 45°) as possible. Having laid out the most accessible route, the installation team then stands on stepladders to attach the cable trays to the overhead ceiling slab and to each other. Because Hospital

Digitized by Google

Buildings 1 and 2 were to be occupied during construction, OKJ could not plan to use a more substantial work platform such as portable scaffolding. (Tr. I/30-41)

The electrical foreman had over 22 years of experience installing such equipment in homes, schools, industrial buildings and hospitals. Although he would expect to find more congested above-ceiling conditions in hospitals ("a lot of ductwork, a lot of air handling equipment, stuff like that"), and was aware of a "degree of difficulty" to be expected when running wireway in a thirty-one year old hospital such as the VA's, he testified that the amount of congestion found at the VA's Topeka hospital buildings was greater than any that he had previously encountered. He referred to four hospitals on which he had worked. He specifically compared the K.U. Medical Center with the VA Hospital, stating that the "VA would be a whole lot more cluttered, a whole lot more packed in. The hospital is older." He provided no information as to the ages of the other three hospitals. (Tr. I/23-24, 49, 57-58)

The Contractor had started its wireway installation in Building 2, a three story structure with a basement. The third floor was not so bad as the others, except for the corridor junctures. On the lower floors, however, the Contractor encountered frequent obstructions which necessitated the use of 90° or 45° fittings. In alluding to these obstructions, the electrical foreman stated:

> You couldn't miss them. There was no way—you could pick the best route that you could pick and eventually sooner or later—and there was more than I really would have expected. There was—eventually you would have to change directions or elevations to miss something. You could not run, you know, very far without hitting something no matter what spot you picked to start in, so we tried to pick the least trouble.

(Tr. I/66-67)

The witness further described his experience in Building 2 as follows:

> In other areas it got to be a little bit tough, you know. There was, like I said, there's a lot of water lines, steam lines, stuff like that above the ceiling. IR units—[it is] an individual refrigeration unit that hangs above every door in the hallway, that feeds the fresh air into these rooms. You've got a lot of stuff that you've got to—the degree of difficulty began to—didn't take long for us to realize there was a lot of stuff there that we hadn't planned.

(Tr. I/49)

When asked to elaborate on the IR units which were individually suspended within the above-ceiling service areas from the concrete (upper) floor slabs by four hanger rods, this witness testified as follows:

> Q. What's an IR Unit?
>
> A. ... It supplies—it's a small air conditioner that hangs above the hallway over the doorway and supplies air [hot] or cold into that room. Its just a small air conditioner is what it is. They call it an IR unit. I don't really know the technical name. I always called them IR unit[s]. It drew air out of that particular room and circulated it through the air conditioner and back into the room. And they could supply hot or cold water to them if I'm right—remember right. We were not allowed to run underneath those. There was usually a 6 to 12 inch space underneath those but we weren't allowed to run underneath because there was an access panel to service the motor and filters and things like that.
>
> Q. So that means you had to go around?
>
> A. Either behind or above them. Most generally we tried to go above them because if you went down the hallway, you were going between them [and] the ones that were on the opposite side of the hallways and there was water lines and drain lines that come off the back of them and invariably you would hit every one of them, so you try to get above them. Usually the water lines were above the IR units and they had drops coming off of them that were insulated copper drops tie-ins and we [ran] into those. So we could try to get over above the IR units as best we could. That also didn't work because there was duct work. The junctures of the hallways, and I stated before they were the worst because that's where everything kind of came together from the different directions.

(Tr. I/63-64)

Because of the existing $1/2$ inch to 4 inch electrical conduits, the $3/4$ inch to 6 inch insulated water lines, the round and square air duct (which sometimes completely filled the hallway from one side to another), the IR units (with their associated space needs and restrictions), together with the congested corridor junctures, the actual installation required numerous offsets (fittings). Because of the time required to install necessary fittings, the Contractor averaged only

©1994, Commerce Clearing House, Inc.

Digitized by Google

30 to 40 linear feet of cable tray per crew per day versus a planned daily progress of 100 feet, based on a 7 1/2 hour workday for each two person crew. (Tr. I/52-56)

After completing work in Building 2, OKJ moved to Building 1, where the greatest congestion problems were encountered. This structure contains the admissions office, administrative areas, patient care, and surgical facilities. It was the largest building on the project, containing six floors plus a basement. The Contractor began work on the sixth floor. This floor consisted only of offices and the above-ceiling congestion was moderate—conditions that the Contractor stated to be within its normal expectations. As work progressed to the lower floors, however, the above-ceiling congestion worsened because of the accumulation of more equipment. As a result of this congestion, it became "impossible," in the opinion of the foreman, for the Contractor to make a planned installation layout for the entire corridor lengths of each floor. Instead of planning layouts for 100 feet at a time, the Contractor frequently had to change directions and elevations of the cable trays. Every obstacle encountered required a change of routing direction, necessitating cutting, drilling bolt holes, installing fittings, and the extra labor and material entailed. This difficulty was a repeat of the problems in Building 2. (Tr. I/50-55)

In Building 1, where the greatest amount of wireway installation work (in any one building) was to be done, any cuts to be made in the metal cable trays had to be done with a special saw located on the sixth floor, away from the patient care and surgical areas on the five lower floors. In addition, new bolt holes would have to be drilled in cut ends of the shortened trays for connecting to the fixtures. In order to minimize the lost time in transporting these ten foot trays to the sixth floor for cutting and drilling, it was in the Contractor's interest to avoid cutting wherever possible. Likewise, the additional labor involved in installing several 90° or 45° angles to route around, below or above ceiling obstructions, made it important to select the most accessible route before beginning installation above each corridor. (Tr. I/31-41)

In both Buildings 1 and 2, the "worst" areas of congestion were found at corridor junctures, where the equipment above several corridors converged. (Tr. I/64-65; 82) In the words of OKJ's foreman, "the junctures of the hallways were always the worst because the air duct would come down the hallway and it would have to usually branch in four different directions." (Tr. I/64-65)

The hallway junctures in Buildings 3, 4, 5, 6 and 9 were also congested, with air ducts, hangers and conduits, while the corridors had varying amounts of equipment, including the IR units adjacent to the room entrances. The congestion in these five buildings was less than in Buildings 1 and 2. According to Appellant's electrical foreman, wireway installation in these buildings was "a little closer to what we would have figured on the contract and the degree of difficulty." (Tr. I/89-96) Even then, however, the witness described the (relatively) difficult wireway installation in Building 4 in these words:

> I would probably say almost twice the amount of difficulty that we would have really figured on because there's still a lot of air handlers, steam lines. *Its getting pretty congested after forty some years of remodeling and add on.* I would probably say almost twice the degree of difficulty. [Emphasis added]

(Tr. I/90)

An examination of the plan view drawings for this Contract shows the following buildings and their corridor junctures: Bldg. #1, basement—1, first floor—4, second floor—4, third floor—3, fourth floor—3, fifth floor—3, sixth floor—1 (a total of 19); Bldg. #2, basement—1, first floor—3, second floor—4, third floor—3 (a total of 11); Bldg. #3, first floor—2, second floor—2 (a total of 4); Bldg. #4, first floor—3, second floor—2 (a total of 5); Bldg. #5, first floor—3, second floor—2 (a total of 5); Bldg. #6, main floor—2 (total); Bldg. #9, first floor—3 (total); Bldg. #20—1. Altogether, there are fifty corridor junctures in these eight buildings, where the drawings show the greatest amount of cable tray installation to be done. The drawings also showed some cable tray installation in Buildings 21, 22 and 24, but with no corridor junctures. The drawings reveal that the remaining buildings involved in this project would not require cable trays, although some conduit was called for. (Exh. G-14)

Site Visit Observations by Judge and Witnesses

During the site visit portion of the hearing, the Board member was accompanied by the attorneys and the witnesses to several areas in Building 1. The estimator was asked to recall where he had looked during his site visit. Although he was sure that he had looked in several locations of this building, he could only remember one with exacti-

Digitized by Google

tude. This was in the corridor of the First floor, outside the telephone room. Standing on the floor with a flashlight while looking through a ceiling tile opening seemed to show sufficient room for wireway installation for ten feet in either direction. Further down the same corridor, however, there were areas of extreme congestion and also clear areas as seen from the floor. In some areas, the IR units were visible. The estimator did not check both sides of these corridors to get a complete picture. (Tr. IV/674-87)

Several other locations in Building 1 were also examined, both from a position on the floor, and then on the ladder. The obstructions lying ahead of the openings, including IR units, ductwork, and corridor junctures, were much more vivid from the ladder, while the view from the floor sometimes gave one a "snapshot" of open space which was quite misleading. The congestion observed was consistent with that shown on the photographs which were placed in evidence. (Tr. IV/643-86; R4, tabs 23, 113, 114)

In addition to Building 1, the Board was shown areas on the first floor of Building 4, where congested ceiling conditions were again more visible from the ladder than from the floor. Generally, the congestion observed, except for the corridor juncture, was less severe than in Building 1. (Tr. IV/687-93)

Conduit Substitutions and Off-Corridor Installations

At two locations in the above-corridor service areas in Building 1, the congestion would not permit installation of the rigid square wireways. The VA engineers were aware of the problem and allowed OKJ to substitute smaller, round (and flexible) metal conduit until it was again possible to use the cable trays. (Tr. IV/595; Exh. G-10; Exh. G-11, Dwngs. 5, 11)

At three other locations in the above-corridor service areas in Building 1, and one location in Building 2, the Contractor encountered such extreme congestion that neither wireway nor conduit could be installed. The VA engineers were aware of that extreme congestion and approved the routing of the wireways above the ceilings of adjacent rooms ("off-corridor") until the obstructions had been bypassed, at which point the wireways re-entered the above-corridor areas. (Tr. IV/595; Exh. G-10; Exh. G-11, Dwngs. 11, 12, 15)

Although the Government originally had denied liability for these conditions, it conceded during the hearing that the costs associated with the wireway reroutings were compensable. However, the VA takes the position that any equitable adjustment for these off-corridor runs of cable tray must reflect whatever savings resulted from not having to run the tray for each length of corridor that was bypassed. It also seeks a reduction for the costs saved when less expensive conduit was substituted above two of the corridor areas. (Tr. II/251, IV/597; Exh. G-10)

The VA engineer utilized the electrical engineering portion of the 1992 Means Estimating Guide ("Means") to determine both the amounts due to the Appellant and the amounts to be credited against that equitable adjustment. Although the Appellant was critical of Means, stating that it is "too general," it made no pricing effort comparable to the VA's, nor did it offer rebuttal. The Board thus accepts Means as the best available guide for pricing the efforts described. (Tr. IV/551, 595-617, 639-43; II/179, 266; Exh. G-10, G-11, G-12)

The VA engineer described the two areas where OKJ was allowed to substitute conduit in place of wireway. They were both in Building 1. In the Basement, in Corridor CB-9, near Room B-3, 24 feet of six-inch wireway was replaced by 20 feet of three-inch conduit. Utilizing Means, he estimated the savings in using the less expensive conduit as follows: $437.12 – $247.10 = *$190.02.* On the Third floor, in Corridor C3-7, 32 feet of four-inch wireway was replaced by 32 feet of two-inch conduit. The savings were: $378.33 – $193.48 = *$184.85.* (Tr. IV/598-603, 608-610; Exh G-10, G-11)

The four areas where off-corridor installation was necessary were likewise examined in the field and scaled on the drawings by the VA engineer in order to determine both the planned "straight line" installations above corridors and the actual "detour" installations above adjoining rooms. He calculated the materials and labor used versus that saved as follows:

In Building 1, on the Third floor, off-corridor wireway ran from Room A-342 to B-329, a distance of 84 feet. Had the installation been done "straight" through the corridor area, only 60 feet would have been needed. The estimated total of labor and material costs of the "detour," including costs of fittings, hangers, and necessary wall penetrations, was $1,948.58, minus $1,017.66 saved, for a net cost of *$930.92.* (Tr. IV/603-607; Exh G-10, G-11).

©1994, Commerce Clearing House, Inc.
Digitized by Google

On the Fourth floor, the wireway detoured off-corridor in two locations near Room A-403, running for 76 feet and using 18 fittings with 7 separate wall penetrations, for an estimated total cost of $2,272.03. The total direct labor and material cost saved by not running "straight" above the corridor for 52 feet was $922.10. The net cost to the Contractor was thus *$1,349.93.* (Tr. IV/611-613; Exh G-10, G-11)

At the Fourth floor ICU suite, the off-corridor run was 76 feet, estimated at $1,934.88, including 14 fittings and 4 wall penetrations. The "straight" run of 68 feet was priced at $1,215.57. Here, the net cost to the Contractor was *$719.31.* (Tr. IV/613-616; Exh. G-10, G-11)

In Building 2, on the Second floor near Room 233A, the off-corridor detour was for a distance of 40 feet at $855.89 versus 28 feet of a "straight" corridor run at $570.48. Only two wall penetrations and one additional fitting were necessary with the detour, and the net cost to the Contractor was *$285.41.* (Tr. IV/616-617; Exh. G-11, G-12)

DISCUSSION

The Appellant charges that the congested conditions above the corridor ceilings (predominantly in Buildings 1 and 2, and, to a lesser degree, in five others) so differed from the norm as to constitute a Type II changed condition. Appellant further contends that these conditions could not have been discovered during several reasonably conducted pre-bid site visits by its experienced estimator. Finally, Appellant argues that the VA engineers possessed certain "as built" drawings depicting the equipment above the corridor ceilings and withheld disclosure of this "Superior Knowledge" to the Contractor's detriment.

The law regarding the basic issues raised by Appellant were previously addressed by the Board in the appeal of *Markey Construction Company,* VABCA No. 2019, 85-3 BCA ¶ 18,425 at 92, 51:

> In regard to the omission of crucial details of work from contract documents, our Board has often remarked upon the contractor's duty to conduct a reasonable site investigation before submitting its bid. In *George E. Jensen Contractor, Inc.,* VACAB-1322, 78-2 BCA ¶ 13,359 at 65,515, we stated that:
>
> While the site investigation clause does not nullify the provisions of the Differing Site Conditions clause, nor require the Contractor to discover, at his peril, conditions at the site that would not be ascertainable by a reasonable pre-bid site investigation, the Contractor is chargeable with the knowledge reasonably ascertainable on proper site investigation by a prudent bidder, in the absence of any misrepresentation or withholding of essential information by the Government. (Citations omitted)
>
> The Appellant charges that the Government in fact *did* withhold essential information in this case. Where the missing information could easily have been discovered through a bidder's independent pre-bid site investigation, however, there can be no invocation of the Superior Knowledge doctrine against the Government. *Ambrose Augusterfer Corp. v. United States,* 184 Ct.Cl. 18, 38 (1968).

Shortly after the *Markey* decision, the Board, in the appeal of *ECOS Management Criteria, Inc.,* VABCA No. 2058, 86-2 BCA ¶ 18,885, addressed a Contractor's similar contentions of withholding of Superior Knowledge by the Government. In *ECOS,* at 95,259-61, we reviewed the existing law concerning this doctrine, including the seminal case of *Helene Curtis Indus., Inc. v. United States* [9 CCF ¶ 71,992], 160 Ct.Cl. 437, 312 F.2d 774 (1963). We concluded that in those situations where a reasonable site inspection by a contractor would have disclosed the conditions complained of, the Government's withholding of the information would not serve to substitute for such an inspection. We stated that:

> The cases cited by the parties, and a long line of others, have one common exception to the duty of the Government to disclose to prospective contractors information which it possesses. When the undisclosed information is not exclusively within the knowledge of the Government, but could reasonably be expected to be known by the contractor, or readily ascertainable from a pre-bid or pre-proposal site investigation (in cases where the invitation for bids or request for proposals advises the contractor to make such an investigation), the contractor cannot base a claim on the fact that the Government did not volunteer the information.

Apart from the question of what an adequate pre-bid investigation would have shown, it should be noted that the "as built" drawings, upon which the Appellant bases its Superior Knowledge argument, are not in evidence. The Board is thus unable to make a determination that those drawings were sufficiently complete/current to have war-

Digitized by Google

ranted reliance for bidding purposes. As the party alleging Superior knowledge, it was Appellant's burden to secure such evidence (in pre-hearing discovery) and to place it in the record.

To prove its Type II claim under the Differing Site Conditions ("DSC") clause, Appellant must show not only that the conditions were unknown, but that they were "of an unusual nature, which differ materially from those ordinarily encountered and generally recognized as inherent in work of the character provided for in the contract." One making such a Type II claim of a differing site condition is often said to carry a "relatively heavy burden." *Charles T. Parker Construction Co. v. United States,* 193 Ct.Cl. 320, 333-34 (1970); *Shumate Contractors, Inc.,* VABCA No. 2772, 90-3 BCA ¶ 22,946.

The question thus is whether the degree of above-corridor congestion found in these thirty-one year old hospital buildings was sufficiently unusual or unexpected to qualify as a Type II condition. Even were such conditions found to qualify under the above criteria, however, they must not have been otherwise reasonably ascertainable by the bidders. The viability of this appeal thus rests on the accessibility to a reasonable bidder of the information which was necessary to properly estimate the difficulty (and thus the cost) of installing cable trays in the hospital's above-corridor service areas. To put it another way: Did this Contractor conduct a reasonable pre-bid site investigation, and would such an investigation have disclosed the congested conditions which were ultimately encountered? In its main brief (at pp. 16-17) Appellant's Counsel calls the Board's attention to the fact that the VA failed to rebut the testimony by OKJ's estimator concerning the adequacy of his pre-bid site investigation. From that failure, Counsel has constructed the following argument:

> "The process of conducting a reasonable site investigation is sufficiently technical, both in terms of what the inspector does and looks for and in terms of *what is the industry standard,* to require some expertise in order to testify regarding these matters with any authority." The Government has supplied the Board with neither. OKJ has met its burden of showing that it lacked knowledge of the site condition, and the Government has wholly failed to rebut that showing. [Emphasis added]

The problem with this argument is Counsel's assertion that the testimony of Appellant's estimator, standing alone, was sufficient to establish some sort of an industry site investigation standard (also often referred to as a "trade practice") for this type of a project. That contention is simply untenable. As we recently stated in the appeal of *Caddell Construction Company, Inc.,* VABCA No. 3509, 93-3 BCA ¶ 26,114: "Trade practice cannot override or alter the clear intent of a contract provision;" *citing Craft Machine Works, Inc. v United States,* 926 F.2d 1110 at 1115 (Fed. Cir. 1991). In our view, the "clear intent" of the contract clause titled "Site Investigation and Conditions Affecting the Work," was that the bidder(s) take "steps reasonably necessary" to determine existing site conditions that can affect "the work or its cost." Further, the Contract drawing note unambiguously warned the Contractor of the need to closely examine the existing areas where the wireway was to be installed. Whether such steps were taken is essentially a legal conclusion which goes to the heart of this dispute. We will not be bound by essentially self-serving and uncorroborated testimony offered on behalf of one of the parties to this dispute. Instead, we will ourselves determine the reasonableness of the site investigation, based upon the factual record as a whole.

The Contractor is warned, in General Drawing Note 8, that the (straight line) cable tray layouts on the plan views "are not intended to show all required fittings, offsets and exact locations." Following the warning is this instruction: "Contractor shall field verify all obstructions and provide an installation which will fit within existing ceiling heights." While it is true that this note is equally applicable to post-bid layout and installation, it nevertheless serves to place a contractor on notice that straight wireway runs shown in all corridors on the plan view drawings cannot be relied upon for bidding purposes, a fact acknowledged by the estimator himself. His ordering of several hundred fittings even before the congested conditions were encountered illustrates his understanding. He testified that the Contractor was itself required to "design" the wireway runs. Despite his awareness of this cautionary note and its implications, the estimator nevertheless proceeded to base his bid price on only thirteen fittings, the precise amount shown on these drawings. He did not satisfactorily explain this action. Regardless, these pre-bid actions cannot have comported with any industry standards in light of the clear contract warning. Even the Appellant's President acknowledged that more fittings

©1994, Commerce Clearing House, Inc.
Digitized by Google

would be needed than shown on the drawings.

Furthermore, the estimator stood on the floor when prying up the individual corridor ceiling tiles. He was thus limited to what could be seen from that position. If the estimator had brought or borrowed a ladder, there is no doubt that he would have seen numerous obstructions which were vividly described by the Contractor's electrical foreman. As the foreman said: "You couldn't miss them." Indeed, OKJ's President said he would have expected a ladder to be employed. We reject any notion that it was reasonable to not use a ladder to actually look above the ceilings as part of the site investigation. After all, the foreman testified that before beginning any cable tray layout, he would climb the ladder and look above the ceilings to determine the presence of any obstructions. The Board's own site visit during the hearing confirmed the much more accurate picture which one derives from standing on a ladder and peering into the service areas versus the very limited oblique view afforded, through a 2′ by 2′ opening, from the floor some eight to nine feet below. Nor has Appellant established that such restricted inspection of the service areas was in accordance with any reasonable industry standard.

The contract was to be performed in a working hospital setting. There was no representation in the solicitation or the specifications that would have led any bidder to believe otherwise. In Building 1, the only way that cable tray could be cut was to remove and transport the (standard) ten foot length to the sixth floor by means of a freight elevator. There was no other location where the cuts could be made utilizing Appellant's specialized saw without interfering with the operation of the hospital. This entirely predictable situation further emphasizes the need for a particularly thorough site investigation of Building 1 prior to bidding. The sheer impact of transporting and cutting the cable trays, on labor efficiency and performance time, made it imperative to get as accurate a picture as possible of the conditions existing above the corridors of Building 1. With this awareness of the consequences of underestimating the number of fittings (and associated cuts), a prudent bidder would use the best availible means to investigate the service areas above corridor ceilings—a ladder. While the use of a ladder would not be required every ten feet for the length of each corridor, the congestion seen even in random viewings would reasonably induce further examination, particularly where the interior refrigeration units and their hangers, wiring, access panels and associated plumbing accessories could be seen blocking access in so many service areas on both sides of the corridors.

The Appellant's electrical foreman also encountered extreme congestion because of the IR units and at the corridor junctures in at least seven of the hospital buildings (Bldgs. 1 through 6 and 9), with the worst being on most floors of Building 1 and several floors of Building 2. Since these corridor junctures are where various systems intersect or branch out, we cannot fathom why some greater degree of congestion was not forseeable. The estimator failed to make an adequate inspection of the above-ceiling corridor junctures. In such a situation, the Contractor, having failed to take reasonable precautions, cannot now claim that this particular congestion was unforseeable.

We have concluded that both the interior refrigeration units and the corridor junctures were accessible and visible upon a reasonable inspection of these above-ceiling service areas. With respect to the other equipment which existed in these areas (ducts, pipes, conduits, etc.), we observe that this VA hospital was thirty-one years old at the time of the solicitation. Although Appellant's witnesses identified several hospitals where the Contractor had performed similar installation of wireways (but with less difficulty), the ages of three of those facilities were not given, while the fourth was stated to be of more recent vintage. We thus have no basis for a true comparison. Certainly, one would normally expect an older hospital to have been periodically upgraded with utility system additions and modifications over time, resulting in cumulative congestion in areas reasonably expected to contain, at the very least, domestic plumbing, sewage/interior drainage, HVAC (ductwork and plumbing), communication wiring, and electrical equipment. Therefore, the older the facility, the more important it becomes to conduct a *thorough* site investigation.

The Appellant's assertion that it was simply impractical to lift over ten thousand feet of ceiling tile in numerous buildings as a part of any reasonable site investigation sets up a "strawman." Lifting every tile was simply not necessary. A random inspection (from a ladder) at several spots in the corridors of each floor of the buildings would not have been an oppressive burden in preparing a bid of nearly $1 million for a project involving extensive cable tray installation above those

Digitized by Google

building corridors. Such a random inspection would have revealed both congested corridors (IR units and hangers, ducts, plumbing, etc.) and corridor junctures. Having discovered this congestion, a bidder then could have asked the VA for any as-built drawings, or placed some contingencies in its bid (as is often done when exact site conditions cannot be *precisely* determined), or simply declined to submit a bid for the contract.

We are not convinced, moreover, that excessive contingencies were called for in this situation. As we have found, and as testified to by the Appellant's electrical foreman, almost all of the corridor junctures in the seven buildings scheduled for extensive cable tray installation were congested. It would have been a relatively simple matter to have examined two or three above-ceiling corridor junctures in each of these seven buildings (at least one per floor in Building 1—the largest). Having done so, the estimator could have taken the number of 90° and 45° fittings needed in the most congested corridor juncture (or an average of several) and multiplied those two figures by the total of forty-nine junctures depicted on the contract drawings for those seven buildings. Since it was evident from almost any vantage point in the seven buildings that the IR units posed a problem with straight wireway runs above the corridors, and since there was one of these units for nearly every room, the estimator could have counted the number of rooms per floor of each building and estimated the number of IR units to be encountered. Then, just as with the corridor junctures, he could have examined several of the IR units and calculated a "worst case" (or averaged) number of fittings necessary to detour around that equipment. Again, simply multiplying the number of fittings per unit by the total number of IR units would have given a bidder a reasonably reliable basis for preparing an estimate. Of course, the above-described methodology is not exact, nor for that matter is any other in fixed price competition, in this Board's experience. However, we are convinced that the above-described methodology, or something similar, was reasonably available to the bidders for this project. It certainly was not necessary, as suggested by Appellant, to closely examine over 10,000 feet of corridor ceilings or to place excessively large price contingencies in the bids for this project. This Appellant took none of the reasonable precautionary measures which we have just discussed. It cannot now shift responsibility to the Government for the consequences of its overly optimistic estimating assumptions.

Quantum

The Government has conceded that in those instances where the service areas were too congested for any amount of fittings to allow passage of the cable trays, the Contractor's need to go "off corridor" and route the wireway around the obstructions resulted from a differing site condition and should be compensated. The Board agrees. The Contract drawings indicated, by use of the straight lines above the corridors, that the wireways could be installed somewhere in those service areas. A contractor was entitled to rely on that representation. In those instances where this representation was erroneous due to extreme congestion or complete obstruction, making wireway installation impossible above any corridor, there were Type I differing site conditions.

The parties could not agree on the amount of the equitable adjustment due as a result of these unforseeable conditions. The Appellant takes the position that it should prevail in the entire claim, and that it has established a right to prove its costs through the use of the total cost approach. The VA, on the other hand, has presented more specific information regarding the probable costs which the Contractor incurred by having to route wireway around the four totally obstructed corridor locations in Buildings 1 and 2.

As has been repeatedly stated, the total cost approach to quantifying claims is generally not favored by either the boards or the courts. *Servidone Construction Corporation v. United States* [37 CCF ¶ 76,082], 931 F.2d 860, 61 (Fed. Cir. 1991); *Fletcher & Sons, Inc.*, VABCA No. 3248, 92-1 BCA ¶ 24,726; *Sefco Constructors*, VABCA No. 2747, *et al.*, 93-1 BCA ¶ 25,458. Even in those limited situations when the method is allowed, several preconditions are required to be met. One of these criteria is that the Contractor's bid price must have been reasonable. *Servidone*, 931 F.2d at 861. While there is no question that OKJ's base bid of $978,175 was quite close to that of the next lowest bidder's $994,240, the focus of our attention here is the reasonableness of that component of the bid relating to cable tray installation. We conclude that the Appellant's price estimate for this particular work was unreasonable in that it included only thirteen 90° fittings and no 45° fittings at all. As we have already found, the estimator simply counted the fittings shown on a drawing, ignoring the cautionary note on Note 8, Contract Draw-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ing 4 of 31. The material costs, together with the associated labor costs of cutting, drilling, transporting and installing these fittings (particularly in Building 1) make up the overwhelming bulk of the total cost claim before us. For the Contractor to have so completely underbid such a labor-intensive item as fittings in calculating costs of cable tray installation was simply not reasonable. The Appellant thus can not meet this prerequisite for use of the total cost method. We need not discuss the other criteria.

The Government points to the fact that the Contractor was allowed to use less expensive smaller round conduit instead of the specified larger square cable trays in certain extremely congested areas above the corridors, and that the Contractor saved some (lesser) amount of its planned effort above the corridors when complete obstruction forced it to install off-corridor runs of cable tray. Because of these putative savings, the Government argues that costs provably incurred by the Appellant in the above instances must be adjusted downward. We agree. The purpose of an equitable adjustment is to "keep a contractor whole" whenever the Government modifies a contract. *Bruce Construction Corp. v. United States* [9 CCF ¶ 72,325], 163 Ct.Cl. 97, 100, 324 F.2d 516, 518 (1963). As our Board stated in *Zurfluh Enterprises,* No. 1941, 85-1 BCA ¶ 17,789 at 88,908: "The measure of the equitable price adjustment is the difference between the reasonable cost of performing without the change or deletion and the reasonable cost of performing with the change or deletion."

We will thus accept the more reliable computations made by the VA engineer, set forth in our findings of fact, which reflect the savings discussed above. *See, e.g., Blount, Inc.,* VABCA No. 3236, 93-1 BCA ¶ 25,474 at 126,894. However, we will make an adjustment to the estimated costs associated with OKJ's three off-corridor wireway runs in Building 1. This reflects the loss of efficiency in having to stop, measure, and transport wireway to the Sixth floor in order to then cut and drill for the unanticipated additional fittings required by the detours. Although there is no precise way of measuring this inefficiency factor, there is adequate support *for some adjustment* in the testimony offered by Appellant's electrical foreman and made a part of the foregoing findings of fact. On a jury verdict basis, therefore, the Board will add 20% to the estimated costs of the three off-corridor detours in Building 1: 3rd Floor, $1,948.58 plus $389.72 = $2,338.30, minus a $1,017.66 credit, for a net of *$1,320.64;* 4th Floor (A-403), $2,272.03 plus $454.41 = $2,726.44, minus a $922.10 credit, for a net of *$1,804.34;* 4th Floor (ICU), $1,934.88 plus $386.98 = $2,321.86, minus a $1,215.57 credit, for a net of *$1,106.29.* There is no comparable credible evidentiary basis for similarly adjusting the costs of the one Building 2 off-corridor detour.

Applying the foregoing factors to the estimated costs and credits contained in the findings of fact, we find the Appellant entitled to the equitable adjustment calculated below:

Bldg. 1 (A-342)	$1,320.64	
Bldg. 1 (A-403)	$1,804.34	
Bldg. 1 (ICU)	$1,106.29	
Bldg. 2 (233A)	$ 285.41	
Total Adj.	$4,516.68	$4,516.68
Bldg. 1 (CB-9)	($ 190.02)	
Bldg. 1 (C3-7)	($ 184.85)	
	($ 374.87)	(374.87)
		$4,141.81
	Overhead (10%)	414.18
		$4,555.99
	Profit (10%)	455.60
		$5,011.59

DECISION

In accordance with the foregoing findings and discussion, that portion of the Appellant's differing site conditions claim relating to the obstructions in the previously-discussed above-corridor locations, found to be Type I conditions, is sustained in the (rounded) amount of $5,012.00. The balance of the claim, as it relates to partially obstructed/congested above-corridor locations, characterized as Type II conditions, is denied.

[¶ 26,506] Penn Environmental Control, Inc.

Attorney Fees and Costs Under Equal Access to Justice Act—Application Procedures—Motion for Reconsideration.—A contractor's motion for reconsideration of a previous decision that denied the full amount of the contractor's Equal Access to Justice Act application preparation fees was granted because the board determined that it had mistakenly failed to include the amounts contained in the contractor's replies to the government's answers to the original applications. The board's rules, procedures for processing EAJA applications, and orders concerning the applications did not prevent the contractor from increasing the amount of its application in a reply. Upon review of the record, the board concluded that but for its failure to recognize that the contractor was increasing the total amount of its fee requests, the EAJA application preparation costs would have been considered by the board in the principal decision.

Attorney Fees and Costs Under Equal Access to Justice Act—Amount—Application Preparation.—Under the Equal Access to Justice Act, a contractor was entitled to recover the full amount of the application preparation fees requested because the government failed to show that the hours of effort claimed for EAJA application preparation, EAJA research, and replies to the government's answers were unreasonable. However, the contractor was not entitled to recover all of the requested EAJA application preparation costs in connection with a claim that involved issues and amounts identical to another claim for which an application had been prepared.

For the appellant: Frederick J. Condon, Solon, Ohio. For the government: Kenneth B. MacKenzie, Trial Counsel, Office of General Counsel, Washington, D.C., William E. Thomas, Jr., Assistant General Counsel, and Phillipa L. Anderson, Deputy Assistant General Counsel, of Counsel.

Before KREMPASKY, PULLARA, and ROBINSON, Administrative Judges.

Reconsideration of 94-1 BCA ¶ 26,326 granted.

KREMPASKY, Administrative Judge: Penn Environmental Control, Inc. ("PEC" or "Applicant"), has timely moved for reconsideration of our decision, issued on August 20, 1993, in VABCA Nos. 3599E, 3600E, and 3725E. In that decision, we awarded PEC fees and expenses under the *Equal Access to Justice Act* ("*EAJA*"), 5 U.S.C. § 504, in the total amount of $5,525.25. The recovery allowed in each application was as follows:

Application No.	*Amount Awarded*
VABCA No. 3599E	$1,725.63
VABCA No. 3600E	1,725.62
VABCA No. 3725E	2,074.00
Total	5,525.25

Familiarity with the principal decision is presumed.

PEC asks the Board to reconsider the amount of the fees and expenses awarded in the principal decision in light of the Board's apparent failure to include the attorney fees claimed for preparation of each its three *EAJA* applications. PEC alleges that the total amount of attorney fees and expenses requested in the three applications cited in the principal decision did not include the amounts, contained in PEC's Replies to the Government's Answers to the original applications, requested for preparation of the *EAJA* applications. Because of the Board's apparent failure to evaluate the application preparation fees in its principal decision, PEC claiins the following additional attorney fees for preparation of its *EAJA* applications:

Application No.	*Additional Amount Claimed*
VABCA No. 3599E	$1,312.50
VABCA No. 3600E	1,100.00
VABCA No. 3725E	810.00
Total	3,222.50

The Department of Veterans Affairs ("VA" or "Government") contests the Motion on the basis that, since PEC has presented no newly discovered evidence or evidence not readily available at the time of the principal decision, there is no basis for the Board to reconsider the principal decision. In the alternative, if the Board decides to reconsider the principal decision, the VA avers that the amounts claimed by PEC for preparation of the *EAJA* applications are excessive and any additional award should be prorated based on the amounts originally awarded.

DISCUSSION

PEC's original applications for *EAJA* fees and expenses in VABCA Nos. 3599E, 3600E, and 3725E were received by the Board on

©1994, Commerce Clearing House, Inc.

Digitized by Google

May 23, June 11, and June 21, 1993 respectively. The VA's Answers to the applications were filed on June 21, 1993 in the case of VABCA 3599E and July 21, 1993, in the case of both VABCA Nos. 3600E and 3725E. The Board received PEC's Replies to the Answers (styled, in each case, by PEC as "Memorandum Re: Government's Answer to Appellant's EAJA Application") on July 13, August 17, and August 10, 1993. The Reply to the Answer in VABCA No. 3599E included, without explanation or introduction, the following table:

Additional Fees—Frederick J. Condon

May	3	Research on EAJA	3.0 hrs.
	4	Draft Application for EAJA	2.5 hrs.
	6	Draft Application for EAJA	2.5 hrs.
	7	Draft Application for EAJA	1.0 hrs.
	11	Draft Application for EAJA	3.0 hrs.
June	28	Study Government Answer on EAJA	1.0 hrs.
July	3	Draft Memorandum on EAJA	2.0 hrs.
	4	Draft Memorandum on EAJA	3.0 hrs.
	5	Draft Memorandum on EAJA	1.0 hrs.
			17.5 hr @ $ 150/hr.=
			$ 2,625.00

We note that the table lists 19 hours of services rendered by Mr. Condon, not the 17.5 hours listed as the total in the table. In its Motion for Reconsideration, PEC reiterates its claim for an additional $2,625.00 (17.5 hr. @ $150/hr) for Mr. Condon's services in preparing the *EAJA* application. Thus, we will use 17.5 hours as the additional number of hours of *EAJA* application preparation fees for which PEC seeks recovery in VABCA No. 3599E.

PEC's replies to the VA's Answers in VABCA Nos. 3600E and 3725E followed the same format and contained tables similar to the table in the reply in VABCA No. 3599E. The additional request for *EAJA* application preparation fees in the reply in VABCA No. 3600E was $2,200 (9.3 hours application preparation + 5.5 hours reply preparation = 14.8 hrs @ $150/hr); in VABCA No. 3725E, the request was for $1,620 (6.3 hours application preparation + 4.5 hours reply preparation = 10.8 hrs. @ $150.00/hr). In its Motion for Reconsideration, PEC, recognizing the holding in our principal decision that we are limited to the $75 per hour rate stated in *EAJA* in awarding attorneys fees, revised the amounts stated in the Replies that it sought to recover for *EAJA* application fees to $1,312.50, $1,100, and $810, in VABCA Nos. 3599E, 3600E, and 3725E respectively.

In reviewing the record, we have determined that we misconstrued the nature and purpose of the tables presenting PEC's application for attorney's fees for preparation of the *EAJA* applications. Because of the manner in which the requests for *EAJA* application preparation fees were made in the Replies, the Board did not treat them as additions to the fee requests made in the original applications. Consequently, the Board, mistakenly, did not include the attorney fees claimed for preparation of the *EAJA* applications in its consideration of PEC's applications in the principal decision.

The VA has correctly noted that we will ordinarily grant a motion for reconsideration only when the movant presents newly discovered evidence or evidence not readily available at the time of the principal decision. *Saturn Construction Co., Inc.,* VABCA No. 2600R, 88-3 BCA ¶ 21,183. However, because of the circumstances present here, the ordinary standard applicable to our consideration of a motion for reconsideration does not preclude our granting this Motion. When the Board's decision is based, to some extent, on its own material mistake or oversight, a motion for reconsideration will ordinarily be granted. *Sentry Insurance, A Mutual Company,* VABCA No. 2617R, 92-3 BCA ¶ 25,147 at 125,360.

We question the wisdom of PEC in increasing its fee applications through the vehicle of a reply to a Government answer to an application without clearly highlighting its intent to the Board. However, there is nothing in the Board's Rules, the Board's procedures for processing *EAJA* applications, or the Board's Order Concerning *EAJA* Application issued in each of the three applications that prevented PEC from increasing the amount of its application in a reply. Upon review of the record, we are

Digitized by Google

convinced, but for our failure to recognize that PEC was increasing the total amount of its fee requests, that the *EAJA* application preparation costs would have been considered by the Board in the principal decision. Therefore, in the interests of justice, we will reconsider the principal decision to include the *EAJA* application preparation fees.

It is well settled that fees for preparation of *EAJA* applications are recoverable. *Commissioner, Immigration and Naturalization Service v. Jean, et al.*, 496 U.S. 154, 110 S.Ct. 2316 (1990); *Scheuenemeyer v. United States*, 776 F.2d 329 (Fed. Cir. 1985). An applicant is entitled to recover only reasonable attorney fees. In determining the reasonableness of fees, the Board is entitled to examine the complexity of the legal work, the results obtained, and the hours expended. *Buckley Roofing Company, Inc.*, VABCA No. 3374E, 92-2 BCA ¶ 24,826 at 123,839, citing *Hensley v. Eckerhart*, 461 U.S. 424, 433, (1983). Thus, we will examine the reasonableness of PEC's application for attorneys fees for the preparation of the *EAJA* application under the *Buckley* standard.

The VA contends that PEC's fee request for payment for 3 hours of services to research *EAJA* in VABCA No. 3599E is excessive. Because of the Board's detailed instructions on the preparation of *EAJA* applications provided to PEC and Mr. Condon's acknowledged expertise in Federal procurement law, the VA asserts that the 3 hours claimed for *EAJA* research is excessive. In addition, in light of the fact that the three applications and Government answers are virtually identical, the VA asserts that PEC's requests for a total of 24.6 hours to draft the three applications and 17.8 hours to prepare the replies to the Government's answer are unreasonable. Finally, the VA asks us to prorate any amount of additional recovery we determine to be reasonable based on the relationship of the amount originally awarded to the original amount requested.

The three applications for fees and expenses under *EAJA* are essentially identical and are supported by the same evidentiary submissions of fees and costs incurred. PEC's Replies to the Government's Answers, in each of the three applications, specifically addressed the Government's position and arguments in relation to the particular facts and circumstances of each application. The VA, other than expressing its belief that an attorney with Mr. Condon's expertise and experience should have been able to prepare the Applications and the Replies in a shorter time, offers nothing to support its position that the claims for preparation of the replies to the Government's Answers should be reduced to a more reasonable amount. In regard to the effort for *EAJA* research, only the application for VABCA No. 3599E contained a request to recover fees for research.

We find the 17.5 hours of effort to claimed for *EAJA* preparation, preparation of PEC's Reply, and *EAJA* research in VABCA No. 3599E to be reasonable. Thus, we will allow recovery for an additional 17.5 hours of Mr. Condon's services in VABCA No. 3599E.

PEC requests 9.3 hours of effort to prepare the application in VABCA No. 3600E. The issues involved (as well as the amount requested) in VABCA No. 3600E were identical to the issues in VABCA No. 3599E. Consequently, we find that the request for 9.3 hours of effort to prepare the *EAJA* application in VABCA No. 3600E to be unreasonable. In our view, the only effort necessary to prepare the application in 3600E was the editing of the application prepared for VABCA No. 3599E. Therefore, we will allow recovery for 2 hours of effort in preparing the *EAJA* application in VABCA No. 3600E. The 5.5 hours of Mr. Condon's services claimed for preparation of PEC's Reply in the VABCA No. 3599E appears reasonable on its face and we will allow recovery for those services. Thus, PEC is entitled to an additional 7.5 hours of effort in VABCA No. 3600E.

The effort and work product to prepare the applications in VABCA Nos. 3599E and 3600E was directly translatable to the application in VABCA No. 3725E. However, VABCA No. 3725E involved additional issues concerning the substantial justification of the Government's position not involved in the other two applications. Consequently, we will allow 3 hours of effort to prepare the application in VABCA No. 3725E; the 4.5 hours of additional attorney effort claimed for preparation of the Reply is reasonable and will be allowed. Thus, we will allow an additional recovery based on 7.5 hours of Mr. Condon's services to prepare the *EAJA* application in VABCA No. 3725E.

The VA urges us to prorate any award for *EAJA* application preparation fees based on the ratio of the Board's award in the principal decision to the amount claimed. We see no reasonable basis for such proration. The reductions to the amounts originally requested by PEC in the principal decision resulted from the Board's application of the

©1994, Commerce Clearing House, Inc.
Digitized by Google

$75 per hour rate for fees to PEC's fee request and from the Board's holding that certain fees requested in the application were either incurred prior to PEC's appeals or were incurred in a period after the Government was substantially justified in its position. None of these circumstances are applicable to the request for *EAJA* application preparation costs.

Therefore, PEC is entitled to recover the additional $1,312.50 (17.5 hours @ $75 per hour) claimed for *EAJA* application preparation costs in VABCA No. 3599E. In VABCA Nos. 3600E and 3725E, we will allow additional recovery of $562.50 (7.5 hours @ $75 per hour) in each of those two applications.

DECISION

For the foregoing reasons, Penn Environmental Control, Inc.'s, Motion for Reconsideration of the Boards decision, dated August 20, 1993 in VABCA Nos. 3599E, 3600E, and 3725E is GRANTED. Accordingly, the amount of fees and other expenses awarded in the Board's August 20, 1993, decision is VACATED.

The Applicant, Penn Environmental Control, is awarded fees and expenses under the *Equal Access to Justice Act* in the applications in VABCA Nos. 3599E, 3600E, and 3725E as follows:

Application No.	*Amount of Fees and Expenses*
VABCA No. 3599E..	$3,038.13
VABCA No. 3600E..	2,288.12
VABCA No. 3725E..	2,636.50
TOTAL	7,962.75

[¶ 26,507] The Planters, Inc.

AGBCA No. 93-209-10, November 17, 1993. Contract No. 52-447U-1-4604.

Attorney Fees and Costs Under Equal Access to Justice Act—Substantial Justification—Default Termination.—A tree planting contractor was entitled to recover attorney fees and expenses under the Equal Access to Justice Act because the government's position in terminating for default a tree planting contract before the time for performance had run was not substantially justified. The government terminated the contract on the ground that the contractor had failed to make sufficient progress to ensure completion of the contract by the specified date. The government, however, failed to show that there was no reasonable likelihood that the contractor could not complete performance in the remaining time. In terminating a contract prior to the date of completion, the government must do more than compare the percentage of work completed with the time remaining for completion, and it may not terminate on the ground that completion is less than absolutely certain.

For the appellant: William N. Carden, Indianapolis, Indiana. For the government: Ted L. Elders, Office of the General Counsel, U.S. Department of Agriculture, Atlanta, Georgia.

Before EATON, HOURY, and SETO, Administrative Judges.

EATON, Administrative Judge: The Planters, Inc., of Indianapolis, Indiana (Applicant), applies for attorney fees and expenses in the amount of $14,528.84 under the Equal Access to Justice Act (EAJA), 5 U.S.C. § 504, as amended. The Government opposes the application but argues that if the Board finds entitlement, the amount claimed should be reduced.

Under EAJA and implementing U. S. Department of Agriculture (USDA) regulations, 7 CFR § § 1.180-1.203, attorney fees up to $75 an hour and other expenses may be awarded to prevailing parties in adversary proceedings against the Government. Appeals of decisions under the Contract Disputes Act, 41 U.S.C. § § 601-613, are among such proceedings. Applicants initially must demonstrate that they meet certain income and size standards.[1] Upon doing so, they are eligible to receive an award unless the Government's position was "substantially justi-

[1] For corporations, the standard is a net worth of not more than $7 million and not more than 500 employees. 7 CFR § 1.184(b)(5).

Digitized by Google

fied" or other circumstances would make the award unjust.

The Adversary Proceeding

The dispute between Applicant and the Forest Service, USDA, arose under contract No. 52-447U-1-4604, for hand planting of loblolly pine seedlings on 571 acres in the Holly Springs National Forest, Mississippi. The Forest Service awarded the contract, in the amount of $22,394.62, to Applicant on December 10, 1990. Performance was to be completed by March 12, 1991. On February 11, 1991, however, the Contracting Officer (CO) terminated the contract for default on grounds that Applicant had failed to make sufficient progress to ensure completion by the date specified. At the time of termination, Applicant had completed 24 percent of the work in 55 percent of allotted time, although the first pay estimate showed planting quality of 97 1/2 percent.

Applicant challenged the termination (AGBCA No. 91-154-1) and Government claims for $8,228.48 in excess costs of reprocurement and $1,290 for spoiled seedlings (AGBCA No. 91-194-1). In addition, Applicant claimed $18,306.20 in damages for alleged breach of contract, primarily Government interference with performance (AGBCA No. 91-198-1).

In a decision issued March 1, 1993, *The Planters, Inc.*, AGBCA Nos. 91-154-1 *et al.*, 93-2 BCA ¶ 25,880, the Board found the termination for default improper. We denied the Government's claims and remanded Applicant's monetary claim for resolution by the parties under the regulations applicable to a termination for the convenience of the Government.[2]

The EAJA Application

In an EAJA application dated June 30, 1993, Applicant argues that the position of the Government in the appeals was not substantially justified. Applicant seeks $13,837.50 in attorney fees for 184.5 hours of legal services, including conferences with Applicant, the CO, Government counsel, witnesses, and the presiding judge, as well as research, preparation for and participation in a 1-day hearing in Memphis, Tennessee, and briefing. All services were billed at $75 an hour. Applicant also claims $691.34 in expenses, including transcript, $92.40; postage, $45.94; copying, $25.30; and travel from Indianapolis to Memphis and return, $458.70 for mileage and $69 for accommodations.

On July 21, 1993, Applicant supplemented its application with information on net worth and number of employees, demonstrating its eligibility under EAJA.

The Government's Response

The Government asserts that the CO's decision to terminate the contract and to seek excess costs and damages was "justified to a degree that could satisfy a reasonable person," citing *Pierce v. Underwood*, 487 U.S. 552, 565 (1988). According to the Government, there is a limited time when weather conditions are favorable for survival of seedlings planted in Mississippi, and a CO is under significant pressure to accomplish this work in a manner that meets overall forest plans and guarantees the continuous production of timber. The Government argues that even a few additional days may be critical when a CO is deciding whether to terminate an ongoing contract for default and obtain another contractor to complete the work while weather still permits, or to continue with the incumbent in hopes that performance will improve. Under these circumstances, the Government contends, the CO's decision to terminate Applicant's contract for default was reasonable, and she was then obligated to seek excess costs and damages.

The Government adds that proceedings were delayed by counsel for Applicant, who allegedly sought postponement of the hearing and agreed to holding it in Jackson, Mississippi, or Memphis, rather than closer to Applicant's home base. The Government argues that even if the Board finds the Government was not "substantially justified," fees and expenses should be reduced.

Analysis

The Government does not challenge Applicant's eligibility. We therefore consider only whether the Government's position during the appeals was "substantially justified." It is the Government's burden to establish substantial justification. *Francis Paine Logging*, AGBCA No. 91-156-10, 92-3 BCA ¶ 25,043.

The Government is essentially reasserting the positions espoused during the hearing and attempting to relitigate its claims. As indicated above, the Board held the termination for default improper and denied the claim for excess costs. Among the bases for

[2] Counsel for Applicant has advised the Board that the parties recently settled the termination claim. Although the parties also discussed possible settlement of the attorney fee claim, they were unable to reach agreement on it.

Digitized by Google

this decision were a finding that Forest Service inspectors had interfered with performance and attempted to supervise Applicant's planters; the CO's inability to recall Applicant's promise to bring more planters to Holly Springs upon completion of another contract in Georgia; and the lack of evidence that the CO had compared the time needed for Applicant to complete performance with the time in which the same work could be accomplished by reprocurement, as required by the Federal Acquisition Regulation (FAR), 48 CFR 49.402-3(f). In this case, we stated, such consideration might have changed the result. We concluded that the Government had failed to prove there was no reasonable likelihood that Applicant could not complete performance in the 29 days remaining at the time of termination.

The Board also denied the Government's claim for 56 bags of spoiled seedlings, each containing an estimated 384 seedlings. We found that the CO's Representative had not conferred with Applicant, as required by the contract, before ordering additional seedlings from the nursery. In addition, the Government's own witness testified that the number of seedlings per bag ranged from 50 to 1,000, leading the Board to conclude that the Government's estimated loss was too speculative to support the claim.

Our decision did not require resolution of close questions of law or fact, as in *Giuliani Contracting Co.*, AGBCA No. 91-166-10, 92-2 BCA ¶ 24,930. Nor were the issues presented without clear precedent, as in *B & M Constr., Inc.*, AGBCA No. 93-160-10, 93-3 BCA ¶ 26,126, so that the Government would have been justified in defending its actions. The cases cited in our decision of March 1, 1993, make clear that in terminating a contract before the time for performance has run, the Government must do more than compare the percentage of work completed with the time remaining, and may not terminate on grounds that completion is less than absolutely certain. In our opinion, the weaknesses in the Government's case should have been apparent to it prior to hearing and briefing. But for apparent personality conflicts between and among the parties, a settlement might have been effected.[3]

Finally, the Government's contention that counsel for Applicant delayed the hearing is incorrect. Correspondence in the prior appeals indicates that one hearing was rescheduled due to the Government's late response to Applicant's discovery requests and late filing of witness and exhibit lists. The rescheduled hearing was postponed at the request of the parties to allow an additional 30 days for settlement negotiations which, as indicated, were not successful. With regard to location, it is the Board's practice to schedule hearings where it is most convenient for counsel and the majority of witnesses. In this case, Government counsel was in Atlanta, and counsel for Applicant in Indianapolis. The parties agreed that neither of these locations was as desirable as one close to the contract site.

We conclude that the Government's position during the adversary proceeding was not "substantially justified." We find no basis for reducing the attorney fees and expenses claimed.

DECISION

The application is granted in the amount of $14,528.84 ($13,837.50 in attorney fees plus $691.34 in expenses).

[¶ 26,508] Kato Corporation, Inc.

AGBCA No. 93-169-1, November 23, 1993. Contract No. 50-05G1-2-0320.

Contract Disputes, Claims—Statement Adequacy—Disputed Extra Work.—Although a construction contractor maintained that its letter was a routine request for a price adjustment as a consequence of a work order directing the installation of fire dampers, the board ruled that the correspondence was a claim because a dispute existed as to whether the installation of the fire dampers was extra work. The government had directed the contractor to install the fire dampers at no increase in the contract cost, whereas the contractor took the position that the installation of the fire dampers would be at extra cost to the government.

---

[3] Correspondence in the prior appeals indicates that on February 11, 1992, Applicant offered to settle for less than 20 percent of its claimed damages and, in return, not to bid on contracts in the Holly Spring area again. The CO did not respond to this offer.

Digitized by Google

Timeliness of Appeals to Boards—Filing—Ninety-Day Deadline.—An appeal regarding a contractor's claim for the costs of installing fire dampers was dismissed because the contractor failed to file its appeal within 90 days of receiving the contracting officer's final decision. The contractor argued that the contracting officer's final decision was a nullity because its letter was a request for an equitable adjustment, not a claim. The contractor contended that it should be allowed to file a new claim, receive an adverse final decision, and then file an appeal within 90 days of such a decision. It was clear, however, that the contractor's correspondence was a claim, the decision on which the contractor was required to appeal within 90 days of its receipt.

For the appellant: Smith, Currie & Hancock, Atlanta, Georgia, by Karl Dix, Jr. For the government: Michael E. Trow, Office of the General Counsel, U.S. Department of Agriculture, Portland, Oregon.

Before HOURY, DOHERTY, and SETO, Administrative Judges.

HOURY, Administrative Judge: This appeal arose under contract No. 50-05G1-2-0320 between the Forest Service, U.S. Department of Agriculture, and the Kato Corporation (Appellant). The contract, in the amount of $559,300, was for construction of the New Curlew Job Corps Dormitory located in the Colville National Forest, Washington.

A dispute arose between the parties over whether Appellant was required to install fire dampers under the terms of the contract or whether Appellant was entitled to extra payment therefor. The Contracting Officer (CO) wrote a final decision denying compensation. The Board assigned a docket number to an appeal from Appellant's subcontractor. The Board, however, advised Appellant that only Appellant could appeal, and that it would hold the matter in abeyance until Appellant did appeal. Appellant did not respond. After the expiration of the 90-day appeal period, the Board issued Appellant a Notice to Show Cause why the appeal[1] should not be dismissed as untimely.

Appellant entered an appearance, asserting that the CO's decision was a nullity, since Appellant had filed only a request for an equitable adjustment, not a claim. Appellant seeks dismissal without prejudice. The Government has now moved to dismiss on the basis that the appeal was not timely and the Appellant opposes the Government's Motion.

FINDINGS OF FACT

1. Contract No. 50-05G1-2-0320, for construction of the New Curlew Job Corps Dormitory, was awarded June 10, 1992, in the amount of $559,300 (Appeal File (AF) 53).[2] The dormitory was approximately 10,000 square feet and was intended to house 64 people (AF 49). The contract included a Changes clause (Federal Acquisition Regulation (FAR) 52.243-3 (Aug. 1987) (AF 119)) and a Disputes clause (FAR 52.233-1 (Apr. 1984) Alternate I (Apr. 1984) (AF 117)).

2. On September 17, 1992, the CO's Representative (COR) issued Work Order K, directing Appellant to install fire dampers as shown on drawings/specifications, with no adjustment in contract price (Exhibit (Ex.) A).[3]

3. By letter dated September 21, 1992, General Sales Company, Inc., a supplier to Air Flow Heating, Appellant's subcontractor, advised that its bid excluded the fire dampers and the reasons therefor (Ex. B).

4. By letter dated October 24, 1992, from the subcontractor directly to the CO, the subcontractor advised that the specifications did not include fire dampers, that fire dampers could be provided, but that the subcontractor expected "to receive payment in full for them" (Ex. C).

5. By letter dated October 27, 1992, the subcontractor advised the CO fire dampers would cost $2,900 plus $780 for installation (Ex. C).

[1] The matter docketed is referred to as an appeal for convenience only. Appellant, technically, has never filed an appeal and has entered an appearance to obtain a dismissal of the matter docketed without prejudice to Appellant's filing a claim and appealing a new CO's decision.

[2] Unless otherwise indicated, references to AF are to the AF in appeal AGBCA No. 93-178-1, involving the same parties and contract.

[3] As attachments to its Motion the Government included the Declaration of Lucy Soldan, the CO, and Exhibits A-E as attachments to the Declaration. The references in the Findings of Fact (FF) are to these exhibits.

©1994, Commerce Clearing House, Inc.

Digitized by Google

6. The CO called Appellant and advised that the subcontractor should be communicating through Appellant, that the CO disagreed that the fire dampers should cost extra, and that Appellant needed to decide whether the subcontractor's position was correct (CO's Declaration ¶ 3).

7. By letter dated November 19, 1992, Appellant advised the CO that "We agree with Air Flow .... Therefore as authorized [directed] under work order K, the fire dampers that are being installed are being done so at extra cost above and beyond the contract price." (Ex. C.)

8. By facsimile transmission dated December 30, 1992, Appellant sent the CO a Change Order, signed by Appellant, for the fire damper work in the amount of $5,075.52. Appellant relied on its subcontractor's October 27, 1992 price breakdown (FF 5) and added overhead, profit, and bond costs. (Ex. D.)

9. The CO in a final decision dated February 5, 1993, denied Appellant's request (Ex. E).

10. By undated letter postmarked March 11, 1993, received by the Board March 16, 1993, Air Flow appealed the CO's decision and characterized the CO's decision as "[t]he letter which I just received from the contracting officer dening [sic] my *claim* ...." (Emphasis added.)

11. By letter dated March 19, 1993, the Board docketed the appeal and advised both Appellant and the subcontractor that only Appellant could appeal and that the matter would be held in abeyance until Appellant filed a timely appeal.

12. No response was received by the Board. On June 17, 1993, the Board issued Appellant a Notice to Show Cause, within 10 days, why the appeal should not be dismissed as untimely.

13. By letter dated July 12, 1993, Appellant asserted that the request for an equitable adjustment did not amount to a claim, that the CO's decision was a nullity, and that the appeal should be dismissed without prejudice. By letter dated July 26, 1993, the Government indicated it had no objection to a dismissal without prejudice.

14. By letter to Appellant and the Government dated August 3, 1993, the Board stated:

> [I]f the appeal had been timely filed and the Government moved for dismissal because the CO had not been presented with a claim (as Appellant now alleges), we would have considerable difficulty concluding there was no claim based upon the present incomplete record....

The Board requested the parties to supplement the record with relevant evidence prior to the Board's deciding to dismiss with or without prejudice.

15. In response to the Board's letter, the Government changed its position and filed a Motion to Dismiss (with prejudice). Appellant opposes the Government's Motion and seeks dismissal without prejudice.

DISCUSSION

Appellant and the Forest Service were already before the Board in another appeal involving the same contract (FF 1, note 2). Nevertheless, under the Contract Disputes Act (CDA) only "the contractor" may appeal an adverse decision of the CO. 41 U.S.C. § 606. A subcontractor may not file an appeal because the subcontractor lacks privity. *Erikson Air Crane Co. v. United States* [32 CCF ¶ 72,392], 731 F.2d 819 (Fed. Cir. 1984); *United States v. Johnson Controls, Inc.* [31 CCF ¶ 71,374], 713 F.2d 1541 (Fed. Cir. 1983). Therefore, the purported appeal by Appellant's subcontractor was clearly a nullity since even Appellant has not argued that it authorized the appeal. (FF 10, 11.)

An appeal to the Board of a CO's adverse decision must be filed within 90 days of its receipt. 41 U.S.C. § 606. This time limit is jurisdictional in nature and may not be waived. *Tom Farrell,* AGBCA No. 93-185-1, 93-3 BCA ¶ 26,026. Since Appellant did not file an appeal within 90 days of the CO's final decision (FF 9-12), the matter docketed would ordinarily be dismissed. However, in response to the Board's Notice to Show Cause (FF 12, 13), Appellant contends that under 41 U.S.C. § 605(a), all "claims" must be the subject of a CO's final decision, and that Appellant's request for an equitable adjustment was not a claim. Appellant contends that the CO's final decision was, therefore, a nullity and that Appellant should be allowed to file a claim, receive an adverse CO's final decision, and file an appeal within 90 days of such decision. Appellant contends the present appeal should be dismissed without prejudice to the filing of a new appeal.

Appellant is correct that 41 U.S.C. § 605(a) requires a CO's final decision on all "claims." A claim is defined by FAR 52.233-1(c) as follows:

> (c) "Claim," as used in this clause, means a written demand or written assertion by

Digitized by Google

> one of the contracting parties seeking, as a matter of right, the payment of money in a sum certain, the adjustment or interpretation of contract terms, or other relief arising under or relating to this contract .... A voucher, invoice, or other routine request for payment that is not in dispute when submitted is not a claim under the Act. The submission may be converted to a claim under the Act, by complying with the submission and certification requirements of this clause, if it is disputed either as to liability or amount or is not acted upon in a reasonable time.

Appellant asserts that its facsimile transmission of December 30, 1992 (*see* FF 8), "was an attempt to initiate negotiations for providing the fire dampers ... was nothing more than a cost proposal [that] neither implicitly nor explicitly request[ed] a CO's final decision."

The contract includes the Changes clause which provides that a written order, not designated a Change Order, may nevertheless be treated as a Change Order, and the contractor may request an equitable adjustment thereunder (FF 1). Appellant's position is that Appellant's December 30, 1992 facsimile (FF 8) was only a request for an equitable adjustment submitted as a consequence of the Work Order directing that Appellant install the fire dampers (FF 2).

Under the FAR's definition of a claim, a routine request for payment is not a claim. Therefore, ordinarily, a request for an equitable adjustment is also not a claim, because it is both contemplated and called for under the Changes clause. Such a request, with or without negotiation, may become a modification to the contract and, unless disputed, never becomes a claim. *See Raven Indus.*, ASBCA Nos. 44048 and 44049, 93-3 BCA ¶ 26,031; *Saco Defense, Inc.*, ASBCA Nos. 44792 and 45171, 93-3 BCA ¶ 26,029; *RMS Technologies, Inc.*, ASBCA No. 44727, 93-2 BCA ¶ 25,789, *recon. denied*, 93-3 BCA ¶ 26,023.

At the other extreme from routine requests for equitable adjustments, there are cases holding, not surprisingly, that a claim exists after the parties have reached an impasse. *Santa Fe Eng'rs, Inc. v. Garrett* [38 CCF ¶ 76,506], 991 F.2d 1579 (Fed. Cir. 1993); *Essex Electro Eng'rs, Inc. v. United States*, 22 Cl. Ct. 757 (1991), *aff'd* 960 F.2d 1576 (Fed. Cir. 1992), *cert. denied* 113 S. Ct. 408 (1992).

Where a routine request for an equitable adjustment is submitted to the CO, and the CO, without discussions with the contractor, writes a final decision denying the request, it would appear to be incongruous to conclude that no jurisdiction exists over a contractor's timely appeal therefrom. The CO, by considering and denying the requested equitable adjustment, has created an impasse and converted an otherwise routine request for equitable adjustment to a claim. To hold that a board is without jurisdiction because Appellant's request was not a claim when submitted simply obviates 41 U.S.C. § 607(e) requiring boards to provide informal, expeditious and inexpensive relief. Such a holding may also unfairly deprive prevailing contractors of interest under 41 U.S.C. § 611.

In the present matter we need not decide whether the CO can convert a routine request for an equitable adjustment into a claim by issuing a final decision denying the request. When all the facts are considered, it is clear that Appellant's December 30, 1992, facsimile was anything but a routine request for an equitable adjustment. Appellant had already been *directed* to install the fire dampers *at no increase in contract cost* (FF 2). Appellant's subcontractor and the subcontractor's supplier not only advised the CO directly that payment was expected, but also stated the precise amount of payment sought (FF 3-5). The CO advised Appellant that she disagreed the fire dampers should cost extra and asked Appellant to decide whether Appellant agreed with the subcontractor. (FF 6.)

Appellant took the position in writing that its subcontractor was correct, and that the fire dampers that were then being installed would be at extra cost to the Government (FF 7). Therefore, there was a clear dispute at this point in time. Appellant then sent the CO its December 30, 1992, facsimile which it signed, and transmitted the Change Order form on the fire damper installation with its own increased costs (FF 8). Only the CO's signature was necessary to authorize the claimed amount. The CO could either sign the form or deny the claim. The CO considered the facsimile to be a claim and issued a final decision denying it.

We conclude that after the CO unequivocally advised Appellant that she disagreed with paying extra for the fire dampers (FF 6), Appellant's submittals of November 19 and December 30, 1992, taken together, constituted submission of a claim for a specific amount. The CO's denial required Appellant to accept the decision or appeal within 90 days. Appellant failed to appeal within 90 days.

©1994, Commerce Clearing House, Inc.

Digitized by Google

The parties have been given a full opportunity to present evidence and brief the issues. Appellant has failed to show cause why the present matter should not be dismissed. The facts and circumstances presented a close enough question to have warranted at least a protective appeal by Appellant, particularly after Appellant's subcontractor appealed and the Board advised Appellant thereof.

RULING

The Board is without jurisdiction. The docketed matter is dismissed with prejudice to reintroduction to the Board.

[¶ 26,509] Clifford La Tourelle

AGBCA Nos. 93-132-1, 93-133-1, November 22, 1993. Contract No. 52-0112-1-00132, 52-0112-1-00149.

Sales of Government Property—Timber Sales—Extensions.—A timber sales contractor's decision not to subcontract, made after being informed that the agency considered subcontractors as employees for purposes of state workers' compensation law, did not provide a basis for granting the contractor's request for a time extension, because the contractor was required to provide all labor necessary to complete performance and his decision not to subcontract amounted to a business decision. The contractor's assertion that state law prohibited subcontracting was not established. The contract neither prohibited nor required subcontracting, but merely required agency approval if the contractor decided to subcontract. The contractor provided no evidence that the agency withheld such approval. If the contractor had decided to subcontract, the Permits and Responsibilities clause of the contract would have required him to comply with the state law. The board stated that the contractor was presumed to have known its contractual responsibility to comply with state law and noted that the contractor could have included any workers' compensation costs in its bid.

Delays—Adjustments—Government Interference with Work.—A tree-thinning contractor's claim that the government's failure to ensure that workers on other tree-thinning contracts were adequately equipped and trained to work safely caused delay was not summarily dismissed, because there remained disputed or unknown facts with regard to the health and safety requirements of the other tree-thinning contracts and the time of government action or failure to act. Furthermore, the contractor was seeking only extensions of time, which in turn would eliminate its liability for liquidated damages. Under the Default and Liquidated Damages clauses of the contract, the contractor was not required to prove government fault, but only that the delays were beyond the contractor's control and without its fault or negligence. In addition, the contractor would have to prove the number of days that overall completion of its own contract was delayed by assisting stranded workers and taking precautions against habituated bears.

Liquidated Damages—Amount—Reasonableness.—A government motion for summary judgment on the issue of liquidated damages to be assessed against a tree-thinning contractor was denied because there remained fact questions concerning the basis of the $20-a-day rate. The contractor argued that the rate was based on mistaken assumptions with regard to the number of inspections to be made.

For the appellant: Clifford La Tourelle. For the government: James J. Ustasiewski, Office of the General Counsel, U.S. Department of Agriculture, Juneau, Alaska.

Before EATON, HOURY and DOHERTY, Administrative Judges.

EATON, Administrative Judge: These appeals are from two final decisions covering two contracts between the Forest Service, U.S. Department of Agriculture, and Clifford La Tourelle of Sitka, Alaska (Appellant). Both contracts were for pre-commercial tree thinning on Kruzof Island in Alaska's Tongass National Forest.

The appeal docketed as AGBCA No. 93-132-1 concerns contract No. 52-0112-1-00132, awarded May 21, 1991, in the amount of $59,400. When Appellant did not finish within the specified time, the

Digitized by Google

Contracting Officer (CO) allowed him to complete performance in default status and withheld $1,440 in liquidated damages. The appeal docketed as AGBCA No. 93-133-1 concerns contract No. 52-0112-1-00149, awarded September 26, 1991, in the amount of $22,195.88. Time for performance of this contract expired before Appellant even began work. The CO initially allowed Appellant to work in default status, but ultimately terminated the contract and imposed liquidated damages of $4,340.

In seeking remission of liquidated damages, Appellant advances two reasons for excusable delay: (1) state law and Forest Service contract provisions that allegedly preclude subcontracting, and (2) Forest Service failure to enforce health and safety requirements for other tree thinning contractors on Kruzof Island, allowing these contractors to interfere with Appellant's own performance. In addition, Appellant argues that actual damages were not difficult to predict and that the contractually-specified rate of $20 a day was based on mistaken Forest Service assumptions regarding the frequency and number of inspections.

Appellant requested a hearing and, in preparation for it, presented the Government with 11 interrogatories. The Government asserted that responding in writing would be an undue burden and expense and sought a Protective Order. Appellant responded with a Motion to Compel Discovery.

In a Ruling dated June 7, 1993, the Board treated the Government's request as a Motion to Limit the Scope of Discovery under Federal Rule of Civil Procedure 26(a). We delayed ruling on either party's Motion, finding that the appeals might be appropriate for partial summary judgment, obviating the need for some interrogatories. *See Clifford La Tourelle,* AGBCA Nos. 93-132-1, 93-133-1, 93-3 BCA ¶ 26,125.

The Board has jurisdiction under the Contract Disputes Act, 41 U.S.C. § § 601-613.

FINDINGS OF FACT

Contract No. 52-0112-1-00132

1. Contract No. 52-0112-1-00132, the Kruzof Island Pre-commercial Tree Thinning contract, was in the Chatham Area of the Tongass National Forest, Alaska. The contract site, approximately 20 air miles northwest of Sitka, Alaska (Appeal File (AF) I at 22), could be reached by a combination of helicopter, float plane, or boat and all terrain vehicle (ATV) (AF I at 25).[1]

2. The Forest Service awarded Bid Item 3, consisting of two units designated 120A and 120B, to Appellant on May 21, 1991. Appellant bid $330 an acre for 180 acres, or a total of $59,400 (AF I at 11, 18, 113).

3. The Government estimate for Bid Item 3, $51,933.60, was based on a crew of two completing an average of .6 acres a day for 254 days. The estimate included direct labor costs of $148.48 and fringe benefits and payroll taxes (FICA, workers' compensation, unemployment, and health and welfare) of $69.79 a day. (AF I at 109, 110.)

4. The Forest Service issued a Notice to Proceed effective June 3, 1991. Performance was to continue until November 1, 1991, unless severe weather intervened. (AF I at 38, 118.)

5. On October 7, 1991, Appellant requested a partial suspension retroactive to September 1 because access to the contract site required crossing two tidal rivers and was hazardous if not impossible due to heavy rains. The Forest Service granted the request and placed in effect a contract provision stating that during partial suspensions, 1 day in 10 would be counted against performance time. (AF I at 123, 128, 129, 132; *see* Finding of Fact (FF) 17, below.)

6. The Forest Service issued a Resume Work Order on April 16, 1992 (AF I at 140). The 254 days for performance expired on September 3, 1992. A daily diary prepared by the CO's Representative (COR) on October 15, 1992, indicates that by this date the Forest Service had accepted 76 percent of Appellant's work, which the COR noted was of Appellant's "usual high quality." The COR recommended payment in full, minus liquidated damages if the CO decided to assess them. (AF I at 174.)

7. On November 1, 1992, Appellant requested a partial suspension that the Forest Service approved, again counting 1 day in 10 against performance time (AF I at 177, 180). Appellant completed performance during the pendency of these appeals, using 326 calendar days. The CO withheld liquidated damages of $20 a day, or $1,440, for the 72 days in excess of the performance time specified. (Correspondence File.)

[1] The record includes two appeal files, one for each contract. AF I refers to that for contract No. -00132; AF II refers to that for contract No. -00149.

Contract No. 52-0112-1-00149

8. Contract No. 52-0112-1-00149, the 1991 Chichagof Precommercial Tree Thinning contract, was also on Kruzof Island, approximately 16 air miles northwest of Sitka (AF II at 23).

9. The Forest Service awarded Bid Item 2, unit 454, to Appellant on September 26, 1991. Appellant bid $326.41 an acre for 68 acres, or $22,195.88. (AF II at 10, 19, 134.)

10. The Government estimate, $19,505.80, was based on a crew of two completing .6 acres a day in 119 calendar days. It included direct labor costs of $152.48 and fringe benefits and payroll taxes (FICA, unemployment, and health and welfare) of $22.87. (AF II at 132, 133.)

11. The Forest Service issued a Notice to Proceed effective October 15, 1991 (AF II at 138). Appellant requested and the Forest Service approved a total suspension effective November 1, 1991 (AF II at 142, 145).

12. The Forest Service issued a Resume Work Order on April 16, 1992 (AF II at 149). Time for performance expired on July 25, 1992, before Appellant had done any work on the contract; however, the CO advised Appellant that he would be allowed to work in default status and subject to liquidated damages (AF II at 160, 161, 181).

13. The Forest Service granted Appellant's request for a total suspension effective November 1, 1992 (AF II at 169, 177). Although the record does not show when Appellant resumed performance, Government counsel states that Appellant worked for 336 calendar days before the contract was terminated for default on August 10, 1993. The CO withheld $4,340 in liquidated damages on this contract. (Correspondence File.)

Relevant Contract Provisions [2]

14. Contract No. -00132 included the Federal Acquisition Regulation (FAR) clause entitled Permits and Responsibilities, 48 CFR 52.236-7 (April 1984). Among other things, the clause requires a contractor, without additional expense to the Government, to comply with federal, state, and municipal laws, codes, and regulations. It also requires the contractor to take proper safety and health precautions to protect the work, the workers, the public, and the property of others. (AF I at 72.) Contract No. -00149 did not include this clause.

15. Both contracts required the contractor to obtain written permission from the Forest Service before subcontracting any portion of the work. Subcontracts were to incorporate the terms and conditions of the prime contract and to "otherwise be in compliance with applicable laws and regulations." (AF I at 43, AF II at 45.)

16. The contracts included the standard FAR clause covering the Service Contract Act of 1965, as amended, 48 CFR 52.222-41 (May 1989). The clause defines "service employee" to include all persons engaged in performance of the contract, regardless of the relationship between a prime contractor and any subcontractor. (AF I at 54, AF II at 63.)

17. The CO was authorized to issue either partial or total suspensions, depending on weather conditions. The contracts stated that winter shutdowns would begin about November 1; during mild winters the contractor could request a partial suspension when 1 day of performance time would be counted for every 10 calendar days (AF I at 37, 38, AF II at 40).

18. The contracts included the standard FAR clause covering Default of Fixed Price Service and Supply Contracts, 48 CFR 52.249-8 (April 1984). The clause states in pertinent part:

> (c) Except for defaults of subcontractors at any tier, the Contractor shall not be liable for any excess costs if the failure to perform the contract arises from causes beyond the control and without the fault or negligence of the Contractor. Examples of such causes include (1) acts of God or of the public enemy, (2) acts of the Government in either its sovereign or contractual capacity, (3) fires, (4) floods, (5) epidemics, (6) quarantine restrictions, (7) strikes, (8) freight embargoes, and (9) unusually severe weather. In each instance, the failure to perform must be beyond the control and without the fault or negligence of the Contractor.

(AF I at 73, AF II at 82.)

19. The contracts also included the FAR clause entitled Liquidated Damages—Supplies, Service, or Research and Development, 48 CFR 52.212-4 (April 1984). It provided for liquidated damages at the rate of $20 a calendar day for failure to perform within the time specified. The contractor was not to be charged if delays in performance arose "out of causes beyond the control

[2] Unless otherwise indicated, the cited provisions appeared in both contracts.

Digitized by Google

and without the fault or negligence" of the contractor, as defined in the Default clause. (AF I at 37, AF II at 39.)

20. The contracts stated that the Forest Service would conduct inspections at such times and places as the CO deemed sufficient to ensure satisfactory performance. Due to the remoteness of some units and related access problems, and to the limited number of inspectors, once-a-month inspections were not guaranteed. Between November 1 and April 15, inspections were to be scheduled as weather permitted, but might not be conducted at all. In addition, no more than ten inspections per bid item were to be made for the purpose of progress payments. (AF I at 33, AF II at 35.)

21. The contracts stated that there were hazards associated with field work in southeast Alaska, among them brown bears, a large coastal form of the Grizzly considered unpredictable and potentially dangerous. Contractors were advised to carry large caliber weapons and to avoid human/bear encounters. The contracts specifically stated that "all campsites are to be kept clean and free of garbage so as not to attract bears." (AF I at 27, AF II at 29.)

Appellant's Requests for Extensions

A. *Requests Based on Status of Subcontractors*

22. On June 2, 1992, Appellant requested permission to subcontract portions of unit 120B on contract No. -00132 (AF I at 153). On June 10, 1992, however, Appellant wrote the CO requesting a 75-day extension on contract No. -00132 and a 110-day extension on contract No. -00149. Appellant stated that he had intended to subcontract the former and move his camp to the latter on June 1, 1992, allowing him to complete both contracts on time; he instead had decided to complete the work himself because new (1992) Forest Service solicitations warned that subcontractors might be considered "employees."[3] (AF I at 154.) The Government, in its Answer, admits that on occasion Alaska has considered tree thinning subcontractors to be "employees" for purposes of state workers' compensation law.

23. On June 29, 1992, the CO denied Appellant's requests for extensions but stated that she would allow Appellant to continue to work in default status, incurring liquidated damages, until both contracts were completed (AF I at 158).

24. On July 20, 1992, Appellant wrote the CO indicating that he interpreted Alaska law to prohibit subcontracting. He argued that the prohibition was beyond his control and that he had no reason to expect he could not follow his previous practice of subcontracting if it appeared that he could not complete work himself within the performance time specified. He also argued that use of "employees" would result in bid prices much higher than the Forest Service was willing to pay, and that Forest Service estimates were therefore faulty. Appellant requested a final decision, within 60 days, on his requests for extensions. He also sought relief from liquidated damages. (AF I at 160, 161.)

B. *Requests Based on Conditions in Other Camps*

25. On September 7, 1992, Appellant wrote the CO alleging that the Forest Service had failed to prevent other tree thinning contractors from interfering with his own performance. Appellant stated that the only people on Kruzof Island in addition to himself were employed by other contractors, and that these workers were not adequately prepared or equipped for conditions at a remote site. Appellant alleged that he had been delayed by having to assist these workers, who had no means of transportation and no funds to hire any, when they needed supplies or quit. (AF I at 165, 166.)

26. Appellant further alleged that problems with habituated bears were the direct result of Forest Service inaction and negligence. He stated that he had lived in the woods for 12 years, was aware of "normal and acceptable" risks of bears, and had never had a camp destroyed. In the past 2 years, however, Appellant stated, bears had been attracted to food left in camps abandoned by other contractors and had destroyed them, as well as a Forest Service camp. Appellant alleged that despite his complaints to the CO, the Regional Forester, the Forest Supervisor, and a member of Congress, the Forest Service had taken no action to clean up abandoned camps; to require contractors to maintain clean camps; to inform the Alaska Department of Fish and Game of conditions attractive to bears; or to inform him of increased risk after the Forest service camp was destroyed. Appellant stated that he had been forced to take immediate action to protect his own camp, for example, siding it with boards to make it more difficult for bears to get inside. Appellant concluded that

[3] The statement did not appear in Appellant's contracts.

©1994, Commerce Clearing House, Inc.

Digitized by Google

he intended to complete his contracts, but requested an additional 60 days for each. (*Id; see also* AF I at 163, 175, 176.)

27. Appellant supports his allegations with copies of 1991 and 1992 daily diaries prepared by the COR for four other tree thinning contractors on Kruzof Island: B&C Thinning, David Chavez, Chile Fritos Cutters, and J&R Reforestation. A sampling of entries confirms that workers in these camps did not properly store or clean up food, and were not provided with emergency transportation, working radios, or safety gear, for example, chainsaw chaps. In addition, workers were abandoning camps due to disputes over pay. When one contractor instructed a helicopter pilot not to pick up his workers, the diaries show that Appellant transported them to the mainland by ATV and boat and, in addition, volunteered to take them back to Kruzof Island to retrieve their gear. (Appellant's Supplement to AF, Tabs 1.0 to 1.9.)

28. In an undated "Explanation of Delays," Appellant alleges that he lost at least 20 days assisting other contractors' workers and 10 days in milling lumber and siding his camp. Appellant asserts that days lost during the summer cannot be replaced on an equal basis with shorter fall and winter days when weather is worse. (AF I at 186.)

29. The COR's diaries also show that the COR warned contractors of the need to maintain clean camps, threatened termination for default if conditions were not corrected, and worked with officials of the Immigration and Naturalization Service and the Department of Labor when problems appeared to be within the jurisdiction of these agencies. (Appellant's Supplement to AF, *supra.*)

30. The Government, in its Answer, admits that at times during the summer of 1992, employees of David Chavez were not equipped to work safely; that two temporary work camps on Kruzof Island, operated by this contractor, did not meet safety standards; and that one bear was attracted to the camps.

Liquidated Damages

31. As indicated above, the Forest Service assessed $1,440 in liquidated damages on contract No. -00132 and $4,340 on contract No. -00149 (FF 7, 13).

32. The COR, in an affidavit attached to the Government's Motion for Partial Summary Judgment, states that at the time of award, actual damages were difficult to predict. While damages generally would be limited to the cost of administering the contracts beyond the specified time, the actual amount depended on the number of additional inspections, the method of transportation used, the number of other contractors for whom inspection trips could be combined, and personnel costs, both for inspections and in-office. The COR concluded that liquidated damages would average $600 a month and could exceed this if a helicopter were used. (Affidavit of Barry L. McDonald, July 14, 1993.)[4]

33. Appellant, in correspondence addressed to the CO, argues that except for a few summer months, inspections were seldom conducted monthly, and that at the time his contract was awarded, the Forest Service knew that there were other contracts in the area on which work would continue into 1993 (AF I at 179).

Final Decisions

34. On September 23, 1992, the CO issued a final decision denying Appellant's requests for extensions. On November 10, 1992, the CO issued a second final decision, reaffirming her denial and assessing liquidated damages under contract No. -00132. The CO noted the rate of $20 a day, but did not state the amount actually due.

Proceedings on Appeal

35. Appellant timely appealed both decisions, generally repeating the allegations in his claims to the CO. As indicated above, in preparation for a hearing Appellant submitted 11 interrogatories to the Government, leading Government counsel to move for a Protective Order allowing it to respond orally and Appellant to move to compel written answers. The Board delayed ruling on both Motions until it could consider the

[4] The COR's liquidated damages estimate for 1992 Chichagof Pre-commercial Tree Thinning contract included the following:

Two technicians, 2 days @ $10.18 an hour	$325.12
Remote *per diem* @ $15 a day	60.00
Two fixed wing flights to job site, 45 minutes each @ $330 an hour	495.00
	$880.12
Overhead @ 5 percent	44.01
Cost per inspection	$924.13
Cost per day ($924.13 divided by 30)	$30.80

(Appellant's Supplement to AF, Tab 1.12.) It is not clear whether this estimate also was used for Appellant's contract, which was awarded in 1991.

Digitized by Google

positions of the parties in the context of a Government Motion for Partial Summary Judgment.

DISCUSSION

Summary judgment is appropriate when there are no material facts in dispute, so that the moving party is entitled to judgment as a matter of law. The Board, however, will decline to decide legal questions on the basis of an inadequate factual record or when it is not reasonably certain there are no triable issues of fact. *Cannon Structures, Inc.*, AGBCA No. 90-207-1, 93-3 BCA ¶ 26,059.

We grant summary judgment with regard to Appellant's alleged inability to subcontract. The Government need not answer interrogatories on this subject. As discussed below, we find disputed or inadequate facts with regard to Appellant's other claims.

Status of Subcontractors

Appellant alleges that the Service Contract Act's definition of "service employee" and Alaska's treatment of tree thinning subcontractors clearly establish that subcontractors are "employees." Therefore, Appellant argues, contract provisions permitting subcontracting with Forest Service approval are contrary to and/or create a conflict between state and federal law.

Appellant further alleges that under previous Forest Service contracts, he was allowed to subcontract a portion of the work. In bidding the disputed contracts, Appellant states, he relied on this practice. When he learned that subcontractors might be considered "employees," Appellant instead decided to complete performance himself and sought additional time to do so.

Appellant's interpretation of state law, and of contract provisions regarding subcontracting, is flawed. Our review of the Alaska code reveals no prohibition against subcontracting, and neither party has directed our attention to a specific code provision. With regard to workers' compensation, the code indicates that persons *not* covered include part-time babysitters, cleaning persons, harvest help, and "similar part time or transient help." ALASKA STATUTES § 23.30.230.

We do not decide whether, in this particular case, a subcontractor of Appellant would be considered an "employee." What we glean from the Government's Answer, in which it admits that on occasion Alaska has treated tree thinning subcontractors as "employees" for purposes of state workers' compensation law (FF 22), is that the state may require a tree thinning contractor who elects to subcontract to obtain the workers' compensation coverage to which "employees" would be entitled.[5] If Appellant had proceeded to subcontract, the Permits and Responsibilities clause of contract No. -00132 required him to comply with all federal, state, and municipal laws (FF 14). While this clause did not appear in contract No. -00149 (FF 14), Appellant is presumed to know the law. In order to comply with it, Appellant could have adjusted his bids to include an amount for workers' compensation coverage.

Appellant's contracts do not otherwise prohibit or require subcontracting; they merely require Forest Service approval if the contractor elects to subcontract (FF 15). There is no evidence that in this case the Forest Service withheld approval. A contractor is expected to provide all labor and equipment necessary to perform. *Schmalz Constr. Ltd.*, AGBCA Nos. 86-207-1 *et al.*, 91-3 BCA ¶ 24,183. Whether this includes subcontracting is a business decision of the prime contractor.

We conclude that inability to subcontract does not constitute excusable delay or justify an extension of Appellant's contracts. We grant the Government's Motion for Partial Summary Judgment on this portion of the claim, and we deny Appellant's Motion to Compel Discovery with regard to interrogatories No. 1-3, 8, and 9, related to subcontracting.

Appellant additionally argues that the Forest Service underestimated the cost of performance. With regard to contract No. -00149, Appellant may have a point, since the Government estimate did not include workers' compensation for either of the two workers on which the estimate was based (FF 10). The estimate, however, was not available to Appellant before bidding, so he could not have relied on it. As indicated in our prior Ruling, the Government also need not answer interrogatory No. 6, seeking facts underlying the Government's denial of Appellant's allegation that Forest Service estimates are unrealistic.

Conditions in Other Camps

Appellant alleges that because the Forest Service failed to ensure that workers on

[5] The Alaska Supreme Court has held that an uninsured subcontractor's employees are considered employees of the contractor. *Searfus v. Northern Gas Co.*, 472 P.2d 966 (Alaska 1970).

©1994, Commerce Clearing House, Inc.

Digitized by Google

other tree thinning contracts on Kruzof Island were adequately equipped and trained to work safely, he was forced to assist them, delaying his own performance. In addition, Appellant alleges that food left in abandoned camps attracted and habituated bears, delaying him because of the need to take extraordinary precautions to protect his own camp. Appellant concludes that the Forest Service's failure to enforce health and safety requirements allowed other contractors to interfere with Appellant's contract. (*See* FF 25-28.)

The Government responds that Appellant's contract did not require him to assist workers employed by other contractors and that alleged delays were therefore not the result of Government action or inaction. It also seeks summary judgment on this basis.

The Government has an implied duty not to interfere with or delay a contractor's performance. When some Government action is essential for the contractor to perform, the Government will be liable if it wrongfully refuses or fails to take action. *Mann Constr. Co.*, EBCA No. 362-6-86, 88-3 BCA ¶ 21,014 (quoting J. Cibinic and R. Nash, Administration of Government Contracts (2d ed. at 212)). Consequently, if Appellant were seeking damages, he would be required to prove fault, negligence, or breach of warranty on the part of the Forest Service. *See Xplo Corp.*, DOT CAB No. 1242, 86-2 BCA ¶ 18,867 at 95, 144-146 and cases cited therein.

The Government, however, is generally not liable for interference by third parties. *Id.* At a minimum, to recover damages Appellant would be required to show that the Forest Service could have effectively intervened to prevent interference by other tree thinning contractors. *Development Management Consultants, Inc.*, HUD BCA No. 79-405-C28, 85-3 BCA ¶ 18,338. Diaries provided by Appellant indicate that in 1991 and 1992, the Forest Service was aware of health and safety violations by other tree thinning contractors on Kruzof Island; that it directed the contractors to correct the conditions; and that in some instances the Forest Service brought the problems to the attention of other responsible Government agencies (FF 28).

There nevertheless remain disputed or unknown facts with regard to the health and safety requirements of the other tree thinning contracts and the timing of Forest Service action (or failure to act) in response to Appellant's complaints. In these appeals, moreover, Appellant seeks only extensions of the time for performance, which in turn would reduce or eliminate his liability for liquidated damages. Under the Default and Liquidated Damages clauses of his contracts, Appellant is not required to prove Government fault, but only that the delays were beyond his control and without his own fault or negligence.[6] (FF 19, 20.) In addition, Appellant must prove the number of days overall completion of his own contracts was delayed by (1) assisting stranded workers and (2) taking precautions against habituated bears. *Xplo Corp., supra.*

Since Government fault or negligence is not the legal question to be decided, the Motion for Partial Summary Judgment on the basis of conditions in other contractors' camps is denied.

Liquidated Damages

Fault or negligence, if any, resulting in delays of Appellant's performance is irrelevant for purposes of deciding the remaining question in these appeals, *i.e.*, whether the liquidated damages claimed by the Government are excessive or represent a penalty. *Connell Rice & Sugar Co.*, AGBCA No. 85-483-1, 87-1 BCA ¶ 19,489, *rev'd on other grounds*, 837 F.2d 1068 (Fed. Cir. 1988).

The Government has the initial burden to prove that:

> at the time of contracting, actual damages were uncertain in amount or difficult to ascertain;
>
> the parties intended to liquidate them; and
>
> the amount specified is reasonable and not greatly disproportionate to the presumed loss or injury.

Tru-Tech, Inc., AGBCA No. 83-295-3, 84-2 BCA ¶ 17,247; *see also M&T Logging*, AGBCA No. 85-122-1, 88-3 BCA ¶ 21,124.

Appellant disputes the Forest Service contention that actual damages were difficult to ascertain and alleges that the $20-a-day rate was based on mistaken assumptions with regard to the number of inspections to be made. The rate appears to be based on monthly inspection of only Appellant's work. (FF 32; *see also* note 4.) The record, however, indicates that there were four other tree thinning contractors on Kruzof

[6] We note that under Appellant's contracts, foreseeability is not an element of excusable delay that Appellant is required to prove.

Digitized by Google

Island for whom inspection trips possibly could have been combined (FF 27), and that monthly inspections were not guaranteed (FF 20). Appellant argues that these facts were known at the time of contracting. This alone is sufficient to preclude summary judgment.

In addition, the FAR requires a CO to take all reasonable steps to mitigate liquidated damages and specifically states:

> If a liquidated damages clause is in a contract and a basis for termination for default exists, the contracting officer shall take appropriate action expeditiously to obtain performance by the contractor or to terminate the contract.

48 CFR 12.202(c). Appellant was in default status before he even began performance of contract No. -00149; nevertheless the CO allowed him to perform (FF 12), a potential breach of the Government's duty to prevent the contractor from having to pay a disproportionately high amount or allowing the damages to run for an unreasonable length of time. *See JEM Devel. Corp.*, ASBCA No. 42645, 92-1 BCA ¶ 24,428 (quoting *Jennie-O Foods, Inc. v. United States* [24 CCF ¶ 81,814], 580 F.2d 400 (Ct. Cl. 1978)).

Finally, the CO's willingness to forbear, allowing Appellant to begin and/or keep on working in default status, may have constituted a waiver of contract delivery or performance dates. In that case, unless a new completion date were established within a reasonable time, the Government would not have been entitled to terminate contract No. -00149 for default, and could not assess liquidated damages for late performance of either contract. *See*, for example, *Jack L. Hartman & Co.*, AGBCA No. 84-126-1, 91-1 BCA ¶ 23,546; *Robert E. Moore Constr.*, AGBCA No. 85-262-1, 90-2 BCA ¶ 22,803. Alternatively, forbearance coupled with Appellant's continuing to perform may have constituted (1) a modification of Appellant's existing contracts, or (2) new, implied-in-fact contracts wherein the parties agreed that the contract price would be decreased by $20 a day. We have no evidence as to the intent of the parties in this regard, and therefore cannot grant summary judgment.

RULING

The Government's Motion for Partial Summary Judgment is granted with regard to the status of subcontractors. The Motion is denied with regard to (1) delays allegedly caused by other tree thinning contractors and (2) liquidated damages.

As for the Government's Motion for a Protective Order and Appellant's Motion to Compel Discovery, Appellant may narrow interrogatories so that they are reasonably calculated to lead to the discovery of admissible evidence on delays caused by other contractors and on liquidated damages. The Government shall provide written answers to any revised interrogatories or copies of requested documents within 30 days of receipt.

By attached letter of today, the Board encourages settlement but proposes a schedule for further proceedings.

[¶ 26,510] McGee Landscaping, Inc.

AGBCA No. 92-194-1, November 24, 1993. Contract No. 50-4741-9-706.

Procedure, Boards—Failure to Prosecute—Failure to Respond.—An appeal arising out of a contract for the reconstruction of rural strip mining land was dismissed with prejudice because the contractor failed to respond to the board's show cause order. The board requested that the contractor's response include either a brief or a request that the appeal be decided without a brief.

For the appellant: Charles A. McGee. For the government: Ted L. Elders, Office of the General Counsel, U.S. Department of Agriculture, Atlanta, Georgia.

Before HOURY, EATON, and DOHERTY, Administrative Judges.

HOURY, Administrative Judge: This appeal relates to Soil Conservation Service (SCS), U.S. Department of Agriculture, Contract No. 50-4741-9-706 with McGee Landscaping, Inc. (Appellant) dated August 10, 1989 in the amount of $202,098.60. Appellant appealed the Contracting Officer's (CO) final decision denying claims for equitable adjustments totaling $301,066.99.

The Board has jurisdiction under the Contract Disputes Act, 41 U.S.C. §§ 601-613.

©1994, Commerce Clearing House, Inc.

Digitized by Google

The Board has substantially adopted the opinion of its Chief Counsel, M. C. Shager.

BACKGROUND

The SCS awarded Contract No. 50-4741-9-706 to Appellant on August 10, 1989. The contract covered reconstruction of 29.6 acres of rural abandoned strip mine land located in Marion County, Tennessee. The timely appeal in this case was from the CO's final decision dated February 24, 1992, denying all but $7,906.20 of Appellant's claims for equitable adjustments. The CO's final decision organized the claim into nine items; the Appellant responded in its Complaint to the Board using these same nine items as follows:

1. Modification No. 4, Bid Item 7—inadequate compensation for increased length of rock riprap in chute B, softer subgrade, and material transportation distances;

2. Modification No. 4, Bid Item 10—threefold increase in moving spoil due to uphill travel for 2.4 acres;

3. Bid Item 9—additional .6 acres of reclamation work;

4. Modification No. 4, Bid Items 9 & 10—additional 2.4 acres of reclamation work performed before SCS issued Modification No. 4;

5. Modification No. 4, Bid Item 10—59,656 additional cubic yards of excavation in reshaping the 2.4 acres;

6. Modification No. 4, Bid Item 11—natural material encountered requiring additional ripping;

7. Modification No. 5, Bid Item 5A—inadequate compensation for added berm construction;

8. Bid Item 5—movement of 30,157 additional cubic yards of material caused by misplacement of lower 2 berms;

9. SCS interference, unnecessary withholding, and unjustified liquidated damages.

Appellant's claim to the CO was in the amount of $301,066.99. On appeal, Appellant increased the claimed amount to $301,574.99.

The parties filed the pleadings and Appeal File. At Appellant's request, the Board held a hearing in this appeal on May 19-20, 1993, in Chattanooga, Tennessee. After receiving the transcript of the hearing, on June 17, 1993, the Board set the briefing schedule, which Appellant received on June 30, 1993 (Certified Receipt No. P 481 948 619). Appellant's brief was due August 23, 1993.

Appellant did not file a brief or contact the Board to request an extension. On September 20, 1993, the Board issued a Notice to Show Cause why the appeal should not be dismissed for Appellant's failure to prosecute. The Board requested that Appellant's response include either its brief or a request that the appeal be decided without Appellant's brief, and provided Appellant 20 days to respond. The Board stated that "[i]n the absence of a reply, the Board may dismiss the appeal with prejudice without further proceedings." Appellant received the Notice on October 7, 1993 (Certified Receipt No. P 481 951 290).

DISCUSSION

The Notice to Show Cause made clear that Appellant was required either to respond in some fashion to the Board's request or face dismissal of the appeal. Appellant failed to respond.

Board Rules 31, Dismissal or Default for Failure to Prosecute or Defend, and 33, Sanctions, allow for appropriate Board action in the face of a party's failure to file documents or respond to notices or correspondence from the Board. In this case, Appellant neither filed the required brief nor complied with the Board's Notice. It is thus appropriate to dismiss the appeal with prejudice for failure to prosecute. *Garlick Enters.*, AGBCA Nos. 78-137-4, 78-189-4, 84-2 BCA ¶ 17,440.

DECISION

The appeal is dismissed with prejudice.

[¶ 26,511] Centennial Contractors, Inc., a/k/a CCI, Inc.

ASBCA No. 46280, November 12, 1993. Contract No. NAS5-35030.

Interpretation of Contracts—Ambiguities, Patent—Duty to Seek Clarification.—Although neither the specifications nor the architectural drawings of a building construction contract showed shelf angles at the third level of a building, the contractor was not entitled to recover the costs of complying with a direction to furnish and install shelf angles at this level, because it was aware that structural drawings did show the shelf angles

Digitized by Google

at the third level but failed to seek clarification of this inconsistency. The inconsistency was on the face of the contract, with the shelf angles depicted on the structural drawings but not on the architectural drawings. The contractor had reviewed all the drawing details and noticed the differences, but it failed to perceive an ambiguity and relied on the architectural drawings for the overall scope and purpose of the project. The board noted that the contractor, faced with this inconsistency, was required to seek clarification before it could rely on its own unilateral interpretation of the contract requirements.

For the appellant: Lewis Mulitz, Executive Vice President. For the government: Geoffrey Swanson, Counsel, Goddard Space Flight Center, Greenbelt, Maryland.

Before TODD and RIISMANDEL, Administrative Judges.

TODD, Administrative Law Judge: This appeal involves a dispute as to whether the contract required installation of shelf angles at the third level of a two-story building. Appellant has elected the accelerated procedure provided in Rule 12.3. A one-day hearing was held. At the hearing the Government filed a brief and appeared with an expert witness. Appellant appeared *pro se* with appellant's representative the only witness and elected to make a closing argument in lieu of filing a brief. Only entitlement is before us for decision.

FINDINGS OF FACT

1. On 25 September 1990, contract NAS5-35030 was awarded by the National Aeronautics and Space Administration (NASA) to Centennial Contractors, Inc. (CCI), in the amount of $7,380,000 for the construction of a two-story Customer Data Operations Facility at the Building 28 complex at NASA's Goddard Space Flight Center. Work was to be performed in accordance with Specification No. 90GCCZ dated May 1990, and Government-prepared Drawings Nos. GF-28-16996 through GF-28-17128 and GF-28-17130. (R4, tab 1) CCI awarded a subcontract to Potomac Iron Works, Inc. (PIWI) for the structural steel, the miscellaneous metal, and some of the architectural metal work (tr. 15). Neither the contract specifications nor the subcontract were made part of the record on appeal.

2. There is no allegation that the contract specifications required the installation of a shelf angle at any level, including the third roof level of Building 28 (R4, tab 1; Gov't Br., at 2). The purpose of a shelf angle, also known as a relieving angle, is to provide structural support for levels or floors on a building for vertical expansion and relieving loads on masonry (R4, tab 12; tr. 66-67). The contract included architectural drawings designated with an "A" and structural drawings designated with an "S", specifically Drawings A-3, ROOF PLAN (GF-28-17026); S-3, ROOF FRAMING PLAN (FUTURE THIRD FLOOR) (GF-28-17062); and S-8, SECTIONS AND DETAILS (GF-28-17067) (R4, tabs 2, 3). The contract included one other relevant architectural drawing which was the subject of testimony at the hearing (tr. 19, 59).

3. The contract included a clause, SUBMISSION OF SHOP DRAWINGS, in Section H.23 that specified that approval of shop drawings by the Contracting Officer shall in no way relieve the contractor from responsibility for complying with the requirements of the contract, as provided in Section I.17, SPECIFICATIONS AND DRAWINGS FOR CONSTRUCTION (APR 1984)(FAR § 52.236-21). Section H.25, SPECIFICATIONS AND DRAWINGS, stated in relevant part that "[l]arge scale drawings shall govern over small scale drawings." The clause, ORDER OF PRECEDENCE—CONSTRUCTION, in Section H.35 provided that any inconsistency in the contract be resolved by giving precedence to the schedule, clauses, specifications and drawings over referenced documents, exhibits and attachments. (R4, tab 1, §§ H.23, H.25, H.35) The contract incorporated by reference the standard clauses, CHANGES (AUG 1987)(FAR § 243-4), and DISPUTES (APR 1984)-ALTERNATE I (APR 1984)(FAR § 233-1) (R4, tab 1, § I.1).

4. The contract specifications and drawings referenced the American Institute of Steel Construction (AISC) Manual of Steel Construction, Eighth Edition (tr. 26). Section 4.2.1 provides in pertinent part that "[a]pproval by the owner of shop drawings prepared by the fabricator indicates that the fabricator has correctly interpreted the contract requirements" (exh. A-5; tr. 21). Both this Manual and the Structural Welding Code—Steel manual of the American Welding Society, which are established standards in the industry, provide that full and complete information for the structural steel design showing the work to be performed shall be included in the contract documents, drawings and plans (exh. A-6, § 2.1.1; tr. 21,

©1994, Commerce Clearing House, Inc.

Digitized by Google

27-28). The Order of Precedence clause in the contract provided that if there were a variation, the contract documents would override these manuals (finding 3; tr. 47-48).

5. Appellant's representative, Mr. Lewis Mulitz, Executive Vice President and Chief Executive Officer of PIWI, reviewed the bidding documents and prepared PIWI's bid to CCI (tr. 15, 24). In 1919, PIWI was established by Harry Mulitz, the father of Lewis Mulitz, and it has been family owned and operated for 74 years. The company fabricates and installs miscellaneous metal, structural steel, ornamental metal, and architectural metal. Mr. Mulitz has been in the metal fabrication business all his life. He went to George Washington University where he took special courses in engineering and business from 1945 to 1951. He has been an active member of the Panel of Arbitrators of the American Arbitration Association for over 25 years and presided in many cases related to the construction and particularly the metal fabrication industry. (Exh. A-4; tr. 24) Mr. Mulitz considers himself recognized as an expert in the field of metal fabrications and in the ability to read specifications and make determinations (tr. 25).

6. All of the specifications and drawings were reviewed in the preparation of PIWI's bid (tr. 18, 22, 69). Although Mr. Mulitz noted a shelf angle at the third level in details on a structural drawing, it was not shown on the architectural drawings, and he did not find the drawings ambiguous (tr. 23, 28, 36). No pre-bid inquiry was made to the Government about the shelf angles (tr. 23, 35-36). PIWI came to a considered, reasonable and logical conclusion that shelf angles were not required at the third level (tr. 16, 18, 28-29, 72).

7. PIWI prepared shop drawings based on its interpretation of the architectural and structural drawings. Contract Drawing A-9 showed the wall sections with shelf angles at the second floor, but it did not depict shelf angles at the third level. Detail 1 on Drawing A-5 was a specific, large scale ($1\frac{1}{2}$" = 1'-0") detail of the condition at the roof level, and shelf angles were not shown on it (R4, tab 8; tr. 19-20, 39). This detail was drawn to a larger scale than any other detail on the drawings, including the structural drawings (tr. 59, 62). Drawing S-3, according to its title, "ROOF FRAMING PLAN (FUTURE THIRD FLOOR)," was prepared by the structural engineer for the roof framing plan or the future third floor. If it were used for the third floor, shelf angles would be required to support masonry above the roof level, but they were not necessary for the roof. The architectural drawings showed that the scope of the project did not include a third floor. (Tr. 22-23, 31-34) Mr. Mulitz thought the language used for the drawing title was "confusing," because the structural engineer was referring to both the roof and the future third floor, but he was not confused because reference back to the architectural drawings clarified the scope of the project (tr. 23). On cross-examination, he did not testify that the language was confusing, but rather that in his opinion the engineer had prepared the plan in "a dumb way" that was "kind of stupid, really" (tr. 31-32). He understood that the plan was prepared as advice to the architect of what would be required for supporting heavy electronic data equipment if there were a third floor (tr. 31, 70). Drawing S-3 referred to Details 1 and 2A on Drawing S-8 (R4, tabs 2, 11; tr. 34). Details 1 and 2 and 2A both have the caption "SECTION" and are drawn to the scale $\frac{3}{4}$" = 1'-0" (R4, tab 2). They showed a shelf angle at the third level (R4, tab 11). They both refer to Detail 5 on Drawing S-8. Detail 5 has the caption "DETAIL (TYP.)" and is drawn to the scale 3" = 1'-0". Detail 5 was a larger scale drawing that depicted a typical shelf angle at the second floor with masonry and not roof above (tr. 33, 46). There is no dispute involving the scale of Detail 5 (tr. 59).

8. Mr. Mulitz testified that in the interpretation of the contract drawings, PIWI did not consider an inquiry to be needed before bidding because the scope of the project was clear in the architectural drawings. In addition, since large scale details take precedence, they were relied on as governing (tr. 19, 35, 60, 69-70, 71).

9. The Government's expert witness, Mr. Walter M. Daly, is a registered architect with 20 years experience who is currently employed as a Project Architect by a company that provides architectural an engineering services for both government and privately owned construction projects. His expertise is in the design, production and coordination of contract drawings and specifications on construction projects. (R4, tab 12; tr. 39-41) Mr. Daly's opinion is that the drawings required a shelf angle at the third level (tr. 41). His opinion was based on the absence of any legend, notation or symbol on Drawing S-3 to indicate future work. The title of the drawing, according to Mr. Daly, did not necessarily mean that all or any part of the work depicted in the drawing was for future construction and not part of the con-

Digitized by Google

tract work. If something is to be dealt with in the future, it is depicted differently than something that is part of the contract. There was no annotation "N.I.C." meaning "Not in Contract" beside the illustration of any details on Drawings S-3 or S-8. Mr. Daly stated his opinion that work which is properly depicted in a construction contract drawing need not have an apparent present purpose to be a part of the contract work. He also was of the opinion that the shelf angle depicted in structural drawings was not required or expected to be depicted in the architectural drawings. (R4, tab 12; tr. 45-47)

10. Mr. Daly did not agree on cross-examination that large scale details take precedence over small scale details in the interpretation of contract drawings (tr. 60). Mr. Mulitz was obviously surprised and stated that "[l]arge scale details take preference over smaller details and it's written in every Government standard I've ever read and I've read thousands of them" (tr. 60). He also said that "everybody knows that large scale details take preference," that the specifications so provided, and he offered to supplement the record later (tr. 61). The record remained open for receipt of this evidence after the conclusion of the hearing. Appellant submitted an excerpt from a General Services Administration solicitation with the text of GSAR 552.236-77, SPECIFICATIONS AND DRAWINGS (APR 1984), which supplements the "Specifications and Drawings" clause at FAR 52.236-21, and states in relevant part, "[i]n case of difference between small and large-scale drawings, the large-scale drawings shall govern." The same substantive provision was included in the contract (finding 3). Mr. Mulitz testified with respect to the scale of the details and not the scale of the drawings. There was no showing that either the bid package or the contract included sets of different scale drawings.

11. PIWI submitted its shop drawings to CCI by transmittal sheet, dated 10 December 1990 (exh. A-1). The shop drawings for the contract item "GALV. STEEL SHELF ANGLES W/ INSERTS & SHIMS AS REQ'D" are on Drawing No. 41940, dated 7 December 1990 (exh. A-3). The drawing showed shelf angles at the second floor and none at the third level. The drawing stated the reference drawings were Drawings A-3, A-9, and S-8. (R4, tab 8; exh. A-3) Appellant used the details of the wall sections on architectural Drawing A-9 and followed the basic intent of the architect who designed the structure in preparing it (tr. 20, 36, 69). The shop drawing included three details that were captioned and referenced as follows:

> LOCATION PLAN; 2ND FLOOR GALVANIZED STEEL SHELF ANGLES W/ INSERTS
>
> DETAIL (TYP.) [with reference symbols for Detail 5, and Drawings A-9 and S-8]
>
> DETAIL—SHELF ANGLES @ 2ND FLOOR

(Exh. A-3) The shop drawing was reviewed by the Government and returned marked to change cold galvanizing to hot dipped galvanizing (exh. A-3; tr. 22). NASA stamped the drawing "approved as noted" on 23 January 1991. The NASA stamp states, "All actions subject to contract requirements. No responsibility assumed for quantities or dimensions." (Exh. A-3) On 1 February 1991, CCI sent Drawing No. 41940 back to PIWI approved as noted (exh. A-2).

12. PIWI fabricated, delivered and installed shelf angles for the second floor (tr. 22). PIWI then learned that the Government had decided it wanted shelf angles for the third floor. Mr. Mulitz met with the contracting officer and explained appellant's position that they were not part of the contract requirements. The contracting officer directed appellant to furnish the shelf angles. (Tr. 24)

13. On 8 July 1991, PIWI submitted a cost proposal for extra work to CCI. Reference was made to a verbal request on 8 July 1991 from Whitney Hanscom of CCI. The extra work was described as an added shelf angle that involved the supply of 41 galvanized angles, 215 galvanized wedged inserts, shop labor, and field labor. The total amount requested, including overhead and profit, was $17,748. (R4, tab 4)

14. By letter dated 15 August 1991, CCI submitted a proposal in the amount of $21,690 for the job costs of making the alleged change (R4, tab 4).

15. Negotiations were conducted 13 December 1991 (R4, tab 5).

16. The contracting officer by letter dated 9 January 1992, rejected the proposed change to the contract for the stated reason that the work was clearly shown on the structural drawings (R4, tab 5).

17. On 23 April 1992, CCI requested a contracting officer's final decision on behalf of PIWI based on a letter dated 16 April 1992, from PIWI; PIWI's cost proposal; and the relevant drawing excerpts, all of which were enclosed (R4, tab 6). PIWI gave as reasons for its claim (1) there was no function for the

©1994, Commerce Clearing House, Inc.

Digitized by Google

shelf angle at the third level, (2) there was a difference between the structural drawing and Detail 1 on Drawing A-5, and (3) approval of the shop drawing confirmed PIWI's conclusion that the shelf angle was not required.

18. The contracting officer's final decision dated 8 September 1992, stated that the shelf angle at the roof was included to support future expansion of Building 28. The angle was not shown in the architectural drawings, but was depicted in structural Drawing S-3 and in Details 1, 2, 2A, and 5 on structural Drawing S-8. The contracting officer said that if PIWI did not understand the function of the shelf angle or believed the requirement to be ambiguous, it had a duty to inquire and resolve the matter before bidding. The request for a contract modification and equitable adjustment was denied. (R4, tab 7)

19. By memorandum dated 18 September 1992, PIWI noted to NASA that an important fact was not included in the final decision and requested review so that the matter could be settled without going through the appeal procedure. Approval of the shop drawing showing shelf angles at the second floor and none at the roof had not been mentioned in the decision. (R4, tab 8)

20. On 25 September 1992, PIWI filed a timely notice of appeal to initiate these proceedings at the NASA Board of Contract Appeals. The appeal was docketed NASA BCA No. 81-0992. The Government filed a motion to dismiss the appeal for lack of jurisdiction, but withdrew that motion upon receipt of evidence that CCI, the prime contractor, had agreed to authorize and sponsor the appeal. The caption was retitled to reflect that the appeal was taken by and in the name of CCI. On 7 May 1993, appellant elected the accelerated procedure. The appeal is before the ASBCA as a result of the merger of the NASA BCA and ASBCA that was effective 12 July 1993.

DECISION

The issue in this appeal is whether appellant is entitled to an equitable adjustment for a Government direction to furnish and install shelf angles at the third level of the building. The contract specifications did not provide for the location of shelf angles, and the architectural drawings did not show shelf angles at the third level, but appellant has acknowledged it was aware that some details on the structural drawings showed shelf angles at the third level. Appellant maintains that its interpretation of the contract drawings that shelf angles were not required at the third level was reasonable, and that is all that is required for it to prevail even though there may be another reasonable interpretation of the contract requirements. Appellant did not find an ambiguity in the drawings and did not make any inquiry of the contracting officer before bidding.

The Government argues that appellant's interpretation is unreasonable because if it were adopted, the drawing details which showed shelf angles at the third floor would be rendered meaningless. The Government maintains there was no conflict in the drawings since it is not necessary to include information on structural components in architectural drawings. According to the Government, the illustrations, symbols, and annotations on the structural drawings set forth a contract requirement for shelf angles at the third level and appellant's interpretation would create an ambiguity. The Government argues that there was a purpose for the shelf angles at the third level, and in any event, it is not uncommon for work to be included in drawings for which there is no apparent present purpose. Since appellant should have known this to be true, the shelf angles shown could not be disregarded without making an inquiry, according to the Government.

In this case there was an inconsistency on the face of the contract drawings. Shelf angles at the third level were depicted on some, but not all drawings. Appellant saw all the drawing details and saw the differences, but did not perceive an ambiguity. Appellant relied on the architectural drawings, which did not show the shelf angles at the third level, for the overall scope and purpose of the project. Appellant understood Drawing S-3, "ROOF FRAMING PLAN (FUTURE THIRD FLOOR)," which references the Details 1 and 2-A on Drawing S-8 that show shelf angles at the third level, to have been prepared by the structural engineer to provide either for the roof or a third floor. The roof did not require shelf angles, but a third floor addition, which was not part of the contract, would. Accordingly, by appellant's interpretation, shelf angles at the third level were also not part of the contract.

When the bidder is aware of internal inconsistencies in the bidding documents, he is under an affirmative obligation to bring the problem to the attention of the Government prior to bidding. *Santa Fe Engineers, Inc.*, ASBCA No. 23523, 92-1 BCA ¶ 24,420. The knowledge that a drawing requirement

Digitized by Google

might be applicable will impose a duty on a bidder to seek clarification before he can rely on an interpretation which ignores the potentially applicable requirement. When faced with an inconsistency, a bidder is thus required to seek clarification before he can attempt to rely on his own unilateral interpretation of the contract requirements. *A.A. Beiro Construction*, ASBCA No. 22107, 78-2 BCA ¶ 13,372, *aff'd on reconsid.*, 79-1 BCA ¶ 13,813. This Board follows the rule that where the contractor was aware of a discrepancy before bidding, the question whether an ambiguity is patent is irrelevant. *Solar Turbines International v. United States* [31 CCF ¶ 71,259], 3 Cl.Ct. 490 (1983); *James A. Mann, Inc. v. United States* [22 CCF ¶ 80,289], 210 Ct.Cl. 104, 123, 535 F.2d 51, 61 (1976); *accord, J.W. Bateson Company, Inc.*, VABCA No. 3482, 93-3 BCA ¶ 26,115 (a contractor must seek clarification of *any* interpretive problem of which it is actually aware); *Foley and Associates Construction Company, Inc.*, PSBCA No. 2851, 92-1 BCA ¶ 24,397 (the fact that the amount in issue is insignificant or the matter is relatively minor will not override the duty to seek clarification); *Saturn Construction Company*, PSBCA No. 959, 84-2 BCA ¶ 17,342 (the obviousness of the ambiguity is irrelevant).

Mr. Mulitz was fully qualified to interpret contract drawings involving this type of construction on behalf of appellant. He made a thorough review of the drawings before bidding, and presented what sounded like a reasonable explanation of how he reconciled the drawing differences and why no inquiry was made. The architect's intent in designing a two-story building, the drawing title that suggested future work, the nature and purpose of the item in dispute, and the details and notations on the Government's drawings all served to resolve a potential conflict in the drawings for appellant. The failure of the Government to notice any problem in reviewing appellant's shop drawings, which plainly showed shelf angles only at the second floor, is not binding on the Government, and also has no bearing on whether appellant was required to clarify the drawing requirements. We further note there is no suggestion that appellant was acting in other than good faith.

We have concluded, however, that there was an inconsistency known to appellant and appellant did not attempt to clarify its obligations before bidding. Accordingly, we cannot grant recovery on appellant's claim.

The appeal is denied.

[¶ 26,512] Packard Construction Corporation

ASBCA No. 45996, November 15, 1993. Contract No. DACA31-93-C-0014.

Mistake—Relief After Award—Government Knowledge.—A contractor's claim for relief from a unilateral mistake in omitting the price for fabric panels, curtains, and draperies under a contract to cover exposed trusses and ceiling joists in an amphitheater was denied because there was nothing on the face of the contractor's bid to place the contracting officer on notice that there was a pricing mistake. The contractor's bid to the government merely contained a stated price to perform the contract in its entirety. The fact that the bid was 13 percent less than the government's estimated cost of performance was not significant enough to place the contracting officer on notice that a mistake in the bid might exist.

For the appellant: Christine Pak, President. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and John F. Herbert and Douglas P. Knowles, Sr., Engineer Trial Attorneys, U.S. Army Engineer District, Baltimore, Baltimore, Maryland.

Before HARPER and RUBERRY, Administrative Judges.

HARPER, Administrative Judge: Appellant, Packard Construction Corporation, a Virginia corporation located in Newington, Virginia (hereinafter "contractor") appeals from a decision of a contracting officer of the United States Army Corps of Engineers (hereinafter "Government") which denied a claim for an increase in the price of a construction contract because of a mistake in bid. Contractor elected to proceed under our accelerated procedure pursuant to Board Rule 12.3.

SUMMARY FINDINGS OF FACT AND CONCLUSIONS

On 28 October 1992 Government solicited bids for the materials and labor to cover exposed roof trusses and ceiling joists in a large amphitheater or ceremonial hall known as Building 241 at Fort Myer, Vir-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ginia, in accordance with Government's own design. The work contemplated involved fabricating tubular steel frames of rectangular shape which were to rest upon L-shaped steel supports welded to the existing steel roof trusses and beams in the existing building. The steel frames were to be covered with a specified cloth. When completed the cloth covered frames were to serve as a ceiling which would prevent persons seated in the amphitheater from observing the stage flood lighting equipment and appurtenances which were mounted on and above the roof trusses and beams. In addition curtains and valences were also to be supplied and installed which would further limit the audience in the amphitheater from seeing the interior areas of the building existing above the bottom of the roof trusses and beams. The building already had curtains, valences, and cloth at the ceiling level which would have to be removed by Government before the new materials could be installed.

Government's solicitation called for performance of the proposed contract to begin within 10 calendar days after receipt of a notice to proceed from Government. The proposed contract also provided for performance to be completed within 24 calendar days after receipt of such notice. There was no date or requirement as to when such notice had to be provided by Government to contractor.

Item 0001 of the Solicitation stated as follows:

> *Provide all* tools, labor, equipment, *materials* and all incidentals *required to cover exposed ceiling rafters* in Building 241 (Ceremonial Hall) in Fort Myer, Arlington, VA, with a removable panel system. The panel system consists of steel tubing *covered with fabric.* The work also includes pipe batten and border above the main floor (continuation of existing) and pipe battens and borders against the wall. (Emphasis added)

Section 13025—Fabric Panel System—of the Solicitation specifications, in pertinent part, provided that the furnishing of materials required to cover the "exposed ceiling rafters" was to be done in accordance with the specifications and attached drawings. The specifications called for providing a "removable panel system above main floor (continuous panel system above east side bleachers)" and providing "all required associated items such as supports, fastenings, etc."

Sheet 2 of the Solicitation drawings showed that the successful bidder was to manufacture 95 steel tubular frames of rectangular shape to the various sizes shown. Such rectangular frames or panels were to be mounted between existing roof trusses and joists on L-shaped steel angles to be provided by contractor and welded to such roof trusses and joists as shown on the drawings. The drawings also showed that the frames or panels were to be installed in areas of the ceiling level of the building designated on the drawings as Rows A and B. The frames and their cloth covering were to cover 11 bays designated as such between Rows A and B of the drawings. Dimensions were shown on the drawings outlining the perimeters of all the panels that were to be installed. By adding up the dimensions shown on the drawings it can be determined that the panels cover a horizontal area of 9001.058 square feet. The specifications described the cloth needed to cover the 9001.058 square feet of area as being flame retardant cotton Duvetyne colored black.

In addition to the panels the drawings and specifications called for curtains to be furnished. The drawings contained the following pertinent "SPECIFIC NOTES":

> 3. WORK REQUIREMENTS:
>
> A.) THE INSTALLATION OF FABRIC PANELS IN EACH BAY OF ROW A & ROW B.
>
> B.) THE INSTALLATION OF CURTAINS AT WALL OF ROW A, BAY 1 AND ROW A, BAY 11.
>
> C.) THE INSTALLATION OF HUNG CURTAINS AT ROW B, BAY 1, BAY 2, BAY 3, AND ROW B, BAY 9, BAY 10, BAY 11.

Sheet 2 of the drawings depicted curtains along one side of Row B at Bays 1, 2, 3, 9, 10 and 11 and along one side of Row A at Bays 1 and 11. Notes on the drawing stated "Provide 2' (±) Long Curtain X width of bay to match exist, see Sheet 3 of 3 for detail (Field verify length & width)."

The contract specifications provided that the curtains were to conform to specified requirements such as being black colored cotton Duvetyne chemically treated to be flame retardant and having certain fullness, pleats, top finish and hems. (R4, tab 4; exh. G-1; tr. 1/26, 111, 112, 209, 2/171, 200)

Contractor received a copy of the Solicitation together with the drawings and specifications (tr. 1/24, 25). Contractor sent copies of the drawings and specifications to subcontractors it intended to use in the event it was

Digitized by Google

awarded a contract. Contractor sought bids from S&F Ironworks of Springfield, Virginia (hereinafter S&F) to supply the steel rectangular frames and other steel work needed, and from P&M Draperies, Inc. of Laurel, Maryland (hereinafter P&M) to supply the cloth covering of the steel rectangular frames and the curtains to be hung (tr. 1/29, 31-32, 152).

On 8 December 1992 S&F faxed to contractor a bid for $35,000 for the manufacture and supply of the steel work needed to perform the contract. S&F's bid specifically indicated that it did not include "demolition, cutting & patch work" and "field layout." (R4, tab 7; tr. 1/32)

On 10 December 1992 (the day bids were scheduled to be opened at Government's offices in Baltimore, Maryland), P&M delivered a bid to contractor as follows:

> Re: Bldg 241, Ceremonial Hall Ft Myer VA
>
> We respectfully submit our bid for the above referenced project per plans and specificatons [sic] as follows:
>
> Fabric Type: Duvetyne Color Black 6 pr 246 × 24
>
> We propose to supply fabric, fabricate, supply hardware and velcro necessary and install the above draperies for the sum of $3,985.00.
>
> Please call if you have any questions.

(R4, tab 7; tr. 1/33)

The record is silent as to whether or not P&M field verified the length and width of the curtains or the area of cloth needed to cover the rectangular frames prior to bid preparation. Contractor admits that it made no prebid site inspection or ascertainment of the amount of cloth needed to meet the contract requirements (tr. 1/72-73).

After receiving P&M's bid contractor did not carefully review the same. Contractor incorporated S&F's and P&M's prices into its own pricing for its bid, but did not include the actual subcontractor bids as part of its bid submittal to Government. Upon completing its bid contractor hastened to Government's offices in Baltimore, Maryland, to meet the bid opening deadline. Contractor bid $43,895 to perform the contract.

Two other bids were received by Government. One was in the amount of $114,500 and the other was in the amount of $120,000. Government had estimated the cost of performing the contract to be $50,000. Government's estimate included a cost of approximately $12,000 for the cloth needed to cover the horizontal rectangular steel frames that comprised the ceiling (R4, tab 11).

Upon seeing the difference between its bid, the other bids and Government's estimate at the bid opening contractor did nothing to check whether it had made any mistake in its bid (tr. 1/37).

Before making a contract award Government checked upon contractor to determine if it was a competent and responsible bidder. Government's records disclosed that contractor had satisfactorily performed contracts for Government in 1991 and 1992. (Tr. 2/133, 134) One of the said prior contracts had been for the renovation of an office at Fort Belvoir, Virginia. Thirteen bids had been received for such contract. Contractor's bid for such contract was $106,000 with the next lowest bid being $122,122 and the remainder ranged up to the highest at $207,000. Government's estimate for such job had been $162,000. (Tr. 2/135; exh. G2) No claim of mistake was made by contractor on that contract.

As to the contract involved in this appeal Government did not ask contractor to verify its bid (tr. 2/143-44). Government saw nothing in contractor's bid or behavior to cause it to suspect or believe that a mistake might have been made by contractor. Government knew that contractor had bid on the Fort Belvoir job at a cost below Government's estimate for such job yet finished performance of such contract successfully without the need for a contract price increase (tr. 2/148-50).

Government awarded contract DACA31-93-C-0014 (the subject of this dispute) to contractor on 15 December 1992 (tr. 2/137). Contractor learned of the award on 16 December 1992 when Government called contractor and requested a meeting to discuss the job. Such meeting was held at the job site on 17 December 1992. At such meeting contractor for the first time saw the area and scope of the work to be performed. Contractor saw no need to check the accuracy of its bid.

At a subsequent meeting held on 21 December 1992 Government inquired concerning the cloth to be attached to the horizontal steel frames. For unexplained reasons doubt arose in contractor's mind as to whether its subcontractor, P&M, had bid upon the proper amount of cloth. Contractor said nothing about its doubt to Government. (R4, tab 8; tr. 1/62, 69)

©1994, Commerce Clearing House, Inc.

Digitized by Google

After the meeting was over contractor returned to its office, telephoned P&M, and inquired whether P&M had bid upon enough cloth to cover the full area of the ceiling shown by the contract drawings. (Tr. 1/59-60, 69)

P&M did not testify at the hearing. On 22 December 1992 P&M wrote to contractor as follows:

Re: Bldg 241, Ceremonial Hall

Ft Myer

Covering ceiling joists

In reference to the above project we respectfully submit our bid as follows:

6 each vals 290 × 24; 2 wall panels 290 × 75

150 yds Duvetyne Black @ 8.25	$ 1,237.50
Labor to fabricate	1,500.00
Installation	900.00
	3,637.50

Cover ceiling joists – 324 panels

1,100 yds Duvetyne Black @ 8.25	9,075.00
Labor to sew with velcro	1,875.00
Installation	4,000.00
	14,950.00
TOTAL PRICE	18,587.50

The fabric is in stock at the mill and if we place to [sic] order by 2:00pm today we can have the fabric in our warehouse on Dec. 28, 1992.

We have adequate manpower to complete this project by January 6, 1993.

We are experienced in handling a wide range of commercial projects and are equipped to handle all field measurements and co-ordination to complete this prject [sic] in a timely and professional manner.

Please do not hesitate to call if we can be of any further assistance.

(R4, tab 7)

Upon receipt of the aforesaid letter contractor called Government, advised that contractor had made a mistake in its bid, and wrote a letter, dated 22 December 1992, explaining the mistake. Contractor argued that P&M had failed to include a price for the fabric needed to cover the ceiling panels. Contractor requested that it receive $19,517 for additional cost in order to be able to complete the job. (R4, tabs 6, 7; tr. 1/58, 70, 71-72, 2/137-38)

On 26 January and again on 11 March 1993 contractor reasserted its claim for a contract price increase in the amount of $19,517 based upon a mistake discovered after award of contract (R4, tabs 9, 13).

On 8 April 1993 Government denied contractor's claim. (R4, tab 1; tr. 2/138)

Contractor made a timely appeal from such decision.

DECISION

A contractor seeking relief from a unilateral mistake in bid claimed after a contract award must prove not only the mistake, but also that Government's contracting officer knew or ought to have known of the mistake at the time the bid was accepted. *Singleton Contracting Co.*, ASBCA No. 26862, 82-2 BCA ¶ 15,994, *affirmed* 2 FPD 20, 723 F.2d 68 (Fed. Cir. 1983 (Table)).

From the facts of this appeal it is easy to see that contractor made a unilateral mistake in its bid. It failed to carefully read P&M's written bid. As a direct result it did not observe that P&M clearly bid on only six pairs of "draperies" (the "hung curtains" shown on the contract drawings along Row B at Bays 1, 2, 3, 9, 10 and 11). P&M's written bid covered such draperies for a price of $3,985 and contained no prices for the curtains called for by the contract drawings to be installed at the wall of Row A at Bays 1 and 11. Likewise, such bid contained no price for the fabric panels called for by the contract drawings to cover the 95 rectangular shaped steel frames depicted by such drawings for installation in the 9001 square feet of ceiling area shown for all the Bays of Rows A and B. The omissions are obvious when the P&M bid is compared with the contract drawings and specifications. By failure to make the simple comparison contractor mistakenly arrived at a bid price that did not include all the materials and labor needed to perform the contract.

However, such mistake was not open and obvious to Government's contracting officer. Contractor's bid to Government merely contained a price of $43,895 to perform the contract in its entirety. The P&M subcontract bid was not included as part of contractor's bid, and, accordingly was not made available to the contracting officer for a comparison with the contract requirements. Moreover, contractor provided no information concerning the very existence of P&M's bid. Accordingly, on the face of contractor's bid there was nothing to place the contracting officer on notice, or constructive notice, of a mis-

Digitized by Google

take prior to contract award other than, possibly, the difference in pricing between the three bids received and Government's estimate of the cost of the job.

A difference in price alone is not necessarily enough to put a contracting officer on notice that a mistake has been made, even if the price differential is great. *Wender Presses, Inc. v. United States* [10 CCF ¶72,978], 170 Ct. Cl. 483, 343 F.2d 961 (1965)

Contractor's bid was only 13% beneath Government's estimated cost of performance. In the absence of other evidence such is not enough to place a contracting officer on the alert that a mistake in bid might exist. This is particularly true considering that the contracting officer was aware that contractor had previously bid lower than a Government estimate, had made no complaint of mistake in such bid, and had successfully performed the contract that had resulted therefrom.

When the bids involved in this appeal were opened contractor could see the difference between its price and the prices bid by others and of Government's higher cost estimate. Contractor, nevertheless, made no protest, took no action, and failed to even check its own pricing to see if it had made a mistake.

If contractor found no cause to check its prices upon seeing the bids of others at higher prices and Government's estimate at a higher price it follows that the contracting officer had even less cause to suspect a mistake in bid.

In this instance we find insufficient evidence to show that the contracting officer was on actual or constructive notice of a mistake in bid. Likewise, we find no evidence of bad faith in accepting contractor's bid.

This appeal is denied.

[¶ 26,513] Kvaas Construction Co.

ASBCA No. 45965, November 12, 1993. Contract No. N68711-88-C-4451.

Interpretation of Contracts—Contract Documents—Referenced Specifications v. Drawings.—The costs of complying with a direction to provide expansion loops in steam pipes for a heat distribution system were not compensable to a contractor, even though referenced specifications allowed the contractor to use other expansion devices in place of the loops, because the contract drawings required the expansion loops, and the drawings took precedent over the referenced specifications. The Specifications and Standards clause provided that in the case of a difference between referenced specifications and the project specifications or its accompanying drawings, the project specifications and its accompanying drawings would govern.

For the appellant: Jeff S. Moore, Niles, Illinois. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Wayne O. Hadland, Trial Attorney, Naval Facilities Engineering Command, San Bruno, California.

Before FREEMAN and STEMPLER, Administrative Judges.

FREEMAN, Administrative Judge: Kvaas Construction Co. (Kvaas) appeals denial of a claim for providing expansion loops in steam and condensate pipes for a heat distribution system. We find that the expansion loops were a contract requirement, and deny the appeal.

FINDINGS OF FACT

1. The contract was awarded to Kvaas on 30 September 1991 for construction of a hangar and related facilities at the North Island Naval Air Station, San Diego, California. The contract was administered for the Government by the Resident Officer in Charge of Construction (ROICC), North Island/Coronado. The contract specifications at section 15705, paragraph 1.3, required design, fabrication, installation and test of a heat distribution system in strict accordance with "the Federal Agency Approved Brochure" for the system being supplied, and the project drawings.

2. The project drawings for the heat distribution system showed a steam line and a condensate line running parallel to each other. Both lines were straight runs except for one right angle bend, one obtuse angle bend and four expansion loops in each line. Section 2.2.2 of the federal agency approved

©1994, Commerce Clearing House, Inc.

Digitized by Google

brochure for the system being supplied gave the supplier (Perma-Pipe Division of Midwesco, Inc.) discretion to design the system in accordance with its own design standards.

3. Perma-Pipe's design standards at section 4.2.4.4.1 of the brochure and subparagraphs thereunder provided for use of expansion compensation devices in the following order of priority: (i) expansion elbows, (ii) "Z" bends, (iii) expansion loops, and (iv) expansion joints. Section 5.1.3.3 of the brochure provided for the use of 'cold springing" in conjunction with expansion elbows, Z-bends and expansion loops. On 13 February 1992, Kvaas submitted a shop drawing of the stern and condensate piping prepared by Perma-Pipe. This drawing showed expansion elbows and cold springing at the obtuse and right angles in the pipes, but no expansion loops. Kvaas certified that the submittal was in compliance with the contract drawings and specifications "subject to (ROICC) approval of eliminating the expansion loop."

4. On 16 March 1992, the ROICC returned the submittal to Kvaas with the notation "expansion loops required." Kvaas protested the requirement arguing that cold springing was permitted in place of expansion loops under the approved brochure for the Perma-Pipe system. On 3 April 1992, the Government again directed that the expansion loops be included as shown on the contract drawing. After further correspondence, Kvaas provided the expansion loops under protest and submitted a claim in the amount of $48,059 for the work. By final decision dated 22 January 1993, the contracting officer denied the claim. This appeal followed.

5. Section 01010 of the contract specifications at paragraph 3.7 stated in relevant part:

> 3.7 SPECIFICATIONS AND STANDARDS: The specifications and standards referenced in this project specification, including addenda, amendments, and errata listed, will govern in all cases where references thereto are made. In case of differences between these specifications or standards and this project specification or its accompanying drawings, this project specification and its accompanying drawings will govern to the extent of such differences....

6. Kvaas has presented evidence that under four prior contracts at North Island with similar provisions, the Government allowed the use of alternative expansion compensation devices in piping systems in place of some or all of the expansion loops shown on the contract drawings for those systems.

DECISION

This appeal does not involve an ambiguity in the contract, but rather a conflict between the contract drawing which specified expansion loops, and the agency approved brochure which allowed the supplier to use other expansion compensation devices in place of the specified loops. The agency approved brochure, however, was a referenced specification. Specification section 01010 at paragraph 3.7 provided that in the case of differences between referenced specifications and the project specification or its accompanying drawings, "this project specification and its accompanying drawings will govern...." See Finding 5. Accordingly, the contract unequivocally required the expansion loops as shown on the contract drawing. *Cf., Caddell Construction Co., Inc.*, ASBCA No. 32641, 87-1 BCA ¶ 19,359.

Kvaas alleges that Government approval of alternative expansion compensation devices under four prior contracts having substantially the same provisions established a past practice of deviation or waiver on which it was entitled to rely, absent notice to the contrary before bidding. Considering the unique circumstances of each construction project, we are unable to find from the four prior contracts, a course of dealings so consistent and numerous as to cause the reasonable expectation that the same deviation would be automatically allowed in all future construction.

In *Gresham & Co., Inc. v. United States* [18 CCF ¶ 81,896], 470 F.2d 542 (Ct. Cl. 1972), the Government was held bound by a consistent course of allowing the same deviation on 21 prior contracts for the same item. In *Doyle Shirt Manufacturing Corp. v. United States* [17 CCF ¶ 81,544], 462 F.2d 1150 (Ct. Cl. 1972), the Government was held not bound by deviations on only three contracts. Kvaas here falls on the *Doyle* side of the line. We also note that Kvaas' certification on the initial submittal of the shop drawing recognized that the drawing was not in compliance with the contract, and that Government approval of the elimination of the expansion loops was required. See Finding 3.

The appeal is denied.

[¶ 26,514] **Alpha Matrix, Inc.**

ASBCA No. 45794, November 18, 1993. Contract No. N62470-92-C-5922.

Defaults, Grounds—Failure to Progress—Inability to Complete on Time.—The default termination of a construction contract was proper because the contractor did not show that its failure to timely perform was due to circumstances beyond its control and without its fault or negligence. The contractor did not provide sufficient evidence in support of its contention that construction was delayed by the extended submittal period, during which suppliers and subcontractors researched the specifications and faced difficulties in locating the allegedly atypical material needed to complete the contract. Under the contract, the contractor was responsible for scheduling the contract work to ensure timely completion.

For the appellant: Matthew Towns, President. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Anthony M. Dowdle, Trial Attorney, Naval Facilities Engineering Command, Washington, D.C.

Before ELMORE and FREEMAN, Administrative Judges.

ELMORE, Administrative Judge: Alpha Matrix, Inc. (A-M or appellant) has appealed the contracting officer's (CO) 12 February 1993 "final decision" terminating A-M's contract for default (R4, tab 21). A-M has elected to utilize the Board's ACCELERATED Procedure and the parties have waived hearing electing to submit the matter on the record pursuant to Board Rule 11. The record consists of the appeal (R4) files; Towns' affid.; Hendricks' affid.; complaint with exhibits (Complaint exh.); and Government and appellant briefs with exhibits (Govt. exh.) and (app. exh.) respectively. Only entitlement will be decided.

SUMMARY FINDINGS OF FACT

A-M on 25 September 1992 was awarded firm fixed price construction contract N62470-92-C-5922 (C-5922) to "Construct Air Traffic Facility at Bogue Field, Marine Corps Air Station, Cherry Point, North Carolina" at a contract price of $73,420 (R4, tab 1). The contract completion date was 7 February 1993 (Hendricks' affid.; R4, tab 23).

The contract included or incorporated by reference Federal Acquisition Regulation (FAR) clauses: 52.233-1, DISPUTES (DEC 1991); 52.236-15, SCHEDULE FOR CONSTRUCTION CONTRACTS (APR 1984); 52.236-21 SPECIFICATIONS AND DRAWINGS FOR CONSTRUCTION (APR 1984); 52.249-10, DEFAULT (FIXED PRICE CONSTRUCTION) (APR 1984). Under the terms of the contract Section 01011, "ADDITIONAL GENERAL PARAGRAPHS" the contractor was to "(a) commence work within 10 calendar days, (b) prosecute the work diligently, and (c) complete the entire work for use within 120 calendar days after receiving the award." Failure to complete the work within the time specified, or any extension, subjected the contractor to "the assessment of liquidated damages in the amount of $100 for each day of delay." (R4, tab 1)

Under FAR clause 52.236-15, SCHEDULE FOR CONSTRUCTION CONTRACTS (APR 1984), (R4, tab 1) the contractor was to prepare and submit for the CO's approval, within five days after the work commenced on the contract or any other period of time determined by the Contracting Officer, three copies of a practicable schedule showing the order in which it contemplated performing the work and the contemplated starting and completing dates. Failure of the contractor to comply with the requirements under this clause was grounds for a CO's determination that the contractor "is not prosecuting the work with sufficient diligence to ensure completion within the time specified" which was basis for the CO to terminate the contract for default.

FAR Clause 52.236-21, SPECIFICATIONS AND DRAWINGS FOR CONSTRUCTION (APR 1984), (R4, tab 1) required the contractor to indicate its approval of shop drawings after having coordinated and reviewed them for accuracy, completeness, and compliance with contract requirements. The CO was to indicate an approval or disapproval of the shop drawings or if not approved as submitted to indicate the reason therefor. Any work done by the contractor before approval by the CO was done at the contractor's risk.

Contract Section 01300 "SUBMITTALS", (R4, tab 1) provided for the contractor to "coordinate preparation and processing of submittals with performance of the work so that work will not be delayed by submittal processing," and for the approving authority to review submittals "for approval with rea-

©1994, Commerce Clearing House, Inc.

Digitized by Google

sonable promptness and only for conformance with project design concepts and compliance with the Contract documents." Submittals were forwarded using the "Submittal Register Form."

A-M in a 1 October 1992 memorandum informed its "Subcontractors/Suppliers" that it had been awarded contract C-5922 and would "be forwarding a construction schedule within 10 days". The subcontractors/suppliers were requested to "begin preparing all . . . submittal information for the Navy." On 19 October 1992 A-M requested the subcontractors to submit their contracts and all submittals as soon as possible as the "start date" for the project was 20 October 1992. (App. exh. A) On 21 October 1992 A-M was authorized to commence work (R4, tab 2). On 2 November 1992 A-M was advised its "Schedule of Prices" was disapproved due to an "inadequate basis for determining progress payments in accordance with the 'Payment to Contractor' and 'Schedule of Prices' provisions of the contract." A-M was requested to "resubmit the 'Schedule of Prices' " after correcting the noted deficiencies." (R4, tab 3)

On 19 November 1992 the Assistant Officer in Charge of Construction (AOICC) informed A-M of the Government's concern that the work had not commenced; that contract submittals "vital to beginning work on the site" including submittals for fill, selected material test, soil treatment, concrete mix design, reinforcing steel and pre-engineered metal building, were not received or approved; and that the Government did not assume any responsibility for "delays incurred as a result of [A-M's] failure to make submittals in a timely fashion" (R4, tab 5). A-M responding to the AOICC's 19 November letter, on 23 November 1992 stated it was "anticipating starting work on Nov. 30 or Dec. 1;" that the submittals necessary to start the project were turned in; and that it was confident "the project would be completed within the contracted time frame" (R4, tab 6; app. exh. E). The Government on 23 November approved A-M's revised submittal register (R4, tab 7).

On 17 December 1992 A-M assured the Government the "[metal] building submittals" would be delivered 21 December 1992 (R4, tab 9; app. exh. G).

The Government by letter dated 18 December 1992 issued a "Cure Notice" notifying A-M of the Government's concern that 61 percent of the contract time had expired and A-M had not completed any work; that although A-M stated in its 23 November letter that it had turned in the submittals necessary to start the project, the foundation plan, a submittal vital to starting work, was not received until 15 December 1992; and that the submittal of a complete set of drawings for the building, slab, and foundation had not been tendered. The Government also stated it was concerned with A-M's capability to complete the contract within a reasonable period; and that A-M's lack of planning, management, and its limited work force were endangering the performance of the contract. A-M was requested to "present within 15 days . . . a plan . . . to correct and change the direction of job progress." (R4, tab 10)

By letter dated 21 December 1992 A-M stated it was submitting its "updated construction schedule" showing 26 February 1993 as its anticipated completion date vice the contract completion date of 7 February 1993. A-M, contending the delay in the construction was due to the "extended and protracted submittal period" resulting from its suppliers and subcontractors having had to "research" the specifications and due to their difficulty in locating "not typical" material, requested a new completion date of 3 March 1993 be established. On 22 December 1992 the Government approved and returned A-M's Schedule of Prices. (R4, tabs 11, 12; app. exh. B).

On 23 December 1993 A-M, responding to the Government's 18 December "cure notice," contended it had already taken the necessary steps to expedite the construction schedule which, it argued, was greatly delayed due to the requirements and nature of the material and supplies that were specified for the project, which A-M contended were "atypical"; that due to the "atypical" nature of the needed material it was required to work with "5-6 suppliers" on each item; and that the suppliers many times had to undertake substantial levels of research to find the specified material. A-M further contended that the updated log indicated "95-97%" of all required submittals, including the foundation and anchor bolt plans, had been completed and the actual construction would proceed fairly quickly. (R4, tab 13)

On 30 December 1992 the AOICC requested A-M provide its updated progress schedule which was referred to in its 21 December letter but which was not attached (R4, tab 14).

On 6 January 1993 the Officer in Charge of NAVFAC Contracts (OIC) issued a "Show Cause" letter wherein he stated that al-

Digitized by Google

though "85% of the contract time has expired no construction has been accomplished on site;" that although A-M's plan to expedite the project called for pre-ordering and storing all material on-site, foundation work over the Christmas holidays, and expediting the pre-engineering metal building, that as of the date of the cure notice very few materials were stored on site and the Government had yet to receive a complete submittal for either the building or foundation plan. A-M was advised the Government was considering terminating the contract for default and pending a final decision A-M should, within 10 days after receipt of the notice, submit in writing any facts bearing on whether the failure to perform arose out of causes beyond A-M's control and without its fault or negligence. (R4, tab 15)

The Resident Officer in Charge of Construction (ROICC) in a 12 January 1993 memorandum to file, discussing a meeting held 8 January 1993 between the Government and A-M, noted that the main points coming out of the meeting were (1) A-M was to complete submittal for the foundation and building by early in the week of 11 January or default proceedings may begin and (2) there was no justification for a time extension (R4, tab 24).

By FAX dated 22 January 1993, A-M informed the Government it would be "fedexing the entire building spec package . . . for Monday [24 January 1993] delivery" (R4, tab 18). On 27 January 1993 A-M was informed its submittal of the pre-engineered metal building was unacceptable because it did not provide the manufacturer's catalog data, drawing information, the pre-engineered building's design calculations prepared and stamped by a professional engineer, and the certificates for the pre-engineered metal building materials as required by specification section 13121, paragraphs 1.3.1, 1.3.3, 1.3.4.1, and 1.3.5, section 01300, paragraphs 1.5.2.1 and 1.6.4.b (R4, tab 19).

On 8 February 1993, Ms. Linda L. Dowling, Head, Contracts Division in her "MEMORANDUM OF FINDINGS AND DETERMINATIONS" recommended to the CO that the contract be terminated for default due to the contractor's lack of performance (app. exh. K). On 12 February 1993 A-M was issued a notice of default termination for contract C-5922 due to A-M's failure to perform. The CO stated the contract completion date was 7 February 1993 and as of the date of the termination no work had been performed (R4, tab 21).

In a letter dated 23 February 1993, apparently in response to an inquiry from A-M, the Government stated (R4, tab 27):

> In response to your letter dated 15 February 1993, there has been a miscommunication between this office and Mr. Dave Lamoureux at LANTDIV. Our discussion during the meeting on 8 January 1993 was that the Government was considering default action and that this action would hinge heavily on your ability to meet your promise to have an approved submittal for the metal building and foundation by 12-13 January 1993. You were unable to meet this date and therefore the Government addressed proceeding with default.
>
> With respect to the metal building submittal our records indicate that your first submittal was received on 4 January 1993. This was returned with comments on 4 January 1993 because it was incomplete. After having our 8 January 1993 meeting, we anticipated receiving a complete submittal on or about 12-13 January 1993. Your resubmittal was dated 25 January 1993 and was returned to you on 27 January 1993 with comments due to incompleteness. At this point, the Government made the decision to proceed with default.
>
> In your letter you indicated that all submittals except the metal building submittal and foundation plan had been submitted and approved. Our review of the submittal log indicated that . . . submittals have not been approved. Further, we have no record of a pre-approved submittal and in fact, it is not our policy to review preliminary submittals.

By letter dated 5 March 1992 A-M timely appealed the CO's "final decision" to the Armed Services Board of Contract Appeals (Board).

DECISION

A-M's default termination is based on its failure to make progress and complete the contract by 7 February 1993, the acknowledged contract completion date. A-M does not dispute the Government's contention it defaulted in its performance, but contends the failure to timely complete contract performance was due to circumstances beyond its control and without its fault or negligence or was otherwise excusable. *See, Orlando Williams*, ASBCA Nos. 26099, 26872, 84-1 BCA ¶ 16,983. The fact of default being undisputed, the Government has met its burden of proof, and it only remains for us to determine if A-M's failure to perform was excusable. *Local Contractors, Inc.*, ASBCA

©1994, Commerce Clearing House, Inc.
Digitized by Google

No. 37108, 92-1 BCA ¶ 24,491, *aff'd. on reconsid.*, 92-1 BCA ¶ 24,693, *aff'd., Local Contractors, Inc. v. Stone, Secretary of the Army*, 988 F.2d 131 (Fed. Cir. 1993) (Table); *Lisbon Contractors, Inc. v. United States* [34 CCF ¶ 75,358], 828 F.2d 759, 765 (Fed. Cir. 1987).

A-M argues the delay in the construction was due to the extended and protracted submittal period resulting from its suppliers and subcontractors having to "research" the specifications and because they experienced difficulty in locating the "not typical" material needed to complete the contract. We find A-M's contentions specious and unsupported in the record.

The contract clearly puts the onus on the contractor, A-M, to schedule the contract work so as to ensure its completion within 120 days from the date of award. To ensure this the contractor must have located the source of its supplies and materials prior to the award. Except for the affidavit of A-M's president, Mr. Towns, appellant has not provided us with any other evidence, such as an affidavit from the subcontractors or suppliers, either supporting and/or substantiating its contentions regarding the difficulty in locating material or that the material was "atypical." We have previously held that unsupported self serving statements are insufficient and unpersuasive proof and would not be considered as evidence. *See, AGH Industries, Inc.*, ASBCA Nos. 27960, 31150, 89-2 BCA ¶ 21,637. A-M's frivolous contentions that it was delayed by a delay in the preconstruction conference is also without merit. A-M's lack of progress was due to its untimely and incomplete submittals. The submittals were not dependent on the holding of the preconstruction conference. A-M's appeal fails for lack of proof.

Accordingly, the appeal from the default termination is denied.

[¶ 26,515] Tele-Sentry Security, Inc.

ASBCA No. 45323, November 12, 1993. Contract No. F02601-91-D-0002.

Interpretation of Contracts—Contract as a Whole—Meaning to Every Part.—Although a radio communications equipment services contractor was not entitled to an equitable adjustment for alleged excess repair calls that were substantially similar to recurring workload estimates provided to bidders as a basis for formulating bids, the contractor's unreasonable interpretation of some services as excess emergency calls under the contract's nonrecurring maintenance schedule rather than as priority services under the recurring maintenance schedule rendered other provisions meaningless. The contract clearly indicated that priority services under the recurring maintenance schedule required repairs during or outside of normal duty hours and on holidays, 24 hours per day, seven days per week, and that routine recurring maintenance included work during normal duty hours. The contract clearly defined nonrecurring maintenance as maintenance and repair of equipment not listed in the land mobile radio contract or of equipment damaged by abuse, unfair wear and tear, or acts of God. Moreover, the contractor failed to show that it relied on its interpretation when it bid on the contract.

For the appellant: James E. Watt, President. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Paul L. Whalen, Trial Attorney.

Before LUSSIER, RUBERRY, and SPECTOR, Administrative Judges.

LUSSIER, Administrative Judge: This appeal is from a decision by the Air Force contracting officer on the subject contract denying claims by Tele-Sentry Security, Inc., (appellant) for equitable adjustments under a service contract for radio communications equipment at Davis Monthan Air Force Base, Tucson, Arizona. A hearing was held in Phoenix, Arizona and the parties have filed opening briefs and reply briefs. Only the issue of entitlement is before us.

FINDINGS OF FACT

1. Contract No. F02601-91-D-0002 was awarded to appellant on 29 October 1990. The basic contract period, as amended, ran from 1 November 1990 through 30 September 1991, with an option permitting the Air Force to extend the contract for three month periods not to exceed a maximum of six months. By unilateral Modifications P00007 and P00012, the Government exercised the two three month options effectively extending the contract through 31

Digitized by Google

March 1992 (R4, tabs 12, 15). In each case, the price was increased using the same unit prices bid for the base contract period. A third three month extension was negotiated by the parties and effectuated by bilateral Modification P00012 (R4, tab 17), extending the contract through 30 June 1992 on the same price increase basis.

2. Line item 0001 in the "SCHEDULE OF SERVICES" of the contract is described as:

> NON-PERSONAL SERVICES: BASIC CONTRACT PERIOD 1 OCT 90 OR DATE OF AWARD, WHICHEVER IS LATER, THROUGH 30 SEP 91. CONTRACTOR TO PERFORM TROUBLESHOOTING, REPAIR, PREVENTIVE MAINTENANCE, REMOVAL, AND INSTALLATION OF COMMUNICATIONS EQUIPMENT LISTED BELOW. (EQUIPMENT IS LISTED BY SERIAL NUMBER IN TECHNICAL EXHIBIT 9)

Immediately below this heading, and under the title "RECURRING CHARGES," there followed a list of numerous subitems of specific types of equipment, each with a fixed price for monthly service, and a total price for 12 months service which was merely the unit price times 12.

For example a subitem would appear as follows:

LI NO.	*EQUIPMENT*	*QTY/DESCRIPTION*	*QTY*	*UNIT*	*UNIT PRICE*	*AMOUNT*
0003AA	Base station	1/compu station	12	Mo	$2.00	$24.00

The parties both understood this to be a flat rate charge which appellant was entitled to regardless of the number of actual service calls made.

3. Under the title "NON-RECURRING CHARGES" an additional number of subitems appeared under a "DESCRIPTION" column. The description identified the type of service, such as "removal of units or vehicle chargers," or "one time pager repair," or "installation of remote control unit or console." Following the "DESCRIPTION" column there was a column entitled "QTY (ESTIMATED)" under which a number was shown for the number of units of the particular item followed by a space for the bidder to insert a unit price, and another space to insert a total amount. For example, a subitem would appear as follows:

LI NO.	*DESCRIPTION*	*QTY (ESTIMATED)*	*UNIT*	*UNIT PRICE*	*AMOUNT (ESTIMATED)*
0003DC	Hospital Antenna Installation —over 50 ft.	4	EA	$N/C	$N/C

Appellant bid "N/C," i.e. no charge, for all the non-recurring items except for reimbursable parts which it bid at "not to exceed" dollar amounts.

4. While the non-recurring schedule was composed primarily of installation or removal of equipment, rather than repair, there were three line items under the description "emergency service and repairs"; one of "10 ea" for "TAC," one of "5 ea" for "AMARC" and one of "5 ea" for "Hospital," all at no charge. The acronyms were not explained but are not relevant to the appeal. The contract did not define elsewhere the term "emergency service and repairs." Also, the bidders had been advised at a pre-bid conference that if the estimated quantities under the "non-recurring" charge schedule changed there would be no renegotiation of price (R4, tab 3; tr. 1/132-33). After the pre-bid conference and in response to a request from the contracting officer, appellant checked and verified its bid before award was made to it.

5. Appellant prepared its bid for recurring charges by deciding upon a total figure and then making the individual line items correlate to that total. Mr. James Watt, Jr., who prepared the bid for appellant, explained, for example, that the $2 unit price figure might change to $13 or $35 on other bids because "nobody wants to release what they actually charge to repair a radio" and that it just depends "on how my numbers work out (tr. 1/131)."

6. Section C-1 of the contract contains the Performance Work Statement (PWS) which at ¶ 1.1 sets forth the general scope of work as follows:

> 1.1 SCOPE OF WORK. The contractor shall provide all personnel, equipment, tools, materials, vehicles, supervision, and other items and services necessary to perform troubleshooting, repair, installation, and removal of commercial two-way radio communications equipment and systems on both a recurring and nonrecurring basis as defined in this Performance Work

©1994, Commerce Clearing House, Inc.

Digitized by Google

Statement (PWS) except as specified in Section C-3 as Government Furnished Property and Service at Davis-Monthan AFB, the Mt. Lemmon facility and the surrounding area. The contractor shall also provide special technical/engineering assistance to correct malfunctions in any equipment, nets or systems covered by this PWS as outlined in Section C-5. The contractor shall ensure that intrinsically safe and/or Data Encryption Standard (DES) radios are maintained in such a manner as to retain their intrinsically safe and/or DES certification, IAW AFR 700-18, after repair. *The estimated quantities of recurring work are listed in Technical Exhibit 2, Workload Estimates.* [Emphasis supplied]

7. Technical Exhibit 2 (TE-2) contained the following information at page 33a:

Recurring Workload Estimates
Based on FY90 Historical Data

	Oct	*Nov*	*Dec*	*Jan*	*Feb*	*Mar*	*Apr*	*May*	*Jun*	*Jul*	*Aug*	*Sep*	
Maintenance													
Portable	18	11	6	15	20	23	21	18	11	7	10	6	(166)
Mobile	5	0	6	2	9	6	8	6	7	4	5	7	(65)
Pager	5	8	2	2	4	2	1	3	2	2	1	2	(34)
Fixed	5	10	2	5	6	12	5	8	12	11	10	9	(95)

The figures in parenthesis represent the Board's total of the twelve months figures, and did not appear as such in TE-2. There is no evidence to reasonably conclude that the historical data was inaccurate.

8. During contract performance appellant complained about being called out on calls for fixed equipment service, which turned out to be telephone company problems (tr. 1/49, 50, 113, 187). The basis for these complaints, according to appellant's president, Mr. James Watt, Sr., was that, while Paragraph 5.10.1 [1] of the PWS required appellant to assist telephone company repair personnel, there were occasions when appellant was called out and no telephone company personnel showed up leaving appellant to repair the problem (tr. 1/51). The procedure used by the Air Force contract manager in calling appellant was that he would call appellant if he did not know it was a phone company problem. He would check the circuit diagram of the network and if, for example, one leg of a phone circuit had 4 remote units and they all went out at the same time he would assume it was a phone company problem. If there was only one remote on the leg he would not know whether it was a phone company problem or a remote unit problem and appellant would be called (tr. 1/113-14). We find this procedure reasonable under the circumstances.

9. Appellant's president testified that he took the estimated number of fixed equipment service calls on TE-2 "to mean that it would not be called out as an emergency call, that we'd do it on a regularly scheduled time when we went to the base, which is on a Tuesday and on a Thursday between the hours of 7:00 and 4:00 or 7:00 and 5:00, whenever we got there to work on it" (tr. 1/76). However, the PWS included a provision for an on-base facility for appellant to use five days a week (see finding 19, PWS paragraph 5.6.4). At the pre-bid conference bidders were advised that, while it was not necessary that the contractor utilize the government furnished facility, the contractor "must ensure that the response and restoral times identified in Technical Exhibit 8 are adhered to." (R4, tab 3) In addition, Technical Exhibit 8 required a response time of 2 hours for "fixed" equipment. We note in this connection that the appellant is located in Tempe, Arizona, outside of Phoenix, well over an hour's drive to Tucson, where Davis Monthan AFB is located (tr. 1/153).

10. The first written evidence of a claim for excess service appears on 15 April 1992, when appellant, in the last three months of performance, filed a claim for $24,375 for exceeding the "estimated number of emergency service and repairs." The letter asserted that the contract (in the *non*-recurring schedule) provided for 10 "emergency service" calls, whereas appellant had made 136 "emergency service" calls for the first year and a half of the contract. Appel-

[1] 5.10. REQUEST FOR SPECIAL TECHNICAL/ENGINEERING ASSISTANCE.

* * *

5.10.1. The contractor shall assist telephone repair personnel or the QAE in resolving problems related to the radio network telephone control line circuits. The contractor shall dispatch a qualified technician to assist the telephone repair personnel as required. The technician shall coordinate with the telephone repair personnel to determine what assistance he can provide.

Digitized by Google

lant deducted the 10 from the 136, reduced it by an allowance of 1 more call (representing 10% of the 10) and came up with 125 extra service calls. It multiplied this by 3 hours labor to arrive at 375 hours, at $65 per hour, totaling $24,375 (R4, tab 18). The "emergency service" claim relates only to the "fixed" equipment (tr. 1/49, 82). The Air Force manager on this contract, when calling for the services in question here, never used the term "emergency service" but always referred to "priority service" (tr. 1/111). His example of an "emergency service" would be, if the base commander's mobile radio broke down and he wanted it fixed "right away" (tr. 1/96).

11. On 30 April 1992, in response to a request from the contracting officer for additional information appellant increased its claim from 136 "emergency service" calls to 151 such calls, claimed none were provided for in the contract, and increased its hours per call. Its claim now was for 151 calls at 4.5 hours × $65 per hour, totalling $44,167 (R4, tab 20).

12. A bilateral modification to the contract in August 1991 (P00005) established a unit price of $28.00 under "NON-RECURRING CHARGES," [2] for "one time pager repair/maintenance" in excess of 22 calls, whereas prior to this such repair had been at no charge. The Government witnesses explained that this was done because the estimated quantity (20) for these repairs in the original schedule had been exceeded (tr. 1/109, 177). P00005 made like price adjustments under the "non-recurring charges" schedule for "removal of mobile units or vehicle chargers" and for "installation of mobile units or vehicle chargers." However, similar adjustments were not made for the "emergency service" calls appellant is now claiming, despite the fact that appellant was experiencing what it now alleges are excess "emergency service" calls. Further, when appellant agreed in March 1992 to a final three month extension, after the Government options to extend had expired, that agreement (bilateral Modification P00012) continued to provide no charge for "emergency services" under a "non-recurring charges" schedule (R4, tab 17). Execution of these two bilateral modifications under the circumstances, without credible explanatory evidence, is not consistent with the allegation that appellant held the view, at the time, that it was performing excessive "emergency service" under the "non-recurring charges" schedule.

13. While we are satisfied that appellant complained earlier about being called out on what were telephone company problems, we are not persuaded by the evidence in the record that it raised the "emergency services" interpretation issue prior to its 15 April letter. This is the first point in time that it clearly appears appellant espoused the interpretation that the service calls fell under the "emergency services" items in the non-recurring schedule. More importantly, we are not persuaded by credible evidence, after very careful review of the testimony, that appellant held that interpretation at the time it made its bid.

14. On 30 April 1992 appellant also sent separate letters claiming $4,312.50 for excess repair calls on mobiles and $1,925 for excess repair calls on portables. The claim for excess repair calls for mobiles and portables was related to the *recurring* schedule of the contract. It was based on the fact that the contract (TE-2) provided 166 repair calls for portables and 65 such actions for mobiles whereas appellant had to make 198 and 106 such calls respectively (R4, tabs 21, 22).

15. The claims were ultimately denied by the contracting officer who took the position that all three claims involved "recurring" maintenance and that the estimated quantities given in Technical Exhibit 2 for a twelve month period were, in effect, reasonably accurate. The letter noted that the claims covered a longer period and did not take into account the additional fact that units had been added by various contract modifications, which would naturally increase repair actions.

16. The Air Force contract administrator on the subject contract at the time the claims were filed went through the Air Force computer list, maintained for all units serviced by appellant, and compared it to the invoices submitted in support of appellant's claim letter of 30 April 1992. He arrived at totals for the first twelve months of the contract of 152 service calls for portable equipment, 72 service calls for mobile radios and 107 "priority" calls for fixed equipment (tr. 1/194-96).

17. Viewed from the standpoint of appellant's claim letters of 30 April 1992, it must be taken into account that the claimed actual service calls covered an eighteen month

[2] The contracting officer did not know the reason why pagers were included both in "NON-RECURRING CHARGES" and also in TE-2 estimates of "Recurring Workload Estimates" (tr. 1/177). We conclude it was the result of a mistake (tr. 1/197).

©1994, Commerce Clearing House, Inc.

Digitized by Google

period, not a twelve month period. Estimating 95 calls for "fixed" equipment over a twelve month period, and carrying that over to 18 months would result in an estimate half again as large, or 142 calls, very close to the 151 actual calls claimed. Applying the same 50% increase to the TE-2 estimate for mobiles (65) and portables (166) results in estimates of 97 and 249 as compared to appellant's claimed actual calls in those categories of 106 and 198. By virtue of the contract modifications (see finding 1), appellant was compensated for the additional six months period at the same rates as he had been for the base period.

18. We find that the number of service calls made by appellant was substantially similar to Technical Exhibit 2 estimates for "recurring workload." In so finding, we recognize this does not dispose of the issue of whether the service calls on "fixed" equipment were excess "emergency" calls under the non-recurring schedule (as asserted by appellant), or were (as the Government asserts) "priority" service required by the PWS under the recurring schedule.

19. The Performance Work Statement contained the following pertinent provisions relied upon by either one, or both, of the parties to this appeal:

SECTION C-1

GENERAL

* * *

1.6. HOURS OF OPERATION.

1.6.1. Normal Hours. The contractor shall provide the following customer service hours: 0700—1600 (7:00 AM to 4:00 PM) daily, Monday through Friday.

1.6.1.1. Recognized Holidays. The contractor is not required to provide routine service on: New Year's Day, Martin Luther King Day, President's Day, Memorial Day, Independence Day, Labor Day, Columbus Day, Veteran's Day, Thanksgiving Day, and Christmas Day.

1.6.1.2. Priority Service. Service shall be required to troubleshoot and/or repair equipment, nets or systems needed to maintain mission essential communications, during or outside of normal duty hours and recognized holidays described above. Contractor personnel may be required to travel to any point (location) under the responsibility of Davis-Monthan AFB up to a radial distance of 40 miles and the Mt. Lemmon facility. *Workload Estimates, Technical Exhibit 2, may be used as a basis to protect priority restoral actions.* The contractor shall establish and maintain procedures and communications to ensure standby technician call-outs can be accomplished as required. The contractor's responsibilities for priority service are described in Section C-5. [Emphasis supplied]

clude, but are not limited to, the installation/removal of fixed and mobile equipment, recrystalization or otherwise changing frequencies in various items of equipment, repair of pagers *not otherwise covered on the recurring maintenance contract*, cases of nonfair wear and tear, etc.... [Emphasis supplied]

* * *

SECTION C-5

SPECIFIC TASKS

* * *

5.6. RECURRING MAINTENANCE SERVICE.

5.6.1. Priority Recurring Maintenance Service. The contractor shall ensure that a technician(s) is available for contact, response, and repair of priority items/systems outages and problems listed in Part 1: Schedule of Services, Technical Exhibit 9.[4] Contractor repair shall include troubleshooting, adjustment and repair required to maintain an item so that its performance will equal or exceed the original manufacturer specifications. The contractor shall respond, repair and restore to service, the priority items and systems prescribed in Technical Exhibit 8.[5] Priority service may be required 24 hours per day, 7-days a week, per paragraph 1.6.1.2. herein. The contractor shall meet all response and restoral times specified in Technical Exhibit 8.

5.6.2. Routine Recurring Maintenance. The contractor shall ensure a technician is available for contact, response and repair of routine items/system outages and problems for the items listed in Technical Exhibit 9 as specified in paragraph 1.6.1. herein. Routine requests for service received after 1400 hours may be deferred until the first hour of the next normal work day. The contractor shall check, by telephone, with the QAE daily, Monday through Friday, excluding authorized holidays, by 1000 hour [sic], to determine daily repair requirements. Schedules, agreeable to the contractor, QAE and using organization, to effect repair of fixed station equipment, mobiles, etc., shall be determined within 24 hours of contractor notification. The contractor must comply with the response and restoral times listed in Technical Exhibit 8. The contractor shall perform an operational check of each item or system following repair actions.

* * *

5.6.4. Contractor Availability. A maintenance facility is provided on the base and the contractor shall ensure a technician(s) is available from 0700 to 1600 hours, Monday through Friday each week, excluding authorized holidays. The contractor's technicians may be utilized to respond to outages and/or trouble calls on government equipment and systems, identified in this contract, on and off base. Directions and/or instructions to the technicians shall be made by the contractor or a designated representative.

20. The contract contained the standard "Changes-Fixed Price (AUG 1987)" clause required by FAR 52.243-1, and "Disputes (APR 1984)" clause required by FAR 52.233-1. It also contained the "Requirements (APR 1984)" clause in FAR 52.216-21 which provided in pertinent part:

> (a) This is a requirements contract for the supplies and services specified, and effective for the period stated, in the Schedule. The quantities of supplies or services specified in the Schedule are estimates only and are not purchased by this contract. Except as this contract may otherwise provide, if the Government's requirements do not result in orders in the quantities described as "estimated" or "maximum" in the Schedule, that fact shall not constitute the basis for an equitable price adjustment.

---

[4] Technical Exhibit 9 listed the serial numbers of all equipment accompanied by a reference to a note on Technical Exhibit 8, which indicated the "response" time and the "restoral" time for the particular item. A notation of "1" meant 2 hours response time and 4 hours restoral time seven days a week. A notation of "2" meant 2 and 8 hours respectively, also seven days a week. There were over 150 items with a "1" or "2" response time so designated. There were also a number of items which had a response time of 24 hours and a 24 hour, or next day, restoral time. There was a 10 day restoral time for equipment returned to the contractor's facility.

[5] Technical Exhibit 8 listed an order of priority repair service for base operational components when there were "multiple net outages." For example, "Base Commander" was the first item listed, followed by "INF Escort," "Fire Crash/EOD," "Det 1, 120 F16 (alert forces), "Security Police," "Medical Services," and so on, through 29 separate base areas.

DECISION

As our findings show (findings 7, 16) the service calls claimed by appellant to have been excessive were substantially similar to the estimate in Technical Exhibit 2 for recurring workload. For mobiles the twelve month estimate was 65, and appellant had 72 such calls. For portables the estimate was 166, and appellant had 152. The twelve month estimates in TE-2 for "fixed" equipment was 95 and the actual turned out to be 107. On all three claims the actual service calls were substantially similar to the estimates provided in TE-2 as a basis for bidders to formulate their bids. The estimates were not a guarantee of exact quantities and there is no proof that the FY 90 historical data used for TE-2 were untrue. This completely disposes of appellant's claims for portables and mobiles.

However, the claim for excess "emergency" calls presents the further issue of whether the service calls, which the Government treated as "no-charge recurring priority" service, were instead "emergency service and repairs" under the "NON-RECURRING CHARGES" schedule. If they were, they substantially exceeded the 20 such calls estimated in that schedule (see finding 4).

The issue is one of contract interpretation. We are not faced with a question of ambiguity giving rise to application of the rule of *contra proferentem* because that rule applies only if there is a latent ambiguity with appellant's interpretation lying within "the zone of reasonableness." *WPC Enterprises Inc. v. United States* [9 CCF ¶ 72,289], 323 F.2d 874, 876 (Ct. Cl. 1963). Moreover, that rule requires that the contract be ambiguous; i.e., susceptible to two or more different and reasonable interpretations, each of which is consistent with the contract language. *George Bennett v. United States* [11 CCF ¶ 80,884], 178 Ct. Cl. 61,371 F.2d 859 (1967).

For us to find the appellant's interpretation reasonable would do violence to the basic rule that requires avoiding an interpretation which renders a contract provision meaningless. *Julius Goldman's Egg City v. United States* [30 CCF ¶ 70,662], 697 F.2d 1051 (Fed. Cir. 1983) *cert. denied.* 646 U.S. 814; *United Pacific Insurance Company v. United States* [20 CCF ¶ 83,173], 204 Ct. Cl. 686, 692, 697 F.2d 1402, 1405 (1974); *Hol-Gar Manufacturing Corp. v. United States* [10 CCF ¶ 72,885], 169 Ct. Cl. 384, 351 F.2d 972 (1965). Further, it is axiomatic that contractual language should be given its plain and ordinary meaning. *Thanet Corp. v. United States* [25 CCF ¶ 82,997], 219 Ct. Cl. 75, 82, 591 F.2d 629, 633 (1979).

The contract is quite clear that recurring service calls included "priority service," which was stated to be service "required to troubleshoot and/or repair equipment, nets or systems needed to maintain mission essential communications" (PWS 1.6.1.2). It was just as clear that this service was required during or outside of normal duty hours and on holidays (PWS 1.6.1.2 and 2.2.53). The contract reiterated that requirement by explicitly stating the service may be required "24 hours a day, 7-days a week" and it mandated that the contractor was "to meet all response and restoral times specified on Technical Exhibit 8" (PWS 5.6.1). In the next paragraph it distinguished "routine recurring maintenance" as work to be done during normal duty hours which, while it had to meet the same response and restoral times, could be deferred until the next normal work day, if requested after 1400 hours (PWS 5.6.2).

The non-recurring maintenance, on the other hand, was stated to be for maintenance and repair of equipment "not listed on the LMR (Land Mobile Radio) maintenance contract" or equipment "damaged by abuse, nonfair wear and tear or acts of God" (PWS 2.2.44). The reference to not being "listed" on the LMR maintenance contract we read as referring to Technical Exhibit 9 which listed all the equipment to be served under the contract. The contract further delineated this in its references to nonrecurring maintenance, in PWS 4.4.1, as "over and above the provisions of the recurring maintenance contract," and in PWS 4.4.1.1, as "not otherwise covered on the recurring maintenance contract." Again the use of the word "contract," while not the best example of good draftsmanship, leaves clear, in context, that if the service is covered in recurring services it is not covered in nonrecurring services.

We conclude that the services claimed by appellant as "emergency service" under the "non-recurring" schedule were "priority" services under the "recurring" schedule and appellant's interpretation of the contract to the contrary is unreasonable. Under the rules of contract interpretation set forth above it cannot control. Accordingly, appellant's claim for excess "emergency services" must fail.

A further obstacle to relief here is appellant's failure to establish to our satisfaction that it relied upon the interpretation it now

Digitized by Google

asserts when it bid on the contract. *Lear Siegler Management Services Corps. v. United States*, 867 F.2d 600 (Fed. Cir. 1989); *Fruin-Colnon Corp. v. United States* [36 CCF ¶ 75,923], 912 F.2d 1426 (Fed. Cir. 1990).

The appeal is denied.

[¶ 26,516] Contract Automotive Repair & Management

ASBCA No. 45316, November 16, 1993. Contract No. M00681-92-C-0047.

Defaults, Procedure—Cure Notice—Termination Prior to Expiration.—The government's partial default termination of a truck repair contract within a 10-day cure period was proper, despite the contractor's motion for summary judgment on appeal from the termination, because the contractor did not show that it actually cured the many deficiencies cited by the government before the termination or that it could have or would have cured such deficiencies before expiration of the cure period if given the opportunity. The contractor failed to demonstrate that any material facts remained in dispute or that it was entitled to relief as a matter of law.

For the appellant: Sam Zalman Gdanski, Montebello, New York. For the government: Theresa M. Young, Special Counsel, Procurement Law, U.S. Marine Corps, Western Area Counsel Office, Camp Pendleton, California.

Before RUBERRY, FREEMAN, and LUSSIER, Administrative Judges.

RUBERRY, Administrative Judge: Appellant moved for summary judgment on its appeal from the Government's partial default termination of a vehicle repair contract. Appellant alleges that termination prior to expiration of a ten-day cure period was improper. The Government opposes the motion.

UNDISPUTED FACTS

The Contracting Office, United States Marine Corps, Camp Pendleton, California, awarded contract No. M00681-92-C-0047 to appellant on 23 July 1992. The $52,206 fixed-price service contract called for the repair of four special purpose trucks. (R4, tab 4)

The contract incorporated by reference the standard Default clause of FAR 52-249-8, which, in pertinent part, provides:

> DEFAULT (FIXED-PRICE SUPPLY AND SERVICE) (APR 1984)
>
> (a)(1) The Government may, subject to paragraphs (c) and (d) below, by written notice of default to the Contractor, terminate this contract in whole or in part if the Contractor fails to—
>
> (i) Deliver the supplies or to perform the services within the time specified in this contract or any extension;
>
> (ii) Make progress, so as to endanger performance of this contract (but see subparagraph (a)(2) below); or
>
> (iii) Perform any of the other provisions of this contract (but see subparagraph (a)(2) below).
>
> (2) The Government's right to terminate this contract under subdivisions (1)(ii) and (1)(iii) above, may be exercised if the Contractor does not cure such failure within 10 days (or more if authorized in writing by the Contracting Officer) after the receipt of the notice from the Contracting Officer specifying the failure.

Contract Line Item Number (CLIN) 1, vehicle number 279886, an auger drilling truck, and CLIN 4, vehicle number 271244, an aerial lift truck, were delivered by appellant to the Government for inspection on or about 30 September 1992. The base maintenance division stated in a 30 September memo to the contracting office that:

> Vehicle #279886 [CLIN 1] could not be inspected because of major oil leaks from hoses and one hydraulic cylinder causing a spillage on the parking lot. This vehicle was returned to the contractor.
>
> Vehicle #271244 [CLIN 4] was left to be inspected by BMT Maintenance and Facilities Maintenance with results to be presented to the contractor upon next delivery of vehicle #279886 [CLIN 4].

(R4, tab 7)

Appellant returned CLIN 1 to the Government for inspection on or about 7 October 1992. By memo dated 7 October 1992 to the contracting officer, the General Foreman,

©1994, Commerce Clearing House, Inc.
Digitized by Google

Maintenance Division, outlined the deficiencies found upon inspection of CLIN 1. The memo identified 40 deficiencies, including leaking cylinders and hoses and a lack of California Occupational Safety and Health Administration (California OSHA) certification. (R4, tab 8)

By letter dated 8 October 1992, the contracting officer sent a cure notice to appellant regarding the deficiencies in the repair of CLIN 1 and CLIN 4. The notice listed 39 deficiencies for CLIN 1 and 34 deficiencies for CLIN 4 and also stated that corrected vehicles had to be accompanied by California OSHA certifications. The notice further stated:

> Unless these conditions are cured within 10 days after receipt of this notice, the Government may terminate for default under the terms and conditions of the DEFAULT (FIXED-PRICE SUPPLY AND SERVICE) CLAUSE, FAR 52.249.8.

(R4, tab 9) The contractor received the written cure notice on 13 October 1992. (R4, tab 10) Appellant tendered CLIN 1 to the Government for reinspection on 14 October 1992. (Compl./Answer)

By letter dated 19 October 1992, confirming verbal notice of 14 October, the contracting officer partially terminated the contract for default. The default notice stated:

> This letter confirms our verbal notice to you on 14 October 1992 that Item 1, Vehicle #279886 on above referenced contract is terminated for default, pursuant to the clause entitled DEFAULT, FAR 52.249.8. You are advised that this termination is due to unsatisfactory performance in the maintenance and repair of vehicle #279886. You have delivered this vehicle three times for government inspection and acceptance, and each time the vehicle has failed to pass inspection. You still have in your possession Items 2, 3, and 4 of the contract for maintenance and repair services. Vehicle #271244 [CLIN 4] has been returned to you to correct the discrepancies noted in our Cure Notice. You have until 23 October to correct all discrepancies and deliver this vehicle in an acceptable condition. Failure to comply with the requirements of the cure notice relative to Vehicle #271244 [CLIN 4] will result in the complete termination of the referenced contract.

(R4, tab 11) Appellant received the termination letter on 21 October 1992. (R4, tab 12)

CONTENTIONS OF THE PARTIES

Appellant essentially argues that "[w]hen the government issues a cure notice giving a stated period within which to correct deficiencies in the performance of the contract, it waived its prior right to terminate for default. So a default termination cannot be effective before the expiration of the cure period and therefore a [con]version to a termination for convenience is required." (App. Mot. at 2)

In response, the Government argues that it is entitled to terminate for default within a cure period where it is apparent that the contractor will not sufficiently perform. The Government contends that appellant's three failures to deliver the vehicle properly repaired demonstrated appellant's inability to perform and justified the partial default termination within the cure period.

DECISION

Summary judgment is appropriate where the material facts are undisputed and the moving party is entitled to judgment as a matter of law. The party seeking summary judgment has the burden of demonstrating both elements and the non-moving party is entitled to have all inferences drawn in its favor. *Mingus Constructors, Inc. v. United States* [33 CCF ¶75,126], 812 F.2d 1387, 1390 (Fed. Cir. 1987); *J.W. Creech, Inc.*, ASBCA Nos. 45317 and 45454, 94-1 BCA ¶ 26,459, (26 October 1993) (citations omitted).

The record indicates that appellant presented the vehicle in question for final inspection and acceptance on three occasions, the last of which was 14 October 1992. The Government maintains that the numerous deficiencies identified by these inspections demonstrated appellant's inability to successfully perform the contract, and entitled the Government to terminate within the cure period. Appellant presents no evidence regarding its performance during the course of the contract or its ability to successfully perform the contract within the cure period.

