CONTRACT APPEALS DECISIONS REPORTS

Nos. 994-1001 (1993-1994)

© 1994, COMMERCE CLEARING HOUSE, INC.

When published as promulgated, U.S. Public Laws, federal regulations and decisions of administrative and executive agencies and courts of the United States are in the public domain. However, their arrangement and compilation, and historical, statutory, and other notes and references, along with all other material in this publication, are subject to the copyright notice.

FOREWORD

This volume is the ninety-second of the series of BOARD OF CONTRACT APPEALS DECISIONS—a Reporter of the full texts of decisions rendered by the Armed Services and other Boards of Contract Appeals. Special features are the case table, finding lists, and topical index. These contain, for direct and most convenient use, references to all opinions that appear in the 94-1 volume of the series.

In addition to ASBCA decisions, opinions of the Interior Department Board of Contract Appeals, General Services Administration Board of Contract Appeals, Department of Energy Board of Contract Appeals, Corps of Engineers Board of Contract Appeals, Postal Service Board of Contract Appeals, Department of Housing and Urban Development Board of Contract Appeals, Department of Transportation Board of Contract Appeals, Department of Labor Board of Contract Appeals, Department of Agriculture Board of Contract Appeals, and Department of Veterans Affairs Board of Contract Appeals are reported in full text in the volume. All cases included are exact reproductions of the decisions originally reported in the current issues of CONTRACT APPEALS DECISIONS REPORTS.

Each BCA opinion report includes the name of the case, the docket number, the contract number, the date of the decision, a headnote or headnotes, and the names of attorneys representing the government and the contractor or subcontractor litigants if available.

The contents of this volume, cited "94-1 BCA ¶ . . . .," consist of the decisions reported in CONTRACT APPEALS DECISIONS REPORTS during the period from December 17, 1993, through March 25, 1994.

In planning and producing BOARD OF CONTRACT APPEALS DECISIONS, the publishers aim to make this series most useful in the important and constantly expanding field of federal acquisition. That subject is also covered in the CCH GOVERNMENT CONTRACTS REPORTER, which contains digests of these decisions, keyed to the full texts in this volume and coordinated with the other cases, regulations, and statutes.

ABBREVIATIONS

A

AAA—Army Audit Agency
AAF—Awaiting Additional Funds
AC—Acquisition Circular
ACD—Administrative Commitment Document
ACM—Authorized Controlled Material Order
ACO—Administrative Contracting Officers
ACRDN—Awaiting Contract Record Disposition Notice
ADD—Awaiting Delivery of Data
ADM—Administration—used by General Services Administration
ADO—Advanced Development Objective
ADP—Automatic Data Processing
AE—Architect-engineer
AEC—Atomic Energy Commission
AEM—Advance Engineering Memorandum
AF—Air Force
AFA—Air Force Academy—Construction Agency
AFAC—Air Force Acquisition Circular
AFAFC—Air Force Accounting and Finance Center
AFARS—Army FAR Supplement
AFB—Air Force Base
AFCMD—Air Force Contract Management District
AFCS—Air Force Communication Service
AFD—Air Force Depot
AFDIERSS—Air Force Departmental Industrial Equipment Reserve Storage Site
AFE—Aerospace Facilities Engineer
AFFARS—Air Force FAR Supplement
AFFC—Air Force Finance Center
Aff'd—Affirmed
Aff'g—Affirming
AFI—Awaiting Final Invoice
AFISR—Air Force Industrial Security Regulations
AFL—Air Force Letter
AFM—Air Force Manual
AF-MIPR—Air Force-Military Interdepartmental Purchase Requests
AFMPP—Air Force Manual Procurement and Production
AFN—Air Force Finance Center
AFPC—Air Force Procurement Circular
AFPI—Air Force Procurement Instruction (Superseded by HQ USAF Supplement to ASPR which was subsequently retitled "Air Force ASPR Supplement.")
AFPP—Air Force Procurement Procedures
AFPRO—Air Force Plant Representative Office
AFPRO—Air Force Procurement Representative Office
AFR—Air Force Regulations
AFRCE—Air Force Regional Civil Engineer
AFROTC—Air Force Reserve Officers Training Corps
AFSWAP—Armed Forces Special Weapons Project
AG—Adjutant General's Corps
AGBCA—Department of Agriculture Board of Contract Appeals
AGE—Aerospace Ground Equipment
AGO—Attorney General's Opinion
AID—Agency for International Development
AL—Acquisition Letter (Army)
ALO—Air Logistic Officer
AMA—Air Materiel Area (Air Force)
AMEDS—Army Medical Service
AMP—Additional Military Production
AMPR—Aeronautical Manufacturers Planning Report
ANFE—Aircraft not fully equipped
ANMB—Army-Navy Munitions Board (subsequently Munitions Board)
ANPP—Army Nuclear Power Program
AOCP—Aircraft out of commission for lack of parts
AOCP rate—Aircraft-out-of-commission-for-lack-of-parts rate
APC—Awaiting Plant Clearance
APD—Air Procurement District (Air Force)
APL—Authorized Price List
APO—Air Procurement Officer
APOE—Aerial Port of Embarkation
APP—Army Procurement Procedure
App.—Appellate; Appendix
APR—Awaiting Price Redetermination
APRA—Aircraft Production Resources Agency
APRC—Awaiting Patent and Royalty Clearance
AQL—Acceptable Quality Level
AR—Army Regulations
ARD—Army Renegotiation Division, Armed Services Renegotiation Board
ARD—Automatic Release Date
AREF—Awaiting Removal of Excess Funds
ARLS—Automatic Resupply Logistic System
ARPA—Advanced Research Projects Agency
ARS—Awaiting Report of Survey
Art.—Article
ASBCA—Armed Services Board of Contract Appeals
ASD—Aeronautical Systems Division

[¶ 26,258] E.M. Scott & Associates, Inc.

ASBCA No. 45869, July 30, 1993. Solicitation Nos. N00189-90-R-0108, N00189-91-R-0118.

Data—Disclosure—Board Jurisdiction.—A firm's claim alleging an implied-in-fact agreement with the government concerning the use of a trade secret was within the jurisdiction of the board, despite the government's contention that the appeal sounded in tort, because the appeal on its face appeared founded upon an agreement licensing the use of a trade secret, a type of contract within the scope of the Contract Disputes Act. The CDA confers jurisdiction on the boards to hear claims founded upon implied or express contracts, but not on matters sounding in tort. In considering the nature of the claim, the board noted that a trade secret holder can pursue a claim founded upon a contract in the event of unauthorized disclosure or use of the trade secret by those to whom the secret had been confided under restriction of nondisclosure. In this case, the firm alleged that the government had used, without authority, secret data and manuals it had submitted in two solicitations that were eventually canceled. Because the firm had alleged an implied-in-fact contract concerning the disclosure of a trade secret, the board ruled that it should be furnished an opportunity to prove the existence and terms of any such agreement.

For the appellant: Edward M. Scott, Owner. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Anita D. Polen, Trial Attorney, Fleet and Industrial Supply Center, Norfolk, Virginia.

Before HARTMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

HARTMAN, Administrative Judge: On 14 May 1993, the Government moved to dismiss this appeal for lack of jurisdiction. During early June 1993, appellant E.M. Scott & Associates ("EMS") submitted an opposition to the Government's motion and seven volumes of documents, in addition to the one volume it had submitted previously, to supplement the Rule 4 file. On 17 June 1993, the Government served a reply to EMS's opposition. Six days later, on 23 June 1993, EMS served a three-paragraph letter addressing the Government's reply.

BACKGROUND

On 17 April 1990, the Regional Contracting Department of the Naval Supply Center in Norfolk, Virginia, issued solicitation No. N00189-90-0108 for bids to provide "technical and support services in the planning, preparation, conduct, analysis, and report of anti-terrorism and training for Naval units & facilities" during fiscal year ("FY") 1991, and optionally during FY 1992, 1993, and 1994. Section C of the solicitation, "Description/Specifications/ Work Statement," advised that the Naval Security Coordination Team ("NSCT") intended to conduct annually approximately 40 anti-terrorism awareness seminar games, vulnerability assessments, and/or security enhancement exercises which would vary in duration from 1/2 to 10 days. Section C further advised that

> [t]he following is required:
>
> * * *
>
> Research terrorist threat to Navy assets at exercise location and provide information and analysis of techniques likely to b [sic] employed by terrorist groups threatening those assets. For exercise location, collect and evaluate directives, procedures and other pertinent information regarding anti-terrorism and physical security measures. Inspect installation perimeter, command and control arrangements. Provide recommendation for specific exercise events. Provide input for development of Rules of Exercise Play (ROEP) to ensure realism without harm to participants or equipment. . . . Provide input for development of site-specific exercise scenario and scenario event list. Conduct on-site anti-terrorism seminar games for senior base personnel in conjunction with vulnerabil-

Digitized by Google

ity assessments and/or security exercises, or as separate events. Prepare draft exercise OPORDERs.

Section L of the solicitation, "Instructions, Conditions, And Notices To Offerors," provided that offerors must submit their proposals in two separate parts—"Price" and "Technical." With respect to the "Technical" proposal, section L stated that:

> Offerors are required to submit a detailed technical proposal which will be used to assess the offeror's capability to perform the tasks described in the Statement of Work [("SOW")] ....
>
> * * *
>
> The proposal should clearly demonstrate that the offeror has a thorough understanding of the effort called for herein. It is recognized that all technical factors cannot be detailed in advance, but the proposal must be sufficient to show how the offeror proposes to accomplish the effort described by the statement of work, including a full explanation of the procedures and techniques to be followed. ...
>
> * * *
>
> Offerors shall set forth in detail their technical approach to implementing each specification requirement .... Included herein shall be staffing concepts to effectively implement the technical approach described.

Section L of the solicitation also incorporated by reference various provisions of the FAR, including FAR 52.215-12 which provides as follows:

> RESTRICTION ON DISCLOSURE AND USE OF DATA (APR 1984)
>
> Offerors or quoters who include in their proposals or quotations data that they do not want disclosed to the public for any purpose or used by the Government except for evaluation purposes, shall—
>
> (a) Mark the title page with the following legend:
>
> "This proposal or quotation includes data that shall not be disclosed outside the Government and shall not be duplicated, used, or disclosed—in whole or in part—for any purpose other than to evaluate this proposal or quotation. If, however, a contract is awarded to this offeror or quoter as a result of—or in connection with—the submission of this data, the Government shall have the right to duplicate, use, or disclose the data to the extent provided in the resulting contract. This restriction does not limit the Government's right to use information contained in this data if it is obtained from another source without restriction. The data subject to this restriction are contained in sheets *[insert numbers or other identification of sheets]"*; and [emphasis in original]
>
> (b) Mark each sheet of data it wishes to restrict with the following legend:
>
> "Use or disclosure of data contained on this sheet is subject to the restriction on the title page of this proposal or quotation."

(R4, tab 1)

EMS and others submitted proposals in response to the Navy's solicitation. However, after the NSCT completed a technical evaluation of the proposals, the solicitation was cancelled. (App. supp. R4, vol. 2 at B2p1; Gov't. br. at 2, 4)

Approximately one year after issuance of the cancelled solicitation, on 15 April 1991, the Naval Supply Center issued solicitation No. N00189-91-R-0118 to obtain bids to "provide specialized anti-terrorism training and technical support" to NSCT during FY 1992 and 1993. Except for its omission of a requirement to provide a "final report," section C of the new solicitation, which set forth the work statement, was virtually identical to section C of the first solicitation. In addition, like section L of the first solicitation, section L of the new solicitation required submission of both a price and technical proposal, set forth a description of the detail expected to be included in the technical proposal, and incorporated by reference various provisions of the FAR, including FAR 52.215-12. However, in contrast to the first solicitation, section L of the new solicitation expressly provided that:

> The offeror shall provide his comments and/or answers on how he will prepare for and execute the following efforts:
>
> [(1)] Technical Scenario 1:
>
> ... Provide Vulnerability Assessment/Security Enhancement Exercise (VASEX) support at Naval Base, Subic Bay, PI:
>
> 1. Conduct pre-site survey to include:
>
> (a) Research specific terrorist threat to installation being exercised and provide this information to the NAVSECORDTM exercise coordinator.
>
> (b) Collect and evaluate directives and procedures used .... Assess tradeoffs of

©1993, Commerce Clearing House, Inc.

Digitized by Google

how personnel assets and hardware on hand are employed.

(c) Recommend exercise events based on terrorist threat and as test of installation procedures to deal with threat. . . .

(d) Recommend rules of exercise play (ROEP) which apply to installation being exercised in order to maximize safety and minimize liabilities.

(e) Prepare and provide officer conducting the exercise a draft Exercise Operations Order via NSCT.

2. Provide VASEX support:

(a) Provide daily summary of exercise events which will include details of all events executed and lessons learned to include recommended security improvements and identification of specific vulnerabilities.

(b) Evaluate installation command center operations.

(c) Recommend changes to exercise event schedule based on observation/evaluation of security force reaction to events with a view towards maximizing training and identification of specific vulnerabilities.

(d) Provide an out brief report . . . .

(2) Technical Scenario 2:

Prepare and conduct an Anti-terrorist Awareness Seminar Game (ATASG) at Naval Station, New York, N.Y.

1. Prepare overview of world wide terrorist threat followed by site specific threat assessment. . . .

2. Prepare site specific ATASG which provides scenarios that include bombings, assassinations, ambushes, kidnapping and hostage barricade situations. . . .

3. Serve as Game Director and conduct ATASG.

(3) Technical Scenario 3:

Conduct stand alone vulnerability assessments (VA) at NAF Atsugi, Japan that includes a report which identifies specific vulnerabilities and recommends security improvements.

(4) Technical Scenario 4:

Develop and maintain data base for and of all ATASG's VASEX's and stand VA's.

(5) Technical Scenario 5:

Produce an annual lessons learned report . . . .

(R4, tabs 1, 3)

EMS and others submitted proposals in response to the Navy's second solicitation. However, after NSCT completed a technical evaluation of those proposals, the second solicitation also was cancelled. (R4, tab 4; app. supp. R4, vol. 3 at B4p1; Gov't. br. at 3, 5)

On 29 October 1991, EMS submitted a "Formal Claim" to a Naval Supply Center contracting officer. EMS's claim provided, in part, as follows:

> This ["]short form" claim will be followed by a full and final claim. A short form claim is used because the Navy refused a Freedom of Information Act request (FOIA) to provide the information needed to complete a long form, final claim. . . .
>
> *BASIS FOR CLAIM*
>
> * * *
>
> The Navy violated the FAR by wrongly using an RFP . . . to obtain marketing information such as price and delivery. . . .
>
> The Navy used RFPs to *twice* pick the brains of industry, and walk away with their collective expertise without paying a penny for the wealth of data and products they "liberated." . . . [A]ll respondents had to provide their methodologies, ideas and processes rolled into a [sic] well illustrated manuals for PSSs, VAs, ATASGs, VA/SEXs, and detailed report outlines at great expense to the respondents. [Emphasis in original]
>
> * * *
>
> R-0108 was canceled on the basis that there was a significant change in the SOW. . . . As shown in the body of the claim dealing with comparisons of the SOWs for R-0108 and R-0118, *there was no change in the two SOWs;* both remained exactly the same in all material respects. The Navy did change the *format* (but not content) of the technical scenarios under R-0118. This false cancellation reason shows that the Navy was really after free manuals. Whereas under R-0108 they required a single, comprehensive but amorphous manual, under R-0118 they asked for separate illustrated manuals for PSSs, VAs, ATASGs, and VA/SEXs, and a detailed report outline. [Emphasis in original]
>
> R-0118 was canceled on the basis that there was no longer a requirement for this service.
>
> In an arrogant, twisted way the reason is true, but not because all the terrorists were "born again" or all Navy personnel who would have received this training be-

Digitized by Google

came mysteriously "enlightened", but because the requirement is now being fulfilled by the Navy Security Coordination Team (NSCT), with all the free manuals and training it liberated from all the contractors who responded to their RFPs 0108 and 0118.

Attached to EMS's "Formal Claim" was a chart indicating that it currently was seeking $75,000.00 as "the selling price of what NSCT 'liberated' from [it]," $70,890.63 in costs to prepare the proposals it submitted in response to the solicitations, $8,506.88 as an "Eichleay Amount," and $4,687.50 in costs to prepare its claim or a total of "$159,085.00." (R4, tab 5)

By letter dated 21 January 1992, the Naval Supply Center's contracting officer advised EMS that she did not believe the two solicitations were cancelled wrongfully, that EMS's claim had been submitted pursuant to the Contract Disputes Act of 1978 ("CDA"), and that she "must apply the same rational [sic] that the *Coastal Corp.* court applied to various boards of Contract Appeals," *i.e.*, a "claim for bid preparation costs falls outside the scope of the Contract Disputes Act." The contracting officer stated that, while she "regret[s] any inconvenience the cancellations of these solicitations has caused," she does "not, however, as contracting officer, have the authority to grant the relief [EMS was] requesting." (R4, tab 6)

By letter dated 23 January 1992, EMS advised the contracting officer that it had received her letter, the letter's legal "citation is inappropriate," and the letter seems "premature" because EMS "continue[s] to develop (its] claim" and, when "the incorrect FOIA denials are settled in court, ... will formalize [its] final claim, have it reviewed by a law firm specializing in this field, submit it to [her) and, upon denial, appeal it" (R4, tab 7).

On 7 December 1992, EMS submitted to the contracting officer a claim, which was "the final version of the short form claim" it had submitted previously and which was certified by Edward M. Scott, EMS's "Owner." The "Executive Digest" set forth by EMS for its 10-volume claim provided, in part, as follows:

> In 1984, reacting to the Beirut airport bombing that killed and maimed more than 250 military personnel, the Navy began to illegally contract out certain Navy security services. In late 1988, a DOD-IG investigation discovered that this contract duplicated work done by an existing Navy agency. Navy counsel pointed out that contracting out these activities violated the law. DOD-IG recommended that the Navy militarize this work by performing it themselves. SecNav agreed with the DOD-IG; the Navy Comptroller stopped funding this effort in 1989.
>
> Notwithstanding SecNav's agreement with DOD-IG and the complete lack of funding for this effort, in 1990 and again in 1991 Navy *military* personnel initiated solicitations for detailed proposals from industry to do this work. The first solicitation asked for one comprehensive "how-to" manual from respondents. After the manuals were received, this solicitation was canceled on the basis of a purported major change in work scope, resulting in a second solicitation in 1991. This solicitation asked for 5 separate "how-to" manuals. After the manuals were received, this solicitation was canceled on the basis the work was no longer needed. Both cancellation reasons were completely specious. [Emphasis in original] [Footnote omitted)
>
> In sum, the Navy deliberately abused the federal procurement system to steal manuals and knowledge from industry so it could continue to do this work themselves. At worst, this is criminal activity; at best it is reckless negligence.

The "Executive Summary" set forth by EMS for the claim further provided as follows:

> By deliberate violations of the Federal Acquisition Regulations and other laws, the Navy . . . twice requested, received, and assimilated products from numerous, technically qualified security contractors without payment for these products ....
>
> * * *
>
> The total claim is $250,782.62 which consists of:
>
> 1) Theft of product $75,000;
>
> 2) Needless and costly preparation of technically sound and cost-realistic RFPs and changes thereto, and costs to prepare for, undergo, and react to DCAA audits $70,890.63;
>
> 3) Costs to prepare this claim $80,187.50;
>
> 4) Interest for one year $18,576.49.
>
> 5) Attorneys' fees and costs, and court costs, should they be incurred.
>
> . . . [T]he Navy Security Coordination Team (NSCT) was created to "increase anti-terrorism skills." Shortly thereafter the Navy decided to contract-out some of this work. The last contract (C-0037) for this work was awarded in 1988 to Kapos

©1993, Commerce Clearing House, Inc.

Digitized by Google

Associates Incorporated (KAI) who employed several ex Navy officers to perform these services into January 1991....

* * *

While the contract was running its course, the Navy made at least two separate, unsuccessful attempts to buy manuals from KAI, in preparation to carry on without the services of a contractor. They were not successful because they simply did not have the money to pay for these products, which were not within the SOW of the KAI contract and therefore required additional effort and funds. The Navy resorted to the tactic of using bogus RFPs (0108 and 0118) requesting respondents to provide a technical section that in fact resulted in the best illustrated Physical Security manuals tailored to NSCT's purposes. No such technical section was required on *any* of the earlier contracts.

Well before R-0108 was issued in April 1990, and well before the last service was performed by KAI in December 1990, the Navy knew it did not have the money to continue contracting-out these services, and it knew of the decisions made as a result of the DOD-IG report....

* * *

The evidence shows that NSCT itself was engaged in an intense bureaucratic struggle to preserve its own redundant existence. To survive without Contractor Assisted Advisory Services, NSCT needed to eliminate CAAS but obtain their collective knowledge embodied in "how to" manuals for each SOW service, before getting rid of them.

... Twice the claimant provided the Navy with manuals, graphics, guidelines and report outlines that embodied knowledge gained over 46 years of professional experience, tailored to the specific needs of the NSCT. The claimant's technical products under R-0118 were found by NSCT to be superior even to the Navy's incumbent contractor, who had been doing the work for years and had all the inside knowledge of an incumbent....

Not only did the Navy in effect steal these tailored products from the claimant ..., it also caused the expenditure of a great deal of time and effort in preparing and revising ... two detailed offers and undergoing one DCAA audit in response to these RFPs, which the contracting officer should never have allowed to become "production" RFPs per the FAR, for the absence of funding.... [T]he Navy should pay for what it got, and the needless expense caused by its negligence and deceit.

(R4, tab 8)

By letter dated 24 February 1993, a Navy contracting officer advised EMS that, "[a]s stated in our 21 January 1992 response to your earlier claim, the Navy has no authority to decide a claim under ... (FAR) clause 52.233-1, Disputes (APR 1984), or the Contract Disputes Act where no contract has been awarded" and "[c]onsequently the Navy will not consider your 7 December 1992 claim under the Disputes clause or the Contract Disputes Act" (R4, tab 9). On 17 March 1993, EMS notified the Board by letter that the Navy's contracting officer had failed to render a decision upon its 7 December 1992 claim within the 60 days allowed by the FAR and "an appeal is intended." In accordance with the Board's Rules, on 9 April 1993, EMS submitted a "complaint" to the Board, which reiterated the allegations set forth in EMS's 7 December 1992 claim and indicated that EMS's appeal was "under de facto contracts" arising from solicitation Nos. N000189-90-R-018 and N000189-91-R-0118 (R4, tab 10).

DECISION

In moving to dismiss for lack of jurisdiction, the Navy contends that, because "no contract was ever awarded" by it, EMS's claim of "theft" must sound in tort and the remaining claims must "necessarily be based upon an implied contract with the Navy to treat [EMS's] bid honestly and fairly," a "type of implied contract [which] is not covered by the CDA." In opposing dismissal, EMS asserts that: the Navy's "characterization of [its] claim as an attempt to recover Bid and Proposal Preparation (B&PP) costs and ... to have ... proposals ... considered '... honestly and fairly...'" is a "red herring;" it "recognizes that the Board has no jurisdiction over criminal matters" or "contracts [implied] in law;" its "claim is sounded in contract law and not in torts;" and it "has always *expressly* stated that [its] claim was based on implied contracts-in-*fact*" (emphasis in original).

The CDA confers jurisdiction on the Boards of Contract Appeals to hear claims founded upon the types of contract specified in the CDA. *Coastal Corp. v. United States* [31 CCF ¶71,373], 713 F.2d 728, 730-31 (Fed. Cir. 1983); *accord Institut Pasteur v. United States*, 814 F.2d 624, 627-28 (Fed. Cir. 1987); *Forman v. United States* [32 CCF ¶73,682], 767 F.2d 875, 878-79 (Fed. Cir.

Digitized by Google

1985). The scope of the CDA is limited specifically to implied or express contracts for the procurement of property or services and for the disposal of personal property. 41 U.S.C. § 602(a). An implied contract to treat a bid honestly and fairly, therefore, is not among the types of contract specified in the CDA and not a basis for a Board to hear a claim. *Coastal Corp.*, 713 F.2d at 730-31; *Apex Management Services, GmbH*, ASBCA No. 27341, 86-3 BCA ¶ 19,167 at 96,887.

The CDA does not confer jurisdiction on the Boards to hear claims "sounding in tort." *E.g., Alfred Bronder*, ASBCA No. 29938, 86-3 BCA ¶ 19,102, *aff'd*, 824 F.2d 980 (Fed. Cir. 1987) (table). However, claims which might be "characterized" as tortious can be entertained if the duties or obligations purportedly breached arise primarily from express or implied-in-fact contracts. A Board, therefore, may hear a claim "with a tort aspect" if the claim is founded upon a type of contractual obligation specified in the CDA. *E.g., HTC Industries, Inc.*, ASBCA No. 40562, 93-1 BCA ¶ 25,560 at 127,309; *Aulson Roofing, Inc.*, ASBCA No. 37677, 91-2 BCA ¶ 23,720 at 118,728; *see H.F. Allen Orchards v. United States*, 749 F.2d 1571, 1576 (Fed. Cir. 1984), *cert. denied*, 474 U.S. 818 (1985); *Chain Belt Co. v. United States*, 115 F. Supp. 701, 711-12, 127 Ct. Cl. 38, 54 (1953).

Accordingly, in order to rule upon the pending motion to dismiss for lack of jurisdiction, we must examine the nature of the obligation alleged by EMS. *See, e.g., Institut Pasteur*, 814 F.2d at 627-28; *HTC Industries, Inc., supra*, at 127,309. In doing so, we express no views regarding the veracity of EMS's allegations and, due to the inflammatory nature of some of the allegations, for purposes of fairness, stress that EMS's allegations are unproven at this time.

As set forth above, in its claim, EMS essentially asserts that: twice it provided the Navy with manuals, graphics, guidelines and report outlines, which embodied knowledge it had gained over 46 years of professional experience and which were tailored to the specific needs of the NSCT; it did so in response to solicitations issued by the Navy expecting that the Navy would abide by Federal procurement regulations and use the data submitted only for purposes of awarding a service contract; both times it submitted such data the Navy cancelled the solicitations for specious reasons; the Navy knew before issuing the solicitations that no funding was available for the service contracts solicited and issued the solicitations solely to obtain data from contractors deemed necessary to perform the solicited services "in-house;" and the Navy should have to pay EMS monies for subsequently using "in-house" the data EMS submitted. EMS, which apparently has been proceeding without benefit of legal counsel, thus appears to contend, in sum, that it furnished "trade secrets" in confidence to the Navy with the understanding use of the data would be limited to evaluating proposals submitted for performance of a service contract and that the Navy did not abide by the understanding.