Appellant relies on *B&C Janitorial Services*, ASBCA No. 11084, 66-1 BCA ¶ 5355, in contending that it is entitled to summary judgment merely because the Government terminated within the ten-day cure period. However, this decision was distinguished and limited to its particular facts in *Soledad Enterprises*, ASBCA No. 20376, 77-2 BCA ¶ 12,552. In *Soledad* the Board upheld a default termination within a cure period

Digitized by Google

where there was no indication that the contractor had taken any action to improve performance. The Board distinguished *B&C Janitorial Services* and a similar appeal, *Bill Powell, d/b/a Bill's Janitor Service*, ASBCA Nos. 10345, 10393, 65-2 BCA ¶ 4916, stating:

> In both of those appeals a default termination effected prior to the expiration of the cure period was held not to be proper. However, the facts are significantly different. In the first appeal, the Board noted that at one time the contract could have been terminated for default because of the contractor's failure to perform; however, the default was actually effected because of deficiencies in services performed. The Board found that as of the day of termination, those deficiencies had been corrected. In the second case the Board found that the contractor was in a position to cure the noted deficiencies within the designated cure period but, because of the premature termination, was deprived of the opportunity to do so.

77-2 BCA at 60,872. Appellant does not allege that it actually cured the numerous deficiencies cited by the Government prior to the termination or that it could or would have cured such deficiencies prior to the expiration of the cure period if given the opportunity. In short, appellant has not demonstrated that no material facts remain in dispute and that it is entitled to relief as a matter of law.

CONCLUSION

Appellant's motion for summary judgment is denied. Within 30 days of receipt of this decision, the parties are directed to provide a schedule for proceeding with the adjudication of the subject appeal.

[¶ 26,517] Merrimac Management Institute, Inc.

ASBCA No. 45291, November 15, 1993. Contract No. N00102-91-D-0055.

Indefinite Delivery Contracts—Limitations and Minimums—Minimum Amount.—A contractor's cross motion for summary judgment under an indefinite delivery, indefinite quantity, time and materials contract for management training services was denied because the contractor failed to present undisputed facts showing that it was entitled to recover as a matter of law for the government's alleged failure to comply with the contract's Minimum and Maximum Quantities clause. The contractor did not refute the government's contention that before negotiation of the delivery order, the government advised the contractor that the delivery order was intended to satisfy the contract's minimum quantity requirement and that the contractor accepted the order without objection.

For the appellant: Harry B. Ellis, Jr., President. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and James E. Fender, Trial Attorney, Portsmouth Naval Shipyard, Portsmouth, New Hampshire.

Before STEMPLER, RUBERRY, and SPECTOR, Administrative Judges.

STEMPLER, Administrative Judge: This appeal arises under an indefinite delivery, indefinite quantity, time and materials contract to train Navy personnel in management services. The Government moved for summary judgment. Appellant replied by filing a cross motion for summary judgment. The Government withdrew its motion, alleging material facts were in dispute, leaving only appellant's cross motion before the Board for resolution. The Contract Disputes Act is applicable.

STATEMENT OF FACTS FOR THE PURPOSES OF THE MOTION

The above-referenced contract was awarded to appellant on 16 September 1991. It included the following clauses:

> MINIMUM AND MAXIMUM QUANTITIES
>
> As referred to in paragraph (b) of the "Indefinite Quantities" clause of this contract, the contract minimum quantity is a total of $75,000.00 BASIC YR $50,000 OPTION YEARS *at the contract's unit price(s)*... [Emphasis added]

SUBCONTRACTING

Occasionally the contractor may be requested by the Government to satisfy special training needs requiring recognized authorities/experts for which the contractor may need to subcontract in order to perform an assigned task. However, subcontracting by the Contractor shall not be permitted without prior approval of the Government. Rates for such work are not restricted to Section B rates but must be negotiated prior to issuance of a delivery order.

On 8 May 1992, the Government issued Delivery Order 0001 for work valued at $92,399.27. Of the total, the parties agreed that $12,119.99 was for work to be performed by appellant at the contract's unit prices, while the remainder was for work to be subcontracted at a negotiated price. Subcontracting was necessary because appellant did not possess the expertise needed to perform the delivery order. The Government alleges by affidavit that prior to the negotiation of delivery order 0001 the Government advised appellant that it was the Government's position that this order would satisfy the minimum order under the contract and appellant had no objection to this statement. No other work was ordered under the contract, and a dispute arose involving whether this single delivery order had satisfied the $75,000 minimum quantity requirement specified in the contract clause noted above. By letter dated 21 October 1992, appellant submitted a certified claim to the contracting officer demanding payment in the amount of $62,880.01 ($75,000—$12,119.99). By letter dated 30 October 1992, the contracting officer denied appellant's claim in its entirety. Thereupon, appellant filed a timely notice of appeal with the Board.

CONTENTIONS OF THE PARTIES

Appellant contends that under Delivery Order 0001, only $12,119.99 of the total work ordered was based upon the contract's designated unit prices. It alleges that the work performed by the subcontractor was at a price resulting from *negotiations* between appellant and the Government. Therefore, appellant argues that the Government failed to order $75,000 worth of work at the contract's unit prices, and appellant is entitled to the difference. Appellant asserts that there are no material facts in dispute and that the issue before the Board is simply a matter concerning the interpretation of the contract's Minimum and Maximum Quantities clause to determine whether the Government has fully complied with its requirements.

The Government contends that, prior to appellant's acceptance of the delivery order, appellant had been informed that Delivery Order 0001 was intended to satisfy the contract's $75,000 minimum quantity requirement and the order was accepted without objection.

DECISION

Summary judgment is properly granted only when there is no genuine issue of material fact and the movant is entitled to judgment as a matter of law. *Mingus Constructors, Inc. v. United States* [33 CCF ¶75,126], 812 F.2d 1387, 1390 (Fed. Cir. 1987). The moving party has the burden of demonstrating both elements and the opposing party is entitled to have all inferences drawn in its favor. *United States v. Diebold, Inc.*, 369 U.S. 654 (1962); *Jacksonville Shipyards, Inc.*, ASBCA No. 32300, 86-3 BCA ¶19,147.

The issue in this appeal is whether delivery order 0001 satisfied the contract's Minimum and Maximum Quantities clause. It is clear that the parties dispute whether during performance of the contract (*i.e.*, during negotiations for the issuance of delivery order 0001) the Government advised appellant of the Government's interpretation that delivery order 0001 satisfied the Government's obligation under the clause and appellant accepted that interpretation. Appellant has not set forth undisputed facts demonstrating that it is entitled to recover as a matter of law. Consequently, summary judgment may not be granted.

CONCLUSION

Appellant's cross-motion for summary judgment is denied.

[¶ 26,518] Loral Infrared and Imaging Systems, Inc.

ASBCA No. 44832, November 10, 1993. Contract No. N62269-90-C-0554.

Contract Disputes, Certification—Amount of Claim—Potential Amount.—Although a board of contract appeals decision would have precedential impact on similar claims that in total exceeded $50,000, certification of the contractor's claim was not required, because the claim did not exceed $50,000. The board was not entitled to look beyond the amount in controversy ($2,000) and consider all matters that would be impacted by the decision. The matters were not in dispute, and the board did not have access to the facts of each potential dispute.

For the appellant: Sidley & Austin, Washington, D.C., by Melvin Rishe and Howard Stanislawski. For the government: Jerome C. Brennan, Chief Trial Attorney, Defense Contract Management District, Northeast Boston (DLA), and Rita M. Quinn, Trial Attorney.

Before STEMPLER, RUBERRY, and SPECTOR, Administrative Judges.

STEMPLER, Administrative Judge: This matter comes before us on the appellant's motion for a ruling that no Contract Disputes Act certification is required for the instant appeal and the Government's motion to dismiss for lack of jurisdiction based on the absence of a certification.

STATEMENT OF THE CASE FOR MOTION PURPOSES

On 31 December 1989, Loral Corporation acquired substantially all of the assets of Honeywell's Electro-Optics Division, which name was changed to that of appellant. On 23 July 1990, FAR 31.205-52, "Asset Valuation Resulting From Business Combinations" was promulgated. Appellant, Loral Infrared and Imaging Systems, Inc. (Loral) became aware that, contrary to its position, it was the Defense Contract Audit Agency's (DCAA) position that the FAR provision applied to acquisitions completed prior to promulgation of the provision. In order to resolve the issue, Loral discussed the matter with the Government Administrative Contracting Officer (ACO) and submitted a voucher on 21 March 1991 under the instant contract (awarded 29 September 1990) as a test case. The voucher was for $2,087, representing costs under the instant contract attributable solely to asset step-up resulting from the 31 December 1989 acquisition. It is agreed by the parties that if all the asset revaluations issues under this and all of appellant's other contracts were combined, the total would exceed $50,000 in controversy. On 22 July 1991, DCAA issued a Form 1, Notice of Contract Costs Disapproved relating to the costs in dispute. The parties were unable to resolve the matter and on 20 February 1992, Loral requested a contracting officer's decision on DCAA's Form 1 to allow Loral to appeal the matter. The ACO issued his decision on 17 April 1992, declining to approve payment of Loral's $2,087 invoice. A timely appeal was filed on 13 July 1992. Subsequently, on 10 February 1993, Loral filed the invoice as a certified claim with the ACO.

CONTENTIONS OF THE PARTIES

It is the Government's position that we lack jurisdiction because the $2,087 invoice represents a contractor's claim and that it was required to be certified even though it is less than $50,000 because it is a "test case" and the "matter has application beyond the amount at issue in the Appeal." (Gov't br. at 8)

Loral argues that the amount in controversy does not exceed $50,000 and no certification is required. Alternatively, Loral urges us to hold that the appeal concerns a Government claim and therefore no certification is necessary. Finally, Loral contends that the recent amendments to the CDA regarding certification (P.L. No. 102-572, § 907, 29 October 1992) allow it to remedy any defective certification. It is submitted by Loral that its 10 February 1993 certification cures any alleged defect.

DECISION

We do not deal with most of the issues raised by Loral, for we determine that we have jurisdiction on the basis that the claim does not exceed $50,000 and therefore is not required to be certified.

Assuming the claim to be Loral's, the CDA requires that all claims by contractors be certified if they exceed $50,000 (41 U.S.C. § 605(c)(1)). In the instant appeal, the request submitted by Loral and the contracting of-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ficer's decision, that serve as the vehicles for the Board's jurisdiction, concern a $2,087 amount. While the precedential impact of our decision, according to the parties, will have an impact on the parties in excess of $50,000, we cannot adopt the standard urged by the Government of looking beyond the amount in controversy and considering all matters that our decision will have application to. These matters are not in dispute and we do not have the facts of each potential dispute before us. It is not clear what the Government would have Loral certify to. The amount in controversy in this appeal is only $2,087, the total amount of potential disallowance is not known and has not been invoiced. If Loral were to certify, it could not do so in good faith since the matters which our ruling may have application to are not yet known, were not presented by Loral nor considered by the contracting officer.

There is properly no allegation that there has been claim fragmentation here, and we do not regard the use of a test case as claim fragmentation. *Brunswick Corporation*, ASBCA No. 26691, 83-2 BCA ¶ 16,794.

CONCLUSION

An appeal under contract No. N62269-90-C-0554 concerning $2,087 is the only matter before us. A certification is not required. Appellant's motion is granted, The Government's motion is denied.

[¶ 26,519] Bath Iron Works Corporation

ASBCA Nos. 44617, 45232, November 12, 1993. Contract Nos. N00024-87-C-2257, N00024-89-C-2033.

Modifications—Notice of Claims for Adjustments—Shipbuilding Contracts.—The government's motion to dismiss the contractor's appeal was treated as a motion for summary judgment and denied because there was a question of the timeliness of the contractor's claim to the contracting officer pursuant to the statutory limitation on the adjustment of shipbuilding contracts. 10 U.S.C. § 2405 provides that the secretary of a military department may not adjust a price under a shipbuilding contract on a claim arising out of events occurring more than 18 months before the submission of the claim. Although the government contended that the contractor filed its claims more than 18 months after the government changed the requirements, the 18-month period would begin to run when the contractor complied with the direction, and there was no proof that the contractor complied with the government's alleged direction.

Modifications—Constructive Changes—Proof.—It was inappropriate to grant a government motion for summary judgment denying a claim for increased costs attributable to a modification of a shipbuilding contract, because there was inconsistent information in the record with respect to the alleged government direction and the contracting officer's knowledge of the direction. It was undisputed that the specifications did not prescribe or limit the size of secondary sheathing plates. However, the appeal file and documents did not identify the party that proposed the alteration of the sheathing plates. Moreover, the file contained inconsistent statements as to whether the government directed the contractor to reduce or change secondary sheathing plate size and contained no information as to whether the contracting officer knew or had reason to know of such a direction.

For the appellant: Patton, Boggs & Blow, Washington, D.C., by Robert H. Koehler. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and John B. Dale, Trial Attorney.

Before JAMES, RUBERRY, and RIISMANDEL, Administrative Judges.

JAMES, Administrative Judge: In consolidated ASBCA Nos. 44617 and 45232, respondent's 30 August 1993 "Partial Motion[s] to Dismiss Appellant's Fragmentation Protection Plate Claim[s] as Untimely," state parallel grounds: that appellant submitted certified DDG 53 and DDGs 54/56/58 claims on 12 June 1990 and 6 February 1991 respectively; appellant alleged that respondent changed the specified secondary sheathing requirements on 8-9 March 1988; such event occurred more than 18 months before appellant submitted its claims; and,

Digitized by Google

therefore, 10 U.S.C. § 2405 bars relief for such event.

Appellant's 7 and 13 October 1993 Oppositions to Respondent's Motions argue that the Navy direction to reduce the size of the DDG secondary sheathing plates in March 1988 is among several interrelated, evolutionary changes in the DDG 51 secondary sheathing design, subject of its DDG 53 and DDG 54/56/58 claims. Appellant also argues strenuously that 10 U.S.C. § 2405 cannot be an affirmative defense to its claim.

Statement of Facts for the Purposes of This Motion

Background Facts. The parties entered into contract N00024-85-C-2144 (contract 2144) for the detail design and construction of the DDG 51 ARLEIGH BURKE lead ship in April 1985; contract N00024-87-C-2257 (contract 2257) to construct the DDG 53 follow ship in September 1987; and contract N00024-89-C-2033 (contract 2033) to construct the DDGs 54/56/58 follow ships on 13 December 1988 (complaint & answer, ¶ 6; R4, tab 57).

Respondent first required fragment protection of DDG 51 class ships in contract 2144's 15 March 1985 specification section 072d, providing that the DDG 51 class ships were to have two types of fragment protection:

> a single plate system and a spaced system .... The spaced system consists of ... a frontal plate and a backup plate .... Steel single plate systems shall be High Strength Steel (HSS) ... except where a higher yield steel is required for structural purposes, [and] shall not exceed 10 percent of the fragment protection total area without NAVSEA approval.
>
> Spaced system general requirements.—Either the frontal or the backup plate shall be structural; the remaining plate shall be nonstructural. The nonstructural plate shall be HSS or high yield steel (HY80) ... or high yield steel (HSLA-80) ... as modified herein. A minimum of 4 inches shall separate the frontal and backup plates ... distributive systems shall not be run between the frontal and backup plates. The spaced system shall be designed to permit the spraying of insecticides .... Spaced system installation requirements for nonstructural plate.—The plating shall be mechanically fastened unless welding is approved by NAVSEA. Gaps in the nonstructural plating over 0.25 inches that are not continuously shielded by stiffeners shall be covered with a strap of thickness and material equivalent to the nonstructural plating. The strap shall overlap the edges of the plate by at least 1.0 inch.

(App. oppos., Attach. 3)

The 1 July 1986 specification section 072d in contracts 2257 and 2033 was the same as that in contract 2144, except (a) engineering change ECP 51-0865 changed the single plate limit to "25 percent for DDG 59 and follow" ships; (b) specification change notice 01206 for DDG 52 through 63 restricted the weight and location of attachments on spaced system frontal and backup plates; and (c) the following provision was added:

> For DDG 59 and follow, gaps in the nonstructural plating that are not continuously shielded by the stiffeners shall be covered with a strap of thickness and material equivalent to the nonstructural plating. The strap shall overlap the edges of the plate by at least 1.0 inch.

In the 2033 contract, respondent changed the effectivity to DDG 67 in exception (b) above regarding attachments. (R4, tabs 3, 13) Specification section 072d in contracts 2144, 2257 and 2033 neither prescribes nor limits the size of secondary sheathing plates.

DDG 53 (ASBCA No. 44617)

Before award of DDG 53 contract 2257, appellant's 27 May 1986 ECP 51-0134R2C1 sketched three and four horizontally oriented secondary sheathing plates between decks. Appellant's undated secondary sheathing drawing 450-BH-ISBO-01, Rev. A (putatively July 1986), specified plates measuring from 1' $1\frac{3}{8}$" to 2' $6\frac{3}{16}$". (R4, tab 16 at 54; tab 62)

Respondent's June-July 1987 minutes of a secondary sheathing design conference stated that the rear plate's size would be limited to 60 lbs. per panel to allow ease of handling by two men and to facilitate the plate's installation and removal (app. response, tabs 5, 6).

After award of contract 2257, on 12 February 1988 appellant depicted secondary sheathing plates measuring approximately 2 by 3 feet (R4, tab 52).

According to appellant, at the March 1988 Design Review Meeting PMS 400D, Captain Perkinson, respondent's AEGIS Program Manager—

> indicated that the plates were to be removable for maintenance by Ship's force. Compartment congestion dictated that, if plates were to be removable, then they would necessarily need to be smaller, due

©1994, Commerce Clearing House, Inc.

Digitized by Google

to their close proximity to equipment .... [He] criticized the use of large plates that did not permit maintenance removal by ship's force. The Navy maintained that this invalidated the intended purpose of secondary sheathing. BIW pointed out that there was no ship specification requirement in this area.

(R4, tab 14 at 6, tab 16 at 184)

Respondent's 8-9 March 1988 Design Review minutes stated that respondent had conducted ballistic tests of secondary sheathing consisting of "a series of small plates to facilitate easy removal by ships crew for maintenance and access" with three horizontal seams and clips to secure the plates in place and a 1/4 inch gap between the plate and stiffener flange. Those tests showed "that the horizontal seams resulted in an equivalent 17 percent degradation in the overall effectiveness of the sheathing" and the protection was unachievable "using HSS materials." The minutes stated that:

Both Mr. [R.] Fortune [Navy AEGIS Program Deputy Director] and Mr. [A.] Summers [Navy ship design manager] noted that the secondary sheathing will only be removed for maintenance during a shipyard overhaul. There is no requirement to limit the size of the plate panels to permit removal by the ship's crew. Mr. Fortune observed that the present design has invalidated the purpose of the secondary sheathing and requested that a system level review be presented at the April Design Review.

(R4, tab 53)

On 31 March 1988 Mr. Fortune directed appellant "to eliminate the gaps" in the fragment protection design (R4, tab 16 at 69).

At the 12 April 1988 Design Review appellant stated that its 2' by 2' sized secondary sheathing plates should be of limited weight to facilitate removal "during the latter stages of construction" and that the reduced effectiveness of the secondary sheathing "due to the larger number of seams can be compensated by welding strips to adjoining plates." Respondent reiterated a "desire to prohibit the use of HSS material for secondary sheathing, to minimize the number of seams in the secondary sheathing by using larger plate sizes, and to eliminate the remaining gaps by welding strips to the adjacent plates" and requested appellant's cost estimate to substitute HSLA 80 or HY80 for HSS material. Mr. Fortune stated that 2' × 2' plates "appeared to be too small." (R4, tab 54)

Appellant's 21 April 1988 letter to Gibbs & Cox (appellant's designer—G&C) concurred with G&C's "logic ... in maintaining relatively small [approximately 2 × 2 feet], mechanically attached plates of standardized dimensions where possible [with] overlapping stiffener flanges" (R4, tab 16 at 72).

On 22 August 1988 respondent, after testing, (a) determined to eliminate "HSS steel as an allowable choice for non-structural plate material" and to prohibit "clear gaps in non-structural plate" and (b) directed appellant to perform shipbuilder's special study "SSS LY-0006," under Lead Yard Services contract N00024-87-C-2077, to investigate the feasibility of incorporating HSLA 80 non-structural plate, increasing individual plate [size] where practical, and overlapping plate seams (R4, tab 16 at 79, tab 29 Encl. (11)).

Appellant's 3 March 1989 SSS LY-0006 report stated that HSS and HY80 steel could be eliminated for DDG secondary sheathing because Navy tests had shown that "at the clear gap area HSS at blast impact would curl the unsupported edge, whereas HSLA 80 had insignificant distortion," and gaps could be eliminated at unsupported plate seams by welding a flatbar between structural stiffeners, overlapping nonstructural plate by one inch minimum and noted that gap elimination required a change to specification § 072d, which permitted spaces not greater than 0.25 inch. The report was silent with respect to increasing individual plate size. (R4, tab 16 at 98-110)

Appellant's 21 June 1989 secondary sheathing viewgraphs depicted a typical plate measuring 2' 4" by 2' 2 7/8" (R4, tab 16 at 119).

Appellant's 12 June 1990 certified DDG 53 "Request for Equitable Adjustment" (REA) for $2,157,161 alleged that its 17 February 1987 proposal to construct DDG 53 envisioned spaced system "back up plates about two feet wide extending from deck to deck, held in place by ... resilient spacers, flat washers and threaded studs" and that constructive changes arose from Government actions affecting specification § 072d for DDG 53 (R4, tabs 14, 16).

Before 13 April 1992 respondent told appellant that 10 U.S.C. § 2405 barred DDG 53 fragment protection claim events which occurred before 13 December 1988 (R4, tab 29, ¶ 2).

The contracting officer's 18 May 1992 final decision addressed the three changes appellant alleged in its 12 June 1990 REA: (1)

Digitized by Google

redesign of fragment protection plates to a smaller size, (2) elimination of gaps between plates necessitating greater use of backer bars, and (3) greater use of the single plate system. He (a) decided that appellant had failed to substantiate that at the March 1988 design review respondent directed appellant to limit the size of plate panels to permit their removal by the ship's crew, and in any event such claim element was precluded by 10 U.S.C. § 2405; (b) acknowledged that gap elimination and greater use of single plates were changes made by ECP 51-865, the second of which significantly relaxed specification requirements and offset the added costs of gap elimination and backer bars; and (c) determined that no contract price adjustment was warranted. (R4, tab 11)

DDGs 54/56/58 (ASBCA No. 45232)

Appellant's 6 February 1991 DDGs 54/56/58 REA presented cryptic entitlement conclusions with no new technical allegations. Appellant based its DDGs 54/56/58 labor and material cost estimates on its DDG 53 REA. (R4, tab 4) On 12 March 1991 appellant reduced its estimate to a $6,658,958 ceiling price increase (R4, tab 5). The contracting officer's 3 August 1992 final decision addressed appellant's DDGs 54/56/58 claim in terms of the same three changes as the DDG 53 claim, repeated his previous decision on the first change, and with respect to the second and third alleged changes decided that "a downward price adjustment of $555,053 is warranted . . . based on the net cost effect of performing these two changes" (R4, tab 1). On 3 August 1992 respondent's unilateral modification A00519 reduced the contract 2033 target price by $512,159 and ceiling price by $589,615 (R4, tab 10).

DECISION

I.

Respondent's motions seek to "dismiss" appellant's claim insofar as respondent allegedly changed the secondary sheathing requirements at the March 1988 Design Review Meeting. We treat the motions as for partial summary judgment, because respondent grounds its motions on 10 U.S.C. § 2405, which establishes an affirmative defense, that, if valid, would result in denial rather than dismissal of portions of appellant's claims. *Bath Iron Works Corporation*, ASBCA No. 43303, 93-2 BCA ¶ 25,792 at 128,347. Summary judgment is appropriate only when the material facts are undisputed and the moving party is entitled to judgment as a matter of law. *Mingus Constructors, Inc. v. United States* [33 CCF ¶ 75,726], 812 F.2d 1387, 1391 (Fed. Cir. 1987). Any doubt about the existence of a disputed material fact is to be resolved against the movant. *Short Electronics, Inc.*, ASBCA No. 40499, 91-3 BCA ¶ 24,100.

II.

Respondent "treats as true" only for the purpose of its motions its alleged March 1988 direction to reduce or to change secondary sheathing plate size. We must determine first whether such direction involved conduct and facts interrelated or closely connected with other fragment protection claim items, or is an independent claim. *See, Roscoe-Ajax Construction Co. v. United States* [20 CCF ¶ 83,138], 499 F.2d 639, 204 Ct. Cl. 726, 742-43 (1974) (discussing what is a single claim or dispute for purposes of appeal); *Allied Repair Service, Inc.*, ASBCA No. 26619, 82-1 BCA ¶ 15,785 (discussing what is a claim for purposes of CDA certification and of *res judicata*).

The parties treated the 1988-89 questions about secondary sheathing plate material and size, reduction or elimination of interplate gaps and protecting plate seams, and their technical resolutions, as interrelated. We see nothing unreasonable or illogical in such treatment. Respondent did not direct appellant to reduce or increase the plate size in isolation from, but rather in conjunction with, its resolution of technical concerns about eliminating HSS steel, reducing interplate gaps and protecting plate seams, of secondary sheathing. Appellant's continued use of the smaller sized plates after 8-9 March 1988 was consistent with its SSS LY-0006 report on the feasibility of incorporating HSLA 80 non-structural plate and overlapping plate seams, which report was silent about increasing plate size. The secondary sheathing technical questions, including plate size, were not resolved until after 3 March 1989, when respondent accepted the recommendations in appellant's SSS LY-0006 report and appellant conformed its contract performances thereto. The present record tends to show that the plate size claim element is connected factually to other secondary sheathing claim items, whose global resolution occurred less than 18 months before appellant submitted its certified claim. Moreover, whatever occurred in March 1988 does not prove whether appellant complied with respon-

©1994, Commerce Clearing House, Inc.
Digitized by Google

dent's alleged direction at that time and thus cannot establish that there was a constructive change order in March 1988.

In its 8 November 1993 reply to appellant's opposition, respondent cites our statement in *Bath Iron Works Corp.*, ASBCA No. 43303, 93-3 BCA ¶ 25,992 at 129,233 (recon. den., *"Bath I"*), that

> we believe that for each shipbuilding claim, the statutory term "events" includes dual operative facts of the Government's conduct giving rise to liability and the contractor's recognition of (or time by which a reasonable contractor should recognize) such conduct

and argues that—

> both the occurrence of the Government conduct giving rise to liability (the alleged constructive change order) and the contractor's recognition of such conduct, the "dual operative facts" identified by the Board, took place at the March 1988 meeting.

We made the quoted statement in response to appellant's *Bath I* argument that we misconstrued the term "events" by treating it as a singular "event" with respect to a single item of allegedly defective Government furnished material. In *Bath I,* we noted the Congressional view that the "event" triggering the 18-month period occurs when the contractor discovers the defective GFM and the Government directs its repair or replacement, and held that the 18-month period began when appellant's subcontractor made the 6 July 1987 troubleshooting call to repair defective GFM. 93-2 BCA ¶ 25,792 at 128,346. In the present dispute concerning the secondary sheathing plate size, the conduct giving rise to liability must embrace not only the alleged Government direction, but also appellant's putative compliance with that direction, just as in *Bath I.*

III.

Next we must determine whether there are undisputed material facts disproving any element of appellant's first claim item: *viz.,* that contracts 2257 and 2033 prescribed no limit on the size of secondary sheathing plates; respondent, at the 8-9 March 1988 Design Review Meeting, directed appellant to change the fragment protection specification or changed or reduced appellant's secondary sheathing plate size; respondent's contracting officer knew or had reason to know of such direction; and appellant complied with such direction.

It is undisputed that specification section 072d in contracts 2144, 2257 and 2033 neither prescribes nor limits the size of secondary sheathing plates. The appeal file and documents accompanying the motions and oppositions (a) do not identify at whose instigation appellant's allegedly proposed secondary sheathing "plates about two feet wide extending from deck to deck" were altered before award of contract 2257 to three to four horizontally oriented plates between decks, each plate measuring one to two to three feet on the side, (b) contain inconsistent statements on whether respondent directed appellant to reduce or change the secondary sheathing plate size at the 8-9 March 1988 Design Review Meeting, and (c) contain no information on whether the contracting officer knew or had reason to know of such direction. It is undisputed that in August 1988 respondent directed appellant to perform the SSS LY-0006 study to investigate the feasibility of *increasing* individual plate size, and that appellant's SSS LY-0006 report was silent with respect to *increasing* plate size. It is undisputed that appellant did not change the size of its secondary sheathing plates after 9 March 1988, but continued to perform contracts 2257 and 2033 with the two to three foot rectangular size secondary sheathing plates.

Based upon the inconsistent information in the present record with respect to the alleged Government direction to reduce or change the secondary sheathing plate size and the contracting officer's knowledge of such direction, it is inappropriate to grant summary judgment. Nothing said in this opinion is intended to decide or to intimate any opinion on any facet of the merits of appellant's claims. Respondent's motions are denied.

ASBCA No. 44119, November 12, 1993. Contract No. DAAH01-78-C-0912.

Value Engineering—Acceptance—Board's Jurisdiction.—A claim for a portion of the savings resulting from the alleged use of ideas submitted by a contractor as value engineering change proposals was dismissed for lack of jurisdiction because there was no

Digitized by Google

constructive acceptance of the proposals. Although the contract for circuit card assemblies did not contain a Value Engineering clause, the contractor submitted three proposals, which were subsequently disapproved. The contractor alleged that the government's use of the ideas constituted constructive acceptance of the VECPs. However, the board found that the contract had been completed before the alleged use of the ideas. The Federal Circuit has held that there is no basis for constructive acceptance of a VECP once a contract is complete. Without acceptance, there was no contract over which the board could have jurisdiction.

Awards—Existence of Contract—Implied-in-Fact Contracts.—The board did not have jurisdiction over a claim for a portion of the savings resulting from value engineering change proposals, because the elements of an implied-in-law contract were missing. An implied-in-law contract requires a meeting of the minds that is inferred from the conduct of the parties and requires the same elements as an express contract, i.e., an offer, acceptance, and consideration. In this case, the contractor submitted value engineering change proposals even though the contract under which the proposals were made did not contain a Value Engineering clause. It was undisputed that the government rejected the VECPs when they were presented; therefore, the element of acceptance was missing.

For the appellant: Cosmo Fiore, President. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. David C. Hoffman, JAGC, Trial Attorney.

Before DICUS, RUBERRY, and STEMPLER, Administrative Judges.

DICUS, Administrative Judge: Respondent has filed a Motion to Dismiss the captioned appeal, alleging the underlying claim is based on a contract implied-in-law over which the Board has no jurisdiction. Appellant contends its claim is brought under either an express contract or a contract implied-in-fact. Respondent's Motion originally included lack of standing as a basis for dismissal, as appellant had cited Contract No. DAAH01-88-P-1976, to which appellant was not a party. Appellant has subsequently filed proof it was a party to Contract No. DAAH-78-C-0912 (referenced in claim documents at R4, tab 18), and respondent has withdrawn its Motion to Dismiss for Lack of Standing. The contract reference in the heading has been amended accordingly.

Undisputed Facts

1. Contract No. DAAH01-78-C-0912 ("contract 0912") in the amount of $25,444.28 between Amplitronics, Inc. and respondent United States Army was executed 10 July 1978. The contract called for 303 circuit card assemblies (Appellant's Opposition to Respondent's Motion to Dismiss, encl. A). The contract did not contain a Value Engineering (VE) clause (R4, tabs 19, 30).

2. Appellant submitted Value Engineering Change Proposals (VECP) 7891, 7892, and 7893. All three proposals were dated 7 September 1978 and referenced contract 0912. They were contingent upon incorporation of applicable VE clauses into the referenced contract (R4, tab 30). The VECPs were disapproved by letter dated 21 November 1978 (R4, tab 22).

3. There is no evidence as to when the contract was completed. There is no evidence of a claim reservation related to the subject VECPs under the contract. The Government's contract files have been destroyed (R4, tab 13).

4. In a claim dated 10 July 1991 appellant asserted that beginning in 1987 respondent made use of the ideas it had submitted in its 1978 VECPs. Appellant claimed a portion of the savings (R4, tab 18). In the absence of evidence to the contrary, we find the contract had been completed before the alleged use of appellant's ideas in 1987 (*cf.* finding 3).

5. Appellant's claim was denied in a final decision dated 9 December 1991 (R4, tab 7). An appeal was filed by letter dated 10 February 1992.

DECISION

Respondent argues there is no contract under which we may take jurisdiction, contending there was no constructive acceptance of Appellant's VECPs because the contractual relationship between the parties had ended. It is also argued that the elements of a contract implied-in-law are not present. Appellant argues that respondent constructively accepted the VECPs submitted by appellant in 1978, thereby incorporating the VE clause into the contract. Alternatively, appellant argues that an implied-in-fact contract arose under the alleged constructive acceptance.

The Contract Disputes Act of 1978, 41 U.S.C. §§601-613 ("the Act"), provides at

©1994, Commerce Clearing House, Inc.

Digitized by Google

§ 607(d) "Each agency board shall have jurisdiction to decide any appeal from a decision of a contracting officer (1) relating to a contract ...." Section 602(a) makes the Act applicable to express or implied contracts. It is well-established that the Board has jurisdiction under the Act over contracts implied-in-fact, but not over contracts implied-in-law. *J. Brinton Rowdybush*, ASBCA No. 24955, 83-1 BCA ¶ 16,188.

Appellant's argument that an express contract existed is premised upon the theory of constructive acceptance. However, in *John J. Kirlin v. United States* [34 CCF ¶ 75,354], 827 F.2d 1538 (Fed. Cir. 1987), the Court held there is no basis for constructive acceptance of a VECP when the contractual relationship under which the VECP was submitted has ended. We have found the contract here, which had no VE clause, was completed by the time respondent allegedly used appellant's VECP ideas in 1987 (findings 1, 4). In this regard, we note appellant has not asserted that contract 0912 was still in existence in 1987. As we understand appellant's theory, its VECP was conditioned upon inclusion of a VE clause in contract 0912 (finding 2). According to appellant, respondent's alleged use of the VECP was a constructive acceptance of the VECP under which respondent agreed to incorporation of a VE clause in the contract. The problem with appellant's theory is there was no contract in existence in 1987 when respondent allegedly used the VECP. We are not aware of any basis whereby a express contract could somehow be created through the process of constructive acceptance of a VECP. Thus, even if respondent used the VECPs in 1987 as appellant claims, there was no express contract under which the Board may exercise jurisdiction over appellant's claim.

Alternatively, appellant argues we have jurisdiction under a implied-in-fact contract. A contract implied-in-fact "requires a meeting of the minds which is inferred from the conduct of the parties and, in light of surrounding circumstances, shows their tacit understanding and agreement .... Such an implied contract requires the same elements as an express contract, i.e., an offer, acceptance, and consideration." *Fincke v. United States*, 675 F.2d 289, 295 (Ct. Cl. 1982). It is undisputed that respondent rejected the VECPs when they were presented in 1978 (finding 2). Thus, the element of acceptance is missing. Jurisdiction based on an implied-in-fact contract is contingent upon a finding of constructive acceptance.

Appellant cites *Algonac Manufacturing Co. v. United States* [15 CCF ¶ 83,779], 428 F.2d 1241 (Ct. Cl. 1970), and *Alan Scott Industries*, ASBCA No. 24729, 82-1 BCA ¶ 15,494 in support of its implied-in-fact contract argument. In *Algonac*, the Court based its finding of an implied-in-fact contract on a provision in a contract between the parties that imposed certain duties on the contractor with respect to storage of Government property. Thus, there was a demonstrable offer and acceptance by the parties on the subject matter of the claim. Here, there is no dispute that contract 0912 had no VE clause, and therefore no basis on which an agreement under that contract can be implied by the conduct of the parties with respect to appellant's VECPs.

In *Alan Scott*, the Board relied on Armed Services Procurement Regulation (ASPR) 1-1708, Unsolicited VE Proposals, which provided for submission and acceptance of VECPs by proposers without a current contract, as authority for an implied-in-fact contract. Additionally, there was a contemporaneous exchange of correspondence in which the contracting officer told appellant its proposal had "been evaluated and favorably considered" and asked for additional cost estimate data "in order to share the resultant savings from your VECP." *Id.* at 76,856. The Government then proceeded to use the VECP. Thus, the elements of offer and acceptance were shown, and authority to enter into a contract was present in the regulations. However, ASPR 1.1708 was deleted by Defense Procurement Circular No. 76-9, effective 30 August 1977, and the contemporaneous correspondence between appellant and respondent here affirms rejection, not acceptance, of the VECP (finding 2). Even if appellant were able to demonstrate use of the ideas in its 1978 VECPs by respondent in 1987, it could not show constructive acceptance under the Federal Circuit's holding in *John J. Kirlin v. United States, supra* at 1541, that "when the contract is completed ... there is no basis for constructive acceptance of a VECP." Without acceptance, constructive or express, there is no contract. While appellant might still pursue relief under *quantum meruit*, that is a basis over which we have no jurisdiction. *J. Brinton Rowdybush, supra.*

The appeal is dismissed for lack of jurisdiction.

[¶ 26,521] **Northwest Marine, Inc.**

ASBCA No. 43502, November 22, 1993. Contract No. N00024-90-H-8337.

Performance—Specifications—Implied Warranty of Suitability.—A ship repair contractor was not entitled to an equitable adjustment for the installation of light fixtures, because it did not show that the allegedly defective specifications resulted in a breach of an implied warranty of suitability. The contractor failed to show that performance was not possible, that installation was outside the state of the art, or that the specified methods were economically unrealistic. The drawings showed various means for installing fixtures. Moreover, the contract made the contractor responsible for all but government-furnished materials, and the means depicted on drawings to show the location of light fixtures were consistent with trade practice.

Modifications—Change—Failure to List.—A ship repair contract's failure to specifically list foundation materials did not constitute a change, because it was clear that the contractor was responsible for all materials not listed as government-furnished. Although foundation materials for the installation of lighting fixtures were not listed as government-furnished, they were not included in the specific lists of contractor-supplied materials. However the contract expressly stated that the contractor was to supply all materials except those furnished by the government under express provisions of the contract. The contractor did not contend that foundation materials were unnecessary, and thus, there was no reasonable interpretation under which the contractor could prevail without ignoring the contract's provisions.

Interpretation of Contracts—Trade Usage—Nondimensional Drawings.—A ship repair contractor was not entitled to an equitable adjustment for installing light fixtures at locations other than those depicted on the drawings, even though the light fixtures to be installed were not dimensioned on the drawings, because it was a common practice for nondimensional drawings to reveal only the general location for lighting fixtures, and the contractor was charged with knowledge of this practice. The trade practice of showing approximate locations for lighting fixtures affords greater flexibility to the installer because less adaptable systems, such as ventilation and wave guides, have to be installed first. Contractors are charged with knowledge of trade practices that have a regularity of observance in the trade. In any event, the contractor's electrical foreman understood that only general locations were shown for the lights.

For the appellant: Jones & Donovan, Irvine, California, by Peter B. Jones and Toni L. DeGasparin. For the government: Arthur W. Hildebrandt, Navy Chief Trial Attorney, and James D. Beback, Supervisor of Shipbuilding, Conversion, and Repair, Seattle, Washington.

Before DICUS, REITER, RUBERRY, and SPECTOR, Administrative Judges.

DICUS, Administrative Judge: 1. Appellant was awarded a Master Agreement for the Repair and Alteration of Vessels on 27 February 1990, the terms and conditions of which applied to all job orders for ship repairs and alterations between appellant and respondent, United States Navy. Among the required clauses was 52.217.7112, Performance. That clause provides:

> Except as otherwise provided in the job order, the Contractor shall furnish all necessary materials, labor, services, equipment, supplies, power, accessories, facilities and such other things and services as are necessary for accomplishing the work specified in the job order subject to the right reserved in the Government under Clause 52.217-7218 entitled GOVERNMENT PROPERTY.

(R4, tab 1)

2. Solicitation No. N00024-89-R-8519 was issued 18 September 1989 for the regular overhaul of the USS STANDLEY. The solicitation called for a New Threat Upgrade (NTU) which included weapons systems upgrades. The specifications included Work Item Nos. 411-91-003, 452-90-001, 453-90-003, and 473-90-001. The resulting contract made the contractor responsible for planning and scheduling and for furnishing "materials, services, and facilities (except those furnished by the Government under express provisions of this contract) . . . ." (R4, tabs 2, 10, 11, 12, 13)

©1994, Commerce Clearing House, Inc.

Digitized by Google

3. Prior to award the following question and answer from a bidder was distributed to all bidders:

> QUESTION: This offeror assumes that its responsibility for procuring installing activity-furnished material is limited to those items identified as IAF material on the CG-32 drawings, plus additional material identified as GFM on the drawing but not included as GFM in Section 5 of the individual work item or in Attachment K, NTU ShipAlt Material Kit List. All other ShipAlt material is to be GFM. Is this correct?
>
> ANSWER: *No.* Contractor is responsible for procuring *all material* incidental or otherwise unless as noted above. [emphasis in original]

(R4, tab 3; tr. 2/84)

4. The solicitation and resulting contract also included NAVSEA Standard Items as Attachment H. NAVSEA Standard Item 009-01, General Criteria, requires the contractor to "Provide labor, materials, and equipment which are required to complete the Work Items, including that which is indicated on drawings or test specifications as being provided by sources other than the contractor, unless specifically listed as Government Furnished Material (GFM) in the Work Items." (R4, tabs 2, 9)

5. The solicitation and resulting contract do not specifically list foundation materials (aluminum and steel piping and flat bar) for attaching lighting to the ship as either Government Furnished Material or in the various Bills of Materials as contractor supplied (R4, tabs 2, 10, 11, 12, 13, attachments 1-5; tr. 1/90-91, 2/12-14). The various means of attaching lighting to ships and appropriate materials therefor are listed on drawing 803-518-4170 including piping and flat bar (R4, attachment 5). General Note 30, contained on relevant lighting drawings, provides "light fixtures shall be installed in accordance with NAVSEA 803-5184170." [sic] (R4, attachments 1-4) Relevant lighting drawings were referenced in the Work Item specifications (R4, tabs 10, 11, 12, 13). Respondent considered the foundation materials to be of a miscellaneous nature because quantities cannot be predicted (tr. 2/55; *see also* Price Proposal No. 3110, which describes the material as miscellaneous, R4, tab 108).

6. The proposal submitted by appellant did not include the cost of foundation materials for lighting (tr. 1/62). Appellant is an experienced ship repair firm, and the electrical estimator who prepared the relevant estimate has prepared more than 500 such estimates (tr. 1/27, 34). He did not consider that General Note 30 had significance to him as an estimator (tr. 1/65). There is no probative evidence on how the job was bid with respect to the locations of the lighting fixtures. The contract, or Job Order, in the amount of $29,798,179.00 was awarded to appellant on 27 February 1990 (R4, tab 2).

7. The overhaul of the ship made appellant responsible for various repairs and alterations and involved the work of various crafts (R4, tabs 2, 10, 11, 12, 13; tr. 1/105-07, 119, 151-53). The relevant drawings for lighting locations showed the lights in dark lines, with other systems represented by lighter lines (exh. A-1, -2, -3). Clearances from the overhead to the top of the light were shown by a "B" dimension (*id.*; tr. 2/104). The drawings were to scale but not otherwise dimensioned with respect to the lights, which, according to witnesses for both parties, is common practice in the trade with regard to surface ships (exh. A-1, -2, -3; tr. 1/153, 2/103-04). This affords flexibility to the installer as lighting systems are usually the last to be installed, and must be made to fit around less flexible systems that must be installed first, such as waveguides and ventilation (tr. 2/51-52, 104-07). The location of lights is not critical. By scaling the drawings but not dimensioning the lights, the approximate location of the lights and an approximation of the overall layout is given, affording some additional latitude to the installer (tr. 2/46-49). Appellant's electrician foreman understood that only a general location for the lights was shown on the drawings (tr. 1/106).

8. Appellant filed Inspection/Deficiency Reports ("IDRs") asserting that the lack of dimensions and precise locations for lighting fixtures hampered progress. Respondent directed appellant to "template," or install to fit existing conditions (R4, tab 7; tr. 2/101). A number of lighting fixtures were installed in locations more than one foot from the locations indicated in the non-dimensioned drawings (tr. 1/217-20; exh. A-1, -3). Appellant conducted the installation of lighting at the same time as other crafts were in the same space installing other systems such as ventilation, piping, cableways, and waveguides, and interferences were experienced (tr. 1/105-07, 124-26, 145). Several fixtures had to be moved after the initial installation due to interferences caused by changes to other systems directed by respondent (tr. 1/189-91). While the normal proce-

Digitized by Google

dure is for such changes to include all costs, including the additional cost of relocating the light fixture (tr. 2/112-14), the record contains no specific identification of which lights were relocated because of changes directed by respondent and no specific identification of changes for which appellant was paid for relocating lighting. As many as six situations involved moving fixtures to avoid interferences that required special attention. These were handled by filing IDRs (tr. 2/54). There is no evidence as to whether change orders were issued.

9. In performing the contract work, appellant's electricians ascertained what contractor-supplied materials were necessary and ordered them through their own purchasing department (tr. 1/88-89). As noted in finding 5, lights are installed using a combination of steel or aluminum piping, which is attached to the ship, and flat bar steel or aluminum, which is attached to the piping and the mounting brackets of the lights (R4, attachment 5; tr. 1/117, 157-58). When the electricians ordered these foundation materials, appellant's purchasing department could not identify the foundation components on its list of materials and instructed the electricians to file an IDR (tr. 1/156). Appellant filed eight IDRs as a result between 10 August 1990 and 22 August 1990 (R4, tab 8).

10. Appellant's IDRs were received by respondent, which prepared and sent to appellant Price Proposal No. 3110, dated 7 September 1990, which stated in relevant part:

Add the following subparagraph to the work item:

3.11 Provide miscellaneous foundation materials as necessary to accomplish installation.

REASON: Miscellaneous material not addressed by general notes of Ref. 2.m.

(R4, tab 108) The purpose of the Price Proposal was to solicit from appellant a cost proposal for the foundation materials (tr. 2/70, 97).

11. Prior to directing the preparation of Price Proposal No. 3110, respondent's lead electrical surveyor had attempted to obtain information as to whether other Navy ship overhauls specifically listed foundation materials for lighting. When the information was not forthcoming, he went ahead and ordered preparation of the Price Proposal. After it was submitted to appellant, he received information that lighting foundation materials were not specifically listed as contractor furnished in any previous overhauls. A meeting with the contracting officer and others was held, whereupon Price Proposal No. 3110 was canceled (tr. 2/95-99). The cancellation notification cited paragraph 3.4 of Standard Item 009-01 (R4, tab 8; *see* finding 4).

12. Appellant thereafter purchased the necessary foundation materials and completed installation of the lighting (tr. 1/169). By letter dated 26 April 1991 a properly certified claim in the amount of $377,764.00 was submitted by appellant. The claim sought additional costs for installation of the lighting system arising from the allegedly defective drawings which did not list foundation materials or include lighting dimensions (R4, tab 4). The claim was denied in a final decision dated 13 June 1991 (R4, tab 5). A notice of appeal was filed 6 September 1991.

DECISION

Appellant argues that the contract contained detailed design specifications which carry an implied warranty of suitability, and that the specifications and drawings were defective in both their failure to list foundation materials and the manner in which lighting locations were depicted. Respondent argues, in effect, that the contract required appellant to supply all materials not expressly Government-furnished. With respect to the location of the lighting fixtures, respondent argues that the drawings were consistent with trade practice, and that any ambiguity arising from the non-dimensioned drawings imposed on appellant the duty to inquire.

With respect to the implied warranty, in *Natus Corporation v. United States* [11 CCF ¶ 80,882], 371 F.2d 450, 458 (Ct. Cl. 1967), the Court held:

> The warranty, properly construed, promises only that performance is possible and within the state of the art. How that performance shall be achieved, or at what price, is a matter properly reserved for the contractor, and he may claim a breach of warranty only if the specified method demands resort to the economically unrealistic.

We cannot find the implied warranty was breached by respondent. There is no contention by appellant that installation of light fixtures was outside the state of the art. Indeed, the drawings showed various means for installing light fixtures (finding 5), and they were ultimately installed with only six

©1994, Commerce Clearing House, Inc.

Digitized by Google

installations requiring special attention (finding 8). Moreover, the contract made appellant responsible for all but Government-furnished materials (findings 1-4), and the means used on the drawings to show the location of the lighting fixtures was consistent with trade practice (finding 7), as discussed below.

As to appellant's contention that the failure to specifically list foundation materials constituted a change, we find that argument without merit. In the Master Agreement and in the contract itself, as well as in the response to a pre-bid question provided to appellant (findings 1-4), respondent made it clear that the contractor was responsible for all materials not listed as Government-furnished. Pre-bid questions and answers resolving specification questions are not "wiped from the record by the formal execution of the contract." *Sylvania Electric Products, Inc. v. United States* [17 CCF ¶ 81,287], 458 F.2d 994, 1008 (Ct. Cl. 1972). Further, foundation materials were not listed as Government-furnished and they were not included in the specific lists of contractor supplied materials. The contract expressly states the contractor is to supply all materials "(except those furnished by the Government under express provisions of this contract)." (Finding 2) It is not contended that appellant interpreted the contract as not requiring the lighting fixtures to be attached to the ship, nor is it contended that foundation materials were somehow unnecessary. Since foundation materials were necessary and they were not expressly listed as Government-furnished in the contract, there is no reasonable interpretation under which appellant can prevail without ignoring the provisions referred to above. This we may not do under governing rules of contract interpretation. *Hol-Gar Manufacturing Corporation v. United States* [10 CCF ¶ 72,885], 351 F.2d 972 (Ct. Cl. 1965).

In *Service Engineering Company*, ASBCA No. 40272, 92-3 BCA ¶ 25,106, the contractor maintained that stanchions and other supports not shown in the contract's Guidance Plan constituted changed work. The contract, however, made the contractor responsible for omitted details necessary to fulfill the intent of the specification. The Board found the contractor responsible for the omitted stanchions and supports, stating at 125,183:

> SECO was an experienced contractor, having overhauled a number of Navy vessels (finding 5). It had experienced estimators (finding 24). We simply cannot accept the notion that SECO could have been so naive as to believe that what was shown in the Guidance Plans constituted the total scope of its work, particularly in view of the above-cited specification provision.

Similarly, we cannot conclude that a contractor as experienced as appellant was misled into believing it was not responsible for foundation materials, particularly in light of the several bid, contract, and Master Agreement statements (finding 1-4) making appellant responsible for all but Government-furnished materials.

Appellant contends the lighting drawings were defective because the lighting fixtures were not dimensioned on the drawings and they had to be moved from the locations depicted thereon. Witnesses for both parties testified that non-dimensioned drawings for lighting are common practice in the trade (finding 7). Appellant's electrician foreman understood that only general locations were shown for lights (finding 7). Thus, the drawings were not defective. Moreover, a contractor is charged with knowledge of trade practices which have a "regularity of observance" in the trade. *Alfred A. Altimont, Inc. v. United States* [25 CCF ¶ 82,515], 579 F.2d 622, 625 (Ct. Cl. 1978). We are not persuaded that an experienced contractor such as appellant (finding 6) could be unfamiliar with common industry practices, or that the practice in question caused unanticipated disruption. To the contrary, we are persuaded that this practice of showing approximate locations for lighting affords flexibility to the installer. Logically, less adaptable systems such as ventilation and waveguides had to be installed first (finding 7), and respondent's direction to install lighting to fit conditions is not, on this record, shown to be somehow the cause of additional work.

In this regard, testimony was offered on crowding in limited work spaces where several crafts attempted to work and interferences were experienced (finding 9). As the contract made appellant responsible for scheduling and planning (finding 2), the timing and sequence for installation of the various systems was appellant's contractual responsibility. We are not persuaded that the non-dimensioned drawings somehow created or contributed to this problem, or excused appellant from its responsibility for managing the job.

We note that appellant presented testimony that some of the location changes were the result of change orders issued by respondent, and respondent presented evidence that the normal procedure was to in-

Digitized by Google

clude any lighting changes in the change order. Appellant presented no proof as to specific change orders or directions by respondent (finding 8). On balance, we find the record inconclusive on this point. As the burden of proof is on appellant, *Peterman, Windham, and Yaughn*, ASBCA No. 21147, 77-2 BCA ¶ 12,674, we cannot find respondent liable. The appeal is denied.

[¶ 26,522] Gaffny Corporation

ASBCA Nos. 37639, 39740, 46025, 46026, 46027, 46028, 46029, November 22, 1993. Contract No. N62472-85-C-0007.

Modifications—Reduction in Requirements or Prices—Cost Savings.—Under a contract for the renovation of a heating plant, the government's price reduction arising from its determination to abandon attempts to relocate a feedwater line was improper, because there was no indication that the government's abandonment of the work resulted in any cost savings to the contractor.

Delays—Approval Delays—Processing Period.—Under a contract for the renovation of a heating plant, the government was responsible for delays caused by its failure to approve submittals within a two-week process period because it had promised a submittal turnaround period of two weeks and the contractor had relied on that time frame for locking in work schedules and material delivery lead times. There was uncontested evidence that the delayed review of the submittals affected the contractor's ability to timely order materials that had to be approved in the submittals.

Modifications—Constructive Change—Rejected Ceramic Tile Work.—Under a contract for the renovation of a heating plant, the government's direction that a contractor remove and replace allegedly nonconforming ceramic tile laid in shower room areas was a constructive change because the government failed to prove that the ceramic tile work done by the contractor did not conform to contract requirements. The government personnel who rejected the ceramic tile work were not qualified to make the decision to reject the tile.

Contract Disputes, Claims—Government Claims—Withheld Payments.—A claim for relief from the government's purportedly improper withholding of liquidated damages was properly before the board because the issue of liquidated damages was raised in another claim by the contractor and the deemed denial of that claim was appealed to the board.

Liquidated Damages—Propriety of Assessment—Government Delay.—An assessment of liquidated damages for delay in completion of a contract for the renovation of a heating plant was improper because the government was a cause of the delayed contract performance from the original completion date until substantial performance. The government delayed approval of the contractor's submittals, which subsequently delayed the delivery of required materials. The government was also shown to have delayed performance when it improperly directed the removal and replacement of ceramic tile.

Contract Disputes, Claims—Submission to Contracting Officer—New Claim v. Factual Assertion.—An assertion relating to a cumulative delay claim that first appeared in a contractor's post-hearing brief was not a new claim over which the board lacked jurisdiction, but was an assertion of another fact in support of the cumulative delay claim. A new assertion that an additional fact supports the validity of an existing claim is not the assertion of a new claim.

Delays—Causation—Concurrent.—Under a contract for the renovation of a heating plant, the contractor's cumulative delay claim was denied because the contractor failed to demonstrate that its claimed costs were due solely to the delays caused by the government. Instead of demonstrating a causal connection between its claimed costs and the government-caused delay, the contractor relied solely on the total costs incurred. However, it was

 ©1994, Commerce Clearing House, Inc.

Digitized by Google

insufficient to show total costs. Rather, the contractor was required to show that there were increased costs and that the increase was caused solely by the government.

Payments, Prompt—Dispute—Subsequent Assertion.—A contractor was entitled to Prompt Payment Act interest on funds improperly retained by the government under a contract for the renovation of a heating plant, because the government failed to make timely payment after the submission of the contractor's final invoice. Because the contract did not contain a specific payment due date, for purpose of the PPA, payment was due 30 days after the receipt of the invoice. Although the government later asserted a claim for liquidated damages, the amount of the invoice was not in dispute at the time it was submitted and for at least 16 months afterward. Testimony that the invoice was not received was not credible.

For the appellant: John J. Gaffny, President, and Michael F. Gaffny, Vice-President. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Chuck Kullberg, Trial Attorney, Naval Facilities Engineering Command, Washington, D.C.

Before KIENLEN, RUBERRY, and SPECTOR, Administrative Judges.

KIENLEN, Administrative Judge:

INTRODUCTION

This case arose out of a contract for the renovation of the heating plant at the Naval Air Station in Brunswick, ME. ASBCA No. 37639 is a delay impact claim. ASBCA No. 39740 concerns liquidated damages. ASBCA No. 46025 concerns asbestos. ASBCA No. 46026 concerns late approval of submittals. ASBCA No. 46027 concerns rejection of ceramic tile. ASBCA No. 46028 is a claim for payment of the contract balance. ASBCA No. 46029 is a claim for prompt payment act interest. Entitlement and quantum were tried.

GENERAL FINDINGS OF FACT

On 21 March 1986, the Northern Division, Naval Facilities Engineering Command, U.S. Naval Base, Philadelphia, PA, awarded a $119,000 construction contract to Gaffny Corporation, incorporated in Massachusetts. The work was part of the renovation of the central heating plant at the Naval Air Station, Brunswick, ME, and was to be completed on 3 August 1986.

The contract included these standard clauses: SUSPENSION OF WORK (APR 1984); DISPUTES (APR 1984); CHANGES (1984); DEFAULT (FIXED-PRICE CONSTRUCTION) (APR 1984); PAYMENTS UNDER FIXED-PRICE CONSTRUCTION CONTRACTS (JUL 1985); INTEREST (APR 1984); and PRICING OF ADJUSTMENTS (APR 1984).

The Navy administrative contracting officer was LT Hyde, the Assistant Resident Officer in Charge of Construction (AROICC) at the Brunswick Naval Facility Engineering Command. He had full authority to accept or reject work; but could not assess liquidated damages, he could only recommend their assessment to a contracting officer at higher headquarters. He was not knowledgeable about ANSI requirements for ceramic tile. Carl Thorpe was the government inspector. He visited the site nearly every day; often twice a day. He was not knowledgeable about the ANSI requirements for ceramic tile.

Michael Gaffny was appellant's vice-president and site superintendent. He was responsible for the submission of submittals and overall supervision of the contract. The contract required the contractor to have a supervisor on site whenever work was performed.

By letter of 25 February 1987, Gaffny submitted, concerning previously disputed matters, claims totaling $65,522.10 and a 202 day time extension, certified by its president, John J. Gaffny, using the form provided by statute (41 U.S.C. 605(c)(1)). LT Hyde acknowledged that Gaffny's claim was received on 2 March 1987. On 5 March 1987 Gaffny submitted a final invoice.

A final decision on Gaffny's claim was issued on 25 July 1988 by higher headquarters. Gaffny then went to Brunswick to negotiate quantum on items which had been favorably decided. During that meeting Gaffny was first told that liquidated damages were being considered.

By letter of 21 September 1988, Gaffny appealed to this Board. The appeal of those claims was docketed on 28 September 1988; as ASBCA No. 37639, 46025, 46026 and 46027. The complaint included a request for relief from liquidated damages. In a decision of 15 May 1989, in response to a Government Motion to Strike, this Board held that liquidated damages were not part of the 21 September 1988 appeal. The request for re-

Digitized by Google

lief from liquidated damages was dismissed. *Gaffny Corporation,* ASBCA No. 37639, 89-3 BCA ¶ 22,007.

On 11 July 1989, Gaffny submitted, as to previously disputed matters, claims for the contract balance of $6,808, plus statutory interest from the "5 March 1987 requisition date," and asked for recission of the liquidated damages. Gaffny requested a final decision. It was received by the Navy on 17 July 1989. On 19 July 1989, a new AROICC acknowledged receipt of Gaffny's 11 July 1989 "request for a contract adjustment in the amount of $8,092.00."

On 29 August 1989, the Northern Division acknowledged receipt of Gaffny's claim. On 30 August 1989, Gaffny forwarded to the Northern Division a copy of the 5 March 1987 invoice. On 17 October 1989 Gaffny appealed a deemed denial. Those claims were docketed as ASBCA Nos. 39740, 46028 and 46029. The Head of the Claims Branch of the Northern Division issued a contracting officer's final decision on 22 November 1989. He denied the claim for the contract balance and the claim for interest; confirmed liquidated damages of $3,500 at $50 per day; and, agreed that Gaffny was entitled to $3,308. He insisted that Gaffny file another invoice before the Navy would pay the amount it owed.

All of Gaffny's claims are now before the Board. We discuss them more or less in chronological order, finding facts and deciding each claim in turn.

ASBCA No. 46025—Asbestos—FINDINGS OF FACT

The contract had no provisions concerning asbestos. Asbestos was raised during a preconstruction conference. LT Hyde told Gaffny that asbestos was only in the superintendent's office, and that it would be removed before Gaffny started work.

On 22 May 1986, while drilling holes for the feedwater line, Gaffny encountered a latent obstruction. That work was suspended. On 10 June Gaffny proposed $600 for relocating the line. Gaffny said a time extension would not be required if the modification was approved before 1 July 1986. In late July, Gaffny told the Navy that it needed 45 days after approval to relocate the feedwater line. This was a reasonable estimate for scheduling the subcontractor, getting the materials, and doing the work.

On 30 July 1986, the Navy prepared Modification P00001, with a price of $600 and the original completion date of 3 August 1986. On 5 August 1986, Gaffny signed the modification; the Navy signed on 8 August 1986. We find the parties must have intended a reasonable time to complete the work,

On 3 September 1986, Gaffny began the relocation of the feedwater line. Gaffny began this work within a reasonable time after being directed to do so by the Navy. After work progressed, government personnel called in the installation industrial hygienist, who determined that the insulation at the relocation point contained asbestos. Because of the asbestos, Gaffny was required to stop the relocation work on 3 September 1986. By this time Gaffny had incurred all its labor and material costs. The unused material was turned over to the Navy. The Navy abandoned all efforts to relocate the feedwater line.

LT Hyde requested a price reduction for deleting the relocation work. Gaffny declined. There is no evidence that Gaffny had any savings from the deletion of the relocation work. Likewise, there is no evidence that the contractor performed any work beyond that covered by Modification P00001.

On 23 September 1986, Gaffny encountered asbestos while tying-in the heat coil to existing steam coil piping. Gaffny immediately identified a new tie-in location and additional materials. The Navy inspector agreed. Gaffny purchased additional pipe and fittings, and completed the tie-in work that same day. LT Hyde asked Gaffny for a proposal for the changed work. On 29 October Gaffny submitted a proposal for $161.40. The work and price were accepted by LT Hyde in an internal memorandum, and by a new contracting officer in unilateral Modification P00002 of 6 December 1988.

The record does not distinguish the costs for the work performed from the costs for the work which was otherwise required by the contract, except for the additional pipe and fittings. Those costs were included in Gaffny's proposal. It is not possible to conclude from the record that Gaffny incurred costs greater than the $161.40 as a result of the changed work.

The new contracting officer unilaterally took a credit, from the agreed $600 in Modification P00001, for the abandoned feedwater relocation. The credit was identical to the price increase for rerouting the tie-in. No explanation was given.

Neither of the incidents of encountering asbestos resulted in delay to the overall completion of the contract.

Digitized by Google

ASBCA No. 46025—Asbestos—DECISION

Gaffny claims damages plus a time extension as a result of the discovery of asbestos. As to the feedwater line, there was no evidence that Gaffny performed work in addition to that covered by Modification P00001. Gaffny was compensated under that modification and is not entitled to more.

There also was no evidence that the Navy's abandonment of attempts to relocate the feedwater line resulted in any savings to the Appellant. The Navy's determination to delete $161.40 in Modification P00002 was taken in response to Appellant's claim. The appeal brings the case to us *de novo. Space Age Engineering, Inc.,* ASBCA No. 26028, 82-1 BCA ¶ 15,766, at 78,033. The Navy's unilateral action to deduct $161.40 from Modification P00001 is a nullity and is not approved.

As to the redesign of the heat coil tie-in to the steam piping, LT Hyde accepted the work and agreed to the $161.40 price. The new contracting officer also accepted $161.40 as just compensation, in Modification P00002. We found that it is not possible to determine from the record that Gaffny incurred costs greater than $161.40 as a result of the changed work.

Since the Navy has accepted those costs, we accept them. *Melvin Wilner, d/b/a Wilner Construction Company v. The United States,* No. 92-5161 (Fed. Cir. 24 May 1993); *Cox & Palmer Construction Corp.,* ASBCA Nos. 43438, *et al.,* 93-3 BCA ¶ 26,005, *Page Construction Co.,* ASBCA No. 30266, 89-1 BCA ¶ 21,488 at 108,255; *Structural Finishing, Inc.,* ASBCA No. 30260, 85-3 BCA ¶ 18,235 at 91,563; *Robert McMullan & Son. Inc.,* ASBCA No. 19023, 76-1 BCA ¶ 11,728 at 55,903. Gaffny is entitled to $161.40 for the extra work performed for the tie-in of the heat coil, plus Contract Dispute Act (CDA) interest from 2 March 1987, the date the claim was received by the Navy.

Because the discovery of asbestos did not result in delay to the overall completion of the contract, the appellant is not entitled to extra time.

ASBCA No. 46026—Late Approval of Submittals—FINDINGS OF FACT

On 1 April 1986, LT Hyde sent to Gaffny a "Manual of Instruction to Contractors," for "detailed guidance to specific contract requirements and items of policy which will be pertinent to this contract." The manual said submittals would be processed in two weeks. The Navy conceded it promised a submittal turn around time of two weeks. The appellant relied on that time frame for locking in work schedules and material delivery lead times. All the submittals were simple and straight forward.

On 5 May 1986, the Navy received the first submittal package. The processing and return of the first submittal should have been completed no later than Monday, 19 May 1986. On 7 May 1986, the Navy received the second submittal package. The processing and return of the second submittal should have been completed no later than Wednesday, 21 May 1986.

Earlier, the Navy decided to send the submittal reviews to an architect & engineer firm. On 15 May 1986, the appellant first learned that the Navy had taken no action on appellant's first two submittals and did not have a submittal review contract with an architect & engineer firm.

The designated architect & engineer firm agreed, as an accommodation to the Navy, to review the submittals before a contract was awarded. On 16 May 1986, Gaffny picked up the submittals from the Navy and took them 145 miles to the firm in Boston, MA, so that the firm could start on the review of the submittals. On 15 June 1986, the Navy finally entered into a contract with the architect & engineer firm for the review of all submittals.

On 2 June 1986, submittal number 1 was approved and returned to Gaffny, 28 days after the Navy received it from the appellant. This processing period was 14 days longer than the turn around period the Navy had promised and upon which the appellant had reasonably relied.

The Metcraft gang shower was in the first submittal. The gang shower was a specialty plumbing fixture which permitted several people to take a shower at the same time. It was a wall mounted unit that had three separate shower heads. The showers were essential for the 24 hour crew of the boiler plant; the absence of the showers precluded full use of the facilities.

Gaffny ordered the Metcraft gang shower through Peabody Supply on 16 April 1986, subject to the submittal approval. The lead time for the specialty Metcraft gang shower was 10 weeks from order to delivery. It was uncontested that Metcraft shut down for a three week vacation beginning the last week in July and continuing through the first two weeks of August. A reasonable result of the vacation period was that incoming orders would backlog and extra time would be

Digitized by Google

needed for production start up at the end of the vacation period, increasing the normal delivery lead time beyond the usual ten weeks.

If the first submittal had been returned within two weeks, the Metcraft shower would have been ordered in time to be delivered to Gaffny prior to the vacation shut down, and to be installed before contract completion. The first submittal was returned two weeks late, putting the last two weeks of delivery lead time at the beginning of the vacation shut down, adding extra weeks to the delivery lead time. The showers actually were delivered on 19 September 1986, for a lead time of $15\frac{1}{2}$ weeks. This is consistent with three weeks of vacation, three weeks of backlogged orders, and a few extra days for production start up after the vacation shutdown.

On 12 June 1986, submittal number 2 was approved and returned to Gaffny, 36 days after the Navy received it from the appellant. This processing period was 22 days longer than the turn around period that the Navy had promised and upon which the appellant had reasonably relied.

The heat coil was in the second submittal. The heat coil was made by McQuay, which also had a summer shutdown period. The delivery lead time for the heat coil was also ten weeks. The McQuay heat coil was purchased through D. Griffin Company, Inc. The order was placed by Gaffny on 18 April 1986, subject to the submittal approval. The heat coil was delivered on 23 September 1986, for a delivery lead time of $14\frac{1}{2}$ weeks.

In Modification P00002 of 6 December 1988, a Navy contracting officer unilaterally granted a 14 day extension of contract performance time as a result of the delayed approval of submittals, extending contract completion from 3 August 1986 to 17 August 1986. There was no explanation for choosing 14 days. While the 14 days were equal to the delay in approving the first submittal, they were eight days short of the 22 days of delay in approving submittal number 2, and many weeks short of delayed delivery of materials.

ASBCA No. 46026—Late Approval of Submittals—DECISION

Because the Navy delayed in reviewing and approving submittals, Gaffny claims an adjustment of $1,423.13 (plus profit) for disruption, and a time extension for material delivery delays. The Navy denies a price adjustment, but concedes 14 days of contract delay.

The first claimed labor disruption was for obtaining off site materials on 14 and 15 May 1986, which materials would have been on site if the submittals had been promptly returned. We found that the first submittal was not due to be approved until 19 May. Any such off site costs were not caused by the Navy's delay in approving the submittals and they are denied.

The second claimed labor disruption was for the direct labor costs of the 290 mile round trip travel time to take the submittals to the architect & engineer firm in Boston. Gaffny did not offer evidence that the supervisor's travel time to Boston would not otherwise have been spent at the construction site that day, and did not show that the supervisor was paid more than he would otherwise have been paid. All the disruption costs are denied.

The Navy represented that the submittals would be returned within two weeks. We have found that the submittals were simple and straight forward; and, that appellant reasonably relied upon the Navy's promise to review and approve the submittals within two weeks. See *Azerind, Inc.*, ASBCA No. 34294 *et al.*, 87-3 BCA ¶ 20,122, (more than two weeks was unreasonable); *Ernest A. Cost*, ASBCA No. 28811, 86-1 BCA ¶ 18,559 (10 days normally acceptable maximum). Delays caused by the Navy's failure to approve the submittals within 14 days are the responsibility of the Navy.

There is uncontested evidence that the delayed review of the submittals delayed appellant's ability to order materials which had to be approved in the submittals; and, pushed delivery lead time for the Metcraft gang shower into the manufacturer's vacation schedule. As a result, the delivery of this material was delayed from Monday, 28 July until 19 September 1986, or 53 days. All of this delay directly impacted overall completion of the contract. The renovation was not usable until the showers were complete.

The material delivery delay caused by the delayed submittal review for the McQuay heat coil was from Wednesday, 30 July until 23 September 1986, or 55 days.

LT Hyde testified that there would have been no delay in obtaining materials if the appellant had turned in submittals for approval right after the preconstruction conference. However, LT Hyde knew or should have known at the time, and at the time of his testimony, that the Navy had no contract or extra contractual arrangements with the architect & engineer firm for the review

and approval of submittals. There is no basis for any presumption that an earlier submittal would have meant an earlier actual return date. That position is not credible.

The Navy also argued that Gaffny "should have known well in advance that it would encounter such problems with deliveries and sought other sources." This argument is not persuasive. The Navy offered no proof that there were other suppliers that could have delivered earlier. It is the Navy's burden to show that the delay it caused could have been overcome. Moreover, having caused a delay, the Navy is responsible for the consequences of that delay. The significance of those delays will be discussed *infra* when the liquidated damages and the cumulative delay claims are discussed.

ASBCA No. 46027—Ceramic Tile—FINDINGS OF FACT

The contract incorporated the specifications of the American National Standards Institute (ANSI) for ceramic tile standards of workmanship (ANSI A108.1) (Section 09310, part 1.1.1). The relevant portions are:

A.3.3: Workmanship, Cutting and Fitting:

A.3.3.1: Center and balance areas of tile, if possible.

A.3.3.2: An excessive amount of cuts shall not be made. Usually, no cuts smaller than half size should be made. Make all cuts on the outer edges of the field.

* * *

A.3.3.5: The splitting of tile is expressly prohibited except where no alternative is possible.

* * *

A.3.3.7: Make corners of all tile flush and level with corners of adjacent tile, with due allowance to tolerances for tile as specified in TCA 137.1.

A.3.3.8: Keep all joint lines straight and of even width, including miters.

* * *

A.3.3.10: Finish floor and wall areas level and plumb with no variations exceeding 1/8 inch in 8 feet (3 mm in 2.4 m) from the required plane.

The contract also incorporated the ANSI specifications for the Standard Grade of ceramic tile (ANSI A137.1) (Section 09310, part 2.1.1). Relevant portions are:

6.1.1.2.5 Facial Dimensions. The average major facial dimension(s) of each tile when measured as described in ASTM C 499, shall not vary more than 4.0 percent from the nominal dimension(s) [i.e., 5/32 of an inch, or slightly more than 1/8 of an inch, for $4\frac{1}{4} \times 4\frac{1}{4}$ tile]. The range(s) of the average major facial dimensions of all tile in the sample shall not exceed 0.6 percent of the largest value in the range.

6.1.1.2.6 Spacers. Unless otherwise specified, flat wall tile shall have lugs or other means on all edges to provide uniform spacing.

The Secretary of the ANSI A108 Committee on Ceramic Tile, Kenneth R. Erikson, furnished the Committee's official opinion on balancing a field of tile: "If the tile installer made *any* effort to attempt centering or balancing the tile and followed local trade practices, he has fulfilled the 'if possible' statement of Section A-3.3.1." (Emphasis in the official opinion of the committee.)

Section 09310, part 3.1.3, specified installation methods. Grouting was to be in accord with ANSI 108.1, using white grout for walls and gray grout for floors. Joint widths were specified in part 3.1.4.1 and provided that single or unmounted tiles were to be spaced "as determined by spacing lugs" on the pieces of tile.

On 24 July 1986 Gaffny began installing the ceramic tile. The contract called for a combined 800 square feet of ceramic tile in the mens' shower and in the womens' shower rooms. The tile work was completed on 7 August 1986.

The Navy performed no final inspection on the ceramic tile work until one month later, when on 8 September 1986, the Navy inspector complained to Gaffny about deficiencies. This oral notice was followed by a letter of 10 September 1986 from LT Hyde, which enclosed handwritten descriptions of deficiencies and invited questions or comment from Gaffny. The letter was received on 12 September 1986.

On 24 September 1986 Gaffny responded in writing to the 10 September 1986 letter. Gaffny agreed that some of the ceramic tile work needed to be corrected. Gaffny spent six hours correcting that ceramic tile work. Gaffny denied that the other work was defective, but began removing it on 24 September 1986. Both parties agree that the replacement of 300 square feet of ceramic tile work was in dispute.

With respect to the mens' shower room, the Navy said the wrong size bullnose tile was used, some of the tile was not plumb, portions were out of alignment, and the fields of tile on two of the walls were out of balance.

Digitized by Google

As to bullnose tile, the Navy objected to the use, at the entrance to the shower, of a 2 × 6 bullnose tile to finish the edge of the tiled wall which abutted a vertical row of tiles less than a half tile wide. The Navy insisted that a 4 × 6 inch bullnose edge tile should have been used. It is standard trade practice to use 2 × 6 bullnose tile in such situations. The contract does not specify that 4 × 6 bullnose tile is to be used.

As to plumbness, LT Hyde could point out only one spot as not being plumb. LT Hyde admitted on cross examination that the spot he pointed out was a defect which Gaffny agreed with and was one that Gaffny corrected without dispute. No other locations were identified as being out of plumb.

As to alignment, LT Hyde said there were joint lines which wandered, and were not in a straight line, "we measured 1/8th inch variations of those joint lines." The only example LT Hyde had was on photo "1 & 2" in the mens' shower. On cross examination LT Hyde agreed the grout was only 1/16 of an inch and that the grout lines met. The joint lines did comply with the contract standard. LT Hyde's contrary assertions were not credible.

As to balancing the fields of tile on two separate walls, the back wall in the mens' shower room had a vertical row of tile in the corner of the left hand and back walls, which was about 3/4 inch wide. The Navy contended that this 3/4 inch vertical row of tile caused the whole wall, or field of tile, to be unbalanced.

The appellant maintains that the 3/4 inch row of tile resulted, not from a failure to lay out a balanced field of tile, but from variations in tile size. The tile field (the wall area) was laid out for standard 4 1/4 tile. There would have been 20 and 3/4 rows of tile for tile exactly 4 1/4 square; this would have been an acceptably balanced field. However, when the tile was actually installed the result was 21 and 1/4 rows of tile. The last row was only 1/4 tile or approximately 3/4 inch.

When this wall of tile was replaced, the last row of tile in the corner was nearly a full tile. Since all tiles have space lugs to ensure uniform spacing between tiles, and there was no evidence that the size of the grout or space between the tiles was too narrow or too wide, the only explanation for the difference in the number of tiles is variance in the size of the tiles. If the size of the tiles varied 1/16 of an inch (within ANSI 137.1 § 6.1.1.2.5 tolerances of 1/8 inch),[1] that would account for the extra 3/4 inch tile it took to complete the field. There is no requirement that every tile be measured before the field is laid out or the tile installed. The tile variance was within ANSI specifications. According to trade practice, the layout of the tile field was balanced and met the "if possible" provisions of ANSI.

The front wall was the other wall which the Navy contended was out of balance. The Navy said that the front wall was unbalanced because one vertical row of tile was 4 1/8 and one was 3 3/8. According to trade practice, this was a balanced field within the meaning of ANSI.

Our conclusions with respect to the trade practice interpretation of the ANSI requirement for a balanced field of tile is in accord with that of the only tile expert called to testify, Mr. John Salvo. He had 33 years of experience, including large jobs with as many as 30 tile men working for him in the New England area. He was knowledgeable about the tile industry, the changes in the trade resulting from techniques developed in the 1950s, as well as the changes in quality control standards of tile manufacturers. As to both walls in the mens' shower room, Mr. Salvo said that they met the ANSI balancing standard as practiced in the local trade.

In accord with Mr. Salvo's testimony was the statement of the Secretary of the ANSI A108 Committee on Ceramic Tile. He provided the Committee's official opinion on balancing a field of tile, "If the tile installer made any effort to attempt centering or balancing the tile and followed local trade practices, he has fulfilled the 'if possible' statement of Section A-3.3.1."

With respect to the womens' shower room, the Navy complained about the use of 2 × 6 bullnose, unbalanced fields of tile, and alignment or plumbness. The bullnose and balance issues were of the same nature as those raised with respect to the mens' shower room. Notwithstanding the Navy's contentions, the 2 × 6 bullnose tile was appropriate and the tiles were balanced.

With respect to the alignment or plumbness issue, LT Hyde testified that photo #1

[1] These tiles would meet, nevertheless, the standard set by ANSI 137.1, 6.1.1.2.5, for facial dimensions. "The average major facial dimension(s) ... shall not vary more than 4.0 percent from the nominal dimension(s) [4 1/4 × 4 1/4]." This means that 4 1/4 inch tile shall not vary more than 2.7 16ths of an inch. [4 percent of 68 16ths is 2.7 16ths.] The variation encountered by appellant was thus well within the variation permitted by the applicable ANSI.

Digitized by Google

for the ladies shower showed wavy grout lines. He explained that the tile, "instead of being plumb with the wall, was canted out a little bit ... about a micrometer. ..." The ANSI standard required the wall to be "level and plumb with no variations exceeding 1/8 inch in 8 feet. ..." Neither the government's testimony that the wall was canted "a micrometer," nor the photographic evidence, established any variation exceeding the 1/8 inch ANSI standard. LT Hyde's contrary assertions were not credible.

Gaffny replaced 300 square feet of tile under protest. This tile was removed and replaced between 24 September and 10 October 1986, in both the mens' and womens' shower rooms. Gaffny worked five days between 24 and 30 September removing ceramic tile, and seven days between 29 September and 10 October replacing ceramic tile. This was a reasonable schedule for removing and replacing the ceramic tile. The Metcraft gang shower was installed and the other fixtures reinstalled on 10 October 1986. Gaffny claimed to have incurred 130 labor hours for a labor cost of $1,731.50; that amount is supported by the records and the audit. Gaffny claimed 56 supervisory hours at a cost of $1,859.20; the records support the hours claimed, but an audit only supports a cost of $1,414.56. This establishes a cost of $3,146.06 to which a labor burden of 31.4% is applied for a total labor cost of $4,133.92.

Gaffny's material costs of $669.33 were not disputed. Gaffny did not provide sufficient evidence to support its allocation of tool costs. We accept the audit G&A rate of 11% for 1986 and find that a profit of 10% is reasonable. The total cost on the ceramic tile replacement is $5,864.77.

ASBCA No. 46027—Ceramic Tile—DECISION

Gaffny claims an adjustment of $8,404.44, profit, and a time extension for the directed replacement of ceramic tile. The crux of this claim is the Navy's rejection of 300 square feet of ceramic tile work, causing Gaffny to incur additional expense and delays to contract performance. "In such cases the Government bears the burden of proving that the work which it rejected did not conform to the contract requirements." *Southwest Welding & Manufacturing Company v. United States*, 188 Ct.Cl. 925, 413 F.2d 1167 (1969); *Ace Precision Industries, Inc.*, ASBCA No. 40307, 93-2 BCA ¶ 25,629; *D.E.W., Incorporated*, ASBCA No. 37232, 93-1 BCA ¶ 25,444.

With respect to bullnose tile, using 2 × 6 bullnose tile is standard trade practice. The Navy failed to establish that there was any contractual obligation to use a 4 × 6 inch bullnose instead of a 2 × 6 inch bullnose. With respect to plumbness and alignment of the tile, the Navy failed to establish that the tile alignment and plumbness exceeded ANSI tolerances.

As to a balanced field of tile, the Navy argued that ANSI specifications unambiguously required that a field of tile be balanced, that there was no room for any deviation, and that trade practice was not to be used. The Navy relies on *George Hyman Construction Company v. United States* [24 CCF ¶ 81,802], 215 Ct.Cl. 70, 81, 564 F.2d 939 (1977), holding that a "trade practice cannot prevail over unambiguous provisions of a contract such as we have in the instant case." See, *R.B. Wright Construction Co. v. United States*, 919 F.2d 1569, 1572 (Fed. Cir. 1990); *S.S. Silberblatt v. United States* [15 CCF ¶ 84,068], 433 F.2d 1314, 1323, 193 Ct.Cl. 269, 288 (1970); and *WRB Corporation v. United States* [12 CCF ¶ 81,781], 183 Ct.Cl. 409, 436 (1968).

But the appellant does not argue that the trade practice is in conflict with the ANSI provisions of the contract. Appellant argues that the trade practice gives meaning to the ANSI specification which was incorporated into the contract. The correct principle is that the language of a contract is to be given effect according to its trade meaning. *Gholson, Byars & Holmes Construction Co. v. United States* [11 CCF ¶ 80,065], 173 Ct.Cl. 374, 395, 351 F.2d 987, 999 (1965); *W.G. Cornell Co. v. United States*, 179 Ct.Cl. 651, 670-71, 376 F.2d 299, 311-12; *Riley Stoker Corporation*, ASBCA No. 37019, 92-3 BCA ¶ 25,143 (good discussion at 125,327); Tomahawk Construction Co., ASBCA No. 41717, 93-3 BCA ¶ 26,219 (9 July 1993).

The language of *Gholson, Byars and Holmes Construction Co.*, is instructive:

> The Board's failure to consider the evidence of trade practice and custom on the basis of absence of ambiguity was in error. For the principle is now established in this court (and almost every other court) that in order that the intention of the parties may prevail, the language of a contract is to be given effect according to its trade meaning notwithstanding that in its ordinary meaning it is unambiguous.[fn] That is to say the trade usage or custom may

Digitized by Google

show that language which appears on its face to be perfectly clear and unambiguous has, in fact, a meaning different from its ordinary meaning.[fn] [extensive cases and authorities cited are omitted]. The defendant [Government] contends, however, that plaintiff has not shown that the government was actually aware of the trade usage and hence that it may not be bound by it. The short answer is that such knowledge will be presumed when (as here) the evidence shows the usage was an established, well-defined and obviously well-recognized one. [citations omitted] Moreover, in view of the fact that there was no provision in the contract which expressly or by implication precluded resort to usage in defining the meaning of its terms, plaintiff's reliance thereon to determine the meaning of the specification requirement in question was entirely reasonable; any ambiguity on this score must be resolved against the government as the drafter of the instrument. *E.g., Peter Kiewit Sons' Company v. United States*, 109 Ct.Cl. 390, 418 (1947).

In *W.G. Cornell Company of Washington, D.C., Inc. v. United States* [12 CCF ¶81,040], 179 Ct.Cl. 651, 670 (1967), 376 F.2d 299, 311, the issue was the use of flexible insulation vs rigid insulation around air-conditioning ducts. The Federal specifications incorporated by reference required rigid insulation. The specific contract specifications provided that the insulation could be of other "equally suitable material" and no mention of rigidity was made. The Court of Claims reversed the ASBCA and held that flexible insulation met the contract specification. The language of that case is also instructive:

The decisions of the Boards below are replete with declarations of the general rule that evidence of trade usage may not vary or contradict plain contract language. While that rule is correctly stated, it is not applicable or controlling here because a close analysis of the administrative opinions discloses that only one provision of the contract was examined and taken into consideration. Moreover, evidence of trade usage and custom may always *explain* or *define*, as distinguished from *vary* or *contradict*, contract language. That is the status of the controversy before us. Assuming, *arguendo*, that the only ordinary meaning which could be placed upon the words "other equally suitable material" would exclude flexible insulation, evidence of trade usage still must be taken into consideration, since it supplies a meaning to that phrase which is not disclosed from a casual reading thereof. Even in the absence of ambiguity, contract language must be given the meaning which "would be derived from the contract by a reasonably intelligent person acquainted with the contemporaneous circumstances." *Hol-Gar Manufacturing Corp. v. United States, supra*, at 388.

In the instant case, the Navy witnesses had no expertise in the installation of, or the installation standards for, ceramic tile. The testimony of the appellant's independent expert and the statement by the Secretary of the ANSI Committee were credible and persuasive. The tile met the ANSI standards for balancing fields of tile, as well as for plumbness, alignment, and the use of 2 × 6 bullnose tile. The Navy has failed to prove its case.

The 300 square feet of ceramic tile replaced by the appellant were rejected by Navy personnel who were not qualified by experience or training to make the decisions rejecting that tile. Their rejection was in error. The Navy's direction is a constructive change for which the appellant is entitled to an equitable adjustment of its costs in the amount of $5,864.77, plus CDA interest from 2 March 1987.

Under the Changes clause, appellant is also entitled to a time extension for the changed work; that is, for the time it took to remove and replace the improperly rejected tile, as well as a reasonable amount of time for any related work which was delayed while the tile was being removed and replaced.

In this connection, the ceramic tile work was originally begun on 24 July and completed on 7 August 1986. The Navy did not complain about the ceramic tile work for over a month, until 8 September 1986, when Carl Thorpe orally indicated to Michael Gaffny that there was some objection to a portion of the tile work. The formal letter of complaint was not received until 12 September 1986. That letter raised questions about the quality of the ceramic work and invited questions or comment from Gaffny. It was not an unequivocal direction to immediately remove and replace the ceramic tile.

Under those circumstances, it was reasonable for Gaffny to explore the possibility of reaching some agreement with the Navy about the extent of the removal and replace-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ment of the ceramic tile. It is also reasonable that it took some time to obtain the materials and schedule the work. Gaffny began removing the tile on 24 September 1986. The 12 days between receipt of LT Hyde's letter and the beginning of the ceramic tile removal was reasonable. *J.D. Hedin Constr. Co. v. United States* [13 CCF ¶ 82,580], 187 Ct.Cl. 45, 55 (1969).

The replacement of the ceramic tile was completed, the Metcraft gang shower was installed, and the other fixtures were reinstalled, on 10 October 1986. The work schedule for removing and replacing the ceramic tile was reasonable. The Navy has not established otherwise. Cases cited by the Navy are inapposite. Appellant is entitled to extra time to complete the contract, as discussed under the liquidated damages claim.

ASBCA No. 39740—Liquidated Damages—FINDINGS OF FACT

In this case it is clear that the Navy caused the submittal delays which resulted in material delivery delays. It is also clear that the Navy improperly rejected the ceramic tile and thus caused the delays necessary for removing and installing replacement ceramic tile. We have so held. We need not reiterate the factual predicates for those delays.

The 22 November 1989 contracting officer's final decision, in response to appellant's claim for the $6,808 balance and remission of the liquidated damages, was the only decision to discuss those damages, it said:

> The OIC, NAVFAC Contracts, NAS Brunswick, ME First Endorsement dated 7 January 1987 to your Invoice No. 4 dated 20 December 1986 notified you that the building was useably complete on 27 October 1986, and that liquidated damages of $3,500.00 for 70 days delay were being withheld to cover the period 17 August 1986 to 26 October 1986. The contract Beneficial Occupancy Date was established as 27 October 1986.
>
> At a negotiation meeting at NAS Brunswick, ME on 20 October 1988, you were orally advised that liquidated damages of $3,500.00 were being assessed against your firm at the contract rate of $50.00 per day for 70 days. You were further advised to invoice for the $3,308.00 balance of the total retention of $6,808.00. The rest of the retention was being withheld to cover the assessed liquidated damages of $3,500.00.
>
> The Government has no record that you ever invoiced for the balance of the retention you are entitled to of $3,308.00.
>
> *Conclusion*
>
> You have not shown that the assessed liquidated damages of $3,500.00 for 70 days of delay in contract performance were improperly assessed.

With respect to invoice no. 4, mentioned in that final decision, the first endorsement was addressed to a Navy disbursing officer. It was not addressed to appellant. There is no evidence that the first endorsement was ever communicated to appellant. In any event, we have found that the AROICC (also called OIC NAVFAC Contracts) did not have authority to impose liquidated damages; authority to impose liquidated damages was reserved to a contracting officer at higher headquarters.

JURISDICTION—ASBCA No. 39740—Liquidated Damages

A claim for liquidated damages can only be asserted by the Navy through a decision. 41 U.S.C. § 605(a). The only relevant decision was that of 22 November 1989. However, that decision was not an express assertion of a government claim against appellant for liquidated damages, instead it was merely a denial of appellant's request for payment of the contract balance and for relief from the improper withholding of liquidated damages. Thus, it cannot be considered the assertion of a government claim. See *Spartan Building Corp.*, ASBCA Nos. 43849 and 44431, 94-1 BCA ¶ 26,336, 26 August 1993 (On Motion for Reconsideration).

Nevertheless, we have jurisdiction over the issue of liquidated damages, because the issue of liquidated damages was raised in appellant's claim of 11 July 1989. The deemed denial of that claim was appealed to this Board. See *Acme Process Equipment Co. v. United States* [10 CCF ¶ 73,060], 171 Ct.Cl. 324, 365-6 (1965); *Bradford Electric Co.*, ASBCA No. 43356, 92-3 BCA ¶ 25,205. The instant case is distinguishable from the facts in *Spartan, supra*, where the contractor did not specifically seek remission of liquidated damages. Cf., *Sharman Company, Inc. v. United States*, No. 92-5150 (Fed. Cir., 17 August 1993).

ASBCA No. 39740—Liquidated Damages—DECISION

As to the substantive merits of the issue of liquidated damages, the Navy asserts that, in order to avoid liquidated damages, "a con-

Digitized by Google

tractor has the burden of proof to establish that not only was the delay beyond its control and without its fault or negligence, but also, that it took all reasonable action to perform the contract notwithstanding its excuse." Citing *William M. Wilson's Sons, Inc.*, ASBCA No. 30553, 85-2 BCA ¶ 18,028, which cited *Jennie-O Foods, Inc. v. United States* [24 CCF ¶ 81,814], 217 Ct.Cl. 314, 327, 580 F.2d 400, 408 (1978).

Those cases state the applicable law of a contractor's claim for damages arising from Government caused delay. Those cases are inapposite to the issue of liquidated damages. A contractor claim for damages arising solely from Government caused delay must be distinguished from a Government claim for liquidated damages arising solely from contractor caused delay. The actual assessment of liquidated damages arises under the provisions of the Default clause, which governs the determination of the delay period. It is black letter law that the assertion of a right to liquidated damages is a government claim.

If and only if the contractor is in default may the government exercise default remedies, which include termination, common law actual damages, or liquidated damages for the duration of the default. The Federal Circuit has reaffirmed that "the government bears the burden of proof on the *issue* of default by the contractor ...." *Lisbon Contractors, Inc. v. United States* [34 CCF ¶ 75,358], 828 F.2d 759, 763 (Fed. Cir. 1987).

The relevant cases are those which discuss the Government's burden on the Government's claim for liquidated damages. It has long been the rule that where the Government prevents "performance of the contract within the stipulated time ... and thereafter the work is completed, though delayed by the fault of the contractor, the rule of the original contract cannot be insisted upon, and liquidated damages measured thereby are waived." *United States v. United Engineering & Contracting Co.*, 234 U.S. 236, 242, 58 L. Ed 1294 (1914); see also *United States v. Brooks-Callaway Co.*, 318 U.S. 120, 87 L. Ed 653 (1943); Michael R. Finke, "The Burden of Proof in Government Contract Schedule Delay Claims," 22 Pub Contract Law J. 125 (1992).

In order to assess liquidated damages the Government must establish that it did not prevent or contribute to the delay. Any other rule, the Supreme Court reasoned in *United States v. United Engineering & Contracting Co., Id.*, "would permit it [the Government] to recover damages for delay caused by its own conduct." The government must prove its case by a preponderance of the evidence. E.g., *West Coast General Corporation*, ASBCA No. 35900, 88-2 BCA ¶ 20,751, at 104,863; *Apollo Construction Company*, ASBCA No. 29861, 88-2 BCA ¶ 20,704, at 104,622; *Roda Enterprises, Inc.*, ASBCA No. 22323, 81-2 BCA ¶ 15,419, at 76,399; see *Central Ohio Building Co., Inc.*, PSBCA No. 2742, 92-1 BCA ¶ 24,399, at 121,824.

We have found that the Navy's delay in approving the submittals caused a delay in the delivery of the Metcraft gang shower. It was not delivered until 19 September 1986. We have found that the Navy delayed in issuing its order to remove and replace 300 square feet of ceramic tile from 7 August 1986 until on or about 12 September 1986, even though the tile work had been completed on 7 August 1986. The Navy's order to remove and replace 300 square feet of ceramic tile was a constructive change and entitled the appellant to a time extension for the removal and replacement of the ceramic tile until completed on 10 October 1986.

There were other delays during this period that are attributable to the Navy; e.g., the issuance of Modification P00001 on 8 August 1986 for extra work, causing work to be performed on 3 September 1986; and, the delayed delivery of the McQuay heat coil until 23 September 1986. There were other causes of delay asserted by Gaffny which, in light of our findings and decision, we have not discussed. These delays were claimed to be attributable to delayed approval of submittals and delayed delivery of materials and rescheduling of performance.[2]

The Navy clearly was a cause of the delayed contract performance from the original completion date of 3 August 1986 until substantial completion on 10 October 1986. No liquidated damages can be assessed for periods in which the Navy was a contributing cause for the delayed performance.

We found in ASBCA No. 46208 that the work was substantially complete on 10 October 1986. Liquidated damages cannot be assessed for any period after substantial completion has occurred and only punch list items remain, even though the government

[2] *E.g.*, the delivery of fencing was delayed and not installed until 13 and 14 August 1986. The delivery of doors was delayed and doors were installed on 18 and 22 August 1986. Duct work and heating coils and controls were installed on 22 and 23 September 1986.

Digitized by Google

did not take beneficial occupancy until sometime after substantial completion. *Sauter Construction Co.*, ASBCA 27050, 84-2 BCA ¶ 17,288, at 86,081:

> Liquidated damages are not assessable once substantial completion occurs and only punch list items remain to be corrected. See *Lindwall Construction Co.*, ASBCA No. 23148, 79-1 BCA ¶ 13,822. We, therefore, conclude the Government has failed in its burden of proving why liquidated damages should be assessed against appellant for the fourteen days between 27 December 1979, the date upon which the record discloses only punch list items remained to be performed, and 10 January 1980, the date upon which final inspection was made and the Government took beneficial occupancy.

The Navy has failed to prove by a preponderance of the evidence that the delay from 3 August until substantial completion on 10 October 1986 was solely due to the fault of the contractor. The liquidated damages must be annulled. *United States v. United Engineering & Contracting Co.*, 234 U.S. 236, 58 L.Ed 1294 (1914); *S.W. Electronics & Manufacturing Corps.*, ASBCA Nos. 20698 & 20860, 77-2 BCA ¶ 12,631, at 61,221, cited with approval but reversed in part on other grounds in *S.W. Electronics & Manufacturing Corp. v. United States* [29 CCF ¶ 81,726], 228 Ct.Cl. 333, 342 (1981); *Blinderman Construction Co., Inc.*, ASBCA No. 24445, 84-3 BCA ¶ 17,527; *Arrow, Inc.*, ASBCA No. 39621, 90-3 BCA ¶ 23,217. See also, *Fortec Constructors v. United States* [32 CCF ¶ 73,702], 8 Cl.Ct. 490, 508 (1985).

As the Federal Circuit said in *Klingensmith, Inc. v. United States* [32 CCF ¶ 72,527], 731 F.2d 805, 809 (Fed. Cir. 1984), "The general rule is that where both parties contribute to the delay neither can recover damages, unless there is in the proof a clear apportionment of the delay and expense attributable to each party." Citing *Blinderman Construction Co. v. United States*, 695 F.2d 552, 559 (Fed. Cir. 1982); *Coath & Goss, Inc. v. United States* [30 CCF ¶ 70,619], 101 Ct.Cl. 702, 714-715 (1944). See also, *Acme Process Equipment Co. v. United States* [10 CCF ¶ 73,060], 171 Ct.Cl. 324, 367 (1965).

JURISDICTION—ASBCA No. 37639—Cumulative Delay

In its post hearing brief Gaffny asserted that the cumulative delay was caused by "late material delivery caused by protracted submittal approval," "inability to proceed on Modification #1," "improper rejection of tile," and "asbestos not shown on drawings."

The Navy raised a jurisdictional challenge to Gaffny's reliance on Mod P00001 as one of the several factual predicates for the cumulative delay claim.[3]

Without jurisdiction, our decision would be a nullity. Jurisdictional issues must be addressed. *Mansfield v. Swan*, 111 U.S. 379, 382-384, 28 L.Ed. 462, 463-464 (1884) (jurisdiction fails unless evidence affirmatively appears in the pleadings or elsewhere in the record); *Capron v. Van Noorden*, 2 Cranch 126, 6 U.S. 126, 2 L.Ed. 229 (1804) (judgment vacated for lack of jurisdiction on application of the losing party); *Universal Canvas, Inc. v. Stone, Sec. of the Army* [38 CCF ¶ 76,370], 975 F.2d 847 (Fed. Cir. 1992) (judgment vacated for lack of jurisdiction on motion of the losing "plaintiff" contractor).[4]

The Navy's motion was raised in an untitled paragraph of its brief (at 34-35). The Navy seems to argue that an assertion that a fact contributed to a cumulative delay is an "issue" over which the Board does not have jurisdiction, because that fact, event, or "issue" was not raised in the claim letter:

> It should be noted that for the first time, Appellant alleged in its brief that the Government's actions in processing Modification P00001 contributed to the "ripple" effect delay. (*App. Br. 18*). Appellant never raised that issue in its claim letter. (*PFF 51, 52*). Consequently, the Board is without jurisdiction to determine entitlement on that issue. *See Structural Finishing, Inc.*, ASBCA No. 30260, 85-3 BCA 18,235.

The 25 February 1987 claim letter does not specifically assert that the Navy's action in processing Modification P00001 was one of several causes of the cumulative delay. The claim letter (at 17) asserts that the "ripple effect" was caused generally by the Navy's actions, which resulted in "non-sequential and interrupted work:"

---

[3] A similar motion was denied earlier in this case. *Gaffny Corporation*, ASBCA No. 37639, 89-3 BCA ¶ 22,007.

[4] The Navy should have treated this issue more seriously by raising it in a separate motion. If time did not permit a more thoughtful presentation by counsel, additional time could have been sought.

Digitized by Google

> The disruption caused by the initial government caused delays is evidenced by the non-sequential and interrupted work. It is submitted that Gaffny Corp. is entitled to be reimbursed for the additional, unanticipated costs and expenses incurred in the performance of the project work.

Newly asserting that a fact contributed to the cause of an existing claim, would be jurisdictionally defective if the new allegation gave rise to a claim that was separate and distinct from the existing claim. The question is whether the allegation is merely an extension of a claim which the contracting officer had the opportunity to consider. *Trepte Construction Co., Inc.*, ASBCA No. 38555, 90-1 BCA ¶ 22,595.

Our cases have differentiated between a new claim and an extension of a claim which the contracting officer had the opportunity to consider. A constructive acceleration claim, although arising out of the same facts as a delay claim, has been held to be a separate claim because it requires proof of the additional element of an express or implied Government order to overcome the excusable delay. *Trepte, supra*, at 113,386. See also, *Systems Engineering Associates Corp.*, ASBCA No. 37536, 90-2 BCA ¶ 22,900 (allegations of fraud requires proof of elements in addition to those required for allegations of negligence.)

When the complaint or evidence varies from the claim as submitted to the contracting officer, we have looked to see whether the matter raised before the Board differs from the claim as submitted to the contracting officer as to the essential nature of the claim and the basic operative facts. A "cardinal change/material breach" claim, which was based on the sum of the "individual compensable actions [taken] by the Government," has been held to constitute a claim which was separate and independent from the individual claims. *Reinhold Construction, Inc.*, ASBCA Nos. 33312 *et al.*, 92-3 BCA ¶ 25,031, at 124,771. See *J.L. Ewell Construction Co.*, ASBCA Nos. 37746 *et al.*, 90-1 BCA ¶ 22,485.

We have held that where the "same set of operative facts" underlies the claim as submitted to the contracting officer and as submitted to the Board, there is only one claim, even though the theory may be different. *RGI, Inc.*, ASBCA No. 38772, 92-2 BCA ¶ 24,839 at 123,932.

In this case, the delay in issuing Mod P00001 and the delay attempting to relocate the feedwater line (from 8 August to 3 September 1986) could stand alone as a disruption claim. However, the fact that a particular delay may stand alone as an individual claim, does not necessarily preclude that same fact from being one of many elements in a different and broader claim, as in *Reinhold, supra*, at 124,771. See also the discussion in *Dyson & Company*, ASBCA No. 21673, 78-2 BCA ¶ 13,482, at 65,970.

The cumulative delay is a single claim of a number of days of delay, a total delay caused by government action or inaction. An additional fact or event which supports that the government caused the cumulative delay, does not change the nature of the claim. *Cf.*, *James P. Purvis v. United States*, 216 Ct.Cl. 398, 24 CCF ¶ 82,223 at 87,696 (1978), and *Norman Engineering Company*, NASA BCA Nos. 1189-12 *et al.*, 92-2 BCA ¶ 24,900, at 124,181, which discussed the nature of cumulative or ripple impact claims:

> As a matter of law, an "impact" claim or a "cumulative impact" claim is a claim based on the constructive change theory that is asserted separately from individual compensable changes. Cumulative impact arises from changes which had such an effect on performance that there is a separately compensable impact claim that does not include the direct costs of the changes. *Bechtel National, Inc.*, NASA BCA No. 1186-7, 90-1 BCA ¶ 22,105 ("Bechtel"), *see McMillan Bros. Constructors, Inc.*, EBCA No. 328-10-84, 91-1 BCA ¶ 23,351, at 117,102, *motion for recons. denied*, 91-1 BCA ¶ 23,574, aff'd, 949 F.2d 403 (Fed. Cir. 1991); *Fruehauf Corporation*, PSBCA No. 477, 74-1 BCA ¶ 10,596, at 50,231. In *Santa Fe Engineers, Inc.*, ASBCA No. 36682, 90-3 BCA ¶ 23,020, *vacated and remanded on other grounds*, 937 F.2d 624 (1991), after claims involving labor inefficiency costs arising from three changes had been litigated, the contractor was not barred from appealing a claim for costs from the collective nature of all the changes and directives that were issued because it was a new claim. The first litigation of the changes claims did not bar a second appeal of a claim for "overall job disruption" on the grounds of collateral estoppel, judicial estoppel or res judicata.

We conclude that we have jurisdiction, because the new assertion that an additional fact supports the validity of a claim, is not the assertion of a new claim. In any event, the facts surrounding Modification P00001 are admissible as a defense to the Navy's claim of liquidated damages. *Leal Petroleum Corporation*, ASBCA No. 36047, 92-1 BCA

©1994, Commerce Clearing House, Inc.

¶ 24,719; *Litton Systems, Inc.*, ASBCA No. 36976, 93-2 BCA ¶ 25,705, appeal docketed on another issue, No. 93-1300 (Fed. Cir. 13 April 1993). See also, *Structural Finishing, Inc.*, ASBCA No. 30260, 85-3 BCA ¶ 18,235.

ASBCA No. 37639—Cumulative Delay—FINDINGS OF FACT

Gaffny claims adjustment for cumulative delay, or "ripple effect" from various events which contributed to the overall delay, in the amount of $19,840.28, plus profit. Gaffny abandoned at trial its assertion that the delay in the Government approval of the bonds was an event which contributed to the cumulative delay.

Gaffny's delay claim apparently includes delays resulting from the changed work resulting from the discovery of asbestos, delay in issuing Modification P00001, delays resulting from the delayed material delivery as a result of the delayed submittal approval, and delays resulting from the replacement of the ceramic tile as a result of the Navy's improper rejection of the original ceramic tile installation. The facts relating to those delays have already been discussed.

The Navy has come forward with evidence to establish that there were periods when the contractor did not perform much work, and that there were concurrent periods when the contractor was performing both work that was delayed by the Navy and work that was not delayed by the Navy.

For example, demolition work did not begin until 12 May 1986; the contractor did not complete the original ceramic tile work until 7 August 1986; and on 7, 8, 10, 27 and 29 August 1986 Gaffny was doing rough duct work. On 18 to 22 August Gaffny did electrical work and painting. On 21 to 26 August Gaffny installed vinyl tile in one of the offices in the boiler plant. There are other days during August and September 1986 where the evidence fails to show that Gaffny was doing any work at all.

As to Gaffny's claimed costs of $19,840.28, the appellant has not shown that any of the claimed costs (which are in addition to those attributed to the ceramic tile and the asbestos issues) were caused solely by delays which were caused solely by the Navy.

There has not been a sufficient showing that all the delays were caused solely by the Navy. There is insufficient evidence to conclude that, during the period of contract performance, all unproductive time was due to delays caused by the Navy. It is also not clear how much time during the contract performance period was productive and how much was nonproductive time. Nor is there sufficient evidence to establish that nonproductive time would have been productive, but for delays caused by the Navy. It appears just as likely that some of the delays were the result of scheduling decisions by the appellant.

ASBCA No. 37639—Cumulative Delay—DECISION

The appellant has the burden of proving its claim for increased costs due to cumulative delays. The appellant has failed to demonstrate that its claimed costs were caused solely by the delays caused by the Navy. Instead of demonstrating a causal connection between its claimed costs and the Navy caused delay, Gaffny has relied solely on the total costs incurred. It is insufficient to show total costs. The appellant must establish that there were increased costs and that the increase was caused solely by the Navy. *WRB Corp. v. United States* [12 CCF ¶ 81,781], 183 Ct.Cl. 409, 426 (1968); *S.W. Electronics & Manufacturing Corp. v. United States* [29 CCF ¶ 81,726], 228 Ct.Cl. 333, 347 (1981); *Servidone Construction Corp. v. United States*, 931 F.2d 860 (Fed. Cir. 1991).

Gaffny's reliance upon *James P. Purvis v. United States*, 216 Ct.Cl. 398, 24 CCF ¶ 82,223 at 87,696 (1978), is misplaced. More to the point is *Commerce International Company, Inc. v. United States* [9 CCF ¶ 72,781], 167 Ct.Cl. 529 (1964) and *Kirk Brothers Mechanical Contractors, Inc.*, ASBCA Nos. 35771R *et al.*, 92-3 BCA ¶ 25,144 at 125,343: "Where both parties contribute to delay, neither can recover delay damages unless there is in the proof a clear apportionment of the delay and expense attributable to each. *William F. Klingensmith, Inc. v. United States* [32 CCF ¶ 72,527], 731 F.2d 805, 809 (Fed. Cir. 1984)."

ASBCA No. 46028—Payment of Contract Balance—FINDINGS OF FACT

The shower facilities were completed when the Metcraft gang shower was installed on 10 October 1986. There was no other work remaining that would preclude the operation of the boiler plant. The operation of the boiler plant was scheduled to begin on 27 October 1986. The Navy formally accepted occupancy of the boiler plant on the day it began operating, which was 27 October 1986. Nevertheless, the work had been substantially completed and ready for

Digitized by Google

beneficial occupancy after the showers were finished on 10 October 1986. On 10 October 1986, LT Hyde, Carl Thorpe, and Michael Gaffny first met to discuss punch list items. Punch list items continued through the Navy's final inspection on 20 February 1987.

By letter of 23 February 1987, LT Hyde advised Gaffny that, "Upon the satisfactory completion of the attached punch list items, submittal of final payrolls, As-Built drawings, final invoice and contractor's release forms, final payment will be processed." That letter also enclosed the final invoice and release forms. Gaffny was instructed to "submit three copies with original signature ... for final processing."

On 5 March 1987, Gaffny submitted the final invoice for 100 per cent of the work. The invoice sought payment of the balance. Enclosed with the invoice was the final release, which excepted the claim dated 25 February 1987. The Navy argued before the Board that work remained on two items of another punch list dated 8 June 1987. The first item was a broken window, which we find had been fixed in January 1987. The second item was an exhaust balance problem, which we find was a Navy design deficiency. Thus, the June 1987 punch list was erroneous. We find that all work was completed and accepted, including punch list items, by 5 March 1987, the date of appellant's final invoice.

The Navy also argued that the final invoice was never received. The only evidence offered to support this contention was the testimony of a former Navy engineer. On direct examination this former Navy engineer testified that as the acting supervisor it was his responsibility to sign off on all invoices; and, that he neither saw nor signed off on Gaffny's 5 March 1987 invoice.

On cross examination, he admitted that he was not the acting supervisor during the time the invoice was sent in by Gaffny in March 1987. His testimony elicited on direct examination was misleading. His testimony on cross examination established that he had no knowledge, and was not in a position to have any knowledge, about appellant's March 1987 invoice.

There is no reason to disbelieve that the appellant did not forward the final invoice as represented. The invoice was properly addressed. It was in compliance with the Navy's directions. It contained appropriate final release language. It was in appellant's interest to do so.

On the other hand, the Navy has displayed some indifference to properly handling and paying invoices submitted by the appellant. The ROICC office failed to forward appellant's first invoice to the finance office for payment. The Navy has had an extra copy of the final invoice since September 1989. The Navy admits that appellant is entitled to be paid $3,308. The Navy continues not to pay appellant for monies it agrees the Navy owes to the appellant, and for which an invoice covering that sum has unquestionably been received. We find that the Navy received the Thursday, 5 March 1987 invoice in the regular course of the mails on Monday, 9 March 1987.

ASBCA No. 46028—Parent of Contract Balance—DECISION

Gaffny now claims the balance due on the contract in the amount of $6,808, and a decision that the Navy's liquidated damages were improper. The Navy admits that it owes Gaffny $3,308. It is the Navy's view that the appellant is entitled only to the $3,308 retained by the Government (the $6,808 less the $3,500 in liquidated damages); and then only after the appellant submits another invoice for that exact amount.

We found that a final invoice for the balance due under the contract was received by the Navy on 9 March 1987. We have held that the Navy wrongfully withheld $3,500 for liquidated damages. We hold that the Navy owes the appellant the full balance due under the contract, in the amount of $6,808.

We thus conclude that the Navy has improperly failed to pay Gaffny the sum of $6,808. This non-payment of the contract balance was turned into a contract disputes act claim by Gaffny's letter of 11 July 1989, which was received by the Navy on 17 July 1989. Gaffny is entitled to $6,808 (which includes the amount wrongfully withheld as liquidated damages) plus CDA interest from 17 July 1989 until paid.

ASBCA No. 46029—Prompt Payment Act—FINDINGS OF FACT

Gaffny claims statutory prompt payment act interest of $1,284.38 on the claimed $6,808.00 balance on the contract, for the period 5 March 1987 thru 15 July 1989.

The PAYMENTS clause in the contract provided that the balance due under the contract was to be paid "after —

(1) Completion and acceptance of all work;

©1994, Commerce Clearing House, Inc.

Digitized by Google

(2) Presentation of a properly executed voucher; and

(3) Presentation of [a] release of all claims . . . other than claims . . . specifically excepted . . . .

We have already held that the work was completed and accepted by 5 March 1987, and that a proper invoice and claims release were received by the Navy on 9 March 1987. In accord with the Payments clause, payment was thus due after 9 March 1937, although no specific payment date was provided for by the contract.

We further have found that the intent to assess liquidated damages was never communicated to Gaffny until after the final decision of 25 July 1988, after which the appellant was orally advised that the Navy was considering withholding liquidated damages. Thus, at the time the final invoice was submitted, and for at least a year and 4 months thereafter, there was no dispute about appellant's entitlement to payment in full.

ASBCA No. 46029—Prompt Payment Act—DECISION

After the Navy received the Gaffny invoice on 9 March 1987, Gaffny was entitled to the balance on the contract price of $6,808. Because the contract did not contain a specific payment due date, for purposes of the Prompt Payment Act, payment was due on 8 April 1987, 30 days after the 9 March 1987 receipt of the invoice (31 U.S.C. § 3903).

The Navy was required to pay prompt payment act interest beginning the day after the payment due date, if the invoice was not paid within 15 days after the payment due date of 8 April 1987, (31 U.S.C. § § 3901(a)(4), 3902(b), and 3903(1)). The Navy still had not paid the balance on the contract at the time of the 25 July 1988 final decision, after which the invoice was turned into a CDA claim by the Gaffny letter of 11 July 1989.

Interest is set at rates computed by the Secretary of the Treasury under section 12 of the Contract Disputes Act of 1978. If the interest is not paid for 30 days, the interest then due is added to the principal and the prompt payment act interest begins anew to accrue on the added amount. It is thus that prompt payment act interest compounds every thirty days until the total amount due is paid. However, the prompt payment act contains a provision which limits the running of interest for only one year (31 U.S.C. 3906(b)(1)(B)). Thus, Gaffny is entitled to prompt payment act interest for only one year.

The payment of that interest was turned into a CDA claim by Gaffny's letter of 11 July 1989, entitling Gaffny to CDA interest on the one year sum total of the unpaid prompt payment act interest. For the prompt payment act interest claim, Gaffny is entitled to $607.69, plus CPA interest from 17 July 1989 until paid.

SUMMARY DECISION

ASBCA No. 37639, for cumulative delay, is denied.

ASBCA No. 39740, for remission of the Navy's assertion of liquidated damages, is sustained.

ASBCA No. 46025, for changed work caused by asbestos, is sustained in part and denied in part and the amount of $161.40 is awarded, plus CPA interest from 2 March 1987 until paid.

ASBCA No. 46026, for delays caused by late review of submittals, to the extent monies were claimed for specific work disruption, is denied; and, to the extent extra days were claimed for contract performance, sustained to the extent discussed under ASBCA No. 39740.

ASBCA No. 46027, for costs and extra days for the replacement of ceramic tile, is sustained in part and denied in part; extra days were sustained to the extent discussed under ASBCA No. 39740, and the amount of $5,864.77 is awarded, plus CPA interest from 2 March 1987 until paid.

ASBCA No. 46028, for payment of the balance due under the contract, is sustained and the amount of $6,808.00 is awarded, plus CDA interest from 17 July 1989 until paid.

ASBCA No. 46029, for Prompt Payment Act interest, is sustained in part and denied in part and the amount of $618.28 is awarded, plus CDA interest from 17 July 1989 until paid.

[¶ 26,523] Tri-State Design Construction Co., Inc.

DOT BCA No. 2570, November 30, 1993. Contract No. J231C-013.

Interpretation of Contracts—Contract as a Whole—Tank Level Transmitter.—Under a contract to renovate a water tower and to install a waterline, a contractor was not entitled to recover the costs of furnishing a tank level transmitter, because the contract, when read as a whole, required the contractor to furnish the equipment. The contract required the contractor to provide a storage tank valve vault, which maintained the water level within the tank. This valve vault contained the tank level instrument equipment. The section referring to the "Transmitter Equipment" stated that the supplier of the vault was to furnish all required tank level instrumentation equipment. This provision also required the contractor to provide all necessary technical assistance. The board concluded that these provisions made sense only if the contractor were required to procure the equipment on its own. To adopt the contractor's position that it was not required to furnish the tank transmitter would render these provisions meaningless.

For the appellant: Frank O'Konski. For the government: Edmund W. Chapman, U.S. Department of Justice, Washington, D.C.

Before STERN, WARE, and FENNESSY, Administrative Judges.

STERN, Administrative Judge: Tri-State Design Construction Company, Inc. ("Appellant" or "Tri-State") appeals the decision of the contracting officer for the Federal Bureau of Prisons ("respondent" or "Bureau of Prisons") denying its claim that it was not required by its contract to provide certain radio transmitting equipment. The parties have elected to proceed on the written record.

Findings of Fact

1. On July 12, 1991, the Bureau of Prisons awarded a contract to the U.S. Small Business Administration which awarded the contract to Tri-State under the provisions of Section 8(a) of the Small Business Act. (AF, Tab 4) The contract, in the amount of $340,000.00, was to renovate a water tower and install a water line at the Federal Corrections Institution in McKean, Pennsylvania. (AF, Tab 4)

2. The "DETAIL SPECIFICATIONS" provided,

> 2. *GENERAL DESCRIPTION*
>
> This project involves construction of a 12-inch diameter water main to connect the existing 12-inch water main situated along Big Shanty Road, S.R. 4001, to the existing elevated water storage tank located at the Federal Correctional Institution.
>
> The work includes but is not limited to the following:
>
> A. Furnishing and installation of all required pipe, valves, fittings and other related water line appurtenances to the extent indicated on the Contract Drawings.
>
> * * *
>
> D. Furnishing and installation of a prefabricated steel valve vault.
>
> * * *
>
> F. Furnishing and installation of a 3/4-inch copper pressure sensing line and fittings, along with a pressure transmitter and control piping.
>
> G. Removal of the existing radio telemetry equipment from the vault near the FCI ground storage tank and reinstallation of the same equipment with the new vault installed as a part of this Contract.
>
> * * *
>
> 8. *STORAGE TANK VALVE VAULT*
>
> A. *General*
>
> The Contractor shall furnish and install one factory-built, underground valve vault, with all the necessary piping, controls, electrical work and appurtenances as shown on the Plans or as specified herein. The vault shall be complete with all necessary equipment installed in a fabricated steel capsule. Entrance to the equipment capsule will be through a rectangular entrance hatch, with an access ladder provided. The vault shall be as manufactured by Engineered Fluid, Inc., Centralia, Illinois, or equivalent.

(AF, Tab 9)

The Valve Vault is a unit which contains the Tank Level Instrumentation Equipment. The purpose of this equipment is to maintain the water level within the tank. (Resp. Brief, p. 2) The tank level transmit-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ter, also known as a transducer, senses the pressure in the water tank and converts it to a radio signal. The radio signal is conveyed to the Radio Transmitting equipment which sends the signal to the water source outside the facility. (Resp. Br., p. 4)

3. The "DETAIL SPECIFICATIONS" also provided:

N. *Electrical Equipment*

All electrical equipment will be designed for the equipment provided and shall perform as indicated by these Specifications. All electrical work shall meet the National Electrical Code, latest edition.

The electrical equipment will include the following:

* * *

(4) Outlet for telemeter transmitter.

4. The "DETAIL SPECIFICATIONS" continued:

10. *RADIO TRANSMITTING EQUIPMENT*

The radio transmitting equipment required to remotely monitor the elevated water storage tank level shall be removed from the vault near the FCI ground level storage tank and reinstalled within the new vault adjacent to the elevated water storage tank.

The existing antenna mounted on the FCI ground storage tank shall be removed and reinstalled on the elevated tank. The antenna cable shall be installed within conduit between the antenna and the new vault.

The radio transmitting equipment shall accept the tank level output signal and transmit said level to an existing level recorder at the Bradford City Water Authority Water Treatment Plant.

Work under this Contract shall include providing all necessary technical assistance from an authorized representative of the radio telemetry equipment manufacturer to remove, reinstall, adjust and calibrate the radio telemetry equipment to return the equipment to a fully functional condition.

11. A. *General*

Under this item the supplier of the vault shall furnish all required tank level instrumentation equipment.

B. *Tank Level Transmitter*

The tank level transmitter shall be designed to translate direct (gauge) pressure into a DC current and shall be the four-wire type which permits operation on 120-volt, 60-cycle current. Actuation shall be by a sensing element which operates on the principle of differential capacitance, the relative values of which are electronically converted into the output signal. The sensing diaphragm shall be of single crystal silicon material which provides no measurable hysteresis and shall be isolated from the process fluid by Hastelloy "C" barrier diaphragms and a silicone oil fill fluid. The pressure cell module shall be type 316 stainless steel, hermetically sealed and shall be interchangeable regardless of capsule span specifications.

The transmitter housing shall be rated NEMA 4 (splash proof) and NEMA 7 (explosion proof) for Class I, Division 1 Groups B, C and D locations. The housing shall be cast low copper aluminum alloy, anodized and finished with aliphatic urethane. A universal mounting bracket shall be supplied suitable for either wall or pipe mounting.

The current output signal shall be 4-20 mAdc into 650 ohms or less. Accuracy shall be ±0.2 percent of calibrated span including the combined effects of linearity, hysteresis and repeatability.

The differential pressure transmitter shall be BIF Model 251-16 or equivalent.

The transmitter shall be used to transmit a maximum level of 40 feet with a zero suppression of 105 feet.

Work under this Contract shall include providing all necessary technical assistance from an authorized representative of the tank level transmitter manufacturer to install, adjust and calibrate the transmitter to a fully functional condition.

4. The contract drawing describing the detail work stated "Provide mounting hardware for radio transmitting equipment (to be relocated from FCI ground storage tank vault. Install radio transmitting equipment in valve vault ....)."

5. Finally, The "DETAIL SPECIFICATIONS" stated:

K. *Equipment in Vault*

The supplier of the vault shall factory install therein the following equipment; (1) Pressure transmitter and control piping

(AF, Tab 16)

6. The manufacturer's instruction manual for the pressure transmitter states that, "transmitters are pressure transducers ..." (App. Brief Appendix)

Digitized by Google

7. The shop drawings submitted by appellant's supplier stated "Telemeter Transmitter (By Others)."

8. The contract required work to be completed within 105 calendar days after appellant's receipt of a notice to proceed. Contract completion date was October 17, 1991. (AF, Tab 22) Liquidated damages of $260 for each day of delay were to be assessed for late performance. (Supp. AF, Tab 15)

9. By letter of September 24, 1991, Tri-State notified respondent that delivery of the vault would take 12 weeks. A contract extension of 30 days was requested. By letter of October 3, 1991, appellant informed the contracting officer that that vault delivery would not occur until October 16, 1991. Again, contract extension was requested. Respondent denied the request by letter of October 16, 1991.

10. The respondent imposed liquidated damages on appellant for late completion of performance. The damages were imposed through January 3, 1992. (AF, Tab 27)

11. By letter of February 18, 1992, Tri-State notified the Bureau of Prisons, *inter alia*, that the contract did not require it to install new radio transmitting equipment, but, rather, only required removal and installation of existing radio equipment. Tri-State claimed that it was delayed as a result of the four-month lead time required for the radio equipment. Tri-State sought an extension in the time for it to complete the contract performance. The contracting officer denied its request.

Decision

We have a very limited question before us: Did the contract require that Tri-State provide a tank level transmitter? If so, then Tri-State is not entitled to a contract time extension. If not, then Tri-State is entitled to a time extension and a remission of any liquidated damages assessed against it.

The contract required that Tri-State construct a 12-inch diameter water main between an existing 12-inch main and an existing elevated water storage tank. Part of the work was for appellant to furnish and install a new underground valve vault with all equipment as specified in the contract. The "General Description" of the work required that appellant "furnish and install" a "pressure transmitter." Appellant was also required to remove "existing radio telemetry equipment" from an existing vault and install it in the new vault. The new vault was specified to be manufactured by a particular supplier. The contract stated that this supplier "shall factory install ... [a] pressure transmitter..."

The contract also contained two other sections pertinent here. The first entitled "Radio Transmitting Equipment" stated, "The radio transmitting equipment required to remotely monitor the elevated water storage tank level shall be removed from the vault near the FCI ground level storage tank and reinstalled within the new vault adjacent to the elevated water storage tank." The second provision entitled "Tank Level Transmitter" required that the "supplier of the vault furnish all required tank level instrumentation equipment." The transmitter was to meet certain very detailed specifications. Finally, Tri-State was to provide "all necessary technical assistance from an authorized representative of the tank level transmitter manufacturer..."

The transmitting equipment that was to be removed from one vault and installed in the new vault was that instrumentation used to transmit the signal regarding the tank water level. This equipment, though related, was distinct from the pressure transmitter or transducer that sensed the pressure in the tank and converted it to a radio signal.

We find no ambiguity or conflict in these specifications. It is clear that Tri-State was to furnish a tank level (pressure) transmitter in addition to moving the existing radio transmitting equipment used to remotely monitor water level in the elevated storage tank. The contract contained two separate provisions to establish these requirements. The provision relating to the transmitter was very specific and informed appellant how the transmitter was to be designed. The provision would make no logical sense if appellant was not to procure this equipment on its own. If we adopted appellant's contract interpretation, part of the contract would be meaningless. Read as a whole we find that the reasonable contract interpretation was that Tri-State furnish the tank level transmitter. A contract must be read as a whole to discern the intent of the parties. *Crowley Constructors, Inc.*, DOTBCA No. 1738, 89-1 BCA ¶ 21,303 (1988). Here, it is clear that certain equipment was to be moved and the transmitter furnished by appellant. There-

©1994, Commerce Clearing House, Inc.

Digitized by Google

fore, the Bureau of Prisons is not responsible for any delay resulting from appellant's tardiness in providing this transmitter.

The appeal is denied.

[¶ 26,524] Gulf Construction Group, Inc.

ENG BCA No. 5964, November 30, 1993. Contract No. DACW64-90-C-0013.

Indefinite Delivery Contracts—Estimates by Government—Negligent Preparation.—A contractor's claim that the government's estimated quantity of vertical seals to be replaced on gate sectors was negligently prepared was denied, even though the overrun exceeded 115 percent of the estimated quantity, because the contractor failed to present evidence that proved that the quantity estimates were negligently prepared. The contractor merely asserted that the government's faulty estimates were evidenced by the overall amounts of overrun. Disparities in estimates alone, however, do not show that estimated quantities are prepared without due care.

Payments—Measurement for Payment—Installation v. Reinstallation.—Under specifications providing that payment for the removal and reinstallation of old vertical seals on gate sections was to be included under payment item 12, the contractor was not entitled to be paid on a different basis for installing new vertical seals, because both parties, contemporaneously with accomplishment of the work, interpreted the specifications to include payment for the reinstallation of old or the installation of new seals under payment item 12. By specifically mentioning only the reinstallation of old seals for payment under payment item 12, it could be said that the payment provisions were ambiguous regarding payment for the installation of new seals. The government would have done well to have omitted the word "old" when it described measurement for payment of installation or reinstallation of seals.

For the appellant: Smith, Gunn & Kaster, Baton Rouge, Louisiana, by Steven E. Sanders. For the government: Frank Carr, Chief Trial Attorney, Washington, D.C., and Daniel Keys III, Government Trial Attorney, Galveston, Texas.

Before SHERIDAN, PEACOCK, and SOLIBAKKE, Administrative Judges.

SHERIDAN,[1] Administrative Judge: The Appellant seeks additional compensation in the amount of $90,066.22, and a 6-day time extension, as relief for an estimated quantity overrun. It asserts negligent preparation by the Respondent of the estimated quantity and entitlement to an equitable adjustment for the excess quantity or, in the alternative, demands a price increase pursuant to the Variation in Estimated Quantity provision of the contract. The claimed equitable adjustment is based on the alleged actual costs to perform a representative portion of the work under the unit-priced payment item.

The Respondent determined that the Appellant was entitled to an increased payment for that portion of the quantity overrun which exceeded 115% of the estimated quantity. Following unsuccessful negotiations, the Respondent unilaterally issued a modification to the contract which allowed $13,575.00, but no time extension, based on its estimate of the costs for the same representative portion of the work under the unit-priced payment item as was used by the Appellant to calculate its claim. The Respondent denies that any additional recovery is due.

The Appellant filed a pre-hearing memorandum. Following a one-day hearing in Houston, Texas, the Appellant also filed a post-hearing brief. The Respondent filed no briefs.

FINDINGS OF FACT

The Contract

1. Contract No. DACW64-90-C-0013 (the contract) was awarded by the U.S. Army En-

[1] The Board adopts the opinion of its Hearing Examiner, Steven L. Reed, Esq., who presided at the hearing of the appeal.

Digitized by Google

gineer District, Galveston, Texas (the Respondent or Corps) to Gulf Construction Group, Inc. (the Appellant or GCG) on January 14, 1990. The contract work, to be performed on the Gulf Intracoastal Waterway, consisted of rehabilitation of the Brazos River Floodgates near Freeport, Texas, and the east gate of the east lock of the Colorado River Locks near Matagorda, Texas. (Consolidated Board Rule 4 Appeal File and Hearing Exhibits, Respondent's Exhibit 3 (R.4, Exh. R-3)).

2. As awarded, the contract price was $1,249,360.00 (increased by contract modifications to $1,405,269.78), the total estimated sum of 29 estimated quantity, unit-priced and fixed price, lump sum payment items. The contract work included, *inter alia*, replacement of an estimated quantity of vertical rubber seals on the gate sectors. Payment Item No. 11 of the contract listed an estimated quantity of 120 linear feet of vertical seals to be replaced at a unit price of $15.00 per linear foot, yielding an estimated price of $1,800.00. (R.4, Exhs. R-3, R-3a).

3. The Corps' notice to proceed was received by GCG on March 22, 1990. The contract specified 428 days for completion after receipt of the notice to proceed. Therefore, the original contract completion date was May 24, 1991. The performance period was extended a total of 51 days by modifications to the contract. The modified contract completion date was July 14, 1991. The work was substantially complete on August 26, 1991. Liquidated damages have been assessed by the Corps. (*Gulf Constr. Group, Inc.*, ENG BCA No. 5850, Finding 4;[2] *Gulf Constr. Group, Inc.*, ENG BCA No. 5961;[3] R.4, Exhs. R-3a, R-4).

4. The contract included standard Contract Clauses typically found in Corps of Engineers construction contracts. The following are pertinent to resolution of the appeal:

a. Variation in Estimated Quantity (APR 1984) FAR 52.212-11.

If the quantity of a unit-priced item in this contract is an estimated quantity and the actual quantity of the unit-priced item varies more than 15 percent above or below the estimated quantity, an equitable adjustment in the contract price shall be made upon demand of either party. The equitable adjustment shall be based upon any increase or decrease in costs due solely to the variation above 115 percent or below 85 percent of the estimated quantity. If the quantity variation is such as to cause an increase in the time necessary for completion, the Contractor may request, in writing, an extension of time, to be received by the Contracting Officer within 10 days from the beginning of the delay, or within such further period as may be granted by the Contracting Officer before the date of final settlement of the contract. Upon the receipt of a written request for an extension, the Contracting Officer shall ascertain the facts and make an adjustment for extending the completion date as, in the judgement of the Contracting Officer, is justified.

b. Disputes (APR 1984) FAR 52.233-1.

(R.4, Exh. R-3).

5. Certain paragraphs of section 2A of the Technical Provisions of the contract are relevant, in part, as quoted below.

1. Scope. The provisions of this section consist of furnishing all plant, labor, equipment and materials for performing the following work ....

* * * *

(7) Replace damaged portions of rubber seals.

* * * *

8. MISCELLANEOUS REPAIRS TO GATE SECTORS. Repair items, including those stated in Paragraphs: ... RUBBER SEALS AND GASKETS below ... are items of repair work for which the need cannot be determined definitely until the sectors are taken out of the water. The quantities are based on experience with the Brazos River Floodgates and Colorado River Locks. It is considered reasonable to assume that these sectors will require similar work. If it is found to be necessary, the contract may be modified to provide for increases or decreases of the estimated quantities ....

* * * *

11. RUBBER SEALS AND GASKETS.

11.1 *Gate Seals.* In connection with "Cleaning and Painting of Sectors [Payment Item No. 12]," all rubber seals, and the structural steel bars and angles holding same, shall be unbolted and removed. Following the cleaning and painting, these members shall be put back in place using new bolts, nuts, and washers .... Worn-out or damaged portions, if any, of the rubber seals shall be replaced with new sections of rubber seals .... Government-furnished molds for the vertical seals are available ....

[2] 93-1 BCA ¶ 25,229 at p. 125,663.

These molds ... may be used in making the vertical seals .... [Payment Item No. added]

* * * *

11.3 Payment for removing and reinstalling *old* gate seals, including furnishing of the necessary bolts, nuts and washers as indicated on the drawings shall be included in the item for "Cleaning and Painting of Sectors [Payment Item No. 12]". Payment for new seals authorized to be installed shall be made at the contract unit price for ... "Rubber Seal, Vertical [Payment Item No. 11]." ... [Emphasis and Payment Item Nos. added]

(*Id.*).

The Bid

6. No direct evidence was provided by GCG to explain how its bid price for vertical seals, Payment Item No. 11, $15.00 per linear foot, was formulated. The other five bids for Payment Item No. 11 ranged from a low bid of $45.60 per linear foot to $200.00 per linear foot. The pre-bid Government Estimate for Payment Item No. 11 was $65.70 per linear foot. In separate appeals under the contract, the Board found that GCG prepared its bid for the entire contract as a lump sum. For example, certain equipment was to be used throughout the life of the project; therefore, the cost of its use was calculated for the entire performance period. After all costs were similarly calculated, unit prices were entered on the bidding schedule solely for the purposes of receiving estimated payments as the work progressed. Costs were not allocated to specific payment item prices based on the projected cost of the work required by that payment item. (*Gulf Constr. Group, Inc.*, ENG BCA Nos. 5944 and 5945, Finding 5 [4]; ENG BCA No. 5945, Exh. A-8).

Interpretation of Contract Payment Items and Claim Analysis

7. Pursuant to the Corps' incremental directions, GCG replaced all vertical seals on all six gate sectors. The total length of all vertical seals replaced was 288 linear feet, *i.e.*, about 240% of the estimated quantity of 120 linear feet. (R.4, Exhs. A-3, A-5, R-8 through R-10; Tr. 713, 737-39, 785-93).

8. In formulating the claim for the excess quantity of new vertical seals, GCG's President included the costs for disposing of old seals, purchasing new seal materials, and labor and equipment to handle (unload, unroll, dry, and straighten) the new materials, drill mounting holes, and otherwise prepare the new seals for installation. He did not include any costs for the actual installation of new seals since installation involved the same effort as would have been required to reinstall the old seals. Later, in preparing for litigation, after discussions with counsel, he determined that the better interpretation of the contract payment provisions was that payment for reinstallation of old seals was included under Payment Item No. 12, while payment for installation of new seals was to be made under Payment Item No. 11. (Tr. 719-20, 730-32, 783-86).

9. By letter dated June 10, 1991, GCG requested an adjustment in the unit price for vertical seals replacement work pursuant to the Variation in Estimated Quantity (VEQ) provision of the contract. A cost breakdown, computer listings of various costs, materials invoices, and equipment cost worksheets were attached to the letter. The cost breakdown was alleged to be a compilation of the total costs to install 176 linear feet of vertical seals (the "representative sample"). In accordance with GCG's initial contract interpretation, as explained above, labor costs were halved, with half allocated to preparation for installation (included in the claim) and the other half allocated to installation (not included in the claim). Supervision and "general conditions" costs were halved on account of other ongoing work, with half of such costs being included in the claim. The request totaled $91,474.74, or about $519.74, per linear foot. In addition, based on GCG daily reports, a six-day time extension was requested based on half of twelve days' work to prepare and install the excess quantity of new vertical seals. (Finding 8, *supra;* R.4, Exh. A-1; Tr. 711-25, 785-87).

10. In a letter dated June 17, 1991, GCG revised its equitable adjustment request to $90,066.22. The same average unit price, $519.74, allegedly derived from the costs to prepare and install 176 linear feet of new vertical seal, was multiplied by the alleged overrun quantity of 150 linear feet. The alleged costs for six days of "impact," including time-related costs for added supervision, "general conditions," and equipment usage and ownership costs, were added. (R.4, Exh. A-3; Tr. 710-17, 727-30, 785).

11. The Corps agreed that an equitable adjustment was due for the quantity overrun pursuant to the VEQ provision of the contract. The Corps further agreed that the overrun quantity was 150 linear feet, the

[4] Slip op. at 4 (November 23, 1993).

Digitized by Google

difference between 115% of the estimated quantity of 120 linear feet and the actual quantity of 288 linear feet (1.15 × 120 = 138; 288 − 138 = 150). In attempting to reach agreement on a price increase for the equitable adjustment, the Corps focused on the costs attributable to obtaining and preparing for installation 176 linear feet of vertical seals. Thus, the Corps calculated a new, increased unit price for new vertical seal. The Corps interpreted the contract such that payment under Payment Item No. 11, "Rubber Seal, Vertical," covered only the cost of procuring the additional materials and preparing them for installation, but not for installing the vertical seal. The Corps interpreted the contract to mean that the cost of installation was provided for under Payment Item No. 12, "Cleaning and Painting of Sectors." (R.4, Exhs. R-8, R-9; Tr. 738-42, 754-65).

12. A Corps cost analyst/engineer determined that the only additional work for the overrun quantities payable under Payment Item No. 11, was to drill holes in the vertical seal materials in preparation for installation. On that basis and relying on GCG's and the Corps' daily reports of work progress, he analyzed the labor and equipment time required to prepare 176 linear feet of vertical seals for installation and developed a "production rate" from which an average cost per linear foot was rendered. The Corps' analyst also determined that the vertical seal work (drilling only) required eight days and did not delay project completion; therefore, in his opinion, no time extension was justified. (R.4, Exhs. R-8, R-9; Tr. 736-43, 756-58).

13. Following unsuccessful negotiations, the Corps unilaterally estimated the increased costs and markups to purchase and drill holes through the excess quantity of new vertical seal. The estimate totaled about $13,575.00, or $90.50 per linear foot. On September 18, 1991, Modification No. 18 to the contract was issued by the Corps to increase the contract price by $13,575.00, with no time extension. GCG did not agree to the contract modification. (R.4, Exhs. R-8, R-10).

14. In a letter signed by its President, dated October 9, 1991, which purported to be a claim, GCG demanded payment of $90,066.22, and a time extension of 6 days, minus the amount allowed by the Corps in the unilateral contract modification. The text of the letter included the following:

> In accordance with the Contracting [sic] Disputes Act of 1978 we hereby certify that this claim is made in good faith and all supporting data is accurate *and correct* to the best of our knowledge and belief. We hereby request a Contracting Officer's decision within the time allowed under FAR 52.233-1, Disputes. [Emphasis added]

(R.4, Exhs. A-4, R-7).

15. GCG appealed to the Board the Contracting Officer's lack of a decision by counsel's letter dated April 8, 1992. (R.4, Exh. R-1).

16. In a Contracting Officer decision dated April 27, 1992 (actually but incorrectly dated 1991), the claim belatedly was denied entirely. The Contracting Officer, as the basis for his denial, relied on the same contract interpretation and cost analysis as formed the basis for the Corps unilateral contract modification. The Contracting Officer found no justification for any additional equitable adjustment above that allowed by the unilateral contract modification. (R.4, Exh. A-5).

17. After receipt by the Board of the pleadings and the appeal file, the Board raised, *sua sponte*, the possibility of a defective claim certificate. This matter and its expeditious resolution was discussed among the Board and both counsel. The Board suggested consideration of a stipulation of the type approved in *United States v. Hamilton Enter., Inc.* [31 CCF ¶71,239], 711 F.2d 1038, 1042-43 (Fed. Cir. 1983), and counsel agreed to explore that possibility. In an undated letter signed by its President, received by the Contracting Officer on November 20, 1992, GCG resubmitted its demand, certified with language identical to that found in the contract Disputes provision. Subsequently, in a *Hamilton*-type stipulation dated December 15, 1992, GCG and the Corps agreed that the same demand previously submitted to the Corps and appealed to the Board had now been properly certified, submitted as a claim to the Contracting Officer, considered by the Contracting Officer, and *de facto* denied by him on the same grounds as in his earlier decision such that issuing a new decision would serve no useful purpose. (Board Correspondence File).

Project Delay

18. Replacement of vertical seal was originally scheduled by GCG to occur during six separate time periods of about seven days for each of six gate sectors, totaling about 42 days. The work was to be performed concurrently with each gate sector's overall rehabilitation. As originally scheduled, the final

©1994, Commerce Clearing House, Inc.

Digitized by Google

segment of vertical seal replacement work was to be completed about eight weeks prior to completion of the overall project. Later versions of GCG's schedule indicated that vertical seal replacement work was slipped to later dates and was consolidated into three separate periods of work of about 14-15 days per gate for three gates, totaling about 44 days for all three gates. The first segment of vertical seal replacement work was to be performed concurrently with gate rehabilitation work. The second and third segments of the work were scheduled to begin after completion of other rehabilitation work on the respective gates. The final vertical seal work segment was to be completed 17 days prior to completion of the overall project. (ENG BCA No. 6015, Exhs. A-12, R-23 [5]).

19. The work to dispose of old seal and prepare and install the excess quantity of new vertical seal required a total of twelve days. The vertical seal work was not the final work on the project. Project daily reports show that vertical seal work of all types (removal of old, preparation and installation of old and new) was accomplished during all or portions of 27 days, with the last work on new seal being completed on or about June 25, 1991. (R.4, Exhs. A-1, A-3, R-10; Tr. 712-14, 722-30, 767, 779-80).

20. GCG's President generally testified that the excess vertical seal work delayed completion of the overall project; however, there is no analysis or other probative evidence that explains the interrelationship between or among the revisions to GCG's original schedule, the delay alleged in this appeal, the delays evidenced by the contract modifications, or any of the other delays alleged by GCG in other appeals. No summary, analysis, or comparison of schedules was presented by GCG to indicate the effect on specific work activities or the overall contract completion date of the excess vertical seal work. No exhibit or testimony convincingly explained, analyzed, or compared the excess vertical seal work as it related to specific work activities or the overall project as-scheduled or as-built. (*Gulf Constr. Group, Inc.*, ENG BCA No. 5941, Finding 22 [6]; Finding 3, *supra;* Tr. 713, 727-29).

Quantum

Labor

21. GCG's documentation of its claim for labor consists of a list of computer entries, encoded (recorded) for vertical seal work. Payments to particular individuals and for labor burden cost amounts during certain weeks are listed. Specific dates and types of work are not identified. As found above, in formulating its claim, GCG estimated that half the vertical seal effort was allocated to removal and reinstallation, which would have been required whether old or new vertical seal was installed, and half was allocated to preparation of new seal for installation. No evidence was adduced by GCG to show the effort required to do preparation work for new seals, whether drilling or other handling. No analytical basis for allocating the costs in the manner claimed was shown. (Findings 8-9, *supra;* R.4, Exh. A-1; Tr. 712-20).

22. In preparing an estimate to support the Corps' unilateral contract modification, the Corps' cost analyst, based on GCG's daily reports, extracted a list of specific dates on which the initial 176 linear feet of vertical seals drilling work, only, was performed. For those dates, the analyst identified the hours worked and the types of workers employed by GCG, *i.e.*, laborers and/or skilled workers. Other work was being performed by GCG personnel on those dates. The vertical seal drilling crew consisted of one laborer, one skilled worker, and an equipment operator. The analyst allocated only half of the equipment operator's time to vertical seal work; however, when questioned by the Board, he testified that the operator could have been employed on vertical seal work full time. (R.4, Exhs. R-8, R-10; Tr. 735-74).

23. Relying principally on the Corps' cost analysis, the Board finds that a laborer, a skilled worker, and an equipment operator were employed by GCG to perform 176 linear feet of vertical seals preparation and drilling work during 68.5 hours. The following labor rates, including labor burden costs, are applicable for each of those labor classifications, respectively: $10.27, $16.31, and $12.33. The total direct labor cost for 176 linear feet of vertical seals is $2,665.34 (68.5 × $38.91). The portion of the cost attributable to 150 of 176 linear feet is $2,271.60. (Finding 22, *supra;* R.4, Exh. R-10; Tr. 776-78).

[5] The parties agreed that evidence from all appeals under the contract may be considered in any of the appeals. (ENG BCA No. 6015, Tr. 26-27).

[6] 93-3 BCA ¶ 26,040 at p. 129,446.

Digitized by Google

Equipment

24. The vertical seal is fastened onto the gate sectors by steel bars and angles. The spacing of the mounting holes in the bars and angles is irregular. To mark the new vertical seal materials for drilling, GCG was obliged to hoist the new vertical seal into position alongside the gate sectors. On account of the weight of the new vertical seal materials and the height of the gate sectors, a crane was required to hold the new vertical seal materials in place for marking. The claim indicates and GCG's President testified that the new seal drilling work required the use of an air compressor and drill, a land-based crane, a barge-mounted crane, a barge, and a tugboat for 12 days. (Finding 5, *supra;* Tr. 708-10, 724-27, 789-91).

25. The Corps' cost analyst, in the estimate for the unilateral contract modification, included use of the drill for the same number of hours as for labor and half of that time for use of the land-based crane, only, in figuring the cost of preparing 176 linear feet of vertical seals. The basis for allowing the crane for only half the time was not specifically explained. When questioned by the Board, he testified that the equipment could have been employed on vertical seal work full time. He could not determine from the daily reports the amount of time during which each item of equipment was employed. (Finding 22, *supra;* R.4, Exh. R-10; Tr. 743-74).

26. The Board finds that neither the necessity for, nor the actual use of, marine equipment for the vertical seal work was convincingly proved. There is no question that equipment was needed to handle the vertical seal materials and the Board has found that an equipment operator was employed for the full extent of vertical seal drilling work. The Board finds that a land-based crane and an air compressor and drill were used for a total of 68.5 hours to prepare new vertical seal for installation. The hourly rates for those items of equipment are $21.25, $38.47, and $0.64, respectively, a total rate of $60.36 per hour. The total direct equipment cost for 176 linear feet of vertical seals work is $4,134.66 (68.5 × $60.36). The portion of the cost attributable to 150 of 176 linear feet is $3,523.86. (Findings 22, 24-25, *supra*).

Materials

27. GCG's President's testimony concerning the quantity of vertical seals represented by the invoices included with the claim was abbreviated, confusing, disjointed, and unpersuasive. He alleged a reorder of materials; however, the record contained only one set of invoices for materials ordered on or about the same date. (Tr. 709-12, 720-22, 733, 785).

28. Consistent with the total dimensions of all gate sectors to be rehabilitated under the contract, allowing for some wastage and cutting of seal materials, and based on its own examination of invoices submitted with GCG's claim, the Board finds that GCG obtained a sufficient quantity of vertical seal materials for the entire project (288 linear feet installed) for the total cost of $14,671.60, including taxes and freight charges. The portion attributable to the installation of 150 linear feet is $7,641.46. The molding charge paid by GCG to its supplier would have been required even if no excess quantity had been directed by the Corps. (R.4, Exhs. A-1, R-10; Tr. 712, 721-22, 771-72).

Markups

29. GCG claims and the Corps does not dispute a 15% markup for overhead. (R.4, Exhs. A-1, R-10).

30. GCG claims 12% profit. The Corps computed a profit of 7.05% based on its weighted guidelines method. (*Id.*). The Board allows 10%.

31. GCG claims a bond rate of 2.5%. The Corps included 2.0% for bond costs in the unilateral contract modification. A Corps audit report for a different VEQ equitable adjustment verified a bond rate of 2.6%. (*Gulf Constr. Group, Inc.*, ENG BCA No. 5850, Exh. R-27;[7] R.4, Exhs. A-1, R-10). The Board allows 2.5% as claimed by GCG.

DECISION

The Parties' Positions

GCG argues that the Corps' estimated quantity was "faulty" and the Corps "should be estopped from requiring [GCG] to assume any portion of the excess over or the shortfall under the estimated quantities." As mentioned in the introduction to this opinion, the Corps did not file a post-hearing brief in this appeal; however, briefs were filed in two other appeals under the same

[7] Nn. 2, 5, *supra*. Quantum evidence was presented in the hearing for ENG BCA No. 5850; however, no equitable adjustment was allowed in that appeal.

©1994, Commerce Clearing House, Inc.

Digitized by Google

contract involving the Variation in Estimated Quantity (VEQ) provision of the contract. In those appeals, the Corps responded to an identical argument by GCG. The Corps asserted that there was no proof of a negligently estimated quantity.

In the alternative, GCG asserts the right to an equitable adjustment pursuant to the VEQ provision of the contract, on account of the quantity overrun. The Corps determined that the Appellant was entitled to an increase in the unit price and issued a unilateral modification to the contract in the amount of $13,575.00.

Jurisdiction

The contract is subject to the Contract Disputes Act (CDA), 41 U.S.C. §§ 601-13 (1988, Supp. II 1990, & Supp. III 1991). For claims over $50,000.00, proper certification pursuant to 41 U.S.C. § 605, implementing regulations (FAR 33.207), and the Disputes provision of the contract, is a jurisdictional prerequisite for appeal to the Board in this case. *W.M. Schlosser Co. v. United States* [30 CCF ¶ 70,985], 705 F.2d 1336 (Fed. Cir. 1983).[8]

In 1991, a dispute arose between the parties concerning the claim which underlies this appeal. In its claim letter, dated October 9, 1991, by which GCG sought a Contracting Officer decision concerning alleged extra costs in excess of $50,000.00, the claim certificate deviated from the language required by the contract Disputes provision in two respects: (1) GCG certified that the claim's supporting data was accurate and *correct* instead of accurate and *complete*, and (2) the certificate failed to include any version of the assertion that "the amount requested accurately reflects the contract adjustment for which the Contractor believes the Government is liable." (Findings 4b, 9-14).

After the appeal was filed, the Board reviewed the appeal file and considered the certificate technically defective. To avoid unnecessary delay and additional expense in the resolution of the claim and appeal, the Board suggested a remedy and the parties proceeded to cure the defect. A proper certificate was received by the Contracting Officer on November 20, 1992. GCG resubmitted its demand as a properly certified claim and the Contracting Officer considered and denied it, *de facto*, by way of a stipulation dated December 15, 1992. (Findings 15-17). At that point, the Board was satisfied that it clearly had subject matter jurisdiction over the appeal.

Negligent Estimated Quantity Preparation

Arguments identical to those presented in this appeal were advanced in two other appeals by GCG under the same contract. In those decisions, the Board held that contractors are protected, by way of the standard VEQ provision, from the risk of overstated or understated estimated quantities. *Gulf Constr. Group, Inc.*, ENG BCA Nos. 5944 and 5945 (Nov. 23, 1993).

Even if the negligent estimated quantities theory was considered applicable to this appeal, the Corps correctly argues that GCG has presented no evidence that tends to prove that the quantity estimates were negligently prepared. GCG merely asserts that the Corps' faulty estimates are evidenced by "the overall amounts of ... overrun." (Appellant's Pre-Trial Hearing Memorandum at 2). However, cases relying on the negligent estimated quantities theory hold that disparities in estimates, alone, do not prove that estimated quantities were prepared without due care. *Medart, Inc. v. Austin* [38 CCF ¶ 76,349], 967 F.2d 579 (Fed. Cir. 1992); *Emerald Maintenance, Inc.*, ASBCA No. 29948, 89-3 BCA ¶ 22,127.

The contract provides that the estimated quantities were based on experience with the Brazos River Floodgates and Colorado River Locks. (Finding 5). There is no evidence to the contrary.

Variation in Estimated Quantity

The VEQ provision of the contract states that if the actual quantity of a unit-priced item varies more than 15% from the estimated quantity, an equitable adjustment in the contract price will be made upon demand of either party. Given the posture of this case, *i.e.*, a demand by GCG for a price increase based on a quantity overrun, any equitable adjustment is to be based upon GCG's proof of an increase in costs attributable to or caused by the variation above 115% of the estimated quantity. If GCG proves that the quantity variation caused an increase in the time necessary for completion, a time adjustment will also be due. (Finding 4a).

[8] For appeals filed on or after October 29, 1992, a defect in the certification of the underlying claim does not deprive the Board of jurisdiction to consider an appeal. However, the Board will require correction of a defective certification prior to issuance of its decision. 41 U.S.C. § 605(c)(6), as added by the Federal Courts Administration Act of 1992, Pub. L. No. 102-572, § 907(a)(1)(B), 106 Stat. 4518.

Digitized by Google

Interpretation of the Contract Payment Provisions

Before the amount of the equitable adjustment may be calculated in this appeal, the matter of what work is to be included within the scope of the equitable adjustment must be determined. A brief examination of the payment provisions of the specifications is required.

The specifications are clear that removal and reinstallation of the *old* vertical seals is to be paid for under Payment Item No. 12, "Cleaning and Painting of Sectors." (Finding 5). There is no disagreement on that point.

GCG did not explain the specific basis for its bid price for Payment Item No. 11. However, when the work was accomplished and when the claim was submitted, there was no disagreement between the parties that the scope of Payment Item No. 11, "Rubber Seal, Vertical," did not include the cost of installation of new seal materials. Only later, as GCG prepared for litigation and after consulting with counsel, did GCG focus on the specification wording that explicitly only addressed reinstallation of old seals. (Findings 6, 8).

GCG now argues that payment for new vertical seals "authorized to be installed," which GCG apparently construes to include installation, is to be made as a part of the contract unit price for Payment Item No. 11, "Rubber Seal, Vertical." Rather than increase its claim amount to include the cost of installation of new vertical seals, GCG seeks to occupy the moral high ground by arguing that it has, consistent with its earlier interpretation of the payment provisions of the contract, "computed its claim, discounting half of its labor associated with the new seals. However, since *no* [reinstallation] of the [old] vertical seals was performed, Gulf [should] be entitled to assert 100% of its costs associated with the installation of new vertical seal. Gulf's approach to pricing the equitable adjustment is more than fair and reasonable." (Appellant's Post-hearing Brief at 5).

By specifically mentioning only the reinstallation of old seals for payment under Payment Item No. 12, it could be said that the payment provisions are ambiguous as to payment for installation of new seals. The Corps would have done well to omit the word "old" when describing measurement for payment of installation or reinstallation of seals. However, the Board need not decide whether the specification is ambiguous since both parties, contemporaneously with accomplishment with the work, interpreted the specifications to include payment for reinstallation of old or installation of new seals under Payment Item No. 12. There is no evidence that GCG relied on its "litigation interpretation" at the time of bid and GCG definitely did not rely on that interpretation when it performed the work and formulated its claim. (Findings 6, 8).

The Equitable Adjustment

Neither GCG nor the Corps actually measured the costs to perform the adjustable quantity, that is, the costs incurred to handle and prepare the last 150 linear feet of vertical seal materials. Both parties focused, for the most part, on a "representative sample" of vertical seals work. GCG allegedly compiled and the Corps estimated the costs to prepare and/or install 176 linear feet of vertical seal materials. While the Board is not entirely satisfied with that method of calculating the equitable adjustment, it is clear that GCG is entitled to an equitable adjustment. On this record, there is no better, fairer way to determine the monetary extent of the equitable adjustment than to derive it from the cost data used by both parties. *See C.F. Bean Corp.*, ENG BCA No. 4537, 86-3 BCA ¶ 19,283.

The Corps has not disputed that GCG is entitled to an equitable adjustment under the VEQ provision; it issued a unilateral modification to the contract to that effect. The factual aspects of proven allowable extra costs are addressed in the Board's quantum findings. A summary follows:

Labor	$ 2,271.60
Equipment	3,523.86
Materials	7,641.46
Subtotal	$13,436.92
Overhead—15%	2,015.54
Subtotal	$15,452.46
Profit—10%	1,545.25
Subtotal	$16,997.71
Bond—2.5%	424.94
TOTAL	$17,422.65

(Findings 21-31).

Delay

The balance of GCG's claim for money and time is related to delay. Absent proof of delay to the overall completion date caused by the quantity overrun, GCG may not recover for delay or obtain a time extension. *Bruno Law v. United States* [16 CCF ¶ 80,286], 195 Ct.Cl. 370 (1971); *Granite-Groves (JV)*, ENG

©1994, Commerce Clearing House, Inc.

Digitized by Google

BCA No. 5674, 93-1 BCA ¶ 25,475. If the specific work activity allegedly affected by the estimated quantity overrun was not shifted, delayed, or extended beyond the planned duration estimated by GCG for that work activity, no extra costs for delay could have accrued. It is GCG's burden to prove disruption or delay to the specific work activity as well as the overall project. *Gulf Constr. Group, Inc.*, ENG BCA No. 5850, *supra*.

The Board concludes that GCG has not proved delay to the vertical seals replacement work activity. GCG's planned duration for vertical seals work was about 42-44 days. The record shows that the work was actually accomplished in no more than about 27 days. Obviously, from a comparison of those durations, without more, the only conclusion is that there was no delay. (Findings 18-19).

Likewise, the Board is not convinced that overall project completion was adversely impacted by the vertical seals overrun. The vertical seals work was completed about two months prior to completion of the overall project. GCG has presented no analysis that shows how the vertical seals quantity overrun delayed the overall project alone or in conjunction with other delays to the project. (Findings 3, 19-20).

In its argument, GCG "submits that it took an additional twelve days to drill all the holes [in] the new seals." (Appellant's Post-hearing Brief at 4). It is true that those assertions were made. (Findings 19, 24). However, assertions are not proof. Even if true, the additional time to drill holes, alone, does not prove that the overall project was delayed or even that the specific work activity was extended. To be probative of delay, extra time to perform extra work must be interrelated and analyzed with the schedule as-planned and as-built, considering, among other things, planned and actual durations and work sequence as well as any other delays.

CONCLUSION

There is no dispute that the actual quantity performed was greater than 115% of the estimated quantity and that the Appellant is entitled to an equitable adjustment. Proven costs of the overrun amount to $17,422.65. Prior to submission of the claim, the Respondent allowed $13,575.00. The Appellant is entitled to the difference, $3,847.65, plus interest in accordance with the CDA and the Disputes provision of the contract from November 20, 1992, until paid. Neither delay nor delay-related costs were proved. The appeal is SUSTAINED IN PART.

[¶ 26,525] Gulf Construction Group, Inc.

ENG BCA Nos. 5944, 5945, November 23, 1993. Contract No. DACW64-90-C-0013.

Indefinite Delivery Contracts—Estimates by Government—Negligent Preparation.—A construction contractor could not utilize a negligence theory to obtain an adjustment for an underrun of certain estimated contract work items, because the contractor was adequately protected from the effects of inaccurate estimates under the contract's Variations in Estimated Quantity clause. The contractor received the agreed-upon unit price for all items ordered. In addition, a standard VEQ clause provided for an equitable adjustment for variances of more than 15 percent from contract estimates. These provisions effectively protected the contractor from the risk of overstated estimates. Moreover, even if a negligence theory were applicable, the only evidence of negligence that the contractor presented was the variance between the government's estimated and actual requirements. The existence of a variance does not, in itself, prove that the estimates were prepared negligently.

Indefinite Delivery Contracts—Price Adjustments for Variation—Proof of Harm.—A contractor was not entitled to additional compensation for an underrun of estimated-quantity, unit-priced construction work items, because the contractor could not demonstrate that it was harmed by the underrun. The contract's Variation in Estimated Quantity clause provided for an equitable adjustment for any increase or decrease in costs due solely to a variation above 115 percent or below 85 percent of the estimated quantity for unit-priced work items. Although the government ordered less than 85 percent of the estimated quantity of the work items, the contractor was unable to demonstrate that specific fixed costs in its bid were not recovered as a result of this underrun. The contractor's item price was unreasonably low, and it was benefitted rather than harmed by the underrun.

For the appellant: Smith, Gunn & Kaster, Baton Rouge, Louisiana, by Steven E. Sanders. For the government: Frank Carr, Chief Trial Attorney, Washington, D.C., and Daniel Keys III, Government Trial Attorney, Galveston, Texas.

Before SHERIDAN, PEACOCK, and SOLIBAKKE, Administrative Judges.

SHERIDAN,[1] Administrative Judge: In ENG BCA No. 5944, the Appellant seeks additional compensation in the amount of $21,078.74, as relief for an estimated quantity underrun based either on negligent preparation of the estimated quantity and the total cost to perform the actual quantity of a unit-priced payment item or pursuant to the Variation in Estimated Quantity provision of the contract.

In ENG BCA No. 5945, the Appellant seeks additional compensation for an estimated quantity underrun of a unit-priced payment item. The amount sought is $4,050.00, which is alleged to be an approximation of the unrecovered costs attributable to the quantity underrun. The Appellant's theory of recovery is based either on negligent preparation by the Respondent of the estimated quantity or pursuant to the Variation in Estimated Quantity provision of the contract.

The Respondent denies that any recovery is due in either appeal. The Respondent asserts that the Appellant has neither proved negligent preparation of estimated quantities nor any unrecovered fixed indirect costs attributable to the quantity underruns.

The appeals were not consolidated, but are decided together given the similarity of the issues. The Appellant submitted a consolidated pre-hearing memorandum, seriatim one-day hearings were conducted in Houston, Texas, and the Respondent filed a consolidated post-hearing brief.

FINDINGS OF FACT

The Contract

1. Contract No. DACW64-90-C-0013 (the contract) was awarded by the U.S. Army Engineer District, Galveston, Texas (the Respondent or Corps) to Gulf Construction Group, Inc. (the Appellant or GCG) on January 14, 1990. The contract work, to be performed on the Gulf Intracoastal Waterway, consisted of rehabilitation of the Brazos River Floodgates near Freeport, Texas, and the east gate of the east lock of the Colorado River Locks near Matagorda, Texas. (Consolidated Board Rule 4 Appeal Files and Hearing Exhibits for ENG BCA Nos. 5944 and 5945, Respondent's Exhibit 3 (ENG BCA Nos. 5944 and 5945, R.4, Exh. R-3)).

2. As awarded, the contract price was $1,249,360.00 (increased to $1,405,269.78 by contract modifications), the total estimated sum of 29 estimated quantity, unit-priced and fixed-price, lump sum payment items. The contract work included, *inter alia*, the following:

ENG BCA No. 5944: replacement of ladder rungs on existing ladders at the canal walls adjacent to the gates; payment Item No. 16 of the contract listed an estimated quantity of 41 ladder rungs to be replaced at a unit price of $10.00 each, yielding an estimated price of $410.00. (R.4, Exhs. R-3, R-3a, R-4; Tr. 272).

ENG BCA No. 5945: emergency removal of two temporary recess fenders and reinstallation of two gate sectors in the event of heavy rains or a flood on either the Brazos or Colorado River; payment Item No. 4 of the contract listed an estimated quantity of two such emergency occurrences at a unit price of $7,500.00 each, yielding an estimated price of $15,000.00. (R.4, Exhs. R-3, R-3a, R-4).

3. The Corps' notice to proceed was received by GCG on March 22, 1990. The contract specified 428 days for completion after receipt of the notice to proceed. Therefore, the original contract completion date was May 24, 1991. The performance period was extended a total of 51 days by modifications to the contract. The modified contract completion date was July 14, 1991. The work was substantially complete on August 26, 1991. Liquidated damages have been assessed by the Corps. (*Gulf Constr. Group, Inc.*, ENG BAA No. 5850, Finding 4;[2] *Gulf Constr. Group, Inc.*, ENG BCA No. 5961;[3] ENG BCA Nos. 5944 and 5945, R.4, Exhs. R-3a, R-4).

4. The contract included standard Contract Clauses typically found in Corps of Engineers construction contracts. The following are pertinent to resolution of the appeals:

a. Variation in Estimated Quantity (APR 1984) FAR 52.212-11:

If the quantity of a unit-priced item in this contract is an estimated quantity and the actual quantity of the unit-priced item varies more than 15 percent above or below the estimated quantity, an equitable adjustment in the contract price shall be made upon demand of either party. The equitable adjustment shall be based upon any increase or decrease in costs due solely to the variation above 115 percent or below 85 percent of the estimated quantity. If the quantity variation is such as to cause an increase in the time necessary for completion, the Contractor may request, in writing, an extension of time, to be received by the Contracting Officer within 10 days from the beginning of the delay, or within such further period as may be granted by the Contracting Officer before the date of final settlement of the contract. Upon the receipt of a written request for an extension, the Contracting Officer shall ascertain the facts and make an adjustment for extending the completion date as, in the judgement of the Contracting Officer, is justified.

b. Disputes (APR 1984) FAR 52.233-1.

(R.4, Exh. R-3).

5. When GCG formulated its bid price, the payment item prices did not reflect the cost that GCG anticipated spending on the work specified thereby. GCG prepared its bid for the entire contract work as a lump sum. For example, certain equipment was to be used throughout the life of the project; therefore, the cost of its use was calculated for the entire performance period. After all costs were similarly calculated, unit prices were entered on the bidding schedule solely for the purposes of receiving estimated payments as the work progressed. Costs were not allocated to specific payment items based on the projected cost of the work required by that payment item. (R.4, Exh. A-4; Tr. 275-82).

ENG BCA No. 5944: Ladder Rung Replacement

6. Certain paragraphs of section 2A of the Technical Provisions of the contract are relevant, in part, as quoted below.

1. Scope. The provisions of this section consist of furnishing all plant, labor, equipment and materials for performing the following work ....

* * * *

(11) Install stainless steel ladder rungs.

* * * *

8. MISCELLANEOUS REPAIRS TO GATE SECTORS. Repair items, including ... those in the following subparagraphs are items of repair work for which the need cannot be determined definitely until the sectors are taken out of the water. The quantities are based on experience with the Brazos River Floodgates and Colorado River Locks. It is considered reasonable to assume that these sectors will require similar work. If it is found to be necessary, the contract may be modified to provide for increases or decreases of the estimated quantities ....

(1) *Miscellaneous Welded Structural Reinforcement.* This item provides for miscellaneous repair ... of corroded ... ladder rungs ... using the typical details shown on the drawings ....

(R.4, Exh. R-4).

7. Contract Drawing No. S-1 included typical details showing existing and new ladder rungs. Existing $^3/_4$-inch diameter ladder rungs to be replaced were to be cut and removed. New ladder rungs were shown to be 18 inches long and formed from 1-inch diameter, round stainless steel (rounds). Each new ladder rung was to be inserted into the centered hole through and welded into two new stainless steel plates, one at each end of each new ladder rung. Each new plate, measuring $4 \times {}^1/_2 \times 4$ inches, was to be welded in place in the existing ladder recesses. (R.4, Exh. R-4; Tr. 272-74).

8. When GCG formulated its bid price of $10.00 per ladder rung, that amount did not reflect the cost that GCG anticipated spending on the work item. In fact, the ladder rung unit price did not cover the direct cost of materials, alone, much less labor, equipment, and markups. GCG expected to make no profit on ladder replacement work and would have lost money with respect to that item of work if it had performed 85% of the estimated quantity. (Finding 5, *supra;* R.4, Exh. A-4; Tr. 275-82). Derivation of the pertinent payment item price in this case, $10.00 per ladder rung, was not specifically explained.

9. At the Corps' direction, GCG replaced 26 ladder rungs, *i.e.*, about 63% of the estimated quantity of 41 ladder rungs. (R.4, Exhs. A-4, A-6, A-7; Tr. 271-73).

10. By letter dated September 27, 1991, GCG requested an adjustment in the unit price for ladder rung replacement pursuant to the Variation in Estimated Quantity

Digitized by Google

(VEQ) provision of the contract. A cost breakdown, materials invoices, and a computer listing of various costs were attached to the letter. The cost breakdown was alleged to be a compilation of all costs to replace 26 ladder rungs, totaling $21,078.74, or about $810.72 per ladder rung. (R.4, Exh. A-4; Tr. 273).

11. In a letter dated October 21, 1991, the Corps Administrative Contracting Officer (ACO) declined to allow an equitable adjustment in the ladder rungs replacement price. The ACO acknowledged the quantity underrun but took the position that the VEQ provision did not allow contract payment items to be repriced in an underrun situation unless GCG could show "certain fixed costs that were not recovered because [GCG] did not perform" the underrun quantity of nine ladder rung replacements (85% of the estimated quantity of 41 is 35, or nine more than the quantity of 26 actually performed). The ACO also wrote that "if [GCG] can prove that any [unrecovered] fixed costs were contained in [its] bid price (such costs) will form the basis for the equitable adjustment." (R.4, Exh. A-7).

12. In a letter dated October 24, 1991, GCG resubmitted the matter as a claim to the Contracting Officer. (R.4, Exh. A-1).

13. In a Contracting Officer decision dated February 3, 1992, the claim was denied entirely. The Contracting Officer, as the basis for his denial, adopted and incorporated the ACO's letter dated October 21, 1991, in its entirety. (R.4, Exh. A-8).

14. GCG appealed the Contracting Officer's decision to the Board by counsel's letter dated March 9, 1992. (R.4, Exh. R-1).

15. At the hearing, GCG's President testified that materials were bought piecemeal, at an increased cost, with some material left over. The quantities and dates listed on the materials invoices reveal that sufficient bulk lengths of stainless steel rounds to install about 100% of the estimated quantity and enough bulk stainless steel plate materials to install well over 115% of the estimated quantity had been purchased by June 1991. In August 1991, an additional quantity of rounds and 14 pre-cut, pre-drilled plates were purchased. The supplier's invoices indicated that the materials could be returned for credit. (R.4, Exh. A-4; Tr. 279-80). There is no evidence that GCG made any attempt to return unused materials or calculated the cost benefit of retaining the excess materials.

16. GCG's President implied, in his hearing testimony, that unspecified project delays caused ladder rung replacement work to be performed at or near the end of the project. He testified that dedicated labor costs for the project superintendent, the contractor quality control representative, and certain travel expenses for workers, normally allocated to job overhead, were directly recorded as a labor cost for replacement of ladder rungs because most of the ladder rungs were installed at or near the conclusion of the job. For the same reason, he testified, direct costs for equipment were increased because equipment was dedicated solely to the task of ladder rung replacement at or near the conclusion of the job. (Tr. 273-82).

17. There is no probative evidence that the quantity underrun caused any delay. Replacement of ladder rungs was scheduled by GCG to occur during three separate time periods as each of the three gates was rehabilitated. As originally scheduled, the final segment of ladder rung replacement work was to be completed about five weeks prior to completion of the overall project. Later versions of GCG's schedule indicated that ladder rung replacement work was slipped to later dates such that the final segment of the work was to occur during the last 17 days of the project, concurrent with the final removal and the return of temporary recess fenders to the Corps as well as reinstallation of the last gate. (ENG BCA No. 6015, R.4, Exhs. A-12, R-23 [4]). The schedule modification was not shown to be connected to ladder rung replacement work.

18. When questioned at the hearing by the Corps counsel, GCG's President was unable to identify any unrecovered "fixed indirect costs" that were attributable to the quantity underrun. (Tr. 276-77)

19. At the hearing, the ACO elaborated on the Corps position on "fixed indirect costs." In his view, the VEQ provision was intended to allow recovery of fixed indirect costs not recovered by performing and being paid for the actual quantity, if less than 85% of the estimated quantity. Fixed indirect costs could include, for example, that portion of the mobilization and demobilization costs for the entire job or home office overhead costs allocable to ladder rung replacement

[4] The parties agreed that evidence from all appeals under the contract may be considered in any of the appeals. (ENG BCA No. 6015, Tr. 26-27).

©1994, Commerce Clearing House, Inc.

Digitized by Google

work but which costs were not fully recovered unless at least 85% of the estimated quantity was performed. Any recovery could not include direct costs. (Tr. 286-87).

20. The ACO determined that the unit price for ladder rung replacement was for payment purposes only and that it had little or no relation to the actual cost of the work. However, he attempted to estimate fixed indirect costs included in the unit price by first estimating direct costs and then subtracting such costs from the unit price. The remainder, he analyzed, was fixed indirect costs. Of course, that calculation rendered zero fixed indirect costs because the unit price was less than the estimated direct costs. By that method, the ACO concluded that the Appellant was not entitled to any recovery. (Tr. 287-96).

ENG BCA No. 5945: Emergency Occurrence Work

21. A Government Estimate was prepared and six offers were submitted prior to award of the contract. The estimated total bid prices for Payment Item No. 4, two emergency occurrences, were as follows, in ascending order:

GCG (Bidder No. 3)	$15,000.00
Bidder No. 1	30,000.00
Bidder No. 4	32,000.00
Bidder No. 2	40,000.00
Bidder No. 6	60,000.00
Government Estimate	84,204.00
Bidder No. 5	89,200.00

(R.4, Exh. A-8)

22. A portion of paragraph 7 of section 2A of the Technical Provisions of the contract, as quoted below, is relevant.

> 7. REMOVAL AND REINSTALLATION OF SECTORS.
>
> * * * *
>
> 7.4 *Emergency Reinstallation and Removal of Sectors.* In the event of heavy rains or anticipated floods on the respective Brazos or Colorado River, the Contractor shall be prepared to put the sectors back into service within 48 hours after he is so directed by the Contracting Officer. The work includes the removal of the recess fenders, reinstallation of sectors with or without seals but with a minimum of three (3) complete lines of fenders, restoring the sectors to normal operating conditions for the duration of the flood, then removing the sectors and giving each a thorough washdown with fresh water before resuming the work to be done.... The temporary emergency reinstallation of sectors is an item of work that will only be used when, and if, in the opinion of the Contracting Officer, such action is warranted to prevent excessive deposits of silt in the Gulf Intracoastal Waterway during floods.

(R.4, Exh. R-4).

23. GCG's President formulated the bid price of $7,500.00 per emergency occurrence. He anticipated (and bid accordingly), based on the specifications, a small probability of being directed by the Corps to install the gates on an emergency basis. He interpreted the specifications (especially the requirement to perform within 48 hours) to mean that GCG would have to be "on standby," "on call," and "like a contingency to be ready and available to do the work" at all times. He knew that the work site was a "hurricane-prone area" of the Texas coast. (Tr. 309-17, 325).

24. GCG's President determined that the same labor and equipment resources could be used to perform the emergency occurrence work as was performing all other contract work. Those resources would be on hand throughout the life of the project and in the event of an emergency occurrence. Therefore, the cost of those resources was included elsewhere in GCG's bid. The one exception was the necessity for an additional barge-mounted crane. To obtain that item of equipment if required, a verbal arrangement was made with one of GCG's subcontractors and other back-up plans were coordinated with other nearby marine equipment owners, all at no cost unless the work was actually directed. The emergency work was never directed and the additional barge-mounted crane neither stood idle for this purpose nor accrued any standby costs. (R.4, Exh. A-1; Tr. 310-15, 336-37).

25. Unspecified preparedness costs were anticipated by GCG on account of the emergency occurrence work. On that account, an unspecified amount for overhead was added to the overall bid. The payment item amount for emergency occurrence work was entered on the bidding schedule by GCG, along with the other bid prices, solely for "draw purposes," *i.e.*, to obtain periodic estimated payments. (Finding 5, *supra;* Tr. 310, 324). Derivation of the pertinent payment item price in this case, $7,500.00 per emergency occurrence for an estimated two occurrences, was not specifically explained.

26. Procurement of materials and certain services for the job was scheduled and coor-

Digitized by Google

dinated by GCG such that the 48-hour deadline for an emergency occurrence could be met, if directed. Unspecified and unproven higher costs allegedly were paid by GCG for local rehabilitation of one of the gate hinge castings and pins and for shorter planned durations for certain subcontractor work. GCG claimed it had to "work around [the] 48-hour time frame on everything [it] did." No specific costs in support of these assertions were included in the claim. (R.4, Exhs. A-1, R-7; Tr. 312-19).

27. The Corps never directed performance of the emergency occurrence work during performance of the contract. (Complaint & Answer, ¶ 8).

28. By letter dated September 16, 1991, GCG requested payment, pursuant to the VEQ provision of the contract, on account of the quantity underrun. GCG demanded $4,050.00, comprised of 27% (15% overhead and 12% profit) of $15,000.00 (the full payment amount for the estimated quantity of two emergency occurrences). GCG asserted that its overhead and profit "were distributed throughout [all] bid items" and that it "maintained the equipment and personnel readiness along with any material necessary for an emergency reinstallation of the gates throughout the contract as specified." (R.4, Exh. A-1).

29. GCG did not quantify any particular overhead costs which it claims were incurred to maintain a state of readiness to perform in the event of an emergency occurrence. GCG's President testified that GCG's audited overhead rate was 24%; therefore, he believed the Corps would accept a claim for a portion (15%) of GCG's overhead costs related to the unit price. He explained that the claimed profit (12%) was a substitute for the inability to isolate specific costs. The alleged extra costs were described by GCG's President generally as long distance phone calls, time for preparation of correspondence, and time for coordination efforts by GCG personnel. (Tr. 319-29). There is no documentation or further explanation of the claimed costs.

30. In a letter dated September 24, 1991, the Corps ACO declined to allow an equitable adjustment for the emergency occurrence work. The ACO acknowledged the quantity underrun but took the position that the information submitted by GCG provided "no justification that you are entitled to any additional compensation since no work was performed under the [payment] item." (R.4, Exh. A-5).

31. In a letter dated September 24, 1991, GCG resubmitted the matter as a claim to the Contracting Officer. (R.4, Exhs. A-6, R-7).

32. In a Contracting Officer decision dated February 3, 1992, the claim was denied entirely. The Contracting Officer noted that emergency occurrence work was not performed and that GCG now wanted "to collect [overhead] and profit on what in essence was a contingent requirement in the contract specifications that was never performed." The Contracting Officer concluded that in the case of an underrun, certain "fixed indirect costs" may be recovered, but that GCG submitted no evidence of such costs "included or specifically associated" with the contract price for the work. (R.4, Exh. A-7).

33. GCG appealed the Contracting Officer's decision to the Board by counsel's letter dated March 9, 1992. (R.4, Exh. R-1).

34. At the hearing, a Corps project engineer/cost estimator elaborated on the Corps position on "fixed indirect costs." After the appeal was taken, he prepared an estimate of the direct costs to perform the emergency occurrence work. His purpose was to analyze whether any recoverable costs, that is, unrecovered indirect costs, could be justified. He analyzed that if his estimate of the direct costs was subtracted from the unit price, the remainder would represent the indirect costs. Those costs could then be examined to identify any recoverable costs. (R.4, Exh. R-10; Tr. 340-41).

35. The Corps post-appeal estimate of GCG's direct costs, only, to perform the emergency occurrence work, using actual direct costs recorded by GCG for Brazos River gate removal and reinstallation performed in the normal course of the contract work, not as emergency work, amounted to almost $78,000.00. Subtracting that amount from the price for two emergency occurrences ($15,000.00) is, of course, zero. The Corps cost estimator concluded that it was "impossible to tell" from that calculation "what the indirect cost would be" for performance of the emergency occurrence work. He also concluded that the bid price was unbalanced, was less than the cost that would be required to perform the work, and that the indirect costs must have been included elsewhere in the bid. His ultimate conclusion was that there was no justifiable basis for the claim. (R.4, Exh. R-10; Tr. 342-55).

36. On further examination and questioning during the hearing, the Corps cost esti-

©1994, Commerce Clearing House, Inc.
Digitized by Google

mator agreed that any of GCG's direct costs, indirect costs, profit, or some combination of costs or profit to perform the emergency occurrence could be elsewhere in the bid. (Tr. 353, 361-62).

37. As found above, the ACO acted based on certain views regarding "fixed indirect costs" and the VEQ provision. In response to the explanation, at the hearing, of GCG's bidding methodology, that the bid price included only a small contingency for overhead-type costs, with direct and other costs included elsewhere in the bid, his opinion was that GCG did not bid in accordance with the contract specifications in that the price did not include all the costs to perform the work. However, he did agree that the unrecovered costs described by GCG's President in his testimony, if proved, could be characterized as unrecovered fixed indirect costs. (Findings 18-20, 23-26, 29, *supra;* Tr. 366-67, 375-76).