A "trade secret" is often defined as any formula, pattern, device or compilation of information which is used in one's business, and which gives one an opportunity to obtain an advantage over competitors who do not know or use it. *See Ruckelshaus v. Monsanto Co.*, 467 U.S. 986, 1001 (1984), *citing* Restatement of Torts § 757, comment b (1939); *E.I. Du Pont de Nemours & Co. v. United States*, 288 F.2d 904, 911, 153 Ct. Cl. 274, 286-87 (1961). In various cases, courts have found that a manual, graphics, outline, or report constituted a "trade secret." *E.g., Tlapek v. Chevron Oil Co.*, 407 F.2d 1129, 1134-35 (8th Cir. 1969) (maps, analyses, and studies); *SmokEnders, Inc. v. Smoke No More, Inc.*, 184 U.S.P.Q. 309, (S.D. Fla. 1974) (manual containing step-by-step information to be conveyed by lecture to participants in a controlled classroom situation); *accord International News Service v. Associated Press*, 248 U.S. 215, 236-38 (1918) (news reports).

It is well-established that the public is at liberty to discover trade secrets by fair and legitimate means, such as independent invention, accidental disclosure, or by so-called reverse engineering. Further, it is well-established that, upon discovery by legitimate means, the public is at liberty to use the subject matter of a trade secret with impunity. *E.g., Kewanee Oil Co. v. Bicron Corp.*, 416 U.S. 470, 475-76 (1974); *Radioptics, Inc. v. United States* [27 CCF ¶ 80,365], 621 F.2d 1113, 1129, 223 Ct. Cl. 594, 623 (1980).

As a result, the law affords protection to a trade secret holder under two circumstances. First, if the discovery of a trade secret is by an improper means, such as theft or wiretapping, the trade secret holder can pursue a claim sounding in tort against the party taking such action. *E.g., Kewanee Oil*, 416 U.S. at 475-76; *Radioptics*, 621 F.2d at 1130, 223 Ct. Cl. at 625; *Aktiebolaget Bofors v. United States*, 194 F.2d 145, 147-48 (D.C. Cir. 1951).

©1993, Commerce Clearing House, Inc.

Digitized by Google

Second, if a trade secret holder reveals its trade secret to another in confidence and under an obligation limiting use and disclosure, the trade secret holder can pursue a claim founded upon "contract" in the event of unauthorized disclosure or use of the trade secret by those to whom the secret has been confided under restriction of nondisclosure and nonuse. *E.g., Kewanee Oil*, 416 U.S. at 475-76; *CompuDyne Corp.*, ASBCA No. 14556, 72-1 BCA ¶ 9218 at 42,770.

While parties often enter into an express agreement which reveals a trade secret in confidence and authorizes a specific use of that trade secret by those to whom the secret has been confided under restriction of nondisclosure, *e.g., Lear v. Adkins*, 395 U.S. 653, 657 (1969), there are occasions where such agreements are implied-in-fact. *E.g., The Padbloc Co. v. United States* [9 CCF ¶ 72,374], 161 Ct. Cl. 369 (1963); *Research, Analysis & Development, Inc. v. United States* [32 CCF ¶ 73,471], 8 Cl. Ct. 54 (1985). Indeed, in *Airborne Data, Inc. v. United States* [30 CCF ¶ 70,905], 702 F.2d 1350 (Fed. Cir. 1983), precedent by which we are bound, the United States Court of Appeals for the Federal Circuit sustained a determination that the Government had breached an implied-in-fact contract arising from circumstances similar to those alleged to exist here.[1]

Because EMS fairly has alleged an implied-in-fact agreement concerning use of a trade secret, we must reject the Navy's contention that EMS's appeal, on its face, sounds in tort. *See id.* at 1352-53. As the United States Court of Appeals for the District of Columbia Circuit has explained:

> [O]ne who has lawfully acquired a trade secret may use it in any manner without liability unless he acquired it subject to a contractual limitation or restriction as to its use. In that event a licensee who uses the secret for purposes beyond the scope of the license granted by the owner is liable for breach of contract, but he commits no tort, because the only right of the owner which he thereby invades is one created by the agreement of disclosure. The owner could not maintain a suit against him for damages arising from unlicensed use without pleading and proving the contract. This being true, the gist of the owner's action is the breach of the licensing agreement.

Aktiebolaget Bofors v. United States, 194 F.2d at 148; *accord American Science & Engineering, Inc. v. Califano* [24 CCF ¶ 82,149], 571 F.2d 58, 61 (1st Cir. 1978) (allegation of abrogation of license agreement "is essentially a contract dispute"); *International Engineering Co. v. Richardson* [21 CCF ¶ 83,870], 512 F.2d 573, 578-79 (D.C. Cir. 1975), *cert. denied*, 423 U.S. 1048 (1976) (same).

Although the Navy further contends in its motion to dismiss that EMS's appeal is founded, for the most part, upon a type of contract not specified as being within the scope of the CDA, on various occasions, courts and Boards have entertained under the CPA claims founded upon contracts licensing the use of data. *E.g., SCM Corp. v. United States* [29 CCF ¶ 82,334], 675 F.2d 280, 281, 230 Ct. Cl. 199, 200 (1982); *General Atronics Corp.*, ASBCA No. 37923, 91-3 BCA ¶ 24,047; *Software Design*, ASBCA Nos. 23616, 24897, 82-2 BCA ¶ 16,073; *see* 10 U.S.C. § 2321. Moreover, prior to the CDA, Boards of Contract Appeals entertained claims founded upon contracts licensing the use of data that were entered into pursuant to the Armed Services Procurement Act of 1947, 62 Stat. 21. *E.g., Bell Helicopter Textron*, ASBCA No. 21192, 85-3 BCA ¶ 18,415; *CompuDyne Corp.*, ASBCA No. 14556, 72-1 BCA ¶ 9218. Like the CDA, 41 U.S.C. § 602(a), which governs contracts for the procurement of "property" and "services," the Armed Services Procurement Act authorized and governed contracts for the procurement of "supplies or services." *See Kern-Limerick, Inc. v. Scurlock*, 347 U.S. 110, 114 (1954).

Since EMS's appeal, on its face, appears founded upon an agreement licensing use of a trade secret, a type of contract within the scope of the CDA, we also must reject the Navy's contentions characterizing the appeal as premised on an implied contract to honestly and fairly consider bids, a type of contract not within the scope of the CDA.[2] EMS fairly has alleged an implied-in-fact

[1] In *Airborne Data*, 702 F.2d at 1359 and n.18, the claimant submitted a proposal containing trade secrets to the Government pursuant to 41 C.F.R. §14-4.5101 (1977). That regulation, like FAR 52.215-12, provided that one could submit to the Government proposals containing trade secrets and bearing a legend restricting disclosure and use of the data set forth to only that necessary for purposes of evaluating the proposal, and that Government officials "shall comply" with the terms of the restrictive legend.

[2] Although not cited to us by the parties, in two prior decisions, this Board has addressed a motion to dismiss for lack of jurisdiction similar to that filed by the Navy here, *i.e.*, arguing a claim con-

Digitized by Google

agreement and must be furnished an opportunity to prove the existence and terms of any such agreement. *See Choe-Kelly, Inc.*, ASBCA No. 43481, 92-2 BCA ¶ 24,910 at 124,221; *Balboa Systems Co.*, ASBCA No. 39400, 91-2 BCA ¶ 23,715 at 118,702; *Reynolds Shipyard Corp.*, ASBCA No. 37281, 90-1 BCA ¶ 22,254; *Lance Dickinson & Co.*, ASBCA No. 36804, 88-3 BCA ¶ 21,186 at 106,936.

CONCLUSION

The motion to dismiss is denied, without prejudice to renewal after an evidentiary presentation. The Navy shall file its answer to the complaint on or before 10 September 1993.

[¶ 26,259] Spinazzolo Systems, Inc.

ASBCA No. 44536, July 29, 1993. Contract No. 1030-761034.

Contract Disputes, Claims—Quantification—Meaningful Review.—A government motion to dismiss a breach of contract claim on the ground that the contractor had failed to submit a properly quantified claim was rejected, because the statement of the claim provided the contracting officer with an adequate notice of the basis and amount of the claim. The claim was broken down into logical elements such as travel, labor costs, lost profits, and per diem for employees.

For the appellant: David L. Spinazzolo, President. For the government: Jessica R. Holmes, Attorney-Advisor, U.S. Department of State.

Before GIERTZ, RUBERRY, and SPECTOR, Administrative Judges.

GIERTS, Administrative Judge: This appeal is before the Board on the Government's motion to dismiss based on appellant's alleged failure to submit a properly quantified claim. Alternatively, the Government moves for partial summary judgment arguing that the profit element of appellant's claim is not recoverable as a matter of law.

Statement of Facts

In June of 1987, appellant and the United States Department of State entered a contract calling for the removal of asbestos at the American Consulate General in Karachi, Pakistan. The contract completion was required within 224 days, *i.e.*, by 26 January 1988. On 19 February 1988, the contract was terminated for the convenience of the Government. At that time, performance was less than 50 percent complete.

Appellant submitted a settlement proposal in the amount of $25,628. The contracting officer eventually issued a final decision determining that appellant was due $13,027. Appellant appealed this decision to the Board and the matter was docketed as ASBCA No. 38601. The complaint, however, sought an additional $85,908 for breach of contract damages. Upon the Government's motion, the Board dismissed that portion of the appeal related to breach of contract matters which had not been properly certified and presented to the contracting officer for decision. *Spinazzolo Systems, Inc.*, ASBCA No. 38601, 91-1 BCA ¶ 23,578 (28 November 1990).

(Footnote Continued)

cerning trade secrets was founded upon an implied contract to honestly and fairly consider bids. In *SCM Corp.*, ASBCA Nos. 26544, 26786, 26788, 26790, 26791, 26792, 85-1 BCA ¶ 17,783 at 88,823-24, the Board granted the Government's motion to dismiss *after* the Board had conducted a trial and found as a fact that, although the appellant's practice had been to affix a restrictive legend to all documents that "tend to contain proprietary information," appellant had not affixed such a legend to the proposal it had submitted to the Government containing information later used by the Government. Further, in *General Connectors Corp.*, ASBCA No. 32298, 87-2 BCA ¶ 19,751, the Board granted the Navy's motion *after* determining that the appellant was a second tier subcontractor of a company possessing an express contract with the Government requiring the delivery of data and that there was no assertion of a delivery of proprietary data to the Government other than pursuant to the express prime contract. Thus, although dicta in these two decisions could be construed as suggesting grant of the Navy's motion here, we find both decisions to be distinguishable and not persuasive with respect to the circumstances presented in this appeal.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Subsequently, on 2 April 1991, the parties settled that portion of ASBCA No. 38601 related to the convenience termination reserving those matters involving breach of contract which had been dismissed by the Board.

On 3 March 1992, appellant submitted a properly certified claim seeking $118,032.24 for breach of contract. A variety of allegations form the basis of the breach of contract claim. Appellant contends that the Government failed to make certain Consulate's rooms available, failed to adhere to an agreed nine stage schedule, failed to provide Pakistani laborers and interpreters, and failed to follow a phase-in schedule. Appellant claims that it is entitled to compensation as follows:

$ 8,100	cost of unscheduled recycling of the appellant's management team to Pakistan due to a Government caused 65 day delay in the project.
$ 11,050	cost of additional per diem and living cost for salaried employees.
$ 14,313	cost of additional salaries
$ 12,311	additional overhead computed at the rate of
$ 189.40	per day for the 65 day delay.
$ 11,541.75	increased overhead expenses related to original work.
$ 24,860	lost profits which it would have earned had the contract been completed.
$ 28,282	value of equipment seized by the Government.
$ 7,574.49	value of material seized by the Government.
$118,032.24	

On 20 April 1992, the contracting officer denied appellant's claim. Although the contracting officer noted that the claim was "deficient" because it failed to explain the basis for the amounts claimed and provide any documentation, he found that these deficiencies were "not material since ... we believe the claim has no merit." The contracting officer essentially determined that the delay to the completion of the project was appellant's fault.

DECISION

The Government first argues that the Board lacks jurisdiction to entertain the appeal since the claim submitted to the contracting officer was not properly quantified. The Government places primary reliance on the Board's decision in *Holk Development, Inc.*, ASBCA No. 40579, *et al.*, 90-3 BCA ¶ 23,086. In *Ebasco Environmental*, ASBCA No. 44547, 93-3 BCA ¶ 26,220 (9 July 1993), we stated:

> In determining whether or not appellant submitted a "claim" within the meaning of the CDA, we employ a "common sense" analysis. *Transamerica Insurance Corp. v. United States* [38 CCF ¶ 76,374], 973 F.2d 1572, 1579 (Fed. Cir. 1992). "All that is required is that the contractor submit in writing to the contracting officer a clear and unequivocal statement that gives the contracting officer adequate notice of the basis and amount of the claim." *Contract Cleaning Maintenance, Inc. v. United States*, 811 F.2d 586, 592 (Fed. Cir. 1987).

Unlike *Holk* where the contractor provided only a bottom-line amount, appellant here has provided more detail. The instant claim is broken down into logical elements such as travel, labor and per-diem for the added work. This is "sufficient to enable the contracting officer to undertake a meaningful review of the claim." *Holk, supra.* at 115,938. We find that appellant's claim provides "adequate notice of the basis and amount of the claim." *Id.*

Alternatively, the Government moves for partial summary judgment on appellant's claim for lost profits. It is not fully developed regarding what these elements of profit pertain to and we deny the Government's motion at this time. Further factual development is necessary.

The Government's motions are denied. The parties shall confer and advise the Board regarding their desires for further proceedings.

[¶ 26,260] K.C. Construction Co.

ASBCA No. 44448, August 2, 1993. Contract No. N62472-88-C-5527.

Delays—Approval Delays—Review of Drawings.—A contractor's contention that the government's failure to timely approve duct-work shop drawings delayed the fabrication

Digitized by Google

and installation of the ducts was rejected because the contractor failed to show that the review time was unreasonable or that the overall project was delayed.

Interpretation of Contracts—Reasonableness—Government-Furnished Equipment.—Under a contract for the renovation of an office, a contractor's interpretation that the requirement to install movable office partitions did not include the requirement to provide electrical components to be affixed to the partitions was not reasonable, because the contractor's position would have rendered meaningless certain paragraphs. The contractor asserted that the government was required to supply the electrical components and that the contractor was required to "only install" the partitions with the exception of providing several minor items. The contractor ignored the provision that it "was required to supply miscellaneous fittings" as well as the provision that the government would not furnish any material or equipment "unless otherwise specified." The contractor's position, when considered with a drawing that depicted the need for 79 electrical receptacles, would also have rendered meaningless a reference in the amendment that the government would provide 27 electrical receptacles.

For the appellant: Davis & Costa, Blue Bell, Pennsylvania, by David I. Davis. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Audrey Van Dyke, Trial Attorney, Naval Facilities Engineering Command, Washington, D.C.

Before ELMORE and RIISMANDEL, Administrative Judges.

ELMORE, Administrative Judge: K.C. Construction Co. (KC or appellant) has appealed the contracting officer's (CO) 24 January 1992 "final decision" denying KC's claim for an equitable adjustment for (1) a 10-calendar day time extension due to the alleged excessive time the Government took to review KC's HVAC duct work shop drawings; (2) a 119-calendar day time extension due to KC having to procure and provide 55 "Hauserman" electrical components that, allegedly, were to be provided as Government furnished equipment (GFE) and; (3) release of liquidated damages (LD).

The appellant has elected to utilize the Board's ACCELERATED procedure. Entitlement only will be decided regarding the issue of delay damages and both entitlement and quantum are in issue regarding the issues of GFE and withholding of LDs. (Tr. 11-14; R4, tabs 23, 25)

SUMMARY FINDINGS OF FACT

On 22 May 1989 Northern Division, Naval Facilities Engineering Command awarded KC contract N62472-88-C-5527 (C-5527), with amendments 0001 through 0004, for a contract price of $258,000, to (R4, tab 1; tr. 16, stipulation):*

> [R]enovation of 4800 S.F. of existing office area and the provision to provide approximately 4400 S.F. of additional office area. included to be new movable partitions (installation only), wall coverings, new suspended ceilings, new lighting, new floor finishes, modification to existing and new HVAC system, new partitions where

* The parties verbally stipulated on the record as follows (tr. 16-17):

Mr. Davis: The following statements are admitted for purposes of these proceedings. On May 2, 1989, KC was awarded Contract N62472-88-C-5527 by the Navy for renovation of NPPSO spaces at Building 4-D at the Naval Aviation and Supply Office in Philadelphia for the contract price of $258,000. During the course of performance, there were four approved modifications increasing the contract price to $296,042 and extending the completion date from September 14, 1989 to November 10, 1989.

KC completed performance on or about February 16, 1990. During the course of performance, certain disputes arose concerning timeliness of performance and acquisition of certain electrical components. The Navy has alleged that KC was delayed in its progress and has assessed $19,000 in liquidated damages, which sum is being retained from the contract proceeds.

The Navy furnished certain electrical components, i.e., receptacles for installation in Hauserman partitions, which is [sic] alleges were the responsibility of KC to furnish. The Navy has retained $1,042 of the contract proceeds on account of its furnishing the receptacles for the Hauserman partitions. Addendum No. 4 to the contract identifies certain Government-furnished equipment for the subject contract. One such item is a receptacle for the Hauserman partitions of which the Navy was to provide 24.

The contract drawings indicate a total of 79 receptacles to be installed in the partitions. The Navy provided the Hauserman receptacles on February 5, 1990, and work was completed promptly thereafter. Thank you.

shown on drawings and incidental related work.

The contract specifications instructed the bidders, in pertinent part, as follows (R4, tab 1; exh. G-10):

8. Movable partitions supplied by the Government were manufactured by Hauserman, Inc., 21 S. 5th Street, Philadelphia, PA 19106, (215) 928-1080. The following will be supplied:

85 EA. Panel, Warm White, 9'6" high w/panel connector, carpet gripper, ceiling channel and black vinyl base.

16 EA. Switch, Single Complete w/panel connector, plate, and box.

24 EA. Receptacle, Duplex, complete w/cut out panel connector, plate and box.

* * *

NOTE: Glass is not supplied with the Hauserman Partitions. Contractor shall supply tempered glass, 1/4 inch thick. Contact Hauserman for method of installation and glazing requirements.

* * *

(Added by Amendment 0004 to solicitation)

Section 01010, GENERAL PARAGRAPHS:

5.1 Omissions from the drawings or specifications or the inaccurate or incomplete description of details of work which are manifestly necessary to carry out the intent of the drawings and specifications, or which are customarily performed, shall not relieve the Contractor from performing such omitted or inaccurately described details of the work but shall be performed as if fully and correctly set forth and described in the drawings and specifications.

* * *

6.2 Liquidated Damages: If the Contractor fails to complete the work within the time specified in the contract, or any extension, the Contractor shall pay to the Government as liquidated damages, the sum of $200.00 for each day of delay.

* * *

7.1 The Government will not furnish any labor, material or equipment, unless otherwise specified on the drawings and specifications.

7.2 Contractor to furnish all required material and equipment

Section 16402. INTERIOR WIRING SYSTEMS:

3.1.2 Wiring Methods: Wiring method shall be insulated conductors installed in conduit, except where specifically indicated or specified otherwise, or required by NFPA 70 to be installed otherwise....

* * *

3.1.11 Government-Furnished Equipment: The Contractor shall make connections to this equipment to make it operate as intended, including providing miscellaneous items such as plugs, receptacles, wire, cable, conduit, flexible conduit, and outlet boxes or fittings.

Drawings A-1, A-5 and E-1, when viewed together, depicted "MOVABLE PARTITIONS SUPPLIED BY OWNER, INSTALLED BY G.C." with 79 receptacles. The contract neither included a movable partitions specification section nor manufacturer's instructions for the partition assembly. KC alleges its bid was based on its determination that the Government furnished partitions would have pre-installed receptacles and switches and KC would not be required to provide any material for the GFE. KC was unable to get Hauserman to provide installation instructions prior to or after contract award. However, prior to submitting its bid, KC neither informed the CO of a need for the partition installation instruction nor did it request clarification regarding Amendment 0004's instruction that only "24" receptacles would be supplied while 79 were required. (Tr. 39-44, 89-90; exh. G-4, A-12; note 1 *supra)*

On 18 May 1989 KC transmitted to the Government for approval its "duct layout" shop drawings with suggested modifications, which the Government on 6 June 1989 returned for revision and resubmittal and which the Government's HVAC architect-engineer, PennEast Corp., on 12 June 1989 approved as submitted. However, KC was not told of the approval until 29 June when it was verbally informed in response to its inquiry. No delay in completing the contract was attributable to a delay in approving the duct layout shop drawings. The HVAC duct installation was completed prior to 6 November 1989, when KC left the job due to the unavailability of the Hauserman electrical components. KC did not provide Daily Reports to Inspector for the period 15 June 1989 to 30 August 1989 when a Contract Construction Compliance Notice was issued. (R4, tab 4; tr. 74-87, 121-25; exh. A-5 through A-10)

Digitized by Google

On 11 October 1989 the Navy's "Assistant Resident Engineer In Charge" (AREIC), based on the extensive contract work remaining and KC's insufficient job manning, concluded the contract completion date of 20 October 1989 would not be met and requested KC to immediately outline its contract completion plan. (R4, tab 6; exh. G-1)

On 20 October 1989 KC, for the very first time, informed the Government that although the electrical portion of the contract included "the installation of electrical circuits and connections to the two types of movable office partitions supplied by the Government," and Amendment 0004 required the "installation and wiring of certain government furnished proprietary [sic] and custom made electrical receptacles within the Hauserman partitions, in addition to the circuits which feed the partitions," the "quantity of specially fabricated electrical receptacles supplied by the Government for this purpose is not sufficient to complete all of the Hauserman electrical work as shown on the contract drawings." KC, contending the Government was responsible to furnish the additional quantities of electrical materials needed to make up the deficit, argued it was contractually required, under Amendment NO. 4, to "only install" the Hauserman partitions with the exception of the glass and minor touch up painting. KC also argued that: specification section 16402, paragraph 3.1.11 did not apply since it is "intended to apply to electrical connections for Government supplied pumps, motors and other equipment" and it neither requires that KC make up any deficits or missing components in the Government supplied partitions themselves, nor does it apply to the specially designed proprietary electrical components, fabricated by the Hauserman company exclusively for use on their partitions and which are an integral part of the GFE. (R4, tab 8; tr. 102; note 1, *supra)*

The AREIC in a 31 October 1989 letter responding to KC's 20 October letter stated KC's "assumption" that section 16402, paragraph 3.1.11, applies only to some specific type of Government furnished equipment is baseless because amendment 0004 listed the Government furnished equipment and did not include sufficient electrical fixtures to complete the installation, and section 16402, para. 3.1.11 required the "contractor to supply miscellaneous fittings to make the equipment operate as intended." KC was told to supply the remaining electrical components to make the partitions operate as intended. (R4, tab 11)

On 2 November 1989 KC, stating it did not agree with the Government's position that KC was responsible for furnishing the electrical components for the Hauserman partitions, indicated it would endeavor to locate a supply source but, since the particular type of Hauserman partition is "obsolete" and no longer in production, there is a possibility the part will not be readily available. KC contended that since the drawings and specifications "clearly state" the partitions were to be Government furnished, and since the proprietary electrical components were an "integral part of the Hauserman system," responsibility for errors and omissions in the contract documents ultimately rests with the Government. KC requested the Government make the parts available from inventory free of charge since the job was at a standstill and no further work could be accomplished until the subject parts are received/procured. (R4, tab 12)

On the Daily Report To Inspector dated "11/6/89 to 2/4/90" KC reported it had "officially pulled off job [due to) Gov't inability to fulfill its end of contract." KC complained it had waited nearly a month for Hauserman panel connectors and electrical components with no action coming from the Government side but that KC would return when the Government supplied the missing electrical components. The Government's 9 March 1990 comments affixed to the same report stated the panel connectors and the electrical components listed on amendment No. 4 had been delivered to the contractor and were eventually lost when the contractor failed to secure them, and the specifications and amendment 0004 state the contractor is to supply the rest. (R4, tab 13)

In its letter dated 14 November 1989 KC informed the Government that it considered itself "prevented from completing the subject Project due to the ongoing delays associated with the 125 A breakers for the HVAC service and electrical outlets and switches for the Hauserman Partitions"; that the delays were due to the errors or omissions in the original contract documents and, therefore, the responsibility of the Government; that KC would continue to assist in finding a solution to the problem but intended to submit a claim for KC's increased cost of superintendence, project management, and office overhead; and labor production inefficiencies suffered by the electrical subcontractor "as a consequence of being denied the ability to complete the Hauserman internal wiring

©1993, Commerce Clearing House, Inc.

Digitized by Google

work in conjunction with the contract electrical work." KC also withdrew its offer to wire the additional 55 Government supplied Hauserman receptacles and switches at no change in contract price. (R4, tab 14)

By speed letter of 14 December 1989 KC informed the Government that its electrical subcontractor had confirmed that Hauserman's distributor, Advance Office Systems, had the electrical parts, except the connectors, available and delivery would take 2 to 3 weeks from the date a purchase order is placed, which would be issued as soon as Advance can confirm the availability of the connectors (R4, tab 15; exh A-11).

On 8 January 1990 the Government issued a "cure notice" notifying KC that it was in danger of being terminated for default due to its failure to order the required electrical components for the movable partitions and to prosecute the work. KC was given "10 days [to] demonstrate [its] ability to perform the work by producing the required material and submitting a practical schedule of work." (Exh. A-13)

On 18 January 1990, in responding to the Government's 8 January cure letter, KC declared it disagreed with the Government's contention that KC was not making a concerted effort to complete the contract and maintained it had been unable to get Hauserman to provide installation instructions prior to or after contract award; that not until 14 December 1989 was KC able to locate some of the electrical components needed, and not until 22 December were the "proprietary" connectors located. KC argued the connectors were considered GFE since they were not an "off the shelf item" but specially assembled by Hauserman for use in its partitions. (Exh. A-1, -3)

KC's letter of 12 February acknowledged receiving the Government furnished electrical components for the Hauserman partitions and informed the Government that KC had "field modified" 34 receptacle and 12 switch locations because Hauserman panels did not permit back-to-back installation of the electrical components as indicated on the drawing (exh. A-2).