DECISION

The Parties' Positions

GCG argues in both appeals that the Corps estimated quantities were "faulty" and the Corps "should be estopped from requiring [GCG] to assume any portion of the excess over or the shortfall under the estimated quantities." The Corps responds that there is no proof of a negligently estimated quantity in either case. In the alternative, in both appeals, GCG asserts the right to an equitable adjustment pursuant to the Variation in Estimated Quantity (VEQ) provision of the contract, on account of quantity underruns. The Corps posits that there is no proof of fixed costs included in either of GCG's pertinent bid and unit prices, and no proof of recoverable fixed indirect costs.

ENG BCA No. 5944: Ladder Rung Replacement

GCG seeks a complete repricing of the payment item for ladder rung replacement work. The claim amount is calculated using GCG's alleged total costs to perform the actual quantity of ladder rung replacements. The actual quantity performed amounts to about 63% of the estimated quantity.

ENG BCA No. 5945: Emergency Occurrence Work

GCG seeks payment of overhead and lost profit for the non-performance of work specified under the payment item for emergency occurrences of reinstallation and removal of waterway gates in the event of high water or a flood, if warranted, as determined and directed by the Contracting Officer, to prevent excessive deposits of silt in the Gulf Intracoastal Waterway.

Jurisdiction

The contract is subject to the Contract Disputes Act, 41 U.S.C. §§ 601-13 (1988, Supp. II 1990, & Supp. III 1991). In 1991, both disputes arose between the parties concerning the claims which underly the appeals. GCG submitted written claims for sums certain (ENG BCA No. 5944, $21,078.74; ENG BCA No. 5945, $4,050.00) and demanded Contracting Officer decisions. The Contracting Officer denied both claims. In both instances, GCG timely appealed to the Board. (Findings 4b, 10-14, 28, 30-33). The Board has proper subject matter jurisdiction.

Negligently Estimated Quantities

Citing *Chemical Technology, Inc. v. United States* [28 CCF ¶ 81,196], 227 Ct.Cl. 120, 645 F.2d 934 (1981); *John Murphy Constr. Co.*, AGBCA No. 418, 79-1 BCA ¶ 13,836; and *Integrity Management Int'l., Inc.*, ASBCA No. 18289, 75-1 BCA ¶ 11,235, *aff'd on recon.*, 75-2 BCA ¶ 11,602; GCG argues that the Corps' faulty estimates should estop the Government "from requiring [GCG] to assume any portion of the ... shortfall under the estimated quantities." Appellant's Pre-Trial Hearing Memorandum at 2. Although not cited by the Appellant, all three decisions rely on the authority of *Womack v. United States* [12 CCF ¶ 81,795], 182 Ct.Cl. 399, 389 F.2d 793 (1968).

The point of *Womack* and the other decisions is that the Government cannot leave a contractor uncompensated for work that was required to be performed where the Government negligently understated the estimated volume of the work to the contractor as the basis for the contractor's bid or price proposal. None of the cited cases involved a contract which included the standard ASPR/DAR/FAR VEQ provision as is found in GCG's contract.

Under construction contracts which include the standard VEQ provision, such as GCG's contract, a contractor is paid the unit price, as bid or proposed and accepted by the Government, for every unit performed. *B&L Constr. Co.*, ENG BCA No. 5772, 91-1 BCA ¶ 23,612. In addition, the contractor may receive an equitable adjustment if an actual quantity variation exceeds 15% of the estimated quantity and causes an increase in the contractor's costs or time for performance. The contract, by way of the standard VEQ provision, protects the contractor from the

Digitized by Google

risk of overstated or understated estimated quantities.[5] (Finding 4a).

In any event, even if the negligently estimated quantities theory were considered applicable to these appeals, the Corps correctly argues that GCG has presented no evidence that tends to prove that the quantity estimates were negligently prepared. GCG merely asserts that the Corps faulty estimates are evidenced by "the overall amounts of ... underrun." Appellant's Pre-Trial Hearing Memorandum at 2. However, cases relying on *Womack, supra*, hold that disparities in estimates, alone, do not prove that estimated quantities were prepared without due care. *Medart, Inc. v. Austin* [38 CCF ¶ 76,349], 967 F.2d 579 (Fed. Cir. 1992); *Emerald Maintenance, Inc.*, ASBCA No. 29948, 89-3 BCA ¶ 22,127.

Variation in Estimated Quantity

The usual measure of an equitable adjustment is the reasonable increase or decrease in the contractor's net costs (to which a profit allowance is applied) caused by the compensable event for which the equitable adjustment is due, *e.g.*, a change or differing site conditions. This process is variously described as keeping the contractor whole or maintaining the contractor's profit or loss position as it was before the occurrence of the compensable event.

The VEQ provision of the contract, as here applicable, states that if the actual quantity of a unit-priced item varies by more than 15% below the estimated quantity, an equitable adjustment in the contract price and time for performance will be made upon demand of either party. Any equitable adjustment is to be based upon proof by GCG of an increase in costs due solely, that is, attributable to or caused by, the quantity variation below 85% of the estimated quantity. Concerning ENG BCA No. 5944, only, if GCG proves that the quantity variation caused an increase in the time necessary for completion, a time adjustment may also be due. (Finding 4a).

In general, where a contractor seeks a cost increase pursuant to the VEQ provision for a quantity underrun, the equitable adjustment usually reflects unrecovered fixed costs attributable to non-performance of the adjustable or underrun quantities. *Savoy Constr. Co.*, ENG BCA No. 3789, 78-1 BCA ¶ 13,138; *C.W. Roberts Constr. Co.*, ASBCA No. 17070, 73-2 BCA ¶ 10,108 (contractor recovered the cost of inefficient labor and unnecessary travel expenses during the last nine weeks of the performance period on account of an underrun below 85% of an estimated quantity for painting work).

The effect of procuring construction services by use of unit-priced payment items based on estimated quantities is to establish a range of revenue the contractor can expect for the work called for by the payment item. Recovery for a quantity underrun generally may not exceed the contract price of the adjustable or underrun quantities, *i.e.*, the adjustable quantities multiplied by the unit price. Assuming reasonably priced payment items, the contractor's profit or loss position is maintained by subtracting (1) the costs that would have been incurred to perform the adjustable quantities, *i.e.*, the unperformed unit-priced work below 85% of the estimated quantity, from (2) the revenue that such performance would have provided to the contractor at the unit price agreed upon in the contract.

In these appeals, the Board is unable to assume or infer that reasonably priced payment items were bid by GCG. On the contrary, GCG bid the work without regard for the specific costs of the work to be performed under particular payment items. GCG substantially underpriced the work items pertinent in these appeals. (Findings 5, 8, 20-21, 23-25, 34-35).

In ENG BCA Nos. 5944 and 5945, nonperformance of the adjustable quantities was actually greatly beneficial to GCG on account of its understated unit prices on the two items involved. The foregoing formulation for an equitable adjustment would result in no increased payments to GCG.

[5] From this Board's reading of the *John Murphy* decision, it is not entirely clear whether that contractor would have received payment for each unit performed under unit-priced, estimated-quantity payment items in its contract. That contract included a quantity variations-type provision; however, it never became operative because the actual quantity variations did not exceed the 25% range specified therein. The AGBCA found that the Government solicited bid prices based on estimated quantities which it knew to be incorrect. The apparent reason for the Board's decision was that it would not allow the Government to hold the contractor to the unit prices where there existed intentional, as compared with negligent, understatement of quantities. Such circumstances are not present in these appeals.

ENG BCA No. 5944: Ladder Rung Replacement

A. *General Considerations*

This discussion is subject to the general rule, formulated above, that any recovery may not exceed the contract price for the adjustable or underrun quantities. GCG seeks over $21,000.00 for an underrun of nine ladder rung replacements. If the underrun quantities had been directed by the Corps and performed by GCG, it would have received a total of $90.00. (Findings 2, 9-11).

The claim is audacious and is its own refutation. The unit price of $10.00 is totally unrealistic. The claim amounts to over $800.00 per unit. It is clear that rather than suffering a financial detriment by not performing the adjustable quantities, GCG greatly benefitted by performing as few ladder rung replacements as it did. Performing additional ladder rung replacements would have increased GCG's loss, if one compares in isolation the actual cost of the work and the contract unit price.

In any event, GCG's claim incorrectly focuses on the costs to complete 26 ladder rung replacements rather than properly attempting to show unrecovered costs attributable to the underrun of nine ladder rung replacements. The facts of this case also allow for examination of particular elements of cost. Such an examination reveals that the total cost claimed by GCG principally is the result of unspecified delays not attributable to the quantity underrun, as will be discussed below. We look below to three direct cost items alleged to have been affected by the underrun.

B. *Extra Material Costs*

GCG claims material costs. If excess material was purchased but not used on account of the quantity underrun, GCG may be entitled to the direct costs plus markups for the excess, less any credit for returned materials. To this extent, the Corps' position, that *only* unrecovered "indirect fixed costs" but no direct costs are recoverable, is too limited. (Findings 18-20, 34-37). Analysis of recoverable costs should not be fixated upon, or limited by, how the costs are best classified in an accounting sense. Most often, any recovery will consist primarily of unrecovered fixed indirect costs; however, as here, recoverable costs may also include direct costs that generally vary by unit of work. Semivariable costs also may, in an appropriate case, be considered.

GCG's President testified that materials were purchased piecemeal, at an increased cost, with some material left over. However, the Board is not persuaded that piecemeal purchases were required because of the quantity underrun. GCG had sufficient bulk quantities of rounds and plate materials in June 1991. Much of the work was performed in August 1991, and more material was purchased at that time. Custom cut and drilled stainless steel plates were purchased in August 1991, in contrast with bulk purchases through June 1991. Even though the materials supplier allowed returns, there is no evidence that GCG made any attempt to return unused materials or calculated the cost benefit of retaining the excess materials. (Findings 7, 15).

No explanation was offered to support the necessity for the purchase of an additional quantity of rounds in August 1991. It would appear that the custom plates were purchased as an expedient in August 1991, to finish quickly and avoid additional liquidated damage assessments. No effort to mitigate any cost increase by availing itself of the opportunity to return materials was evidenced. No credit for their return has been offered. GCG has failed to prove that any excess materials costs resulted from the quantity underrun and that it reasonably mitigated any resultant extra costs. (Findings 3, 15).

C. *Extra Labor Costs*

Claimed labor costs for the project superintendent, contractor quality control representative, and travel costs, which would normally be job overhead costs, but which here were allegedly dedicated full-time to ladder replacement work, resulted from unspecified delays not related to that work. Ladder rung replacement work was not originally scheduled to occur at the end of the job. Schedule revisions after the work had begun, which were not shown to have been caused by ladder rung work, shifted the ladder rung work to a later time, relative to other work. (Findings 16-17). To the extent that extra labor costs or the labor component of job overhead was increased on account of delay, such delay has not been shown to have resulted from the quantity underrun.

D. *Extra Equipment Costs*

Claimed equipment use costs for equipment allegedly dedicated full-time to ladder rung replacement work were also the result of delays unrelated to underrun quantities in that work. (Findings 16-17). There is no

Digitized by Google

proof that equipment costs were increased as a result of the quantity underrun.

ENG BCA No. 5945: Emergency Occurrence Work

A. *General Considerations*

Under the contract, GCG was entitled to be paid $7,500.00 for each ordered emergency reinstallation and removal of gate sectors. GCG chose to structure its bid by putting most of the costs for such work in other bid items. It did so because its President considered the emergency work to be an unlikely contingency. (Findings 2, 23-25).

GCG's claim of $4,050.00 for *not* being ordered to do emergency work is based on an allocation of arbitrarily selected overhead and profit percentages to the total payment item price of $15,000.00 (two estimated occurrences of emergency work) that GCG would have received if the work had been ordered. However, it is clear that the *cost* to GCG of such work would greatly have exceeded $7,500.00 per occurrence. There is evidence that the cost to GCG would have been at least double GCG's unit price. Direct costs alone could have been as much as $78,000.00 per occurrence. (Findings 21, 27-29, 34-35).

Simply stated, GCG was unable to prove that any costs were incurred as a result of not being ordered to perform the emergency work. (Findings 24, 26, 29). On the contrary, GCG benefitted greatly from not having to perform the work at a loss. Below, we look to more specific difficulties with GCG's claim formulation.

B. *Overhead*

GCG seeks a portion of its overhead (15% rather than the alleged audited rate of 24%) it claims should be allocated to the pertinent bid item. The theoretical premise of the claim formulation is that the bid price was calculated in the normal manner for construction work: estimated direct costs for labor, equipment, and materials, plus markups. Based on that pricing structure, the claimed equitable adjustment is founded on GCG's allegation that it performed some of the necessary overhead-type activities in preparation for performance of the emergency occurrence work and should recover some of the overhead-type costs. (Findings 28-29).

The claim's premise is contrary to the facts. GCG's specific bid amount for the emergency occurrences bore no proven relationship with the costs which would actually be incurred to perform the emergency occurrence work. (Findings 5, 21, 23-25). The Board will not allow recovery of overhead costs based on an arbitrary percentage allocation which lacks a basis in fact. Any costs arguably incurred with respect to that work were not specifically explained or quantified with sufficient precision to sustain GCG's burden of proof. Moreover, any overhead costs possibly incurred in relation to preparations for the emergency work appear to have been *de minimis* as well as unquantified and insufficiently documented.

C. *Profit*

The claimed profit is similar to the claimed overhead in that it is presented as an arbitrary markup on unproven costs. The same factual problems identified above in connection with overhead are present here.

CONCLUSION

There is no dispute in either appeal that the actual quantity performed was less than 85% of the estimated quantity. The Appellant would be entitled to an equitable adjustment to the extent that any unrecovered costs attributable to non-performance of the adjustable or underrun quantities had been proved. However, the Appellant failed to prove any such costs. In fact, performance of more ladder rung replacement or any emergency occurrence work would have been to GCG's financial disadvantage. No equitable adjustment is due.

ENG BCA Nos. 5944 and 5945 are DENIED.

[¶ 26,526] Jake Sweeney Auto Leasing, Inc.

PSBCA Nos. 3165, 3167, 3168, 3174, 3176, 3180-82, 3194, 3198, November 12, 1993. Contract Nos. 381793-86-V-A045, 381793-86-V-A033, 174038-85-W-A026.

Contract Types—Vehicle Rentals—Burden of Proof.—A contractor was not entitled to recover for dents and other damage that occurred while its vehicles were on lease to the U.S. Postal Service, because the contractor was unable to meet the applicable burden of proof, i.e., establishing that the damage was caused by government personnel and exceeded

©1994, Commerce Clearing House, Inc.
Digitized by Google

ordinary wear and tear. The board declined to alter this burden of proof on the basis of the contractor's two arguments concerning the proper scope of the government's liability. The contractor maintained that a contract provision absolving the government of liability for ordinary wear and tear was unenforceable and that a vehicle rental contract was a bailment for mutual benefit, which subjected the government to a presumption that it had caused any damage that occurred while the vehicles were in its possession. The board noted that it had considered and rejected both of these arguments in a prior appeal.

For the appellant: Teri Geraci. For the government: John T. Farrell, Jr., United States Postal Service, Philadelphia, Pennsylvania.

Before BROCHSTEIN, COHEN, and FINN, Administrative Judges.

BROCHSTEIN, Administrative Judge: Appellant, Jake Sweeney Auto Leasing, Inc., has appealed from contracting officer's decisions denying, in whole or in part, its claims for damage to vehicles leased by Respondent, United States Postal Service. These appeals are being decided on the record in accordance with 39 C.F.R. § 955.12.

FINDINGS OF FACT

1. Contract No. 381793-86-V-A045 was awarded to Appellant on February 14, 1986, and covered the lease of eight passenger vehicles for use in Park & Loop service at six stations in Cincinnati, Ohio. The term of the contract was from March 23, 1986, through October 25, 1991. (PSBCA Nos. 3165, 3168, 3174, 3176 and 3198 Appeal File Tab (3165 AF A)).

2. Contract No. 381793-86-V-A033 was awarded to Appellant on November 25, 1985, and covered the lease of five passenger vehicles for use in Park & Loop service at the main office and Fort Thomas Branch office in Newport, Kentucky. The term of the contract was from December 21, 1985, through October 21, 1991. (PSBCA Nos. 3167 and 3180-82 Appeal File Tab (3167 AF A)).

3. Contract No. 174038-85-W-A026 was awarded to Appellant on August 14, 1985, and covered the lease of one passenger vehicle for use in Park & Loop service in Brandenburg, Kentucky. The term of the contract was from August 17, 1985, through August 16, 1991. (3194 AF A).

4. Each of the contracts contained the July 1980 version of PS Form 7476, "U.S. Postal Service, General Provisions for Vehicle Hire Contracts." Clause GP-6 of the General Provisions contained the following relevant language:

LIABILITY PROVISIONS

(a) *Contractor's Vehicles.* The Postal Service shall be responsible for loss of, or damage to, the Contractor's vehicles while in its custody only when caused by the act or negligence of any officer or employee of the Postal Service acting in the scope of his employment .... In no event shall the Postal Service be responsible for ordinary wear and tear. (AF A).

5. Through a series of claims dated October 2, 1991 (PSBCA No. 3194 only) and December 2, 1991, Appellant sought the cost of repairing damage to ten of the vehicles, which damage was alleged to have occurred during the contract term. As the basis for each claim, Appellant stated substantially the following:

> USPS had physical possession of vehicle. Damage was not present when vehicle was delivered. No reports have been submitted by USPS to explain damages.

Each of the claims was accompanied by two repair estimates, the lower of which reflected the amount of the claim. (AF B).

Contract No. 381793-86-V-A045

PSBCA No. 3165—Vehicle No. 12002

6. In this appeal, the Form 4577, "Leased Vehicle Condition Report," executed by both parties at the time the vehicle was returned, showed a small dent in the right side door and a small dent in the rear. Appellant's claim, in the amount of $113.00, sought payment for repairs to the left rear quarter panel. In a final decision dated February 7, 1992, the Contracting Officer denied the claim on the basis that it was not possible to determine the cause of the damage or to conclude that the damage exceeded ordinary wear and tear. (3165 AF D, B, E).

PSBCA No. 3168—Vehicle No. 11206

7. In this appeal the Form 4577 noted damage to the rear of the left side of the vehicle. A photograph of the area appeared to show chipped paint and some marks which might be paint damage, but the record contains no further explanation of the photograph. Appellant's claim, in the amount of $113.00, sought payment for repairs to the same area. The Contracting Of-

Digitized by Google

ficer, in a decision dated February 7, 1992, denied the claim on the basis that it was not possible to determine the cause of the damage or to evaluate the damage as exceeding ordinary wear and tear. (*Id.*).

PSBCA No. 3174—Vehicle No. 11146

8. The Form 4577 in this appeal showed small dents in the front of the left side and on the hood. Photographs accompanying the claim are consistent with the information on the Form, but provide little, if any, useful information. Appellant's claim, in the amount of $199.00, sought payment for damage to the left front fender and hood. In a decision dated February 7, 1992, the Contracting Officer allowed the claim in the amount of $99.50 for damage to the hood, but disallowed the balance on the basis that he could not determine the cause of the damage or determine that it was in excess of ordinary wear and tear. (*Id.*).

PSBCA No. 3176—Vehicle No. 11203

9. In this appeal, the Form 4577 noted damage to the right front of the vehicle. Appellant's claim, in the amount of $130.00, sought payment for the cost of replacing the vehicle's front valance [spoiler]. In a final decision dated February 7, 1992, the Contracting Officer conceded that damage to the valance was outside ordinary wear and tear but denied the claim on the basis that Appellant had submitted no evidence that the damage had been caused by the act or negligence of a Postal Service employee. (*Id.*).

PSBCA No. 3198—Vehicle No. 11364

10. The Form 4577 in this appeal noted damage to the front spoiler and Appellant's claim, in the amount of $130.00, sought payment for replacing the same part. In a final decision dated February 7, 1992, the Contracting Officer conceded that a broken valance was outside ordinary wear and tear but denied the claim on the basis that Appellant had not shown that the damage was caused by the act or negligence of a Postal Service employee. (*Id.*).

Contract No. 381793-86-V-A033

PSBCA No. 3167—Vehicle No. 11222

11. In this appeal, the Form 4577, "Hired/Borrowed Vehicle Condition Report," noted a dent in the left front fender and a small dent in the right door. Appellant's claim, in the amount of $194.00, sought payment for repairs in the same locations. In a final decision, dated February 3, 1992, the Contracting Officer denied the claim on the basis that the damage had not been shown to have been caused by negligence of Postal Service personnel or to have been in excess of ordinary wear and tear. (3167 AF D, B, E).

PSBCA No. 3180—Vehicle No. 11223

12. The Form 4577 in this appeal noted small scratches at the rear of the left and right sides of the vehicle. Appellant's claim, in the amount of $128.00, sought the cost of making repairs in the same areas. In a final decision dated February 3, 1992, the Contracting Officer denied the claim on the basis that the damage could not be determined to be the result of negligence of Postal Service personnel or to be in excess of ordinary wear and tear. (*Id.*)

PSBCA No. 3181—Vehicle No. 11220

13. In this appeal, the Form 4577 showed a dent in the left front fender, dents in the front of the vehicle, and a broken spoiler. Appellant's claim, in the amount of $244.60, covered the cost of repairing the left front fender and replacing the spoiler. In a final decision, dated February 3, 1992, the Contracting Officer denied the claim in its entirety. The Contracting Officer concluded that it was not possible to determine that the damage to the left front fender was caused by the negligence of Postal Service personnel or that it was in excess of ordinary wear and tear. As to the broken spoiler, the Contracting Officer conceded that the damage was outside ordinary wear and tear, but denied the claim on the basis that Appellant had not submitted evidence that the damage was caused by the act or negligence of Postal Service employees. (*Id.*).

PSBCA No. 3182—Vehicle No. 11221

14. The Form 4577 in this appeal showed a dent in the rear of the left side and a broken spoiler. Appellant's claim, in the amount of $238.60, sought payment for repairing the left quarter panel and replacing the spoiler. In a final decision, dated February 3, 1992, the Contracting Officer denied the claim. The portion related to quarter panel damage was denied on the basis that it was not possible to determine that the damage was in excess of ordinary wear and tear and had been caused by the negligence of Postal Service personnel. As to the broken spoiler, the Contracting Officer agreed that the damage was in excess of ordinary wear and tear, but denied the claim on the basis that Appellant had not shown the damage to

©1994, Commerce Clearing House, Inc.
Digitized by Google

have been caused by the act or negligence of Postal Service employees. (*Id.*).

Contract No. 174038-85-W-A026

PSBCA No. 3194—Vehicle No. 11126

15. In this appeal, the Form 4577 noted scratches on the front and rear bumpers and on the right side, a dent in the front of the vehicle, faded paint, and a torn driver's seat. Appellant's claim, in the amount of $156.00, sought payment for repairing damage to the right quarter panel and front bumper. In a final decision dated February 3, 1992, the Contracting Officer denied the claim on the basis that the damage had not been shown to have been in excess of ordinary wear and tear or to have been caused by the negligence of Postal Service employees. (3194 AF D, B, E).

DECISION

In its Complaints,[1] Appellant argues that these contracts are mutual benefit bailment contracts under which Respondent, as bailee, is subject to a presumption that any damage to the bailed property was caused by Respondent's negligence. Appellant also argues that terms of the "Liability Provisions" [Finding 4] which limit Respondent's liability with respect to ordinary wear and tear are unenforceable. These arguments have been considered and rejected by this Board in *Jake Sweeney Auto Leasing, Inc.*, PSBCA Nos. 3091-3094, 3096, 3098, 3122, 3125, 93-1 BCA ¶ 25,363, where we concluded that the presumption urged by Appellant was inconsistent with the contract language and that the limitation on liability for ordinary wear and tear was enforceable. Those conclusions apply equally to the appeals here.

As the party seeking recovery, Appellant has the burden of proving that an act or negligence on the part of Respondent's personnel was the proximate cause of the damage to each vehicle and that the damage exceeded ordinary wear and tear. *E.g., Jake Sweeney Auto Leasing, Inc.*, PSBCA Nos. 2784-2788, 2791-2798, 91-3 BCA ¶ 24,278. Respondent argues that Appellant has failed to meet that burden.

In PSBCA Nos. 3176, 3181, 3182 and 3198 the Contracting Officer conceded that damage necessitating the replacement of a valance was beyond damage which could be considered ordinary wear and tear. However, Appellant has provided no evidence to show that such damage was caused by an act or negligence of Respondent's personnel. As to other damage in dispute in these appeals, Appellant has provided no evidence to show that any damage was beyond ordinary wear and tear or was caused by an act or negligence of Respondent's personnel. Thus, Appellant has failed to satisfy its burden of proof in these appeals.

The appeals are denied.

[¶ 26,527] Montgomery Ross Fisher, Inc. & H.A. Lewis, Inc., A Joint Venture

VABCA No. 3696, November 17, 1993. Contract No. V691C-1248H.

Modifications—Bar to Claims—Settlement Agreement v. Modification.—Although the Federal Acquisition Regulation requires that a modification to a contract be in writing and executed by both parties, the board determined that an oral agreement to settle litigation did not need to be reduced to writing in order to be enforceable, because the agreement to settle was not a contract modification within the meaning of the FAR. Although the settlement agreement may have had an effect on the dispute arising out of the instant contract, it was a settlement of claims in litigation before an administrative body rather than a contract modification.

Mistakes—Relief After Award—Settlement Agreement.—An express agreement to settle an appeal could not be rescinded on the basis of the contractor's unilateral mistake concerning the price proposal for a field change order, because the mistake was not a clerical or arithmetic mistake but a mistake in estimating the cost of the changed work. The contractor, as the author of the price proposal submitted to the government, was presumed to know the basis on which the proposal was prepared.

Mistake—Relief After Award—Unconscionability.—The fact that a subcontractor's claimed costs for a field change order were more than six times the amount estimated

[1] Appellant did not file a brief.

Digitized by Google

by the prime contractor and the government did not render the settlement agreement concerning the change order unconscionable, because the subcontractor's cost proposal was submitted after the settlement meeting, and there was no indication that the government took unfair advantage in the parties' negotiation of the settlement. The contractor's and the government's estimate of the field change order were nearly identical. This fact strongly suggested that the parties were on an equal footing in reaching the settlement amount and that the reasonable value of the work for the change order was embodied within the estimates.

For the appellant: David W. Cornwell, Torrance, California. For the government: John Manfredonia, Trial Attorney, Office of General Counsel, Washington, D.C. William E. Thomas, Jr., Assistant General Counsel, and Phillipa L. Anderson, Deputy Assistant General Counsel, of Counsel.

Before KREMPASKY, MCMICHAEL, and ROBINSON, Administrative Judges.

KREMPASKY, Administrative Judge: Respondent, Department of Veterans Affairs ("VA" or "Government") has filed a Motion for Summary Judgment seeking to enforce an oral settlement of this appeal. Appellant, Montgomery Ross Fisher, Inc. and H.A. Lewis, Inc., A Joint Venture ("MRF"), contests the VA's Motion on the basis that the parties' settlement agreement to resolve this appeal was premised on a mistake of fact and that enforcement of the settlement agreement would be unconscionable. This appeal arises out of Contract No. V691C-1248H ("Contract"), for the Renovation of Domiciliary Buildings 214 and 215 at the West Los Angeles, California VA Medical Center ("VAMC, West Los Angeles"). The appeal is from a deemed denial by the VA Contracting Officer ("CO") of MRF's claim for an equitable adjustment of $7,597 for Field Change Order ("FCO") 4K for the rerouting of a conduit for a new transformer in Building 217. The appeal was docketed on June 2, 1992.

The record before the Board consists of the Complaint and Answer; the Government's Motion for Summary Judgment, including 5 attached exhibits (cited as "MSJ Exh. G-__"; and, Appellant's Opposition to the Government's Motion which also includes six exhibits (cited as "MSJ Exh. A-__"). The record also includes the Consolidated Appeal File submitted by the parties (cited as "R4, tab __") consisting of 132 exhibits.

FINDINGS OF FACT FOR THE PURPOSES OF RULING ON THE GOVERNMENT'S MOTION FOR SUMMARY JUDGMENT

The following findings of fact are made for the purposes of this decision only.

The Contract was awarded to MRF on September 30, 1987, for the original contract price of $11,600,000. The Notice to Proceed was issued on November 17, 1987; the Contract was to be complete 1080 days from the Notice to Proceed date. (R4, tab 1)

In Request for Information ("RFI") No. 204, dated August 14, 1990, MRF requested direction concerning a discrepancy with the existing route of an electrical conduit and the location of a required new transformer to which the conduit was to connect. The VA responded to RFI No. 204 on August 15 and 29, 1990, with direction to reroute the conduit. On October 10, 1990, the VA Senior Resident Engineer, acting within the scope of the authority delegated to him by the Contracting Officer, unilaterally issued FCO 4K in the amount of $7,300 for the conduit rerouting. The Government cost estimate for the work was $7,377. FCO 4K indicated that the Contract price had been increased by $7,300 "for fiscal purposes" and directed MRF to submit a cost proposal for the conduit work within 30 days. (R4, tab 18)

By letter dated March 2, 1992, MRF forwarded its price proposal for FCO 4K in the amount of $7,597. The amount of the proposal was developed by MRF's estimator and was not based on any submission from MRF's electrical subcontractor, EMI Electric, Inc. ("EMI"). (MSJ Exh. A-1, A-2).

The VA's counsel, by a January 11, 1993, facsimile transmission, forwarded an offer to MRF's counsel to settle 35 appeals arising out of the Contract. Included in this offer was an offer to settle the appeal in VABCA No. 3696 for a total of $7,377. The offer to settle VABCA No. 3696 included $6,706 for the claim of MRF's electrical subcontractor and $671 for MRF's "fee" and was expressly approved by the VA's Contracting Officer. (MSJ Exhs. G-1, G-5)

Having received no response to its January 11 offer, the VA, by letter dated February 24, 1993, asked MRF to respond to the Government's offer, including the offer to resolve VABCA No. 3696. (MSJ Exh. G-2)

©1994, Commerce Clearing House, Inc.

Digitized by Google

MRF's counsel responded to the VA's settlement offer by facsimile transmission on March 10, 1993. MRF's response, in part, stated that it accepted the VA's offer to resolve VABCA No. 3696 for the amount offered by the VA. As stated in his declaration supporting Appellant's opposition to the Government's motion, MRF's principal responsible for the settlement negotiations, Mr. Herbert A. Lewis, authorized counsel to accept the offer to settle VABCA No. 3696 based on his cursory review of the summary sheet of MRF's original proposal for FCO 4K. This summary included an amount claimed by MRF for the work of its electrical subcontractor, EMI Electric, Inc. ("EMI") (who is the real party in interest in this appeal) for the Building 217 conduit rerouting work. (MSJ Exhs. G-3, A-1, A-2)

The parties conducted a settlement conference, attended by the counsel and principals for each party, including Mr. Lewis and Mr. Joshua Rubin, a principal of EMI, on June 21, 1993, for the purpose of finally resolving numerous appeals arising under the Contract, including this appeal. The subject of VABCA No. 3696 was broached at the conference by Mr. Rubin. At that time, counsel for both parties represented to Mr. Rubin that VABCA No. 3696 was settled and that there was no need for further discussion. Mr. Rubin made no further comment or inquiry about VABCA No. 3696. Consequently, the prior settlement in VABCA No. 3696, although acknowledged, was not specifically discussed at the settlement conference. Mr. Lewis' settlement conference notes characterize VABCA No. 3696 as having been "settled by stipulation." (MSJ Exhs. G-4, A-1)

Consistent with several Joint Status Reports submitted to the Board by the parties, the Board, upon the parties' request, by Order dated May 25, 1993, had suspended proceedings in the numerous appeals arising out of the Contract to facilitate the parties' settlement discussions. Based on the parties' declared intention in the Joint Status Reports to prepare a written Stipulation of Settlement, the Board's May 25 Order included a direction to submit a written stipulation of settlement with the Joint Motion for Judgment. Therefore, the parties contemplated that any settlement agreements reached would be memorialized in writing in the form of a Stipulation of Settlement to support the Joint Motion for Judgment and to facilitate payment of the anticipated judgment to be received from the Board.

The parties filed their Joint Motion for Judgment on Stipulated Settlement relating to 57 appeals arising under the Contract on July 20, 1993; the Board, in turn, issued its Order Entering Judgment on July 27, 1993. The appeal in VABCA No. 3696 was not included in either the parties' Motion or the Order Entering Judgment.

On July 13, 1993, Mr. Lewis met with Mr. Rubin to resolve outstanding issues between MRF and EMI. At that time, Mr. Rubin informed Mr. Lewis that EMI's cost proposal for FCO 4K was $42,028.70. In reviewing MRF's original proposal for FCO 4K, Mr. Lewis determined that MRF's original claim to the VA had been based on an estimate prepared by MRF's estimator and that EMI, prior to July 13, 1993, had not submitted a cost proposal for FCO 4K. Upon EMI's presentation of its cost proposal, counsel for MRF, under Mr. Lewis' instruction, contacted VA counsel by telephone on July 14, 1993, and retracted MRF's prior "acceptance" of the Government's offer to settle VABCA No. 3696. (MSJ Exhs. A-1, A-3)

On July 22, 1993, EMI's counsel formally submitted EMI's claim for FCO 4K to MRF. Mr. Lewis responded, by letter to EMI's counsel dated July 23, 1993. In his response, Mr. Lewis stated that he was returning the claim without action because it was incorrectly prepared. In addition, Mr. Lewis, characterizing EMI's cost proposal as "fallacious", questioned its validity. (MSJ Exhs. A-4, A-5)

DISCUSSION

We will grant summary judgment when there is no genuine issue of material fact and the moving party is entitled to judgment as a matter of law. *Saturn Construction Company,* VABCA No. 3229, 91-3 BCA ¶ 24,151, *aff'd. per curiam,* 991 F.2d 810 (Fed. Cir. 1993) (unpublished decision).

There are no material facts relevant to the Government's Motion in dispute. Therefore, our inquiry is directed to whether the Government, based on the undisputed facts, is entitled, as a matter of law, to a judgment enforcing the parties' agreement to settle VABCA No. 3696.

The VA, relying exclusively on our holding in *Elkhorn Construction Co.,* VABCA No. 1493, *et al.,* 84-2 BCA ¶ 17,435, asserts that MRF's acceptance of the VA's offer to settle VABCA No. 3696 and the parties' subsequent mutual oral reaffirmation of their agreement at the settlement conference constituted an enforceable express oral contract

Digitized by Google

notwithstanding the fact that the parties intended, as directed by the Board, to execute a formal, written Stipulation of Settlement memorializing the agreement. Consequently, the VA contends that it is entitled to a judgment enforcing the oral settlement as a matter of law.

MRF does not contest that it orally agreed to settle VABCA No. 3696; nor, is it contested that the parties' agreement to resolve VABCA No. 3696 included the understanding that settlement of this appeal would be implemented by a Stipulation of Settlement supporting a Joint Motion for Entry of Judgment to be submitted to the Board. However, MRF contends that the agreement to settle VABCA No. 3696 resulted from its unilateral mistake of fact concerning the value of EMI's claim and that this mistake of fact entitles it to rescind its acceptance of the VA's offer. In addition, MRF asserts that it is entitled to rescission because enforcement of its agreement to accept payment of $7,377 to settle VABCA No. 3696, in view of EMI's claim of $42,028.70, would be "unconscionable."

The VA correctly asserts that under *Elkhorn*, the parties' oral agreement to settle VABCA No. 3696 is binding and enforceable. We found in *Elkhorn* that the enforceability of an otherwise valid and binding oral settlement agreement could not be defeated by the parties' failure to execute a written Stipulation of Settlement formalizing the agreement. Critical to our holding in *Elkhorn* was our finding, under the facts present there, that the oral Stipulation of Settlement fulfilled all of the elements necessary for a binding contractual agreement. Based on the undisputed facts and the parties representations here, it is clear that these same elements were fulfilled in the agreement to settle VABCA No. 3696. However, the Board in *Elkhorn* recognized that it may have been compelled to reach an opposite result by *SCM Corp. v. United States* [26 CCF ¶ 83,166], 219 Ct. Cl. 459, 595 F.2d 595 (1979) if the applicable regulations controlling the result in *SCM* had been present in the case before it.

In *SCM Corp.*, the Court of Claims, the predecessor court to the Court of Appeals for the Federal Circuit, held that a settlement agreement resolving a dispute arising out of a Department of the Army contract constituted a contract modification. Contract modifications, the court held, were required to be executed in writing on a Standard Form 30 by the then current Armed Services Procurement Regulations ("ASPR"). In the face of this regulatory requirement, the Court stated:

> Oral understandings which contemplate the finalization of the legal obligations in a written form are not contracts in themselves. When legal obligations between the parties *will be deferred* until the time when a written document is executed, there will not be a contract until that time. *See Restatement of Contracts* § 26 (1932). *See also Corbin on Contracts* § 30 (1963). Under the regulations [ASPR], Government funds were not obligated until the execution of standard form 30. The parties were well aware of the fact that only the written contract modification could finalize their agreement. No commitments in the oral understanding to act in any way by either party were to be consummated until execution of the supplemental agreement. Whether the parties had reached a clear understanding of the terms of the settlement makes no difference and we specifically intimate no decision on that issue. We thus conclude that neither party was bound by its negotiations until standard form 30 was executed. *SCM Corp.*, 219 at 464,595 F.2d at 598 [emphasis in original].

We should note, however, that the court in *SCM* carefully pointed out that it was not ruling on the more general issue of enforceability of oral contracts with the Government. *SCM Corp.*, 219 Ct. Cl. at 464, 595 F.2d at 598.

The United States Court of Appeals for the Federal Circuit, in *Mil-Spec Contractors, Inc. v. United States* [34 CCF ¶ 75,412], 835 F.2d 865 (Fed. Cir. 1987), after reviewing the Federal Acquisition Regulation ("FAR"), 48 CFR Chap. 1, mandating that contract modifications be written, found the effect of the FAR requirements to be the same as the ASPR requirements considered by the Court of Claims in *SCM*. The *Mil-Spec* court, citing *SCM* and the applicable FAR language, held that oral settlements of claims under a Federal procurement contract are ineffective, noting that: "SCM fully supports, if it does not compel, our conclusion that the oral agreement to settle Mil-Spec's claim for $6,367 was not an effective modification of the contract until both parties had signed a written modification agreement—which the contractor never did." *Mil-Spec*, 835 F.2d at 869.

We are confronted with the issue of whether the parties' oral settlement is a contract modification; if the settlement is a contract modification, as defined by the FAR, it

©1994, Commerce Clearing House, Inc.
Digitized by Google

is governed by the holding of *Mil-Spec*. If it is not a modification, then, as discussed above, the oral settlement agreement is binding and enforceable.

The case at bar involves the same FAR provisions as those extensively quoted and confronted by the *Mil-Spec* court. That court, citing *SCM Corp.*, found that the provisions of FAR 2.101 (including bilateral modifications within the definition of a contract and defines contract as written instrument), FAR 43.101 (contract modifications defined as written changes to a contract), and FAR 43.103(a) (bilateral modification defined as a contract modification signed by both parties) read collectively resulted in the parties' oral settlement of the contractor's equitable adjustment claim being unenforceable. The Court concluded: "The oral agreement was a modification of the contract, since it increased the amount the government would pay for the work Mil-Spec had done." *Mil-Spec*, 835 F.2d at 866-67

The Court of Appeals for the Federal Circuit in *Texas Instruments, Inc.*, 922 F.2d 810 (Fed. Cir. 1990), addressed the issue of the enforceability of oral contract modifications and upheld the enforceability of an oral agreement establishing the price of certain unpriced line items in a contract. Although it specifically recognized the continuing validity of *Mil-Spec*, the *Texas Instruments* Court, nevertheless, permitted the enforcement of an oral agreement on the price of several unpriced contract line items. The Court based its holding on applicable contract terms and regulations and distinguished the circumstances present in *Texas Instruments* from *Mil-Spec* by determining that the negotiation of prices for the unpriced contract line items did not constitute a contract modification. Therefore, the Court concluded, *Mil-Spec* did not preclude the enforcement of the oral negotiated price agreements since there was no regulatory provision requiring that such pricing agreements be reduced to writing. *Texas Instruments*, 922 F.2d at 814.

SCM, Mil-Spec, and *Texas Instruments* all involved oral settlements of claims or proposals for equitable adjustments arrived at in the normal course of contract administration prior to appeal. *See also Centennial Leasing v. General Services Administration*, GSBCA No. 11451, 93-1 BCA ¶ 25,350. Here, however, as in *Elkhorn*, we are dealing with the settlement of litigation. In our view, in the absence of controlling law or regulation, an agreement to settle litigation under the jurisdiction of the Board is not a contract modification within the meaning of the FAR. Consequently, we are not bound by *Mil-Spec*'s formalistic dictates with regard to the necessity that agreements for contract modifications be reduced to writing in a form specified by an applicable regulation in order to be enforceable.

The 9th Circuit in *United States v. Bissett-Berman Corp. et al.* [18 CCF ¶ 82,287], 481 F.2d 764 (9th Cir. 1973) confronted circumstances similar to those present in this case. In *Bissett-Berman*, the Government appealed the District Court's grant of the defendant-appellee's motion for summary judgment in the Government's breach of contract, tort, and admiralty suit. The suit arose out of a contract between the Department of Navy and Bissett-Berman for the installation at sea of a Government-owned hydrophone array. During contract performance, the hydrophone array was lost at sea. The Government instituted the action in District Court following a contract dispute and appeal to the Armed Services Board of Contract Appeals ("ASBCA") relating to the loss of the hydrophone array. The appeal was dismissed by the ASBCA with prejudice pursuant to the parties' Stipulation of Settlement filed with the board. The District Court based its judgment in favor of Bissett-Berman, in part, on the Stipulation of Settlement filed in the ASBCA proceeding.

In both the District Court and Court of Appeals actions, the Government argued that the Stipulation of Settlement was a nullity because such a settlement could only be effectuated by a contract modification properly executed under applicable procurement regulations. Citing the sources and extent of the ASBCA's authority and the judicial nature of ASBCA proceedings, the Court of Appeals upheld the lower court's ruling concerning the conclusive effect of the settlement of the appeal before the ASBCA, stating:

> The [District] trial court did not regard the Stipulation of Settlement as simply a contract modification, nor do we. It may have had an effect on a dispute arising out of a contract, but it was in fact and in law the settlement of claims in litigation before an administrative body constituted by law to make an adjudication. *Bissett-Berman*, 481 F.2d at 769.

We concur with 9th Circuit's well-reasoned analysis in *Bissett-Berman Corporation*. Holding the Board and the parties before us hostage to the minutiae of FAR forms and procedures for contract modifications in the settlement of appeals would

Digitized by Google

eviscerate our authority, and obligation, to control our docket and to oversee, encourage, and implement the settlement of contract appeals properly in litigation before the Board. Thus, the parties' oral agreement for the settlement of the appeal in VABCA No. 3696 is a binding and enforceable agreement.

Even if we were to find that a "writing" was required to bind MRF to the settlement of VABCA No. 3696, the facsimile offer and acceptance exchanged by the parties' counsel would satisfy any requirement for a written agreement. *Robinson Contracting Co., Inc. v. United States* [35 CCF ¶ 75,654], 16 Cl. Ct. 676 (1989). The fact that the offer and acceptance were not executed by MRF's principal or the CO does not defeat the enforceability of the agreement. Both counsel were acting with the express knowledge of their clients; furthermore, the principals and their counsel in litigation are entitled to rely on the actions of opposing counsel even where the CO has the sole authority to bind the United States. *Bissett-Berman,* 481 F.2d at 768.

Having found that the parties entered into an express agreement for the settlement of the appeal in VABCA No. 3696, we turn to MRF's contentions that the agreement to settle VABCA No. 3696 should be rescinded because MRF based its acceptance of the VA's offer on its unilateral "ministerial error" and that enforcement of the agreement in this circumstance would be unconscionable.

A party seeking reformation or rescission of contract based on a unilateral mistake must demonstrate both that the mistake resulted from a clear arithmetic or clerical error or misreading of contract requirements and that the other party knew or should have known of the mistake at the time of contract formation. A party's unilateral error of judgment will not support contract reformation or rescission. *United States v. Hamilton Enterprises, Inc.* [31 CCF ¶ 71,239], 711 F.2d 1038 (Fed. Cir. 1983); *The Faulkner Corporation,* VABCA No. 2998, 90-1 BCA ¶ 22,507.

Thus, MRF must demonstrate that: 1) it made a mistake; 2) the mistake was clerical or arithmetic (there is no issue relating to misreading Contract requirements here); and, 3) that the Government knew or should have known of the mistake in order to rescind its agreement settling VABCA No. 3696. The "mistake" asserted by MRF arose only upon EMI's submission, subsequent to MRF's acceptance of the Government's offer, of its claim to MRF. MRF argues that Mr. Lewis' cursory review of the 1992 proposal for FCO 4K to simply verify the amount of the proposal was a "ministerial" act resulting in MRF's mistake as to the amount claimed by EMI for the FCO 4K work.

MRF asserts that it can be relieved of the consequences of its unilateral "ministerial" errors. Although it offers no precedent or other basis for doing so and without defining the term, MRF apparently presumes that "ministerial" errors are the same as clerical or arithmetic errors. Mr. Lewis, in January 1993, reviewed the summary cover of its proposal for FCO 4K submitted to the VA the previous year in determining to accept a VA offer $200 less than MRF's proposal. This review, even if it could be characterized as "ministerial", was neither a clerical nor arithmetic error. Moreover, if MRF made a mistake concerning the price of FCO 4K, the mistake was made in March 1992, nearly eighteen months after FCO 4K was issued, when MRF decided to submit a proposal for FCO 4K based on its own estimates without receiving a proposal from EMI. Since Mr. Lewis was the author of the proposal submitted to the VA, he is presumed to know the basis on which it was prepared. The fact that, in January of 1993, he only reviewed the cover summary of his March, 1992 proposal, does not eliminate the fact that the proposal amount in March 1992 was the result of MRF's exercise of its business judgment to seek additional funds from the VA on the basis of its, not EMI's, estimate of the costs associated with FCO 4K.

Consequently, any MRF mistake in accepting the VA's offer to settle VABCA No. 3696 was a unilateral mistake of judgment for which it is not entitled to rescission of the agreement. We should also note that MRF makes no assertion, nor is there any evidence, that the VA was or should have been aware of the mistake. In fact, the evidence is to the contrary. The VA's estimate for FCO 4K was $7,377, the amount of its offer; MRF's proposal was $7,597. Clearly, MRF has not met its burden to demonstrate that the VA knew or should have known that MRF's agreement to the sum of $7,377 was a mistake or that EMI would submit a claim to MRF for over six times the amount at which MRF had valued its work.

Even though we have found that MRF's unilateral mistake of judgment will not support rescission of the settlement agreement, we must also deal with the issue of whether enforcement of the agreement would be unconscionable. Where the factors permitting

©1994, Commerce Clearing House, Inc.
Digitized by Google

rescission of a contractual agreement due to a unilateral mistake are not present, such relief may still obtain based on the theory of unconscionability. John Cibinic, Jr. & Ralph C. Nash, Jr., *Administration of Government Contracts, 2nd Edition,* 239-48 (1985) MRF asserts that the VA should not be permitted to "get something for nothing" by the enforcement of its agreement to settle VABCA No. 3696. In MRF's view, it would be unconscionable to permit the VA to pay only $6,838 (the amount for the EMI portion of the FCO 4K work) in the face of EMI's claim of over $42,000 for the work.

The application of the theory of unconscionability to Federal contracts, requires proof that the Government has somehow taken an unfair advantage of the contractual relationship. *Fan, Inc.,* GSBCA Nos. 7836, 8715, 91-1 BCA ¶ 23,364. In this case, the VA's and MRF's independent estimates of the value of FCO 4K are within $220 of each other; this fact strongly suggests that the parties were on equal footing in reaching the settlement amount and that the reasonable value of the work for FCO 4K is embodied within the estimates. EMI's cost proposal was submitted subsequent to the settlement meeting at which EMI was present, nearly two years after FCO 4K was issued. The fact that EMI's cost proposal was over six times the amount estimated by the both MRF and the Government for EMI's work does not, absent some indication of validity, necessarily result in the conclusion that the VA took unfair advantage in the parties' negotiation of the settlement.

MRF has propounded what may be characterized as a theory of "speculative unconscionability" by grounding the purported unconscionability of its settlement on a cost proposal by its subcontractor which it has previously rejected as erroneous and fallacious. Thus, MRF asks us to void its agreement to settle VABCA No. 3696 because of the potential, based on EMI's rejected cost proposal, that the agreement, at some point, may become unconscionable.

In the Federal contracts area, unconscionability is normally applied to mistake-in-bid situations where, in the absence of a mutual or unilateral mistake permitting such relief, a bid is allowed to be rescinded or withdrawn because of the "extreme" difference between other bids or the reasonable price of the item or work. *Carrier Corp. v. United States* [32 CCF ¶ 72,717], 6 Cl. Ct. 169 (1984). Rescission of a negotiated mutual agreement because of unconscionability is generally not available absent demonstrable Government overreaching. *Louisiana-Pacific Corp. v. United States* [29 CCF ¶ 81,737], 228 Ct. Cl. 363, 656 F.2d 650 (1981).

Thus, under the undisputed facts present here, Appellant has not established that the parties' agreement to settle VABCA No. 3696 is unconscionable. As the General Services Administration Board of Contract Appeals stated in *American Transparents Plastics Corporation,* GSBCA No. 7006, 85-1 BCA ¶ 17,819 at 89,150-151:

> The doctrine of unconscionability is applied in our circuit as a means to prevent oppression and unfair surprise. It is not intended as a tool to permit tribunals the discretion to redistribute risks assumed by the contracting parties in the bargaining process.

Accordingly, the VA is entitled to the enforcement of the agreement to settle VABCA No. 3696 which was finalized at the settlement conference of June 21, 1993.

DECISION

For the foregoing reasons the Government's Motion for Summary Judgment in the Appeal of Montgomery Ross Fisher, Inc. & H.A. Lewis, Inc., A Joint Venture, VABCA No. 3696, under Contract No. V691C-1248H is **GRANTED.**

Accordingly, the above referenced appeal is **SUSTAINED** and Appellant, Montgomery Ross Fisher, Inc. & H.A. Lewis, Inc., A Joint Venture, is found entitled to a judgment of $7,377 plus interest pursuant to the Contract Disputes Act.

Procedure, Boards—Reconsideration—Factual Error.—Upon reconsideration of an earlier decision denying a contractor's claim for the costs incurred in relocating its computer concession, the board considered the exceptions advanced by the contractor to the

Digitized by Google

factual findings and affirmed its decision because there was no showing that the board erred in its findings.

For the appellant: James A. Langemak, Vice President, and Michael J. Lyon, Director. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. E. Michael Chiaparas, JAGC, Trial Attorney.

Before YOUNGER, SPECTOR, and THOMAS, Administrative Judges.

Reconsideration of 94-1 BCA ¶ 26,297 denied.

YOUNGER, Administrative Judge: Appellant has moved for reconsideration of our decision regarding its claims relating to a concession contract with a non-appropriated fund activity. Familiarity with our decision is assumed.

In its motion, appellant takes exception to 26 of our 35 findings. Most of these exceptions are simply expressions of disagreement with our findings. Those exceptions that appear to be either outcome-determinative or otherwise significant are as follows:

- contrary to finding 18, and our decision regarding Lyon's advice to respondent to make payments to Scope, "it is irrelevant how many verbal requests Mr. Lyon might have made [to respondent] to make contract ... payments to Scope GmbH. Until a contract modification per clause I-42 had been accomplished, no change in contract payment terms is in effect;"
- contrary to finding 21, "there is a considerable body of evidence in the record that Appellant's two key [5 January 1988 and 15 February 1988] letters were received by Respondent in a timely manner," rather than in December 1988; and
- contrary to finding 29, "[t]here is no evidence [that] Respondent's 26 May 1988 letter was ever even sent, let alone received by Appellant."

In view of the finality accorded our decision by the "DISPUTES" clause of the contract (*see* finding 5), we have granted the motion. Upon reconsideration, we are not persuaded that we erred. We address appellant's major exceptions in the order set forth above.

1. *Finding 18.* We reject appellant's contention that we disregarded clause I-42, "MODIFICATIONS AND ADDITIONS," which generally required modifications, deletions or additions to be accomplished bilaterally through formal amendment. There is no doubt that the preponderance of the evidence, as recited in finding 18 and as implied in appellant's 5 January 1988 letter (finding 21) is that appellant requested, and respondent agreed, to make Scope a payee on checks beginning in 1987. While this informal arrangement was not reduced to writing, clause I-42 does not render it nugatory on that account. "[U]nder District of Columbia law [*see* finding 7], '[i]t is well settled that a written contract may be modified, rescinded or discharged by subsequent oral agreement; also that an express stipulation against oral modification is no bar to the parties' right to contract anew on the subject, since such stipulation like any other term of the contract may be rescinded.'" *Southern Railway Co. v. National Railroad Passenger Corp.,* Civil Action No. 88-1672-LFO (D.D.C. Aug. 16, 1989), 1989 U.S. Dist. LEXIS 8857 (*quoting Nickel v. Scott,* 59 A.2d 206, 207 (D.C. 1948)); *see also Pan American Optical Co., Inc.,* ASBCA Nos. 17383 *et al.,* 74-1 BCA ¶ 10,566 at 50,058 (holding that a clause identical to clause I-42 did not bar an informal agreement effecting a price increase on a date earlier than specified in a formal amendment). In any event, we have found that the payments made to Scope, as enumerated in finding 22, represented Scope's percentage of gross sales from inventory that it owned and sold.

2. *Finding 21.* We continue to give credence to the consistent testimony of the contracting officer (he did not see the January letter "until I received that letter dated 16 December 1988;" the February letter "is the same. It was attached to the 16 December letter of '88"); the contracting officer's representative (he did not see the January letter "at any time in any conjunction with that [January] date at all;" "[t]he same would apply" to the February letter); and the contract specialist ("there's no doubt" that he first saw the January and February letters in December). In the face of this testimony, we are not swayed by the conclusion of one of respondent's attorneys that, in preparing the 26 May 1988 letter (*see* finding 29), respondent derived appellant's then-current address from the February letter. While this conclusion, if true, would suggest receipt of the February letter by May, we do not find it persuasive. The attorney was reviewing the Rule 4 file nearly two years af-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ter the fact, and he lacked personal knowledge of the circumstances. By contrast, the contracting officer's representative had personal knowledge. He testified that "[t]he address that's on the letter is a residence address that was shown in documents where Mr. Langemak had actually sold an interest in Scope GmbH to a third party ... and that address was the address that was available.... [T]hat was the address I used."

3. *Finding 29.* We reject appellant's assertion that the record fails to establish that the 26 May 1988 letter was either sent or received. The record contains credible testimony that the letter was sent. When asked about the letter, the contract specialist testified unequivocally that "I personally put it in the mail to the address as so indicated on the letter." Mindful of the "CHOICE OF LAW" clause in the contract (*see* finding 7), we apply the rebuttable presumption that "[p]roof that mail matter is properly addressed, stamped and deposited in an appropriate receptacle has long been accepted as evidence of delivery to the addressee." *Legille v. Dann,* 544 F.2d 1, 4-5 (D.C. Cir. 1976); *see also Diamond Service Co., Inc. v. Utica Mutual Insurance Co.,* 476 A.2d 648, 654 n. 13 (D.C. 1984) ("[a] letter properly addressed, stamped and mailed, is presumed to have been duly delivered to the addressee"). We do not regard the presumption as rebutted by appellant's irrelevant insistence that respondent "failed to send this pivotal letter by registered mail." In any event, even if appellant's seeming denials of receipt could be deemed to satisfy its "duty to come forward with other evidence," *Legille v. Dann, supra,* 544 F.2d at 5, we would nonetheless resolve the issue of receipt against appellant. The preponderance of the evidence is that the letter was sent on 26 May 1988 and received in the ordinary course shortly thereafter.

We have carefully considered the other exceptions and arguments advanced by appellant. We cannot concur that appellant has demonstrated that they warrant alteration of our findings or decision.

Accordingly, upon reconsideration, we affirm our decision.

ASBCA No. 41891, November 22, 1993. Contract No. N62474-89-C-1175.

Mistake—Relief After Award—Reconsideration.—A contractor's motion for reconsideration of an earlier decision in which the board refused to grant reformation of a contract on the basis of an alleged bid mistake was denied because the board's resolution of the issue was not shown to have been based on misleading fact findings or misapplication of the law. The contractor insisted that the finding that it had failed to give the government preaward notice of any suspected error in the bid was not relevant to the board's ruling. The contractor noted that it could correct a suspected bid error only if it had clear and convincing evidence of the existence of the mistake, which it did not have, and, therefore, the finding was irrelevant. However, the contractor had another preaward alternative besides bid correction. The regulations allowed the contractor to withdraw its bid if the evidence of the contractor's mistake was clear and convincing only as to the mistake but not as to the intended bid. The contractor asserted that the board miscited precedents, but the board, in reaching its decision, cited no precedent "on all fours" with the facts dispositive of the appeal.

For the appellant: Timothy Miguel Willardson, Alpine, Utah. For the government: Arthur H. Hildebrandt, Chief Trial Attorney, and Wayne O. Hadland, Trial Attorney, Naval Facilities Engineering Command, San Bruno, California.

Before JAMES, RUBERRY, and RIISMANDEL, Administrative Judges.

Denying reconsideration of 94-1 BCA ¶ 26,380.

JAMES, Administrative Judge: On 15 October 1993 Triax timely moved for reconsideration pursuant to Board Rule 29 of our 16 September 1993 decision on Triax's alleged mistake in bid claim, which decision Triax received on 20 September 1993. Familiarity with our 16 September decision is assumed. The Government responded to the motion on 3 November 1993 and appellant replied thereto on 12 November 1993. The original dispute centered on whether the Government knew or should have known that Triax

Digitized by Google

made a mistake in its bid. Appellant contends that the Board's resolution of that issue depended upon misleading fact findings and misapplication of the law.

According to appellant, finding 7 is misleading because estimating the IFB roof was "beyond Triax's estimating competence," Triax did not change its bid price for the roof as a result of its site inspection, and contract specialist Diana Thomas' familiarity with the three Washington state bidders is proof that such bidders had performed previous work on Whidbey Island Naval Air Station (NAS) or repairs comparable to the IFB repairs.

Estimating a hypalon roof was not beyond Triax's estimating competence. Appellant's James Vallett testified in response to counsel's question:

> Q Does Triax have the expertise in-house to accurately estimate the cost of a hypalon roof?
>
> A Oh, in that we could refer to Means and know what's involved in it. We could come up with some kind of an answer. (Tr. 1/86)

We found that Triax's bid included LaVoie's roofing price quote (findings 9, 10). Finding 7 did not state that Triax changed its roofing bid as a result of its site visit, although appellant's Kayl Smith testified that as a result of the site visit Triax changed its roofing demolition estimate "number" (tr. 1/97). Diana Thomas was a Naval Facilities Engineering Command, Northwest, contract specialist (tr. 3/7). She did not testify that any of the three Washington state bidders, with whom she was familiar, actually performed a contract on Whidbey Island NAS or repairs comparable to the IFB repairs (tr. 3/14-15). Nothing in finding 7 is misleading.

According to appellant, the statement in our finding 12, "Triax gave respondent no pre-award notice of any suspected error in the roofing cost in its bid," is misleading because, pursuant to FAR § 14.406-3, Triax could correct a suspected error only if it had clear and convincing evidence of the existence of the mistake and the bid actually intended, which evidence it did not have. Thus our finding 12 "should be irrelevant."

It is probably true that, before contract award, Triax had no clear and convincing evidence of the existence of the mistake and of the bid actually intended by LaVoie or by the other roofing contractor whose belated quote was "dramatically higher" than LaVoie's price. Triax lacked such evidence mainly due to its ineffectual efforts to verify subcontract price quotations (tr. 1/93, 120). However, Triax had another pre-award alternative besides bid correction. FAR § 14.406-3(c) allowed Triax to withdraw its bid if the evidence of LaVoie's mistake was "clear and convincing only as to the mistake but not as to the intended bid" or the evidence reasonably supported the existence of a mistake but was "not clear and convincing." Bid withdrawal was the relief for which Triax strenuously argued in its post-hearing brief, page 7, but is conspicuously absent from its motion for reconsideration. Triax's conclusion that finding 12 is irrelevant is specious. Nothing in finding 12 is misleading; it is relevant and dispositive.

According to appellant, findings 13, 14, and 15 are misleading because contract specialist Diana Thomas' testimony that she suspected a buy-in to get Government business contradicts the conclusory Government testimony that it "had no reason" to suspect a mistake.

Findings 13-15 state the facts and circumstances known to respondent's acquisition officials relevant to the possibility of suspecting a mistaken bid. Triax's argument that Ms. Thomas' suspicion of a buy-in is suspicion of a bid mistake is fallacious. "Buying-in" is the "prohibited practice" of intentionally underpricing a contract. It triggers no Government duty to verify the bid, but only the duty to ensure that the contractor does not recover its buying-in losses improperly. FAR 3.501-2. A mistake is not intentional, cannot be "prohibited," and may create a duty to verify the intended bid. Nothing in findings 13-15 is misleading.

According to appellant, our finding 5 is misleading because we did not recognize mistakes and omissions in respondent's Final Design Submission. Our correlation of the items and finding of no significant discrepancy between the Final Design Submission and the specification were consistent with, and fully supported by, the record. Nothing in finding 5 was misleading in any way.

Triax also argues that the Board miscited precedents. Our decision cited no precedent "on all fours" with the facts and hence dispositive of the appeal. We cited precedents to establish the principles governing our decision. In *Hankins Construction Co. v. United States,* 838 F.2d 1194, 1195 (Fed. Cir. 1988) the three low bids clustered in the range of $1,280,000 to $1,353,000, a $73,000 or 5.7% variance (not $73 or 0.06% as Triax wrongly states) and "tended to confirm the reliability of Hankins' bid." Here the 1.63% variance from respondent's estimate and 13.78% variance from the second low bid

©1994, Commerce Clearing House, Inc.
Digitized by Google

tended to confirm the reliability of Triax's bid. Just as Hankins might have let its bid lapse, Triax might have withdrawn its bid for the reasons explained previously. Triax, just like Hankins, after its bid was submitted but before contract award, received a "dramatically higher" vendor price, and failed to investigate why it varied so much from an earlier vendor price. As discussed in the comments to *Restatement (Second) Contracts,* § 154(b), Triax undertook to perform contract 1175 between 14 September and 4 December 1989, including "preparing submittals, approving and ordering materials," when it learned of the LaVoie roofing mistake (findings 17, 18). Appellant's distinctions of *Hankins* and *Restatement,* § 154(b), are unsound and unpersuasive.

We deny the motion for reconsideration and affirm our initial decision.

ASBCA No. 35622, November 19, 1993. Contract No. DAJA76-86-C-0370.

Brand Name or Equal—Brand Name Only—Reconsideration.—Upon reconsideration of an earlier decision holding that the government properly refused to permit a contractor, after award, to substitute an equal product for the one that was promised, the board affirmed its decision because there was no error in the board's conclusion that the government was entitled to insist on the brand-name product promised by the contractor. The contractor asserted that the board overlooked precedence that not only permitted the substitution of a brand-name product after contract award but held that the government's failure to permit a contractor to do so constituted arbitrary conduct. The board, however, noted that the case cited by the contractor was factually distinguishable from the instant case.

For the appellant: von Maur and Partners, Sulzbach, Germany, by Reed L. von Maur and Michael J. Murphy. For the government: Col. Riggs L. Wilkes, JAGC, Chief Trial Attorney, and Lt. Col. Stephen R. Dooley, JAGC, Trial Attorney.

Before REITER, RUBERRY, and SPECTOR, Administrative Judges.

Affirming 93-3 BCA ¶ 26,222 on reconsideration.

REITER, Administrative Judge: The Appellant moves us to reconsider our 13 July 1993 decision in this matter. In that decision, we held that the Government's refusal to permit appellant after award to substitute an equal product for the one that appellant promised to deliver was not arbitrary or capricious. We based that decision on the long standing and well defined general principle that the Government is entitled to what the contractor promised in the contract. The appellant in its then brief in this case argued that both *Jack Stone Co. v. U.S.,* 170 Ct. Cl. 281, 344 F2d 370 (1965) and our decision, in *Acorn Specialty & Supply Company,* ASBCA No. 22710, 79-1 BCA ¶ 13,820, which relied on *Jack Stone supra,* directed that an equal product not only may be substituted after award, but that a failure to permit a contractor to do so, constituted arbitrary and capricious conduct.

In its motion for reconsideration, the appellant notes that:

> The Board dismisses appellant's reliance on *Jack Stone Co. v. U.S.* . . . as too facile noting that, unlike here, the contract in *Jack Stone Co.* contained no clause permitting the bidder the option of listing the brand names it intended to supply.

but goes on to say that we "overlooked and failed to consider the more applicable and controlling precedent in *Acorn Specialty & Supply Co.* . . ."

Both *Jack Stone Co.* and *Acorn Specialty & Supply Co., supra* were considered by the Board in deciding the case although *Acorn,* a progeny of *Jack Stone Co.,* was not specifically dissected as was *Jack Stone Co.* in our 13 July 1993 opinion. By our decision we nevertheless rejected, albeit *sub silentio,* the applicability of *Acorn* to the instant case.

We note now for the record that *Acorn* is not this case; the settings are significantly different. In the instant case there was no Government claim. The Government did not terminate for default nor attempt to assert liquidated damages. In *Acorn* the Gov-

Digitized by Google

ernment terminated the contractor for default in July rather than consider the contractor's request to substitute an allegedly equal product. Also, the Board noted that "[i]f the Government had approved substitution of the Dyna Quip valve, it naturally would have been entitled to a deductive change price adjustment for any resulting cost savings to appellant."

We also note that the clause which appellant claims is substantially the same in *Acorn* as the clause in the instant case which we found to satisfy the national anti-monopoly policy and desideratum, carries baggage which did not exist in the instant case and subtly encourages the use of the name brand item.

A bidder under the *Acorn* invitation choosing to offer an alternate equal product in its bid was prominently warned as follows:

> "NOTE: If an alternate offer submitted in response to this solicitation is low and technical evaluation of the alternate item will require more than 30 days, the offeror will be so advised *and the alternate offer will not be considered* for this procurement. [emphasis added]

Thus, under *Acorn* a contractor's ability to achieve award with an equal non-brand name item was defeasible, and the option the bidder was afforded subject to easy annulment. In the instant case, the bidder's option to offer an equal product before award was not so fettered.

Here and in summary, the appellant promised the name brand. After award the Government had under the circumstances the option, but not the obligation, to permit appellant to substitute an equal product. However, the Government could insist on receiving what the appellant bound itself to deliver so long as no public policy was violated thereby. "If a contractor can bind himself to build a snowman in August," *Rixon Electronics, Inc. v. U.S.* [22 CCF ¶ 80,365], 210 Ct. Cl. 309, 536 F2d 1345 (1976), it can also bind itself to supply a name brand.

We see no caprice in insisting on what was promised under the existing circumstances.

Upon reconsideration, our prior decision is affirmed.

[¶ 26,531] Ametek Aerospace Products, Inc.

ASBCA No. 45307, November 29, 1993. Contract No. F34601-91-G-7703.

Contract Disputes, Claims—Submission to Contracting Officer—Incorporation of Prior Correspondence.—A government motion to dismiss a portion of a contractor's complaint was denied because the argument made in that portion had been previously presented to the contracting officer. The government contended that the issue had not been presented to the contracting officer and was not a part of the contracting officer's final decision. However, that issue had been raised previously in a letter that was incorporated by reference in the contractor's claim letter.

Contract Disputes, Jurisdiction—Boards of Contract Appeals—Allocation from Parent Corporation.—A government motion to dismiss a contractor's claim for costs allegedly allocable to it by its corporate parent was denied because the presence of the parent as a party was not necessary. The government contended that the contractor sought relief for a purely hypothetical situation because the parent had not in fact allocated the costs in question to the contractor and the contractor had not claimed them as a home office allocation. However, questions concerning the admissibility, relevance, and probative value of evidence concerning the pertinent accounting practices would be better addressed in connection with hearing and prehearing preparation.

For the appellant: McKenna & Cuneo, Denver, Colorado, by Thomas A. Lemmer and Janice Davis. For the government: Debra E. Berg, Trial Attorney, Defense Contract Management District Northeast, (DLA), Boston, Massachusetts.

Before YANNELLO, RUBERRY, and SPECTOR, Administrative Judges.

YANNELLO, Administrative Judge: This appeal follows a final decision by the contracting officer (CO). At issue in the appeal is the proper cost accounting for, and appropri-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ate value of, certain capital assets following various business combinations and acquisitions.

The Government has moved to dismiss paragraph 38 of appellant's complaint. Appellant has responded in opposition to the motion.

For purposes of considering the pending motion, the essential facts may be summarized as follows.

The General Electric Company ("GE") contained an operating division known as Instruments Products Operations (or "Instruments"), which was not a separate legal or accounting entity. "Instruments" produced cockpit instruments as well as engine sensor products, signal conditioning and monitoring products, and flight reference systems for both public or Government and private or commercial customers and, on 7 August 1989 was performing various Government contracts.

GE also owned a subsidiary known as Technology, Inc., Sub. 64 (hereinafter "Technology"), which was an inactive corporation, with minimal assets and liabilities, which conducted little or no business.

On or about 3 June 1989, GE entered into a Purchase and Sale Agreement with Ametek Incorporated ("Ametek Inc.") whereby Ametek Inc. would purchase certain assets, and liabilities, of "Instruments."

At about that time, and in furtherance of the Agreement, GE transferred from "Technology" its minimal assets and transferred to this subsidiary certain of the assets and liabilities of GE's "Instruments" division which were to be acquired by Ametek Inc. (GE's "Technology" subsidiary, thus consisting of certain assets formerly of GE's "Instruments" division, may also be referred to herein as "Technology/Instruments".)

On 7 August 1989, and pursuant to the Purchase and Sale Agreement, GE and Ametek Inc. entered into a series of almost simultaneous transactions which may be summarized as follows. GE, as sole stockholder and parent of its "Technology/Instruments" subsidiary, sold all of the outstanding stock in "Technology/Instruments" to Ametek Inc. in exchange for about $100 million in cash and other consideration.

Thus, "Technology/Instruments" became a wholly-owned subsidiary of Ametek Inc. The new parent, Ametek Inc, then changed the name of its wholly-owned subsidiary to "Ametek Aerospace Products, Inc." (or "Ametek Aero"). Various other changes within Ametek Aero were made.

In its books and records, Ametek Inc. accounted for the acquisition of Technology/Instruments, renamed Ametek Aero, by using the "purchase method of accounting." Under this method, the assets were accounted for at their fair market value (or, approximately, their purchase price); this represents a "stepped-up" value from the book value at which the assets would have been recorded prior to the acquisition by Ametek Inc.

After 7 August 1989, the Government contracts previously being performed by "Instruments" were performed by Ametek Aero, the subsidiary wholly-owned by Ametek Inc. In December 1989, a Novation Agreement was entered into between the United States, "General Electric Company (Transferor)" and "Ametek Aerospace Products, Inc. (Transferee) and formerly known as Technology, Inc. 64" recognizing that the transferee had acquired the assets of "Transferor's Instrument Product Operation," and was in a position to fully perform all obligations of the then on-going contracts between the Government and the transferor. With respect to such contracts, the Novation Agreement precluded any increases in costs as a result of the transfer.

As described by appellant, Ametek Aero also has, since 7 August 1989, accounted for the value of its assets using the purchase method of accounting, that is: at their "stepped-up" or fair market value and/or purchase price.

Beginning in 1990, a series of audits was conducted by the Defense Contract Audit Agency (DCAA); reports of these audits were prepared and copies furnished to Ametek Aero. By letter of 12 September 1990, the Administrative Contracting Officer (ACO) advised appellant of his preliminary determination, and that of DCAA, that appellant's accounting did not conform with the provisions of CAS 404 and FAR 31.205-11. The Government and Ametek Aero discussed this issue during 1990 and 1991. In an attachment to a letter of 19 October 1990, appellant contended:

... DCAA's argument would say that the asset write-up belongs on the corporate books of Ametek Inc. However, CAS 403, Allocation of Home Office Expenses to Segments, would require that cost to be

Digitized by Google

allocated to the operating segments. Based on the allocation method hierarchal preference included in the standard, the depreciation expenses on those assets would be directly allocated to [Ametek Aero]. CAS 414 includes similar allocations for the net book value of corporate assets .... A CAS argument does nothing to eliminate cost; it merely affects how it is accounted for and in this case only changes the accounting path with no impact on the result. [R4, Tab 6]

In January 1991, the Government awarded the subject, firm fixed-price contract or Basic Ordering Agreement (BOA) to appellant, Ametek Aero. The contract called for the furnishing of cockpit indicators to the Air Force, and appellant received the contract as the sole-source. On 2 April 1992, the Government issued Order No. SA33, for 98 indicators at a unit price of $33,500 or a total price of $3,283,000. (By contract modification in September 1992, the contract term was extended to 30 November 1992.)

By letter of 6 May 1992, the ACO advised the contractor that he had determined that the contractor was not in compliance with CAS 404; the contractor was requested to provide a cost impact statement. By letter of 28 May 1992, the contractor advised the ACO that it disagreed with, and intended to appeal from, this determination, and that "[t]o begin that process, attached is a claim under the Contract Disputes Act of 1978." By letter of 28 May 1992 (R4, tab 23), the contractor submitted a claim stating its belief that its step-up of asset values (relating to the acquisition of Instrument's assets) did not comply with CAS 404; The contractor referred, *inter alia*, to its earlier letters of 19 October 1990 and 9 July 1991. The contractor requested a final decision.

By letter of 28 July 1992 (R4, tab 24), the CO issued a final determination, with respect to the subject contract, that *inter alia*, appellant's increased depreciation cost, as a result of the step-up or write-up of its assets, was unallowable. The CO pointed to CAS 404 and FAR 31.205-11. Appellant filed a timely Notice of Appeal.

Essentially, the Government contends, *inter alia*, that the contractor (also referred to as Ametek Aero) improperly accounts for its assets at their "stepped-up" value, representing their fair market value (or, approximately, purchase price).

Appellant's complaint contains two counts or assertions, which may be summarized as follows: (1) appellant's books and records properly recognized and accounted for the assets of Technology/Instruments at their fair market value and/or purchase price; and, alternatively, (2) in accordance with CAS 403, Ametek Inc. might properly allocate to Ametek Aero costs based upon Ametek Inc.'s acquisition of the assets of the former Technology/Instruments.

Paragraph 38 of the complaint, under Count II, states:

> Alternatively, assuming that [Ametek Inc.] and not [Ametek Aero] must recognize the cost of acquiring the former [Technology/Instruments] capital assets, those acquisition costs on Ametek Inc.'s books are a proper basis for measuring certain costs that are allocable to [Ametek Aero] under CAS 403.

This is also referred to by the parties as appellant's "alternative CAS argument."

In its prayer for relief, the complaint asks the Board to rule that:

> (a) The contracting officer's final decision is erroneous in fact and law;
>
> (b) The acquisition costs of the former [Instruments] assets recognized on [Ametek Aero's] books and records are proper under CAS 404 and FAR § 31.205-11;
>
> (c) Or alternatively, [Ametek Inc.] properly may allocate to [Ametek Aero] under CAS 403 certain costs measured based upon the costs of acquiring the former [Instruments] assets and [Ametek Aero] may allocate those costs to government contracts pursuant to CAS 410 or CAS 418.

The Government's answer contains a First Affirmative Defense in which the Government asserts that appellant's amortization costs, cost of money, and depreciation costs are unallowable, relying upon FAR 31.205-52 (effective 23 July 1990) which was not recited in the CO's determinations.

The Government has moved to dismiss paragraph 38 of the complaint for lack of jurisdiction. The grounds relied upon by the Government are essentially as follows:

> 1. The issue involved, the allocation of costs from [Ametek Inc.] to [Ametek Aero] under CAS 403, was neither presented to the ACO nor part of his Final Decision ....
>
> 2. The relief sought is an advisory opinion on a purely hypothetical situation. [Ametek Inc.] has not even attempted to use the values at issue as a basis for allocating costs to [Ametek Aero] under CAS 403 and [Ametek Aero] has never claimed these

©1994, Commerce Clearing House, Inc.
Digitized by Google

costs as a Home Office Allocation under CAS 403.

3. [Ametek Inc.] is not a party to the contract under which this action is brought.

In response to the motion, appellant contends, *inter alia*, that:

1. Appellant's alternative CAS argument does not present a new claim not previously submitted to the CO; rather it presents a new legal theory in support of its existing claim;

2. Appellant's alternative argument does not seek an advisory opinion inasmuch as it merely presents an alternative argument in support of appellant's contention that it may allocate certain costs to its government contracts which costs are measured by the acquisition cost of its assets.

3. The claim is that of Ametek Aero, and need not be asserted by Ametek Inc. Appellant cites the provisions of CAS 403-50(e) concerning contracts with a "segment" or wholly owned subsidiary for whom the parent company may serve as a "home office", and providing that the contracting corporation may only accept allocations from the [parent] company to the extent that such allocations meet the requirements of CAS for allocation of home office expenses to segments.

DECISION

The Government's motion is denied. The Board notes, firstly, that the Complaint is not first time that appellant has raised its alternative contention (see appellant's claim letter of 28 May 1992 incorporating by reference its earlier correspondence, including that of 19 October 1990).

Secondly, while the Board agrees with the Government that clearly Ametek Inc. (appellant's parent) is not a party to either the subject contract or this appeal, the presence of such party is not necessary. Appellant may pursue its contentions as a separate and independent legal entity.

In so deciding, the Board is not unmindful of the Government contentions concerning accounting practices, and their ramifications, which may possibly be hypothetical as contrasted with those actually reflected in books and records. However, questions concerning the admissibility, relevance, and/or probative value of evidence concerning such accounting practices may be better addressed in connection with possible hearing and pre-hearing preparation.

Conclusion

The Government's Motion to Dismiss is denied.

[¶ 26,532] Metric Constructors, Inc.

ASBCA No. 46279, November 26, 1993. Contract No. NAS10-11800.

Modifications—Bar to Claims—Accord and Satisfaction.—A modification executed by the parties after an appeal was filed did not operate as an accord and satisfaction, because the modification, by its terms, did not include the change orders covered by the appeal. To reach accord and satisfaction, there must be a mutual agreement between the parties with the intention clearly stated and known by the contractor. The contractor's conduct in pursuing its claim before the board at the time the modification was signed indicated that the parties never understood the agreement as an abandonment of the earlier claim.

Modifications—Changes—Proof of Increased Costs.—Although additional requirements were imposed by a change order, a contractor was not entitled to additional compensation under a construction contract, because it did not prove that it incurred additional costs or that any costs were directly attributable to the changed requirements. There was no question that modifications involving tests and temperature readings were changes to the original contract specifications. The contractor contended that it was required to add a technician to its work force and that it incurred costs to pay for engineering supervision and support, secretarial support, and supplies involved in the review and compilation of test reports. However, although some changes to the test requirements were made, the changes did not cause the contractor to incur the additional costs of a full-time technician, because the costs of the technician were to be incurred without regard to the issuance of the change order. Moreover, the contractor failed to establish how it attributed the costs

Digitized by Google

of the test reports to the different types of tests required. In the absence of such evidence, the board could not find that the costs claimed were caused by the change order .

For the appellant: Bonner, Hogan & Coleman, PA, Clearwater, Florida, by Jon A. McAuliffe. For the government: Dudley R. Cannon, Jr., Trial Attorney, National Aeronautics and Space Administration, Kennedy Space Center, Florida.

Before TODD, RUBERRY, and FREEMAN, Administrative Judges.

TODD, Administrative Judge: This appeal involves a claim for additional concrete testing under a building construction contract. The parties have submitted the appeal for decision on both entitlement and quantum under Rule 11 without oral hearing.

FINDINGS OF FACT

1. On 15 February 1991, the National Aeronautics and Space Administration (NASA) awarded Contract No. NAS10-11800 to appellant Metric Constructors, Inc. (Metric) for the construction of the Space Station Processing Facility (SSPF) and related improvements at Kennedy Space Center. The contract incorporated by reference the standard clauses, "Material and Workmanship (APR 1984)" (FAR 52.236-5), "Inspection of Construction (JUL 1986)" (FAR 52.246-12), "Changes (AUG 1987)" (FAR 52.243-4), and "Disputes (APR 1984)" (FAR 52.233-1) (R4, tab 32).

2. Section IV, Article 3 of the contract schedule stated that specified tests of construction materials "shall be accomplished by the Contractor utilizing the services of an acceptable independent testing laboratory" (R4, tab 32, p. 39). Section I, Article 3 of the contract schedule placed the schedule provisions first in order of precedence for resolving any inconsistency in the contract (R4, tab 32, p. 7).

3. Section 03300, "Cast-in-Place Concrete," of the contract specifications stated at paragraph 1.3: "All work shall be in accordance with ACI [American Concrete Institute Standard] 318" (R4, tab 23). ACI 318 at paragraph 4.8.1.1 required taking samples for compressive strength tests from "each class of concrete placed each day . . . not less than once a day, nor less than once for each 150 cu yd of concrete . . ." (R4, tab 25).

4. Specification section 03300 at paragraph 1.5 stated in relevant part:

> 1.5 Concrete Sampling and Testing
>
> Quality-control testing during construction shall be by the Contractor using an independent commercial laboratory. Two specimens shall be tested for compressive strength at 7 days and 2 specimens shall be tested at 28 days for each design mix. Two additional test cylinders shall be cast and held in reserve for testing at 56 days . . .

(R4, tab 23)

5. On 11 February 1991, prior to award of the contract, Atlanta Testing & Engineering (ATE) offered to provide construction materials testing for Metric with a senior engineering technician and a support technician on-site, full time for twelve months (exh. G-3). On 16 April 1991, Metric awarded a subcontract to ATE for performance of construction materials testing and inspections required by specification section 03300 and other listed sections of the contract specifications (exh. G-5).

6. Section IV, Article 5 of the contract schedule required Metric to maintain a quality program to assure compliance with the contract requirements (R4, tab 32, pp. 40-48). Metric's quality program plan, dated 10 May 1991, described its inspection program and stated that "[i]nspectors shall perform day-to-day monitoring of activities to verify that accepted and identified items and proper procedures are being used" (exh. G-6).

7. On 2 May 1991, by KSC Form 8-268, Contractor Request for Information/Clarification (RFI) No. 48, Metric asked whether there were any testing requirements in addition to those specified in paragraph 1.5 of specification section 03300 (R4, tab 1). Metric and ATE knew at that time that the compressive strength testing specified in paragraph 1.5 was less than that required by ACI 318 and good construction practice (R4, tab 12; Deposition [Dep.] of Harry Webster, pp. 24-27).

8. On 30 May 1991, Metric began concrete placement. Pursuant to its contract with ATE, Metric directed ATE to follow ACI 318 for concrete testing and to provide quality control monitoring (R4, tab 18; Webster dep., p. 25; Affidavit [Aff.] of Steven N. Murray; Declaration [Decl.] of Rechea H. Hutchinson). ATE had initially planned to use one engineering technician for both soils testing and concrete testing and inspection, but found that one technician's time was fully employed on the soils testing (R4, tabs 12, 18).

©1994, Commerce Clearing House, Inc.

Digitized by Google

9. Before the concrete testing requirements were revised by change order, ATE and Metric agreed that ATE would provide an additional inspector on site "to properly monitor the concrete placement ... with the understanding Metric would ask the owner for additional compensation ..."

(R4, tab 12). The second inspector was hired on 10 June 1991. (R4, tab 18; exh. G-47; aff. of C. Rees Nickerson)

10. On 7 June 1991, the contracting officer issued Change Order No. 19 which replaced specification section 03300 with new section 03305 for the cast-in-place concrete work. Paragraph 3.11 of section 03305 required quality control tests on the concrete which included a slump test to be performed "for each concrete load at point of discharge," and for each set of compressive strength tests; an hourly temperature test when the air temperature was 40 degrees F or below and 80 degrees F or above; and compressive strength tests "one set for each 150 cubic yards or fraction thereof of each concrete class placed in any one day ..." (R4, tab 24).

11. Paragraph 3.12.2 of section 03305 set forth inspection criteria for determining if the strength of the concrete structure in place was deficient. One of the stated criteria was: "Poor workmanship likely to result in deficient strength." (*Id.*)

12. Appellant interpreted the revised specifications to add slump tests for each concrete truck load and hourly concrete temperature tests when the air temperature was at certain stated ranges. Appellant considered that continuous observation of concrete placement was also required because that is the only method of discovering poor workmanship. That was listed as a condition that could be considered deficient strength of the concrete structure under paragraph 3.12.2. (Nickerson aff.) Mr. C. Rees Nickerson, a Senior Professional Engineer with ATE who was responsible for the construction material testing and inspection services performed on the contract, has stated that "[o]bviously, the only method of determining if their [sic] is poor workmanship during concrete placement, is to observe the placement" (*id.*, ¶ 11).

13. Upon receipt of Change Order No. 19, appellant promptly contacted Ms. Rechea H. Hutchinson, the contracting officer, to obtain clarification of the specifications because some of the testing requirements, such as strict inspection of each load of concrete, were out of the norm and appeared unintentional. Appellant notified her that Change Order No. 19 would result in additional man hours for testing and inspection of concrete (Webster dep., pp. 11-16; Hutchinson decl.).

14. After meeting with the contracting officer, appellant met with Mr. H.C. Williamson, the contracting officer's technical representative, to discuss the revised specifications. A concrete technician from ATE was also present. Mr. Williamson interpreted the specifications regarding slump tests and said that visual slump tests on each load of concrete would be acceptable, and that mechanical tests would only be required when concrete specimens were obtained, approximately every 150 cubic yards of concrete. (R4, tab 31; Webster dep., pp. 13-15; Nickerson aff.)

15. After issuance of Change Order No. 19, ATE's second on-site technician provided concrete monitoring, testing and reporting (R4, tab 18). The Government observed no change in ATE's field monitoring activities and time on site before and after the issuance of Change Order No. 19, except for some additional slump tests (Murray aff.). The Government has acknowledged that appellant performed 11 additional slump tests required by Change Order No. 19 during the period 10 June 1991, through 4 October 1991 (Hutchinson decl.; Murray aff.).

16. On 18 June 1991, the contracting officer issued Change Order No. 21 that deleted portions of the revised cast-in-place concrete specification that had been issued by Change Order No. 19. This change clarified that the contractor was only required to comply with paragraphs 1.7, 3.11, and 3.12 of section 03305. No changes were made to the requirements for testing and inspection of concrete, and no additional expenses or costs were associated with this change order. (R4, tab 5)

17. These change orders required the performance of a slump test on every load of concrete between the effective date of Change Order No. 19 on 7 June 1991, and 4 October 1991, when the specification was changed by Change Order No. 130. Slump tests involve the placement of a representative sample of the concrete being tested into a metal cone using a tamping rod and subsequent inversion and removal of the cone after which the slump of the unsupported concrete is measured (exh. G-16; Webster dep., pp. 31-32). Concrete temperature tests involve a simple quick temperature reading which takes no more than five minutes to perform (Murray aff.).

Digitized by Google

18. On 16 July 1991, appellant submitted a cost proposal for Change Order No. 21 in the amount of $70,436 (R4, tab 7). On 22 July 1991, appellant provided back up documentation from ATE in support of the proposal. ATE's costs of $45,600 were for an engineering technician for 40 weeks (40 hours/week) at $28.50/hour. ATE stated that it needed an additional technician on site full time for the additional testing requirements in Section 03305, paragraphs 3.11 and 3.12. Appellant stated that the quality control labor was for "the additional work required for [their] quality control man to coordinate government inspections and further review and process test results required by the additional concrete testing." (R4, tab 9)

19. NASA's proposal evaluation, dated 8 August 1991, recommended that ATE provide detailed justification for additional testing and the frequency of the testing. The evaluator thought field staff of ATE had not changed as of that date. (R4, tab 10) During negotiations with Metric on 20 August 1991, the contracting officer advised that no justification could be found for a cost impact of the change orders. The additional staff employed by ATE was then stated to be covering a different job near the Vehicle Assembly Building (VAB). (R4, tab 11)

20. ATE furnished justification for the additional inspection to Metric by letter, dated 23 August 1991. Concrete Placement Monitoring logs showed that ATE performed concrete monitoring on 31 May 1991, 4 June 1991, and then on a daily basis. ATE considered this monitoring "additional inspection." (R4, tab 12)

21. NASA's further proposal evaluation, dated 10 September 1991, noted that an extra man was on site as ATE field staff, but he was covering a job near the VAB. NASA did not consider that ATE had identified any additional cost or justification for entitlement to additional compensation. (R4, tab 13)

22. In October 1991, the contracting officer issued Change Order No. 130, which required slump tests when concrete specimens were obtained, approximately every 150 cubic yards of concrete, and provided for visual tests on all other loads, unless an additional slump test were required for questionable loads. The change order formally adopted the verbal instruction that had been given earlier by Mr. Williamson and removed the mandatory requirement for a slump test for every load from the specifications. No additional expenses or costs were associated with this change order. (R4, tab 33; Hutchinson decl.; Nickerson aff.)

23. By letter, dated 19 December 1991, appellant submitted a revised cost proposal for Change Orders Nos. 19 and 21 in the amount of $90,768 (R4, tab 14). ATE had itemized its claim of $70,650 for an additional engineering technician, overtime, out-of-town living expenses, secretarial services, supplies (copies, mailing and postage), and for engineering review of reports by a project engineer and a professional engineer (R4, tab 16). As a result of negotiations conducted on 5 February 1992, it was agreed that NASA would reevaluate based on information provided by the contractor (R4, tab 15).

24. NASA's proposal evaluation, dated 18 February 1992, included an evaluated construction cost of $1,003 for the costs of nine cylinder tests and two slump tests which were considered additional. The amount included mark-up costs of 15% overhead, 5% profit and 0.645% bond. (R4, tab 16) Negotiations were conducted with Metric on 27 and 28 February 1992. (R4, tab 17)

25. By letter dated 11 March 1992, Metric submitted to the contracting officer additional information from ATE in support of its position on the specification change and demanded a final decision. The ATE letter, dated 5 March 1992, which was enclosed, stated that "Metric and Atlantic Testing implemented a program of testing similar to Specification Section 03346 'Light Weight Concrete' to assure NASA that the concrete installed was of high quality." ATE described the activities for the additional technician as including work to monitor the field placement, collect the cylinders, strip the cylinder molds, put them into and remove them from curing, cap with capping compound, conduct compressive strength tests, make calculations, and write up field and laboratory reports. (R4, tab 18) Most of these activities appear to be related to compressive strength tests and not slump tests. All testing that was performed was not a result of Change Orders Nos. 19 and 21. The daily samples for compressive strength tests were required by ACI 318 which was part of the original contract (finding 3). Office time was required for review, typing, copying and mailing of test reports. ATE costs incurred as of 13 December 1991, were itemized in a total amount of $35,026.94, and the total claimed including estimated costs through the end of the project in March 1993, was $70,650. (R4, tab 18)

26. NASA's proposal evaluation, dated 16 March 1992, did not change after review of

©1994, Commerce Clearing House, Inc.
Digitized by Google

the additional information. The recommendation was that appellant be compensated $1,003 for an extra 11 slump tests. (R4, tab 19) A letter dated 20 March 1992, from the contracting officer noted that the offer had been declined and that appellant's cost proposal was not a claim without the required certification (R4, tab 20).

27. By letter dated 7 April 1992, Metric submitted its properly certified claim for $89,473 for the costs of the additional testing with the following itemization:

Subcontract		$70,650
Jobsite Overhead	@16.94%	11,968
G & A Overhead	@ 3.14%	2,594
Fee	@ 10%	4,261

The amount claimed for fee was calculated at 5% of the total amount of the claimed costs. (R4, tab 21) It is apparent that the rate for fee should have been stated in the claim as 5% to calculate the dollar amount of fee claimed, and that the number 10% was a mistake (R4, tab 29). Enclosed with the claim were detailed time summaries and cost estimates prepared by ATE (R4, tab 21).

28. NASA's proposal evaluation, dated 20 April 1992, included an evaluated construction cost of $418 for the costs of 11 slump tests which were considered additional. The cost per test was $30 based on competitive quotations received by telephone. The amount included mark-up costs of overhead, G&A, and profit at the same rates that had been claimed by Metric. (R4, tabs 22, 29) After appellant declined this offer of compensation, the contracting officer issued Change Order No. 513 increasing the contract price by $418 (Hutchinson decl.).

29. The contracting officer's final decision, dated 4 June 1992, denied the amount of Metric's claim as excessive stating that it did not represent the fair and reasonable increased costs for the change in performance attributable to Change Orders No. 19 and 21. An equitable adjustment in the amount of $418 was awarded. (R4, tab 29) On 4 September 1992, Metric filed its timely notice of appeal to initiate these proceedings at the NASA Board of Contract Appeals (R4, tab 30). Notice of the appeal that was sent to the contracting officer reduced the claim to $85,105 to reflect actual cost and forwarded a letter, dated 18 August 1992, from ATE in response to the contracting officer's final decision. This letter acknowledged that the original contract required concrete testing through the reference to ACI 318, but stated that a second engineering technician was needed on site to monitor the concrete for slump and hourly temperatures during placement. The basis for the claim was the new requirements in Change Order No. 19 for an increase in the number of required slump tests and the monitoring of the concrete for temperature. (R4, tab 31) The appeal was docketed NASA BCA No. 80-0992 prior to the merger of the NASA BCA and ASBCA that was effective 12 July 1993.

30. The parties entered into a supplemental agreement, effective 7 October 1992, that is Modification No. 674 to the contract, to incorporate definitized change orders. The form stated that it applied only to modifications or change orders that were described in the agreement. One of the change orders was Change Order No. 130, but Change Orders No. 19 and 21 were not listed. The agreement provided:

> It is hereby agreed that ... the adjustments agreed to herein constitute an accord and satisfaction and fully satisfy any and all claims against the Government arising out of or related to the changes specified in this Supplemental Agreement including, but not limited to, claims for additional costs associated with delays, disruptions, extended overhead or time impact.

(R4, tab 33) There were no reservations of any claims for costs incurred beyond 4 October 1991, the effective date of Change Order No. 130.

31. Mr. Nickerson, the responsible senior professional engineer with ATE, estimated for appellant the reasonable additional time required for the additional inspection and testing services based on ATE's records of the actual times that concrete pours occurred. He reviewed appellant's daily Concrete Placement Monitoring reports and its daily Field Reports and prepared a "Summary of Concrete Pour Monitoring" which shows for each day there were concrete pours during the period 31 May 1991 and 30 July 1992, the actual time of the concrete pour and the number of sets of concrete tests (from 0 to 2, and in two instances 3) performed. Mr. Nickerson stated his opinion that the actual time of concrete pours was between 1010 and 1100 hours. He used 1000 for the number of additional hours claimed for the changed inspection (less concrete sampling time). This number and amounts for travel time, down time, and overtime for the technician, as well as engineering time and secretarial time were itemized. Applying reasonable rates of compensation, the total claimed for additional time, was $71,171.75

Digitized by Google

(Nickerson aff.). The rates for mark-up costs of overhead, G&A, and profit are undisputed (R4, tabs 22, 29; aff. of Chip Angenendt). In the opinion of Mr. Robert Chen, a senior professional engineer and manager of ATE, a reasonable fee for additional inspection and testing services required by Change Order No. 19 for ATE would be approximately $71,000 (Aff. of Robert Chen). The total amount of appellant's claim is $89,473 (R4, tab 21).

DECISION

The Government maintains that Modification No. 674 executed by the parties after the filing of this appeal operated as an accord and satisfaction to bar appellant's claims for the period of performance after 4 October 1991, the date of Change Order No. 130. The contract modification was to definitize change orders that included Change Order No. 130, but not Change Orders Nos. 19 and 21. The Government has the burden of proving the affirmative defense of accord and satisfaction. *Whitton Construction Co., Inc.*, ASBCA No. 40756, 93-1 BCA ¶ 25,375 (Aug. 30, 1993). To reach an accord and satisfaction there must be mutual agreement between the parties with the intention clearly stated and known to the contractor. *Todd-Grace, Inc.*, ASBCA No. 34469, 92-1 BCA ¶ 24,742; *Chantilly Construction Corporation*, ASBCA No. 24138, 81-1 BCA ¶ 14,863. By its terms the modification covered only Change Order No. 130. To find that it also covered Change Orders Nos. 19 and 21 would require a showing by the Government that both parties understood the language to accomplish that purpose. Appellant was pursuing its claim before the Board at the time the modification was signed. This conduct indicates an intent that the parties never understood the agreement as an abandonment of appellant's earlier claim. *Community Heating & Plumbing Co. v. United States* [38 CCF ¶ 76,488], 987 F.2d 1575 (Fed. Cir. 1993). We have concluded that none of the costs of Change Orders Nos. 19 and 21 are barred by the operation of an accord and satisfaction in Modification No. 674.

Appellant has the burden of proving its affirmative claim and establishing its entitlement to an equitable adjustment by a preponderance of the evidence. *PAE GmbH*, ASBCA No. 46163 (Nov. 10, 1993). In order to recover for the costs of performing additional concrete testing, appellant must show three necessary elements—liability, causation and injury. *Servidone Const. Co. v. United States*, 931 F.2d 860 (Fed. Cir. 1991); *BellinCo, Inc.*, ASBCA No. 41601, 91-2 BCA ¶ 23,896; *Bechtel National, Inc.*, NASA BCA No. 1186-7, 90-1 BCA ¶ 22,549, *motions for reconsid. denied*, 90-3 BCA ¶ 23,105. Appellant alleges that additional requirements were imposed by Change Order No. 19 since the contract specifications did not refer to the tests that the Government argues were incorporated because of ACI 318. We find that the slump tests for each concrete load and the hourly temperature readings, but not the compressive strength tests, were changes to the original contract specifications.

Appellant is entitled to compensation for changes, however, only to the extent that a change actually caused an increase in the costs of performance of the contract work. *Lectro Magnetics, Inc.*, ASBCA No. 15971, 73-2 BCA ¶ 10,112. The overriding basic principle applicable to price adjustments under the Changes clause is that they are measured by the cost impact on the contractor. *G&S Construction, Inc.*, ASBCA No. 28677, 86-1 BCA ¶ 18,740, at 94,309. A contractor who acts as a volunteer cannot be paid for extra work which is furnished on its own initiative. *DWS, Inc.*, ASBCA No. 29743, 93-1 BCA ¶ 25,404; *Advanced Control Technology, Inc.*, NASA BCA No. 24-0790 *et al.*, 92-2 BCA ¶ 24,947; *Optimal Data Corporation*, NASA BCA No. 381-2, 85-1 BCA ¶ 17,760, *motion for reconsid. denied*, 85-2 BCA ¶ 18,165, *aff'd*, 802 F.2d 469 (Fed. Cir. 1986).

The Government maintains that appellant did not change its methods of inspection and testing as a result of the change orders and there was no impact for which compensation could be claimed. Appellant was monitoring the concrete placement, and no additional time or effort was required to conduct the concrete testing after the issuance of Change Order No. 19, according to the Government. Appellant claims it was required to add a technician to perform the additional slump tests and take hourly temperature readings for every concrete pour. Appellant further claims that it was required by the change order to begin continuous observation of the concrete pours. Although some changes to the test requirements were made, we do not find that they caused appellant to incur the additional costs of a full-time technician for testing or inspection and monitoring of the concrete placement. By referring to poor workmanship when specifying what would be conditions of deficient concrete in Change Order

©1994, Commerce Clearing House, Inc.
Digitized by Google

No. 19, the Government did not thereby change appellant's inspection system. There is no assertion that inspection standards became more stringent or that closer supervision of the work was required to meet a higher standard of performance. Under the Material and Inspection clause and quality control provisions of the original contract, appellant was responsible for the quality of the work and obligated to monitor its performance and needed a second technician on site to do so (findings 6, 8-9). Since the costs of the second technician were to be incurred without regard to the issuance of Change Order No. 19, they cannot be attributed to the Government's change order. We are not persuaded that they would not have been incurred but for appellant's anticipation of receipt of the change order.

The Government further argues that appellant has failed to produce sufficient cost data to prove the costs of its claim. We have considered whether appellant's other claimed costs were attributable to the changed test requirements and have been sufficiently proved. These costs were for engineering supervision and support, secretarial support, and supplies involved in the review and compilation of written test reports. The estimated amounts claimed have varied (findings 23, 25, 27, 31). To meet its burden of proof, appellant must establish both the reasonableness of the costs claimed and their causal connection to the event on which the claim is based. *Delco Electronics Corp. v. United States* [35 CCF ¶ 75,679], 17 Cl.Ct. 302 (1989). The Government argues that these costs "all appear to be driven by the compressive strength tests requirements" in the original contract. (Gov't br. at 58) Its argument is based on ATE's listing of the activities of the additional technician, most of which concerned the compressive strength tests exclusively (finding 25; Gov't. br. at 19-20). We have concluded that Appellant has failed to establish how it attributed costs of the test reports to the different types of tests that were required, and we cannot find the costs claimed to have been caused by the change order in the absence of such evidence.

For the reasons stated, the appeal is denied.

[¶ 26,533] Hom-Russ, Inc.

ASBCA No. 46084, December 2, 1993. Contract No. F09651-90-C-0135.

Interpretation of Contracts—Drawings—Typical Detail.—In a contract for the construction of a vehicle maintenance building, a detail drawing was not sufficient to indicate that steel floor plates were to be provided wherever two sets of parallel lines appeared on a concrete floor, because the drawing did not indicate that it was a typical detail and applied to the entire contract. The notation "typical" is necessary to indicate that the drawing applies to the entire contract. The contractor did not have any reason to know whether the plating on only one portion of the building was consistent with the intended use of the building. Moreover, there was nothing on the face of the drawing that would have alerted the contractor that the drawing was intended to be typical. The government, as author of the drawings and specifications, had the responsibility of assuring that the drawings expressed its intent to the contractor.

For the appellant: Seifer, Yeats & Mills, Portland, Oregon, by Rodney R. Mills. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, Maj. William M. Lackermann, Jr., USAF, Trial Attorney, and Maj. Flayo O. Kirk, USAF, Contract Law Attorney.

Before FREEMAN and RIISMANDEL, Administrative Judges.

FREEMAN, Administrative Judge: Hom-Russ, Inc. (HRI) claims a price adjustment for an alleged change order requiring six additional steel floor plates in a vehicle maintenance building. The parties have submitted the appeal for decision on the issue of entitlement under Rule 11 without oral hearing. HRI has elected the Rule 12.3 accelerated procedure.

FINDINGS OF FACT

1. The contract was awarded to HRI on 28 September 1990 for construction of a two-bay, "range support maintenance facility" at Eglin Air Force Base, Florida. The title page of the contract drawings had a picture of a tank. That picture indicated that the vehicles and equipment to be maintained in

Digitized by Google

the facility would include tracked armored vehicles.

2. Contract Drawing C-2 ("Foundation Plan, Details") showed in plain view for each bay, two parallel lines four feet apart running the length of one side of the bay, and two parallel lines four feet apart running the length of the opposite side of the bay. Detail 5 on the drawing was a cross-section of the foundation showing a thickened foundation under each set of parallel lines in the two bays. The manifest intent of the thickened foundation was to provide increased support under the wheels and tracks of vehicles being serviced in the bays.

3. Detail 4 on Drawing C-2 showed two steel plates anchored to the concrete floor between one set of parallel lines in one bay. The two plates formed a four-foot wide steel track running the length of one side of the bay. Detail 4 was not marked "typical." There is no indication otherwise on the face of the drawings or in the specifications that similar steel plates were to be provided between the parallel lines on the opposite side of the same bay or between the two sets of parallel lines in the second bay.

4. The term "typical" is generally used on construction drawings where a detail is intended to be applicable to similar elements of the construction. The term "typical" was used on the drawings for details on other elements of the construction, but not for Detail 4.

5. HRI's bid estimate included two steel floor plates for the one set of parallel lines indicated in Detail 4. It did not include steel floor plates for the other three sets. After award, the Government directed that steel plates be provided between all four sets of parallel lines. HRI complied with this direction under protest. On 9 July 1991, it submitted a claim in the amount of $20,851.93 for providing six additional steel plates. By final decision dated 18 February 1993, the claim was denied.

DECISION

Detail 4 referred to only one of the four sets of parallel lines in the maintenance bays. It was not marked "typical," nor did the drawings and specifications otherwise indicate that steel plates were to be placed between the other three sets of parallel lines. HRI's understanding that steel plates were required only between one set of parallel lines in one bay as shown in Detail 4 did not render the other sets of parallel lines meaningless. All four sets showed in plan view where the thickened foundation shown in the cross-section detail was to be placed.

The Government as the author of the drawings and specifications had the responsibility of assuring that the words and symbols used expressed its intent to the contractor. It can avoid that responsibility only where it makes a major error or discrepancy that the contractor should reasonably have noticed in the bidding process and should have brought to the Government's attention before bidding. *Blount Brothers Construction Co. v. United States* [10 CCF ¶ 73,058], 171 Ct. Cl. 478, 495-97 (1965).

We find no major discrepancy or error on the face of the drawing which HRI should have noted and brought to the attention of the Government before bidding. HRI was not responsible for evaluating the design of the building. It knew that the building was to be used for maintenance of "range support" vehicles, and that those vehicles included tracked armored vehicles. But it did not know, nor did it have any reason to know whether the steel plating of only one side of one bay as indicated on the drawings, was or was not consistent with the characteristics of those vehicles, or otherwise consistent or inconsistent with the intended use of the building.

The appeal is sustained and remanded to the parties for settlement of amount.

[¶ 26,534] COLSA, Inc.

ASBCA No. 45505, November 30, 1993. Contract No. DAAD07-87-C-0020.

Procedure, Boards—Reconsideration—Arguments Already Considered.—A motion for reconsideration that asserted that two contract clauses were in conflict was denied because the contractor had made that argument in its brief and failed to note that the board's decision expressly stated that although the two clauses were similar, they authorized action with respect to different costs. The contractor failed to identify the provisions in the clauses that it contended were in conflict, either in its brief or in the motion for reconsideration.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Procedure, Boards—Reconsideration—Misunderstood Ruling.—A contractor's request, in a motion for reconsideration, to receive the fixed fee payable upon contract completion was denied because the prior decision had determined only entitlement to a government claim; there was no claim seeking the fixed fee or any other monies before the board. The motion reflected a misunderstanding of the nature of the board's ruling. There was no basis to modify the prior decision to add the language requested by the contractor.

Procedure, Boards—Reconsideration—Immaterial Evidence.—Excerpts from a contract that were not previously a part of the record were immaterial and were not accepted on a motion for reconsideration, because the excerpts were not from the contract at issue. As part of its motion, the contractor attempted to proffer evidence into the record to show that the contract specialist was a contracting officer in the other contract. However, even if the individual was the contracting officer in another contract, the contractor is charged, as a matter of law, with knowing the authority of government officials.

For the appellant: Gary L. Rigney and Henry L. Brown, Huntsville, Alabama. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Capt. Scott E. Lind, JAGC, Trial Attorney.

Before HARTMAN and VAN BROEKHOVEN, Administrative Judges.

Reconsideration of 94-1 BCA ¶ 26,309 denied.

HARTMAN, Administrative Judge: Appellant, COLSA, Inc. ("COLSA"), has moved for reconsideration of our 16 August 1993 decision denying its appeal of a final decision, which disallowed $46,553.62 in costs billed by and paid to it under a cost-plus-fixed-fee contract because it had "overrun" the estimated work cost set forth in three work assignment orders by that sum without notifying the contracting officer ("CO") and obtaining approval to do so. Familiarity with our prior decision, which was issued pursuant to Rules 11 and 12.3, is assumed.

COLSA asserts in its reconsideration motion that, "in paragraph (e) of its reply [brief], [it] challenged the validity of the provisions of paragraph H.21 ... establish[ing] additional funding restrictions which conflicted with the provisions of the Limitation of Funds (LOF) clause contained in the contract" and that "[t]he decision rendered by the Board does not discuss or apparently consider th[is] issue." It is true COLSA contended for the first time in paragraph (e) of its reply brief that "use of a policy, procedure, contract clause or method that is inconsistent with the intent, principle or substance of the required FAR clause constitutes a 'deviation' as that term is defined at FAR 1.401" and that "[t]he contract file does not contain any information relating to approval for the [CO] to use the additional funding limitations set out in section R.21.10" (emphasis deleted). COLSA, however, never identified in its brief the provisions of section H.21 and LOF clause it believes conflict, and fails to note that our decision expressly states, with respect to COLSA's unsupported contention, "[w]hile schedule section H.21.10 and the LOF clause are similar in that they both allow a CO to decline reimbursement of costs, they authorize such action with respect to 'different' costs."

In its two-page reconsideration motion, COLSA once again fails to identify the provisions of section H.21 and the LOF clause which it believes are in conflict. COLSA's simple assertion that section H.21 and the LOF clause are in conflict does not make it so. In order for there to be a deviation from the prescribed FAR LOF clause, there must be action *"inconsistent* with the FAR" (emphasis supplied). FAR 1.401; *Northwest Marine, Inc.*, ASBCA No. 43097, 92-2 BCA ¶ 24,861 at 124,012-13. As described in DFARS 1.402(a)(1), there must be a "contract clause covering the *same* subject matter which varies from the FAR or DoD FAR supplement coverage, or use of a collateral provision which *modifies* either the clause or its prescribed application" (emphasis supplied). Because appellant has pointed us to no such variation or modification and we ourselves have been unable to find any such variation or modification, we see no reason to change the conclusion set forth in our prior decision—that COLSA's arguments relating to the LOF clause are without merit.

COLSA further asserts in its reconsideration motion, without any citation to the record or legal authority, that it "has completed all the tasks that were to be performed by this contract" and the Board should "modify its decision to find that upon satisfactory completion of the con-

Digitized by Google

tract, [it] is entitled to receive the fixed fee set out in the contract." COLSA's assertion, however, reflects a misunderstanding of the nature of the Board's proceedings to date. The Board simply has held that the CO properly disallowed certain costs, *i.e.*, determined "entitlement" with respect to COLSA's appeal of the CO's decision disallowing specific costs billed by and paid to COLSA under the parties' cost-plus-fixed-fee contract based upon COLSA's "overrun" of the estimated work cost set forth in three work assignment orders. The Board, therefore, has determined entitlement with respect to a "Government" claim "adversely" to COLSA and remanded the appeal to the parties to see if they can resolve amicably the issue of quantum, *i.e.*, the proper amount of the disallowance. Because COLSA has not submitted a claim to the CO seeking "fixed fee set out in the contract" or any other sum, the Board lacks jurisdiction to "award" COLSA "fixed fee" or any other monies. *See* 41 U.S.C. § 605(a); *Heyl & Patterson v. O'Keefe* [38 CCF ¶ 76,475], 986 F.2d 480 (Fed. Cir. 1993); *Paragon Energy Corp. v. United States* [28 CCF ¶ 81,290], 645 F.2d 966, 971 (Ct. Cl. 1981); *Eurostyle, Inc.*, ASBCA No. 45934, 94-1 BCA ¶ 26,458; *LGT Corp.*, ASBCA No. 44066, 93-3 BCA ¶ 26,184 (June 30, 1993). Thus, we are aware of no basis to modify our prior decision to add the language requested by COLSA.

Finally, COLSA asserts in its reconsideration motion that, while the Board referred to Ms. Schrecongost as a "Contract Specialist in accordance with the affidavits submitted by Ms. Schrecengost" [sic], "COLSA knew her, based upon her representations, as the 'Contracting Officer' who issued contract DAAD07-89-C-0024." COLSA appends to its motion excerpts from what appears to be contract No. DAAD07-89-C-0024 which previously were not part of the record, but proffers no reason why the Board should, in resolving a reconsideration motion, examine evidence previously available to COLSA and not submitted. The belatedness of COLSA's attempt to supplement the record, however, need not concern us because, as the Government notes in opposition to the reconsideration motion, the excerpts proffered are immaterial. At issue in this appeal is contract No. DAAD07-87-C-0020, not contract No. DAAD07-89-C-0024. COLSA is charged, as a matter of law, with knowing the authority of Government officials. *E.g., Federal Crop Insurance Corp. v. Merrill*, 332 U.S. 380, 384 (1947); *HTC Industries, Inc.*, ASBCA No. 40562, 93-1 BCA ¶ 25,560 at 127,310, *aff'd on recon.*, 93-2 BCA ¶ 25,701. Moreover, as stated in our prior decision, even if one assumed Ms. Schrecongost was the CO for contract No. DAAD07-87-C-0020, the statement she purportedly made regarding modification of the contract would "not justify a failure by COLSA to obtain a modification of a [Work Assignment Order]." Accordingly, COLSA's motion for reconsideration is denied and our prior decision affirmed.

[¶ 26,535] New England Construction Company

ASBCA No. 44229, November 30, 1993. Contract No. DAHA43-91-C-0011.

Interpretation of Contracts—Drawings—Drawings and Specifications Read Together.—A drawing that did not provide for the installation of cranes and that provided that the installation was an additive bid item was patently ambiguous, because the relevant specification expressly stated that crane quantity was indicated on the drawing. A contract for construction work at an airplane engine inspection and repair shop described the base-bid work as the installation of an overhead crane system, and it described the furnishing and installing of three overhead monorail cranes as an the additive bid item. Construing the contract to require the supply of cranes only under the additive bid item would give no meaning to the word "crane" as used in the phrase "overhead crane system," which is contrary to the principles of contract interpretation.

Interpretation of Contracts—Ambiguities, Patent—Duty to Seek Clarification.—A contractor had an affirmative obligation to obtain clarification of a discrepancy between a specification and a drawing because it was aware that a drawing made no reference to the number of cranes to be installed in an overhead crane system and because it knew before bidding that its prospective subcontractors disagreed concerning the number of cranes to be installed. The contractor's interpretation of the discrepancy that a drawing, which omitted the number of cranes to be installed, meant that it was not required to install any

 ©1994, Commerce Clearing House, Inc.

Digitized by Google

cranes in an overhead crane system was unreasonable. Although the contractor contacted, by phone, a government employee who did not have authority to respond to the inquiry and who indicated that he was unable to respond, the procedure did not conform to the instructions furnished with the invitation for bids to contact the contracting officer.

For the appellant: Arter & Hadden, Cleveland, Ohio, by Barry J. Miller. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Lt. Col. Thomas O. Mason, JAGC, Trial Attorney.

Before HARTMAN, WILLIAMS, and RUBERRY, Administrative Judges.

HARTMAN, Administrative Judge: Appellant seeks review of a contracting officer's final decision denying its claim for an equitable adjustment in contract price based upon supply and installation of three cranes as part of its base-bid work. Entitlement only is at issue.

STATEMENT OF FACTS

On 31 July 1991, the Department of the Army issued an invitation for bids ("IFB"), No. DAHA43-91-B-0006, for the performance of construction work at the Vermont Air National Guard Base Engine Inspection and Repair Shop, Building No. 330, Burlington International Airport, which contained a base bid and four "additive bid" items. The base bid was "to furnish all plant, labor, materials, equipment and services necessary" to construct an addition housing administrative functions, and to "[a]lter existing facility for the expansion of the engine repair area by eliminating the administrative areas and installation of an overhead crane system." (R4, tab 1 at 1)

Section 14920 of the IFB was entitled "Overhead Monorail Cranes." The first part of section 14920, which was entitled "General," provided in part as follows:

1.02 *DESCRIPTION OF WORK:*

A. The work covered by this section includes the furnishing and installation of overhead monorail cranes.

B. The quantity, requirements and locations are indicated on Drawing No. S2.

1.03 *QUALITY ASSURANCE*

A. Provide at least one person who shall be present at all times during the execution of this portion of the work and who shall be thoroughly trained and experienced in installing monorail cranes specified ....

(R4, tab 1 at 36) (Emphasis added)

The second part of section 14920 entitled "Products" stated that: "the clearance between the ends of the crane and the building columns, knee braces or any other obstructions shall be not less than 2 inches with crane centered on runway rails;" there shall be "a minimum clearance of 3 inches between the highest point of the crane and the lowest overhead obstruction;" "crane stops furnished by the purchaser shall be designed to suit the specific crane to be installed;" "runway rails should be standard rail sections of a proper size for the crane to be installed;" "conductors shall have sufficient capacity to carry the required current to the crane, or cranes, when operating with rated load;" and "[t]he rated capacity of the crane shall be that load for which the crane is designed." (R4, tab 1 at 36-38) (Emphasis added)

The third part of section 14920 entitled "Execution" provided in part as follows:

A. *PREPARATION:*

Coordinate installation of monorail cranes and associated equipment indicted [sic] on the drawings....

Coordinate delivery of cranes and associated equipment to project site to avoid delaying progress.

[sic] *INSTALLATION:*

General: Comply with manufacturer's detailed instructions for the installation of cranes and associated equipment.

B. *ERECTION:*

[] The Crane shall be erected ... by the contractor.... The purchaser shall protect the crane from the time of its receipt until it is placed in service....

C. *LUBRICATION:*

[] The crane shall be provided with all necessary lubrication fittings. Before putting the crane in operation, the contractor shall lubricate all bearings, gears, etc. in accordance with the crane manufacturer's recommendations.

D. *PAINTING:*

[] Before shipment, the crane shall be cleaned and painted with the crane manufacturer's standard paint, unless otherwise specified.

E. *ASSEMBLY AND PREPARATION FOR SHIPMENT:*

[] The crane shall be assembled in the manufacturer's plant. ... The crane shall

Digitized by Google

be taken apart only to the extent necessary for shipment and all parts shall be carefully match-marked. . . .

F. *WARRANTY:*

[] Provide the manufacturer's standard warranty.

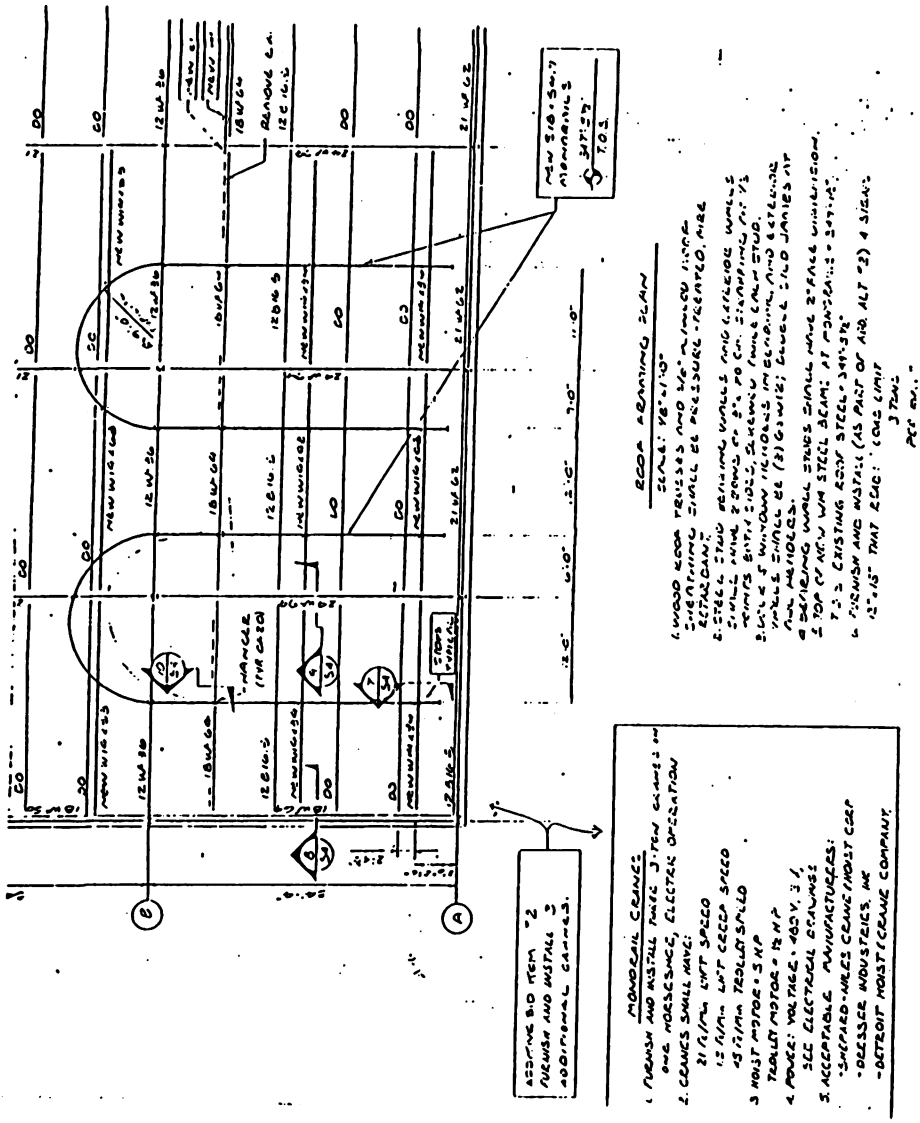
G. *ADJUST AND CLEAN:*

[] Make necessary adjustments for safe, efficient operation of monorail cranes and associated equipment.

(R4, tab 1 at 38-40) (Emphasis added)

Section 01010 of the IFB, which was entitled "Summary of Work," expressly provided that "an overhead crane system is to be added." It also provided that the work was to be performed in four phases, "[c]onstruction of the new crane area should be delayed until after the exterior storage area and addition are completed," and "[d]uring construction of the new crane area, the Owner must have complete use of the [existing] crane system at the East end of the building" (R4, tab 1 at 31-32) (emphasis added).

Section 01030 of the IFB entitled "Additive Bid Items" defined an additive bid item as "an amount proposed by Bidders and stated on the Bid Form for certain construction activities defined in the Bidding Requirements that may be added to the Base Bid amount if the Owner decides to accept a corresponding change in either the amount of construction to be completed, or in the products, materials, equipment, systems or installation methods described in the Contract Documents." It described additive bid item No. 2 as follows:



> The work of this additive bid item consists of the furnishing and installing of 3 Overhead Monorail Cranes. All other work at the monorails is part of the Basic Contract Amount.

(R4, tab 1 at 33-34)

Drawing S2, which was referenced in part one of IFB section 14920 and enclosed with the IFB, was labeled "Framing Plan" and depicted a new monorail crane system in the altered structure as follows:

©1994, Commerce Clearing House, Inc.

Digitized by Google

Digitized by Google

The IFB incorporated by reference various standard clauses (R4, tab 1 at 5-12), including FAR 52.236-21 and DFARS 52.236-7002. The former provides that "[i]n case of discrepancy in the figures, in the drawings, or in the specifications, the matter shall be promptly submitted to the Contracting Officer, who shall promptly make a determination in writing" and "[a]ny adjustment by the Contractor without such a determination shall be at its own risk and expense." The latter provides that "[t]he Contractor shall check all drawings furnished him immediately upon their receipt and shall promptly notify the Contracting Officer of any discrepancies."

Appellant, New England Construction Company ("NECCO"), an experienced Government contractor, received a copy of the IFB and commenced preparation of a bid. NECCO sent copies of the plans and specifications to potential subcontractors, such as hoist manufacturers, structural steel fabricators, and steel erectors, and solicited quotes from them to perform various aspects of the contract work. The crane suppliers solicited submitted quotes for supplying different numbers of cranes to NECCO's estimator, Jack Barnes, causing Mr. Barnes to conclude "there seemed to be confusion out there as to how many cranes were required" under the contract. (Tr. 28-29, 34-36, 48-49, 56-58, 78-79, 145)

On 29 August 1989, one day before bid opening, because Mr. Barnes "was feeling somewhat confused about what exactly the plans and specifications were asking for regarding cranes and monorails," he called Tom Boll, the chief structural engineer with Hallam & Associates ("Hallam"), an architect and engineer ("AE") firm retained by the Government, in order to obtain a "clarification." Mr. Boll had not been involved in Hallam's preparation of the project plans and specifications because he only joined the firm in the summer of 1991, and had not been designated by the Government as an individual to respond to inquiries from bidders. Mr. Boll advised Mr. Barnes that he was not able to say how many cranes were specified and Mr. Barnes would have to use his own judgment. (R4, tabs 25, 38; tr. 57-61, 69, 76, 109, 117-19, 124-25, 130-31, 137-38, 162)

After speaking with Mr. Boll, Mr. Barnes did not call the contracting officer, the base civil engineer, or anyone else knowledgeable about the project. Rather, he simply "reached [his] own conclusions about or [his] own understanding of what was required in the base bid and what was required in the alternates," which was that the base bid did not require supply of any cranes and that additive bid item No. 2 required the supply of three cranes, if awarded. In completing NECCO's bid, Mr. Barnes therefore did not include the cost of supplying any cranes, except with respect to additive bid item No. 2. (R4, tabs 8, 39; tr. 33-34, 60-61, 64-65, 69-70, 72-73, 76, 107, 146, 157)

On 30 August 1991, the contracting officer learned that there were sufficient funds for the Government to award all of the additive bid items for the project and opened the four bids she had received. The bids had been submitted by NECCO, E.G. Wall & Associates, Delphia Construction, and K.R. Adams, and totalled for the base and additive bid items, respectively, $270,010, $297,283, $304,353, and $345,900. The contracting officer requested that NECCO verify its apparent low bid and NECCO did so without raising the issue of the number of cranes to be supplied. (R4, tabs 3, 24; tr. 39-40, 72-73, 108, 146-47, 149-51, 156-57)

On a prior IFB issued for work at the base where NECCO was the apparent low bidder, NECCO notified the contracting officer after bid opening that it had failed to include in its bid material and labor costs for some additive bid items and thereafter did not receive award of the contract. NECCO, thus, was familiar with the procedures for alerting a Government contracting officer to a mistake in bid and the possibility that, if it did so, it may not receive award of the contract. (Tr. 38, 144-45)

In mid-September of 1991, the contracting officer awarded the contract to NECCO. Approximately one month later, on 14 October 1991, Mr. Boll, who had been assigned by Hallam to be the contract project manager, called NECCO to ascertain whether there were any issues it planned upon raising at the pre-performance conference scheduled for the next day. Mr. Barnes reminded Mr. Boll of their conversation on 29 August 1991 and advised Mr. Boll that, when NECCO's clarification request went unanswered, NECCO "carried no cranes on the base bid and had three on the additive bid item." Because NECCO's action was "clearly against [Mr. Boll's] understanding" that the contract required "[t]hree [cranes] in the base bid and three in the additive bid items," Mr. Boll promptly sent a letter by facsimile to the Government's contract specialist advising that: "[i]n talking to Jack Barnes ... it became clear that [NECCO] included *zero* cranes in the base bid and car-

©1994, Commerce Clearing House, Inc.
Digitized by Google

ried 3 as AB#2 that will result in one of the monorails being a non-functional crane system;" "[i]t was the consultant's intent to have 3 in the base bid and 3 in additive bid item #2;" and "[t]his is a 'big ticket' item and we should be prepared to talk about it at our meeting" (emphasis in original). (R4, tabs 1, 4; tr. 61, 72-73, 117-18, 120-21)

At the pre-performance conference and a subsequent meeting in October, the parties discussed their differing views regarding the number of cranes to be supplied and the contracting officer requested that NECCO furnish her documentation supporting its claim that it had included in its bid only the cost of supplying three cranes. Thereafter, NECCO sent the contracting officer documents generated during preparation of its bid, a letter setting forth its interpretation of the contract, and cost information for supply and installation of three additional cranes. (R4, tabs 5 through 8, 10; tr. 63, 158-59)

By letter dated 4 November 1991, the contracting officer advised NECCO that its "stated interpretation of the plans and specifications does not relieve [it] of the responsibility to perform the contract, to include the provision and installation of two (2) Overhead Crane Systems," each with "three (3) overhead cranes. She also requested assurance from NECCO that it "possess[ed] the capability and intent to perform th[e] contract in its entirety at no additional cost to the Government." On 19 November 1991, NECCO notified the contracting officer that: "NECCO Inc. is not asserting that there was any error in its bid, nor ... seeking relief from its bid;" NECCO "stands ready to perform the contract work in accordance with its bid;" and "[i]n the event that the Government wishes to have NECCO Inc. install three overhead cranes on each monorail, please issue and [sic] appropriate written directive for us to perform that work." (R4, tabs 9, 11, 12)

In a letter dated 12 December 1991, NECCO advised the contracting officer that it had "not received the requested [crane work] directive and would like the matter made clear." On 4 February 1992, after receiving a letter from Hallam that "[i]t remains [Hallam's] interpretation that three cranes are included in the Base Bid and an additional three cranes ... in Additive Bid Item #2," the contracting officer issued a document notifying NECCO that "[y]our stated interpretation of the contract requirements ... is in error," setting forth a detailed explanation for her conclusion, and stating "[t]his is the final decision of the Contracting Officer." By letter dated 27 February 1992, NECCO advised the contracting officer that it was in receipt of her "Directive to install six (6) cranes," and was "at this time making a claim for equitable adjustment of $35061.00 and requesting a four (4) day extension" of contract time. On 2 March 1992, the contracting officer notified NECCO simply that "[i]f you choose to appeal my final decision, rendered on 04 February 1992, you must follow the guidelines, as stated in paragraph 8 [of that decision]." (R4, tabs 13, 16 through 18)

Approximately one week after the contracting officer advised it to follow the appeal guidelines previously set forth, NECCO filed this appeal with the Board. During November of 1992, the Board conducted a one-day hearing in Burlington, Vermont, at which the AE's project manager testified that the components of an "overhead crane system" are understood to include one or more "cranes" and the contracting officer testified that, if she had been made aware of the problem with the plans and specifications, she could have amended the solicitation and extended the bid opening date to allow bidders a chance to make any necessary modifications to their bids (tr. 117, 126, 140, 143, 150-51). Subsequently, the parties submitted to the Board both initial and reply, post-hearing briefs.

DECISION

NECCO contends in its briefs that it is entitled to receive an equitable adjustment in the contract price for supplying three cranes as part of its base-bid work because the contract drafted by the Government was ambiguous concerning the number of cranes to be supplied and NECCO's interpretation of the contract as requiring only the supply of three cranes under the second additive bid item was reasonable. The Government, however, contends in its briefs that NECCO is precluded from receiving a price adjustment because any ambiguity regarding the number of cranes to be supplied was "patent," NECCO did not apprise the contracting officer of that ambiguity before contract award, and NECCO's interpretation of the contract as requiring zero cranes to be supplied under the base bid was unreasonable.

Under the rule of *contra proferentem*, a contract ambiguity is to be construed against the party who drafted the contract. An exception to the rule exists, however, if the ambiguity is "patent." The rule does not ap-

Digitized by Google

ply with respect to a patent ambiguity unless an authorized representative of the drafting party has received an inquiry prior to contract award from the other party about the contract's true meaning. This exception ensures that all bidders are bidding upon the same specification, protects the drafting party from being taken advantage of by a bidder who relies upon the least costly interpretation of a serious ambiguity in order to obtain contract award and who plans to seek an increase in contract price later when a more costly interpretation is advanced by the drafter, and assists contract administration by requiring ambiguities to be resolved administratively pre-award, rather than in costly litigation post-award. *Newsom v. United States* [29 CCF ¶ 82,417], 676 F.2d 647, 649 (Fed. Cir. 1982); *S.O.G. of Arkansas v. United States* [23 CCF ¶ 80,878], 546 F.2d 367, 371, 212 Ct. Cl. 125, 131 (1976); *Beacon Construction Co. v. United States* [9 CCF ¶ 72,018], 314 F.2d 501, 504, 161 Ct. Cl. 1, 6-7 (1963).

There is no general rule for determining when an ambiguity is patent. Rather, that determination is made on a case-by-case basis, utilizing an objective standard of what a reasonable man would find to be patent and glaring. *Newsom*, 676 F.2d at 649-50; *Max Drill, Inc. v. United States* [15 CCF ¶ 83,691], 427 F.2d 1233, 1244, 192 Ct. Cl. 608, 626 (1970); *M.C. Dean Electrical Contracting, Inc.*, ASBCA No. 38132, 90-1 BCA ¶ 22,314 at 112,066, *aff'd on recon.*, 90-2 BCA ¶ 22,711; *Harco Manufacturing Co.*, ASBCA No. 27567, 85-1 BCA ¶ 17,926 at 89,759, *aff'd*, 790 F.2d 91 (Fed. Cir. 1986) (table).

Here, the parties' contract described the base-bid work as including "installation of an *overhead crane system*" (emphasis added). The phrase "overhead crane system" means an overhead system containing one or more "cranes." To conclude otherwise would be to give no meaning to one of the words contained in the phrase, *i.e.*, "crane," contrary to the principles of contract interpretation. *See, e.g., State of Arizona v. United States*, 575 F.2d 855, 863, 216 Ct. Cl. 221, 235 (1978); *Astro-Space Laboratories, Inc. v. United States* [18 CCF ¶ 81,894], 470 F.2d 1003, 1010, 200 Ct. Cl. 282, 295 (1972).

Section 14920 of the contract Specification stated that "[t]he work covered by th[at] section includes the furnishing and installation of overhead monorail cranes" and "[t]he quantity, requirements and locations are indicated on Drawing No. S2." Contract drawing No. S2 contained a note which was enclosed in a box and labeled "Monorail Cranes." The note stated that the contractor was to "[f]urnish and *install three 3-ton cranes* on one horseshoe, electric operation," specified acceptable crane manufacturers, and set forth required speeds, horsepowers, and voltages for the cranes (emphasis added). Drawing No. S2 contained a second note enclosed in a box, which had arrows pointing from the box to both the note described previously and a horseshoe-shaped track depicted upon the drawing. That note stated: "Additive Bid Item #2 Furnish And *Install 3 Additional Cranes*" (emphasis added).

The parties' contract described additive bid item No. 2 as simply the "furnishing and installing of 3 Overhead Monorail Cranes." The contract noted, with respect to additive bid item No. 2, that "[a]ll other work at the monorails is part of the Basic Contract Amount." Because the contract expressly defined an additive bid item as "an amount proposed by Bidders . . . for certain construction activities . . . that may be added to the Base Bid amount if the Owner decides to accept a corresponding change . . . in the products, materials, equipment, systems or installation methods described in the Contract Documents," the three cranes referenced under additive bid item No. 2 would be supplied and installed by the contractor *only* if the Government elected after bid submission to make a "change" in the equipment or systems required under the base bid.

Although the language used in the contract to convey the number of cranes to be installed under the base bid is not a model of clarity, one reading the contract documents as carefully as a prospective bidder and construing drawing No. S2 as requiring only the supply of cranes under the additive bid item could not help but notice a conflict between the drawing and other contract documents. Such a construction would result in the installation of an overhead system with *no cranes*, unless the Government subsequently elected to "change" the equipment by awarding additive bid item No. 2, when the contract documents repeatedly described the base bid work as "installation of an overhead *crane* system" (emphasis added). *See, e.g., Bodell Construction Co.*, ASBCA No. 44474, *M.C. Dean Electrical Contracting, Inc.*, 94-1 BCA ¶ 26,429 (18 Oct. 1993) 90-1 BCA ¶ 22,314 at 112,067; *Master Mechanical Contractors, Inc.*, ASBCA No. 33304, 87-2 BCA ¶ 19,799 at 100,160.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Moreover, such a reading would be premised upon a glaring drawing "omission." Because Specification section 14920 expressly states that crane "quantity, requirements and locations *are indicated* on Drawing No. S2" and *nowhere* on the drawing does it state that the contractor is to supply "zero" cranes when installing an "overhead crane system" under the base bid, a bidder so reading the drawing necessarily must conclude that the "number" of cranes to be installed as part of that work has been omitted from the drawing and furnish its own number, *i.e.*, "zero." (Emphasis added) *See, e.g., Jefferson Construction Co. v. United States* [7 CCF ¶ 71,364], 151 Ct. Cl. 75, 88 (1960); *Lord and Son Construction, Inc.*, ASBCA No. 42700, 91-3 BCA ¶ 24,346 at 121,620.

In its post-hearing briefs, NECCO acknowledges that, under its reading, drawing No. S2 makes no mention of cranes as part of the base bid work. NECCO also acknowledges that it knew before bidding its prospective subcontractors disagreed concerning the number of cranes to be supplied under the contract. (App. br. at 11, 18, 23; app. reply br. at 3, 5) When a bidder has notice of a significant problem, such as NECCO here, the bidder is not free simply to "bridge the gap" in its own favor by supplying the number zero or another number. Rather, it has an affirmative obligation to make appropriate inquiries in an effort to obtain clarification. *E.g., Max Drill*, 427 F.2d at 1243; *Westerchil Construction Co.*, ASBCA No. 35191, 88-2 BCA ¶ 20,528 at 103,776.

NECCO asserts in its briefs that it made such an inquiry and was furnished no guidance (app. br. at 26-27, app. reply br. at 1, 8-10). However, NECCO, an experienced Government contractor, did not follow the instructions furnished bidders in the IFB and contact the Government's contracting officer regarding the problem. Rather, one day before bid opening, it simply contacted by telephone an employee of the AE firm retained by the Government for the project who had not been designated or authorized to respond to such inquiries and who indicated he was unable to respond. NECCO therefore did not make appropriate inquiries to obtain clarification. *See, e.g.*, FAR 52.366-21; *Jefferson Construction Co.*, 151 Ct. Cl. at 90-91; *Construction Foresite, Inc.*, ASBCA No. 42350, 93-1 BCA ¶ 25,515 at 127,072.

Citing *Wright Associates, Inc.*, ASBCA No. 22492, 79-2 BCA ¶ 14,102, *aff'd on recon.*, 80-1 BCA ¶ 14,252, NECCO also asserts that an inquiry of the contracting officer was unnecessary because it would not have produced a meaningful response (app. reply br. at 6-7). However, unlike the case cited, which this Board previously has characterized as "turn[ing] primarily on the proven facts," *Wright*, 80-1 BCA ¶ 14,252 at 70,207, there is no evidence in the record which would support such a finding here. *See Fred A. Arnold, Inc.*, ASBCA Nos. 22124, 22428, 78-2 BCA ¶ 13,369 at 65,345. Indeed, NECCO's contracting officer testified at the hearing that, if she had known of the problem, she could have extended the date for bid opening to allow review of the issue and notification of all potential bidders of her advice on the issue.

In sum, NECCO failed to bring to the Government's attention a patent ambiguity regarding the number of cranes to be supplied. Accordingly, it cannot now avail itself of the

Digitized by Google

contra proferentem rule to obtain an equitable adjustment based upon that ambiguity.*

CONCLUSION

The appeal is denied.

[¶ 26,536] J.A.K. Construction Company, Inc.

ASBCA No. 43099, November 30, 1993. Contract No. DAKF27-89-D-0042.

Interpretation of Contracts—Plumbing, Pipes, and Welding—Frozen Pipes.—The government's order to repair burst pipes was a compensable change because the work was outside the scope of the contract in that the contractor made a *prima facie* showing that the contract required it to protect buildings from freezing only while the buildings were in its possession. The government contended that even if the pipes froze when the units were back in the government's possession, the contractor was responsible because it failed to warn the government that supplemental heating would be necessary. However, the contract did not impose that burden on the contractor, and there was no obligation to provide a warning to the government, because the government was aware of the need to protect the buildings from freezing since it had drafted the specifications authorizing supplemental heating while the buildings were in the contractor's possession.

Interpretation of Contracts—Plumbing, Pipes, and Welding—Water Damage.—A contractor was responsible for water damage caused by burst pipes, even though the pipes were damaged while the housing units were in the possession of the government, because the contractor, as the party in possession of the units when the water was turned back on, should have checked for the possibility of cracked pipes to prevent water damage as a matter of simple prudence. In a contract for the replacement of heating systems in family housing units, the contractor knew that the water had been shut off for at least seven months over the winter. It also knew that it had not drained the pipes and that the pipes might have frozen and cracked. Since it failed to drain the pipes, it was responsible for resulting water damage under the terms of the clause that made the contractor responsible for all damage to the property that occurred as a result of the contractor's fault or negligence, and the work was not a compensable change.

For the appellant: John Sfakianoudis, Vice President. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. Margaret A. Schuyler, JAGC, Trial Attorney.

Before LANE, SPECTOR, and STEMPLER, Administrative Judges.

LANE, Administrative Judge: Appellant had a contract for replacement of heating systems in family housing. The contract required appellant to protect the housing units from freezing. The units in issue were in appellant's possession for part of the winter, in the Government's possession for the rest of the winter, and then back in appellant's possession for completion of the work. At some unknown time during the winter the pipes froze and water damage resulted. Appellant claims $2,264.06 for the cost of performing ordered repairs to fix the pipes and correct the water damage.

---

* NECCO raises two additional contentions in support of its receipt of an equitable adjustment, but neither merits much discussion. While NECCO contends the "Government cannot establish the ultimate instructions [it furnished] to the design professional for the treatment of cranes" and, when drafting the final specification, the AE believed cranes simply were to be an alternate bid item because of a miscommunication between it and the Government, neither the subjective intent of the AE nor the Government is at issue here. The goal in an appeal such as this is to determine the intent of the contracting parties *as expressed* in their contract. *E.g., L. Rosenman Corp. v. United States* [12 CCF ¶ 81,648], 390 F.2d 711, 714, 182 Ct. Cl. 586, 590 (1968); *Harco Manufacturing, supra*, at 89,759. Moreover, while NECCO contends that this appeal is analogous to *United States v. Turner Construction Co.* [34 CCF ¶ 75,292], 819 F.2d 283 (Fed. Cir. 1987), a case where the court concluded there was no patent ambiguity because, "[e]ssentially, the location of the transmitters appears to [have] be[en] a nonissue in the specifications," one cannot fairly construe the parties' contract here as leaving the number of cranes which were to be installed to the discretion of the contractor. As found above, the contract expressly stated that the crane "quantity, requirements and locations *are indicated* on Drawing No. S2" (emphasis added).

Digitized by Google

This appeal was submitted for decision on the written record under Rule 11 without a hearing. Only entitlement is in issue.

We conclude that appellant is entitled to recover for the cost of repairing the pipes because the Government has not carried the burden of showing that the damage occurred during appellant's possession of the units, and appellant did not have an obligation to warn the Government when turning back the units of the need to protect them. However, appellant is not entitled to recover its cost of repairing the water damage to the units because it has not carried its burden of showing due care in checking for leaks when it turned the water back on.

FINDINGS OF FACT

1. On 29 August 1989 the Directorate of Contracting, Fort Meade, Maryland, awarded appellant contract No. DAKF27-89-D-0042 for the replacement of heating systems in 300 military family housing units. It was a firm fixed-price requirements contract for $1,224,345. (R4, tab 1; Sfakianoudis Affid., ¶ 3, 4)

2. The contract included (in Section I) the following standard clauses: Permits and Responsibilities (APR 1984) (FAR 52.236-7) [1]; Protection of Existing Vegetation, Structures, Equipment, Utilities, and Improvements (APR 1984) (FAR 52.236-9) [2]; Use and Possession Prior to Completion (APR 1984) (FAR 52.236-11) [3]; and Changes (AUG 1987) (FAR 52.243-4).[4] (R4, tab 1)

---

[1] PERMITS AND RESPONSIBILITIES (APR 1984)

The Contractor shall, without additional expense to the Government, be responsible for obtaining any necessary licenses and permits, and for complying with any Federal, State, and municipal laws, codes, and regulations applicable to the performance of the work. The Contractor shall also be responsible for all damages to persons or property that occur as a result of the Contractor's fault or negligence, and shall take proper safety and health precautions to protect the work, the workers, the public, and the property of others. The Contractor shall be responsible for all materials delivered and work performed until completion and acceptance of the entire work, except for any completed unit of work which may have been accepted under the contract.

[2] PROTECTION OF EXISTING VEGETATION, STRUCTURES, EQUIPMENT, UTILITIES, AND IMPROVEMENTS (APR 1984)

(a) The Contractor shall preserve and protect all structures, equipment, and vegetation (such as trees, shrubs, and grass) on or adjacent to the work site, which are not to be removed and which do not unreasonably interfere with the work required under this contract. The Contractor shall only remove trees when specifically authorized to do so, and shall avoid damaging vegetation that will remain in place. If any limbs or branches of trees are broken during contract performance, or by the careless operation of equipment, or by workmen, the Contractor shall trim those limbs or branches with a clean cut and paint the cut with a tree-pruning compound as directed by the Contracting Officer.

(b) The Contractor shall protect from damage all existing improvements and utilities (1) at or near the work site, and (2) on adjacent property of a third party, the locations of which are made known to or should be known by the Contractor. The Contractor shall repair any damage to those facilities, including those that are the property of a third party, resulting from failure to comply with the requirements of this contract or failure to exercise reasonable care in performing the work. If the Contractor fails or refuses to repair the damage promptly, the Contracting Officer may have the necessary work performed and charge the cost to the Contractor.

[3] USE AND POSSESSION PRIOR TO COMPLETION (APR 1984)

(a) The Government shall have the right to take possession of or use any completed or partially completed part of the work. Before taking possession of or using any work, the Contracting Officer shall furnish the Contractor a list of items of work remaining to be performed or corrected on those portions of the work that the Government intends to take possession of or use. However, failure of the Contracting Officer to list any item of work shall not relieve the Contractor of responsibility for complying with the terms of the contract. The Government's possession or use shall not be deemed an acceptance of any work under the contract.

(b) While the Government has such possession or use, the Contractor shall be relieved of the responsibility for the loss of or damage to the work resulting from the Government's possession or use, notwithstanding the terms of the clause in this contract entitled "Permits and Responsibilities." If prior possession or use by the Government delays the progress of the work or causes additional expense to the Contractor, an equitable adjustment shall be made in the contract price or the time of completion, and the contract shall be modified in writing accordingly.

[4] CHANGES (AUG 1987)

(a) The Contracting Officer may, at any time, without notice to the sureties, if any, by written order designated or indicated to be a change order, make changes in the work within the general scope of the contract, including changes—

(1) In the specifications (including drawings and designs); (2) In the method or manner of performance of the work; (3) In the Government-furnished

Digitized by Google

3. (a) The specifications contained two provisions relating to protection of buildings from freezing.

(b) Part I, Statement of Work, included the following in the Notes to Bidders:

4. The Contractor shall be responsible for protection of all quarters in his possession from weather damage and freezing. Any quarters with heating systems which are inoperable during freezing weather shall be provided with supplemental electric heat or shall have the plumbing system and fixtures properly drained and protected from freezing.

(R4, tab 1)

(c) Part II, Technical Provisions, in Section 15011—General Requirements, Mechanical, included the following paragraph:

22. SHUT DOWN OF EXISTING HEATING/COOLING SYSTEMS: Contractor shall not shut down heating systems during normal work hours during the period from 15 October through 15 April and shall not shut down cooling system during normal work hours from 15 June through 15 September unless specifically approved in writing by the Contracting Officer or his authorized representative. Work requiring shut down of existing systems shall be performed from 1600 hours through 0600 hours on normal work days or on weekends provided the system is again in operation for the next regular work day. During times of outages of the heating system, the contractor shall be fully responsible for the protection of the building, its systems, and its contents from damage due to freezing. Any damages which may occur shall be repaired or replaced at the Contractor's expense.

(R4, tab 1)

4. Section F, Deliveries or Performance, of the contract included the following provision:

1.) The contractor will be given fifteen (15) sets of housing units initially to begin work. The first set of completed quarters must be returned to the Government within 21 calendar days of receipt. Thereafter, the contractor shall be required to complete a minimum of 15 sets of quarters per calendar month. The contractor shall return no more than 5 sets of quarters to the Government during any seven day moving period. When a unit is completed and accepted by the Government, a new unit will be released to him. The Contractor shall have no more than 15 units in his possession at any given time, however, delivery orders for more than 15 units may be issued by the Government giving projected availability dates for the quarters.

2.) As with the quantities stated in the Bid Schedule, the quantities stated in paragraph 1. above are estimates and are based on optimum conditions. The failure of the Government to order these quantities shall not constitute the bases [sic] for an equitable price adjustment.

(Footnote Continued)

facilities, equipment, materials, services, or site; or (4) Directing acceleration in the performance of the work.

(b) Any other written or oral order (which, as used in this paragraph (b), includes direction, instruction, interpretation, or determination) from the Contracting Officer that causes a change shall be treated as a change order under this clause; provided, that the Contractor gives the Contracting Officer written notice stating (1) the date, circumstances, and source of the order and (2) that the Contractor regards the order as a change order.

(c) Except as provided in this clause, no order, statement, or conduct of the Contracting Officer shall be treated as a change under this clause or entitle the Contractor to an equitable adjustment.

(d) If any change under this clause causes an increase or decrease in the Contractor's cost of, or the time required for, the performance of any part of the work under this contract, whether or not changed by any such order, the Contracting Officer shall make an equitable adjustment and modify the contract in writing. However, except for an adjustment based on defective specifications, no adjustment for any change under paragraph (b) of this clause shall be made for any costs incurred more than 20 days before the Contractor gives written notice as required. In the case of defective specifications for which the Government is responsible, the equitable adjustment shall include any increased cost reasonably incurred by the Contractor in attempting to comply with the defective specifications.

(e) The Contractor must assert its right to an adjustment under this clause within 30 days after (1) receipt of a written change order under paragraph (a) of this clause or (2) the furnishing of a written notice under paragraph (b) above, by submitting to the Contracting Officer a written statement describing the general nature and amount of the proposal, unless this period is extended by the Government. The statement of proposal for adjustment may be included in the notice under paragraph (b) above.

(f) No proposal by the Contractor for an equitable adjustment shall be allowed if asserted after final payment under this contract.

(R4, tab 1, Amendment No. 0005 to Solicitation)

5. On 29 September 1989 the Government issued Delivery Order No. 0001 for work on 144 units. On 30 September 1989 the Government issued Delivery Order No. 0002 for work on 138 additional units. (R4, tabs 5, 6)

6. (a) On 4 December 1989, the Government gave appellant keys to fifteen housing units—ten two-bedroom units and five three bedroom units. The latter were units Nos. 7116-H, 7226-E, 7226-D, 7226-H, and 7313-A. (Sfakianoudis Affid., ¶ 5; R4, tab 48)

(b) The parties have treated the receipt and return of keys to individual units as receipt and return of possession of those units.

7. Appellant proceeded with the work and removed the existing furnaces from the fifteen units. On 20 December 1989, appellant informed the Government inspector that telephone conduit in the three-bedroom units (Nos. 7116-H, 7226-D, 7226-E, 7226-H and 7313-A) interfered with the new ducts. (R4, tabs 11, 12, 50; Sfakianoudis Affid., ¶ 5-6) The parties discussed the problem at a 27 December 1989 meeting but did not resolve it. By letter of 28 December appellant advised the Government that the telephone conduit would have to be relocated or abandoned; that until the matter was resolved appellant could not continue work in the three-bedroom units; and that it wanted the housing office to issue two-bedroom units to replace the affected three-bedroom units. (R4, tabs 13, 15; Sfakianoudis Affid., ¶ 7)

8. It is undisputed that on 4 or 5 January 1990 appellant returned to the Government the keys to the five three-bedroom units. (R4, tabs 14, 48, 50) The parties disagree as to whether this was pursuant to a Government directive; we do not consider it material to the case and make no finding on the point.

9. It is undisputed that when appellant initially took possession of the units on 4 December 1989, the water had been turned off and there was no indication of leaks in the existing piping systems. (Sfakianoudis Affid., ¶ 16)

10. (a) Appellant asserts in a rather general way that

> [w]hen JAK first took possession of these units on December 4, 1989, it took all reasonable and necessary precautions to protect these units from weather damage and freezing as called for under the Contract. The precautions taken by JAK remained in effect until JAK relinquished possession of these units back to the Government on January 4, 1990.

(Sfakianoudis Affid., ¶ 15)

(b) It is evident from the subsequent freezing of the pipes that appellant did not drain the plumbing systems and fixtures. The alternative method permitted by the contract to protect against freezing was to provide supplemental electric heating (finding 3(b)). Appellant's vice president does not state specific details as to precisely what precautions appellant took. Furthermore, while he states that he has personal knowledge of the facts, he does not state that he personally observed the precautions taken against freezing as opposed to relying on reports from his workers. We therefore decline to make a finding one way or the other as to whether appellant took precautions against freezing and whether they were adequate. Such a finding is not necessary to our decision.

11. When appellant returned the keys to the five units to the Government on 4 January 1990, it did not advise the Government whether the water pipes had been drained, whether the buildings had supplemental heating, or whether measures by the Government to protect the buildings were now required. Appellant does not assert otherwise.

12. Correspondence and discussions concerning the telephone conduit continued, but it was not until 3 July 1990 that bilateral modification P00005 was issued, adding a new line item to the contract to relocate electrical and telephone lines. (R4, tab 19)

13. There is no evidence or allegation that the Government took any precautions against freezing between 4 January and July 1990. We find that it did not.

14. During July 1990 the Government reissued to appellant the keys to the five three-bedroom units in issue (one on 5 July and the other four on 16 July) (Sfakianoudis Affid., ¶ 11). From 4 January to 5 July 1990, appellant had no access to the five units in issue. They were entirely in the Government's possession during that time. (Sfakianoudis Affid., ¶ 19)

15. Appellant proceeded to complete the work in those units. Before final cleanup, the water to the units was turned on (whether by appellant or by the Government at appellant's request is not clear), and appellant proceeded with final cleanup. During cleanup, appellant discovered water damage and water leaking into the kitchen

Digitized by Google

and laundry areas in the five units, and discovered that pipes encased in the walls of the housing units had frozen and burst during the winter. (Sfakianoudis Affid., ¶ 12-14; R4, tabs 22, 23) Appellant immediately shut off the water, notified the Government, and asked the Government inspector to observe the leaks. (Sfakianoudis Affid., ¶ 13)

16. There is no allegation or evidence that when appellant turned the water back on or asked the Government to do so, appellant checked the units to be sure the pipes were intact and not leaking. We find it did not do so.

17. There is no allegation or evidence that water damage done by water leaking from the pipes that had burst occurred while the units were in the Government's possession. On the contrary, the record indicates that appellant discovered water leaking and water damage only during final cleanup after the water had been turned back on. We find that the water damage occurred after the water had been turned back on while the units were in appellant's possession.

18. It also appears that there were three other causes of water leaks and damage not pertinent to the claim before us. On 9 July and 13 July 1990, appellant wrote the Government about a large accumulation of water in the mechanical room of unit No. 7116-H, apparently due to broken pipes under the kitchen sink that appellant had reported several months before and that was apparently not due to freezing of the pipes. (R4, tabs 20, 21) On 19 July 1990, in writing the Government about the water leaks in the kitchen and laundry areas in the five units in issue, appellant also mentioned a leak in the elbow of the sink in the upstairs bathroom in one of those units (No. 7226-H), and a leak in the upstairs toilet tank in another unit (No. 7104-C) that is not part of the present claim. (R4, tab 22)

19. There is no persuasive evidence as to when the water pipes in the five units in issue froze and burst. On this record it is not possible to find whether the pipes froze and burst between 4 December 1989 and 4 January 1990 while the units were in appellant's possession or between 4 January and 5 July 1990 while the units were in the Government's possession.

20. Appellant's vice president states without contradiction that the Government directed appellant to repair the leaks to the pipes encased in the walls. (Sfakianoudis Affid., ¶ 14) The affidavit does not specifically state that the Government ordered appellant to repair the water damage resulting from the leaks. The contracting officer's decision (R4, tab 48), however, determined that appellant was responsible for "any resulting damages" from the freezing. We find that the Government ordered appellant to repair the pipes and the water damage at its own expense and that the contracting officer either gave that order or at least ratified it in his final decision.

21. It is undisputed that appellant repaired the burst pipes and the water damage they had caused.

22. By letter of 9 January 1991, appellant submitted to the contracting officer a "claim for the damages to the five units" in the amount of $2,264.06, which included costs of repairing pipes and costs of repairing drywall, spackling, and painting. (R4, tab 32)

23. The contracting officer acknowledged receipt of the claim and promised a final decision. (R4, tab 33) After further correspondence (R4, tabs 36, 38, 44, 45), the contracting officer on 2 May 1991 issued a final decision denying appellant's claim (R4, tab 48). Appellant timely appealed to this Board by letter of 19 June 1991.

DECISION

Appellant claims reimbursement for the cost of repairing frozen water pipes and the damage that resulted from the leaking pipes.

Appellant has the ultimate burden of proof as the claimant. Appellant has established a prima facie case for recovery of the cost of repairing the broken pipes by demonstrating that the work was ordered by the Government and was not within the scope of the original contract. The Government then has the burden of going forward with the evidence and showing that the broken pipes occurred because of appellant's failure to fulfill a contractual responsibility or because of appellant's negligence. Such a showing would establish appellant's responsibility to repair the pipes under the Permits and Responsibilities clause and the Protection of Existing Vegetation, Structures, Equipment, Utilities, and Improvements clause. The Government has not carried this burden.

The contract required appellant to protect the buildings from weather damage and freezing, but only while they were in its possession. The pertinent specification provision is note 4 of the Notes to Bidders in Part I of the specifications (finding 3(b)), which made appellant "responsible for protection of all quarters *in his possession* from weather damage and freezing" (emphasis ad-

©1994, Commerce Clearing House, Inc.
Digitized by Google

ded). (Paragraph 22 of section 15011 (finding 3(c)) only applied to temporary shut down of heating systems for night work, not to long-term shut-down for replacement as in this case.)

Note 4 expressly gave appellant two alternatives for providing such protection—draining the plumbing systems and fixtures, and providing supplemental electric heating. If appellant had chosen the first alternative, the pipes would not have burst and the damage would not have occurred, but that is beside the point since the contract authorized the second alternative. Since appellant chose not to drain the plumbing systems, it *was* obligated to provide supplemental heating instead during freezing weather, and by doing so it could fully meet its contractual obligation to protect the quarters from freezing.

We have been unable to make a finding as to whether appellant actually did provide supplemental heating. However, appellant was only obligated to do so while the quarters were in its possession.

Even assuming appellant failed to provide supplemental heating while the quarters were in its possession during freezing weather, which would have violated its obligation under note 4 and would also have constituted negligence, that failure has not been shown to have caused the freezing and bursting of the pipes. The record does not provide a basis for a finding as to when the pipes froze—whether before 4 January 1990 while the units were in appellant's possession or after 4 January 1990 when appellant returned possession to the Government for the balance of the winter.

Thus the Government has not carried its burden of showing that the pipes froze because of a failure by appellant to protect them from freezing. *See Baldwin-Lima-Hamilton Corp. v. United States*, 193 Ct.Cl. 556, 434 F.2d 1371 (1970), which held that where the evidence showed two equally plausible causes of damage to equipment, one within the contractor's warranty responsibility and the other the Government's fault, the Government had not carried its burden of proof.

The Board's decision in *Beach Building Corp.*, ASBCA Nos. 30969, 31953, 88-1 BCA ¶ 20,490, cited by the Government, is not on point. That case held the contractor responsible for freeze damage which occurred over a Christmas holiday weekend when the contractor was not on the job, but the contract contained the Work Outside Regular Hours clause which the Board observed had been held to negate the notion of exclusive control by the Government. In the present case, the Government had exclusive control of the buildings in issue from 4 January until July 1990, during which period we presume the freezing of the pipes occurred, absent a showing by the Government that it occurred during appellant's possession.

The Government further argues that even if the pipes froze when the units were back in the Government's possession, appellant is responsible because it failed to warn the Government, when turning back the units on 4 January 1990, that it had not drained the plumbing systems and that supplemental heating by the Government would be necessary. The contract does not expressly impose such an obligation upon appellant, and we do not find in the contract an implied obligation to do so, whether as part of appellant's duty to cooperate or otherwise. Nor do we think appellant had an obligation to the Government to provide such a warning as a matter of reasonable care. But even if appellant did have such an obligation, the Government had to be as aware as appellant of the need to protect the buildings from freezing, and the Government had to know that appellant might not have drained the plumbing systems; the Government had drafted the specification note authorizing the alternative of supplemental heating. The Government either forgot that that option had been allowed or assumed appellant had chosen to drain the plumbing systems. In either case, that was an error on the Government's part. The most proximate cause of the frozen pipes, given our presumption that the freezing occurred while the units were in the Government's possession, was the Government's failure to provide supplemental heating, not appellant's failure to warn the Government to do so.

Accordingly, we conclude that appellant has not been shown responsible for the freezing of the pipes, and that the Government's order to repair the burst pipes was a compensable change. No issue has been raised over the absence of notification of a claim as a bar or limitation on recovery by appellant.[5]

Digitized by Google

The damage caused by water leaking from the burst pipes after the water was turned on again is another matter. This occurred after appellant took possession of the units in July 1990 and while they were still in appellant's possession; appellant itself says it was unaware of any leaks when it took possession on 4 December 1989, and it has not asserted there was any water damage when it took possession again in July 1990. The water damage must have occurred when the water was turned on again, after appellant completed the work but before final cleanup.

We think that when appellant turned on the water, or asked the Government to turn it on, in July 1990, it had a duty as a matter of reasonable care to check for leaks or at least to inquire whether the Government had taken precautions against freezing of the pipes. The water had been shut off for at least seven months over the winter. Appellant knew that it had not drained the pipes itself and had to know that the Government might not have drained them. Appellant also had to know that the pipes might have frozen and cracked, whether because the Government had not taken any precautions against freezing or because the Government had provided supplemental heat that was inadequate or was interrupted for whatever reason. As the party in possession of the units when the water was turned back on, we think appellant as a matter of simple prudence should have checked for that possibility.

Since it failed to do so, appellant became responsible for the resulting water damage under the terms of the Permits and Responsibilities clause (finding 2), which makes the contractor "responsible for all damage to persons or property that occurs as a result of the Contractor's fault or negligence." Therefore the repair of the water damage was part of appellant's contractual obligations. The Government's order to perform that repair was not a compensable change.

CONCLUSION

The appeal is sustained to the extent that appellant is entitled to recover the cost of repairing the burst water pipes, plus interest under the Contract Disputes Act from the date the contracting officer received appellant's claim until the date of payment. Appellant is not entitled to recover the cost of repairing the water damage.

The matter is remanded to the parties for negotiation of the amount of appellant's recovery, subject to reinstatement at the request of either party for a determination of quantum in the event the parties do not reach agreement within 60 days after the date of this decision.

ASBCA No. 42763, November 26, 1993. Contract No. DLA600-90-D-0542.

Defaults, Waiver—Delay in Terminating—Length of Delay.—A contractor's motion for summary judgment was denied because the government's 32-day delay in terminating a contract after the contractor failed to make a scheduled delivery was not, as a matter of law, an unreasonable delay. In addition, there were material facts in dispute as to whether the contracting officer consented to a substantial purchase for contract purposes after the default. Thus, the undisputed facts did not establish government waiver of the contract delivery schedule.

Defaults, Procedure—Government Decision—Totality of Circumstances.—A contractor was not entitled to summary judgment in its appeal from a default termination, because the undisputed facts did not show that the contracting officer failed to consider adequately the factors in FAR 49.402(f) when making the decision to terminate. Determining that an alleged excuse was invalid because the contractor's failure to perform was not beyond the contractor's control constituted adequate consideration of the excuse. The factor of availability of other sources refers to the availability to the government, not to the contractor. The contracting officer's failure to consider the contractor's ability to perform would not be conclusive, but it would be only one fact to be considered in evaluating the propriety of the decision to terminate.

For the appellant: Paul Crowley, Exton, Pennsylvania. For the government: John J. Ralston and Howard Phifer, Counsels, Defense Fuel Supply Center, DLA, Alexandria, Virginia.

Before TUNKS, WILLIAMS, and RIISMANDEL, Administrative Judges.

TUNKS, Administrative Judge: Appellant moves for summary judgment alleging that the Government waived the delivery date, improperly rejected JP-4 jet engine fuel containing blue dye and failed to adequately consider the factors in section 49.402-3(f) of the Federal Acquisition Regulation in terminating the contract for default.

FINDINGS OF FACT

The Government awarded indefinite quantity Contract No. DLA-600-90-D-0542 to appellant on 4 September 1990 (R4, tab 11). Under the contract, appellant was to supply approximately 10,000,000 gallons of JP-4 jet engine fuel per month to be delivered primarily by barge during the period 1 October 1990 through 30 September 1991 (R4, tabs 1, 11). On 7 September 1990, appellant advised the Government pursuant to clause I193, "Schedule of Contractor's Refinery Shutdown for Turnarounds (DFSC Feb 1989)," that its refinery would be shutdown for repairs for three weeks beginning 1 October 1990 (App.'s Motion, tab 5). Clause I193 provided, in pertinent part, as follows:

> (a) ... Any revisions to [the tentative refinery shutdown] schedule will necessitate prior notice of at least 60 days....
>
> (b) If the Contractor can not [sic] provide the 60 days advance notice, then, at no additional cost to the Government, the Contractor shall maintain sufficient inventory to make deliveries ... or ... provide for an alternate source of product during the shutdown period.

(R4, tab 1). Appellant proposed to continue truck deliveries from inventory (R4, tab 24).

On 24 October 1990, appellant notified the Government that the turnaround period would be extended by about four weeks due to a delay in receipt of a heat exchanger and that it would not be able to make any barge deliveries in November (App.'s Motion, tab 6; R4, tab 24). The contracting officer issued a cure notice on 26 October 1990 indicating that notice of the revised turnaround schedule was untimely under clause I193, that appellant was required to deliver even if it had to purchase JP-4 from another refiner, that the Government considered the extended shutdown a condition endangering performance of the contract and demanded that appellant submit a written proposal to cure the condition. (R4, tab 20). Appellant replied that it could not make any barge deliveries in November (R4, tab 21). The contracting officer terminated the November barge orders for default on 6 November 1990 (R4, tab 24). The Government ordered 10,181,000 gallons of JP-4 to be delivered by barge ad truck in November. Of that amount, appellant delivered 677,464 gallons by truck (Resp.'s Motion, tab 1).

On 20 November 1990, appellant advised the contracting officer that it had not yet received the heat exchanger, that it was hoping to resume barge deliveries in December and that it was unable to purchase JP-4 from other refineries (R4, tab 27). The contracting officer issued a second cure notice on 30 November 1990 demanding that appellant cure its inability to make barge deliveries by 14 December 1990 (R4, tab 28). On 10 December 1990, appellant replied that it had jury rigged its equipment and could process some JP-4, that the heat exchanger would be delivered by 18 December 1990 and that it expected the refinery to be on line by 21 December 1990. Appellant also indicated that it expected to deliver 60,000 barrels by barge between 27 December 1990 and 7 January 1991 (R4, 29).

On 18 December 1990, appellant tendered approximately 1,500,000 gallons of blue JP-4 (Resp.'s Motion, tab 1). The Government's Quality Assurance Representative (QAR) rejected the tender on the grounds that it did not meet the workmanship standards of the contract and contained an unauthorized additive (R4, tab 52). Appellant requested the contracting officer to overrule the QAR's rejection stating that if the blue JP-4 was rejected undyed feedstocks could not be purchased, processed and delivered before late January 1991 (R4, tab 53). The contracting officer declined to overrule the QAR (R4, 54). The Government ordered 10,355,500 gallons of JP-4 for delivery in December. Of that amount, 9,450,000 gallons were to be delivered by barge. The December barge orders were to be delivered as follows: order 4015 by 14 December 1990, order 4016 by 21 December 1990, order 4017 by 28 December 1990 and delivery order 5502 by 30 December 1990. (R4, tab 26) Appellant delivered a total of 411,878 gallons in December all by truck (Resp.'s Motion, tab 1).

Digitized by Google

On 24 December 1990, the contracting officer issued another cure notice indicating that appellant's inability to provide JP-4 until late January was a condition endangering performance and demanding that appellant submit a plan to cure the condition (R4, tab 54). Appellant replied that the heat exchanger had arrived and proposed to deliver 60,000 barrels by barge the first week of February using undyed feedstock purchased on the Gulf coast. Appellant stated that it would not commit the approximately $3,000,000 required to buy the Gulf coast feedstock unless the contracting officer approved its proposed delivery schedule. Appellant further indicated that it would no longer be able to make truck deliveries due to the rejection of the blue JP-4. (R4, tab 60)

During a telephone conversation with appellant's vice president on 8 January 1991, the contracting officer indicated that the Government expected to order approximately 225,000 barrels for delivery in February. Appellant's vice president said he would check and see if appellant could deliver that quantity and reiterated that his company would not commit to the purchase of the Gulf coast feedstock unless the contracting officer approved the revised delivery schedule (App.'s Motion, tab 2; Resp.'s Motion, tab 1). During a telephone conversation on 9 January 1991, appellant's vice president stated that appellant could make a barge delivery on 18 February 1991, but that it could not deliver the full 225,000 barrels. According to appellant's vice president, the contracting officer agreed to this schedule and instructed appellant to "go do it," meaning to go purchase the Gulf coast feedstock (App.'s Motion, tab 2, p. 165; Resp.'s Motion tab 1). The contracting officer denies agreeing to the proposed schedule or instructing appellant to make the purchase (Resp.'s Motion, tab 1, R4, tab 62). In reliance on the alleged agreement, appellant bought 67,358 barrels of undyed feedstock at a cost of $2,105,893.30 on 11 January 1991 (App.'s Motion, tab 18).

The Government placed orders for 10,197,500 gallons of JP-4 for delivery in January 1991. Appellant made no deliveries in January. The contracting officer terminated the contract for default on 15 January 1991. (R4, tab 61)

DECISION

Summary judgment is appropriate only where there are no genuine issues of material fact and the moving party is entitled to judgment as a matter of law. Federal Rule of Civil Procedure 56(c); *Aydin Corporation (West).* ASBCA No. 43273, 93-2 BCA ¶ 25,575. The burden of establishing both elements is on the moving party and the non-moving party is entitled to have all reasonable inferences construed in its favor. *Brill Brothers, Inc.,* ASBCA No. 42573, 93-2 BCA ¶ 25,795.

Appellant first argues that the Government waived the delivery date. In order to establish waiver, a contractor must meet the test set forth in *DeVito v. United States* [13 CCF ¶ 82,319], 413 F.2d 1147 (Ct. Cl. 1969). The first prong of that test requires a contractor to demonstrate that the Government failed to terminate within a reasonable time after default under circumstances indicating forbearance. The second prong requires a contractor to show that it relied on the Government's failure to terminate and continued to perform beyond the delivery date with the Government's knowledge and implied or express consent.

There are no material facts in dispute with respect to the first prong of *DeVito.* The Government ordered 9,450,000 gallons of JP-4 for delivery by barge in December. The delivery dates for the orders were 14 December 1990, 21 December 1990, 28 December 1990 and 30 December 1990. Appellant did not deliver any of the December barge orders. There was one January barge order with a delivery date before termination. That order was for 2,520,000 gallons and the delivery date was 11 January 1991. Appellant did not deliver any of these orders. The contracting officer terminated the contract on 15 January 1991.

Although there are no material facts in dispute with respect to the first prong, we are unable to grant appellant's motion for summary judgment. The Government acquired the right to terminate on 14 December 1990, the delivery date for the first December barge order, 32-days prior to termination. We do not agree that, as a matter of law, 32-days is a unreasonable length of time between the default and termination. *See Enginetics Corporation,* ASBCA No. 40834, 92-2 BCA ¶ 24,965 (33-day delay did not waive the delivery date); *Harold Burgmayer Real Estate, Inc.,* HUDBCA 88-3404-C5, 88-3 BCA ¶ 21,063 (89-day delay between cure notice and default not a waiver); *Security Parachute Co.,* ASBCA No. 20334, 76-1 BCA ¶ 11,722 (two-year delay between delivery date and termination not a waiver).

Appellant is not entitled to summary judgment on the second prong of *DeVito* because

©1994, Commerce Clearing House, Inc.

Digitized by Google

there are material facts in dispute. Under the second prong, a contractor must show that it relied on the Government's failure to terminate and continued to perform beyond the delivery date with the Government's knowledge and implied or express consent. Appellant alleges that the contracting officer consented to the purchase of $2,100,000 in feedstock after the delivery date had passed. The contracting officer denies consenting to the alleged purchase or knowing that appellant made the purchase. This dispute precludes summary judgment.

As its second basis for summary judgment, appellant alleges that the Government improperly rejected JP-4 containing blue dye. Appellant argues that since the specifications did not specifically prohibit the use of blue dye, the Government's rejection of blue JP-4 was wrongful. The Government argues that the specifications listed all the additives that were approved for use in JP-4 and that blue dye was not on the list. The Government additionally alleges that, within the industry, blue dye is used exclusively to distinguish aviation gasoline from jet engine fuel. These are disputes regarding material facts which preclude summary judgment on this issue.

As its third basis for summary judgment, appellant argues that the contracting officer did not adequately consider the factors in FAR 49.402(f) and misapplied the standards to the circumstances surrounding appellant's contract in reaching his decision to terminate the contract. In particular, appellant finds fault with the contracting officer's treatment of factors (2), (3), (4) and (7).

Factor (2) requires the contracting officer to consider the specific failure of the contractor and the excuses for the failure. Appellant alleges that its failure to deliver was caused by the inability of its subcontractor to obtain a heat exchanger as a result of a strike. Appellant criticizes the contracting officer because he concluded in his "Memorandum for Record" that this excuse was not beyond appellant's control or without its fault or negligence. According to appellant, the contracting officer should have considered the excuse, valid or not, in making the termination decision.

This argument is without merit. When the contracting officer determined that appellant's excuse was not valid, he took the excuse into account. Appellant's argument also ignores the language of clause I11.02 "Termination for Default (DFSC 1983 May) (Deviation)" which defines an excusable cause as one which is beyond the control and without the fault or negligence of the contractor. Contrary to appellant's assertions, the standards for termination are not willful failure to perform, dereliction, ineptitude or egregious conduct. The Default clause authorizes the Government to terminate a contract for default when a contractor fails to meet the delivery date or make progress such that contract performance is endangered.

Factor (3) requires the contracting officer to consider the availability of the supplies from other sources. Appellant argues that the contracting officer was "wrong" when he concluded that appellant could have obtained the fuel from historic DFSC contractors who had remaining capacity. We construe the factor to refer to availability to the Government, not the contractor *e.g.*, whether or not the terminated supplies or services will be available to the Government from other sources if the contract is terminated for default. In any event, whether or not there were other sources of JP-4 is a disputed fact precluding summary judgment.

Factor (4) requires the contracting officer to consider the urgency of the need for the supplies and the period of time required to obtain them from other sources as compared to the time delivery could be obtained from the delinquent contractor. The contracting officer did not make a finding as to how quickly it could obtain the fuel from other sources as compared to how quickly appellant could supply the fuel. Appellant argues that it could have provided the fuel more quickly than any other source.

Appellant argues that it was ready, willing and able to provide the required JP-4. However, appellant's history on this contract does not support this assertion. Appellant's plant was shutdown for turnaround for most of the first three months of the contract and it delivered only 1,089,342 of the 30,734,000 gallons ordered for delivery in November, December and January. When asked if it could supply the 225,000 barrels the Government expected to order for delivery in February, appellant indicated that it could not supply the full amount. Given these facts, the contracting officer reasonably concluded that appellant would probably not be able to satisfy the contract requirements despite the promise to begin deliveries on 18 February 1991. In any event, the failure to consider one or more FAR factors does not automatically render a default improper. *Ruffin's A-1 Contracting, Inc.*, ASBCA No. 38343, 90-3 BCA ¶ 23,243. The contracting officer's failure to consider this aspect of fac-

Digitized by Google

tor (4) is only one of the facts which must be taken into account in evaluating the overall propriety of the termination for default.

Appellant also criticizes the contracting officer for failing to consider other factors, such as the possible closing of appellant's refinery, the adverse impact such a closing would have on the people and economy of West Virginia, appellant's history of timely deliveries under another contract, excess JP-4 under existing contracts which was available for resupply, the alleged lack of a critical need for the fuel and appellant's commitment to resume delivery in February. These issues are subject to differing views and do not lend themselves to summary judgment.

Appellant's motion for summary judgment is denied.

[¶ 26,538] **Freightliner Corporation**

ASBCA No. 42982, November 26, 1993. Contract No. DAAE07-85-C-J010.

Contract Disputes, Claims—Related Items—Option Exercise.—The board had jurisdiction to hear the second count of a complaint alleging that the government's exercise of an option was an attempt to acquire an unauthorized requirement for a sixth program year, even though this argument had not been presented to the contracting officer, because the second count was based on a common or related set of operative facts that had already been presented to the contracting officer. As alleged in the other three counts of the complaint, the contractor had complained to the contracting officer that exercise of the option effectively extended the period of performance nearly one year beyond the production schedule originally contemplated by the parties and that the government appeared to be attempting to purchase quantities originally scheduled for a follow-on contract.

Methods of Procurement—Multiyear Procurement—Option Exercise.—The government's exercise of an option to be funded by appropriations from a sixth fiscal year did not violate a prohibition against options exceeding the requirement for five years, because the option was exercised for currently existing requirements within 60 months of the date of contract award. Under DAR 1-322, limitation of multiyear contracts to five program years applied only to basic quantities. Multiyear contracts were permitted to include options subject to DAR 1-1502, which was generally applicable to options and required that the total of basic and option quantities not exceed the requirement for five years. Because the limitation in DAR 1-1502 made no reference to program years or fiscal years, it was construed to refer to five 12-month periods.

For the appellant: Hogan & Hartson, Washington, D.C., by William A. Bradford, Jr., Thomas L. McGovern III, and Pierre M. Donahue. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Lt. Col. Thomas O. Mason, JAGC, and Maj. Rodney A. Grandon, JAGC, Trial Attorneys.

Before THOMAS, GROSSBAUM, TING, RUBERRY, and SPECTOR, Administrative Judges. Administrative Judges GROSSBAUM and TING concurred in that portion of the decision denying the motion to dismiss, but dissented from that portion of the decision denying the contractor's motion for summary judgment. Separate opinion by Administrative Judge GROSSBAUM, joined by Administrative Judge TING.

THOMAS, Administrative Judge: Appellant seeks an equitable adjustment in the amount of $15,598,353 in connection with the exercise of an option in a five year multiyear contract. Appellant's complaint contains four counts. Count two alleges that the exercise of the option violated the statutory and regulatory limitations on multiyear contracts because the quantity in question, a portion of the option quantity for the fifth program year, represented an "unauthorized requirement for a sixth program year" (Complaint ¶ 87). Appellant has moved for summary judgment on count two. The Government opposes the motion, and has moved to dismiss count two for lack of subject matter jurisdiction. Jurisdiction of the appeal arises under the Contract Disputes Act (CDA), 41 U.S.C. § § 601 *et seq.* We deny both motions.

UNDISPUTED FACTS RELEVANT TO BOTH MOTIONS

Contract Provisions

On 31 October 1984, the U.S. Army Tank-Automotive Command (TACOM) awarded appellant a five year multiyear contract for Small Emplacement Excavator (SEE) tractors (sometimes referred to as vehicles). The amount of the contract was $64,209,511. Because TACOM issued the solicitation prior to the effective date of the Federal Acquisition Regulation (FAR), the contract included standard Defense Acquisition Regulation (DAR) clauses.

The contract required the delivery of a basic quantity of tractors for each of five program years. There were a total of 922 basic quantity tractors. The contract designated the basic quantities as the "FIRST PROGRAM YEAR BASIC QUANTITY," "SECOND PROGRAM YEAR BASIC QUANTITY," and so forth. At time of award, the contracting officer funded the first program year basic quantity. Clause H04 provided for cancellation payments to the contractor if the later program year requirements were not funded by specified dates.

The contract also included options for 200% of the quantity of basic tractors within each program year. There were a total of 1844 option quantity tractors. The option clause, H05, provided in part that the right to exercise the option "for any given CLIN shall expire upon Government acceptance of 50% of the vehicles initially specified for each program year (exclusive of any option vehicles)." The contract provided for acceptance at place of origin (Clause E01(b)) and delivery F.O.B. origin (Clause F01). The delivery schedule for the "vehicles initially specified" depended upon the date of contract award. For the fifth program year, deliveries at a rate of 33 tractors per month (with a final shipment of 19) were scheduled beginning 1410 DAC (Days After Contract) or 10 September 1988 and ending 1680 DAC or 7 June 1989. Clause H05 did not provide for cancellation payments if the options were not exercised.