By letter dated 19 December 1990 KC filed a claim requesting an equitable adjustment (EA) and time extension (TE) for the following alleged delays which the Government, in conceding partial liability, by letter of 5 March 1991 granted as follows (R4, tabs 19, 20):

Description of delay	*KC Requested EA/TE*	*Government Granted EA/TE*
Unaccessible Project Site	$2,061.92/14 cal. days	$1,031/7 cal. days
Review of Ductwork Drawings	$1,472.80/10 cal. days	$0/0 cal. days
Interest for Late Payment	$247.96/0 cal. days	$0/0 cal. days
Hauserman Partitions	$10,296.03/23 cal. days	$7,846/9 cal. days
Hauserman Partitions Electrical Components	$15,169.84/103 cal. days	$0/0 cal. days
Cutting Hauserman Partitions	$3,166.96/5 cal. days	$1,000/2 cal. days
Hauserman Partitions Door Hardware	$3,166.96/5 cal. days	$800/2 cal. days

The Government's letter further assessed liquidated damages as follows:

Total Recommended Equitable Adjustment:	$10,677.00
Recommended Time Extension:	Twenty (20) calendar days
Total Liquidated Damages:	$20,000.00 (100 days)*
Total of previous claim:	$9,964.00 (0 days)
Cost of customer furnished electrical component	$1,042.00

On 1 and 2 August 1991 KC requested the CO issue a "final decision" on its equitable adjustment claims as follows:

> The claim for Equitable adjustment includes a time for the 10 calendar days beyond the allowable 21 days permitted for review of submissions, release of the appropriate liquidated damages, and payment for KC's extended overhead. . . . The total amount of the claim is:
>
> | | |
> |---|---|
> | 10 Calendar days × 147.28 | = $1,472.80 |
> | Released liquidated damages | = $2.000.00 |
> | Total | $3,472.80 |

(R4, tab 22)

* From 22 October 1989 until 20 February 1990 (120 days minus 20 days)

Digitized by Google

The claim for Equitable adjustment includes a time extension for the time from October 19, 1989 to February 15, 1990 (119 Calendar days), payment for KC's extended overhead, release of the $1,042 the Navy is withholding for the components they provided in excess of the 24 and release of appropriate liquidated damages .... The total amount of the claim is:

119 Calendar days × 147.28/day	= $17,526.32
Release for components	= 1,042.00
Released liquidated damages	= $23.800.00
Total	$42,368.32

(R4, tab 23)

On 24 January 1992 the CO issued the "final decision" denying KC's $45,841.12 equitable adjustment claim (R4, tab 25). By letter dated 21 April 1992 KC timely appealed the CO's adverse decision (Board correspondence file).

PARTIES' POSITIONS

HVAC Claim:

KC contends the Government took 10 days longer than was reasonable to review the duct work shop drawings forcing KC to stop work on the project. KC contends that had the drawings been approved when submitted the duct fabrication and installation could have been completed in "early June" 1989. (R4, tab 22)

The Government contends the shop drawings were submitted for review on 26 May 1989 and returned on 6 June because they were incomplete; that KC resubmitted the drawings on 6 July and the Government approved them on 11 July 1989; that the two review periods were within a reasonable submittal review period. In the alternative the Government contends that KC did not suffer any damages since its construction schedule shows the HVAC work starting ten weeks after mobilization and the work was completed within the originally scheduled contract performance period. (R4, tab 25)

Electrical Component Claim:

KC contends that the contract drawings indicated 79 receptacles were "to be installed" in the Hauserman partitions; that amendment 0004 presented a list of Government furnished equipment and included 24 receptacles; that KC intended to install the contractually permitted standard duplex receptacles with a surface mounted "wiremold" system for the remaining 55 receptacles and was subsequently told the surface mounted receptacles were unacceptable; KC started installation of the Hauserman partitions approximately 2 October 1989 and on 19 October informed the Navy that the lack of GFE, the electrical components, was delaying the project; that Hauserman electrical components were no longer manufactured and were obtainable only from existing stock sources/suppliers; that on 14 and 22 December 1989 KC located sufficient stock but refused to pay for the purchase of the components; that on 5 February 1990 the Navy provided the Hauserman receptacles to KC and on 16 February 1990 KC completed the contract. (R4, tab 23)

The Government contends Drawing E-1 shows that 79 receptacles and 6 switch outlets are to be installed in the Government furnished Hauserman partitions; that Amendment 0004, setting forth the GFE, indicated only 24 receptacles would be provided; that KC was responsible for determining the availability of the electrical components prior to bidding; that standard commercial electrical components could be used in the partitions; that KC failed to proceed diligently with contract performance pending final resolution of its request for relief as required by the Disputes clause; therefore, the delay in completing the contract resulting from the late installation of the electrical components into the Hauserman partitions was KC's responsibility, and not the Government's; and KC is not entitled to either an equitable adjustment or the remission of the LDs. (R4, tab 25)

DECISION

HVAC Delay Claim

To prevail on a claim of delay, appellant must show: (1) specific delays were attributable to Government-responsible causes; (2) these delays resulted in delay of the overall project; and (3) the Government-caused delays were not concurrent with delays within the contractor's control. *Lambrecht & Sons, Inc.*, ASBCA No. 42773, 92-2 BCA ¶ 24,863 and cases cited.

We have held that "in any situation involving delayed approval of shop drawings, first articles, subcontractors, etc., a contractor is not entitled, as a basic premise, to any adjustment unless the delay is unreasonable" and "[t]he length of time taken to give approval does not 'establish ipso facto an unreasonable delay on the part of the defendant. It is the contractor's burden to show 'where the work was delayed because of lack of approval.'" *R.J. Crowley, Inc.*, ASBCA

©1993, Commerce Clearing House, Inc.

Digitized by Google

No. 35769, 88-3 BCA ¶ 21,151 citing, *H.Z. & Co., Ltd.*, ASBCA Ho. 29776, 87-1 BCA ¶ 19,384; *Law v. United States* [16 CCF ¶ 80,286], 195 Ct. Cl. 370, 385 (1971); *Jefferson Construction Co. v. United States* [11 CCF ¶ 80,767], 177 Ct. Cl. 581, 595-96, 368 F.2d 247, 256 (1966).

KC's contention that had the shop drawings been approved when submitted, the duct fabrication could have been completed in early June 1989 is self serving, purely speculative, and unsupported by the record and, accordingly, is insufficient basis for allowing a claim against the Government. *Zinger Construction Company, Inc.*, ASBCA Nos. 28788, 32424, 87-3 BCA ¶ 20,196 at 102,291. KC has failed to establish the actual approval/review time (6 June to 29/30 June 1989) was unreasonable or delayed the overall project, as required if KC is to prevail. *Technocratica*, ASBCA No. 39119, 90-3 BCA ¶ 22,997.

Electrical Component Claim

In contract interpretation, where a provision of the contract is phrased in plain and unambiguous language, the words of that provision must be given their plain and ordinary meaning in defining the rights and obligations of the parties. *Craft Machine Works, Inc. v. United States*, 926 F.2d 1110 (Fed. Cir. 1991).

It is undisputed that KC was contractually required to "only install" Government furnished partitions. KC argues that at the time it was preparing its bid it determined the partitions had the electrical components installed and, accordingly, "install only" meant that there were no other material items to be affixed prior to the installation. We are hard pressed to accept KC's determination as reasonable since "install only" was definable only after a thorough review of the specifications and drawings which, at the very least should have caused KC to question what material it had to provide and what material the Government would provide.

Specification Section 01010, paragraphs 7.1 and 7.2 state that the Government will not furnish any material or equipment "unless otherwise specified" and "the Contractor" was to furnish all required material and equipment. Amendment 0004 unambiguously stated, and KC acknowledged it understood Amendment 0004 to state, that only 24 receptacles would be provided while drawing E-1 depicted a need for 79 receptacles. KC knew 24 receptacles were insufficient to meet the requirements depicted on drawing E-1. KC, aware of this inconsistency, called Hauserman to seek instructions on the panel installation but was rebuffed. At no time prior to submitting its bid did KC request either assistance or clarification from the CO. When faced with an obvious inconsistency or discrepancy of significance, a contractor is obligated to bring the situation to the Government's attention. *Space Corporation v. United States* [18 CCF ¶ 81,891], 470 F.2d 536, 538 (Ct. Cl. 1972). KC having actual knowledge of a patent ambiguity prior to bidding had a duty to seek clarification and failing to do so cannot prevail in its claim for an equitable adjustment. *Westerchil Construction Company*, ASBCA No. 35191, 88-2 BCA ¶ 20,528.

Assuming, *arguendo*, we were to accept KC's interpretation we would still have to deny its claim for an equitable adjustment. We have previously held that when reviewing a contract a contractor must give effect to all of its terms so as to not render any of them meaningless or useless. *Reflectone, Inc.*, ASBCA No. 34891, 89-3 BCA ¶ 21,962. KC's interpretation would render meaningless and useless paragraphs 7.1 and 7.2 of Section 01010 as well as Amendment 0004's reference to the Government providing only 24 receptacles.

Based on the discussion above, the appeal in its entirety is denied.

[¶ 26,261] Alco Environmental Services, Inc.

ASBCA No. 43183, July 28, 1993. Contract No. N62472-88-D-2222.

Convenience Termination—Propriety—Nonresponsiveness.—The rescission of an indefinite delivery contract for asbestos removal was improper and was treated as a termination for the convenience of the government, although the government insisted that the contractor's failure to bid a line item rendered the bid nonresponsive, because the contractor's failure was a minor irregularity that the contracting officer should have waived or permitted the contractor to cure. A minor irregularity under the regulations is defined as an immaterial variation from the terms of the invitation that can be cured or waived

Digitized by Google

without prejudice to other bidders and that has a negligible effect on price, quantity, quality, or delivery of the total services being procured. In view of the contracting officer's failure to waive the minor irregularity or allow an opportunity to cure, the board deemed the rescission a termination for the convenience of the government.

For the appellant: Sam Zalman Gdanski, Montebello, New York. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Audrey J. Van Dyke, Trial Attorney, Naval Facilities Engineering Command, Chesapeake Division, Washington, D.C.

Before FREEMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

FREEMAN, Administrative Judge: Alco Environmental Services, Inc. (ALCO) claims a convenience termination for a cancelled contract. We sustain the appeal on entitlement and remand to the parties for settlement of amount.

FINDINGS OF FACT

1. On 12 October 1989, the Naval Facilities Engineering Command office at Portsmouth Naval Shipyard (NAVFAC-Portsmouth) invited bids on an indefinite quantity contract for removal of asbestos-contaminated materials and installation of asbestos-free materials at the shipyard. The proposed contract included the FAR 52.216-22 clause entitled "INDEFINITE QUANTITY (APR 1984)," and the FAR 52.249-2 clause entitled "TERMINATION FOR CONVENIENCE OF TEE GOVERNMENT (FIND PRICE)(ALTERNATE I)(APR 1984)"

2. A six-page bid schedule contained five line items with 84 sub-line items. The line items grouped similar sub-line items for total pricing purposes, but unit price bids were invited on each sub-line item and ordering was to be done on a sub-line item basis. A maximum quantity was specified for each sub-line item. The sub-line items were not dependent on each other as to price, quality, quantity or delivery. The Government was obligated to order a minimum quantity of $100,000 in total services under the contract, but was not obligated to order any particular quantity under any particular sub-line item. Clause 13 of specification section 01010 provided that if the Government failed to order the specified minimum quantity, the convenience termination clause would apply to the unordered amount.

3. Clause 12(c) of the Instructions to Bidders stated: "If the solicitation requires bidding on all items, failure to do so will disqualify the bid." Clause 17(c) of the Instructions to Bidders stated: "The Government may accept any item or combination of items, unless doing so is precluded by a restrictive limitation in the solicitation or at the bid." The invitation did not require bidding on all items. There was no restrictive limitation in the invitation or at the bid on the Government accepting any item or combination of items.

4. On 15 December 1989, NAVFAC-Portsmouth issued Amendment 0003 to the invitation. Amendment 0003 substituted a new page 1 to the bid schedule. The new page 1 increased the specified maximum quantity for sub-lne item 0001AJ, "Remove asbestos-contaminated bulk debris," from 20 cubic yards to 40 cubic yards, and added new sub-line item 0001AK, "Remove asbestos-contaminated soil," with a maximum quantity of 200 cubic yards.

5. On 28 December 1989, Alco bid $727,715.61 for the contract. Bids were opened on that date. Alco was the low bidder. The second low bid was $905,934.39. After verifying its bid, Alco was awarded the contract on 19 January 1990. Alco then submitted the required performance and payment bonds and certificate of insurance, and performed various administrative tasks while waiting for delivery orders and notice to proceed with on-site work. However, before any orders or notice to proceed were issued, NAVFAC-Portsmouth discovered that Alco had submitted its bid with the original page 1 of the bid schedule. Thus, the contract as awarded did not include the increased maximum quantity for sub-line item 0001AJ or the new sub-line item 0001AK.

6. NAVFAC-Portsmouth estimated the cost of the increased maximum quantity for sub-line item 0001AJ as $2,000, and the cost of the new sub-line item 0001AK as $20,000. On 12 February 1990, it recommended to its next higher headquarters (NAVFAC-Northern Division) that Alco's contract be amended to add these items. NAVFAC-Northern Division, however, decided that the contract had been awarded erroneously on a non-responsive bid, and should be rescinded. By letter dated 7 March 1990, the NAVFAC-Portsmouth contracting officer who awarded the contract notified Alco that the award was rescinded. When Alco's President protested the rescission, he was told that the decision to rescind was under review and that "there was a possibility it

©1993, Commerce Clearing House, Inc.

Digitized by Google

might be overturned." (tr. 1/38, 1/7/93). NAVFAC-Northern Division reviewed the decision to rescind to determine if it was made at the proper level of authority. While this review was in progress, Alco made numerous inquiries as to when a decision would be made, but it did not demand return of its bonds while the review was in progress.