Funding of the Basic Quantities

The contracting officer funded the first program year basic quantity with FY 1984 funds (that is, funds appropriated for the fiscal year ending 30 September 1984), the second program year basic quantity with FY 1985 funds, and so forth. He funded the fifth program year basic quantity with FY 1988 funds. Funds for the SEE program primarily came from the appropriation for Other Procurement, Army (OPA), and remained available for obligation for three years.

Option Exercises

Prior to the disputed quantity, the contracting officer exercised options for 793 tractors. Bilateral modification P00041 dated 21 September 1988 required delivery of the last 38 of these tractors in September 1989, and provided that 50% of them might be delivered in October 1989 at the discretion of appellant at no change in contract price.

The contracting officer funded the option quantities with appropriations for various fiscal years, not necessarily corresponding to the appropriation used for the basic quantity for the same program year. For example, he funded 13 of the option tractors for the first program year with FY 1985 funds and 12 of the option tractors for the second program year with FY 1986 funds. (*See* App. Exh. 23)

On 5 January 1989, the contracting officer issued unilateral modification P00051 purporting to exercise the fifth program year option for an additional quantity of 491 tractors. The accounting classification indicated the following funding: 453 tractors, FY 1989 funds in the amount of $31,155,075; 26 tractors, FY 1988 funds in the amount of $1,788,150; and 12 tractors, FY 1987 funds in the amount of $825,300. The contracting officer required appellant to provide a proposed delivery schedule for the additional tractors within thirty days. As a result of modification P00051, deliveries could be expected to extend into 1990.

On 15 February 1989, appellant advised the contracting officer that it did not agree that modification P00051 was an effective exercise of the contract's option clause and that it intended to treat the order as a constructive change order under the Changes clause. Under protest, it provided a proposed delivery schedule with final deliveries due 31 August 1990. (R4, tab 32)

MOTION TO DISMISS

Further Findings for Purposes of Deciding the Motion to Dismiss

Under date of 1 September 1989, appellant submitted a certified "claim" for reasonable costs and profit in the amount of $17,850,305 "resulting from TACOM's legally ineffective option order" for a quantity of 491 tractors. Appellant stated:

Digitized by Google

The basic facts pertinent to this claim may be simply stated. The option clause of the Contract clearly provided that TACOM's right to order optional quantities of S.E.E. Tractors was subject to several constraints. One such constraint was that the total number of option vehicles deliverable "within each Program Year" was limited to 200% of the basic vehicles scheduled for delivery within that Program Year. In this case, TACOM has issued an option order that purports to require the delivery of a substantial number of 5th Program Year option vehicles long after the expiration of the 5th Program Year.

This unilateral order effectively extends the period of Freightliner's performance for the 5th Program Year nearly a year beyond the production schedule originally contemplated by the parties, without any provision for an equitable adjustment to Contract price. As discussed below, this unilateral adjustment to the Contract delivery schedule impermissibly alters the terms under which Freightliner was obligated to supply the option vehicles.

Neither Freightliner nor (prior to this dispute) TACOM ever intended that Freightliner would be producing S.E.E. Tractors well into 1990 under the present Contract. Indeed, the record shows that at least as late as six months before announcing its intention to order the additional 491 vehicles that are the subject of this claim, TACOM was still planning to award a *follow-on* S.E.E. Tractor production contract, with scheduled deliveries commencing in the fall of 1989. This circumstance suggests that TACOM, having encountered unexpected delays in issuing the solicitation for the follow-on contract, is now looking for ways to force as many additional S.E.E. Tractor orders as possible into the present Contract, without regard to whether it has any contractual right to place such orders.

(R4, tab 49 at 1-2) Under "Legal Basis for Claim," appellant relied upon the express language of the contract, the parties' predispute conduct, and the doctrine of *contra proferentem*. Appellant alluded in a footnote to the fact that modification P00051 was funded in part with FY 1989 funds, and said that "It is clear that the 5th Program Year was intended to be funded with FY 88 monies.... It is not plausible that the 5th Program Year was intended to correspond to both fiscal years 1988 *and* 1989" (*ibid.* at 48, n. 16).

On 25 February 1991, the contracting officer issued a final decision denying the claim. Because of concerns about the possible applicability of the decision in *United States v. Grumman Aerospace Corp.* [36 CCF ¶ 76,013], 927 F.2d 575 (Fed. Cir.), *cert. den.*, 116 L.Ed.2d 270 (1991), on 24 April 1991 appellant recertified and resubmitted its claim, revising the amount to $15,598,353. The claim was unchanged in relevant respect, and we refer to the September 1989 and April 1991 submissions collectively as the claim. On 13 May 1991, the contracting officer issued a final decision reiterating the determination in his 25 February 1991 final decision.

On 24 May 1991, appellant filed a timely notice of appeal from the 25 February 1991 decision, and a protective notice of appeal from the 13 May 1991 decision, requesting that the appeals be consolidated. The Board docketed both appeals under docket number 42982.

On 1 July 1991, appellant filed its complaint, consisting of four counts. Counts one, three, and four set forth the three legal theories discussed in the claim, that the option exercise was ineffective based on the express language of the contract, the parties' predispute conduct, and the doctrine of *contra proferentem*. Count two alleged in part:

80. The vehicles acquired under Contract Modification P00051 were purchased with fiscal year 1989 appropriations obligated in fiscal year 1989.

81. During the six fiscal years including fiscal year 1984 through fiscal year 1989, the Army submitted budget requests reflecting funding for the S.E.E. Tractor program in an amount totalling approximately $148.2 million.

82. The total Contract obligations representing the Army's purchase under the S.E.E. Tractor Contract totalled approximately $148.6 million.

83. The Army acquired a total of six year' requirements for S.E.E. Tractors under the Contract.

84. The statutory authority for multiyear contracts set forth at 10 U.S.C. § 2036(h)(8) provides that multiyear contracts shall be used for "the purchase of property or services for more than one, but not more than five, program years."

85. FAR § 17.103-1(b)(2) states "[e]xcept as permitted by statute, agencies shall not use multiyear contracts when ... (2) Requirements exceed a 5-year planned program."

©1994, Commerce Clearing House, Inc.

Digitized by Google

86. Department of Defense Directive 7200.4 "Full Funding of DoD Procurement Programs," at Enclosure 2, defines a "Multiyear Contract" as "a contract covering current and future-year procurement of quantities of items but not more than 5 years' procurement quantities as reflected in the Five Year Defense Program (FYDP). Each program year is budgeted and funded annually. At the time of award, funds need only to have been appropriated for the 1st year."

87. TACOM's use of Contract Modification P00051 to acquire an unauthorized requirement for a sixth program year violated the statutory and regulatory limitations on multiyear contracts set forth above in ¶ ¶ 84—86. Contract Modification P00051 is therefore legally ineffective.

88. Under TACOM's interpretation of the Contract's option clause, TACOM would be permitted to acquire a legally unauthorized sixth program year's requirements. TACOM's interpretation of the option clause therefore cannot be sustained as a matter of law, and Contract Modification P00051 is an ineffective option order.

Decision On Motion To Dismiss

On 24 June 1992, following appellant's motion for summary judgment, the Government filed "RESPONDENTS MOTION TO DISMISS AND RESPONSE TO APPELLANT'S MOTION FOR SUMMARY JUDGMENT." The Government moves to dismiss count two upon the ground that the allegations in count two were not presented to the contracting officer in the claim. Specifically, the Government argues:

> In its Claim to the Contracting Officer, Appellant claimed that the subject option did not conform to the contract's option clause. As such, Appellant claimed that the option was ineffective thereby entitling Appellant to an equitable adjustment. Specifically Appellant claimed that the option order required Appellant to deliver option vehicles beyond the end of what it characterized as the fifth program year. It was on this basis that the final decision was issued. An examination of Appellant's detailed claim reveals that Appellant never claimed that the Government violated statutes or regulations concerning multiyear contracting. In fact, not one theory of relief advanced by Appellant in its Claim alleges that the Government violated funding statutes and regulations.

(Motion to Dismiss at 7)

The U.S. Court of Appeals for the Federal Circuit has established the rule that "[t]o determine whether two or more separate claims, or only a fragmented single claim, exists, the court must assess whether or not the claims are based on a common or related set of operative facts. If the court will have to review the same or related evidence to make its decision, then only one claim exists." *Placeway Construction Corp. v. United States* [36 CCF ¶ 75,967], 920 F.2d 903, 907 (Fed. Cir. 1990). Applying this rule, we recently held in an option exercise case that:

> Since an option must be exercised by the optionee—the Government—in strict conformance with its terms, it is appropriate for us to treat the exercise of the option, and not the individual grounds for invalidating the option as the "common denominator" operative fact for purposes of determining whether a claim has been submitted to the contracting officer for decision.

Aydin Corp. (West), ASBCA No. 43273, 93-2 BCA ¶ 25,575 at 127,364.

As in *Aydin Corp. (West)*, the issue in this appeal is the validity or invalidity of the option exercise. Appellant's claim asserted that modification P00051 effectively extended the period of performance nearly a year beyond the production schedule originally contemplated by the parties, and that the Government appeared to be attempting to purchase quantities originally scheduled for a follow-on contract, with deliveries commencing in the fall of 1989, under appellant's contract. Count two alleges that modification P00051 was an attempt "to acquire an unauthorized requirement for a sixth program year." We conclude that count two is based on a "common or related set of operative facts." Accordingly, we have subject matter jurisdiction of count two.

MOTION FOR SUMMARY JUDGMENT

On 23 April 1992, appellant moved for summary judgment on count two of the complaint. Appellant stated:

> Count Two of the Complaint alleges that ... TACOM ... improperly invoked the option terms in its multiyear contract with Freightliner ... to acquire in excess of 5 years' planned requirements in direct violation of the statute and regulations governing multiyear contracts. The evidence so overwhelmingly supports this conclusion that TACOM cannot reasonably dispute it. Accordingly, there being no

Digitized by Google

material facts in dispute, Freightliner is entitled to summary judgment because TACOM's option order is *illegal*, and thus, ineffective, and because TACOM's interpretation of its rights under the option clause cannot be sustained as a matter of law.

("APPELLANTS MOTION FOR SUMMARY JUDGMENT ON COUNT TWO OF THE COMPLAINT" at 1, footnote omitted, emphasis supplied)("MSJ"). Appellant did not submit a supporting affidavit. The Government has opposed the motion, submitting a opposing affidavit.

Federal Rule of Civil Procedure 56 provides that a motion for summary judgment should be granted if the filings "show that there is no genuine issue as to any material fact and that the moving party is entitled to a judgment as a matter of law." The parties' filings show that there are no genuine issues as to any material fact, and that the question presented may be decided as a matter of law.

Undisputed Material Facts

In addition to the facts set forth in the beginning of this opinion, there are no genuine issues as to the following material facts:

The DoD Five Year Defense Program (FYDP), as referred to in DAR 1-322.1(d)(2) *infra*, was a long-range planning document setting forth DoD's planned and budgeted requirements for five fiscal years. The name and format of the FYDP have changed over time. Those changes are not important for present purposes. (*See* explanation in "SUPPLEMENTAL BRIEF IN SUPPORT OF APPELLANT'S MOTION FOR SUMMARY JUDGMENT ON COUNT TWO OF THE COMPLAINT," dated 5 April 1993, at 2-3 and n.3) ("App. Supp. Br.")

At or about the time of contract award, the basic quantities (922 tractors), but not the option quantities, were included in the FYDP for fiscal years 1984 through 1988. (Affidavit of MAJ John Semler dated 29 September 1992 attached to "RESPONDENT'S RESPONSE TO APPELLANT'S REPLY TO RESPONDENT'S BRIEF OPPOSING APPELLANT'S MOTION FOR SUMMARY JUDGMENT," filed 30 September 1992)

The FYDP is revised at least annually. Appellant has analyzed the most recent revisions of the FYDP for fiscal years 1984 through 1989. The Government has not challenged this analysis, which is based on Government responses to discovery, and we adopt it for purposes of deciding the motion. According to appellant, "[b]y issuing the disputed option order, TACOM purchased SEE Tractors in excess of the Army's planned and budgeted requirements for more than five years as reflected in the FYDP." In particular, "FYDP data shows that the Army 'budget line' contained a *planned and budgeted* quantity of approximately 1460 SEE Tractors for fiscal years 1984 through 1988, inclusive." Prior to modification P00051, TACOM had acquired a total of 1715 vehicles under the contract, 922 basic vehicles and 793 option vehicles. Some of those vehicles (167) were funded by DoD or the Marine Corps. "Thus, an apples-to-apples comparison of planned and budgeted quantities to purchased quantities is 1453-1463 (budgeted) to 1548 (purchased Army requirements)." Appellant suggests that the difference between the planned and budgeted and purchased quantities (85-90 vehicles) "appears to be the result of TACOM shifting funds from other places in the DoD budget *within* the five program years spanning fiscal years 1984 through 1988." Appellant concludes that "the disputed option order cannot be seen as procuring overall planned and budgeted requirements for fiscal years 1984 through 1988." (App. Supp. Br. at 3, 29-30, 34)

Appellant also states that currently the 453 vehicles funded with FY 1989 funds are in the FYDP for fiscal year 1989 (*ibid.* at 43). (The current status of the vehicles funded with FY 1987 and 1988 funds is unclear. We focus on the 453 vehicles for purposes of deciding the motion.)

The FYDP has never included all of the Army's requirements for SEE tractors. According to the Government's opposing affidavit, as of September 1988:

> [T]he Army had requirements for 3047 SEE vehicles as reflected in the Army Acquisition Objective (AAO), and 2424 SEE vehicles as reflected in the Initial Issue Quantity (IIQ). The AAO is the sum of all recognized Army SEE requirements based on Basis of Issue Plans, Tables of Organization and Equipment, and includes maintenance requirements, readiness requirements, and war reserves. The IIQ is a minimum quantity of SEEs the Army needs for the vehicles to be a completely effective combat multiplier as reflected by priority unit fielding plans.

The Army had fulfilled some of those requirements through the basic quantities (922 tractors) and option quantities. It had a

©1994, Commerce Clearing House, Inc.

Digitized by Google

remaining requirement for in excess of 491 additional tractors. (Semler affidavit)

As of 5 January 1989, the Army continued to have an existing need for in excess of 491 additional tractors, and the contracting officer had OPA appropriations available to fund acquisition of 491 additional tractors.

The key undisputed fact from appellant's point of view, therefore, is that 453 of the 491 option vehicles were included in the FYDP for fiscal year 1989.

Decision on Motion for Summary Judgment

We conclude that appellant has not shown that it is entitled to judgment as a matter of law for three reasons: (1) appellant has not shown that the option exercise was illegal apart from the possible applicability of the multiyear statute and regulations; (2) the provisions of the multiyear statute and regulations upon which appellant relies apply to quantities subject to a cancellation payment rather than to option quantities; and (3) appellant has not shown that the provision of the regulations applicable to option quantities, DAR 1-1502(e), was violated.

1. *Appellant has not shown that the option exercise was illegal apart from the possible applicability of the multiyear statute and regulations.*

Appellant does not contend that there was a violation of the Antideficiency Act, 31 U.S.C.A. § 1341, "*Bona Fide* Needs Rule," 31 U.S.C.A. § 1502(a), or other funding statutes. Thus, appellant states:

> Respondent expends significant effort trying to justify its option order under the "classical fiscal controls of time, purpose, and amount." Opposition Brief at 22-23. Whether TACOM did or did not comply with the "classical fiscal controls," TACOM still violated 10 U.S.C. § 2306(h)(8) by acquiring in excess of five years' requirements under its existing multiyear contract with Freightliner. In FY 1989, Congress appropriated $32,588,000 in response to TACOM's budget request for its FY 1989 requirement for S.E.E. Tractors. Since sufficient funds were made available by Congress in FY 1989, TACOM was justified—under the "time, purpose, and amount" tests—to use those funds to purchase the S.E.E. Tractors to fill Army's FY 1989 requirement. Nevertheless, TACOM was *not* authorized to obligate those funds to buy the Army's FY 1989 requirement *under this contract.*

("APPELLANT'S REPLY TO RESPONDENT'S BRIEF OPPOSING APPELLANT'S MOTION FOR SUMMARY JUDGMENT ON COUNT TWO AND OPPOSITION TO RESPONDENT'S MOTION TO DISMISS" dated 7 August 1992 at 20-21, footnote omitted)

Furthermore, appellant has not shown that the contracting officer failed to comply with the regulatory requirements for exercise of an option. At the time the contracting officer exercised the option, 5 January 1989, the FAR provided, in relevant part, that the contracting officer might exercise an option only after determining that funds were "available" and that the requirement fulfilled "an existing Government need" (FAR 17.207(c)(1) and (2)). It is undisputed that funds were available and that there was an existing need for the tractors.

2. *The provisions of the multiyear statute and regulations upon which appellant relies apply to quantities subject to a cancellation payment rather then to option quantities.*

Appellant argues that regardless of the above, the statute and regulations governing multiyear contracts prohibited exercise of the option because the quantities in question were in the FYDP for fiscal year 1989. Appellant states that the Board must analyze the situation as if the contract had contained a Sixth Program Year Basic Quantity at time of award:

> Respondent argues that its "use of FY 1989 funds was proper." *See* Respondent's Brief, Sept. 30, 1992, at 16-17. While "tagging on" a sixth fiscal year's requirement *after* receiving appropriations technically may not violate the Antideficiency Act, it does violate 10 U.S.C. § 2306(h). Moreover, in order to determine whether or not this is a "legal" contract under the funding statutes, the Board must analyze the situation from the perspective in time when the contract was awarded in 1984. If TACOM had structured [the] contract in 1984 to purchase a total of six fiscal years' planned and budgeted requirements, the contract would have violated both 10 U.S.C. § 2306(h) and the Antideficiency Act. It would be a perverse result indeed (and one obviously not intended by Congress) if the Board permitted TACOM to do at the end of a contract what TACOM expressly was prohibited from doing when the contract was awarded.

(App. Supp. Br. at 11, n. 10)

This argument seeks to diminish any distinction between quantities subject to a cancellation payment if not funded (hereinafter

Digitized by Google

basic or multiyear quantities) and quantities which, although they may be included in a multiyear contract, are not subject to a cancellation payment (option quantities). (*Cf. Cessna Aircraft Co.*, ASBCA No. 43196, 93-3 BCA ¶ 25,912, in which the contract included a three year option, and provided for a cancellation ceiling, applicable to the second and third years of the option period, effective upon Government exercise of the option. 93-3 BCA at 128,876.) At or about the time of contract award, the first through fifth program year basic quantities were planned and budgeted in the FYDP for fiscal years 1984 through 1988. Given that fact, we assume for purposes of this decision that TACOM could not properly have included a sixth program year basic quantity which was planned and budgeted in the FYDP for fiscal year 1989. *See Army's Multiple Launch Rocket System Multiyear Contract*, 64 Comp. Gen. 164 (1984). The question is not, however, whether such a sixth program year basic quantity would have been illegal, but whether a fifth program year option quantity was illegal when, because of the award date of the contract (31 October 1984), it was susceptible of being exercised in fiscal year 1989, to fill an existing need.

In considering this question, we look first to the language of the statute authorizing multiyear contracts for the acquisition of property, 10 U.S.C.A. § 2306(h)(1)-(11). "[T]he starting point for interpreting a statute is the language of the statute itself. Absent a clearly expressed legislative intention to the contrary, that language must ordinarily be regarded as conclusive." *Consumer Product Safety Commission v. GTE Sylvania, Inc.*, 447 U.S. 102, 108 (1980). Appellant relies upon the following language of the statute (10 U.S.C.A. § 2306(h)(8)):

> For the purposes of this subsection, a multiyear contract is a contract for the purchase of property or services for more than one, but not more than five, program years. Such a contract may provide that performance under the contract during the second and subsequent years of the contract is contingent upon the appropriation of funds and (if it does so provide) may provide for a cancellation payment to be made to the contractor if such appropriations are not made.

This language defines a multiyear contract. It states that such a contract "may provide that performance ... is contingent upon the appropriation of funds and (if it does so provide) may provide for a cancellation payment to be made ...." It does not refer to options, at least explicitly.

We look next to the language of the DAR as in effect at the time the solicitation was initiated (DAC 76-20). (Although count two refers to the FAR, appellant chiefly relies upon the DAR in its motion. There is no material difference for present purposes.) The DAR contained two key provisions: 1-322.1(d) and (g). Appellant highlights DAR 1-322.1(d). It provided that "[m]ultiyear contracts for property and services shall not be used ... (2) To obtain requirements which are in excess of the Five-Year Defense Program." Appellant argues that "[t]here is every reason to believe that when Congress adopted the 'five program years' language [in § 2306(h)(8)], it simply meant to 'codify' the above quoted DAR 1-322 limitation" (App. Supp. Br. at 26). Like the statute, however, DAR 1-322.2(d) did not refer to options. DAR 1-322.1(g), on the other hand, expressly dealt with options. It provided:

> (g) *Use of Options.*
>
> (1) Options may be used when some future requirements are definite and additional quantities of supplies or services are likely, though not definitive as to amount.
>
> (2) Options to increase quantities or options to renew the contract for a reasonable period shall be priced not to include (i) charges for plant and equipment already amortized or (ii) any other nonrecurring charges that were included in and already recovered under the basic contract price. Any such option provision shall not exceed the period described in 1-1502(e).

Considering (d) and (g) together, we conclude that (d) (and the statute) concern the requirements for multiyear (basic) quantities and (g) concerns the requirements for option quantities. The former are limited to the requirements in the FYDP; the latter are not.

3. Appellant has not shown that the provision of the regulations applicable to the option quantities, DAR 1-1502(e), was violated.

As noted, DAR 1-322.1(g) cross-referenced DAR 1-1502(e), stating that "[a]ny such option provision shall not exceed the period described in 1-1502(e)." DAR 1-1502(e) applied to service and supply contracts in general with certain exceptions. It provided (DAR 76-42) that "the total of the basic and option quantities shall not exceed the requirement for five years in the case of supplies." Appellant contends that DAR 1-322.1(g) and 1-1502(e):

©1994, Commerce Clearing House, Inc.

Digitized by Google

unequivocally preclude any argument that TACOM had authority to use any unexercised option quantities for the Fifth Program Year to acquire its requirements for a sixth year. Thus, it is clear that the options provided for in the S.E.E. Tractor Contract were intended only to allow TACOM to order additional S.E.E. Tractors when its requirements for those program years became "definitive as to amount"—*within* the five planned Program Years corresponding to fiscal years 1984 through 1988.

(MSJ at 26-27)

Our interpretation is just the opposite. DAR 1-322.1(g) said, in effect, a multiyear contract may include option quantities. Make sure that the option prices do not include certain charges. Other than that, apply the regulations applicable to options in general. DAR 1-1502(e), in turn, limited the total of the basic and option quantities to the "requirement for five years." It did not refer to program years or fiscal years or the FYDP. In the absence of such a reference, we interpret "years" as a generic reference to twelve month periods. We conclude that DAR 1-1502(e) did not prohibit the award of a contract crossing fiscal years provided that the basic and option quantities did not exceed the requirement of the Government for the five years beginning with the award of the contract.

Proceeding on the basis of this interpretation, the undisputed material facts establish that at time of contract award (31 October 1984), there was a requirement for the first program year basic quantity. At time of option exercise (5 January 1989), whether one looks at the FYDP, the AAO, or the IIQ, there was an existing need for the option quantities. The span of time from contract award to option exercise was less than five years. The regulatory requirements were met.

Conclusion

Appellant extended options for 1844 tractors. TACOM exercised options for 1284 tractors within five years of contract award. Appellant suggests that it would be a perverse result if TACOM were allowed to do so. With all due respect, we believe it would be a perverse result to interpret the multiyear statutory and regulatory provisions, which were designed to ease funding constraints, in such a manner as to prohibit this result as a matter of law.

The motions with respect to count two are denied.

SEPARATE OPINION BY ADMINISTRATIVE JUDGE GROSSBAUM

GROSSBAUM, Administrative Judge: I respectfully dissent from that portion of the decision on appellant's motion for summary judgment which disconnects the option quantity requirements completely from the basic multiyear requirement in order to support the conclusion that appellant has not shown a violation of DAR 1-1502(e). I also dissent from the denial of appellant's summary judgment motion.

The Option clause in the contract granted the Government

> the option to increase the quantity of vehicles of each CLIN [contract line item number] *within each Program Year* by a additional quantity not to exceed 200% of the initial quantity of vehicles specified for each CLIN for all five Program Years.

(R4, tab 1; emphasis added) Moreover, the contract schedule tied specific option quantities inextricably to particular program years.

Paragraph (a) of DAR 1-322.1 then applicable to the contract describes the multiyear procurement procedure and provides in relevant part that: "[m]ultiyear contract quantities are budgeted for and financed in accordance with the applicable program year as reflected in the DoD Five-Year Defense Program [FYDP]." Accordingly, the program years applicable to a multiyear contract are determined by what is reflected in the version of the FYDP which establishes the multiyear requirement.

The Government has proffered what it calls a "working definition" of the term "program year," which denies any possible direct relationship between program years and fiscal years or calendar years and, instead, attaches significance to the dates when funds are obligated to the contract and when supplies are scheduled to be delivered. As the Government applies this "working definition" to the SEE tractor multiyear contract, program years overlap one another and are even permitted to expand and contract. (Gov't response to app's mot. at 10-13). Thus, the term "program year" takes on whatever meaning the Government chooses to give it. *Cf.* L. Carroll, *Through the Looking Glass*, in THE ANNOTATED ALICE 269 (New York 1960) (" 'When *I* use a word,' Humpty Dumpty said ..., 'it means just what I choose it to mean —neither more nor less.' ") (emphasis in original).

Digitized by Google

To the contrary, in accordance with DAR 1-322.1(a), scheduled delivery dates and dates when funds are obligated to a multiyear contract are not relevant to determining the parameters of applicable program years, unless so reflected in the FYDP.

In this case, it is undisputed that the Army's initial multiyear requirement for a total of 922 SEE tractors was first finalized under the FYDP "commencing in FY84 and ending in FY88." Moreover, the total planned quantity of 922 vehicles corresponded to the "basic" quantity of tractors stipulated in the contract schedule.

It is also undisputed that the FYDP covering fiscal years 1984 through 1988 did not reflect the applicable "program years" in any manner other than as fiscal years. Therefore, despite the Government's failure to award the SEE tractor contract until 31 October 1984, the five program years identified in the schedule of this multiyear contract necessarily corresponded to fiscal years 1984, 1985, 1986, 1987 and 1988, with fiscal year 1984 being the first program year and fiscal year 1988 being the fifth program year.

I agree with the majority that the purported exercise of an option by Modification P00051 did not violate either the "not more than five program years" limitation prescribed by 10 U.S.C. § 2306(h)(8) nor the DAR 1-322.1(d)(2) prohibition against using multiyear contracts "[t]o obtain requirements which are in excess of the Five-Year Defense Program." The statutory constraint appears to apply only to basic multiyear quantities subject to cancellation provisions. By contrast, the DAR 1-322.1(d)(2) restriction may encompass both basic and option quantities, but it would appear to operate meaningfully only at the time of contract formation. Therefore, any possible violations of the DAR 1-322.1(d)(2) restriction would be redressable, if at all, in a forum other than this Board.

However, I cannot agree with the majority's view that option quantity requirements attached to a multiyear supply contract can summarily be divorced completely from the parameters of that contract. The majority holds, as a matter of law, that the exercise within sixty months from contract award of any option for quantities of supplies for which a current need then exists satisfies, in all cases, the DAR 1-1502(e) prohibition against total basic and option quantities of supplies exceeding "the requirement for five years." Thus, the holding renders irrelevant both the source of "the requirement" and, in this case, the multiyear character of the contract under which the option is exercised.

The use of options in multiyear contracts is, in the first instance, governed by DAR 1-322.1(g), not DAR Subpart 1-15. Options may be used in multiyear contracts "when some future requirements are definite and additional quantities of supplies ... are likely, though not definite as to amount."

Current Army guidelines in Army Material Command Acquisition Letter 90-AMC-1 prescribe that: "[t]he difference between firm requirements and program requirements should be the subject of option provisions." (App. exh. vol. IVA, tab II-A-6.) If that guideline were shown to have been in effect at the time the instant contract was formed, it would have cast doubt on the propriety of including any option provision in the contract at all, because the difference between the firm contract requirement for a basic quantity of 922 vehicles and the then-current FYDP total program requirement for 922 SEE tractors would leave a balance of zero vehicles that could be the subject of option provisions. In any event, the current guidelines demonstrate that option quantity requirements in multiyear contracts cannot be disconnected cavalierly from either the requirements of the FYDP or the "applicable program year[s]" in the contract.

The approved FYDP current at the time when a multiyear procurement action is initiated determines the program years (including outyears beyond the first program year) applicable to a particular authorized multiyear contract and fixes the requirement for the first program year. However, the planning programming and budgeting system that produces the FYDP is not static. The FYDP is updated every year and quantities and budgeted amounts in the FYDP covering the outyears defined therein vary from year to year, because it is important to keep the FYDP current with DoD's "best estimate" of total program and systems costs. (App. exh. vol. IVA, tabs B-2, B-3) This updating process permits flexibility in establishing total requirements, including option quantity requirements, for applicable outyears in a multiyear contract.

DAR 1-322.1(g)(2) circumscribes any option provision in a multiyear contract by the period described in DAR 1-1502(e), which in turn provides in part that: "the total of the basic and option quantities shall not exceed the requirement for five years in the case of supplies." Since the program years applicable to the instant contract were fiscal years 1984 through 1988, the relevant "require-

©1994, Commerce Clearing House, Inc.
Digitized by Google

ment for five years" in this case was the requirement for fiscal years 1984 through 1988, inclusive.

Appellant has supported its motion on the "requirement for five years" issue by showing the Government's FY 1984 through FY 1988 requirements for the SEE tractor acquisition gleaned from excerpts from the "Procurement Programs (P-1)" exhibits that DoD submits to Congress each year in conjunction with the President's budget. (App. exh. vol. IVA, tab II.C.) Viewed most favorably to the nonmoving party, relevant P-1 exhibits show that the maximum requirement for SEE tractors for the five fiscal years 1984 through 1988 could not have exceeded a total of 1,625 vehicles (23 + 390 + 409 + 334 + 469).

Opposing the motion on this issue, the Government asserts that the 453 SEE tractors ordered under modification P00051 using funds from the fiscal year 1989 Other Procurement, Army appropriation satisfied a "current" need. There is, of course, no dispute that these vehicles satisfied a "current" need of FY 1989. The Government also argues that the 453 tractors purchased with FY 89 funds could have been "legitimate requirements of the initial five year multiyear contract" and, in fact,

> ... were not new requirements uniquely related to FY 89 or any period of time beyond the initial multiyear contract. Rather, these vehicles were part of the program requirements as set forth in the multiyear contract that had not been satisfied with earlier year funds because funding was not available.

(Gov't supp. br. at 14, 16-17)

To support this assertion and to show that there may be a genuine factual issue for trial, the Government has presented evidence of TACOM's shopping list requirements for varying quantities of SEE tractors from FY 1984 through FY 1991, as gleaned from a series of supporting exhibits used to develop the Army's "Appropriation Budget Activity Reports" (Gov't exh. vol. III, tab E). These exhibits show, *inter alia,* that at no relevant point in time did TACOM's planned requirements for SEE tractors during the five fiscal years from FY 1984 through FY 1988, inclusive, ever exceed a total quantity of 1,614 each. Moreover, viewing these exhibits most favorably to the nonmoving party by considering the highest quantity for each of the five fiscal years shown on any exhibit (23 + 397 + 435 + 334 + 528), the maximum requirement of SEE tractors for the five fiscal years 1984 through 1988 could not have exceeded a total of 1,717 vehicles. In addition, up through and including September 1988 all Procurement History & Planning exhibits reflecting SEE tractor requirements for FY89 and beyond showed the "contractor" for these requirements as "TBS" or "TO BE SELECT[ED]." By contrast, "Freightliner" had consistently been shown as the "contractor" for the FY84 through FY88 requirements.

During proceedings on this motion, the Government was given ample opportunity to show the existence of genuine issue for trial. The only showing offered by the Government, in addition to the exhibits associated with the Army's "Appropriation Budget Activity Reports," is the "Semler affidavit" quoted in the majority opinion. However, the conclusory statements in this affidavit do not correlate alleged "requirements for 3047 SEE vehicles" to any specific program, fiscal or calendar years, let alone to the "requirement for five years" that is relevant to the motion. On balance, the affidavit appears to be devoid of probative value and I would conclude that the Government has failed to set forth specific facts showing that the 2,200 vehicle total of the basic and option quantities ordered under the contract did not exceed the requirement for the five fiscal years 1984 through 1988, inclusive.

In ruling on motions for summary judgment, this Board is guided by the standards of Fed R. Civ. P. 56 and, if the moving party would otherwise be entitled to judgment as a matter of law, paragraph (e) of the rule provides that, unless a showing of genuine factual issue has been made, summary judgment "shall be entered" against the nonmoving party. It is not the object of this provision of the rule to permit replacing conclusory allegations in an answer with conclusory allegations in an affidavit or brief. *See Lujan v. National Wildlife Federation,* 497 U.S. 871, 888 (1990); *Celotex Corp. v. Catrett,* 477 U.S. 317, 322-23, (1986); *Anderson v. Liberty Lobby, Inc.,* 477 U.S. 242, 249 (1986).

From the record developed on appellant's motion for summary judgment, it appears undisputed that, when the Government issued modification P00051 to exercise a fifth program year option, it contravened the prohibition in DAR 1-1502(e) against exceeding "the requirement for five years." In particular, the 453 SEE tractors ordered under this unilateral modification by using more than $31 million from the Army's appropriation

Digitized by Google

for fiscal year 1989 clearly had never been included in the multiyear requirement for any of the five applicable program years and had, instead, theretofore been planned and budgeted as requirements of fiscal years 1989 and beyond. The purported option exercise brought the total quantity of vehicles ordered under the contract to 2,200 and exceeded the requirements of the applicable five years, from fiscal year 1984 through fiscal year 1988, inclusive, in violation of DAR 1-1502(e), a published procurement regulation binding on the Government and having the "force of law." *Paul v. United States*, 371 U.S. 245, 255 (1963); *see Public Util. Comm'n v. United States*, 355 U.S. 534, 542 (1958).

The United States cannot be bound by acts of its agents which contravene its statutes or published regulations. *Federal Crop Ins. Corp. v. Merrill*, 332 U.S. 380 (1947). When a binding regulation or directive has the effect of denying procurement officials the authority to exercise a particular option in a contract, we must first determine whether or not the Government's purported option exercise contravened such authority-denying regulation or directive. *New England Tank Industries of New Hampshire, Inc. v. United States*, 861 F.2d 685 (Fed. Cir. 1988), *pet. for modifications denied*, 865 F.2d 243 (1989) (violation of unpublished, internal housekeeping directive affecting funds control invalidates option exercise).

If the violation of an unpublished, internal, directive of a housekeeping nature is a matter of more than internal concern and, if the directive is "binding on the government," may invalidate an otherwise facially unconditional option exercise, as in *New England Tank v. United States*, 861 F.2d at 692, 695, it stands to reason that more than internal concern attaches to the contravention of published procurement regulations binding on the Government. Since DAR 1-1502(e) denied the contracting officer authority to exercise an option exceeding the requirement for the pertinent five years, I would hold that the option purportedly exercised by modification P00051 was invalid and would grant appellant's motion for partial summary judgment as to liability.

[¶ 26,539] The Ryan Company

ASBCA Nos. 41235, 42095, November 29, 1993. Contract No. N62472-88-C-0301.

Interpretation of Contracts—Electrical Work—Switchgear Drawings.—A letter directing a contractor to comply with sketches on switchgear constituted a contract change for which the contractor was entitled to an equitable adjustment because the discrepancy in the contract drawings concerning the switchgears was latent, not patent, and the contractor's interpretation was reasonable. Although the contractor had noted two conduits leading from the switch, it was only upon reaching an installation note on one of the drawings that one could find the first indication that two lines were exiting the switch. Although a government witness testified that during the preparation of a government cost estimate, the installation detail drawings are studied in addition to the one-line drawings to determine the specific electrical equipment requirement for the job and architect-engineer witnesses testified that they would have performed such a detailed study prior to bid, the board indicated that a bidder could not be expected to conduct the same kind of study before submitting a bid.

Interpretation of Contracts—Electrical Work—Transformers.—A contractor was not entitled to additional compensation for being required to provide 208-volt transformers instead of the 240-volt transformers originally ordered, even though there was a latent ambiguity that raised no obligation to inquire, because the contractor failed to prove that it suffered any damage. The record showed the cost of the replacement transformer, but it did not indicate that the transformer originally ordered could not be returned or used for some other purpose or that the 208-volt transformer was more costly than the 240-volt transformer. More important was the fact that despite two requests from the architect-engineer, the contractor failed to supply a correlation between each transformer and its proposed location. The architect-engineer testified that if he had had the correlation information he requested, he would have checked out each drawing.

For the appellant: McNamara, Desimone & Flynn, P.A., Boston, Massachusetts, by Leo S. McNamara. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Brad L. Johnson, Trial Attorney.

Before BURG, RIISMANDEL, and RUBERRY, Administrative Judges.

BURG, Administrative Judge: Each of these appeals was filed by appellant pursuant to the Contract Disputes Act (CDA), 41 U.S.C. § 605(c)(5) from deemed denial of a request for equitable adjustment. ASBCA No. 41235 concerns an appeal for costs incurred in ordering new electrical switches which it alleges were not required by the contract. ASBCA No. 42095 concerns costs incurred in ordering a new transformer because of allegedly defective plans and specifications. Only entitlement is before the Board.

FINDINGS OF FACT

1. On 8 December 1988 appellant was awarded this contract in the amount of $2,848,000 for conversion of the electrical system at the Naval Air Station, South Weymouth, MA, from 2.4kV to 13.8kV. The contract contained the standard Disputes and Changes clauses. Of relevance to these appeals, the contract contained detailed requirements for electrical submittals, including a certification that the proposed material conformed to the contract requirements. It also required the contractor to obtain approval of electrical items before procurement, fabrication or delivery to the job site. The contract further noted that partial submittals would not be acceptable and would be returned without review. (R4, tab 1, Specifications § 16011-1, ¶ 1.3, 1.3.1, 1.3.2; § 16476-2, ¶ 1.3.)

ASBCA No. 41253. THE SWITCHGEAR CLAIM

2. The contract required appellant to supply and install, *inter alia*, six large outdoor switches, each mounted on a concrete pad. Four of the switches appear on contract drawing E-8 "13.8 KV Feeder System One Line Diagram" and drawing E-11 "New 13.8 KV Duct System One Line Diagram" servicing the feeds for transformers in four vaults in Hangar No. 1. The other two switches appear on one-line drawings E-7 and E-12 servicing feeds to transformers in Building Nos. 82 and 24. On several of these drawings the switch one-line diagram is labelled "selector switch" or "transfer switch," terms which are used interchangeably. The electrical diagramatics or "one-line" drawings depicted two leads entering each switch and a single line exiting with a "dot" on that line. The dot was unexplained (see finding 7, *infra*). At some distance beyond the dot the line split, going to two transformers. Additional information concerning the switches appeared on other contract drawings.

3. Specifications for the switches are set forth in Section 16476 of the Contract Specifications. Other pertinent specifications concerning required submittals and approvals as well as contract drawing discrepancies were contained in Sections 01010, 01011, 01400, and 16011.* Under the contract appellant was required to submit shop drawings and certain information for the switches it proposed to use after the submittal was approved by appellant's Quality Control Representative (CQC). Final approval of electrical equipment had to be obtained from the Government before procurement, fabrication or delivery to the job site. (R4, tab 1, § 01400 ¶ 1.5; § 16011 ¶ 1.3; § 16476 ¶¶ 1.3.1, 1.3.2)

4. Appellant selected Grainger-Rush Company/RTE (RTE) to manufacture the switches. It had been in the business for many years and is a recognized electrical supplier. Appellant forwarded the contract specifications and the one-line diagram pages of the drawing package to RTE. Since it is standard practice in the trade to use the one-line diagramatics and specifications for designing electrical equipment unless additional information is required, appellant saw no need to supply other drawings in the package which contained additional information concerning the switches. It considered the one line drawings, and specifications clearly established the switches required under the contract both at the time it prepared and submitted the bid and when it submitted the information to RTE. RTE prepared the shop drawings attached to appellant's submittals based on the one-line drawings and specifications without request for additional information.

5. On 8 August 1989 appellant forwarded its proposed outdoor pad mounted

*These specifications are lengthy and, despite the Government request that various portions be quoted, we have concluded they would extend these findings to a greater extent than necessary. They have been carefully considered and will be discussed to the extent considered relevant.

Digitized by Google

switchgear submittal to the Government which in turn forwarded it to the A/E for the project. The A/E reviewed the submittal, which included the RTE drawings, and on 23 August 1989 recommended the submittal be rejected and returned to appellant because of its failure to include the following:

1. Submission of the manufacturer's documentation for electrical ratings;

2. A statement of interrupting and insulating medium;

3. A statement of the type and model of switchgear

The Government contract administrator, a civil engineer, relied on the A/E for specific electrical engineering matters because of its expertise which he considered superior to his own. He returned the submittal to appellant noting its rejection for the above three alleged failures. No additional reasons for rejection were given to appellant. Appellant's 8 August 1989 submittal actually contained Items 2 and 3, *supra*. In lieu of submitting manufacturer's documentation supplying the information noted as required by Item 1, *supra*, appellant's quality control engineer had handwritten the information on the submitted drawing.

6. On 21 September 1989, appellant resubmitted its proposal for the six outdoor switches. The submittal was identical to the first submittal, including attachment of the same shop drawings, except that, to comply with Item 1 of the rejection, appellant included as the "manufacturer's documentation" four pages of the manufacturer's catalog. Pages three and four gave the ratings which were identical to those which appellant had handwritten on the original submittal. Other pages of the documentation indicated how to interpret the switch model number. Various switching combinations appeared in the documentation. In the middle of the second page of appellant's resubmittal appellant placed the following note in bold print:

Our configuration is not listed in RTE's available catalog. The shop drawings give more specific information not shown in the catalog. The electrical ratings however still apply.

(R4, tab 7) The catalog specifically alerted individuals that it did not contain all available configurations by indicating that inquiry could be made for other configurations. The submittal was reviewed by the A/E and approval noted in three places. The 3 October 1989 letter from the A/E to the Government contract administrator states that "The above referenced submittal is approved in its entirety" (exh. 104; tr 2-11). A similar notation of approval in its entirety appears on the "Contractor Drawings and Information" submittal form and on the second page of the submittal under appellant's note set forth above. The Government contract administrator endorsed the A/E approval on 20 October 1989. The submittal was returned to appellant with the approval endorsements. Following the approval, appellant released the switches for manufacture and received them at the job site in November 1989. Neither the initial or second submittal indicated the location of each of the proposed switches or the drawings which were the basis for the equipment. Appellant considered, and we so find, that it was obvious where they were to be used. The A/E also did not consider it a basis for rejection and unlike the problem with location of transformers (see finding 15, *infra*) raised no question about location of the switches at the time of "approval in its entirety" of the resubmittal. We conclude that failure to specify the exact locations of the switches or the drawings which referenced the switches created no difficulty or confusion. At the oral hearing the A/E who approved the submittals indicated that he had other reservations about the submittals but approved them so that appellant would not be delayed. The A/E neither reduced any such concerns to writing nor informed the Government orally at the time of the submittals of any concerns other than the three items listing above (finding 5). Appellant had no contact with the A/E. All contacts were with the Government contract administrator.

7. About a year into the construction, appellant's field superintendent informed appellant's project manager that he was having a problem determining where to connect the two wires on the load/tap side of the switch because there was no place to splice the two cables outside of the switch. The contract required all splices to be made at man-holes. Drawing E-11 indicated location of both new and old man-holes. No manholes were shown in the vicinity of the "dots" related to the switches at Hangar No. 1 which are involved in this dispute. While appellant was aware that splices would be required between the switches and the transformers, at the time of bid it did not investigate to make certain that there were manholes where splices were required, relying on the "integrity" of the Government drawings,

©1994, Commerce Clearing House, Inc.

Digitized by Google

i.e., that man-holes would be located where required or new man-holes specified. It also interpreted the "dot" near each switch to indicate that a splice would be used. The list of symbols on the drawings in this contract did not indicate what the "dot" signified. Appellant interpreted it as being a splice. The only explanation offered by the Government at the hearing was that one-line diagrams (such as E-10) are electrical schematic representations, not intended to represent any physical characteristics and that one must study the detail drawings for such characteristics. The A/E engineer and expert witness considered the "dot" to show a junction and not specifying where the junction occurred—whether inside or outside the switch. However, the symbol for the switch on the drawings did not include this "dot" as part of the switch. Frequently a dot is used to indicate a splice without the word and without appearing in the symbol listing. Drawings E-24, "Transformer Removal and Installation Details Feeder No. 2" and E-31 "Transformer Removal and Installation Details Emergency Generator Feeder" contained fifteen or more notes regarding pulling of electrical cable. In following the 29 notes on Drawing E-24 listing steps of wiring sequentially, Notes 8 and 13 of the 15 notes for Hangar 1-Vault 2 and Notes 8 and 12 of the 14 notes for Hangar 1-Vault 1, and Notes 8 and 12 of the 14 notes for Hangar 1-Vault 3 on Drawing E-31, require that two cables be pulled from the switch to the transformer rather than one cable with a splice at the "dot." Drawings E-24 and E-31 depict two conduits from the switch to the transformer. The two conduits were noticed by appellant but raised no question in appellant's mind and were not a matter of concern to it at the time it prepared its bid since it is common in electrical installations to include additional conduits for possible later use in the event additional lines are required some time in the future. Appellant reviewed these drawings prior to bidding but did not consider them in terms of switch design since they were detailed notes for installing (pulling) electrical cables which are not usually reviewed at the time of bidding for determining design characteristics of electrical equipment unless the drawings and specifications are not clear.

8. The Government expert witness testified that if appellant had reviewed all the drawings, including E-24 and E-31, checking all details, it would have realized that the switches required two leads into and out of the switch and that his company followed such practice prior to submitting a bid. He was not involved in this contract prior to the dispute. However, he was a principal in the A/E firm that both designed this project and reviewed the various submittals and from which the Government had considered seeking redress. At some time prior to the oral hearing, the Government decided it would not do so. Appellant's expert had been its electrical consultant for this contract and had helped prepare the bid and the submittal for the switches. An electrical engineer with 42 years of experience, including teaching experience, he testified that it is usual to rely on the one-line drawings and specifications for the type of electrical equipment required for this contract and appellant had done so in this case. The Government contract administrator testified that he carefully reviews all detail drawings in preparing Government cost estimates for a job.

9. When appellant's field superintendent raised the problem, about a year into construction, appellant's project manager at first had some difficulty in understanding just what the problem was. After then carefully studying all of the installation details and noting the installation details in notes on E-24 and E-31 (finding 7), on 11 November 1989 appellant inquired how it should proceed in making the connections between the switch and the two transformers it was to feed since the details did not indicate any means or method of doing so. Appellant had not noted this discrepancy at the time it submitted its bid and, based on the specifications and one-line drawings had determined that it would provide the types of switches included in its submittals (findings 5 and 6). Appellant considered the discrepancy far too subtle to have been recognized at time of bid preparation because it was only by putting together the exact routing of the piping, the number of feeders, etc., that the inability to make a splice becomes clear (tr. 1/161-62). At the time of inquiry appellant was not overly concerned about the matter since it felt there were several alternatives for making the connections. One was by use of "feed-through bushings" which would only have required a slight modification to the switches and the other was by "racks and elbows" which would not have required any modification to the switches.

10. The Government forwarded appellant's inquiry to the A/E. It was not until two months later that the A/E forwarded a response, containing one-line drawings for two switches, to the Government which, in turn, forwarded it to appellant on 10 Janu-

Digitized by Google

ary 1990. Appellant was "stunned" by the response since it indicated that appellant should furnish two entirely different switches than those which had been approved following appellant's resubmittal. The switches depicted on the three one-line drawings in the A/E response were far more elaborate than the switches previously approved. They could not be considered selector or transfer switches (see finding 2, *supra*). The A/E reply also indicated the model number for five of the switches as they appeared in the catalog which appellant had included in its resubmittal, despite the notation appellant had set forth in that resubmittal that the catalog did not contain the models which appellant intended to supply. The sketch for the fused switch did not indicate a model number reference but there was one.

11. By letter dated 18 January 1990, appellant protested what it considered a directive from the Government to supply the switches set forth in the A/E reply and detailed the differences between those switches and the ones for which it had received approval and had on location for two months. Various communications between appellant and the Government and between the Government and the A/E followed thereafter (R4, tabs 9-13). At no time did appellant request permission to use the alternatives which it felt could be used for the installations. While at no time did the Government "order" appellant to purchase the new switches, indicating that it was appellant's responsibility to comply with the contract, by letter dated 16 February 1990 the Government informed appellant that

> ... Again, you are directed to proceed based on the clarification sketches provided by PLM Technologies [the A/E] and the building details as shown on drawings E-20, E-22, E-24, E-29, E-30 and E-31. Again, you are directed to provide switches that accept two sets of loadbreak separable connectors (or more where indicated) on the transformer side and from two sources on the supply side. ...

(R4, tab 13). In the Government's view "whatever any slight ambiguity might exist on the one-line documents is clarified by the details" on Drawings E-20, E-22, E-24, E-29, E-30, and E-31 (R4, tab 22). At the oral hearing the A/E engineer who was responsible for reviewing appellant's submittals and responding to appellant's request, testified that he would have had serious concerns about the installation alternatives appellant considered possible. While he never specifically stated he would have recommended that they be disapproved, we conclude, from the import of his testimony and that of the Government expert at the oral hearing, that appellant would not have been given approval to use either alternative it considered feasible (finding 9). We conclude that based on the reliance by the Government civil engineer on the electrical engineering expertise of the A/E and his concerns about his own expertise in such areas, that he would not have approved either alternative, and that based on the "directions" in the Government letter, *supra*, appellant was required to order the switches as shown on the A/E sketches forwarded to it on 10 January 1990.

12. Appellant investigated the possibility of modifying the switches it had on hand to comply with the requirement that two feeds enter and two feeds exit the switch and found that the cost would exceed the cost of ordering new switches. Because of the time constraints and the indication by the A/E of the model number of the switches appellant should order, appellant did not seek other sources for the required switches. Appellant ordered new switches based on the sketches supplied by the A/E. It ordered Model 9B for the non-fused switches and Model 7B for the fused switch. All of these switches were far more elaborate than so-called selector or transfer switches and capable of many functions not required by the contract. While the Model 9B switch was referenced by number in the A/E sketch, the Model 7B (the fused switch) was not referenced by number but did comply with the sketch supplied by the A/E. There was specific testimony by the Government expert that appellant's submitted and approved fused switch for Building 82 would have complied with contract requirements (tr 2-144) so that the new fused switch was not required. However, that was not the import of the Government direction of 16 February 1990 (finding 11).

13. Appellant was unable to return, use or sell the original switches it had ordered and received. At the time of the oral hearing those six switches were still in appellant's possession and only worth salvage value. By letter dated 17 April 1990 appellant notified the Government that it had ordered new switches based on the clarification sketches supplied by the A/E through the Government and submitted a claim for $117,829 certified by its project manager and requested a contracting officer decision. When no decision was forthcoming, appellant filed an appeal from a "deemed denial." After a

©1994, Commerce Clearing House, Inc.

Digitized by Google

decision in ASBCA Nos. 42774 and 42776 that the project manager's certification was valid, this appeal moved forward to an oral hearing.

ASBCA No. 42095. THE TRANSFORMER CLAIM

14. The contract required appellant to furnish and install a number of transformers. Drawings E-7 and E-8 listed a total of 45 transformers with the voltage required for each transformer. Many of the transformers, including two listed for Building No. 17, specified a voltage of 240 Volt Delta. Appellant ordered the transformers from the information furnished on E-7 and E-8. While checking the specific lines prior to the installation of the transformers, on 8 March 1990 appellant discovered that the actual secondary voltage at Building No. 17 was 120/208Y so that a 208 volt transformer was required rather than the 240 volt transformer listed on E-7.

15. Appellant's submittal of proposed transformers was rejected by the A/E. One reason for rejection was that the submittal failed to include a list of the transformer ID numbers along with the locations where they were to be installed. Appellant's resubmittal also failed to specify where appellant intended to install each transformer. Upon review of the resubmittal, the A/E engineer spent several hours attempting to correlate the information and "gave it up" because he was reaching too many "dead ends." While he approved the transformer configurations, he again refused to approve the submittal. The record fails to indicate that appellant ever submitted this correlating information. At the hearing the A/E engineer testified that had that information been given him, he would not have relied on the listing on E-7 and E-8 but would have looked at other drawings, which contained information about the proposed location for each transformer, to assure that the listing was correct.

16. By letter dated 9 March 1990, appellant informed the Government of the discrepancy in the voltage for the Building 17 transformer, that it had ordered the transformers from the one-line diagram drawings and that it had used a 208 volt transformer on hand for another location in order not to delay progress. By letter dated 21 March 1990, the Government contract administrator informed appellant that it should not have ordered merely using the one-line drawings and that if it had reviewed Drawing E-22 it would have been apparent that a 208 volt transformer was required.

17. Drawing E-22, "Transformer Removal and Installation Details" is labelled Building 106. By careful analysis it is possible to discern that in the upper right hand corner of the drawing a note appears which indicates "New 4" RGS conduit to existing 4" PVC conduit Bldg. 17 ..." Following the conduit to the bottom of the detail it goes to a transformer below which there is a note "New 75 EVA, [three phase] 13.8 kV—208v[sic]/120V transformer."

18. Appellant had ordered the transformers from the one-line diagrams of E-7 and E-8 plus the specifications. A bidder would not normally go through the drawings and compare every detail on each drawing at the bid stage. It would not be practical to do so. E-22 is a layout diagram and at most appellant would have "glanced" at it to determine whether certain equipment was installed inside or outside. It would not have studied it sufficiently to recognize that it addressed Building 17 transformer voltage requirements, especially since it was labelled Building 106.

19. Appellant filed a claim of $14,622 for the cost of providing the replacement transformer. When it failed to receive a contracting officer decision on its claim, it filed an appeal from a deemed denial which was docketed as ASBCA No. 42095. Thereafter, the contracting officer denied appellant's claim.

DECISION

The major thesis of the Government argument is that the contract must be read as a whole and, that reading this contract in its entirety to the last detail, one could determine that the switches which appellant ordered would not do the job and that there was an error in the drawings concerning the 208V transformer about which appellant should have inquired. Certainly the principle that a contract must be read as a whole is a well-established basic principle of contract interpretation. That is not the issue as we view these appeals. In our view, the question is whether appellant had to go through a detailed and laborious scrutiny of numerous document drawings or whether it had a right to rely on the one-line drawings using other detail drawings merely to check for other information to the extent necessary for ordering the switches and transformers involved in these appeals but not to the depth of detail which was required to discern the problems which are the cause of these appeals.

Digitized by Google

A contract will be interpreted against the drafter. However, where the defect is patent, there is duty upon a bidder for a Government contract to inquire prior to contract award. *Hol-Gar Manufacturing Corp. v. United States* [10 CCF ¶72,885], 169 Ct.Cl. 384 (1965). While after the fact, it is often possible to show that careful scrutiny would have detected a defect in a contract, that is not the test which is applied in determining whether a defect was latent or patent. The defect must be obvious, significant and glaring to be considered patent and create a duty on the part of a bidder to inquire. *Newsom v. United States* [29 CCF ¶82,417], 676 F.2d 647 (Ct.Cl. 1982); *Chris Berg, Inc. v. United States* [17 CCF ¶81,143], 455 F.2d 1037, 1045 (Ct.Cl. 1972). A subtle, hidden or minor inconsistency does not raise such a duty on the part of a bidder. *Blount Brothers Construction Co., v. United States* [10 CCF ¶73,058], 346 F.2d 962 (Ct.Cl. 1965); *WPC Enterprises v. United States* [9 CCF ¶72,289], 323 F.2d 874 (Ct.Cl. 1963).

ASBCA No. 41235, THE SWITCHGEAR CLAIM

Applying the above discussed basic concepts to the issues before us, in our view, the problem concerning the switches falls into the latter, not the former category. The one-line drawings, E-7, E-8, E-11 and E-12 contained symbols which the drawing legends indicated designated a "selector switch" or "transfer switch" (both designations defining the same type of switch). It was not until nearly a year later, during installation, that it became apparent to appellant that the switch not only had two lines feeding into it but that there also were two "feeds" or outputs from the switch into the building. while appellant had noted the two conduits leading from the switch, it was not concerned about this and had concluded, in reliance on the one-line drawings, it had to include an extra conduit merely for possible future use. It was only upon reaching installation note 8 on the detailed 29 installation notes on drawing E-24 (finding 7), that one could find the first indication two lines were exiting the switch. In our view that does not give rise to a blatant or obvious discrepancy. It was far too subtle. We, therefore, conclude that the discrepancy concerning the switches was a latent, not a patent discrepancy. Appellant having bid relying upon its own interpretation had no duty to inquire.

Having reached the conclusion that the problem was latent, we must determine whether appellant's interpretation was reasonable. The installation details are not generally studied in the bidding process. We recognize that the Government witnesses testified that in preparing a Government cost estimate the installation detail drawings are studied in addition to the one-line drawings to determine the specific electrical equipment required for the job and that A/E witnesses testified that they would have performed such a detailed study prior to bid. However, we cannot equate the pressure of preparing a Government cost estimate and a bid. Nor are we persuaded by the testimony of the Government expert, a principal of the A/E who prepared the drawings and specifications, that his firm's practice to review all drawings in great detail before bidding is the usual one in the general contracting field. We are also concerned about possible bias on the part of a principal of the A/E involved in this contract. We recognize that the evidence indicated that the Government had decided not to pursue any legal action against the A/E because of various problems about possible design deficiencies. However, the reputation of the A/E would not be absolved because of this. While appellant's rebuttal witness also had a vested interest because he was appellant's consultant for this contract, we are persuaded by his 42 years of experience and his teaching credentials that it is customary in preparing bids of the type present here to look at other than the one-line drawings for clarification of questions not answered by the one-line drawings and then only to the extent necessary to answer such questions, not to study them to the detail which was required here to indicate the problem. As we weigh the evidence, the bias created because the Government expert was a principal in the A/E is greater than any bias of appellant's expert.

Our conclusion is further influenced by the fact that the A/E submitted one-line drawings in response to appellant's request for clarification how to resolve the problem. The assumption by the A/E that the manufacturer's catalog submitted by appellant contained the type of switch which appellant ultimately ordered should not have been made in light of the clear note which appellant placed on the submittal that the schematics in the catalog did not include the switch it was proposing. The catalog specifically alerted individuals that it did not contain all available configurations by indicating that inquiry could be made for other configurations. In light of appellant's note, the catalog proviso and inclusion by appellant of the shop drawings referenced in

©1994, Commerce Clearing House, Inc.

Digitized by Google

the note, we consider the conclusion reached by the A/E unreasonable. It could and should have inquired if there was concern that location of the proposed switches was not clear. If they were not to be used in all locations, the submittal was deficient not only as to where they were to be used but also what was proposed for the other locations. We are not persuaded by the A/E testimony that it approved the second submittal despite certain deficiencies because contractors usually need to order the items. The alleged deficiencies were not listed in the first, disapproved submittal; there was no indication that time was of the essence; and no objection was voiced when the A/E took two months to respond to the request for clarification when appellant raised the problem.

While the parties argued the merits of the alternatives which appellant indicated could have been used to adapt the switches which it had ordered, we have found that, even had these alternatives been specifically presented, the A/E would not have considered either of them acceptable and recommended that either be approved and that appellant was "directed" to comply with the A/E sketches. In our view, this direction was tantamount to an order.

We, therefore, conclude that the general rule of contract construction applies to the switches, namely, that the contract will be interpreted against the drafter, *Hol-Gar Manufacturing Corp. v. United States, supra*, and that supplying switches which complied with the sketches supplied to appellant from the A/E constituted a contract change for which appellant is entitled to an equitable adjustment. See also, *C. Sanchez and Son, Inc. v. United States* [39 CCF ¶ 76,578], No. 95-5010, slip. op. at 10, 11 (Fed. Cir. Oct. 3, 1993).

Appellant's appeal is sustained.

ASBCA No. 42095: THE TRANSFORMER CLAIM

Applying the general principles concerning defects in drawings and specifications set forth in the introduction of this decision, we conclude that the discrepancy between the listing of transformers on Drawings E-7 and E-8 and the reference on Drawing E-22, labelled Building 106, was far too subtle to constitute a blatant discrepancy which should have been obvious to appellant at the time of bidding. It was a latent ambiguity which raised no obligation to inquire on appellant.

However, in our view, appellant has failed to prove that had it complied with contract requirements it would have suffered any damage. While the record shows what the replacement transformer cost, it does not indicate that, unlike the switchgear involved in ASBCA No. 41235, the 240 volt transformer originally ordered could not be returned or used for some other purpose nor that the 208 volt transformer was more costly than the 240 volt. More important, in our view, is the fact that, despite two requests from the A/E, appellant failed to supply a correlation between each transformer and its proposed location. This is different from the switchgear appeal, where the switch locations were recognizable and we have concluded that the failure to specify was never noted as a defect in the submittal. Here the A/E engineer testified that had he had the correlation information he requested he would have checked out each drawing. Appellant's argument that the A/E would probably have only checked the one-line diagrams is just that—argument and conjecture on its part. We conclude that appellant has failed to prove it is entitled to recover for the erroneous listing on E-7 of the Building 17 transformer.

The appeal in ASBCA No. 42095 is denied.

Summary

We have concluded in ASBCA No. 41235 that there was an ambiguity in the drawings, that the error was latent, not patent, and that appellant, having bid in reliance on its interpretation and unaware of any discrepancy, is entitled to an equitable adjustment for additional costs incurred in replacing the switches. In ASBCA No. 42095, we have concluded that had appellant supplied the A/E through the Government the list of where it intended to place each transformer, the requirement for a 208 volt transformer for Building 17 rather than the 240 volt transformer listed on the one-line diagram would have probably been discerned in time to avoid ordering the wrong transformer. We have also noted appellant's failure to show that the 208 volt transformer was more costly.

The appeal in ASBCA No. 41235 is sustained. The appeal in ASBCA No. 42095 is denied.

[¶ 26,540] Hicks & Ingle Company of Virginia, Inc.

ASBCA No. 38182, November 30, 1993. Contract No. DACA65-87-C-0068.

Interpretation of Contracts—Ambiguities, Latent—Reliance on Subcontractor's Interpretation.—A contractor was not entitled to an adjustment for the cost of asbestos abatement for insulated pipes that it was required to remove and replace, because it did not rely on the interpretation of its asbestos subcontractor that asbestos abatement would be required only for pipes shown to be demolished. In computing its bid, the contractor had allowed substantially more for asbestos abatement than the subcontractor had quoted. The subcontractor had notified the contractor of its interpretation after negotiation of the subcontract and had requested additional compensation.

For the appellant: Eliades & Eliades, Hopewell, Virginia, by Peter D. Eliades. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Robert L. Oswald, Engineer Trial Attorney, U.S. Army Engineer District, Norfolk.

Before STEMPLER, SPECTOR, and TING, Administrative Judges.

STEMPLER, Administrative Judge: This is a timely appeal from a contracting officer's decision denying appellant's claim for $42,474 for asbestos abatement work allegedly beyond the requirements of the contract. The Contract Disputes Act is applicable. Appellant's asbestos abatement subcontractor, Insulation Specialties, Inc. (ISI) is the real party in interest. A hearing was held at the Board's offices. The Government has filed a brief, appellant has not. Only entitlement is before us for decision.

FINDINGS OF FACT

1. On 26 May 1987, the Army awarded contract No. DACA65-87-C-0068 to Hicks & Ingle Company (HIC). The $996,000 firm fixed-price construction contract called for the modernization of the existing steam plant at the Radford Army Ammunition Plant, Radford, VA. The contract required that the plant remain operational during the work (R4, tab 3; R4, Vol. IV § 3.2.1).

2. The contract contained the standard FAR clause, "Site Investigation and Conditions Affecting the Work (1984 APR)," § 52.236-3 (R4, tab 3).

3. The dispute here concerns the extent to which HIC was responsible to remove the existing asbestos insulation [1] from piping that was to be removed and replaced under the contract.

4. The contract drawings contained a legend which used one symbol for new pipe, another for existing pipe, and another for existing pipe to be demolished. The symbol for pipe to be demolished was cross-hatches. Approximately 160 l.f. of one pipe with asbestos insulation had this cross-hatching. This pipe was not to be replaced with new pipe once removed. There was approximately 420 l.f. of existing piping with asbestos insulation that was to be removed and replaced with new piping. A site visit would make it clear to a reasonable contractor that this piping, and its insulation, had to be removed before the new piping could be installed. Furthermore, the contract required the existing pipe hangers to be re-installed in approximately the same locations (R4, tab 6, sheet 178, 179; tr. 1/39-40, 98, 144, 147, 179, 267-68).

5. On 12 May 1987, without making a site visit, ISI submitted a quote to HIC for subcontract work.[2] Included in that quote was $21,000 [3] for asbestos abatement (*i.e.*, removal of the asbestos pipe insulation). It was ISI's testimony that it had interpreted the contract drawings [4] to require asbestos abatement only for the 160 l.f. that had the cross-hatches and for a short distance where each new pipe tied into existing pipes that were to remain (tr. 1/18, 24-26, 33; R4, tab 18A; exh. G-3, -4).

[1] The contract specifications required almost all existing insulation to be considered asbestos (R4, tab 5).

[2] ISI had an original complete bid package from the Government when it prepared its quote to HIC (tr. 1/49, 104).

[3] The eventual subcontract price for the asbestos abatement work was $21,636 (tr. 1/89, 2/63; R4, tab 30).

[4] We have in evidence drawings called sheets 1000, 2000 and 3000, and extensive testimony concerning them. We find these drawings are not contract drawings, were not used in the contract, were not used in preparing HIC's or ISI's bids, were not in the possession of appellant when the problem being litigated was brought to the Government's attention, and are irrelevant to this dispute (R4, tabs 7, 16; tr. 1/48, 54, 92, 107-08, 111, 129, 209-10, 227-29, 2/74).

©1994, Commerce Clearing House, Inc.

Digitized by Google

6. HIC did not, either prior to, or after award, interpret the contract as did ISI. HIC interpreted the contract drawings to require the removal of the pipe in question, including the asbestos insulation. In preparing its bid, HIC used a figure of $70,000 for the asbestos abatement work. We find that HIC did not rely on the interpretation of the drawing now being advanced by ISI in submitting HIC's bid to the Government (R4, tab 21; tr. 1/120-22, 138-39, 160-61, 2/55-58).

7. Neither HIC nor ISI inquired of the Government prior to award regarding ISI's now advanced interpretation (tr. 1/61, 78-79).

8. After a site visit by ISI on 15 June 1987, ISI and HIC entered into a subcontract on 6 July 1987. HIC agreed to remove the existing piping after ISI encapsulated the asbestos insulation (R4, tabs 31, 34; tr. 1/59, 62-64, 148-49, 2/75).

9. On 24 July 1987, ISI notified HIC of its current position that insulation on pipes not shown to be demolished, but to be removed and replaced are not included in the contract. ISI requested an additional $42,474 for this work (R4, tab 15H; tr. 1/69).

10. On 11 August 1987, ISI submitted its asbestos abatement plan to HIC. The Government approved the plan (forwarded by HIC) on 11 September 1987. The plan was intended to include only the asbestos abatement work ISI felt was required under the contract, but did not indicate that it was deviating from the work that ISI knew HIC and the Government felt was required. The phrasing of the plan leaves doubt as to exactly what work was being covered (exh. A-1; tr. 1/41-42, 192-94, 2/71-74).

11. The Government was first notified of ISI's differing interpretation by letter from HIC on 3 September 1987 (R4, tab 11).

12. On 24 September 1987, the Government wrote HIC stating that the contract required the work in question (R4, tab 12).

13. On 26 February 1988, HIC submitted a $60,011.16 certified claim, comprised of $47,086.50 for ISI's alleged additional work, and $12,924.66 for HIC's indirect costs. HIC does not seek any additional monies itself for removing the pipe in question (R4, tab 15; tr. 1/99, 138, 213).

14. On 29 September 1988, the contracting officer issued a decision denying the claim (R4, tab 2).

15. On 4 January 1989, HIC filed a timely appeal.

DECISION

We agree with the Government that when the contract documents are read as a whole, there is no ambiguity that asbestos abatement is required for those pipes required to be removed and replaced. The drawings require the existing pipe hangers be re-installed in approximately the same locations. It was evident that the new pipe was replacing the existing pipe along the same runs, and that the existing pipe (including its asbestos insulation) had to be removed in order to install the new pipe. Assuming *arguendo*, that the contract was ambiguous, to recover based on an interpretation of an ambiguous contract, a contractor must show that it relied on the interpretation in submitting its bid. *Fruin-Colnon Corp. v. United States* [36 CCF ¶ 75,923], 912 F.2d 1426 (Fed. Cir. 1990). The evidence is clear that HIC did not rely on ISI's interpretation in submitting its bid, or does it even share ISI's interpretation at this date.

CONCLUSION

The appeal is denied.

[¶ 26,541] Hogan Construction, Inc.

ASBCA No. 37241, November 26, 1993. Contract No. F41613-87-C-0043.

Interpretation of Contracts—Walls, Ceilings, and Floors—Visible Gaps.—Under a contract modification for the installation of walls, a contractor was not entitled to additional compensation for providing trim to cover visible gaps between ceilings and walls, because the gaps evidenced performance that was not skillful or workmanlike. The government acted properly to reduce economic waste by directing the contractor to provide trim rather than to replace the walls.

For the appellant: Williams & Jensen, P.C., Washington, D.C., by Robert J. Martinez and Sally B. Pfund. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and R. Stephen Houlihan and John M. Taffany, Trial Attorneys.

Digitized by Google

Before SCHEPERS, RUBERRY, and RIISMANDEL, Administrative Judges.

SCHEPERS, Administrative Judge: This timely appeal, tried with other appeals under this construction contract, is from a contracting officer's decision denying appellant's claim for the costs of adding trim at the top of certain gypsum board paneling walls which appellant installed. The parties stipulate to quantum in this appeal.

FINDINGS OF FACT

On 27 September 1987 appellant was awarded Contract No. F41613-87-C-0043 in the initial amount of $278,770 for renovation of the Willis-Cartwright School at Carswell Air Force Base, Texas (the contract). Modifications raised the contract price to $339,943.75.

The contract incorporated by reference the standard Disputes, FAR 52.233-1 (APR 1984), Changes, FAR 52.243-8 (APR 1984), and Material and Workmanship, FAR 52.236-5 (APR 1984) clauses, the latter of which states:

> (c) All work under this contract shall be performed in a skillful and workmanlike manner....

Also the contract contained the ASPR contract clause Contract Drawings, Maps and Specifications (1965 JAN) which states:

> (b) Omissions from the drawings or specifications or the misdescription of details of work which are manifestly necessary to carry out the intent of the drawings and specifications, or which are customarily performed, shall not relieve the Contractor from performing such omitted or misdescribed details of the work but they shall be performed as if fully and correctly set forth and described in the drawings and specifications.

Richard D. Hogan, appellant's president and sole owner, had over 25 years' experience in the construction industry and had been in business for himself since 1966, with experience in a wide range of general construction projects.

On 24 November 1987 appellant received the Government's undated memorandum which requested a pricing proposal for certain contemplated changes. After appellant's submittal and the parties' negotiations, the Government issued Modification P00001 to the contract, a bilateral modification, dated 10 December 1987, which made a number of changes to the contract and increased the contract price by $62,500.

Paragraph n. of Modification P00001 states:

> n. Remove/cover all school chalk greenboards and repair walls to match existing. Install walls with studs @ 24" center to center and 5/8" fire rated gypsum board paneling. Extend all affected electrical fixtures to be flush with new walls. Install 4" vinyl base around new walls. Tape, bed, texture, and paint walls in accordance with Technical Provisions 9A and 9H. See drawing sheets 4 and 5 of 11.

Technical Provision 9A states:

> 2.02 GYPSUM BOARD ACCESSORIES.
>
> * * *
>
> B. Edge Trim: LC Bead.
>
> * * *
>
> 3.01 GYPSUM BOARD INSTALLATION.
>
> * * *
>
> G. ... Place edge trim where gypsum board abutts [sic] dissimilar materials.

We are given no definition for "LC Bead."

The requirement for "4" vinyl base around new walls" was not included in contract provisions other than Modification P00001. Modification P00001 did not specify that 10' wall material was to remain 10' in height or was to extend through the ceiling. "Match existing" walls refers to color, texture, wall decor. The walls constructed under Modification P00001 were the only sheetrock walls in the rooms, and were to cover chalkboard on CMU walls. Walls constructed under the contract but unrelated to Modification P00001, extended only to ceiling height. In the area pertinent to this appeal the ceiling tiles sagged with respect to the grids (the metal strips under the ceiling placed to hold the ceiling tiles) prior to the contract work. In other areas where walls were constructed under the contract work unrelated to Modification P00001, ceiling tiles were placed after the walls were constructed, thus did not sag.

During negotiations, both Mr. Hogan and Olin Long, Chief of Contract Management for Carswell Air Force Base, visited the site primarily because appellant disagreed with the Government's estimation of the wall dimensions. The parties found the walls to be 9' 10" high, approximately 8" higher than the Government's original figures. Mr. Long testified that he and Mr. Hogan agreed that appellant would order 10" lengths in the sheetrock, studs, and the like, and cut the

©1994, Commerce Clearing House, Inc.

Digitized by Google

ceiling so the walls would extend through the ceiling. Mr. Hogan testified that no such agreement was made, rather that during pricing of Modification P00001 Mr. Hogan assumed that since other walls constructed under the contract extended only to the ceiling, that the 10′ sheetrock, studs, and the like used to construct the walls covered by paragraph n. of Modification P00001, were to be cut to 9′ 10″ lengths with no cuts in the ceiling. We find, based on the demeanor of the witnesses, and the findings made in this appeal (specifically within paragraphs 6—8) and other appeals heard the same day (specifically ASBCA Nos. 37347 and 37348), that Mr. Hogan and Mr. Long agreed that the ceiling would be cut so that the 10′ wall materials would extend through the ceiling.

Appellant cut the wall materials to 9′ 10″ lengths and did not cut the ceiling. Appellant finished the walls where they met the ceiling, with J channel, the same method used on the walls required by the contract prior to negotiation of Modification P00001. The J channel is a piece of metal that "caps" the termination of the wall and gives a smooth appearance. Prior to 25 February 1988, the Government found the walls defective due to visible gaps between the ceiling and the walls caused by: (1) uneven sawing of sheetrock; and (2) sagging of the suspension ceiling tiles between the grids. The ceiling would have ultimately conformed, so that the gaps would not have shown as they did initially; however, the parties dispute the length of time this would have required. Over a month's time elapsed from the initial construction to installation of the trim. There is no evidence that the ceiling conformed at all prior to installation of the trim.

On 3 March 1988 the Government rejected the walls, stating they were not 10′ high and did not present a finished appearance. The Government indicated that the walls would be acceptable if appellant added trim at the ceiling to cover the gaps between the walls and ceiling. On 24 March 1988, the Government directed trim for the top of the walls, citing FAR 52.236-5, the Material and Workmanship clause. The Government ordered trim rather than installation of 10′ walls in an effort to complete the job.

Appellant placed the trim on the walls as directed. Some gaps between the walls and ceiling still existed after the trim was installed. On 26 April appellant wrote the Government and demanded its costs for adding the trim.

DECISION

Appellant contends that under paragraph n. of Modification P00001, appellant was to extend the gypsum board paneling walls only to, rather than through, the ceiling and without the trim ultimately ordered by the Government, despite the fact the results were visible gaps between the walls and ceiling. The Government contends that it was entitled to reject the walls under the first sentence of paragraph (c) of the Material and Workmanship, FAR 52.236-5 (APR 1984) clause. We agree with the Government's position. The undisputed visible gaps between the top of the walls and the ceiling gave an undesirable appearance and evidenced performance in a manner neither skillful nor workmanlike. The Government's right under (c) of the Material and Workmanship clause is limited by the rule of economic waste. *Toombs & Co., Inc.*, ASBCA Nos. 35085, 35086, 91-1 BCA ¶ 23,403 at 117,423. The Government, in permitting appellant to place a trim between the top of the walls and the ceiling, rather than replace the walls, adhered to this rule.

The parties pointed to nothing in either the specifications or drawings in support of their positions. Other than the portions of Technical Specification 9A quoted in our findings, we are aware of nothing else in the specifications and drawings which pertains to this appeal. The parties do not address the requirement in Technical Specification 9A for "LC Bead" edge trim "where gypsum board abutts [sic] dissimilar materials." We have no definition of the LC Bead. We do not know whether the J channel, which was used on the walls concerned in this appeal and seemingly all other walls constructed under the contract, met this requirement. However, even if the trim ordered by the Government was not specifically required by the specifications and drawings, a reasonable reading of the contract overall, particularly in light of paragraph (b) of the Contract Drawings, Maps and Specifications clause dictates that some type of finish to the top of the walls sufficient to hide the gaps, is manifestly necessary and a customary means to carry out the intent of the drawings and specifications. *See Blinderman Construction Co., Inc.*, ASBCA No. 35589, 91-1 BCA ¶ 23,457.

Further, a contract is read in accordance with its express terms and the plain meaning thereof; when the matter in dispute is not expressly provided for in the contract, it is necessary to determine whether the contractor's interpretation of the contract require-

Digitized by Google

ments was reasonable. *C. Sanchez and Son, Inc. v. United States* [39 CCF ¶ 76,578], No. 92-5010, slip op. at 9-10 (Fed. Cir. Oct. 5, 1993). The reading of Modification P00001 which appellant urges results in visible gaps between the walls and ceiling, an unreasonable interpretation.

Accordingly the appeal is denied.

[¶ 26,542] National Medical Staffing, Inc.

DOT BCA No. 2568, December 10, 1993. Contract No. DTCG84-92-C-3KB290.

Defaults, Grounds—False Statement—Government Knowledge.—A default termination was not necessarily justified by the contractor's false certification in its offer that it had not previously had a contract terminated for default, because it was not shown whether the contracting officer knew of the prior default. The contracting officer terminated the present contract for performance deficiencies, but when the contractor appealed, the government moved for summary judgment on the basis of the certification. Even if the certification was false, it would not support summary judgment, because the contracting officer's knowledge of the prior termination was a significant factual issue.

For the appellant: James D. Thrasher, Marietta, Georgia. For the government: Bernard J. Roan, United States Coast Guard, Washington, D.C.

Before STERN, Administrative Judge.

STERN, Administrative Judge: The U.S. Coast Guard ("respondent" or "Coast Guard") has moved for summary judgment on the appeal of National Medical Staffing, Inc. ("appellant" or "National"). Appellant has filed a reply opposing respondent's motion.

The Coast Guard issued a request for proposals (RFP) on January 3, 1992, for the services of two nurse practitioners at the U.S. Coast Guard, Aviation Training Center Clinic, Mobile, Alabama.[1] Appellant responded to the RFP with its initial offer to provide one nurse practitioner, Dr. Gloria Bertacchi. The appellant's president signed the initial offer on January 31, 1992. Appellant submitted its best final offer on March 26, 1992, slightly modifying the initial offer. Based on appellant's proposal, the Coast Guard awarded the contract to National Medical for one nurse practitioner on July 21, 1992. The solicitation contained the following provisions:

> Part IV—Representations and Instructions
>
> Section K—Representations, Certifications and Other Statutes of Offerors
>
> K.6. FAR 52.209-5 Certification Regarding Debarment Suspension, Proposed Debarment and Other Responsibility Matters (May 1989).
>
> (a)(1) The Offeror certifies, to the best of its knowledge and belief, that—
>
> * * *
>
> (ii) The Offeror has ( ) has not (x) [this block was hand marked by appellant], within a three-year period preceding this offer, had one or more contracts terminated for default by any Federal agency.
>
> * * *
>
> THIS CERTIFICATION CONCERNS A MATTER WITHIN THE JURISDICTION OF AN AGENCY OF THE UNITED STATES AND THE MAKING OF A FALSE, FICTITIOUS, OR FRAUDULENT CERTIFICATION MAY RENDER THE MAKER SUBJECT TO PROSECUTION UNDER SECTION 1001, TITLE 18, UNITED STATES CODE.
>
> (b) The Offeror shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Offeror learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
>
> (c) A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in con-

[1] The facts herein are taken from the filings of the parties and the appeal files. They do not represent final findings by the Board which may ultimately appear in a decision after a trial in this case.

©1994, Commerce Clearing House, Inc.

Digitized by Google

nection with a determination of the Offeror's responsibility. Failure of the Offeror to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Offeror nonresponsible.

(d) Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of an Offeror is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

(e) The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Offeror knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the contracting Officer may terminate the contract resulting from this solicitation for default.

On February 1, 1990, less than three years preceding both the initial and the best and final offers of Appellant, the Naval Supply Center Jacksonville, Florida terminated for default contract N68836-90-C-0028 with Appellant. Appellant appealed the termination to the Armed Services Board of Contract Appeals (ASBCA). After a two-day trial in Jacksonville, a trial at which Dr. Bertacchi testified, the ASBCA denied the appeal. See *National Medical Staffing, Inc.*, ASBCA No. 40391, February 21, 1992, 92-2 BCA ¶ 24,837. Appellant appealed the ASBCA denial to the Federal Circuit, *National Medical Staffing, Inc. v. United States*, Civ. No. 92-1357 (Fed. Cir.). That appeal was dismissed by a clerk's order on July 15, 1992, six days before award of the Coast Guard contract.

On August 26, 1992 the contracting officer issued a final decision terminating the contract with appellant for default. The contracting officer based the determination to terminate the contract on appellant's failure to perform the contract. The termination was not based on an erroneous certification.

Appellant's principal, Dr. Gloria Bertacchi, who executed the certification that appellant had no terminations for default within a three year period, filed an affidavit that she made this certification with the belief that terminations for default are not final if the termination is on appeal.

The Coast Guard argues that as a matter of law, appellant's erroneous certification is sufficient basis to uphold the termination for default.[2]

Appellant contends that summary judgment is inappropriate since there has been no intentional misrepresentation by appellant.

In *General Dynamics Corporation*, DOTBCA No. 1232, 83-1 BCA ¶ 16,386 (1983) at 81,458-59, we summarized the general principles applicable to motions for summary judgment:

> We are guided by the general principles that summary judgment is only appropriate where there is no issue as to any material fact present, *Bouchard v. Washington*, 514 F.2d 824, 827 (D.C. Cir. 1975), that any doubt on whether summary judgment is appropriate is to be resolved against the moving party, *Erco Industries, Ltd. v. Seaboard Coast Line Railroad Co.*, 644 F.2d 424 (5th Cir. 1981), and that the moving party shoulders the burden of proving that no question of material fact exists, *Adickes v. Kress and Co.*, 398 U.S. 144, 157 (1970).
>
> Under Fed. R. Civ. P. 56(e), however, more than mere allegations are necessary to defeat a properly supported motion for summary judgment. *Fireman's Insurance Co. of Newark, N.J. v. DuFresne*, 676 F.2d 965 (3d Cir. 1982); *Filden Financial Corp. v. Palo Tire Service, Inc.*, 596 F.2d 604 (3d Cir. 1979).

Thus, if the Board determines that any material fact needs to be proven at trial, summary judgment is inappropriate.

Here, appellant filed a certification which the Coast Guard alleges is erroneous and supports the termination of the contract. For purposes of this motion, we need not determine whether this certification is erroneous, because assuming *arguendo* that the certification was erroneous, summary judgment would be inappropriate.

We find that an erroneous certification is, by itself insufficient to support a termination for default. To support a termination for default on this basis respondent would have to demonstrate that the contracting officer was unaware of the contractor's prior default termination at the time of award.

[2] The contract was terminated for default based on appellant's failure to perform the contract. Respondent does not contend that summary judgment would be appropriate on the basis of appellant's non-performance.

Digitized by Google

The Board may not sustain a termination for default if the contracting officer had knowledge of appellant's prior termination for default and made award in spite of that knowledge. In such a case, respondent may have waived or may be estopped from relying on the certification provision as a ground for terminating the contract. *American Contractors v. General Services Administration,* GSBCA No. 10363, 92-2 BCA ¶ 24,899 (1992). Assuming the contracting officer was aware of appellant's erroneous certification, taken to its logical conclusion, the Coast Guard's position could lead to an unconscionable result: the Coast Guard could award the contract and retain the right to terminate it at any time. This situation is similar to that when one party finds the other has breached the contract.

As we stated in *General Dynamics:*

> "[W]hen one party breaches a contract, the contract does not automatically end. The injured party must make an overt act to declare the contract over. If this party does not act, but, treats the contract as continuing, it will be precluded from asserting such a breach . . . at a later time.

(at 81,461.)

Here, there is no evidence regarding the contracting officer's knowledge of the prior termination for default at the time of award. This is a significant factual issue.

Respondent has failed to meet its burden of establishing the absence of any genuine issues of fact.

The Motion for Summary Judgment is denied.

[¶ 26,543] Pindar Donnelley Partnership and GraphicData, Inc.[1] v. Department of Commerce; International ComputaPrint Corporation, Intervenor

GSBCA Nos. 12667-P, 12670-P, November 23, 1993. Proposal No. 52-PAPT-0-00027.

Protests, GSBCA—Suspension of Procurement Authority—Extension of Incumbent Contract.—A protester's request for suspension of an agency's procurement authority governing the award of an extension of an incumbent contract under a request for proposals was denied as untimely because the protester did not file its protest and request for suspension within 10 calendar days of award of the extension. However, the agency agreed to a voluntary suspension of its authority to proceed under the request for proposals, pending resolution of the protest.

For the protester, Pindar Donnelley Partnership: Sidley & Austin, Washington, D.C., by Michael A. Nemeroff, Francis J. O'Toole, Gary P. Quigley, Joseph C. Port, Jr., and Denise W. DeFranco. For the protester/intervenor, GraphicData, Inc.: Sullivan & Worcester, Washington, D.C., by Richard D. Lieberman, J. Randolph MacPherson, and Jane B. Maxwell. For the government: Jerry A. Walz, Mark Langstein, Lisa J. Obayashi, and Fred Kopatich, Office of the Assistant General Counsel for Finance and Litigation, Department of Commerce, Washington, D.C. For the intervenor, International ComputaPrint Corporation: Petrillo & Hordell, Washington, D.C., by Joseph J. Petrillo, Michael A. Hordell, Laurel A. Heneghan, and Jessica C. Abrahams, and Schwalb, Donnenfeld, Bray & Silbert, Washington, D.C., by Burton Schwalb.

Before WILLIAMS, Administrative Judge.

WILLIAMS, Administrative Judge:

Background

In this protest, Pindar Donnelley Partnership (Pindar) challenges the Patent and Trademark Office's (PTO's) proposed award of a contract to International ComputaPrint Corporation (ICC) under request for proposal (RFP) number 52-PAPT-0-00027. ICC is also the incumbent contractor on an existing contract for similar services.

This matter comes before the Board on protester's request for a suspension of the agency's procurement authority pending resolution of this protest. Protester seeks a suspension not only of the imminent award

[1] The Board has not yet ruled on the objection to GraphicData, Inc.'s request to intervene or on its status as a protester, but has allowed it to participate in the protest proceedings pending such ruling.

©1994, Commerce Clearing House, Inc.

Digitized by Google

being challenged here,[2] but also of the contract under which ICC is currently performing.[3]

Discussion

On April 30, 1993, PTO published a notice in the Commerce Business Daily announcing its intent to modify ICC's incumbent contract by extending the period of performance from June 1993 through November 30, 1993, with two additional three-month options for extension through February 1994 and May 1994 respectively, while PTO continued the competitive procurement under Request for Proposal (RFP) No. 52-PAPT-0-00027. Intervenor ICC's Suspension Hearing Exhibit 1.

On June 1, 1993, PTO awarded ICC the extension of its incumbent contract. Declaration of Joseph Dariano, President, International ComputaPrint Corporation (November 15, 1993), ¶ 1.

The instant protest was filed on November 5, 1993, long after award of the contract extension. Pindar's protest complaint fails to establish the timeliness of its request that work being performed under this extension to the incumbent contract be suspended. Because Pindar did not file its protest and request for suspension within ten calendar days of award of the extension, its request for suspension is untimely and must be denied. 40 U.S.C. § 759(f)(3) (1988); *see RMTC Systems, Inc. v. Department of the Army*, GSBCA 12303-P, 93-2 BCA ¶ 25,890, 1993 BPD ¶ 51; *Federal Support Group, Inc. v. Department of the Army*, GSBCA 11803-P, 92-3 BCA ¶ 25,078, 1992 BPD ¶ 119.

As a result of a telephonic conference between the Board and the parties on November 19, 1993, respondent has agreed to a voluntary suspension of its authority to proceed under RFP No. 52-PAPT-0-00027 pending resolution of this protest.

Decision

Protester Pindar's request for a suspension of respondent's procurement authority is **GRANTED IN PART.**[4] Pindar's request for a suspension of the agency's procurement authority governing ICC's incumbent contract is **DENIED AS UNTIMELY.** Pindar's unopposed request that the PTO suspend any further action under RFP No. 52-PAPT-0-00027 pending resolution of this protest is **GRANTED.**

[¶ 26,544] Metropolitan Technical Services, Inc. v. Defense Information Systems Agency

GSBCA No. 12659-C(12490-P), November 12, 1993. Solicitation No. DCA100-93-R-0042.

Protests, GSBCA—Costs of Protest and Attorney Fees—Expert Witness.—A protester was not entitled to recover the fees and expenses it incurred in retaining an expert witness, despite its request that the board consider reimbursement of such fees if it revisited its holding in a precedential cost case that was currently on appeal, because the appellate court did not overrule or revise the cost case, which therefore remained binding precedent.

For the protester: Elizabeth N. Forgotson and Johnson & Roche, McLean, Virginia, by Jon E. Shields. For the government: Roger B. Sabin, Eileen P. Manley, and Capt. Daniel M. Kline, Office of General Counsel, Defense Information Systems Agency, Arlington, Virginia.

Before GOODMAN, DEVINE, and NEILL, Administrative Judges.

GOODMAN, Administrative Judge: This protest was filed by Metropolitan Technical Services, Inc. (MTS or protester) on July 8, 1993, alleging that respondent, the Defense Information Systems Agency (DISA or respondent), improperly rejected MTS's pro-

[2] The agency expects to award this new contract within thirty days of the suspension hearing in this protest, which was held on November 17-18, 1993.

[3] Pindar requested that the Board "suspend the PTO's procurement authority and direct that the PTO suspend any contract performances by ICC pending a decision by the Board on the merits of this protest." Complaint at 17.

[4] Respondent has moved to dismiss this protest on the ground that the procurement is not for automatic data processing equipment. Although the question of jurisdiction is open, we have proceeded with a hearing and this ruling on the issue of suspension of contract performance consistent with the general rule that we may, if appropriate, preserve the status quo while determining our authority to consider the case fully. *Sector Technology*, GSBCA 10566-P, 90-2 BCA ¶ 22,865, at

Digitized by Google

posal for computer equipment to be supplied to respondent. After discovery and negotiations, on September 13, 1993, the parties met at the Board and filed a stipulation of fact signed by respondent and protester. By this stipulation, the parties entered into the record the depositions of two government witnesses and the following factual determination:

> Respondent's determination that protester's proposal, submitted in response to solicitation DCA100-93-R-0042, was technically unacceptable was not supported by substantial evidence.

The parties jointly requested that the Board close the record in this matter on September 13, 1993. By decision dated September 30, 1993, the Board granted the protest. *Metropolitan Technical Services, Inc. v. Defense Information Systems Agency*, GSBCA 12490-P, 94-1 BCA ¶ 26,448 (Sept. 30, 1993).

Under Board Rule 35[1] and 40 U.S.C. § 759(f)(5)(C) (1988), the Board may award protest costs, including reasonable attorney fees, to an "appropriate interested party" when an agency has violated a statute, regulation, or the conditions of a delegation of procurement authority. An appropriate interested party has been defined as a "prevailing party" or "one that has succeeded on any significant issue in the litigation that achieves some of the benefit it sought in bringing suit." *Bedford Computer Corp.*, GSBCA 9837-C(9742-P), 89-2 BCA ¶ 21,827, at 109,811, 1989 BPD ¶ 121, at 3. MTS is an appropriate interested party entitled to recover its costs pursuant to Rule 35 and 40 U.S.C. § 759(f)(5)(C) (1988).

On October 27, 1993, protester filed its motion for payment of protest costs pursuant to Rule 35 in the amount of $37,332.21. On November 2, 1993, protester filed an amendment to its motion for costs correcting several clerical errors and increasing the total amount requested to $37,369.42. This amount is composed of $34,066.44 for outside attorney fees and taxable costs, $963.50 for the cost of the deposition transcripts, and $2,339.48 for expert witness fees and expenses. Respondent objects to the payment of fees and expenses incurred by protester for retaining an expert witness. Respondent's Reply to Protester's Motion at 1-2.

In its motion for costs, with regard to expert witness fees and expenses, protester states:

> Protester has included the charges of [its] expert witness ... in its fee petition. Protester respectfully requests that the Board consider reimbursement of these fees should it revisit its holding in *Sterling Federal Systems, Inc. v. National Aeronautics and Space Administration*, GSBCA 10000-C(9835-P), 92-3 BCA ¶ 25,118, 1992 BPD ¶ 141, during the pendency of this cost case.

In its amendment to its motion for costs, protester notes that the *Sterling Federal* decision has been appealed to the Court of Appeals for the Federal Circuit and states that "[p]rotester accepts that *Sterling Federal* remains binding precedent unless the Court of Appeals overrules or revises it. It asks only that the Board consider award of [the expert's] fees if the Court of Appeals overturns *Sterling Federal* during the pendency of its cost case." Protester's Amendment to Motion for Costs at 5.

As of this date, no decision has been rendered in the *Sterling* appeal. We, therefore, follow our decision in *Sterling* and deny protester's request for $2,339.48 for the fees and expenses incurred by protester for retaining its expert witness.

We have independently examined the documentation filed by MTS in support of its motion and otherwise find its request for costs reasonable. Accordingly, we award $34,066.44 for outside attorney fees and taxable costs and $963.50 for the cost of the deposition transcripts, for a total of $35,029.94.

Decision

Protester's motion is **GRANTED IN PART.** Protester is awarded $35,029.94 to be paid, without interest, in accordance with statute, 31 U.S.C. § 1304 (1988). 40 U.S.C. § 759(f)(5)(C) (1988).

(Footnote Continued)

[¶ 26,545] Amdahl Corporation v. Department of the Treasury; Federal Computer Corporation and ViON Corporation, Intervenors

GSBCA No. 12658-P, November 8,1993.

Protests, GSBCA—Suspension of Procurement Authority—Partial Suspension.—A protester's request for suspension of an agency's delegation of procurement authority in connection with a procurement for automatic data processing equipment and services was granted because the government's mere assertions that the protester would not be harmed by the continuation of the procurement or that delay would inconvenience the agency did not justify the continuation of the procurement or even the imposition of only a partial suspension. Although the government contended that the contractor was not seeking an award and would thus suffer no harm from the denial of the suspension request, the protester's amended protest requested reinstatement into the competitive range. Moreover, the government failed to show that the continuation of the evaluation process was critical or that it would not be possible to minimize the effect of delay attributable to the protest.

For the appellant: Arent Fox Kintner Plotkin & Kahn, Washington, D.C., by Richard J. Webber, Craig S. King, and Adam J. Ruttenberg. For the government: Donald M. Suica, James W. Corbitt, Jr., Greg M. Weinman, and Duane L. Zezula, Office of Chief Counsel, Internal Revenue Service, Department of the Treasury, Washington, D.C. For the intervenor, Federal Computer Corporation: David S. Kovach. For the intervenor, ViON Corporation: Latham & Watkins, Washington, D.C., by David R. Hazelton and C. Chad Johnson.

Before HYATT, Administrative Judge.

HYATT, Administrative Judge: On October 27, 1993, protester, Amdahl Corporation, challenged the elimination of its proposal from the competitive range of a procurement under which the Internal Revenue Service (IRS) will purchase or lease automated data processing equipment and support services. The IRS opposes protester's request for suspension of the delegation of procurement authority applicable to this procurement and asks that the Board permit it to proceed with the procurement. In the alternative, respondent requests a limited suspension that would allow it to proceed with work on the procurement up to but not including making award. For the reasons stated, respondent's motion is denied and protester's request for an interim suspension is granted.

Background

The purpose of this procurement is to acquire large-scale IBM compatible mainframe computers and associated peripheral equipment and support services to replace existing, outdated systems at two IRS computing centers located in Martinsburg, West Virginia, and Detroit, Michigan. These centers will provide centralized support of tax administration processing over an eight-year systems life while the IRS converts to a more decentralized tax processing architecture.

Amdahl's protest complaint states that Amdahl is one of three manufacturers that produces equipment suitable for the IRS's requirements. As originally issued, however, the solicitation required two features, "dual copy" and "native ESCON [Enterprise Systems Connection Architecture]" which Amdahl could not provide immediately. After reviewing the solicitation, Amdahl informed the IRS that it could not submit a compliant proposal if these two features were required at initial installation, but that it could supply both features by the time of the first hardware upgrade, which was scheduled for the thirteenth month of the contract. In response, the IRS amended the solicitation to provide that these two features would not be required until the time of the first hardware upgrade.

Amdahl, in light of this amendment to the solicitation, prepared an initial proposal, which was timely submitted to the IRS. At that time, Amdahl commenced work on the required benchmark. Thereafter, the IRS issued clarification requests and conducted oral discussions.

The protest alleges that the benchmark script was prepared for the IRS by a consultant. The script was designed in such a fashion that, because of extensive input/output transaction demands of the workload, a non-native ESCON solution would be substantially disadvantaged in the interactive response time portion of the benchmark.

Amdahl's protest alleges, alternatively, that it was either illegally induced to waste its efforts and was not timely notified that it

Digitized by Google

had no reasonable chance of award or that it should not have been eliminated from the competitive range because the exclusion resulted from the agency's misevaluation of the Amdahl proposal and a change in the agency's needs. In its initial protest, by way of relief Amdahl requested an award of attorney fees and wasted bid and proposal costs and any other relief the Board deemed appropriate; in an amended protest filed on November 2, 1993 (after the filing of respondent's motion), Amdahl expressly requested reinstatement into the competitive range.

Discussion

This is a preaward protest. Respondent concedes that it cannot establish that urgent and compelling circumstances which significantly affect interests of the United States will not permit waiting for the Board's decision, nor does it contend that it would be in a position to make award within thirty days of a hearing convened to determine if the delegation of procurement authority (DPA) should be suspended.[1] 40 U.S.C. § 759(f)(2)(A) (1988). Although the statute provides that absent such a showing the Board "shall suspend" the agency's DPA, respondent urges it should nonetheless be permitted to proceed without restriction because the delay would inconvenience the agency and the purpose of the interim suspension, to preserve meaningful relief for the protester, would not be served. Alternatively, the IRS, citing *NCR Comten, Inc.*, GSBCA 7698-P, 85-1 BCA ¶ 17,903, 1985 BPD ¶ 1, urges that if a suspension is ordered it should be partial, permitting the agency to evaluate best and final offers from the remaining offerors.

Generally, the requirement to impose a suspension has been recognized to be mandatory in the absence of the requisite showing, which respondent concedes it cannot make. *See Prime Computer, Inc.*, GSBCA 9000-P, 87-2 BCA ¶ 19,918, 1987 BPD ¶ 98; *TAB, Inc.*, GSBCA 8769-P, 87-1 BCA ¶ 19,495, 1986 BPD ¶ 213. The Board has, however, recognized that a less than total suspension may be imposed in appropriate circumstances. In *NCR Comten* the agency demonstrated in a suspension hearing that the protested procurement was part of an overall modernization program designed to produce more than $100 million in ultimate cost savings for the agency. In addition, testimony was adduced to the effect that the delay occasioned by the protest would cost the agency many millions of dollars. As a result the Board was persuaded to allow the procurement, which was in an early stage, to proceed on a limited basis, under which respondent was permitted to perform evaluations and seek clarifications, but was proscribed from conducting discussions. In *Federal Systems Group, Inc.*, GSBCA 10518-P, 90-2 BCA ¶ 22,796, 1990 BPD ¶ 64, the Government demonstrated that if the procurement did not proceed "apace" there would likely be "devastating ramifications to the United States and its trade partners." *Id.* at 114, 472, 1990 BPD ¶ 64, at 6. Having so found, the Board balanced the competing interests of the parties, and allowed the evaluation process to proceed in a limited fashion.

Protester contends that respondent's points do not justify denial of a suspension request or even the imposition of only a partial suspension. Respondent's principal point, that Amdahl is not contending for an award and thus would suffer no harm, has been addressed by the amended protest. Amdahl now expressly seeks reinstatement into the competitive range if appropriate. In addition, there has been no showing here that it is critical to continue the evaluation process. Respondent simply states in its motion that:

> Delays in the ... procurement will likely result in decreased access [to certain computer-stored tax information] for ... IRS employees. As resources on the existing hardware are stretched, workload prioritization will negatively impact Service employees using the system. This could take a number of different forms: degraded response time, a limitation on the numbers of concurrent users, and a reduction in the hours of availability to on-line users.

As protester observes, this surmise falls far short of the large dollar cost savings demonstrated in *NCR Comten* and of the "devastating impact" demonstrated in *Federal Systems*. In both of these cases the Board had a record, with testimonial evidence, that showed it was essential to proceed in some fashion short of making award during the pendency of the protest. The mere assertion that the protester would not be harmed by continuation of the evaluation process does not serve to justify imposition of a partial suspension over protester's objection. *See Corporate Systems Resources, Inc.* v.

[1] Respondent represents that no hearing is necessary.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Tennessee Valley Authority, GSBCA 11938-P, 93-1 BCA ¶ 25,342, 1992 BPD ¶ 206. Additionally, respondent offers no evidence of what its award schedule is or that it would not be possible to make adjustments to minimize the effect of delay attributable to the protest. *See Prime Computer.*

Decision

Respondent's motion opposing a suspension is DENIED. Protester's request for a suspension is GRANTED.

[¶ 26,546] MCI Telecommunications Corporation v. Peace Corps; AT&T Communications, Inc., Intervenor

GSBCA No. 12632-P, November 10, 1993.

Timeliness of Protests, GSBCA—Significant Issue—Sole-Source Award.—An intervenor's motion to dismiss as untimely a protest of the Peace Corps' refusal to immediately end its sole-source arrangement with the intervenor for telecommunications services was denied because the protest was filed within 10 working days of the protester's receipt of a letter stating that the Peace Corps would not immediately initiate a competitive procurement for the services.

For the appellant: Robin L. Redfield and Linda P. Armstrong. For the government: Kirby Mullen, Office of the General Counsel, Peace Corps, Washington, D.C. For the intervenor, AT&T Communications, Inc.: Jonathan S. Hoak and Steven H. Talkovsky and McKenna & Cuneo, Washington, D.C., by C. Stanley Dees, Thomas C. Papson, and William Lewis Taylor.

Before DANIELS, DEVINE, and BORWICK, Administrative Judges.

DANIELS, Administrative Judge: In November 1984, the Peace Corps gave to AT&T Communications, Inc. (AT&T) an Appointment of Communications Representative (ACR). Since then, AT&T has been meeting all of the agency's requirements for international switched voice telecommunications services (ISVS).

On October 8, 1993, MCI Telecommunications Corporation (MCI) filed a protest alleging that as long as the Peace Corps fails to satisfy its needs for ISVS through a competitively-awarded contract, the agency is violating requirements of statute and regulation. MCI maintains that the current arrangement between the Peace Corps and AT&T is illegal for two reasons—first, because it was made without competition and an exemption from competition was not justified, and second, because the General Services Administration (GSA) never granted a delegation of procurement authority (DPA) to the Peace Corps to enter into it. MCI maintains that the Peace Corps can secure ISVS legally only by obtaining the services under MCI's contract with the Defense Commercial Communications Office (DECCO) or by soliciting and awarding a separate contract. Because the second of these alternatives cannot be accomplished immediately, MCI asks that if the Peace Corps selects it for the long-term fulfillment of its needs, we direct the agency to buy ISVS under the DECCO contract in the interim.

AT&T, an intervenor of right in this case, has moved the Board to dismiss the protest as untimely filed. We deny the motion.

Findings of Fact

1. The Peace Corps appointed AT&T its communications representative on November 20, 1984, "to participate in and coordinate the subscription process for all customer lines listed (none are listed) and to issue instructions to and to otherwise deal with the Local Exchange Company regarding the same." The appointment may be revoked at any time. Protest, Exhibit F at 4th unnumbered page.

2. Under this arrangement, AT&T charges the Peace Corps monthly for international telecommunications services that it has provided. The charges are made pursuant to the published Government International Communications Service (GICS) tariffs. MCI's Response to AT&T's Motion to Dismiss (MCI's Response), Exhibit 6 at 5.

On February 16, 1993, MCI requested that the Peace Corps provide, pursuant to the Freedom of Information Act (5 U.S.C. § 552) (FOIA):

Digitized by Google

a copy of any documents, memoranda, correspondence, contract(s), agreement(s), purchase order(s), etc., together with any modifications or amendments, with the current telecommunications provider(s) reflecting the terms and conditions under which the Peace Corps receives [ISVS].

Motion to Dismiss, Exhibit 4.

4. Eight days later, on February 24, an MCI account executive sent to his superiors, a branch manager and the firm's director of civilian sales, an electronic mail message which described his efforts to persuade the Peace Corps to obtain ISVS through the MCI/DECCO contract. The message concludes, "I think we should continue putting the heat on them to make a move—the bottom line is still that PC has sole sourced this business to AT&T for atleast (sic) ten years." Motion to Dismiss, Exhibit 6.

5. By letter dated March 2 (and marked as received on March 4), the Peace Corps responded to MCI's FOIA request by sending a copy of the one-page ACR and stating, "No other contracts, agreements, or purchase orders relative to Peace Corps' [ISVS] were located." Motion to Dismiss, Exhibit 5.

6. By letter dated March 10, the Peace Corps' director of information resources management told MCI that the agency had performed an analysis of costs that would be incurred if ISVS were purchased under the MCI/DECCO contract instead of the current AT&T GICS tariffs. He said that the analysis showed the Peace Corps would pay considerably more if it were to buy ISVS from MCI. Consequently, he concluded, "[I]t is more economical for Peace Corps to utilize the GICS tariff for ISVS than to obtain these services under the non-mandatory DECCO ISVS contract." Motion to Dismiss, Exhibit 7.

7. On April 13, 1993, MCI asked that "the Peace Corps issue an RFP [request for proposals] for its [ISVS] requirements no later than April 23, 1993." The letter stated, "It is MCI's belief that the Peace Corps has not conducted a full and open competition for its (ISVS) requirements since at least 1984. This violates the spirit and intent of the Competition in Contracting Act ('CICA'), the Federal Acquisition Regulation[] ('FAR') and Federal Information Resource(s) Management Regulation[] ('FIRMR')." Motion to Dismiss, Exhibit 8.

8. In response to this letter, the Peace Corps' information resources management director said on April 22 that "due to the complexity of the effort involved," the Peace Corps "will be unable to prepare and issue an RFP for ISVS by April 23." He also stated, "Peace Corps has never received a delegation of procurement authority from GSA to compete an ISVS contract." Protest, Exhibit B.

9. On May 4, MCI protested to the Peace Corps contracting officer his "action of April 22, 1993, in refusing to issue a request for proposals or otherwise compete the [ISVS] requirements of the Peace Corps." This agency-level protest maintained that the Peace Corps' action of "sole-sourc[ing] all of its requirements for [ISVS] to AT&T violated 41 U.S.C. § 253(c) and (f)." MCI observed that this statute prohibits the unjustified use of sole-source contracts, and maintained that the justification of "only one responsible source" (41 U.S.C. § 253(c)(1)) is clearly inapplicable because many companies can provide ISVS. The agency protest alleged that the Peace Corps' arrangement with AT&T is also illegal because the agency "has admittedly not obtained a [DPA] from the Administrator of General Services." This protest asked "that the Peace Corps obtain a [DPA], and give [MCI] written assurances that it will take the necessary steps to procure these services by competitive means and that it will do so within the next six months." Protest, Exhibit C.

10. The Peace Corps responded to the agency protest by letter dated September 22 (and marked as received on September 24). The agency stated that GSA was negotiating with a private firm to perform an analysis of the Peace Corps' requirements for ISVS; the analysis should be completed within 90 to 120 days; and "[i]t appears likely" that the Peace Corps would subsequently "obtain communications services through the Department of State, purchase services under the ISVS contract awarded by DECCO, or . . . procure our communications needs through the competitive RFP process." Protest, Exhibit D.

11. On October 29—three weeks after the Board protest was filed—the Peace Corps informed the parties that GSA and the firm hired to analyze the Peace Corps' ISVS requirements "have agreed to expedite the procurement process and estimate that a contract for Peace Corps' international telecommunications service would be ready for award within approximately 6 months." Respondent's Supplemental Document Production (cover letter). On November 8, the Peace Corps stated further in this regard, "We expect a competitive contract award to be made within six months." Answer at 3.

Discussion

A protest which does not complain about improprieties in a solicitation is timely only if filed with this Board "no later than 10 [working] days after the basis for the protest is known or should have been known, whichever is earlier. Rule 5(b)(3)(ii) (48 CFR 6101.5(b)(3)(ii) (1992)); *see also* Rule 2(c)(computing time). If the protest is from the denial of a protest made earlier at the agency level, the complaint is timely only if (a) the agency protest would have been timely under this rule if it had been filed here instead of with the agency and (b) the complaint arrives here within ten working days of adverse action on the agency protest. Rule 5(b)(3)(iii).

AT&T and MCI both understand these rules, and each firm believes that applying them will result in a ruling in its favor on the motion to dismiss. We agree with MCI's perception of the case; AT&T has misinterpreted the principal subject of protest.

AT&T views this protest as one against the existence of the ACR arrangement under which AT&T is, and has been for the past nine years, the purveyor of ISVS to the Peace Corps. *See* Findings 1, 2. If that were all that MCI is complaining about, we would have no doubt that AT&T is correct. MCI knew at least by February 24 that AT&T was supplying ISVS to the Peace Corps under a sole-source arrangement. Finding 3. MCI had a copy of the documentation of this arrangement by March 4, and by April 13, the firm was able to conclude that this compact was in violation of statute and regulation. Findings 4, 6. The Peace Corps' response of April 22 provided no new information about this situation. MCI's May 4 protest to the Peace Corps was filed more than ten working days after whichever of the earlier dates—February 24, March 4, or April 13—we select. Thus, to the extent that the complaint objects solely to the existence of the arrangement, it would not have been timely if filed with us instead of the contracting officer. Given this predicament, the Board protest cannot be timely, even though it was filed within ten working days of MCI's receipt of the denial of the agency protest.

This analysis is not conclusive as to the timeliness of the instant case, however, because MCI is concerned not so much with what has transpired for the past nine years, but rather, with what will happen in the future. The protest is principally against the Peace Corps' refusal to bring to an end a revocable arrangement which MCI considers to be in violation of statute and regulation. *See* Finding 1. The triggering event for the agency protest, as MCI asserts, was the firm's receipt of the Peace Corps' April 22 letter stating that the agency would not immediately initiate a competitive procurement for ISVS services and that the agency did not have a DPA from GSA. *See* Finding 8. To the extent that the agency protest challenges the agency's decision not to issue a solicitation at once, that protest would have been timely if filed at the Board because the filing occurred seven working days after the date of the letter. *See* Finding 9. The Board protest was timely filed ten working days after MCI's receipt of the Peace Corps' denial of the agency protest. *See* Finding 10.

As stated earlier, MCI maintains that the Peace Corps can secure ISVS legally only by obtaining the services under the MCI/DECCO contract or by awarding a separately solicited contract. After the protest was filed, the Peace Corps agreed to proceed with the second alternative. Finding 11. Whether the agency should acquire ISVS through competitive procedures is consequently no longer in dispute. MCI has not explained what issue remains regarding this matter, other than whether the protest should be granted or dismissed as moot. The pertinent questions, for this purpose, are (a) whether the agency's action may fairly be taken as an admission that its prior failure to compete its requirements was in violation of law, and (b) whether the protest was the proximate cause of the present decision to conduct a competitive procurement. *See HSQ Technology, Inc.*, GSBCA 10802-P, 91-1 BCA ¶ 23,326, 1990 BPD ¶ 271; *Severn Companies, Inc.*, GSBCA 9344-P, et al., 88-2 BCA ¶ 20,566, 1988 BPD ¶ 25.

The issue clearly remains, however, whether the Peace Corps has authority to procure ISVS from AT&T—or any vendor—during the period of time between now and the date on which a competiting award is made. The agency has no power to acquire any telecommunications services, MCI alleges, because GSA has not given it a DPA to do so.

The Brooks Act vests in the Administrator of General Services, who heads GSA, the authority to "coordinate and provide for the economic and efficient purchase, lease, and maintenance of automatic data processing equipment [ADPE] by Federal agencies." 40 U.S.C. § 759(a)(l)(1988). ADPE includes telecommunications services. *Id.* § 759(a)(2)(A). The Administrator may carry out this re-

Digitized by Google

sponsibility by acquiring ADPE himself and providing it to other agencies; he may also carry it out by delegating to other agencies or officials thereof the authority to make the acquisitions. *Id.* § 759(b). When the Administrator exercises his responsibility in the second of these ways, he issues what is called a DPA. 41 CFR 201-20.305 (1992). Without a DPA, an agency has no authority to acquire ADPE, or even to conduct a procurement for ADPE. *CACI, Inc. v. Stone* [38 CCF ¶ 76,501], 990 F.2d 1233 (Fed. Cir. 1993).

MCI's assertion that the Peace Corps does not have a DPA for the current arrangement with AT&T is the product of a misunderstanding. The first mention of a DPA in this whole affair occurred, so far as we know, on April 22. On that date, the Peace Corps' director of information resources management told MCI that his agency "has never received a [DPA] from GSA to compete an ISVS contract." Finding 8. MCI immediately assumed that this statement referred to the ACR arrangement with AT&T. There is no reason to believe that it does; to the contrary, it refers to "compete" and "contract," both of which are apparently alien to the ACR designation. From context, the statement appears to refer to a future competition; the official was telling MCI that his agency was not ready to issue a request for proposals, and the lack of a DPA is a bar to such an issuance. *See CACI.*

Notwithstanding the peculiar origin of the allegation, all parties to this protest appear to be proceeding on the belief that MCI is contending that the agency does not have a DPA for its current arrangement with AT&T. This circumstance, if true, is "a matter of fundamental importance and requires close review." *Universal Automation Labs, Inc. v. Department of Transportation* GSBCA 12370-P, 93-1 BCA ¶ 26,142, 1993 BPD ¶ 211, at 27 (July 7, 1993); *see also Science Applications International Corp. v. National Aeronautics & Space Administration*, GSBCA 12600-P, et al., 94-1 BCA ¶ 26,553 (Nov. 3, 1993). How to approach a determination as to the merit of the allegation is not clear at this point, however. Among the outstanding questions are these:

1. GSA grants DPAs by three methods—regulation, specific delegation to an agency for a class of acquisitions, and specific delegation to an agency for a particular acquisition. 41 CFR 201-20.305(a)(1) (1992) (FIRMR 201-20.305(a)(1)). The Peace Corps and AT&T acknowledge that no specific DPA has been issued. Motion to Dismiss at 16 n.7; Board's Memorandum of Conference of Nov. 2, 1993, at 2. These parties maintained initially that a regulatory DPA permitted the Peace Corps to acquire the services without prior approval of GSA because the total dollar value involved does not exceed $2,500,000. *See* FIRMR 201-20.305-1(a). The relevant period of time within which the total dollar value should be counted is in dispute, however: should it be the period from inception of the arrangement to the present, the period from inception until eternity (because the ACR has no end date), the period from the present until anticipated award of a contract through competition, or some other duration of time?

2. Whatever time is relevant, given that the Peace Corps has been able to locate billing records only for the period from October 1, 1991, through September 30, 1993, how can dollar value be measured (or at least reliably estimated)? *See* Peace Corps' Response to MCI's First Request for Production of Documents at 3 & Exhibit 7.

3. Has AT&T's provision of ISVS to the Peace Corps actually been under a contract between GSA and AT&T during at least part of the period in which AT&T has held the ACR from the Peace Corps? *See* Board's Memorandum of Conference of Nov. 2, 1993, at 2; AT&T's Reply to MCI's Response to Motion to Dismiss at 7 n.3. If so, does this affect the relevant time period for computation of the total dollar value of the services with which we are concerned—or does it mean that because GSA was the agency that contracted for the services, no DPA has been necessary? *See* FIRMR 201-20.305-1(c).

4. Has GSA issued a specific DPA for the ACR arrangement (or more precisely, the continuation of that arrangement until a competitive award is made) since the protest was filed? If so, does that moot MCI's contention that the Peace Corps cannot buy ISVS from AT&T because it lacks a DPA to do so?

The questions remaining before the Board involve matters of fact as well as law. We have authorized the parties to supplement the documentary record on which our decision on the merits of the protest will be based. Our previous authorization was solely to select, from among documents that had been exchanged on or before November 5, which ones should constitute part of the record. To permit a full analysis of the questions raised, we now extend this authorization to place in the record additional relevant documents. The documents must be designated as a party's exhibits and

filed with the Board no later than Monday, November 15.

Decision

AT&T's motion to dismiss the protest as untimely filed is DENIED.

[¶ 26,547] Citicorp v. General Services Administration; American Express Travel Related Services Co., Inc., Intervenor

GSBCA No. 12631-P-R, November 19, 1993.

Automatic Data Processing Equipment—Brooks Act Applicability—Card Readers.—A protester's motion to amend a solicitation to delete a reference to mechanical readers under the assumption that the procuring agency sought to procure electronic readers that were automatic data processing equipment was rejected because there was no language in the solicitation that suggested that the agency had sought to procure card readers that possessed electronic or ADPE capabilities. The board's conclusion was consistent with the facts that the awardee had offered a reader that contained no electronic features and that the agency, by accepting the proposal of the awardee, clearly had decided that the capabilities of a mechanical printer would fulfill the requirements of the solicitation.

For the protester: Diantha McJilton, Arnold & Porter, Washington, D.C., by David B. Apatoff and Steven S. Diamond, and Howrey & Simon, Washington, D.C., by Michael R. Charness and William A. Roberts III. For the government: George Barclay, Michael J. Ettner, Janet L. Harney, Michelle A. Harrell, Seth P. Binstock, Pamela J. Reiner, and Glynis Lloyd, Office of General Counsel, General Services Administration, Washington, D.C. For the intervenor, American Express Travel Related Services Co., Inc.: Paul, Hastings, Janofsky & Walker, Washington, D.C., by Hamilton Loeb, Bruce D. Ryan, Scott M. Flicker, John M. Oseth, and Randall M. Stone.

Before DEGRAFF, LABELLA, and HENDLEY, Administrative Judges.

DEGRAFF, Administrative Judge: On October 13, 1993, the General Services Administration (GSA) filed a motion to dismiss this protest for lack of jurisdiction. On October 14, 1993, American Express (AmEx) filed a similar motion. The parties' motions were based upon their assertion that the procurement at issue is not one for the purchase, lease, or maintenance of automatic data processing equipment (ADPE). One of the many requirements of the solicitation is that the awardee provide "card readers (point of sale machines) at no cost to the Government, to agencies/organizations issuing travelers checks, if requested by the participating agency/organization." Respondent's Motion to Dismiss, Attachment 1. Anticipating one of Citicorp's arguments, GSA and AmEx asserted that this solicitation language does not require the awardee to provide ADPE. They argued that the requirement of the solicitation would be met if the awardee were to provide mechanical devices, commonly used by merchants, which are operated by placing a credit card and a carbon interleaved receipt form in the device and then sliding a bar across the top of the receipt form so that the embossed information contained on the card is imprinted onto the receipt form. These mechanical devices are known as manual imprinters. Because such mechanical devices do not constitute ADPE, GSA and AmEx asserted that the procurement of card readers (point of sale machines) does not amount to a procurement of ADPE. Respondent's Motion to Dismiss at 20; Intervenor's Motion to Dismiss at 16.

In opposing the motion to dismiss, Citicorp asserted that "a card reader (point-of-sale machine) is electronic computer hardware." Protester's Opposition to the Motion to Dismiss at 11. In support of its assertion, Citicorp attached a statement that explains that an electronic card reader works by scanning the information encoded in the magnetic strip on a card. The statement asserts that a manual imprinter could not be offered to satisfy "a customer's requirement for a card reader." This statement is not sworn and does not meet the requirements of 28 U.S.C. §1746 (1988) for unsworn declarations provided under penalty of perjury. Protester's Opposition to the Motion to Dismiss, Attachment D. Citicorp also attached to its opposition brief a portion of AmEx's

Digitized by Google

proposal. In response to GSA's requirement for a card reader (point of sale machine), AmEx states in its proposal that it will provide electronic point of sale machines when the parties agree that the volume of transactions at a particular location justifies their use and that it will provide manual imprinters in other locations. Protester's Opposition to the Motion to Dismiss, Attachment E. AmEx's proposal was accepted by GSA.

On October 22, 1993, we dismissed this protest for lack of jurisdiction. At page 8 of our opinion, we discuss Citicorp's allegation that the solicitation seeks to procure and requires contractors to furnish ADPE in the form of electronic credit card readers. Based upon an examination of the requirements of the solicitation, we determined that there is no requirement for an electronic reader and, thus, we concluded that the solicitation's requirement for card readers is not one for ADPE. In our opinion, we refer to the manual imprinters as "mechanical" readers.

Pursuant to Rule 32, Citicorp asks that we modify or amend our October 22, 1993 opinion to delete the reference to "mechanical" readers and to conclude that GSA sought to procure electronic card readers (point of sale machines) which are ADPE. According to Citicorp, the record contains no basis for any other conclusion. AmEx and GSA oppose Citicorp's motion. For the following reasons, Citicorp's motion is denied.

The point of the discussion contained at page 8 of our October 22, 1993 opinion is that the terms of the solicitation simply do not contain any requirement for an electronic device capable of electronically reading the information contained on a credit card. The basis for our conclusion is the language of the solicitation itself, which does not contain any suggestion that GSA sought to procure card readers (point of sale machines) which possessed any electronic or ADPE capabilities. Our conclusion is consistent with the fact that AmEx determined when it prepared its proposal that the requirement of the solicitation can be fulfilled by something other than an electronic device, namely the manual imprinter that it proposed to supply, and is also consistent with the fact that GSA, by accepting AmEx's proposal, clearly decided that supplying manual imprinters will fulfill the requirements of the solicitation.

Although Citicorp denominates its motion as a request for a modification or amendment of a finding of fact, what it actually requests is that we reach a different conclusion of law concerning our interpretation of the solicitation. Citicorp asserts that the statement that it provided in response to the motions to dismiss establishes that our interpretation of the solicitation is incorrect. Whether Citicorp's proffered statement has any value is doubtful, given that it is unsworn and does not meet the statutory requirements for an unsworn statement made under penalty of perjury. Even if the statement were entitled to some weight, it would not persuade us that our interpretation of the solicitation is incorrect. Although the statement discusses the features of electronic card readers, the card readers (point of sale machines) that GSA sought to procure are not required to possess any of these features. The statement's discussion, therefore, does not persuade us that our interpretation of the solicitation is incorrect. Similarly unpersuasive is the statement's conclusory assertion that a manual imprinter, which we referred to as a mechanical reader in our opinion, will not meet some hypothetical customer's unspecified requirements.

It is important to keep in mind the scope and purpose of the discussion contained at page 8 of our opinion. We were called upon to resolve whether the solicitation's requirement for "card readers (point of sale machines)" is a requirement for ADPE. Based upon our reading of the solicitation, we concluded that GSA did not seek to procure ADPE when it sought to fulfill its requirements. Our reference to a "mechanical" reader is nothing more than the means we chose to describe the manual imprinters which AmEx proposed to supply and which GSA determined to accept. Our opinion does not suggest that the term "mechanical" reader has any meaning beyond that necessary to resolve the jurisdictional issue that was before us. Our conclusions are grounded in the language of the solicitation itself and are supported by the remainder of the record.

Decision

For the reasons set forth above, Citicorp's motion to modify or amend our opinion is **DENIED.**

[¶ 26,548] Storage Technology Corporation v. Department of the Army; Comparex Informationssysteme GmbH, Intervenor

GSBCA No. 12626-P, November 2, 1993.

Certification of Integrity—Responsiveness—Completion of Certificate.—Although an awardee under a procurement for a retrieval system failed to complete a certificate of procurement integrity as required by regulations, the board concluded that the awardee's failure did not render the certification materially defective, because the three dashes placed on a response line provided in a paragraph of the certificate indicated the awardee's intent to show that it had not committed a violation of the Procurement Policy Act. The awardee's use of dashes rather than the word "none" called for in the instruction to the certificate was consistent with its responses in another provision in the RFP. The awardee had inserted three dashes under all five of the paragraphs in the other provision of the RFP to illustrate that it had not had prior contracts with the government.

For the protester: Cohen & White, Washington, D.C., by David S. Cohen, Andrew Tenenbaum, and G. Brent Connor. For the government: Col. Riggs L. Wilks, Jr., Maj. Charles R. Marvin, Jr., Maj. Karl M. Ellcessor III, and Capt. Gerald P. Kohns, Jr., Office of the Chief Trial Attorney, Department of the Army, Arlington, Virginia. For the intervenor, Comparex Informationssysteme GmbH: Gerisch Liebrich.

Before BORWICK, LABELLA, and DeGRAFF, Administrative Judges.

BORWICK, Administrative Judge:

Background

Storage Technology Corporation (STC) protests the Department of the Army's (Army's) contract award to Comparex Informationssysteme GmbH (Comparex) for acquisition of an automated tape cartridge and library retrieval system. STC alleged that the award was improper because the machine Comparex proposed failed to meet the request for proposal's (RFP's) mandatory requirements for dimension and electrical capacity. These counts have been withdrawn. The remaining count is that Comparex failed to complete a certificate of procurement integrity, which failure renders Comparex's offer materially defective. STC maintains that the contracting officer violated statute and regulation—41 U.S.C. § 423 and FAR 3.104-9(b)—in accepting Comparex's offer with the defective certification.

In filling out the certificate, Comparex put three dashes "---" in paragraph K.4(b)(3) of the certificate, rather than the word "NONE" as instructed. Respondent and STC have moved for summary relief. The material facts are not in dispute and respondent is entitled to summary relief as a matter of law. We conclude that the placement of the three dashes in place of the word "NONE" does not render the certification materially defective, as Comparex's intent that it meant "none" was clear.

The following facts are not in dispute. On June 4, 1993, the Army issued an RFP for the acquisition of an automated tape cartridge and library retrieval system. Section K of the RFP listed the requirements for representations, certifications, and other statements of offerors.

Paragraph K.3 of the RFP, which addressed "Prior contracts with the U.S. Government," stated:

> Designate below all contracts with the United States Government (including the Army, Navy, and Air Force) in excess of $25,000 during the last four years. If fewer than 3 contracts in excess of $25,000 during the last four years have been performed with the United States Government, also list contracts below $25,000 and contracts older than four years. Attach additional sheet if necessary.

Respondent's Motion for Partial Summary Relief, Attachment 2.

Paragraph K.3 then listed five columns for the bidder to enter information pertaining to the prior contracts with the U.S. Government: CONTRACT #, DATES PERFORMED, DM OR $ AMOUNT, TYPE OF WORK, WHERE DONE. *Id.* Comparex also placed three adjacent dashes in paragraph K.3 to indicate it did not have prior contracts with the U.S. Government.

Paragraph K.4 of the RFP incorporated the certificate of procurement integrity. Paragraph K.4(b)(1) and (b)(3) of the certificate stated:

> (1) I, _____ [Name of certifier], am the officer or employee responsible for the preparation of this offer and hereby cer-

Digitized by Google

tify that, to the best of my knowledge and belief, with the exception of any information described in this certificate, I have no information concerning a violation or possible violation of subsection 27(a), (b), (d), or (f) of the Office of Federal Procurement Policy Act, as amended (41. U.S.C. 423), (hereinafter referred to as "the Act"), as implemented in the FAR, occurring during the conduct of this procurement _____ _____ (solicitation number).

. . . .

(3) Violations or possible violations: (Continue on plain bond paper if necessary and label Certificate of Procurement Integrity (Continuation Sheet), ENTER NONE IF NONE EXIST)

_____

_____

_____

Id.

Comparex submitted an executed certification as part of its proposal. In paragraph K.4(b)(1), Comparex listed two officers responsible for the offer, but left the solicitation number portion blank. *Id.* Comparex entered three adjacent dashes "---" in the space provided in paragraph K.4(b)(3) of the certificate. *Id.* On September 28, 1993, Comparex received the award.

Discussion

Summary relief should be granted as long as there are no genuine issues of material fact in dispute and the moving party is entitled to judgment as a matter of law. *Mike Creech v. GSA*, GSBCA 11726, 93-3 BCA ¶ 25,952. There is no dispute that the dashes were placed in paragraph K.4(b)(3) of the certification or that the certification instructions stated "Violations or possible violations: (Continue on plain bond paper if necessary and label Certificate of Procurement Integrity (Continuation Sheet), ENTER NONE IF NONE EXIST)." Submission of a properly executed certificate is a material requirement of a solicitation; failure to complete the certificate is a material deficiency in the proposal and grounds for rejection of the proposal. *See generally Mid-East Contractors, Inc.*, 70 Comp. Gen. 383 (1991), 91-1 CPD ¶ 342.

The sole question regarding Comparex's certification is whether entering three adjacent dashes in the space provided in paragraph K.4(b)(3) results in a defective certification, requiring rejection of the proposal for failure to meet a material requirement of the RFP. We hold that the dashes placed in paragraph K.4(b)(3) of the certification signify Comparex's intent to indicate that there were no violations or possible violations of the Office of Federal Procurement Policy Act.

The General Accounting Office (GAO) has ruled on the sufficiency of dashes in bids or proposals. In *Custom Environment Service, Inc.*, B-234774, 89-1 CPD ¶ 501 (May 24, 1989), the awardee placed dashes in its pricing bid sheet. The GAO concluded that the bid was unclear as to whether the awardee intended to perform the work at no cost to the government. The dashes in the bid could have been the result of an oversight by the awardee, and so "did not clearly express MJW's [awardee's] intent to perform the work . . . at no cost to the government." *Id.* at 3. In another GAO decision, an awardee placed dashes in its bid's unit price and amount columns. The GAO decided that entry of dashes "is certainly less clear an indication of intent than either a dollar price entry or a statement like 'No charge.' But it is a more meaningful expression of intent than a mere blank space. . . . Therefore, while there is no explicit indication that the data was to be supplied at no cost, the bidder's intent to do so was clear and the failure to state this intent in a more positive fashion did not render the bid nonresponsive." 48 Comp. Gen. 757, 762 (1969). In both *Custom Environment* and 48 Comp. Gen. 757, the GAO's ruling depended upon whether the awardee's intent was clearly expressed by the insertion of the dashes. *See also Keahey's Moving Co.*, B-224273, 86-2 CPD ¶ 602 (Nov. 24, 1986). (In lieu of submitting a price, a bidder may indicate *intent* to be obligated by insertion of a notation—"zero," the words "no charge," or a dash—that the item will be provided at no cost or charge to the government).

The GAO has decided that leaving *blank* the space provided in paragraph (b)(3) of a certificate of procurement integrity does not render a bid nonresponsive. In *Neighborhood Development Corp.*, B-246166, 92-1 CPD ¶ 162 (Feb. 7, 1992) the certificate was signed by officers and no other information was submitted to indicate a violation or possible violation of the Office of Federal Procurement Policy Act. Paragraph (b)(3) was blank. Because paragraph (b)(1) states that the person signing the certificate has no information concerning violations except those listed in paragraph (b)(3), GAO decided that leaving paragraph (b)(3) blank is a "redundant affirmation" that the person has no such information.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Because Comparex properly signed the certificate, its offer would not have been materially defective if had left paragraph (b)(3) blank. The question is whether the offer is materially defective because three dashes were inserted into paragraph K.4(b)(3) of the certification. STC argued that the three dashes may not be enough to constitute an answer to paragraph K.4(b)(3)'s request for information. STC argued that "---" meant that there was an attached sheet listing further information. We find this interpretation unreasonable. Comparex undoubtedly was aware of paragraph (b)(3), since it completed the paragraph with a symbol (the three dashes) commonly understood as signifying the term "none." (Indeed, GAO considers that using dashes is more meaningful of intent than leaving spaces blank. 48 Comp. Gen. 757.) Thus, it is evident that Comparex had no knowledge of violations or possible violations of the Office of Federal Procurement Policy Act, as implemented by the FAR.

Comparex's use of dashes to signify "none" was consistent with its responses to paragraph K.3 of the RFP; Comparex also inserted "---" under all five of the columns in paragraph K.3 to illustrate that it did not have prior contracts with the U.S. Government. Therefore, since the bidder's intent is clearly expressed, we hold that Comparex's certification is not defective.

Respondent's motion for partial summary relief is **GRANTED;** STC's motion for partial summary judgment is **DENIED.** The protest is **DENIED.** The suspension of respondent's delegation of procurement authority lapses by its terms.

[¶ 26,549] Integrated Systems Group, Inc. v. Department of the Army

GSBCA No. 12611-P, November 2, 1993. Solicitation No. DAKF49-92-R-0017.

Selection of Contractor—Information to Be Considered—Material Misrepresentation.—The government's elimination of an offeror from a procurement for automatic data processing equipment on the basis of bidder's incorrect certification was proper because the bidder's erroneous certification that it had not been subject to any terminations for default on any federal contracts was a material misrepresentation. In attempting to diminish the significance of its incorrect certification, the offeror noted that the default termination had been appealed to the board and that the appeal had not yet been decided. The offeror also pointed out that the equipment to be supplied under the defaulted contract was not manufactured by it. The certification requirements, however, unequivocally called for disclosure of any default action applicable to the offeror. The nature of the equipment to be supplied under the defaulted contractor was irrelevant to the offeror's duty to accurately certify with respect to default actions. Similarly, the offeror's filing of an appeal of the termination did not negate the fact of the default action, which the certification required the offeror to report.

For the protester: Skolnick & Leishman, Derwood, Maryland, by Shelton H. Skolnick, Judy D. Leishman, Amy M. Hall, Wayne W. Finegar II, and Bruce Trimble. For the government: Col. Riggs L. Wilks, Jr., Maj. Charles R. Marvin, Jr., Maj. Karl M. Ellcessor III, and Capt. Gerald P. Kohns, Office of the Chief Trial Attorney, Department of the Army, Arlington, Virginia.

Before HYATT, WILLIAMS, and DEGRAFF, Administrative Judges.

HYATT, Administrative Judge: Integrated Systems Group, Inc. (ISG) has challenged the rejection of its proposal by respondent, the Department of the Army, to supply automated data processing equipment and services pursuant to solicitation number DAKF49-92-R-0017. Respondent has filed a motion to dismiss the protest for lack of an interested party or, in the alternative, a motion for summary relief.[1] The basis for the motion is ISG's incorrect certification that it had not been subject to any terminations for default of any contract with a federal agency for the three years preceding its offer.

[1] Hereinafter, for the purpose of citing to the attached exhibits, respondent's motion is referred to as "Motion for Summary Relief."

Digitized by Google

Background

1. Solicitation number DAKF49-92-R-0017 sought offers to configure, furnish, deliver, install, and provide software technical support and training for a computer system for the Army Medical Department Center and School in Fort Sam Houston, Texas. The equipment to be provided included 80486 central processing unit (CPU) workstations. Protest File, Exhibit 1.

2. Pursuant to Federal Acquisition Regulation (FAR) clause 52.209-5, section K of the solicitation included the following certification, which provides in pertinent part:

> CERTIFICATION REGARDING DEBARMENT, SUSPENSION, PROPOSED DEBARMENT, AND OTHER RESPONSIBILITY MATTERS (MAY 1989)
>
> (a)(1) The Offeror certifies, to the best of its knowledge and belief, that—
>
> ....
>
> (ii) The Offeror has / / has not / /, within a three year period preceding this offer, had one or more contracts terminated for default by any Federal agency.
>
> ....
>
> THIS CERTIFICATION CONCERNS A MATTER WITHIN THE JURISDICTION OF AN AGENCY OF THE UNITED STATES AND THE MAKING OF A FALSE, FICTITIOUS, OR FRAUDULENT CERTIFICATION MAY RENDER THE MAKER SUBJECT TO PROSECUTION UNDER SECTION 1001, TITLE 18, UNITED STATES CODE.
>
> (b) The Offeror shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Offeror learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
>
> ....
>
> (e) The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award.

Protest File, Exhibit 1, ¶ K.12.

3. In letters dated February 16, 1993, addressed to Valix Federal Partnership I, the Army terminated for default two contracts for the delivery of 80486 personal computers. The reasons stated included failure to deliver conforming goods. Motion for Summary Relief, Exhibits 2-3. Valix appealed these termination decisions to the Armed Services Board of Contract Appeals (ASBCA) on March 11, 1993. Motion for Summary Relief, Exhibit 4. A settlement agreement, signed by the contracting officer on September 30, 1993, subsequently converted the two terminations for default to terminations for the convenience of the Government. Motion for Summary Relief, Exhibit 14.

4. ISG submitted an initial proposal responding to the subject solicitation on April 10, 1993. At that time, ISG affirmatively certified that it had *not* "had one or more contracts terminated for default by any Federal agency." Protest File, Exhibit 6.

5. In a letter addressed to Integrated Systems Group, and dated May 15, 1993, the U.S. Army Information Systems Selection and Acquisition Agency (ISSAA) terminated for default a contract to supply computer equipment for, among other reasons, failure to deliver conforming equipment. ISG acknowledged receipt of this letter on May 26, 1993. Motion for Summary Relief, Exhibit 6.

6. In a revised offer submitted to the Army on June 15, 1993, ISG included what it referred to as "corrected Section K pages." None of these corrected pages altered the prior certification concerning default terminations. Protest File, Exhibit 6.

7. On July 12, 1993, ISG appealed the ISSAA default termination action to the Armed Services Board of Contract Appeals. Motion For Summary Relief, Exhibit 7. This appeal is still pending.

8. In an amendment to the solicitation dated July 8, 1993, the Army added the following provision:

> The Contractor shall submit with his proposal a history of recent experience (within the last five years) in providing services similar to those described in the performance statement...; The description shall include a minimum of three references to include company name, points of contact, addresses with associated telephone numbers and types of equipment.

Protest File, Exhibit 5. ISG responded to this solicitation amendment in a letter dated July 20, 1993. The letter provides three references but makes no mention of the terminations of the Valix contracts or of the ISG contract. Protest File, Exhibit 18.

9. In a letter dated September 9, 1993, the contracting officer reopened written discussions with ISG for the specific purpose of addressing concerns regarding the quality of performance. The contracting officer re-

©1994, Commerce Clearing House, Inc.

Digitized by Google

quested further information with respect to a particular contract, awarded to Valix, for similar equipment:

> 1. Your offer is for Integrated Systems Group (ISG) brand workstations (CLIN 0001AB). There are unresolved problems on a contract awarded by the Contract Administration Division in our Directorate on 29 October 1992 ... for ninety-four (94) computer workstations (similar to the instant procurement) to Valix Federal Partnership.... Numerous memorandums from various users in the contract file indicate problems with the equipment.
>
> ....
>
> 3. Since there are known deficiencies in your equipment, how will the offer on this procurement be different to ensure a high quality, reliable system with sound performance? *Are there any other customers who have experienced difficulties with the equipment?* What has your research shown to be the cause of the problems?

Protest File, Exhibit 16 (emphasis added).

10. ISG responded to this inquiry in a letter dated September 13, 1993. In part, ISG stated:

> ISG disputes many of the details of the September 9, 1993 letter. ISG chooses not to respond to each allegation at this time. The contract referenced was the first contract requiring delivery of over 90 systems that Valix/ISG won and occurred almost a year ago. Since that time we have performed on PC [personal computer] contracts with an aggregate value of over $2M without any major problems. Major changes to all aspects of the ISG manufacturing facility have been instituted since that time.
>
> ISG made these changes in order to eliminate problems and are [sic] convinced that future contract performance will not be an issue. We are not aware of other contracts having difficulties [as] extensive as the ones alleged in your letter.

Protest File, Exhibits 6, 18.

11. In a memorandum written on September 17, 1993, the contracting officer issued a determination that ISG's proposal was technically unacceptable. The memorandum details the problems experienced with similar ISG brand workstations delivered under a contract with Valix. Given the problems with this contract, and the unsatisfactory responses provided by ISG to the reopened discussions directed at this issue, the contracting officer deemed ISG to be technically unacceptable. Protest File, Exhibit 16.

12. Subsequently, the contracting officer learned of the terminations for default of the two Valix contracts and the ISG contract. On October 7, 1993, a letter was issued to ISG informing it that its failure to properly notify the contracting officers of those three default termination actions was a material misrepresentation which left the Government no alternative but to eliminate ISG from the procurement. Protest File, Exhibit 16.

Discussion

The Army contends that ISG's failure to disclose the three termination actions constituted a material misrepresentation which disqualified ISG from the procurement. ISG's protest should therefore either be dismissed for lack of an interested party or, in the alternative, denied summarily since the controlling facts are not in dispute. Since ISG is an interested party to challenge the determination of ineligibility, we deem this issue to be one more properly addressed by the motion for summary relief.

The standard by which a motion for summary relief, or summary judgment, should be measured is whether there are any genuine issues of material fact to be resolved that would affect the outcome of the case. *Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 248 (1986); *Stroh Corp. v. General Services Administration*, GSBCA 11029, 93-2 BCA ¶ 25,841. In considering a motion for summary relief, we draw all inferences in favor of the non-moving party. *See Reliance Insurance Co. v. United States* [37 CCF ¶ 76,083], 931 F.2d 863, 865 (Fed. Cir. 1991).

ISG maintains that it should not have been disqualified from the procurement and that its failure to inform the Government of the default actions does not disqualify it from the procurement. ISG further asserts that the Board cannot decide this matter summarily because there are disputed facts material to the outcome of the case. Specifically, ISG contends that the Valix contracts that were defaulted cannot be ascribed to ISG and that the ISG contract that was defaulted was not for ISG equipment.

In a recent decision, the Board has extensively addressed the duty to disclose default termination actions under this certification. *RMTC Systems, Inc. v. Department of the Air Force*, GSBCA 12346-P, 93-3 BCA ¶ 26,046, 1993 BPD ¶ 129, *aff'd on reconsideration*, 1993 BPD ¶ 169 (June 21, 1993). In *RMTC Systems*, the offeror had, like ISG, affirmatively certified that it had not been subject to any default termination actions by

Digitized by Google

any federal agencies for the prior three years. In evaluating proposals, the contracting officer received information that RMTC had in fact had a contract terminated for default and that that default action had been upheld by the ASBCA. On the basis of this information, the contracting officer declared RMTC Systems to be nonresponsive and thus ineligible for award.

In its defense, RMTC explained that its miscertification was not intentional but was the result of lack of knowledge on the part of a new employee who was simply unaware of the termination action. RMTC further argued that the matter was a clerical error that could readily have been clarified by the contracting officer. The Board rejected RMTC's efforts to diminish the importance of the certification, noting that inclusion of the clause in the solicitation is mandatory under the Federal Acquisition Regulation (FAR) and that the clause itself expressly cautions offerors that the representation made is "material." The Board found the miscertification to be a material misrepresentation that compromised the integrity of the procurement process. Thus, the Board denied the protest on the ground that the contracting officer had properly eliminated RMTC from the procurement because of the false certification.

Because the factual record is inadequate to impute the first two default terminations of Valix contracts to ISG, to decide this motion we focus only on the third termination, which plainly involved an ISG contract. Moreover, ISG does not dispute that this contract was terminated for default, nor does it claim to have notified the contracting officer of this fact. Instead, ISG urges that the circumstances in this procurement are distinguishable from those in *RMTC Systems* because (1) the equipment to be supplied under the defaulted contract was not manufactured by ISG, and (2) in *RMTC Systems* the ASBCA had upheld the default termination. Here, ISG points out, the default termination has been appealed to the ASBCA and that appeal has not yet been decided.

Neither of these distinctions is persuasive. The certification unequivocally calls for disclosure of any default action applicable to the offeror. The fact that different equipment was supplied under the defaulted contract is irrelevant to the offeror's duty to certify accurately and to properly update the certification to inform the contracting officer of termination or debarment actions occurring after submission of the initial proposal and prior to award. ISG failed to correct its certification despite the fact that it had occasion to correct other certifications in a submission that was made subsequent to the third termination action. This is in direct violation of the plain terms of the certification requirement. In addition, the filing of an appeal of the termination did not negate the fact of the termination action which the certification requires ISG to report to the contracting officer.

In conclusion, the contracting officer properly disqualified ISG from further participation in the procurement on the basis of its failure to update its certification. ISG's protest of this action is denied. Since ISG is not eligible for award, the remaining allegations of the protest must be dismissed for lack of an interested party. *See, e.g., Datasouth Computer Corp.*, GSBCA 10536-P, 90-2 BCA ¶ 22,794, 1990 BPD ¶ 74.

Decision

Respondent's motions are **GRANTED**. The protest is **DENIED IN PART** and **DISMISSED IN PART.**

[¶ 26,550] Integrated Systems Group, Inc. v. National Aeronautics and Space Administration

GSBCA No. 12603-P, November 9, 1993.

Invitations for Bids—Restrictiveness—Design v. Performance.—Under an invitation for bids calling for the upgrading of computers, a design specification that did not permit bidders to meet the agency needs by replacing computers but instead required bidders to replace motherboards present in the computers was overly restrictive, because the agency's conclusion that replacement computers would cost far more than replacement motherboards was not correct. The 10-slot motherboards that the agency specified were rarely manufactured and commanded a premium price. On the other hand, a new computer, even with a replacement hard drive and necessary combination card was likely to cost less than a new 10-slot motherboard. The government's information about the costs of new

©1994, Commerce Clearing House, Inc.

Digitized by Google

computers was unrealistic and admittedly out of date. Further, the government engineer's belief that buying new computers would necessitate buying integration kits for the new computers made no sense. The board ordered the agency to replace in its invitation for bids the contested design specifications with functional specifications.

For the protester: Skolnick & Leishman, P.C., Derwood, Maryland, by Shelton H. Skolnick, Judy D. Leishman, Amy M. Hall, Wayne W. Finegar II, and Bruce J. Trimble. For the government: Sumara M. Thompson-King, Office of the General Counsel, National Aeronautics and Space Administration, Washington, D.C., and Jerald J. Kennemuth, Office of Chief Counsel, Lewis Research Center, Cleveland, Ohio.

Before DANIELS, BORWICK, and HYATT, Administrative Judges.

DANIELS, Administrative Judge: The National Aeronautics and Space Administration's Lewis Research Center (NASA) needs to replace microcomputers containing 80286 central processing units (CPUs) with microcomputers containing 80386 and 80486 CPUs. The agency has invited bids for replacement motherboards which, when installed in the existing computers, will accomplish this goal. Integrated Systems Group, Inc. (ISG), has demonstrated that if NASA were to permit a vendor to supply entirely new computers, rather than the specified motherboards alone, the agency might be able to secure machines which would perform identical functions at lower cost. We consequently find that the specifications are unnecessarily restrictive—in violation of statute and regulation—and grant the protest.

Findings of Fact

1. NASA currently has 245 microcomputers in the engineering directorate of its Lewis Research Center. Of these, 73 are Zenith Z-248 models which contain microprocessors that are based on the 80286 chip. NASA needs to upgrade these machines "to address the need for more rapid, efficient desktop computing and the increased [use] of Windows applications for both the engineering analysis and office automation environments." Protest File, Exhibits 2 at 2, 10, 23 at 1; Transcript at 72.

2. Each Zenith Z-248 computer contains what was referred to in our proceedings as a ten-slot motherboard (although the parties understand that the computer actually has a backplane configuration, rather than a motherboard). Transcript at 10, 16-17; Protest File, Exhibit 23 at 1. A "motherboard" is the printed circuit board that holds the microprocessor, expansion slots, and other items. A "slot," or "expansion slot," is a place on the motherboard into which a printed circuit card may be plugged. Most motherboards now being produced have eight slots; ten-slot motherboards are unusual and command a premium price. Transcript at 10, 99-100.

3. NASA solicited bids to upgrade 34 of the computers into machines whose microprocessors are based on the 80386 chip and 39 into machines whose microprocessors are based on the 80486 chip. Protest File, Exhibit 7 at B-1. According to the invitation for bids, each upgrade must have numerous specified features, including "Ten (10) 16-bit ISA expansion slots" and "Form factor and drill/mounting pattern [to] conform to the Zenith 286/8 and 286/12 chassis." *Id.* at C-1 to C-2. ISG correctly read these specifications as requiring replacement of each computer's motherboard, rather than replacement of the entire chassis. Transcript at 9; *see also id.* at 72-73. When asked to relax the specifications to permit replacement of the machine, NASA refused. Protest File, Exhibit 15.

4. NASA insisted on ten-slot motherboard replacements because it wanted to retain the basic configuration of the boards in the computers it now has. Transcript at 42. As one of the individuals who wrote the specifications testified: "That was determined as a requirement due to the fact that the existing equipment currently had ten slots and the chassis or case contained the fit to reaccept that." *Id.* at 80.

5. NASA needs computers which will perform the functions of ten cards now in the agency's computers. Each computer has separate cards that perform six basic functions—input/output, MFM hard disk drive controller, floppy disk drive controller, mouse bus, video bus, and ethernet connection. The agency needs space inside each computer for installing as many as four optional cards. Transcript at 42-43, 84-85; Protest File, Exhibits 7 at C-1, C-2, 13 at 3.

6. There are readily available in the marketplace combination cards each of which contains an IDE hard drive controller, a floppy drive controller, two serial ports, a parallel port, and a game port. Transcript at

Digitized by Google

17-18, 43-44, 83, 104. According to uncontested testimony by ISG witnesses, the price of one of these cards to an integrator such as ISG is under ten dollars. *Id.* at 17-18, 102.

7. The solicitation requires a bidder to provide, as part of its solution, "[s]upport for MFM." Protest File, Exhibit 7 at C-1, C-2. MFM is an older style hard disk drive which is lower in performance, has a slower response time, is more durable, and generally has less capacity than an IDE hard drive. Transcript at 18, 26-27, 45, 104. An MFM drive requires a controller which is contained on a separate card which can be inserted into a motherboard. *Id.* at 18.

8. The combination card described in Finding 6 could only work in NASA's computers if the MFM hard drives now in the computers were replaced with IDE hard drives, because the IDE controller will not work with the existing MFM drives. *Id.* at 44. ISG understands this; it knows that if it proposes to eliminate the MFM controller card, it must also replace the existing hard drives and move all the data on the MFM drives to the IDE drives. *Id.* at 19. A NASA contractor's engineer confirmed that this solution would be technically acceptable. *Id.* at 86.

9. If the combination card is employed, three cards now installed in each of NASA's computers—each of which fits into one slot—would be replaced with a single card. Thus, ISG's vice-president testified, "[I]f they think ten [slots] is required to get their job done, then I could do the same job in eight." Transcript at 19-20.

10. The NASA center where the relevant computers are being used needs to communicate with its customers through an electronic messaging system. To perform this function, each computer must contain an ethernet card and associated software. Transcript at 65. The cost of these items, which are collectively called a "LIMS [for "Lewis Information Management System"] integration kit," is estimated by NASA to be $1,366. *Id.*; Protest File, Exhibit 23 at page 2 of Attachment 4.

11. The LIMS integration kits now present in NASA's computers can physically be removed and installed in replacement machines, where they will work acceptably. Transcript at 46-47.

12. NASA's computer manager testified that the agency insists on buying replacement motherboards, rather than new computers, for reasons of cost, not any technical problems. Transcript at 51.

13. Before issuing the invitation for bids, NASA considered the price differential between buying new computers through an existing contract and buying new motherboards only. The agency presented two separate analyses. The conclusion of one was that buying each new 486 computer to perform the necessary functions would cost $1,626 for a base system and $1,366 for a LIMS integration kit, whereas replacing a motherboard would cost only $1,120 for a base system and nothing for an integration kit. Transcript at 62-65; Protest File, Exhibit 23 at Attachment 4. The conclusion of the other study was that buying new motherboards would cost about $65,000 in all, and that buying new computers instead would cost about $202,000, a figure that was considered "not . . . realistic." Transcript at 126-28; Protest File, Exhibit 2.

14. This case comes to us in an unusual posture: although the protest complains about solicitation provisions, the case was not initiated until after NASA had received bids. Although such a sequence would generally make a protest untimely, Rule 5(b)(3)(i), ISG's protest is timely because it is a reprise of an agency protest which was timely filed and denied, and this case was initiated within ten working days of that denial. Rule 5(b)(3)(iii). We are consequently able to know about the bids that NASA actually received in response to the solicitation. Protest File, Exhibit 21. Among the bids that the agency believes are responsive to the solicitation, the lowest would yield a cost for replacement motherboards that is roughly the same as NASA's estimate. Protest File, Exhibit 21; letter from agency counsel to Board, Oct. 22, 1993.

15. ISG's vice-president testified that if his firm were permitted to supply replacement chassis, rather than replacement motherboards, "roughly speaking, even including a hard drive, [our] price is in the neighborhood of about $__ for the 486 requirement. For the 386 requirement, that's about $__ less. That's even including the hard drive." Transcript at 22. (The actual amounts were provided under protective order; we do not specify them so as not to prejudice competition when the agency resolicits bids or proposals as directed in this decision.) At these amounts, ISG's total price to NASA for the 73 computers involved in this procurement would be considerably less than the amount of the agency's estimate for replacement motherboards. We have independently reviewed advertisements in published sources for the retail sale of 486 and

©1994, Commerce Clearing House, Inc.
Digitized by Google

386 computers, with special attention to machines that more or less meet the specifications listed in the solicitation at issue. Our review shows that the prices quoted by ISG's vice-president are well within the range of prices advertised for computers meeting NASA's needs. *See, e.g., Computer Shopper* (Oct. 1993 ed.). We consequently find the testimony to be credible.

16. The NASA contracting officer who is responsible for this procurement has been purchasing automatic data processing equipment for the agency for eight years. She testified that in that time, she has never bought a microcomputer for less than $1,000.

Transcript at 119. She admitted, however, that she has actually bought few if any microcomputers during the past two years. *Id.* at 126.

17. If NASA replaces the motherboards in its 73 existing computers, at the completion of the transaction, it will have 73 machines that perform all functions the agency needs and 73 spare motherboards. If NASA instead purchases 73 new 386 and 486 computers, it will have 73 machines that perform all functions the agency needs and 73 286 computers that could function as free-standing units if supplemented with keyboards, monitors, and video cards. Transcript at 47-48, 72-74.

18. ISG's vice-president testified, without challenge, that the present fair market value of the computers NASA needs to upgrade is about $200 to $250 each. Transcript at 27-29. NASA has not performed an analysis of the difference in value between 73 spare motherboards and 73 286 computers. *Id.* at 74.

19. Because of NASA's need to communicate electronically with its customers, a free-standing computer which does not contain a LIMS integration kit is of virtually no use to the agency. Thus, if NASA buys new computers to replace the 73 286 computers in question, it would need to buy 73 integration kits in order to make use of all 144 computers it would have. Transcript at 65-66, 69-71, 74-75. NASA's computer-aided engineering manager believes that the agency does not have sufficient funds to purchase these kits. *Id.* at 112.

20. NASA's computer manager believes that to compare the price to the agency of buying replacement motherboards with the price of buying replacement chassis, the agency must include with the cost of the replacement chassis the cost of new integration kits to be installed in them. Transcript at 113.

21. ISG's vice-president believes that to install a replacement motherboard in each of NASA's computers would take about two to two and one-half hours per computer. Transcript at 10-16; Protester's Exhibit 1. NASA's computer manager believes, based on information provided to him by his center's support service contractor, that the work would take only one hour. Transcript at 55-56. He also believes, based on information provided to him by the contractor, that installing new machines would take one hour. *Id.* A representative of the contractor testified that transferring data from an MFM hard drive to an IDE drive takes between 30 seconds and one minute per megabyte of data. *Id.* at 89-90. Most of the MFM drives now on the computers in question contain a maximum of either twenty or forty megabytes of data; a few contain a maximum of eighty. *Id.* at 44, 90-92.

Discussion

When an agency conducts a procurement for property or services, it is with limited exceptions to "obtain full and open competition through the use of competitive procedures." 10 U.S.C.A. § 2304(a)(1)(A) (West Supp. 1993). To do this, an agency shall "develop specifications in such manner as is necessary to obtain full and open competition with due regard to the nature of the property or services to be acquired." *Id.* at § 2305(a)(1)(A)(iii). Specifications may "include restrictive provisions or conditions only to the extent necessary to satisfy the needs of the executive agency or as authorized by law." *Id.* at § 2305(a)(1)(B)(ii). "Full and open competition" means that "all responsible sources are permitted to submit sealed bids or competitive proposals on the procurement." 41 U.S.C. § 403(6) (1988). The statute's mandates are reflected in the Federal Acquisition Regulation, in provisions such as 48 CFR 6.101(a), 10.002(a)(1), (3), and 10.004(a) (1991).

As we explained in *Amdahl Corp. v. Department of Health and Human Services*, GSBCA 11998-P, 93-2 BCA ¶ 25,612, 1992 BPD ¶ 325—

> In evaluating the merit of a protest which alleges that full and open competition has been compromised by an agency's insertion into a solicitation of an unnecessarily restrictive specification, we take as a given the agency's requirements. This does not mean, though, that every specification is necessarily associated with those

Digitized by Google

requirements.... We have a limited role in these protests: to determine whether the challenged specification bears a rational relationship to fulfillment of the requirements. The protester has the burden of establishing by a preponderance of the evidence that the narrowing of competition is impermissible in that it does not have such a relationship.

93-2 BCA at 127,486, 1992 BPD ¶ 325, at 8-9 (citations omitted).

In the instant case, NASA needs 386 and 486 microcomputers, rather than the 286s it has now, to handle "the need for more rapid, efficient desktop computing and the increased [use] of Windows applications." Finding 1. The 386s and 486s must be able to support the functions of all ten printed circuit cards that are now installed in the 286s. Finding 5. These are the only agency requirements that have been identified to us. NASA is interested in meeting them at the lowest possible cost. Finding 12.

Congress has enunciated a policy that agencies "require descriptions of agency requirements, whenever practicable, in terms of functions to be performed or performance required." 10 U.S.C.A. § 2301(b)(7) (West Supp. 1993). In furtherance of this policy, the Federal Information Resources Management Regulation provides that agencies shall "[d]escribe requirements in terms of functions to be performed and performance to be achieved, unless a more restrictive statement of requirements is necessary to satisfy the needs of the agency." 41 CFR 201-20.103-3(b)(1992). The use of functional specifications is consistent with the legislature's direction that agencies maximize the opportunities for full and open competition for Government contracts. *Microsolve, Inc.*, GSBCA 8564-P, 88-1 BCA ¶ 20,321, at 102,743, 1987 BPD ¶ 244, at 9, *aff'd*, 856 F.2d 202 (table) (Fed. Cir. 1988).

NASA inserted into its invitation for bids, however, design specifications that limit the ways in which a vendor may meet the agency's needs: a bidder may only propose to supply ten-slot motherboards which have a certain drill/mounting pattern and thus could replace the motherboards now present in the 286 computers. Finding 3. NASA refused to permit a vendor to meet the agency's needs by supplying replacement computers, rather than replacement motherboards, even though it believes that technically, new computers could serve it just as well. Findings 3, 12. It wanted to retain the same boxes and board configuration that it now has. Finding 4.

NASA believed that this decision was reasonable because replacement computers would cost far more than replacement motherboards. Finding 13. The evidence adduced at hearing demonstrates that this conclusion is not correct. The agency's needs can actually be satisfied by a less restrictive statement of requirements—and very likely, at a lower cost.

The ten-slot motherboards that NASA specified are rarely manufactured and command a premium price. Finding 2. A computer with an eight-slot motherboard can provide the same functionality because a single, inexpensive combination card can substitute for three of the cards occupying slots on the ten-slot board. Findings 5, 6, 9. Based on the evidence in the record, we find that the two options available to NASA compare, for each of the 73 computers involved, as follows:

	REPLACEMENT MOTHERBOARD	REPLACEMENT COMPUTER
Materials	New motherboard	New computer; new combination card; new IDE hard drive(s)
Labor	Remove and replace old motherboard; remove cards on old board and install them on new board	Remove LIMS integration kit and some cards from old computer and install them in new one; transfer data from MFM hard drive(s) to IDE hard drive(s); set up computer
Salvage items	Old motherboard	Old computer, less LIMS integration kit, keyboard, monitor, and video card

©1994, Commerce Clearing House, Inc.
Digitized by Google

An analysis of this information demonstrates that NASA's cost estimate was badly flawed. A new computer, even with the addition of a necessary combination card and replacement hard drive or drives, Findings 6-9, is likely to cost considerably *less* than a new ten-slot motherboard. Findings 14, 15. Even if the NASA contracting officer's information about the cost of new computers was ever realistic, it is admittedly out of date. Finding 16. The amount of labor involved in the two options is in dispute, but it is not large for either choice. Finding 21. The salvage value of the old motherboard, which could be used by the agency as a spare for computers in other offices, is unknown; the old computer, on the other hand, has significant value on the marketplace, even if (because it could not be used for communication with outsiders) it would have marginal utility to the agency. Findings 17-19. A NASA engineer's belief that buying replacement computers rather than replacement motherboards would necessitate also buying integration kits for the new computers, Findings 19, 20, makes no sense; the old kits could be transferred to new computers virtually as easily as the cards in them could be installed on new motherboards. Finding 11.

Requiring NASA to permit competition against functional, rather than design, specifications will not necessarily result in an award to ISG. Indeed, it will not even necessarily result in an award to a bidder who proposes a solution like the one that ISG wishes to bid. Competition will, however, give the Government an opportunity to benefit from vendors' exercise of innovative powers; NASA will have a chance to select, from among alternative solutions, the approach which is truly most advantageous to the Government. H.R. Conf. Rep. No. 861, 98th Cong., 2d Sess. 1429 (1984). The crucible of the marketplace will be the true test of how the agency's needs can most economically be met.

Decision

The protest is **GRANTED.** The General Services Administrator's delegation to NASA of authority to proceed with the subject is amended as follows: NASA shall replace the contested design specifications in its invitation for bids with functional specifications. If the agency believes that various proposed ways of meeting its needs will result in different sorts of ancillary financial impacts (such as labor costs imposed on the agency, or benefits from having different sorts of salvage items), it shall state in the solicitation how those impacts will be evaluated. The agency may then permit further competition to meet its needs.

[¶ 26,551] Golden West Environmental Services

AGBCA No. 93-232-1, December 6, 1993. Contract No. 53-9A23-1-1M610.

Timeliness of Appeals to Boards—Filing—Effective Date.—Although a contractor placed its notice of appeal in the possession of a private delivery service within 90 days of its having received the contracting officer's final decision, the appeal was untimely because the appeal notice was not received by the board until 96 days after the final decision, and the date of receipt of the notice was considered the effective filing date. Unless a contractor sends the notice of appeal through the United States Postal Service, the board considers the date of receipt of the notice as the filing date.

For the appellant: D. Bailey Neff, President. For the government: James E. Andrews, Office of the General Counsel, U.S. Department of Agriculture, San Francisco, California.

Before SETO, HOURY, and DOHERTY, Administrative Judges.

SETO, Administrative Judge: Appellant Golden West Environmental Services appeals the decision of the Forest Service, U. S. Department of Agriculture, Contracting Officer (CO) denying Appellant's claims for Prompt Payment Act interest and for repayment of Forest Service deductions for permit fees on Contract No. 53-9A23-1-1M610. The Government filed a Motion to Dismiss the appeal because Appellant did not appeal within 90 days of receiving the CO's final decision.

The Board has substantially adopted the opinion of its Chief Counsel, M. C. Shager.

Digitized by Google

BACKGROUND

The Forest Service awarded Contract No. 53-9A23-1-1M610 to Appellant on September 26, 1991. The contract covered packing, manifesting, loading, transportation, and salvage or disposal of hazardous and extremely hazardous waste chemicals. The contract required work completion no later than November 1, 1991. The parties later agreed to contract modifications extending the completion date to January 31, 1992.

During performance of the contract, a dispute arose as to Appellant's entitlement to interest on several invoices under the Prompt Payment Act and whether the Forest Service was entitled to deduct fees for obtaining permits from payments due Appellant. The CO issued a final decision denying Appellant's claims on June 14, 1993. Appellant acknowledges that it received the final decision on June 17, 1993.

On September 13, 1993, Appellant placed a Notice of Appeal in the custody of United Parcel Service for transmittal to the Board. The Board received the Notice of Appeal on September 21, 1993, 96 days after Appellant received the CO's final decision.

DISCUSSION

The Government moved to dismiss the appeal because it was not timely filed, *i.e.*, was not filed within 90 days of Appellant's receipt of the CO's final decision.

The Contract Disputes Act (CDA), at 41 U.S.C. § 605(a), states that the CO shall mail or otherwise furnish a copy of the final decision to the contractor, while 41 U.S.C. § 606 provides that a contractor may appeal a CO's final decision to the Board within 90 days of receiving the CO's final decision. Appellant opposed the Government's Motion because the Notice of Appeal left its offices within 90 days, and because the Board's mandate to provide "informal, expeditious, and inexpensive resolution of disputes" is not served by dismissing the appeal.

While the Board is well aware of its responsibility to provide an informal, expeditious, and inexpensive forum for the adjudication of contract disputes, the Board may not decide appeals over which it has no jurisdiction. The requirement that an appeal be filed within 90 days is statutory; the Board has no authority to extend this period or waive the requirement. *Cosmic Constr. Co. v. United States* [30 CCF ¶ 70,732], 697 F.2d 1389 (Fed. Cir. 1982); *Tom Farrell*, AGBCA No. 93-185-1, 93-3 BCA ¶ 26,026.

An appeal is deemed to be filed when it is placed in the mail with the United States Postal Service (USPS), or, if not mailed, when the Board receives it. *Butkin Precision Mfg. Corp.*, ASBCA No. 41961, 91-2 BCA ¶ 23,858. In this case, the Notice of Appeal was placed in the possession of a private delivery service within 90 days of Appellant's receiving the CO's final decision. However, use of a private delivery service is not afforded the same status as use of USPS. Unless the Appellant sends the Notice of Appeal through the USPS, the Board considers the date of receipt of the Notice as the filing date. *Kirchhan Indus., Inc.*, ASBCA No. 39260, 90-1 BCA ¶ 22,340.

The Board received Appellant's Notice of Appeal on September 21, 1993, 96 days after Appellant received the CO's final decision. Because Appellant used a private delivery service rather than USPS, the Board considers September 21, 1993 to be the filing date. The appeal is thus untimely and the Board lacks jurisdiction to decide it.[1]

RULING

Because the appeal was not filed within 90 days of Appellant's receipt of the CO's final decision, the Motion to Dismiss is granted. The appeal is dismissed.

[¶ 26,552] Tidewater Contractors, Inc.

AGBCA No. 93-236-10, December 6, 1993. Contract No. 50-04H1-7-3270.

Attorney Fees and Costs Under Equal Access to Justice Act—Prevailing Party—Evidentiary Standard.—In determining whether an applicant under the Equal Access to Justice Act met the definition of a "party" as set out in the Act, the board concluded that the evidentiary standard was the preponderance of evidence standard, not the more stringent standard approaching beyond a reasonable doubt, because there was

[1] The Board notes, however, that the CDA provides for appeal to the U. S. Court of Federal Claims (formerly the U. S. Claims Court) within 12 months after a oontractor receives a CO's final decision. 41 U.S.C. § 609(a)(1).

©1994, Commerce Clearing House, Inc.

Digitized by Google

nothing in the Act or in the implementing regulations imposing a more stringent burden on the applicant. The board found that the contractor's conclusory affidavit without supporting evidence established by a preponderance of the evidence that the applicant met the definition of a "party."

Attorney Fees and Costs Under Equal Access to Justice Act—Eligibility Criteria—Net Worth.—Although an affidavit without supporting documentation was inadequate when submitted to prove that a corporate contractor had met net worth requirements in connection with its application under the Equal Access to Justice Act, the contractor succeeded in proving that it met net worth requirements, because it supplemented its application with an acceptable net worth exhibit. The relevant regulations require an applicant to provide with its application a detailed exhibit showing the net worth of the applicant. The board noted that the contractor filed and supplemented its application well within 150 days of the board's decision on reconsideration.

For the appellant: Hanna, Kerns & Strader, Portland, Oregon, by Todd A. Bradley. For the government: Holly R. McLean, Office of the General Counsel, U.S. Department of Agriculture, Portland, Oregon.

Before HOURY, DOHERTY, and EATON, Administrative Judges.

HOURY, Administrative Judge: This decision is being rendered on the application of Tidewater Contractors, Inc. (Applicant), for attorney fees and expenses in the amount of $31,473.87 under the Equal Access to Justice Act (EAJA), 5 U.S.C. § 504, as amended. Under the Act, attorney fees (up to $75 per hour) and other expenses may be awarded to eligible prevailing parties when the Government's position in an adversary proceeding was not "substantially justified." Current eligibility standards are a net worth of not more than $7 million and not more than 500 employees.

The appeal upon which this application is based arose under contract No. 50-04H1-7-3270 between the Forest Service, U.S. Department of Agriculture, and Applicant. The contract was awarded June 30, 1987, in the amount of $1,771,558.95, and required the reconstruction and paving of approximately 16 miles of road in the Siskiyou National Forest in Oregon.

On appeal, with minor exceptions, the Board sustained Applicant's claims in the amount of $235,789.33. *Tidewater Contractors, Inc.*, AGBCA No. 90-195-1, 93-3 BCA ¶ 26,050, *aff'd on reconsideration* (increasing the amount of recovery from $173,536.97 to $235,789.13), AGBCA No. 93-201-R, 93-3 BCA ¶ 26,151. The Government apparently concedes that Applicant not only is a prevailing party but also that the Government's position was not substantially justified, since the Government did not raise these issues in its Objection to Award of Attorney Fees. Nor does the Government oppose the amount of Applicant's claim.

In opposition to Applicant's application, the Government asserts:

> An application that includes only an affidavit as to the net worth of the corporation is inadequate to establish that the applicant meets the definition of "party" found at 5 USC 504(b)(1)(B). *Fields v. United States* [39 CCF ¶ 76,580], __ Fed. Cl. __, 1993 WL 385702 (September 30, 1993)....
>
> In this case, Appellant has filed as evidence of its eligibility, a one page affidavit merely stating that its net worth is less than $5,000,000. This affidavit does not meet Appellant's burden of proving that it meets the eligibility requirements of 5 USC 504(b)(1)(B), *Fields v. United States*, supra, (1993), nor does it meet the requirements of the regulations regarding such applications. 7 CFR 1.191(a).

Applicant's Proof That It Is a Party under 5 U.S.C. § 504(b)(1)(B)

The EAJA provides that an agency shall award to a prevailing "party" fees and other expenses incurred unless the Government's position in an adversary proceeding was "substantially justified." 5 U.S.C. § 504(a)(1). In 5 U.S.C. § 504(b)(1)(B) "party" is defined as follows:

> "Party" means ... partnership, corporation, association ... the net worth of which did not exceed $7,000,000 ... at the time the adversary adjudication was initiated....

With its application, Applicant submitted an affidavit signed by the corporate secretary, asserting that the secretary was knowledgeable about all aspects of the corporation's finances and assets, and that the net worth of the corporation was less than $5 million at all times during the performance of the

Digitized by Google

contract and the pendency of the claim. The Government does not controvert the amount of Applicant's net worth but simply asserts Applicant has failed adequately to prove it.

In *Fields, supra,* the court's holding that a conclusory affidavit without supporting evidence is inadequate to establish such "party" status is based upon the court's reliance on *Scherr Constr. Co. v. United States* [38 CCF ¶ 76,314], 26 Cl. Ct. at 248 (1992) and *United States v. Harper,* 569 F. Supp. 602 (E.D. Penn. 1983), neither of which requires nor necessarily supports the conclusion reached.

Scherr, supra, did not involve the adequacy of a supporting affidavit. In *Scherr* the application and supporting documentation were not submitted under oath, contrary to the requirements of the court's rules. Rules of U.S. Claims Court 81(e)(1). Moreover, Scherr's claimed costs lacked itemization or specificity. Finally, as proof of net worth Scherr submitted an unaudited balance sheet. The application was denied.

In *Harper, supra,* the Government controverted Harper's eligibility and Harper refused to answer Government inquiries pertaining to its eligibility. Even under these circumstances, the court dismissed the application without prejudice to Harper's willingness to litigate the question of its eligibility.

Moreover, the court in *Fields* held that because the EAJA is a waiver of sovereign immunity, the Act must be strictly construed. It was also on this basis that Fields' unopposed and uncontroverted affidavit was rejected.

We do not disagree that EAJA should be strictly construed. Strict construction is a matter of statutory interpretation, however, and unless required by the Act, it does not change the applicable evidentiary standard or burden of proof.

The evidentiary standard for contract claims is the preponderance of the evidence, not a more stringent standard approaching beyond a reasonable doubt. *Teledyne McCormick-Selph v. United States* [25 CCF ¶ 82,891], 218 Ct. Cl. 513, 588 F.2d 808 (1978); *Youngdale & Sons Constr. Co. v. United States* [38 CCF ¶ 76,467], 27 Fed. Cl. 541 (1993); *Neal & Co. v. United States* [36 CCF ¶ 75,802], 19 Cl. Ct. 470 (1990). We find nothing in the EAJA or implementing regulations imposing a more stringent burden on Applicant to prove entitlement to attorney fees and expenses. Indeed, 7 CFR § 1.185(a) and 5 U.S.C. § 504(a)(1) place the burden on the Government to prove that its position was "substantially justified," based upon the existing administrative record. Moreover, for Applicants, affidavits are prescribed for proof of time expended, hourly rates, and expenses. 7 CFR § 1.192.

We conclude that Applicant's affidavit established, by a preponderance of the evidence, that Applicant meets the definition of a "party" set forth in 5 U.S.C. § 504(b)(1)(B).

The Requirements of 7 CFR § 1.191(a)

The regulations at 7 CFR § 1.191(a) require as follows:

> An applicant . . . must provide with its application a detailed exhibit showing the net worth of the applicant and any affiliates . . . when the proceeding was initiated. The exhibit may be in any form convenient to the applicant that provides full disclosure of the applicant's and its affiliates' assets and liabilities and is sufficient to determine whether the applicant qualifies under the standards in this subpart . . . .

Applicant filed only the affidavit mentioned above with its application. The affidavit does not show assets and liabilities, nor is it a "detailed exhibit" showing the components of assets or liabilities. Therefore, Applicant's application did not initially meet the requirements of 7 CFR § 1.191(a).

By letter dated October 19, 1993, 133 days after the Board's ruling on June 8, 1993, granting the parties' joint motion for reconsideration, Applicant supplemented its application with an acceptable net worth exhibit, showing the net worth of Applicant and affiliates to be $2,332,255 during 1990 when the appeal was initiated.

The Government asserts that the time for filing an application and supporting information has expired, citing 5 U.S.C. § 504(a)(2), which provides as follows:

> A party seeking an award of fees and other expenses shall, within thirty days of a final disposition in the adversary adjudication, submit to an agency an application . . . .

The regulations at 7 CFR § 1.193 provide:

> **§ 1.193 Time for filing application.**
>
> (a) An application may be filed whenever the applicant has prevailed in the proceeding or in a significant and discrete substantive portion of the proceeding, but in no case later than 30 days after final

©1994, Commerce Clearing House, Inc.

Digitized by Google

disposition of the proceeding by the Department.

(b) For the purposes of this rule, final disposition means the date on which a decision or order disposing of the merits of the proceeding or any other complete resolution of the proceeding, such as a settlement or voluntary dismissal, become final and unappealable, both within the Department and to the courts.

(c) If review or reconsideration is sought or taken of a decision as to which an applicant believes it has prevailed, proceedings for the award of fees shall be stayed pending final disposition of the underlying controversy ....

Under the Contract Disputes Act, 41 U.S.C. §§ 601-613, the decision of an agency board of contract appeals is final unless appealed within 120 days. 41 U.S.C. § 607(g)(1)(A) and (B). Therefore, Applicant had 150 days in which to file an application. Contrary to the Government's position, Applicant filed and supplemented its application well within 150 days of the Board's decision on reconsideration. *See B&M Constr., Inc.,* AGBCA No. 93-160-10, 93-3 BCA ¶ 26,126; *Francis Paine Logging,* AGBCA No. 91-156-10, 92-3 BCA ¶ 25,043. Indeed, the regulations contemplate additional proceedings and proof after the initial filing. 7 CFR §§ 1.196 and 1.199.

Substantial Justification And Quantum

The Government has the burden of proving its position was substantially justified. The Government has not controverted this issue and accordingly we conclude that the Government's position was not substantially justified. *See Siska Constr. Co.,* VABCA No. 3381E, 92-1 BCA ¶ 24,730.

The Government has not controverted the amount claimed of $31,473.87. Our review indicates the attorney fee rates charged were reduced to $75 per hour for purposes of this application, that the number of attorney and support staff hours charged was reasonable, and that the nature and amounts of other expenses were also reasonable.

DECISION

Applicant is entitled to its attorney fees and other expenses in the amount of $31,473.87.

[¶ 26,553] Science Applications International Corporation and HSQ Technology v. National Aeronautics and Space Administration; Engineering Design Group, Inc., Intervenor

GSBCA Nos. 12600-P, 12616-P, November 3, 1993. Solicitation No. RFP2-35117(BEJ). (The text below is the redacted version issued to the public on November 10, 1993.)

Protests, GSBCA—Jurisdiction—ADP Services Procurement.—A government motion to dismiss a protest against an intended award under a solicitation for a wind tunnel automation system was denied, despite the government's contention that the procurement was not for automatic data processing services and was thus exempt from Brooks Act coverage, because the solicitation clearly required an interconnected system of ADPE for the acquisition, storage, and manipulation of data for the operation of the wind tunnels. Although the government indicated that the procurement's principal product, the distribution control systems, controlled the mechanical and electrical operations of the wind tunnel rather than acquired, stored, or managed data, the court determined that the systems acquired data about the wind tunnel environment, processed it to ensure that the tunnels were functioning within operating limits, and transmitted the data to control systems that regulate the wind tunnels.

Automatic Data Processing Procurement—Brooks Act Applicability—Exemptions.—A government motion to dismiss a protest against an award under a solicitation for a wind tunnel automation system was denied, despite the government's contention that the microprocessors being procured fell within the Federal Information Resources Management Regulation's embedded exception for equipment valued below a threshold dollar amount, because the FIRMR only exempted the acquisition, management, and use of equipment and this procurement was for an automation system rather than for a product containing an automated system. Moreover, even if the thresholds were relevant, the system was ADPE that was valued at well over the threshold amount. The system, which was more than the microprocessor, included distribution control systems, an antisurge control system,

Digitized by Google

a vibration monitoring system, an annunciation system and sequence-of-events recorder, transmitters, and a time code generator system. The fact that installing the system involved a significant amount of construction did not diminish its significance as ADPE.

Automatic Data Processing Procurement—Authority to Procure—Delegation of Authority.—A government motion to dismiss a protest against an award under a solicitation for a wind tunnel automation system was denied and the protesters' cross motion for summary relief was granted because the government failed to show that it was entitled to rely on a regulatory delegation of procurement authority. The government did not show that the federal information processing equipment being procured was valued at less than $2.5 million, which was the threshold value for applicability of the regulatory DPA. The board relied on the government's estimates in determining that the threshold of the regulatory DPA had been exceeded and concluded that the government needed a specific acquisition DPA for this procurement.