7. NAVFAC-Northern Division notified NAVFAC-Portsmouth orally on 4 April 1990 and in writing on 9 May 1990 that the "cancellation" of Alco's contract was approved. On 23 May 1990, NAVFAC-Portsmouth returned Alco's bonds, and on 6 June 1990 issued a contract modification cancelling the contract. During the period that the Government held Alco's bonds, Alco was unable to obtain bonding for other projects because it was at the limit of its bonding capacity.

8. On 13 September 1990, Alco submitted a claim for $100,000, the specified minimum quantity under the contract. Alco properly certified the claim on 12 December 1990. On 23 January 1991, it revised the claim to add $158,589.27 for unabsorbed overhead (Eichleay formula) from 6 February 1990 through 31 October 1990. By final decision dated 11 April 1991, the contracting officer denied the claim. This appeal followed.

DECISION

At issue is whether the Government had a right to rescind the award. In deciding that issue we must determine whether Alco's bid was responsive, and if non-responsive in any particular, was it subject to cure or waiver as a minor irregularity. *Cf. Albano Cleaners, Inc. v. United States* [17 CCF ¶ 81,144], 197 Ct. Cl. 450, 455, 455 F.2d 556, 559 (1972).

Alco's omission of new sub-line item 0001AK did not make its bid non-responsive. The invitation did not require bidding on all items, nor did it restrict the Government from accepting any item or combination of items less than the total in the invitation. *See* Finding 3 above and *Decision of the Comptroller General*, B-148624, May 2, 1962, 41 Comp. Gen. 721. Alco's bid on less than the specified maximum quantity for sub-line item 0001AJ, as amended, was nonresponsive as to that item, but this was a minor irregularity which Alco was entitled to cure.

FAR 14.405 states that a minor irregularity includes an immaterial variation from the terms of the invitation which can be cured or waived without prejudice to other bidders and which has a negligible effect on the price, quantity, quality, or delivery of the total services being procured. The cost of the additional 20 cubic yards for sub-line item 0001AJ, which as an indefinite quantity might or might not be ordered, was .27 percent of the total bid. The effect of this defect on the price, quantity, quality and delivery of the total services procured by the contract was negligible. Moreover, cure or waiver of the defect would not affect the relative standing of bidders. The second low bid was $178,220 more than Alco's bid. See *TECOM, Inc.*, B-236929.2, 11 May 1990, 69 Comp. Gen. 411 (.5 percent of total bid held immaterial); *Leslie & Elliott*, B-216676, 19 February 1985, 64 Comp. Gen. 279 (.214 percent of total bid held immaterial); *Custom Environmental Service, Inc.*, B-234774, 24 May 1989, 89-1 CPD ¶ 501 (.4 percent of total bid held immaterial). FAR 14.405 states that the contracting officer "shall" either waive or allow opportunity to cure a minor irregularity. In Alco's case he did neither. Accordingly the rescission of the award on 7 March 1990 was improper and must be deemed a termination for convenience of the Government.

Alco's claim for unabsorbed overhead costs following the rescission notice is without merit. The rescission notice terminated Alco's obligation to hold itself ready to perform the contract. The subsequent review of the decision to rescind did not revoke the notice. Alco was told only that there was a "possibility" of the decision being overturned. Moreover, even if it had been overturned, the contract could have been reinstated only with Alco's consent. Alco complains that the Government's retention of its bonds prevented it from taking other work. Alco, however, never demanded their return. Alco allowed the Government to retain the bonds while it hoped that the contract would be reinstated. That was Alco's voluntary choice, and not compelled by the Government.

The appeal is sustained to the extent that Alco is entitled to a convenience termination effective 7 March 1990. The appeal is remanded to the parties for settlement of amount pursuant to the convenience termination clause and this decision.

ASBCA Nos. 42753, 42754, 42812, 42822, July 30, 1993. Contract No. DLA500-84-C-3299, DLA500-85-C-1590.

Defaults, Excuses—Specification Problem—Summary Judgment.—A government motion for summary judgment in an appeal in which a contractor challenged the default termination of its contract was denied because there remained issues of material fact concerning whether the contractor's failure to deliver acceptable first article test results was attributable to defective specifications.

For the appellant: S. Dubroff & Associates, Inc., Howell, New Jersey, by Stanley Dubroff. For the government: Keith Levinson, Attorney/ Advisor, Defense Industrial Supply Center (DLA), Philadelphia, Pennsylvania.

Before REITER, RUBERRY, and SPECTOR, Administrative Judges.

REITER, Administrative Judge: The appellant's contracts for Bearings, Plain, Rod End were terminated for default in January 1991 for failure to deliver acceptable first article test results (FATR). Timely appeals were filed. The gravamen of the appeals (2 for wrongful termination and 2 for refusal to grant an equitable adjustment) is that the appellant's failure to deliver acceptable first article test results and its claim for an equitable adjustment were attributable to defective specifications.

The Government has moved for summary judgment in toto and in part on the basis that the item has been produced to the exact same specification without deviations or waivers by others, and that appellant agreed to forego equitable adjustment claims in return for extensions of delivery when it wrote "We understand and agree that you are unable to consider any additional compensation for the efforts expended ... but will use this situation as consideration ... to reschedule these contracts."

In response to this preemptory challenge to its case, the appellant has submitted evidence that those items successfully produced were so produced because they were exposed to operations not called out in the very detailed specification, *i.e.*, a certain hammering, rolling, and bumping to loosen up the assembly so that it could pass the no load break away test. As to there being any accord and satisfaction on the claim for equitable adjustments, the appellant contends none was intended and if the appearance of one did evolve, it did so under duress.

DECISION

Whether this hammering, rolling, and bumping are dehors the specification as appellant claims or merely unarticulated "know how" as the Government claims, presents a factually impacted issue which requires taking evidence. The same is true on the issue of accord and satisfaction. Whether the appellant's writing quoted above constitutes an offer (or an offer uncompelled by duress) accepted by the Government can not be decided without a fleshing out of the surrounding context. These unresolved issues of fact preclude the Board from entering summary judgment in toto or in part.

The Government's Motion for Summary Judgment in toto and in part is denied.

[¶ 26,263] **C Construction Co., Inc.**

ASBCA No. 41706, July 30, 1993. Contract No. N62470-86-C-6349.

Quality—Approvals—Notice of Deviation.—Although a contracting officer approved steel vanities rather than the wooden vanities called for under a building construction contract, the contractor was not entitled to recover the costs of complying with a direction to supply wooden vanities, because the contractor's failure to bring the deviation to the attention of the contracting officer negated any approval. When the contractor submitted its shop drawings for steel vanities, it failed to include, as required by the Specification and Drawing for Construction clause, a letter or other writing separate from the drawings that called attention to the fact that the steel vanities were a deviation from the contract requirements.

For the appellant: Smith, Currie & Hancock, Atlanta, Georgia, by Thomas J. Kelleher, Jr. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Audrey J. Van Dyke, Trial Attorney, Naval Facilities Engineering Command, Chesapeake Division, Washington, D.C.

Before FREEMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

FREEMAN, Administrative Judge: C Construction Co., Inc. claims $60,277 for two alleged changes under a construction contract. The Government moves for summary judgment. We find no genuine issue of material fact and deny the appeal.

STATEMENT OF FACTS

1. The contract was awarded on 27 March 1989 for construction of bachelor quarters at Cap Lejeune, North Carolina. The contract drawings showed a vanity in each sleeping room. The alleged changes involve the material for fabricating the vanities and their interior finish.

2. The contract specifications at section 12331, paragraph 2.1, required the vanities to be fabricated in accordance with MIL-V-28639 "except as provided herein." MIL-V-28639 allowed the vanities to be made either of wood or steel. But paragraph 2.1 stated: "Wood construction shall be used. Particleboard shall not be used. Countertop, doors, and all wood panels shall be 3/4-inch plywood ...." Particleboard is a wood product.

3. Contract drawing A-3 at detail 1 showed the vanity body made of 3/4 inch plywood with a painted interior finish. However, paragraph 2.1.2.2 of specification section 12331 stated: "Interior of doors and cabinet body ... shall be nondecorative laminated plastic."

4. Orders of precedence were established in paragraph 22 of specification section 01010, and in paragraph (a) of the FAR 52.236-21 "SPECIFICATIONS AND DRAWINGS FOR CONSTRUCTION (APR 1984)" clause of the contract. Paragraph 22 provided that the contract specifications would govern any difference with referenced military specifications. Paragraph (a) provided that the contract specification would govern any difference with the contract drawings.

5. On or about 8 June 1989, C Construction submitted shop drawings for steel vanities to the project architect-engineer (A-E) for approval. This submittal was made on a Government form at the top of which were three boxes labelled respectively "Contractor Approved," "OICC Approval," and "Deviation/Substitution For OICC Approval." C Construction checked the box labelled "OICC Approval." The submittal was not accompanied by a letter or other writing separate from the drawings calling the attention of the A-E or contracting officer to the fact that steel vanities were a deviation from the contract requirements.

6. Pursuant to paragraph 14.2 of specification section 01011, the A-E was to "review and provide surveillance for the Contracting Officer to determine if Contractor-approved submittals comply with the contract requirements." On 28 June 1989, the A-E returned the vanity submittal to C Construction "[a]pproved as noted." An A-E note on one of the submitted drawings stated: "The paint color for main steel carcass shall match the HPL color submitted." The A-E also checked a box on the submittal form which was labelled: "Submittals are returned with action indicated. Approval of an item does not indicate approval of any deviation from the contract requirements unless the contractor calls attention to and supports the deviation."

7. Paragraph (e) of the Specifications and Drawings for Construction clause of the contract stated in relevant part: "Approval [of submittals] by the Contracting Officer shall not relieve the Contractor from responsibility for any errors or omissions in such drawings, nor from responsibility for complying with the requirements of this contract, except with respect to variations described and approved in accordance with (f) below." Paragraph (f) stated in relevant part: "If shop drawings show variations from the contract requirements, the Contractor shall describe such variations in writing, separate from the drawings, at the time of submission...."

8. Paragraph 15 of specification section 01011 stated in relevant part: "Approval [of submittals] will not be construed as relieving the Contractor of compliance with the specification, even if such approval is made in writing, unless the attention of the Contracting Officer is called to the non-complying features by letter accompanying the submitted matter."

9. On or about 8 February 1990, the Government directed C Construction to supply wood vanities for the project rather than the steel vanities on the approved submittal.

Digitized by Google

C Construction complied with the direction under protest. On 25 May 1990, it submitted a certified claim for $60,277 for supplying wood vanities and for providing a non-decorative plastic rather than a painted finish on the vanity interiors. The claim was denied by the contracting officer on 9 August 1990. This appeal followed.

DECISION

The contract specifications stated that the vanities were to be fabricated in accordance with MIL-V-28639 "except as noted herein." Among the exceptions noted in the specifications was the requirement that "Wood construction shall be used." This direction excluded the steel option under MIL-V-28639. The express exclusion of particleboard did not create an ambiguity with respect to the use of steel. Particleboard is a wood product and would have been within the scope of wood construction if not expressly excluded. Steel is not a wood product and was within the scope of exclusion under the direction "Wood construction shall be used." There was only one reasonable meaning of these terms of the contract. Steel vanities were not permitted. There was also no ambiguity with respect to the interior finish of the vanities. The conflict between the specifications and drawings was resolved by paragraph (a) of the Specifications and Drawings for Construction clause which provided that the specification requirement was governing.

Since there was only one reasonable meaning to be given the contract provisions at issue, the A-E's approval of the vanity submittal was not an interpretation of ambiguities, but inadvertence or negligence in failing to reject a clear deviation from contract requirements. The Specifications and Drawings for Construction clause and paragraph 15 of specification section 01011 both expressly provided that approval of a deviating submittal would not bind the Government unless the deviation was called to the contracting officer's attention by accompanying letter or other writing "separate from the drawings" at the time of submittal. No such letter or writing was presented by C Construction with the deviating submittal.

C Construction argues that it was entitled to substitute a steel vanity for a wood vanity under the provisions of the FAR 52.236-5 "MATERIAL AND WORKMANSHIP (APR 1984)" clause of the contract. We disagree. The cited clause does not contain a broad charter to substitute functionally equivalent materials for those specified. The right of such substitution is limited by the clause to cases where a product is specified by trade name, make or catalog number. The vanities in C Construction's contract were not specified by trade name, make, or catalog number, or otherwise restricted to a single manufacturer's product.

C Construction's further argument that the Government is estopped to require the specified wood construction is also without merit. As noted above, two contract provisions expressly warned C Construction that it could not rely on approval of a deviating submittal unless it had pointed out the deviation in a separate writing at the time of the submittal. Moreover, the same warning was contained on the submittal approval that was returned to C Construction. Reasonable reliance on a representation is an essential element of estoppel. In light of the provisions of the contract and the submittal form, C Construction could not have reasonably relied on the A-E's approval of the submittal. *Cf. Martin K. Eby Construction Co., Inc.*, ASBCA No. 15848, 72-2 BCA ¶ 9521 at 44,359 and 44,331.

Joseph Morton Company, Inc., ASBCA No. 19793, 78-1 BCA ¶ 13,173 is inapposite. The shop drawing approval in *Morton* was binding because the dimensions at issue had been specified as "approximate" and the approval was held to be "concurrence in the appellant's views that the $77\frac{1}{2}$ inches appearing on the drawing represented a proper approximation." 78-1 BCA at 64,418. In C Construction's case there was no term such as "approximate" or other ambiguity requiring interpretation.

The appeal is denied.

ASBCA No. 41541, July 30, 1993. Contract No. F65503-90-C-0021.

Defaults, Procedure—Government Decision—Contracting Officer's Independent Judgment.—A termination for default was improper because the contracting officer was improperly influenced by a lieutenant colonel's direction to monitor the contractor

©1993, Commerce Clearing House, Inc.

Digitized by Google

more closely than was usual and to terminate for the smallest thing. Detecting performance problems to support the Corps of Engineers in denying an award was not a justification for more than normal surveillance, and termination for the smallest thing would violate the government's duty to exercise discretion in default terminations. The contracting officer's haste to issue a cure notice and then a termination, stating weak and technical reasons, was best explained by reference to the lieutenant colonel's directive. A subsequent review by a termination contracting officer was not sufficiently unbiased to remove the taint. The government's more positive approach to cooperating with the contractor after it was hired as subcontractor under the post-termination takeover agreement also indicated that the lieutenant's colonel's directive had been influential.

For the appellant: Wade & DeYoung, Anchorage, Alaska, by R.R. DeYoung. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Capt. Wayne D. Loosbrock, USAF, and Robert P. Balcerek, Trial Attorneys.

Before DELMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

DELMAN, Administrative Judge: Appellant, Walsky Construction Company, seeks to overturn the Government's default termination of its contract. Our jurisdiction over the appeal lies under the Contract Disputes Act, 41 U.S.C. §601 *et seq.* A hearing was held and briefs were filed. We sustain the appeal.

FINDINGS OF FACT

1. On 15 March 1990, the Government issued an IFB for a project known as "Repair Roof Structure and Install Fire Protection Building 1306," at Eielson AFB, Fairbanks, Alaska. In brief, the work involved the removal of the existing roof and its replacement with a new standing seam metal roof; reinforcing the existing structural system; and the installation of a fire sprinkler system. The roofing specification was based upon the product of a particular manufacturer—the "Butler CMR 24" system. The successful contractor was to provide the design, the product and the installation of all systems. The work was to be accomplished in two phases and was to be completed within 180 days from notice to proceed.

2. During the prebid period, contractors raised a number of questions regarding the scope and phasing of the work. Insofar as pertinent here, questions were raised by a number of mechanical contractors regarding the adequacy of the specifications to design the fire sprinkler system. These contractors sought "water flow data" so as to be able to hydraulically calculate the fire sprinkler system, i.e. static pressure, residual pressure, and the number of gallons flowing in the system (exh. A-6, -12). These data were not included in the specifications, as originally issued, or as amended.

3. At the hearing, appellant provided evidence from an expert in the design and calculation of fire protection systems. The Government did not. Appellant's expert stated, and we find, that the water flow data were necessary to design the fire sprinkler system envisioned by the specifications (Harpole deposition, at 26, 42).

4. Because the Government needed time to answer all prebid questions, it issued Amendment 0001 which extended bid opening indefinitely. Amendment 0002 made a number of substantive changes to the specifications. Insofar as pertinent, the Government eliminated the phased nature of the work. It decided to turn over the entire building at once to the contractor to facilitate performance, and the performance period was reduced from 180 days to 90 days. Bid opening was extended to 21 May 1990. The Government added to the IFB a four page Schedule of Material Submittal, AF Form 66, which, *inter alia,* listed the required submittals by contract section and their due dates. With respect to this form, Amendment 0002, paragraph 8, further provided as follows:

> Specifications (Specs), section 01020, 1.01—insert the following "Revised" statement—Scope of Work: This section covers procedures for submitting and substituting materials. Submittals received which do not conform to the requirements of this section will be returned to the contractor whithout [sic] consideration. *Refer to AF Form 66 for a listing of all submittal items by section.* Section 15020 of this specification covers required Fire Equipment review submittals and substituation [sic] procedures. It shall be the contractors [sic] responsibility to review each section of this specification for additional material submittal requirements. [Emphasis added]

Additional pertinent provisions of Amendment 0002 are set out below:

19. Q: Clarify specs, section 13600, 1.05 A.

Digitized by Google

A: The contractor shall provide structural certification by a registered Professional Engineer as to the adequacy of the "roof system", to include the roofing metal, purlins, clips, and the method of fastening the purlins to the existing structural frame.

* * *

23. Q: What is the water flow date [sic] for the Fire Protection System design?

A: The water source is a non-potable, closed loop system serving the airfield loop area. There are three high capacity, pressure demand pumps, and a 180,000 gallon holding tank. The top [sic] will be on a 10 inch line, running at 150 psi.

5. Appellant's bid of 21 May 1990 was lowest amongst the bidders and was responsive. For purposes of determining appellant's responsibility for award, the contracting officer, who was also to administer this contract (ACO), contacted a number of sources regarding appellant's financial and technical ability to perform. Overall, the information received was satisfactory. On 24 May 1990, the contracting officer issued a determination of contractor responsibility, which concluded as follows (exh. A-21):

> Based upon the above information and findings [sic] no discrepencies [sic], I hereby determine Walsky Construction a responsible and responsive contractor eligible for award of this contract.

The contract was awarded to appellant on 25 May 1990. The contract contained the standard article, Default (Fixed Price Construction) (APR 1984), FAR 52.249-10. A preconstruction conference was set for 5 June 1990.

6. On 4 June 1990 the Director of Contracting, a lieutenant colonel at Elmendorf AFB, Headquarters Alaskan Air Command, telephoned the contracting office at Eielson and wished to speak to the base contracting officer. The base contracting officer was not available and the contract administrator for this contract took the call in his absence. The following was the contract administrator's written summary of this conversation (exh. A-22):

> *Situation*
>
> Received a call from [the lieutenant colonel] who stated there was a possible problem with the award to Walsky Construction. He stated the *Corp of Engineering are working [sic] a file to try to deny award to Walsky and by us awarding to them it weakened there [sic] position.* I questioned him as to what we could do now as award has been made and a pre-con scheduled for 05 Jun 9[0] and *he stated we could only monitor this company more than normal and if the smallest thing goes wrong take normal steps to default.* [The ACO] did a background check prior to award and amoung [sic] other people spoke with Elmendorf and did not have any information that would lead to a non-responsibility rejection; however, it sounds like the Corp. [sic] does. Anyways [sic] to make a long memo short [the lieutenant colonel] wants you to call him when you get in. [Emphasis added]

Neither the lieutenant colonel, the contract administrator, nor the base contracting officer gave testimony at the hearing.

7. The Army Corps of Engineers directly contacted key Government contracting personnel on 4 June regarding the award to Walsky, including the termination contracting officer (TCO) and the contract administrator (exh. A-75). The TCO gave testimony at trial. When confronted with the Corps' telephone notes of his conversation, he testified that he did not remember the call (tr. 1/74).

8. The Eielson base contracting officer, the ACO and the contract administrator met to discuss the lieutenant colonel's directive (tr. 1/195). On the official file copy of the contract administrator's written summary, the words "the smallest thing" were circled in red ink. At the hearing, the ACO was able to identify that certain handwritten notes on the summary were made by her direct supervisor, the base contracting officer. She testified that the words "the smallest thing" were probably circled by the base contracting officer as well (tr. 1/192-93). Absent other evidence, we find that the base contracting officer did in fact circle the phrase.

9. At hearing, the ACO, a master sergeant, testified that she was not influenced by, nor did she follow the lieutenant colonel's directive in the administration of this contract, nor was she influenced by the matter which was circled by the base contracting officer, her immediate supervisor.

10. Appellant's vice president attended the preconstruction conference of 5 June 1990. Appellant was given an immediate notice to proceed—contract completion was due within 90 days, or by 4 September 1990. Appellant was also advised that under the contract, many submittals, certificates, and shop drawings were required to be provided to the Government within 10 days of notice to proceed. Appellant advised the Government that this was a contractor-designed job

©1993, Commerce Clearing House, Inc.

Digitized by Google

and it would be unrealistic to expect these shop drawings within 10 days. The Government representative advised appellant, in essence, to make as many submittals as it could within the 10-day time frame.

11. At the preconstruction conference, appellant furnished the Government with its performance and payment bonds and a certificate of insurance. It also advised that it expected to begin field work around 15 July 1990. The Government did not object. (Tr. 2/357-61)

12. By letter to the Government dated 12 June 1990, appellant confirmed in writing the position it took at the preconstruction conference regarding submittals. Appellant concluded: "We are deligently [sic] pursuing these submittals and will turn them in at the earliest possible time" (R4, tab 5).

13. On 13 June 1990, the contract administrator called appellant and asked for the status of submittals. Appellant replied that some submittals would be made the next week (exh. A-25). The next day, the parties spoke again by telephone. The Government advised appellant that a contract modification would be forthcoming for a change in the color of the roof panels; appellant asked for the color as soon as possible (tr. 2/375-76). During this conversation, the Government's project engineer asked appellant's vice president whether he could complete the project on time. He replied in the affirmative (tr. 2/91).

14. As of Friday, 15 June 1990, the tenth day after notice to proceed, the Government had not received any submittals from appellant. By letter to appellant of the same date, the ACO issued a cure notice, which stated in part as follows (R4, tab 6):

> 1. You were given a "Notice to Proceed" on 05 Jun 90 to begin work on subject project. In accordance with FAR 52.212-3 and AF FAR Sup 36.290, you are obligated to submit all material submittals, and to begin performance within 10 days of receipt of the Notice to Proceed. As of this date, no material submittals have been received by our office. . . .
>
> 2. Several administrative letters were issued at the preconstruction meeting that require your completion and return to this office for coordination, ie, Contract Insurance, Performance of work, Superintendence by Contractor, etc. Again, to date none of these letters have been returned.
>
> 3. You are notified that the Government considers your lack of providing the required submittals and administrative letters, a condition that is endangering performance of the contract. Therefore, unless this condition is cured within 10 days after receipt of this notice, the Government may terminate for default. . . .

15. The parties spoke by telephone on Monday, 18 June 1990. Appellant had not yet received the cure notice. The ACO questioned appellant's lack of submissions and also the projected start date of 15 July 1990. Appellant's vice president indicated that the major design systems could not be submitted yet, and that other submittals would be sent soon. Appellant again stated that it could complete the project on time.

16. During this telephone conversation, the ACO also advised appellant that a cure notice had been issued. We find that the following colloquy occurred, in accordance with the testimony of appellant's vice president (tr. 2/381-82):

> . . . [I]t really caught me off guard because this is ten days after notice to proceed. I had absolutely no indication that the government had any concerns either verbally, in writing, in any way. She said that she had her—excuse me, let me remember as best I can her exact words. I wrote them down in my notebook and I do keep very very good notes on a daily basis.
>
> *She said that she was going to aggressively manage our contract, that she had her "marching orders," that's an absolute direct quote.* If there was the slightest glitch, as she called it, she was not going to sit idly by. She said she—I asked her why, and she said we view you as a marginal contractor. . . . I said where did you get your information. She said [the termination contracting officer]. [Emphasis added]

Apparently, the TCO had provided the ACO with information regarding Walsky's performance on earlier contracts. Appellant challenged the accuracy of this information.

17. In view of the parties' telephone conversation of 18 June, appellant's vice president decided to fly to Eielson to meet the ACO personally with the hope of developing a better rapport and a meeting of the minds (tr. 2/387). The parties met at Eielson on 20 June. Appellant hand carried several submittals, primarily administrative in nature (tr. 2/389-90). Insofar as appellant was concerned, the sought after "meeting of the minds" was not reached. However, matters of substance were addressed. For one thing, the Government gave appellant the name of the color for the anticipated roof panel color

Digitized by Google

change. The Government also issued to appellant a request to price the color change; appellant's cost estimate was to be submitted by 29 June 1990 so as to allow the negotiation of price prior to the ordering of the panels (R4, tab 7). On 29 June 1990, appellant timely submitted its cost proposal to the Government.

18. By letter to the Government dated 29 June 1990, appellant also submitted its reply to the cure notice. In brief, appellant reiterated the information it provided the Government at the preconstruction conference on 5 June and in writing on 12 June—that because of the design elements, it was not possible to make the submittals within 10 days from notice to proceed, but that appellant would submit them at the earliest possible time. In fact, appellant had just recently subcontracted the work—roof shop drawings were begun on 26 June 1990 (tr. 3/73).

19. Along with the cure notice reply, appellant transmitted several of the "administrative letters" referenced in the cure notice which had been sought by the Government. Appellant also stated in its reply that it had just recently received the contract set of plans and specifications from the Government, on 13 June 1990. Appellant maintained that the cure notice was not warranted, and concluded: "We understand that timely performance is of utmost importance. We have been and will continue to diligently prosecute the work." (R4 tab 8)

20. By letter to appellant dated 29 June 1990, the Government proposed another contract change—a revision of the tap line from 8 inches in diameter to 6 inches. The Government sought appellant's cost estimate by 9 July 1990 in order to negotiate a price prior to ordering this material.

21. On 3 July 1990 the parties attempted to negotiate the pricing of the proposed roof panel color change, but negotiations broke down. The ACO withdrew the proposed change. The original galvanized roof panel was to be installed.

22. On or about that same date, the ACO made several telephone calls—to RDM Sanders, Butler's Alaska representative; to Butler's Kansas City reroof group, and to Butler's California representative to determine the status of this project and appellant's ability to timely perform. The ACO was advised that it could take three to four weeks to ship a galvanized roof order on an expedited basis, otherwise it could take five to six weeks. It does not appear that the Government obtained any information regarding roof installation time.