Awards—Relief for Improper Award—Void v. Voidable.—A government motion to dismiss a protest against an intended award under a solicitation for a wind tunnel automation system was denied, despite the government's contention that its failure to obtain the requisite delegation of procurement authority voided only the intended award under the procurement rather than the entire procurement process, because the board was not required to render an advisory opinion as to whether the General Services Administration could ratify a procurement that the agency lacked authority to create. The government's contention that it had time to obtain a specific acquisition DPA amounted to a suggestion that GSA should ratify the completed procurement actions. A board decision as to whether GSA should ratify the procurement actions would be premature.

Timeliness of Protest, GSBCA—Apparent Improprieties—Delegation of Procurement Authority.—A government motion to dismiss a protest against an intended award under a solicitation for a wind tunnel automation system was denied, despite the government's contention that the protesters' allegations regarding the government's failure to obtain a delegation of procurement authority were untimely filed after the closing time for the receipt of proposals, because the protesters' allegations affected the board's jurisdiction to hear the merits of the protest and thus enabled the board to decide the issue regardless of its lack of timeliness. Although the government contended that its failure to obtain a specific acquisition DPA was apparent before the closing time for receipt of proposals and that the absence of a prescribed Federal Information Resource Management Regulation clause regarding DPAs put protesters on constructive notice of the lack of a DPA, the board was obligated to first determine subject matter jurisdiction before determining any other alleged violations of procurement law.

For the protester/intervenor, Science Applications International Corporation: Fried, Frank, Harris, Shriver & Jacobson, Washington, D.C., by James J. McCullough, Joel R. Feidelman, James S. Kennell, and Deneen J. Melander. For the protester/intervenor, HSQ Technology: Canterbury, Stuber, Pratt, Elder & Gooch, Dallas, Texas, by Donald O. Pratt and Paul H. Sanderford. For the government: Sumara M. Thompson-King, Office of the General Counsel, National Aeronautics and Space Administration, Washington, D.C., and Rosamond M. French, Office of the Chief Counsel, Ames Research Center, Moffett Field, California. For the intervenor, Engineering Design Group, Inc.: Gardner, Carton & Douglas, Washington, D.C., by L. Stephen Quatannens, James J. Henningan, and George N. Grammas.

Before LABELLA, BORWICK, and NEILL, Administrative Judges.

LABELLA, Administrative Judge: Science Applications International Corporation (SAIC) and HSQ Technology, Inc. (HSQ), have protested the intended award of a contract by the National Aeronautics and Space Administration, Ames Research Center (the Government or respondent) to Engineering Design Group, Inc. (EDG). SAIC and HSQ intervened in each other's protests and EDG intervened in both protests. Respondent moved to dismiss both protests for lack of jurisdiction and for untimely submission of one count of the protests. SAIC and HSQ each made cross-motions for summary relief.

Protesters raised numerous issues in their protests concerning the Government's actions during the course of the procurement

©1994, Commerce Clearing House, Inc.
Digitized by Google

process. We stayed consideration of those issues. In this decision, we only address the allegation in Count I of both protests that the Government failed to obtain a valid delegation of procurement authority (DPA).

Background

Respondent has commenced a modernization project to provide a major overhaul of its Unitary Plan Wind Tunnels (UPWT) Complex at Ames Research Center in California. As a part of this project, respondent issued Solicitation No. RFP2-35117(BEJ) (solicitation) for the delivery and installation of a Facility Automation Control System. The existing facility consists of three wind tunnels and an auxiliary facility. The offeror selected for the automation project is required to design, furnish, install, and test all materials necessary to automate the operation of the facility. Technical Specifications for the Automation System for the Modernization of the Unitary Plan Wind Tunnel Section 01011 at 1.1.2 (Technical Specifications).

Terms of the solicitation

The automation project requires the selected offeror to demolish existing tunnel and auxiliary equipment, motor control centers, and concrete foundations. Technical Specifications Section 01011 at 1.1.2. The offeror would then rebuild the facilities and include the automation systems discussed below during the course of construction.

Distributed Control Systems

The solicitation required that contractors offer a total of five distributed control systems (DCSs) to automate the control of the UPWT complex. Technical Specifications Section 16960 at 2.1.1.1. Three DCSs were required for the existing wind tunnels; one was designated as an auxiliary; and one was designated as a developmental unit. *Id.* The wind tunnel DCSs were designed to "control and monitor all phases of wind tunnel operation. ..." *Id.* at 1.4.1. The auxiliary DCS unit was designed to provide "regulatory and supervisory control" of auxiliary and ancillary systems. *Id.* The developmental DCS was to be used for development work and testing of hardware and software. *Id.*

Pursuant to the terms of the solicitation, each DCS is required to contain:

a. Communications systems consisting of:
   * DCS communications network
   * Inter-DCS communication equipment
   * Foreign systems communications

b. Operator interface hardware consisting of:
   * Operator consoles
   * Operator stations
   * Engineering stations
   * Printers
   * Hand-held terminals

c. Process control units:
   * Network communication processors
   * Controllers
   * I/O modules
   * Power supplies
   * Cabinets

d. Disk storage
   * Two times that needed for system and custom software plus an additional 120 megabytes minimum.

Technical Specifications Section 16960 at 2.1.1.1.

Operator and engineering stations must include CRTs, support electronics, keyboards, and mice. Technical Specifications Section 16960 at 2.4.2.1, 2.4.3.1. Operator stations must be able to perform configuration and maintenance functions. *Id.* at 2.4.2.2. Each engineering station also must include disk storage facilities. *Id.* at 2.4.3.2. Engineering stations in the wind tunnel must be capable of configuring and editing wind tunnel test matrices and parameters, and monitoring test progress and equipment operation. *Id.* at 2.4.3.5. Hand-held terminals must consist of a display, numeric keypad, programmable function keys, and dedicated hardware switches. *Id.* at 2.4.4.1. This equipment must acquire, manipulate, control, display, and transmit data to perform these functions.

Digitized by Google

Each process control unit is required to "perform the real-time process monitoring and control functions of data acquisition, regulatory and sequential (supervisory) control, and shall communicate with other process control units and operator engineering stations." Technical Specifications Section 16960 at 2.5.1. It shall consist of modular components including communications processors, microprocessor based controllers, I/O modules, power supplies, etc. *Id.* Portable programming units must be provided for process control unit interrogation and configuration. *Id.* at 2.5.4. The portable programming units must be configured with floppy and hard disk storage, and software for process control unit configuration. *Id.* The required DCS controllers are defined as "microprocessor-based multi-tasking processors" and were required to "process inputs, perform calculations, alarms and algorithm control and logic, and provide outputs." *Id.* at 2.6.1. The processors and controllers are required to acquire, manipulate, manage, and control data.

Each controller must be capable of communicating with the process control units. Technical Specifications Section 16960 at 2.6.1. The controller and processors also are required to interface with the wind tunnels and auxiliary processors. *Id.* at 2.8.1. Furthermore, a "fiber optic communications network/data highway" must be provided to link the DCSs. *Id.* at 2.9.1. Each DCS must be capable of communicating with other DCSs, foreign systems, and the data system computers. *Id.* at 2.9.2, 2.9.3, 2.9.4. To be capable of interfacing with the wind tunnels and processors, the equipment must be capable of transmitting and receiving data.

Moreover, each DCS must be equipped with a laser graphics printer to print operator's or engineer's station graphic displays. Technical Specifications Section 16960 at 2.10.1. Each DCS must also be equipped with a dot-matrix printer which will automatically print alarms, system events, and operator actions. *Id.* at 2.10.2.

The contractor is required to prepare custom supervisory and regulatory software to implement the tunnel, model support, and auxiliary automation design. Technical Specifications Section 16960 at 2.12.1.2. Each DCS also must include database and spreadsheet software. *Id.* at 2.12.5.1, 2.12.6.

Antisurge control system

The solicitation also requires an antisurge control system for use with the make-up air compressor system. Technical Specifications Section 16910 at 1.1.1. The antisurge control system must continuously monitor compressor inlet and outlet conditions, and modulate a recycle valve to keep the compressor within operating limits. *Id.* at 2.1.1. The antisurge control system must include controllers which scan all inputs, perform calculations, and update outputs at least once every forty milliseconds. *Id.* at 2.1.4, 2.2.1; *see also id.* at 2.2.8.

Engineering personnel must be able to communicate with the antisurge control system through a CRT based monitor. Technical Specifications Section 16910 at 2.4.1. Compressor maps must be displayed to show operating points with respect to changing inlet conditions. *Id.* In addition to this display capability, critical events must be archived so "incidents and disturbances" can be replayed. *Id.* The antisurge control system must also be capable of communicating with the auxiliary DCS via a serial data link. *Id.* at 2.5.1. The antisurge control system must be capable of acquiring, storing, manipulating, controlling, displaying, transmitting, and receiving data.

Vibration monitoring system

Furthermore, the solicitation requires a "vibration monitoring system for continuous online monitoring, trending, archival, analysis, diagnostics, and predictive maintenance" of various existing drive trains. Technical Specifications Section 16961 at 1.1.1. The vibration monitoring system must consist of communication processors and a computer system with software capable of providing the functions described above. *Id.* at 2.4.1.1. The vibration monitoring system operator must be able to access historical and current information, startup and shutdown data, and information collected by the attached computer system. *Id.* The computer system must include a central processing unit, data storage devices, a CRT, modem, mouse, keyboard, and printer. *Id.* at 2.4.2.1, 2.4.2.2. The vibration monitoring system must also be capable of communicating and exchanging data with the auxiliary DCS. *Id.* at 2.5.1. The vibration monitoring system must, therefore, acquire, store, control, transmit, and receive data.

Annunciator system and sequence of events recorder

An annunciator system and sequence of events recorder must also be included in the offer. Technical Specifications Section 16962 at 2.1.1. The system must consist of "an annunciator, sequential events recorder,

©1994, Commerce Clearing House, Inc.
Digitized by Google

cabinet, programming terminal, operator panel, printer, audible horns and rotating lights, visual display unit, and means for bulk storage and off-line programming." *Id.* The offeror must provide an IBM compatible PC system for alarm monitoring, system configuration, and programming with the system. *Id.* at 2.1.7. The PC system must include disk storage devices, a keyboard, and CRT. *Id.* The sequence recorder must interface with the auxiliary DCS. *Id.* at 2.1.6. Thus, this system must store, manipulate, and transmit data.

Pressure profile monitoring system

Three systems must be provided for the pressure profile monitoring system. Technical Specifications Section 16968 at 1.1.1. Each system must measure tunnel pressure, store and convert the data, and transmit the data to the DCSs. *Id.* The pressure profile monitoring system must consist of pressure scanners, a scanner interface unit, a data acquisition and calibration system, and software and hardware for pressure measurement and data acquisition. *Id.* at 2.1.1. The system must, therefore, be capable of data acquisition, storage, manipulation, movement, and transmission.

Transmitters

The solicitation requires transmitters to collect data regarding the temperature, level, pressure, humidity, and flow rates from the wind tunnels and transmit it to the DCSs. *See e.g.,* Technical Specifications Section 16965 at 2.1.2, 2.1.5.1, 2.2.1, 2.3.1.1, 2.4.1, 2.5.1, 2.9.1. The temperature and pressure transmitters must also contain "smart" circuitry. *Id.* at 2.1.5.5.1. Smart transmitters must be capable of analog and digital communications, and on board data storage. *Id.* They must also be capable of allowing users to remotely configure and store information. *Id.* at 2.1.5.5.3. Thus, this equipment must acquire and transmit data.

Time code generator system

The solicitation requires a time code generator system to provide synchronized time to control devices and remote displays. Technical Specifications Section 16969 at 1.1.1. The time code generator system is a "programmable, multi-system digital clock/calendar, with a digital front display panel" and must include a programmable processing unit with memory. *Id.* at 2.1.1. This equipment must store and display data.

Intended award of the contract

On or about September 14, 1993, NASA informed protesters that intervenor EDG was the intended contract awardee. The Government held a debriefing for SAIC on or about September 27, 1993, and for HSQ on or about September 28, 1993. Both SAIC and HSQ filed their protests following their debriefing sessions.

Discussion

Our jurisdiction in bid protest cases is limited to procurements subject to the Brooks Act. 40 U.S.C. § 759(f)(1)(1988). We have the authority to "determine whether any procurement is subject to (the Brooks Act) and ... to review regulations to determine their consistency with applicable statutes." *Id.*

The Brooks Act applies to the lease, purchase, and maintenance of automatic data processing equipment (ADPE) by federal agencies. *Id.* § 759(a)(1). The Act goes on to define ADPE as:

> any equipment or interconnected system or subsystems of equipment that is used in the automatic acquisition, storage, manipulation, management, movement, control, display, switching interchange, transmission, or reception, of data or information—
>
> (i) by a Federal agency, or (ii) under a contract with a Federal agency which (I) requires the use of such equipment, or (II) requires the performance of a service or
>
> the furnishing of a product which is performed or produced making significant use of such equipment.
>
> (B) Such term includes—
>
> (i) computers; (ii) ancillary equipment; (iii) software, firmware, and similar procedures; (iv) services, including support services; and (v) related resources as defined by regulations issued by the Administrator for General Services.

Id. § 759(a)(2).

Both protesters argue that the Government failed to obtain a DPA for this procurement. The Government advances three arguments in support of its position that this count in the protests should be dismissed. We briefly summarize these arguments and will discuss each in turn.

The Government's first argument is that the embedded exception contained in the Federal Information Resources Management Regulation (FIRMR) applies to remove this procurement from Brooks Act coverage. The Government contends that because the Brooks Act does not apply, the Board lacks jurisdiction over this protest. The Government's second argument is that even if the embedded exception does not ap-

Digitized by Google

ply and the Board does have jurisdiction, the regulatory or blanket DPA contained in the FIRMR applies. Thus, it avers, the procurement actually proceeded with a valid DPA. The Government's final argument is that, even if the embedded exception and the regulatory DPA do not apply, there is still time for the General Services Administration (GSA) to ratify the unauthorized procurement process because the contract has not yet been awarded.

When reviewing motions for summary relief, the Board has previously stated that

> . . . summary judgment is properly granted only where there is no genuine issue of material fact and the movant is entitled to judgment as a matter of law. Fed.R.Civ.P. 56. . . . The court must view all the evidence in a light most favorable to the opponent (or non-movant) and draw all reasonable inferences in its favor.

Richard S. Carson & Associates, Inc., GSBCA 9411-P, 88-2 BCA ¶ 20,685 (quoting *Armco, Inc. v. Cyclops Corp.*, 791 F.2d 147, 149 (Fed. Cir. 1986)). The parties disagree on the cost of the equipment in this procurement and whether the equipment is ADPE. With regard to the cost of the equipment, the parties' disagreements involve either a question of law which we are free to decide for ourselves or differences in cost estimates that are immaterial to the outcome of this decision. To the extent there are material fact disagreements, the Board has relied exclusively on figures presented by the Government in its Motion to Dismiss and its Answer to Protester's Statement of Material Facts in reaching its decision. Whether the equipment is actually ADPE is a question of law and we are not bound by the Government's characterization of this equipment. We have drawn our own conclusions on this issue based solely on the Government's description of the equipment in its Technical Specifications.

Embedded exception

The General Services Administration (GSA) has issued the FIRMR to implement the Brooks Act. The FIRMR applies whenever a Federal agency acquires Federal information processing (FIP) resources, or whenever a Federal agency solicitation or contract requires the delivery of FIP resources or requires a contractor to make significant use of FIP resources. 41 CFR 201-1.002-1(a), (b) (1992) (FIRMR 201-1.002-1(a), (b)). "FIP resources" are, generally, what the Brooks Act calls "ADPE." Agencies conducting procurements which are not subject to the FIRMR do not have to obtain DPAs from GSA. FIRMR 201-39.106-1.

The FIRMR does not apply if the procurement falls within the embedded exception. *See* FIRMR 201-1.002-2(e). A procurement for FIP equipment falls within the embedded exception when:

> (1) The embedded FIP equipment would need to be substantially modified to be used other than as an integral part of the product; or
>
> (2) The dollar value of the embedded equipment is less than $500,000 or less than 20 percent of the value of the product, whichever amount is lower. Embedded FIP equipment is FIP equipment that is an integral part of the product, where the principal function of the product is not the "automatic acquisition, storage, manipulation, management, movement, control, display, switching, interchange, transmission, or reception of data or information."

FIRMR § 201-1.002-2(e).

The Government contends that the primary product of this procurement is the DCS and that the principal functions of the DCSs are "to run the wind tunnel; or alternatively, to control the mechanical and electrical operations of the wind tunnel, and its auxiliaries," not to "acquire, store, or manage data." Respondent's Motion to Dismiss at 11. Therefore, it states, the DCSs do not perform ADPE applications and the Board lacks jurisdiction.

The protesters proffer two main arguments to rebut the Government's position. Both protesters argue that an examination of the terms of the solicitation reveals that the procurement is for ADPE, and that the cost of the DCSs exceeds the dollar limit bet in the embedded exception.

Our appellate authority instructs us that in deciding whether we have jurisdiction over a bid protest, we should examine the nature of the items called for in the solicitation. *Best Power Technology Sales Corp. v. Austin* [38 CCF ¶ 76,468], 984 F.2d 1172, 1176 (Fed. Cir. 1993). In this procurement, the Government is not buying a wind tunnel, or even an automated wind tunnel. It is buying automation for an existing wind tunnel. Thus, the very purpose of this procurement is automation. The products in this procurement are ADPE as defined by the Brooks Act and as noted above. We conclude the embedded exception does not apply. There-

©1994, Commerce Clearing House, Inc.
Digitized by Google

fore, the Board has jurisdiction over this protest.

The Government is unable to see the forest for the trees. As stated above, the embedded exception only applies to "FIP equipment that is an integral part of the product, where the principal function of the product is not the 'automatic acquisition, storage, manipulation, management, movement, control, display, switching, interchange, transmission, or reception of data or information.'" FIRMR 201-1.002-2(e)(2). In this procurement, a principal product at issue is the DCS, a fact which the Government admits in its Motion to Dismiss. Respondent's Motion to Dismiss at 11. However, the Government contends that the DCSs do not acquire, store, or manage data.

An examination of the terms of the solicitation illustrates the tenuousness of the Government's argument. According to the solicitation, each DCS is required to provide regulatory and supervisory control and system interface of test conditions in the wind tunnel. Technical Specifications Section 16960 at 1.4.1. The DCSs must ensure that safe operating limits are not exceeded, and must control and monitor all phases of wind tunnel operation. *Id.* In order to perform these functions, the DCSs must acquire data about the wind tunnel environment; process it to ensure that the wind tunnels are functioning within operating limits; and transmit the data to control systems which regulate the wind tunnels. All of these functions are clearly ADPE functions as defined in the Brooks Act. The Government has strained its credibility by arguing that the DCSs do not perform ADPE functions when the solicitation for this procurement clearly establishes this fact.

The Brooks Act defines ADPE, in part, as "any equipment or interconnected system or subsystems of equipment." Even a cursory examination of the requirements of the solicitation reveals that this procurement is for an interconnected system of ADPE. The antisurge control system must monitor compressor conditions and modulate the recycle valve to keep the compressor within operating limits. The vibration monitoring system must monitor various drive trains, store data, and communicate with the auxiliary DCS. The annunciator system must record events, and display and store data. The pressure profile monitoring system must measure wind tunnel pressure, store data, and transmit the data to the DCSs. All of these systems acquire, store, and manipulate data. These systems then must transmit the data to the DCSs so that they can operate the wind tunnels. Therefore, whether we focus on the DCSs or the entire automation system, it is clear this procurement is for ADPE.

Respondent, relying on FIRMR 201-1.002-2(e)(2), argues that the FIRMR and the Brooks Act do not apply because the FIP resources—the DCSs microprocessors—have a value of $200, considerably below the threshold of $500,000 or twenty percent of the value of the products. Respondent's argument is specious.

FIRMR 201-1.002-2(e)(2) only exempts the "acquisition, management, and use of products containing embedded FIP equipment." As noted above, this procurement is for the automation system, not for a product containing an automated system. The thresholds in the section are, thus, irrelevant.

Even if the thresholds are relevant, the system is more than the microprocessor. It includes as a minimum: (1) the DCSs; (2) the antisurge control system; (3) the vibration monitoring system; (4) the annunciator system and sequence of events recorder; (5) the transmitters; and (6) the time code generator system. Considering the system as ADPE is the only approach faithful to the Brooks Act definition of ADPE as "any ... interconnected system or subsystems of equipment that is used in the automatic acquisition, storage, manipulation, management, movement, control, display, switching interchange, transmission or reception, of data ...." 40 U.S.C. § 759(a)(1). As discussed below, we conclude the FIP equipment in this procurement exceeds $2,500,000, which is considerably above the thresholds.

We rejected an argument similar to the Government's in *S&W Associates International, Inc. v. Department of the Navy,* GSBCA 12118-P, 1992 BPD ¶ 412 (Dec. 18, 1992). In *S&W Associates,* the Navy claimed that the microprocessor in cesium frequency standards was embedded equipment. In that case, the standard was required to "manage, move, control, display, and transmit" data, as well as provide remote access and control from computer terminals. *Id.* at 9. In rejecting the Navy's argument, we stated that "the exception only applies to products where the principal function of the product is *not* an ADPE application." *Id.* at 8 (emphasis in original). The function of the product in this procurement, whether we look at the DCSs or the entire system, is ADPE. Thus, the embedded exception by definition does not apply. If these arguments

Digitized by Google

are taken to their logical extreme, then no computer would ever be classified as ADPE because a computer essentially consists mainly of a processor, wires, and formed plastic. That is not the proper interpretation to be given to the embedded exception.

Furthermore, the fact that the procurement involves a significant amount of construction does not change the analysis. The single driving force behind this procurement is the automation of the operation of the wind tunnels. As discussed above, the systems needed to satisfy the Government's requirements are ADPE. "The fact that installing the ADPE system also involves a considerable amount of construction does not diminish [the significance of the ADPE]." *Vikonics, Inc.*, GSBCA 10575-P, 90-3 BCA ¶ 23,044, at 115,693, 1990 BPD ¶ 148, at 7-8. This Board has repeatedly considered protests involving automated systems which are built into Government facilities. *See, e.g., HSQ Technology, Inc.*, GSBCA 10802-P, 91-1 BCA ¶ 23,326 (procurement for the upgrade of an existing energy monitoring and control system for an Army facility); *Johnson Controls, Inc.*, GSBCA 10115-P, 89-3 BCA ¶ 22,172, 1989 BPD ¶ 245 (procurement for a supervisory control system for a desalting plant); *Advanced Control Systems*, GSBCA 10098-P, 89-3 BCA ¶ 22,136, 1989 BPD ¶ 235 (procurement for a control and monitoring system for well fields and a sludge pipeline).

Regulatory Delegation of Procurement Authority

The Government contends that even if the embedded exception does not apply, the value of the FIP equipment is less than the threshold of $2,500,000 contained in GSA's regulatory DPA and thus it has, in fact, proceeded with the necessary authority to procure. The Government avers that the threshold will not be crossed no matter if the Board examines the Government's estimates or any of the offeror's proposals. This is not a determination made at the time this procurement was initiated, but is now proffered only after reliance on the embedded exception has been seriously challenged.

The protesters argue that the Government did not include the cost of all the FIP equipment contained in the DCSs when it made its determination that the regulatory DPA applied. They dispute the figures proffered by the Government and contend that the dollar threshold is exceeded no matter whose figures are used.

The Brooks Act gives the GSA exclusive authority to procure all ADPE for the Federal government. 40 U.S.C. § 759(a)(1), (b)(1) (1988). GSA is authorized to delegate its procurement authority to other agencies. *Id.* § 759(b)(2). In the FIRMR, GSA has granted a blanket or regulatory DPA to agencies' designated senior officials (DSOs). FIRMR 201-20.305(a)(2). Each agency's DSO may redelegate GSA's authority to qualified officials. *Id.* at 201-20.305(a)(3).

The regulatory DPA provides that

> (a) Agencies may contract for the following FIP resources without prior approval of GSA:
>
> (1) FIP equipment, software, services, and support services when the dollar value of any individual type resource including all optional quantities and periods over the life of the contract, does not exceed $2,500,000 ($250,000 for a specific make and model specification or for requirements available from only one responsible source)...

FIRMR 201-20.305-1(a)(1). If the dollar value of any resource exceeds the threshold, a specific acquisition delegation is required. *Id.* 201-20.305-1(b).

FIP equipment is defined as "any equipment or interconnected system or subsystems of equipment used in the automatic acquisition, storage, manipulation, management, movement, control, display, switching, interchange, transmission, or reception of data or information." FIRMR Bulletin A-I Attachment A. Examples of FIP equipment include microcomputers, disk drives, tape drives, optical storage and/or retrieval equipment, printers, storage and backup devices cable connected to computers, data communications networks, and fiber optics and other communications networks. *Id.*

The Government looks solely to the value of the DCSs and argues that it does not exceed the dollar limit of the regulatory DPA whether the Board examines NASA's estimates or any of the offerors' proposals. The Government examined the proposed costs for the DCSs for each of the three offerors and its estimate as of May 10, 1993, and concluded that the dollar threshold for FIP equipment had not been exceeded. The Government provides the following figures in its motion to support its argument with respect to its own estimates:

©1994, Commerce Clearing House, Inc.

Digitized by Google

Description	Cost
DCSs	[exceeds $2,500,000]
Deduction for state taxes	[redacted]
Deduction for non-FIP equipment	[redacted]
Total	[less than $2,500,000]

Respondent's Motion to Dismiss at 17-19. The Government contends that because the value of the DCSs is less than $2,500,000, regardless of which figure is used, the regulatory DPA should apply.

The Government admits that because it decided that the embedded exception applied, it never determined the value of individual FIP resources, such as equipment, software or related supplies. Respondent's Answer to Protester's Statement of Material Facts at 5. The Government further states that "the Government's estimates do not readily lend themselves to the kind of analyses that need [sic] to be made for determining the dollar value of the reputedly FIP type categories. This explains why the [exceeds $2,500,000] figure [representing its estimate of the cost of the DCSs] is misleading." *Id.* While the Government is obviously attempting to dispute its own estimates, it has not submitted any sort of affidavits or documentation to support its argument.

The Government's attempt to raise an issue of material fact is deficient. The Board's Rule 8(g), which the Board has applied in this case and which outlines the procedure for motions for summary relief, provides that

> Parties opposing [a motion for summary relief] shall serve and file, together with their opposing legal memoranda and opposing affidavits and documents, if any, a concise statement setting forth all material facts as to which it is contended there exists a genuine issue necessary to be litigated. All material facts set forth in the statement required to be served and filed by the moving party are deemed to be admitted unless controverted by the statement required to be served by the opposing party.

As discussed below, the Government disputes Protester's Statement of Material Facts through the use of broad conclusions and does not support those conclusions with affidavits or other documents. Because the Government has not adequately controverted SAIC's statement as required by the Rule 8(g), we could deem the material facts set forth by SAIC, based as they are on the Government's own documents, to be admitted and adopt SAIC's statement of facts for purposes of this decision on summary relief. While we could take this course of action, we will use the Government's unsubstantiated figures for our analysis. Even giving the Government every benefit of the doubt in this regard, it can be demonstrated that the threshold of the regulatory DPA has been exceeded.

While the Government has focused its discussion solely on the DCSs, other systems, such as the antisurge control system and the vibration monitoring system, constitute FIP equipment. The Government has not provided the Board with any in-depth analysis regarding the cost of these other systems and whether the line item costs listed in its estimates include FIP related supplies or FIP software. Because the Government has not engaged in this exercise and is not disputing the amounts contained in these estimates, the Board adopts the line item costs for those systems in its analysis of FIP equipment costs. Even if the cost of any non-FIP equipment included in these systems was deducted from the line item cost, our analysis would not change. As discussed below, only a small amount attributable to these systems is needed to exceed the threshold of the regulatory DPA and this amount can easily be found within costs of the other systems.

The FIRMR does not clearly state how an agency determines whether a procurement will exceed the $2,500,000 threshold. The Government argues that the only rational, fair, and consistent interpretation of the FIRMR concerning when the "dollar value" of any individual type of FIP resource exceeds $2,500,000 is to interpret "dollar value" as referring to the principal value of an item before imposing handling charges, markups, or taxes on it. Respondent's Response to Protester's Cross-Motion for Summary Relief at 4-5; Respondent's Answer to Protester's Statement of Material Facts at 2-3. However, FIRMR Bulletin C-5 offers guidance on this issue. The Bulletin describes the procedure for obtaining a DPA for a specific acquisition exceeding the $2,500,000 limitation for a regulatory DPA. When requesting such a DPA, each agency is required to submit an agency procurement request (APR) which provides, among other information, a description of the project and the FIP resources to be acquired. FIRMR Bulletin C-5 Attachment A at 1. The APR

Digitized by Google

must also include the "estimated contract cost" of the acquisition. *Id.* at 2. Thus, when determining whether to authorize a DPA for a specific acquisition, GSA examines the cost of the resource to the agency, not the cost of the resource to the offeror. The agency's contract cost would include overhead, profit, and taxes.

When determining whether the dollar limits of the regulatory DPA have been exceeded, a similar analysis should be used because of its direct relationship to the possible need for a specific acquisition DPA. The analysis should remain consistent because it is an exercise which the Government should undertake to determine what type of DPA is applicable to the procurement at issue. Before the Government begins the procurement process, it should determine the estimated contract cost of the acquisition and not engage in post-protest rationalizations of its actions. Therefore, we will examine the Government's estimate, as it would exist in an APR, to determine whether the dollar threshold of the regulatory DPA has been exceeded in this procurement and an APR for a specific acquisition is necessary.

The Government's argument to exclude markups and taxes might have merit if it considered acquiring the products from the manufacturer itself and providing them as Government-furnished equipment. However, the Government is not going directly to the manufacturer for these products and has not considered that option. Moreover, if the Government went to the manufacturer directly, we would still be examining what the Government would actually have to spend to acquire the products. Thus, we will examine the Government's estimates of the cost of the FIP equipment in this procurement with sales tax, overhead and G&A, and profit included.

In its response to Protester's Statement of Material Facts, the Government filed three versions of its estimate for this procurement. Two versions discuss the entire automation system by section and subsection of the specifications. These versions are dated May 10, 1993, and May 12, 1993. The final version discusses the DCSs exclusively and is undated. Only the May 10 estimate was filed with the Government's Motion to Dismiss. The other estimates were filed with its Answer to Protester's Statement of Material Facts.

The figures contained in the May 10 and May 12 estimates do not include "profit, bonds and insurance, shipping, escalation, mark-up, supervision of subcontractors, and effects of schedule." Respondent's Answer to Protester's Statement of Material Facts Exhibits A and B at 1. The line total calculations do include the cost of labor and 8.25% sales tax. *Id.* The Government's entries on both sets of estimates do not include overhead and general and administrative costs (G&A), or profit. However, it estimated those figures to be [redacted] for overhead and G&A, and [redacted] for profit. Respondent's Motion to Dismiss, Exhibit 3 at 2d unnumbered page. Using the figures contained in the Government's own estimates, the DCSs alone exceed the dollar threshold in the regulatory DPA. If we examine the entire automation system, it is clear that the Government cannot even suggest that the regulatory DPA is applicable. The May 10 figures are as follows:

Description	Total Estimate
DCSs (Section 16960)	
Operator stations	[redacted]
Engineering Stations	[redacted]
Hand-held terminals	[redacted]

Total for the automation system (including sales tax, overhead and G&A, and profit)	[substantially exceeds $2,500,000]

The May 12 figures are quite similar and provide a total cost for the automation system, including sales tax, overhead and G&A, and profit, of [substantially more than $2,500,000].

The material costs contained in the Government's undated Exhibit E are the same as the figures provided in the May 12 estimate in Exhibit B. However, several deductions have been made to the total cost of the DCSs in an attempt to focus solely on the cost of FIP equipment. For the most part, the Government does not explain how it obtained the figures associated with the deduc-

Digitized by Google

tions through the use of affidavits or any other documentation and it is impossible to assess whether its figures are correct. The total cost for the DCSs is listed at [exceeds $2,500,000], and includes sales tax of 8.25%, shop drawings, software, and testing. Respondent's Answer to Protester's Statement of Material Facts, Exhibit E. The deductions made in the exhibit are as follows:

Deductions	Amount
Dead man switches	[redacted]
Cabinet structures	[redacted]
Field installation materials costs	[redacted]
Factory acceptance testing miscellaneous costs	[redacted]
Test procedures miscellaneous cost	[redacted]
Shop drawings documentation materials cost	[redacted]
Loop drawings documentation materials cost	[redacted]
Loop lists documentation material cost	[redacted]
Input/Output lists documentation material cost	[redacted]
Vendor supplied system costs that are software related	[redacted]
DCSs required package software included in hardware costs	[redacted]

Once the deductions listed in Exhibit E are made, the Government contends that the actual total equipment cost of the DCSs is [less than $2,500,000]. When overhead and G&A of [redacted], and profit of [redacted] are added to the Government's revised figure in Exhibit E, the total cost is [less than $2,500,000].

The following items are listed by the Government to be vendor supplied, software related system costs:

Specification subsection	Description
1.3.1n	Certification of bonded storage of source code for proprietary languages
2.12.4	Programming Language "C" and compiler
2.12.6	Commercially available spreadsheet program
2.12.9	Historical storage and retrieval system

Respondent's Answer to Protester's Statement of Material Facts, Exhibit E.

The following items are listed by the Government as required package software included in hardware costs:

Specification subsection	Description
2.4.2	Operator stations, including the support electronics to run the CRTs
2.4.3	Engineering stations, including data storage facilities consisting of hard disks, optical disks, or floppy disk drives; magnetic tape units; and the capability to configure and maintain the system, and to edit test matrices and parameters
2.5.4	Portable programming unit, including floppy and hard disk storage, and software
2.6	Controllers
2.9.1	Fiber optic communications network
2.9.2	Communication network between the DCSs
2.9.3	Communication network between the DCSs and foreign systems

Respondent's Answer to Protester's Statement of Material Facts, Exhibit E.

We note that some of the items the Government includes within its software totals are actually either FIP equipment or FIP related supplies. As discussed above, examples of FIP equipment include disk drives, tape drives, optical storage and/or retrieval equipment, and fiber optics and other communications networks. FIRMR Bulletin A-1 Attachment A. An examination of the entries reveals that the fiber optic communications network, the communication networks for the DCSs, the disk drives, and the magnetic tape units are FIP equipment and should not be included within this software entry. The historical storage and retrieval system also appears to be FIP equipment and should not be included within this entry.

©1994, Commerce Clearing House, Inc.
Digitized by Google

The FIRMR defines FIP related supplies as "consumable item[s] designed specifically for use with FIP equipment, software ...." FIRMR Bulletin A-1 Attachment A. Examples of FIP related supplies include floppy disks and magnetic tapes. *Id.* Thus, the Government should not have included the cost of any disks or magnetic tape within this software entry, although they are properly excluded from consideration of the cost of FIP equipment.

Due to the Government's wholly inadequate submissions, it is impossible to determine the exact amount which should be excluded from NASA's software deductions. After examining the specifications for the products at issue, we can determine that the Government is making too many deductions from the total equipment cost of the DCSs because of its erroneous legal conclusions as to the non-FIP nature of the products at issue. However, as discussed below, no matter which of the Government estimates we adopt, the total cost of the FIP equipment included in the automation system will exceed the threshold of the regulatory DPA.

When we examine the May 10 and May 12 estimates, it is obvious that the threshold of the regulatory DPA has been exceeded. The cost of the DCSs alone was estimated to be [exceeds $2,500,000] on May 10 and [exceeds $2,500,000] on May 12. Both of these figures exceed the regulatory threshold. The threshold is exceeded by an even greater amount when we examine the automation system as a whole.

Even if we adopted the Government's total for the equipment cost of the DCSs, [less than $2,500,000], the final result does not change. As discussed above, when overhead and G&A, and profit are added to the Government's total, this figure is increased to [less than $2,500,000]. Because FIP equipment includes not only individual pieces of equipment, but also a system or subsystem of equipment, the cost of the remaining FIP equipment in the automation system must be added to the total cost of the DCSs. Regardless of whether we base our calculations on the May 10 or May 12 estimates, the cost of the remaining FIP equipment well exceeds $150,000. This relatively small sum is all that is needed to push this procurement over the threshold. Thus, when we focus on the entire system at issue, rather than merely the DCSs, it is clear that the threshold for the regulatory DPA has been exceeded.

The Government contends that we should also examine the costs contained in the offerors' proposals because their costs are below the regulatory DPA threshold. We give more credence to the Government's own estimates because they were prepared contemporaneously with the initiation of the procurement process, i.e., when the analysis should have been prepared. Moreover, the figures NASA provides for EDG, the intended contract awardee, are incomplete. The Government has only provided us with EDG's cost for the DCSs, annunciator and sequence of events recorder, and the time code generator. The cost for these products does not include any markups and it is unclear whether it includes sales tax. In addition, we do not have EDG's costs for the remaining portions of the automation system. While we might examine EDG's proposal as requested by NASA, we lack sufficient information to know the costs of all the FIP equipment at the rates charged by EDG in order to conduct an analysis similar to that done on the Government's own estimates. For that reason, we are relying exclusively on the Government's estimates to determine whether the threshold of the regulatory DPA has been exceeded.

Because the estimated cost of the total automation system exceeds the threshold, the Government cannot rely on the regulatory DPA for this procurement. The Government needs a specific acquisition DPA for this procurement.

Applicability of CACI, Inc. v. Stone

The Government's final argument centers on whether the Federal Circuit's decision in *CACI, Inc. v. Stone* [38 CCF ¶ 76,501], 990 F.2d 1233 (Fed. Cir. 1993), requires us to void this entire procurement action and require it to begin the entire process anew if we conclude that the Government has failed to obtain a proper DPA.

In that case, CACI, Inc., filed a protest against the award of a contract for engineering services and data processing support services by the Department of the Army alleging, in part, that the Army had failed to obtain a DPA before proceeding with the procurement. *Id.* at 1233-34. Although the Army admitted its failure to obtain the requisite DPA, this Board declined to suspend the contract because the Army "had taken necessary steps to obtain a DPA with dispatch." *Id.* at 1234.

The Federal Circuit disagreed with the Board's statement that the failure to obtain a DPA is a "remediable deficiency that 'does not necessarily nullify and render void the solicitation and all actions taken pursu-

Digitized by Google

ant.' " *Id.* at 1236 (quoting *Computervision Corp.*, GSBCA 8709-P, 87-1 BCA ¶ 19,518 (1986), at 98,651-52). The Court stated that there was no clearer example of an illegality than where there is an absence of actual authority to enter into the contract. *Id.* Thus, the Court concluded, a "government procurement or contract" may not proceed without a valid DPA. *Id.*

The Government argues that *CACI* does not void the entire procurement process if the agency lacks a DPA, but only voids any contract award which might result from the process. The Government goes on to state that because it has not awarded the contract, there is still time to obtain a specific acquisition DPA from GSA any time before contract award. The Government is essentially suggesting that GSA may ratify the procurement actions NASA already took and will issue a specific acquisition DPA for this acquisition and thereby allow NASA to proceed to award on the basis of the ratified procurement actions already completed.

Following the *CACI* decision, the Board itself may not ratify a procurement or contract that the agency lacked authority to create. 990 F.2d at 1236. Thus, we do not consider the numerous remaining counts raised by protesters regarding the propriety of NASA's procurement actions. Whether GSA may ratify the Government's procurement actions is a decision that GSA will have to make at least in the first instance. We will not render an advisory opinion on the issue. If GSA should decide to ratify the Government's procurement actions, its decision may be protestable. We need not address that issue because GSA has not considered whether to ratify this unauthorized procurement and it is premature for us to address it. However, NASA should fully inform GSA if it does not intend to redo this procurement completely once it receives a proper DPA.

Timeliness

The Government also argues that the protesters' allegations that it failed to obtain a DPA are untimely. The Government states that, pursuant to the Board's rule 5(b)(3)(i), a protest based upon alleged improprieties in a solicitation which are apparent before the closing time for receipt of initial proposals must be filed before the closing time for receipt of the proposals. The Government contends that its failure to obtain a specific acquisition DPA should have been apparent before the closing time for receipt of proposals because the clause prescribed in FIRMR 201-39.5202-3 was not present. That clause states that "the acquisition is being conducted under [a regulatory, specific agency, or specific acquisition] delegation of GSA's exclusive procurement authority of FIP resources." FIRMR 201-39.5202-3. It contends that the absence of the clause put protesters on constructive notice that a DPA had not been obtained. Therefore, it states, protesters should have filed their protests on this count prior to the closing time of receipt of proposals.

The Government cites *The Orkand Corp.*, GSBCA 11405-P, 92-1 BCA ¶ 24,624 (1991), 1991 BPD ¶ 320, and *NCR Corp.*, GSBCA 9787-P, 89-1 BCA ¶ 21,499 (1988), 1988 BPD ¶ 331, in support of its contention that protesters' allegations are untimely. The Government correctly notes that the Board held that issues related to DPAs were untimely in both of those cases. However, the cases are factually distinguishable, all other protest issues were considered and denied in those cases, and the Government's reliance on them is misplaced. Moreover, given the Court's decision in *CACI*, we are required to determine our subject matter jurisdiction before we can proceed to consider other alleged violations of procurement law.

In *The Orkand Corp.*, protester alleged that the Department of Labor (DOL) improperly awarded a contract without obtaining an amendment to its specific acquisition DPA reflecting an increase in the estimated contract cost. 92-1 BCA at 122,834, 1991 BPD ¶ 320 at 16. The DOL included the DPA at issue in its protest file. *Id.* Protester received the protest file on September 5, 1991, but did not raise the issue until September 23, 1991. *Id.* The Board dismissed the count as untimely because it was filed eleven working days after protester received the protest file.

In *NCR Corp.*, protester argued that the DPA under which the Health Care Financing Administration awarded a contract was invalid due to an alleged failure to obtain an amendment to its specific acquisition DPA. 89-1 BCA at 108,326, 1988 BPD ¶ 331 at 16. Protester received the documents on which it based its allegations in the protest file, but did not raise the issue of the alleged defective DPA until thirteen business days later. *Id.* The Board stated that protester was on "constructive notice" of the terms of the DPA because it had the document in its possession. *Id.* The Board charged protester with knowledge of the possible lack of a valid DPA from the time it received the protest file. *Id.* Because protester waited thirteen business days after receiving the

©1994, Commerce Clearing House, Inc.
Digitized by Google

protest file to raise the issue, the Board dismissed the count as untimely.

The Board did not decide in either case that a protester must raise the absence of a DPA prior to the closing time for submission of proposals. The issue was never before the Board because in both cases, the Government had received a specific acquisition DPA and protesters had possession of the DPA well before the issue was raised. In this protest, neither SAIC nor HSQ was aware that NASA had never qualified for or obtained a DPA until their debriefings sessions at the end of September. Both protests were filed within ten days of acquiring this knowledge.

We note that both cases were decided prior to the Court's decision in *CACI*. After *CACI*, however, the Board must consider whether it has subject matter jurisdiction to hear a protest as a preliminary matter. Before we can address any allegations concerning the agency's actions during the course of the procurement process, we must first determine whether the procurement is subject to the Brooks Act and whether the agency obtained a valid DPA prior to commencing the procurement process. *See Universal Automation Labs, Inc. v. Department of Transportation*, GSBCA 12370-P, 93-3 BCA ¶ 26,142 (July 7, 1993) (although protester did not specifically allege the Government lacked a valid DPA, the Board *sua sponte* raised the issue because it was "a matter of fundamental importance and requires close review").

In this protest, both protesters allege that the Government did not obtain a valid DPA before initiating the procurement process. Because protesters' allegation that the Government lacked a valid DPA affects our jurisdiction to hear the merits of this protest, we may decide the issue regardless of its timeliness. Even prior to *CACI*, we have raised the issue of our jurisdiction *sua sponte* if jurisdiction appeared in doubt. *Businessland, Inc.*, GSBCA 8586-P, 86-3 BCA 19,188; *see also Artic Corner, Inc. v. United States* [34 CCF ¶ 75,472], 845 F.2d 999, 1000 (Fed. Cir. 1988) ("A court may and should raise the question of its jurisdiction *sua sponte* at any time it appears in doubt.").

Decision

The Government's motion to dismiss is **DENIED** and the protester's cross motion for summary relief is **GRANTED**. The Government is directed to obtain a DPA, and to proceed with this procurement in accordance with statute and regulation.

[¶ 26,554] Advanced Information Network Systems, Inc. v. Department of Commerce

GSBCA No. 12576-P, November 16, 1993.

Protests, GSBCA—Grounds for Protest—Selection of 8(a) Programs.—Denial of a protest against an 8(a) procurement for a trade data systems study was proper, despite the protester's contention that the Commerce Department unfairly failed to include it in a group of small companies being interviewed for the proposed study, because when the Commerce Department decided to conduct the study, its contracting officer was not aware of the protester's interest in the procurement or of its existence when she interviewed vendors. The protester's prior meetings and conversations with the Commerce Department covered trade data systems and other projects in which the protester was interested. Although the protester filed capability statements with the SBA and the Commerce Department's International Trade Administration, it did not file such statements with the Commerce Department's procurement office. The Federal Acquisition Regulation requirement that the procuring agency transmit the names of interested vendors to the SBA when conducting an 8(a) set-aside procurement did not apply to unknown interested vendors.

For the protester: David Kruger, Business Development Manager. For the government: Kenneth A. Lechter and F. Jefferson Hughes, Department of Commerce, Washington, D.C.

Before DEVINE, LABELLA, and VERGILIO, Administrative Judges.

DEVINE, Administrative Judge: Advanced Information Network Systems, Inc. (AINS) has protested the Commerce Department's failure to include it in a group of small companies being interviewed for a trade data system study proposed by the Department. The Government filed a motion to dismiss the protest on the ground that it failed to

Digitized by Google

state a claim upon which relief can be granted. The Government also filed a motion for summary judgment. Both motions were taken under advisement pending a hearing. The Government renewed its motion to dismiss for failure to state a claim at the close of the evidence. In view of the disposition we make, these motions are moot.

Findings of Fact

According to its evidence, protester is experienced in developing and setting up computerized trade data systems. Its president, Moe Goswami, worked on the World Bank's original trade data system. One of its executives, Ken Mason, a former Secretary of the United States International Trade Commission, has more than 20 years of trade data related experience.

The Department of Commerce owns and maintains an international trade data system called COMPRO, which runs on a mainframe computer located at the National Institutes of Health in Bethesda, Maryland. According to AINS the system is slow, cumbersome and "user unfriendly." Also according to AINS Congress has directed NIH to get out of the government-wide trade data business. AINS is a small business which is eligible for 8(a) set aside contracts. It was interested in assisting the Department of Commerce to develop a new trade data system based on smaller, faster and cheaper computers, under the Small Business Administration's 8(a) set-aside program. To this end it sent an unsolicited capability statement on August 27, 1992, to the head of Commerce's International Trade Administration, Dr. Thomas Lowe.

A capability statement is a form of corporate resume. On November 12, 1992, at AINS' request, Dr. Lowe and his superior, John Menes, met with protester's president and business manager. Protester's Supplemental Protest File, Exhibit 4. The follow up letter written the next day by Mr. Kruger, the business manager, indicates that the participants discussed Mr. Menes' idea that the trade data system be "privatized." The letter closed with the statement, "The next logical step is to find some seed money to conduct a systems requirement study involving all the user representatives from their respective agencies." *Id.* The user agencies of the existing trade data system, in addition to the Department of Commerce, include the United States International Trade Representative, the United States International Trade Commission, and the Departments of Agriculture, Labor, Treasury, and State. Protester's Supplemental Protest File, Exhibit 5. Protester also made a similar visit to the United States International Trade Commission, an independent government agency. *Id.*, Exhibit 9.

On February 3, 1993, protester sent a letter to Mr. Menes seeking a briefing with Mr. Ron Brown, the new Secretary of Commerce. The letter enclosed a document entitled "Executive Summary" for transmission to Secretary Brown; it sought access to the Secretary to convey AINS' ideas concerning trade data systems. *Id.*, Exhibit 7. There is no evidence of any response from the Department of Commerce. On February 23, 1993, an AINS employee, Mr. Mason, visited with Dr. Thomas Lowe at the Department of Commerce. *Id.*, Exhibit 10. Mason's memorandum of the meeting reads as follows:

> Dr. Tom Lowe and I discussed the status of the COMPRO database. Commerce still seems to be groping about. Lowe noted that, within several agencies, an attempt was being made to find enough money to fund an initial study. He clarified the status of the computer center at Springfield, Va. It is not part of the NTIS as we had been told previously. Over the years he has been pressured to use Springfield rather than NIH but has resisted. Now, with the NIH disappearing, he may have no choice. He asked how business was—in AINS. I'm not sure the purpose of that question. During the discussion with Lowe and Lee Beller, an employee of the Court of International Trade, I talked up the seminar on downsizing so as to build interest if it is given again or offered at clients' offices.

Protester's Supplemental Protest File, Exhibit 10.

Mason's report covered the week of February 22, 1993, and dealt with visits to the International Trade Commission, the Court of International Trade, the National Labor Relations Board, the Resolution Trust Corporation, and the Postal Rate Commission. *Id.*

Although protester's complaint alleges that it was not properly treated with respect to the procurement at issue, its president admitted at hearing that Commerce had not broken any law or regulation. Transcript at 17, 18. At hearing protester's president stated that its case "is based on what is fair and what effort we have made and the treatment we have been given." *Id.* at 52. The Government's contracting officer testified that the procurement branch had no copy of

©1994, Commerce Clearing House, Inc.

Digitized by Google

protester's capability statement on file, a fact that protester does not dispute, although the planning branch had received a capability statement in the mail during late August 1992. Protester's Supplemental Protest File, Exhibit 1. The contracting officer who handled the procurement testified that she did not know of the existence of AINS. Transcript at 36, 46. Protester has produced no evidence to show any connection, between the Commerce officials with whom AINS employees discussed trade data systems and the Commerce officials who conducted the subject procurement, of such a nature as to require the contracting officer to inquire into the matter.

The only Federal Regulation that might assist protester in its fairness issue of which we are aware is 48 CFR 19.804-2(a)(12) (1993) which requires the Commerce Department, when notifying the Small Business Administration of its 8(a) procurement plans, to identify "all known 8(a) concerns which have expressed an interest in this specific requirement as a result of self-marketing." As it happens protester had itself filed a statement of its capabilities with the Small Business Administration on August 18, 1993, as a part of a request that a requirements letter be sent on protester's behalf to the Department of Commerce. Protester's Supplemental Protest File, Exhibit 13. This request included a general outline of the study requirements for a new trade data system, estimating its cost at close to one million dollars. *Id.* There is no evidence that the SBA acted on protester's request.

Discussion

Protester's complaint is based on what it believes to be its unfair treatment by the Government because it was not one of the firms interviewed by Commerce as a prospective awardee under an 8(a) set-aside procurement which protester believed it was fully qualified to carry out, and for which it had made an effort to be considered for. Protester views the Government's sin to be one of omission rather than commission. Protester's contacts with the Commerce Department consist of two meetings three months apart, the first between protester's president and business manager, and Dr. Thomas Lowe of Commerce's International Trade Administration; the second between one of protester's employees and Dr. Lowe. Protester's employees also made two telephone calls in December 1992. One was to Mr. Menes and one to Dr. Lowe. Transcript at 44. The conversations dealt in part with trade data systems, but also included other work subjects in which protester was interested. Protester also had meetings with at least two other agencies to discuss trade data systems, and with a number of other agencies to discuss other areas of interest that might result in business for protester. Although protester filed capability statements with Dr. Lowe's International Trade Administration and with the SBA itself, it did not file such a statement with Commerce's procurement office. Thus, when Commerce decided to conduct a limited study of the trade data base requirements its contracting officer did not interview protester because she did not know that protester existed. We do not believe that the Federal Acquisition Regulation requirement that the procuring agency, when conducting an 8(a) set-aside procurement, must transmit the names of interested vendors to the SBA, applies to those that are unknown.

We can find nothing that the Government did that it shouldn't have done, and protester agrees with us. The only thing that the Government didn't do that it might have done was indicate to the SBA (whose files already contained protester's capability statement) that protester might be interested in the procurement. It didn't do so for the same reason that it didn't itself interview protester in connection with the projected procurement: Commerce's procurement division did not know of protester's interest or even of its existence.

Decision

For the reasons given the protest is DENIED.

[¶ 26,555] ViON Corporation and Integrated Systems Group, Inc. v. General Services Administration; Amdahl Corporation and Federal Computer Corporation, Intervenors

GSBCA Nos. 12565-P, 12575-P, October 29, 1993.

Automatic Data Processing Procurement—Solicitations—Drop-In Contracts v. Schedule Contracts.—A protest against the General Services Administration's author-

Digitized by Google

ity to award three indefinite delivery, indefinite quantity "drop-in" contracts under which other agencies could place orders for computers was denied, despite the protester's contention that the program amounted to a nonmandatory schedule program that did not comply with competition requirements, because the proposed contracts were part of a regular competitive procurement that involved full and open competition, including being publicized twice in the *Commerce Business Daily*. The protester, who could compete for the contracts, failed to show how it was prejudiced by the procurement method. The protester's fears that an agency might attempt to order a computer at the lowest price even though the computer might not meet the agency's needs were speculative and premature.

Automatic Data Processing Procurement—Solicitations—Performance Validation.—A protest against a solicitation for three indefinite quantity, indefinite delivery "drop-in" contracts under which other agencies could place orders for mainframe computer systems was denied, despite the protester's contention that the specifications were improperly based on a survey of several agencies' workloads rather than on a particular agency's workload, because the survey was a reasonable exercise of GSA's authority to provide for the economic and efficient purchase of automatic data processing equipment for the government under the Brooks Act. The survey showed that the government currently needed the different types of computer systems being procured. The protester also failed to show that the GSA's "prove-it" method of validating performance of the computer systems was unreasonable. The proposed method involved the submittal of data by offerors to enable the government to verify that the systems met requirements, rather than a benchmark test or performance validation technique based on a particular agency's workload.

Automatic Data Processing Procurement—Solicitations—Current Production.—A protest against a solicitation for three indefinite quantity, indefinite delivery contracts for mainframe computer systems was denied, despite the protester's contention that the solicitation's definition of "in current production" was vague and ambiguous, because the protester failed to identify any specific ambiguity in the definition. The protester did not provide any competing interpretations of any of the terms or identify any particular reading of the definition that would harm the protester's ability to submit a responsive offer. Although it contended that the definition did not indicate that a proposed system must be one that is currently being manufactured, no statute or regulation required the government to purchase systems that were currently being manufactured. Although prior board decisions required agencies to include a manufacturing component in their definitions of "in current production," the solicitations underlying those cases required computers that were currently being manufactured. However, the instant solicitation required that the proposed computers be supported and maintained, but not currently manufactured.

Automatic Data Processing Procurement—Solicitations—Outdated Equipment.—A protest against a solicitation for contracts for computer systems was denied, despite the protester's contention that the solicitation permitted offers of outdated equipment in violation of the Federal Information Resources Management Regulation, because the protester did not show that the solicitation's and the FIRMR's definitions of outdated equipment were contradictory. Although the FIRMR and the solicitation defined "outdated equipment" as items over eight years old, the FIRMR based age on the initial commercial installation date, whereas the solicitation dated equipment from the time of initial offers. The protester contended that the solicitation violated a FIRMR bulletin that advised against buying equipment that would become outdated before the need for the equipment ended. This nonregulatory bulletin, which did not require setting specific dates for measuring age, admonished agencies to consider the intended period of use before buying equipment. The protester failed to show that it was restricted from competing by the challenged clause, and its support for a more rigid definition of outdated equipment was in effect an attempt to limit competition.

Automatic Data Processing Procurement—Solicitations—Evaluation of Upgrades.—A protest against a solicitation for indefinite delivery contracts for mainframe computer systems was denied, despite the protester's contention that the solicitation failed to include the evaluation of possible upgrades to the proposed processors in violation of the Federal Information Resources Management Regulation, because the protester failed to

©1994, Commerce Clearing House, Inc.
Digitized by Google

show that the decision not to include upgrades in the procurement was unreasonable. If an agency anticipated a need to upgrade a processor during its system life, it could consider the cost of such an upgrade in determining which processor to buy and how to buy it. The protester did not provide any evidence regarding the frequency with which agencies upgrade processors. The protester's argument in support of evaluating prices based on options that may not be needed by a hypothetical user agency was speculative and premature.

For the protester, ViON Corporation: Latham & Watkins, Washington, D.C., by Irwin Goldbloom, David R. Hazelton, and Martin F. Petraitis. For the protester/intervenor, Integrated Systems Group, Inc.: Skolnick & Leishman, Derwood, Maryland, by Shelton H. Skolnick, Judy D. Leishman, and Amy M. Hall. For the government: John C. Sawyer, Kurt D. Summers, and Seth Binstock, Office of General Counsel, General Services Administration, Washington, D.C. For the intervenor, Amdahl Corporation: Cohen & White, Washington, D.C., by David S. Cohen, Nikki Koulizakis, and G. Brent Connor. For the intervenor, Federal Computer Corporation: David S. Kovach.

Before PARKER, WILLIAMS, and GOODMAN, Administrative Judges.

PARKER, Administrative Judge: These protests challenge the General Services Administration's (GSA's) authority to award three indefinite quantity, indefinite delivery contracts from which other agencies of the Government may place orders for mainframe computer systems. As discussed below, we hold that GSA's proposed procurement scheme does not violate any statute or regulation. In addition, we find the protesters' specific objections to various portions of the solicitation to be without merit. Thus, we deny the protests.

Findings of Fact

1. In an effort to streamline the twelve to twenty-four month procurement process for mainframe computer systems, GSA established the "Drop-in Technology For Mainframe Computers Program." Protest File, Exhibit 5 at 1. GSA issued the solicitation at issue here on June 23, 1993, as part of a pilot project for the program. *Id.*, Exhibit 30 at C-2.

2. The solicitation provides for the award of indefinite quantity, indefinite delivery contracts for mainframe computer systems (including site surveys), the design of which is based on International Business Machines Corporation's System 370/390-class technology. Protest File, Exhibit 30 at C-1. The solicitation would result in separate contracts in each of three different performance classes or "bands." *Id.* at C-6. The minimum guaranteed purchase for each contract is $50,000. *Id.* at B-1.

3. The purpose of the procurement is to avoid the need for separate mainframe computer procurements by individual user agencies by establishing non-mandatory contractual vehicles from which agencies can order commercially available hardware and software:

> It is the goal of this program to establish contractual vehicles to expedite the procurement of commercially available hardware and software for use throughout the Federal Government. Use of the contracts by agencies will be voluntary. GSA believes, however, substantial ordering activity will occur because of the potential savings in time and cost that agencies will realize using this contract versus conducting their own individual competitive procurements.

Protest File, Exhibit 30 at C-1 to C-2.

4. The initial contracts will last for one year, with two six-month options. The optional periods are only to cover unanticipated delays in the recompetition, which will occur yearly to avoid "locking out" unsuccessful vendors for long periods of time. Protest File, Exhibit 30 at C-3. The relatively short contract term is also intended to simplify the contract by obviating the need for "technology refreshment" or "substitution" provisions. *Id.* Although GSA does not know how long a particular agency will use a particular computer, GSA established a five-year systems life for evaluation purposes. *Id.*, Exhibit 26 at M-7.

5. Agencies that wish to order computers from the contract will be required to justify their needs to GSA:

> The availability of the Drop-in Technology contract will not exempt agencies from conducting all of the studies (requirements analysis, alternatives analysis, conversion study) required by the Federal Information Resources Information Resources Management Regulations (FIRMR). These studies will enable each agency to determine the characteristics of processor needed to satisfy its requirements, to identify and evaluate acquisition alternatives, and to select the most advantageous alter-

Digitized by Google

native. Only agencies with a bona fide requirement for compatibility-limited, 370/390-architecture processors will be permitted to use these contracts. GSA will establish a Drop-in Program Management Office to assist agencies in the use of the contract and to process delivery orders on their behalf. The GSA PMO will ensure that agencies have met the FIRMR requirements and have satisfactorily demonstrated a need for IBM compatibility-limited equipment that can be satisfied through this contract.

Protest File, Exhibit 30 at C-3. The contract does not require an agency to publicize its intention to order a computer from the contract.

6. Prior to issuing the solicitation, GSA conducted a detailed survey of other federal agencies currently using IBM or IBM compatible mainframe computers. Protest File, Exhibits 6, 7, 9. Although the survey was not all-inclusive[1], GSA's analysis of the results led it to conclude that there exists a present need within the Government to purchase these types of computers. *Id.*, Exhibit 9.

7. Although GSA's survey revealed significant differences among agencies in terms of their types and amounts of workload, GSA analyzed the workload data and established the three performance categories of computers based upon "typical" levels of required processing power. In establishing these "bands," GSA also took into account the extent to which it could expect a fair competition among the three manufacturers of IBM and IBM compatible mainframe computers. *See* Protest File, Exhibits 6, 9.

8. In order to determine whether an offered computer will satisfy the performance requirements of the band for which it is proposed, GSA adopted a performance validation method termed "prove-it." Essentially, the solicitation requires offerors to submit data which they believe will enable the Government to verify that the proposed processor meets the requirements. The solicitation encourages offerors to provide reliable and easily verifiable technical information and states that "[t]he Government may independently collect and use its own evidence to supplement the evaluation of the proposed processor." Protest File, Exhibit 30 at L-7 to L-10. There is no provision for a "benchmark" test or any other performance validation technique based upon any particular agency's workload.

9. The solicitation requires that proposed computers be "in current production":

> the "in current production" requirement is met if: (a) the item is being actively marketed and supported with ongoing enhancements; (b) the item is being maintained without any significant reduction in maintenance related resources; and (c) the manufacturer has not announced discontinuance of such marketing, support, and maintenance levels.

Protest File, Exhibit 30 at C-10.

10. Although the solicitation permits offers of used equipment, it prohibits offers of "outdated" equipment:

> Federal agencies are prohibited from including outdated equipment in their specification unless the agency's Designated Senior Official determines that such action will be in the best interest of the Government. Therefore, equipment that is outdated, as of the due date for the submission of initial offers, will not be considered acceptable. Outdated equipment is defined as any mainframe processor that is over eight (8) years old, based on the initial commercial installation date of that processor, and is no longer in current production as defined in C.4.2 above.

Protest File, Exhibit 30 at C-11.

Discussion

The Drop-in Technology Procurement

Protester ViON argues that, by awarding indefinite quantity, indefinite delivery (IDIQ) contracts from which other agencies may place orders for mainframe computers, GSA is in essence establishing nonmandatory schedule contracts without complying with statutory and regulatory requirements designed to ensure competition within the GSA schedule program. As discussed below, we disagree with ViON's characterization of the proposed contracts at issue here. Although similarities exist between the IDIQ contracts to be awarded under the "Drop-in Technology" program, and contracts awarded under GSA's nonmandatory schedule program, the two programs are fundamentally different. These contracts will be awarded as a result of full and open competition; schedule contracts are awarded without competition. Thus, the statutory and regulatory requirements

[1] GSA sent out eighty-eight survey questionnaires and received forty-three responses. Of these responses, approximately twenty-eight provided "usable data." Protest File, Exhibit 9.

©1994, Commerce Clearing House, Inc.

Digitized by Google

which apply specifically to GSA's non-mandatory schedule program do not apply here.

The Administrator of GSA possesses broad authority to "coordinate and provide for the economic and efficient purchase, lease, and maintenance of automatic data processing equipment [ADPE] by Federal agencies." 40 U.S.C. § 759(a)(1) (1988). GSA may purchase directly ADPE for use by other agencies, or it may delegate to the agencies the authority to make such purchases. *Id.*, § 759(b)(1), (2). The Brooks Act was broadly drafted so as to permit GSA to "enter into any method of procurement or arrangement that [it deems] economical, efficient and appropriate to foster the objectives of the Act." *Amdahl Corp.*, GSBCA 7859-P, 85-2 BCA ¶ 18,111, at 90,933, 1985 BPD ¶ 18, at 20. In carrying out its Brooks Act responsibilities, GSA sometimes purchases ADP directly for use by agencies, and sometimes delegates authority to agencies to make such purchases.

Pursuant to its statutory authority, GSA also established the non-mandatory ADP schedule program. *See* 41 CFR 201-39.803 (1992) (FIRMR 201-39.803). Under the program, GSA awards contracts to numerous vendors—often for exactly the same items—with prices based upon discounts from the vendors' commercial price lists. 48 CFR 38-102.2 (1992) (FAR 38.102.2). These contracts are not competitively awarded; any vendor which complies with GSA's requirements may be awarded a schedule contract. *See Insyst Corp.*, GSBCA 9946-P, et al., 89-2 BCA ¶ 21,782, 1989 BPD ¶ 132.

In schedule contracting, the competition occurs not in the award of the schedule contract, but in connection with an agency's determination whether to place an order under one of the contracts. Consequently, before placing an order under a non-mandatory GSA schedule contract, an agency is required to publicize its intention in the *Commerce Business Daily* (CBD) and consider all responses received in order to determine whether the proposed schedule purchase "results in the lowest overall cost alternative to meet the Government's needs." FIRMR 201-39.803-2. If the proposed schedule buy is not the lowest overall cost alternative, the agency, depending on the responses received, must either order from another schedule contract that does offer the lowest overall cost alternative, or issue a solicitation and conduct a competitive procurement. *Id.* This is how the Government obtains competition under the schedule program.

In contrast, the proposed IDIQ contracts at issue here will be awarded as a result of full and open competition at the front end. The procurement was publicized twice in the CBD and at least forty-six vendors requested copies of the solicitation.[2] GSA is conducting a "regular" competitive procurement which will result in three IDIQ contracts. We are unable to find, nor has ViON pointed us to, any statute or regulation which prohibits GSA from exercising its Brooks Act authority in this manner. We also fail to see how ViON will be prejudiced by this procurement method; ViON will be able to compete for the contracts just like every other vendor.

It is true, as ViON points out, that agencies must, at some point, assess their individual needs before deciding whether to ask GSA to place an order under one of the contracts. GSA, however, will require agencies to perform all of the analyses and studies required by the FIRMR prior to making such a decision. Finding 5. ViON's fears that an agency may attempt to order a computer that does not meet its needs at the lowest price are both speculative and premature. The possibility that a contract may, at some point, be misused does not make the contract itself illegal.[3]

In a related ground of protest, ViON argues that the proposed contracts violate statute and regulation because the specifications for the three performance bands are based upon a survey of several agencies' requirements, rather than on the specific workload requirements of a particular agency. We deny this ground of protest, as well. GSA's survey, which ViON has not shown to be unreasonable, showed that there exists a present need within the Government for these types of computers. Finding 6. GSA's decision to analyze workload data from a

[2] Protest File, Exhibits 11, 12, 24, 25.

[3] We recognize, as does ViON, that unless either GSA or the agency publishes its intent to place an order under the contract, it will be more difficult for vendors to challenge individual orders that competitors believe to be improper. We assume that GSA will comply with whatever publication requirements are applicable to the placement of orders under an IDIQ contract. GSA's failure to include publication requirements applicable to the non-mandatory schedule program in this solicitation, however, does not render the solicitation defective in any way. As discussed above, these contracts are not part of the schedule program.

Digitized by Google

number of agencies, and to establish the three performance categories based upon "typical" levels of required processing power, is a reasonable exercise of GSA's Brooks Act authority to provide for the economic and efficient purchase of ADP equipment for the Government.

ViON also challenges GSA's decision to validate the performance of proposed computer systems through the use of a methodology called "prove-it." Under that methodology, offerors submit data which they believe will enable the Government to verify that the proposed processor meets the requirements of the band for which it was proposed. No "benchmark" test or other performance validation technique based on a particular agency's workload will be used. Finding 8.

This ground of protest is related to the previous two, and our analysis is, consequently, similar. ViON has not shown that GSA's proposed method of validating performance is unreasonable. To the contrary, given the nature of the procurement, "prove-it" seems to make a great deal of sense. GSA is soliciting offers of computer systems with certain performance capabilities which different agencies may use to satisfy their requirements. We agree with GSA that using a particular agency's workload to validate performance would not make sense under these circumstances. Although validating the performance of a particular processor based upon its ability to process the specific workload of the agency purchasing it is generally the preferred method, *see* FIRMR 201-24.215(a), it certainly is not the only method. We refuse to apply the FIRMR so rigidly as to force the Government to act in a way which is unreasonable, if not impossible.

Again, ViON has not shown that it will be prejudiced by GSA's use of this technique. ViON has not even alleged that it will be unable to prove that its proposed processors meet the requirements of the solicitation. Moreover, if after contract award ViON believes that an awardee failed to prove the capabilities of its proposed processor, ViON will be able to protest the award at that time. Rule 5(b)(3)(ii).

In Current Production

In its next ground of protest, ViON maintains that the solicitation's definition of "in current production" is vague and ambiguous. We disagree.

The solicitation states that the "in current production" requirement is met if:

> (a) the item is being actively marketed and supported with ongoing enhancements; (b) the item is being maintained without any significant reduction in maintenance related resources; and (c) the manufacturer has not announced discontinuance of such marketing, support, and maintenance levels.

Finding 5. We begin our analysis by pointing out that ViON has not identified any particular ambiguity in the definition. ViON has neither provided the Board with competing interpretations of any of the terms, nor identified a particular reading of the definition which would harm ViON's ability to submit a responsive offer. Thus, we have no basis upon which to hold that the definition is vague or ambiguous.

ViON's brief makes it clear, however, that ViON is really complaining about the fact that the solicitation's definition of "in current production" does not require that a proposed system be one which is currently being manufactured. Instead, the definition concerns itself with the extent to which a manufacturer is marketing and maintaining the processor. The problem with ViON's argument, however, is that no statute or regulation requires that the Government purchase computer systems that are currently being manufactured.

Lacking a statute or regulation upon which to rely, ViON points to prior Board decisions which purportedly require agencies to define "in current production" to include a manufacturing component. ViON's reliance on those cases, however, is misplaced. In *ViON Corp.*, GSBCA 11002-P, 91-2 BCA ¶ 23,809, 1991 BPD ¶ 8, the Board held that a contract was wrongly awarded because the awardee's computer did not meet the solicitation's requirement that equipment be in current production. The solicitation provided that "[o]nly new, or used equipment certified as new by the [manufacturer] . . . in current production shall be offered." Finding that the phrase "in current production" was not a term of art, the Board interpreted the solicitation to require computers "actually being manufactured" as of the relevant date. 91-2 BCA at 119,221, 1991 BPD ¶ 8, at 9-10.

Similarly, in *Federal Computer Corp. v. Department of the Treasury*, GSBCA 11872-P, 93-1 BCA ¶ 25,347, 1992 BPD ¶ 207, the Board was called upon to interpret a solicitation which defined the term "in current production" to refer to "a product which is out of the design phase, on the assembly line, and being manufactured as of

©1994, Commerce Clearing House, Inc.

Digitized by Google

the proposal due date, with the expectation that such production will continue on a scheduled basis." 93-1 BCA at 126,257, 1992 BPD ¶ 207, at 4. We held that the awardee's product was in current production because it was, among other things, in the manufacturing phase.

In each of these cases the Board was called upon to interpret the meaning of the phrase "in current production" in the context of a particular solicitation. In those cases we found the term to include a manufacturing component because the solicitations themselves, reasonably interpreted, required it. Here, the situation is quite different. The solicitation clearly does not require that a proposed computer be one which is currently being manufactured. GSA has simply determined that it requires that proposed computers be supported and maintained, but not currently manufactured. The term "in current production" may be inapt to describe what GSA wants, but it is clearly defined.[4]

ViON urges the Board to require GSA to adopt a more restrictive (and, therefore, less competitive) definition of the phrase "in current production." We decline to do so. ViON has not shown that the current definition fails to meet the needs of the Government, is unreasonable, ambiguous, or violates any statute or regulation.

Outdated Equipment

In its final ground of protest, ViON argues that the solicitation permits offers of outdated equipment, in violation of the FIRMR. We deny this ground, as well.

Section C.4.4 of the solicitation provides:

> Federal agencies are prohibited from including outdated equipment in their specification unless the agency's Designated Senior Official determines that such action will be in the best interest of the Government. Therefore, equipment that is outdated, as of the due date for the submission of initial offers, will not be considered acceptable. Outdated equipment is defined as any mainframe processor that is over eight (8) years old, based on the initial commercial installation date of that processor, and is no longer in current production, as defined in C.4.2 above.

Finding 10. This definition closely mirrors the definition of outdated equipment contained in the FIRMR. The FIRMR defines outdated equipment as "any [ADP] equipment over eight years old, based on the initial commercial installation date of that model of equipment, and that is no longer in current production." FIRMR 201-4.001.

ViON argues the solicitation permits offers of outdated equipment because it prohibits equipment that is outdated *at the time of initial offers*, whereas FIRMR Bulletin C-29 states that "agencies should not acquire outdated equipment or equipment which will become outdated *before the need for the equipment ends.*" Thus, argues ViON, because agencies may order computers for up to two years under the terms of the contracts, *see* Finding 4, and the systems life of the computers is five years, *Id.*, any computer more than one year old (eight minus seven equals one) as of the date of award would be outdated, unless it is in current production. ViON also argues that "in current production" in the context of this FIRMR definition must be read to include a manufacturing component.

There are several problems with ViON's position. First, although the solicitation establishes a systems life of five years for evaluation purposes, Finding 4, the actual life of an agency's system may vary substantially from that number. In answering a vendor's question on this subject, GSA noted:

> The FIRMR Bulletin C-29 contains "guidelines for consideration by agencies when solicitations allow offerors to propose used equipment", and these guidelines were taken into account in the development of this solicitation. Offerors are reminded that the FIRMR definition of "outdated" is conjunctive, requiring that the equipment be over eight years old AND no longer in current production. The FIRMR does not define "current production", therefore a definition of the phrase was developed in concert with the requirements of this solicitation.

[4] We recognize that the definition of "in current production" in the solicitation is contrary to the ordinary meaning of this term—which does include the concept of currently being manufactured. *See ViON.* While we do not encourage agencies to define terms in such an inconsistent manner, we do not find the definition to be illegal here where no prejudice inures to any vendor. The only conflict we see here is with the definition of outdated equipment in FIRMR 201-4.001, which defines outdated equipment in part using the term "in current production." While we interpret that FIRMR provision to mean "currently being manufactured," the inconsistency is not problematic in this case. *See* discussion, *infra.*

Digitized by Google

> As the Government has no means of predicting, and feels certain that offerors and manufacturers will not predict, the "last production date" for a model of equipment, the Government has determined that equipment that is not "outdated" (as defined in this solicitation) as of initial proposal submission will be eligible for award, provided that such equipment meets all of the other solicitation requirements and is offered at the lowest evaluated cost.
>
> The agencies who acquire equipment under the contracts resulting from this solicitation may or may not have a need to use the equipment for the full five year system life cycle that has been established for the cost analysis for this procurement as stated in M.5.2.

Protest File, Exhibit 35 at Q.61. Thus, an agency may use ordered equipment for a shorter period or a longer period than the solicitation's evaluated systems life. Until the agency defines the period of need for each ordered processor, it is impossible to determine whether that processor is likely to become outdated during the agency's projected period of use. And, since the Drop-in contracts are not mandatory, an agency can select another contract vehicle if any processor on the Drop-in contract is likely to become obsolete during the agency's projected use period.

Second, we do not find the solicitation to run afoul of the FIRMR's definition of outdated equipment. As stated above, the FIRMR contains a two-pronged test for determining whether equipment is outdated: equipment is outdated if it is "over eight years old based on the initial commercial installation date of that model of equipment *and* ... is no longer in current production." FIRMR 201-4.001 (emphasis added). Thus, if a piece of equipment "passes" either prong of the test, it is not outdated.

As to the first prong of the definition, the solicitation virtually mirrors the FIRMR: outdated equipment is "over eight (8) years old, based on the initial commercial installation date of that processor ...." Finding 10. The solicitation will measure the age of equipment as of the date initial offers are due. *Id.* ViON argues that this latter date runs afoul of FIRMR Bulletin 29, which states in part that "agencies should not acquire outdated equipment or equipment which will become outdated before the need for the equipment ends."

ViON reads too much into this Bulletin. FIRMR Bulletins are "nonregulatory publications to provide guidance and information." FIRMR 201-3.001(b)(1). Thus, even if ViON could prove that GSA's definition of outdated equipment is inconsistent with FIRMR Bulletin C-29, the Board does not grant protests on the basis of violations of FIRMR Bulletins alone. *ViON Corp.*, GSBCA 11048-P (10218-P-REM), 91-2 BCA ¶ 23,792, 1991 BPD ¶ 38. In any event FIRMR Bulletin 29 does not require agencies to set any particular date for measuring the age of computer equipment. We read FIRMR Bulletin 29 as admonishing agencies to consider the intended period of use before deciding which computers will meet their requirements. There is no indication here that any agency intends to purchase a computer from one of the Drop-in contracts which is or will become outdated. We hold that GSA's decision to measure the age of proposed processors at the time of initial proposals is reasonable and does not violate the FIRMR.[5]

Under the FIRMR definition, a system cannot be outdated (even if it is more than eight years old) if it is in current production. This is the second prong of the FIRMR definition. Because the term "in current production" is not defined in the FIRMR, we agree with ViON that the term must assume its common meaning for purposes of the outdated equipment requirement. This is irrelevant, however, because we have found that, under the solicitation, the proposed processors must pass the first prong of the FIRMR's outdated equipment test (less than eight years old based upon initial commercial installation date). Thus, the solicitation does not permit offers of outdated equipment, regardless of how it defines "in current production."

Finally, we deny this ground of protest because ViON has failed to show that it will be prejudiced by the challenged clause. ViON has not alleged that it will be restricted from competing for the contracts; to the contrary, by arguing for a more rigid definition of outdated equipment, ViON is

[5] Under ViON's restrictive reading of the FIRMR, an agency could not purchase *any* computer that it anticipated keeping for more than eight years. This is because, under ViON's reading, every computer would be "outdated" ("over eight years old" "before the need for the equipment ends") before it was even manufactured. Clearly FIRMR Bulletin C-29 was not intended to mandate such an absurd result.

©1994, Commerce Clearing House, Inc.

Digitized by Google

attempting to limit competition. As long as the solicitation accurately reflects the Government's requirements (and ViON has not shown otherwise) restricting competition is not an interest that the Competition in Contracting Act protects. *Teradata Corp. v. Department of the Air Force,* GSBCA 11642-P, et al, 92-2 BCA ¶ 24,895, 1992 BPD ¶ 74; *Computer Consoles, Inc.,* GSBCA 8453-P, 86-2 BCA ¶ 18,941, 1986 BPD ¶ 74. ViON's protest is denied.

ISG's Grounds of Protest

ISG maintains that the solicitation violates the FIRMR because it fails to include evaluation of possible upgrades to the proposed processors. According to ISG, because agencies often upgrade the capacity of their processors during their useful lives, GSA cannot not know which processor offers the lowest system life cost without evaluating offers of upgrades along with the cost of the processors. In a related ground of protest, ISG argues that this situation encourages offerors to "buy in" at low prices, knowing that they can sell an agency expensive upgrades at a later time.

The FIRMR provides:

> The use of options may be appropriate in [ADP] resources acquisitions because—
>
> (a) The FIRMR requires agencies to determine a system life for each [ADP] resource requirement and to evaluate costs over the system life . . . .

Putting aside the fact that this provision states that options *may* be appropriate, ISG's argument, like ViON's similar arguments, is speculative and premature. By awarding three IDIQ contracts, GSA is obtaining firm, competitive prices for three types of processors. When agencies have a requirement for this type of processor, they will perform all of the studies (requirements analysis, alternatives analysis, etc.) required by the FIRMR prior to purchasing a mainframe computer system. Only if ordering from one of the IDIQ contracts is found to be the most advantageous alternative will an agency be permitted to do so. Finding 5. Obviously, if an agency anticipates a need to upgrade a processor during its system life, it should take into account the cost of such upgrade in determining which processor to buy, and how to buy it.

ISG has not shown that GSA's decision not to include processor upgrades in this procurement is unreasonable. ISG has produced no evidence whatsoever regarding the frequency with which agencies upgrade their processors. Under these circumstances, evaluating prices based upon options which may not be needed by a hypothetical user agency is just as silly as failing to evaluate them when they will be needed. The fact that these decisions will be made later on an agency-by-agency basis does not mean that GSA lacks authority under the Brooks Act to establish the Drop-in IDIQ contracts as a non-mandatory alternative for agencies to consider.

In its final ground of protest, ISG maintains that the solicitation fails to state a minimum quantity of supplies or services to be ordered. ISG cites FAR 16.504(a):

> (1) The contract shall require the Government to order and the contractor to furnish at least a stated minimum quantity of supplies or services and, if and as ordered, the contractor to furnish any additional quantities, not to exceed a stated maximum. . . .
>
> (2) To ensure that the contract is binding, the minimum quantity must be more than a nominal quantity, but it should not exceed the amount that the Government is fairly certain to order.

The solicitation establishes a guaranteed minimum purchase of $50,000 for each contract. Finding 2. These amounts clearly are more than "nominal," and certainly constitute sufficient consideration to bind the Government. *See Coastal States Petrochemical Co. v. United States* [23 CCF ¶ 81,512], 214 Ct. Cl. 520, 559 F.2d 1 (1977), *cert. denied,* 435 U.S. 942 (1978) ($100 minimum order sufficient consideration for $19,000,000 indefinite quantity contract). The payment will be made whether or not any deliverables are ordered and, although $50,000 will not purchase a mainframe computer system, it will purchase a site survey under the contract. *See* Finding 2. To the extent ISG argues that the FAR requires GSA to agree to purchase at least one computer system under each contract, we find ISG's reading of the FAR to be unsupported by both a plain reading of the regulation and the case law interpreting it.

Decision

For the reasons discussed above, the protests are **DENIED.** The suspension of respondent's authority to proceed with this procurement lapses by its terms.

Digitized by Google

[¶ 26,556] Integrated Systems Group, Inc. v. Department of Agriculture

GSBCA No. 12552-P, November 3, 1993. (The text below is the redacted version issued to the public on November 10, 1993.)

Timeliness of Protests, GSBCA—Adverse Agency Action—Ten-Day Rule.—A protest against a solicitation for mainframe central processing units was timely because the protester filed its protest with the board within 10 days of the agency's denial of the protester's agency protest. When the protester filed its protest with the board, alleging that the agency was altering its requirements without a written amendment, the closing time for receipt of proposals had not yet passed. Acceptance of the agency's contention that the protest clock started to run when the protester received written discussion questions would encourage resolution of issues through protests rather than through agency-level discussions.

Protests, GSBCA—Grounds for Protest—Statement Adequacy.—A protest against a solicitation for mainframe central processing units was not dismissed, despite the agency's contention that the protest's grounds were not adequately stated, because the alleged specific factual problems and general legal violations were sufficiently explained so that the contracting officer could respond to the agency protest. The protest incorporated by reference the underlying agency protest that noted that the agency had yet to determine applicable provisions of the solicitation and expressly referenced the Federal Acquisition Regulation in urging the contracting officer to provide sufficient time to respond to solicitation amendments.

Timeliness of Protest, GSBCA—Knowledge of Basis—Amended Protest.—A protest against a solicitation for mainframe central processing units was not dismissed, despite the agency's contention that the protest was untimely filed, because the protester filed the amended protest within 10 days of learning of its exclusion from the competitive range. The protest grounds were timely filed independent bases of protest that could have been docketed as separate protests. No party suggested that it would be inappropriate to consolidate the matters with the initial protest. Thus, there was no basis for dismissing the timely raised new issues.

Selection of Contractor—Competitive Range—Reasonable Chance of Award.—A determination that a protester lacked a reasonable chance of being selected for award under a solicitation for mainframe central processing units was improper, because the agency precluded the protester from submitting a best and final offer without giving the protester an opportunity to respond to finalized terms of the solicitation. In its agency protest, the protester expressed concern regarding the agency's interpretation of a solicitation paragraph and contended that a related written discussion question revealed changed agency requirements. The agency's response to the protest and subsequent amendment to the solicitation reflected the agency's belief that the protester's interpretation was reasonable. The solicitation language at the time that responses to written discussion questions were due did not accurately reflect the agency's requirements, but the agency proceeded with discussions, evaluations, and competitive range determinations even though the solicitation failed to reflect its requirements.

For the protester: Skolnick & Leishman, Derwood, Maryland, by Shelton H. Skolnick, Judy Leishman, and Amy M. Hall. For the government: Jane H. Talley, Office of the General Counsel, Department of Agriculture, Washington, D.C.

Before VERGILIO, WILLIAMS, and GOODMAN, Administrative Judges.

VERGILIO, Administrative Judge: On August 25, 1993, Integrated Systems Group, Inc., filed with the Board this pre-award protest. Protester maintains that the respondent, the Department of Agriculture, "attempted to modify solicitation requirements without formal amendment." On September 1, the protester amended its protest to allege that the agency had improperly excluded it from the competitive range and had failed to provide the protester with timely and proper notice of its exclusion.

The agency has moved to dismiss the initial protest, contending that these issues have been untimely protested to the Board

©1994, Commerce Clearing House, Inc.

Digitized by Google

because they had been untimely protested to the agency. The Board concludes that the issues raised in the agency protest initially, and subsequently raised in the initial protest at this Board, are matters which would normally be discussed or resolved through the discussion process. The agency had not yet requested best and final offers. The protest to this Board was timely filed.

In light of fundamental, unresolved aspects of the solicitation, and the ambiguity of certain provisions, the agency's rigid approach to the discussion process was unreasonable, as was its exclusion of the protester from the second competitive range. The agency's actions impermissibly stifled competition and improvidently excluded a potential offeror from the competition.

Findings of Fact

Initial proposals and discussions

1. The agency obtained initial proposals for the delivery, installation, maintenance, and support of IBM-compatible, large scale, mainframe CPU (central processing unit) complexes on a lease or lease-to-ownership basis. Protest File, Exhibits 7, 9-12, 14, 15, 19. The solicitation dictates, "To be considered for source selection, both the technical (pass/fail) and the cost proposal must be compliant without exception, qualification, and/or reservation." *Id.*, Exhibit 14 at 369 (¶ M.3, proposal evaluation). Further, award would be made to the offeror proposing the lowest overall cost to the Government based upon a cost model described in the solicitation. *Id.*, Exhibits 10 at 321, 14 at 373, 386-87, 15 at 397-99 (¶ ¶ M.4 through M.6).

2. Following its evaluation of initial proposals, one of which the protester had submitted, the agency concluded:

> The evaluations revealed that all offerors' proposals could be made acceptable with revisions and no complete rewrites would be needed. ... It is felt that all [] offerors have a reasonable chance for award.

Protest File, Exhibit 19 at 777. The agency included the protester and others in the initial competitive range, and proceeded to issue written discussion questions. *Id.* The agency did not exclude any offeror because of price disparity. Transcript at 125.

3. The protester received its written discussion questions on July 19. Protest File, Exhibit 30(a) (¶ 17). The cover letter to these questions noted: "These questions need to be addressed by submitting an addendum to your proposal." "Revised cost and price information and technical information shall be submitted in separate, sealed envelopes[.]" "Your signed addendum must be received by 11:00 a.m., Eastern Standard Time, on August 2nd, 1993 .... Late responses will be governed by the 'Late Submissions, Modifications, and Withdrawals of Proposal' clause in the solicitation document." *Id.*, Exhibit 20 at 781-82.[1] The response time and date were later extended through 11:00, August 3. *Id.*, Exhibit 22 at 900.

4. The protester received forty-four numbered questions. The questions were pigeonholed into three categories—those relating to general contract terms (five questions); technical requirements (ten questions); and cost requirements (twenty-nine questions). Protest File, Exhibit 20. Those in the first category asked if the protester "will": submit a copy of various solicitation sections, as amended; provide written acknowledgement of receipt of amendments; submit specific section K certifications fully completed; provide additional information on [REDACTED]; and provide a certificate of insurance as required under section H. *Id.* at 783-86.

5. The questions in the second category focused upon sections C, J, and L of the solicitation, asking if the protester "will": [

REDACTED

]

Protest File,

Exhibit 20 at 787-93.

6. Although arising from evaluation of the cost proposal, the questions in the cost category reached into cost and technical areas of the initial proposal. A sampling of the questions is indicative of the agency's concerns. [

REDACTED

] Protest File, Exhibit 20 at 794-880.

7. By amendment eight to the solicitation issued with an effective date of July 29,

[1] The solicitation incorporates by reference Federal Acquisition Regulation (FAR) clauses 52.215-9 (Submission of Offers) (Dec. 1989) and 52.215-10 (Late Submissions, Modifications, and Withdrawals of Proposals) (Dec. 1989). Protest File, Exhibit 23 at 1000 (¶ L.1).

Digitized by Google

prior to the due date for responses to the written discussion questions, the agency noted that questions pertaining to clauses involving the Buy American Act, Trade Agreements Act and Small Business Act "have been taken under advisement and no final decision has been made on whether or not to apply an evaluation preference for, or to restrict eligibility to, domestic products." Protest File, Exhibit 22 at 900. The parties were not informed of any resolution of these questions prior to the due date for responses to written questions. *Id.*, Exhibit 3 at 23.

Protest to agency

8. On August 3, prior to the time set for receipt of responses, the agency received by facsimile from the protester an agency protest. Protest File, Exhibit 2; Transcript at 128; Answer at 5 (¶ 3). The letter states that the protester:

> is interested in participating in the referenced solicitation. The Government's clarification questions recite "requirements" of the solicitation which have not been made solicitation requirements by formal amendment (see attached for specific examples).
>
> Please (1) remove these questions or (2) restate the clarification questions to [re]move the amendments or (3) make the changes as a formal amendment and provide sufficient time to respond to that amendment IAW FAR 15.410.
>
> We are confused by the most recent amendment which implies that the Government is changing its requirements for US Made products. This change would represent a significant change, requiring us to reevaluate the products which we have proposed. Should the Government make such a change, please provide sufficient time IAW FAR 15.410.
>
> When these issues are resolved, we will promptly respond to the remaining clarification questions. Please suspend immediately the conduct of this solicitation until these matters are resolved . . . .

Protest File, Exhibit 2.

9. Only through the agency protest, as the protester's referenced attached specific examples, did the protester provide "responses" to eight of the forty-four written discussion questions. Two responses relate to the technical category of questions, six to the cost category of questions. See Findings 11-12. The protester did not submit a written response specific to any of the other thirty-six questions. Transcript at 136.

10. By letter dated August 13, to the protester, the contracting officer responded to the agency protest. Protest File, Exhibit 3. The letter provides specific determinations. Namely, the "protest based upon Amendment 7 is untimely"—any protest based upon changed requirements was known or should have been known on July 19 (the date protester picked up that amendment); ten working days hence was August 2. The response also addresses the merits of each item raised in the agency protest by the protester.

11.

[

REDACTED

]

12. The second written discussion question in the technical category, protester's response (contained in its agency protest), and the agency response to that protest are as follows:

[

REDACTED

]

Protest File, Exhibit 3 at 24-25.

13. While the actual requirements of the agency may not have changed, the agency recognized that the existing solicitation could be (and was being) interpreted in a manner inconsistent with the agency's intent. In amendment nine, issued to those in the second competitive range (not the protester) with an effective date of August 13, the agency altered the very provision addressed by the protester. Protest File, Exhibit 27 at 1032 (¶ M.3.1.6).

14. In addition to responding to the cost category of questions, the agency concluded its August 13 response to the agency protest by stating, "The Government will not remove the questions issued under written discussions dated July 19, 1993 nor relax the due date of August 3, 1993 as the deadline for submission." Moreover, "The protest is denied." Protest File, Exhibit 3 at 29.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Second competitive range determination

15. After the date and time had elapsed for receipt of responses to the written discussion questions, the agency reviewed the initial proposals, as supplemented or not by written response. The agency did not consider the "responses" in the protester's agency protest during this process because they had been submitted by facsimile, and the original was received after the closing date had elapsed. Transcript at 132-33, 135-36. The agency made a new competitive range determination. The contracting officer "had to look to see, did [each offeror] still stand a reasonable chance for award. The offerors that responded had improved theirs significantly, so that the [protester's] relative standing, you know, was a lot further down." *Id.* at 149. The determination of relative standing was made in terms of "how close were they to having a technically acceptable proposal." *Id.* The contracting officer concluded that the protester still had much to address in many areas, while others had only minor areas to address. The protester "didn't seem to understand what we were looking for in terms of satisfying the requirements." *Id.* at 150. The contracting officer testified: "I don't know that anything would have been difficult for [the protester] to have corrected. They did not choose to submit a response. So I'm not in a position to say what they could have corrected or not." *Id.* at 151. The contracting officer noted: "I'm just saying that the other offerors had made a good faith effort of responding to the Government's questions and had satisfied a lot of those questions that had—so that their proposal was nearer to being technical[ly] acceptable at that point in time and [protester]'s had remained stagnant." *Id.* at 152.

16. Although the contracting officer testified that, at the time of second competitive range determination, the protester's proposal was capable of being made acceptable, "in comparison to the other offerors, I did not feel they had a reasonable chance (of receiving the award). Their initial submission, with everyone else's initial submission, they had approximately the same reasonable chance." Transcript at 153. Price was not a discriminating factor in the second competitive range determination. *Id.* at 158.

17. The agency placed multiple offerors, but not the protester, in the second competitive range. The contemporaneous rationale notes that the protester did not respond to the agency's written discussion questions, states that the initial proposal is not acceptable, and concludes, "Therefore, [protester] can no longer be considered." Protest File, Exhibit 26 at 1020-21. This conclusion rests, in part, on the conclusions of technical evaluation team's (TET's) revised technical evaluations (conducted taking into consideration the initial proposals and written responses, if any). The TET found the protester's proposal to be technically unacceptable, because, as originally submitted, it did not meet all mandatory requirements." *Id.* at 1022.

18. The contracting officer went through the summaries of the panels and "concluded that the offerors that had responded had improved their proposals sufficiently, that the gap had widened enough that I did not feel that [protester] had a reasonable chance for award, particularly considering the time that we had left prior to making award." Transcript at 344.

19. On August 18, the protester received from the agency a letter dated August 16. Appeal File, Exhibit 30(a)(¶ 24). After stating that the protester did not provide a response to the written discussion questions, and that the protester's initial proposal did not satisfactorily meet all of the mandatory requirements, the letter concludes, "Therefore, a determination has been made that FCC is no longer within the competitive range and cannot be considered further." Protest File, Exhibit 28.

20. Amendment nine to the solicitation, with an effective date of August 13, states that the agency

> has concluded its original determination that the (Trade Agreements Act] does not apply to this procurement was correct. Further, [the agency] has determined that offered end products must comport with the requirement that they be manufactured domestically. ... Accordingly, [the agency] will not be applying the Buy American Act differential to end products determined to be foreign made.

Protest File, Exhibit 27 at 1027. Finding 13 describes another provision of amendment nine.

The Board protest

21. On August 25, the protester filed its initial protest with the Board. The stated ground of protest reads: The agency "attempted to modify solicitation requirements without formal amendment." Protest at 2.

22. On September 1, the protester amended its protest to include additional alleged agency violations: (1) Failure to give

Digitized by Google

protester timely and proper notice of its exclusion from the competitive range. (2) Improper exclusion from the competitive range because the agency had "admitted the validity of some of the Protester's [agency] protest issues. Those protest issues could affect ma[n]y of the Protester's responses to the [agency's] written discussions." (3) Improper exclusion from the competitive range because the agency "expected to amend the protested solicitation (thus resulting in changes to prior respons[e]s to written discussion) at the time" the [agency] excluded the protester. (4) Improper exclusion from the competitive range because the agency had failed to make a finding the protester's proposal was not capable of being made acceptable.

Discussion

In its protest filed with the Board, the protester initially raised a single ground: the agency attempted to modify the solicitation without formal amendment. Thereafter, by amendment, the protester raised additional grounds, contending that the agency had failed to provide the protester properly and timely with notice of its removal from the competitive range, and had improperly excluded the protester from the competition.

The agency maintains that the protest should be dismissed. On the merits, the agency contends that all bases of protest must be denied.

Agency motion to dismiss

The agency raises alternative grounds to dismiss the protest: the protest to the agency and ensuing protest to the Board were untimely; the protest and clarification fail to conform to the requirements of Rule 7(b)(2); and the amendment of the protest was filed without leave of the Board and impermissibly enlarges the grounds of protest.

Timeliness

Contrary to the assumptions of the agency, the timeliness of the agency protest is not relevant, and Rule 5(b)(3)(i), not 5(b)(3)(ii), is here applicable.

The allegation in the initial protest that the agency was improperly altering its requirements without a written amendment to the solicitation focuses on language in amendment eight which explicitly left unresolved the applicability of Buy American Act, Trade Agreement Act, and Small Business Act provisions and on eight written discussion questions. Amendment eight was issued fewer than ten days before the protester submitted its agency protest and before the agency requested a second round of proposals. The protester filed its protest with the Board within ten days of the agency denial. Thus, even under the agency's theory, that aspect of the initial protest was timely filed. Rule 5(b)(3).

The other aspect of the initial protest focuses upon the written discussion questions. Rule 5(b)(3)(i) provides that alleged improprieties which do not exist in the initial solicitation but which are subsequently incorporated therein must be protested no later than the next closing time for receipt of proposals following the incorporation. The questions were part of the discussion process; under regulation, this process did not request a modification to the initial proposals. FAR, Part 15, defines the term "modification" to mean a "modification of a proposal, including a final modification in response to the contracting officer's request for 'best and final' offers. *The term does not include normal revisions of offers made during the conduct of negotiations by offerors selected for discussions.*" 48 CFR 15.412 (1992) (emphasis added). At the time the protest was filed with the Board, the closing time for receipt of proposals had not yet passed—best and final offers were still to be submitted and ten days had not elapsed from the agency denial. Hence, the protest was filed timely with the Board, regardless of the timeliness of the underlying protest to the agency.

Alternatively, the concerns of the protester revealed in the eight questions could all have been raised (whether or not ultimately resolved) during the discussion process. To start the protest clock with the receipt of written discussion questions, as urged by the agency, would encourage protests while greatly limiting the scope and benefits of, and the possibility of resolving matters through, the discussion process. Such a position is inconsistent with the regulatory preference that matters be raised with an agency before being protested at this Board. 48 CFR 33.102(c) (1992) ("An interested party wishing to protest—(1) Is encouraged to seek resolution within the agency (see 33.103) before filing a protest with the GAO or the GSBCA.").

Rule 7(b)(2)(v)

The agency maintains that the initial protest must be dismissed for failure to comply with Rule 7(b)(2)(v) which requires a "simple, concise, and direct statement of the grounds for protest, including citations to provisions of statute, regulation, or the dele-

©1994, Commerce Clearing House, Inc.

Digitized by Google

gation of procurement authority that the protester alleges were violated." The protest incorporates by reference the underlying agency protest which notes that the agency had yet to determine applicable provisions of the solicitation and expressly references FAR 15.410 in urging the contracting officer to provide sufficient time to respond to solicitation amendments. Even if the protest could have provided more detail as to the underlying legal violations, the specific factual problems and general legal violations were sufficiently explained so that the contracting officer could respond to the agency protest. The protester complied with Rule 7(b)(2)(v).

Amended protest

The protester filed with the Board the amended protest within ten days of learning of its exclusion from the competitive range. The grounds of protest raised serve as timely filed, independent bases of protest which could have been docketed as a separate protest. No party suggested that consolidating the matters with the initial protest would be inappropriate. There exists no basis to dismiss the timely raised new issues.

Failure to issue written amendment

The protester maintains that the agency improperly attempted to modify the solicitation without a formal amendment. That is, the protester alleges that the agency sought responses to written discussion questions before it had finalized terms of the solicitation relating to product eligibility and evaluation preferences, and before it had eliminated an ambiguity in the stated requirements. The protester contends that the agency acted improperly by proceeding with the discussion process without amending the solicitation so as to accurately set forth true requirements.

The contracting officer, not an offeror or protester, is charged with controlling discussions. 48 CFR 15.610 (1992). Filing a protest with the agency is not to be equated with the suspension of the procurement process. 48 CFR 33.103 (1992). By not formally participating in the discussion process, and by filing an agency protest instead, the protester limited the benefits it (and the agency) could gain through discussions. However, as explained below, the agency had yet to finalize solicitation provisions which substantively could affect what would be offered and the ultimate responses to many of the questions. In light of the recognized need to amend the solicitation, the agency has not demonstrated the reasonableness of rigidly proceeding with discussions and requiring the protester to finalize technical and cost aspects of a proposal when the underlying items to be offered could change with future amendments to the solicitation.

Notice of the exclusion from the competitive range

The protester's allegation that the agency failed to provide the protester with timely and proper notice that it had been excluded from the competitive range rests on a sentence in the letter addressed to the protester: "Therefore, a determination has been made that FCC is no longer within the competitive range and cannot be considered further." Finding 19. Indeed, protester is not FCC. However, the protester learned of its exclusion from the competitive range and amended its protest within ten days of receiving the letter referencing FCC. The protester suffered no prejudice. To pursue the allegation regarding notification under these circumstances is frivolous.

Exclusion from the competitive range

The protester asserts that it was improperly excluded from the second competitive range.

Having concluded that the protester's initial proposal could be made acceptable without a complete rewrite, the agency included the protester in the initial competitive range. Finding 2. At the time of the second competitive range determination, the agency concluded that the unamended initial proposal was unacceptable, and therefore, excluded the protester from the competitive range.

This determination was made, despite the protester's agency protest and the agency's determinations and conclusions revealed in amendments eight and nine to the solicitation and its response to the agency protest. Amendment eight explicitly recognized that the terms of the solicitation and, hence, the underlying competition, remained incomplete. Finding 7. The agency had yet to make determinations regarding evaluation preferences and restrictions on the eligibility of products. Contending that the resolution of these matters could affect its determination of the products to be offered, the protester raised this as a basis in support of delaying responses to the written discussion questions in its agency protest. Finding 8.

In its agency protest, the protester expressed concern regarding the agency's inter-

Digitized by Google

pretation of paragraph M.3.1.6 and contended that the related written discussion question revealed changed agency requirements. Finding 12. While the actual requirement of the agency may well have remained unchanged, both the agency's response to the protest question, Finding 12, and the subsequent amendment to the solicitation, Finding 13, reflect the agency's belief that the protester's interpretation of the provision was reasonable. In short, the solicitation language at the time responses to written discussion questions were due did not accurately reflect the requirements of the agency.

The agency's actions, particularly as reflected in amendments eight and nine, demonstrate that the agency was proceeding with discussions, evaluations, and competitive range determinations while the solicitation failed to reflect its true requirements. Moreover, while so proceeding, the agency was aware that the protester was contending that its ultimate response to the solicitation would be dependent on the agency's answers to unresolved and ambiguous matters. To preclude an offeror from submitting a best and final offer, without giving that offeror the opportunity to be responsive to finalized terms of a solicitation, is inconsistent with requirements that the agency obtain competition.

With the information in the agency protest and the knowledge that the solicitation was not finalized in fundamental aspects (relating to evaluation preferences and eligibility of products, and to a provision acknowledged by the agency to be ambiguous), the contracting officer's determination that the protester lacked a reasonable chance of being selected for contract award is unwarranted. 48 CFR 15.609(b)(1992).

Decision

The Board **GRANTS** the protest. The previously entered order suspending the agency's applicable procurement authority lapses by its terms. The Board revises the procurement authority of the agency to require the agency to place the protester in the competitive range and to conduct discussions and proceed as permitted by statute and regulation. 40 U.S.C. § 759(f)(5)(B) (1988).

[¶ 26,557] HSQ Technology v. National Aeronautics and Space Administration

GSBCA No. 12543-P, October 19, 1993. Solicitation No. 1-121-5690.0665.

Protests, GSBCA—Interested Party—Direct Economic Interest.—A protest against an award under a request for proposals for hardware and software to upgrade a utility control system at a research center was dismissed because the protester's proposal did not meet the solicitation's mandatory requirements, and thus the protester was not an interested party with an economic interest in the contract award. The protester did not show that its proposal fulfilled the government's requirements for interfaces with other control system manufacturers or the requirements of the statement of work. Although the protester indicated that its proposed system would have fulfilled the government's needs, it was the government's exclusive right to determine its needs and to set forth the requirements for meeting its needs. Moreover, the protester would not have amended its proposal to fulfill the government's requirements even if the government conducted discussions.

For the protester: Canterbury, Stuber, Pratt, Elder & Gooch, Dallas, Texas, by Donald O. Pratt and Paul H. Sanderford. For the government: Sumara M. Thompson-King, Office of the General Counsel, National Aeronautics and Space Administration, Washington, D.C., and Jeremy Becker-Welts, Office of the Chief Counsel, National Aeronautics and Space Administration, Hampton, Virginia.

Before DEGRAFF, DEVINE, and BORWICK, Administrative Judges.

DEGRAFF, Administrative Judge: On May 21, 1993, the National Aeronautics and Space Administration (NASA) issued solicitation 1-121-5690.0665, which requests proposals to supply the hardware and software necessary to upgrade the utility control system (UCS) at the Langley Research Center in Hampton, Virginia. Protest File, Volume I, Exhibit A. The UCS monitors and controls the heating, ventilating, and air conditioning systems for nineteen major buildings at the research center. Transcript at 230.

©1994, Commerce Clearing House, Inc.

Digitized by Google

NASA received proposals from three vendors in response to the solicitation. Protester, HSQ Technology, Inc. (HSQ), offered the lowest price of $336,342.00. Protest File, Volume IV. The awardee, Dorsett's, Inc. (Dorsett's), offered a price of $461,069.33. Protest File, Volume II, Exhibit B. The third offeror submitted two proposals, priced at $496,545.00 and $487,545.00. Protest File, Volume II, Exhibit A-4.

HSQ filed this protest when it learned that NASA intended to award the UCS contract to Dorsett's. In its third amended complaint, HSQ alleges that 1) NASA should have performed a technical/cost trade-off analysis; 2) NASA's technical evaluator was not sufficiently experienced to evaluate HSQ's proposal properly; 3) NASA should have conducted discussions with offerors; 4) NASA provided Dorsett's with an unfair competitive advantage in both technical and cost areas; and 5) NASA did not properly conduct an analysis of Dorsett's price and so could not determine which proposal was most advantageous to the Government.

HSQ was not eligible for contract award, because HSQ did not propose to fulfill NASA's requirements. Instead, HSQ proposed to supply a system that failed to meet several mandatory requirements of NASA's statement of work. For this reason, HSQ is not entitled to pursue this protest and the protest is dismissed.

Findings of Fact

Developing The Solicitation

NASA's Technical Project Engineer (TPE) was responsible for preparing the statement of work for this solicitation. Transcript at 14. He began by collecting several statements of work from contracts entered into by other Government facilities for UCS upgrades and replacements, and he used these to prepare a draft statement of work for this procurement. The TPE provided this draft to the UCS users in order to obtain their ideas. *Id.* at 236-38.

The TPE prepared several drafts of the statement of work, obtaining input from his supervisor, an engineering contract specialist, an individual from another NASA facility, the contract specialist, and the contracting officer. Transcript at 236-38. HSQ's president testified that he recognized the statement of work as having been issued by the Army Corps of Engineers ten years ago. It is certainly possible that the Corps' statement of work resembles the statement of work prepared by the TPE, given that the TPE based his initial draft upon other Government contracts. *Id.* at 298, 307.

The contract specialist and the contracting officer reviewed the statement of work in order to ensure that competition for the procurement would not be limited and that the solicitation contained no restrictive requirements. In keeping with this goal, NASA decided to permit offerors to choose among upgrading the UCS, replacing the UCS, or partially replacing the UCS. Transcript at 96-97, 355. Because the statement of work had been prepared by the engineering division which, in the contracting officer's experience, is very adept at preparing detailed specifications, the contracting officer considered whether to issue the solicitation as an invitation for bids or as a request for proposals. The contracting officer decided to issue a request for proposals because he and the contract specialist anticipated having to negotiate software licensing requirements. *Id.* at 97, 200, 355.

After the contracting officer decided to issue a request for proposals, he had to decide which contract clauses to include in the solicitation. He discussed the possibilities with the contract specialist and they determined that, because the requirements set forth in the statement of work were very clear, a technical evaluator would simply have to compare those requirements with the contents of offerors' proposals and determine whether the requirements were met. In other words, a technical evaluator would be required to make a comparison, rather than exercise any judgment as to relative merits of proposals. Transcript at 90, 356-57.

Contents Of The Solicitation

As explained above, the contracting officer and the contract specialist believed that the requirements set forth in the statement of work were very clear. As a result, they informed offerors that NASA would evaluate proposals by using the "Simplified Evaluation Method," and directed offerors to prepare their proposals accordingly. Sections L and M of Part IV of the solicitation contain the following provisions, which explain the "Simplified Evaluation Method."

SECTION L—INSTRUCTIONS, CONDITIONS, AND NOTICES TO OFFERORS

* * * *

Digitized by Google

L.13 CONTRACT AWARD (FAR 52.215-16) (JUL 1990)—ALTERNATE III (AUG 1991)

(a) The Government will award a contract resulting from this solicitation to the responsible offeror whose offer conforming to the solicitation will be most advantageous to the Government, cost or price and other factors, specified elsewhere in this solicitation, considered.

(b) The Government may (1) reject any or all offers if such action is in the public interest, (2) accept other than the lowest offer, and (3) waive informalities and minor irregularities in offers received.

(c) The Government intends to award a contract without discussions with offerors. Therefore, each initial offer should contain the offeror's best terms from a cost or price and technical standpoint. However, the Government reserves the right to conduct discussions if later determined by the Contracting Officer to be necessary.

* * * *

L.30 PROPOSAL PREPARATION INSTRUCTIONS—SIMPLIFIED EVALUATION METHOD

In order to facilitate proposal evaluations, your proposal should include adequate details to verify that *all* requirements as defined in the RFP's specifications/Statement of Work are met. Your proposal shall include detailed information, including descriptive product literature as applicable, sufficient to unequivocally confirm that *each requirement* of the specifications/Statement of Work is completely met.

Protest File, Volume I, Exhibit A.

Section M of the solicitation reads, in its entirety:

SECTION M—EVALUATION FACTORS FOR AWARD

M.1 EVALUATION AND SELECTION—SIMPLIFIED EVALUATION METHOD

A. All proposals will be evaluated for compliance with the specifications set forth in the Statement of Work. Proposals which do not clearly meet each requirement of the specifications will be rejected. Accordingly, proposals should include adequate details to verify that all specifications are met. Proposals which do not include fixed prices cannot be considered and will be rejected.

B. The responsible offeror proposing acceptable item(s) at the lowest total aggregate price will be selected for negotiation leading to contract award.

Protest File, Volume I, Exhibit A.

The solicitation's statement of work consists of sixty-nine pages of detailed requirements for the components of the utility control system. Only a few of these requirements are important to the resolution of this protest.

In section 1.0 of the statement of work, NASA defines the scope of work as "providing all labor, parts, and materials to upgrade the Langley Research Center Utility Control System (UCS) to meet the performance and design requirements specified herein and to be fully functional." Section 1.0 also provides that all of the existing UCS's capabilities had to be preserved or improved as delineated in the statement of work. In section 1.4, NASA explains that an offeror could propose to upgrade the existing UCS, to replace the existing UCS, or to replace part of the existing UCS. Protest File, Volume I, Exhibit A.

Section 4 of the statement of work is titled, "System Description." Section 4.9 provides that the system "shall have full, transparent interfaces with at least two direct digital control system manufacturers. The interfaces shall consist of common compatible protocol and exchanged [sic] with common engineering units easily available to the operators." Protest File, Volume I, Exhibit A.

Section 11 of the statement of work is titled, "Field Equipment." Section 11.5.5.3 provides that each latching relay's "[o]perating time shall be 20 milliseconds or less, with release time of 10 milliseconds or less." Protest File, Volume I, Exhibit A.

Section 12 of the statement of work is titled, "System Equipment." Sections 12.7.1, 12.7.2, and 12.7.3 address disk storage systems. These three sections require a primary rigid disk system and an identical backup rigid disk system, each "having a maximum average seek time of 17 milliseconds," and consisting of one disk drive. Section 12.9 requires two operator's terminals, one data collection terminal, one system terminal, and one PC operator's terminal. Protest File, Volume I, Exhibit A.

Also contained in section 12 of the statement of work is section 12.11, which requires a magnetic tape system that exhibits the following characteristics:

Provide high performance $1/2$-inch streaming tape drive backup. The tape

©1994, Commerce Clearing House, Inc.

Digitized by Google

drive shall be equipped with an autoload feature that accommodates any standard size tape reel from 6 to 10-1/2 inches. The tape drive shall operate with both 6250 cpi (characters per inch) and 1600 cpi industry standard densities. Operating with 6250 cpi density, the tape unit shall be rated for a tape drive transfer rate of 751 Kilobytes. Internal buffer size shall be minimum of 512 kilobytes. Read/write speed shall be 125 ips. Minimum data capacity shall be 140 megabytes per 2,400 foot reel at 6250 cpi.

Sections 13.1 and 13.15 of the statement of work contain requirements identical to the requirements contained in sections 4.9 and 12.9 of the statement of work.

Section 14 of the statement of work requires certain command software for the UCS. Section 14.1.4.1 requires the operator's console commands to provide the means for entry of commands and for retrieving UCS information, and to perform certain tasks. Protest File, Volume I, Exhibit A.

Technical Evaluation

The TPE reviewed each proposal in order to determine whether it unequivocally confirmed that each requirement of the statement of work was met. Transcript at 53-54. The TPE determined that the Dorsett's proposal met the requirements of the statement of work, and that the third offeror's proposals did not. Protest File, Volume I, Exhibit B.

The TPE decided that HSQ's proposal did not meet the requirements of sections 4.9 or 13.1, because the proposal does not state that HSQ's system would have the specified interfaces with at least two direct digital control system manufacturers. Protest File, Volume I, Exhibit B. HSQ's proposal states, in response to section 4.9, that HSQ intended to supply a particular graphical user interface that was rapidly becoming a standard interface for computers manufactured by DEC, Sun, Hewlett-Packard, and IBM. The "Executive Summary" section of HSQ's proposal states that HSQ was proposing an "open systems environment" that was flexible enough to permit NASA to integrate other computer applications and to expand the system. *Id.*, Volume III. In its responses to NASA's discovery, HSQ stated that its proposal was not required to name any system manufacturer with which HSQ's system would interface. HSQ also stated that it has a transparent interface to Allen-Bradley PLCs, Modicon PLCs, and ASI Controls. Respondent's Supplemental Protest File, Exhibit 1.

The TPE decided that HSQ's proposal did not meet the requirements of section 11.5.5.3, because the proposal states that HSQ will provide latching relays with operating and release times of 25 milliseconds. Protest File, Volume I, Exhibit B. The statement of work required an operating time of 20 milliseconds or less and a release time of 10 milliseconds or less. Protest File, Volume I, Exhibit A. HSQ stated that this requirement cannot be met. Transcript at 306-07.

The TPE decided that HSQ's proposal did not meet the requirements of sections 12.7.1, 12.7.2, and 12.7.3, because the proposal states that HSQ will provide a disk system with eight disk drives and a maximum average seek time of 19 milliseconds. Protest File, Volume I, Exhibit B. The statement of work required a disk system with two disk drives (one for the primary system and one for the backup system) and a maximum average seek time of 17 milliseconds. *Id.*, Volume I, Exhibit A.

The TPE determined that HSQ's proposal did not meet the requirements of sections 12.9 or 13.15, because the proposal states that HSQ will provide four terminals instead of the five terminals required by the statement of work. Protest File, Volume I, Exhibits A and B. In HSQ's view, it was not necessary to supply the dedicated system terminal required by sections 12.9 and 13.15. Transcript at 158. There are two primary users of the system, and three more individuals support the users. The users required the fifth terminal because there may be times when other terminals are not available. Transcript at 230, 250-51; Respondent's Supplemental Protest File, Exhibit 4, page 2 of 7.

The TPE determined that HSQ's proposal did not meet the requirements of section 12.11, because the proposal states that HSQ will provide a cartridge type tape unit instead of the specified reel-to-reel type unit, and that HSQ's unit will not meet either the specified densities or transfer rates. Protest File, Volume I, Exhibit B. HSQ agrees. Transcript at 160, 182. HSQ also described the equipment specified by NASA as a "very expensive piece of hardware." *Id.* at 159.

Finally, the TPE determined that HSQ's proposal did not meet the requirements of section 14.1.4.1, because HSQ's proposal does not contain any response to that section. Protest File, Volume I, Exhibits A and B. The TPE is correct. *Id.*, Volume III. The

Digitized by Google

TPE testified that HSQ supplied several manuals with its proposal and that he reviewed these manuals and could not determine that they addressed section 14.1.4.1. Transcript at 71-73. HSQ's expert witness testified that he assumed that one of the manuals addressed the section. He based his opinion upon a review of the title pages of the manuals and not upon a review of the manuals themselves. *Id.* at 161-62, 183.

HSQ acknowledges that its proposal was not "fully responsive" and "did not unequivocally meet every requirement of the (statement of work]." HSQ's Post-Hearing Brief at 29-30. In its proposal, HSQ took exception to several items contained in the statement of work, and proposed several items which were different from the items required by NASA. Transcript at 300; Respondent's Supplemental Protest File, Exhibit 1. HSQ believed that the statement of work had been prepared by the Corps of Engineers and had not been edited by NASA for use in this procurement. HSQ decided, therefore, that several of the statement of work's requirements were "not part of this particular contract," were not "required for the project," and had "no application in this particular project." Transcript at 306-08. Before submitting its proposal, HSQ did not request or recommend that NASA alter any of the requirements of the statement of work and did not complain to NASA that any of the requirements were unnecessary, inappropriate, or impossible to meet. *Id.* at 360.

There is no evidence to suggest that HSQ would have ever been willing or able to submit a proposal which met all of NASA's requirements. No such evidence was elicited by HSQ, which did not call anyone associated with HSQ to testify during its case in chief. NASA called HSQ's president to testify; he stated that he believed that HSQ met the "intent" of the specifications, that HSQ was offering NASA a "superior" system, and that HSQ was offering a system that would have operated "satisfactorily." Transcript at 310-12. Although HSQ's president testified that he wished NASA had conducted discussions before award, he did not state that HSQ would have altered its proposal in order to meet NASA's requirements. *Id.* at 301-02, 309. Instead, he testified that, if HSQ had been able to discuss its proposal with NASA, HSQ would have taken the opportunity to clarify for NASA the "changes that we recommended in the specification." *Id.* at 331.

Selection of Awardee

The TPE prepared a memorandum for the contract specialist, which contained the TPE's evaluation of the offeror's technical proposals. Protest File, Volume I, Exhibit B. The contract specialist and the contracting officer recommended to counsel's office that award be made to Dorsett's because, although HSQ proposed the lowest price, HSQ's proposal took exception to some of the statement of work's requirements, and Dorsett's proposed the second-lowest price. Transcript at 86-89, 209-10; Protest File, Volume I, Exhibit C.

The contracting officer knew that he could conduct discussions with offerors, if discussions were necessary. He decided that discussions were not necessary, for the following reasons. Sections L and M of the solicitation explained that offerors were required to confirm unequivocally that they would meet the requirements of the statement of work. In addition, Sections L and M explained that a proposal which failed to contain such a confirmation would be rejected. The contracting officer knew that he had one proposal which took no exceptions to the statement of work's requirements, and two proposals which were deficient. If discussions had been held, the contracting officer would have been obligated to conduct discussions with all offerors, including Dorsett's. In the contracting officer's view, such "discussions" would have been discussions in name only because there would have been nothing to discuss with Dorsett's, given that it had supplied a technically compliant proposal. He decided that, given the nature of the deficiencies contained in the proposals of HSQ and the third offeror, any "discussions" with them would have resulted in his identifying weaknesses in their proposals and then providing solutions to cure those weaknesses. The contracting officer knew that he could waive "minor informalities" in a proposal. But, in his opinion, the deficiencies contained in HSQ's proposal did not amount to minor informalities. Instead, portions of HSQ's proposal simply failed to meet the requirements of the statement of work. Transcript at 118-25, 132-37, 364-65.

The contract was awarded to Dorsett's on August 6, 1993. NASA notified HSQ of the award that same date, and this protest followed. Protest File, Volume I, Exhibits E and G.

Discussion

Pursuant to 40 U.S.C. § 759 (1988), the Board possesses jurisdiction to consider a protest filed by an interested party in connection with a procurement. The term "interested party" is defined at 40 U.S.C. § 759(f)(9)(B) as "an actual or prospective bidder or offeror whose direct economic interest would be affected by the award of the contract or by failure to award the contract." Because an agency cannot award a contract to an offeror who does not propose to fulfill mandatory requirements of a solicitation, such an offeror lacks an economic interest in the award of a contract and is not an interested party to pursue a protest. *Integrated Systems Analysts, Inc.*, GSBCA 10750-P, 91-1 BCA ¶ 23,383, 1990 BPD ¶ 298.

It is clear that, in its proposal, HSQ did not intend to provide latching relays with the operating and release times required by NASA, a disk system with the required number of disk drives or the required seek time, the required number of terminals, or a reel-to-reel tape unit with the required densities and transfer rates. HSQ believed that it was impossible to meet the latching relay requirement. In addition, HSQ did not establish that its proposal fulfills NASA's requirements for interfaces with other direct digital control system manufacturers, or whether it fulfills the requirements of section 14.1.4.1 of the statement of work. Although HSQ believes that its proposed system would have operated well and would have fulfilled NASA's needs, it was NASA's exclusive right to determine its needs and to set forth the requirements for meeting those needs. There is no doubt that the system proposed by HSQ does not fulfill all of NASA's requirements.

NASA asserts that, when it states in a solicitation that it intends to award without discussions, an offeror who submits an imperfect proposal cannot be in line for award and so is not entitled to pursue a protest of NASA's award decision. According to NASA, the deficiencies in HSQ's proposal demonstrate that HSQ was not eligible for award and so, NASA maintains, we may not give any further consideration to this protest because HSQ is not an interested party to pursue it. NASA's Post-Hearing Brief at 34.

In order to resolve this protest, it is not necessary for us to decide whether NASA's view is correct. Here, in addition to the fact that HSQ's proposal was deficient, it became apparent at the hearing that HSQ would not have amended its proposal in order to fulfill NASA's requirements, even if NASA had conducted discussions. HSQ believes that not all of NASA's stated requirements are necessary or capable of being met and if NASA had conducted discussions, HSQ would have used that opportunity only to clarify its recommended changes to the specifications. If HSQ wished to recommend that NASA change its specifications, it should have done so before it submitted its proposal. After proposals were submitted, HSQ was eligible for award only if it was willing and able to fulfill all of NASA's mandatory requirements. HSQ has not established that, if NASA had conducted discussions, HSQ would have submitted an amended proposal which met those requirements.

HSQ is not a potential candidate for award because its proposal failed to meet several mandatory requirements contained in the statement of work. HSQ also did not establish that it was willing or able to amend its proposal in order to meet any of those requirements. Because HSQ is not a potential candidate for award, it lacks a direct economic interest in the award of the contract and it is not an interested party to maintain this protest.

Decision

The protest is **DISMISSED,** for lack of an interested party.

[¶ 26,558] Cleveland Telecommunications Corporation v. General Services Administration

GSBCA No. 12540, November 15, 1993. Contract No. GS05P92GAC0085.

Contract Disputes, Contracting Officer's Decision—Government Claims—Deduction Upheld.—Although there were no contracting officer decisions on deductions made by the government under a janitorial services contract for six months, a letter from the contracting officer to the contractor the seventh month stating that the deduction would be upheld constituted a decision on that claim. Although there were no decisions on

Digitized by Google

the first six government claims, the decision on the seventh claim gave the board jurisdiction over that claim.

Contract Disputes, Contracting Officer's Decision—Government Claims—Existence of Dispute.—Five letters sent by a contractor taking issue with an agency's proposed deductions did not constitute claims conferring jurisdiction on the board, because there was no dispute between the parties at the time the letters were sent. The letters were sent in response to the proposed deductions, and the purpose of the letters was to notify the agency that the contractor had contested the proposed deductions. None of the five letters by itself was sufficient to constitute a claim, and viewing the letters collectively, as the contractor asked the board to do, did not cure their deficiencies.

For the protester: Arter & Hadden, Cleveland, Ohio, by Carl E. Anderson. For the government: Julia C. Allen, Assistant Regional Counsel, General Services Administration, Chicago, Illinois.

Before DEGRAFF, DANIELS, and GOODMAN, Administrative Judges.

DEGRAFF, Administrative Judge: Cleveland Telecommunications Corporation (CTC) contracted with the General Services Administration (GSA) to provide a variety of services at a federal building. During the course of the contract, GSA made several deductions from CTC's monthly payments. In this appeal, CTC complains that the deductions were improper, that GSA is discriminating against CTC, and that GSA improperly suggested that the contract should be terminated. GSA filed a motion to dismiss this appeal for lack of jurisdiction. As explained below, we grant GSA's motion in part.

Findings of Fact

On December 18, 1992, GSA awarded contract GS05P92GAC0085 to CTC for janitorial and related services at the federal building in Cleveland, Ohio. The term of the contract was one year, beginning January 1, 1993, with two one-year options. In exchange for its performance, CTC was to be paid a fixed price of $19,544.53 each month. Appeal File, Exhibit 1.

GSA was supposed to inspect CTC's work and, if GSA determined that CTC's performance was unsatisfactory, GSA was entitled to make deductions to CTC's monthly payments. The contract contains clause 552.232-78, which establishes a procedure for making such deductions: No later than the tenth work day of the month following the performance period for which GSA wished to make a deduction, a GSA representative was to send CTC a written notice of the type and amount of deduction that GSA proposed to make. CTC was permitted to respond to the notice within ten work days after receipt. CTC's response was to be provided to the contracting officer and was to contain "specific reasons why any or all of the proposed deductions are not justified." No response from CTC within the ten-day period "will be interpreted to mean that the Contractor accepts the deductions proposed." If the contracting officer determined that any or all of the proposed deductions were warranted, the contracting officer was to notify CTC and adjust CTC's monthly payment accordingly. Appeal File, Exhibit 1 at I-E-2, I-G-1, I-G-2. GSA made deductions from CTC's monthly contract price, as described below.

Deductions for February 1993: On March 8, 1993, GSA sent CTC a notice proposing to deduct $327.10 from the monthly payment due for February 1993.[1] Appeal File, Exhibit 4. There is nothing in the appeal file to establish when this notice was received by CTC, although CTC does not contest that it received the notice. There is no evidence that CTC responded to the notice. GSA deducted $327.10 from the monthly payment due for February 1993. *Id.*, Exhibit 5.

Deductions for March 1993: On April 5, 1993, GSA sent CTC a notice proposing to deduct $375.92 from the monthly payment due for March 1993. Appeal File, Exhibit 6. This notice was received by CTC on April 7, 1993, and there is no evidence that CTC responded to the notice. *Id.*, Exhibit 32. GSA

[1] This notice, like the notices discussed in the following paragraphs, was addressed to CTC Technologies, Inc. The party with whom GSA has a contract is CTC, not CTC Technologies, Inc. The addresses for each company are the same and it appears that there are common personnel. Neither party has suggested that the jurisdictional issue currently presented is affected by the fact that the letters were addressed to CTC Technologies, Inc.

Digitized by Google

deducted $375.92 from the monthly payment due for March 1993. *Id.*, Exhibit 7.

Deductions for April 1993: On May 7, 1993, GSA sent CTC a notice proposing to deduct $654.38 from the monthly payment due for April 1993, due to deficiencies in general office cleaning, court space cleaning, and restroom cleaning. Appeal File, Exhibit 8. This notice was received by CTC on May 8, 1993. *Id.*, Exhibit 32. In a July 26, 1993 letter to the contracting officer, CTC asserts that it contested this deduction within the ten-day period permitted by the contract, in letters dated May 18 and 21, 1993. *Id.*, Exhibit 15. Although the May 18, 1993 letter does not refer to GSA's May 7, 1993 notice, it does mention cleaning restroom fixtures. Instead of contesting the amount deducted, CTC acknowledged that there was a "problem" and stated that it intended to remedy the problem by assigning additional personnel and by directing its staff to "focus on the problem." *Id.* In its May 21, 1993 letter, which is addressed to the contracting officer's representative with a copy to the contracting officer, CTC explains that the "problem" with the restroom fixtures was due to metal corrosion and not due to improper cleaning. CTC requested in the May 21 letter that it be credited for all deductions that had been made as a result of this item. CTC did not contest the deductions for general office cleaning and court space cleaning. *Id.*, Exhibit 18. Sometime after June 3, 1993, GSA deducted $654.38 from the monthly payment due for April 1993. *Id.*, Exhibit 9.

Deductions for May 1993: On June 3, 1993, GSA sent CTC a notice proposing to deduct $327.05 from the monthly payment due for May 1993, due to deficiencies in general office cleaning, court space cleaning, and restroom cleaning. Appeal File, Exhibit 10. This notice was received by CTC on June 7, 1993. *Id.*, Exhibit 32. On June 23, 1993, CTC sent a letter to the contracting officer which discusses the restroom fixture issue and notes that CTC expected that the remaining deficiencies would be corrected as a result of CTC's new quality control program.[2] CTC's letter requests a refund of amounts which had been deducted. *Id.*, Exhibit 18. Sometime after July 8, 1993, GSA deducted $327.05 from the monthly payment due for May 1993. *Id.*, Exhibit 11.

Deductions for June 1993: On July 6, 1993, GSA sent CTC a notice proposing to deduct $359.20 from the monthly payment due for June 1993, due to deficiencies in general office cleaning, court space cleaning, restroom cleaning, carpet spotting, and elevator cleaning. Appeal File, Exhibit 12. This notice was received by CTC on July 8, 1993. *Id.*, Exhibit 32. On July 22, 1993, CTC responded to GSA's July 6, 1993 notice by sending a letter to the contracting officer's representative with a copy to the contracting officer. CTC stated it was "in total disagreement with the deductions" proposed in GSA's notice and requested payment for all past deductions. *Id.*, Exhibit 16 (first letter).[3] Sometime after July 22, 1993, GSA deducted $359.20 from the monthly payment due for June 1993. *Id.*, Exhibit 13.

Deductions for July 1993: On August 12, 1993, GSA sent CTC a notice proposing to deduct $1,891.93 from the monthly payment due for July 1993, due to eight deficiencies, including unsatisfactory restroom cleaning. There is a memorandum to the file that states that this notice was hand delivered to CTC's site supervisor on August 13, 1993. Appeal File, Exhibit 14. It was also received by CTC at its offices on August 17, 1993. *Id.*, Exhibit 32. On August 19, 1993, CTC sent a response to the notice to the contracting officer, suggesting that no deduction should be made because the August 12, 1993 notice was not timely. CTC's response also discusses the restroom fixture issue and asserts that the cause of the problem is not deficient cleaning. CTC did not contest the deductions for the other seven deficiencies. *Id.*, Exhibit 33. On September 30, 1993, the contracting officer informed CTC that, in her view, the notice was timely and the proposed deduction was being "upheld." *Id.*, Exhibit 34. GSA states that it has made this deduction. Respondent's Supplemental Motion to Dismiss at 1 n.1.

CTC filed its notice of appeal with the Board on August 17, 1993. The notice contains seven numbered paragraphs which CTC has labeled "Issues." In Issues One, Two, and Seven, CTC alleges that GSA assessed unwarranted deductions, failed to no-

[2] This letter was sent on CTC Technologies, Inc. letterhead. As we state in the preceding footnote, neither party has suggested that this affects the resolution of the motion to dismiss.

[3] Exhibit 16 contains two letters dated July 22, 1993. When referring to this exhibit, we will identify which of the two letters supports our factual finding. Both letters are written on CTC Technologies, Inc. letterhead.

Digitized by Google

tify CTC of deductions within the time permitted by the contract, failed to respond to CTC's letters protesting the deductions, and conducted inspections that were inconsistent with the contract's requirements. In Issues Three, Four, and Six, CTC alleges that GSA is discriminating against CTC due to CTC's business practices and due to CTC's status as an 8(a) contractor. In Issue Five, CTC alleges that GSA improperly considered terminating CTC's right to perform this contract.

GSA's contracting officer states that she has never received a claim from CTC and has never issued a decision upon any matter raised in CTC's notice of appeal to the Board. Appeal File, Exhibit 20. The contract defines a "claim" as a "written demand or written assertion by one of the contracting parties seeking, as a matter of right, the payment of money in a certain sum, the adjustment or interpretation of contract terms, or other relief arising under or relating to this contract." The contract provides that a demand for payment which is not in dispute when it is submitted to the contracting officer does not amount to a claim. The contract also explains that a claim by the Government against the contractor "shall be subject to a written decision by the Contracting Officer." *Id.*, Exhibit 1 at II-1-23.

GSA filed a motion to dismiss this appeal for lack of jurisdiction. GSA asserts that CTC never submitted a claim to the contracting officer and that the contracting officer never issued a decision concerning the issues raised in CTC's notice of appeal. GSA also contends that the deductions do not constitute government claims and have not been the subject of a decision by the contracting officer because the contracting officer never sent CTC a written notice which described GSA's claim, referred to pertinent contract terms, contained a statement of facts and a statement of the decision, and informed CTC of its appeal rights. GSA alleges that the contracting officer never issued a written decision addressing any of the deductions that it made to CTC's monthly payments, even though contract clause 552-232-78 provides a deduction could be made after the contracting officer made a "final decision" concerning the deduction and provided a notice to CTC.

In response to GSA's motion, CTC identifies five letters from CTC to GSA which, according to CTC, constitute a claim. Four of the letters—dated May 21, June 23, July 22, and July 26, 1993—are discussed above. The fifth letter is also dated July 22, 1993. The letter, which was sent to the contracting officer, sets out a number of questions that suggest that CTC had several complaints about GSA. *Id.*, Exhibit 16 (second letter). According to CTC, these five letters establish "CTC's intent to obtain relief from the proposed deductions and to have the contracting officer render a final decision on the matter." Appellant's Response at 6. CTC asserts that the amounts deducted were in dispute and that its letters requested a sum certain, explained the basis for CTC's request, and made it clear that CTC wanted a decision from the contracting officer. CTC contends that the lack of a written response from the contracting officer constitutes a deemed denial of CTC's claim. CTC does not contend that the contracting officer ever issued a written decision concerning a government claim.

Discussion

In their briefs, the parties recognize that our jurisdiction is defined by the Contract Disputes Act, 41 U.S.C. §§601-613 (1988). The statute provides us with jurisdiction to entertain this appeal provided that one of the parties has asserted a claim and provided that the contracting officer has issued a decision upon that claim. 41 U.S.C. §607. A contracting officer's decision upon a contractor's claim can be either written or, in some circumstances, implied. 41 U.S.C. §605(a), (c)(5). A contracting officer's decision upon a Government claim must be written. 41 U.S.C. §605(a).

In order to analyze GSA's motion to dismiss, we must determine what issues CTC wishes to present to us for decision, and whether these issues have been the subject of a claim and a contracting officer's decision. The issues stated in CTC's notice of appeal fall into three categories: 1. Deduction issue: CTC alleges that GSA assessed unwarranted deductions, failed to notify CTC of deductions within the time permitted by the contract, failed to respond to CTC's letters protesting the deductions, and conducted inspections that were inconsistent with the contract's requirements. 2. Discrimination issue: CTC alleges that GSA is discriminating against CTC due to CTC's business practices and due to its status as an 8(a) contractor. 3. Termination issue: CTC alleges that GSA considered terminating CTC's right to perform this contract.

Deduction Issue

Government Claims

Deductions to fixed price contracts constitute government claims. *Placeway Construction Corp. v. United States*, 920 F.2d 903 (Fed. Cir. 1990); *Kleen Master, Inc.*, GSBCA 7657, 89-2 BCA ¶ 21,880. Therefore, we may entertain so much of this appeal as concerns deductions, if the contracting officer issued a written decision concerning these Government claims.

There is no evidence that the contracting officer issued a written decision concerning GSA's claim for deductions for February through June, 1993. Perhaps the contracting officer should have issued a written decision before GSA made its deductions. The fact is, however, that no written decision was issued, and it is this fact that determines the jurisdictional issue. In the absence of a contracting officer's written decision upon these Government claims, we lack jurisdiction.[4]

There is a letter from the contracting officer to CTC concerning the deduction for July 1993. In the letter, the contracting officer states that she has determined that the deduction will be "upheld." GSA states in its motion to dismiss that it has made the deduction. The contracting officer's letter constitutes a decision upon GSA's claim for the July 1993 deduction and it is immaterial that the letter does not notify CTC of its appeal rights. *Placeway Construction Corp.*, 902 F.2d at 907. We possess jurisdiction to entertain an appeal concerning the July 1993 deduction because the deduction constitutes a government claim and the contracting officer has issued a decision concerning that claim. GSA's motion to dismiss is denied, insofar as the deduction for July 1993 is concerned.

Contractor Claims

Even though the February through June 1993 deductions are government claims, CTC could have submitted its own claims concerning the deductions and could have filed an appeal after the contracting officer issued a decision concerning those claims. In its response to GSA's motion to dismiss, CTC contends that it did indeed submit a claim or claims to GSA.

There is no evidence that CTC ever responded to GSA's notice of proposed deductions for February and March 1993, much less any evidence that CTC ever submitted a claim to the contracting officer concerning these deductions. For this reason, we lack jurisdiction to entertain an appeal concerning the deductions for February and March 1993. GSA's motion to dismiss is granted in so far as the deductions for February and March 1993 are concerned.

We also lack jurisdiction to consider an appeal concerning the deductions for April, May, and June 1993. CTC's May 21, June 23, and July 22, 1993 letters take issue with GSA's proposed deductions for April, May, and June 1993, respectively. But, it appears that CTC's letters were sent to GSA in response to GSA's notice of proposed deductions and the purpose of the letters was to notify GSA that CTC contested the proposed deductions. There was no dispute between the parties at the time CTC sent the May 21, June 23, and July 22, 1993 letters to GSA, therefore these letters do not constitute claims and we lack jurisdiction to entertain an appeal concerning the April, May, or June 1993 deductions. GSA's motion to dismiss is granted in so far as the deductions for April, May, and June 1993 are concerned.

We reject CTC's argument that its claim consists of a combination of five letters that it sent to GSA. We discuss the May 21, June 23, and one of the July 22, 1993 letters above and explain why they do not constitute claims. The July 26, 1993 letter contains absolutely no demand or request for anything. It simply notifies GSA that, in CTC's view, CTC responded to GSA's notices of deduction within the time permitted by the contract. Although the second July 22, 1993 letter contains several complaints concerning GSA, the letter consists of a series of questions and concludes by stating that CTC intends to "file a brief with the GSA Board of Contract Appeals, the Inspector General, and the General Accounting Office . . . ." The letter does not make any demand or request for relief, and does not seek the payment of money in a sum certain or the adjustment or interpretation of contract terms. None of these five letters by itself is sufficient to

[4] CTC has not requested that we suspend proceedings until the contracting officer issues a decision upon these claims. Even if it had made such a request, we would not have suspended proceedings. Jurisdiction is determined by the facts as they exist at the time the appeal was filed and, at that time, there was no contracting officer's decision. *Keene Corp. v. United States* [38 CCF ¶ 76,523], 113 S. Ct. 2035, 2040 (1993). The Contract Disputes Act provides a narrow exception to this general rule when it permits us to stay proceedings if a contracting officer has failed to issue a written decision within the time permitted for consideration of contractor claims. 41 U.S.C. § 605(c)(5). This exception does not apply to government claims.

Digitized by Google

constitute a claim, and viewing the letters collectively, as CTC suggests we do, does not cure their deficiencies.

Discrimination and Termination Issues

CTC never presented a claim to the contracting officer concerning either the discrimination or the termination issue.[5] We have examined the five letters that CTC identifies as containing its claim. None of those letters contains a demand for the payment of money in a certain sum, the adjustment or interpretation of contract terms, or other relief arising under or relating to the contract, concerning either the discrimination or the termination issue. Therefore, we lack jurisdiction to consider these issues. GSA's motion to dismiss is granted insofar as the discrimination and termination issues are concerned.

Decision

We possess jurisdiction to entertain an appeal from the contracting officer's decision concerning the July 1993 deduction. We lack jurisdiction to consider any of the remaining issues that CTC wishes to present in this appeal. The appeal is **DISMISSED IN PART FOR LACK OF JURISDICTION.**

[¶ 26,559] Integrated Systems Group, Inc. v. Department of Commerce

GSBCA No. 12532-C(12420-P), October 28, 1993.

Protests, GSBCA—Costs of Protest and Attorney Fees—Employee Wages.—Although the government agreed to an award of the costs of the protest and attorney fees, the board declined to pay a portion of the award, because the costs of corporate employees were included in the agreed award, and case law precludes an award of costs incurred by corporate employees working on a protest. The contractor was a prevailing party in a protest in which the government was found to have violated a statute, regulation, or the conditions of a delegation of procurement authority.

For the protester: Skolnick & Leishman, P.C., Derwood, Maryland, by Shelton H. Skolnick, Judy D. Leishman, and Amy M. Hall. For the government: Jerry A. Walz and Kenneth A. Lechter, Office of the Assistant General Counsel for Finance and Litigation, Department of Commerce, Washington, D.C.

Before GOODMAN, WILLIAMS, and DEGRAFF, Administrative Judges.

GOODMAN, Administrative Judge: This protest was filed by Integrated Systems Group, Inc. (ISG or protester) on May 7, 1993, alleging that respondent, the Department of Commerce (Commerce or respondent), improperly rejected ISG's bid for computer equipment to be supplied to the National Climatic Data Center, Asheville, North Carolina. After a hearing on the merits, we granted the protest in a decision dated July 16, 1993. *Integrated Systems Group, Inc. v. Department of Commerce,* GSBCA 12420-P, 93-3 BCA ¶ 26,198 1993 BPD ¶ 215 (July 16, 1993).

Under Board Rule 35[1] and 40 U.S.C. § 759(f)(5)(C)(1988), the Board may award protest costs, including reasonable attorney fees, to an "appropriate interested party" when an agency has violated a statute, regulation, or the conditions of a delegation of procurement authority. An appropriate interested party has been defined as a "prevailing party" or "one that has succeeded on any significant issue in the litigation that achieves some of the benefit it sought in bringing suit." *Bedford Computer Corp.,* GSBCA 9837-C(9742-P), 89-2 BCA ¶ 21,827, at 109,811, 1989 BPD ¶ 121, at 3. ISG is an appropriate interested party entitled to recover its costs pursuant to Rule 35 and 40 U.S.C. § 759(f)(5)(C) (1988).

On August 9, 1993, protester filed its motion for payment of protest costs pursuant to Rule 35 in the amount of $3,260.25. This amount represents $2,475 for outside attorney fees, $297.25 for the cost of the transcript of the hearing on the merits, $120 for a corporate employee to review the protest,

[5] In its response to GSA's motion to dismiss, CTC does not assert that it presented claims concerning these issues. Even so, we have an obligation to examine the facts in order to determine whether jurisdiction exists.

[1] 48 CFR 6101.35 (1992).

©1994, Commerce Clearing House, Inc.

Digitized by Google

consult with counsel, and testify at the hearing (six hours at $20 per hour), and $368 for a corporate officer to file the protest, consult with counsel, and prepare the motion for costs (4.6 hours at $80 per hour).

On October 20, 1993, protester and respondent filed a joint Request for Stipulated Judgment which reads as follows:

> The Department of Commerce ("Respondent") has agreed to pay $3,140.65 to Integrated Systems Group, Inc. ("Protester") for the Protester's protest costs in the above-captioned protest.
>
> Accordingly, both the Respondent and Protester request the Board to enter a judgment in favor of the Protester for the amount of $3,140.65.

Thus, respondent has agreed to an award of costs of $3,140.65, which is $119.60 less than originally sought by ISG. While respondent has agreed to pay this amount, the full Board decision in *Sterling Federal Systems, Inc. v. National Aeronautics and Space Administration*, GSBCA 10000-C(9835-P), 92-3 BCA ¶ 25,118, 1992 BPD ¶ 141, precludes any award of costs incurred for corporate employees to work on a protest. *See also, Integrated Systems Group, Inc. v. Department of the Navy*, GSBCA 12236-C(12127-P), 93-2 BCA ¶ 25,718, 1993 BPD ¶ 25. We have independently examined the documentation filed by ISG in support of its motion and otherwise find its request for costs reasonable. Accordingly, we award $2,475 for outside attorney fees and $297.25 for the cost of the transcript, for a total of $2,772.25.

Decision

Protester's motion is **GRANTED IN PART.** Protester is awarded $2,772.25 to be paid, without interest, in accordance with statute, 31 U.S.C. § 1304 (1988). 40 U.S.C. § 759(f)(5)(C)(1988).

[¶ 26,560] EG&G Florida, Inc. v. National Aeronautics and Space Administration

GSBCA No. 12318-C(12204-P), November 5, 1993.

Protests, GSBCA—Costs of Protest and Attorney Fees—Stipulation Agreement.—In response to a joint stipulation, a protester was awarded attorney fees and costs because the record clearly demonstrated that the protester prevailed. As a result of the protest, the proposed award to another offeror was canceled and another round of offers was received and evaluated. The government conceded that it had violated the law and that the fees and costs were compensable.

Protests, GSBCA—Costs of Bid and Proposal Preparation—Stipulation Agreement.—Proposal preparation costs were awarded in response to a stipulation because the government conceded that wasted effort was incurred by the protester and that the wasted effort was a direct result of the government's violation of the law. The government conceded that it failed to evaluate the offerors' proposals in accordance with regulations, and the record demonstrated that the protester prevailed inasmuch as the proposed award to another offeror was canceled and another round of offers was received and evaluated. The board examined the detailed expenses and found them to be both reasonable and appropriately documented.

For the protester: Wiley, Rein & Fielding, Washington, D.C., by Rand L. Allen, Paul F. Khoury, Mitchell R. Kreindler, and John F. Guyot. For the government: David P. Forbes, Sumara M. Thompson-King, and Robert M. Stephens, Office of the General Counsel, National Aeronautics and Space Administration Headquarters, Washington, D.C., and Dudley R. Cannon, Jr., and Douglas G. Hendriksen, National Aeronautics and Space Administration, Kennedy Space Center, Florida.

Before HENDLEY, DANIELS, and VERGILIO, Administrative Judges.

HENDLEY, Administrative Judge: The protester seeks to recover its costs of filing and successfully pursuing its protest before this Board. Under 40 U.S.C. § § 759(f)(5)(B), (C) (1988), when this Board determines that a challenged agency action violates a statute or regulation or the conditions of any delegation of procurement authority, ... it may ... further declare an appropriate interested party to be

Digitized by Google

entitled to the costs of—(i) filing and pursuing the protest, including reasonable attorney's fees, and (ii) bid and proposal preparation.

This statute authorizes the Board to award costs and exercise discretion to determine both if a party is "appropriate" and entitled to payment of costs from the permanent indefinite judgment fund, and if the amount requested is "reasonable."

On December 2, 1992, the Board docketed a protest filed by EG&G Florida, Inc., contending that the respondent, the National Aeronautics and Space Administration (NASA), had improperly selected Lockheed Space Operations Company, an intervenor in the protest, for award of a contract for automatic data processing services. That protest was followed by protests filed by Bamsi, Inc. on December 3 and Westinghouse KSC Company, Inc. on December 4. Each protester intervened in the other protests. The protests were consolidated for further proceedings before this Board. The respondent's delegation of procurement authority was suspended on December 10.

In our order on proceedings of December 4, we set forth a schedule for resolving the protests. However, shortly before the originally scheduled hearing date, the parties sought a postponement of the hearing and informed the Board that they were in the process of settling the cases. We rescheduled the hearing, and a settlement ensued.

On January 26, 1993, the parties filed a "joint stipulation of dismissal without prejudice" in each protest. The requested dismissals were to become dismissals "with prejudice 10 working days after debriefings following the announcement of a selection of an awardee based on the evaluation of best and final offers ('BAFOS') submitted in accordance with the revised BOC [Base Operations Contract] request for Proposals ('RFP')." Accordingly, on January 28, 1993, the Board dismissed without prejudice EG&G's protest pursuant to EG&G's and the respondent's signed joint stipulation of dismissal without prejudice, with attached settlement agreement. *EG&G Florida, Inc. v.* National Aeronautics and Space Administration, GSBCA 12204-P, et. al, 1993 BPD ¶ 28 (Jan. 28, 1993).

Under the terms of the motion to dismiss, which we expressly declined to make a part of our order of dismissal, we note that the respondent was obliged to engage in another round of BAFOs, that the protesters, for the purposes of the agreement, are deemed prevailing parties in these protests, and that the respondent agrees that the protesters' "attorneys' fees and partial bid and proposal costs in a sum not to exceed $1.2 million for each protester may be recoverable under these protests."

In particular, the parties agreed that:

> 11. NASA acknowledges that it failed to evaluate the offerors' proposals in accordance with NASA FAR Supplement 18-15.613-71(b)(5). NASA agrees that for the purposes of recovering protest costs, including any reasonable attorneys' fees and disbursements, protesters shall be deemed to have prevailed on the merits of this proceeding under 40 U.S.C. sect. 759(f)(5)(C). In compromise of the protesters' claims for protest costs and full bid and proposal costs, and in consideration of the foregoing provisions and the implementation of the revisions and actions specified herein, the parties agree that attorneys' fees and partial bid and proposal costs in a sum not to exceed $1.2 million for each protester may be recoverable under these protests. Protestors shall follow the procedures of Rules 35 and 36 of the Board's Rules of Procedure in seeking recovery of these costs.

The record clearly demonstrates that the protester prevailed in its protest. The proposed award to another offeror was canceled and another round of offers received and evaluated. On February 28, 1993, EG&G filed a motion for award of its costs of filing and successfully pursuing its protest, which was docketed as GSBCA 12318-C(12204-P). That motion was further supplemented on April 12, 1993. On May 12, 1993, the respondent responded to the protester's motion, conceding that $357,444.16 in protest costs and $649,179.11 in proposal preparation costs were compensable under 40 U.S.C. § 759(f)(5)(C). These costs total $1,006,623.27. In its response, the respondent further stated:

> Although NASA believes that EG&G's estimation of wasted costs related to SB/SDB/WOB plans is on the high side, NASA acknowledges that costs were wasted related to the development of EG&G's SB/SDB/WOB plans. NASA also acknowledges that EG&G has provided a reasonable approach to quantify waste related to both the ODC and SB/SDB/WOB issues. It has provided an estimate based on a proportion of its proposal preparation effort that was wasted. After reviewing the documentation provided by the company in support of its

©1994, Commerce Clearing House, Inc.

Digitized by Google

petition, the Agency also believes that the company has adequately established a nexus between the procurement violation and the wasted effort to the and (sic)[1] claimed in its Supplemental submission.

From the above, we conclude that the respondent clearly has conceded that wasted effort was incurred by the protester, and that this was a direct result of respondent's violation of law. In light of the fact that the respondent canceled the proposed award to another, it had no motive in agreeing to the amount of the costs of the protester's wasted effort. There can be no suspicion of "Fed Mail" in its agreement involving the protester's costs of wasted effort. We therefore conclude that the amounts involved are reimbursable.

We consider *Communications Technology Applications, Inc.*, GSBCA 10172-C(9978-P), 90-3 BCA ¶ 23,261, 1990 BPD ¶ 207, cited by the dissent, to be inapposite. In that case the Board had already found in our prior decision on the merits of the protest the facts necessary to reach a decision as to entitlement. In the instant case, we did not decide the merits of the original protest. In addition, in the instant case, further litigation would not adduce any evidence inconsistent with the result reached by the parties in their agreement because the parties agree as to all evidence which might be pertinent.

Although NASA, in its response, moved that we award those costs[2], it further stated that "NASA recognizes a need for an audit of these costs, as to their incurrence, accounting and previous or pending Government reimbursements."

In light of the respondent's reservation of an audit, we contacted the parties and suggested that issue be clarified. We noted that the parties do not appear to differ on the amounts due the successful protester. On October 25, 1993, we received a letter from respondent's counsel which states that:

> NASA, therefore, again moves the Board to award to EG&G protest costs of $357,444.16[3] and proposal preparation costs of $649,179.11 based on the documented costs presented in its cost petition, as amended.
>
> We have examined the detailed expenses and find them to be both reasonable and appropriately documented.

Decision

The protester's motion for attorney's fees and other costs associated with the pursuit of this protest together with a portion of the cost of the preparation of its proposal is **GRANTED.** The protester is awarded $1,006,623.27 as costs incurred in pursuing this protest and preparing its proposal. This award is to be paid, without interest, from the permanent indefinite judgment fund, 31 U.S.C. § 1304 (1988); 40 U.S.C. § 759(f)(5)(C) (1988).

Vergilio, Board Judge, dissenting in part.

I respectfully dissent from the conclusion of the majority that the protester is entitled to recover proposal preparation costs. The record in this case and the prior case law at this Board dictate a denial of the requested proposal preparation costs. To me, the record does not demonstrate that the changes to the solicitation were made because the existing clauses were improper or that efforts and expenses were wasted as a result of the underlying agency-acknowledged misevaluations and violations.

Previously, the Board has denied a motion for the award of proposal preparation costs, stating:

> Although the respondent made substantive changes in the solicitation requirements, none of the subsequent amendments to the solicitation followed from the protest or were required by our decision. In fact, and more to the point, the protester had not protested any of the terms of the original solicitation. Consequently, our decision never dealt with the propriety of any of the solicitation terms. Our decision dealt solely with the actions taken by the respondent in evaluating and awarding the contract. The protester has not and can not point out any change in

[1] We believe the word "and" should be "amount". This belief was confirmed by respondent's counsel.

[2] In the conclusion of its motion, the respondent cited protest costs in the amount of $337,552.45 rather than the $357,444.16 it had moved that we grant. Inasmuch as $337,552.45 was the amount in the original motion and the supplemental motion added an additional $19,891.71 for a total of $357,444.16, we conclude that the respondent had simply misstated the intended figure. The respondent noted the correction in its October 25, 1993 filing and we have used the correct figures in the body of our decision.

[3] The respondent acknowledged that its May 12, 1993 filing contained an arithmetic error which was recognized and corrected in its October 25th filing.

Digitized by Google

the solicitation requirements that resulted from our decision. It can not do so for the simple reason that neither the protest nor our decision dealt with the propriety of the terms of the solicitation.

Communications Technology Applications, Inc., GSBCA 10172-C (9978-P), 90-3 BCA ¶ 23,261 at 116,700, 1990 BPD ¶ 207 at 5. The Board noted that it has "declined to award proposal costs to successful protesters because the agency lawfully changed its requirements." *Id.*

The majority in the present case recites its analysis thusly:

From the above, we conclude that the respondent clearly has conceded that wasted effort was incurred by the protester, and that this was a direct result of respondent's violation of law. In light of the fact that the respondent canceled the proposed award to another, it had no motive in agreeing to the amount of the costs of the protester's wasted effort. There can be no suspicion of "Fed Mail" in its agreement involving the protester's costs of wasted effort. We therefore conclude that the amounts involved are reimbursable.

Majority opinion at 3.

The changes to the terms of the solicitation described in the protester's justification of its request[4] do not demonstrate to me that the costs were incurred because of agency violations and represent wasted effort. As noted in *Communications Technology*, an agency may legitimately alter its requirements during the course of a procurement. Every amendment does not entitle an offeror to recover some of its proposal preparation costs through the protest process at this Board. While an agency may choose to not object to the payment (through non-reimbursed funds) of the proposal preparation costs of potential contractors, the lack of objection cannot serve as the touchstone of this Board's determinations. The Brooks Act should not be read as legitimizing a wholesale shift in the costs of doing business with the Government.

[¶ 26,561] Westinghouse KSC Co., Inc. v. National Aeronautics and Space Administration

GSBCA No. 12317-C(12208-P), November 5, 1993.

Protests, GSBCA—Costs of Protest and Attorney Fees—Stipulation Agreement.—In response to a joint stipulation, a protester was awarded attorney fees and costs because the record clearly demonstrated that the protester had prevailed. As a result of the protest, the proposed award to another offeror was canceled and another round of offers was received and evaluated. The government conceded that it had violated the law and that the fees and costs were compensable.

Protests, GSBCA—Costs of Bid and Proposal Preparation—Stipulation Agreement.—Proposal preparation costs were awarded in response to a stipulation because the government conceded that wasted effort was incurred by the protester and that the wasted effort was a direct result of the government's violation of the law. The government conceded that it failed to evaluate the offerors' proposals in accordance with regulations, and the record demonstrated that the protester prevailed inasmuch as the proposed award to another offeror was canceled and another round of offers was received and evaluated. The board examined the detailed expenses and found them to be both reasonable and appropriately documented.

For the protester: Dunnells, Duvall & Porter, Washington, D.C., by Richard O. Duvall, Timothy J. Bloomfield, Richard L. Moorhouse, William J. Dempster, Michael H. Ditton, and Giannina Lynn. For the government: David P. Forbes, Sumara M. Thompson-King, and Robert M. Stephens, Office of the General Counsel, National Aeronautics and Space Administration Headquarters, Washington, D.C., and Dudley R. Cannon, Jr., and Douglas G. Hendriksen, National Aeronautics and Space Administration, Kennedy Space Center, Florida.

Before HENDLEY, DANIELS, and VERGILIO, Administrative Judges.

HENDLEY, Administrative Judge: The protester seeks to recover its costs of filing and successfully pursuing its protest before this Board. Under 40 U.S.C. §§ 759(f)(5)(B), (C) (1988), when this Board

> determines that a challenged agency action violates a statute or regulation or the conditions of any delegation of procurement authority, ... it may ... further declare an appropriate interested party to be entitled to the costs of—(i) filing and pursuing the protest, including reasonable attorney's fees, and (ii) bid and proposal preparation.

This statute authorizes the Board to award costs and exercise discretion to determine both if a party is "appropriate" and entitled to payment of costs from the permanent indefinite judgment fund, and if the amount requested is "reasonable."

On December 2, 1992, the Board docketed a protest filed by EG&G Florida, Inc., contending that the respondent, the National Aeronautics and Space Administration (NASA), had improperly selected Lockheed Space Operations Company, an intervenor in the protest, for award of a contract for automatic data processing services. That protest was followed by protests filed by Bamsi, Inc. on December 3 and Westinghouse KSC Company, Inc. on December 4. Each protester intervened in the other protests. The protests were consolidated for further proceedings before this Board. The respondent's delegation of procurement authority was suspended on December 10.

In our order on proceedings of December 4, we set forth a schedule for resolving the protests. However, shortly before the originally scheduled hearing date, the parties sought a postponement of the hearing and informed the Board that they were in the process of settling the cases. We rescheduled the hearing, and a settlement ensued.

On January 26, 1993, the parties filed a "joint stipulation of dismissal without prejudice" in each protest. The requested dismissals were to become dismissals "with prejudice 10 working days after debriefings following the announcement of a selection of an awardee based on the evaluation of best and final offers ('BAFOS') submitted in accordance with the revised BOC [Base Operations Contract] request for Proposals ('RFP')." Accordingly, on January 28, 1993, the Board dismissed without prejudice Westinghouse's protest pursuant to Westinghouse's and the respondent's signed joint stipulation of dismissal without prejudice, with attached settlement agreement. *EG&G Florida, Inc. v. National Aeronautics and Space Administration*, GSBCA 12204-P, et. al, 1993 BPD ¶ 28 (Jan. 28, 1993).

Under the terms of the motion to dismiss, which we expressly declined to make a part of our order of dismissal, we note that the respondent was obliged to engage in another round of BAFOs, that the protesters, for the purposes of the agreement, are deemed prevailing parties in these protests, and that the respondent agrees that the protesters' "attorneys' fees and partial bid and proposal costs in a sum not to exceed $1.2 million for each protester may be recoverable under these protests."

In particular, the parties agreed that:

> 11. NASA acknowledges that it failed to evaluate the offerors' proposals in accordance with NASA FAR Supplement 18-15.613-71(b)(5). NASA agrees that for the purposes of recovering protest costs, including any reasonable attorneys' fees and disbursements, protesters shall be deemed to have prevailed on the merits of this proceeding under 40 U.S.C. sect. 759(f)(5)(C). In compromise of the protesters' claims for protest costs and full bid and proposal costs, and in consideration of the foregoing provisions and the implementation of the revisions and actions specified herein, the parties agree that attorneys' fees and partial bid and proposal costs in a sum not to exceed $1.2 million for each protester may be recoverable under these protests. Protestors shall follow the procedures of Rules 35 and 36 of the Board's Rules of Procedure in seeking recovery of these costs.

The record clearly demonstrates that the protester prevailed in its protest. The proposed award to another offeror was canceled and another round of offers received and evaluated. On February 26, 1993, Westinghouse filed a motion for award of its costs of filing and successfully pursuing its protest, which was docketed as GSBCA 12317-C(12208-P). This motion and its corresponding exhibits were stamped on each page with the protective seal. On March 11, 1993, Westinghouse, in response to this Board's directions, filed a substitute motion for the award of protest costs and proposal preparation costs, in which it withdrew the protective seal from every page of the motion except for those limited portions of the motions and exhibits containing Westing-

Digitized by Google

house proprietary information. That motion was supplemented on March 12, 1993 and again on April 15, 1993.[1] On March 25, 1993, the respondent responded to the protester's motion, conceding that $257,164.15 in protest costs and $942,835.85 in proposal preparation costs were compensable under 40 U.S.C. § 759(f)(5)(C). These costs total $1,200,000.00.

In its response, the respondent further stated:

> Westinghouse has provided an estimate on a category-by-category basis of the proportion of its proposal preparation effort that was wasted. (Exhibits 1 and 5). After review of documentation provided by the company in support of its petition, the Agency also believes that the company has adequately established a nexus between the procurement violation and the wasted effort to the ceiling established in the Joint Stipulation.

From the above, we conclude that the respondent clearly has conceded that wasted effort was incurred by the protester, and that this was a direct result of respondent's violation of law. In light of the fact that the respondent canceled the proposed award to another, it had no motive in agreeing to the amount of the costs of the protester's wasted effort. There can be no suspicion of "Fed Mail" in its agreement involving the protester's costs of wasted effort. We therefore conclude that the amounts involved are reimbursable.

We consider *Communications Technology Applications, Inc.*, GSBCA 10172-C(9978-P), 90-3 BCA ¶ 23,261, 1990 BPD ¶ 207, cited by the dissent, to be inapposite. In that case the Board had already found in our prior decision on the merits of the protest the facts necessary to reach a decision as to entitlement. In the instant case, we did not decide the merits of the original protest. In addition, in the instant case, further litigation would not adduce any evidence inconsistent with the result reached by the parties in their agreement because the parties agree as to all evidence which might be pertinent.

Although NASA, in its response, moved that we award those costs, it further stated that "NASA recognizes a need for an audit of these costs, as to their incurrence, accounting and previous or pending Government reimbursements."

In light of the respondent's reservation of the right to audit the amounts, we contacted the parties and suggested that issue be clarified. We noted that the parties do not appear to differ on the amounts due the successful protester. On October 25, 1993, we received a letter from respondent's counsel which states that:

> NASA, therefore, again moves the Board to award protest costs of $257,164.15 and proposal preparation costs of $942,835.85 to Westinghouse based on the documented costs presented in its cost petition.
>
> We have examined the detailed expenses and find them to be both reasonable and appropriately documented.

Decision

The protester's motion for attorney's fees and other costs associated with the pursuit of this protest together with a portion of the cost of the preparation of its proposal is **GRANTED.** The protester is awarded $1,200,000.00 as costs incurred in pursuing this protest and preparing its proposal. This award is to be paid, without interest, from the permanent indefinite judgment fund, 31 U.S.C. § 1304 (1988); 40 U.S.C. § 759(f)(5)(C) (1988).

Vergilio, Board Judge, dissenting in part.

I respectfully dissent from the conclusion of the majority that the protester is entitled to recover proposal preparation costs. The record in this case and the prior case law at this Board dictate a denial of the requested proposal preparation costs. To me, the record does not demonstrate that the changes to the solicitation were made because the existing clauses were improper or that efforts and expenses were wasted as a result of the underlying agency-acknowledged misevaluations and violations.

Previously, the Board has denied a motion for the award of proposal preparation costs, stating:

> Although the respondent made substantive changes in the solicitation requirements, none of the subsequent amendments to the solicitation followed from the protest or were required by our decision. In fact, and more to the point, the protester had not protested any of the terms of the original solicitation. Consequently, our decision never dealt with the

Before HENDLEY, DANIELS, and VERGILIO, Administrative Judges.

HENDLEY, Administrative Judge: The protester seeks to recover its costs of filing and successfully pursuing its protest before this Board. Under 40 U.S.C. § § 759(f)(5)(B), (C) (1988), when this Board

> determines that a challenged agency action violates a statute or regulation or the conditions of any delegation of procurement authority, . . . it may . . . further declare an appropriate interested party to be entitled to the costs of—(i) filing and pursuing the protest, including reasonable attorney's fees, and (ii) bid and proposal preparation.

This statute authorizes the Board to award costs and exercise discretion to determine both if a party is "appropriate" and entitled to payment of costs from the permanent indefinite judgment fund, and if the amount requested is "reasonable."

On December 2, 1992, the Board docketed a protest filed by EG&G Florida, Inc., contending that the respondent, the National Aeronautics and Space Administration (NASA), had improperly selected Lockheed Space Operations Company, an intervenor in the protest, for award of a contract for automatic data processing services. That protest was followed by protests filed by Bamsi, Inc. on December 3 and Westinghouse KSC Company, Inc. on December 4. Each protester intervened in the other protests. The protests were consolidated for further proceedings before this Board. The respondent's delegation of procurement authority was suspended on December 10.

In our order on proceedings of December 4, we set forth a schedule for resolving the protests. However, shortly before the originally scheduled hearing date, the parties sought a postponement of the hearing and informed the Board that they were in the process of settling the cases. We rescheduled the hearing, and a settlement ensued.

On January 26, 1993, the parties filed a "joint stipulation of dismissal without prejudice" in each protest. The requested dismissals were to become dismissals "with prejudice 10 working days after debriefings following the announcement of a selection of an awardee based on the evaluation of best and final offers ('BAFOS') submitted in accordance with the revised BOC [Base Operations Contract] request for Proposals ('RFP')." Accordingly, on January 28, 1993, the Board dismissed without prejudice Bamsi's protest pursuant to Bamsi's and the respondent's signed joint stipulation of dismissal without prejudice, with attached settlement agreement. *EG&G Florida, Inc. v. National Aeronautics and Space Administration,* GSBCA 12204-P, *et al.,* 1993 BPD ¶ 28 (Jan. 28, 1993).

Under the terms of the motion to dismiss, which we expressly declined to make a part of our order of dismissal, we note that the respondent was obliged to engage in another round of BAFOs, that the protesters, for the purposes of the agreement, are deemed prevailing parties in these protests, and that the respondent agrees that the protesters' "attorneys' fees and partial bid and proposal costs in a sum not to exceed $1.2 million for each protester may be recoverable under these protests."

In particular, the parties agreed that:

> 11. NASA acknowledges that it failed to evaluate the offerors' proposals in accordance with NASA FAR Supplement 18-15.613-71(b)(5). NASA agrees that for the purposes of recovering protest costs, including any reasonable attorneys' fees and disbursements, protesters shall be deemed to have prevailed on the merits of this proceeding under 40 U.S.C. sect. 759(f)(5)(C). In compromise of the protesters' claims for protest costs and full bid and proposal costs, and in consideration of the foregoing provisions and the implementation of the revisions and actions specified herein, the parties agree that attorneys' fees and partial bid and proposal costs in a sum not to exceed $1.2 million for each protester may be recoverable under these protests. Protestors shall follow the procedures of Rules 35 and 36 of the Board's Rules of Procedure in seeking recovery of these costs.

The record clearly demonstrates that the protester prevailed in its protest. The proposed award to another offeror was canceled and another round of offers received and evaluated. On February 26, 1993, Bamsi filed a motion for award of its costs of filing and successfully pursuing its protest, which was docketed as GSBCA 12316-C(12206-P). This motion and its corresponding exhibits were stamped on each page with the protective seal. On March 4, 1993, Bamsi, in response to this Board's directions, filed a substitute motion for the award of protest costs and proposal preparation costs, in which it withdrew the protective seal from every page of the motion except for those limited portions of the motions and exhibits containing Bamsi proprietary information.

©1994, Commerce Clearing House, Inc.
Digitized by Google

That motion was further supplemented on April 16, and April 19, 1993. On May 12, 1993, the respondent responded to the protester's motion, conceding that $249,718.54 [1] in protest costs and $942,916.28 in proposal preparation costs were compensable under 40 U.S.C. § 759(f)(5)(C). These costs total $1,192,634.82. In its response, the respondent further stated:

> Although NASA believes that BAMSI's estimation of the percentage of wasted costs attributable to each areas [sic] identified on pages 10 through 11 of its Motion are on the high side, NASA acknowledges that costs were wasted related to the preparation of BAMSI's proposal. NASA also acknowledges that BAMSI has provided a reasonable approach to quantify waste, and it has provided an estimate based on a proportion of its proposal preparation effort that was wasted. After reviewing the documentation provided by the company in support of its petition, the Agency also believes that the company has adequately established a nexus between the procurement violation and the wasted effort to the ceiling established in the Joint Stipulation.

From the above, we conclude that the respondent clearly has conceded that wasted effort was incurred by the protester, and that this was a direct result of respondent's violation of law. In light of the fact that the respondent canceled the proposed award to another, it had no motive in agreeing to the amount of the costs of the protester's wasted effort. There can be no suspicion of "Fed Mail" in its agreement involving the protester's costs of wasted effort. We therefore conclude that the amounts involved are reimbursable.

We consider *Communications Technology Applications, Inc.*, GSBCA 10172-C(9978-P), 90-3 BCA ¶ 23,261, 1990 BPD ¶ 207, cited by the dissent, to be inapposite. In that case the Board had already found in our prior decision on the merits of the protest the facts necessary to reach a decision as to entitlement. In the instant case, we did not decide the merits of the original protest. In addition, in the instant case, further litigation would not adduce any evidence inconsistent with the result reached by the parties in their agreement because the parties agree as to all evidence which might be pertinent.

Although NASA, in its response, moved that we award those costs, it further stated that "NASA recognizes a need for an audit of these costs, as to their incurrence, accounting and previous or pending Government reimbursements."

In light of the respondent reserving the right to audit the amounts, we contacted the parties and suggested that they reduce the matter to a final settlement executed by both parties. We note that they do not appear to differ on the amounts due the successful protester. On October 25, 1993, we received a letter from respondent's counsel which states that:

> NASA, therefore, again moves the Board to award to BAMSI protest costs of $248,913.54 [2] and proposal preparation costs of $942,916.28 based on the documented costs presented in its cost petition, as amended.

On October 27, 1993, we received a stipulation from the parties, in which Bamsi and NASA stipulate that Bamsi "is entitled to $1,192,635.82 consisting of $249,719.54 in protest costs and $942,916.28 in proposal preparation costs . . ." [3]

We have examined the detailed expenses and find them to be both reasonable and appropriately documented.

Decision

The protester's motion for attorney's fees and other costs associated with the pursuit of this protest together with a portion of the cost of the preparation of its proposal is GRANTED. The protester is awarded $1,192,634.82 as costs incurred in pursuing this protest and preparing its proposal. This award is to be paid, without interest, from the permanent indefinite judgment fund, 31 U.S.C. § 1304 (1988); 40 U.S.C. § 759(f)(5)(C)(1988).

---

[1] NASA has made a mathematical error in its response. NASA notes that Bamsi, in its first submission, requested $217,297.62 in protest costs and in its supplement requested an additional $32,420.92 for a total of $248,913.54. This total is incorrect. The correct total is $249,718.54. We have accounted for NASA's error in the body of our decision.

[2] The respondent again has failed to note that it has made a mathematical error. As previously noted the correct figure is $249,718.54. We have accounted for this error in our decision.

[3] The stipulation inexplicably raises by one dollar the amount for protest costs, and, hence, the total.

Digitized by Google

Vergilio, Board Judge, dissenting in part.

I respectfully dissent from the conclusion of the majority that the protester is entitled to recover proposal preparation costs. The record in this case and the prior case law at this Board dictate a denial of the requested proposal preparation costs. To me, the record does not demonstrate that the changes to the solicitation were made because the existing clauses were improper or that efforts and expenses were wasted as a result of the underlying agency-acknowledged misevaluations and violations.

Previously, the Board has denied a motion for the award of proposal preparation costs, stating:

> Although the respondent made substantive changes in the solicitation requirements, none of the subsequent amendments to the solicitation followed from the protest or were required by our decision. In fact, and more to the point, the protester had not protested any of the terms of the original solicitation. Consequently, our decision never dealt with the propriety of any of the solicitation terms. Our decision dealt solely with the actions taken by the respondent in evaluating and awarding the contract. The protester has not and can not point out any change in the solicitation requirements that resulted from our decision. It can not do so for the simple reason that neither the protest nor our decision dealt with the propriety of the terms of the solicitation.

Communications Technology Applications, Inc., GSBCA 10172-C(9978-P), 90-3 BCA ¶ 23,261, at 116,700, 1990 BPD ¶ 207, at 5. The Board noted that it has "declined to award proposal costs to successful protesters because the agency lawfully changed its requirements." *Id.*

The majority in the present case recites its analysis thusly:

> From the above, we conclude that the respondent clearly has conceded that wasted effort was incurred by the protester, and that this was a direct result of respondent's violation of law. In light of the fact that the respondent canceled the proposed award to another, it had no motive in agreeing to the amount of the costs of the protester's wasted effort. There can be no suspicion of "Fed Mail" in its agreement involving the protester's costs of wasted effort. We therefore conclude that the amounts involved are reimbursable.

Majority opinion at 4.

The changes to the terms of the solicitation described in the protester's justification of its request[4] do not demonstrate to me that the costs were incurred because of agency violations and represent wasted effort. As noted in *Communications Technology*, an agency may legitimately alter its requirements during the course of a procurement. Every amendment does not entitle an offeror to recover some of its proposal preparation costs through the protest process at this Board. While an agency may choose to not object to the payment (through non-reimbursed funds) of the proposal preparation costs of potential contractors, the lack of objection cannot serve as the touchstone of this Board's determinations. The Brooks Act should not be read as legitimizing a wholesale shift in the costs of doing business with the Government.

[¶ 26,563] Marci Enterprises, Inc. v. General Services Administration

GSBCA No. 12197, November 9, 1993. Contract No. GS-02F-58159.

Defaults, Waiver—Delivery Date—Failure to Reestablish.—The government improperly terminated a Federal Supply Service contract for waterproof barrier material because it waived the delivery date when it told the contractor to delay the first shipment for inspection and continued to encourage the contractor to correct its deficiencies without establishing a new delivery date. The government contacted the contractor to inspect the first lot of material produced for the contract but did not schedule the inspection until three days after delivery was due. Thus, even before the government's inspection, the government indicated that the contractor was not to comply with the original delivery date, so it was reasonable for the contractor to assume that a new delivery schedule would be established.

For the appellant: Frederick P. Weiner, President. For the government: Michael D. Tully, Office of General Counsel, General Services Administration, Washington, D.C.

Before PARKER, DANIELS, and NEILL, Administrative Judges.

PARKER, Administrative Judge: Appellant, Marci Enterprises, Inc. (Marci), appeals the decision of respondent's contracting officer to terminate for default Marci's contract to provide waterproof barrier material. The parties have submitted the case for decision on the record. As discussed below, we find that respondent improperly terminated the contract. Thus, we grant the appeal.

Findings of Fact

1. On January 17, 1992, the General Services Administration's (GSA's) Federal Supply Service (FSS) awarded contract number GS-02F-58159 to Marci. Appeal File, Exhibit 1. The contract required Marci to furnish GSA's normal requirements for waterproof, flexible barrier material. *Id.*

2. On February 4, 1992, GSA placed two orders with Marci for barrier material, designating March 30, 1992, as the date the shipment was due. Respondent's Record Submission, Exhibit 13. According to the terms of the contract, delivery was due at the destination within forty-five calendar days after receipt of the order. Appeal File, Exhibit 1 at 26.

3. On March 19, 1992, GSA's Quality Assurance Specialist (QAS) contacted Marci's subcontractor and supplier, Salinas Valley Wax Paper Company (Salinas), pursuant to the Source Inspection clause of the contract. Appeal File, Exhibit 3. That clause provides in part as follows:

> (c) Inspection by Government personnel.
>
> (1) Although the Government will normally rely upon the Contractor's certification as to the quality of supplies shipped, it reserves the right under the Inspection of Supplies—Fixed Price clause to inspect and test all supplies called for by this contract, before acceptance, at all times and places, including the point of manufacture. When the Government notifies the Contractor of its intent to inspect supplies before shipment, the Contractor shall notify or arrange for subcontractors to notify the designated GSA quality assurance office 7 workdays before the date when supplies will be ready for inspection. *Shipment shall not be made until inspection by the Government is completed and shipment is authorized by the Government.*
>
> ....
>
> (d) Quality deficiencies.
>
> (2) If supplies in process, shipped, or awaiting shipment to fill Government orders are found not to comply with contract requirements, or if deficiencies in either plant quality or process controls are found, the Contractor may be issued a Quality Deficiency Notice (QDN). Upon receipt of a QDN, the Contractor shall take immediate corrective action and shall suspend shipment of the supplies covered by the QDN until such time as corrective action has been completed. The Contractor shall notify the GSA quality assurance office, within 5 workdays, of corrective action taken or to be taken to permit onsite verification by a Government representative. Shipments of nonconforming supplies will be returned at the Contractor's expense and may constitute cause for termination. Delays due to the issuance of a QDN do not constitute excusable delay under the Default clause. Failure to complete corrective action in a timely manner may result in termination of this contract.

Id., Exhibit 1 at 22-23 (emphasis added). Mr. Nelson, President of Salinas, informed the QAS that the orders would be available for inspection either that day (March 19) or sometime in the next week. However, due to the QAS's work schedule and the 125-mile distance to Salinas' facility, the QAS scheduled the inspection for April 2, 1992, three days after the delivery date. Respondent's Record Submission, Exhibit 18.

4. On April 2, 1992, Salinas presented the material for inspection. The QAS inspected the first lot and found deficiencies in the subcontractor's quality control system and issued a Quality Deficiency Notice (QDN). Appeal File, Exhibit 4. The QDN required Marci to correct the deficiencies and provide a written response within five days after receiving the notice. *Id.* Marci did not respond to the QDN. *Id.*, Exhibit 5.

5. The QAS, however, continued to work with Salinas:

> I also spent considerable time with this subcontractor reviewing their quality control manual and advising them as to certain changes that were required in order to bring their quality control program and manual into conformance with Federal Standard 368A .... Although I spent considerable time and energy assisting Salinas

Digitized by Google

in order for them to be able to perform in accordance with the conditions of the contract, my duties do not require me to supervise or conduct the inspection procedures of the prime or its subcontractor.

Respondent's Record Submission, Exhibit 18.

6. On May 1, 1992, the QAS returned to inspect Salinas' facility and two days later issued an Evaluation of Corrective Action which stated that no corrections had been implemented. Appeal File, Exhibit 5. The QAS stated that the facility was not in accordance with the quality control standards set forth in Federal Standard 368A and that the packaging had not been marked in accordance with Federal Standard 123F. Respondent's Record Submission, Exhibit 18.

7. The administrative contracting officer (ACO) stated in his declaration:

On May 1, 1992, the QAS returned again to the subcontractor's facility and found that no corrective action was taken .... In light of the considerable time spent by the QAS assisting the subcontractor to bring its quality control system in compliance with the above reference standards and the fact that they could not, or would not, implement the necessary changes, the QAS referred this matter to me for appropriate action.

Respondent's Record Submission, Exhibit 19.

8. Marci claimed that its subcontractor needed more time to correct the quality control and marking systems. *See* Respondent's Record Submission, Exhibit 17. On May 6, 1992, the ACO contacted Mr. Weiner, President of Marci, and negotiations for a contract extension took place. Appeal File, Exhibit 6. Marci alleges that the ACO offered, and Marci accepted, an extended delivery date in return for the consideration of $300 ($150 per order), while the ACO contends that no agreement was reached. *See* id., Exhibit 10; Respondent's Record Submission, Exhibit 19.

9. On May 14, 1992, the ACO terminated Marci's right to proceed with performance of the contract by reason of default. Appeal File, Exhibit 8. The termination letter stated that the termination was for Marci's failure to "deliver material to the Government pursuant to the delivery requirements of the contract." *Id.*

10. On May 18, 1992, Mr. Weiner wrote a letter to the ACO stating:

I believed that we had an agreement due to the consideration you offered, and which I accepted in the aforementioned telephone call. Our plant subsequently proceeded to make the additions and corrections to the paperwork as requested by the QAS .... Both orders have been manufactured and have been sitting on the floor of our plant for many weeks. The plant has also completed the additional paperwork requested by the QAS.

Appeal File, Exhibit 10. On September 5, 1992, Marci filed the instant appeal with the Board, contending that the ACO improperly terminated the contract. *Id.*

11. The contract incorporates by reference GSA Form 3507, which contains the clause found at Federal Acquisition Regulation (FAR) section 52.249-8, Default. That clause provides:

(a)(1) The Government may ... by written notice of default to the Contractor, terminate this contract in whole or in part if the Contractor fails to—

(i) Deliver the supplies or to perform the services within the time specified in this contract or any extension;

(ii) Make progress, so as to endanger performance of this contract ...; or

(iii) Perform any of the other provisions of this contract ....

Appeal File, Exhibit 2 at 22.

Discussion

Marci contends that GSA improperly terminated the contract, and we agree. GSA waived the delivery date when it told Marci to delay the first shipment for inspection and continued to encourage Marci to correct its deficiencies. Because GSA never established a new delivery date (and, thus, a date by which Marci had to comply with the packaging and quality control requirements), GSA could not terminate the contract based upon either Marci's failure to deliver by the original due date, or to comply with the packaging and quality control requirements.

Timely Delivery

The Government has the burden of proving that a default termination is warranted because it is a "drastic sanction ... which should be imposed (or sustained) only for good grounds and on solid evidence." *J.D. Hedin Construction Co. v. United States* [13 CCF ¶82,580], 408 F.2d 424, 431 (Ct. Cl. 1969). When a contractor fails to make timely delivery of the contract item, the Government has a reasonable period of time,

©1994, Commerce Clearing House, Inc.

Digitized by Google

known as the period of forbearance, to settle upon its course of action. *R & O Industries, Inc.*, GSBCA 4800, 80-1 BCA ¶14,195 at 69,874. If, however, the Government fails to act within a reasonable time, the original delivery schedule is deemed to have been waived:

> In essence, the Government loses its right to terminate a contract for default . . . if by its subsequent conduct it condones the default, encourages or asks for continued performance, or fails to set a new delivery schedule for the contractor's performance after it has permitted performance to continue unhampered for too long a period of time.

Id.

In *DeVito v. United States* [13 CCF ¶82,319], 413 F.2d 1147 (Ct. Cl. 1969), the Court of Claims articulated the two necessary elements for the non-defaulting party to waive the delivery schedule: (1) failure to terminate within reasonable time after the default under circumstances indicating forbearance; and (2) reliance by contractor on failure to terminate and continued performance by him under the contract, with the Government's knowledge and implied or express consent. *Id.* at 1154. Thus, if GSA's conduct following the March 30, 1992, delivery deadline constituted a constructive election to permit continued performance, which was relied upon by appellant, a waiver of the delivery date occurred.[1]

The two purchase orders dated February 4, 1992, designated March 30, 1992, as the delivery date. The QAS contacted Salinas on March 19, 1992, to inspect the first lot of material produced for the contract. Mr. Nelson, President of Salinas, informed the QAS that the orders would be available for inspection that day or sometime during the next week. The QAS, however, did not schedule the inspection until April 2, 1992, *three days after delivery was due.* Thus, even before the QAS's inspection, the Government indicated that the contractor was not to comply with the original delivery date. According to the terms of the contract, the shipment was not to proceed until inspection by the Government was completed. Once the inspection date was set by the QAS, the subcontractor could not ship the materials until after the inspection was completed or it risked violating that contract term. Obviously, it became impossible to comply with both the inspection clause and the designated delivery date; thus, it was reasonable for the contractor to assume that a new delivery schedule would need to be established.

The QAS issued a Quality Deficiency Notice on the same day as the inspection, April 2, 1992. The QDN instructed Marci to provide the QAS with a written response of corrective action taken or to be taken QAS within 5 workdays after receiving the notice. This was neither a "cure notice" which allows the delinquent contractor additional time to deliver, nor a "show cause" letter which affords a delinquent contractor an opportunity to advance reasons why the contract should not be terminated. *See* 48 CFR 49.607 (1990). Although the QAS also noted that the "cited purchase orders are now delinquent" as one of the specific deficiencies, the QDN encouraged the subcontractor to make the necessary corrections and continue performance.

FAR Part 49 regulates contract termination. 48 CFR Part 49 (1992). FAR 49.402-3(c) directs that "if the Government has taken any action that might be construed as a waiver of the contract delivery or performance date, the contracting officer shall send a notice to the contractor setting a new date for the contractor to make delivery or complete performance." In the typical "DeVito cure," the Government issues a cure notice, establishes a new delivery date, and terminates the contract in the event the contractor fails to deliver in accordance with the new schedule. *W.S. Jenks & Son*, GSBCA 10278, et al., 91-3 BCA ¶24,262, at 121,298. Here, after waiving the original delivery schedule, GSA never established a new delivery date upon which a default termination could be based.

Marci relied on GSA's waiver of the original delivery schedule. According to both the QAS and the ACO, the QAS spent time assisting Salinas so that it could perform in accordance with the conditions of the contract. Marci claimed that its subcontractor needed time to make the changes requested

[1] The underlying principle in termination of a contract containing fixed performance dates is that time is of the essence. Thus, when a due date has passed and the Government does not terminate for default, an inference is created that time is no longer of the essence. *DeVito*, 413 F.2d at 1154. Thereafter, the proper way for the Government to proceed is "to issue a notice under the Default clause setting a reasonable but *specific* time for performance on pain of default termination." *Id.* (emphasis added). Time is reinstated as being of the essence and a new time for performance is given to the contractor.

Digitized by Google

by the QAS but, because no new delivery date had been provided, Marci did not know how much time it had to make those changes.

The parties agree that negotiations for a contract modification took place on May 6, 1992, although they differ in regard to the outcome of those negotiations. Mr. Weiner believes that he and the ACO agreed to extend the due date for a consideration of $150 per shipment, whereas the ACO contends that no agreement was reached. By that time, however, the Government had already waived the delivery date. Although Marci's efforts to comply with the contract requirements were not as GSA would have liked, GSA could not suddenly terminate the contract for failure to deliver the goods without giving Marci a firm date by which the goods were to be delivered.

Conforming Goods

Although the Government terminated the contract based upon Marci's failure to make timely delivery, the Government in its brief offers additional grounds for the termination. The ACO's final letter of termination pointed out that Salinas did not furnish the QAS with an updated quality control manual, forward copies of GSA Form 1678, or conform to the requirements for case markings. Thus, according to GSA, the orders were incomplete at the time of inspection and the contract could have been terminated for that reason as well.

The problem with respondent's argument, however, is that these requirements for packaging and quality control are all related to appellant's delivery schedule, which was waived by GSA. The Government waived the original delivery date when the QAS scheduled the inspection test three days after the deadline and continued to work with the contractor with respect to these other items. The Government should have established a new delivery schedule, and if the contractor subsequently failed to meet the new delivery date, or if the goods were not in accordance with the contract requirements at the later deadline, the ACO could have terminated the contract. After waiving the schedule, however, and encouraging the contractor to correct these items so that the first shipment could be made, the contracting officer was unreasonable in terminating the contract without giving the contractor a firm date by which the contractor had to comply with the contract requirements.

Decision

For the reasons set forth above, the appeal is **GRANTED**. The termination for default is converted to one for the convenience of the Government. As requested by appellant, the termination shall be at no cost to either party.

[¶ 26,564] Keller & Sons Enterprises, Inc. v. General Services Administration

GSBCA No. 11970, November 3, 1993. Contract No. GS-09P-89-KSC-0099.

Modifications—Reduction in Requirements or Prices—Computation Method.—An appeal was granted in part because the government's calculation of a downward equitable adjustment to which it was entitled as a result of deleted contract work was erroneous. Under a janitorial services contract, the contractor was responsible for maintaining an outside water fountain. The government deleted by a constructive change, not by a suspension of work, daily water tests, thrice-weekly vacuuming, and semiannual cleaning. The appropriate reduction in price was to be calculated by ascertaining the number of hours it would have required the contractor to perform the deleted tasks and multiplying that sum by the contractor's cost per hour. The government's calculation that water testing was required 24 days each month was erroneous, as was its calculation that vacuuming was required 11 times each month. The board recalculated the reduction in price.

For the appellant: Sam Zalman Gdanski, Montebello, New York. For the government: Michele M. Feher, Assistant Regional Counsel, General Services Administration, San Francisco, California.

Before DEGRAFF, DANIELS, and PARKER, Administrative Judges.

DEGRAFF, Administrative Judge: Keller & Sons Enterprises, Inc. (Keller) contracted with the General Services Administration (GSA) to provide a variety of services at a

©1994, Commerce Clearing House, Inc.

Digitized by Google

federal building. During the course of the contract, GSA made certain deductions from Keller's monthly payments, and Keller contends that the deductions were improper. As explained below, Keller's appeal is granted in part.

Findings of Fact

On July 10, 1989, GSA awarded contract GS-09P-89-KSC-0099 to Keller for providing janitorial and related services at the federal building in Tucson, Arizona. Keller was required to work a normal five-day work week, and was to be paid a fixed price per month for its services. The performance period was one year, with four one-year options. Appeal File, Exhibit 4. GSA exercised three of the options. *Id.,* Exhibits 17, 45, 58.

The federal building has an outside water fountain that Keller was required to maintain. The contract provides that Keller was required to perform a daily test in order to determine the pH level and chlorine content of the water, and to add chemicals to ensure that the proper chemical balance was maintained. Keller was also required to vacuum the fountain three times per week and to drain and clean the fountain twice each year. Appeal File, Exhibit 4 at III-J-1, III-J-21.

The contract provides that "Figure G-1, Criteria for Deductions" was to be used to calculate the amount that GSA would deduct from Keller's monthly payments if there were deficiencies in Keller's work, if Keller failed to perform satisfactorily, or if Keller omitted work. Appeal File, Exhibit 4 at I-G-1, I-G3. Figure G-1 explains that if Keller "omitted or unsatisfactorily performed" a task, GSA was entitled to deduct a specified amount per hour from Keller's monthly payments, based upon the number of hours needed to perform the task. For August 1, 1989, through July 31, 1991, the amount to be deducted for water fountain maintenance was $16.20 per hour. *Id.,* Exhibits 8, 17. For August 1, 1991, through July 31, 1992, the amount to be deducted was $16.54 per hour. *Id.,* Exhibit 45.

The contract also permits GSA to make deductions from Keller's monthly payments in the event of a suspension of work. The contract defines a suspension of work as a period of time when "the building is closed due to inclement weather, unanticipated holidays declared by the President, failure of the Congress to appropriate funds, etc." The contract provides that the deduction rate will be equal to the monthly contract price divided by twenty-one, multiplied by the number of days that services were not provided. Appeal File, Exhibit 4 at I-G-6.

The contract permits GSA's contracting officer to make changes in the services performed by Keller. If a change resulted in a decrease in either Keller's cost or time of performance, the contract provides that GSA was supposed to make an equitable adjustment to the contract price and to modify the contract accordingly. Appeal File, Exhibit 4 at II-I-18.

On August 14, 1990, GSA wrote to Keller concerning the fountain. This letter is signed by GSA's Tucson field office manager, on behalf of the contracting officer's representative. The letter states that the fountain had been drained and had not been used since May 1, 1990. The letter also states that GSA did not know when, if ever, it would begin using the fountain again and, as a result, water testing, vacuuming, and semi-annual cleaning (April and October) were not required. GSA estimated that daily water testing required fifteen minutes per day, thrice-weekly vacuuming required thirty minutes per day, and semi-annual cleaning required four hours for each cleaning. GSA stated that, at $16.20 per hour, this amounted to $97.20 per month for water testing, $89.10 per month for vacuuming, and $64.80 per cleaning. In the letter to Keller, GSA stated that it intended to deduct $186.30 per month, except in April and October when it intended to deduct $251.10, for the work not being performed. Appeal File, Exhibit 16. GSA's calculations are based upon water testing being performed twenty-four days per month and vacuuming being performed eleven days per month.

GSA took the following deductions associated with the water fountain:

Period of Service	Amount of Deduction
October 1-31, 1990	$251.10
December 1-31, 1990	$186.30
January 1-31, 1991	$186.30
February 1-28, 1991	$186.30
March 1-31, 1991	$186.30
April 1-30, 1991	$251.10
May 1-31, 1991	$186.30
June 1-30, 1991	$186.30
July 1-31, 1991	$186.30
November 1-30, 1991	$186.30
January 1-31, 1992	$186.30
February 1-29, 1992	$186.30
April 1-30, 1992	$251.10
May 1-31, 1992	$186.30
June 1-30, 1992	$186.30

Appeal File, Exhibit 59. There is no evidence to suggest that deductions were taken for any months other than those listed

Digitized by Google

above. The total amount of these deductions is $2,988.90.

On October 11, 1991, Keller submitted a claim to the contracting officer concerning deductions to its monthly payments. Keller stated that GSA had taken deductions "each month since the first part of 1991 for non-service of a[n] outside water fountain." Keller asserted that the deductions were not proper because Keller stopped servicing the fountain for the convenience of the Government. Keller requested that GSA repay all amounts that had been deducted. Appeal File, Exhibit 46.

On June 10, 1992, the contracting officer denied Keller's claim. According to the contracting officer, the deductions were appropriate because a suspension of work had occurred. The contracting officer stated that the August 14, 1990 letter to Keller explained the method by which the amount of each deduction was calculated. Appeal File, Exhibit 56.

This appeal was filed August 10, 1992, and in its complaint, filed March 4, 1993, Keller alleges that no deductions were appropriate. The parties agreed to submit the case on the record. In its brief, Keller asserts that GSA should not have taken any deductions concerning the water fountain, because Keller incurred costs when it repaired the water fountain in 1990. Keller also asserts that the amounts deducted by GSA are inappropriate, and requests that the amounts be recomputed based upon Keller's "more accurate" cost figures. Keller concludes its brief by stating, "The Brief [sic] dispute here really concerns whose cost figures should be computed. Premised on the legal arguments submitted with respect to the claim above, Appellant takes the position that his own cost data should be utilized."

During the life of the contract, the minimum wage rate that Keller was required to pay its janitors and cleaners was $6.04 per hour. Appeal File, Exhibits 5, 17, 45, 58. During the course of performance, the parties agreed that Keller's labor costs included this hourly amount, plus approximately $2.36 per hour for health and welfare benefits costs, workers compensation benefits costs, payroll taxes costs (FICA, FUTA, SUTA), bond costs attributable to labor, and insurance costs attributable to labor. Keller calculated its profit at ten percent, and GSA accepted this profit margin during the course of the contract. Appeal File, Exhibits 33, 34, 36, 48. Adding the minimum wage rate, Keller's other labor-related costs, and Keller's profit results in a total hourly labor cost rate of approximately $9.24 per hour.

Discussion

After a dispute arose between the parties, Keller submitted a claim to the contracting officer and the contracting officer rendered a decision. Keller filed this appeal within ninety days after it received that decision. Therefore, the Contract Disputes Act, 41 U.S.C. §§601-613 (1988), provides us with jurisdiction to consider this appeal.

We reject Keller's argument that, because Keller incurred costs when repairing the fountain in 1990, GSA is not entitled to reduce Keller's monthly payments. If Keller was not compensated properly for its repair costs, Keller should have submitted a claim to the contracting officer. Whether Keller is entitled to be paid for its repair costs has no bearing upon whether GSA is entitled to reduce Keller's monthly payments.

Although the contracting officer's decision states that a suspension of work occurred, this is not accurate. According to the contract, a suspension would have been the result of an event, temporary in duration, which closed the entire federal building. Directing Keller to discontinue the work related to the fountain does not amount to a suspension of work.

What occurred here was a change in the work required by the contract, even though the contracting officer did not give effect to the change by issuing a contract modification. A constructive change occurred when the fountain was drained and not refilled, which effectively deleted the daily water tests, thrice-weekly vacuuming, and semi-annual cleaning required by the contract.

When work is deleted in a fixed-price contract, the Government is entitled to a downward equitable adjustment to the contract price. The amount of the adjustment is the reasonable cost that the contractor would have incurred if the work had been performed. The amount of the adjustment includes direct and indirect costs plus profit. The Government has the burden of proving the amount of the adjustment that is appropriate. *Nager Electric Co. v. United States* [16 CCF ¶80,367], 194 Ct. Cl. 835, 442 F.2d 936 (1971); *J.S. Alberici Constr. Co.*, GSBCA 10306, 91-2 BCA ¶23,846; *John N. Brophy Co.*, GSBCA 5122, 78-2 BCA ¶13,506; *G & M Electrical Contractors Co.*, GSBCA 4771, 78-2 BCA ¶13,452.

In order to calculate the amount that it would have reasonably cost Keller to per-

©1994, Commerce Clearing House, Inc.

Digitized by Google

form the work that was deleted from the contract, we must ascertain the number of hours that it would have taken Keller to perform the daily water tests, thrice-weekly vacuuming, and semi-annual cleaning, and then multiply the number of hours by Keller's cost per hour. Keller does not dispute that the daily water test could be performed in fifteen minutes per day, that the thrice-weekly vacuuming could be performed in thirty minutes per day, and that the semi-annual cleaning required four hours for each cleaning. GSA's calculation that water testing was required twenty-four days each month is erroneous, as is its calculation that vacuuming was required eleven times each month. The correct calculations for both of these tasks are set forth below.

The total number of hours that Keller would have taken to perform the daily water test (fifteen minutes per test), is as follows:

Period of Service	Work Days Per Month [1]	Hours Per Month
October 1-31, 1990	22	5.50
December 1-31, 1990	20	5.00
January 1-31, 1991	21	5.25
February 1-28, 1991	19	4.75
March 1-31, 1991	21	5.25
April 1-30, 1991	22	5.50
May 1-31, 1991	22	5.50
June 1-30, 1991	20	5.00
July 1-31, 1991	22	5.50
November 1-30, 1991	19	4.75
January 1-31, 1992	21	5.25
February 1-29, 1992	19	4.75
April 1-30, 1992	22	5.50
May 1-31, 1992	20	5.00
June 1-30, 1992	22	5.50
Total Hours To Perform Daily Water Test		78.00

The total number of hours that Keller would have taken to perform the thrice-weekly vacuuming (thirty minutes per vacuuming), is as follows:

Period of Service	Vacuumings Per Month	Hours Per Month
October 1-31, 1990	14	7.0
December 1-31, 1990	13	6.5
January 1-31, 1991	13	6.5
February 1-28, 1991	12	6.0
March 1-31, 1991	13	6.5
April 1-30, 1991	13	6.5
May 1-31, 1991	14	7.0
June 1-30, 1991	12	6.0
July 1-31, 1991	14	7.0
November 1-30, 1991	13	6.5
January 1-31, 1992	14	7.0
February 1-29, 1992	12	6.0
April 1-30, 1992	13	6.5
May 1-31, 1992	13	6.5
June 1-30, 1992	13	6.5
Total Hours To Perform Vacuuming		98.0

The semi-annual cleaning was to be performed each April and October. GSA reduced the contract price during October 1990, April 1991, and April 1992. Keller would have taken a total of twelve hours to perform the cleaning during these months.

Adding the number of hours that Keller would have taken to perform the daily water tests (78), the number of hours that Keller would have taken to perform the thrice-weekly vacuuming (98), and the number of hours that Keller would have taken to perform the semi-annual cleaning (12), yields a total of 188 hours of work which Keller did not have to perform, due to the constructive change in the contract's requirements.

We must next determine what would have been Keller's reasonable hourly cost to per-

[1] We arrived at the number of days by consulting a calendar.

Digitized by Google

form this work. There is no evidence that the $16.20 per hour figure that GSA utilized has any relationship to Keller's performance costs. This figure was to be utilized in order to calculate GSA's damages if Keller failed to perform satisfactorily. More likely than not, the $16.20 figure reflects the loss to GSA if work is not performed, rather than the cost to Keller of performing the work. Neither party offered us any assistance in estimating what Keller's costs would have been if it had performed the work that was deleted from the contract. The appeal file contains sufficient evidence to permit us to conclude that Keller's costs plus a ten percent profit would have amounted to approximately $9.24 per hour.

The total amount of the downward equitable adjustment to which GSA is entitled is $1,737.12 (188 hours × $9.24 per hour). GSA deducted a total of $2,988.90. Therefore, Keller's appeal is granted in the amount of the difference between these two figures, which is $1,251.78.

Decision

This appeal is **GRANTED IN PART.** Keller is entitled to recover $1,251.78 plus interest at the rate set forth in 41 U.S.C. § 612 from October 11, 1991, until paid.

[¶ 26,565] Tele-Sentry Security, Inc. v. General Services Administration

GSBCA No. 11639-C(10945(7703)-REIN)-R, November 2, 1993.

Procedure, Boards—Reconsideration—Justifiable or Excusable Mistakes.—A motion for reconsideration, alleging that the board misread the contractor's expense itemization sheet because of a smudge and that the board did not understand that a payment was made to a person who was not an employee, was denied because the contractor did not explain why the alleged mistakes were justifiable or excusable. The contractor did not provide the board with an explanation of the items prior to its original decision and could not later use a motion for reconsideration to further develop arguments it previously lost. The contractor is required to present clear and convincing evidence to show that a mistake has occurred and equally convincing evidence supporting the alleged correct figures.

For the appellant: Kenneth K. Takahashi, Rockville, Maryland. For the government: Robert W. Schlattman, Office of General Counsel, General Services Administration, Washington, D.C.

Before HENDLEY, LABELLA, and BORWICK, Administrative Judges.

Reconsideration of 93-2 BCA ¶ 25,816 denied.

HENDLEY, Administrative Judge: Appellant, Tele-Sentry Security, Inc., filed a timely motion for reconsideration of our decision in *Tele-Sentry Security, Inc. v. General Services Administration,* GSBCA 11639-C(10945(7703)-REIN), 93-2 BCA ¶ 25,816 (Feb. 9, 1993), which was docketed as GSBCA 11639-C(10945(7703)-REIN)-R.

Appellant asserts that it is entitled to reconsideration because:

(1) this Board "mis-read the appellant's expense itemization sheets which were made difficult by duplicating smudges;"

(2) this Board "found that appellant was not entitled to recover payments made to Bob Brown ($5,012) 'as appellant's employee,' and 'salary' paid 'Ken Takahashi' ($2,520) as counsel, a total of $7,532" however, appellant "inadvertently" placed the $2,520 figure on the "Ken Takahashi" line when the the $2,520 figure "should have been carried across on [the Bob Brown Line]" and failed to cross-reference the "Bob Brown" line so as to alert this Board to the notation that "Bob Brown was not an employee of TSSI after 1983."

Neither basis is sufficient for an order of reconsideration. Hence, appellant's motion is **DENIED.**

Discussion

Under Rules 32(a) and 33(a)(2) of our Rules of Procedure, we may grant a motion for reconsideration if there is a "[j]ustifiable or excusable mistake, inadvertence, surprise, or neglect." Appellant has not identified any "justifiable or excusable mistake(s)." Hence, we decline to reconsider our decision.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Appellant has the burden of proving why the alleged mistakes are "justifiable or excusable." However, appellant has not identified any reason as to why these alleged mistakes, which were made on its behalf, are "justifiable or excusable." It is not enough for an appellant to point to the mistakes and say they occurred. Appellant must explain why these mistakes are "justified or excusable." This it has not shown.

We stand by our original interpretations of the evidence. Appellant has not provided us with any additional documentation to support its contention that mistakes were made, and we have no additional information to either alter our conclusions as to what the smudged photocopy said or change our view as to what alleged costs may be recovered for the appellant's expenses incurred employing Messrs. Takahashi and Brown. The appellant's current version of what it contends the document shows is no more credible than the original copy of the document provided to us. We cannot rely on shifting, self-serving versions of what appellant contends the document should show. We require clear and convincing evidence that a mistake has occurred and equally convincing evidence supporting the alleged correct figures. This appellant has failed to provide.

Moreover, we believe that under these circumstances, neither basis appellant identified can be a "justifiable or excusable mistake." The errors appellant has attributed to this Board appear to result from dissatisfaction with the manner in which appellant's claim has been presented. It is incumbent upon an appellant to present a carefully documented claim to this Board. If appellant has complaints about the poor quality of the photocopying or the structuring of its claim it should address these concerns elsewhere. It is not our responsibility to correct the errors set out in its claim. *See Universal Development Corp. v. General Services Administration,* GSBCA 11252-R, 93-2 BCA ¶ 25,845 (counsel's error in failing to present fully its case before this Board is not sufficient to support a motion for reconsideration).

Finally, we note that even if the alleged errors appellant posits could be construed to be a justifiable or excusable mistake, we would still not grant appellant's motion.

First, appellant has not provided us with any new information sufficient to justify the granting of costs associated with the activities of Bob Brown. Appellant now tells us that Bob Brown was not an employee of Tele-Sentry during the course of this appeal.[1] However, appellant has failed to provide us with sufficient information to enable us to determine the precise status of Mr. Brown. Through our best efforts we have been able to determine that appellant maintains, although without documentation, that Bob Brown was an electronic technician on the project in question. Appellant's Application For Fee and Expenses Under the Equal Access to Justice Act, GSBCA 11639-C, at 7. However, it is unclear what capacity Bob Brown acted in during the appeal. The only evidence before us as to Bob Brown's capacity, is a statement by appellant in which appellant asserts that Bob Brown worked in conjunction with appellant's attorneys to prepare the claim. *Id.* Was Bob Brown an expert witness, an expert consultant, or simply a former employee brought back to help appellant's attorneys with the appeal? Did Bob Brown perform anything more than secretarial functions? We could not determine Mr. Brown's contribution to the case because the appellant did not provide us with sufficient evidence. This evidence was necessary for us to reach a conclusion under the Equal Access to Justice Act (EAJA). *See* 5 U.S.C. 504(b)(1) (1988) (" 'fees and other expenses' includes the reasonable expenses of expert witnesses, the reasonable cost of any study, analysis, engineering report, test, or project which is found by the agency to be necessary for the preparation of the party's case, and reasonable attorney or agent fees"). Hence, appellant has not met its burden of proof with regard to the costs associated with Mr. Brown. There is therefore no reason to reconsider our original decision. If there was any error in our original decision concerning costs associated with Mr. Brown, it was harmless.

[1] Appellant's new position is undercut by its past statements before this Board. For instance, appellant stated in its Application for Fee and Expenses Under Equal Access to Justice Act, GSBCA 11639-C, at 1, (emphasis added) that "[i]n 1986 Mr. Tenerowicz traveled to Tempe, Arizona, to go through TSSI's files, select documents, and discuss the case with James Watt, President of TSSI, and Bob Brown, *the project superintendent.*" Hence, it would appear from appellant's own statement's that Bob Brown was employed by appellant at least through 1986. However, appellant apparently contradicts itself, later in the same document, when it explicitly claims that Bob Brown was not appellant's employee after 1983. *Id.* at 7.

Digitized by Google

Second, appellant argues that duplicating smudges caused this Board to err in our original decision. As a matter of fact we do not think that duplicating smudges were the problem with the item in question. In fact, our reading of line 33, page 3 of the expense itemization sheet is the same as appellant's.[2] However, that item is cryptic. Appellant did not see fit to provide us with an explanation of that item prior to our original decision. This Board interpreted that item to the best of its ability, considering the paucity of evidence available. Appellant cannot now use a motion for reconsideration to further develop arguments it has previously lost. *Universal Development*, 93-2 BCA ¶ 25,845.

As we have said many times, this Board does not grant reconsideration on the basis of arguments already made and reinterpretations of old evidence. Appellant's arguments are now more learned and complex than they were earlier, but that is not sufficient reason for reopening our consideration of the case; because the issue was before the Board previously, appellant could have made this more sophisticated presentation then.

Id. (citations omitted). Hence, we will not now consider vesting this item with a new interpretation.

Decision

Appellant's motion for reconsideration is **DENIED.**

[¶ 26,566] Planning Research Corporation, Inc. v. Department of Commerce

GSBCA Nos. 11286-COM, 11576-COM, November 24, 1993.

Subcontracting—Prime Contractor on Behalf of Subcontractor—Severin Doctrine.—In an appeal by a prime contractor on behalf of two of its subcontractors for equipment leases, the government was not entitled to a summary decision that the contractor was entitled to permit subcontractor leases to lapse thus requiring application of the *Severin* doctrine, because the existence of potentially exculpatory language in the subcontracts was not sufficient to bar equitable adjustment claims asserted by a prime contractor on behalf of its subcontractors. The *Severin* doctrine provides that a subcontractor cannot recover against the government when its agreement with the prime contractor completely exculpates the prime contractor from any liability to the subcontractor. Further refinements on the doctrine require an iron-bound release immunizing the prime contractor completely from any liability to the subcontractor to be applicable. In this case, because the contractor sought payment under a contract clause providing for a price adjustment rather than under a breach-of-contract theory, the *Severin* doctrine might be inapplicable.

For the appellant: Graham and James, Washington, D.C., by A. Wayne Lalle, Jr., and Paul J. Kennedy. For the government: Jerry A. Walz, Mark Langstein, and Leslie Viguerie, Office of the Assistant General Counsel for Finance and Litigation, Department of Commerce, Washington, D.C.

Before HYATT, DEVINE, and NEILL, Administrative Judges.

HYATT, Administrative Judge: This appeal is of a contracting officer's decision denying claims sponsored by appellant, Planning Research Corporation, Inc. (PRC), on behalf of two of its subcontractors under certain equipment leases. These claims arose from the decision of respondent's Patent and Trademark Office not to fund a renewal of equipment leases in the option years, allowing the leases to expire. PRC asserts that the nonexercise of the options to renew the leases constituted a breach of contract, an improper termination for convenience, and a deductive change.

Respondent has moved that the appeal be denied summarily because under the plain, unambiguous terms of the contracts, PRC, and thus the Government, were entitled to permit the leases to lapse. PRC has opposed the motion, arguing that material facts are in dispute and, in addition, that the cases relied upon by respondent are inapplicable in this context, involving options between a prime contractor and its subcontractors. Be-

[2] Both appellant and this Board believe that line 33, page 3 of the expense itemization sheet reads: "(5) Sets of GSA Claims—Consisting of (15) books of receipts, letters compiled by secretary & copied." Appellant's Motion for Reconsideration, at 1.

Digitized by Google

cause we cannot determine at this juncture that the Government is entitled to prevail as a matter of law, we deny the motion.

Background

Respondent, the United States Department of Commerce, Patent and Trademark Office (PTO), awarded a cost-reimbursement contract to PRC for the design, development, and implementation of an automated patent system (APS) for the PTO. The contract was awarded in April of 1984. Appeal File, Exhibit 1.

The APS design developed by PRC, and approved by the PTO, provided that the APS text search function would be performed by computer processor "search engines" that would be coupled to mainframe computers. Appeal File, Exhibit 10. In connection with this design feature, PRC entered into a subcontract with Federal Technology Corporation (FTC) for the acquisition of UNIX-based processors and associated equipment. Complaint ¶ 14. In conjunction with the FTC subcontract, PRC also entered into equipment lease agreements (the "leases") with Finalco and Eden Hannon (the "lessors"). Complaint ¶¶ 15, 16. The equipment leases were of the "lease to ownership plan (LTOP)" type, providing that after sixty months the equipment, which would be purchased by the lessors and furnished to PRC, would be owned outright by the PTO.

The lease with Finalco was executed on August 9, 1986; the lease with Eden Hannon was executed on October 1, 1987. Appeal File, Exhibits 2, 4. The parties contemplated that the term of each lease would be sixty months. Appeal File, Exhibits 3, 5, 6, 10; Supplemental Appeal File, Exhibits 15, 18, 19. These leases, although entered into between the lessors and PRC, are stated to have been authorized and funded by the prime contract between the PTO and PRC.

The equipment lease agreement between Finalco and PRC provides that equipment needed by PRC to perform its prime contract with the PTO would be purchased by Finalco from a designated equipment vendor on a schedule negotiated and executed by PRC and Finalco. PRC would assign any subcontract rights it had with such vendor to Finalco, which would lease the equipment to PRC under the terms stated in the schedule. The equipment lease agreement further provides that upon payment of sixty monthly lease payments, Finalco shall transfer and deliver title to the equipment to the Department of Commerce as directed by PRC. Appeal File, Exhibit 2.

On July 23, 1987, PRC and Finalco executed an assignment of subcontract purchase rights, as provided under the equipment lease agreement. The assignment permitted Finalco to purchase equipment from FTC pursuant to the August 1985 contract entered into by PRC and FTC. Complaint ¶ 17.

Also on July 23, 1987, equipment schedule number F003A to the PRC-Finalco equipment lease was executed. The schedule provided that PRC would lease thirty search engines and other associated items from Finalco. Under the heading "lease term," the lease is stated to be a "60 month Lease to Ownership Plan [LTOP] subject to section 9.2 of the Agreement and subject to any cancellation or termination rights of Lessee [PRC] under the Agreement." Appeal File, Exhibit 3.

On October 1, 1987, PRC entered into an equipment lease agreement with Eden Hannon and Company. This lease is almost identical to the PRC-Finalco agreement. It similarly provides for a sixty month LTOP schedule for the subject equipment and for assignment of PRC subcontract rights. Appeal File, Exhibit 4. On April 16, 1988, PRC and Eden Hannon executed an assignment of subcontract purchase rights, permitting Eden Hannon to purchase equipment from FTC pursuant to the August 1985 PRC-FTC contract. They also executed equipment schedule number E003D providing that PRC would lease twenty-two search engines and associated items from Eden Hannon. Appeal File, Exhibit 5.

Section 9 of both leases contains flowdown clauses such as disputes (paragraph 9.3), termination for the convenience of the Government (paragraph 9.4) and various Federal Acquisition Regulation (FAR) clauses incorporated by reference (paragraphs 9.5 and 9.6). Paragraph 9 in each lease states that "[t]he following contract clauses are based upon equivalent clauses contained in the User Contract."[1] Appeal File, Exhibits 2, 4. Both leases include paragraph 9.1, which states as follows:

> *Option to Extend the Term of the Equipment Leases.* Notwithstanding any provision below to the contrary, Lessee shall be deemed to have exercised its option to extend the term of any Equipment

[1] The "User" is defined in the leases to be the PTO. Appeal File, Exhibits 2, 4.

Digitized by Google

Lease for the next Government Fiscal Year (as defined below) if the User issues a modification to the User Contract providing Government Fiscal Year funding for the Equipment Lease and authorizing Lessee to exercise its option to extend the term of the Equipment Lease for the next Government Fiscal Year. This clause is applicable and shall be deemed to be included in each and every Equipment Lease executed under this Agreement notwithstanding the term of this Agreement or the expiration of any other Equipment Lease. The initial term of each Equipment Lease is from the stated commencement date until the end of the then-current Government Fiscal Year. Each Equipment Lease is renewable at the same monthly rate applicable at the inception of the appropriate Equipment Lease, at the option of Lessee, by Lessee giving written notice of renewal to lessor by the commencement of the next Government Fiscal Year or within 30 days after Government funding for such Government Fiscal Year becomes available, whichever date is later, such notice to include a copy of the User Contract funding document; provided that Lessee shall have given preliminary notice of Lessee's intention to renew at least 15 days before the Equipment Lease is to expire. Such a preliminary notice of intent to renew shall not be deemed to commit Lessee to renewals. If the User has not so authorized Lessee, by the end of the then-current Government Fiscal Year, to exercise the option to extend the term of the Equipment Lease for the next Government Fiscal Year, Lessee may, at its option, so extend such Equipment Lease on a month-to-month basis. In such event the terms and conditions applicable to such Equipment Lease under this Agreement shall be in full force and effect including the provisions of this Section 9.1. The total duration of such Equipment Lease, including the exercise of any options under this Section 9.1, shall not exceed 60 months.

Appeal File, Exhibits 2, 4.[2] In contrast to paragraphs 9.3 through 9.6, there is no clause that equates to paragraph 9.1 in the prime contract between PRC and the PTO.

PRC contends that all the principals, including various PTO officials, intended and construed the leases to require exercise of the options to the extent funds were available. This, according to PRC, was a clear condition of obtaining financing for the leases. The following averments, relating to the Eden Hannon lease, are made in an affidavit offered by PRC:

> In connection with the Lease Equipment Agreement ("Lease") relating to the provision of search engines and related equipment to the United States Department of Commerce, Patent and Trademark Office ("PTO"), I attended a meeting on behalf of Connecticut General in Washington, D.C. on September 30, 1987, to confirm the PTO's commitment to performance of the Lease for the full 60 months. The meeting was held at my request and as a precondition to Connecticut General's participation in the Lease financing. In attendance at this meeting were ... the Director of Procurement of PRC and ... the Assistant Commissioner for Information Systems of the PTO. I advised [the PTO Commissioner] that Connecticut General's willingness to finance the lease depended on the correctness of the representation that the risk of non-appropriation was limited to the case in which the entire PTO automation project was discontinued and that, other than in the case of a lessor default, any other termination would be "for convenience," which would result in damages that would make a lender whole. I further advised [the PTO Commissioner] that my purpose in requesting the meeting was to obtain assurance that PTO interpreted the Lease arrangement in a way wholly consistent with Connecticut General's understanding and that such assurance was a condition to financing the Lease. [The PTO Commissioner] indicated that the only impediments to continued funding of the Lease for the full term were non-appropriation of funds by Congress for PTO automation as a whole and termination by the PTO for convenience or default.
>
> I was interested in obtaining this commitment from the PTO because the equipment to be provided under the Lease was designed specifically for the PTO, and we had no basis for judging whether it would have any value on the open market, a point I made to [the PTO Commissioner]. [The PTO Commissioner's] response was that even if the Government had the right

[2] Paragraph 9.2 of the PRC-Finalco agreement permits PRC to discontinue leasing equipment upon 25 days written notice if the PTO discontinues leasing under its agreement with PRC. Appeal File, Exhibit 2. This provision is omitted in the agreement between PRC and Eden Hannon. Appeal File, Exhibit 4.

©1994, Commerce Clearing House, Inc.

Digitized by Google

to terminate individual items of equipment without full compensation (a right he repeated it did not have), the government would not exercise such a right in this case because the equipment was of such general utility within the Commerce Department. Without the PTO's affirmation of the interpretation of the Lease arrangement, Connecticut General would not have financed the Lease.

Declaration of Donald F. Rieger, Jr. (Rieger Declaration) (August 20, 1991) ¶ ¶ 2-3.[3]

On March 31, 1988, the Findings and Recommendations of the Automated Patent System Industry Review Panel were issued. The Review Panel endorsed an alternative system not using search engines. Supplemental Appeal File, Exhibit 20.

On April 22, 1988, PRC and Eden Hannon entered into a letter agreement amending the terms of the lease agreement and equipment schedule. The letter agreement provided that PRC would pay an amount equal to the aggregate amount of unpaid monthly lease payments if 1) the user contract between PRC and the Department of Commerce was modified to provide for the expiration of the user contract on a date on which not all of the monthly lease payments had been paid in full, or 2) if the PTO discontinued payment for the use of the equipment at any time prior to the end of the Lease Term "for any reason other than a termination for convenience as contemplated by Section 9.4 of the Lease Agreement or a nonrenewal as contemplated by Section 9.1 of the Lease Agreement." Appeal File, Exhibit 6.

In a letter dated September 19, 1989, the contracting officer for the PTO-PRC prime contract notified PRC that "[d]ue to budgetary constraints" the fiscal year 1990 lease schedules with Finalco and Eden Hannon should not be funded. At the same time, other leases, pursuant to different equipment schedules under the same Equipment Lease Agreements, would be funded. Appeal File, Exhibit 7.

In letters dated September 29, 1989, PRC in turn informed Finalco and Eden Hannon that "in accordance with Section 9.1, Option to Extend the Term of the Equipment Lease" of its lease agreements with these companies, PRC had been informed by the PTO that the lease schedules would not be funded in fiscal year 1990. Appeal File, Exhibits 8, 9.

On August 13, 1990, American Security Bank (ASB), assignee for Finalco, forwarded a claim to PRC for $793,722.47, plus interest and attorney fees for the termination of the equipment lease. Appeal File, Exhibit 10. On August 21, 1990, Eden Hannon similarly submitted a claim for the remaining lease payments from the date of the last lease payment made. PRC in turn certified these claims[4] and submitted them to the contracting officer, who denied them.

Discussion

PRC's complaint alleges that the PTO improperly terminated the portion of PRC's prime contract that related to the subcontracts of Finalco and Eden Hannon. According to PRC, the PTO's actions constituted a beach of contract, an improper partial termination for convenience, and a deductive change. PRC contends that recovery would be justified under any of these alternative legal theories.

Respondent's motion for summary relief is premised on paragraph 9.1 of the lease agreements PRC entered into with Finalco and Eden Hannon. Respondent argues that this lease provision is an option clause providing PRC the absolute right not to renew the leases. Based on this clause, respondent further urges that the term of each lease is limited to a single fiscal year. Accordingly, respondent contends, when PRC, in consonance with the PTO's instructions that the leases would not be funded, did not opt to renew the leases, no further cause of action was available to these subcontractors.

Relying on *Government Systems Advisors, Inc. v. United States* [34 CCF ¶ 75,496], 847 F.2d 811 (Fed. Cir. 1988), respondent thus urges that this appeal raises a matter of pure contract interpretation as to which summary relief is clearly available because

[3] Connecticut General financed the Eden Hannon lease and received an assignment of the proceeds; American Security Bank financed the Finalco lease under a similar arrangement.

[4] The initial certification of the claims by PRC has been challenged by the Government as inadequate to establish jurisdiction at the Board. A decision on this motion has been deferred because PRC, as a precautionary measure, submitted a second certification of its claim, one which PTO agrees is satisfactory under the FAR. The "second" certification of PRC's claim is docketed as GSBCA 11576-COM. Thus, the certification issue has become a matter of resolving the date from which entitlement to interest commences, a matter which is not pressing unless the appeal is resolved in appellant's favor, at least in part.

Digitized by Google

the plain language of the option clauses in the leases controls. Appellant disagrees, pointing out that summary judgment is not always available in cases involving contract interpretation absent a record sufficient to show the circumstances surrounding the contract. *Campbell v. United States,* 2 Cl. Ct. 247, 249 (1983); *Jay Automotive Specialties, Inc.,* ASBCA 38930, 91-2 BCA ¶ 23,716. The standard by which a motion for summary relief, or summary judgment, should be measured is whether there are any genuine issues of material fact to be resolved that would affect the outcome of the case. *Anderson v. Liberty Lobby, Inc.,* 477 U.S. 242, 248 (1986); *Stroh Corp. v. General Services Administration,* GSBCA 11029, 93-2 BCA ¶ 25,841. In considering a motion for summary relief, we draw all inferences in favor of the non-moving party. *See Reliance Insurance Co. v. United States,* 931 F.2d 863, 865 (Fed. Cir. 1991).

In the principal case cited by the PTO, *Government Systems Advisors, Inc.,* the Government had entered into a lease to ownership contract with Government Systems Advisors, Inc. The terms of the lease were similar to those of the subcontracts in issue here, and the lease contained an option clause comparable to section 9.1 of the Finalco and Eden Hannon leases. In *Government Systems,* the agency decided not to renew the leases in option years; the lessor asserted a claim, urging that the Government was obligated to exercise the options unless no funds were available. Pointing out that the case did not involve any allegations of Government conduct or actions that might affect the interpretation of the contracts, the Court held that the language in question was unambiguous and established a true option contract. The Government, therefore, was not bound to exercise the options regardless of the availability of funds. In these circumstances, the Court affirmed the lower court's decision granting the Government's motion for summary judgment.

The PTO's position is that *Government Systems* is controlling —under the plain language of the leases there was absolutely no obligation for PRC (or thus the PTO) to renew; PRC was therefore well within its contractual rights to let the leases expire. Section 9.1 establishes one-year terms for the leases, with options to renew for up to a total of a sixty months. As the PTO points out, in general, option clauses are deemed to be just that—there is no requirement that an option be exercised. *See, e.g., Government Systems Advisors, Inc.; Vehicle Maintenance Services v. General Services Administration,* GSBCA 11663, 93-3 BCA ¶ 25,929; *Centennial Leasing v. General Services Administration,* GSBCA 11409, 93-2 BCA ¶ 25,609; *Gricoski Detective Agency,* GSBCA 8901, 90-3 BCA ¶ 23,131; *Optimal Data Corp.,* NASA BCA 381-2, 85-1 BCA ¶ 17,760 (1984). Thus, respondent contends, since the subcontracts contain exculpatory language relieving PRC from any liability to the lessors, the Government is also immune from liability to PRC.

At the outset, PRC points out that there is no privity of contract between the PTO and the lessors, such that the PTO might properly invoke these clauses as a defense to this appeal.[5] This is particularly so because there is no comparable option provision in the prime contract entered into between the PTO and PRC.[6] Thus, PRC argues, the Government cannot in any event rely on section 9.1 of the leases to avoid the dispute that exists between it and the prime contractor, PRC. Accordingly, PRC claims that the cases cited by respondent do not apply here.

In *Severin v. United States,* 99 Ct. Cl. 435 (1943), *cert. denied,* 322 U.S. 733 (1944), the Court of Claims held that a subcontractor could not recover against the Government when its agreement with the prime contractor completely exculpated the prime contractor from any liability to the subcontractor. Subsequent cases have clarified that this is a limited defense and that

[5] It is unclear whether respondent, in urging that both PTO and PRC were entitled to allow the options to expire, is suggesting that for this purpose, PTO and PRC shared the same shoes. In any event, to the extent respondent is intimating that there is an agency type of relationship that permits PTO to establish privity of contract with the lessors, such that it might have the right to rely on this clause, the record is insufficiently developed to ascertain whether this is factually correct under controlling precedent. *See U.S. West Communications Services, Inc. v. United States* [37 CCF ¶ 76,142], 940 F.2d 622 (Fed. Cir. 1991); *United States v. Johnson Controls, Inc.* [31 CCF ¶ 71,374], 713 F.2d 1541 (Fed. Cir. 1983). In addition, at least one court, in addressing the same contract, has held that there is no agency relationship. *See Amdahl Corp. v. Baldridge,* 617 F. Supp. 501 (D.D.C. 1985).

[6] Indeed, PRC has made an argument that the option clauses in paragraph 9 of the leases are inapplicable in light of the introductory language stating that the provisions in paragraph 9 are based on equivalent provisions in the prime contract and the absence of a corresponding option clause in the prime contract.

©1994, Commerce Clearing House, Inc.

Digitized by Google

the Government, to the extent it seeks to invoke the *Severin* doctrine, has the burden to prove that the sponsoring prime contractor has no liability to its subcontractor. *Southern Construction Co. v. United States* [11 CCF ¶ 80,552], 364 F.2d 439 (Ct. Cl. 1966); *Folk Construction Co. v. United States* [31 CCF ¶ 71,247], 2 Cl. Ct. 681 (1983). Indeed, *Severin* has been refined to the extent that "it requires an iron-bound release or contract provision immunizing the prime contractor completely from any liability to the sub[contractor]" to be applicable. *Cross Construction Co. v. United States,* 225 Ct. Cl. 616, 618 (1980). The limited record available to us in this matter does not show this to be the case. PRC has alleged facts that, if proven, could show that it is in fact obligated to the lessors to pay for the equipment. Even if we might, on a fully developed record, deem this lease clause to be one that completely exonerated PRC from liability to its lessors, the Government cannot rely on it in the context of a summary relief motion to defeat this claim.

Additionally, PRC notes that to the extent it may be eligible to recover the amounts claimed under a contract clause providing for a price adjustment, rather than under a breach of contract theory, the *Severin* doctrine is simply inapplicable. *Seger v. United States* [18 CCF ¶ 81,826], 469 F.2d 292 (Ct. Cl. 1972); *Blount Brothers Construction Co. v. United States,* 348 F.2d 471 (Ct.7Cl. 1965); *F.E. Constructors,* ASBCA 25784, 82-1 BCA ¶ 15,780.[7] PRC has alleged, and offered some substantiating evidence to corroborate, certain facts that support its contention that the Government should have treated the decision to jettison these particular leases as a partial termination for convenience of the prime contract, or, alternatively, as a deductive change under the prime contract. The record is not sufficiently developed to determine if these theories are viable or not. The existence of potentially exculpatory language in the subcontracts is thus not sufficient to bar equitable adjustment claims asserted by a prime contractor on behalf of its subcontractors.

Even assuming *arguendo* that the *Severin* doctrine might bar the breach of contract claim,[8] however, PRC opposes the motion because there are disputed factual issues concerning the intent of the parties in entering into the lease agreements, which are subcontracts to which the PTO is not even a party. In particular, PRC contends that there are at least two material facts that appear to be disputed: 1) PRC's assertion concerning the contemplation of the parties that notwithstanding section 9.1, which was intended only to cover the contingency that funds might not be appropriated, the lease terms would be for 60 months; and 2) PRC's assertions concerning the reliance of the finance companies on the representations of the PTO as to the extent of the Government's commitment. PRC has provided an affidavit to support its contentions in this regard. The affidavit raises sufficient doubt as to the intentions of the parties to the subcontracts to prevent the summary disposition of this matter. In addition, section 9.1 is set forth in a group of flow-down clauses, but does not have a counterpart in the prime contract, another circumstance that contributes to ambiguity as to the intentions of the parties.

Decision

The motion for summary relief is DENIED.

---

[7] The rationale for not permitting an exculpatory clause to bar recovery of an equitable adjustment is that these clauses were intended merely to protect the prime contractor from liability to the subcontractor in the event its prime contract did not permit recovery of a particular cost. *Seger v. United States* [18 CCF ¶ 81,826], 469 F.2d 292 (Ct. El. 1972).

[8] To overcome the summary relief motion as to its breach of contract allegation, appellant must simply demonstrate the existence of a question of fact as to whether the Government acted properly. One way to prove breach of contract would be to provide evidentiary support for the contention that PTO's decision directing PRC not to renew the leases was improperly motivated by bad faith. *Vehicle Maintenance Services,* 93-3 BCA at 128,967. PRC has alleged that the timing of the issuance of the Industry Review Panel's report, coupled with the Government's decision to drop the search engine leases, provides evidence of possible bad faith.

[¶ 26,567] Integrated Systems Analysts, Inc. v. Department of the Navy; Information Systems & Networks Corporation, Intervenor

GSBCA No. 10750-P-R, November 2, 1993.

Automatic Data Processing Equipment—Evaluation—Notice of Rejection.—Upon reconsideration of a decision in which the board had determined that the government properly rejected the protester's proposal as nonconforming, the board concluded that it had erred in holding that the protester lacked standing to challenge the untimely notification of the rejection; nevertheless, it declined to hear this claim because the issue of timeliness of notice was academic. The issue of timeliness was a minor allegation in the context of this procurement, and even if the board were to grant the untimeliness claim, the protester would not be able to demonstrate a significant violation of law or regulation or obtain any benefit regarding the procurement as a result of the protested actions.

For the protester: Venable, Baetjer and Howard, McLean, Virginia, by William L. Walsh, Jr., Thomas J. Madden, J. Scott Hommer III, and Wm. Craig Dubishar. For the government: Harvey J. Nathan, Robert D. Hogue, and Naomi J. Miske, Space and Naval Warfare Systems Command, Department of the Navy, Washington, D.C. For the intervenor, Information Systems & Networks Corporation: Piliero, Tobin & Mazza, Washington, D.C., by Pamela J. Mazza and Andrew P. Hallowell.

Before WILLIAMS and LABELLA, Administrative Judges.

WILLIAMS [1], Administrative Judge: On September 21, 1990, the Board denied Count 2 of a protest filed by Integrated Systems Analysts, Inc. (ISA) challenging the Department of the Navy's award of a contract for Shipboard Nontactical ADP Program (SNAP) II systems to Information Systems & Networks Corporation (ISN). We concluded that the Navy had properly rejected ISA's proposal as nonconforming and dismissed the other seven counts of ISA's protest for lack of an interested party. *Integrated Systems Analysts, Inc.*, GSBCA 10750-P, et al., 91-1 BCA ¶ 23,383, 1990 BPD ¶ 298.[2] On October 1, 1990, ISA asked that we reconsider that portion of our decision dismissing Count 3 of the protest, in which ISA claimed that it did not receive timely notice that its proposal had been rejected. For the reasons set forth below, we grant ISA's motion for reconsideration.

Background

The findings pertinent to the request for reconsideration are as follows.[3] In the procurement at issue, the Navy solicited SNAP II systems. These are computer systems installed on board Navy ships and submarines which provide an automated data processing capability for maintenance, supply, and administrative matters. The procurement was a 100% set aside for small and disadvantaged businesses (SDBs).

Thirteen proposals were evaluated and nine, including that of ISA, were determined to be in the competitive range. On March 26, 1990, after receipt of best and final offers, the Navy issued Amendment 005 to the solicitation, requesting the offerors to update their proposals by March 29, 1990. The letter accompanying this amendment specified: "It is the Government's intention to award a contract on the basis of these offers without further discussion." *Integrated Systems Analysts, Inc.*, 91-1 BCA at 117,344, 1990 BPD ¶ 298, at 7. Revised proposals were received from the remaining offerors in the competitive range on March 29.

On April 6, 1990, the Navy notified ISA and other offerors in the competitive range that Systems Management American Corporation (SMA) was the apparent successful offeror and that challenges to the SDB or size status of SMA could be made by April 13, 1990. *Integrated Systems Analysts, Inc.*, 91-1 BCA at 117,344-45, 1990 BPD ¶ 298, at 8-9. Two protests as to SMA's SDB status

[1] This case was originally decided by a panel of three judges, Judges Suchanek, LaBella, and Williams. Judge Suchanek has since resigned from the Board. Because this decision involves reconsideration of the original opinion, no new judge has been added to the panel. *See Universal Restoration, Inc. v. United States* [33 CCF ¶ 74,555], 798 F.2d 1400, 1406 n.9 (Fed. Cir. 1986).

[2] Systems Management American Corporation (SMA) intervened in ISA's protest solely on one count not in issue here.

[3] Because none of the Board's factual findings are challenged in the motion for reconsideration, references are to the findings in *Integrated Systems Analysts, Inc.*, GSBCA 10750-P, et al., 91-1 BCA ¶ 23,383, 1990 BPD ¶ 298.

©1994, Commerce Clearing House, Inc.

Digitized by Google

were filed and forwarded to the Small Business Administration (SBA). On June 4, 1990, the contracting officer determined SMA to be nonresponsible.

With SMA's disqualification, the Navy concluded that ISA was next in line for award. However, the contracting officer had previously overlooked a cover letter to ISA's March 29 proposal. The contracting officer interpreted that cover letter to indicate that ISA's price was conditioned on its substitution of the unacceptable Fujitsu disk drive for the required Harris disk drive. *Integrated Systems Analysts, Inc.*, 91-1 BCA at 117,345-46, 1990 BPD ¶ 298, at 9-11. Because of this condition, on approximately July 12, 1990, the Navy concluded that ISA had submitted an unacceptable offer. *Id.* at 117,346-48, 1990 BPD ¶ 298, at 12, 15. However, the Navy did not notify ISA of its rejection at that time. Rather, as the Board found:

> By letter dated July 13, 1990, offerors were advised that ISN was the apparent successful offeror. Protest File, Exhibit 19.[4] ISA was not notified that its proposal had been rejected due to the perceived "condition" concerning the disk drive. Transcript at 165. Notwithstanding the contracting officer's judgment that ISA's offer was nonresponsive, ISA was asked to extend its offer twice after March 29, 1990, once in May 1990 and again on July 20, 1990, seeking an extension of ISA's proposal until August 31, 1990. Protest File, Exhibits 36, 37; Transcript at 166.

Id. at 117,348, 1990 BPD ¶ 298, at 15-16.

By letter dated July 20, 1990, ISA, through counsel, protested to SBA ISN's SDB status on the ground that ISN was not disadvantaged. Protester's Motion for Reconsideration and Motion for Summary Disposition (Motion for Reconsideration), Exhibit A; Protest File, Exhibit 38. The Navy proceeded with award to ISN despite the SBA protests. *Integrated Systems Analysts, Inc.*, 91-1 BCA at 117,348, 1990 BPD ¶ 298, at 16.

ISA protested to this Board the award to ISN, raising the following eight grounds of protest. In Count 1, ISA claimed that the Navy evaluated ISN's proposal based upon lesser quantities than were specified in the solicitation and modified the delivery schedule in making award to ISN, violating the requirement that the agency amend the solicitation when changing its requirements. In Count 2, ISA claimed that the Navy improperly rejected its proposal as nonresponsive. In Count 3, ISA alleged that the Navy failed to notify it promptly that its proposal was ineligible for award. In Count 4, ISA contended that the Navy's award to ISN was invalid in that the Navy had never called for a second round of best and final offers (BAFOs), had not obtained approval from the Source Selection Authority for a second request for BAFOs, and awarded to ISN based on its response to Amendment 5 of the solicitation without closing discussions.

In Count 5, ISA challenged the Navy's communications with ISN, claiming that the Navy provided ISN information concerning a decrease in quantities, *inter alia*, which afforded ISN a competitive advantage and constituted illegal unequal treatment of offerors. In Count 6, ISA claimed that it was denied the opportunity to clarify or meaningfully discuss its proposal. In Count 7, ISA claimed that the Navy engaged in illegal post-BAFO discussions with ISN. In Count 8, ISA alleged that the Navy's decision to go forward with the procurement despite the pendency of two protests at the SBA concerning ISN's SDB status was erroneous.

We concluded that the Navy properly rejected ISA's proposal as not conforming to a material requirement of the solicitation. We therefore denied Count 2 of ISA's protest and dismissed the remainder of its claims, including Count 3, on the ground that ISA was no longer an interested party. ISA is requesting here that we reconsider our decision to dismiss Count 3. For the reasons stated below, we grant reconsideration, conclude that ISA was an interested party for the purpose of raising that ground of protest, but dismiss the claim.

Discussion

ISA argues that if ISA had standing to challenge the Navy's rejection of its offer, ISA necessarily had standing to challenge the untimely notification. ISA states:

> The Board ruled that when the Navy determined that ISA's price update was unacceptable, ISA was at "the end of its protest trail." Opinion at 18. Count 3 does not take ISA a single step past the end of this protest trail. Count 3 merely asserts that when the Navy decided that ISA was at the end of the SNAP II trail it had an

[4] This letter also notified ISA that it had five days in which to file a protest against ISN's SDB status.

Digitized by Google

obligation under the FAR and the decisions of this Board to give ISA timely notice of that determination.

Motion for Reconsideration at 11.

We agree that the untimely notice allegation is so intertwined with the Navy's determination that ISA's proposal was nonconforming that ISA did have standing to raise that ground of protest as well.

Although protester has standing to raise Count 3, we decline to address that claim. The issue is subordinate to the question whether the rejection of ISA's proposal as nonconforming was proper. Having denied that claim, we view the timeliness of the notice of such rejection to be academic in this forum. Even if we were to grant Count 3, protester would not be entitled to any relief in this forum. While protester may have incurred legal expenses pursuing an SDB protest at SBA, such expenses are not compensable at this Board. Nor would the late notification violation entitle protester to bring a cost case under the circumstances here. Count 3 was by no means the thrust of the protest; it was a minor ancillary allegation in the context of this procurement. Protester recognizes that all of its other seven counts were properly dismissed for lack of an interested party. Thus, even if the Board were to grant Count 3, protester would not have demonstrated a *significant* violation of law, regulation, or DPA or have obtained any benefit regarding the procurement as a result of the protested action. *Bedford Computer Corp.*, GSBCA 9837-C(9742-P), 89-2 BCA ¶ 21,827, at 109,814, 1989 BPD ¶ 121, at 7. As such, protester would not be entitled to an award of costs.[5]

In conclusion, even if protester were to prevail on Count 3, protester would not be entitled to any relief in this forum other than a declaration that a regulation was violated; the Board, therefore, deems it inappropriate to address the merits of this count at this time. *Cf. Guerra v. Sutton*, 783 F.2d 1371, 1376 (9th Cir. 1986) (District Court properly declined to grant declaratory relief where declaration would have been "so narrow as to be useless to the plaintiffs.")

Decision

The motion for reconsideration is **GRANTED.** The Board's decision dismissing Count 3 is affirmed on other grounds.

[¶ 26,568] P. M. Hagel & Associates, Inc. v. General Services Administration

GSBCA No. 10742, November 24, 1993. Contract Nos. GS-09P-50109, GS-09P-50111.

Labor—Price Adjustment for Change in Wage Determinations—Reliance on Agency Representations.—A contractor's reliance on an affirmative representation from another agency under a prior contract that its work assignment practices were proper did not validate its decision to assign the work under the instant sprinkler installation contract to laborers as opposed to higher paid sprinkler fitters, because the contractor was aware that only the Department of Labor could determine a proper assignment, and no such determination had been issued under the prior contract. Under the prior contract, the contractor's work assignment practices were questioned by the contracting officer, but the contractor eventually received an affirmative representation that no violations of labor provisions had occurred. Given the contractor's awareness of the critical importance of a determination from the DOL on such matters, the board concluded that the contractor should not have attributed any special significance to the representation provided by the other procuring agency. The contractor's request for a price adjustment for paying its employees at the higher sprinkler fitter rate was denied.

Labor—Disputes Concerning Labor Standards—Boards of Contract Appeals.—A board of contract appeals had jurisdiction to consider a dispute concerning an alleged ambiguity in labor classifications because the contractor's claim was not a challenge to a Department of Labor wage determination but a claim focusing on the impact of the wage determination on the contractor's contractual rights. Jurisdiction to resolve disputes involving mutual contract rights and obligations is not lost by a board of contract appeals simply

[5] The Board's decision awarding costs in *Gallegos Research Group Corp.*, GSBCA 10125-C(9983-P), 90-1 BCA ¶ 22,609, 1990 BPD ¶ 21 is distinguishable. There, protester had standing to proceed with the protest, protester had abandoned all claims other than the notification claim, and the Board concluded that the notification in *Gallegos* was misleading and inaccurate.

©1994, Commerce Clearing House, Inc.

Digitized by Google

because labor standard issues within the exclusive DOL jurisdiction form the partial factual predicate for the dispute between the parties.

Interpretation of Contracts—Trade Usage—Labor Classifications.—Under a contract to install a sprinkler system, a contractor's contention that the contract was ambiguous with respect to the labor classifications to be assigned to work items was rejected because the contractor's work assignment problems were caused not by the provisions of the wage determination but by its failure to comply with the prevailing local practice of assigning the work at issue to sprinkler fitters as opposed to laborers.

Mistakes—Mutual Mistakes—Labor Classifications.—A contractor's request for reformation of a sprinkler system installation contract based upon the mutual but mistaken belief that labor classifications to be assigned to work items were proper was denied because there was no showing that either the contractor or the government was operating under such a mistaken belief when the contract was being administered. The board could not accept the fact that the contractor had assumed its labor classifications were proper, because the contractor's prior experience with a similar contract for the installation of a sprinkler system alerted the contractor to the possibility of problems in the area of proper labor classifications. The fact that a government representative certified the correctness of the contractor's payroll record did not signify the government's belief in the propriety of the assignments. The certification addressed only the correctness of the labor rate paid when compared to the rate shown in the applicable wage determination. In the absence of any record containing a description of the work actually done, the board was unwilling to conclude that the representative found the work assignment proper.

Contract Disputes—Implied-in-Fact Contract—Wage Determinations.—Under a contract to install a sprinkler system, a procuring agency's actions in retaining funds to satisfy a Department of Labor wage determination and in providing information for the wage dispute did not create an implied contract that required the agency to fund the agreement the contractor reached with DOL regarding the wage determination, because the communications between the agency and the DOL did not rise to the level of an express or implied promise. Even if it were assumed that the communication did rise to the level of a promise, the contractor did not explain how such a promise converted to an implied contract. A promise, even if made, would have been unilateral, and in fact, even if there had been an implied contract in this case, the parties would have been the DOL and the procuring agency, not the contractor and the agency.

For the appellant: Schwabe, Williamson & Wyatt, Portland, Oregon, by Thomas M. Triplett. For the government: Sharon A. Roach, Office of General Counsel, General Services Administration, Washington, D.C.

Before NEILL, LABELLA, and HYATT, Administrative Judges.

NEILL, Administrative Judge: In this case, appellant, P.M. Hagel & Associates, Inc. (Hagel), disputes the refusal of the General Services Administration (GSA or respondent) to make an equitable adjustment to the price of two contracts calling for the installation of fire sprinkler systems in federal buildings located in the San Francisco city area. Appellant also disputes the refusal of GSA to fund a portion of a settlement agreement which appellant entered into with the Department of Labor (DOL) regarding certain labor violations which allegedly occurred during the performance of the two contracts in question.

The parties have elected to have this case decided on the record without the benefit of a hearing. Rule 11. They have also agreed to a detailed stipulation regarding the facts in this case. We have reviewed these stipulations and find them substantially in accordance with documentation contained in the appeal file. We, therefore, are relying upon them in great part for our own findings of fact in this case. Upon review of the record in its entirety, we conclude that the appeal should be denied for the reasons set out below.

Findings of Fact

1. GSA awarded firm fixed price contract no. GS-9P-50111 (hereinafter "contract 111") to appellant on September 26, 1985. Under the terms of the contract, appellant was required to perform all labor, and supply all materials, equipment, and incidentals

Digitized by Google

to install a fire sprinkler system at the Federal Building at 50 United Nations Plaza in San Francisco. Hagel agreed to perform the work for $997,500, subsequently modified to $1,045,300. Joint Stipulation No. 1.

2. Firm fixed price contract no. GS-09P-50109 (hereinafter "contract 109") was awarded to Hagel on September 30, 1985. Under the terms of the contract, appellant was required to perform all labor, and supply all materials, equipment, and incidentals to install a fire sprinkler system at the U.S. Appraisers Building, 630 Sansome Street in San Francisco. Hagel agreed to perform for $1,191,000, subsequently modified to $1,185,424. Joint Stipulation No. 2.

3. Both contracts were awarded by respondent's Region 9 in San Francisco. Joint Stipulation No. 3.

4. Both contracts contained GSA Form 3505 (Apr. 1984) entitled "Labor Standards (Construction Contract)." This form sets forth, *inter alia*, GSAR 552.220-70—Davis Bacon Act (40 U.S.C. Section 276a to 276a-7) (Apr. 1984); GSAR 552.222-71—Contract Work Hours and Safety Standards Act—Overtime Compensation (40 U.S.C. Section 327 to 333) (Apr. 1984); GSAR 552.222-73—Payrolls and Basic Records (Apr. 1984); GSAR 552.222-78—Disputes Concerning Labor Standards (Apr. 1984); and GSAR 552.222-81—Applicable Minimum Hourly Rates of Wages (April 1984). Joint Stipulation No. 4.

5. Both contracts also contained, *inter alia*, the following clauses: FAR 52.236-3, "Site Investigation and Conditions Affecting the Work (Apr. 1984)" and FAR 52.243-4, "Changes (Apr. 1984)." Joint Stipulation No. 5. The clause regarding site investigation has the following provision:

> The Contractor acknowledges that it has taken steps reasonably necessary to ascertain the nature and location of the work, and that it has investigated and satisfied itself as to the general and local conditions which can affect the work or its cost .... Any failure of the Contractor to take the actions described and acknowledged in this paragraph will not relieve the Contractor from responsibility for estimating properly the difficulty and cost of successfully performing the work, or for proceeding to successfully perform the work without additional expense to the Government.

Appeal File, Exhibits 1, 2.

6. Both contracts contained wage determination no. CA84-5022, published October 5, 1984 (49 Fed. Reg. 39416), as modified nine times. Joint Stipulation No. 6. The determination sets out the prevailing wages for sprinkler fitters, painters, and laborers by group. No definitions are offered in the determination for the type of work performed by sprinkler fitters or painters. The wage determinations for laborers are broken out into separate groups. These groups of laborers are differentiated one from another by brief definitions. There is no similar breakdown for the sprinkler fitters or painters. Appeal File, Exhibits 1-2.

7. Prior to award of the two contracts which are the subject of this appeal, Hagel had experience in the installation of fire sprinkler equipment in the area covered under the wage determination. This was in connection with performance of work for the U.S. Army Corps of Engineers at Fort Ord, in Monterey County, California. Appeal File, Exhibit 21.

8. During performance of the Army contract, the contracting officer's representative questioned whether it was appropriate for Hagel to pay some of its employees at a laborer's rate when they were doing journeyman sprinkler fitter work. Appellant's Brief of February 19, 1993,[1] Exhibit 1. Counsel for Hagel responded that the contract contained no definition of a fire sprinkler fitter journeyman or a laborer. He asserted that the contractual definition of labor included the work being performed by those designated as laborers on the certified payroll. He further pointed out that if the Army insisted on all employees being paid at the fire sprinkler journeyman rate, then the contract would require revision and Hagel would ask for "an extra." Finally, counsel for Hagel asked for the name and address of the DOL official who presumably made the determination upon which the Army was relying. Appeal File, Exhibit 21.

9. The Corps' District Labor Officer promptly informed counsel for Hagel that his district would take no further action in the matter. He wrote:

> I have investigated the jurisdictional matter involving fire sprinkler fit-

[1] This brief, received by the Board on February 19, 1993, has been mistakenly styled by appellant as "Respondent's Memorandum." We cite it here and elsewhere in this opinion as "Appellant's Brief of February 19."

©1994, Commerce Clearing House, Inc.

Digitized by Google

ters/laborers. I have determined, based on the information available, that there are no violations of the Davis-Bacon Act involved.

Appeal File, Exhibit 21.

10. There is no evidence in the record that appellant sought clarification from either GSA or the DOL regarding the wage determination included in the solicitation which led to the two contracts which are the subject of this appeal. *See* Joint Stipulation No. 7.

11. Work began on contract 109 in March 1986, and on contract 111 in May 1986. Both contracts were substantially complete by December 1986. Joint Stipulation No. 8.

12. There is, in the record for this case, a certification signed by an employee of the company which served as project manager for contract 109. The certification says that this employee spot checked payroll records and found them to be accurate "according to the pay scale in effect at the time the records were submitted." Appellant's Brief of February 19, Exhibit 7. Among the various responsibilities assigned to this corporate project manager was the task of checking for compliance with labor standards provisions of the contract. *Id.,* Exhibit 4. Appellant has submitted what are purported to be copies of such payroll records provided to the project manager. These records indicate that the individuals listed are salaried employees, owners, laborers, fitters, etc. The records also show the hourly rate paid to each individual not on regular salary. They do not, however, provide any description of the type of work done by these individuals. *Id.,* Exhibits 5-6.

13. By letter dated December 17, 1986, DOL advised GSA that it was conducting a "concurrent Fair Labor Standards Act, Davis Bacon Act (DBA) and Contract Work Hours and Safety Standards Act (CWHSSA) investigation" of Hagel under the contracts. In its letter, DOL advised that its investigation had disclosed DBA and/or CWHSSA violations, and requested that GSA withhold $213,900.04 from contract funds. Joint Stipulation No. 9.

14. By subsequent letter, dated December 30, 1986, DOL advised GSA that its investigation had disclosed DBA violations by one of Hagel's subcontractors. DOL requested that GSA withhold an additional $12,569.38 ($6,868.26 from contract 111, and $5,701.12 from contract 109). Joint Stipulation No. 10.

15. By letter dated December 31, 1986, GSA notified Hagel that based on DOL's December 17, 1986, letter, it would withhold further progress payments. Joint Stipulation No. 11.

16. On January 26, 1987, counsel for Hagel wrote the contracting officer a letter concerning DOL's investigation and the findings thereof and requesting an equitable adjustment. Enclosed with counsel's letter of January 26 was the DOL's "Summary of Unpaid Wages," totalling $214,129.62. Joint Stipulation No. 12.

17. The letter of January 26, 1987, from counsel for Hagel also informed GSA that the basis of DOL's findings was that "there could be no laborers on the project, but that only painters and pipefitters could be used." Hagel's request for an equitable adjustment was based on (1) the lack of a specification which specified the classification of laborer to be used on the project; and (2) that Hagel had submitted weekly payroll certifications to the agency without objection, which payrolls "where applicable" specified work being performed under the laborers' classification. Joint Stipulation No. 12.

18. By letter dated March 27, 1987, the contracting officer's representative, Mr. Wilby, responded to the letter of January 26, 1987, from counsel for Hagel. The contracting officer's representative declined to authorize additional compensation to Hagel for the contracts. The basis for his conclusion was his understanding that the basis for the DOS investigation was whether laborers performed pipefitters' work, not whether laborers could be used for any work under the contracts. The contracting officer's representative stated that to the best of his knowledge, laborers "certainly can be used" on the projects, *provided* that laborer's work was performed. Appeal File, Exhibit 18.

19. Counsel for Hagel responded to the foregoing in a letter dated April 15, 1987, advising that he would explore the issue with DOL. In this letter, counsel also clarified the basis for Hagel's request for an equitable adjustment, stating that DOL had taken the position that no laborers could be assigned to perform work under the contracts, and that since that was contrary to the "common expectation" of the parties to the contract, an equitable adjustment should be considered to reflect the parties' intent. Appeal File, Exhibit 19.

20. According to the narrative report prepared by the DOL to document its investigation, Hagel had classified and paid almost all of its workers on these contracts as laborers. The DOL had determined that the correct

Digitized by Google

classification and wage rate for the work at issue was sprinkler fitters. Based on an area practice survey conducted by DOL of "most sprinkler fitter installing contractors" in the geographic area, it was concluded that contractors assign the type of work at issue to sprinkler fitters and/or to apprentices, as opposed to assigning the work to members of the Laborers Union or a separate craft. DOL further concluded that its finding was reinforced by the collective bargaining agreements relating to both the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry and the Laborers Masters Agreement. Joint Stipulation No. 15.

21. By letter dated October 21, 1987, to the contracting officer, counsel for Hagel renewed his client's request for an equitable adjustment. The basis for the renewed request for an equitable adjustment was the allegation that the specifications do not contain any indication as to whether union or nonunion practice prevails in the applicable geographic area and that accordingly, bidders are not alerted as to labor assignments that may be made. Appeal File, Exhibit 21.

22. By letter dated November 24, 1987, to the contracting officer, DOL confirmed its continuing investigation of Hagel for DBA and CWHSSA violations. Further, DOL advised GSA that it was not willing to settle with Hagel for less than the full amount of the back wages, or $200,648.07. Joint Stipulation No. 17.

23. On December 1, 1987, the contracting officer's representative, Mr. Wilby, responded to the request of October 21 from counsel for Hagel asking for an equitable adjustment. He advised that because DOL had jurisdiction over resolution of the issues, he could not entertain settlement proposals. Joint Stipulation No. 18.

24. The DOL investigation of Hagel continued, as did Hagel's attempts to reach a settlement with DOL. GSA was not a party to the negotiations. By letter of May 4, 1988, counsel for Hagel proposed settlement to DOL, noting that GSA had declined Hagel's request for extras, and that GSA had declined to participate in a joint offer. Joint Stipulation No. 19.

25. By letter dated May 20, 1988, the Administrator of the Employment Standards Administration of DOL advised Hagel that, based on a careful review of the investigation report, she found reasonable cause to believe the DBA and CWHSSA violations constituted a disregard of Hagel's obligations under the DBA and CWHSSA regulations. At this point, Hagel was provided an opportunity for a hearing. Joint Stipulation No. 20.

26. DOL, in its Summary of Investigation Findings, concluded that Hagel:

a) violated the DBA by failing to pay the prevailing wages and misclassifying employees as laborers who performed painters' and sprinklers fitters' work;

b) violated CWHSSA by failing to pay overtime for work in excess of 40 hours a week; and

c) submitted falsified payroll records (the records not only "routinely falsely indicated" that certain employees were owners and salaried when in fact they weren't, but were falsified to show that employees had not worked over 40 hours in a week).

Appeal File, Exhibit 26; Joint Stipulation No. 21.

27. On June 15, 1988, Hagel requested a hearing from DOL. In its request, Hagel admitted that it did not pay its employees overtime as required by CWHSSA (although it continued to contest classification for purposes of computing the overtime rate). Hagel also admitted that it furnished incorrect certified payrolls to the compliance officer, when it listed nine individuals as salaried owners when only two were. Joint Stipulation No. 22.

28. The matter was referred to an administrative law judge. DOL issued its prehearing information on February 17, 1989, and Hagel answered on March 6, 1989. Appellant's Complaint at ¶10; Joint Stipulation No. 23. The information expressly stated in paragraph ten that $200,048.78 is being withheld by the GSA pending resolution of this matter. In its answer, Hagel expressly admitted the statements of paragraph ten of the information. Appellant's Brief of February 19, Exhibits 15-16.

29. Shortly thereafter, Hagel's counsel resumed settlement negotiations with DOL. Specifically, by letter dated March 21, 1989, Hagel offered the full amount of retainage on the contracts, $157,090, as payment for unpaid back wages, plus an additional $20,000 should Hagel recover any monies from GSA, in return for the DOL dropping debarment proceedings. Joint Stipulation No. 24.

30. At some point during this latest period of discussions between DOL and Hagel, an attorney for DOL telephoned GSA's then contracting officer, James Solomon. Accord-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ing to the DOL's attorney's notes, she was told that for contract 109, GSA was withholding $200,978 and for contract 111, GSA was withholding $215,382. These notes further stated as follows:

> Called Red . . . told him that K officer saying $416,000 . . . being . . . -He checked . . . 2 letters sent, one in '9/86 and one in '87, asking that $200,000 be held—he thinks they may have held too much.

Joint Stipulation No. 26.

31. The DOL attorney advised counsel for Hagel that GSA was withholding $200,978 on 109 and $215,382 on 111. Joint Stipulation No. 27.

32. Hagel questioned these numbers because they were inconsistent with the records of the company. However, Hagel did not communicate with GSA during this time. Joint Stipulation No. 28.

33. On May 12, 1989, DOL and Hagel entered into consent findings on case no. 89-DB-33. Under the terms of these consent findings, it was agreed that Hagel had underpaid 26 employees under the contracts by a total of $199,818.49. Joint Stipulation No. 29.

34. After the consent findings were entered into, DOL requested an accounting of funds from GSA. By letter dated May 26, 1989, the contracting officer responded that $58,368 remained on contract 109 and $215,382 remained on contract 111. Joint Stipulation No. 30.

35. Subsequently, by letter dated July 5, 1989, DOL requested that GSA release $199,818.49 to DOL because its investigation had been completed and Hagel had agreed to make full restitution. Appeal File, Exhibit 34.

36. In response to the July 5 letter from DOL, on August 29, 1989, the acting chief of the Construction A/E Contracts Branch instructed the GSA Accounts Payable Division to release $199,818.49 to DOL. Appeal File, Exhibit 35.

37. This internal instruction of August 29 to GSA's accounts payable reflected a total balance on the two contracts of $273,750. Release of the $199,818.49 to the DOL left an aggregate contract balance on both contracts of $73,931.51. That balance was subject further to liquidated damages in the amount of $350, leaving $73,581.51. Joint Stipulation No. 33.

38. The information contained in the August 29, 1989, internal memorandum to GSA's accounts payable branch was incorrect. By memorandum dated on or about September 12, 1989, the acting branch chief advised accounts payable that an accounting error had occurred and that the total contract funding available on the contracts was $156,740. He requested that all remaining funds be remitted to DOL. Joint Stipulation No. 34.

39. Having received a copy of the foregoing GSA memorandum, counsel for Hagel wrote to the acting chief of the Construction A/E Contracts Branch on September 18, 1989, expressing his dissatisfaction with the situation. Joint Stipulation No. 35.

40. On March 9, 1990, Hagel submitted a claim to the contracting officer pursuant to the Contract Disputes Act (CPA), 41 U.S.C. §§ 601-613 (1988). As required by the CDA, 41 U.S.C. § 605(a), Hagel's claim was properly certified. Hagel submitted three alternative theories for recovery, as follows:

> (1) **$73,581.50** This amount reflects the accounting calculations on Hagel's remaining contract balance as set forth in GSA's August 29, 1989, memorandum at Rule 4, Exhibit 35. It is the difference between the mistaken contract balance of $273,382 and the sum of $199,818.49 as contained in the Consent Findings between Hagel and DOL. Of the $73,581.50, $43,078.49 would be payable to DOL, with Hagel receiving the balance of $30,503.01.
>
> (2) **$216,544.51** This amount is based on the oral information the DOL attorney informed Hagel she received from the then GSA contracting officer. It is the difference between $416,360 and the amount set forth in the Consent Findings of $199,818.49.
>
> (3) **$199,818.49** This amount represents the amount set forth in the Consent Findings between Hagel and DOL and is based on Hagel's request for an equitable adjustment under the contract.

Joint Stipulation No. 36.

41. The contracting officer did not issue a final decision within the requisite time, and Hagel appealed the deemed denial to this Board on July 25, 1990. Joint Stipulation No. 37.

Discussion

Appellant's Request for Equitable Adjustment

Appellant contends that it is entitled to an equitable adjustment or change order increasing the contract price by $199,818.49.

Digitized by Google

In its complaint, appellant explains the basis for this claim:

> [T]he parties to the agreement, General Services Administration and P.M. Hagel & Associates, Inc. reasonably understood and believed and conformed to the understanding set forth in the contract that assignment of laborers to perform work as described herein above satisfy the contractual responsibilities of the parties.

Complaint ¶ 20.

In briefing this argument, counsel for appellant urges us to consider four factors which allegedly support its claim for equitable adjustment. We consider them in turn.

The first factor is that shortly before bidding on the two GSA contracts which are the subject of this appeal, Hagel had a similar contract with the Army. Under that contract, Hagel's assignment practices were questioned by the contracting officer but eventually "received an affirmative representation from the U.S. Department of the Army."

We find this argument unconvincing. The Army's so called "affirmative representation" hardly appears to have been a reasonable basis for appellant to conclude that its assignment practices were above reproach. The contracts in this case were with GSA, a civilian agency, obviously distinct from the Army. Nevertheless, in view of subsequent events, this contretemps with the Army should have at least served as a wake-up call, alerting appellant that it was vulnerable on this matter.

Documentation in the record demonstrates that it was the Army which first contacted Hagel on the issue of whether the contractor's assignment practices were proper. There is no indication that the DOL was involved. Indeed, counsel for appellant, in replying to the Army's inquiry, not only raised the prospect of a contract price increase, but also challenged the Army to identify the DOL official who issued the determination on which the Army was relying. *See* Finding 8. We find this comment particularly significant. It demonstrates that appellant's counsel was very much aware that ultimately only a DOL determination could validate a contracting officer's concern over proper assignments.

Counsel's letter appears to have moved the Army to back down in the dispute with Hagel. A carefully worded reply from the Corps' district labor officer advised that "based on information available" he had determined that no violation of the DBA was involved. *See* Finding 9. Given counsel's obvious awareness of the critical importance of a determination from DOL on such matters, we do not believe that appellant either could or should have attributed any special significance to the determination provided by the Corps. If appellant did so, this was clearly unreasonable on its part.[2]

The second factor presented by appellant in support of its claim for equitable relief is that the contracts with GSA were ambiguous with respect to the type of labor classifications permitted. Hagel complains that the contracts did not contain the appropriate wage determination. That which was contained did not designate specifically the work to which the determination should apply. Rather, the wage determination is said to have been an open-ended specification which included every craft and trade in the geographic area and was totally insensitive to the type of work to be performed under the two GSA contracts in question. Appellant also points out that there was no descriptor of the work of sprinkler fitters and that it is clear a significant portion of the challenged work fell within the description of laborers' work. *See* Appellant's Brief of February 19 at 9-10.

Relying on a decision of the Court of Appeals for the Federal Circuit, namely, *Emerald Maintenance, Inc. v. United States* [36 CCF ¶ 76,018], 925 F.2d 1425 (Fed. Cir. 1991), GSA argues that we do not even have jurisdiction to hear appellant's contention regarding the alleged inadequacy of the wage determination. According to GSA, appellant's complaint regarding this contract

[2] Appellant has also cited 29 U.S.C. § 255, a statute of limitations provision regarding actions to enforce any cause of action for damages under the DBA. This provision, according to appellant, is a "safe harbor to contractors acting in good faith reliance on certain types of agency statements." We think not. This argument was apparently offered to the DOL as well and was rejected with the following observation:

> The firm intends to offer as a defense, the fact that on the previous DBRA [Davis-Bacon Related Acts] contract at Ford [sic] Ord California, the firm was given a clean bill of health by the U.S. Army Corps of Engineers.
>
> This argument is unimpressive. Because the firm avoided detection of a previous violative practice is hardly justification for current violations.

Respondent's Brief of February 17, Exhibit 1 (Narrative Report), Addendum I.

©1994, Commerce Clearing House, Inc.

Digitized by Google

specification is nothing more than a thinly veiled challenge to the labor standard itself. GSA reminds us that, in *Emerald Maintenance,* the Court held that such disputes, regardless of how a claimant chooses to style its complaint, relate to contract labor standard provisions. Such disputes are exempt from the contract's general disputes clause and, by specific contract provision, are to be resolved in accordance with the DOL procedures. Respondent's Brief of February 17 at 24-25.

We find GSA's reliance on *Emerald Maintenance* misplaced. The facts in that case differ significantly from those in the present case in one particularly important aspect. In *Emerald Maintenance,* the contractor made no effort to challenge the DOL determination; it simply filed a claim for recovery of funds withheld by the Government in response to DOL's request. In such a situation one can readily understand why the Court concluded that the contract claim in that case was tantamount to a challenge to DOL's determination.

By contrast, in the instant case, the record shows that Hagel did, in fact, challenge the labor standards applicable to its contracts with GSA—albeit unsuccessfully. The focus of its claim now, therefore, is on the impact DOL's determination has had on Hagel's contract rights. This is a matter which we can and should address. *See Burnside-Ott Aviation Training Center, Inc. v. United States* [38 CCF ¶76,479], 985 F.2d 1574 (Fed. Cir. 1993) (jurisdiction to resolve disputes involving mutual contract rights and obligations not lost simply because labor standard issues within exclusive DOL jurisdiction form the *partial* factual predicate of dispute between the parties).

We have considered, therefore, this second factor raised by appellant in support of its request for equitable relief. Nevertheless, we reject it. In this particular case, we do not see Hagel's problems arising from any alleged deficiency in the wage determination. GSA did insert the applicable wage determination in its solicitations and that determination contained the prevailing wages for sprinkler fitters, painters, and laborers. Finding 6. Hagel's problem did not stem from the provisions of this wage determination, but from its failure to comply with the prevailing local practice of assigning the type of work at issue to sprinkler fitters and/or to apprentices, as opposed to members of the laborers union or a separate craft.

It is well established that because wage determinations are the responsibility of DOL, a contracting agency owes no legal duty to an offeror to interpret or clarify the labor classifications they contain. *Collins International Service Co. v. United States* [32 CCF ¶ 73,099], 744 F.2d 812 (Fed. Cir. 1984). The responsibility of determining the appropriate labor classification applicable to the contracts in question rested, therefore, with Hagel. The record, however, contains no evidence that Hagel sought clarification from either GSA or DOL regarding the wage determination included in the solicitation. Finding 10. Similarly, Hagel, notwithstanding its previous entanglement with the Army on this very issue, in preparing its bid for a similar contract with GSA apparently made no inquiry regarding the prevailing local practice for labor assignments.

In sum, if Hagel lacked critical information regarding the appropriate labor classifications to use in preparing its bid for the GSA contracts, we would attribute this more to its own lack of diligence than to any alleged deficiency in the wage determination provided by GSA.

The third factor offered by appellant in support of its request for equitable relief is that the parties allegedly administered the two contracts based upon the mutual but mistaken belief that the labor assignments were proper. Appellant's Brief of February 19 at 10.

We are not convinced that either appellant or GSA was operating on such a belief. The Government does not appear to have had enough information to form an opinion one way or the other. Appellant attaches special significance to the fact that a representative of respondent certified to the correctness of the contractor's payroll records. The certification, however, goes only to the correctness of the rate paid when compared to the rate shown in the applicable wage determination. These records do not contain any description of the work actually done by the employees in question. In the absence of that information, we can hardly conclude that the certifying official believed the assignments to be proper. There simply was not sufficient information to permit him to make any determination in this regard. *See* Finding 12. As a matter of fact, nothing in the record convinces us that, prior to the DOL investigation, respondent had any idea of how appellant was making its various labor assignments.

As to appellant, we have already noted that prior experience with an Army contract for the installation of a sprinkler system alerted Hagel to the possibility of problems

Digitized by Google

in the area of proper labor classifications. In view of the absence of any DOL involvement in that earlier case, it is puzzling that Hagel did not seek clarification on this matter before submitting its proposal on the two GSA contracts. Hagel contends that it entered the GSA contracts on the mistaken assumption that its labor assignments were correct. Under the circumstances, we cannot accept this fact as certain. It is equally possible that Hagel made no such assumption but chose instead to let sleeping dogs lie. In any event, its labor assignments were simply an exercise of business judgment and not a matter of shared responsibility.

Given the record before us, we are not convinced that a mutual mistake existed regarding the proper labor assignments for the two GSA contracts. Nevertheless, even if this were the case, our appellate authority has spoken clearly on this issue. In *Emerald Maintenance,* the contractor sought relief for a mistake similar to that alleged in this case—neither party was aware of the local area practice of classifying all employees working on roofs, as part of a roofing contract, as roofers. The Court held, however, that the inclusion of the Site Investigation Clause in the contract placed the risk of any mistake as to local labor practice on the contractor.

The Court's decision in *Emerald* focused, in particular, on the provision of the Site Investigation Clause which states that the contractor has "investigated and satisfied itself as to the general and local conditions which can affect the work or its cost" and that failure of the contractor to do so "will not relieve the contractor from responsibility" for estimating properly the cost of performing the work. This investigation on the part of the contractor was expressly held by the Court to include inquiry into area practice in classifying workers. For this reason, the Court refused to hold the Government responsible for Emerald's inadequate investigation. *Emerald Maintenance,* 925 F.2d at 1430-31.

The two contracts in this appeal contain the same Site Investigation Clause as was indicated in the contract in *Emerald Maintenance.* Finding 5. Accordingly, even if we were to find the existence of a mutual mistake as alleged by appellant (which we do not), we would still, given the conclusion reached by the Court of Appeals in *Emerald Maintenance,* reject Hagel's claim for relief based on the alleged mistake.

The fourth and final factor which appellant offers in support of its claim for an equitable adjustment in the contract price is that the contracting officer allegedly misrepresented the amount of retainage when DOL and Hagel were settling their dispute. This alleged representation is also at the heart of the other dispute in this case, namely, the contracting officer's refusal to fund the settlement between DOL and Hagel. For reasons described in detail later in this opinion, we find that the circumstances in this case do not warrant relief for the contracting officer's error. This holds true not only for appellant's demand that GSA fund the settlement but also for its claim to equitable relief based on the same facts.

Appellant's Demand that GSA Fund its Settlement with DOL

Hagel lists various sums to which it claims it is entitled as a result of GSA's failure to communicate to DOL and appellant the precise amount retained under the two contracts to satisfy DOL's demands. These sums range from $73,581.50 to $216,544.51. *See* Finding 40.

Appellant's theory for recovery here is not altogether clear. In briefing this case, counsel for Hagel states:

> Here it is certain that the fundamental dispute arose out of the contract, be its interpretation or mutual mistake. Appellant simply seeks to enforce the resolution reached of that dispute.

Appellant's Brief of February 19 at 12.

GSA takes this statement to mean that Hagel is asking us, in this count of its complaint, to enforce the settlement agreement reached with DOL. GSA is correct in pointing out that Hagel's agreement with DOL did not include GSA as a party, did not involve negotiations with GSA, and is not an agreement within the purview of the CDA; and that, even if it were, the agency in question is not one within our CDA jurisdiction. Accordingly, GSA urges us to dismiss this count. Respondent's Brief of February 17 at 16-17; Respondent's Reply Brief at 2-3.

We do not understand appellant's claim in quite the same manner that GSA does. Rather, we understand appellant to be complaining of GSA's failure to live up to a promise made prior to the signing of the Consent Findings.

In its complaint, Hagel alleges:

> [GSA] promised in its discussions with ... Labor, to fully fund the consent [agreement] and to remit to P.M. Hagel & Associates, Inc. the sum of $216,544.51 ....

©1994, Commerce Clearing House, Inc.

Digitized by Google

Complaint ¶ 23. We understand appellant to argue that it is this promise and not the settlement agreement itself which is the contract over which we have jurisdiction. In his brief, counsel for Hagel states:

> The jurisdiction of the Board of Contract Appeals exists whether the contract is implied or express. Implied contracts may arise out of oral representations of the contracting officer. *Balboa Systems Company, Inc.,* ASBCA No. 39400, 91-2 BCA ¶ 23,715 (Jan. 1991). The facts and circumstances here most distinctly give rise to an implied contract, particularly given the stated purpose of the inquiry and the resulting agreements which followed.

Appellant's Brief of February 19 at 13.

Even with this qualification, we find appellant's theory insufficient to support its claim. The information provided in this case by the GSA contracting officer to the inquiring DOL attorney certainly does not rise to the level of either an express or implied promise. The inquiry was an informal one and the amount mentioned was immediately recognized as being at variance with the amount formally requested at an earlier date by DOL. Finding 30. Furthermore, even if one is to assume that the communication did rise to the level of a promise, appellant does not explain how such a promise converts to an implied contract. The promise, even if made, is unilateral. We see the contracting officer getting nothing in return—except perhaps this dispute. Further, even if we are to assume that an implied contract did arise, the parties would be GSA and DOL. Such an agreement between two agencies or representatives of two agencies is obviously not one over which we would have jurisdiction.

The most egregious flaw, however, in appellant's demand that GSA fund the DOL settlement is Hagel's contention that it reasonably relied on the contracting officer's alleged promise. The record in this case supports the opposite conclusion. The accuracy of the information provided by the contracting officer to the DOL attorney was questionable from the start. The $416,000 was immediately recognized as being in excess of DOL's original requests. *See* Finding 30. This figure was also over twice the amount of retainage DOL had stated in its prehearing information and to which Hagel had agreed in its answer to the same. Finding 28. Furthermore, the parties have stipulated that Hagel, itself, questioned the numbers as being inconsistent even with its own records. Nevertheless, despite the enormous difference in estimates, Hagel did not seek to clarify matters by conferring with GSA. Finding 32.[3]

The difficulties encountered by GSA in determining the precise amounts withheld on the contracts are indeed disconcerting. It would be fanciful, however, for us to assume that these accounting errors on the part of GSA are without parallel in the annals of contract administration. What is astonishing here is that Hagel, under the circumstances in this case, made no effort to flush the matter out and resolve it prior to signing its settlement with DOL. We will not speculate on why Hagel elected not to question the figures provided. Rather, we conclude only that such undiscerning reliance was clearly unreasonable under the circumstances and, in itself, vitiates any argument Hagel now raises in support of an equitable price adjustment or funding of its settlement with DOL.

Decision

This appeal is **DENIED.**

[¶ 26,569] Ingenieurgesellschaft Fuer Technische Dienste

ASBCA Nos. 42029, 42030, April 24, 1992. Contract Nos. F61503-90-M-0514, F61503-90-M-0745.

Payments, Prompt—Interest—Foreign Vendors.—An award of Prompt Payment Act interest was granted to a foreign contractor, even though a regulation provided that the interest penalty provisions of the PPA did not apply to contracts awarded to foreign vendors, because there was nothing in the PPA or its legislative history showing that Congress intended to restrict the benefit of the Act to domestic contractors performing contractual work within the United States. The legislative history made clear that the

[3] We also note here that in an earlier settlement proposal, Hagel had estimated the retainage to be $157,090—a figure which differed by only $350 from GSA's ultimate figure of $156,740. *Compare* Finding 29 *with* Finding 38.

Digitized by Google

purpose of the PPA was to encourage every agency to pay all of its bills in a timely fashion. There was no distinction drawn in the PPA between a foreign or domestic vendor. Moreover, the PPA was expressly linked to the Contract Disputes Act for purposes of the computation of the interest rates. The reference to the CDA, which applied to covered agency contracts awarded and performed outside the of the United States, was further confirmation that Congress's perspective was not limited to an agency's domestic operations. The regulation excluding foreign contractors, being inconsistent with the intent and purpose of the PPA, was not binding on the parties.

For the appellant: Paul D. Reinsdorf, Frankfurt, Germany. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Maj. Kathleen G. O'Reilly, USAF, Trial Attorney.

Before HARTY, RIISMANDEL, and RUBERRY, Administrative Judges.

HARTY, Administrative Judge: These consolidated appeals seek interest pursuant to the Prompt Payment Act (PPA), 31 U.S.C. §§3901-3907, on amounts due under two repair contracts performed by Ingenieurgesellschaft Fuer Technische Dienste (ITD), a German corporation, in the Federal Republic of Germany during 1990. ITD also seeks DM 1,300 for return charges incurred as a result of cancellation of some of the work called for under one of the contracts. The parties have submitted the appeals on the record under Board Rule 11. Both parties submitted briefs and the Government submitted a reply. We decide entitlement only.

We sustain the appeals as to the PPA interest claims, but deny the claim for return charges.

FINDINGS OF FACT

ASBCA No. 42029

Contract No. F61503-90-M-0514 (M-0514) called for ITD to repair and provide parts for various pieces of equipment located at Rhein-Main Commissary, Rhein-Main Air Base, Federal Republic of Germany. The completion date for work was 15 March 1990. On 14 February 1990, ITD met with representatives of the Base contracting office. During the meeting, the contracting officer advised the ITD representative that the Government no longer required repair of two of the pieces of equipment. The ITD representative was told to attempt to cancel orders that ITD may have placed for repair parts. (Affidavit of R.S. Kennedy; G-4, G-5)

The Government received ITD's 17 January 1990 invoice for DM 4,358 for the work performed no later than 22 January 1990. ITD also sought DM 1,300 for return charges on spare parts that were to be used in connection with the cancelled work. On or about 27 March 1990, the Government's contracting officer received three bills from ITD assertedly supporting its claim for return charges. A translation of the supporting documents shows that the orders were placed in March of 1990, after the 14 February 1990 cancellation of the work covered by the parts requested. (G-1A-C, G-2, G-3, G-4) Appellant has offered no evidence in rebuttal. We find that the orders were placed after cancellation.

ASBCA No. 42030

On or about 27 February 1990, the contracting officer issued Contract No. F61503-90-M-0745 (M-0745) for the repair of two forklifts also located at the Rhein-Main Commissary. The forklifts were repaired and the Government accepted the work on 9 March 1990 and 22 March 1990. On 30 March 1990 ITD submitted an invoice for the contractual amount of DM 10,944.40. The Government received the invoice no later than 4 April 1990.

Request for Contracting Officer's Decisions

No payment was forthcoming under either contract. By separate letters, each dated 27 August 1990, ITD submitted formal claims for payment. The Government received the claims no later than 29 August 1990 (Gov't br. at 3). ITD demanded payment of the outstanding balance of DM 4,358 under contract M-0514, together with PPA interest from 17 February 1990 until the Government received the claim and interest thereafter under section 612 of the Contract Disputes Act (CDA), 41 U.S.C. §§601-613. ITD also filed a claim of DM 1,300 for return charges. DM 10,944.40 was claimed under M-0745 together with PPA interest from 30 April 1990 until claim receipt and CDA interest thereafter. ITD's 27 August 1990 claim letters specifically requested a contracting officer's final decision within 60 calendar days. The contracting officer did not respond. By letters of 31 October 1990, appellant appealed to the Board from deemed denials in accordance with the CDA, 41 U.S.C. §605(c)(5).

DISCUSSION

Contract Performance

The Government has admitted liability for the principal amounts of DM 4,358 under contract M-0514 and DM 10,944.40 under contract M-0745. We understand payment was made in February, 1991 (app. br. at 8 n.6). The Government has also acknowledged liability for appropriate CDA interest. However, the Government does contest the claim for return charges under contract M-0514 on the ground that ITD failed in its duty to mitigate damages by placing the orders for the parts after the work was cancelled, citing *The McCarthy Corp.*, ASBCA No. 35204, 88-1 BCA ¶ 20,485. We agree and note that appellant has offered no rebuttal, apparently abandoning this claim.

Prompt Payment Act Interest

The only question remaining here is ITD's entitlement to PPA interest.[1] The Government maintains that the PPA was not intended to have extraterritorial effect. Counsel argues that there is neither an express statement in the Act concerning extraterritorial effect, nor does the legislative history appear to specifically address the question whether Congress intended the PPA to have extraterritorial effect. In this context, counsel urges that we apply the "long standing principle of American law that legislation of Congress, unless a contrary intent appears, is meant to apply only within the territorial jurisdiction of the United States." *Equal Employment Opportunity Commission v. Arabian American Oil Co.*, 111 S.Ct. 1227, 1230, 113 L.Ed 2d 274, 281 (1991), citing *Foley Bros., Inc. v. Filardo*, 336 U.S. 281, 285, 93 L.Ed 680, 683 (1949).

The Government also emphasizes that both Federal Acquisition Regulation (FAR) 39.901 and Air Force Regulation (AFR) 177-102, Commercial Transactions at Base Level, dated 15 November 1987, as amended, preclude payment to foreign vendors in these circumstances.[2] FAR 32.901 provides that "the interest penalty provisions" of the PPA "do not apply to contracts awarded to foreign vendors outside the United States for work performed outside the United States." Paragraph 12-131 of AFR 177-102, in effect during the period covered by the contracts in dispute here, provided that:

> Interest Penalties required by the Prompt Payment Act are not payable to foreign vendors or foreign governments serving as vendors for purchases made outside the U.S. This exclusion does not apply to U.S. vendors doing business overseas or to purchases made from foreign vendors doing business in the U.S.

(Gov't reply br., attachment 1)

Appellant argues that the PPA unambiguously requires the payment of interest to foreign vendors. In appellant's view, the purpose of the Act plainly applies equally to a Finance Office in Cleveland, Ohio, and to a Finance Office in Frankfurt, Germany. In the present case, two contracts were made, the work performed, invoices submitted, and then the contractor was simply ignored, a result which frustrates the manifest congressional purpose in enacting the PPA.

The presumption against extraterritoriality is an important canon of construction. As the Supreme Court explained in *Arabian American Oil*, the presumption "serves to protect against unintended clashes between our laws and those of other nations which could result in international discord." *Id.* at 1230, 113 L.Ed 2d at 282. In the context of *Arabian American Oil*, the Court was "unwilling to ascribe to [Congress] a policy which would raise difficult issues of international law by imposing this country's employment discrimination regime upon

[1] By order dated 8 April 1991, we dismissed appellant's request for attorney's fees as premature and not properly before the Board. *Maintenance Engineers, Inc.*, ASBCA No. 34431, 87-2 BCA ¶ 19,915; *J.M.T. Machine Co.*, ASBCA Nos. 23928 *et al.*, 86-2 BCA ¶ 18,928, *aff'd*, 826 F.2d 1042 (Fed. Cir. 1987).

[2] Government counsel has also candidly pointed out that prior to March of 1989, paragraph 12-12c of AFR 177-102 as originally published provided for the payment of PPA interest to foreign vendors in the following terms:

> c. Contracts with foreign governments (bilateral agreements and memoranda of understanding) are excluded from provisions of the Prompt Payment Act. All other contracts with foreign vendors, and foreign governments serving as vendors (government ownership or control of railroads, utilities, port facilities, etc.) are subject to the Act ....

Counsel has also noted that Air Force Pamphlet 110-4, entitled Fiscal Law, dated 30 September 1988, indicated the PPA applied to foreign vendors. Counsel emphasizes, however, that while the initial version of AFR 177-102, paragraph 12-12c would have allowed payment of PPA interest to foreign vendors, the section was deleted in March 1989. We accept that at all times relevant to these contracts Air Force regulations precluded payment of PPA interest to appellant.

Digitized by Google

foreign corporations operating in foreign commerce." *Id.* at 1234, 113 L.Ed 2d at 286.

However, we think the Government's reliance on the presumption alone is misplaced. We do not understand the Supreme Court's most recent application of this important guide to ascertaining congressional intent to require an express statement to the effect that the Act applies outside the United States, its territories and possessions before the presumption can be overcome. The absence of an express statement does not foreclose an inquiry into Congressional intent, although it may otherwise "buttress" a conclusion that the legislation was not intended to have extraterritorial effect. *Id.* at 1235, 113 L.Ed 2d at 288.

We agree with appellant's analysis. In our view, Congress intended that the PPA be given extraterritorial effect and we recently reached this conclusion with respect to the precise questions presented by these appeals in *Held & Francke Bauaktiengesellschaft mbH*, ASBCA Nos. 42463, 42464, 92-1 BCA ¶ 24,712.

Under the PPA an agency head "acquiring property or service from a business concern, who does not pay the concern for each complete delivered item of property or service by the due date, shall pay an interest penalty to the concern on the amount of the payment due." 31 U.S.C. § 3902(a). The legislative history makes clear that "[t]he Prompt Payment Act requires every Federal Agency to pay an interest penalty on amounts owed to business concerns for the acquisition of property or services when the agency does not pay on time." H.R. Rep. No. 97-461, 82d Cong., 2d Sess. 8 (1982), *reprinted* in 1982 U.S. Code Cong. & Admin. News 111-126. The aim was

> to accomplish what administrative rules and regulations have failed to do—provide incentives for the Federal Government to pay its bills on time. Those suppliers of goods and services who do business with the Government, in particular small companies, are being treated unfairly by the Government when it fails to pay its bills on time. The companies frequently must borrow money at high interest rates to secure operating funds which would have been available if the Government had paid its bills promptly. The Government itself is also hurt because its reputation as a slow payer discourages businesses from bidding for Government contracts. The Government consequently is deprived of the innovation and lower prices that result from vigorous competitive bidding for contracts.

Id. at 1.

The focus of the Act is principally on the agency and its total operations. Congress was concerned that every agency pay *all* of its bills in a timely fashion. No distinction is drawn between a foreign or domestic vendor. Instead, the emphasis is on a "business concern," which the Act defines as including "a person carrying on a trade or business" and "a nonprofit entity operating as a contractor." 31 U.S.C. § 3901(a)(2)(A), (B). Moreover, the PPA is expressly linked to the CDA for purposes of the computation of the interest rate, delineating interest penalty payable under the PPA from interest payable under the CDA, and specifically authorizing claims for unpaid interest under the CDA. 31 U.S.C. §§ 3902, 3907. The references to the CDA, which applies to covered agency contracts awarded and performed outside the territorial jurisdiction of the United States, are further confirmation that Congress's perspective was not limited to an agency's domestic operations when it enacted the PPA.[3]

In summary, as we said in *Held & Francke*,

> the Act's purpose was "to provide incentives for the Federal Government to pay its bills on time." Nothing contained either in the Act or in its legislative history demonstrates that Congress intended to restrict this benefit to domestic contractors performing contractual work within the boundaries of the United States.

Held & Francke at 123,350

[3] Though we find Congress's intent clear, we do note that the presumption against extraterritorial effect is particularly pertinent in assessing domestic socioeconomic legislation. When the PPA is measured against the purpose underlying the presumption, a congressional direction to pay an interest penalty if an agency does not honor its contractual commitments to pay in a timely fashion poses virtually no risk of "international discord," unlike the imposition of domestic socioeconomic legislation abroad. If for some reason a foreign contractor is unwilling to accept a PPA interest penalty, it may refuse the payment. *Matter of Central Intelligence Agency*, 62 Comp. Gen. 673 (1983) (waiver of PPA interest authorized). Alternatively, a foreign contractor might decline to contract or insist on a choice of foreign law to govern the contract if the amount of a late payment penalty were a serious concern. *See Gesellschaft Fuer Fertingungstechnik u. Maschinenbau AG*, ASBCA No. 24816, 81-1 BCA ¶ 14,924 for a discussion of choice of law.

©1994, Commerce Clearing House, Inc.

Digitized by Google

We also found FAR 32.901 to be inconsistent with the purposes of the PPA. *See also R & B Bewachungsgesellschaft mbH,* ASBCA No. 42221, 92-1 BCA ¶ 24,752, 27 January 1992. As we observed, Section 3903(a) of the PPA charges the Director of the OMB with proscribing regulations implementing the Act. Under this authority, OMB issued Circular A-125 on 19 August 1982. From its original form until a revision was publicly proposed on 14 April 1989, 54 Fed. Reg. 15,053, Circular A-125 never purported to exclude foreign vendors from the Act's application. In the proposed revision, OMB made the following proposal:

> Contracts with foreign contractors for work performed outside the United States are not covered by the circular. The Prompt Payment Act does not specifically address the question of geographic coverage. In the absence of clear congressional intent, the general principle, articulated by the Supreme Court, is that statutes can only operate upon persons and things within the territorial jurisdiction of the law making power. In addition, a number of requirements of the Act, reflecting domestic industry practice, either have no counterparts overseas or are in conflict with industry practice abroad. Interest rates vary widely among countries so that application of the Act in foreign countries would result in windfalls to contractors in some countries and would undercompensate vendors in others. Further, some vendors overseas do not willingly accept application of U.S. law.

Id. at 15,056.

However, in formulating its most recent revision of the Circular on 21 December 1989, 54 Fed. Reg. 52,700, OMB stated:

> We received comments from three agencies, one industry association, and a foreign government agency, asking for clarification or complaining about precluding applicability to foreign vendors outside the United States for work performed outside the United States. We have conferred with the FAR Council, the Office of the U.S. Trade Representative, and a number of affected agencies and concluded that the proposed exclusion should be removed to avoid possible discrimination on the basis of nationality.

Id. at 52,701.

The "proposed exclusion" referred to and dropped by OMB from Circular A-125 is embodied in the FAR 32.901 injunction that "the interest payment provisions" of the PPA "do not apply to contracts awarded to foreign vendors outside the United States for work performed outside the United States." We also note that neither FAR 32.901 nor the parallel paragraph 12-131 of AFR 177-102 are apparently based on an assessment that Congress intended to limit the territorial effect of the PPA since the regulations are directed only to foreign vendors performing outside the United States. Domestic vendors performing contracts awarded outside the United States would be covered under the regulations.

Against this background, we concluded that:

> OMB, the agency entrusted by Congress to draft regulations to carry out the Act's intent, has—after some deliberation—publicly opposed the exclusion contained in FAR 32.901 so as to avoid possible discrimination on the basis of nationality.
>
> As we stated in *Zinger Construction Co.,* 87-3 BCA ¶ 20,043:
>
> > Although administrative construction of a statute should be given deference because of the expertise of the administrative agencies, it is still proper to resort to legislative history and to consider the intent of the lawmakers as well as the purpose of the statute in determining the meaning of a statutory provision where the language of the statute leaves room for interpretation and there have been inconsistencies in its application. See *Texas State Commission for the Blind v. United States,* 796 F.2d 400, 415 (Fed. Cir. 1986).
> >
> > We have performed such an analysis and conclude, as we did in *Zinger,* that the regulation at issue is "inconsistent with the intent and purpose of the" Prompt Payment Act. Since FAR 32.901 does not "carry out the legislative intent," it is "not reasonable in this respect" and is not binding on appellant. *Southeastern Community College v. Davis,* 442 U.S. 397, 411 (1979); *cf. Brown & Root Development, Inc. v. Tennessee Valley Authority,* 681 F.2d 1313 (11th Cir. 1982) [cited in *Zinger, supra*]."

Held & Francke at 123,350-51. *See also New York Guardian Mortgagee Corp. v. United States,* 916 F.2d 1558 (Fed. Cir. 1990).

This analysis is controlling here and applies with equal force to AFR 177-102.

DECISION

ITD's claims for PPA interest penalty under ASBCA Nos. 42029 and 42030 are sustained and the matter is remanded to the parties for the determination of quantum. ITD is entitled to PPA interest penalty from 30 days after Government receipt of the invoices until receipt of the claims and interest thereafter on the amount of the interest penalty in accordance with the CDA. The claim for return charges in connection with ASBCA No. 42029 is denied. ASBCA No. 42030 is sustained and ASBCA No. 42029 is sustained in part as indicated.

[¶ 26,570] Monoko, Inc.

ASBCA No. 46283, December 15, 1993. Contract No. NAS10-11830.

Performance—Interference by Government—Inspection Services.—The costs of inspection services performed by a contractor after the original completion date for its repair contract were not recoverable, because the contractor failed to prove that its alleged increased inspection costs were caused by disruptive effects of government changes in the later period of time. The inspection costs were required by the contract and were not shown to be attributable to change orders or government delay. It was not shown that performing the inspections after the completion date increased the cost of the required inspections. Moreover, the sheer volume or the continued flow of change orders did not constitute proof of disruption to the contract work.

For the appellant: De Renzo & Karraker, P.A., Altamonte Springs, Florida, by Donald E. Karraker. For the government: Donald H. Schiller, Counsel, National Aeronautics & Space Administration, Kennedy Space Center, Florida.

Before TODD and RIISMANDEL, Administrative Judges.

TODD, Administrative Judge: This appeal involves a claim for costs of inspection of protective coatings and surface preparations on water tanks caused by delay and disruption. Appellant elected the accelerated procedure provided by Board Rules, and both parties agreed to waive a hearing and submit the appeal for decision on the record. Only entitlement is before us for decision.

FINDINGS OF FACT

1. On 12 July 1991, the National Aeronautics and Space Administration (NASA) awarded Contract No. NAS10-11830 for the repair and maintenance of two water tanks at Kennedy Space Center (KSC) to appellant Monoko, Inc., d/b/a Quality Painting & Construction Co. (Monoko), for a firm fixed price of $193,432 (R4, tab 4). Monoko is a small business and did not have prior Government contracting experience (R4, tab 42). The contract work involved sandblasting and coating steel water tanks. The contracting officer was to provide a National Association of Corrosion Engineers (NACE) certified inspector for inspection of coatings to assure compliance with the specifications. (R4, tab 2, at 6, 30, 62) The specifications required the contractor to provide quality control inspection and included the following provision related to Government-provided NACE inspection:

> The Contracting Officer will provide NACE certified coating inspectors to ensure the requirements of this Specification are fulfilled. The Contractor shall provide safe walking surfaces and access to his work areas for all Government inspections.

(R4, tab 2, § 09892, at 46, ¶ 3.4; § 09893, at 62, ¶ 3.4) The contract incorporated by reference the standard clauses "Changes (AUG 1987)" (FAR 52.243-4), "Suspension of Work (APR 1984)" (FAR 52.221-12), and "Disputes (APR 1984)" (FAR 52.233-1) (R4, tab 4, at 54, 56-57).

2. On 18 September 1991, the contracting officer issued the notice to proceed (R4, tab 14). It is agreed that the original contract completion date was thereby set as 15 April 1992 (R4, tab 4, at 6; app. br. at 1; Gov't br. at 3).

3. NASA did not have NACE certified inspectors employed at KSC available to support the contract and decided the services should be supplied by the contractor (exh. G-46). By letter dated 18 September 1991, the contracting officer requested a proposal from appellant for providing the technical services of a NACE certified inspector to

©1994, Commerce Clearing House, Inc.

Digitized by Google

"inspect all protective coatings and surface preparations both on-site and off-site as required in contract specifications and drawings." The letter began, "NOTICE: THIS IS NOT A NOTICE TO PROCEED WITH THE WORK." The proposal was to "include a firm, fixed price for all work within the proposed change." (R4, tab 15)

4. Appellant obtained a quotation from Aerotek Services, Inc. (Aerotek) to submit a proposal to NASA. Aerotek quoted an hourly rate of $26.50 and higher rates for inspection at locations other than KSC. (Exh. G-10, -11) On 31 October 1991, appellant proposed a price of $57,500 (exh. G-12). After a NASA request, appellant submitted a cost breakdown and confirmed its proposal of "the lump sum" of $57,500. Appellant's hourly rate was $48 and, after calculating overtime, payroll taxes, overhead and profit, the "[t]otal per average week" would be $4,486. Appellant's proposal included the following:

> The project should run 13 weeks @ $4,486/wk, we than [sic] have a total of $58,318. If the project should run more than the 13 weeks, we will add the necessary amount, if the project should be completed before we can than [sic] pro-rate and deduct from the proposal amount, which ever [sic] may be the case.

(R4, tab 17)

5. Mr. Thomas E. DeLaet, the contracting officer's technical representative (COTR), evaluated appellant's proposal with assistance from Mr. Chuck Belt, a NASA Base Support contractor employee. NASA reduced the hourly rate to $34.22 and calculated that $23,274 would be a fair and reasonable price for the inspection services during the 13-week period the contractor scheduled. NASA expected the contractor to begin work 7 November 1991 and complete the project 9 March 1992. (Exh. G-46)

6. Negotiations were conducted by telephone on 27 November 1991. Participants were Messrs. DeLaet and Belt, Ms. Anne D. Reed, the NASA contract administrator at that time, and Ms. Keri Monokandilos, appellant's president. Appellant represented that its quoted hourly rate was high because it included payroll taxes and insurance and travel expenses. Accordingly, NASA considered the proposed costs fair and reasonable. Appellant's proposal in the amount of $57,500, which had been evaluated at $23,274, was settled at $28,704. (R4, tab 6)

7. During the negotiations the Government representatives told Ms. Monokandilos that appellant was to provide NACE inspection services on a firm, fixed price basis. Ms. Reed explained the effect to Ms. Monokandilos. If the company finished the job early it would make more profit, but if the work went beyond the contract completion date, there could be a loss that the company might have to absorb. The lump sum was not considered adjustable based on actual cost experience or the period of time during which the work would be performed. (R4, tab 27; exh. G-44, -46) The Government did not hear any objection from Ms. Monokandilos (exh. G-46). According to appellant's attorney, Ms. Reed said that if the contract duration were extended, the costs of NACE inspection would be considered in a contract modification to increase the costs of providing NACE inspection for the extended time of the contract (R4, tab 42).

8. Modification No. SA-1 to the contract (SA-1), signed by appellant on 20 December 1991, provided a negotiated equitable adjustment in the amount of $28,704 for NACE inspection services and was the Notice to Proceed for the NACE inspection work. The contract completion date was unchanged. The contractor was required to submit a certification of the NACE inspector to the contracting officer for approval (R4, tab 5). This submission was made on 19 December 1991 (exh. G-13). SA-1 included the following accord and satisfaction language:

> It is hereby agreed that the adjustments agreed to herein constitute an accord and satisfaction and fully satisfy any and all claims against the Government arising out of or related to the changes specified in this Supplemental Agreement including, but not limited to, claims for additional costs associated with delays, disruptions, extended overhead or time impact.

(R4, tab 5)

9. Some mobilization had begun on the job site as of 24 October 1991, but there was no significant contractor activity until 7 January 1992, when the NACE inspector began work (R4, tabs 9, 12; exh. G-14). During the course of the contract, the contracting officer was concerned with the lack of progress and the progress that appellant reported. Requests were made for recovery plans beginning 7 January 1992. (R4, tabs 19, 20, 25; exh. G-44). As of mid-April there had been numerous causes of delay, all of which appellant considered beyond its control (exh. G-29). Among the causes of delay were seven separate change orders involving extra work, material supplier and subcontractor delays, bad weather, and there had been delay get-

Digitized by Google

ting acceptance of the interior coating (R4, tabs 5, 22). Appellant worked overtime and on Saturdays and Sundays as needed to increase its rate of progress (exh. G-15, -17, -19, G-21 to -25, G-28, -29, -31).

10. On 10 April 1992, appellant requested an extension of time for completing the contract to 30 May 1992, and submitted a claim for additional NACE inspection costs in the amount of $19,972 (R4, tabs 22, 23). Appellant explained that it had proposed providing the services for 13 weeks, which was negotiated at a cost of $2,208 per week, and the project was now delayed beyond the 13 weeks, in part because of the Government-ordered changes to the scope of the work. The basis for the amount of the claim was nine additional weeks of services at $2,208 per week. (R4, tab 23)

11. On 15 May 1992, appellant's claim for additional NACE inspection costs was denied with a statement that the SA-1 amount, which was $28,704, was adequate compensation (R4, tab 28). The contracting officer had received a "Summary of Monoko Account Receivable" from Aerotek as of 13 May 1991, which showed $12,486.50 had been billed to date. Aerotek estimated the subcontract billings as of an anticipated completion date of 14 June 1992, at $17,786.50. (R4, tab 26) By letter dated 29 May 1992, appellant disagreed and indicated its intention to appeal (R4, tab 29).

12. Cost proposals for change orders were negotiated, settled and incorporated into modifications to the contract (R4, tabs 5, 6, 27). Specifically, Change Order No. 14, negotiated 27 May through 5 June, 1992, and settled for $24,196 and a five-day contract extension, was incorporated into Modification No. SA-15, effective 17 June 1992, with substantially the same accord and satisfaction language that was in SA-1. This agreement included additional costs of NACE inspection for work added by the change order. (R4, tabs 5, 6) All of the change orders, in total, extended the time of performance of the contract from 210 days to 328 days, which is an increase of approximately 56 percent, and increased the contract price by the amount of $113,458 from $193,432 to $306,890, which is an increase of approximately 59 percent (R4, tab 5; app. supp. R4, tabs 7, 8).

13. On 10 September 1992, appellant submitted a second claim for NACE inspection services in the amount of $22,974 for the period 6 June 1992 through 11 August 1992, and a time extension from 5 June 1992 through 11 August 1992. Appellant included amounts for "loss in downtime and production" while NACE inspection occurred. Attachment C to the claim identified the loss as one hour occurring each time an inspector inspected a tank because the crew had to stop work, collect supplies, come down from the tank, wait during an average 32 minutes needed for inspection, climb back to their work stations, and resume work. (R4, tab 34)

14. By letter dated 16 September 1992, the contracting officer denied the claim as without merit. The letter noted that Aerotek total costs for inspection services through 10 August 1992, were $25,049.62, and SA-1 had settled the amount of $28,704 for the inspection services. (R4, tab 36)

15. The final negotiations to settle all outstanding change orders and claims were conducted on 7 October 1992 (R4, tab 6). Both parties understood and agreed that these were final negotiations prior to closing out the contract (R4, tabs 41, 44; exh. G-34, -35, -37, -40).

16. On 12 October 1992, appellant resubmitted its first claim for NACE inspection services for costs rather than estimates during the period 15 April through 5 June 1992, in the amount of $11,482. The cost breakdown included "downtime of crew." (R4, tab 43) On the same date by separate letter, appellant requested a contracting officer's final decision on the second NACE inspection claim that had been denied on 16 September 1992, and enclosed a copy of a letter of advice, dated 5 October 1992, that it had received from its attorney (R4, tab 42). The claims were not discussed during the final negotiations, and no reservation of rights was made then (R4, tab 6). Since Ms. Monokandilos had not mentioned the claims, Ms. Lisa G. Kestel, the contract administrator, considered that she had not negotiated in good faith and so informed her in a telephone conversation on or about 19 October 1992 (R4, tab 44). The Government had recognized that appellant was a small business and, despite communication difficulties, gave the benefit of the doubt to the contractor in conducting negotiations when it was reasonable to do so (exh. G-45).

17. On 21 December 1992, the contracting officer denied the claims as without merit on the grounds that the NACE inspections were required under the firm fixed-price contract as agreed to in SA-1 (R4, tab 47). Appellant expressly reserved its right to appeal this final decision in its letter, dated 6 January 1993, transmitting the signed final contract modifications (exh. G-41, -42). On 16 March 1993, appellant filed its timely

©1994, Commerce Clearing House, Inc.
Digitized by Google

notice of appeal to initiate these proceedings at the NASA Board of Contract Appeals. The appeal was docketed NASA BCA No. 87-0393 prior to the merger of the NASA BCA and ASBCA that was effective 12 July 1993. The total amount of the claims is $34,456.

DECISION

Appellant claims entitlement to costs of NACE inspection services performed after the original contract completion date on the grounds that Government changes increased the scope of work and extended the time for performance. Appellant alleges that it was not required by SA-1 to provide inspection services beyond the original contract completion date, but that the time of performance was "expressly agreed" (app. compl., ¶ 8). Since Government changes extended the contract performance period, appellant maintains it should recover costs of inspection that were allegedly caused by the changed work and the delay.

Appellant's attorney in numerous references in a claim letter, dated 5 October 1992, and its briefs has asserted that appellant, a small business without prior experience in Government contracting, was taken advantage of by unfair, unethical and unscrupulous NASA personnel. A series of different contracting officers and contract administrators exercised responsibility for the contract, but we do not believe they acted to keep the contractor off balance or in pursuit of "a Machiavellian plan" (app. br. at 9, 11). We consider it unnecessary to respond to all of appellant's attorney's assertions which are without confirmation from any Monoko individual or other source. We understand the difficulties appellant's president may have had with Government procedures that were new to her, but there is evidence that the contractor was given the benefit of the doubt, and we have no basis without proof from appellant to consider whether there was actionable Government bad faith.

The Government's position has been that SA-1 constitutes an accord and satisfaction that operates to bar NACE inspection claims regardless of when the costs were incurred (Gov't br. at 25). The Government maintains that appellant has mischaracterized its position and a correct statement is that "SA-1 required the Contractor to perform all NACE inspection for base contract work without regard to whether the NACE inspection was performed during the originally scheduled contract completion period or later" (Gov't reply br. at 6). Since there is no evidence that delay caused any increase in cost to perform NACE inspections, the Government argues there is no basis for the claim.

SA-1 by its terms reflects an intention that the fixed price adjustment stated would satisfy "any and all claims against the government arising out of or related to the changes specified," *i.e.*, the NACE inspection change (finding 8). The Government's evidence that the parties contemplated that the fixed price would cover the performance period of the contract that could be either shorter or longer than the contract term has not been disputed. Appellant has stated that it was induced to enter into SA-1 by the assurances of Ms. Reed that if the contract were extended, the costs of NACE inspection would be considered in a contract modification and that those false statements constitute material misrepresentation. The affidavit of Ms. Reed is to the contrary (finding 7). If there were some factual basis for appellant's claim, it would be necessary for appellant to establish that there was a false representation, there was knowledge of falsity or other evidence of an intent to deceive, and that appellant relied and was in fact injured by a misrepresentation that went to the essence of the transaction. *Roseburg Lumber Co. v. Madigan*, 978 F.2d 660, 667 (Fed. Cir. 1992); *Spalding and Son, Inc. v. United States* [37 CCF ¶ 76,029], 24 Cl. Ct. 112, 143 (1991); *Acres American, Incorporated*, ASBCA No. 27743, 85-1 BCA ¶ 17,865. Appellant was given the opportunity in this Rule 11 proceeding to supplement the record with affidavits and other documentary evidence, but has declined to submit any affidavit evidence. Allegations and arguments made by appellant's attorney are insufficient to meet the burden of proof on appellant's claims. An assertion or allegation standing alone does not constitute proof. *D.J. Simons Construction Co.*, ASBCA No. 41336, 93-1 BCA ¶ 25,306; *Advanced Control Technology*, NASA BCA Nos. 24-0790 et al., 92-2 BCA ¶ 24,947; *Tri-State Services of Texas, Inc.*, ASBCA No. 38019, 89-3 BCA ¶ 22,064. We have no indication in the record that appellant was misled by anything said by Government representatives during the negotiations of the price appellant would accept for performance of the NACE inspection.

Subsequent change orders were not within the contemplation of the parties and are not the subject of SA-1. The Government has in fact provided compensation when NACE inspection costs were increased by Change Or-

Digitized by Google

der No. 14. We have concluded that the agreement in SA-1 does not operate to bar future claims which were not within the contemplation of the parties at the time of its execution, and as to which there could be no meeting of the minds. *Todd-Grace, Inc.*, ASBCA No. 34469, 92-1 BCA ¶ 24,742; *RCA Corp.*, NASA BCA No. 676-4, 78-1 BCA ¶ 13,220, at 64,666.

The parties' agreement was that NACE inspection as required by the contract would be performed for a price not to exceed $28,704. NACE inspection was performed by appellant's subcontractor at less than that cost. Appellant presents the additional costs claimed as costs incurred by appellant, not its subcontractor, in connection with loss of productivity, downtime and disruption because of NACE inspection. Appellant argues the "disruptions" of providing safe walking surfaces and access to the work, as well as the provision of required supervision and coordination, which occurred after the contract completion date are compensable. (App. reply br. at 3-8) Appellant's supervisor and crew time would have been spent on this work whether NACE inspection was conducted during the original contract term or later, and for this reason we find no basis for a claim for disruption. *Gaffny Corporation*, ASBCA Nos. 37639, *et al.* (Nov. 22, 1993).

The costs described by appellant as its costs related to NACE inspection were incurred for the contractually required inspection work and were not attributable to the change orders or any delay. It has not been shown that the fact that NACE inspections were performed later increased the cost of inspection. In addition, the sheer volume and continued flow of change orders does not constitute proof of disruption to the contract work. There must be evidence of the effect of the changes that actually occurred in performance of the contract work. *Bechtel National, Inc.*, NASA BCA No. 1186-7, 90-1 BCA ¶ 22,549, *aff'd*, 90-3 BCA ¶ 23,105. We have insufficient evidence to conclude that there were any costs of NACE inspection that increased as a result of subsequent change orders that have not been paid. Appellant has failed to prove the causation of its increased costs and that there were unforeseeable disruptive effects in the later period of time.

The appeal is denied.

[¶ 26,571] Essex Electro Engineers, Inc.

ASBCA No. 46202, December 20, 1993. Contract No. N00383-90-C-9680.

Contract Disputes, Jurisdiction—Boards of Contract Appeals—Existence of Dispute.—A settlement proposal submitted following the convenience termination of a contract for exciter regulators did not constitute a claim, even though it expressly stated it was a claim and sought a final decision, because there was no evidence that there had been communication on the proposal. A dispute cannot be manufactured and interest cannot be made applicable by the mere assertion that a submission is a claim. The proposal's demand for a decision within 60 days did not activate the requirement for a final decision within 60 days, because the proposal was not a claim.

Contract Disputes, Contracting Officer's Decision—Failure to Decide—Insufficient Information.—The failure of a contracting officer to respond to a contractor's request for a decision was not deemed to be a denial of a claim, even though six months had expired between the contractor's request and its appeal, because the request was inadequate as a claim. Sufficient basic information to permit a contracting officer to construct an informed opinion must be provided if the contracting officer is to be obligated to issue a final decision. The contractor's failure to provide necessary information outweighed the contracting officer's failure to respond.

For the appellant: Israel & Raley, Washington, D.C., by Charles E. Raley and James S. Phillips. For the government: Arthur H. Hildebrandt, Chief Trial Attorney, and Lawrence S. Rabyne, Trial Attorney, Defense Contract Management Office (DLA), Chicago, Illinois.

Before DICUS, RUBERRY, and RIISMANDEL, Administrative Judges.

DICUS, Administrative Judge: Respondent's brief contests the Board's jurisdiction in this appeal, asserting, *inter alia*, appellant's termination settlement proposal was not in dispute when submitted and does not constitute a claim. Appellant's response ar-

©1994, Commerce Clearing House, Inc.

Digitized by Google

gues principally that respondent's failure to respond within a reasonable time establishes the existence of a claim.

This appeal was filed under Rule 12.2. Appellant has moved to withdraw its election under that rule. That motion is granted, as respondent has not opposed it.

FINDINGS OF FACT

1. Contract N00383-90-C-9680 for the production and delivery of 24 exciter regulators was awarded to appellant in the amount of $42,480.00 on 26 June 1990, with a delivery date of 22 March 1991. The contract contained the following Termination for Convenience clause:

TERMINATION FOR CONVENIENCE OF THE GOVERNMENT (FIXED-PRICE) (SHORT FORM) (APR 1984)

The Contracting Officer, by written notice, may terminate this contract, in whole or in part, when it is in the Government's interest. If this contract is terminated, the rights, duties, and obligations of the parties, including compensation to the Contractor, shall be in accordance with Part 49 of the Federal Acquisition Regulation in effect on the date of this contract.

(R4, tab 1; deposition of Frank J. Pawloski (Pawloski dep.))

2. By letter of 23 October 1990 appellant requested legible drawings (app. SR4, tab A-1). When they were not received, appellant again requested the drawings by letter of 7 January 1991 (app. SR4, tab A-2). Appellant received aperture cards on 25 January 1991. Appellant characterized them as "inadequate" in a letter of 30 January 1991, in which new drawings were again requested (R4, tab 6).

3. The contract was terminated for convenience by Modification P00001, dated 12 April 1991 (R4, tab 3). By letter of 23 April 1991 the Termination Contracting Officer (TCO) provided instructions to appellant. The letter provides, in relevant part:

> In accordance with our telephone conversation of 19 April 1991, enclosed are the following forms to be used by your firm in preparation of a Settlement Proposal on subject completely terminated contract.
>
> A. *Settlement Proposal Under $10,000*
>
> 1) SF 1438—Settlement Proposal (Short Form)
>
> 2) SF 1434—Termination Inventory Schedule E (for use with SF 1438 only)
>
> * * *
>
> Should you be considering settlement expenses, FAR 31.205-42 addresses this subject. Please maintain separate records for the directly charged settlement expenses, the time, type of task performed, and employee performing the effort. The cost must be reasonable, i.e. related to time a person or company would expend on their own, in the normal conduct of business, without expecting reimbursement by another party.
>
> Your final Settlement Proposal, subcontractors Settlement Proposals, Schedule of Accounting Information and Inventory Schedules should be submitted as soon as possible, but *no later than one year from the effective date of termination.* (Emphasis in original.)
>
> Please advise me no later than 15 May 1991 of the estimated amount of your proposal to facilitate the required recommendation for release of excess funds in accordance with FAR 49.105-2.

(R4, tab 5)

4. Appellant submitted its 12 March 1992 Settlement Proposal on Standard Form (SF) 1438, requesting payment of $9,942.00. In explanation of its request for payment, appellant submitted the following exhibit:

	Essex Claim	Contract '9680 Summary
		I. Claim Elements
1.	Award Date	07/11/90
2.	T4C Date	04/15/91
3.	Days of Performance	278 days
4.	Contract Sales	$42,480.00
5.	Plant Sales—July '90 - June '91:	$10,000,000.00 (Estimated)
6.	Plant Burden—July '90 - June '91:	$2,300,000.00 (Estimated)
		II. Claim

Digitized by Google

A. Unamortized Burden Allocable to Contract

1.	Plant Burden / 365 Days	×	Contract Sales / Plant Sales	=	Daily Burden Allocable to Contract	
2.	$2,300,000.00 / 365	×	$42,480.00 / $10,000,000.00	=	$26.77 per day	
3.	$23.65 per day × 278 days			=	$7,442.06	
					SubTotal =	$7,442.06

B. Settlement Expenses (Estimated)

1.	$2,500.00	SubTotal =	$2,500.00
		Total =	$9,942.06

(R4, tab 8)

5. The letter forwarding the SF 1438, also dated 12 March 1992, states:

> In accordance with the Contract Disputes Act, and also in compliance with FAR 33.206 and FAR 52.249(d), enclosed please find Essex's termination claim under the above-referenced Contract.
>
> Inasmuch as the amount of this claim is less than $10,000, I can perceive no reason why we may not promptly meet and negotiate this claim. I therefore request that you schedule a meeting to resolve the claim within the next 60 days, or issue your Contracting Officer's final decision within that time. Absent a meeting or a decision within the next 60 days, we will conclude that you have disputed this claim on receipt, and we will proceed to invoke our rights to appeal under the Contract Disputes Act.

(R4, tab 7)

6. When no response was received, appellant sent the following 28 January 1993 letter:

> We have not received a response to the above referenced claim, even though the amount of the claim is less than $10,000.
>
> For the purpose of preserving our rights under the Contract Disputes Act, and without waiver to our right to interest from your receipt of the claim submitted on March 12, 1992, we hereby resubmit the termination claim. In the event you fail to issue a final decision or otherwise resolve this claim within 60 days of your receipt of this submission, we will proceed to docket our appeal from your failure to decide this claim, and request that the appeal be processed under the "Expedited" procedures available at the Armed Services Board of Contract Appeals.

(R4, tab 9)

7. An appeal was filed 16 June 1993 from the contracting officer's failure to issue a final decision. There is no evidence respondent communicated with appellant on its Settlement Proposal up to the date of the appeal notice. Appellant's Complaint asserts it was delayed in performance by inadequate Government drawings as the basis for the costs claimed in its Settlement Proposal. In its brief, appellant increases the requested payment to $12,975.59. Appellant asserts the burden, sales, and settlement expense figures used are "actuals." Appellant also changed the period used for computation to 293 days, as follows:

Plant burden / 293 days	×	Contract sales / Plant sales	=	Daily Burden Alloc. to Contract	
$1,891,427 / 293 days	×	42,480 / 9,117,536	=	$30.08 per day	
Daily burden	×	days of delay	=	Unamortized standby Burden	
$30.08	×	293 days	=	$ 8,813.44

(App br. at 10)

DECISION

Appellant argues that its 12 March 1992 submission is a claim because it expressly states it is a claim and sought a final decision. We disagree. Under *Dawco Construction Inc. v. United States* [37 CCF ¶ 76,056], 930 F.2d 872, 878 (Fed. Cir. 1991), a cost proposal is not a claim unless the parties are already in dispute over the amount requested when the proposal is submitted. A dispute cannot be manufactured and interest cannot be made applicable by the mere assertion that a submission is a claim. *CPT Corp. v. United States* [37 CCF ¶ 76,282], 25 Cl. Ct. 451, 455 (1992). There is no evidence of communication on the Settlement Proposal (finding 7) and thus no evidence of a dispute. Therefore, the 12 March 1992 submission was not a claim. Moreover, as it was not a claim, the requirement for a final decision in 60 days under the Contract Disputes Act ("CDA"), 41 U.S.C. § 605(c)(1), did not apply.

The events thereafter present the issue in a somewhat different context. The second writing (finding 6) invoked the CDA, purported to "resubmit the termination claim," and asserted an appeal would be filed if a final decision or other resolution was not forthcoming in 60 days. An appeal was filed nearly 5 months later when no response was received (finding 7). Appellant argues that "one need look no further than the length of time that the claim was ignored by the Government and the allegations made by the Government in the Answer to the Complaint and their brief" to establish a dispute (Appellant's Response to the Board's Order of November 3, 1993 (App. Response) at 4-5). We find nothing in the Answer or respondent's brief to establish the existence of a dispute contemporaneously with the Settlement Proposal or at any time prior to the filing of the appeal. As to appellant's complaint assertion that it was delayed by respondent's failure to provide adequate drawings (finding 7), appellant had not identified it as an issue prior to filing this appeal. Appellant's argument that the Settlement Proposal was converted to a claim by respondent's refusal to respond for over a year, however, warrants close examination.

Respondent argues, in this regard, that appellant submitted an unsupported proposal based on estimates that never rose to the level of a sum certain, one of the requisites of a claim. Respondent cites *Essex Electro Engineers v. United States* [37 CCF ¶ 76,304], 960 F.2d 1576 (Fed. Cir. 1992), which establishes the requirement for a writing setting forth a demand for a "sum certain." *Id.* at 1580. Indeed, even as a Settlement Proposal appellant's submission fails to comply with the Federal Acquisition Regulation (FAR), which requires at 49.602-1(c) that proposals be in "reasonable detail" and permits use of estimated costs "if the method of arriving at the estimates is approved by the TCO." There is no evidence TCO approval of the estimate was ever sought. Moreover, appellant was directed to submit an SF 1434—Termination Inventory Schedule E. There is no evidence this was ever done.

Further, the estimating method employed by appellant in its settlement proposal is not the inventory basis preferred under FAR 49.206-2. If construed as a total-cost propo-

Digitized by Google

sal, advance approval by the TCO is required. FAR 49.206(b). If construed as an "other" basis, FAR 49.206-2(c) requires the prior approval of the chief of the contracting or contract administration office. The FAR provides no relief from these requirements for proposals under $10,000.00. There is no evidence the approvals were obtained. Had they been obtained, information identifying the drawing issue may have emerged and a greater understanding of the substance of the proposal might have been possible. As it stands, there is no way to know that a delay claim is its substance.

It is well-settled that a termination for convenience proposal is ordinarily not a claim when submitted. *Mayfair Construction Company,* ASBCA No. 30800, 87-1 BCA ¶ 19,542, *aff'd Mayfair Construction Company v. United States* [34 CCF ¶ 75,450], 841 F.2d 1576 (Fed. Cir.), *cert. denied,* 488 U.S. 980 (1988). Here, the submission is lacking even as a termination settlement proposal, both from the standpoint of regulatory compliance and the sufficiency of the information provided for purposes of evaluation by the contracting officer. The adequacy of the information presented affects not only the adequacy of the submission as a termination settlement proposal, but, more importantly, its adequacy as a claim. Thus, we see a broader issue than whether appellant has made a demand for a "sum certain." Sufficient basic information to permit a contracting officer to construct an informed opinion must be provided if the contracting officer is to be obligated to issue a final decision. *J. J. Bonavire Company,* ASBCA No. 29846, 86-2 BCA ¶ 18,788 at 94,664. While we do not condone the contracting officer's inaction for a lengthy period, we cannot find that such inaction excuses contractors from meeting some minimal requirements in submitting a claim. *Cf. Gauntt Construction Company, Inc.,* ASBCA No. 33323, 87-3 BCA ¶ 20,221. Moreover, as noted above, the underlying basis of this submission is the alleged delay from illegible drawings. This is simply not mentioned. "Where a submitted claim fails to include basic factual allegations there is no basis upon which the parties can enter into a meaningful dialogue towards settlement, or upon which the issues can be sufficiently identified by a contracting officer's final decision to facilitate the litigation process...." *Westclox Military Products,* ASBCA No. 25592, 81-2 BCA ¶ 15,270 at 75,615. Accordingly, we conclude that appellant's failure to provide necessary information outweighs respondent's failure to respond. To do otherwise would undermine the Congressional intent that CDA claims be resolved by negotiation. *See, e.g., Gauntt Construction Company, supra* at 102,412; *Newell Clothing Company,* ASBCA No. 24482, 80-2 BCA ¶ 14,774. As essential information was lacking and appellant's Response makes clear it had no intent to pursue negotiations*, we find there was no claim as defined in the "Disputes" clause. Hence, we have no jurisdiction. The appeal is dismissed without prejudice.

[¶ 26,572] **Green Construction Company**

ASBCA Nos. 46157, 46301, December 6, 1993. Contract No. N62467-91-C-8686.

Site Conditions—Unusual Conditions, Category II—Oversize Manhole Covers.—Under a contract for the renovation of a sewer system in a housing area, a contractor was entitled to an equitable adjustment for a differing site condition because the evidence showed that oversize manhole covers constituted an unknown physical condition of an unusual nature that differed materially from what would ordinarily be encountered in such work.

Site Conditions—Contract Indications, Category I—Implied Indications.—Under a contract for the renovation of a residential sewer system, a contractor was not entitled to an equitable adjustment for locating service connections to houses across the street from the sewer lines being replaced, because the lateral connections were not conditions at the site that differed materially from those indicated in the contract. The drawings

* "Here, Essex never indicated any intention other than its intent to pursue the claim procedure under the CDA. Essex's claim of March 12, 1992, expressly stated that it was made under the CDA and sought a final decision. Essex's claim contained no suggestion of waiting for negotiations with the Contracting Officer and, in fact, specifically stated that it was waiting no more than the statutory period and would then proceed to action in the appropriate forum." App. Response at 4.

©1994, Commerce Clearing House, Inc.

Digitized by Google

contained a note that explicitly required the contractor to reestablish all service connections displaced by line replacement. Although the drawing showed only one main storm drain, it was reasonably implicit that the main sewer had to be connected by laterals to the houses. The contract did not indicate that the subsurface conditions differed from what the contractor actually encountered or that laterals existed only on one side of the street. The unrebutted evidence of the trade practice in installing residential sewer systems showed that the contractor should have expected the condition encountered.

Site Conditions—Contract Indications, Category I—Underground Service Lines.—Under a contract for the renovation of a residential sewer system, a contractor was not entitled to an equitable adjustment for extra time spent in connection with concrete-encased water and sewer lines, because the contract drawings warned that the locations of existing facilities were approximate and the contract indicated that the contractor was responsible for verifying the location of existing utilities and storm drains before excavating.

Site Conditions—Contract Indications, Category I—Reestablishment of Service Connections.—Under a contract for the renovation of a residential sewer system, a contractor was not entitled to an equitable adjustment for the costs incurred in locating and connecting a lateral sewer line to the main sewer line, because the contract drawings required the contractor to reestablish all service connections. Although 28-year-old as-built drawings showed a different lateral location, the contractor did not base its bid on the drawings. The record indicated that the drawings were provided without any representation as to updated accuracy.

Interpretation of Contracts—Drawings—Omission.—Under a contract for the renovation of a residential sewer system, a contractor was entitled to an equitable adjustment for extra work resulting from the fact that storm drains crossed sewer lines because the drawings failed to show that the storm drains crossed the sewer lines, and the contractor did not take such interferences into account when bidding. Although the drawings depicted a catch basin, they did not show any connections to the basin that affected the work.

For the appellant: Smith, Collins & Dusenbury, P.A., North Charleston, South Carolina, by Steven L. Smith and Joe S. Dusenbury, Jr. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Stirling Adams, Trial Attorney, Naval Facilities Engineering Command, Chesapeake Division, Washington, D.C.

Before LUSSIER and STEMPLER, Administrative Judges.

LUSSIER, Administrative Judge: These appeals arise out of decisions by the contracting officer denying claims by Green Construction Company, the appellant, in connection with work performed at the Naval Weapons Station, Charleston South Carolina. The appellant has elected to have the appeals processed under the accelerated procedure set forth in Board Rule 12.3. A one day hearing was held in Charleston, S.C. and each party has filed a post-hearing brief. Only liability (entitlement) is before us for decision.

SUMMARY FINDINGS OF FACT

1. Contract No. N62467-91-C-8686 was awarded to appellant on 12 May 1992. It called for renovation of a sewer system in a housing area at the Naval Weapons Station, Charleston, South Carolina, for a total price of $490,000.

2. The "Differing Site Conditions, FAR 52.236-2 (APR 1984)" clause of the contract provides for an equitable adjustment in price where there exist: "1) subsurface or latent physical conditions at the site which differ materially from those indicated in this contract, or 2) unknown physical conditions at the site, of an unusual nature, which differ materially from those ordinarily encountered and generally recognized as inhering in work of the character provided for in the contract." During the course of the contract, appellant submitted eight claims for equitable adjustment for alleged differing site conditions. ASBCA No. 46157 is an appeal from a final decision of the contracting officer denying five of these claims. ASBCA No. 46301 is an appeal from a final decision of the contracting officer denying the other three claims.

Oversize Manhole Bottoms

3. The contract drawings contained one drawing, NAVFAC DWG No. 5227583, "Typical Details" which depicted a "Typical Manhole Detail." This detail reflected new

Digitized by Google

manholes appellant was to install (tr. 92). The left side of the detail illustrated a precast manhole, and the right side of the detail illustrated a brick manhole. The detail depicted the manhole bottom as 6′ in diameter and 9″ thick. The 6′ length consisted of a 4′ inside diameter, an 8″ wall on each side and a 4″ extension of the concrete bottom beyond the wall on each side. The existing manholes were brick manholes (tr. 176) and appellant was replacing them with precast concrete manholes (tr. 93).

4. In bidding, appellant, who has been in the business for fifteen years, had in mind removing what he termed "standard procedure" size manhole bottoms, his description of which was quite similar to that depicted in the contract detail (tr. 95-7).

5. Prior to bidding, appellant's owner, Marion Green, was unable to confirm the size of the manhole bottoms because all that was visible on site inspection was the 4′ portion constituting the inside diameter. In actual performance, appellant encountered manhole bottoms that extended up to 12′ in length rather than the expected 6′, and that were up to 24″ thick instead of 9″ thick (tr. 29, 96).

6. The Navy inspector, who had past experience with sewer renovation projects, described an "average" concrete bottom to a brick manhole as being "about eight to nine feet (tr. 171) across." He explained that this was so because it was cheaper to simply pour concrete into the hole rather than frame the bottom (tr. 173). Although he had seen concrete bottoms to brick manholes which were up to 28″ thick he conceded the abnormality of that, and his own opinion was that some of the manholes appellant encountered were thick enough to justify a contract adjustment (tr. 208-10).

7. The claim for oversize manhole bottoms was based upon there being thirteen oversized manhole bottoms creating an additional concrete volume of 95 tons to be removed. This was based in turn on an average of 10′ × 10′ × 1′ of additional concrete per manhole (tr. 98-9, R4, tab 4). The 1′ dimension was arrived at by figuring an average thickness of 18 inches per manhole bottom removed, and subtracting the 6 inches appellant expected to find (tr. 109). The oversize manhole bottoms increased appellant's expenses in removing concrete and also in hauling and disposing of the extra concrete and bringing in additional bedding stone to fill in the excess space evacuated (tr. 31, 32). These expenses form the basis for count I of ASBCA No. 46157 and Count II of ASBCA No. 46301.

DECISION

We conclude, from the preponderance of the credible evidence, that manhole bottoms greater than 9″ thick and 8′ in width constituted an unknown physical condition of an unusual nature differing materially from what would ordinarily be encountered in such work. We, therefore, find a type II differing site condition and sustain ASBCA No. 46151 and 46301, on entitlement, as to the oversize manhole claims, to the extent indicated.

Extra Mucking

8. This claim, Count II of ASBCA No. 46157, is for the cost of removing "mucky," or wet, unusable soil and replacing it with bedding stone in the sewer-line trenches. It is based on appellant's contention that it had to dig and replace 6″ more than Mr. Green planned on in bidding the contract (tr. 110-11).

9. The "Typical Details" drawing referred to in finding 3 above contained a detail entitled "Pipe Bedding and Encasement Details" showing pipe emplacements. The detail contained a note reading in pertinent part:

> 1. WET OR UNSTABLE BOTTOMS, EXCAVATE MIN. 4″ BELOW BELL [*] BACKFILL WITH WASHED CRUSHED STONE.

10. Mr. Green prepared appellant's bid, following a "normal rule of thumb," estimating double the distance, *i.e.*, roughly six to eight inches of bedding stone (tr. 34, 113). However, it developed that the soil conditions required him to excavate 10″ below the pipe (tr. 110), but only in certain areas (tr. 34).

11. The specifications at Section 02225, "Excavation, Backfilling and Compacting for Utilities" provided at paragraph 1.7c. that "suitable backfill in the quantities required is available on Government property," and at paragraph 2.1.1 that the contractor was to "[b]ring trenches to grade indicated using material excavated on the site of the project." Mr. Green testified that based on these specifications, he bid assuming the material under the existing pipes was suitable to reuse (tr. 35). At the same time

[*] The "bell" as shown in the drawing detail is the end of a section of pipe enlarged to insert the next section of pipe. Thus it is slightly larger in diameter than the rest of the pipe section.

©1994, Commerce Clearing House, Inc.

Digitized by Google

however, it is clear from his own testimony that he figured on doing 6″ to 8″ of "mucking" because of the drawing note.

12. The preponderance of the evidence supports finding that appellant encountered 2″ of wet unsuitable soil more than it expected in the trenches, but not throughout the site.

DECISION

The contract drawing note alerted bidders to the fact that wet conditions might be encountered in the pipe beds and directed that pipe bedding be excavated in that event to a "minimum" of 4″, and backfilled with crushed stone. Appellant planned for up to twice that amount in its bid. Appellant has not shown that encountering an additional 2″ of unsuitable wet material in part of the project constitutes a condition differing "materially" from that indicated in the contract. Nor can it be said to constitute an unknown physical condition differing materially from those ordinarily encountered and generally recognized as inhering in such work. This portion of ASBCA No. 46157 is accordingly denied.

Locate Lateral Connections

13. This claim, counts III and V of ASBCA No. 46157, involves time spent by appellant to locate service connections to houses across the street from where appellant was replacing sewer line, and time spent reconnecting those service lines and cleanouts.

14. All of the pertinent contract drawings contained the following pertinent note:

LOCATION OF EXISTING UTILITIES AND STORM WATER PIPING IS APPROXIMATE. CONTRACTOR SHALL VERIFY LOCATION AND ELEVATIONS OF EXISTING UTILITIES AND STORM DRAINS PRIOR TO EXCAVATING. IF INTERFERENCES WITH INTENDED WORK ARE FOUND, NOTIFY THE CONTRACTING OFFICER FOR INSTRUCTIONS. DAMAGE TO EXISTING UTILITY LINES IS CONTRACTOR'S LIABILITY. CONTRACTOR TO REESTABLISH ALL SERVICE CONNECTIONS DISPLACED BY LINE REPLACEMENT.

15. The contract drawings showed the sewer line on only one side of the street. The drawings did not show houses on either side of the street or service connections from the sewer line to houses. They did show concrete driveways on the same side of the street as the sewer line. On Mr. Green's prebid site inspection, it was obvious to him that there were houses and concrete driveways on both sides of the street (tr. 124). He also noticed storm drains and manholes on the side of the street opposite the sewer line and assumed there was a separate sewer line there. The manhole covers were round leading Mr. Green to think they were sewer manholes (tr. 40).

16. The "Typical Cleanout Detail" on Drawing 5227583 depicted cleanouts installed in "earth areas" and the "Typical Service Connection Detail" on that drawing required it to be at a minimum of 10′ and maximum of 25′ from the main sewer line. This would have required the cleanouts for lateral lines going to houses on the side of the street opposite the main sewer line to be placed in the middle of the asphalt roadway. Mr. Green gave this as another reason why he assumed the opposite side of the road had its own sewer line (tr. 40-41). In performance, the Navy required appellant to reconnect the laterals running to the opposite side of the street but waived the 10′—25′ restrictions.

17. After appellant began performance the Government gave it a set of 1964 "as built" drawings which showed laterals from the main sewer line to both sides of the street (app. exh. A1-A5, tr. 25, 28, 43). It is Mr. Green's testimony that had he been given these at the time of bidding, he would have included the costs of reconnecting laterals to both sides of the street (tr. 43).

18. A registered professional civil engineer for the Navy testified, without contradiction, that it is normal practice for residential areas to have a gravity sewer system containing a single main sewer collection line on one side of the street with lateral lines running to houses on each side of the street (tr. 151-54).

DECISION

The lateral connections were not conditions at the site which differed materially from those indicated in the contract. The drawings contained a note explicitly requiring the contractor to reestablish all service connections displaced by line replacement. While the drawing showed only one main storm drain and laterals were not shown for either side of the street, it was reasonably implicit that the main sewer had to be connected by laterals to the houses. The contract gave no reasonably plain or positive indication that the subsurface conditions were different than what appellant actually encountered. *Stuyvesant Dredging Company v. United States* [34 CCF ¶ 75,414], 834 F.2d

Digitized by Google

1576, 1581 (Fed. Cir. 1987). The contract gave appellant no cause to reasonably believe that laterals would exist only on one side of the street. Thus there was no type 1 differing site condition under the "Differing Site Conditions" clause. Nor does the existence of the laterals constitute a type 2 differing site condition under the clause. Appellant has not established that the laterals constituted an unknown physical condition, of an unusual nature, differing materially from those ordinarily encountered. In fact, the unrebutted evidence of trade practice in installing residential sewer systems shows that the condition encountered should have been expected. Accordingly, appellant's claims under ASBCA No. 46157 for locating and reconnecting lateral connections to houses across the street from the main sewer line are denied.

Extra Work on Sewer Lines 16 & 17

19. This claim, Count IV of ASBCA No. 46157, is for extra time spent as a result of appellant encountering underground interferences. The contract drawing (NAVFAC Dwg. No. 5227587) showed the water line and sewer line 16 crossing at the southwest corner of Edison Street and Jefferson Street. Appellant found the old sewer line and the water line encased in cement at this juncture after digging for two hours. The evidence establishes however, that if there is no 10′ separation, where water lines and sewer lines cross, it is necessary to encase them in concrete to prevent contamination (tr. 166). The Navy authorized appellant to lower the elevation of the new sewer line to avoid this interference.

20. Section 02225 of the Specifications, "Excavation, Backfilling and Compacting for Utilities," provided at paragraph 1.7(b) that:

* * *

> b. The character of the material to be excavated or found in the trench is as indicated. Rock or hard material as defined in paragraph entitled "Definitions," will not be encountered.

The "Definitions" paragraph at 1.3.10, "Rock," contained within that definition "concrete other than pavement exceeding 1/2 cubic yard in volume." We do not know if the concrete encountered exceeded 1/2 cubic yard in volume. The definition of "hard material" at paragraph 1.3.6 specifically excludes "man made materials such as concrete."

21. When appellant began work the next day at the northeast corner of the same intersection, where the drawing showed a storm drain crossing the sewer line, it made an elevation check and found a storm drain would be in the path of the new sewer line. Again the Navy authorized an elevation change in the new sewer line to avoid the storm drain interference (R4, tab 7).

22. As indicated in finding 14, the contract drawings warned that the location of existing facilities was "approximate" and the contractor was told to verify the location and elevations of existing utilities and storm drains prior to excavating.

23. The record does not establish, as alleged by the appellant, that the AROICC approved these particular changes as the responsibility of the Government.

DECISION

It was the responsibility of the appellant under the contract to verify the location of existing utilities and storm drains prior to excavating, since the location on the drawings was only approximate. It has not been shown that appellant did any more than the contract required. This part of ASBCA No. 46157 is accordingly denied.

Locate Lateral on Hamilton Street

24. This claim, count 1 of ASBCA No. 46301, involves the cost of locating and connecting a sewer line to the house at 1214 Hamilton Street. In the early stages of performance, appellant checked the manholes to be replaced so it could order new manholes with holes already drilled in them for lateral connections. Manhole 5214 showed a stub-out indicating a line going directly to the house (tr. 46, 50).

25. When appellant took the old manhole out preparatory to installing the new manhole it discovered that the stub out was only 3′ to 4′ in length (tr. 47). The 1964 "as built" drawings, which appellant received after award, also showed that lateral going into manhole 5214 (tr. 53). The lateral was in fact tied into the main sewer line some 20′ to 30′ before the manhole (tr. 54). In digging up the old line, and not expecting a tie-in at that location, it was not looked for and consequently missed at the time (tr. 54). This resulted ultimately in appellant having to dig to find the line and then cut into the newly installed main sewer line to make the connection, as well as close the pre-cut hole in the new manhole (tr. 47, 48).

©1994, Commerce Clearing House, Inc.

Digitized by Google

DECISION

The contract drawing was explicit in requiring the contractor to reestablish all service connections. The Government is correct in contending that the contract as bid did not identify the location of the laterals, and that this lateral was not unusual or differing in location from where lateral connections are normally connected. Thus, it has not been established that the lateral location was either a type 1 or type 2 differing site condition. Further, appellant did not base its bid upon the 1964 "as built" drawings, since it did not have such drawings at the time it bid. Nor is there proof that it examined the manhole interior prior to bidding. Even though the 1964 drawing, when viewed in conjunction with the manhole stub-out, might lead one to conclude that the lateral connection was at the manhole, not 20′ to 30′ before it, these drawings are 28 years old and appellant did not produce any evidence as to what, if any, representation was made at the time. On this record, all we can conclude is that the drawings were given for any assistance they might provide, but without representation as to updated accuracy. They do not supersede the contract requirement that placed upon the contractor the primary responsibility to reestablish all service connections. Accordingly, they provide no basis for recovery. This part of ASBCA No. 46301 is denied.

Storm Drain Interference

26. This claim, Count III of ASBCA No. 46301, involves extra work resulting from the fact that two storm drains, not shown as such on the drawing, crossed the sewer line on Jefferson Street. The pertinent drawing, NAVFAC Drawing No. 5227590, shows storm drains east of the sewer line on Jefferson between Hamilton and Lafayette Streets. While it shows a symbol of a catch basin on the west side of the sewer line, it shows nothing leading to it. The drawing legend reflects that storm drain lines are to shown by broken lines. There are broken lines leading to catch basins east of the sewer line. There are no such broken lines leading to the catch basin symbol on the west side of the sewer line. In fact appellant encountered storm drains crossing the sewer line and leading to the west side catch basin. Appellant did not take such interference into account in bidding because the drawing did not reflect the storm drains crossing the sewer line (tr. 136).

DECISION

While showing a catch basin, the drawing did not show any connections to it which one could reasonably assume would be shown if they affected the work. This is entirely different than requiring the contractor to reestablish service connections to the sewer main, or to verify approximate locations of existing utilities and storm water piping, which were stated to be approximate. There is nothing "approximate" about the complete failure to show the storm drain west of the sewer line. This part of ASBCA No. 46301 is sustained.

To the extent above indicated, the appeals are sustained in part and denied in part.

[¶ 26,573] MIMCO Incorporated

ASBCA No. 46134, December 6, 1993. Contract No. 31-2225-003.

Sales of Government Property—Buyer's Remedies—Dead Freight Charges.—Under a term contract for the sale of scrap metal, a contractor was not entitled to recover dead freight charges, because neither the invitation for bids nor the contract as modified included a clause obligating the government to pay dead freight charges. In his affidavit, the contracting officer stated that he never agreed to add a Dead Freight clause to the contract. Although the contractor contended that another document obligated the government to pay dead freight charges, this document, which was not signed by an authorized government representative and which lacked the requisite contract requirements of an offer and acceptance, was not a binding contract.

For the appellant: Richard Singerman, Vice President. For the government: Cynthia S. Emerson, Trial Attorney, Defense Reutilization & Marketing Region, DLA, Memphis, Tennessee.

Before TUNKS and THOMAS, Administrative Judges.

Digitized by Google

TUNKS, Administrative Judge: Appellant requests payment of $4,657.40 in dead freight charges under a term contract for the sale of scrap metal.

FINDINGS OF FACT

1. The Defense Reutilization and Marketing Service (DRMS) issued term Invitation for Bids (IFB) No. 31-2225 for the sale of scrap metal on or about 1 June 1992 (R4, tab 1).

2. The IFB incorporated by reference the DRMS pamphlet entitled "Sale by Reference, August 1989." Option A was for unprepared scrap and option B was for prepared scrap. Paragraph D of Part III of the pamphlet, entitled "Award of Contract," provided, in pertinent part, as follows:

> A written award mailed (or otherwise furnished) to the successful Bidder within the time for acceptance provided in the Invitation shall be deemed to result in a binding contract without any further action by either party.

(R4, tab 1)

3. On 8 June 1992, appellant submitted a bid in the amount of 129.85 percent of market for option B (R4, tab 3).

4. DRMS awarded term contract No. 31-2225-003 to appellant on 24 June 1992. The Notice of Award was signed by sales contracting officer Danny J. Snow. (R4, tab 6)

5. On 25 June 1992, the parties modified the contract to correct an error in the description of the item purchased, change the contract duration, reduce the estimated amount of scrap available and add a demurrage clause (R4, tab 7).

6. Both the Notice of Award and the contract were telefaxed to appellant on 30 June 1992. Richard Singerman, appellant's vice president, signed the contract as modified on 30 June 1992. (R4, tab 7)

7. Neither the IFB nor the contract as modified included a provision for dead freight charges (R4, tab 9).

8. On 20 November 1992, appellant advised DRMS that it was going to issue a check for $180,796.06 as full payment for the scrap purchased under the contract. The proposed payment reflected deductions of $1,750 for demurrage and $4,657.40 for dead freight. (R4, tab 9)

9. The contracting officer at that time, Laurie Hansen, denied the dead freight charges because there was no dead freight clause in the contract (R4, tab 10).

10. Appellant responded to Ms. Hansen's denial on 27 January 1993 stating that the previous contracting officer, Mr. Snow, had agreed that DRMS would pay dead freight charges. In support of this contention, appellant produced a Mimco "contract" signed by a Mimco representative which purported to obligate DRMS to pay dead freight charges. The document was not signed by Mr. Snow or any other DRMS representative. (R4, tab 11)

11. On 3 February 1993, Ms. Hansen indicated that the contract had never been modified to include a dead freight clause and that Mr. Snow denied agreeing to add such a clause to the contract (R4, tab 12).

12. On 10 February 1993, Mr. Singerman requested DRMS to reconsider its denial of dead freight charges. In pertinent part, his letter provides as follows:

> Although our contract calls for Department of Defense to load minimum 180,000 lbs per car a month, we are now aware that Department of Defense did not include that stipulation in there [sic] offering.
>
> With no minimum guarantee, it is possible that all profit margins for our company can be removed. Therefore a bid on a future offering is some what [sic] diminished. Consider the fact that when the Department of Defense loads only 112,000 [pounds] of material in a car, the tremendous loss we would incur. Obviously only the Department of Defense has the ability to load the car properly and to the full capacity or at least the maximum weight of the car. Most major industrial resources of scrap have a guaranteed loading minimum in their bids.
>
> I would appreciate your reconsideration of not accepting our debit due to the dead freight and pay as rendered.

(R4, tab 12)

13. The contracting officer denied appellant's claim because there was no provision in the contract obligating DRMS to pay dead freight charges (R4, tab 14).

14. In support of its case, DRMS submitted an affidavit from Mr. Snow which stated that he never agreed to add a dead freight clause to the contract (R4, tab 15). We find as fact that appellant's contract was not modified to include a dead freight provision.

15. Appellant timely appealed the contracting officer's decision to the board.

©1994, Commerce Clearing House, Inc.

Digitized by Google

DECISION

There is no basis upon which we can award appellant dead freight charges. Neither the IFB nor the contract included a clause obligating DRMS to pay dead freight charges. Although the contract was modified after award, those modifications did not include a dead freight clause. Mr. Snow, the contracting officer at the time of the modifications, stated in his affidavit that he had never agreed to add a dead freight clause to the contract. Appellant has not presented any evidence to the contrary.

The Mimco "contract" which purported to obligate DRMS to pay dead freight charges was not a contract because it was not signed by an authorized representative of DRMS. In order to create a contract, there must be offer and acceptance. There is no evidence that the "contract" was presented to DRMS for acceptance or that, if it was, DRMS accepted it. Thus, the dead freight clause in the Mimco "contract" did not bind DRMS.

The appeal is denied.

[¶ 26,574] Superstaff, Inc.

ASBCA No. 46112, December 13, 1993. Contract No. N68836-92-C-0015.

Interpretation of Contracts—Methods of Interpretation—Prior Contracts.—Under a contract to perform shelf-stocking services in a commissary that did not mention the location of the staging area, a contractor was entitled to the additional costs resulting from a change in the staging area's location, because it relied on the past practice under prior contracts of using the sales floor as the staging area in preparing its bid. Although the contractor did not make a prebid site investigation, the record indicated that such a visit would not have alerted the contractor to a different practice of moving merchandise. Although a contract chart required the contractor to stock all items placed in the staging area, the chart did not indicate the location of the staging area. Moreover, in light of the commissary's contemporaneous practice, the contract's omission of the staging area location was not obvious, and thus the contractor was not under a duty to inquire regarding the staging area.

For the appellant: Connolly & McCurry, Portland, Maine, by John C. McCurry. For the government: Jay P. Manning, Defense Commissary Agency, Fort Lee, Virginia.

Before DICUS and RIISMANDEL, Administrative Judges.

DICUS, Administrative Judge: This appeal arises from a contracting officer's final decision denying appellant's claim for additional costs from an alleged change in the staging area under a contract for shelf stacking at the Naval Air Station in Jacksonville, Florida. Appellant has elected accelerated procedures under Rule 12.3. The parties have agreed to waive a hearing under Rule 11. Only entitlement is to be decided.

FINDINGS OF FACT

1. Contract N68836-92-C-0015 was awarded 25 January 1992 with an effective date of 1 February 1992. The contract contained the standard Changes—Fixed Price (AUG 1987) and Disputes (APR 1984) clauses. Appellant was to provide all personnel, equipment, and supplies to perform shelf stacking services at a branch commissary store at the Naval Air Station, Jacksonville, Florida (hereinafter "the commissary") (R4, tab 1).

2. The commissary did not have a warehouse attached. It had an "overwrite area" off the sales floor (affidavit of Lloyd R. Messier [Messier aff.]; R4, tab 9). The Statement of Work is silent as to the warehouse and staging areas. It does, however, contain the following relevant definitions:

> *Isolated Staging Area:* A holding area where merchandise is kept prior to being picked up and brought to centralized cutting area by the contractor.
>
> *Centralized Cutting:* An area designated by the Commissary Store Officer to perform the function of cutting merchandise cases.
>
> *Overwrite:* Excess merchandise pulled from the warehouse which cannot be stocked due to unavailable space on the shelf in the Commissary resale area.

(R4, tab 1)

Digitized by Google

3. The contract also contained a Performance Requirements Summary Chart ("the chart") which established the performance standard for stocking items placed in the staging area as "All items in holding area stocked or placed in overflow area when stock space is not available." (R4, tab 1) Reading the foregoing in conjunction with the definition of "overwrite," we conclude that excess merchandise was to be placed in the overwrite area shown on the drawing of the commissary which was available for bidders (R4, tab 9; affidavit of R. Allen [Allen aff.]). Our examination of the drawing and the contract does not disclose any area designated "warehouse," "receiving," or "staging" area by respondent (R4, tabs 1, 9).

4. Appellant's bid was prepared relying upon the holding or staging area being the ends of the aisles on the sales floor, based on the past experience of Mr. Messier, appellant's vice president, with the commissary under other contracts performed by contractors other than appellant (Messier aff.). Appellant did not make a prebid site inspection (Allen aff.). Prior to the bid appellant was not told by any employee of respondent that the sales floor served as the staging area (*id.*). Correspondence from the contracting officer establishes that prior to the contract at issue respondent had its own personnel take merchandise to the sales floor and remove overwrites to the overwrite area (R4, tabs 6, 10, 13).

5. The contract Statement of Work provides at 3.7 in relevant part:

> *Familiarization (Phase-in concept).* This plan has been developed to aid the contractor in his or her knowledge of the job requirements.
>
> Observing the job-functions performed by in-house personnel. . . .

(R4, tab 1) In January 1992 appellant's vice president made a familiarization tour of the commissary escorted by the contracting officer's technical representative (COTR). During the tour, Mr. Messier saw commissary personnel moving merchandise to the sales floor which was used as a staging area (Messier aff.). The affidavit of the COTR states Mr. Messier and the COTR "discussed the sales floor, unloading area, staging area and walked thru the aisles . . . . There was no indication given indicating the sales floor and staging area were one and the same." (Allen aff.). The affidavit of Mr. Messier states "At no time did (the COTR) point out to me any area which was designated as the staging area, nor did he indicate that any change from the practice of using the sales floor as the staging areas was being considered." (Messier aff.) We find Mr. Messier's affidavit to be more specific and, thus, more persuasive. We conclude that the staging area was not specifically pointed out by respondent during the visit or at any time prior to the bid (Allen. aff.; Messier aff.; R4, tabs 1, 9).

6. The COTR's affidavit also asserts "The staging area at the commissary . . . has been and always will be the warehouse receiving area. Blue print [sic] of the store which are made available to all bidders, clearly indicate location of the sales floor/staging area/warehouse area." (Allen aff.) We find this inconsistent with the failure of the contract to identify staging and warehouse areas, our examination of the only drawing of the commissary in the record, and with statements in correspondence of the contracting officer which concede the staging area is not identified in the contract (findings 2, 3, 7; R4, tabs 10, 13).

7. The first month of the contract was performed with commissary personnel moving merchandise to the sales floor. On 1 March 1992 the overwrite area was designated as the staging area (R4, tabs 6, 10). Thereafter, appellant was required to move merchandise from the overwrite area which required additional labor hours (R4, tab 2). Appellant complained that this was a contract change, and the contracting officer responded that "The warehouse area of any Commissary is designated the staging area." The contracting officer further asserted that previously commissary personnel had moved merchandise from the staging area to the sales floor for stocking and would then take overwrites back to the "staging area." After 1 March 1992 these commissary personnel were assigned elsewhere (R4, tab 6). A claim in the amount of $17,150.44 was filed on 4 January 1993 (R4, tab 11). It was denied in a final decision dated 2 March 1993, which concedes that the contract does not identify a staging area and that commissary personnel had been available to move merchandise prior to 1 March 1992. However, the contracting officer states "The warehouse area is, and has always been, designated the staging area." (R4, tab 13). An appeal was filed 14 May 1993 (R4, tab 14).

DECISION

The contract contains no identification of the staging and warehouse areas and respondent did not identify the staging area to appellant prior to the bid (findings 2, 4, 5). In fact, the commissary did not have a

©1994, Commerce Clearing House, Inc.

Digitized by Google

warehouse attached (finding 1). The warehouse/staging area referred to by respondent is designated the "overwrite area" on the floor plan drawing available to bidders (findings 3, 7). It is conceded by respondent that commissary personnel moved merchandise from the staging area to the sales floor and back under previous contracts and the first month of this contract (findings 4, 7). Appellant knew of this past practice and relied on it in preparing the bid (finding 4). While appellant did not make a prebid site visit, there is no basis on this record to find that anything would have been observed at a site visit to indicate that appellant would be required to haul merchandise from the staging area to the sales floor. To the contrary, confirmation of past practice was observed during a post-award familiarization visit (finding 5).

Respondent argues nonetheless that appellant was required to provide all necessary personnel to do the job, and that the Performance Requirements Summary Chart requires appellant to "stock all items placed in staging area." However, the chart does not indicate where the staging area is. The chart also makes appellant responsible to take items to the "overflow" area, which we construe as synonymous with the "overwrite" area, when there is no room on the shelves on the sales floor (finding 3). We are not persuaded that the chart somehow provides information clarifying the location of the staging area, and we do not construe appellant's claim as including costs for taking overwrites back to the overwrite area.

Respondent argues that appellant has not established a course of dealing between the parties. We do not reach that issue, however. The contract omitted any mention of the location of the staging area. "Contractors are not expected to ferret out hidden errors and are protected if they innocently overlook an error." *M.A. Mortenson Company*, ASBCA No. 36759, 88-3 BCA ¶ 21,187 at 106,936. However, a contractor has an obligation to "call attention to an obvious omission ...." *Ring Construction Corp. v. United States*, 162 F. Supp. 190, 192 (Ct. Cl. 1958). We cannot conclude that this was an obvious omission. There is no dispute about the practice at the commissary—commissary personnel had been moving merchandise from the overwrite area to the aisles of the sales floor prior to this contract and continued to do so until 1 March 1993. Moreover, the contract specifically provided that appellant should familiarize itself with "job-functions performed by in-house personnel" (finding 5). Appellant's vice president was familiar with the commissary and job-functions performed by in-house personnel. He prepared the bid on the basis of his experience, which was consistent with actual conditions. We cannot conclude that resolving the omission based on the contemporaneous practice at the commissary was unreasonable, or that, in light of that contemporaneous practice, there was a duty to inquire. Indeed, so long as commissary personnel were moving merchandise to the aisles of the sales floor, the location of the staging area was not critical to the bid. Under the circumstances, the omission was "neither glaring nor substantial nor patently obvious." *Mountain Home Contractors v. United States*, 425 F.2d 1260, 1264 (Ct. Cl. 1970). The appeal is sustained and remanded to the parties to negotiate quantum.

[¶ 26,575] Adkins Construction, Inc.

ASBCA Nos. 46081, 46092, 46093, 46094, 46330, December 3, 1993. Contract No. DAKF40-92-D-0052.

Contract Disputes, Certification—Amount of Claims—Separate Claims.—A government motion to dismiss a contractor's five appeals for lack of jurisdiction on the ground that the appeals constituted a unitary claim that required certification was denied because the contractor showed that two of the appeals were separate and distinct claims that were not based on a common set of operative facts and required interpretation of different specification sections. Although two other appeals regarding the installation of door trim arose out of one set of operative facts and constituted one claim, the amounts of these appeals added together did not require certification.

For the appellant: Sands, Anderson, Marks & Miller, Richmond, Virginia, by Elaine R. Jordan. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. Harold F. Clary, JAGC, Trial Attorney.

Digitized by Google

Before TUNKS, SPECTOR, and RIISMANDEL, Administrative Judges.

TUNKS, Administrative Judge: The Government moves to dismiss ASBCA Nos. 46081, 46092, 46093, 46094 and 46330 for lack of jurisdiction alleging that the appeals constitute one unitary claim which has not been certified as required by section 605(c)(1) of the Contract Disputes Act of 1978 (CDA), 41 U.S.C. § 601, *et seq.* Although none of the appeals exceeds $50,000 by itself, in the aggregate, the appeals total almost $100,000. Appellant argues that the claims are separate and distinct, and that they do not require certification.

BACKGROUND

The Government awarded requirements Contract No. DAFK40-92-D-0052 for the installation of new metal siding, doors and windows, the painting of wood surfaces and miscellaneous other work to appellant on 23 September 1992. Delivery Order Number 1 was issued on 25 September 1992 directing appellant to perform the work required by all 18 contract line items. The contract incorporated a number of standard clauses by reference, including: Changes (AUG 1987) FAR 52.243-4; Site Investigation and Conditions Affecting the Work (APR 1984) FAR 52.235-3; and Specifications and Drawings for Construction (APR 1984) FAR 52.236-21.

ASBCA No. 46081 is a claim for additional compensation in the amount of $9,651.44 for providing aluminum trim for overhead doors. Appellant argues that neither the specifications nor the drawings indicated that new trim was required on the overhead doors. As a result, appellant did not include any money for this item in its bid. The Government argues that the drawings only provided a general representation of the trim requirements. Citing paragraphs I.E.1, I.E.5, III.3 and IIIA-2.E.2 of the specifications, the Government asserts that overhead door trim was required.

ASBCA No. 46092 is a claim for additional compensation in the amount of $10,033.37 for painting multi-paned window frames. It is not disputed that the drawings showed single-paned windows. Appellant argues that it bid what was shown on the drawings and that, as a result, it did not include enough money in its bid to paint the window frames. The Government argues that it had to detail the windows as single-paned on the drawings so that it could show the storm windows. If appellant had made the site visit referred to in the Site Investigation clause of the contract and required by paragraph I.D. of the specifications, the Government alleges that appellant would have observed that the windows were multi-paned instead of single-paned.

ASBCA No. 46093 is a claim for additional compensation in the amount of $25,024.37 for providing framing for skirting. Although appellant does not dispute that paragraph III.G of the specifications required it to provide skirting, it argues that neither the drawings nor the specifications indicated that it had to provide framing members for the skirting. The Government argues that if appellant had made a site visit pursuant to the Site Visit clause and paragraph I.D of the specifications prior to bidding it would have observed that there were no framing members on the existing buildings. In addition, the Government points out that paragraph I.E.2 required installation of bracing members "wherever required to provide substantial construction" and that both paragraphs I.E.2 and II.E required installation of wood nailers as necessary.

ASBCA No. 46094 is a claim for additional compensation in the amount of $11,657.87 for providing aluminum trim around entrance doors. According to appellant, neither the specifications nor the drawings indicated that trim was required around the entrance doors. The Government argues that paragraphs I.E.1, I.E.5, III.G and IIIA-2.E.2 of the specifications require trim around entrance doors.

ASBCA No. 46330 is a claim for additional compensation in the amount of $43,192.80 for installing trim around 515 windows. Appellant interpreted a note to trim a window on a particular drawing as typical for that building. Thus, if a drawing did not include a note to trim a window, appellant did not include the windows in that building in its bid. The Government asserts that the drawings included typical details which required trim around all the windows. In addition, the Government cites paragraphs I.E.1, I.E.5, III.G and IIIA-2.E.2 of the specifications which relate to trim around the doors and windows.

Except for the two claims involving trim around the doors, appellant submitted each claim separately and these were denied by the contracting officer in separate final decisions.

DECISION

Section 605(c)(1) of the CDA requires that all claims of more than $50,000 be certified. Neither the court nor the boards of contract appeals have jurisdiction over uncertified claims of more than $50,000. *United States v. Grumman Aerospace Corp.* [36 CCF ¶ 76,013], 927 F.2d 575 (Fed. Cir. 1991) and cases cited therein, *cert. denied* 112 S.Ct. 330 (1991); *Ball, Ball & Brosamer, Inc. v. United States* [35 CCF ¶ 75,681], 878 F.2d 1426, 1428 (Fed. Cir. 1989). In *Placeway Construction Corp. v. United States*, 920 F.2d 903, 907 (1990), the Court of Appeals for the Federal Circuit set forth the test for determining whether there are two or more separate claims or a fragmented single claim for purposes of CDA certification:

> ... To determine whether two or more separate claims, or only a fragmented single claim exist, the court must assess whether or not the claims are based on a common or related set of operative facts. If the court will have to review the same or related evidence to make its decision, then only one claim exists. ... On the other hand, if the claims as presented to the CO will necessitate a focus on a different or unrelated set of operative facts as to each claim, then separate claims exist. ...

Applying the *Placeway* test to ASBCA Nos. 46092 and 46093, we conclude that these claims are separate and distinct from each other and the other three appeals. ASBCA No. 46092 involves the painting requirements and the Site Investigation clauses of the contract. ASBCA No. 46093 relates to framing for the skirting and requires interpretation of the Carpentry section of the specifications and the omissions and misdescriptions portion of FAR 52.236-7001(d), "Contract Drawings, Maps and Specifications (Dec 1991)." *JAYCOR*, ASBCA No. 40911, 91-3 BCA ¶ 24,082; *Giuliani Contracting Co., Inc.*, ASBCA No. 41435, 91-2 BCA ¶ 23,774.

We reach a somewhat different conclusion with respect to ASBCA Nos. 46081 and 46094. These appeals arose out of one operative set of facts, the requirement to install trim around the doors, whether overhead doors or entrance doors. The Government's defense to both appeals is identical: paragraphs I.E.1 and III.G of the specifications required installation of trim on all doors. The adjudication of each of these appeals will require us to examine the identical specification provisions. If appellant's reading of the specifications prevails, appellant will prevail on both appeals; if its reading is rejected, it will lose both appeals. Under the circumstances, the fact that each appeal involves installation of trim around a different type of door is not determinative. Our conclusion that ASBCA Nos. 46081 and 46094 are one claim does not affect the certification issue because the claims added together total less than $50,000.

ASBCA No. 46330 is separate and distinct from the other four claims. In order to decide ASBCA No. 46330, we will have to look at the contract drawings. The Government alleges that the drawings included typical notes indicating that all windows were to receive trim. Appellant asserts that it only included the windows for a particular building in its bid when there was a note to provide trim around a window on that drawing. If there was no note on a drawing, appellant did not include that work in its bid. Although this claim also involves trim, it is different from ASBCA Nos. 46081 and 46094 because we will have to consider different evidence, namely the drawings, and reach a decision with respect to appellant's interpretation of the typical notes. *Scientific Management Associates, Inc.*, ASBCA No. 42971, 92-2 BCA ¶ 24,912; *Lake Shore, Inc.*, ASBCA Nos. 42577, 42578, 91-3 BCA ¶ 24,075.

The Government's Motion to Dismiss is denied.

[¶ 26,576] Waco, Inc.

ASBCA No. 46085, December 9, 1993. Contract No. N62470-92-C-8299.

Interpretation of Contracts—Contract as a Whole—Meaning to Every Part.—Under an asbestos removal contract, a contractor was not entitled to an equitable adjustment for additional costs incurred in using a full containment method of asbestos removal rather than its proposed glovebag method, because the contract as a whole required removal by the full containment method. The specifications limited the use of the glovebag method to a book storage room, in which full containment was not feasible. Although the contractor contended that it reasonably read the specifications as requiring full containment in areas

Digitized by Google

where the asbestos was friable and as allowing the glovebag method in areas other than the book storage room, the contractor's interpretation was inconsistent with the specifications, which specifically limited the use of the glovebag technique to the book storage room. The specifications did not afford the contractor the opportunity to tailor its abatement plan according to its own determination as to the friability of asbestos. Although the contractor contended that the glovebag method was a full containment method, the contract indicated that glovebag techniques were other than full containment methods of asbestos abatement.

For the appellant: Outland, Gray, O'Keefe & Hubbard, Chesapeake, Virginia, by Benjamin A. Hubbard. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Lisa C. Gerideau, Trial Attorney.

Before LIPMAN and STEMPLER, Administrative Judges.

LIPMAN, Administrative Judge: This is an appeal from a decision of the contracting officer denying appellant's claim for compensation for added costs allegedly incurred in performance of this construction contract to remove asbestos. The issue presented is whether the removal method proposed by appellant, but rejected by the Government in favor of a more costly method, met the contract requirements. We are to decide only the question of liability based upon the documentary record and testimony provided at trial. Appellant has elected to proceed under the Board's Rule 12.3 Accelerated Procedure.

SUMMARY FINDINGS OF FACT

On 13 July 1992, appellant was awarded this contract to remove and replace asbestos floor tile, pipe insulation and acoustical ceiling and to do some lighting work at an existing school building at the Marine Corps Base in Camp LeJune, North Carolina. The contract price was $48,800 and the required completion date was 25 November 1992. By contract modification, the asbestos abatement in the school's administrative area was deleted from the contract and the contract price was reduced to $30,301.

Section 02080 of the contract specifications, entitled "Removal and Disposal of Asbestos Materials," incorporated North Carolina law, the North Carolina Asbestos Hazard Emergency Response Act (AHERA) and federal regulations, and contained the following pertinent provisions:

1.4 REQUIREMENTS

1.4.1 Description of Work

The work covered by this section includes the handling of asbestos containing materials which are encountered during repair, construction and demolition projects and describes some of the resultant procedures and equipment required to protect workers and occupants of the building or area, or both, from contact with airborne asbestos fibers. The work also includes the disposal of the generated asbestos containing materials. ... Under normal conditions non-friable or chemically bound materials containing asbestos would not be considered hazardous; however, this material will release airborne asbestos fibers during demolition and removal and therefore must be handled in accordance with the removal and disposal procedures as specified herein. Provide full containment, glovebag, and floor tile techniques as outlined in this specification.

* * *

1.5 SUBMITTALS

* * *

1.5.2.1 Asbestos Hazardous Abatement Plan (NC Abatement Design)

Submit a detailed plan of the safety precautions and work procedures to be used in the removal of materials containing asbestos. ... This plan must be approved in writing prior to the start of any asbestos work. .. Any changes required in the specification as a result of the plan shall be identified specifically in the plan to allow for free discussion and approval by the Contracting Officer prior to the start of work.

* * *

3.3 WORK PROCEDURE

Perform asbestos related work in accordance with 29 CFR 1926.58 and as specified herein. Use wet removal procedures and full containment for friable asbestos pipe insulation, except in the book storage room, where glovebag techniques can be used.

* * *

3.3.4 Asbestos Control Area Requirements

3.3.4.1 Full Containment (Pipe Insulation, Except as Noted Otherwise)

Block and seal openings in areas where the release of airborne asbestos fibers can be expected. Establish an asbestos contain-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ment with the use of curtains, portable partitions, or other enclosures in order to prevent the escape of asbestos fibers from the contaminated asbestos work area. Containment development shall include protective covering of walls, [sic] and ceilings with a continuous membrane of two layers of minimum 4-mil plastic sheet sealed with tape to prevent water or other damage. Provide two layers of 6-mil plastic sheet over floors and extend a minimum of twelve inches up walls. Seal all joints with tape. Provide local exhaust system in the asbestos control area. Openings will be allowed in enclosures of asbestos control areas for the supply and exhaust of air for the local exhaust system. Replace filters as required to maintain the efficiency of the system.

3.3.4.2 Glovebag (Pipe Insulation in Plywood Enclosure in Book Storage Room)

The construction of an enclosed asbestos containment is infeasible for the removal of pipe insulation in plywood enclosure in Book Storage Room. Use glovebag techniques as indicated in 29 CFR 1926.58 Appendix G, III-A, B, C, D and Figure G-1.

* * *

As used in the specification and, in general in this appeal, the term "friable" means "airborne."

The specification was prepared for the Government by a design engineer who was certified by the Environmental Protection Agency (EPA) in asbestos abatement. He included the information in the parentheses in the title of subsections 3.3.4.1 and 3.3.4.2 in an effort to make clear at which locations the different methods of asbestos removal were to be used since the specifications in previous contracts did not include that information and resulted in ambiguity.

Glovebags are sealed, disposable work chambers placed around asbestos material to facilitate its removal without release of fibers into the atmosphere. They include glove/sleeve assemblies, tool pouches and water entry ports to permit workers to remove the material without becoming exposed to the fibers. Glovebags have been used in asbestos abatement since 1980, and negative air bags, which employ the use of a vacuum with the glovebags, have been used since 1990. The glovebag method has been approved by OSHA, by the State of North Carolina, and meets the requirements of the CFR. However, glovebags have been known to break, and the slit required for the entry of the air hose into the glove bag is another source of possible contamination of the environment outside the glovebag.

The full containment method of asbestos abatement, as reflected by the contract specification, involves, in effect, using plastic barriers to totally enclose a room or part of a room, which the workers, wearing protective clothing, can then enter to remove the asbestos. The full containment method offers better protection to the room, including its carpet, than does the glovebag method used alone. Use of the full containment method does not preclude the use of glovebags within the fully contained room.

Appellant's bid was prepared by its project manager who, while not an engineer, received training in asbestos abatement and was qualified and experienced as an asbestos designer. He visited the site before bidding and found the existing pipe insulation to be in good condition, covered with an intact canvas jacket and located a foot above lay-in ceiling tile. The contract specification did not call for the removal of ceiling tile as asbestos-contaminated, and appellant's project manager considered that to be further indication that the pipe insulation above the tile was intact.

Appellant's bid anticipated wetting the asbestos material and was based upon use of the negative air glovebag method. Appellant planned to use a "5 in 1" glovebag, which consists of five bags connected together with multiple arms for workers to contain a large section of pipe insulation at one time during the removal process. In incorporating that method into the bid, appellant's project manager considered (a) that the specification required the full containment method, as described in paragraph 3.3.4.1, only "where the release of airborne asbestos fibers can be expected," as described in that paragraph, and (b) the good condition of the pipe insulation as constituting a situation where "the release of airborne asbestos fibers" would not occur. He considered the glovebag method as a full containment procedure, because asbestos is fully contained in a small area, despite the language of paragraph 3.3 of the specification calling for "full containment . . . except in the book storage room, where glovebag techniques can be used." In his experience, glovebags did not break.

Appellant's initial asbestos abatement plan, dated 13 July 1992, was rejected by the Government on 16 July 1992 because it proposed using the glovebag method, rather than full containment, in areas other than the book storage room. At a preconstruction meeting held at approximately that date, a

Digitized by Google

Government representative incorrectly stated that the glovebag method was not permitted under the requirements of the AHERA, the North Carolina statute. At the same meeting, the Government's asbestos abatement designer incorrectly told appellant that there was no such thing as a negative pressure glovebag based upon his belief that the vacuum collapsed the bag.

Despite appellant's attempts at persuasion, the Government did not change its position and appellant modified its asbestos abatement plan to satisfy the Government. Appellant's 23 July 1992 cover letter to its modified abatement plan stated, in part, that "[g]love bagging has been deleted from the plan" and that "the [a]sbestos control area drawing now reflects full containment." The Government approved the modified asbestos abatement plan on 30 July 1992.

Appellant performed the work in a manner consistent with its modified plan. It constructed wood and polyethylene enclosures to achieve full containment of large areas in lieu of the glovebag method. It did use glovebags without negative pressure for the limited purpose of helping to prevent asbestos insulation falling to the floor during its removal from the pipes. Appellant incurred more costs than it would have incurred had it used the method it originally proposed.

Appellant sought to recover the additional costs it incurred and, in correspondence with the Government, it cited several other projects in which it successfully employed the glovebag method. By letter of 17 December 1992, which the Government received on 23 December 1992, appellant submitted a claim seeking recovery of $29,810.07 due to the additional effort expended in performing the contract work in the manner directed by the Government.

On 22 February 1993, the contracting officer issued a decision denying the claim. Appellant made timely appeal.

DECISION

In this contract for the abatement of asbestos insulation, appellant submitted a plan calling for use of a glovebag method of asbestos removal. That method was rejected by the Government in favor of a more costly full containment method which, the Government contends, was required by the contract specification. Appellant seeks to recover for its additional effort, and our decision on the merits of its claim turns on interpretation of the language of the specification.

It is a basic principle of contract law that the contract is to be interpreted as a whole and, if possible, in a manner so as to harmonize all parts and to avoid rendering any part meaningless. *United States v. Johnson Controls* [31 CCF ¶ 71,374], 713 F.2d 1541, 1555 (Fed. Cir. 1983).

The record reflects that specification subsection 3.3.4.1 specifically required the asbestos removal to be achieved, except as noted otherwise, by the full containment method, the details of which were set forth in the subsection. The exception was the pipe insulation in the book storage room, where full containment was stated by specification subsection 3.3.4.2 to be "infeasible" and with regard to which the glovebag method was authorized. The record also reflects that, due to prior problems with ambiguous asbestos abatement specifications, the Government made a special effort in this contract to ensure that the specification clearly set forth the method of abatement it required. That effort succeeded. The specification is quite clear.

Appellant contends that it reasonably read the specification to require the full containment method only where the insulation was friable and that, since the asbestos in question was wrapped in canvas jackets which had not been breached, it was justified in planning to use glovebag techniques in areas other than the book storage room. That interpretation is inconsistent with the text of section 3.3 of the specification, which specifically limits glovebag techniques to the book storage room. The specification does not afford appellant with the flexibility to make its own determination as to the friability of the asbestos and to tailor its abatement plan accordingly. Although, as appellant points out, it was to be the "designer" of the abatement plan, that design was to meet the requirements of the specification. Furthermore, the specification's subsection 1.4.1 "Description of Work" acknowledges that non-friable materials containing asbestos would not be hazardous, but that the concern was the release of airborne asbestos fibers during demolition, thereby calling for the specification's specifically mandated abatement procedures.

Appellant also maintains that the glovebag method is a full containment method, as it contains the asbestos into a small area. It is quite clear, however, by both the text and spirit of the specification, that glovebag techniques were considered to be other than a full containment method of asbestos abatement.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Appellant points to the erroneous statements of Government representatives at meetings as indicating that they did not fully comprehend the contract requirements or the current status of asbestos abatement laws, regulations or equipment in the industry. The erroneous statements, however, were limited in scope and, in any event, have no bearing upon the clear requirements of the specification.

Appellant has contended throughout this proceeding that the glovebag method is superior to the full containment method because of the smaller physical area in which the workers are able to confine the asbestos. However, our record also reflects some greater risks of possible contamination posed by use of the glovebag method. In any event, the Government is entitled to get what it has contracted for and, toward that end, to demand strict compliance with its specifications. *Ram Construction, Inc.*, ASBCA No. 22370, 79-1 BCA ¶ 13,646.

The appeal is denied.

[¶ 26,577] Packard Construction Corporation

ASBCA No. 46082, December 9, 1993. Contract No. DACA31-93-C-0014.

Site Conditions—Inspection—Visibility of Condition.—Although a contractor did not make a prebid site inspection, it was entitled to an equitable adjustment for modifications made after award of a contract to cover exposed interior roof trusses and ceiling joists in a large amphitheater, because the condition was not visible and would have required scaffolding or special lift equipment and two days' inspection to learn of the obstructions. In response to a claim for an increase in price caused by a change in specifications, the government contended that the real issue was whether the contractor encountered a differing site condition, and that the contractor was not entitled to an adjustment because it failed to make a prebid visit. However, it was not reasonable to expect a bidder to expend the extra time and effort in preparing its bid.

Modifications—Changes—Government Failure to Remove Obstructions.—A contractor was entitled to an equitable adjustment for modifications made after award of a contract to cover exposed interior roof trusses and ceiling joists in a large amphitheater, because the government's failure to remove obstructions as agreed was the reason that extra work was necessary. The contract required the fabrication of rectangular steel frames that were designed by the government. At the prework conference, the government agreed to remove or relocate the obstructions, but subsequently failed to do so. The contractor produced the frames according to the drawings and specifications, and, were it not for the obstructions, the frames would have fit into the spaces intended. There was nothing in the contract, the drawings, or the specifications to impose any obligations to change the drawings or to redesign the frames to fit around the obstructions at the contractor's expense.

For the appellant: Christine Pak, President. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and John F. Herbert and Douglas P. Knowles, Sr., Engineer Trial Attorneys, U.S. Army Engineer District, Baltimore.

Before HARPER and RIISMANDEL, Administrative Judges.

HARPER, Administrative Judge: Appellant, Packard Construction Corporation, a Virginia corporation located in Newington, Virginia (hereinafter "contractor") appeals from failure of a contracting officer of the United States Army Corps of Engineers (hereinafter "Government") to act upon a claim for an increase in the price of a construction contract because of a change in performance. Contractor elected to proceed under our accelerated procedure pursuant to Board Rule 12.3.

SUMMARY FINDINGS OF FACT AND CONCLUSIONS

On 28 October 1992 Government solicited bids for the materials and labor to cover exposed interior roof trusses and ceiling joists in a large amphitheater or ceremonial hall known as Building 241 at Fort Myer, Virginia, in accordance with Government's own design. The work desired involved fabricating tubular steel frames of rectangular shape which were to rest upon L-shaped steel supports welded to existing steel roof trusses and beams. The steel frames were to

Digitized by Google

be covered with a specified cloth. When completed, the cloth covered frames were to serve as a ceiling which would prevent persons seated below in the amphitheater from observing the stage flood lighting equipment and appurtenances which were mounted on and above the roof trusses and beams.

Government's solicitation included the Site Visit (APR 1984) clause, FAR 52.237-0001, which urged offerors to inspect the job site to satisfy themselves regarding all general and local conditions that might affect the cost of performing the proposed contract (R4, tab 4).

The contract specifications, in pertinent part, provided as follows:

Section 01010

* * *

1.6 CONTRACT DRAWINGS

Perform the work *in accordance with the attached drawings*

* * *

Section 01030

* * *

1.3 LAYOUT OF WORK

The Contractor shall layout his work and shall be responsible for all measurements in connection therewith.... The Contractor will be held responsible for the execution of the work *to such dimensions shown on the drawings*....

* * *

Section 13025

1. Scope of Work. The *work* covered by this project *consists of furnishing* all tools, labor, equipment and *materials required to cover exposed ceiling rafters*, Bldg. 241 (Ceremonial Hall) Fort Myer, Arlington, VA *in accordance with these specifications and attached drawings.*

* * *

1.3 Provide removable panel system above main floor....

* * *

1.5 Field verify all measurements shown on drawings prior to submission of bid.

* * *

1.7 Visit site before bidding.

* * *

3. Installation.... Equipment shall be installed ... *per plans and specifications.* (Emphasis added)

(R4, tab 4)

The contract drawings or plans showed 95 steel tubular frames, each rectangular in shape, to be installed in a horizontal plane in spaces between existing roof trusses and joists. Several large notations on the drawing stated: "Provide 1″ × 2″ × 18 Gage steel tube framing *as shown.* (Italics added) The drawings showed specific dimensions for each frame. The drawings also contained a note that stated: "All dimensions are (±) and not intended for field fabrications. The contractor shall field verify all existing conditions prior to ordering and fabrication of materials required." (Exh. G-1, sheet 2) The contract drawings showed existing conduits at Bays 3 and 4 and indicated that they were to remain and that contractor was to adjust the framing panels as required to accommodate such existing conduits. Nowhere else did the drawings or specifications indicate that contractor was to adjust the framing panels to accommodate existing conduits or, for that matter, that there were other existing conduits. (Exh. G-1)

Contractor did not make a site visit prior to preparing its bid (tr. 1/72-73). It would have taken two persons two days to thoroughly survey the work area of the job site and would have required permission and coordination from Government's engineering staff as well as the users of the building to make prebid measurements such as to learn all the general and local conditions that might affect the cost of performing the proposed contract as referred to in the solicitation (tr. 2/73-74, 82-83). Even if someone crawled up, in and about the roof trusses with a flashlight, he would not have been able to see all the local conditions (tr. 1/189). Government awarded contract numbered DACA31-93-C-0014 to contractor on 15 December 1992 to produce and install the steel frames. The contract contained the Changes (AUG 1987), FAR 52.243-0004, clause. (R4, tab 4; tr. 2/137) The contract also contained the Contract Drawings, Maps, and Specifications clause (DEC 1991), FAR 52.236-7001, which requires the work to conform to the specifications and contract drawings (R4, tab 4).

Contractor's subcontractor, S&F Ironworks of Springfield, Virginia (hereinafter "S&F") verified all the dimensions shown on the contract drawings as well as the existing conditions at the job site as called for by the contract (tr. 2/9, 24, 30, 60, 172). S&F found the contract drawing dimensions to be correct so that the frames, if manufactured according to the contract drawing dimensions, would fit into the appropriate spaces as dimensioned on such drawings between the various roof trusses and joists with the ex-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ception of the spaces containing existing conduits in Bays 1 and 3 shown on the contract drawings. Contractor made the adjustments necessary to make the framing panels to accommodate such conduits (as called for on the drawing). (App. supp. R4, tab 13; tr. 1/114, 208)

After verifying the contract drawing dimensions as called for in the contract S&F prepared and submitted to Government shop drawings covering the rectangular steel frames it intended making (tr. 1/208, 209). Government neither approved or rejected such drawings (tr. 2/46) because Government was anxious to have the job completed as soon as possible. It was a hurry-up job. (Tr. 2/170-71) During S&F's verification of drawing dimensions it discovered that many obstructions were appended to the roof trusses and joists which would conflict with the installation of the steel frames it was to produce. Government was notified accordingly. Government had been aware of the obstructions when it prepared the contract drawings but had omitted showing them on the drawings because it believed it would clutter up the plan. (Tr. 1/100, 103, 109, 114, 189-90, 2/12, 23, 50, 69; exh. B1)

Such obstructions could not have been reasonably discovered by a prudent bidder since they were hidden from view by an existing black cloth ceiling covering, were approximately 25 feet or more above the floor, and could only be seen with the assistance of scaffolding which was not present or special equipment after an investigation which would have taken approximately two days of effort (tr. 1/43, 44, 110, 125-26, 201-02, 2/26, 82, 83).

On 25 February 1993 the parties held a prework conference. Government acknowledged the presence of the existing obstructions to the proper fitting and installation of the steel frames. Government agreed to remove all such obstructions prior to 1 March 1993 so that contractor could start installing the frames. (App. supp. R4, tab 8; tr. 1/205, 2/26, 29, 2/100, 102-03)

Government thereafter visited S&F's shop and observed the manufacture of the steel frames. Such frames were in accordance with the shop drawings. They were rectangular in shape. (Tr. 1/208, 209, 2/47-48) Government made no objections to the steel frames it observed.

On the weekend prior to 1 March 1993 Government removed some of the obstructions complained of by contractor and S&F (tr. 1/205, 2/100-01).

On 2 March 1993 contractor wrote to Government advising that obstructions still remained and requested Government's advice as to how Government wished contractor to proceed with the installation of the frames (App. supp. R4, tab 5). Government refused to advise contractor how to overcome the obstructions since Government believed it was paying contractor to work around such obstructions (tr. 2/49).

When contractor attempted to install the frames in their designated spaces only 60 of the frames fit into the spaces as designed. The remaining 35 frames, although manufactured to Government's design, would not fit into the desired spaces the way Government wished them to be installed because of obstructions which had not been removed or relocated by Government. (Tr. 1/100, 103, 109, 114, 189-90, 2/12, 23, 57, 69, 212, 224; exh. B1)

Contractor continually requested direction from Government how to overcome the obstructions (App. supp. R4, tabs 3, 5, 8, 9, 11, 12, 13; tr. 1/131-32, 2/93, 105, 107, 189, 3/10, 16).

Government visited the job site, saw that the frames built in accordance with the contract plans and specifications could not be fitted into certain of the spaces intended, but refused to instruct contractor how to proceed (tr. 1/198-99, 2/189, 3/16, 37). Government refused to relocate or remove the obstructions. When pressed by contractor for Government's directions as to how to fit the frames into the spaces with the obstructions the contracting officer merely told contractor "to get your tail over there [to the job site] and get to work" (tr. 2/95, 124). Contractor suggested that the frames would have to be cut and reassembled to fit around the obstructions. The contracting officer then advised contractor to "just do it" (tr. 1/131-32, 2/9, 107-08). Government felt that contractor should solve the obstruction problems by itself without any assistance from Government (App. supp. R4, tabs 14-16; tr. 2/189). Government continually threatened to terminate the contract for default in performance and to assess liquidated damages if contractor did not solve the obstruction problems promptly (tr. 2/105-06).

Contractor followed the contracting officer's direction to "just do it", cut the 35 nonfitting frames at 64 corners thereof, remanufactured them at the job site with offsets to fit around the obstructions and installed them to Government's satisfaction (tr. 1/203, 3/87; exh. B1). The modification of frames at the job site caused contractor to

Digitized by Google

incur added labor and material costs plus a speedup in performance. (Tr. 1/103, 104, 108, 115, 116, 206, 2/9, 14, 115) The job was finished on time on 23 March 1993 by use of overtime work (tr. 1/91-92, 118, 121). Installation of the frames should have taken a week at most. Because of the obstructions it took contractor from 7 to 21 March 1993 to install the frames. (Tr. 2/112) In addition the changes required to fit around the obstructions caused contractor to use more materials than otherwise would have been needed (tr. 2/116). Contractor's fabric subcontractor was required to be on a standby status while the changes were performed to overcome the obstructions (tr. 2/115-16). On 15 March 1993 contractor faxed a written claim to Government, received on the same day by Government, seeking $21,096 as an equitable adjustment in the contract price to cover its added costs arising out of the delays caused by Government's failure to advise contractor how Government wished contractor to proceed and out of the changes ordered by Government to make the frames fit around the obstructions (App. supp. R4, tabs 13, 15).

On 17 March 1993 the contracting officer visited the job site, observed the obstructions and determined that they were such that contractor could not reasonably have been aware of them at the time of bidding (tr. 3/37, 38, 45-46). The contracting officer later decided that changes had been ordered in contractor's performance for which contractor should be compensated (tr. 3/48). The contracting officer prepared a proposed contract modification, numbered 3, which would have compensated contractor for the cost of changing only 11 frames rather than the 35 actually modified along with certain other changes not pertinent to this appeal (App. supp. R4, tab 29; tr. 3/2, 60). Contractor refused to sign the modification since it did not compensate for all the added costs of the changes and the delays that occurred (tr. 3/24). The contracting officer thereupon held up payment of all sums claimed to be due by contractor (App. supp. R4, tab 33). In justification of such holdup the contracting officer argued that "as-built" drawings were owed to Government. Contractor responded to such argument by stating that the drawings were available, but would not be delivered until all monies due and owing above and beyond the 10 percent retainage permitted by the contract were paid. (App. supp. R4, tabs 27, 33)

The contract's Payments Under Fixed-Price Construction Contracts (APR 1989) clause, FAR 52.232-0005, provides that Government shall pay the amount due the contractor after (1) completion and acceptance of all work, (2) presentation of a properly executed voucher, and (3) presentation of release of all claims against Government arising by virtue of the contract. In addition the contract provided under paragraph 1.6 of Section 01720 that failure to submit as-built drawings and marked prints as required shall be cause for withholding any payment due the contractor under the contract. (R4, tab 4)

The contracting officer refused to issue a decision on contractor's claim for an equitable adjustment within the 60 days required by law. Contractor deemed such failure to issue a decision as a denial and duly appealed therefrom.

At the hearing of this appeal in July 1993 the contracting officer admitted that changes were called for in contractor's performance for which compensation should be made (tr. 3/45-46, 48).

The "as-built" drawings were accepted by the Board pursuant to the parties' stipulation. They are designated as Board exhibit B-1.*

DECISION

Government argues that the real issue in this appeal is whether contractor encountered a differing site condition for which it should receive an equitable adjustment and that contractor is not entitled to an equitable adjustment because it failed to make a prebid site visit during which it would have learned of the obstructions. Government further argues that when contractor learned of the obstructions it should have manufactured the frames to fit around the obstructions.

We disagree with Government's arguments. The evidence disclosed that even if contractor had made a prebid site inspection it would not necessarily have learned of the obstructions, since they were hidden by the existing cloth ceiling and, thus, could not be

* The Board accepted the "as-built" drawings in an effort to expedite the resolution of a dispute involving withholding of monies due the contractor which is not before the Board in the instant appeal. The parties have stipulated, however that in view thereof the government would promptly issue a check payable to the contractor in the amount of $510. The record does not show that this has happened.

©1994, Commerce Clearing House, Inc.

Digitized by Google

seen. Moreover, it would have required use of scaffolding or special lift equipment and two days of site inspection to learn of the obstructions. To expect a bidder to expend such extra time and effort in preparing a bid is unreasonable. Furthermore, contractor's failure to make a prebid site visit does not affect our decision in this appeal.

Government prepared the frame design covered by the contract. Contractor by entering into the contract with Government obligated itself to build the frames in accordance with Government's design. This it did. Contractor did not promise to redesign the installation sought by Government so as to overcome obstructions that Government promised to remove or relocate and failed to do. There was nothing in the contract, the drawings or the specifications to impose on contractor any obligation to change the drawings or to redesign the frames to fit around the obstructions at contractor's expense. *Raycomm Industries, Inc.*, ASBCA Nos. 16379, 16380, 73-1 BCA ¶ 9806. The contracting officer acknowledged that changes occurred when she issued a contract modification and also in her testimony.

Moreover, Government at the prework conference agreed to remove all obstructions to the installation of the frames in their designated locations. Government's failure to remove all such obstructions was the cause for frames not fitting. Contractor produced the frames according to Government's drawings and specifications. But for the unremoved or nonrelocated obstructions all the frames would have fit precisely into the spaces intended.

There is no question that each of the changes made to the various frames was not called for in the contract. Contractor is entitled to an equitable adjustment in the contract price to compensate it for all of its increased costs arising out of Government's delay in responding to contractor's requests for directions, all of its costs arising out of making the changes, and interest on such amounts from 15 March 1993 pursuant to Section 12 of the Contract Disputes Act.

This matter is remanded to the parties for negotiation of the equitable adjustment required. In the event the parties are unable to agree upon the amount of the equitable adjustment within 60 days from the date of this decision the contracting officer shall issue a decision setting forth her decision as to the proper amount. If contractor disagrees with such amount it may appeal to the Board from such decision.

The appeal is sustained.

[¶ 26,578] General Electric Co.

ASBCA No. 45936, December 23, 1993. Contract No. N00140-83-C-0196.

Interpretation of Contracts—Methods of Interpretation—Summary Judgment.—A motion for summary judgment involving the issue of a contractor's liability for delivery of defective turbines was denied, even though it was clear that the contractor had not committed a breach, because the contractor could be held liable on another theory. The government characterized its claim as one for breach damages and alleged that the amounts claimed were not recoverable under any adjustment provision of the contract. Applying the interpretive rule of *expressio unis est exclusio alterius*, it appeared that the Inspection clause remedies for such defective material were exclusive. However, delay costs might be recoverable as common law damages under the reservation of the Other Rights and Remedies provision of the Default clause.

For the appellant: Pettit & Martin, Washington, D.C., by Michael W. Clancy and Richard P. Rector. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Brad L. Johnson, Trial Attorney.

Before FREEMAN, RUBERRY, and RIISMANDEL, Administrative Judges. Separate opinion concurring in the result by Administrative Judge RIISMANDEL and joined in by Administrative Judge RUBERRY.

FREEMAN, Administrative Judge: General Electric Co. (GE) has appealed a contracting officer's decision holding it liable for breach of contract damages allegedly incurred as a result of GE's initial delivery of defective supplies. GE moves to dismiss the appeal on the ground that the Government has failed to state a claim upon which relief can be

Digitized by Google

granted. Since the parties have argued the motion on the basis of matters in the appeal file, beyond the four corners of the complaint, we consider the motion as one for summary judgment.

STATEMENT OF FACTS

1. On 30 August 1985, the Government contracted with GE for delivery of four propulsion turbines and related equipment for the USS KITTY HAWK. The contract was made by a modification to a basic ordering agreement (BOA) and by a delivery order under that BOA. The general provisions of the BOA applicable to the delivery order included the FAR 52.246-2 clause entitled "INSPECTION OF SUPPLIES-FIXED PRICE (APR 1984)," and the FAR 52.249-8 clause entitled "DEFAULT (FIXED PRICE SUPPLY AND SERVICE) (APR 1984)."

2. Section 5.0 of the delivery order schedule as amended provided that initial inspection and acceptance of the turbines would be made at the GE plant with payment of the contract price (less specified withholding) at that time. Final inspection, acceptance, and payment of the withholding were to be made "after full power test during the ocean trials for the USS KITTY HAWK."

3. The initially specified delivery date for the turbines was 21 June 1987. The record does not indicate whether the delivery date was extended by contract modification prior to the events at issue in this appeal. However, the turbines were delivered and installed in the ship at the Philadelphia Naval Shipyard on or before 24 January 1991.

4. On 24 January 1991 and thereafter, a series of problems were encountered during dock trials of the turbines. The parties dispute responsibility for these problems, but for purposes of this motion we assume that the turbines as initially delivered by GE were defective. When the defects were discovered, GE undertook repair and correction.

5. On 7 February 1991, the Government notified GE that the turbine problems would cost the Government an estimated $1,436,000 and delay sea trials by 14 days. The Government proposed a contract amendment extending the delivery date with consideration to the Government. GE refused to agree to the proposed amendment.

6. On 19 March 1991, by Modification 01 to the delivery order, the Government formally rejected the turbines and unilaterally established a new delivery date of noon, 23 March 1991 for delivery of turbines conforming to the specifications. This modification further stated that the Government was reserving all rights to "delay and any other damages." GE completed the repairs and returned the turbines to the Government on 25 March 1991. Sometime thereafter ocean trials were completed and the turbines were finally accepted by the Government.

7. By letter dated 10 September 1992, the Government demanded payment from GE of $3,862,720 for additional costs allegedly incurred as a result of the defective turbines. The claimed costs included $2,575,147 for "additional costs in the completion of the USS KITTY HAWK overhaul," and $1,287,573 for additional costs on other shipyard work "impacted" by the delay of the USS KITTY HAWK work. GE rejected the claim. By final decision dated 5 February 1993, the contracting officer held GE liable for the full amount claimed. The Government characterizes its claim as one for breach damages and insists that the amounts claimed are not recoverable under any adjustment provision of the contract.

DECISION

The Inspection clause of the contract at paragraphs (e)(2), (f), (h) and (1) specified various remedies for the delivery of defective supplies. Paragraph (1) expressly reserved other rights and remedies, but only as to defects found after final acceptance. Applying the interpretive rule of *expressio unius est exclusio alterius,* it appears that the parties did not intend to reserve other rights and remedies with respect to defective material discovered before final acceptance, and that the Inspection clause remedies as to such defective material are exclusive. *See United Pacific Insurance Co. v. United States* [20CCF ¶ 83,173], 497 F.2d 1402, 1405 (Ct. Cl. 1974). Therefore, to the extent the Government claim is for costs incurred in attempting to test and repair the defective turbines, or for disruption of other work caused by that effort, those costs are recoverable only to the extent allowed by the remedial provisions of the Inspection clause and not as breach damages. *See Triex-Pacific v. Stone,* 958 F.2d 351, 354 (Fed. Cir. 1992) ("contingencies contemplated by various contract clauses are remediable under those clauses of the contract, not as a breach of contract.")

However, to the extent the Government claim is for time delay costs, incident to GE's failure to deliver specification compli-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ant turbines by the contract delivery date, and not more specifically related to the test and repair work on the turbines, the time delay costs might be recoverable as common law damages under the reservation of other rights and remedies provision in paragraph (h) of the Default clause of the contract.

The motion is denied.

CONCURRING OPINION BY ADMINISTRATIVE JUDGE RIISMANDEL

I concur in the denial of appellant's motion, whether it be considered for dismissal or for summary judgment, but for reasons different from those stated in the proposed opinion.

I respectfully decline to adopt the proposition that the Inspection clause, as a matter of law, constitutes the exclusive remedy for a Government's breach of contract damages claim as presented in this case. The cited *Triax-Pacific* case, as well as *Johnson & Sons Erectors Company v. United States,* 231 Ct.Cl. 753, *cert denied,* 459 U.S. 971 (1982) (relied on by appellant) do not mandate such a result. The inspection clause does not provide an equitable adjustment, other "specific type of relief" or compensation for the costs the Government may have incurred upon rejection of the equipment after its installation and removal by the Government but before final acceptance as do the Changes and Suspension of Work clauses in those cases. *Edward R. Marden Corp. v. United States* [16CCF ¶ 80,368], 442 F.2d 364, 368 194 Ct.Cl. 799, 807 (1971); *Len Company & Associates v. United States* [12 CCF ¶ 81,392], 385 F.2d 438, 450 n.17, 181 Ct.Cl. 29, 50 n.17 (1967).

Neither have we here a case for the application of the rule of *expressio unius est exclusio alterius,* particularly in view of the UCC provision that if the parties intend "the term to describe the sole remedy under the contract, this must be clearly expressed." (¶ 2-719)

Since the contractor agreed to, and in fact did correct, the defects in the turbines, there was no resort to the Default clause. The reservation of Government's rights and remedies in the Default clause thus is not applicable.

The foreseeability of the various elements or categories of the Government's claimed/asserted costs as consequential damages also is an issue to be considered.

The Board should consolidate the instant appeal with that in ASBCA No. 45937 (General Electric's claim for costs of repair, etc.) and proceed with the consideration of both appeals on the merits.

[¶ 26,579] E.M. Scott & Associates, Inc.

ASBCA No. 45869, December 9, 1993. Contract Nos. N00189-90-R-0108, N00189-91-R-0118.

Procedure, Boards—Pleadings—Answer.—The government's certificate of service stating that an answer had been served on the contractor was not a false statement violating the board's rules and punishable by default, because the term "served" used in a certificate of service can refer to the act of sending papers, rather than to the receipt of those papers by the opposing party. Moreover, the board's rules require the board, not the government, to serve a copy of the answer on the contractor. The answer was timely submitted to the board because the due date fell on a Sunday and the next day was a legal holiday; thus, the board's receipt of the answer by the next day fully comported with the board's rules and order.

Procedure, Boards—Discovery—Admissions.—The government's admission that it had accepted, evaluated, and assimilated manuals did not entitle the contractor to summary judgment for damages arising from the unlicensed use of a trade secret, because the admission did not acknowledge the essence of the claim, which was a contractual limitation to the use of the material. The acknowledgment by the government that it assimilated the manuals did not rise to that level.

Procedure, Boards—Discovery—Interrogatories and Depositions.—Although the government's first interrogatory was not signed under oath as required by board rules, a contractor was not entitled to a summary judgment awarding damages arising from the unlicensed use of a trade secret, because the government cured the defect before the (cont'd)

Digitized by Google

contractor suffered any prejudice in the conduct of the appeal resulting from the defect. Thus, there was no basis for the imposition of a sanction upon the government.

For the appellant: Edward M. Scott, Owner. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Anita D. Polen, Trial Attorney, Fleet and Industrial Supply Center, Norfolk, Virginia.

Before HARTMAN, SPECTOR, and THOMAS, Administrative Judges.

HARTMAN, Administrative Judge: By letter dated 13 October 1993, appellant, E. M. Scott & Associates ("EMS"), requested grant of "summary judgment in the amount of (its) claim" based "on the Government's failure to follow ASBCA rules, and the false statement made by the Government to the Board." By letter dated 14 October 1993, EMS further requested grant of "summary judgment in the amount of the claim, based on the Respondent's concurrence with the essence of the claim in the Government's Answer." Thereafter, the Government filed a response to both motions opposing the grant of summary judgment and EMS filed a reply to the Government's response. On 15 November 1993, EMS filed a third motion requesting grant of summary judgment due to the Government's failure "to comply with the law with respect to answering interrogatories." Because EMS has not shown that it is entitled to summary judgment as a matter of law or the imposition of a sanction against the Government, we deny all three motions.

1. *13 October 1993 Motion*

In its first motion, EMS asks for summary judgment because the Government "stated in its *CERTIFICATE OF SERVICE* that: '. . . on the 8th of October 1993, a copy of the Government's Answer was served on the Appellant by Federal Express . . . .'" (emphasis in original), but it did not receive a copy of the answer until 11 October 1993. According to EMS, "Federal Express was given the package on the 8th, a Friday, and was not instructed to deliver it on the next day, which they would have done, . . . [but] on Monday, the 11th one day after it was due." EMS contends such action by the Government constituted furnishing of a "false statement" and a violation of the Board's Rules.

Neither contention by EMS, however, is correct. The term "served," when used in a certificate of service, can refer to the act of "sending" papers, rather than to the "receipt" of those papers by an opposing party. *See, e.g., Bloomer v. Dept. of Health & Human Services*, 966 F.2d 1436, 1438 (Fed. Cir. 1992) (MSPB regulation defines service as process of furnishing a copy of any pleading either by mail, facsimile, or by personal delivery); *Huey v Dept. of Health & Human Services*, 782 F.2d 1575, 1578 (Fed. Cir. 1986) (there may be difference between service and filing date).

Further, no provision of the Board's Rules required the Government to deliver its answer to EMS or the Board by 10 October 1993. Board Rule 6(b) provides that the Board, not the Government "shall serve a copy [of the answer) upon appellant." Also, when service of a document is effectuated by the Government or another party, Board Rule 16 provides simply that "[p]apers shall be served personally or by mail, addressed to the party upon whom service is to be made." It does not require next day service on an opposing party by an express courier service such as Federal Express. Use by a party of an express courier service for next day or other expedited service to an opposing party is a courtesy, not a requirement. Moreover, Board Rule 33 expressly provides that, "[i]n computing any period of time, . . . the last day of the period shall be included *unless it is a* Saturday, *Sunday, or a legal holiday, in which event the period shall run to the end of the next business day"* (emphasis added). Thus, while the Board's 3 September 1993 order provided that the Government's answer was to be submitted to "the Board" on or before 10 October 1993, because 10 October was a Sunday and the next day a legal holiday, *i.e.*, Columbus Day, the Board's receipt of the answer by Federal Express on 12 October 1993 comported fully with the Board's Rules and order. *See, e.g., Wood-Ivey Systems Corp. v. United States*, 4 F.3d 961, 962 (Fed. Cir. 1993).

We note for the parties' edification that entry of a "default" judgment as a "sanction" is a drastic step, which is to be employed only in the most extreme cases. *See, e.g., Information Systems & Networks Corp. v. United States*, 994 F.2d 792, 796-97 (Fed. Cir. 1993); *Radcliffe Construction Co.*, ASBCA No. 38478, 90-2 BCA ¶ 22,863 at 114,848, *aff'd in relev. part on recon.*, 90-3 BCA ¶ 22,961. Accordingly, such action should not be sought by a party to an appeal, except under extraordinary circumstances.

©1994, Commerce Clearing House, Inc.

Digitized by Google

2. *14 October 1993 Motion*

In its second motion, EMS asks for summary judgment because "the Government agrees that the Navy accepted, evaluated, and *assimilated* five tailored, individual manuals (without payment)" (emphasis in original). EMS is correct in noting that the Government admitted in its answer the allegations contained in paragraph 8 of EMS's complaint which provide as follows:

> two weeks later, all technical products (five tailored, individual manuals) had been accepted, evaluated and assimilated by the Navy.

However, such a admission does not entitle EMS to summary judgment.

In our prior decision denying the Government's motion to dismiss EMS's appeal, we explained that " '[o]ne who has lawfully acquired a trade secret may use it in any manner without liability unless he acquired it subject to a contractual limitation or restriction as to its use.' " *E.M. Scott & Associates, Inc.*, ASBCA No. 45869, 94-1 BCA ¶ 26,258 (30 July 1993) quoting *Aktiebolaget Bofors v. United States*, 194 F.2d 145, 148 (D.C. Cir. 1951); *accord American Science & Engineering, Inc. v. Califano*, 571 F.2d 58, 61 (1st Cir. 1978); *International Engineering Co. v. Richardson*, 512 F.2d 573, 578-79 (D.C. Cir. 1975), *cert. denied*, 423 U.S. 1048 (1976). Thus, in order to maintain a suit for damages arising from unlicensed use of a trade secret appellant must plead and prove a contract.

A simple acknowledgment by the Government that it "assimilated" five manuals does not establish the existence of a contract between EMS and the Government limiting or restricting the Government's use of the manuals. *Compare Airborne Data, Inc. v. United States*, 702 F.2d 1350 (Fed. Cir. 1983), and *The Padbloc Co. v. United States*, 161 Ct. Cl. 369 (1963), *with Radioptics, Inc. v. United States*, 621 F.2d 1113, 1120-29, 223 Ct. Cl. 594, 608-24 (1980). As the Government notes in its opposition to EMS's motion, such an acknowledgment may mean only that the Government concedes it obtained or comprehended specific information. *See, e.g., Webster's II New Riverside University Dictionary* 131 (1988). Thus, EMS has failed to show that, based upon the admission, it is entitled to summary judgment as a matter of law.

3. *15 November 1993 Motion*

In its third motion, EMS asks for summary judgment because "Mary Beth Hacic's response to [its) September 28, 1993 interrogatory" was "not signed under oath, as required by ASBCA rules." EMS correctly notes that the Government's response to its first set of interrogatories did not comply with Board Rule 15 because the answers were not "signed under oath." However, by letter dated 16 November 1993, with a copy supplied to the Board, the Government furnished EMS an amended signature page with Ms. Hacic attesting to the veracity of the interrogatory responses "under penalty of perjury." The Government therefore cured the defect before EMS suffered any prejudice in its conduct of the appeal resulting from the defect. Thus, there is no basis for imposition of any sanction upon the Government. *See, e.g., Radcliffe Construction Co.*, ASBCA No. 38833, 90-1 BCA ¶ 22,480 at 112,833.

In its 16 November letter, the Government asks that, in the future, EMS contact it first regarding "requests that can be easily resolved between the parties." The Government's request comports fully with Board Rules 14 and 21 directing that the parties cooperate and engage in discovery voluntarily.

CONCLUSION

EMS has not shown it is entitled to imposition of any sanction against the Government or to summary judgment as a matter of law. Accordingly, all three of EMS's motions are denied.

[¶ 26,580] Professional Services Unified, Inc.

ASBCA No. 45799, December 14, 1993. Contract No. N00123-91-C-5563.

Interpretation of Contracts—Clear Meaning—Wage Determination.—A Price Adjustment clause governing wage determinations was not applicable to a wage modification made during the base year, because the clause specifically stated that it was applicable on the anniversary date of the multiple year contract or at the beginning of the renewal option period and therefore clearly did not apply to the base year. The parties agreed to a price adjustment to reflect increased wages and fringe benefits during the base period, necessary

Digitized by Google

because both parties held an erroneous belief about the minimum wage and fringe benefit rates for service employees applicable at the time of award. Although the government agreed to adjust the contract price to account for the increase in actual wages and fringe benefits applicable to the basic contract, it averred that it did not have to include an amount for indirect costs and profit as part of the equitable adjustment, citing the Price Adjustment clause. However, the contractor's contention that the clause did not apply to the base year was unassailable inasmuch as the clause clearly stated that a base contract period could not be an option or renewal period.

Labor—Service Contract Act—Wage Determinations.—A contract was properly reformed to reflect increased wages and fringe benefits during the base period because the parties both held an erroneous belief about the minimum wage and fringe benefit rates for service employees applicable at the time. A collective bargaining agreement, signed 30 days before the award and scheduled commencement of performance, applied to the contract pursuant to the Service Contract Act. The successorship requirements of the Service Contract Act require a successor contractor to pay its service employees no less than the wages and fringe benefits provided in the predecessor contractor's collective bargaining agreement. However, the parties mistakenly incorporated the previous year's version of the wage determination into the contract for the base year. The contracting officer should have reopened and amended the request for proposals to incorporate the terms of the new agreement. Because that was not done, fairness dictated that the contract price for the base year should be adjusted to reflect the actual increase.

Interpretation of Contracts—Clear Meaning—Economic Price Adjustment for Option.—A contractor was not entitled to be compensated for indirect costs or profit in connection with wage determinations that applied to option periods, because the Price Adjustment clause expressly provided that no adjustment should include any amount for general and administrative costs, overhead, or profit. Although the contractor did not explain its theory of entitlement, the board pointed out that the contract price for the option years should reflect any actual changes in wages and fringe benefits made but that indirect costs and profit were not included in the price adjustment.

For the appellant: Frank H. Russell, President. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and James J. Paris, Trial Attorney, Naval Regional Contracting Center, San Diego, California.

Before GROSSBAUM and SPECTOR, Administrative Judges.

GROSSBAUM, Administrative Judge: This appeal is taken from the contracting officer's failure to issue a decision on a claim by appellant, Professional Services Unified, Inc. (PSU), for an equitable adjustment resulting from the incorporation of Service Contract Act wage determinations into its contract. The only matter in dispute relates to PSU's entitlement to general and administrative (G&A) costs, overhead (claimed as "increased liability insurance"), and profit under the adjustment. There is no dispute regarding PSU's entitlement to price adjustments for increases in wages, fringe benefits and related taxes. After this appeal was docketed the contract was modified to reflect the foregoing undisputed adjustments.

As originally presented, the amount in dispute appeared to relate only to the approximately $3,500 in G&A costs, overhead and profit applicable to the undisputed direct cost adjustment of $35,330.60 for the base contract year. As subsequently clarified and recomputed, PSU claims slightly more than $3,150 for indirect costs and profit for each year of contract performance: the base year and each of two option years. Thus, the total amount in dispute is approximately $9,500.[1]

Appellant has elected the accelerated procedure provided by Rule 12.3. The parties waived hearing and have elected to submit the case for decision on the record, pursuant to Rule 11. Only liability is before us for decision. Appellant filed a brief. The Government's position is reflected in its answer to appellant's complaint.

[1] Only approximate amounts have been stated herein because the claimed indirect cost and profit elements were actually calculable as fixed percentages of direct cost items, the amounts of which varied slightly for each contract year.

Digitized by Google

SUMMARY FINDINGS OF FACT

On 6 June 1991 the Government issued a request for proposals (RFP) for procurement of mess attendant services at the Naval Air Station North Island, San Diego, California, for the base period from 1 October 1991 through 30 September 1992. As amended, the RFP set 8 August 1991 as the closing date for offers covering the base period and two one-year option periods.

The solicited services represented a recurring requirement. A contract to furnish substantially the same services at the same location had earlier been awarded to Renaissance Exchange, Inc. (Renaissance). However, this contract had been terminated for default in January 1991 and the services required up through September 1991 were being performed by a completion contractor, Balantine's South Bay Caterers, Inc. (Balantine's).

The Service Contract Act of 1965, as amended (sometimes SCA), 41 U.S.C. § 351 *et seq.*, and implementing regulations promulgated by the Department of Labor (DOL) at 29 C.F.R. Part 4 (1993 ed.) and also published in the Federal Acquisition Regulation (FAR) at 48 C.F.R. Subpart 22.10 (1990 ed.) require the contracting officer, *inter alia*, to submit to DOL Standard Form (SF) 98, "Notice of Intention to Make a Service Contract" (sometimes Notice), for each new solicitation for a service contract in excess of $2,500. Among other things, the SF 98 provides for a Response to the Notice by DOL, wherein the wage determination (sometimes WD) applicable to the procurement may be indicated. *See* 29 C.F.R. § 4.4(a)(1); FAR 22.1007(a).[2]

On or about 23 May 1991, less than two weeks before issuing the RFP, the contracting officer submitted SF 98 Notice A2282535 applicable to the solicitation. Among other things, the Notice identified Balantine's as the incumbent contractor and WD 74-341 (Rev. 21) as the wage determination in the incumbent's contract, which incorporated a collective bargaining agreement (sometimes CBA) between the Industrial, Technical and Professional Employees union (the Union) and the defaulted predecessor contractor, Renaissance. The Notice also stated: "No new agreement available from Balantine's, the incumbent contractor." (R4, tab 6)

The solicitation and resulting contract included the Service Contract Act of 1965, As Amended (May 1989) clause prescribed by FAR 52.222-41 (sometimes SCA clause). The scheme in SCA clause paragraph (c), *Compensation*, provides for paying each service employee "not less than the minimum monetary wages and ... fringe benefits ... specified in any wage determination attached to this contract" and, in the case of contracts with terms of more than one year, provides for adjusting the required minimum monetary wages and fringe benefits "after 1 year and not less often than once every 2 years, under [DOL] wage determinations ..."

With regard to an incumbent prime contractor paying wages and benefits to service employees pursuant to a CBA effective during the contract performance period, SCA clause paragraph (m), *Collective Bargaining Agreements Applicable to Service Employees*, requires prompt reporting of full information about the CBA to the contracting officer, but does not specifically require negotiation of new CBAs. However, to effectuate the "successorship" requirements of SCA section 4(c), 41 U.S.C. § 353(c), SCA clause paragraph (f), *Successor Contracts*, prohibits the contractor under a contract which succeeds a contract subject to the Act under which substantially the same services were furnished in the same locality and service employees were paid wages and fringe benefits provided for in a collective bargaining agreement,

> from paying any service employee under the contract:
>
> > less than the wages and fringe benefits provided for in such collective bargaining agreement, to which such employee would have been entitled if employed under the predecessor contract, including accrued wages and fringe benefits and any prospective increases in wages and fringe benefits provided for under such agreement[,] ... unless the limitations of 29 CFR 4.1b(b) apply ...

The RFP and resulting contract also contained the Fair Labor Standards Act and Service Contract Act—Price Adjustment (Multiple Year and Option Contracts) (May

[2] In the case of a service contract for a recurring or known requirement, under paragraph (a) of FAR 22.1008-7, Required time for submission of Notice, the contracting officer must submit the Notice to DOL "not less than 60 days (nor more than 120 days ...) before the earlier of ... (2) issuance of any request for proposals, [or] (3) commencement of negotiations ..." Where circumstances prevent timely submission of the Notice, paragraph (c) of this subsection requires the contracting officer to submit "a written statement of the reason for delay as soon as practicable."

Digitized by Google

1989) clause prescribed by FAR 52.222-43 (sometimes the FLSA/SCA Price Adjustment clause), which applies both to contracts subject to DOL wage determinations and to contracts subject to CBAs and provides in part:

> (c) The [DOL] wage determination ... current on the anniversary date of a multiple year contract or the beginning of each renewal option period, shall apply to this contract....
>
> (d) The contract price or contract unit price labor rates will be adjusted to reflect the Contractor's actual increase or decrease in applicable wages and fringe benefits to the extent that the increase is made to comply with or the decrease is voluntarily made by the Contractor as a result of:
>
> (1) The Department of Labor wage determination applicable on the anniversary date of the multiple year contract, or at the beginning of the renewal option period...;
>
> (2) An increased or decreased wage determination otherwise applied to the contract by operation of law;...
>
> (e) Any adjustment will be limited to increases or decreases in wages and fringe benefits as described in paragraph (c) [sic—(d)?] of this clause, and the accompanying increases or decreases in social security and unemployment taxes and workers' compensation insurance, but shall not otherwise include any amount for general and administrative costs, overhead, or profit.

Attachments to the RFP, as issued, included WD "74-341(21)." On or about 12 July 1991 the Government issued amendment 0002 to the solicitation, which replaced WD 74-341(21) with WD "74-341 (Rev. 22)" and stated that: "[t]he collective bargaining agreement appended to the Wage Determination is the current bargaining agreement and remains unchanged." WD 74-341 (Rev. 22), dated 17 September 1990, was based on the latest CBA between Renaissance and the Union.

On or about 18 July 1991, while the RFP was outstanding, Balantine's and the Union executed a new CBA covering the food service employees at North Island Naval Air Station, effective 11 January 1991. The agreement increased wages and fringe benefits for the contract year "1991-92" beyond those covered under the then-current WD 74-341 (Rev. 22). According to its terms, this new CBA was to remain in "force and effect until January 10, 1993." (R4, tab A-6)

On 7 August 1991 the Union submitted an executed copy of its new CBA with Balantine's to the contracting officer. The CBA was received by the Government on 9 August 1991. (R4, tab A-7) The RFP was never reopened to incorporate the terms of the new CBA nor to include the clause at FAR 52.222-47, Service Contract Act (SCA) Minimum Wages and Fringe Benefits.[3]

PSU submitted its proposal in response to the RFP on 2 August 1991. PSU's proposed prices were based mainly on the rates of wages and fringe benefits reflected in WD 74-341 (Rev. 22).

No negotiations were conducted with any offerors from the date proposals were received through the date of contract award. On 30 September 1991 the Government awarded the captioned contract to PSU for the base period from 1 October 1991 through 30 September 1992. WD 74-341 (Rev. 22) was attached to and made part of the contract. (R4, tab 1)

In a 7 October 1991 letter to PSU "as the successor contractor," the Union transmitted a copy of the predecessor contractor's (Balantine's) CBA and informed PSU about various practices and procedures required by the Union. (R4, tab A-6) This was the first time that PSU knew or had reason to know about the terms of the new CBA between Balantine's and the Union.

---

[3] In situations involving a "successorship/same locality/incumbent collective bargaining agreement," FAR 22.1012-5, Response to late submission of Notice—with collective bargaining agreement, provides that, if the contracting officer has not filed a timely Notice as required by FAR 22.1008-7 (note 2) nor received a DOL response, and DOL

> is unable to provide the wage determination or revision by the latest date needed to maintain the acquisition schedule, the contracting officer shall incorporate in the solicitation the wage and fringe benefit terms of the collective bargaining agreement, or the collective bargaining agreement itself, and the clause at 52.222-47, Service Contract Act (SCA) Minimum Wages and Fringe Benefits. If the contract has been awarded, an equitable adjustment following receipt of the wage determination or revision will not be required, since the wage determination or revision will be based on the economic terms of the collective bargaining agreement.

The aforementioned SCA Minimum Wages and Fringe Benefits clause expressly provides, *inter alia*, that the economic terms of the CBA will apply to the resulting contract "notwithstanding the absence of a wage determination reflecting such terms."

On 25 February 1992 DOL issued WD 74-341 (Rev. 23), incorporating the terms of Balantine's CBA. This wage determination was attached as a DOL response to the SF 98 Notice A2282535, which had been submitted in May 1991. (R4, tab 6)

On 6 May 1992 the contracting officer issued unilateral modification P00002 to the contract, attaching and incorporating WD 74-341 (Rev. 23) "into the contract for the period 01 October 1991 through 30 September 1992," *i.e.*, the base contract year. The modification invited PSU to "notify the Contracting Officer of any price increase claimed under the Service Contract Act within 30 days . . ." (R4, tab 1)

PSU submitted a price adjustment proposal to the contracting officer on 13 May 1992. The proposal included increases for general liability insurance (an overhead item), G&A costs and profit, in addition to increases in wages and fringe benefits and related increases in social security and unemployment taxes and workers' compensation insurance. (R4, tab 3, attch. C)

On 30 June 1992 the contracting officer issued unilateral modification P00003, exercising the option to extend performance for Option Year I, from 1 October 1992 through 30 September 1993. The wage determination applicable to the contract and current at the beginning of this first renewal option period was WD 74-341 (Rev. 23), dated 25 February 1992. (R4, tab 1)

After discussions between the parties, in November 1992 the contracting officer advised PSU that the Government intended to "adjust the contract amount pursuant to [the] FAR 52.222-43" FLSA/SCA Price Adjustment clause. This adjustment would reflect only PSU's "actual increase or decrease in applicable wage[s] and fringe benefits" and would not include increases in indirect costs (R4, tab 3, attch. D-F). At this point, the parties had reached an impasse regarding an adjustment covering PSU's indirect costs and profit.

By letter to the contracting officer dated 2 December 1992, PSU resubmitted its price adjustment proposal and designated a discrete portion of the proposal as a claim for the "increased liability insurance, G&A, and profit amounts" included therein. Each of these claim elements was expressed as a certain percentage of either the direct labor or total direct cost increases sought in the price adjustment proposal and amounted to a readily calculable annual sum of approximately $3,500 for the base year and each of the option years. PSU requested a contracting officer's decision on its claim. (R4, tab 3, attch. C, G)

PSU's claim letter indicated that it expected to reach agreement with the Government on the direct cost portion of its May 1992 price adjustment proposal and that it intended to reserve its right to appeal the contracting officer's expected rejection of its claim for indirect costs and profit. Shortly thereafter the parties initiated discussions leading to an agreement on the direct cost elements of PSU's price adjustment proposal. (R4, tab 3, attch. G-H)

Meanwhile, on 3 December 1992 DOL issued WD 74-341 (Rev. 24), based on an apparently new ("current") CBA between PSU and the Union. (R4, tabs 1, 2) There is no evidence in the record of any later revision to this wage determination.

In March 1993 PSU appealed from the contracting officer's failure to issue a decision on its pending claim and the appeal was docketed as ASBCA No. 45799. PSU later elected the Rule 12.3 accelerated procedure in a letter that was received by the Board on 14 June 1993.

By letter dated 11 March 1993, the NRCC contracting officer advised PSU that the Government would not allow any claimed overhead, G&A costs, or profit increases. Nevertheless, an adjustment for only direct labor wages, benefits, and associated payroll costs was agreed to by both parties on 16 March 1993. (R4, tabs 4, 5)

Bilateral modification P00007, effective 19 May 1993, purported to provide price increases for the base year and the first option year, pursuant to the revised wage determinations applicable to the period 1 October 1991 through 30 September 1993. These price increases did not include any amounts for G&A costs, overhead or profit. The modification expressed neither a specific reservation of rights nor a specific release with respect to previously claimed indirect costs or profit and made no mention of the instant appeal, ASBCA No. 45799, which was then pending. (R4, tab 1). Nevertheless, we are persuaded by the parties' subsequent conduct that they did not intend this modification to extinguish PSU's instant claim for indirect costs and profit.

DECISION

The Government argues that the FAR 52.222-43 FLSA/SCA Price Adjustment clause applies to the price adjustments resulting from pertinent revised wage determi-

Digitized by Google

nations and that the clause expressly precludes recovery of the indirect costs and profit claimed in this appeal. (Ans. at 10-11) By contrast, appellant contends that this price adjustment clause does not apply to the wage determination revisions made after award of the contract. Appellant argues that increases resulting from complying with these revised wage determinations were changes, compensable under the Changes clause by means of an "equitable adjustment," which necessarily includes allowances for increased indirect costs and a reasonable profit. (App. br. at 4-6) To evaluate these conflicting arguments, we must distinguish between the years to which the price adjustments apply.

1. *Base contract year.* Appellant points out that "*no* term, phrase, or other language" in the FLSA/SCA Price Adjustment clause in the contract "specifically names or refers to a contract's base contract period" and that this clause specifically governs only

> *wage determination[s] applicable on the anniversary date of the multiple year contract, or at the beginning of the renewal option period.* A base contract period cannot, in or of itself, be an option or renewal period.

(App. br. at 5; emphasis in original). Appellant's argument appears unassailable.

Among other things, paragraph (c) of the FAR 52.222-43 clause (quoted in part above) may reasonably be construed to preclude any applicability of the clause's adjustment provisions to the contract's base period.[4] Moreover, we have interpreted a predecessor version of the FLSA/SCA Price Adjustment clause in an option contract as permitting adjustments only for changes in wages and fringe benefits made to comply with or resulting from DOL wage determinations "applicable to the renewal option period" and as "not pertain[ing] to other wage increases the contractor undertakes during the basic contract period." *Ralph Construction, Inc.*, ASBCA No. 35633, 88-2 BCA ¶ 20,731 at 104,756; *cf. Burnside-Ott Aviation Training Center v. United States*, 985 F.2d 1574, 1576 (Fed. Cir. 1993) (wage determination issued during base contract period "became effective at the start of the first option year"). Accordingly, we hold that the FAR 52.222-43 FLSA/SCA Price Adjustment clause in the instant contract does not provide a vehicle for adjusting the contract price with respect to changes in wages or fringe benefits effectuated during the base period of a multiple year or option contract to which the SCA applies.

A price adjustment to reflect increased wages and fringe benefits during the base period of the instant contract became necessary because both parties harbored an erroneous belief about the minimum wage and fringe benefit rates for service employees applicable at the time of award. The parties' mistake as to this basic assumption came about because the Government neglected to follow the procedures prescribed by FAR 22.1012-5 (note 3) as soon as it learned of the new CBA executed by Balantine's and the Union.

The "successorship requirements of SCA section 4(c), 41 U.S.C. § 353(c), recited in paragraph (f) of the SCA clause in the contract, impose obligations on the successor contractor that are "not contingent or dependent upon the issuance or incorporation in the contract of a wage determination based on the predecessor contractor's collective bargaining agreement." 29 C.F.R. § 4.163. As applied to the instant contract, from the first day of contract performance through 10 January 1993, PSU was obligated to pay its service employees no less than the wages and fringe benefits provided in Balantine's CBA with the Union, even though a wage determination based on that CBA had not yet been incorporated in its contract, unless PSU was somehow excepted from SCA section 4(c).

None of the exceptions or limitations to the applicability of SCA section 4(c) alluded to in the SCA clause apply to this contract. In particular, the specific "limitations of 29 CFR 4.1b(b)" do not apply here because notice of the terms of the new CBA was received by the contracting agency on 9 August 1991, more than 30 days before both award

[4] Were it not for paragraph (c), the multiple year and option contracts price adjustment clause would be nearly identical to the FAR 52.222-44 FLSA/SCA Price Adjustment clause applicable to one-year service contracts, and might be interpreted in the same manner. The latter clause makes no provision for price adjustments based on ordinary wage determinations issued during the contract term and wage determinations issued after award and before completion of the contract do not change the contractor's obligation with respect to minimum wages to be paid and fringe benefits to be furnished. "Such wage determinations are effective for contracts not yet awarded." 29 C.F.R. § 4.161; *Broad Avenue Laundry and Tailoring v. United States* [30 CCF ¶ 70,003], 681 F.2d 746, 747 (Ct. Cl. 1982); *see Suburban Industrial Maintenance Co.*, ASBCA No. 22875, 79-1 BCA ¶ 13,731 at 67,322; *J&L Janitorial Services, Inc.*, ASBCA No. 31245, 88-3 BCA ¶ 21,137 at 106,725.

Digitized by Google

and scheduled commencement of performance of the successor contract. *See* 29 CFR § 4.1b(b)(2); FAR 22.1008-3(c)(2)(i)(B). Therefore, pursuant to FAR 22.1012-5, the contracting officer should have reopened and amended the RFP to incorporate the terms of the new CBA and the FAR 52.222-47 SCA Minimum Wages and Fringe Benefits clause. If the contracting officer had done so, no price adjustment would have been needed during the base contract period to compensate the resulting successor contractor, PSU, for complying with the terms of the predecessor contractor's CBA.

It is unnecessary to speculate about the reasons why the contracting officer failed promptly to follow the FAR 22.1012-5 procedures, although the fact that notice of the new CBA wasn't received until one day after the scheduled closing date for offers may have contributed to this failure. In any event, we may fairly presume that the Government did not intend to violate the law as embodied in the FAR. *See Beta Systems, Inc. v. United States* [34 CCF ¶ 75,429], 838 F.2d 1179, 1186 (Fed. Cir. 1988).

The parties intended to apply the minimum wage and fringe benefit rates required by the SCA to the base period of the contract as awarded. However, the parties mistakenly incorporated WD 74-341 (Rev. 22) into the instrument instead of the economic terms of the predecessor contractor's CBA. This mistake may be rectified by reformation. RESTATEMENT (SECOND) OF CONTRACTS § 155 (1981).

Reformation to effectuate the parties' intended agreement has been accomplished in part by the retroactive incorporation into the contract of WD 74-341 (Rev. 23) for the entire base contract year. Moreover, since the price offered and accepted for performing this labor-intensive contract was based largely on the assumed applicability of the wage and fringe benefit rates reflected in WD 74-341 (Rev. 22), fairness dictates that the contract price for the base year should be adjusted to reflect the actual increase in applicable wages and fringe benefits made to comply with the economic terms provided in Balantine's CBA, as eventually memorialized in WD 74-341 (Rev. 23). The proper measure of such adjustment would be an equitable adjustment, which necessarily makes provision for increased overhead and G&A costs and for a reasonable profit, unless these factors are expressly excluded by some pertinent contract provision.

Since no clause in the contract limits the amount of any price adjustment reflecting changes in wages and fringe benefits applicable to the basic contract period, we hold that appellant is entitled to be compensated for indirect costs and profit as part of the equitable adjustment provided for increased minimum wages and fringe benefits for the base year.

2. *Option years.* Appellant claims G&A costs, overhead and profit in connection with SCA price adjustments made applicable to the two option years of its contract, but does not explain its theory of entitlement. This claim is without merit.

Despite the inapplicability of the FAR 52.222-43 FLSA/SCA Price Adjustment clause to the basic period of a multiple year or option contract, the clause makes the DOL wage determination "current on the beginning of each renewal option period" applicable to the contract. Moreover, subparagraph (d)(1) of the clause expressly provides for price adjustments to reflect increases in wages and fringe benefits made to comply with the DOL "wage determination applicable ... at the beginning of the renewal option period." Accordingly, the FLSA/SCA Price Adjustment clause applies to each of the option years in PSU's contract.

The record before us establishes that the option to extend performance for Option Year I, 1 October 1992 through 30 September 1993, was actually exercised and suggests that the option for Option Year II, 1 October 1993 through 30 September 1994, may already have been exercised. The record also establishes that WD 74-341 (Rev. 23) was applicable at the beginning of the first renewal option period and indicates that WD 74-341 (Rev. 24) would have been applicable at the beginning of the second renewal option period.

Pursuant to subparagraph (d)(1) of the FLSA/SCA Price Adjustment clause, the contact price for Option Year I may have been adjusted to reflect actual increases or decreases, if any, in applicable wages and fringe benefits to the extent made to comply with WD 74-341 (Rev. 23). Similarly, the same subparagraph of the clause permits adjusting the contact price for Option Year II to reflect any actual changes in wages and fringe benefits made to comply with WD 74-341 (Rev. 24).

However, pursuant to paragraph (e) of the FLSA/SCA Price Adjustment clause, no such price adjustment may include "any amount for general and administrative costs, overhead, or profit," as claimed by PSU. Therefore, appellant would not be entitled

Digitized by Google

to recover any amount for indirect costs or profit in connection with whatever price adjustments may be applicable to either the first or second renewal option periods.

Accordingly, the appeal is sustained with respect to overhead and G & A costs and profit claimed in connection with the price adjustment negotiated for the base contract year. The matter is remanded to the contracting officer to determine the amount of indirect costs and profit due appellant plus interest on that amount pursuant to 41 U.S.C. § 611. In all other respects the appeal is denied.

[¶ 26,581] Midwest Holding Corporation

ASBCA Nos. 44589, 45222, December 22, 1993. Contract No. DAHC92-89-C-0169.

Contract Types—Vehicle Rentals—Wear and Tear.—The government's argument that a government estimator included fair wear and tear in his estimate of damage to leased vehicles was unconvincing because the estimator knew that fair wear and tear were not recoverable. Although the estimate form listed all deficiencies, many were not priced on the joint inspection reports, indicating that a distinction was made between what was recoverable and what was not. The government was bound by what it obviously agreed to as compensable repair costs during the joint inspection and the resulting estimate.

For the appellant: Elliott, Vanaskie & Riley, Washington, D.C., by Dennis J. Riley and Michael W. Kauffman. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. Robert L. Duecaster, JAGC, Trial Attorney.

Before DuVALL, RUBERRY, and SPECTOR, Administrative Judges.

DuVALL, Administrative Judge: These appeals involve three claims for recovery of costs allegedly due appellant following the expiration of a contract to lease commercial sedans to the U.S. Army. The claims are for: 1) Repair costs for deficiencies in excess of fair wear and tear; 2) Rental costs for delay in return of vehicles following contract expiration, and; 3) Additional costs relating to the condition and extended delay in return of a single vehicle. The parties agreed to waive rights to a hearing and have the appeals decided on the available record pursuant to Board Rule 11.

FINDINGS OF FACT

On 17 August 1989 the Government awarded appellant a contract to furnish, on a lease basis, 60 commercial sedans for use by the Military Police Command In Panama. The contract specified that the vehicles would be operated on a continuous basis, twenty-four hours a day, seven days a week, and that the minimum mileage estimate per vehicle was 2000 miles a month (Clause C.1.2). The base year of the contract ran from 1 October 1989 through 30 September 1990. The contract expired at the end of the first option year, on 30 September 1991. The option to renew the contract for a second year was not exercised. The lease price included maintenance and repair of the vehicles, including parts and labor when due to fair wear and tear (Clause C.3.1.2).

Clause C.3.1.7 pertinently stated: "The U.S. Government will return the vehicles in the same condition as received except for normal fair wear and tear."

The following provision dealt with damaged vehicles:

C.3.2 Damaged Vehicles:

C.3.2.1 When due to accidental, willful, or negligent actions by its employees, the U.S. Government shall have the option of accomplishing repairs by either (i) in-house resources, or (ii) by directing the Contractor, in writing, to perform the repairs with cost thereof to be for the account of the U.S. Government.

C.3.2.1 [sic] Whenever a vehicle is returned to the Contractor with damages which are considered over and beyond fair wear and tear, the Contractor shall prepare a written and detailed estimate for the cost of labor and parts necessary to repair the vehicle to its original condition. This estimate will be submitted to the Office in Charge (OIC), DOS Transportation Motor Pool (TMP). The OIC will review the estimate and make a recommendation to the Contracting Officer within three (3) work days after receipt of the estimate.

C.3.2.3 No repair work on any damaged vehicle will be performed until authorized

©1994, Commerce Clearing House, Inc.

Digitized by Google

in writing by the Contracting Officer. The Contractor is cautioned that any repairs accomplished without the Contracting Officer's authorization is done at its risk and expense and will not be reimbursed by the U.S. Government.

Section E, INSPECTION AND ACCEPTANCE, called for performance of the inspection and acceptance by the chief of the Transportation Motor Pool or his duly authorized representative (Clause E.1). Clause E.2, Inspection of Leased Vehicles, stated:

(a) Each vehicle delivered to the U.S. Government shall be subject to a joint inspection by authorized representatives from the Contractor and the U.S. Government for damages and other deficiencies. The results of such inspection will be evidenced on DA Form entitled "Acknowledgment Of Leased/Rental Vehicles Procedures" which will list all exceptions and be signed by both parties and dated. Exceptions listed will be considered final and conclusive and a copy thereof will be furnished to the contractor. The U.S. Government will not accept any vehicle unless both signatures appear on the inspection form.

(b) A joint inspection in the manner described above will be performed each time a vehicle is returned to the Contractor and/or delivered to the U.S. Government.

Clause I.29, LIABILITY AND INSURANCE, LEASED MOTOR VEHICLES, made the Government responsible for loss or damage to the vehicles except for normal wear and tear and loss or damage caused by the contractor, its agents, or employees.

The contract lease rate for the first option year was $666 per month. Contract Clause I.21, VEHICLE LEASE PAYMENTS, pertinently provided that:

(e) Rent stated in monthly terms shall be prorated on the basis of 1/30th of the monthly rate for each day the vehicle is in the Government's possession.

The proration was thus $22.20 per day per vehicle at the time the contract expired. While there are no contract provisions specifically calling for payment of rent to a contractor for the late return of vehicles after the expiration of the contract, the Government agrees that appellant is entitled to such payment at the above rate. Further, in a memorandum addressed to the chief of the Transportation Division dated 25 March 1992, after appellant's claim was filed, Mr. Tom Benero, the contract administrator, acknowledged that all vehicles were to be returned to appellant by 30 September 1991 (R4, tab 90).

Appellant contends that, following the invasion of Panama on 20 December 1989, the army began using the vehicles for high speed chases on poor roads. The Government disputes this contention, and we are unable to find that the vehicles were used in such a manner. The appellant also contends that the amount of time the vehicles were utilized varied from what it was led to believe when it bid on the contract. We find no evidence that the Government exceeded the 2000 miles a month per vehicle minimum established by the contract. However, memoranda authored by the chief of the motor pool and the director of the U.S. Army Garrison in Panama during the contract and distributed within the command complained specifically about "abuses of vehicles" by MPs, which are characterized as "normal," and generally about the excessive number of accidents involving non-tactical leased vehicles in the command and the resulting "needless drain in money and resources" (R4, tabs 46, 43).

Fifty-nine of the sixty cars leased were involved in one or more accidents during the two year contract period (R4, tab 101, pp. 48, 49).

Shortly after the contract expired, Mr. Charles Pui, who held the title of Chief of Quality Inspection and who was the authorized representative of the Chief of Transportation Motor Pool, and three other Government inspectors inspected the vehicles and prepared an Equipment Inspection and Maintenance Worksheet (hereinafter DA Form 2404, or inspection report) for each vehicle, which listed all deficiencies, including those classifiable as fair wear and tear, in a column on the form headed "deficiencies and shortcomings." Mr. Pui had extensive experience as a vehicle inspector and familiarity with lease contracts (R4, tab 99).

From 9 through 11 October 1991, following the Government inspection, Mr. Pui and three representatives of appellant, including its president, Mr. Blaine Clark, on-site manager, Mr. Mike Chadwick and appraiser, Mr. Bobby Hatton, jointly inspected the vehicles. During this inspection, the DA Form 2404s previously prepared by Mr. Pui and the other Government inspectors were reviewed and repair cost figures added. On some reports additional deficiencies were listed. Appellant's president signed off on the reports indicating that the appellant was essentially in agreement with the inspection results. The reports were then considered

Digitized by Google

the joint inspection reports of the parties. Some of the deficiency items on the joint reports listed prices. Other items were left unpriced. (R4, Tab 110)

Most of the DA Forms 2404 indicated that the cars needed repainting. When damage was repaired by the Government during contract performance, the repainting of the repaired portions often failed to match the rest of the vehicle, and repair shops frequently oversprayed the new paint onto unpainted portions of the vehicle (R4, tabs 104, 105).

Mr. Pui then prepared an estimate to repair 52 of the vehicles, at a total cost of $99,111.43 and appellant accepted the Government estimate. Generally, the repair costs for vehicles listed on the estimate were less than the total prices on the individual joint inspection reports (R4, tabs 96, 110).

Six other vehicles were jointly inspected, but, unlike the other 52 vehicles, none of the "deficiency" items, including obvious fair wear and tear items (eg. "replace wiper blades," "replace 3 tires," "align headlamps," "clean up carpet," "clean up seats") were priced on the joint inspection reports for these vehicles. These vehicles were not included in Mr. Pui's estimate. After the vehicles were returned to the mainland, appellant's estimator, Bob Allen Chevrolet, estimated the cost of repair of all of the items appearing on the deficiency reports, including fair wear and tear items (R4, tab 96).

These reports were submitted to support appellant's claim of $17,337.38 for repair of these six vehicles. Appellant has failed to meet its burden of establishing a right to recovery in this amount. We have reviewed Mr. Pui's revised reports relating to these vehicles (discussed, *infra*), and conclude that, except for the elimination of repainting, they establish the extent of required repairs in excess of fair wear and tear. By taking Mr. Pui's repair costs, and adding on the cost of repainting, we find that appellant is due recovery of $13,982.12 for repairs to these six vehicles.*

On 24 January 1992 appellant filed a certified claim with the contracting officer, which included the amount of $117,448 for damage in excess of fair wear and tear for 58 vehicles. This amount consisted of Mr. Pui's and Mr. Allen's estimates.

Following receipt of the claim, the acting chief of transportation for the U.S. Army in Panama directed Mr. Pui to review the Form DA 2404's for the 58 vehicles to differentiate the fair wear and tear items from those that exceeded fair wear and tear. The review was conducted several months after the vehicles were returned to the mainland. By this time the vehicles had been disposed of by appellant.

Based upon Mr. Pui's review, the contracting officer in a final decision dated 13 April 1992, determined that the appropriate recovery for damage in excess of fair wear and tear should be $72,212.02. Over $35,000 of the difference between the claim and the amount awarded resulted from Mr. Pui's removal of repainting from the joint inspection reports. This was the first time, in Mr. Pui's experience, that the joint inspection reports on leased vehicles were later revised (R4, tab 99, p. 103).

Appellant also claimed recovery of rent for 619 days of delay in return of these vehicles. Fifty eight of the vehicles were delivered to appellant from 1 October 1991 through 14 November 1991. On appeal, appellant has adjusted its claim for untimely delivery with respect to these vehicles to 532 days total. Also on appeal, the Government concedes 516 of these days. The Government avers that the delay period should be computed from 2 October, while appellant counts 1 October as the first compensable day of delivery delay. The differing start dates account for the difference between the totals.

The third element of the claim was for $7,025 for one vehicle, identified as no. 8078, which was not returned to appellant by 15 November 1991 and was not included in the joint inspection of the other vehicles held in Panama. The vehicle was withheld because it was being repaired. Appellant has established the amount claimed as the fair market value of the vehicle.

The record contains conflicting statements in sworn affidavits from Mr. Chadwick, appellant's on-site administrator, and Mr. Tom Benero, the Government's contract administrator. Mr. Chadwick swears that on or about 1 November 1991, Mr. Benero told him the Government would purchase any vehicles not returned by 15 November 1991. Mr. Benero swears that he made no such statement. In the absence of

*The two remaining vehicles of the 60 leased under the contract were one used by the commander, which was undamaged and not the subject of the claim, and another, vehicle 8078, which is the subject of a seperate claim, discussed *infra*.

Digitized by Google

corroborating evidence, we cannot find that such a committment was made.

The contracting officer's final decision determined that recovery was limited to rental value from 1 October 1991 to the time the vehicle was actually shipped on 3 February 1992, or for 126 days, for a total of $2,797.20 (at the daily rate of $22.20). Since the vehicle was not included in the return shipment to the mainland of the other vehicles in mid November 1991, the Government agreed to ship the vehicle at its own expense. On appeal the Government established that the vehicle was actually available for pickup at a military installation in Panama on 12 November 1991, and that appellant's on-site representative was so advised on that date by Mr. Emilio R. Cooper, chief of the transportation motor pool (R4, tab 77, 102, 107).

On 16 June 1992 appellant submitted a second certified claim regarding this vehicle, increasing the amount claimed to $10,287.40. Attached was an estimate for repairs showing repair costs of $9,533.08. Appellant has produced the estimate for the record, and we have been given no reason to doubt its validity (R4, tab 96). We find that the vehicle could not reasonably be considered salable or usable without extensive repairs. Since the cost of repair exceeded the fair market value, appellant now claimed $6,025 for the vehicle (fair market value minus $1,000 salvage offered by the estimator). In addition, appellant claimed $4,262.40 in rental fees for a 192 day delay in delivery. Appellant measured the delay period from 1 October through 9 April 1992, the date it received shipment of the vehicle. The Government denied this revised claim by affirming its earlier decision. The resulting appeal was docketed as ASBCA No. 45222.

DECISION

Repair costs for deficiencies exceeding fair wear and tear

We find untenable the Government's contention that Mr. Pui's original estimate with respect to 52 vehicles made during the joint inspection and accepted by appellant included fair wear and tear. While the Form DA 2404s listed all deficiencies, many were not priced on the joint inspection reports, indicating that a distinction was made between what was recoverable and what was not. Moreover, there was no reason for Mr. Pui, an experienced estimator, to include in his cost estimate items that were not recoverable. We conclude that the Government was bound by what it obviously agreed to as compensable repair costs during the joint inspection and the resulting estimate. The Government's attempt to change its position as to what was compensable through a review of the inspection reports made several months after the joint inspection, when the vehicles were no longer present, is unconvincing. We hold that appellant is entitled to recover the amount established in the Government estimate for the 52 vehicles, $99,911.43.

We have found that appellant has failed to establish entitlement to the full amount claimed for six vehicles not included in Mr. Pui's estimate, and that the amount of recovery due appellant for these vehicles is $13,982.12.

The total recovery due appellant for 58 vehicles is $113,893.55.

Rental Cost for Delay in Return of Vehicles

The dispute with respect to this claim is whether, in light of the 30 September 1991 contract expiration date, rent to appellant for delays should begin on 1 October or, as the Government contends, 2 October 1991. The Government's position is inconsistent with both the statement of the contract administrator in an internal memorandum that all vehicles were to be returned by 30 September 1991 and with the calculation of the 126 day delay in return of vehicle 8078 by the contracting officer in the final decision, which delay period included 1 October. The Government has offered no sound reason or legal support for eliminating the first day of delay from the calculation. Accordingly, appellant is entitled to recover for 532 days of delay at the agreed upon daily rate of $22.20, or $11,810.40 for this claim.

Vehicle 8078

The dispute relating to the proper calculation of the delay in return of the vehicle is not material to our determination of recovery since the evidence shows that the vehicle was not salable or usable without repairs exceeding its fair market value. Accordingly, appellant's claim for rent for delivery delay is denied. We conclude that in these circumstances the proper recovery is limited to fair market value, minus salvage value, or $6,025.

Summary

The appeals are sustained to the extent that appellant is entitled to the following recovery; plus interest pursuant to 41 U.S.C. § 611:

Claim 2	11,810.40		
Claim 3	6,025.00		

[¶ 26,582] **KAL M.E.I. Manufacturing & Trade Ltd.**

ASBCA Nos. 44367, 45531, 45532, November 30, 1993. Contract No. DLA700-87-C-1480.

Risk Allocation—Risk of Loss—Delivery Failure.—The government was entitled to recover the full purchase price it paid for cover assemblies, even though they were determined to have only scrap value after the covers were accepted, paid for, and lost in transit, because under the Responsibility for Supplies clause the contractor bore the risk of loss until the assemblies reached their destination. The government complied with the Uniform Commercial Code by giving the contractor reasonable notice that the lost shipment had not been received. Under the UCC, after giving reasonable notice, a buyer is entitled to recover the purchase price. The board would not accept the contractor's argument that the Termination for Convenience clause was dispositive. The appeals before the board did not relate to the contractor's termination for convenience settlement proposal.

For the appellant: Shiboleth, Yisraeli, Roberts, Yerushalmi & Zisman, Tel Aviv, Israel, by Asher Goshen. For the government: Stephanie Zimmt-Mack, Assistant Counsel, Defense Logistics Agency, Europe (DLA).

Before YOUNGER, LANE, LUSSIER, RUBERRY, and SPECTOR, Administrative Judges. Separate opinion concurring in part and dissenting in part by Administrative Judge LANE.

YOUNGER, Administrative Judge: In these consolidated appeals under a supply contract, the issues relate to the measure of damages for items shipped by the contractor but lost in transit. The contract provided that completed items would be accepted at origin, shipped f.o.b. destination, and could be paid for upon proof of acceptance and of delivery to a common carrier. After the shipment in dispute was accepted, paid for and lost in transit, it was determined to have only scrap value. The parties join issue over whether respondent is entitled to this amount or to the full purchase price that it paid. The parties have elected to submit the appeals under Rule 11. Both entitlement and quantum are before us. We dismiss one appeal and deny the other two.

FINDINGS OF FACT

A. *The Contract*

1. On 6 January 1987, respondent awarded appellant, located in Israel, contract no. DLA700-87-C-1480 for the supply of 1,655 cover assemblies, which amount was thereafter increased by the exercise of an option. The contract contained various standard clauses, including: "Payments (APR 1984);" "Responsibility for Supplies (APR 1984);" "F.O.B. Destination (APR 1984);" "F.O.B. Destination—Evidence of Shipment (APR 1984);" and "Termination for Convenience of the Government (Fixed-Price) (APR 1984);" all in the form prescribed in FAR 52.232-1, 52.246-16, 52.247-34, 52.247-48, and 52.249-2, respectively. Aside from the standard FAR clauses, the contract contained other clauses, including clause E03, "Acceptance at Origin (MAR 1972)-DCSC," which required compliance with the "F.O.B. Destination" clause "in order that payment may be made prior to receipt of the supplies at destination."

2. It is uncontested that the contract provided for inspection and acceptance of the cover assemblies at origin in Israel. It further provided for shipment f.o.b. destination to various joints in the United States, with title passing to respondent upon acceptance and appellant bearing the risk of loss or damage until delivery of the assemblies at destination. It is also uncontested that appellant was entitled to invoice and be paid for assemblies accepted at origin, before they were received at destination, provided the invoice was supported by a copy of the signed commercial bill of lading indicating the common carrier's receipt of the supplies for transportation to the required destination.

B. *Contract Performance*

1. *The Lost Shipment*

3. The shipment in issue consisted of 335 cover assemblies destined for Mechanicsburg, PA. On 31 May 1988, respondent's quality assurance representative executed the form DD 250 for these 335 assemblies, indicating inspection and acceptance at origin. That same day, appellant sent an invoice to the Army payment office in Germany for the $42,605.30 contract price for the 335 assemblies, with the form DD 250 enclosed. Appellant did not provide the required evidence of shipment or any evidence of receipt at destination. On or about 5 July 1988, the Army payment office paid appellant the amount of the invoice.

4. Appellant shipped the 335 assemblies from its facility on 13 June 1988 by common carrier, with appropriate arrangements for transportation to the destination in Mechanicsburg, PA specified in the contract. We find that appellant shipped the assemblies in accordance with general practice on such f.o.b. destination contracts. In the words of respondent's transportation officer, such a contractor "generally employs two or three agents to ensure delivery: a shipping agent in the country of origin, the shipping line, and a shipping agent in the United States."

5. The shipment reached the Port of New York by vessel, was devanned approximately 10 July 1988, and cannot be accounted for after that. On this record, we find that respondent never received the shipment at Mechanicsburg, PA, or anywhere else. We further find that the shipment was lost in transit and that neither party was guilty of fault or negligence contributing to the loss itself.

2 *Notice of Loss to Appellant*

6. We find that respondent notified appellant within a reasonable time after discovering the loss. Accepting the affidavit of the administrative contracting officer, we find that "KAL had been notified several times that the Government's records did not reflect receipt of all deliveries KAL had notified us it had made." We find that respondent first notified appellant by telex dated 13 October 1988 from the procuring contracting officer to the administrative contracting officer that recited what shipments under the contract were then known to have been received. This telex did not mention that any shipment had been received at Mechanicsburg, PA, stating only that "THREE SHIPMENTS HAVE BEEN RECEIVED FROM THE CONTRACTOR AS OF THIS DATE: DEFENSE DEPOT TRACY [California] RECEIVED TWO SHIPMENTS TOTALLING 310 EACH AND DEFENSE DEPOT MEMPHIS [Tennessee] RECEIVED ONE SHIPMENT OF 445 EACH." The administrative contracting officer had this telex furnished to appellant.

7. Thereafter, on several occasions between November 1988 and April 1989, respondent sought information from appellant regarding the whereabouts of the Mechanicsburg, PA shipment that had never arrived at destination. The record includes

- a 16 November 1988 letter from the procuring contracting officer to appellant's project manager asking for "[c]opies of DD250s indicating Depot receipt" for the lost shipment, as well as another shipment;
- a 2 February 1989 letter from the procuring contracting officer to appellant's president, confirming a 24 January meeting with him, listing quantities received which appellant had to know did not include the Mechanicsburg shipment, and asking for proof of delivery of any other quantities shipped;
- appellant's responses dated 22 November 1988 and 21 February 1989 to these communications furnishing evidence of shipment to Mechanicsburg but no evidence of delivery to Mechanicsburg;
- credible hearsay evidence that as late as the end of April 1989 appellant itself was making efforts to trace the Mechanicsburg shipment.

Given all of the foregoing evidence, we find not credible assertions by appellant's general manager that appellant "understood that [the procuring contracting officer] wished to see the DD250s in order to compare [appellant's] records of what it had shipped with the Government's records of what it had received in order to identify the source of any discrepancy;" and that when appellant received no further inquiries about the shipments, it "understood that the DD250s had enabled [the procuring contracting officer] to account for all the shipments."

8. In November 1989 appellant submitted a claim to its marine insurer for the price of the lost shipment, but the insurer refused to pay, primarily because the claim was more than one year after the anticipated arrival date of the shipment. It appears that appellant is pursuing a civil action in the Israeli courts against its marine insurer, as well as its shipping agent in Israel.

Digitized by Google

3. *Termination for Convenience*

9. In the fall of 1988 respondent discovered that the cover assemblies were useless because the Government-furnished drawings had called for alignment of the holes in each assembly in such a way that it did not match the placement of the bolts in the mating part. Respondent concluded that reworking was not feasible. In September 1988 respondent issued a "Stop-Shipment Order." In October 1988 respondent issued a Stop Work order. In April 1989 respondent terminated the contract for convenience.

4. *Disposal of Delivered and Unshipped Assemblies as Scrap*

10. It is undisputed that the cover assemblies that were delivered to respondent, as well as those in appellant's possession that had not been shipped, were transferred in or about the fall of 1989 to the Defense Reutilization and Marketing Service for disposal. It appears that they were thereafter sold as scrap metal, but there is no evidence of what price respondent may have received.

11. We find that the scrap value of the lost shipment was $400, based upon the parties' estimates. We further find that the assemblies were worthless to respondent except as scrap, based upon respondent's disposition and the absence of any evidence that they had any other value to anyone else.

C. *Termination Settlement Proposal; Unilateral Determination*

12. On 24 May 1989 appellant submitted a final termination settlement proposal seeking $350,080.89 as "Net Payment Requested."

13. In October 1989, the parties entered into negotiations. At that time the administrative contracting officer told appellant that the lost shipment still had not been received and, for the first time, advised that if the shipment was not located the contract price for those items, which had already been paid, would be deducted from payment of the termination settlement amount. Appellant objected, asserting that it had not been told the shipment was missing.

14. By letter dated 13 December 1989 the administrative contracting officer told appellant that the 335 cover assemblies in the lost shipment had still not been received, and that "the Government will deduct the total amount of $42,605.30 (representing the total value of the missing units) from the final settlement costs under subject contract."

15. We find that the parties could not agree on appellant's proposed termination settlement amount. Accordingly, on 20 December 1989, the contracting officer issued a decision (not one giving rise to any of the three present appeals) determining that appellant was due $209,105.27, thereby effectively disallowing $140,975.62 of the $350,080.89 that appellant had requested in its termination settlement proposal. (*See* finding 12) It is undisputed that the amount allowed included compensation at the full contract unit price for all 497 completed but not yet accepted cover assemblies in appellant's possession for which payment had not yet been made. Appellant had previously been paid the full contract unit price for the 1130 cover assemblies shipped and for 310 completed and accepted cover assemblies not shipped because of the Stop-Shipment Order. The 20 December 1989 decision said nothing about a setoff against the termination settlement amount or any other means of recovering from appellant for the price of the lost shipment.

D. *Government Claim for Lost Shipment*

16. On 26 December 1989, the administrative contracting officer issued unilateral contract modification A00002, implementing the 20 December 1989 decision. (*See* finding 15) The modification provided for payment of the $209,105.27 that previously had been determined to be due appellant as a termination settlement. The modification also deducted $42,605.30, representing the contract price for the 335 items in the lost shipment. It stated:

> 1. The purpose of this modification is to release payment in accordance with FAR 52.249-2 entitled Termination for Convenience and in accordance with Contracting Officer's Final Decision dated 20 December 1989, attached hereto and made part hereof.
>
> 2. From the total amount of $209,105.27 determined by the Contracting Officer to be a fair and reasonable settlement cost, the amount of $42,605.30 shall be deducted for the missing 175 ea units under clin 0001 and 160 ea under clin 0004 (DD 250, KAL 0003) and paid for by the Government.

The modification did not characterize the setoff as a Government claim, was not identified as a contracting officer's decision, and did not advise appellant of its appeal rights. The contracting officer also had not issued any separate decision asserting a Government claim for the lost shipment.

E. *Appeal of Termination Settlement; New Claims; Additional Appeals*

17. By letter dated 12 March 1990, appellant timely appealed from the 20 December 1989 decision unilaterally determining the termination settlement amount. (*See* finding 15) We docketed that appeal as ASBCA No. 40596. We thereafter dismissed ASBCA No. 40596 for lack of proper certification.

18. By letter dated 13 January 1992, appellant submitted a certified claim to the contracting officer dated 10 January 1992 for $176,650.69. This claim was said to represent "the unpaid balance of the amount to which Kal believes it is entitled in connection with termination of the above-captioned contract for the convenience of the Government." This claim did not include any amounts withheld for the lost shipment. The contracting officer has not issued a decision on the claim. The parties have advised the Board that they are in settlement discussions on the claim and do not wish to bring it before the Board at this time through either a contracting officer's decision or an appeal from a deemed denial.

19. With its 13 January 1992 letter, appellant included a second, uncertified, claim dated 10 January 1992 for the $42,605.30 withheld pursuant to modification A00002 as the price of the lost shipment. (*See* finding 16) Appellant states that it separated this claim from its $176,650.69 claim (*see* finding 18) to obtain Rule 12.3 disposition from the Board. In any event, the contracting officer did not issue a decision on the claim. By letter dated 6 April 1992, appellant filed a notice of appeal invoking our deemed denial jurisdiction under 41 U.S.C. § 605(c)(5). We docketed that appeal as ASBCA No. 44367. Appellant initially elected Rule 12.3 disposition, but subsequently withdrew its election.

20. By letter dated 27 April 1992, appellant responded to an 8 April 1992 letter from the administrative contracting officer suggesting that appellant's claim should be certified. With its letter appellant resubmitted to the contracting officer its claim for $42,605.30, including a request for a decision within 60 days, together with a certification and a reservation of its position that its claim as previously submitted without a certification was proper.

21. On 11 January 1993, appellant filed another notice of appeal. By this notice, appellant challenged modification A00002 (*see* finding 16), which it treated as a contracting officer's decision asserting a Government claim for an offset of $42,605.30. We docketed that appeal as ASBCA No. 45531.

22. The contracting officer did not issue a decision on appellant's 27 April 1992 resubmitted, certified claim for $42,605.30. (*See* finding 20) On 11 January 1993, appellant filed a notice of appeal, invoking our deemed denial jurisdiction under 41 U.S.C. § 605(c)(5), regarding that claim. We docketed that appeal as ASBCA No. 45532. Thereafter, we consolidated ASBCA No. 45532 with ASBCA Nos. 44367 (*see* finding 19) and 45531 (*see* finding 21).

DECISION

A. *Jurisdiction*

Respondent has moved to dismiss ASBCA No. 44367 on jurisdictional grounds. In its motion, respondent contends that we lack jurisdiction because the $42,605.30 lost shipment claim at issue in ASBCA No. 44367 (*see* finding 19) is inextricably linked to appellant's larger termination for convenience claim (*see* finding 18), and constitutes a single, unitary claim that must be certified under 41 U.S.C. § 605(c)(1). *See W.M. Schlosser Co. v. United States* [30 CCF ¶ 70,985], 705 F.2d 1336, 1337-39 (Fed. Cir. 1983).

Regardless of the merits of this argument, we dismiss ASBCA No. 44367 as moot on our own motion. We do so for two reasons. First, appellant has certified the claim before us in ASBCA No. 45532 (finding 22), thereby curing any certification problem that may have hovered over ASBCA No. 44367. Second, the merits of ASBCA No. 44367 are in any event before us in both ASBCA Nos. 45531 and 45532. Both of these latter appeals are mirror images of each other. Like ASBCA No. 44367, they relate to the $42,605.30 that respondent withheld under modification A00002 to recover the contract price of the lost shipment. (*See* findings 16, 19, 21, 22)

We plainly have jurisdiction over ASBCA No. 45531. Appellant there challenges respondent's setoff under modification A00002 of the $42,605.30 contract price of the lost shipment. (Finding 21) We have jurisdiction over this appeal for three reasons. First, respondent's withholding constituted "a final decision on a government claim" that was appealable. *Placeway Construction Corp. v. United States*, 920 F.2d 903, 907 (Fed. Cir. 1990); *Marlowe Heating & Air Conditioning*, ASBCA No. 39588, 90-2 BCA ¶ 22,753 at 114,214. Second, "certification is not required for government claims." *Placeway*

Digitized by Google

Construction, supra, 920 F.2d at 906; *Triasco Corp.*, ASBCA No. 42465, 91-2 BCA ¶ 23,969 at 119,977. Third, while the modification was issued in December 1989 and not appealed until January 1993 (findings 16, 21), there is no timeliness issue. As we have found, the modification was not designated as a contracting officer's decision and contained no advice of rights. (Finding 16) Hence, it "did not start the running of the 90-day filing period [in 41 U.S.C. § 606,] so that we may take jurisdiction." *Marlowe Heating, supra*, 90-2 BCA at 114,214.

We also have jurisdiction over ASBCA No. 45532, which is the contractor's resubmitted, certified claim for the $42,605.30 withheld. (Finding 22) No contracting officer's decision having been rendered on the claim (*id.*), appellant properly invoked our deemed denial jurisdiction under 41 U.S.C. § 605(c)(5). *E.g., Do-Well Machine Shop, Inc. v. United States* [35 CCF ¶ 75,633], 870 F.2d 637, 640 (Fed. Cir. 1989). As indicated, appellant cured any certification defects that may have existed in its original claim with the submission of this claim.

Accordingly, ASBCA No. 44367 is dismissed as moot. Respondent's motion to dismiss ASBCA No. 44367 is denied as moot.

B. *Merits*

The parties join issue regarding the measure of appellant's risk of loss for the lost shipment. While it is undisputed that appellant bore the risk of loss, appellant contends that the Termination for Convenience clause (*see* finding 1) specifies the proper measure of its risk. That measure, appellant says, is the contract price of the lost shipment, less its agreed scrap value. Deduction of the scrap value here ($400) from the contract price (42,605.30) would yield a recovery for appellant of $42,205.30. (*See* findings 11, 14) In the alternative, appellant asserts that it should be absolved from all liability because respondent knew of the nonreceipt of the lost shipment and failed to notify appellant, thereby preventing appellant from making a timely claim under its marine insurance policy. (*But see* finding 8) For its part, respondent argues that the Termination for Convenience clause is inapplicable, and that appellant is liable for the full contract price for failure to fulfill its delivery obligation under the contract. In the alternative, respondent contends that appellant is entitled to the contract price, less the cost of production.

We conclude that, in the present posture of these appeals, the proper measure of the risk of loss is the price that respondent paid for the lost shipment. We reach this conclusion for four principal reasons.

First, appellant plainly bore the risk of loss until the assemblies reached their destination. The Responsibility for Supplies clause (*see* finding 1) provides, in pertinent part:

> Unless the contract specifically provides otherwise, risk of loss or damage to supplies shall remain with the Contractor until, and shall pass to the Government upon—
>
> * * *
>
> Acceptance by the Government or delivery of the supplies to the Government at the destination specified in the contract, whichever is later, if transportation is f.o.b. destination.

FAR 52.246-16. The contract did not provide "otherwise." That is, it contained no provisions that allocated risk of loss in any manner other than in the Responsibility for Supplies clause. In addition, transportation here was f.o.b. destination. (Finding 2) Accordingly, under the clause, the risk of loss remained with appellant until "delivery of the supplies to the Government at the destination specified in the contract," *i.e.*, Mechanicsburg, PA. For its part, the F.O.B. Destination clause (*see* finding 1) provided in part that "[t]he Contractor shall ... [b]e responsible for any loss of and/or damage to the goods occurring before receipt of the shipment by the consignee at the delivery point specified in the contract." FAR 52.247-34.

Second, in applying the risk of loss provisions in the contract, we look to the Uniform Commercial Code. While the contract allocated the risk of loss, it did not specify the remedy in the event of a loss. *But cf. R&L Diesel Service, Inc.*, ASBCA No. 22542, 78-1 BCA ¶ 13,177 at 64,443 (holding that under Fast Payment Procedure clause, contractor assumed "risk of loss for supplies ... not received at destination" and hence was "not entitled to retain the payment received" where goods did not arrive). It is familiar that "[t]he Uniform Commercial Code is applicable to the field of public contracts." *John C. Kohler Co. v. United States* [20 CCF ¶ 83,156], 498 F.2d 1360, 1367 n. 6 (Ct. Cl. 1974)

We looked to the Code in resolving a similar dispute in *Electro Optics, Inc.*, ASBCA No. 22017, 78-1 BCA ¶ 12,996, *aff'd on reconsideration*, 78-2 BCA ¶ 13,251. There, the Government accepted, and paid for,

©1994, Commerce Clearing House, Inc.

Digitized by Google

items that were subsequently lost in transit. The contract contained the Title and Risk of Loss clause prescribed in ASPR 7-103.6, which was the forerunner of the Responsibility for Supplies clause. We held that, before the contractor became obligated to replace lost items, or to "return the payment therefor," the Government had to demonstrate compliance with U.C.C. § 2-608 by "notify[ing] appellant of the non-receipt of those items within a reasonable time." *Electro Optics, supra*, 78-1 BCA at 63,392. Here, by contrast, we have already found that respondent gave appellant reasonable notice that it had not received the lost shipment. (Finding 6; *see also* finding 7) We also cannot conclude that appellant suffered prejudice, as the contractor did in *Electro Optics*. (*See* findings 7, 8)

Having given reasonable notice, respondent is entitled to recover the purchase price. We so recognized in *Electro Optics, supra*. U.C.C. § 2-711 recognizes such a remedy as well. In cataloging a buyer's remedies for breach, U.C.C. § 2-711 provides that "[w]here the seller fails to make delivery," then, among other remedies, "the buyer may cancel and whether or nor he has done so may *in addition to recovering so much of the price as has been paid*," recover damages. (Emphasis added) *See* 3 A. Squillante & J. Fonseca, Williston on Sales § 25-17 (4th ed. 1974) (interpreting U.C.C. § 2-711 to make buyer "unequivocally entitled to so much of the purchase price as he has paid over to the seller" where, *inter alia*, "the seller has failed to make the required delivery"). Recovery of the purchase price is distinct from recovery of damages. *E.g., Frontier Mobile Home Sales, Inc. v. Trigleth*, 505 S.W.2d 516, 518 (Ark. 1974) (holding, in breach of warranty action, that lower court properly allowed recovery of purchase price under U.C.C. § 2-711, rather than damages for breach); *see also* J. White & R. Summers, Uniform Commercial Code § 6-7, at 241 n. 130 (2nd ed. 1980) (noting that U.C.C. § 2-711 "allows a buyer to recover 'so much of the price as has been paid' whether or not he recovers other damages.").

Third, we cannot accept appellant's argument that the Termination for Convenience clause is dispositive. We do not have a termination for convenience claim before us. The three appeals that are before us do not relate to appellant's termination for convenience settlement proposal. Rather, they relate to appellant's certified and uncertified claims regarding modification A00002 (ASBCA Nos. 44367 and 45532) and appellant's challenge to the Government claim asserted in that modification (ASBCA No. 45531). (Findings 19, 21, 22) The only appeal that related to appellant's termination settlement proposal was ASBCA No. 40596, which we dismissed because the proposal had not been certified in accordance with the Contract Disputes Act, 41 U.S.C. § 605(c)(1). *KAL M.E.I. Manufacturing & Trade, Ltd.*, ASBCA No. 40596, 92-1 BCA ¶ 24,713. (*See also* finding 17) Appellant's pending termination for convenience claim has not been appealed. (Finding 18)

Fourth, unlike the dissent, we cannot construe the contract to equate delivery to the common carrier with delivery to respondent. Assuming that the payments under the contract may be characterized as advance payments, we cannot presume that respondent included clause E03 (*see* finding 1) in contravention of 10 U.S.C. § 2307(c), which authorizes advance payments. *See, e.g., Parsons v. United States*, 670 F.2d 164, 166 (Ct. Cl. 1982) (public official presumed to act "in accordance with the law and governing regulations"). Given the exclusions in FAR 32.404, we do not regard it as conclusive that the contract evidently did not include the Advance Payments clause in the form prescribed in FAR 52.232-12. In addition, we cannot harmonize the dissent's equation with the FAR. FAR 47.001 defines "f.o.b. destination" to mean that "the seller or consignor delivers the goods on seller's or consignor's conveyance at destination." We see no basis for treating the "seller's or consignor's conveyance" as the buyer's—respondent's—agent. Particularly is this so in view of the record before us, which speaks of a practice in which contractors "employ two or three agents to ensure delivery." (Finding 4)

Accordingly, respondent is entitled to recover the price that it paid for the lost shipment.

CONCLUSION

The appeal in ASBCA No. 44367 is dismissed as moot. Respondent's motion to dismiss ASBCA No. 44367 is denied as moot. The appeals in ASBCA Nos. 45531 and 45532 are denied.

OPINION BY ADMINISTRATIVE JUDGE LANE CONCURRING IN PART AND DISSENTING IN PART

I agree with the majority's holding that we have jurisdiction.[1] I also agree that the Government gave appellant timely notice of nonreceipt of the lost shipment.[2] Otherwise I dissent from the majority's decision on the merits.

[1] [Introduction to Dissenting Opinion] I would not, however, dismiss ASBCA No. 44367 as moot, because the claim which was appealed under that docket number establishes the starting date for interest on the recovery I would give appellant. See section IV of Discussion in this opinion.

I also observe that the jurisdictional nature of certification has been abolished by statute for defectively certified claims appealed on or after 29 October 1992 (though a failure to certify may not qualify as a "defective" certification—see note 16 *infra*). Sec. 907(a)(1)-(2) of Federal Courts Administration Act of 1992, Pub. L. No. 102-572, enacted 29 October 1992, adding a new subsection 6(c)(6) to the Contract Disputes Act of 1978, 41 U.S.C. § 605(c)(6). That amendment does not apply to ASBCA No. 44367, the original appeal here, which was filed on 6 April 1992.

[2] [Introduction to Dissenting Opinion] As to notice, I would also observe—though it is not necessary to the decision in this case since notice was timely given—that at least with respect to an overseas shipment, in light of the apparent frequency of losses or misdeliveries in transit, it would seem prudent for a contractor, on its own initiative and even absent notice of nonreceipt, to follow up to assure actual delivery of shipments to destination and to start a timely trace of shipments that have not arrived so that a timely insurance claim can be filed if necessary.

CONCLUSION 42
NOTES FOR DISSENTING OPINION 43

SUMMARY OF THE CASE AND BASES FOR DISSENT

These consolidated appeals involve interpretation of the risk of loss provisions of appellant's supply contract and of the Uniform Commercial Code—specifically, whether appellant's admitted risk of loss of items which were accepted at origin, shipped f.o.b. destination by common carrier, paid for, and then lost in transit and so not physically delivered to the Government, is to be measured by the contract price for the items ($42,605.30) or by their value to the Government (which in this case was their $400.00 scrap value because an error in the Government-furnished manufacturing drawings made the items useless.) No termination for default for nondelivery of the lost shipment was issued, and the Government never purported to revoke acceptance of the lost shipment (and in my view neither of those remedies was available to the Government in any event).

The contract expressly provided for payment for accepted items upon delivery to a common carrier for shipment f.o.b. destination. Therefore the Government can recover money back on account of a loss in transit only to the extent appellant is liable under the contract (as amplified by consistent provisions of the Uniform Commercial Code) or by way of breach damages.

The Responsibility for Supplies clause and F.O.B. Destination clause expressly make the contractor responsible for the loss (hence there is no issue as to whether a common carrier transporting end items is a "subcontractor" whose fault is imputed to the contractor[3]), but do not specify how its risk of loss is to be measured. The Termination for Convenience clause (pertinent because the contract was later terminated for convenience) prescribes "fair value" as the measure of the credit due the Government, against the price otherwise payable, for "property that is destroyed, lost, stolen, or damaged so as to become undeliverable to the Government." The Uniform Commercial Code has two different provisions covering a seller's breach, including nondelivery: one (§ 2-714) applicable to accepted goods and providing for damages "determined in any manner which is reasonable"; the other (§ 2-711) providing for recovery of the price paid, but not, in my view, applicable to accepted goods (absent revocation of acceptance).

I have concluded that appellant's responsibility for the lost items should be measured by the value of the items, not the contract price as the majority holds. For reasons explained in this opinion, I would hold:

(1) Applicability of the "fair value" measure in paragraph (g) of the Termination for Convenience clause is an issue ripe for consideration now, even without a termination for convenience claim before us, because the issue is "fair value" as the proper measure of the Government's claim and of appellant's defense to that claim, and in a way involves an affirmative contractor termination claim.

(The majority holds erroneously that we may not consider this question unless and until appellant brings a termination claim before us.)

(2) The "fair value" measure in the Termination for Convenience clause is applicable to the lost shipment here even though it was accepted, shipped, and lost before the termination. "Fair value" is the express and proper measure of the Government's claim and appellant's liability, overriding any UCC provision to the contrary.

(The majority does not reach this question for the reason stated in (1) above.)

(3) If the Termination for Convenience clause does not apply and the UCC therefore does apply (since there is no express measure of appellant's risk of loss in the Responsibil-

[3] [Summary of the Case and Bases for Dissent, in Dissenting Opinion] *See Hogan Mechanical, Inc.*, ASBCA No. 21612, 78-1 BCA ¶ 13,164, at 64,332-35 (& authorities cited).

Digitized by Google

ity for Supplies or F.O.B. Destination clause), UCC § 2-714 (prescribing damages for breach in regard to accepted goods), not § 2-711 (allowing recovery of the price in case of nondelivery), is the applicable provision, because (a) § 2-711 does not apply to nondelivery of *accepted* goods, and (b) even if it did, appellant's delivery of the accepted items to the common carrier (transportation to destination prepaid) had to constitute legal "delivery" to the Government because the contract provided for payment upon such delivery to the common carrier and absent "delivery" to the Government such payment would have violated the statutory prohibition against advance payments.

(The majority refuses to address the complementary nature of UCC §§ 2-711 and 2-714 and the Official Comments thereto which plainly make § 2-711 inapplicable to accepted goods. Furthermore, the majority's finding of nondelivery under UCC § 2-711 disregards over one hundred years of consistent administrative rulings applying the 170-year-old advance payment prohibition; is contrary to the legal position, adopted at the secretarial level of the Defense Department in 1965, that delivery to the carrier constitutes legal "delivery" to the Government; and in one fell swoop renders illegal twenty-eight years of defense contracts entered into in accordance with that legal position under ASPR, DAR, and FAR provisions authorizing payment upon delivery to a carrier under an f.o.b. destination contract—both Fast Payment Procedure small purchases and larger dollar contracts.)

(4) The proper measure of damages under UCC § 2-714 is the value of the lost items, *i.e.*, the $400.00 scrap value in this case.

(The majority does not reach this question because it considers § 2-711 applicable instead.)

I therefore dissent from the majority's conclusion that appellant's risk of loss is to be measured by the contract price of the lost shipment. Appellant should be found liable for the value (*i.e.*, the $400 scrap value) of the lost shipment, and entitled to recover the $42,605.30 contract price the Government paid for the items and then recouped by offset, less the $400.00.

I would also hold that the Contract Disputes Act interest on appellant's recovery starts on the date the contracting officer received appellant's original uncertified lost shipment claim, not the later date of receipt of the resubmitted certified claim, because appellant's claim was an independent claim under $50,000 and was not essentially part of and improperly split off from a larger uncertified unitary termination claim which was over $50,000 and therefore should have been certified. (The majority does not address this interest issue because it denies the appeal.)

FINDINGS OF FACT

I concur in the majority's findings of fact, but I would make the following additional findings.

I. *The Contract*

1. The following contract provisions, in addition to several of those included in the majority's finding No. 1, established appellant's uncontested right to invoice (with proper supporting documentation) and be paid for supplies accepted at origin and shipped by common carrier, before they were received at destination (see majority finding No. 2): (i) Invoices (OCT 1982) (DOD FAR Supplement 52.232-7000); and (ii) Material Inspection and Receiving Report (DEC 1969) (DOD FAR Supplement 52.246-7000), and DOD FAR Supplement Appendix I incorporated therein (particularly paragraph I-306).

2. I include herewith in a footnote the full text of the following clauses for ready reference because of their importance to this case: (i) Payments (APR 1984); (ii) F.O.B. Destination—Evidence of Shipment (APR 1984); (iii) Responsibility for Supplies (APR 1984); and (iv) F.O.B. Destination (APR 1984).[4]

[4] [Section I of Findings of Fact, Finding 2, in Dissenting Opinion] (a) The standard clause Payments (APR 1984) in the contract stated:

PAYMENTS (APR 1984)

The Government shall pay the Contractor, upon the submission of proper invoices or vouchers, the prices stipulated in this contract for supplies delivered and accepted or services rendered and accepted, less any deductions provided in this contract. Unless otherwise specified in this contract, payment shall be made on partial deliveries accepted by the Government if—

(a) The amount due on the deliveries warrants it; or

(b) The Contractor requests it and the amount due on the deliveries is at least $1,000 or 50 percent of the total contract price.
(R4, tab 1, clause 101(I)(a), FAR 52.232-1)

II. *Contract Performance*

A. *Invoicing Generally*

3. There was a technical noncompliance by appellant with the invoicing requirements, because appellant's invoices were apparently not accompanied by signed commercial bills of lading, and the Government paid the invoices anyway. However, appellant did in

(Footnote Continued)

(b) The contract included the standard clause F.O.B. Destination—Evidence of Shipment (APR 1984), prescribed as applicable when, as in this case, the supplies are purchased f.o.b. destination and inspection and acceptance are performed at origin. It stated:

F.O.B. DESTINATION—EVIDENCE OF SHIPMENT (APR 1984)

If this contract is awarded on an f.o.b. destination basis and if transportation is accomplished by—

(a) Common carrier, the Contractor agrees to furnish in support of the Contractor's invoice, a copy of the signed commercial bill of lading indicating the carrier's receipt of the supplies covered by the invoice for transportation to the destination specified in the contract;

(b) Parcel post, the Contractor agrees to furnish a certificate of mailing with the Contractor's invoice; and

(c) Other than common carrier or parcel post, the Contractor agrees to attach to the Contractor's invoice a receipted copy of the appropriate delivery document showing receipt at the destination specified in the contract.
(R4, tab 1, clause F03(a), FAR 52.247-48)

(c) The standard clause Responsibility for Supplies (APR 1984) in the contract stated:

RESPONSIBILITY FOR SUPPLIES (APR 1984)

(a) Title to supplies furnished under this contract shall pass to the Government upon formal acceptance, regardless of when or where the Government takes physical possession, unless the contract specifically provides for earlier passage of title.

(b) Unless the contract specifically provides otherwise, risk of loss of or damage to supplies shall remain with the Contractor until, and shall pass to the Government upon—

(1) Delivery of the supplies to a carrier, if transportation is f.o.b. origin; or

(2) Acceptance by the Government or delivery of the supplies to the Government at the destination specified in the contract, whichever is later, if transportation is f.o.b. destination.

(c) Paragraph (b) above shall not apply to supplies that so fail to conform to contract requirements as to give a right of rejection. The risk of loss of or damage to such nonconforming supplies remains with the Contractor until cure or acceptance. After cure or acceptance, paragraph (b) above shall apply.

(d) Under paragraph (b) above, the Contractor shall not be liable for loss of or damage to supplies caused by the negligence of officers, agents, or employees of the Government acting within the scope of their employment.
(R4, tab 1, clause E08, FAR 52.246-16)

(d) The standard clause F.O.B. Destination (APR 1984) in the contract stated:

F.O.B. DESTINATION (APR 1984)

(a) The term "f.o.b. destination," as used in this clause, means—

(1) Free of expense to the Government, on board the carrier's conveyance, at a specified delivery point where the consignee's facility (plant, warehouse, store, lot, or other location to which shipment can be made) is located; and

(2) Supplies shall be delivered to the destination consignee's wharf (if destination is a port city and supplies are for export), warehouse unloading platform, or receiving dock, at the expense of the Contractor. The Government shall not be liable for any delivery, storage, demurrage, accessorial, or other charges involved before the actual delivery (or "constructive placement" as defined in carrier tariffs) of the supplies to the destination, unless such charges are caused by an act or order of the Government acting in its contractual capacity. If rail carrier is used, supplies shall be delivered to the specified unloading platform of the consignee. If motor carrier (including "piggyback") is used, supplies shall be delivered to truck tailgate at the unloading platform of the consignee. If the Contractor uses rail carrier or freight forwarder for less than carload shipments, the Contractor shall assure that the carrier will furnish tailgate delivery if transfer to truck is required to complete delivery to consignee.

(b) The Contractor shall—

(1)(i) Pack and mark the shipment to comply with contract specifications; or

(ii) In the absence of specifications, prepare the shipment in conformance with carrier requirements;

(2) Prepare and distribute commercial bills of lading;

(3) Deliver the shipment in good order and condition to the point of delivery specified in the contract;

(4) Be responsible for any loss of and/or damage to the goods occurring before receipt of the shipment by the consignee at the delivery point specified in the contract;

(5) Furnish a delivery schedule and designate the mode of delivering carrier; and

(6) Pay and bear all charges to the specified point of delivery.

Digitized by Google

fact make its shipments by common carrier and did subsequently furnish the Government copies of bills of lading covering its shipments.

B. Termination Settlement Proposal; *Unilateral Determination*

4. The October 1989 termination settlement negotiations (see majority finding No. 13) was the first time the Government said anything about a deduction for the price of the lost shipment. Neither at that time nor at any other time before or since has the Government purported to revoke acceptance of the Mechanicsburg shipment on account of the nondelivery.

C. Appeal to Board re Termination Settlement; *New Claims; Additional Appeals*

5. Appellant's 10 January 1992 certified claim for $176,650.69 (see majority finding No. 18) was said to consist of "Financing Costs of $85,558.69, G&A Expenses of $74,342.00, Engineering Costs of $7,750.00 and Settlement Expenses of $9,000.00." (R4, tab 27) Appellant has observed that these costs represented not costs of incomplete work but rather "costs associated with delay," including "engineering costs incurred during said periods of delay in an attempt to identify the source of problems which had arisen and to find solutions to such problems" (13 Jan. 1993 ltr from App. to Board re Memorandum of Telephone Conference Call).

6. (a) The certification with appellant's 27 April 1992 claim resubmission (see majority finding No. 20) stated:

> I, Ze'ev Poran, General Manager of Kal M.E.I. Manufacturing & Trade Ltd., hereby certify as follows: (1) the foregoing claim is made in good faith; (2) the data supporting Kal's claim are accurate and complete to the best of Kal's knowledge and belief; and (3) the amount requested accurately reflects the amount for which Kal believes the Government is liable in connection with the lost shipment under Contract DLA700-87-C-1480.

(b) It is undisputed and I would find that appellant's general manager who certified the claim was a senior company official in charge at appellant's plant or location involved in this contract.

DISCUSSION

I. Fundamental Premise: Appellant's Right To *Be Paid Contract Price Upon Shipment*

The ultimate issue is whether the Government's claim and appellant's admitted liability for loss of items which were accepted at origin, shipped f.o.b. destination by common carrier, paid for, and then lost in transit and so not physically delivered to the Government, are to be measured by the contract price for the items or by their value (which in these unusual circumstances was their scrap value).

The starting premise in approaching this issue must be appellant's entitlement to be paid for the lost shipment in the first instance. It is undisputed by the Government, and I confirm upon analysis of the invoicing and payment provisions of the contract, and the majority apparently agrees, that because the lost shipment was accepted at origin and properly packed, marked, and put into the hands of a common carrier for shipment to the proper destination, all in accordance with the contract, appellant was entitled to be paid for the shipment before its receipt at destination.[5] This was not an illegal advance payment (a matter discussed further in III(B) below).

Thus the Government's payment of the contract price to appellant for the lost items after acceptance and shipment but before physical delivery to destination was not an erroneous payment and cannot be recovered on account of the loss except to the extent appellant is liable for such a loss under the contract or by way of breach damages.[6] In

(Footnote Continued)

(R4, tab 1, clause F03, FAR 52.247-34)

[5] [Section I of Discussion in Dissenting Opinion] Apparent technical noncompliance by appellant with the invoicing requirements, by failure to attach a signed commercial bill of lading to its invoice, was not material so as to render the Government's payment improper. The noncompliance was waived by the Government in paying appellant and was cured by subsequent submission of the bill of lading to the Government who never asserted this as a ground for recovering the payment in issue here.

[6] [Section I of Discussion in Dissenting Opinion] Examples of other post-performance liabilities, besides responsibility for loss or damage after acceptance but before physical delivery to destination under an f.o.b. destination contract, which survive the normal finality of acceptance and may allow the Government to recover all or part of the price paid, are liability under the Inspection clause for latent defects, fraud, or gross mistakes amounting to fraud, and liability for breach of warranty.

Digitized by Google

determining what the contract provides and what breach damages may be recoverable, I agree with the majority that as a general proposition the express terms of the contract may be amplified by reference to the Uniform Commercial Code[7]—*but only* to the extent that the UCC does not conflict with express provisions of the contract.[8]

II. Express Contract Provision Overriding Any Recovery of Price Under UCC: "Fair Value" Risk of Loss Provision (Paragraph (g)) in Termination for Convenience Clause

A. Ripeness of "Fair Value" Provision (Paragraph (g)) of Termination Clause for Consideration in Present Case as Measure of and Defense to Government's Claim

The majority declines to address whether the "fair value" measure of contractor responsibility for lost items, set forth in paragraph (g) of the Termination for Convenience clause, applies here, because "[w]e do not have a termination for convenience claim before us."

That is a total nonsequitur. The ripeness of the issue of applicability of the "fair value" measure in the termination clause has nothing to do with whether there is a termination for convenience claim before us.

The present dispute was generated in the first instance by the contracting officer's assertion of a *Government claim* by his issuance of Modification A00002 withholding the price paid for the lost shipment from amounts otherwise determined due appellant. I agree with the majority (see section A, Jurisdiction, of majority decision) that ASBCA No. 45531 is an appeal from a Government claim. That appeal involves a Government claim in both form and substance. ASBCA No. 45532 is, as the majority says, a "mirror image" of ASBCA No. 45531; while in form it involves a certified claim by appellant for the money withheld, in substance it presents the same Government claim because in it the Government asserts appellant's liability on account of the lost shipment and a Government right to retain withheld funds otherwise concededly due appellant. ASBCA No. 44367 is identical to ASBCA No. 45532 except that appellant's claim was uncertified.

I find utterly without reason or merit the majority's notion that appellant cannot *defend* against a *Government claim* by arguing that the proper quantum measure of the *Government's claim* is set forth in the Termination for Convenience clause, but rather must amend its *own* termination for convenience claim and bring it before the Board in order to make such a defense.

These appeals do not involve a claim by appellant which is being or should be asserted under the Termination for Convenience clause. Appellant was originally paid for the lost shipment under the standard payment provisions of the contract before the termination occurred. To the extent appellant is asking for release of the withheld funds, it is seeking them under those same payment provisions. Nor was the Government's claim asserted under the termination clause; on the contrary, the Government asserts that the "fair value" provision of that clause does *not* apply, since it wants to recover the price, not the much lower "fair value." Appellant is asserting, and I agree, that the *Government's* claim is cognizable under the termination clause. That does not require a termination claim by *appellant.*

The majority's *refusal to consider* whether the "fair value" provision (paragraph (g)) of the Termination for Convenience clause applies unless and until appellant brings a termination for convenience claim before the Board is insupportable and contrary to the wishes of *both*

[7] [Section I of Discussion in Dissenting Opinion] In addition to the case cited by the majority, see *Northern Helex Co. v. United States* [17 CCF ¶81,069], 197 Ct. Cl. 118, 130, 455 F.2d 546, 553 (1972) ("This court has explicitly recognized the authority and relevance of the Uniform Commercial Code in the field of public contracts" (citing authorities)); *but cf. GAF Corp. v. United States* [37 CCR ¶76,091], 932 F.2d 947, 950 (Fed. Cir. 1991) (refusing to read UCC implied warranties of merchantability and fitness into a contract for Government sale of asbestos fiber, on the dubious basis that a warranty implied in law is the same as a contract implied in law which the Claims Court has no jurisdiction to enforce, without citing the foregoing authorities on applicability of the UCC—a result which should not control over the earlier established authorities and which in any event should not bar application of general remedy provisions of the UCC as distinguished from implied contract terms prescribed by the UCC).

[8] [Section I of Discussion in Dissenting Opinion] The UCC does not supersede express contract language (with some exceptions not pertinent here): section 1-102(3) of the UCC provides that "[t]he effect of provisions of this Act may be varied by agreement, except as otherwise provided in this Act." *Artisan Electronics Corp. v. United States* [20 CCF ¶83,180], 205 Ct. Cl. 126, 134, 499 F.2d 606, 611 (1974), held that express contract language regarding the right to terminate the entire contract for default for failure to deliver one installment overrode a contrary provision of the UCC.

Digitized by Google

parties. The parties have advised the Board that they are involved in protracted negotiations over the larger termination for convenience claim and want these lost shipment appeals fully decided promptly and independently of that claim. They have agreed that, to the extent the risk of loss provision in the Termination for Convenience clause may apply, this lost shipment dispute has appropriately been bifurcated for appeal and decision separately from their unrelated termination quantum dispute (involving delay costs and settlement expenses). They have also agreed that there are no disputed issues of law or fact common to the lost shipment claim and the termination settlement claim. (See Memorandum of Telephone Conference Call held 11 January 1993, by Administrative Judge Lane, dated 13 January 1993.)

I see absolutely no reason why we should not proceed as the parties have agreed and decide here and now the applicability of the "fair value" provision of the Termination for Convenience clause as the proper measure of the Government's claim and appellant's liability.

There is one respect only in which I concur in leaving open the possibility of recovery by appellant with respect to the lost items by way of a termination claim—that is, with respect to appellant's fall-back argument that if it is not entitled to retain the price of the lost shipment as against the Government's setoff, it is at least entitled to its costs of production plus a reasonable profit under the termination clause. Given the majority's decision denying appellant the contract price, I think that approach has merit. If the lost items were undelivered as the majority holds, then the line items under which they were produced and shipped remained open and were necessarily terminated, and the costs of producing the lost items were costs allocable to terminated items. I still think we could appropriately address the entitlement portion of such an alternative argument in the present case on a bifurcated basis, because in substance it represents not a contractor claim but one more question as to the quantum of the Government's claim, *i.e.*, the extent to which the Government's setoff was proper. However, I do not quarrel with the apparent intent of the majority to leave that matter for an amended termination claim and later determination as part of the termination quantum dispute.

B. Text of "Fair Value" Provision (Paragraph (g)) of Termination Clause and Related Regulations

I now turn to the merits of the termination clause question: whether the express "fair value" measure of the contractor's responsibility for lost and therefore undeliverable and undelivered property, set forth in paragraph (g) of the Termination for Convenience clause, applies to items accepted and shipped f.o.b. destination, paid for, and then lost in transit by a common carrier *before* the termination.

Paragraph (g) of the Termination for Convenience of the Government (Fixed Price) clause provided:

> (g) Except for normal spoilage, and except to the extent that the Government expressly assumed the risk of loss, the Contracting Officer shall exclude from the amounts payable to the Contractor under paragraph (f) above, the fair value, as determined by the Contracting Officer, of property that is destroyed, lost, stolen, or damaged so as to become undeliverable to the Government or to a buyer.

FAR ¶ 49.204, which is the corresponding regulatory provision, provides:

> 49.204 Deductions
>
> From the amount payable to the contractor under a settlement, the TCO shall deduct—
>
> * * *
>
> (b) The fair value, as determined by the TCO, of any part of the termination inventory that, before transfer of title to the Government or to a buyer under Part 45, is destroyed, lost, stolen, or so damaged as to become undeliverable (normal spoilage is excepted, as is inventory for which the Government has expressly assumed the risk of loss); and
>
> (c) Any other amounts as appropriate in the particular case.

The term "termination inventory" for purposes of termination is defined by FAR 49.001 by reference to FAR 45.601, which in turn defines it as "any property purchased, supplied, manufactured, furnished, or otherwise acquired for the performance of a contract subsequently terminated and properly allocable to the terminated portion of the contract."

C. Applicability of "Fair Value" Provision (Paragraph (g)) of Termination Clause and FAR ¶ 49.204(b) to Lost Items Accepted, Shipped, and Paid For Before Termination

©1994, Commerce Clearing House, Inc.

Digitized by Google

Since the contract before us was in fact terminated for convenience, the Termination for Convenience clause, including clause paragraph (g), became operative. Applicability of that provision to the particular shipment in issue, however, presents three questions because the shipment was accepted and title passed to the Government before it was lost and the loss occurred before the termination: (1) whether paragraph (g) is wholly inapplicable to property lost before the termination, (2) whether "property" in paragraph (g) covers only termination inventory, and (3) whether paragraph (g) covers only property lost before transfer of title to the Government.

Clause paragraph (g) refers broadly to "property that is destroyed, lost, stolen, or damaged so as to become undeliverable to the Government or to a buyer."

FAR ¶ 49.204(b), while not specifically purporting to implement clause paragraph (g), is evidently an instruction to the termination contracting officer as to how to apply that paragraph.

As to the first question, neither provision is limited by its terms to property lost after termination. I see no reason to read in such a limitation.

The Government objects that to apply the "fair value" measure established for the termination for convenience context to items lost before termination would improperly allow the contractor to "take advantage" of the termination for convenience, after loss of the shipment, and escape the responsibility it would otherwise have had to incur the cost of replacing the lost shipment. I reject that argument. Very simply, there was a termination; among other things, it ended any replacement obligation appellant might have had; and appellant is fully entitled to "take advantage" of the termination clause and regulations. A termination for convenience may relieve the contractor of many responsibilities; that does not entitle the Government to ignore the provisions of the termination clause and insist the contractor perform responsibilities that have been terminated.

As to the second question, FAR ¶ 49.204(b) mentions only termination inventory. Clause paragraph (g) is not so limited, but dictum in the one case I have found addressing the question says it "could relate only to the termination inventory." [9] Assuming that is correct, it nevertheless may reasonably be held to cover the lost shipment here, at least under the majority's view that the lost shipment was not legally "delivered." Until delivery the line items remained open and so were part of the terminated portion of the contract; thus the lost items were "termination inventory"—"property . . . properly allocable to the terminated portion of the contract."

(If, on the other hand, as I believe, the lost shipment was legally "delivered" to the Government upon delivery to the common carrier, those line items were fulfilled and not terminated and the lost shipment would then not be termination inventory—but in that event there could be no Government recovery of the price for "nondelivery" as the majority allows under UCC § 2-711 (see III(B) below), and paragraph (g) of the termination clause would be irrelevant.)

As to the third question, FAR ¶ 49.204(b) refers to inventory which is destroyed, lost, stolen, or damaged "before transfer of title to the Government or to a buyer," while clause paragraph (g) is not so limited. The quoted language dates back at least to 1960 when acceptance at origin (which effected passage of title) was not authorized in conjunction with shipment f.o.b. destination (ASPR 14-203), so it was probably assumed that passage of title closely approximated transfer of the risk of loss. Be that as it may, however, I would give primacy to the broader wording of the clause. The FAR provision does not purport to be a definitive interpretation of the clause but is merely an instruction to the TCO. Furthermore, FAR ¶ 49.204(b) may reasonably be amplified by reference to FAR ¶ 49.204(c), which contains broad, catch-all language providing for credit to the Government for "[a]ny other amounts as appropriate in the particular case." This broader language permits application of the "fair value" provision in clause paragraph (g) to property lost *after* transfer of title to the Government. As long as the risk of loss has not yet passed to the Government (which it has not under an f.o.b. destination contract), there is no conceivable reason *not* to apply the same "fair value" measure to the contractor's liability for property lost after transfer of title as before.

[9] [Section II(C) of Discussion in Dissenting Opinion] *General Motors Corp. (Ternstedt Div.)*, ASBCA Nos. 2830, 2831, 59-2 BCA ¶ 2323, at 10,599 (discussing the applicability of the risk provision in a termination clause which was a virtually identical predecessor to clause paragraph (g)). This was an *ipse dixit* with no rationale offered, and ignored the predecessor provision to the current FAR ¶ 49.204(c).

Digitized by Google

Indeed, consistently with this thinking, I suggest further that even if paragraph (g) and FAR ¶ 49.204 are considered not literally applicable to items lost after acceptance and transfer of title, they nevertheless should be applied in this case as the most nearly applicable provisions of the contract and regulations. Those provisions represent the Government's long-standing policy of assessing a contractor for the value, not the cost or price, of lost termination inventory to which the Government otherwise takes title under a termination. In principle, that policy appears to be equally appropriate for application to lost property to which the Government has already taken title but not the risk of loss before the termination. As appellant persuasively argues:

> The more important point, though, is the *principle* embodied by FAR 49.204(b) [and the corresponding clause paragraph (g)], which essentially sets out an approach for dealing with lost items in the context of Termination for Convenience. This approach recognizes the actual economic effect of the loss, by compensating the contractor fully for the work done on the items in question but also requiring the contractor to compensate the Government for damage caused by the loss. The FAR's approach is eminently fair and appropriate in the present case, whether or not this case is deemed to be within the strict letter of FAR 49.204(b). At all events, FAR 49.204(b) remains the most nearly-applicable FAR provision, and the principle which it embodies should be applied here.

App. Br. at 17.

Finally, I observe that use of "fair value" as the measure of the contractor's responsibility for loss is a two-way street. While "fair value" happens to favor the contractor in this case, it would favor the Government in a case where the "fair value" was higher than the contract price. Use of "fair value" to measure a property loss is fully equitable to both parties, in particular to the Government which is put in the same position it would have been in had the loss not occurred—which (as discussed in III(C) below) is exactly what contractual damages are supposed to do at common law as well as under the UCC. Thus there is no inherent "advantage" to the contractor in the use of "fair value" as the measure of responsibility for the loss.

D. Meaning of "Fair Value"

There surely can be no bona fide dispute over the meaning of "fair value," even though the Government argues (frivolously, in my view) that "fair value" means the contract price.

"Fair value" does not mean contract price or costs incurred for the lost or damaged property. The plain meaning of the words in common usage is different; value, price, and costs mean different things. If the drafters of the clause had meant price or costs, they could easily have said so. *See Bolinders Co.*, ASBCA No. 5740, 60-2 BCA ¶ 2746, at 14,002-07, reciting extensive historical background demonstrating that the "fair value" credit to the Government in the termination clause means fair market value as contrasted with an older approach of eliminating from a termination settlement all costs and profit attributable to missing termination inventory. The Board said:

> The other school of thought [which became the accepted one], also developed in World War II, took the view that the full costs and profit were to be allowed notwithstanding some inventory could not be delivered. The remedy was to deduct the fair market value of the missing inventory.

Id. at 14,003.

Webster's Third New International Dictionary defines "fair value" as "a reasonable value (as set by courts and regulatory commissions) for property—used esp. in application to public-utility property for rate-making purposes."

Black's Law Dictionary (6th ed. 1990) defines "fair value" as follows:

> Fair value. Present market value; such sum as the property will sell for to a purchaser desiring to buy, the owner wishing to sell; such a price as a capable and diligent business man could presently obtain from the property after conferring with those accustomed to buy such property; the amount the property would bring at a sale on execution shown to have been in all respects fair and reasonable; the fair market value of the property as between one who wants to purchase and one who wants to sell the property.... In determining "fair valuation" of property, court should consider all elements entering into the intrinsic value, as well as the selling value, and also the earning power of the property. ... "Actual value," "market value," "fair value," and the like, are commonly used as convertible terms.

Thus "fair value" or market value at a given time, meaning the intrinsic worth of the property reasonably determined by ref-

©1994, Commerce Clearing House, Inc.
Digitized by Google

erence to what a willing buyer and seller would agree upon at that time, is not necessarily the same as the price which may have been agreed upon for the property at some earlier date or the cost of producing the property, though, of course, the "fair value" may happen to be the same as a previously agreed upon price or the cost of production in a given case. In fact, other things being equal, I would consider the contract price in a case like this one to be persuasive, prima facie evidence of the "fair value" of lost items, inasmuch as it represents the amount agreed upon by a willing buyer (the Government) and a willing seller (the contractor) at the time of contracting. However, changed circumstances can make the contract price an inappropriate measure of "fair value" at a later time, such as when market prices have risen or dropped between the time of contracting and the time of loss or the time delivery was required.

The present case is another example of circumstances which made the contract price an inappropriate measure of "fair value." Appellant has met its evidentiary burden of going forward with the evidence and showing that at all pertinent times,[10] the "fair value" of the lost items was merely their scrap value, because they were manufactured to a defective Government-furnished drawing. (See findings 9-11 in majority opinion.)

E. Conclusion Regarding "Fair Value" Measure of Liability in Paragraph (g) of Termination Clause

Because the express provisions of paragraph (g) of the Termination for Convenience clause apply and make "fair value" the operative measure of appellant's liability for the lost items, and because the "fair value" was their scrap value, not the contract price, any provisions of the UCC which would otherwise permit the Government to recover the contract price of the lost items are overridden and rendered inapplicable. See footnote 8 and accompanying text in I above.

Therefore I conclude that the proper amount of the reduction in the amount paid to appellant as a termination settlement is the scrap value of the items in the lost shipment, which we have found to be $400.00. I would hold the Government entitled to only the $400.00 scrap value on its lost shipment claim, and appellant entitled to recover on its claim the balance of the contract price for the lost shipment which the Government recouped by offset against other payments due, that is, $42,205.30.

III. *The Uniform Commercial Code*

If the majority is correct in declining to consider the Termination for Convenience clause here, or if the termination clause does not apply even if considered, then I agree that we must look to the provisions of the Uniform Commercial Code to determine the proper measure of the Government's recovery.

In my view, however, the majority errs again, in two respects. *First*, it ignores the applicable UCC provision (§ 2-714, covering damages for breach in regard to accepted goods) and relies on an inapplicable provision (§ 2-711, covering nondelivery of unaccepted goods). (See subsection A below.) *Second*, it applies § 2-711 to physical nondelivery of the accepted goods to destination, which in this case renders the contract illegal under the statutory prohibition against advance payments. To avoid such illegality, delivery to the common carrier must be deemed legal delivery to the Government under § 2-711 in the contractual context of this case, and the requirement for physical delivery to destination must be deemed to be in the nature of a post-performance, post-payment warranty obligation, breach of which is remediable under § 2-714 like other breaches of warranty. (See subsection B below.)

The proper measure of the Government's damages under UCC § 2-714 for appellant's breach, consisting of loss in transit of Government-owned property, is the value of the lost items, *i.e.*, their scrap value. (See subsection C below.)

A. UCC § 2-714 Providing for Damages, Not Recovery of Price as Such, Governs Nondelivery of Accepted Goods; UCC § 2-711, Providing for Recovery of Price for Nondelivery, Does Not *Apply to Accepted Goods*

UCC § 2-714 is the controlling provision in a case where a seller breaches his obligation to deliver to destination goods already accepted at origin (absent revocation of acceptance). It provides for recovery of damages

[10] [Section II(D) of Discussion in Dissenting Opinion] It is not necessary for purposes of this case to decide as of what date the "fair value" is to be determined. The items in the present case were worthless except as scrap at all pertinent times—required delivery, loss, termination, and termination settlement.

Digitized by Google

reasonably measured, not for recovery of the price. It states in pertinent part:

> § 2-714. Buyer's Damages for Breach in Regard to Accepted Goods
>
> (1) Where the buyer has accepted goods and given notification (subsection (3) of Section 2-607) he may recover as damages for any non-conformity of tender the loss resulting in the ordinary course of events from the seller's breach as determined in any manner which is reasonable.

"Nonconformity" is broad enough to include failure to make the required physical delivery to destination. According to Official Comment 2 to § 2-714:

> 2. The "non-conformity" referred to in subsection (1) includes not only breaches of warranties but also any failure of the seller to perform according to his obligations under the contract. In the case of such non-conformity, the buyer is permitted to recover for his loss "in any manner which is reasonable."

Further, the Government's several inquiries to appellant in the present case as to the whereabouts of the lost shipment were sufficient notice within a reasonable time to meet the notice requirement of UCC § 2-607(3), cross-referenced in § 2-714. (See findings 6-8 in majority opinion.)

Official Comment 1 to § 2-714 states:

> 1. This section deals with the remedies available to the buyer *after the goods have been accepted* and the time for revocation of acceptance has gone by.

(Emphasis added.)

UCC § 2-711 provides in pertinent part:

> § 2-711. Buyer's Remedies in General; Buyer's Security Interest in Rejected Goods
>
> (1) Where the seller fails to make delivery or repudiates or the buyer rightfully rejects or justifiably revokes acceptance then with respect to any goods involved, and with respect to the whole if the breach goes to the whole contract (Section 2-612), the buyer may cancel and whether or not he has done so may in addition to recovering so much of the price as has been paid
>
> (a) "cover" and have damages under the next section as to all the goods affected whether or not they have been identified to the contract; or
>
> (b) recover damages for non-delivery as provided in this Article (Section 2-713).

Official Comment 1 to § 2-711 states:

> 1. . . . The remedies listed here are those available to a buyer *who has not accepted the goods* or who has justifiably revoked his acceptance. The remedies available to a buyer with regard to goods finally accepted appear in the section dealing with breach in regard to accepted goods.

(Emphasis added.)

In the present case the items in the lost shipment were accepted at origin, and the Government could not, and in any event never purported to, revoke acceptance.[11]

There are a number of reasons why I would find § 2-714 and not § 2-711 applicable to nondelivery of accepted goods.

[11] [Section III(A) of Discussion in Dissenting Opinion] Revocation of acceptance is governed by UCC § 2-608, which provides in pertinent part:

> § 2-608. Revocation of Acceptance in Whole or in Part
>
> (1) The buyer may revoke his acceptance of a lot or commercial unit whose non-conformity substantially impairs its value to him if he has accepted it
>
> (a) on the reasonable assumption that its nonconformity would be cured and it has not been seasonably cured; or
>
> (b) without discovery of such nonconformity if his acceptance was reasonably induced either by the difficulty of discovery before acceptance or by the seller's assurances.
>
> (2) Revocation of acceptance must occur within a reasonable time after the buyer discovers or should have discovered the ground for it and before any substantial change in condition of the goods which is not caused by their own defects. It is not effective until the buyer notifies the seller of it.

If this provision applied in the present case, the Government would be entitled under UCC § 2-711(1) to recover the full contract price for the lost shipment. In the event of a justifiable revocation of acceptance, UCC § 2-711(1) expressly allows the buyer to recover so much of the price as has been paid.

UCC § 2-608 does not apply here, for several reasons.

First, unlike UCC § 2-714 which addresses "nonconformity of tender" and the Official Comment to which indicates broad application to "any failure of the seller to perform according to his obligations under the contract," § 2-608 addresses nonconformity of accepted items in the sense of defects, and does not extend to nondelivery after acceptance or indeed to either loss or damage of accepted items in transit. The two conditions in subsections (1)(a) and (b) on their face can only apply to nonconformity existing at the time of acceptance, and so cannot include later nondelivery.

First, this is plain in the title and text of § 2-714 and in the complementary language of the Official Comments to the two sec-

(Footnote Continued)

Electro Optics, Inc., ASBCA No. 22017, 78-1 BCA ¶ 12,996, *aff'd on reconsideration*, 78-2 BCA ¶ 13,251, is not authority to the contrary. There we held that any right the Government might have had to revoke acceptance under UCC § 2-608 for nondelivery to destination of items accepted at origin was lost by the Government's failure to notify the contractor within a reasonable time. We did not need to decide in that case whether, if the Government had given timely notification, it could have revoked acceptance under UCC § 2-608 for nondelivery. The suggestion in the original decision (78-1 BCA at 63,392, n.2 and accompanying text) that revocation of acceptance was an available remedy for nondelivery was therefore dictum, and furthermore failed to distinguish between (1) a defect as to quantity existing at the time of acceptance, which would be a nonconformity that might justify revocation of acceptance, and (2) a failure to deliver because of a loss in transit after acceptance, which is not a nonconformity justifying revocation. Moreover, the decision on reconsideration appears to refocus the premise for possible contractor liability for the lost items from UCC § 2-608 to the Title and Risk of Loss clause of the contract.

Second, even if "nonconformity" were construed to include nondelivery, acceptance of a lot may be revoked only for a nonconformity which "substantially impairs its value" to the buyer. In this case, nondelivery of the lost shipment could not "substantially impair [the] value" of the items to the Government; even if the items had been delivered, they would have had no significant value to the Government that could be impaired, on account of the defective Government-furnished manufacturing drawing.

Third, the Government has never notified appellant of a revocation of acceptance as absolutely required by UCC § 2-608(2), and has not asserted such revocation as a ground for recovery in this case. Failure to give the required notice precludes a Government claim based on revocation of acceptance:

> Notice of revocation of acceptance to the seller must be clearly demonstrated. *Grossman v. D'Or*, 98 Ill.App.2d 198, 240 N.E.2d 266, 268 (1968). Hence, "[w]hen the conduct of the buyer is ambiguous, it does not constitute a required notice of revocation of acceptance." 4 Anderson, Uniform Commercial Code § 2-608:30 (3rd ed. 1983). Thus, in many circumstances, merely returning the goods to the seller, without more explicit indications of intent, will be inadequate notice of revocation of acceptance. *See Poole v. Marion Buick Co.*, 14 N.C. App. 721, 189 S.E.2d 650, 652-53 (1972).

Delhomme Industries, Inc. v. Houston Beechcraft, Inc., 735 F.2d 177, 182 n.7 (5th Cir. 1984). *See also Electro Optics, Inc.*, ASBCA No. 22017, 78-1 BCA ¶ 12,996, *aff'd on reconsideration*, 78-2 BCA ¶ 13,251, holding that the Title and Risk of Loss clause (an earlier version of the Responsibility for Supplies clause), by implication, required reasonably timely notification of nonreceipt and that the failure to give such notification barred any possible Government claim for loss in transit based on revocation of acceptance or under the Title and Risk of Loss clause. *Electro Optics* did not need to, and did not in fact, focus on the difference between notification of nonreceipt and notification of revocation of acceptance. Since the Government in that case failed to notify the contractor of nonreceipt, as noted above, a fortiori it did not give notification of revocation of acceptance.

In the present case, the parties' communications between October 1988 and February 1989 regarding the whereabouts of the lost shipment, which placed appellant on notice of nonreceipt by the Government, did not operate as an unambiguous notice of revocation of acceptance under UCC § 2-608, since revocation of acceptance (even if it had been an available remedy) was not the only remedy available to the Government. The Government could also rely on the express risk of loss provisions in the contract and on UCC § 2-714 covering breach (including nondelivery) in regard to accepted goods as discussed in this dissent.

(Absent a purported revocation of acceptance, it is not necessary to decide when a "reasonable time" for notification of revocation after February 1989 expired. The parties' communications between October 1988 and February 1989, which placed appellant on notice of nonreceipt by the Government, also placed the Government on notice that the items had probably been lost in transit, since appellant was unable to provide any evidence of receipt at destination and the Government itself had no record of receipt. A "reasonable time" after February 1989 for such notification probably expired at least by 28 April 1989, the date of the termination, which is when the "fair value" risk of loss provision of the termination clause became operative, but certainly no later than appellant's July 1989 deadline for filing an insurance claim (one year after expected arrival of the shipment in late July 1988), for that is when appellant was prejudiced by the absence of such notice. Up to that time, and without notice that the Government was invoking a remedy that included recovery of the full contract price, appellant could have believed that the Government's recovery for nondelivery would be limited to the value of the items, which appellant by then knew was scrap value.)

Fourth, even if the Government could otherwise revoke acceptance under UCC § 2-608 on account of the nondelivery to destination—that is, if nonconformity for purposes of UCC § 2-608 included nondelivery and notice of revocation had been timely given—such revocation of acceptance would be barred by the finality provision of the Inspection clause. If nonconformity were to include nondelivery for purposes of UCC § 2-608, then so must it for purposes of the Inspection clause. The Inspection clause says that "[a]cceptance shall be conclusive,

Digitized by Google

tions, even if the text of § 2-711 taken out of context is less than clear.

Second, one of the leading commentators on the UCC states:

> § 2-711:3. Scope and suggestions.
>
> Code § 2-711 begins a series of sections specifying the remedies of the buyer. The section enumerates the remedies of the buyer who has not accepted the goods or who has made a rightful revocation of his acceptance. *If the buyer has accepted the goods and has not made an effective revocation of his acceptance, his remedies are limited to the damages recoverable under Code § 2-714....*
>
> * * *
>
> § 2-711:14. Recovery of purchase price and damages.
>
> * * *
>
> *When the buyer does not act to revoke acceptance and to give notice of any nonconformity, he is barred from recovering the purchase price* and is limited to the damages specified by UCC § 2-714(2).

4 Anderson, Uniform Commercial Code § 2-711:3, at 422, § 2-711:14, at 428 (3rd ed. 1983) (emphasis added; footnotes omitted). The majority ignores this authoritative commentator, relying instead on a superficial summary of UCC § 2-711 in Williston on Sales § 25-17 which does not even mention the Official Comments. Moreover, I think the majority is reading too much into that brief paragraph in Williston. The authors do not there mention § 2-714 which applies to accepted goods and do not specifically suggest that recovery of the price is available for nondelivery of *accepted* goods, and I do not think they so intended. On the contrary, they recognize (in § 25-5, at 443) that if the buyer accepts goods then he must pay the contract price for them. The majority also cites § 6-7 of the White and Summers Hornbook on the UCC, which correctly states that under UCC § 2-711 the buyer can recover damages in addition to recovering the price paid. Like Williston, the authors do not say that § 2-711 applies to nondelivery to destination of accepted goods lost in transit, especially accepted goods delivered to a common carrier and paid for under a Government contract under which payment cannot legally be made before "delivery" (see further discussion of the advance payment prohibition in B below). On the contrary, like Williston, they recognize (in § 7-3, at 256) that under UCC § 2-709(1)(a) the buyer is liable for the price of "goods accepted."

Third, to suggest that the "remedies" referred to in Official Comment 1 to § 2-711 as only available before acceptance do not include the buyer's right under § 2-711 to recover the price paid would be to say that recovery of the price is not a remedy, which would be to ignore the plain meaning of the word "remedy" and the caption of § 2-711, Buyer's Remedies in General.

Fourth, when recovery of the price paid is an available remedy under § 2-711, then § 2-711 unambiguously provides also the additional remedies of § 2-712 (cover) and § 2-713 (damages for nondelivery). But §§ 2-712 and 2-713 on the one hand and § 2-714 (Buyer's Damages for Breach in Regard to Accepted Goods) on the other are mutually exclusive. J. White & R. Summers, Uniform Commercial Code § 10-1, at 375 (2nd ed. 1980). Thus §§ 2-712 and 2-713 do not apply to nondelivery of accepted goods, and by elementary logic recovery of the price under § 2-711 does not either. Indeed, it would make no sense to apply only one remedy among the several parallel remedies listed in § 2-711 to nondelivery of accepted goods.

Fifth, it is not credible that the UCC would allow recovery of the price paid for accepted goods that are lost in transit and therefore undelivered but not those damaged in transit so as to be unusable but nevertheless delivered—yet the majority's application of § 2-711 leaves no room for equivalent treatment of goods so damaged as both logic and the risk of loss provisions of the present contract require. (That disparity does not exist under UCC § 2-711 for goods not accepted at origin because the buyer ob-

(Footnote Continued)

except for latent defects, fraud, gross mistakes amounting to fraud, or as otherwise provided in the contract." That finality provision negates any remedies inconsistent therewith that the Government might otherwise have as a buyer under the Uniform Commercial Code, on account of the loss in transit, because, as discussed in I above (see note 8 supra and accompanying text), the UCC does not supersede express provisions of a contract. "[O]therwise provided in the contract" means expressly provided; it does not mean impliedly provided by virtue of a UCC provision read into the contract. *Republic Aviation Corp.*, ASBCA Nos. 9934, 10104, 66-1 BCA ¶ 5482, at 25,694 (holding that UCC provisions that might otherwise make oral warranties enforceable after acceptance were negated by the finality provision of the Inspection clause in Government contracts, under which any exception to finality "otherwise provided in the contract" had to be express).

©1994, Commerce Clearing House, Inc.

Digitized by Google

viously will not accept at destination goods that are lost in transit and likewise can simply reject seriously damaged goods.)

Thus UCC § 2-714 does apply, and § 2-711 does not apply, to nondelivery of accepted goods. Recovery of the price paid in cases of nondelivery under § 2-711 applies where the payment is a partial or advance payment made before acceptance and the remedy of recovering the price is exercised before acceptance or, if after acceptance, only when acceptance has been properly revoked.

This reading of 2-714 and 2-711 together is further confirmed by reading these provisions on the buyer's remedies in conjunction with the UCC provisions on the seller's remedies:

1. UCC § 2-607, Effect of Acceptance, provides unconditionally that "(1) The buyer must pay at the contract rate for any goods accepted."

2. UCC § 2-703, Seller's Remedies in General, provides that "When the buyer ... fails to make a payment due on *or before delivery* ... the aggrieved seller may: ... (e) recover ... in a proper case the price (Section 2-709)" (emphasis added).

3. UCC § 2-709, Action for the Price, provides: "(1) When the buyer fails to pay the price as it becomes due the seller may recover ... the price (a) of goods accepted ...."

These provisions entitle the seller to be paid the price for accepted items; there is no requirement for delivery. Anderson on the UCC confirms this plain meaning:

> Under the Code, the seller recovers the purchase price for goods which are "accepted" rather than goods which are "delivered." *Thus the common law requirement of proving delivery of the goods is no longer recognized.*

4 Anderson § 2-607:14 (emphasis added).

The majority reads UCC § 2-711 as entitling the buyer to recover any part of the price paid in the case of nondelivery of accepted goods. That reading creates a direct conflict in the UCC between the remedies of the buyer and the remedies of the seller. There is no basis in the UCC or in the cases under the UCC for giving primacy to the buyer's remedies over the seller's remedies. That is not to say the buyer is without a remedy for nondelivery of accepted goods. The buyer recovers damages under § 2-714, which is fully consistent with the seller's right to recover the price.

To sum up, UCC § 2-714, which the majority utterly ignores, governs nondelivery of accepted goods and entitles the buyer (the Government here) to damages, reasonably determined (as discussed in C below). The remedies in § 2-711, upon which the majority erroneously relies, including specifically recovery of the price paid in cases of nondelivery, do not apply with respect to items such as those in this case that have already been accepted and as to which there cannot be or has not been revocation of acceptance.

In contrast to the present case where the lost items had already been both accepted and paid for, see *R&L Diesel Service*, ASBCA No. 22542, 78-1 BCA ¶ 13,177, involving an item lost in transit which had *not* been accepted but had already been paid for under the Fast Payment Procedure clause. The Board held, not citing the UCC and without articulating any rationale, that the Government was entitled to recover the contract price under the risk of loss provision in the clause, even though the only express remedy in the clause was replacement of lost items. The difference in facts (especially the absence of acceptance there) and in contract provisions (especially the absence of any express contractual remedy here for loss in transit) make the *R&L Diesel* case inapposite to this case as authority for Government recovery of the price as such under UCC § 2-711 or otherwise. On the contrary, the *R&L Diesel* decision is fully consistent with Government recovery of damages reasonably determined under UCC § 2-714—value, not price as such, as discussed in C below. Since there was no assertion in *R&L Diesel* of a difference between price and value, the normal presumption that price and value are the same would have applied and there was no need to discuss price versus value.[12]

[12] [Section III(A) of Discussion in Dissenting Opinion] Actually, the peculiar combination of provisions in the Fast Payment Procedure clause appears to make both UCC § 2-711 and UCC § 2-714 technically inapplicable as measures of the contractor's liability for a loss in transit. Section 2-711, while applicable to a loss of unaccepted goods, would not apply in Fast Pay cases because delivery to the common carrier must be deemed delivery to the Government in order to avoid illegal advance payments, as discussed in B below. Section 2-714 only applies to breaches in regard to accepted goods, and so would not apply under Fast Pay where acceptance takes place at destination. Perhaps the best approach to determining the measure of damages for loss of Fast Pay items in transit, assuming the contractor refused to replace the items, would be to treat the matter as a breach of the contractor's warranty obligation to replace the items and to adopt a reasonable measure using

B. UCC § 2-711 Also Does Not Apply Because There Was Delivery: Physical Delivery to Carrier Had To Constitute Constructive Delivery to Government Because of Statutory Prohibition Against Advance Payments

1. *Overview of Advance Payment Question*

Even assuming (contrary to what I have shown in A above) that UCC § 2-711 would normally apply to "nondelivery" of accepted items, it does not apply in this case because legally there was not a "nondelivery" of the lost shipment in this case. Delivery of the shipment to the Common carrier was legal delivery to the Government.

This contract provided unequivocally and unconditionally for payment for items in full upon acceptance at origin by the Government and delivery of end items to a common carrier (transportation prepaid) and before physical delivery to destination.

The majority, however, while agreeing that the contract provided for payment upon delivery to the carrier, reads UCC § 2-711 into the contract so as to render that payment conditional and provisional. The majority permits the Government to recover the price for items delivered to the carrier but then lost in transit and so not physically delivered to destination. This revision of the contract says that even upon delivery to the common carrier, performance is not yet complete and the price is not yet fully earned until physical delivery to destination.

The contract as so revised by the majority is illegal. It violates the statutory prohibition against advance payments (set forth in 2 below), which says that a contract payment "may not be more than the value of . . . the article *already delivered.*" 31 U.S.C. § 3324(a) (emphasis added). I believe instead that the contract provisions were very carefully drafted specifically to avoid this illegality.

It is a fundmental principle that a contract should be given a legal interpretation if reasonably possible:

> For it is a rule of interpretation that where a contract is fairly open to two constructions, by one of which it would be lawful and the other unlawful, the former rust be adopted.

Hobbs v. McLean, 117 U.S. 567, 576 (1886). *Accord:* Restatement of Contracts (Second) § 203(a) (1979); 4 Williston on Contracts § 620, at 747-48 (3rd ed. 1961).

Under this contract, therefore, delivery of the items to the common carrier had to constitute legal delivery to the Government—constructive delivery because made to a third party (the common carrier) pursuant to contractual authorization. Performance of the contract with respect to those items had to be complete at that point; if there remained any performance with respect to the items, payment would have been illegally made before the "article[s] [had been] already delivered." Appellant's risk-of-loss responsibility had to be a post-performance obligation, in the nature of a warranty obligation, to be monetarily liable for loss of the Government's property (title passed upon acceptance at origin). A post-performance,

(Footnote Continued)

common-law damage principles, such as the Government's cost of obtaining replacement items from a third party, similar to reprocurement costs after a default termination. As noted, the *R&L Diesel* case did not provide any rationale for allowing recovery of the contract price paid; perhaps the tacit presumption, absent evidence to the contrary, was that replacement cost would be the same as the contract price.

Interestingly, the Fast Payment Procedure clause (now authorized by FAR Subpart 13.3 and found in FAR § 52.213-1) provides for payment based on passage of title to the Government upon delivery to a post office or common carrier or point of first receipt by the Government, even though the contractor is responsible for physical delivery to destination and the Government inspects and accepts at destination. This appears intended to avoid violating the prohibition against advance payments discussed in B below. *See* Comp. Gen. B-155253, 18 December 1964 (unpublished), 1964 WL 1892 (C.G.) (questioning the legality of the "fast pay procedure for small purchases" then being used by the Defense Supply Agency (DSA) (predecessor to the Defense Logistics Agency (DLA)) in light of the statutory prohibition against advance payments); Comp. Gen. B-155253, 20 March 1968 (unpublished) (approving DOD's use of the fast payment procedure set forth in ASPR ¶ 3-606); Comp. Gen. B-155253, 20 August 1969 (unpublished), 1969 WL 3693 (C.G.) (approving FAA's adoption of DOD's fast payment procedure on small purchases, then set forth in ASPR ¶ 3-606, as augmented by internal FAA audit procedures); Comp. Gen. B-223827, B-223827.3, 13 February 1987 (unpublished), 1987 WL 101457 (C.G.) (approving changes to the FAR regulations and clause on the fast payment procedure to implement limitations on the use of "fast pay" procedures imposed by Attachment 2, "Subject: Prompt Payment Standards," to OMB Circular A-125, "Prompt Payment," as amended, 50 Fed. Reg. 14688 (12 April 1985) (now ¶ 12 of Attachment to current OMB Circular A-125, 54 Fed. Reg. 52700, 52712 (21 December 1989)).

post-payment warranty obligation does not render payment in full illegal as a prohibited advance payment. *Morgen & Oswood Construction Co.*, VABCA No. 3318, 92-1 BCA ¶ 24,482, at 122,194-95.[13] Appellant's liability for the loss in transit, established by the risk of loss provisions in the contract (Responsibility for Supplies and F.O.B. Destination), is appropriately determined under UCC § 2-714 which expressly addresses damages for breach in regard to accepted goods, including warranty liability. (As discussed in C below, the proper measure under that section is the usual measure of loss of someone else's property—the value of the property.)

The advance payment statute is not satisfied by the Government's mere taking of title to the items before payment, if a post-payment delivery obligation remains as part of contract performance required to earn the price. Given the applicability of the advance payment statute to this Government contract, UCC § 2-711 must be regarded either as inapplicable to this contract because inconsistent with the statutory prohibition (if UCC § 2-711 is to be read as the majority does), *or* as recognizing that delivery to a common carrier constitutes completion of performance and delivery to the Government under the circumstances and contractual provisions present here.

My view of the advance payment statute is supported by long-standing administrative decisions of the attorney general and the Comptroller General (see 3 below) and by long-standing administrative interpretation by DOD (see 4 below), as well as by a recent amendment to the Prompt Payment Act recognizing that payment for items in full cannot be made without delivery and that delivery to a common carrier can constitute the required delivery which completes performance and earns the full price (see 5 below). I elaborate below upon that history and interpretation because of the importance of the advance payment statute to the proper interpretation of this contract as well as its place as one of the longest-standing controls over Government procurement.

The majority appears to agree that the contract provisions as it interprets them provide for advance payments which run afoul of the advance payment prohibition unless the Government invoked an extraordinary statutory authorization of advance payments. No such authorization was invoked for this contract (see 2 below).

The majority suggests that my equating of delivery to a common carrier with delivery to the Government is contrary to the FAR 47.001 definition of "f.o.b. destination." I do not understand the majority's point. According to FAR 47.001, "f.o.b. destination" (which defines the physical delivery requirement) means free on board the seller's or consignor's conveyance at destination. I would simply hold that the common carrier is deemed to be the Government's agent to receive legal delivery—not that the conveyance, *i.e.*, the vehicle used for transportation, is the Government's agent. I see no inconsistency with the FAR definition of "f.o.b. destination" for the purpose of physical delivery. The majority also perceives some significance in the fact that more than one common carrier was involved in the transportation chain; but that fact has no bearing on my view that the contractor's delivery to the first common carrier constituted legal delivery to the Government.

2. *The Advance Payment Statute*

Title 31 U.S.C. § 3324 (formerly 31 U.S.C. § 529, codifying Revised Statutes (R.S.) § 3648, Pub. L. No. 17-9, 3 Stat. 723 (1823), prohibits advance payments to contractors:

> (a) Except as provided in this section, a payment under a contract to provide a service or deliver an article for the United States Government may not be more than the value of the service already provided or the article already delivered.

The statute goes on to provide for advance payments where authorized by a specific appropriation or other law or the President, but those conditions do not exist here. There are certain other advance payment authorizations (including 10 U.S.C. § 2307, similar to 41 U.S.C. § 255 for civilian agencies) available to the military departments (see FAR Part 32, § § 32.101, 32.102(a), Subpart 32.4), but none of those was made applicable to the present contract.

The majority presumes—in order to avoid facing up to the illegality created by its interpretation of the contract—that the Government authorized advance payments under 10 U.S.C. § 2307 on this routine supply contract. Such authorization would have

[13] [Section III(B)(1) of Discussion in Dissenting opinion] That case held that "guarantee period services" and "post contract maintenance" services were part of contract warranties, not part of the contract work, so the contractor was entitled to the full contract price and the Government need not and could not withhold the portion of the price attributable to those services as an alleged illegal advance payment until after they were performed.

Digitized by Google

required compliance with the implementing regulations of FAR Subpart 32.4; the exclusions in FAR 32.404 cover advance payments under other statutes, none of which applies to this case. The majority's presumption is inappropriate, contrary to the record, and unnecessary. It is *inappropriate* because, absent affirmative evidence, we should not presume invocation of an extraordinary, "sparingly" (FAR 32.402(b)) used statutory authority, any more than the courts and boards have presumed over the years that special contract provisions limiting boilerplate FAR clauses had been approved pursuant to an authorized deviation. It is *contrary to the record* because the Rule 4 file would likely reflect an advance payment authorization if there had been one, and, more importantly and indeed conclusively, the contract would contain the Advance Payments clause in FAR 52.232.12 mandated by FAR 32.412, which it does not. It is *unnecessary* because, as I have said in 1 above, this contract can and should be interpreted so that payment upon delivery to the common carrier was not in advance of delivery to the Government. The doctrine of presumed regularity of official Government actions, upon which the majority relies, actually supports my inference that the drafters of the clauses permitting payment upon delivery to a common carrier for f.o.b. destination shipment must have intended such delivery to constitute legal delivery to the Government, precisely to avoid both illegal advance payments and the need to go through laborious justification and special authorization to legalize advance payments.

3. Administrative Interpretations by Attorney General and Comptroller General

It has been the uniform administrative interpretation of the Attorney General of the United States and of the Comptroller General of the United States for over one hundred years that the advance payment statute prohibits payment in full for goods or services before delivery to the Government (which is treated as synonymous with completion of performance), while permitting partial (progress) payments before delivery provided the Government receives an equivalent benefit.

The oldest authority I have found categorically disapproved payment in full while approving partial payment based on a lien. 18 Op. Atty. Gen. 105 (1885) (relied on by 29 Op. Atty. Gen. 46 (1911) which was then relied on by 20 Comp. Gen. 917 (1941)), held:

> The object of that section [R.S. 3648, predecessor of the current statute 31 U.S.C. § 3324] is not to preclude a payment in any case where the money has been actually earned and the Government has received an equivalent therefor, but to prevent payments being made to contractors in advance of the performance of their contracts, whether for services or the supply of articles of any kind. Agreeably to this view of the statute, I observed in my opinion of the 20th instant that payment *in full* for the vessel, in advance of its completion, is forbidden thereby.

18 Op. Atty. Gen. at 106 [emphasis in original]. Thus, while the prior opinion in the same matter two days earlier had disapproved payment in full, 18 Op. Atty. Gen. 101 (1885), this opinion authorized *partial* payment based on the lien as an equivalent received by the Government for its payment—precisely the reasoning later used over the years by the Comptroller General in his numerous rulings authorizing *partial* payments. It should be noted that construction of the ship had been "wholly finished," but the full trial trip and formal acceptance had been delayed due to a fracture of a shaft.

Most recently the Comptroller General has held:

> Under 31 U.S.C. § 3324, absent the exceptions noted above, agencies of the government are prohibited from paying for goods or services in advance of receiving them. *See, e.g.*, B-172054, June 11, 1971. Therefore, notwithstanding the FSS contract language to the contrary, agents of the government are strictly prohibited by statute from compensating contractors for any service of [sic] goods which have not been received.

64 Comp. Gen. 710, 85-2 CPD ¶ 97.

Similarly, where under the terms of a contract the contractor's performance obligation would not be completed until the end items were physically delivered to the Government, and title would not vest in the Government until such delivery, and the contractor would not be entitled to payment under the terms of the contract until receipt and acceptance by the Government, payment without evidence of delivery and acceptance would be an illegal advance payment. 20 Comp. Gen. 230, 231-32 (1940).

On the other hand, the Comptroller General has ruled that *partial* (*i.e.*, progress) payments to contractors are not a violation of the advance payment prohibition as long as the contractor has actually earned the

©1994, Commerce Clearing House, Inc.

Digitized by Google

amount of the payment and the Government has received an equivalent therefor, such as title to the items, a lien in the amount at least equal to the payment, or other equivalent benefit such as the benefits from performance and payment bonds which were held to accrue at the time the bonds were obtained when the contract specifically provided for reimbursement of the full bond premiums. 57 Comp. Gen. 89, 92-94, 77-2 CPD ¶ 376, at 4-7; 20 Comp. Gen. 917, 918 (1941) (and authorities cited); 1 Comp. Gen. 143, 145 (1921). Thus, for example, the Comptroller General has ruled:

> We have long held that 31 U.S.C. § 529 prohibits the compensation of contractors for services which have not been received, so as to avoid the possibility of Government loss in the event the contractor, after receipt of full payment, should fail to perform his contract obligations. *See, e.g.*, B-180713, April 10, 1974, and cases cited. Where the Government undertakes an obligation in the contract to reimburse the contractor for performance and payment bonds, the contractor earns such reimbursement upon obtaining the bonds. In other words, once the bonds have been obtained, the contractor has fully performed his part of the bargain in order to "earn" full reimbursement. *There is no further performance for him to render in order to receive reimbursement for the bond premiums.*

57 Comp. Gen. 25, 28, 77-2 CPD ¶ 319, at 5-6 (emphasis added).

Under the reasoning of these decisions, if the contract provides for payment of the full contract price for end items, then in order for the payment not to be an illegal advance payment, "the amount of the payment [must have] been actually earned by the contractor and the United States [must have] received an equivalent therefor," 1 Comp. Gen. 143, 145 (1921), and there must be "no further performance for him to render in order to receive reimbursement" for the items, 57 Comp. Gen. at 28, 77-2 CPD ¶ 319, at 6.

This construction has *never* been applied to permit the Government to pay the full contract price for undelivered items, even if the Government has taken title. The only language that even remotely hints at such a construction is found in 20 Comp. Gen. 917, 918 (1941), which stated:

> While, under the prohibition of the statute, payment may not be made for articles in which the United States has acquired no right or interest and from which it derives no benefit, payment may be made for articles in advance of their delivery into the actual possession of the United States if title therein has vested in the Government at the time of such payment, or if the articles are impressed with a valid lien in favor of the United States in an amount at least equal to the payment. 1 Comp. Gen. 143; 17 Comp. Gen. 894; 29 Op. Atty. Gen. 46.

That ruling, read in its entirety, does not hold or even suggest that payment *in full* for undelivered items, *i.e.*, items as to which performance is not complete, may be made based merely on title or a lien, for three reasons: (1) the factual scenario presented by the agency's request for a ruling asked only for permission to make partial payment; (2) the cases cited by GAO in its ruling were partial payment cases; and (3) GAO's ruling in the case only authorized the agency to amend the contract to provide for partial payment.[14]

4. *Administrative Interpretation by DOD*

For at least twenty-eight years, it has been the Defense Department's administrative interpretation of the advance payment statute, as applied to contract payments before physical delivery to destination on an f.o.b. destination contract, that the statute requires not merely passage of title but also delivery to the Government, and that delivery to a common carrier constitutes delivery to the Government and completion of contract performance when the contract provides for passage of title to the Government and payment upon delivery to the common carrier. The documentation of DOD's position in this regard is in the context of the Fast Payment Procedure for small purchases, but the principle involved has nothing to do with dollar amount.

[14] [Section III(B)(3) of Discussion in Dissenting opinion] *Cf.* also discussions of the advance payment statute and the nature of title to work in progress acquired by the Government as a condition of progress payments, in *Coated Sales, Inc. v. Highland Industries, Inc.*, 112 B.R. 560, 561-63 (U.S. Bankrupty Ct., S.D.N.Y., 1988), and in *Marine Midland Bank v. United States*, 231 Ct. Cl. 496, 687 F.2d 395 (1982), *cert. denied*, 460 U.S. 1037 (1983). While *Coated Sales* disagreed with *Marine Midland* as to whether the Government's purported title taken as a condition of progress payments was real or a fictional device to avoid violating the advance payment prohibition, neither case suggested that payment in full could legally be made before delivery, with or without transfer of title.

Digitized by Google

This interpretation supports the view that under the terms of this contract, delivery of the lost shipment to the common carrier constituted delivery to the Government and completion of contract performance and that the contract price was thereupon unconditionally, not provisionally, earned, contrary to the majority's view in this case that there was nondelivery under UCC § 2-711.

DOD's statement of position on this matter and the Comptroller General's approval of it are found in correspondence and rulings in connection with a General Accounting Office inquiry about the Fast Payment Procedure under Comptroller General Case No. B-155253. Since this material comprises official Government documents recording the legal foundation of published procurement regulations and clauses, we may appropriately take official notice of it. The material may be summarized as follows:

(1) 9/22/64 Memorandum from GAO Defense Accounting and Auditing Division to the Comptroller General—Raised objections to Defense Supply Agency's fast payment procedure on small purchases whereby Government paid for items shipped f.o.b. destination without evidence of receipt at destination, based on (i) a certification of delivery to a post office, common carrier, or point of first receipt by the Government, (ii) transfer of title to the Government upon such delivery, and (iii) the contractor's agreement to replace, repair, or correct supplies not received at destination, damaged in transit, or not conforming to the contract (though no provision for recovery of price by Government). Memorandum stated opinion that procedure violated advance payment prohibition of R.S. § 3648.

(2) 12/18/64 Unpublished Decision consisting of letter from Comptroller General to Secretary of Defense—Asked for comments on legality, propriety, and necessity for DSA's fast pay procedure for small purchases. Noted that although title would vest in Government upon delivery to post office or common carrier—

there is some question that the contractor's full obligation on an f.o.b. destination shipment of the type here concerned would be discharged prior to the time the supplies were delivered at the designated destination. The contractor's certification that he has delivered the supplies to the post office or carrier does not purport to be a certification that the contract performance is complete.

Cited R.S. § 3648, as amended, 31 U.S.C. § 529, as "intended to prevent a department from anticipating the performance of a contract [f]or the performance of any service or for the delivery of articles of any description for the use of the United States." Cited Comptroller General decisions endorsing *partial* payments based on title or lien before delivery into actual possession of the United States, but observed that the DSA procedure provided for payment *in full.*

(3) 4/30/65 Letter from Assistant Secretary of Defense (Comptroller) to Comptroller General in response—Specifically addressing the question of legality under the advance payment statute, it stated:

It is our view, however, that the contractor under the "Fast Payment" procedures will have fully performed his contract upon delivery to a post office or common carrier. There remains only his contingent obligation to replace, repair or correct supplies not received, damaged in transit, or not conforming to purchase requirements. This contingent liability is quite similar to that imposed on a contractor under a warranty guarantee article with respect to completion of contract performance. In the latter case there has been no question that the contractor may be fully paid prior to the expiration of the warranty or guarantee period.

It further stated that the fast pay procedure (by then in ASPR 3-606) *"provides for legal delivery to the Government upon delivery to a post office or common carrier;* if other mode of transportation is used, then delivery is effected at point of first receipt by the Government" (emphasis added). It then expressed the legal view that *"once delivered to the carrier or post office,* title having passed, full payment is authorized" under the advance payment statute.

(4) 9/7/65 Internal ruling by the Comptroller General to GAO Defense Accounting and Auditing Division—Held:

Therefore, since title to the supplies vests in the Government *upon delivery to a post office or common carrier* and the postage or freight is prepaid by the shipper, payment to the supplier under the Fast Payment Procedure need not be objected to as an advance payment in direct violation of section 3648 Revised Statutes, as amended, 31 U.S.C. 529.

(Emphasis added.)

(5) 4/21/67 Letter, GAO Defense Division to Deputy Assistant Secretary of Defense

©1994, Commerce Clearing House, Inc.

Digitized by Google

(Procurement)—Conveyed the ruling quoted in (4) above.

(6) 3/20/68 Unpublished Decision from Comptroller General to Secretary of Defense—Formally approved the fast payment procedure (though the only issues open and addressed at that time involved commercial versus Government bills of lading and internal follow-up controls).[15]

5. *Recent Amendment to Prompt Payment Act*

The foregoing positions of the Attorney General, the Comptroller General, and DOD—that delivery to a common carrier under an f.o.b. destination contract constitutes legal delivery to the Government and completion of performance when the contract provides for passage of title and payment in full upon such delivery—were adopted by the Congress in recent amendments to the Prompt Payment Act.

Section 11 of the 1988 amendments to the Act, P.L. 100-496, 17 Oct. 1988 (which may be found in 31 U.S.C. § 3903 note) included a requirement for a FAR amendment authorizing contracting officers to establish certain payment periods in contracts. One such payment period required to be authorized is 15 days after receipt of invoice on small purchases if "(i) the contract provides for such 'fast payment' terms; (ii) title to any property will vest in the Government *upon delivery (including delivery to a common carrier);* and (iii) the business concern offers appropriate warranties to furnish property or services conforming to the requirements of the contract or purchase order, if payment will be due prior to acceptance of the items or services." (§ 11(b)(1)(C) (emphasis added).)

While that statutory provision and the mandated FAR amendment apply only to small purchases, the underlying legal principle recognizing that delivery to a common carrier may constitute legal delivery to the Government under an f.o.b. destination contract is not so limited.

6. *Conclusion on Advance Payment Question*

In order to give the Government recovery of the contract price of the lost shipment under UCC § 2-711, the majority holds that appellant did not deliver the shipment to the Government. That holding renders the contract illegal under the statutory advance payment prohibition.

In order to avoid unauthorized advance payments and preserve legality of the contract, given the contract provisions for payment *in full* upon delivery to the common carrier, delivery of the shipment to the common carrier must be deemed legal, constructive delivery to the Government and completion of contract performance as to that, shipment which fully earned the price for that shipment. The Government must be deemed to have constituted any common carrier (and the U.S. Postal Service) as its agent to receive delivery of the items, which became Government-owned property upon acceptance at origin. Thus the Government cannot recover the price on account of "nondelivery" under UCC § 2-711 (even assuming—which I have shown in A above to be erroneous—that § 2-711 applies to nondelivery of accepted items). UCC § 2-711 must either (1) be considered inapplicable to a Government contract providing for acceptance at origin, shipment f.o.b. destination, and payment upon delivery to a common carrier, because contrary to the statutory advance payment prohibition, or (2) be interpreted as recognizing delivery of accepted items to a common carrier as contractual delivery to the buyer under contractual provisions like those before us.

The f.o.b. destination requirement for physical delivery to destination must be a post-performance, post-payment obligation in the nature of a warranty. Damages for breach of that obligation may appropriately be determined under UCC § 2-714, "Buyer's Damages for Breach in Regard to Accepted Goods," as discussed in 1 above and in C below. But a loss in transit by the common carrier and consequent failure to make physical delivery to destination does not constitute a failure to perform the contract which forfeits the contract price already earned.

C. UCC § 2-714 Damages for Loss and Nondelivery of Accepted Goods Should Be Measured by Value, Not Price, of Lost Items

As I have shown in A and B above, if it is the UCC rather than the Termination for Convenience clause that is to provide the measure of appellant's liability for the lost shipment, the applicable provision is § 2-714, "Buyer's Damages for Breach in Regard to Accepted Goods," not § 2-711, "Buyer's Remedies in General; Buyer's Security Interest in Rejected Goods."

[15] See also additional references under the same Comptroller General case number in note 12 supra.

Digitized by Google

As noted in A above, § 2-714(1) entitles the buyer to "recover as damages ... the loss resulting in the ordinary course of events from the seller's breach as determined in any manner which is reasonable" for any nonconformity of tender of accepted items, including nondelivery to destination. This phraseology focuses not on the contract price but on the loss suffered by the buyer. In this case, this means to me the value of the lost items, because upon acceptance at origin they had become Government property, and upon shipment performance was complete and the items were then fully paid for. The most logical and sensible way to compensate the Government for the total loss of the Government-owned property in transit is to hold appellant liable for, and the Government entitled to recover, the value of the lost property. This would put the Government in the same position it would have been in had the contract been fully performed, *i.e.*, had the items been delivered to destination. This is a classic formulation of the purpose of breach damages at common law. *Miller v. Robertson*, 266 U.S. 243, 257 (1924); 11 Williston on Contracts § 1338, at 198 (3d ed. 1968); Restatement of Contracts (Second) § 344(a). It is also the standard which the UCC itself establishes for the administration of UCC remedies:

> § 1-106. Remedies to Be Liberally Administered
>
> (1) The remedies provided by this Act shall be liberally administered to the end that the aggrieved party may be put in as good a position as if the other party had fully performed ....

The value of the lost items could, of course, be the same as the price. Indeed, the contract price would generally be a reasonable way to measure value. As I observed in discussing "fair value" under the Termination for Convenience clause in II(D) above, I would normally consider the contract price to be persuasive, *prima facie* evidence of fair value. But not in this case. The items in the lost shipment were worthless except as scrap, not because of any fault of appellant but because of an erroneous Government manufacturing drawing. It would be unconscionable, would give the Government a windfall, and would impose upon appellant a liability totally out of proportion to the true loss for the Government to recoup the entire contract price for the lost shipment of accepted items and thus escape the consequences of its own faulty drawing, because of the happenstance of a loss in transit.

I observe also that using value rather than price as the measure of damages under UCC § 2-714 for nondelivery of accepted items is the practical approach in light of insurance considerations. Official Comment 3 to UCC § 2-509 indicates that the theory underlying the UCC's allocation of risk of loss is based on the practical consideration of which party (as between the buyer and a merchant seller) would be expected to insure the goods. It seems equally appropriate to take into account insurance considerations with respect to the measure of damages for lost accepted goods. In the present record we have no particulars concerning appellant's marine insurance, but it is most likely casualty insurance under which the insurer would pay only for the value of lost property.

Thus I would conclude that appellant's risk of loss under the Responsibility for Supplies and F.O.B. Destination clauses is to be measured under UCC § 2-714 (if not under the termination clause) by the value of the lost property, which was the $400.00 scrap value under the facts of this case.

D. *Authorities Relied Upon by Majority Are Inapposite*

The majority cites *Electro Optics, Inc.*, ASBCA No. 22017, 78-1 BCA ¶ 12,996, *aff'd on reconsideration*, 78-2 BCA ¶ 13,251, for the proposition that the Government is entitled to recover the purchase price of goods accepted at origin, shipped f.o.b. destination, paid for, and then lost in transit.

Electro Optics did not so hold.

That case held that any right the Government may have had to revoke acceptance and recover the price under the UCC or under the contract for nondelivery of accepted items was lost by failure to give timely notice of nonreceipt. It was unnecessary to the decision to address whether there was such a right under the UCC or under the contract, so the suggestion that the Government upon timely notice could have revoked acceptance and recovered the price paid was dictum.

Furthermore, while reading *Electro Optics* as permitting recovery of the price of lost items under UCC § 2-608, the majority does not mention that that provision deals with *revocation of acceptance*. Even though relying on *Electro Optics*, the majority is *not* finding in the present case that the Government could have revoked or did revoke acceptance, and the fact is the Government never did purport to do so and has not even argued that it did.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Since the majority is *not* finding a revocation of acceptance in the present case, then its reliance on *Electro Optics* and that case's reference to UCC § 2-608 is misplaced.

I emphasize again, as I have said in A above, that the Government could not revoke acceptance in this case. The reasons, more fully explained in footnote 11, are: (1) UCC § 2-608 involves nonconformity of items, which does not include nondelivery due to loss of accepted items in transit; (2) the nondelivery did not "substantially impair [the] value" of the lost items as required under § 2-608 because they were already worthless except as scrap; (3) the Government's notice to appellant of nonreceipt did not meet the § 2-608 requirement for explicit notice of revocation of acceptance; and (4) if nondelivery is a "nonconformity" under § 2-608, then so is it under the Inspection clause, but nondelivery is not a listed exception to the finality of acceptance under that clause, which as an express contract provision overrides the UCC.

Finally, to the extent *Electro Optics* on reconsideration considered the risk of loss clause rather than UCC § 2-608, it did not present the question or discuss how the quantum of the Government's recovery (if the Government had recovered) for a loss in transit might have been affected by a discrepancy between value and price of the lost item, which is the issue before us here.

Apart from *Electro Optics*, the majority states that "[r]ecovery of the purchase price is distinct from recovery of damages," citing an Arkansas decision. I agree with the statement and with the holding of the cited case that a buyer who justifiably and timely revoked acceptance was entitled under UCC § 2-711 to recover the price paid rather than damages for breach of warranty. I just don't see what either one has to do with the present case. This case involves not nonconforming goods as to which the buyer timely and justifiably revoked acceptance, but accepted conforming goods which were lost in transit and as to which revocation of acceptance was not available and was never even attempted.

The other authorities cited by the majority—the *R&L Diesel* case, UCC § 2-711, Williston on Sales, and the White and Summers Hornbook on the UCC—I have discussed in the course of this opinion and have shown do not support the majority's result.

IV. *Interest Under Contract Disputes Act*

I would also hold appellant entitled to interest under section 12 of the Contract Disputes Act, 41 U.S.C. § 611, on the $42,205.30 I would allow on its claim, starting on 13 January 1992, the date the contracting officer received appellant's original, uncertified lost shipment claim.

If appellant's claim was required to be certified, then interest would run only from the date the contracting officer received appellant's resubmitted certified claim. *Fidelity Construction Co. v. United States* [30 CCF ¶ 70,827] 700 F.2d 1379, 1384-85 (Fed. Cir.), *cert. denied,* 464 U.S. 826 (1983).[16] The Government argues that appellant cannot avoid the consequences of failure to certify by splitting off its lost shipment claim under $50,000 from a larger unitary termination claim over $50,000 (an issue mooted in this case with respect to jurisdiction but reserved with respect to the starting date for interest). *Placeway Construction Corp. v. United States,* 920 F.2d 903 (Fed. Cir. 1990); *Giuliani Contracting Co.,* ASBCA No. 41435, 91-2 BCA ¶ 23,774.

Under the *Placeway Construction* standard of "common or related set of operative facts," I would hold that appellant's lost shipment claim is truly an independent claim, not a fragmented part of its larger termination claim. The facts regarding the lost shipment and the Government's offset to recover the price for it are on their face different from the facts regarding costs of performance, delay, and termination settlement relating to other items. Contrary to the Government's assertion, appellant's lost shipment claim was not part of appellant's termination settlement proposal. Any connection between the two claims is purely incidental.

V. *Attorney's Fees and Expenses*

Appellant in its complaint requested attorney's fees and expenses. If appellant were a

[16] [Section IV of Discussion in Dissenting Opinion] The rule on the starting date for interest has been changed by statute, § 907(a)(3) of the Federal Courts Administration Act of 1992, Pub. L. No. 102-572, enacted 29 Oct. 1992, but only for periods of interest from 29 October 1992 onward with respect to claims found on or after 29 October 1992 to have been defectively certified. A failure to certify may not qualify as a "defective" certification, *see Eurostyle, Inc.,* ASBCA No. 45934, 94-1 BCA ¶ 26,458 (20 October 1993), but in any event the statutory change would not apply to this case because appellant resubmitted its claim with a certification on 27 April 1992, before the effective date of the statutory change.

Digitized by Google

prevailing party in these appeals, we would need to address that request.

I would point out the following.

First, such fees and expenses are generally not recoverable as a direct award before the Board except pursuant to the Equal Access to Justice Act (EAJA), 5 U.S.C. § 504. *Blue Cross Association and Blue Shield Association*, ASBCA No. 25778, 89-2 BCA ¶ 21,840, at 109,896-900 (& authorities cited).

Second, an EAJA request filed before the appellant has prevailed on a substantive portion of the merits is premature. *Hero, Inc.*, ASBCA Nos. 43258, 43259, 92-3 BCA ¶ 25,048; *Devine v. Sutermeister*, 733 F.2d 892, 898 (Fed. Cir. 1984).

Third, if it had prevailed, appellant could submit an EAJA application not later than 30 days after the Board's disposition of the appeals became final (assuming appellant is eligible with respect to maximum net worth and number of employees), in accordance with the Board's "Interim Procedures for Claims Under Section 504 of Title 5 of the United States Code (The Equal Access to Justice Act)." [17]

CONCLUSION

For the reasons stated in this dissent, I would hold appellant entitled to recover from the Government the withheld amount of $42,605.30 less the $400.00 scrap value of the lost shipment, or a net of $42,205.30, plus interest under section 12 of the Contract Disputes Act, 41 U.S.C. § 611, from 13 January 1992 (the date the contracting officer received the claim) until the date of payment.

[¶ 26,583] Koehlke Components, Inc.

ASBCA No. 44354, December 13, 1993. Contract No. DLA900-91-D-5119/0001.

Procedure, Boards—Reconsideration—Arguments Already Considered.—A motion for reconsideration arguing that the board should consider whether the contractor was justified in halting production while awaiting government approval of its request for a change in inspection point was denied because the board had already held that there was no nexus between a government inspection delay and the contractor's failure to produce units for inspection.

For the appellant: Shulman & Hall, Dayton, Ohio, by Thomas G. Kramer. For the government: Michael J. Kraft, Trial Attorney, Defense Electronics Supply Center (DLA), Dayton, Ohio.

Before LUSSIER, RUBERRY, and THOMAS, Administrative Judges.

Reconsideration of 94-1 BCA ¶ 26,374 denied.

LUSSIER, Administrative Judge: Appellant has moved for reconsideration of our decision of 22 September 1993 holding that the Government was bound to accept 36 units but that no contract came into being as to 64 undelivered units. Familiarity with our decision is assumed. In its motion for reconsideration the appellant asks the Board to determine whether or not appellant was justified in "halting production" while awaiting Government approval of its request for a change in inspection point. Our decision was clear in concluding that the record did not establish a nexus between the inspection de-

[17] [Section V of Discussion in Dissenting Opinion] I would further observe that a successful litigant against the United States may not recover attorney's fees under the Act if "the position of the United States was substantially justified." *Gava v. United States*, 699 F.2d 1367, 1370 (Fed. Cir. 1983); *Department of Health, State of Cal. v. Secretary of HHS*, 823 F.2d 323, 328 (9th Cir. 1987).

Without deciding at this point whether the Government's position in the present case was "substantially justified," I would note that several important factors tending to show that the Government's position was substantially justified are: (1) that the issue, as in the present case, is "one of first impression," *Gava*, 699 F.2d at 1371; (2) that the case, as here, "presented novel and difficult issues," *Department of Health*, 823 F.2d at 328; and (3) that the case, as here, presents "peculiar circumstances and a "novel situation [where] there was no clear contrary precedent that would permit us to characterize respondent's position as tenuous or unfounded," *Facilities Engineering & Maintenance Corp.*, ASBCA No. 39405, 93-1 BCA ¶ 25,221, at 125,631 (& authorities cited).

Digitized by Google

lay and the failure to produce the 64 units for inspection. We specifically held that:

> ... Inspection took place in Tijuana on 16 December and this permitted shipment from appellant's Ohio facility on 27 December. However, there is no evidence to show why only 36 units were inspected. We have a nexus between the issuance of the modification and the date of the Tijuana inspection, but we have no nexus between the issuance of the modification and the limited number of units inspected on 16 December. In this respect we are influenced by the twin facts that appellant never asked for an extension in the delivery date prior to 30 December 1991 and that it has not established, by evidence we would assume would have been available to it, that it had units, in addition to the 36 units it tendered, ready for inspection on 16 December 1991, which the Government refused to inspect.

Appellant contends that since this was a Rule 11 (record submission) no prejudice would result to either party to reopen the record and take evidence on the point. This misses the point. The time to present evidence and argument is prior to the decision, not after. It has not been shown that evidence was not reasonably available at the time of the submission of the appeal for decision.

The motion for reconsideration is denied.

[¶ 26,584] Technocratica

ASBCA Nos. 44347, 44434, 44444, 45360, 45390, 46007, December 22, 1993. Contract No. F63197-91-C-0001.

Payments, Prompt—Interest—Delayed Progress Payments.—A contractor was entitled to interest under the Prompt Payment Act because the government did not pay the contractor within 14 days of receipt of a proper invoice for progress payments. The government was also required to pay an additional penalty of 100 percent of the interest penalty because it did not timely pay the interest owed to the contractor when it paid the principal. Interest on the sum of interest penalty and additional penalty was compounded under the PPA until the date of receipt of the claim, and interest after that date ran under the Contract Disputes Act until the claim was paid.

Payments, Prompt—Interest—Defective Invoice Not Returned.—A contractor was entitled to interest from the 14th day after the date it submitted an invoice to the date of payment, even though the invoice was defective, because the government never returned the invoice with any notice of defects. The invoice did not contain any substantiation of the amount requested. However, if the government fails to notify a contractor within 7 days that its invoice is defective, the Prompt Payment Act provides that the invoice is deemed a proper invoice for purposes of payment and any interest penalty. The government also had to pay an additional penalty of 100 percent of the interest penalty because it failed to pay the interest owed the contractor when it paid the principal or within 10 days thereafter. Interest on the sum of interest penalty and additional penalty was compounded under the PPA until receipt of a claim. After the claim was filed, interest ran under the Contract Disputes Act until the date on which the government made its interest payment.

Payments, Prompt—Construction Contracts—Retainages.—The government was entitled to withhold 10 percent retainage under a construction contract because the contract gave the government the right to take retainage when it viewed job progress as unsatisfactory. A contracting officer retains considerable discretion in deciding whether to take retainage, and in what amounts, up to the limit prescribed by the contract. To prevail, the contractor here had to show that the contracting officer abused his discretion. Even if the cause of the progress failure is a matter of dispute, it is not an abuse of discretion for the government to consider the lack of progress as redounding against the contractor for progress payment purposes.

Payments, Prompt—Interest—Defective Invoice Not Corrected.—A contractor was not entitled to Prompt Payment Act interest on a defective invoice, because instead of correcting the invoice, the contractor filed a claim. Once the government returns a defective invoice to a contractor for correction, the contractor basically has three options—correct and

Digitized by Google

return the invoice, correct and return the invoice under protest, or leave the invoice uncorrected and file a Contract Disputes Act claim asserting wrongful government conduct. The latter route is risky, for if the board holds, as it did here, that the government was correct in rejecting the defective invoice, the contractor loses all rights to interest during the interim period and must then file a proper invoice with the contracting officer if it wishes to get paid.

For the appellant: Harry Cossyphas, Owner. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Robert C. Allen, Trial Attorney.

Before DELMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

DELMAN, Administrative Judge: Under ASBCA Nos. 44347, 44434, 44444, 45360 and 45390, appellant, Technocratica, seeks interest under the Prompt Payment Act (PPA), 31 U.S.C § 3901 *et seq.*, for the Government's alleged failure to timely pay progress payments under Invoice Nos. 5 through 9 of its construction contract with the Department of Air Force.

During the pendency of these appeals, the Government made several interest payments to appellant, but now claims that it overpaid. Under ASBCA No. 46007, the Government seeks to recover these overpayments, including an overpayment of interest allegedly made under an earlier invoice.[1]

Appellant has filed other appeals related to this contract, but this opinion will only address the appeals related to prompt payment. Specifically, we shall deal with the timeliness of any principal payments, any interest due as a result, and the extent of any interest overpayments made by the Government.[2] Our jurisdiction lies under the Contract Disputes Act, 41 U.S.C. § 601 *et seq.*

I. *The Contractor's Claims for Prompt Payment*

FINDINGS OF FACT

1. In February 1991, the parties entered into a fixed price construction contract for the relocation of several facilities from Hellenikon Air Base, Greece, to a base in Araxos, Greece. Insofar as pertinent, the contract contained the following standard clauses: FAR 52.232-27, Prompt Payment for Construction Contracts (APR 1989); FAR 52.232-5, Payments Under Fixed-Price Construction Contracts (APR 1989); FAR 52.233-1, Disputes (APR 1984).

ASBCA No. 45360—Invoice No. 5

2. The parties dispute the Government's date of receipt of appellant's request for progress payment, Invoice No. 5. At a meeting of the parties on 29 July 1991, the contracting office representative acknowledged that appellant had invoiced in July and that it was awaiting a Government progress report to process appellant's payment (ASBCA No. 44134, R4, tab 8).[3] No defects in the invoice were noted. The Government has conceded that this discussion related to Invoice No. 5 (see Attachment G to appellant's complaint). Appellant introduced a document from the Greek postal service to the effect that Invoice No. 5 was received by the Government on 24 July 1991. (See Attachment B to appellant's complaint)

3. We find that the Government received a proper invoice for payment purposes on 24 July 1991.

4. Appellant made inquiries about payment under Invoice No. 5 but received no information from the Government. By letter dated 18 October 1991, the Government advised appellant that it had never received Invoice No. 5. Appellant resubmitted a copy of the invoice and a contract progress report under protest.

5. The Government did not dispute that appellant was due DR 1,365,000[4] under Invoice No. 5. The Government cut a check in this amount, dated 2 December 1991 (R4, tab 7), but the check did not contain any

[1] In *Technocratica*, ASBCA No. 44059 (7 July 1992; unpublished, Board Rule 12.2) the Board held that appellant was entitled to prompt payment interest due to the Government's failure to timely pay Invoice No. 4, and remanded the computation of interest to the contracting officer. It is the payment of interest made pursuant to this remand that is part of the Government's overpayment action.

[2] Appellant has been paid an amount of principal under each invoice except under Invoice No. 9. Appellant has not demonstrated any entitlement to a recovery of principal beyond that already paid. The Government's retainage under Invoice No. 8 is discussed, *infra*, under ASBCA No. 44434.

[3] At the hearing on appellant's 13 appeals, the Board ruled that evidence under any one appeal would be considered under all appeals.

[4] At all times relevant, the Greek drachma (DR) had the equivalent value of slightly over $.004.

©1994, Commerce Clearing House, Inc.

Digitized by Google

interest payment. Appellant received this check.

6. Earlier, by letter dated 30 September 1991 appellant had filed a claim for payment for Invoice No. 5 plus interest, interest penalties and other expenses (R4, tab 4). It later withdrew this claim but reasserted it by letter dated 25 May 1992, received by the Government on 2 June 1992 (R4, tab 10). No contracting officer's decision was issued. This appeal followed.

DECISION

We have found that the Government received a proper invoice for payment purposes on 24 July 1991. Under the PPA, the Government was required to pay appellant within 14 days, or by 7 August 1991, to avoid the payment of interest. 31 U.S.C. § 3903(a)(6)(A)(i) [5]. See also the "prompt payment" clause in the contract, FAR 52.232-27(a)(1)(i)(A). The Government did not pay appellant by this date. Under the PPA, interest runs from the date after the required payment date through the date on which payment is made. 31 U.S.C. § 3902(b). The payment date is deemed the date of the check. 31 U.S.C. § 3901(a)(5). The check was dated 2 December 1991. Hence, appellant is entitled to interest on principal from 8 August through 2 December 1991 (117 days).

The Government must also pay an "additional penalty" since it failed to timely pay the interest owed to appellant when it paid the principal, or within ten days thereafter. 31 U.S.C. § 3902(c)(3).[6] The additional penalty is 100 percent of the interest penalty, but may not be less than $25. See OMB Circular No. A-125, 54 FR 52700 (December 21, 1989), which implements the Act, paras. 8(b), (c). Interest on the sum of interest penalty and additional penalty shall compound under the PPA, per 31 U.S.C. § 3902(e), until 2 June 1992, the date of receipt of the claim, and interest shall then run under the CDA until paid.

The appeal is sustained to the extent indicated.

ASBCA No. 44444—Invoice No. 6

FINDINGS OF FACT

7. The parties also dispute the Government's date of receipt of Invoice No. 6. On 7 October 1991, appellant executed its request for progress payment, Invoice No. 6. According to appellant, this request was mailed and received by the Government on 10 October 1991. According to the Government, the invoice was received on 30 October 1991, and was so date stamped. Appellant did not address its request to the designated payment office identified in the contract (tr. 1/21). We find that appellant's invoice was received by the appropriate Government office on 30 October 1991, the date it was stamped.

8. Appellant's invoice was not accompanied by any documentation to substantiate the amount requested. The Government had seven days from receipt to return the invoice and to advise appellant of any defects. 31 U.S.C. § 3903(a)(7)(B). See also the "prompt payment" contract clause in the contract, FAR 52.232-27(a)(2). The Government did not return the invoice, nor advise appellant of any defects.

9. On 19 November 1991, the contracting officer received a contract progress report from appellant which purported to substantiate the amount invoiced.

10. By letter dated 24 October 1991, appellant sought interest and additional penalty for the Government's failure to pay Invoice No. 6, and also requested a decision under the *Disputes* clause. This "claim" was premature since the Government received the invoice on 30 October 1991. However, as of 13 December 1991, appellant still had not received payment. By letter to the Government of that date, deemed received on 20 December 1991, appellant reiterated its concerns and sought a commitment as to when the Government would decide the issue of prompt payment. We read appellant's letters of 24 October and 13 December together, and find that appellant's claim was filed as of 13 December, and received by the contracting officer on 20 December. The Government advised that a decision would issue by 30 December 1991 (R4, tab 6).

11. The Government did not dispute appellant's invoice, in the amount of DR 1,540,680. A check was cut, dated 5 Decem-

[5] We have held that the PPA applies to foreign vendors for work performed outside the United States. *Held and Francke Bauaktiengesellschaft mbH*, ASBCA Nos. 42463, 42464, 92-1 BCA ¶ 24,712.

[6] The Government has conceded that it owes additional penalty on all invoices, except for Invoice No. 9 under ASBCA No. 45390 (tr. 2/102).

Digitized by Google

ber 1991, which included this amount for Invoice No. 6. No interest was included in the payment. The check was mailed, postmarked 24 December 1991, and received by appellant on 10 January 1992.

12. On 8 January 1992, the contracting officer issued a decision, denying appellant's claim (R4, tab 7). This appeal followed. Appellant elected an expedited review of its appeal (Board Rule 12.2).[7]

13. On 19 May 1992, the Government cut a check for the payment of interest to appellant under Invoice No. 6 in the amount of DR 683,944. Appellant did not present any evidence at trial disputing the receipt of this money. The Government's payment vouchers are of record (supp. R4, tabs C, D). The instruction "Hold in Cage" on one of the vouchers is deleted and initialed. We find that appellant received this interest payment.

DECISION

Invoice No. 6, as originally filed, did not contain any substantiation of the amount requested, and was defective. 31 U.S.C. § 3903(b)(1)(A). However, the PPA expressly requires the Government to notify a contractor of any defects in the invoice which would preclude payment. House Report No. 97-461, which accompanied the original Act (reprinted in 2 U.S. Code Congressional and Administrative News 111 (1982)), explained this requirement as follows at 119:

> ... By including this provision, the Committee is placing a burden on the Government to advise a contractor when it cannot pay an invoive [sic] because of some impropriety or defect in the invoice. The Committee intends thereby to eliminate those situations in which vendors have remained unpaid for inordinate amounts of time with no knowledge of the reasons for the Government's failure to remit.

Through the PPA Amendments of 1988, Pub. Law No. 100-496, 102 Stat. 2463, the Congress sought to strengthen this requirement. While the original Act required the Government to merely notify a contractor of defects within 15 days of receipt of invoice, the Act, as amended, requires the Government to return the contractor's invoice with an explanation of defects, and to do so within seven days of receipt. 31 U.S.C. § 3903(a)(7)(B).

It is also clear that the Congress intended to penalize the Government if it failed to meet the statutory notification requirement. According to House Report No. 100-784, reprinted at 5 U.S. Code Congressional and Administrative News 3036, 3058 (1988), if the agency was late in returning the invoice, that is, it took more than seven days to do so, "the number of days available for an agency to make a timely payment after receipt of a corrected invoice would be reduced by the number of days, in excess of 7, that the agency took before returning the defective notice to the vendor." See 31 U.S.C. § 3903(a)(7)(C).

In our case, however, the Government was not merely late in returning the invoice; it did not return the invoice at all. It appears that the Congress contemplated an appropriate sanction for this as well. House Report No. 97-461, which accompanied the original Act, *supra* at 119, provided as follows:

> If the Government receives a defective notice but fails to notify the vendor of such within the [prescribed] period, then *such interest penalties as may become appropriate if that invoice remains unpaid will accrue as if the Government had received a proper invoice.* Failure by the Government to so notify ... does not preclude the Government's right to request and receive a proper invoice prior to paying the vendor. [Emphasis added]

Simply stated, where the Government fails to meet its statutory responsibilities of notification, the defective invoice is deemed a "proper invoice" for purposes of payment and any interest penalty.

Because the Government never returned Invoice No. 6 to appellant with notice of any defects, appellant's invoice, received on 30 October 1991, is deemed a proper invoice. The Government had until 13 November 1991 to pay the invoice without interest penalty. It did not pay appellant by this date. Appellant is entitled to interest on the principal from 14 November 1991 through the date of payment, 5 December 1991 (22 days). The Government must also pay an additional penalty since it failed to timely pay the interest owed to appellant when it paid the principal, or within ten days thereafter. 31 U.S.C. § 3902(c)(3). As stated ear-

[7] Appellant sought to have all its appeals, both Rule 12 (ASBCA Nos. 44347, 44434, 44444) and non-Rule 12 (ASBCA Nos. 45360, 45390, 46007) heard in Greece, and heard consecutively. Because appellant agreed to hold these hearings well beyond the time set for Rule 12 decisions, appellant effectively waived expedited review. We treat all appeals as if processed under regular procedures.

Digitized by Google

lier, the additional penalty is 100 percent of the interest penalty, but may not be less than $25. OMB Circular No. A-125, paras. 8(b), (c). Interest on the sum of interest penalty and additional penalty shall compound under the PPA until 20 December 1991, the purported date of receipt of the claim. Interest shall then run under the CDA until 19 May 1992, the date on which the Government made its interest payment.

The appeal is sustained to the extent indicated.

ASBCA No. 44347—Invoice No. 7

FINDINGS OF FACT

14. On 7 November 1991, appellant handdelivered to the Government a request for progress payment, Invoice No. 7. This invoice was accompanied by a contract progress report for the period 28 October through 4 November. We find the Government received a proper invoice for payment purposes on 7 November 1991.

15. The Government has not disputed that appellant is entitled to DR 333,615 under this invoice. It cut a check for this amount, dated 5 December 1991, which was received by appellant. No interest was included with the payment. As of 31 December 1991, however, appellant had not received the check, and by letter of that date it submitted a claim for principal, interest and penalty. The claim was received by the Government on 14 January 1992.

16. By contracting officer's decision dated 20 April 1992, the Government denied appellant's claim (R4, tab 8). This appeal followed.

DECISION

The Government received a proper invoice from appellant on 7 November 1991. The Government was obligated to pay appellant the undisputed amount of DR 333,615 by 21 November 1991 to avoid the payment of interest. It did not do so. The Government's check was dated 5 December. Appellant is entitled to interest penalty on the principal for 14 days (22 November through 5 December) due to the late payment of this invoice. The Government must also pay an additional penalty since it failed to timely pay the interest owed to appellant when it paid the principal, or within ten days thereafter. 31 U.S.C. § 3902(c)(3). The additional penalty is 100 percent of the interest penalty, but may not be less than $25. OMB Circular No. A-125, paras. 8(b), (c). Interest on the sum of interest penalty and additional penalty shall compound under the PPA until 14 January 1992, the date of receipt of the claim. Interest shall then run under the CDA until the date of payment.

The appeal is sustained to the extent indicated.

ASBCA No. 44434—Invoice No. 8

FINDINGS OF FACT

17. On 21 December 1991, appellant executed a request for progress payment, Invoice No. 8. This request was received by the Government on 30 December 1991. The invoice did not include any data substantiating the amount requested.

18. As far as this record shows, the Government failed to return this invoice within seven days after receipt of the invoice.

19. Since appellant had received neither notice nor payment from the Government by 1 February 1992, it filed a claim for principal, interest and penalty as of that date, and also requested a contracting officer's decision (R4, tab 3). For purposes of interest computation, we deem the claim received by the contracting officer on 10 February 1992.

20. On 6 February 1992, the Government received a contract progress report from appellant, which purported to support the amounts sought in Invoice No. 8.

21. On 21 February 1992, the Government cut a check for Invoice No. 8 in the amount of DR 240,203, without interest payment. This payment was received by appellant on 19 March 1992. The Government withheld 10 percent from this invoice as retainage for lack of job progress, pursuant to the "payments" clause of the contract, FAR 52.232-5(e).

22. The Government failed to issue a contracting officer's decision on appellant's claim. This appeal followed.

23. On 19 May 1992, the Government cut a check for the payment of interest under Invoice No. 8 in the amount of DR 56,133. Appellant did not present any evidence at trial disputing the receipt of this money. The Government payment vouchers are of record (supp. R4, tabs D, E). The instruction "Hold in Cage" on one of the vouchers is deleted and initialed. We find that appellant received this payment.

24. Appellant also claims that the Government wrongfully withheld 10 percent retainage from Invoice No. 8. As far as the record shows, this was the only invoice from which the Government took retainage. According to appellant, since the Government

Digitized by Google

ultimately extended the contract completion date, it could not be responsible for any lack of progress. The work under Invoice No. 8 was performed in December, 1991, during which time the parties were in dispute over the slab that appellant poured for FAC 361. As a result, the work on this facility slowed. As far as we can tell, the Government did not extend the contract period because of this dispute.

DECISION

The Government failed to return appellant's invoice with an explanation of any defects. For reasons stated under ASBCA No. 44444, we deem the invoice received on 30 December 1991 to be a proper invoice for purposes of payment. The Government had until 13 January 1992 to pay appellant without paying interest. Appellant was paid with a check dated 21 February 1992. Appellant is entitled to 39 days of interest on the amount of principal paid (14 January through 21 February). The Government must also pay an additional penalty since it failed to timely pay the interest owed to appellant when it paid the principal, or within ten days thereafter. 31 U.S.C. § 3902(c)(3). The additional penalty is 100 percent of the interest penalty, but may not be less than $25. OMB Circular No. A-125, paras. 8(b), (c). Interest on the sum of interest penalty and additional penalty shall run under the PPA until receipt of appellant's claim, 10 February 1992. Interest shall then run under the CDA until the date on which the Government paid interest, 19 May 1992.

As for the retainage held by the Government, the contract gives the Government the right to take retainage when it views job progress as unsatisfactory. FAR 52.232-5(e). The contracting officer retains considerable discretion in deciding whether to take retainage and in what amounts, up to the limit prescribed by the contract. To prevail, appellant must show that the contracting officer abused this discretion. Even if the cause of the progress failure is a matter of dispute, we have held that it is not an abuse of discretion for the Government to consider the lack of progress as redounding against the contractor for progress payment purposes. *Fortec Constructors*, ASBCA No. 27480, 83-2 BCA ¶ 16,727. Appellant has failed to show an abuse of discretion on this record. The Government was within its contractual right to withhold 10 percent from Invoice No. 8.

The appeal is sustained to the extent indicated.

ASBCA No. 45390—Invoice No. 9

FINDINGS OF FACT

25. On or about 27 July 1992, appellant executed a request for progress payment, Invoice No. 9. Along with this request, appellant attached a contract progress report for the period covering 13 July to 19 July 1992. In this report, appellant also demanded payment for 25 percent of work performed under contract modification P0004.[8] The Government received these documents on 3 August 1992.

26. By letter to appellant dated 4 August 1992, the Government returned Invoice No. 9 as defective. According to the Government, appellant erroneously calculated the amount due because, among other things, it failed to account for the previous retainage taken under Invoice No. 8.

27. We find that Invoice No. 9 provided a line item for "previous retainage", and that appellant failed to account for said retainage in computing amounts owed under Invoice No. 9.

28. Appellant did not revise its payment request, nor did it resubmit it to the contracting officer. Instead, appellant filed a claim. By letter to the contracting officer dated 31 August 1992, appellant sought payment of Invoice No. 9 including payment under Modification P0004, plus interest, and "financing" costs (R4, tab 5).

29. The Government did not issue a contracting officer's decision on this claim. This appeal followed.

DECISION

Invoice No. 9 was defective. Appellant failed to account for previous retainage in its progress payment request. It was the Government's duty to bring this error to appellant's attention in a timely fashion and it did so. While we hear appellant to argue that the contracting officer could have corrected the math on the invoice, neither the PPA, OMB Circular No. A-125, nor the contract requires this. The Act requires that the Government return the invoice so that the contractor may correct it.

[8] Appellant also made a demand for payment under Modification P0003, but it was later dropped in its claim letter of 31 August 1992.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Once the Government returns an invoice to a contractor for correction, the contractor basically has three options—correct and return the invoice; correct and return the invoice under protest; leave the invoice uncorrected and file a CDA claim asserting wrongful Government conduct. The latter route is risky, for if the Board holds that the Government was correct in rejecting the invoice, the contractor loses all right to interest during the interim period, and must then file a proper invoice with the contracting officer if it wishes to get paid.

Here, appellant took the risk of filing a claim without correcting its invoice. We have concluded that Invoice No. 9 was defective and properly returned by the Government. Hence, appellant must now submit a proper invoice if it wishes to be paid under Invoice No. 9.

The appeal is denied.

II. *The Government's Claim for Overpayment*

ASBCA No. 46007

FINDINGS OF FACT

30. By contracting officer's decision dated 8 April 1993, the Government calculated interest due appellant for late payment of principal under Invoice Nos. 4 through 8, identified the amount of interest already paid by the Government, and demanded the difference from appellant, in the amount of DR 886,041 which it claimed it had overpaid (exh. G-8). This appeal followed.

31. In the Board's unpublished decision in *Technocratica, supra, note* 1, the Board held that the Government was accountable for the late payment of Invoice No. 4, and that appellant was owed prompt payment interest for 14 days, plus additional penalty, plus interest. The Board remanded quantum to the parties.

32. On remand, the Government calculated the amount of interest due as DR 6,244, and the amount due for additional penalty as 100 percent of this amount, or an additional DR 6,244. However, the Government failed to consider that this interest award also accrued interest, to be compounded every 30 days until receipt of the CDA claim (here 16 October 1991). See 31 U.S.C. § 3902(e). OMB Circular No. A-125, para. 7(a)(4). We find that this corrected sum constitutes the interest award due appellant under Invoice No. 4, plus interest under the CDA from 16 October 1991 until the date the Government paid the interest, 9 September 1992 (see below).

33. On 9 September 1992, the Government cut a check for the payment of interest under Invoice No. 4 in the amount of DR 185,090. Appellant did not present any evidence disputing the receipt of this money. The Government payment vouchers are of record (supp. R4, tabs A, B). We find that appellant received this payment. We also find that it exceeds the interest award due appellant under Invoice No. 4.

34. On 19 May 1992, the Government also paid appellant interest in the amount of DR 683,944 related to Invoice No. 6 (finding 13), and in the amount of DR 56,133 related to Invoice No. 8 (finding 23), for a total of DR 740,077. The interest due appellant under these invoices is set out under ASBCA Nos. 44444 and 44434 above. We find that the amount paid by the Government under Invoice Nos. 6 and 8 exceeds the interest award due appellant under these invoices.

DECISION

There is no question that the Government is entitled to recover payments erroneously made to a contractor. *Affiliated Building Maintenance*, ASBCA No. 28436, 85-1 BCA ¶ 17,863. *Foreman Industries, Inc.*, ASBCA No. 23948, 80-2 BCA ¶ 14,501. We conclude that the Government has overpaid appellant interest under Invoice Nos. 4, 6 and 8, and is entitled to recover the difference between the amount due appellant, and the amount actually paid to appellant, in accordance with this opinion. We remand to the contracting officer to determine quantum.

As for Invoice Nos. 5 and 7 under ASBCA Nos. 45360 and 44347 respectively, while we have concluded that appellant is entitled to interest for the late payment of principal on these invoices, the Government may offset the amounts due against its claim for overpayment. It may also apply any retainage held under the contract towards its claim. See *Foreman Industries Inc., supra*. We remand to the contracting officer to determine quantum.

CONCLUSION

ASBCA No. 45390 is denied. All other appeals are sustained to the extent indicated and are remanded to the contracting officer to determine quantum.

[¶ 26,585] **Kimmins Contracting Corporation**

ASBCA Nos. 44268, 44642, 44643, December 23, 1993. Contract No. F09650-89-C-0081.

Interpretation of Contracts—Contract as a Whole—Rectifier Coating.—Under a contract to renovate a military plating shop, a contractor's position that the specifications permitted it to use epoxy coating for rectifier enclosures rather than the polyvinyl chloride coated rectifiers insisted upon by the government was unreasonable because the contractor's position ignored relevant provisions and conflicted with the rule that a contract should be construed as a whole to give effect to all provisions. The contractor contended that the phrase "exposed electrical iron work" used in the electrical specifications included the rectifier enclosures and that it was justified in relying on the option provided in this specification of using either the polyvinyl chloride coating or an epoxy coating. This specification, however, stated that it was applicable except as specified in other individual sections, and the rectifier specification specifically stated that all rectifier enclosures would be polyvinyl chloride coated.

Interpretation of Contracts—Interpretation During Performance—Manifested Intent.—Under a contract to repair and renovate a plating shop, the contractor's contention that it reasonably viewed a mechanical room as an exterior surface requiring an enamel coating rather than a coat of epoxy was rejected because the contractor's action during the course of performance clearly manifested its understanding that epoxy finish was required on the steel surfaces within the mechanical room. The specification did not state whether the mechanical room was considered an interior or exterior surface, and the contractor did not ask whether the mechanical room steel was interior or exterior. However, the contractor's field painting schedule proposed epoxy primer and finish coats for surfaces within the mechanical building. Further, the contractor asked the government whether enamel was acceptable instead of epoxy after it received enamel-painted steel items for the mechanical room.

Acceptance of Performance—Rejection of Nonconforming Items—Economic Waste.—Under a contract to repair a plating shop, the government's direction that a contractor remove enamel paint from coil rack steel in a mechanical room and apply a primer or epoxy coating did not amount to economic waste, because the contractor failed to demonstrate that the nonconforming enamel coat was fit for its intended purpose. The paint manufacturer had recommended a primer and could not guarantee that its enamel finish coats would adhere to steel. In fact, the contractor had encountered a problem in getting the second enamel coat to adhere to the unprimed first coat.

Interpretation of Contracts—Painting—Primer Coat.—Under a contract to renovate a plating shop, the contractor's interpretation of the painting schedule as not requiring a primer coat before the application of two coats of enamel to exterior stack steel was rejected because the contractor's reading of the provision specifying where enamel was suitable was unreasonable. The specification at issue stated that enamel paint "was suitable for use on primed exterior and interior wood and metal surfaces" and "was intended for primed exterior and interior wood or metal." The contractor took the position that the word "primed" modified only exterior wood, not metal. The more natural meaning of the specification, however, was that the word "primed" modified surfaces, the object of the prepositional phrase, and thus modified both wood and metal surfaces.

For the appellant: Watt, Tieder & Hoffar, McLean, Virginia, by Robert G. Watt and Barbara G. Werther. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Michael F. Copley and Capt. Thomas J. Helget, USAF, Trial Attorneys.

Before JAMES, RUBERRY, and PAUL, Administrative Judges.

JAMES, Administrative Judge: These consolidated appeals arise from the contracting officer's final decisions denying appellant's claims for additional compensation for PVC coating rectifier enclosures, epoxy coating mechanical room coil rack steel, and priming exterior stack steel for the Robins Air Force Base plating shop. We have jurisdiction of these appeals under the Contract Disputes Act of 1978, 41 U.S.C. §§ 601 *et seq.* After a five-day hearing in Savannah, GA, both par-

©1994, Commerce Clearing House, Inc.

ties submitted post-hearing and reply briefs.[1] We decide only entitlement.

FINDINGS OF FACT

A. General Findings

1. On 16 August 1989 the parties entered into contract F09650-89-C-0081 ("contract 81") for the repair and renovation of the Robins Air Force Base, GA, plating shop, building 142 for the fixed price of $14,123,000 (R4, tab 1).[2]

2. Contract 81 contained the usual fixed price construction contract clauses including FAR 52.246-12 "Inspection of Construction (JUL 1986)," which provided:

> (f) The Contractor shall, without charge, replace or correct work found by the Government not to conform to contract requirements, unless in the public interest the Government consents to accept the work with an appropriate adjustment in contract price.

(R4, tab 1)

3. Contract 81 required performance in sequential phases I, II, and III, in defined contiguous areas, to permit respondent to operate the plating shop during appellant's demolition and construction work (R4, tab 1, spec. § 01005, ¶ 1.2, § 01652, ¶ 2.1).

4. Contract 81 required appellant to install in phases I, II, and III (a) 38 rectifiers, (b) mechanical room coil rack steel and (c) exterior stack steel (R4, tab 1, spec. § § 16C and 01005, ¶ ¶ 2.1.13, 2.3.1, 2.3.2).

5. Contract 81's specification § 01300, "SUBMITTALS AND CONTRACTOR FURNISHED ITEMS," provided that items requiring manufacturer's literature be submitted to the contracting officer for approval, but such approval would not relieve the contractor from strict compliance with the specifications. The ¶ 5.4 submittal list in § 01300 provided:

> § 9A ¶ 4.1 Color Catalog and Samples
>
> § 9B ¶ 4.1 Color Catalog, Samples and Manufacturer's Literature.

(R4, tab 1)

6. Contract 81's specification § 9A, "PAINTING," provided:

> ¶ 2.1 This section includes ... exterior finish painting .... Interior finish painting shall be as specified in SECTION [9B]: EPOXY COATING.
>
> ¶ 3. APPLICABLE STANDARDS

(R4, tab 1, spec. § 9B; exh. A-77, A-79)

9. Contract 81 specification § 16A, "GENERAL REQUIREMENTS, ELECTRICAL," as modified by solicitation amendment 0003, stated:

> ¶ 1.2 This section applies to all sections in Division 16 of the specifications, except as specified otherwise in the individual sections.
>
> * * *
>
> ¶ 19.1 All new exposed electrical ... iron work shall be epoxy coated by the Contractor or be factory applied 40 mil PVC coated .... paint application shall be in accordance with SECTION: EPOXY COATING, if done by the contractor.

(R4, tab 1, spec. § 16A; exh. A-79; ASBCA 44268, R4, tab 29)

10. Contract 81 specification § 16C, "RECTIFIERS," provided in pertinent part:

> ¶ 5.2.2.1 Enclosures: Rectifier cabinets shall be ... fabricated of sheet steel [and] shall be PVC coated as a unit after all welding and cutting is complete, in accordance with Paragraph: PROTECTIVE COATING.
>
> * * *
>
> 5.6 Protective Coating: The rectifier cabinets shall be PVC coated in accordance with Military Specification MIL-T-704M(11).

Table 2 specified in which of 21 enclosures or cabinets to install 38 designated rectifiers. (R4, tab 1, spec. § 16C)

B. ASBCA No. 44268: Rectifier Enclosures

11. On 10 October 1989 appellant subcontracted with W. H. Howell and Associates (Howell) for contract 81 electrical work, including rectifiers in accordance with specification § 16C (exh. A-8). According to appellant, the Kimmins-Howell subcontract provisions:

> Rectifiers shall be painted with a factory finish color that is epoxy based .... All rectifier cabinets shall be PVC coated in accordance with ... MIL-T-704M(11)

gave Howell the option of field epoxy or factory PVC coated rectifier cabinets (tr. 2/18-19). Appellant's subcontractor painting work schedule for § 16C rectifiers said "Factory Finish" and "PVC Coated" (exh. A-106; tr. 2/109-10).

12. On 30 November 1989 Howell and Rapid Power subcontracted for 38 PVC-coated "rectifiers and enclosures" in accordance with specification § 16C, which subcontract did not specify § 16A, ¶ 19.1, field epoxy coated rectifiers (exh. G-22; tr. 3/234-37). Howell said he contemplated a

©1994, Commerce Clearing House, Inc.

Digitized by Google

deductive change order to Rapid if the field epoxy option became economically advantageous, but did not actually issue one (tr. 3/236, 241-42, 249).

13. Appellant's 26 July 1990 submittal No. 88 proposed three Phase I, sheet steel, PVC-coated, D.C. rectifiers and enclosures, which respondent approved on 2 August 1990 (ASBCA 44268, R4, tab 10). Rapid Power delivered and Howell installed three Phase I, PVC-coated rectifiers and enclosures (tr. 2/124, 3/237).

14. On 28 September 1990 contract 81 bilateral modification P00005 changed the specification § 9B, ¶ 16.3, phrase "DC Bus and rectifiers" to "bus duct," expressly eliminating rectifiers from the epoxy painting provisions of § 9B. P00005 did not alter the provisions of § 16C, ¶ 5.6, for PVC coated rectifier cabinets or § 16A, ¶ 19.1, for epoxy painting of field manufactured ironwork exposed to the elements and the atmosphere (exh. G-26; tr. 2/34, 3/257-59).

15. For financial reasons Howell discontinued performance of its Kimmins subcontract in the early part of Phase II. Appellant completed the installation of rectifiers. (Tr. 2/21-22, 124, 3/238-39)

16. Appellant's 15 May 1991 purchase order with Rapid Power included 35 type 304 stainless steel rectifiers and enclosures as an alternative to PVC-coated steel, for a $6,170 price reduction, if approved by respondent (exh. A-34; tr. 2/29-30).

17. Appellant's submittal No. 175 of 23 May 1991 proposed 13 Phase II rectifiers with stainless steel enclosures. Respondent disapproved it on 31 May 1991, stating "PVC coated steel is required." (ASBCA 44268, R4, tab 11)

18. Appellant's submittal No. 181 of 20 June 1991 proposed 23 Phase III rectifiers with PVC-coated stainless steel enclosures. Respondent disapproved submittal No. 181 on 1 July 1991, stating that the submittal stated "All rectifier enclosures shall be PVC coated, but all drawing [sic] show stainless steel cabinets." (ASBCA 44268, R4, tab 12)

19. Appellant's resubmittal No. 175A of 2 July 1991, which respondent approved on 8 July 1991, proposed 12 Phase II, PVC-coated steel rectifiers and cabinets (ASBCA 44268, R4, tab 13).

20. Appellant's resubmittal No. 175B of 10 July 1991 proposed to coat rectifier enclosures with epoxy in accordance with specification § § 9B, ¶ 16.3, and 16A, ¶ 19.1, which respondent disapproved on 16 July 1991, stating that rectifiers were eliminated from § 9B, ¶ 16.3, and that § 16C, ¶ 5.2.2.1 required PVC-coated rectifiers (ASBCA 44268, R4, tab 14).

21. Appellant's resubmittal No. 181A of 24 July 1991, which respondent approved on 30 July 1991, proposed 23 Phase III, PVC-coated steel rectifiers and cabinets (ASBCA 44268, R4, tab 15).

22. Appellant's 12 August 1991 letter to respondent stated that specification § 16A, ¶ 19.1, provided an epoxy field coating alternative for rectifier enclosures, so disapproval of resubmittal No. 175B was a "changed condition" for which appellant would submit a change order request (COR), designated No. 95 (ASBCA 44268, R4, tab 16).

23. Respondent's 22 August 1991 letter to appellant stated that the interpretation of specification § 16A, ¶ 19.1, to classify rectifiers as "other iron work [was] an extreme stretch of the imagination" and that its previous rectifier submittals had proposed PVC-coated enclosures (ASBCA 44268, R4, tab 18).

24. Appellant's resubmittal No. 175C of 13 November 1991, which respondent approved on 21 November 1991, proposed Phase II, PVC-coated steel rectifier cabinets (ASBCA 44268, R4, tab 20).

25. Appellant's two 31 December 1991 letters to respondent on COR No. 95 claimed $8,795.74 for respondent's rejection of Phases II and III stainless steel rectifier enclosures and $55,595.22 for elimination of the rectifier enclosure epoxy coating alternative, which appellant said it erroneously had omitted from its price submissions for contract 81 Revision No. 2 (ASBCA 44268, R4, tabs 21, 22).

26. Appellant's 9 January 1992 letter to respondent submitted a claim certification for COR No. 95 (ASBCA 44268, R4, tab 24).

27. The 9 March 1992 final decision of the contracting officer denied appellant's COR No. 95 rectifier enclosure coating claim (ASBCA 44268, R4, tab 28). Appellant timely appealed that decision to this Board.

28. Appellant installed PVC-coated rectifier enclosures for Phases II and III (tr. 2/57).

DECISION, ASBCA No. 44268

Appellant has the burden of proving that respondent's disapprovals of stainless steel and of epoxy coated rectifier enclosures were constructive change orders. *Kimmins Con-*

Digitized by Google

tracting Corp., ASBCA No. 44513, 94-1 BCA ¶ 26,411, (6 Oct. 1993), *Kimmins Contracting Corp.*, ASBCA No. 44265, 94-1 BCA ¶ 26,348 (20 Sept. 1993). The dispositive issue is whether the contract required PVC coated rectifier enclosures.

To prevail appellant must prove that the contract specification allowed epoxy coated rectifier enclosures and respondent erroneously rejected appellant's epoxy coating submittals for rectifier enclosures. Appellant argues that contract 81's specification § 16A, ¶ 19.1, phrase "exposed electrical iron work" includes rectifier enclosures and therefore entitles it to epoxy coat Phases II and III field manufactured rectifier enclosures. Appellant's argument ignores the § 16C, ¶ 5.6, requirement for PVC coated steel rectifier enclosures.

We need not, and do not, decide whether rectifier enclosures are "exposed iron work" within § 16A, ¶ 19.1; whether the Howell electrical subcontract actually provided an "option" of field epoxy coating rectifier enclosures; whether appellant, when it began to perform Phase II, first conceived the § 16A, ¶ 19.1, field epoxy coating "option" for rectifier enclosures; or whether the parties' Phase I course of dealing established the mutual understanding that rectifier enclosures must be PVC coated.

Interpreted in isolation, the epoxy option in § 16A, ¶ 19.1 (if considered applicable to enclosures), and the PVC coating requirement in § 16C, ¶ 5.6, apparently conflict. Such apparent conflict is readily resolved by § 16A, ¶ 1.2, which states that § 16A terms, including ¶ 19.1, are applicable "except as specified otherwise in the individual sections" of Division 16 (finding 9). Section 16C, ¶ 5.6, specifies otherwise: rectifier enclosures must be PVC coated (finding 10). Therefore, § 16A, ¶ 19.1, is inapplicable to rectifier enclosures.

The foregoing syllogism harmonizes sections 16A, ¶ 19.1, and 16C, ¶ 5.6. Appellant's argument ignores § 16C, ¶ 5.6, and conflicts with the elementary rule which requires us to construe a contract as a whole so as to harmonize and give effect to all its provisions, leaving no provision void, inoperative, meaningless or superfluous. *Julius Goldman's Egg City v. United States* [30 CCF ¶ 70,662], 697 F.2d 1051, 1057 (Fed. Cir. 1983); *Kimmins Contracting Corp.*, ASBCA No. 44265. We deny the appeal.

C. ASBCA Nos. 44642 and 44643: Coil Rack and Exterior Stack Steel

29. The coil rack had steel frames, columns and channels upon which 14 heating coils were mounted (exh. G-29; tr. 4/61). Contract 81 specification § 5A, MISCELLANEOUS METAL, ¶¶ 15.1 and 16.1, required epoxy coating of "[m]iscellaneous plates and shapes for items that do not form a part of structural steel framework, such as ... equipment mounting, and frames" and § 5B, STRUCTURAL STEEL, ¶ 11.1-11.4, required epoxy painting of all structural steel, in accordance with specification § 9B.[3] (R4, tab 1)

30. The contract 81 specification does not define exterior and interior surfaces (tr. 2/60, 5/54). The building 142 mechanical room is exterior to the plating shop but within that building (tr. 2/98-101).

31. George Robinson, appellant's bid preparer, (a) interpreted specification § 9A to include surfaces outside the plating shop proper; (b) did not ask respondent whether the mechanical room was interior or exterior; (c) knew that FED. SPEC. TT-E-489G enamel was intended for use on *primed* exterior and interior metal surfaces; and (d) concluded that such enamel was intended for "smooth metal outside without a primer" (tr. 2/58-64, 101).

32. The record contains no evidence of any trade practice or of the parties' course of dealing to support the proposition that a "smooth" surface is an "unprimed" surface. Mr. Robinson's field painting schedule for steam heating coil frames stated "Prime & Intermediate Coat" upon arrival on site (exh. A-106; tr. 1/102, 2/108).

33. On 5 and 6 February 1990, respectively, respondent approved appellant's submittals (a) No. 21 for coil rack steel with Glidden epoxy primer No. 10309-10414, equal to its No. 5461, and Glidden epoxy finish No. 5250-5242 (exh. G-29; tr. 4/62) and (b) No. 23 for specification § 9B interior metallic surfaces with Glidden epoxy primer No. 5461 and epoxy finish No. 5240/5242, whose descriptive literature listed eight alternate ferrous metal surface primers (ASBCA 43800, R4, tab 2).

34. On 21 March 1990 respondent approved appellant's submittal No. 34 to paint specification § 9A, ¶ 14.d, exterior ferrous metal surfaces with Glidden enamel 4550,

[3] Appellant argues that the coil rack steel was not § 5A "miscellaneous metal" but rather § 5B "structural steel." We need not decide which interpretation is correct, because both specification sections required epoxy primer and finish paint; neither permitted enamel painting.

©1994, Commerce Clearing House, Inc.

Digitized by Google

whose product literature listed three alternate primers for ferrous metal surfaces but did not mention fiberglass reinforced polyester surfaces (ASBCA 44642, R4, tab 4; exh. G-36, -37).

35. In early August 1990 appellant's project engineer, David Cordova, told respondent's inspector, John Fehr, that the coil rack steel was enamel coated, and asked if that was acceptable in order to avoid a week's steel shipment delay to replace enamel with epoxy. Fehr said that enamel was acceptable for the coil rack steel. The contracting officer was not notified. At that time appellant was unaware that the coil rack and stack steel surfaces were not primed. (ASBCA 44642, R4, tab 9; exh. G-37; tr. 2/74, 4/53-56, 144-45)

36. On 6 August 1990, appellant learned that stack and coil rack steel was not primed and their 2 August enamel second coat was not dry (exh. G-37).

37. On 14 August 1990, while coil racks were being erected, appellant told respondent that the stack and coil rack steel was not primed. Dennis Keene, Government construction manager, told appellant that unprimed Phase I stack steel was acceptable. On 15 August 1990 Keene told appellant to remove enamel from, and to put primer or an epoxy system on, the coil rack steel. (ASBCA 44642, R4, tabs 5, 28; tr. 2/69, 4/57, 226-31, 5/58)

38. Appellant's two 15 August 1990 letters to respondent stated that (a) appellant considered respondent's instruction to remove enamel from the coil rack steel to be a change, designated COR No. 22; (b) specification § 9A, ¶ 14.d, was defective since it specified no primer coat; and (c) Glidden does recommend a primer and cannot guarantee that the submitted paint will adhere to the steel because it is not formulated as a primer and the "finish" is a gloss which also reduces the adhesion between the 1st coat and 2nd coat.

(ASBCA 44642, R4, tabs 5-6; tr. 2/69-72) The record contains no pre-disputatious evidence that appellant proposed to coat the enameled coil rack steel with epoxy or that epoxy could be painted over enamel finish successfully (tr. 2/78-80). Appellant removed coil rack enamel with hand grinders and applied epoxy (ASBCA 44642, R4, tab 29).

39. Respondent's 31 August 1990 letters to appellant stated that (a) unprimed coil rack steel did not comply with the specification requirements, and Glidden's recommendation, to apply the enamel to a primed surface; (b) specification § 9A, ¶ 14.d, was not defective because Fed. Spec. TT-E-489H [sic] specified application of the enamel over a primed surface; and (c) all Phases II and III exterior ferrous metal surfaces had to be primed under the enamel coating (ASBCA 44642, R4, tabs 9-10).

40. Appellant's 19 November 1991 letter stated that it considered respondent's direction to apply unspecified primer to the Phases II and III exterior stack steel to constitute a change, for which it claimed $4,047.81 for COR No. 25 (ASBCA 44642, R4, tab 12; tr. 2/78, 4/226).

41. Appellant's 19 December 1991 letter to respondent claimed $5,158.05 for removal of enamel and application of epoxy paint to the mechanical room coil rack steel for COR No. 22 (ASBCA 44642, R4, tab 16).

42. The contracting officer's undated final decision denied appellant's COR Nos. 22 and 25 claims (ASBCA 44642, R4, tab 27).

43. Appellant appealed that undated final decision to the Board on 8 June 1992, which docketed the COR Nos. 22 and 25 claims respectively as ASBCA Nos. 44642 and 44643. The ASBCA Nos. 44642 and 44643 complaint, ¶ 53, alleges, and ¶ 53 of the answer admits, that the contracting officer's final decision on COR Nos. 22 and 25 claims was issued on 21 April 1992. The appeals are timely.

DECISION, ASBCA No. 44642, Coil Rack Steel

Appellant has the burden of proving that contract 81 allowed unprimed enamel on mechanical room coil rack steel and that respondent's direction to remove such enamel from the coil rack steel and to apply epoxy was a constructive change order. *Kimmins Contracting Corp.*, ASBCA Nos. 44513, 44265, *supra*. The dispositive issue is whether the contract required primed, epoxy coated, coil rack steel.

Appellant argues that it reasonably interpreted contract 81's specification to require epoxy coating of surfaces within the plating shop proper and enamel on surfaces exterior thereto; the mechanical room was exterior to the plating shop proper; so respondent's direction to remove the coil rack enamel and to replace it with epoxy coating was a constructive change order.

Contract 81 specification § 5A, ¶ 16.1, required epoxy coating of miscellaneous plates and shapes for equipment mounting and frames (finding 28). With respect to paint-

Digitized by Google

ing, the specification's terms "interior" and "exterior" surfaces were undefined. Building 142's mechanical room is exterior to the plating shop but within that building. (Finding 30) Appellant prepared its bid interpreting the specification § 9A exterior surfaces to include surfaces outside the plating shop proper, and did not ask respondent whether the mechanical room steel was interior or exterior (finding 31). Contrary to its foregoing bid interpretation, appellant's (a) field painting schedule stated that the coil rack steel would have prime and intermediate coats upon arrival at the site and (b) submittal Nos. 21 and 23 proposed epoxy primer and finish coats for the coil rack steel (findings 32, 33). Upon receiving enamel coated coil rack steel in August 1990, appellant asked respondent whether enamel was acceptable instead of epoxy (finding 35), manifesting its understanding that epoxy was the required coating for coil rack steel and that enamel deviated from that requirement.

We hold that specification § 5A, ¶ 16.1, and appellant's approved submittal Nos. 21 and 23 for specification § 9B epoxy paint, required primed and epoxy finish coated coil rack steel.

Appellant argues that since respondent could have accepted epoxy applied over the coil rack steel enamel, it was economic waste to require enamel removal, citing *Granite Construction Co. v. United States* [37 CCF ¶ 76,290], 962 F.2d 998 (Fed. Cir. 1992). In *Granite* the Government did not evaluate whether the public interest warranted acceptance of noncompliant waterstop material under the terms of an Inspection clause corresponding to ¶ (f) of contract 81's "Inspection of Construction" clause (finding 2). There was also unrebutted expert testimony that the waterstop material installed was adequate to serve its intended purpose and appellant's proposed repairs would have rendered the waterstop sufficient. 962 F.2d at 1005-06.

Here, appellant encountered a problem of adhering the second enamel coat to the unprimed first coat, its paint manufacturer recommended a primer and could not guarantee its enamel finish coats would adhere to steel, and the record contains no pre-disputatious evidence that appellant proposed to coat the enameled coil rack steel with epoxy or that epoxy could be painted over enamel finish successfully (findings 36, 38). Appellant has not established economic waste. *Ball, Ball & Brosamer, Inc.;* IBCA No. 2103-N, 93-1 BCA ¶ 25,287 at 125,980-81; *Toombs & Co., Inc.*, ASBCA Nos. 34590 et al., 91-1 BCA ¶ 23,403 at 117,423-24. We deny the appeal.

DECISION, ASBCA No. 44643, Exterior Stack Steel

Appellant has the burden of proving that the contract 81 specification required only two coats of enamel on exterior stack steel, and that respondent's direction to apply primer before the two coats of enamel to the Phases II and III exterior stack steel was a constructive change order. *Kimmins Contracting Corp.*, ASBCA Nos. 44513, 44265, *supra.*

Specification § 9A PAINTING SCHEDULE ¶ 14d, "exterior ferrous metal," specifies the painting of the disputed exterior stack steel. It required 1st and 2nd coats of FED. SPEC. TT-E-489 enamel and "None" for a 3rd coat. In contrast, for ¶ 14e, "FRP [fiberglass reinforced polyester] exhausters and stacks," § 9A specifies for the 1st coat "FRP Primer" and for the 2nd and 3rd coats TT-E-489 enamel. Section 9A required appellant to "apply painting materials according to manufacturer's instructions and recommendations." (Findings 5-6)

FED SPEC TT-E-489G stated that the specified enamel was "suitable for use on primed exterior and interior wood and metal surfaces" and was intended for "primed exterior and interior wood or metal but particularly on smooth, exterior metal," mainly "automobiles and construction equipment" (finding 7). Appellant's bid preparer knew the provisions concerning the TT-E-489G enamel's suitability and intended use, and concluded that it was intended for "smooth metal outside without a primer" (finding 31). Appellant argues that the adjective "primed" modifies only "exterior and interior wood," not metal. The record contains no evidence of any trade practice or the parties' course of dealing to support the proposition that a "smooth" surface is an "unprimed" surface (finding 32). We think that the more natural meaning of TT-E-489G was that "primed" modified "surfaces," the object of the prepositional phrase, and thus modified both wood and metal surfaces.

On 21 March 1990 respondent approved appellant's submittal No. 34 for specification § 9A, ¶ 14.d, to paint exterior ferrous metal surfaces with Glidden enamel No. 4550. Glidden's enamel No. 4550 literature listed three alternate primers for ferrous metal surfaces, but did not mention fiberglass reinforced polyester surfaces. (Finding 34) About one year after contract 81's award,

©1994, Commerce Clearing House, Inc.

Digitized by Google

Glidden recommended applying primer on ferrous metal surfaces because its finish enamel was not formulated as a primer and would not adhere to steel (finding 38).

Respondent argues that *Atterton Painting & Construction Inc.*, ASBCA No. 30406, 85-3 BCA ¶ 18,475, is dispositive. The contract specification required a coating material with the salient characteristic of "Primer 62 by Tex Cote or equal." Its painting schedule required a first coat "As recommended by manufacturer" and left blank spaces for second and third coats. We held that, read in harmony, all the contract provisions required appellant to apply a multi-coat system, not just one coat of paint. 85-3 BCA at 92,810. *Atterton* is not on all fours with contract 81, which required no salient characteristic of a primer for ferrous metal surfaces.

It was reasonable for § 9A, ¶ 14.e, to specify a first coat primer and second and third coats of TT-E-489 enamel for fiberglass reinforced polyester stack surfaces, because the enamel manufacturer's recommendations were silent with respect to fiberglass reinforced polyester. But there was no need for § 9A, ¶ 14.d, redundantly to specify primer for ferrous metal surfaces because the enamel manufacturer recommended three primers for that application, and ¶ 13.1 expressly required appellant to "apply painting materials according to manufacturer's ... recommendations." (Findings 6, 34) *Cf., R.B. Wright Construction Co.*, ASBCA Nos. 31967 *et al.*, 90-1 BCA ¶ 22,364 (29 Sept. 1989), *aff'd*, 919 F.2d 1569 (Fed. Cir. 1990) (there was no identified contract requirement to apply paint in accordance with its manufacturer's instructions or recommendations; painting instructions of a major paint manufacturer that three coats of paint were unnecessary for previously painted walls did not diminish an unambiguous contract painting schedule requirement for three coats of paint on walls).

We hold that the contract 81 exterior stack steel painting requirements required a primer beneath the enamel finish coatings. We deny the appeal.

In summary, we deny appeals Nos. 44268, 44642 and 44643.

[¶ 26,586] Engineering Technology Consultants, S.A.

ASBCA No. 43454, December 14, 1993. Contract No. F66501-90-C-0009.

Defaults, Grounds—Insurance—Proper Coverage.—Although the Default Termination clause of a repair contract did not contain a provision permitting default termination for failure to perform provisions other than for a failure to timely deliver or for a failure to prosecute, the board concluded that the contractor's failure to maintain the proper amount of insurance was a valid basis for the default termination of the contract because the contractor's failure prevented it from prosecuting the work with the diligence required to ensure completion within the performance period. In prior decisions, the board has ruled that a contractor's failure to maintain adequate insurance coverage is a valid basis for default where general liability insurance is a contractual requirement. In those cases, however, the contracts included a Default Termination clause that specifically permitted the government to terminate for default when the contractors failed to perform provisions of the contract other than a failure to timely deliver, perform, or make progress. In the instant case, the board construed the contractor's inadequate insurance as a failure to perform with the due diligence needed to complete the work.

Defaults, Excuses—Labor and Personnel Problems—Staffing Problems.—A staff member's error that purportedly resulted in the contractor's failure to obtain adequate insurance coverage did not excuse the default termination of its contract for failure to procure adequate insurance coverage, because there was no legal theory supporting a holding that a staff member's or third party error excused a contractor's failure to comply with the contract requirements.

For the appellant: De Obaldia & Garcia De Paredes, Panama, Republic of Panama, by Carlos A. De Obaldia. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Gerald K. Fields and Capt. Michael P. Chiffolo, USAF, Trial Counsels.

Before ELMORE and RIISMANDEL, Administrative Judges.

Digitized by Google

ELMORE, Administrative Judge: Engineering Technology Consultants, Inc. (ETC or appellant) has timely appealed the contracting officer (CO) "final decisions" terminating ETC's contract for default.[1] ETC elected to proceed in accordance with Board Rule 12.3, the ACCELERATED procedure. The record includes the appeal (R4) file; appellant's (A) and Government's (G) exhibits; the hearing transcript (tr.) and appellant's (app.) and Government's (Gov't.) briefs. Only entitlement will be decided.

SUMMARY FINDINGS OF FACT

On 28 September 1990 ETC was awarded negotiated firm fixed price contract F66501-90-C-0009 (C-0009) at a contract price of $397,890.12 to "furnish all transportation, plant, equipment, tools, labor and materials, and all necessary operations to perform 'Miscellaneous Repairs/alter Kobbe School, BLDG 841', at Howard AFB, Pn, in strict accordance with the technical specifications and drawings, subject to the terms and conditions of the contract." (44237, tabs 2, 8)[2]

The contract included or incorporated by reference Federal Acquisition Regulation (FAR) clauses: 52.228-5, INSURANCE—WORK ON A GOVERNMENT INSTALLATION (SEP 1989); 52.233-1, DISPUTES (APR 1984); 52.249-10, DEFAULT (FIXED PRICED CONSTRUCTION) (ALL OVER $25 K) (APR 1984). The contract DEFAULT clause provided for the Government to terminate the contract where the contractor fails to prosecute the work or any separable part thereof with the diligence to insure its completion within the required time period. It did not specifically provide for default termination for the contractor's failure to perform "any of the other provisions" of the contract.

Insurance requirements cited in the contract were as follows (44237, tab 2):

SECTION H—SPECIAL CONTRACT REQUIREMENTS

INSURANCE (SEP 1989) (FAR SUBPART 28.310) (FAR 52.228-5)

The contractor shall, during the entire period of performance under this contract, procure and maintain the following minimum kinds of insurance:

	TYPE	AMOUNT
(1)	Worker's Compensation and Occupational Coverage in accordance with statutory limits. Employer's Liability Coverage with a minimum limit of	$100,000
(2)	Comprehensive General Liability with Minimum Limits of	$500,000 per Occurrence
(3)	Automobile Liability Insurance shall be required on the Comprehensive form of policy [sic] shall provide for bodily injury and property damage liability covering the operation of all automobiles used in connection with performing the contract	$200,000 Per Person/ $500,000 Per Occurrence for Bodily Injury. $20,000 Per Occurrence for property damage

NOTE: The requirement for Workmen's Compensation Insurance and Employer's Liability Insurance is mandatory for designated Contractors and subcontractors only with respect to those employees who are citizens of the United States or residents of the United States and were hired by the contractor in the United States. Contractors employing Panamanians or foreign nationals will be required to comply with the Labor Laws of the Republic of Panama.

PART II, SECTION I, CONTRACT CLAUSES

Insurance—Work on a Government Installation (SEP 1989)

(a) The contractor shall, at his own expense, provide and maintain during the entire performance of this contract at least the kinds and minimum amounts of insurance required in the Schedule or elsewhere in the contract.

(b) Before commencing work under this contract, the contractor shall certify to the Contracting Officer in writing that the

[1] ASBCA No. 43454 is a Rule 12.3 election which was consolidated with ASBCA 44237 for hearing purposes. The decisions on the merits in the two annunciated appeals were delayed awaiting the Board's decision on a Government's Motion to Dismiss filed in docket 44237 and two other ETC appeals. The motion was denied in ASBCA No. 44237 (*Engineering Technology Consultants, S.A.*, ASBCA Nos. 44237, 45277, 45302, 94-1 BCA ¶ 26,334.

[2] References to documents contained in other appeal files filed in other ETC appeals will be made by referencing the docket number of the appeal.

©1994, Commerce Clearing House, Inc.

Digitized by Google

required insurance has been obtained. The policies evidencing required insurance shall contain an endorsement to the effect that any cancellation or any material change adversely affecting the Government's interest shall not be effective (1) for such period as the laws of the State in which the contract is to be performed prescribe, or (2) until 30 days after insurer or the contractor gives written notice to the Contracting Officer, whichever period is longer.

(c) The contractor shall insert the substance of this clause, including this (c), in subcontracts under this contract that require work on a Government installation and shall require subcontractors to provide and maintain the insurance required in the Schedule or elsewhere in the contract. The contractor shall maintain a copy of all subcontractors' proofs of required insurance, and shall make copy available to the Contracting Officer upon request.

FAR 28.310, Contract clause for work on a Government installation, states in pertinent part that "the contracting officer may insert the clause at 52.228-5 in solicitations and contracts ... if it is in the Government's interest to do so."

Tactical Air Command (TAC) FAR Supplement clause 28.310, Contract Clause for Work on a Government Installation, provides that (exh. G-4):

Whenever the clause 52.228-5 ... is included in a contract, prime contractors shall be required to either provide copies of insurance certificates or certify in writing that the required insurance has been obtained before commencing work on the installation. If contractor's certification is used in lieu of submission of insurance certificates to the Contracting Officer, [a] Certificate of Compliance with Insurance Requirements shall be used for the prime contractor. After certification by the contractor, the Certificate of Compliance shall become part of the official contract file.

ETC on 28 August 1990 submitted its bid proposal and on 20 September 1990 the CO approved award of contract C-0009 subject to "approval of HQ TAC/LGC" (exh. A-3; tr. 2/19-23; R4, tab 2). ETC's Manager, Mr. Carlos A. Salazar, on 28 September 1990 submitted a signed CERTIFICATE OF COMPLIANCE WITH INSURANCE REQUIREMENTS certifying he had read and understood the insurance requirements specified in the contract and that the certificate would become a part of, and be incorporated into, the contract and be legally binding and enforceable (tr. 2/56-7). The certificate identified ETC's insurance company as "ASSA Compania De Seguros, S.A." and provided (R4, tab 3):

(1) that such insurance will be maintained in at least the amounts and types specified in the contract . . . ;

(2) that the policies evidencing required insurance shall contain an endorsement to the effect that any cancellation or any material change adversely affecting the Government's interest shall not be effective ... until 30 days after the insurer or the Contractor gives written notice to the Contracting Officer; (3) that ... Workmen's Compensation Insurance . . . shall be maintained on this contract for and during the entire performance period . . . ; and (4) that a copy of all subcontractors' proof of required insurance shall be maintained and shall be made available to the Contracting Officer upon request.

Mr. Salazar did not have insurance when he submitted the certification. Mr. Salazar contends he informed the contract specialist, Ms. Charlene Castro, of this fact and was told to sign the certification anyway and he complied (tr. 2/25-27, 56-57). Mr. Salazar did not obtain insurance after having signed the certification until 16 January 1991 when he requested $500,000 general liability insurance from Cia, International de Seguros, S.A. (Cia) for the period 1 January to 31 May 1991 (R4, tab 7; exh. A-1). A clerk from ETC, unbeknownst to Mr. Salazar, on 29 January 1991 requested from Cia $100,000 general liability insurance coverage (R4, tab 7; exh. A-1). ETC subsequently received the $100,000 policy which Mr. Salazar, allegedly without reading, submitted to the Government as proof of insurance (R4, tab 7). Mr. Salazar neither requested that his subcontractor obtain insurance nor is he aware whether his subcontractor had insurance during the term of the contract (tr. 2/60-1).

After damage was incurred to Kobbe school's equipment due to rainwater infiltration, ETC was requested to produce its comprehensive liability insurance. Unable to provide anything more than the $100,000 policy the CO on 25 April 1991 issued to ETC a "Cure Notice" wherein he stated (R4, tab 5):

The Government considers your failure to maintain insurance in the amounts specified ... a condition that is endangering performance of this contract.

Digitized by Google

Per my request, Ms. Castro asked ETC for a copy of the insurance certificate for this contract on 18 Apr 91. On 22 Apr 91 ETC furnished a copy of their policy for General Liability. The following observations were made:

a. The contract states that the contractor will maintain Comprehensive General Liability with Minimum limits of $500,000. The policy only has a limit of $100,000 which is clearly in violation of the contract.

* * *

d. This policy only covers ETC between 01 Jan and 31 May 91. Request you provide me a copy of the policy that covered you between 28 Sep 90 and 01 Jan 91.

* * *

From the insurance documents which have been presented to me to date, I have no other choice than to inform you that you are in direct violation of [the] Contract ... which provided you the Insurance requirements .... You are hereby notified to provide me a copy of all policies in effect since the award of this contract to include proof of insurance for all subcontractors of [ETC] under this contract within ten (10) days of receipt of this Notice. Ensure that all policies are in accordance with the requirements of the contract as specified ....

Unless this condition is cured within 10 days from receipt of this Notice, the Government may terminate for default ....

ETC did not respond to the Cure Notice (tr. 2/46, 79).

By letter dated 8 May 1991 the CO issued to ETC a "SHOW CAUSE NOTICE" wherein he stated (R4, tab 6):

Since you have failed to provide the Insurance required in accordance with Contract ... within the specified time, as requested in the Government's Cure Notice dated 25 April 1991, the Government is considering terminating the contract under the provision of default of this contract. Furthermore, the admission by Mr. Salazar during the meeting held 2 May 1991, that [ETC] has only maintained General Liability Insurance on this contract since 1 Jan 91 and then, only with a limitation amount of $100,000 in lieu of $500,000 required under the contract, is unacceptable. ETC's failure to maintain Liability Insurance from the onset of the contract is totally unsatisfactory in as much [sic] as Mr. Salazar signed the Certificate of Compliance with Insurance Requirements on 28 September 1990.

Pending a final decision in this matter, it will be necessary to determine whether your failure to cure the conditions specified in the Government's letter dated 25 Apr 91, arose from causes beyond your control and without fault or negligence on your part. Accordingly, you are given the opportunity to present in writing any facts bearing on this question to TSgt Jose R. Medina ... within 10 days after receipt of this notice. Your failure to present any excuses within this time may be considered as an admission that none exist.

In response to the "SHOW CAUSE NOTICE" Mr. Salazar, by letter dated 10 May 1991, contended that ETC intended to obtain both "Public Liability and Automotive Liability" insurance from ASSA Compania de Seguros, S.A. but due to staff error only automobile insurance was obtained; that in January 1991, realizing it had no public liability insurance, ETC requested a $500,000 limit comprehensive liability policy from Cia International; that an ETC office clerk requested the same type insurance but with a $100,000 limit; that Cia issued the policy at the $100,000 limit which ETC submitted "without review;" that by letter dated 11 March 1991 ETC informed Cia that the issued policy failed to meet the terms requested for coverage against all risks in the amount of $500,000 coverage; that Cia's response stated that the insurance stipulated in this contract would never have included all the coverages requested and the comprehensive general liability insurance would have excluded damages incurred on adjacent Government property. (R4, tab 7) Mr. Salazar also contends that the Government's reason for terminating the contract was to avoid claims for delay (tr. 2/35-37).

ETC, after receipt of the cure and show cause notices, neither increased its general liability coverage to the contract amount of $500,000 nor provided the CO with subcontractor insurance documents.

On 20 May 1991 the Government terminated ETC's contract for default (R4, tab 8) contending ETC neither responded to the cure notice dated 25 April 1991 nor provided proof of insurance for itself and/or its subcontractors. The CO determined that ETC failed to present an excusable reason for not obtaining general liability insurance between 30 September 1990 and 1 January 1991, as acknowledged by ETC in its response to the show cause notice, or to maintain the correct amount of insurance for the

©1994, Commerce Clearing House, Inc.
Digitized by Google

period 1 January through 31 May 1991; that ETC failed to follow up with the insurance company and obtain general liability insurance in the amount of $500,000 between 11 March 1991, when ETC requested insurance augmentation, and 18 April 1991, the day the CO requested the insurance policies; and that ETC failed to present certificates of insurance for the three subcontractors working under the contract.

By letter dated 13 August 1991 ETC appealed the CO's 20 May 1991 final decision to default terminate contract C-0009 (Board's correspondence file).

DECISION

Terminations for default "should be imposed (or sustained) only for good grounds and on solid evidence." The Government, as the initiator, has the burden of proof in establishing the validity of the default. *Local Contractors, Inc.*, ASBCA No. 37108, 92-1 BCA ¶ 24,491, *aff'd. on reconsid.*, 92-1 BCA ¶ 24,693, *aff'd., Local Contractors, Inc. v. Stone, Secretary of the Army*, 988 F.2d 131 (Fed. Cir. 1993) (Table). In prior decisions we have held that where general liability insurance is a contractual requirement a default termination is proper when a contractor fails to either obtain or to maintain adequate insurance coverage. *Ray Service Company*, ASBCA No. 35800, 89-1 BCA ¶ 21,549; *accord, Mary E. St. Clair*, ASBCA No. 2882, 91-2 BCA ¶ 23,948; *Petroleum Terminal Management, Inc.*, ASBCA No. 33680, 89-2 BCA ¶ 21,835. The terminations in the cited cases, however, differ from the instant matter in that the contracts there included a default termination clause which specifically permitted the Government to terminate for default where the contractor fails to perform provisions of the contract other than a failure to timely deliver, perform or make progress.

The default termination clause in the ETC appeal does not contain a provision permitting default termination for failure to perform provisions other than a failure to timely deliver, but does permit the Government to default terminate where the contractor fails to prosecute the work or any separable part of the work with the diligence required to insure its completion within the performance period. It is undisputed that ETC (1) failed to procure general liability insurance, (2) procured a significantly smaller amount than contractually required, during contract performance, and (3) failed to provide its subcontractors' general liability insurance documents when requested. ETC, when issued both the cure and show cause notices, failed to correct the inadequate comprehensive insurance coverage. The Government, reasonably we conclude, had no alternative but to stop performance based on ETC's failure to maintain the proper amount of insurance coverage. Under the circumstances ETC was unable to perform and/or prosecute the work with the diligence required to insure completion within the performance period. Under the circumstances ETC's failure to obtain the correct amount of insurance was a valid basis for the default termination and, accordingly, the default termination was proper.

The default termination being proper we need only determine if ETC's failure to procure and/or maintain adequate insurance was excusable. ETC contends its failure to obtain insurance from 30 September 1990 to 1 January 1991 was due to "staff" error and its failure to maintain the correct amount of insurance from 1 January to 31 May 1991 was due to staff error and a mistake by the insurance company. We find ETC's contentions specious at best.

ETC prepared and submitted a CERTIFICATE OF COMPLIANCE WITH INSURANCE REQUIREMENTS certifying it had procured general liability insurance when in fact it had no general liability insurance coverage. Although ETC contends it was at the Government's instance that it signed the certificate we find nothing in the record to support this. In like fashion, three months after contract award, ETC procured an amount of general liability insurance significantly lower than that required by the contract arguing this was caused by a staff member and insurance company error. ETC has not cited any legal support or theory, and we are unaware of any, which holds that a contractor's failure to comply with a contract requirement is excusable if such failure was due to staff or third party error. Under the circumstances, ETC obviously made a business decision to mislead the Government into believing ETC had complied with the contract requirement for providing general liability insurance coverage.

ETC also contends the CO acted in bad faith when he terminated the contract. It is well established that there is a presumption that public officials perform their duties correctly, fairly, in good faith, and in accordance with the law and governing regulations, and the burden is on the appellant to prove otherwise. *Space Age Engineering, Inc.*, ASBCA No. 26028, 82-1 BCA ¶ 15,766 and cases cited therein. ETC's alle-

Digitized by Google

gation that the default termination was done to preclude ETC from filing a delay claim is not supported by the record. Clearly, a termination could not, and in the instant matter did not, estop ETC from filing not only the delay claim but numerous other claims. The default termination was proper and ETC has not provided any proof the CO's actions were arbitrary, capricious, an abuse of discretion, or illegal. *Cf., Darwin Construction Co. Inc. v. United States* [33 CCF ¶ 75,063], 811 F.2d 593, 598 (Fed. Cir. 1987).

The appeal from the default termination is denied.

[¶ 26,587] Inter-Continental Equipment, Inc.

ASBCA No. 43298, December 10, 1993. Contract No. N00123-86-C-0660.

Transportation—Cargo Preference Act—Summary Judgment.—In an appeal concerning the issue of a contractor's liability for failure to comply with the contract's standard Cargo Preference clause, the contractor's assertion that the Cargo Preference Act applied only to government-owned material and that the contractor had only contractor-owned material in its possession did not provide a basis for granting a motion for summary judgment, because issues of material fact remained as to whether the contractor possessed only contractor-owned material and as to whether the government acquiesced in the contractor's interpretation.

Transportation—Cargo Preference Act—Standard Contract Clause.—In an appeal concerning the issue of a contractor's liability for failure to provide bills of lading as required by the contract's Cargo Preference clause, the contractor's assertion that the bill-of-lading requirement applied only to foreign aid programs and not to government contracts did not provide a basis for granting a motion for summary judgment, because the contractor failed to point out any statutory provision that prohibited the application of the requirement.

Transportation—Cargo Preference Act—Administrative Procedure Act.—In an appeal concerning the issue of a contractor's liability for failure to comply with the provisions of the Cargo Preference Act, the contractor's assertion that the Cargo Preference clause's implementation violated the Administrative Procedure Act did not provide a basis for granting summary judgment, because the facts underlying this assertion were not established.

For the appellant: John K. Hobbs, Director. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Douglas J. Hinds, Trial Attorney, Naval Facilities Engineering Command, West Coast Litigation Team, San Bruno, California.

Before YOUNGER, SPECTOR, and STEMPLER, Administrative Judges.

YOUNGER, Administrative Judge: In this appeal of a Government claim under a contract to provide shipping containers, appellant has moved for summary judgment. The contracting officer's decision giving rise to the appeal asserted that appellant was liable to respondent for approximately $1.3 million for failure to comply with the standard clause appearing at FAR 52.247-64, "Preference for Privately Owned U.S.-Flag Commercial Vessels, Alternate I (APR 1984)" (the Cargo Preference clause). The parties included the Cargo Preference clause in the contract by bilateral modification, and appellant's asserted noncompliance was in failing to furnish the ocean bills of lading required by paragraph (c) of the clause. We deny the motion.

BACKGROUND

Appellant filed a three-count complaint, denominating each count as a claim. The gravamen of the first count is laches, appellant alleging that the contracting officer "should have notified the contractor within a reasonable period of time after she knew, or should have know[n], of the alleged problem." The gravamen of the second count is waiver and estoppel, appellant alleging that it advised the contracting officer that it believed that the requirement for bills of lading in the Cargo Preference clause was illegal and, from her failure to take any action

©1994, Commerce Clearing House, Inc.

Digitized by Google

when appellant refused to comply, "took this acquiescence as relieving the contractor of the requirement." The gravamen of the third count is that the bills of lading requirement constitutes "an illegal requirement" for various reasons.

In its lengthy motion for summary judgment, appellant argues that there are no genuine issues of material fact regarding what it identifies as "the four affirmative defenses." While appellant's complaint is organized around three counts, and respondent did not interpose any affirmative defenses in its answer, the Board understands appellant to use this term to refer to the different arguments that it advances. Appellant summarizes its four arguments as follows:

> The facts show proof of each of the four affirmative defenses, namely, (1) that the [Cargo Preference] clause applies only to Government-owned material, while appellant had only contractor-owned material in his possession and this fact was known by the Government who for 5 years acquiesced to Appellant's interpretation of the clause; (2) the requirement itself comes out of foreign-aid program law, while Appellant's contract was made under the provisions of the Armed Services Procurement Act of 1947; (3) the [Cargo Preference] clause's implementation violates the Administrative Procedure Act; and (4) [the contracting agency] waited too long to assert its rights, assuming it had rights to begin with.

Appellant's motion is not supported by any affidavits. The parties are still engaged in discovery and the Board only recently decided motions to compel discovery brought by both parties.

DECISION

We deny appellant's motion. It is familiar that "[s]ummary judgment is properly granted only where [1] there is no genuine issue of material fact and [2] the movant is entitled to judgment as a matter of law." *Mingus Constructors, Inc. v. United States*, 812 F.2d 1387, 1390 (Fed. Cir. 1987); *Lockheed-California Co.*, ASBCA Nos. 28618, 31314, 92-1 BCA ¶ 24,382 at 121,770. We measure appellant's motion against these two elements.

Appellant's first argument affords no basis for granting summary judgment. We cannot conclude that appellant is entitled to judgment as a matter of law because we cannot harmonize appellant's reading of the Cargo Preference clause with our decision in *Brussels Steel America*, ASBCA No. 34108, 90-1 BCA ¶ 22,268. While appellant reads the clause to apply "only to shipments of Government-owned material," we there read the clause to apply where "[t]itle to the supplies had not passed to the Government when [the] foreign-flag shipments were made" and other legal predicates satisfied. *Id.*, 90-1 BCA at 111,865-66. In addition, we cannot in any event say on this record that there are no genuine issues of fact that: (a) appellant only had contractor-owned material in its possession; (b) respondent so knew; or (c) respondent acquiesced in appellant's interpretation of the Cargo Preference clause for five years. While the first two of these contentions of fact are of dubious materiality, discovery is ongoing, as indicated. The outcome of the parties' discovery may shed light on some of these contentions of fact.

Appellant's second argument also affords no basis for granting summary judgment. We cannot accept appellant's invitation to conclude that the "bill-of-lading requirement [in the Cargo Preference clause] applies to, and only to, foreign aid programs, and not to contracts made under the Armed Services Procurement Act of 1947," 10 U.S.C. § 2301 *et seq.* Appellant has pointed us to no statutory provision that in terms prohibits application of the bill of lading reporting requirement to contracts authorized by that Act, and we know of none. Similarly, appellant has pointed to no express regulatory prohibition or limitation. We have found none in the cargo preference provisions appearing in FAR Subpart 47.5. We likewise have found no prohibition or limitation in the Cargo Preference clause itself. *See* FAR 52.247-64. While appellant looks to 46 C.F.R. § 381.3, which details the reporting requirement for agencies "except for the Department of Defense for which separate regulations will be issued," that qualifier plainly does not preclude application of the reporting requirement to contracts under the Act. Finally, while not dispositive, we note that both the court of appeals and this Board have previously taken note of the reporting requirement in cases relating to Department of Defense contracts, without any suggestion that it was improperly applied. *See Craft Machine Works, Inc. v. United States* [36 CCF ¶ 76,020], 926 F.2d 1110, 1112 (Fed. Cir. 1991); *Brussels Steel America, supra*, 90-1 BCA at 111,865.

Appellant's third argument similarly will not support summary judgment. While appellant asserts that respondent did not promulgate the Cargo Preference clause in

Digitized by Google

accordance with Administrative Procedure Act, 5 U.S.C. § 551 *et seq.* (APA), the facts underlying this contention are not established on the record before us. A more serious infirmity, however, steam from our inability to say that appellant would be entitled to judgment as a matter of law even if the material facts were established. That is, we are hard put to reconcile appellant's contention with the "public contracts" exemption in the APA itself. Congress expressly exempted "a matter relating to . . . public . . . contracts" from the application of the rulemaking requirements of the APA. 5 U.S.C. § 553(a)(2) (1988). In *Essex Electro Engineers, Inc. v. United States* [38 CCF ¶ 76,304], 960 F.2d 1576, 1581 (Fed. Cir. 1992), the court of appeals gave effect to this exemption, rejecting an argument that the executive branch failed to comply with the APA "in either the drafting or application" of the definition of a "claim" in the FAR. *See also Westinghouse Electric Corp.*, ASBCA No. 25787, 85-1 BCA ¶ 17,910 at 89,701 n. 26, *aff'd*, 782 F.2d 1017 (Fed. Cir. 1986) (recognizing exemption); *cf. McQuiston Associates*, ASBCA No. 24676, 83-2 BCA ¶ 16,602 at 82,549, *aff'd sub nom McQuiston v. United States*, 746 F.2d 1489 (Fed. Cir. 1984), *cert denied*, 470 U.S. 1004 (1985) (Board proceedings not governed by APA).

Finally, there are disputed issues of material fact regarding appellant's fourth argument. While appellant relies upon *Gresham & Co. v. United States* [18 CCF ¶ 81,896], 470 F.2d 542 (Ct. Cl. 1972), we would need a much fuller record before saying that respondent failed to exact compliance with the Cargo Preference clause during performance over an extended period, thereby reasonably leading appellant to believe that the reporting requirement was "dead." *Id.*, 470 F.2d at 554; *see also Inter-Continental Equipment, Inc.*, ASBCA No. 36807, 90-1 BCA ¶ 22,256 at 111,834 (fact issues precluded summary judgment regarding waiver of reporting requirement in Cargo Preference clause).

CONCLUSION

Appellant's motion for summary judgment is denied.

[¶ 26,588] Aydin Corporation (West)

ASBCA Nos. 43273, 44156, 44157, 44091, December 16, 1993. Contract No. DAAB07-86-C-J007.

Procedure, Boards—Suspensions and Stays—Criminal Proceedings.—In an appeal concerning the propriety of a contractor's testing of radio sets, a government motion to stay proceedings until parallel criminal proceedings against the contractor were completed was granted in order to avoid interference with the criminal case because the facts, issues, and witnesses in both proceedings were substantially similar, there was a need to protect the criminal case, and the contractor failed to show that it would be injured by a stay. The issue in the appeal, the propriety of the testing, was also at the heart of the related criminal proceedings. The facts relating to the manner in which the tests were conducted were central to both sets of proceedings. The witnesses, two convicted employees of the contractor, were likely to give testimony before the tribunal in the criminal proceedings as well as in the appeal before the board. Further, the government made an adequate showing of the need to protect the criminal litigation, and the board concluded that such need overrode the injury to the contractor. Finally, discovery in the criminal case had served to hinder important aspects of discovery in the appeal.

For the appellant: Jones & Donovan, Irvine, California, by Peter B. Jones. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Lt. Col. Thomas O. Mason, JAGC, Trial Attorney.

Before PAUL, RIISMANDEL, and RUBERRY, Administrative Judges.

PAUL, Administrative Judge: After the Board set these appeals for hearing in January 1994, the Army moved to stay proceedings for either 180 days or until parallel criminal proceedings against appellant Aydin Corporation (West) (Aydin) were completed. It contended that granting such a stay would "avoid interfering with the ongoing criminal proceedings involving the same contract at issue in these appeals" and would enable the Board "to ascertain the facts and circumstances surrounding appellant's claims." In a lengthy response, Aydin opposed "Respondent's eleventh-hour mo-

©1994, Commerce Clearing House, Inc.

Digitized by Google

tion." It argued that the "Government's request is untimely, utterly without merit, and may well be a disingenuous attempt to create leverage in settlement discussions by denying to Appellant its ability to resolve its claims in this forum." In its equally extensive reply brief, the Army reiterated its concerns that proceeding with the scheduled trial of these matters would prejudice the Government's handling of the parallel criminal proceedings.

For the reasons stated below, we grant the Army's motion, cancel the scheduled trial, and stay proceedings for a period of 180 days.

FACTUAL BACKGROUND

The Contract

On 25 September 1986, the Army awarded the underlying contract to Aydin for the design, production, and delivery of 733 microwave radio sets. The radios represented an attempt to integrate modern technology into the communication system used by Army combat signal units. The contract's testing and quality assurance requirements were aimed at producing a product which could withstand the rigors of transport across degraded road surfaces and open terrain without either permanent damage or degradation in performance. Specifically, the contract required Aydin to design mounts which would protect the radios from damage resulting from shock and vibrations. The contract also contained a requirement for a self-testing feature which utilized an RF loopback capability.

Pursuant to Section H.133 of the contract, Aydin warranted that the radios would meet the requirements of their intended use, be free of defects in material and workmanship, and remain free of defects for a two-year period commencing on the date of final acceptance. Upon discovering defects in the radios, the contracting officer had three options: (1) direct Aydin to repair or replace defective radio sets; (2) authorize the Army to repair the radios at Aydin's expense; or, (3) take a contractual price adjustment.

Also specified under the contract were testing, evaluation and inspection procedures which included an Acceptance Test Procedure designed to detect deficiencies in workmanship and materials. A component of this procedure was Environmental Stress Screening, a test designed to discover latent defects in the radios. The contract also required Aydin to conduct reliability testing in a chamber at a set temperature pursuant to certain testing standards.

The Board Proceedings

ASBCA No. 43273

After commencing work on the contract, Aydin encountered difficulties complying with the testing provisions which we have discussed. As a result, Aydin submitted a proposal for a revised delivery schedule, and the Army granted it a time extension. Aydin experienced additional problems and was unable to meet any of the subsequent revised delivery schedules. After negotiating another delivery schedule with Aydin, the contracting officer issued a unilateral modification through which, *inter alia*, the Army exercised a contractual option for 82 radios. Aydin contended that the exercise of the option was untimely and submitted a claim in the amount of $1,068,117.60.

ASBCA No. 44157

After Aydin delivered the first radios in 1988, the Army began to operate them in the field. Soon thereafter, the Army began to complain that the radios displayed a faulty signal upon normal vibration. The Army also purportedly discovered a number of module failures during initial check-out and returned several units to Aydin for repair under the warranty provisions of the contract. In July 1989, Aydin sent an engineer to investigate these alleged deficiencies. The engineer tested several of the radios and concluded that vibrating the sides of the units caused some of them to display faulty signals. Aydin repaired these radios and later submitted a claim in the amount of $2,196,095.

ASBCA No. 44156

As we have stated, the contract required Aydin to develop an RF loopback feature for self-testing purposes. After commencing work on the contract, Aydin modified the radios in an attempt to produce an imbedded RF loopback capability, thereby eliminating the need for an external coaxial cable. Aydin subsequently submitted a claim in an amount of $213,694.36 for costs incurred in altering the RF loopback configuration.

ASBCA No. 44901

The contract required Aydin to subject the radios to certain reliability tests under environmentally stressful conditions, as set forth in paragraph 50.1 of MIL-STD-781C, entitled "combined environments for fixed

Digitized by Google

ground equipment." Subparagraphs 50.1.1 through 50.1.5 of this standard stated test requirements for electronic stress, vibration stress, thermal stress, and humidity.

During the course of contractual performance, Aydin experienced extremely high failure rates in environmental stress and reliability tests. Aydin later contended that the contract's specifications relating to testing were defective and proposed to change the testing requirements. It also filed a claim for defective specifications in an amount of $6,622,436.42.

The Criminal Proceedings

Attached to the Army's motion was a detailed, sworn affidavit from Mr. Leland B. Altschuler, an Assistant United States Attorney for the Northern District of California. Mr. Altschuler described the Government's investigation of Aydin and its employees in these terms:

2. The criminal investigation began in November 1989, when Special Agents of the Federal Bureau of Investigation and Army CID served a federal search warrant on Aydin's production facilities located in San Jose, California. During the search, the agents seized a large number of documents relating to Aydin's performance on a government contract with the Department of the Army's Communications and Electronics Command, contract number DAAB07-86-C-J007, to manufacture AN/GRC radio sets.

3. A Grand Jury investigation commenced and further information and materials from Aydin were subpoenaed for use in the Grand Jury proceedings. An indictment (Tab A) was returned by the Grand Jury on February 12, 1992, alleging that between about January 1988 and November 1989, two Aydin employees, Patrick A. Huveldt and Sharon S. Favinger, participated in an unlawful conspiracy and committed fraud against the United States by instructing test technicians to record test data in pencil and, when entries showed failure, erasing those entries and substituting, in ink, passing entries. In addition, the indictment alleges that the defendants wrote about 250 test readings for items when their time cards revealed that they were not at work, asked Aydin technicians to initial test data they did not take, and placed initials of Aydin technicians on test readings without permission. More than 200 tests were recorded originally in pencil and later erased, and the indictment identifies more than 40 radio sets accepted by the Government with false test data. The object of the conspiracy was to minimize time and delays associated with reworking radio sets and spares, and to defraud the United States by causing shipment of radio sets and spares that the Aydin defendants knew did not meet contract specifications, thereby causing payments of money by the United States to Aydin. The indictment charges violations of 18 U.S.C. §§ 371 & 1001.

4. On or about March 5, 1993, Mr. Huveldt and Ms. Favinger entered pleas of guilty to conspiracy to defraud the Government and three counts of making false statements to the Government and concealing material facts from the Government. These pleas were entered after the trial on the merits had started and after the Government had presented evidence against Mr. Huveldt and Ms. Favinger. Sentencing for both Mr. Huveldt and Ms. Favinger is pending.

5. As part of the plea agreement, Mr. Huveldt executed an addendum to the plea agreement describing certain activities of his done while employed by Aydin Corporation (West). In Mr. Huveldt's addendum (Tab B), he admitted that:

1. I had certain practices in the Manufacturing Test Department [sic] I supervised another who had similar practices for recording test data entries in the Manufacturing Test Department. I told Chin Nguyen, Jerry Hovey, John Harris, Greg Benson and Guy Knepp to record ESS test data in pencil;

2. I erased pencil test data entries, made by others, including data entries showing faults, showing failures, showing that alarm lights were "on", and otherwise showing that the AN/GRC-222 radio set or spares under test did not meet test parameters specified by the ATP;

3. I wrote passing test data entries in ink on those test data sheets. The data I substituted:

a. Did not reflect observations I made on the dates and at the time indicated on the test data sheet and,

b. Did not reflect observations that were accurate, true or correct, and

c. Did not reflect the number and type of deficiencies found.

4. I did the above practices, or variations on them, during the entire time period from June 1988 to September 1989.

©1994, Commerce Clearing House, Inc.

Digitized by Google

6. As part of the plea agreement, Ms. Favinger executed an addendum to the plea agreement. In Ms. Favinger's addendum (Tab C), she admitted that:

1. I instructed swing shift and graveyard shift test technicians in the Manufacturing Test Department including Greg Benson, Wilbert Dees, Steve Labonowski and Chin Nguyen to record ESS test data in pencil;

2. I erased pencil test data entries, made by others, including data entries showing faults, showing failures, showing that alarm lights were "on", and otherwise that the showing [sic] AN/GRC-222 radio set or spares under test did not meet test parameters specified by the ATP;

3. I wrote, passing test data entries in ink, on those test data sheets. The data I substituted:

a. Did not reflect observations I made on the dates and at the times indicated on the test data sheet and,

b. Did not reflect observations that were accurate, true or correct, and

c. Did not reflect the number and types of deficiencies found.

4. I sometimes wrote entire test data entries for the 48-hours ESS test sequence at one sitting, usually taking less than thirty minutes to complete the form. I am informed by the United States that there are more than 160 entirely in my own handwriting [sic] I have examined these sheets and they were in fact prepared by me.

5. From time to time test technicians recorded test data in ink, which I could not change. I took the test data sheets made in ink by others, which showed failing test data entries. I then created test data sheets and placed them in the manufacturing package. The sheets I prepared were made up but showed passing reads.

6. I followed the above practices, or variations on them, during the entire period from June 1988 to September 1989.

7. Mr. Huveldt and Ms. Favinger pled guilty to count Eighteen of the indictment. As such, Mr. Huveldt and Ms. Favinger admitted knowingly and willfully using a false writing in connection with the product reliability acceptance testing for Radio Set No. 0028A. This test was the reliability test upon which the First Article was approved. These same reliability test procedures are at issue in ASBCA No. 44901.

8. Although Rule 6(e) of the Federal Rules of Criminal Procedure precludes me from describing the nature of the Government's criminal case against the Aydin employees or the continuing criminal investigation of Aydin in further detail, I can state that based on information furnished to me in the course of my official duties, it appears that the issues in both the criminal case and the ASBCA proceedings are not only related, but are substantially similar. Moreover, there will be a substantial overlap of witnesses and documentary evidence for all issues pertaining to the manufacture, testing, and performance of the AN/GRC-222 radio sets and spares. The allegations of fraud set forth in the indictment and subject to the continuing investigation of Aydin arise out of the same contract and are based on the falsification of the same Aydin test and inspection records on AN/GRC-222 radio sets involved in Aydin's claims before the ASBCA. A logical implication from the fraudulent activity under investigation is that workmanship defects that were covered up by changing failing test scores to passing scores permitted Aydin to secure Government acceptance of radio sets that subsequently exhibited performance failures when used by troops in the field and caused delays in shipping.

9. Aydin Corporation remains a target of continuing Grand Jury proceedings. Again, because of Rule 6(e), I cannot disclose a complete description of the course of this investigation. I can, however, state that the scope of the investigation relates to Aydin's performance of contract number DAAB07-86-C-J007, and is not limited to the specific time span alleged in the indictment.

10. I hereby formally request that the Board stay the ASBCA proceedings for a period of 180 days to permit this office to proceed with resolution of the criminal case against the two named former Aydin employees and the continuing investigation and charging as appropriate of the Aydin Corporation. Both Mr. Huveldt and Ms. Favinger have agreed to cooperate in the investigation and prosecution of violations of the laws of which they have knowledge. If a stay is not granted, it is likely that Aydin may gain insight into the criminal case and the on-going investigation through the broader discovery of both witnesses and documents permitted in ASBCA proceedings compared with the limited discovery permitted under the Federal Rules of Criminal Procedure and

Digitized by Google

thereby prejudice the Government criminal case.

For example, I have reviewed Aydin's 9 October 1993 request to depose certain Government employees. If these depositions occur as required by Appellant, the criminal investigation and any following prosecution would be adversely affected. Accordingly, it is in the public interest to stay the ASBCA proceedings to avoid interference with the criminal case.

11. A vast amount of information has been sequestered pursuant to Rule 6(e). This information directly pertains to the appeals pending before the Armed Services Board of Contract Appeals. I am precluded from releasing this information to either Aydin or the Army at this time.*

DECISION

In *E-Systems, Inc.*, ASBCA Nos. 32033, 32334, 32335, 36102, 88-2 BCA ¶ 20,753, this Board ably set forth the legal standards governing the Army's motion to stay proceedings in the following terms:

> A protracted stay of the civil case requires not only a showing of need in terms of protecting the criminal litigation, but also a balanced finding that such need overrides the injury to the parties being stayed. *Ingalls Shipbuilding Division, Litton Systems, Inc.*, ASBCA No. 22645, 78-2 BCA ¶ 13,350 at 65,261. The Government, as the moving party, is required to show that there are "substantially similar" issues, facts and witnesses in both proceedings. *See C3, Inc. v. United States*, 3 FPD ¶ 12, (30 July 1984); and *Sentry Insurance, A Mutual Company*, VABCA No. 2617, 88-1 BCA ¶ 20,318. We would add that the promotion of judicial economy is a further consideration for us, here. *Mayfair Construction Company*, NASA BCA No. 478-6 *et al.*, 80-1 BCA ¶ 14,261, citing *Nigro v. Blumberg*, 373 F. Supp. 1206 (1974). *See also Landis v. North America Co.*, 299 U.S. 248, 57 S.Ct. 163, 81 L.Ed. 153 (1936), relying upon "the power to stay proceedings [as being] incidental to the power inherent in every court to control the disposition of causes on its docket and with economy of time for itself, for counsel and for the litigants." Indeed, this Board's statutory mandate under the Contract Disputes Act to provide an expeditious resolution of the appeals to the fullest extent practicable requires us to do so. (41 U.S.C. § 607(e))
>
> *Accord Fleischzentrale Sudwest GmbH*, ASBCA No. 37273, 89-3 BCA 21,956; *Container Systems Corp.*, ASBCA Nos. 40614, 43694, 93-2 BCA ¶ 25,798.

Applying these criteria to the facts of this case, we can conclude that the Army has met its burden. First, there are "substantially similar issues, facts, and witnesses" in both proceedings. The key issues in the consolidated appeals before the Board revolve around the battery of tests required before the developmental radios produced by appellant could be successfully integrated into the Army's units in the field. As evidenced by the convictions of two of Aydin's key employees, these tests are also at the heart of the related criminal proceedings. Accordingly, the facts relating to the manner in which the tests were conducted are also central to both sets of proceedings. Finally, Aydin's two convicted employees would very likely give testimony before the district court as well as before this Board. Therefore, the Army has demonstrated the requisite degree of commonality.

The Army has also made an adequate showing of need in terms of protecting the criminal litigation, and we can conclude that "such need overrides the injury to the parties being stayed." Aydin itself remains the target of ongoing grand jury proceedings. In addition, as Mr. Altschuler states in his sworn affidavit:

> ... If a stay is not granted, it is likely that Aydin may gain insight into the criminal case and the on-going investigation through the broader discovery of both witnesses and documents permitted in ASBCA proceedings compared with the limited discovery permitted under the Federal Rules of Criminal Procedure and thereby prejudice the Government criminal case.
>
> For example, I have reviewed Aydin's 9 October 1993 request to depose certain Government employees. If these depositions occur as required by Appellant, the criminal investigation and any following prosecution would be adversely affected. Accordingly, it is in the public interest to stay the ASBCA proceedings to avoid interference with the criminal case.

In contrast to the persuasive showing made by the Army, Aydin has failed to

* In response to the Army's interrogatories filed in the ASBCA proceedings, Aydin identified 68 boxes of documents which the Justice Department has sequestered and which are pertinent to the issues in these appeals.

©1994, Commerce Clearing House, Inc.

Digitized by Google

demonstrate that it would be seriously injured by a 180-day stay.

A final element of this analysis relates to our power to control the proceedings before us. In response to interrogatories propounded by the Army in these appeals, Aydin admitted that a large volume of relevant documentation pertaining to the underlying contract has been sequestered by the Department of Justice. Simply as a practical matter, this fact has served to halt important aspects of discovery in the ASBCA proceedings. Weighing this development in the light of the remainder of our analysis, we are constrained to grant the motion to stay proceedings.

CONCLUSION

The motion is granted, and the scheduled trial is canceled. The parties are ordered to file a status report with the Recorder's office at the end of the 180-day stay period.

[¶ 26,589] Smitty's Precision, Inc.

ASBCA No. 43189, December 15, 1993. Contract No. F34601-89-C-1533.

Defaults, Grounds—Delivery Failure—Financial Loss.—A default termination of a delivery contract for brass bushings was proper because the contractor failed to make deliveries in accordance with the revised delivery schedule. In response to a show cause notice, the contractor stated that the reason for its failure to deliver was that it was experiencing a loss on the contract because it had underbid the contract. The contractor stated that it would make delivery by a specific date, but it made no such delivery.

For the appellant: Thomas Minnis, Owner. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Col. Billy Smith, Jr., USAF, Trial Attorney.

Before STEMPLER, SPECTOR, and PAUL, Administrative Judges.

STEMPLER, Administrative Judge: This is a timely appeal from a contracting officer's decision terminating appellant's contract for default. The Contract Disputes Act is applicable. The parties have elected to waive a hearing and proceed on the record. Only the Government has submitted evidence and a brief.

FINDINGS OF FACT

On 31 May 1989, the Air Force awarded contract No. F34601-89-C-1533 to Smitty's Precision, Inc. (SPI). The $21,829.50 fixed-price supply contract called for SPI to manufacture and deliver 2,079 brass bushings in accordance with the following schedule:

31	July 1989:	177
31	January 1990:	634
28	February 1990:	634
31	March 1990:	634

(R4, tab 1)

The contract contains the standard "Default (Fixed Price Supply and Service) (APR 1984)" FAR 52.249-8 clause (R4, tab 1).

SPI did not deliver the first incremental delivery and requested a delivery extension because of changes in priorities for other Government contracts. On 22 November 1989, bilateral modification PJ0001 was issued, reducing the contract price by $273 and revising the delivery dates to:

31	January 1990:	811
28	February 1990:	634
31	March 1990:	634

(R4, tab 2)

SPI did not meet the revised delivery schedule and on 16 May 1990, bilateral modification PJ0002 was issued. The modification reduced the contract price by $170 if delivery was made by 30 September 1990 and by $1,132.00 if delivery was after 30 September 1990 (R4, tab 5).

SPI did not deliver by 30 September 1990, but did deliver 864 bushings by 11 December 1990. On 11 January 1991, bilateral modification PJ0003 was issued. The modification was at no-cost to either party and extended the delivery date for the balance of the bushings (1,215) to 30 April 1991 (R4, tab 6).

SPI did not deliver any further bushings by 30 April 1991.

The Government issued a show cause notice in mid-May 1991 (R4, tabs 13, 14) and on 22 May SPI responded. SPI's stated reason for its failure to deliver was that the contract was a loss contract for SPI because the contract had been underbid. SPI stated that delivery would be made by 14 June 1991 (R4, tab 15).

Digitized by Google

On 27 June 1991, when no deliveries were made, the contracting officer terminated the contract for default for failure to deliver (R4, tab 7).

As of 27 June 1991, SPI did not have any bushings ready for delivery (R4, tabs 16, 17).

On 1 July 1991, SPI filed a timely appeal (R4, tab 18).

DECISION

The Government has proven that SPI failed to deliver in accordance with the terms of the contract. SPI has not proven that its failure to deliver was beyond its control and without its fault or negligence within the meaning of the Default clause of the contract.

CONCLUSION[*]

The appeal is denied.

[¶ 26,590] Burnside-Ott Aviation Training Center

ASBCA No. 43184, December 9, 1993. Contract No. N68520-89-C-0017.

Contract Types—Cost-Plus-Award-Fee—Review of Award Determination.—Although a cost-plus-award-fee contract for aircraft maintenance included a provision that the government's award fee determination was not appealable, the board retained jurisdiction over a claim concerning the amount of the award fee, because the amount to which the contractor was entitled was subject to the board's authority under the Contract Disputes Act to review whether the actions of the government were arbitrary or capricious.

For the appellant: Howrey & Simon, Washington, D.C., by Harvey G. Sherzer and Scott Arnold. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Robert C. Ashpole, Jr., Trial Attorney.

Before DUVALL, SPECTOR, and STEMPLER, Administrative Judges.

DUVALL, Administrative Judge: The Board has before it the Government's *Motion to Dismiss for Lack of Jurisdiction or in The Alternative Motion for Summary Judgment*, and responsive submissions from appellant and the Government. The appeal concerns a cost-plus-award-fee contract for aircraft maintenance, repair and overhaul at six Naval Air Stations. The dispute concerns the amount of the award-fee due appellant. The following uncontroverted facts are relevant to our consideration of the motion:

The contract provided for a zero base-fee and a maximum award-fee of 10% of appellant's estimated cost. The description and application of cost-plus-award-fee contracts is set forth in FAR 16.404-2, which pertinently states:

> The amount of the award fee to be paid is determined by the Government's judgmental evaluation of the contractor's performance in terms of the criteria stated in the contract. This determination is made unilaterally by the Government and is not subject to the Disputes clause.

FAR 16.405, Contract Clauses, instructs the contracting officer that cost-plus-award-fee contracts shall contain a clause that:

> Expressly excludes from the operation of the Disputes clause any disagreement by the contractor concerning the amount of the award fee.

Clause H-20 of the contract, entitled AWARD FEE, pertinently notes that the amount of the award-fee was not guaranteed and was to be earned as set forth in clause H-21, AWARD FEE EVALUATION CRITERIA, and that an award-fee is based on a unilateral determination of the Government.

Clause H-21 contains "Performance Evaluation Report Criteria" which set forth the award-fee criteria and subcriteria. For each criterion, the clause provides the following rating standards or categories: "Submarginal," "Marginal," "Average," "Above Average" and "Excellent." Immediately below these five standards are five entries: (0-60), (61-70), (71-80), (81-90), and (91-100), which correspond with the five standards. The contractor would receive a total numerical rat-

[*] The Government moved for dismissal for failure to prosecute in accordance with rules 5 and 31 because SPI did not file a brief. The motion is denied.

©1994, Commerce Clearing House, Inc.

Digitized by Google

ing commensurate with its level of contract performance.

The clause calls for assigned evaluators to assess performance monthly and submit point scores and narrative evaluations to the contracting officer, who discusses the reports with the contractor. The monthly reports are reviewed during quarterly meetings of a Performance Evaluation Board which in turn submits an award-fee recommendation to a designated Fee Determination Official (FDO). The clause then directs that:

> The FDO shall determine the amount of fee to be awarded for the quarter and forward a copy of his final determination to the Contracting Officer. The Award Fee decision is a unilateral determination made by the FDO and is not subject to the "DISPUTES" Clause of the contract.

The contract did not incorporate a conversion table by which a contractor would receive an award-fee percentage that was not equal to its total performance rating. Other Government cost-plus-award-fee contracts include conversion tables.

During performance, the FDO in fact used a conversion table to determine the amount of the award-fee.

Appellant, upon learning of the use of the conversion table, complained that the conversion table was not part of the contract, and that contract provisions required the Government to provide it with a percentage of the award fee which equaled its numerical evaluation score. Appellant maintained that the regulatory and contractual exclusions of the award-fee determination from the application of the contract Disputes clause applied only to the determination of performance scores. The contracting officer responded by maintaining that the Government had fully complied with the contract in deriving award-fees and that the determination of award-fee amounts was not subject to appeal under the Disputes clause. Appellant then submitted a certified claim in the amount of $293,001.56, which represented the difference between what it alleged it had earned under the contract evaluation procedures and what it had received from the Government.

The Government reiterated its position that the determination of award fees is excluded from the Disputes clause by both law and the contract and that there was no right of appeal from the decision. Appellant appealed from the deemed denial of the claim.

Position of the Parties

In opposition to the above stated position of the Government denying Board jurisdiction appellant contends that it advanced a claim cognizable under the Contract Disputes Act (41 U.S.C. § 605(a)). According to appellant, a contract clause which purports to remove a controversy from the Disputes clause is contrary to statute, and "must give way." Appellant cited a U.S. Court of Federal Claims (then Claims Court) decision, *OSHCO-PAE-SOMC*, 16 Cl. Ct. 614, 619 (1989), in support of this proposition. Alternatively, appellant argues that, notwithstanding the contract provision rendering the Government's unilateral determination of award-fees unappealable, the Board should retain jurisdiction over the claim to determine whether the Government acted arbitrarily or capriciously. In its response to the Government's motion, appellant averred that the Government arbitrarily converted the performance ratings it earned into a reduced award fee. (App. response, p. 21) Appellant further maintained that the existence of material issues of fact in this appeal rendered summary judgment inappropriate. Such issues, as identified by appellant, relate to the parties' prior course of dealing, the pre-dispute interpretation allegedly posited by the administrative contracting officer, and interpretations of the solicitation provisions by competing bidders on the contract. Appellant also contends that the case is not ready for summary judgment because discovery relating to outstanding issues has not been completed.

The Government, in support of its summary judgment alternative motion, contends that there are no material fact issues, and that summary judgment in its favor is warranted on the independent grounds of waiver, contract interpretation (appellant's interpretation was unreasonable), failure to inquire about a patent ambiguity, and because appellant is seeking speculative damages.

DECISION

We have confronted the same jurisdictional question raised in this dispute in cases dealing with similar clauses worded to impose finality on unilateral Government determinations on the amount of collateral savings awarded under contract Value Engineering Incentive (VEI) provisions (*e.g.*, DAR 7-104.44).

In *ICSD Corporation*, ASBCA No. 28028, 90-3 BCA ¶ 23,027, *aff'd.*, 934 F.2d 313 (Fed. Cir. 1991), the Board held that the Govern-

Digitized by Google

ment's determination of a collateral award under a contract containing the VEI clause was subject to limited review by the Board under the Contract Disputes Act to determine whether it was arbitrary or capricious. The Board supported its position by citing *Hoel-Steffen Construction Company v. United States* [30 CCF ¶70,268], 684 F.2d 843 (Ct. Cl. 1982), where the court held that the contracting officer's decision under a contract clause creating decisional finality was nevertheless subject to such a limited judicial review under the standards of the Wunderlich Act (41 U.S.C. § 321). The court noted that the Contract Disputes Act contained the same standard.

The Board affirmed its jurisdiction to conduct such a limited review of an agency decision regarding the amount of collateral savings under the Value Engineering Clause in *Sayco, Ltd.*, ASBCA No. 39366, 92-1 BCA ¶24,573. The Board cited *ICSD* as precedent, and noted that, on the appeal of that decision by the appellant to the U.S. Court of Appeals for the Federal Circuit, the Court, while not directly addressing the jurisdictional question when affirming the Board's decision, "did agree that the appellant has the burden of proving abuse of discretion and considered the issues as to amount which appellant had appealed." The Board concluded from this holding that the court "found no error in our interpretation of limited reviewability of the collateral savings determination" (at 122,589).

We find no reason for arriving at a different conclusion with respect to the finality clause of the award fee evaluation provision of this contract. Accordingly, the Government is wrong when it contends that the clause is an absolute bar to jurisdiction, and appellant is wrong when it attempts to read the clause out of the contract in light of the Contract Disputes Act.* The appellant is right when alternatively arguing that we may conduct such a limited review.

The appellant has also demonstrated that there are issues of fact that may be material to a determination as to whether or not the Government was arbitrary or capricious in rendering decision on the amount of award-fee due; this serves as a bar to summary judgment. We also note that summary judgment is particularly inappropriate where, as here, in addition to the existence of material factual disputes, discovery has not yet been completed. *National Life Insurance Co. v. Solomon*, 529 F.2d 59, 61 (2d Cir. 1975).

The Government's Motion to Dismiss or, in the alternative, for Summary Judgment, is denied. The parties are ordered to confer and, within thirty days of receipt of this decision, propose to the Board a mutually agreed upon schedule for further proceedings.

[¶ 26,591] Holk Development, Inc.

ASBCA No. 43047, December 7, 1993. Contract No. MDA946-88-D-0004.

Procedure, Boards—Pleadings—Particularity of Affirmative Defense.—The government's affirmative defense, stating that an agreement to pay premium rates for non-asbestos-related work was tainted by collusion and therefore void, was not dismissed for failure to meet the particularity requirement of the Federal Rules of Civil Procedure, because the contractor had sufficient notice of the claim to enable it to prepare a meaningful response. The contractor sought to have the defense stricken because the list of indicia of collusion was not sufficiently particular pursuant to the FRCP. However, the FRCP are not binding in proceedings of boards of contract appeals but serve to provide guidance in instances in which specific board rules are not dispositive. The government's affirmative defense was not stricken, however, because the contractor responded to the affirmative defense on its facts and merits, showing that it did not need further particularization.

---

*The Claims Court decision cited by appellant, *OSHCO-PAE-SOMC*, deals with an attempt to bar Claims Court jurisdiction by a contract clause; it is unconvincing as precedent here because it is distinguishable on its facts. Even if the general legal precept of that decision, when interpreted broadly (that a contract provision cannot bar jurisdiction granted by statute) was considered applicable here, we would not deem the decision as controlling in the face of the Board and Court precedent cited in our opinion.

For the appellant: Williams & Jensen, Washington, D.C., by Robert J. Martinez and Sally B. Pfund. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. S. Gregg Kunzi, JAGC, Trial Attorney.

Before MOED, SPECTOR, and STEMPLER, Administrative Judges.

MOED, Administrative Judge:

Facts Relevant to the Motion

Background

This appeal has been consolidated for hearing and decision with ASBCA Nos. 43271, 43377, 44212, 44724, and 45031. These appeals relate to delivery orders issued under an indefinite quantity contract for construction services relating to alteration and renovation of the Pentagon Building, Arlington, VA.

ASBCA No. 43047 relates to the Government's claim to recover amounts of premium pay allegedly improperly paid for non-asbestos related work under delivery orders. In a decision dated 20 October 1992, published at 93-1 BCA ¶ 25,513, we denied Holk's motion for summary judgment in this appeal on the basis that the allegations, in the Government's affidavits, of a collusive working relationship between appellant and certain Government employees created a genuine issue of fact as to the *bona fides* of the orders.

There had been no claim or pleading of collusion prior to these affidavits. After denial of the summary judgment motion, appellant moved for an order directing amendment of the answer so as to plead the allegations of collusion.

On 10 September 1993, the Government filed an amended answer asserting an affirmative defense that any agreements by the Government for payment of premium rates for non-asbestos related work were "tainted by collusion and [are] thus void and unenforceable."

That statement was followed by nine paragraphs of factual allegations, labelled "indicia of collusion," setting forth various alleged improprieties by Holk and Government personnel relating to the award and administration of delivery orders and also in relation to other contracts for these services.

On 12 October 1993, Holk filed a response to the affirmative defense in which it denied the allegation of collusion and addressed each of the "indicia of collusion" on the facts and the merits.

Thereafter, on 14 October 1993, Holk made the present motion for an order dismissing the affirmative defense of collusion and striking the same from the amended answer. The basis of the motion is that the Government has failed to plead the allegations of collusion with particularity, as required by Federal Rules of Civil Procedure (FRCP) Rule 9(b). That Rule provides that in pleading fraud or mistake "the circumstances constituting fraud or mistake shall be stated with particularity." Holk contends that the statement of the collusion defense, including the "indicia of collusion," is defective for failing to comply with that provision.

DECISION

As is correctly noted in the Government's opposition papers, the Federal Rules of Civil Procedure are not binding in proceedings of the boards of contract appeals. They serve, however, to provide guidance in instances where specific board rules are not dispositive. *Dae Lim Industries Co., Ltd.*, ASBCA No. 28416, 87-3 BCA ¶ 20,110

In order to dispose of the present motion, however, we are not required to address the applicability of Rule 9(b) or the sufficiency of the pleading in the light of that rule. Even if the rule were fully applicable and controlling, we could not grant the motion. The primary purpose of the particularity requirement of Rule 9(b) is to give the person accused of fraud sufficient notice of the claim to enable preparation of a meaningful response. *New England Data Services v. Brecher*, 829 F.2d 286, 289 (1st Cir. 1987); *Ochs v. Shearson Lehman Hutton*, 768 F.2d 418, 427 (S.D. N.Y. 1991). Prior to making this motion, Holk responded to the affirmative defense on its facts and merits. In so doing, it showed that it did not need further particularization pursuant to Rule 9(b).

The motion is, accordingly, denied.

[¶ 26,592] Trataros Construction Co., Inc.

ASBCA No. 42845, December 21, 1993. Contract No. DAAB08-84-C-R234.

Acceptance of Performance—Rejection of Nonconforming Items—Alternate Product.—The government's rejection of a dehumidification unit as an unacceptable alternative was proper because the contractor failed to offer sufficient proof for the board to conclude that the unit submitted either met the salient characteristics of the specified unit or was the functional equivalent. The primary purpose of the dehumidifier was to create a dry room in which to conduct research that required a controlled temperature; the contractor bore the burden of proving that the proffered unit met the specific requirements for temperature and relative humidity. The contractor submitted data showing that the unit had worked successfully for five hours; however, that period was insufficient to conclude that the unit would consistently maintain the temperature and relative humidity, especially because the compressor failed after the test.

For the appellant: Giordano, Halleran, & Ciesla, P.C., Middletown, New Jersey, by Richard D. Stanzione and Paul V. Fernicola. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Lt. Col. Raymond M. Saunders, JAGC, John H. Eckhardt, and Capt. Kurt A. Didier, JAGC, Trial Attorneys, U.S. Army Communications/Electronics Command, Fort Monmouth, New Jersey.

Before ELMORE, RUBERRY, and RIISMANDEL, Administrative Judges.

ELMORE, Administrative Judge: Trataros Construction Company, Inc., (Trataros or appellant) has appealed the contracting officer's (CO) 13 February 1991 "final decision" denying Trataros' certified equitable adjustment claim for $281,432 as follows: $243,670 due to the Government's rejection of a reworked and functionally equivalent dehumidification system; $12,177, additional indirect home and field office overhead costs; and $25,585, "reasonable profit" for work performed during the extended period of the contract.[1] A hearing was held and both parties submitted main and reply briefs. Only the issue of entitlement is before the Board (tr. 1/11-12).

FINDINGS OF FACT

1. On 31 October 1984, later changed by modification P00001 to 29 September 1984, Trataros was awarded negotiated fixed price construction contract No. DAAB08-84-C-R234 [R234] at a contract price of $339,000 to "supply all plant, labor, material, equipment, and perform all work required to Renovate the Battery Room 2C203, Building 2700" at Fort Monmouth, New Jersey[2] in strict accordance with plans and specifications. Appellant was issued a NOTICE TO PROCEED dated 31 October 1984 with instructions to "commence physical work at the site on 3 Dec 84." (R4, tabs 1, 2, 179; stip. 1, 2)[3]

2. The contract called for the renovation of a low humidity facility or "dryroom" to be used primarily by employees of the Electronic Technologies and Devices Laboratory (ET&DL) in connection with research and production of lithium batteries. For its battery research, ET&DL required a self-contained work environment with a constant room temperature of 71° F, a constant humidity level (RH) of 2 percent or less and an independent and reliable means of/for maintaining the same. The contract identified the contracting officer's representative (COR) and alternative representative (ACOR) as Mr. Kevin Dooney and Mr. James Ott, respectively. The contract incorporated by reference the following Federal Acquisition (FAR) clauses: 52.233-01I, Disputes—Alternative I (APR 1984 ALT); 52.212-05, Liquidated Damages—Construction (APR 1984); 52.212-12, Suspension of Work (APR 1984); 52.236-05, Material and Workmanship (APR 1984); 52.243-04,

[1] Although the record indicated the Government took liquidated damages deductions from appellant's payments there is neither a claim for the return of these amounts nor was this addressed in the "final decision." We therefore, find that the liquidated damage amounts are not jurisdictionally before us.

[2] The building to be renovated is referred to as Hexagon building, Building 2700 and Meyer's Center interchangeably throughout the contract documents and the record (tr. 4/29).

[3] References used in this decision will be as follows: Rule 4 (R4) file; Board exhibit (Board exh.); stipulations (stip.); Government brief (Gov't brief) and reply brief (Gov't reply brief); appellant brief (app. brief) and reply brief (app. reply brief); Government (G) and appellant (A) exhibits; depositions (depos.).

Changes (APR 1984); 52.246-12, Inspection of Construction (APR 1984). (R4, tab 1; stip. 2, 3)

3. The *SPECIFICATIONS FOR RENOVATION OF ROOM 2C203A HEXAGON (ET&DL DRY ROOM FACILITY) BUILDING 2700* provided in pertinent part (R4, tab 4; stip. 3, 7, 9-11):

SECTION 01011—*GENERAL REQUIREMENTS*

3.1 *Submittals:* A list of materials and/or equipment will be established for the Contractor after the Notice of Award is issued; and Pre-Construction Conference date is established. Said submittal list shall be furnished the Contractor at the Pre-Construction conference. There shall not be any materials, equipment, supplies or manpower permitted on or near construction site until submitted items required are approved, unless special exception is requested in writing, and such request is approved, in writing by the Chief, Engineering Plans & Services.

* * *

4. *CERTIFICATE OF COMPLIANCE.* In addition to submitting shop drawings, the contractor shall submit certificates of compliance where required for demonstration of proof of compliance of material with the specification requirements....

Section 15011—*MECHANICAL GENERAL REQUIREMENTS*

18. *MANUFACTURERS' PRODUCTS:* Products are listed for the purpose of operational and physical characteristics. Other manufacturers' products of similar operational capability, physical size and quality will be acceptable as approved by the Contracting Officer.

SECTION 15650—*FACTORY FABRICATED DEHUMIDIFICATION SYSTEM*

1.6.1 The system depicted in the drawings and hereinafter described is based upon Model IDS-G11-6G-3 manufactured by Cargocaire Engineering Corporation [Cargocaire], Amesbury, Massachusetts 01913.

1.6.2 Design Conditions:

Outside Air	88 ° F DB—76 ° F WB
Space Temperature	71 ° F DB ±1 ° F
Space Humidity	2.4 grains/lb + 0 grains/lb
Supply Air Quality	4700 CFM
Return Air Quantity	3200/4000 CFM
Supply Air Temperature	62.5 ° F DB
Space Moisture Removal	6.7 lb/hr
Space Cooling	51000 BTUH
Reactivation	227,500 BTUH
Supply Fan HP	15
Dehumidifier Drive HP	1/4
Power Supply	208/3/60
Full Load Power Consumption	216 amps
Max. Unit Weight	13600 lbs
Max. Unit Size (ft)	36′ L × 8′ 4″ W × 90′ H
Building Main Gas Pressure	6′ W.C.

4. On 7 January 1985 Trataros proffered a Bry-Air, Inc. (Bry-Air) manufactured dehumidification system and a flow diagram showing the unit was capable of meeting the specified temperature and relative humidity (R4, tab 5; stip. 12, 14).

5. On 30 January 1985 the COR informed Trataros the Bry-Air system proffered 7 January was approved provided the manufacturer certifies the painted steel housing provides weather protection, corrosion resistance, and housing life equal to that of the specified aluminum housing; that the use of direct fired heaters for the reactivation air will have no effect upon the desiccant wheel or the conditioned spaces; and the submission of an alternate gas meter with a pressure drop sufficiently low to allow full gas flow to the heaters (stip. 13; exh. G-9, at 12 of 12).

6. On 6 February 1986 the Government notified Trataros the Bry-Air submittals were approved and Trataros purchased the unit from Brangs and O'Brien, Bry-Air's New Jersey vendor. In early April 1986 the unit was installed and on 10 April 1986 it was tendered for beneficial occupancy. On 17 June 1986 a final inspection was conducted and minor deficiencies were noted. (R4, tab 31, 180; stip. 14-17)

7. By letter dated 27 June 1986 the COR informed Trataros the Bry-Air dehumidification system was not maintaining the required humidity levels in the dry room (R4, tab 34).

8. On 14 July 1986 Trataros submitted the "Pressure Test Reports" performed by its subcontractor, Airco Industries, Inc. (R4, tab 37; stip 20).

9. In a 28 July 1986 memorandum the Chief, Tech. Plans & Programs Office, ET&DL, Mr. E.T. Hunter, informed the ACOR the dehumidification system did not keep the dryroom humidity and temperature at the specified levels (R4, tab 43).

10. At a meeting held on 6 November 1986 to discuss problems encountered with the Bry-Air dehumidification system, the minutes of which were prepared by Trataros, the parties agreed the failures were due to

Digitized by Google

humidity and that the system, as designed, was "marginal and leaves no room for error." Bry-Air suggested that, due to the lack of a "safety margin," and "in order to deliver a working system" the CFM "must be increased to between 6 and 7 thousand CFM." Bry-Air agreed to remove the unit at no cost to the Government, return it to its factory and repair the defects; make some changes, rebuild certain areas "and build into the unit some safety aspects that would handle the changes that have been found in the design and in the room." Bry-Air further agreed to disconnect and reconnect the unit and to provide the Government with the names of companies that use "this unit." Trataros would submit to the Division of Engineering and Housing (DEH) test reports and submittals on the existing Bry-Air unit and the design calculations for the capacity of the unit. DEH agreed to provide its design analysis upon receipt of the requested test reports. (R4, tab 58) The Government did not object to or suggest corrections to Trataros' meeting minutes. (R4, tab 73)

11. On 13 November 1986 Trataros provided to the Government a two-page test report for the "new" Bry-Air unit and a partial listing of Bry-Air's low RH controlled customers (R4, tabs 60, 193).

12. In a 20 November 1986 memorandum, COL Robert Hackett, Commander, U.S. Army Communication Electronics Command, Fort Monmouth, responding to complaints from ET&DL regarding the contract's late completion stated (R4, tab 65):

> A meeting was conducted on 6 Nov 86 regarding the subject contract. In attendance were representatives from the construction contractor (Trataros), the dehumidification equipment manufacturer (Bry-Air), Division of Engineering and Housing, and Mr. Carlos Guerci of your staff.
>
> As a result of this meeting, Bry-Air will remove the dehumidification equipment and rebuild it to increase capacity, as well as repair damage that affects humidity control incurred prior to installation. However, the Division of Engineering and Housing did not allow this equipment to be removed until the contractor provided test reports on the existing system highlighting areas of noncompliance with contract specifications. This was required to allow the government engineering staff an opportunity to evaluate the capabilities of the equipment.

13. In a letter dated 1 December 1986 the COR acknowledged he had received the requested Bry-Air test reports and that Trataros had removed the existing unit on 13 November 1986, as scheduled (R4, tab 66).

14. By letters dated 6 and 8 January 1987 the Government renewed its request that Trataros provide: a list of facilities currently using Bry-Air units maintaining 2 percent or lower RH; a complete manufacturer's submittal on the unit to be re-installed including all manufacturer's performance characteristics, construction and dimensional shop drawings, catalog cuts, construction shop drawings, control schematic, wiring diagrams, operational and maintenance information; and design calculations from Bry-Air on the required capacity of the unit. In a 4 February 1987 memorandum to the procurement office, Fort Monmouth, the COR, in response to Trataros's 19 December 1986 letter, acknowledged that the Government was assessing liquidated damages due to appellant's delay in prosecuting the work. The COR requested the PCO direct appellant to "provide documentation to substantiate the qualifications of Bry-Air" to manufacture a unit capable of maintaining 2 percent RH as requested. (R4, tabs 67, 71, 72, 73; stip 37, 38)

15. On 3 February 1987 Trataros installed the re-worked Bry-Air unit. Submittals were not provided to the Government prior to installation. On 24 February 1987 Trataros advised the Government the requested information on the re-worked Bry-Air unit would be acquired from Bry-Air by 1 March 1987. (Stip. 39, 40)

16. On 2 March 1987 Trataros provided the submittals for the re-worked Bry-Air unit together with the requested list of Bry-Air users. Bry-Air refused to provide design calculations for its unit stating that it was not a contract requirement and the information was proprietary. (Stip. 41)

17. By letter of 3 March 1987 Trataros notified the Government that the testing and balancing of all equipment would be conducted on 16 March 1987 (R4, tab 74; stip. 42).

18. On 11 March 1987 the COR, in a memorandum to the PCO, acknowledging receipt of Trataros' 2 March 1987 submittal for the reconditioned Bry-Air unit, recommended it be disapproved stating (R4, tab 76; tr. 4/25-30):

©1994, Commerce Clearing House, Inc.
Digitized by Google

a. Unit provides 7,000 CFM in lieu of 4,700 CFM. Air handling system was not designed for this quantity of air.

b. Unit is 2,400 lbs. heavier than specified.

c. Unit has a minimum circuit capacity of 369A. Specified unit uses 216 full load amps. The electrical service installed does not have the capacity to provide this power. This is a major safety hazard.

d. The reactivation heater utilizes a heat exchanger. No information has been provided on this piece of equipment.

e. Sections of the submittal are poorly reproduced and illegible.

The unit does not meet the contract specifications. Trataros did not provide this submittal in a timely manner. This unit should never have been installed.

The status of this contract is at the same point as in November 1986. The contractor must be directed to remove the Bry-Air unit and to provide a unit which meets the contract specifications. The contractor must be informed that a submittal for a new dehumidification unit must be received within two weeks. If this is not forthcoming, the contract should be terminated.

19. On 16 March 1987 Mr. Wayne Caudle of Bry-Air tested the reconditioned Bry-Air unit using a Bry-Air owned and calibrated General Eastern (GE) manufactured hygrometer. Present during the testing were ET&DL employees, Messrs. Charles Guerci and Charles Walker, neither of whom represented the CO. Also conducting tests to determine the RH and witnessing Mr. Caudle's testing was Mr. James Buttomer of General Eastern Instruments. (Stip. 43, 65; tr. 3/11-14; R4, tab 77)

20. Mr. Buttomer, using a calibrated GE hygrometer, measured the RH levels in the dryroom for comparison with the levels indicated on the Bry-Air hygrometer to determine the Bry-Air instrument's accuracy. Neither Mr. Buttomer, nor anyone else present, recorded the digital readouts from Mr. Buttomer's hygrometer and no interpretative report was prepared. The ET&DL had a Ondyne, Inc. manufactured hygrometer, purchased and calibrated in 1985, and subsequently recalibrated in August 1988, located in the dryroom, which it used to measure the RH. There was no evidence introduced that the Ondyne machine during the period between 1985 and August 1988 had been calibrated although it was used extensively by ET&DL during this time period to monitor the dryroom's RH. (Tr. 2/15-18, 19-20, 188, 234-35, 349, 3/194-95, 215; stip. 44, 45, 64; R4, tab 220)

21. On 19 March 1987 the CO informed Trataros the reconditioned Bry-Air unit was "disapproved" citing the same reasons provided by the COR in the 11 March 1987 memorandum. Trataros was directed to "remove the Bry-Air unit and to provide a unit which meets the contract specifications." (Finding 18; R4, tab 80; tr. 4/30-31, 64; stip. 47)

22. The 30 March 1987 Test and Balance Report for the re-worked Bry-Air unit and prepared by Effective Air Balance, Inc. stated the actual airflow rate was 5,405 CFM and the discharge pressure was 4.35 inches water gauge (wg) (R4, tab 83; stip. 49).

23. On 2 April 1987 Trataros, responding to the CO's 19 March 1987 letter disapproving the reconditioned Bry-Air unit, stated in pertinent part (R4, tab 85; stip. 50):

1. a. The 7,000 CFM is a nominal factory rating of the unit which is subject to variation as required. The 7,000 CFM nominal rating is no surprize [sic] to the DEH since it was clearly indicated to them at a meeting held on November 6, 1986....

b. The test reports show that the unit in [sic] actually is delivering 5,405 CFM which is only 705 CFM above the 4,700 designed.

c. Enclosed is a letter dated March 30, 1987 from Philip J. Eager, P.E. who is a mechanical engineer. As you can see there is no problems with the ductwork system.

2. a. The unit represents a mere 17% increase in weight and structural designs always included a greater safety factor than that percentage.

b. A review of the minutes of the November 6, 1986 meeting reveals DEH was made aware the revised dehumidifier would be larger. There was no objection.

3. a. The dehumidifier contains 2 compressors and 2 heaters. An interlock allows 1 compressor plus 2 heaters to run at any one time or 2 compressors and one heater; Never [sic] 2 compressors plus 2 heaters.

1) With 2 compressors plus 2 heaters (total failure of the interlock) plus all other motors the full load is 295.2 amp.

2) With 2 compressors plus 1 heater the full load is 260.6 amp.

3) With 2 heaters plus 1 compressor the full load is 219 amp.

b. An analysis of the electrical system was prepared by Bill Steelman of CN, Inc. Electrical Contractors and is enclosed.

Digitized by Google

c. An analysis of the electrical system was prepared by Mr. Bohdan Kalembka, P.E. of Lech Associates, Inc. He is an electrical engineer.

d. Both analyses indicate there is no problem except the 300 amp trip in the disconnect must be changed to 400 amp. This has already been accomplished.

4. Enclosed are catalog cuts showing the reaction heater for your review.

If you will be specific on what page or pages in the submittal are "poorly reproduced and illegible" we will furnish better copies.

a. As promised by Trataros . . . at our November 6, 1986 meeting we have provided a dehumidifier which provides all required humidity levels specified by the contract. It is now in the best interest of all parties to accept the unit for beneficial occupancy pending a summer test.

In view of all of the following [sic] it is requested that the Government take beneficial occupancy of the facility. The specifications require a test in the summer and we will perform the test at that point in time. The punch list items noted in your letter will be corrected. Mr. Charles Walker of the using agency is most anxious to begin operations and ther [sic] is no reason why he can't. The humidity levels are perfect and in fact have been demonstrated to greatly exceed requirements.

24. On 16 April 1987 the parties met and discussed the installed reconditioned Bry-Air dehumidifier. At the meeting Trataros was provided with "Dryroom Log 1987" showing the dryroom's recorded temperatures during an unspecified 30 day monitoring period were higher than the 71°±1° allowed by the specifications. During discussions the contractor, admitting the unit installed was different than the Government specification, contended it would perform and meet the Government's requirements as proven during a four-hour test performed 16 March 1987. The Government, admitting it did not fully evaluate the information provided by Trataros with its 2 April letter, argued the reconditioned Bry-Air unit was not the same as the unit shown on the submittals and it was never approved; that the unit's compressor broke down on 16 March after four hours of testing and, to date, was still not repaired, precluding the Government from assessing whether it was capable of continually meeting the Government's needs; that the Government wanted "approximately 7000 CFM" and the Bry-Air unit was "providing approximately 5000 CFM." (R4, tabs 87, 88, 90; stip. 51)

25. The COR, in a 7 May 1987 memorandum to the CO discussing Trataros' documentation for the installed reconditioned Bry-Air unit/system, identified the following deficiencies (stip 54; *see* R4, tab 89):

High static pressure. The Test and Balance Report indicated that the unit produced 4.35 inches wg discharge static pressure in the ductwork. The duct work was made of aluminum and no standard existed for aluminum ductwork pressure higher than 3" wg; that the duct work installer refuses to accept responsibility for the operation of the ductwork at the increased air flow; and operating at excessive pressure would eventually degrade the integrity of the flanged connectors;

The submitted performance data on the process and regenerator fans did not match the speeds and pressures at which the fans were actually operated;

The submittal for the heat exchanger indicated that the unit was not suitable for use with combustion exhaust, and failed to include a control to modulate gas flow to reduce consumption during low load hours;

The electrical power consumption of the reconditioned Bry-Air unit indicated a full load consumption of 320 amps which was in excess of the specified 216 amps;

The calculations of allowable voltage drop and power consumption by appellant's licensed electrical engineer were based on incorrect assumptions as to voltage, cable length, power phase, power factor, and cable rating;

Appellant's test on the unit was inconclusive in that it was not performed at design load conditions; and

The unit failed to demonstrate the ability to maintain the required conditions in the dryroom.

26. In its letter of 19 May 1987 Trataros informed the Government it "had replaced the compressor;" that although it wanted to monitor the room temperature with the Government to avoid problems of temperature variances, the Government never responded to Trataros' 20 April letter requesting this; and, therefore, Trataros unilaterally monitored the unit and "feel the reliability his been proven;" and the Government was requested to "accept" the project subject only to its performing the summer test. (R4, tab 90; stip. 55)

©1994, Commerce Clearing House, Inc.

Digitized by Google

27. In a memorandum of 27 May 1987 the COR outlined for the CO the Government's position as to the inadequacies of the reconditioned Bry-Air unit, restated the deficiencies that he set forth in his 7 May memorandum emphasizing that had Trataros provided submittals for the reworked unit prior to installation, it would have been rejected prior to installation. The CO further reiterated the re-worked unit was inoperative from 16 March to 2 April when it was started up after replacement of the compressor. The COR recommended Trataros be directed to replace the Bry-Air unit with one complying with the specifications. (R4, tab 91; stip. 56; finding 25)

28. By memorandum of 4 June 1987 the COR, responding to Trataros' 19 May letter, informed the CO that although Trataros contends it monitored the unit, no test reports have been submitted since the compressor was replaced; Trataros' contention the dryroom was ready for occupancy during the 16 April 1987 meeting is contradicted by its contention that after replacing the compressor it had not reset all controls; and the dryroom conditions had been monitored by the user agency and found not to be operating reliably (R4, tab 92).

29. On 11 June 1987 the CO issued a "cure" letter wherein he stated that the Government "never had 'beneficial occupancy'" of the dry room because the unit was never able to maintain a 2 percent humidity level, that due to the subsequent breakdown of the compressor the 5-hour test performed on 16 March 1997 did not prove the reliability of the unit, and that the unit had never been tested under maximum load conditions. The cure notice further stated the installed reconditioned Bry-Air unit was unacceptable because (a) it failed to maintain 2 percent RH level within the dryroom (based upon ET&DL's log of the dryroom conditions); (b) the ductwork was not designed for 4.35 inches discharge static pressure; (c) the process and regenerator fans operated at impermissible CFM, static pressure and fan speeds; (d) the heat exchanger was being used with the combustion exhaust from the gas burner and not the building exhaust as the manufacturer recommends; the electrical power consumption was more than that of the specified unit; the electrical power feeder cable was undersized; and the test results failed to demonstrate the unit was capable of removing 6.7 lbs. of moisture per hour. Trataros was given 10 days after receipt of the cure notice to inform the Government of the work "accomplished toward correcting the above stated deficiencies" and provide a "delivery schedule with milestones showing when each deficiency will be corrected." Trataros was advised that its "failure to provide the requested cure and assurances within ten (10) calendar days after receipt of this notice, may result in the Government terminating the contract for default" pursuant to the default clause. (R4, tab 93; stip. 57)

30. By letter dated 17 July 1987 Trataros responded to the 11 June 1987 cure notice averring the accuracy of the Government's monitoring device was questionable because of its demonstrated inaccuracy during the 16 March 1987 test when it recorded a different RH level than the GE and Bry-Air instruments; that the Bry-Air unit did not remove 6.7 lb. per hour of moisture during the performance test because this amount of moisture was not present in the dryroom; that the mechanical and electrical engineers' reports clearly establish the Bry-Air unit to be within specification and would not cause damage to the ductwork. Trataros proposed to furnish a calibrated measuring device to perform the RH test and offered the Government the option of using its own calibrated device. (R4, tab 101; stip. 59)

31. On 23 July 1987 Trataros requested the Government either waive the summer test and use "in room" humidity and temperature readings or permit Trataros to use the GE calibrated dewpointer, which the Government had under contract for monitoring and recording dryroom conditions, for taking the roof top reading for the summer condition test (R4, tab 103; stip. 67).

32. On 29 July 1987 the Government had Mr. Buttomer of GE install a calibrated dewpointer in the dryroom to provide a constant monitoring of the room's humidity. To accomplish this end, Mr. Bruce Bonner of Harris Environmental connected to the dewpointer a recording device which would continually record the frost point in centigrade. (Stip. 68; tr. 5/285-90)

33. The GE hygrometer, an extremely accurate measuring device, has saturation occurring on its mirror and, accordingly, reads directly out in dew point temperatures (tr. 2/225). The Honeywell recorder was used to record the dew point/frost point readings as they were being made by the GE hygrometer. We find that the recordings made were accurate readings of the temperature and dew/frost point in the dryroom during the period 1 August through 15 September 1987. Each dew point chart covered a 24-hour period and the recordings were made continu-

Digitized by Google

ally from 1 August to 15 September 1987. The chart was changed daily by ET&DL personnel and the pens when needed. Two recording pens made tracer recordings on the charts with one pen recording dew point inputs from the dewpointer in negative degrees centigrade and the other pen recording temperature, from the chart recorder's own temperature sensor, in degrees Fahrenheit. (Stip. 69, 70; tr. 5/288, 291-92 300-13)

34. On 31 July 1987 Trataros informed the Government that "its representative" has been monitoring and logging the conditions in the dryroom three times per day since 27 July 1987 and the temperature and humidity were found to be "well within the specifications" (R4, tabs 108, 120). The log on which the conditions of the dryroom were recorded was kept by Mr. Darren Bellucci from 27 July to 14 August 1987. Mr. Bellucci testified he could not recall where he obtained the entries for the temperature recorded on the log and he could neither explain why there were double entries for some dates nor why the entries for these dates were different although they were allegedly taken at the same time. (Tr. 2/41-55 *passim;* exh. A-4) We give no probative weight to the log and the entries recorded thereon.

35. The COR, when he contacted Bry-Air unit owners/users, was informed that their respective Bry-Air units have and/or still maintain less than two degrees RH (R4, tabs 60, 109; tr. 4/220-26; finding 11 *supra*).

36. On 8 October 1987 the CO sent Trataros a second cure notice stating the response to the first cure notice was insufficient and listing the deficiencies of the Bry-Air system as: failing to maintain required humidity level; high static pressure in the ducts; regeneration and process fans operating at a higher CFM than the manufacturer recommended; heat exchanger being used with the more corrosive exhaust and at a higher temperature than the manufacturer recommended; high electrical power consumption; undersized electrical power feeder cable; and the failure of the unit to show the moisture removal capacity. Trataros was directed to respond within ten days with reasonable assurances and milestones it expected to take to correct the deficiencies. (R4, tab 114; stip. 79)

37. By letter dated 20 October 1987 Trataros requested the Government provide its GE dewpointer monitored readings so the data could be compared with Trataros' generated during the same time (R4, tab 115; stip. 80).

38. On 6 November 1987 the CO provided Trataros with the requested charts which the Government interpreted to say the Bry-Air unit was not maintaining the specified levels of humidity within the dryroom. Trataros was directed to respond to the 8 October 1987 cure notice within ten days and was notified the Government did not waive its right to terminate the contract for default as a result of the deficiencies noted. (R4, tab 118; stip. 81)

39. On 19 November 1987 [4] Trataros, replying to the 6 November letter, contended the charts did not reflect actual room conditions, but rather "out of control" and "overshooting" conditions associated with the extreme sensitivity of the dewpointer to changes in room moisture.[5] Appellant contended that "the shape of the recordings indicated that when the humidity increased after a bed index, the sensor was overshooting and charting a humidity level which did not actually exist in the room." Appellant informed the Government it intended to conduct a final test under simulated summer conditions on 20 November 1987 to which

[4] We note that there is a second letter, dated 17 November 1987 (R4, tab 204) which has the same first page but a different second page. The record is unclear if both letters were delivered to the Government. After consideration, the second page of this second letter does not cause us to change our finding.

[5] Out of control was defined by Mr. Buttomer as (tr. 2/209-10):

> The instrument is not measuring the — does not measure the dew point within certain preset parameters, actually, or there could have been a situation where there was a sudden influx of water that caused the instrument to heat up to establish control at a new point. There could have been an influx of dry air that caused it to slow down to a dew point to further come into control. But it would have been on — it would have been in the transition period between actual physical points.

and by Mr. Bonner as (tr. 5/295):

> That if you have the instrument running at a particular dew point, frost point, and I say frost point because on this type of application you're always in a frost point situation, and you have a step change in the quality of the air that's impinging on the instrument that you can have the unit lose control and not be able to know exactly what the dew point is until it goes through its cycling and is able to pick up the control point again.

Digitized by Google

the Government was invited to attend. Based on the results of the test and assuming the equipment failed to meet contract requirements, Trataros proposed to either correct the equipment presently in place or to negotiate with Cargocaire Corporation to purchase the referenced model in the specifications if immediate repairs cannot be rendered. Trataros was not permitted to perform the proposed test because the CO determined the test could not and would not clear up the deficiencies noted in the Government's 8 October 1987 cure notice. (R4, tabs 121, 124; findings 36 *supra*, 43 *infra*)

40. In a memorandum to the CO dated 20 November 1987 the COR, responding to Trataros' 19 November letter, stated (R4, tab 123):

> The operation of the General Eastern dewpointer is such that when a change in the dew point occurs, there is a delay during which the dewpointer must "catch up" to the actual room conditions. However, the high and low points measured are accurate. The contract specifications called for a moisture level of 2.4 grains per pound (−27° F dew point) + 0 grains per pound. The dewpointer indicated that this level was exceeded consistently.

41. On 20 November 1987 Trataros responded to the "20 November" cure notice, acknowledged as being hand delivered on 20 November, stating in pertinent part that in spite of its insistence, supported by documentation from its engineers, that the Bry-Air unit meets the specifications, the Government's insistence does not leave Trataros any alternative but to remove and replace the Bry-Air unit (R4, tabs 124, 125; stip. 85).

42. During the 20 November 1987 time frame it is undisputed that liquidated damages were being assessed against Trataros. The COR further agreed that although the test of the Bry-Air unit indicated that 5,405 CFM was the output, he "felt that in order for the unit to put out the capacity that was indicated in the submittal, the unit would have to run at 7,000 CFM (although he did not check this with his electrical people); that the compressor failure during the 16 March 1987 test was not critical to the performance test being done; that when he arrived at the 16 March test site at 3 P.M. the test had been concluded (other Government witnesses stated the test did not end until around 5 P.M.); that Trataros had supplied better copies of submittals which satisfied his concern; and catalog cuts were provided for the reaction heater. (Tr. 4/229-37 *passim*)

43. By letter dated 1 December 1987 the CO informed Trataros that its request to perform the summer test on the Bry-Air unit on 20 November could not be adequately evaluated since it was not received until 3:30 P.M. 19 November; that, in any event, the tests could not have cured the stated deficiencies; and that the response to the cure notice "will be considered sufficient only when [Trataros] suppl[ied] a schedule, in writing, of milestones which [Trataros has] set for replacement of the Bry-Air unit." (R4, tab 127; stip. 86)

44. On 14 December 1987 Trataros forwarded to the Government a proposal for the Cargocaire unit including a number of requests for variances (R4, tab 129, 130; stip. 87).

45. On 15 January 1988 the CO advised Trataros its Cargocaire proposal was acceptable subject to the receipt of a complete submittal and the manufacturer's compliance with the specifications. The Government did agree to accept a number of the requested variances. (R4, tab 132, stip. 88) On 27 January 1988 Trataros provided another submittal for the Cargocaire unit (R4, tab 134).

46. On 9 February 1988 Trataros informed the Government it had placed an order for the Cargocaire unit (R4, tab 135; stip. 89).

47. On 11 February 1988 Trataros informed the CO that his direction to remove the reconditioned Bry-Air unit was a constructive change to the contract for which Trataros was seeking an equitable adjustment of: (a) removal and shipping of old system—$5,000; (b) Mounting—$10,000; (c) reconnection of utilities—$6,000; (d) new unit—$127,850; (e) extended overhead, consulting and legal fees, the exact cost of which was unknown at the time, but would be provided when available. (R4, tab 136; stip. 90)

48. On 9 March 1988 the CO unilaterally issued contract modification P00005 setting a schedule for the removal of the Bry-Air dehumidification unit and the installation of the Cargocaire unit (R4, tab 2; stip. 91).

49. On 14 March 1988 Trataros provided to the CO a submittal for the Cargocaire unit which the Government approved by letter dated 23 March subject to receipt of additional information on certain components. On 26 April and 3 May 1988 Trataros provided the additional submittals, (R4, tabs 206, 217; stip. 92, 93, 94)

50. On 23 June 1988 Trataros removed the Bry-Air unit and replaced it with the Cargocaire unit which the Government had ap-

Digitized by Google

proved with variances to accommodate the unit's requirement for 278 amps of electrical power vice the contract specified 216 amps and the installation of a fourth power feeder cable (stip. 95; R4, tab 165).

51. On 9 September 1988 the COR advised Trataros the dryroom and Cargocaire dehumidification unit were accepted for beneficial occupancy (R4, tab 219; stip. 99).

52. On 12 September 1988 the Cargocaire unit was tested and balanced and found to have a discharge static pressure of 6.95 inches wg. Although this was greater than the discharge static pressure the Government previously argued would "eventually degrade the integrity of the flanged connectors [in the ductwork]," the Government accepted the report without comment. (Stip. 100; findings 22, 25, 29, *supra*, 55 *infra*)

53. On 21 October 1988 Trataros invited the Government to attend and witness its testing of the reconditioned Bry-Air dehumidification unit at the Bry-Air factory in Ohio (R4, tab 170). No Government representative attended.

54. By letter dated 20 April 1990 Trataros, through counsel, filed with the CO its certified claim for an equitable adjustment in the "total amount of $281,432," the cost allegedly incurred as a result of the Government's constructive change order requiring Trataros to install the Cargocaire dehumidification unit and to remove the Bry-Air unit. (R4, tab 171; stip. 102)

55. On 13 February 1991 the CO issued a "final decision" denying Trataros' equitable adjustment claim (R4, tab 174) stating, in pertinent part, that Trataros installed the reconditioned Bry-Air dehumidification unit without providing submittals which, if provided prior to the unit's installation, would have been disapproved because the reworked Bry-Air unit did not meet critical performance requirements and the following deficiencies were noted:

a. The system consistently failed to maintain the two percent relative humidity level required by the contract;

b. The increased airflow caused the static pressure in the ducts to rise to an unacceptable level;

c. The process fan and regenerator fan were operating at a higher CFM, static pressure, and speed than that recommended by the manufacturer;

d. The heat exchanger was inappropriate for use with combustion gas exhaust;

e. The electrical power consumption of the reworked unit was higher than that of the unit specified in the contract;

f. The electrical power feeder was undersized; and

g. The contractor's test results did not show the moisture removal capacity of the unit as required by the contract.

56. By letter dated 25 April 1991 Trataros' appealed the CO's decision (R4, tab 175).

DECISION

The Court of Claims has defined equivalency between two items as follows: "if it performs *substantially* the same function in *substantially* the same way and for *substantially* the same purpose." *J.B. Williams Company v. United States,* 450 F.2d 1379, 1391 (Ct. Cl. 1971). The true measure of equivalency must come from actual comparative testing and analysis of the instrument and for a contractor's claim to be supportable, the item must prove to be substantially the same as the brand name with respect to specification requirements. *Id.* The CO is within his/her discretion to reject an alternative product if he/she correctly determines the alternative was not the equal of the specified product. However, this discretion is not absolute and must be reasonably and fairly exercised and there must be some explanation given where the alternative is rejected, *Bruce-Anderson Company, Inc.,* ASBCA No. 29411, 88-3 BCA ¶ 21,135.

It is settled law that an alternative product need not be identical to the specified one or comply with every detail of the specifications but, rather, it need only provide all of the essential functions specified and be suitable to the actual needs. *Id.; D.E.W., Incorporated,* ASBCA No. 36698, 89-1 BCA ¶ 21,312. The burden of proof is on the appellant to establish that its proffered "or equal" functions as well in all essential respects as the specified product. *Id.,* citing *Freeman Electric Company v. United States,* 221 Ct. Cl. 884 (1979); *Central Mechanical, Incorporated,* ASBCA Nos. 29360, 29414, 84-3 BCA ¶ 17,674.

In the instant matter the specification for the dehumidification unit was based upon Cargocaire's model IDS-G11-6G-3 and substitution of an equally functional unit/system was permitted (finding 4). The requirements of the dehumidification unit were set out in the specifications and, accordingly, were needed to be met by the proffered unit/system. Appellant contends

©1994, Commerce Clearing House, Inc.

Digitized by Google

the proffered Bry-Air unit was comparable, and performed in accordance with the specifications.

The Government contends the Bry-Air unit did not perform in accordance with the specifications and that (finding 55):

a. The system consistently failed to maintain the two percent relative humidity level required by the contract;

b. The increased airflow caused the static pressure in the ducts to rise to an unacceptable level;

c. The process fan and regenerator fan were operating at a higher CFM, static pressure, and speed than that recommended by the manufacturer;

d. The heat exchanger was inappropriate for use with combustion gas exhaust;

e. The electrical power consumption of the reworked unit was higher than that of the unit specified in the contract;

f. The electrical power feeder was undersized; and

g. The contractor's test results did not show the moisture removal capacity of the unit as required by the contract.

The primary purpose for the dryroom was to permit ET&DL to conduct research in the production of lithium batteries which required a controlled temperature of 71°F±1° and a relative humidity of 2 percent or less. Whether the Bry-Air unit performed these two specified requirements is a question of fact which Trataros bears the burden of proving.

Trataros contends that its recording in the dryroom during the 16 March 1987 test and the monitoring done during the period 27 July through 14 August 1987 proved that a consistent 2 percent RH or less and the requisite temperature were maintained. We find this argument lacking.

The 16 March 1987 test lasted for a period of approximately four to five hours after which a compressor failed. Between 16 March and approximately 2 April 1987, the system was inoperative (findings 26, 27). We find this 5-hour period insufficient to conclude the Bry-Air unit would consistently maintain a 2 percent or less relative humidity and a 71°F±1°.

As for the monitored period from 27 July to 14 August 1987 we find the reported readings to be of little probative value. Mr. Bellucci's inability to explain the difference between the entries allegedly taken at the same times for a number of the same days, or from where he obtained the temperature readings, leaves the reliability and authenticity of the document questionable (finding 34).

On the other hand, although we give little weight to the monitoring done with the Ondyne hygrometer by ET&DL's employees due to the Government's inability to establish the machine's credibility (finding 20), we do accept the recordings attributed to the GE instrument used by the Government during the period 1 August through 15 September 1987 (finding 33) as credible and reliable and we reject Trataros' contention that all of the aberrations recorded were the result of "out of control" or "overshooting" conditions as unsupported by the record. The "or equal" unit proffered by Trataros was required to be the Cargocaire's functional equivalent and "function as well in all essential respects as the specified" unit. *Central Mechanical, Inc.*, ASBCA Nos. 29360, 29514, 84-3 BCA ¶ 17,674 at 88,157, citing *William P. Sherwin v. United States* [16 CCF ¶ 80,060], 193 Ct. Cl 962, 436 F.2d 992 (1971).

FAR 52.246-12, INSPECTION OF CONSTRUCTION, subparagraph (f) provides (finding 2):

> The Contractor shall, without charge, replace or correct work found by the Government not to conform to contract requirements, unless in the public interest the Government consents to accept the work with an appropriate adjustment in contract price. The Contractor shall promptly segregate and remove rejected material from the premises.

Trataros has failed to offer proof sufficient for us to conclude the Bry-Air unit/system either met the salient characteristics of the Cargocaire unit or was the Cargocaire's functional equivalent. Under the circumstances the CO's decision to have Trataros remove and replace the Bry-Air unit was contractually proper and no showing was made that his actions were arbitrary, capricious, an abuse of discretion or illegal.

We need not address the remaining contentions raised by the Government. For having determined the Bry-Air system was not an "or equal" item, we have no alternative but to deny the appeal.

Accordingly, the appeal is denied.

[¶ 26,593] Atlantic Dry Dock Corp.

ASBCA No. 42679, December 21, 1993. Contract No. N00024-85-H-8111, Job Order No. AD-89-09.

Modifications—Bar to Claims—Intention to Release.—The issue of whether claims for cumulative delay and disruption were barred by a series of bilateral modifications containing broad release language was not appropriate for summary judgment, because the contractor raised genuine issues of material fact concerning the parties' intent in exercising the releases. Although the government alleged that the contractor's summary judgment affidavits suffered from various evidentiary deficiencies, the board neither weighs the evidence nor makes credibility determinations in deciding summary judgment motions. The parties' intent was a material fact that might affect the outcome of the case because of its legal import.

For the appellant: Dempsey, Brown & Touhey, Washington, D.C., by James A. Kelley and Bradley A. Rush. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and John A. Tew, Trial Attorney.

Before PAUL, RUBERRY, and JAMES, Administrative Judges.

PAUL, Administrative Judge: The Navy filed a lengthy motion for summary judgment in which it alleged that appellant Atlantic Dry Dock Corporation's (ADDC) claims for cumulative delay and disruption were barred by a series of bilateral modifications containing broad release language. ADDC opposed the Navy's motion, contending through sworn affidavits that the parties had engaged in a course of dealing through which the Navy precluded consideration of ADDC's cumulative delay and disruption claims until after it had executed the modifications at issue. The Navy subsequently filed two additional briefs, and ADDC submitted a reply brief.

FACTUAL BACKGROUND[*]

On 1 January 1985 ADDC and the Navy entered into Master Agreement for Repair and Alteration of Vessels N00024-85-H-8111 authorizing ADDC to bid on future ship repair projects. On 8 September 1989, the Navy awarded Job Order AD-89-09 to ADDC for the complete performance of the drydocking selected restricted availability repairs to take place on the USS W.S. SIMS from 27 September 1989 through 22 December 1989. The contract contained several clauses which are pertinent to this appeal. Clause H-1 of the Special Contract Requirements was entitled "Complete And Final Equitable Adjustments (NAVSEA 1975)." It provided:

> Whenever the contractor submits any claim for an equitable adjustment to any fact or circumstances regarded as a change order, whether formal or "constructive," under the "changes" or any other clause of the contract, such claim shall include all adjustments (including but not limited to adjustments arising out of delays or disruptions or both caused by such change order) to which the Contractor is entitled under the provisions of this contract. The foregoing requirement shall not preclude the Contractor from revising or resubmitting the aforesaid claim prior to agreement upon the equitable adjustment for the change order. However, upon the execution of the supplemental agreement, setting forth the equitable adjustment for such change order, then, except as the parties may otherwise expressly agree in the aforesaid supplemental agreement, the Contractor shall waive any right under the "Changes" clause or any other clause of this contract to further equitable adjustments attributable to such facts or circumstances giving rise to the aforesaid claim, and, in any event, such right shall be deemed to have been so waived.

ADDC commenced work on the project, and, during the life of the contract, the parties executed 25 modifications settling 81 change orders relating to work in the ship's machinery space. All of the modifications contained the following language:

> The change in price and/or delivery date described above, is considered to be fair and reasonable and has been mutually agreed upon in full and final settlement of

[*] We provide this factual narrative solely for purposes of deciding the Navy's motion for summary judgment.

©1994, Commerce Clearing House, Inc.

Digitized by Google

all claims arising out of this modification including all claims for delays and disruptions resulting from, caused by, or incident to such modifications or change orders.

However, attached to 6 of the 25 modifications at issue in this appeal was a letter from Mr. Edward J. Fleming, ADDC's production manager, in which he stated, in pertinent part, that "to the best of our knowledge this is in full and final settlement of all items on the USS SIMS (FF-1059) with the exception of the following: ... E. Request for Equitable #5, Machinery Space Work, Cumulative Delay and Disruption, letter 3277KEW.032."

On 26 May 1990, ADDC submitted the request for equitable adjustment (REA) to which Mr. Fleming alluded. Through this document, ADDC sought compensation in the amount of $320,534.02 for cumulative delay and disruption which allegedly incurred in connection with the 81 change orders which we have already discussed. On 9 January 1991, Mr. Fleming requested a decision from the contracting officer on REA #5. This request was accompanied by a certification signed by ADDC's president, George W. Gibbs III. The contracting officer denied ADDC's claim in its entirety, and this appeal followed.

In its motion for summary judgment, the Navy relied chiefly upon the release language contained in the 25 modifications executed by the parties, downplayed the impact of the statement contained in Mr. Fleming's cover letter, and failed to discuss any prior course of dealings between the parties relating to the Navy's acceptance of cumulative delay and disruption claims. In its opposition to the Navy's motion, ADDC attached three sworn affidavits from high-ranking officials of ADDC which paint a somewhat different picture. Viewed together, these statements allege that the Navy customarily declined to entertain claims for cumulative delay and disruption until after the parties had executed modifications encompassing ADDC's other claims. At that point, the Navy would consider cumulative delay and disruption claims without even referring to the release language contained in the earlier modifications. The affiants contended further that ADDC relied upon this course of conduct in proceeding under the present contract. In its reply brief, the Navy argued that ADDC's affidavits are replete with hearsay and irrelevant material; however, it did not include any affidavits squarely rebutting the affiants' statements.

DECISION

In *Matsushita Electric Industrial Co. v. Zenith Radio Corp.*, 475 U.S. 574, 587 (1986), the Supreme Court stated that when a party has adequately buttressed a motion for summary judgment, its opponent must come forward with specific facts showing that there is a genuine issue for trial. Moreover, in *Celotex Corp. v. Catrett*, 477 U.S. 317 (1986), the high court indicated that the moving party does not bear a preliminary burden of negating its opponent's claim. Finally, in *Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 248 (1986), the Supreme Court re-emphasized that rulings on motions for summary judgment, as with directed verdicts, necessarily implicate the substantive standard of proof that would be required in a trial of the issue. Thus, material facts are those which might affect the outcome of the case due to their legal import; and genuine issues are those concerning which the evidence is such that a reasonable factfinder could return a verdict for the nonmoving party.

Applying these standards to the facts of this case, we must deny the Navy's motion. We agree with the Navy that ADDC's affidavits suffer from various evidentiary deficiencies. However, as the Supreme Court indicated in *Anderson*, 477 U.S. at 248-50, it is not our province in deciding summary judgment motions either to weigh the evidence or to make credibility determinations. Analyzing the evidence as a whole, we conclude that ADDC has raised genuine issues of material fact concerning the parties' intent in exercising the releases at issue. *Cf. Triple "A" South*, ASBCA No. 35824, 90-1 BCA ¶ 22,567; *Service Engineering Corp.*, ASBCA No. 40274, 93-2 BCA ¶ 25,885. Hence, this matter must be fully tried.

CONCLUSION

The motion for summary judgment is denied. The parties are ordered to continue their preparations for trial.

[¶ 26,594] **MCA Research/Frank E. Basil, Inc.**

ASBCA No. 42431, December 15, 1993. Contract No. DAHA04-90-C-0020.

Contract Disputes, Certification—Failure to Certify—Dismissal Without Prejudice.—A 1990 claim for an equitable adjustment in excess of $50,000 was dismissed without prejudice for lack of jurisdiction, even though the contracting officer had issued a final decision, because the claim was not certified and was not a government claim that did not require certification. Although the contractor alleged that the claim for maintenance services on tracked military vehicles did not require certification because it was a government claim, the dispute between the parties was not solely one of contract interpretation. In reaching a decision, the contracting officer was not merely engaging in contract administration but was attempting to decide an affirmative claim by the contractor that had been reduced to a sum certain.

For the appellant: McKenna & Cuneo, Washington, D.C., by J. Ernest Mincy III. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. Daryle A. Jordan, JAGC, and Capt. Jerome C. Cecelic, JAGC, Trial Attorneys.

Before PAUL, SPECTOR, and RUBERRY, Administrative Judges.

PAUL, Administrative Judge: The Government has filed a motion to dismiss for lack of jurisdiction, contending that appellant MCA Research/Frank E. Basil, Inc. (MCA) failed to certify its claim in excess of $50,000. MCA submitted an opposition to the motion, alleging that the claim at issue was a Governmental claim which, pursuant to the Contract Disputes Act, 41 U.S.C. §§601 *et seq.* (CDA), did not require certification.

For the reasons stated below, we grant the motion and dismiss the appeal.

FACTUAL BACKGROUND

On 24 July 1990, the Government and MCA entered into contract No. DAHA04-90-C-0020 for the performance of maintenance services on tracked military vehicles located at Camp Roberts and Fort Irwin, California. The Army gave MCA notice to proceed on 17 August 1990. Soon thereafter, a dispute arose between the parties concerning both the number of services to be ordered and performed during the contract's base year and the Army's payment obligations. On 5 October 1990, Ms. Linda C. Bennett, MCA's program coordinator, wrote the following letter to LTC Charles H. Painter, the Government's contracting officer:

> This letter is pursuant to a telephone conversation with Ms. Sheri Bashaw, in which we informed your office of a financial impact to Basil/MCA Research as a result of the reduction in the performance period of the base year of this Contract. As you will note from our cost proposal, Basil/MCA priced certain costs, such as project implementation, office trailers, management labor, etc., in the base year. As a result of the reduction in the base year (from 4 months to 1 1/2 months), Basil/MCA must spread non-labor costs and fixed costs over a shorter period of time in order to fully recover its cost under this Contract. It is important to emphasize that this impact will not increase the total project cost.
>
> Since this is a fixed-price contract, Basil/MCA will invoice the Government for 1 month and 15 days of the contract price for the base year. This time period represents the Notice-to-Proceed date of 17 August 1990 through 30 September 1990. The invoice amount will be $234,113.49. In addition, all future billings shall be made on the basis of a fixed-monthly amount determined by dividing the total annual contract value by one-twelfth.

LTC Painter responded to Ms. Bennett's letter on 15 October 1990 in these terms:

> The contract is quite explicit concerning what the Government will pay; it did not set individual payments for "project implementation, office trailers, management labor, etc." While it is indeed unfortunate that the award date was delayed, the Government cannot reimburse Basil-MCA for "out of pocket" expenses.
>
> The Government will pay Basil-MCA based on prices set forth in the contract. Government receipt of an invoice for $234,113.49 for other than maintenance services will be returned without action.

On 26 October 1990, Ms. Bennett forwarded the following reply to the Government:

©1994, Commerce Clearing House, Inc.

Digitized by Google

Reference is made to your letter dated 15 Oct 90 concerning invoicing requirements.

BASIL-MCA submitted it's [sic] bid based upon the RFP requirements for a Firm Fixed Priced contract (page L-4, page L-22 of RFP). The prices indicated for the Base Year, as shown on page B-3 of the Bid Schedule in the RFP, clearly demonstrate that the Contractor would have been entitled to collect the fixed amount of $624,302.65 had the Contractor performed maintenance services for the entire four months of the base year. Actual contract performance did not commence until 17 Aug 90 in accordance with the Notice-to-Proceed which was dated this same date.

The invoice submitted by BASIL-MCA correctly reflects the appropriately prorated price of the firm fixed price contract for the base year. This bill is for services provided by the Contractor in accordance with the contract requirements.

BASIL-MCA contends that this contract falls within the definition of FAR 16.201 and has subsequently billed the government in accordance with the contract clause, 52.232-1, Section I contract and page M-1, paragraph M.2 of the contract.

Conversations between Government and Contractor personnel have surfaced the idea of a "unit" price billing concept. This is clearly incorrect as there are no "unit" prices listed in the Bid Schedules. Prices shown are for services provided under a firm fixed priced contract. The Contractor can find no clauses referencing "unit" billing requirements.

BASIL-MCA representatives are available to provide further information if the Government desires. Your prompt assistance is appreciated.

On 28 October 1990, MCA sent this invoice to the Government:

USPFO for California
Contracting Office
P.O. Box 8104
San Luis Obispo, CA 93403-8104

Attention: Contracting Officer

90-01
Basil-MCA
Contract No. DARA04-90-C-0020
August 17-September 30, 1990

To invoice for costs incurred during the above referenced month(s).

CATEGORY		CURRENT MONTH(S)
TOTAL BASE YEAR CONTRACT VALUE		624,302.65
TOTAL NO. OF MONTHS IN BASE YEAR	(/)	4.00
NO. OF MONTHS PERFORMED (17 AUG-30 SEPT)	(X)	1.50
TOTAL COST		234,113.49

The invoice was received in the Government's offices on 2 November 1990. Neither this invoice nor any of MCA's other submissions contained a certification as set forth in the CDA.

On 31 October 1990, LTC Painter forwarded a purported "final decision" to MCA. He stated:

> The contract does not clearly demonstrate your alleged entitlement to $624,302.65, nor does the contract unequivocally specify a four month base year; rather it stipulates "or date of award." The Notice to Proceed with contract work was conditioned on meeting the requirements of the statement of work. While it is indeed unfortunate that the Notice to Proceed was not issued until some time later, the Government cannot reimburse Basil/MCA for its delays and/or "out of pocket expenses" in meeting these requirements.

As you know, the PAYMENTS clause reads:

> The Government shall pay the Contractor, upon submission of proper invoices or vouchers, the prices stipulated in this contract for supplies delivered and accepted or services rendered and accepted, less any deductions provided in this contract. . . .

Thus it is rather clear and convincing concerning what the Government will pay, the prices stipulated in this contract. The contract bid schedule did not include nor did it contemplate costs for project implementation, office trailers, management labor, etc.

Digitized by Google

The Government will pay Basil/MCA based on prices set forth in the contract. Government receipt of invoices for other than contact [sic] stipulated maintenance services will be returned without action.

This is the final decision of the Contracting Officer. You may appeal this decision to the Board of contract [sic] Appeals. If you decide to appeal, you must, within 90 days from the date you receive this decision, mail or otherwise furnish written notice to the Board of Contract Appeals and provide a copy to the Contracting Officer from whose decision the appeal is taken. The notice shall indicate that an appeal is intended, reference this decision, and identify the contract by number. Instead of appealing to the Board of Contract Appeals, you may bring an action directly in the U.S. Claims Court (except as provided in the contract Disputes Act of 1978, 41 U.S.C. 603, regarding Maritime Contracts) within 12 months of the date you receive this decision. If you appeal to the Board of Contract Appeals, you may, solely at your election, proceed under the Board's small claim procedure for claims of $10,000 or less or its accelerated procedure for claims of $50,000 or less.

This appeal followed.

DECISION

It is axiomatic that we lack jurisdiction to decide an appeal based upon an uncertified claim in an amount in excess of $50,000. Here, MCA clearly announced its intention to seek an equitable adjustment in an amount of $234,113.49, based upon its interpretation of the contract's terms, as early as 5 October 1990. Thereafter, MCA attempted to submit such a claim through its letter of 26 October 1990 and its invoice of 28 October 1990. However, MCA did not attach a CDA certification to any of these documents. Accordingly, the contracting officer's purported final decision of 31 October 1990 has no legal significance.

We reject MCA's argument that the underlying claim was, in essence, a Governmental claim which did not require certification. The dispute between the parties was not solely one of contractual interpretation; and, in reaching his decision, the contracting officer was not merely engaging in contractual administration. Rather, he was attempting to decide an affirmative claim by the contractor which had been reduced to a sum certain. Hence, because MCA's claim was not certified, we lack jurisdiction to review it.

CONCLUSION

The motion to dismiss is granted without prejudice to submission of a properly certified claim to the contracting officer.