23. None of the aforementioned sources was aware of the status of appellant's roof design. Appellant was working through Pacific Northern Constructors, a Butler authorized dealer out of Seattle, Washington. Pacific's structural engineer was preparing the roof shop drawings at this time.

24. Based in part upon the information received from the above sources, and the fact that appellant had yet to submit the roof shop drawings, the ACO concluded on 3 July that "Walsky could not possibly hope to complete this project by 4 Sep 92" (exh. A-28). She determined to issue a show cause notice for default termination. As of 3 July, 70 percent of the contract performance period remained. This was also only two workdays after receipt of appellant's reply to the cure notice. As of 3 July, appellant had not begun field work. However, appellant had advised the Government at the preconstruction conference that it would begin site work around 15 July.

25. The show cause notice was issued on 6 July 1990 (R4, tab 11). The Government cited appellant for failure to "adequately begin performance and make progress." The Government indicated it was unaware of any roof engineering activity for the project. However, it is unclear whether the ACO ever confirmed this information with appellant, since its roof design work had begun on 26 June (tr. 3/73). The Government also indicated in its notice that the galvanized roof would take five to six weeks to ship. It is also unclear whether the ACO ever confirmed this information with appellant. It appears that an expedited delivery could have taken less time. The Government stated it was considering default termination and asked appellant to submit any information that would bear on the question of excusable delay. Reply was required within 10 days of receipt of the show cause notice.

26. Appellant received the show cause notice on 12 July. Its reply was due on Sunday, 22 July, or the next business day, Monday, 23 July.

27. On 9 July 1990, appellant timely submitted its cost proposal on the proposed piping change. It appears that appellant did not hear from the Government on this matter prior to default termination.

28. By letter to the Government dated 10 July 1990, appellant sought water flow data to enable it to complete its hydraulic calculations for the sprinkler system (R4, tab 12).

©1993, Commerce Clearing House, Inc.

Digitized by Google

This was the same information requested by a number of contractors in the prebid period (finding 2). Amendment 0002 provided pertinent information but not the data requested. Appellant's letter was routed to the engineering office for a reply. The Government's project engineer furnished a reply to the contract administrator for submission to appellant, but this information was not relayed to appellant. The contract administrator's notes for 19 July state as follows (exh. A-30):

> Received Response from Capt. E., and *decision was made for other reasons to T For D this contract.* [Emphasis added]

The Government failed to explain the nature of this "decision." We presume, at this early date, that this was the view of the Eielson contracts office, not that of the TCO. In any event, this decision was made before the Government received appellant's reply to the show cause notice.

29. Appellant's reply to the show cause notice, dated 20 July 1990, was telefaxed to the Government on 20 July, and a hard copy was timely received on 23 July 1990 (R4, tab 13). Appellant protested the show cause notice as arbitrary, capricious, and "so erroneous as to constitute bad faith." It characterized the 4 September 1990 completion date as now being unrealistic, and "impossible to meet" in "any practical manner," and attributed the current state of the project to various Government actions and delays. Among other things, it stated, and we find, that it was unable to submit its fire protection shop drawings pending receipt of technical information (the water flow data) from the Government. Appellant stated it would accelerate performance. In letters to the Government dated 20 July, appellant sought to begin field work on 25 July, designated its superintendent, and requested to work on Saturday, 28 July.

30. The ACO testified that she expected to see a plan of action towards project completion in appellant's reply to the show cause notice—the filing of crucial submittals; indications of mobilization and commencement of performance (tr. 1/146-47). However, the show cause notice did not ask for a "plan of action"; it asked for appellant's defenses (any excusable delay) to a default termination. In any event, as for the status of the shop drawings, the record reflects that appellant submitted the key roofing and miscellaneous metal shop drawings between 13 July and 20 July (exh. A-65). On 22 July 1990, the Government's project engineer recommended approval of the pre-engineered roofing system shop drawings (supp. R4, tab 75). As for an indication of mobilization, appellant advised that it planned onsite work in the coming week.

31. The Government moved forward with the default termination. The ACO and project engineer worked the weekend of 21-22 July to prepare the paperwork for default. The ACO prepared a Determination and Findings in support of default termination (exh. A-67). FAR 49.402-3(f). The regulation states that the contracting officer shall consider, *inter alia,* the following:

* * *

> (4) The urgency of the need for the supplies or services and the period of time required to obtain them from other sources, as compared with the time delivery could be obtained from the delinquent contractor.

In addressing this factor, the ACO determined as follows (exh. A-67):

> 4. Due to mission requirements on Eielson AFB, *this project must be complete by mid September 1990. If another contractor could come in and complete this project by accelerated performance, they would be allowed to perform this year.* If, due to long material lead times and the onset of severe weather, the project cannot be completed this year, we would be forced to postpone the start of this project until the spring of 1991. [Emphasis added]

32. As far as this record shows, appellant was never advised that the Government's planned completion date for the project was "mid September 1990." Nor was it aware that a replacement contractor would be allowed to perform through the end of the year. The delivery date in the contract was 4 September, but the contract contained a liquidated damages clause which could have protected the Government's interests beyond 4 September. It does not appear that the ACO considered the use of the contract's liquidated damages provision for a reasonable period of time to allow for project completion by appellant.

33. The ACO did not make any finding that appellant could not complete the project by mid-September 1990. The ACO did not compare projected delivery dates of a new contractor and Walsky.

34. The ACO telefaxed her Determination and Findings, along with a number of other documents to the TCO on Monday, 23 July. The ACO and TCO discussed the case prior to the issuance of the termination notice.

Digitized by Google

35. The TCO testified at the hearing. We find that this witness was evasive when answering questions (tr. 1/38-39, 63-64), and this affected his credibility. He also testified that he became involved with this project about the time that the show cause notice was issued (tr. 1/42), but we have found that he provided the ACO with damaging information regarding Walsky's performance on earlier contracts (finding 16) well before the date of the show cause notice. This also affected his credibility. The record also shows that the TCO was a participant in an important conversation with the Army Corps of Engineers regarding this project on 4 June (finding 7). The TCO testified that he did not have any recollection of the conversation, nor did he recall whether he had discussed it with any of his superiors, of whom the lieutenant colonel was one. However, the lieutenant colonel's directive was given on 4 June and the TCO was contacted by the Corps on 4 June. The lieutenant colonel must have received his information regarding the Corps' predicament from someone, and this record does not show that he was contacted by the Corps directly. Under all the circumstances, we find it hard to accept the TCO's total lapse of memory regarding this important matter.

36. Based upon all the evidence of record and the credibility of witnesses, we find that the TCO was well aware of the Corps' concerns about Walsky, and how they might impact upon this contract.

37. The TCO testified that he considered the FAR termination factors prior to issuing the default termination. FAR 49.402-3(f). However, he spoke only in broad generalities about the nature of the FAR provisions and did not state how he actually applied any of the FAR factors to the facts of this case (tr. 1/31-32). He kept no notes of his deliberations, nor did he document any of his findings (tr. 1/70). As the contracting officer terminating the contract, he did not prepare a memorandum for the contract file, explaining the reasons for the action he took. FAR 49.402-5. For the foregoing reasons, and based upon our overall view of the witness' credibility, we are not persuaded that the TCO considered the FAR termination factors in any meaningful way.

38. The TCO did not make any finding that appellant could not complete the project by mid-September 1990, the completion date cited by the ACO in her Determination and Findings. The TCO did not compare projected delivery dates of a new contractor and Walsky. It does not appear that the TCO considered the use of the contract's liquidated damages provision for a reasonable period of time to allow for project completion by appellant.

39. The TCO did not review the complete contract file. The package he reviewed was put together by the ACO (tr. 1/312). It did not contain the memorandum of the lieutenant colonel's directive of 4 June. It did not contain appellant's request for water flow data to enable it to design the fire sprinkler system. Also, it is not clear whether the TCO was aware that the project engineer had recently recommended the approval of appellant's pre-engineered roofing system. We find that the above documentation was material to an understanding of how both parties—appellant and the Government—were acting under the contract. Moreover, it does not appear that the package contained the document which authorized the termination activity in the first instance. The AF Form 3056, Termination Authority, was executed, dated, and forwarded from the engineering office to the ACO at Eielson on 24 July 1990 at 5:00 p.m. (exh. G-12), which appears to have been after the default termination was issued.

The Bases Cited for Default Termination

40. On 24 July 1990, the TCO issued to appellant unilateral contract modification P00001, terminating this contract for default for appellant's failure to provide complete, accurate and timely submittals so as to complete the project by 4 September 1990 (R4, tab 16). The TCO apparently relied upon that portion of the Default article which allows for default termination for a contractor's failure to prosecute the work with the diligence necessary to insure timely completion.

41. The TCO cited appellant for a number of submittal deficiencies in the notice of default termination. First, he contended that appellant failed to provide structural certification as to the adequacy of the roof system, per Amendment 0002 (finding 4). Appellant contended that the roof shop drawings were stamped by its registered professional engineer, which constituted a certification. The Government apparently wanted a separate letter to this effect, but the contract did not state that a separate letter was required. In any event, appellant did not know that the Government wanted a separate letter until well after default termination (tr. 3/250). Appellant, acting as contractor for the surety, provided a separate letter at that time. The Government also cited appellant for failing to provide a certification of mate-

©1993, Commerce Clearing House, Inc.

Digitized by Google

rial compliance. Appellant later was willing to provide such a certification after the material was fabricated (tr. 3/252-53). The Government failed to provide any credible evidence supporting its need to have this certification in hand prior to fabrication, or prior to its delivery to the site.

42. Similarly, the Government cited appellant for failure to provide a certificate, authorizing it to install the Butler roof. However, the roof was not yet ready to be installed, and appellant was willing to provide the certification at that time (tr. 3/254-56). The Government failed to provide any credible evidence supporting its need to have this certification in hand prior to the time that the roof was ready to be installed.

43. The Government contended that appellant's pre-engineered roof system was overall "severely deficient." However, the Government's project engineer recommended approval of the pre-engineered roof system on 22 July 1990 (supp. R4, tab 75). Appellant's roof designer testified, and we find, that he was never required to make any changes in his drawings by the Government after 13 July (tr. 3/80).

44. Finally, the Government cited to appellant's reply to the show cause notice as an admission that it was unable to timely complete the contract by 4 September. At hearing the Government also adduced evidence from the project designer that a 4 September completion was unrealistic (tr. 2/291). However, we have found that the Government was, in part, responsible for delay (finding 29). Moreover, at the time appellant replied to the show cause notice, it was unaware that the project needed to be complete by mid-September, as stated by the ACO in her Determination and Findings. The project designer offered no opinion as to likelihood of appellant's completion by mid-September, nor did any other Government witness. In 1991, Walsky performed all contract work within 60 days as the surety's contractor under a takeover agreement, apparently without multiple shifts or other accelerated effort. We find that a few additional weeks could have made a difference in appellant's ability to complete the project.

45. At hearing the Government emphasized the importance of contract completion in early September because of the onset of winter in Fairbanks. However, the climatological data in the contract indicated that on average, September weather in Fairbanks was not unlike that of May. Extremes in cold and snow are rare (R4, tab 2 at 64).

46. The Government also cited appellant for failure to reference AF Form 66 in its submittals to the Government. In support of this position, it relied upon Amendment 0002, Paragraph 8 (finding 4). While Paragraph 8 directs appellant's attention to AF Form 66 for pertinent information, we find that it does not require appellant to reference the form in its submittals.

47. At the hearing the Government adduced evidence, and we find, that appellant failed to provide an AF Form 3064, Contract Progress Schedule, within 10 days of notice to proceed as specified in the contract (R4, tab 2, Contract, ¶ 8, at 38). However, it does not appear that this was a matter of vital concern to the Government during the pendency of the contract—the matter was not raised in the cure notice, the show cause notice, or the termination notice. Under the takeover agreement, *infra*, appellant submitted the work schedule as the surety's contractor, and it was approved (supp. R4, tab 55).

Post-Termination

48. On or about 7 September 1990, the Government agreed to a takeover agreement with appellant's surety. The Government approved the use of Walsky as the surety's contractor to perform the work. The Government also agreed to meet and to work with Walsky directly. While the contracting officer testified that it was not normal procedure to hold meetings to discuss shop drawings (tr. 2/50-53), the Government agreed to meet with Walsky to discuss the Government's requirements in the post-termination period. The Government's project engineer testified as follows (tr. 2/126):

> We went in with a positive attitude. Both Mr. Howells did as well as myself. We talked about the submittals, what we felt was required, and what was not required. We agreed to disagree on some things. We negotiated and compromised.

49. By letter dated 23 August 1990, appellant filed a timely notice of appeal with this Board.

DECISION

The law of default termination is well settled. "[A] default termination is a drastic sanction [citation omitted] which should be imposed (or sustained) only for good grounds and on solid evidence." *J.D Hedin Construction Company, Inc. v. United States* [13 CCF ¶ 82,580], 408 F.2d 424, 431 (Ct. Cl. 1969). As we stated in *M.A. Santander Construction,*

Digitized by Google

Inc., ASBCA No. 35907, 91-3 BCA ¶ 24,050 at 120,403:

> The Government has the burden to go forward and to establish the propriety of a default termination action. *Lisbon Contractors, Inc. v. United States* [34 CCF ¶ 75,358], 828 F.2d 759 (Fed Cir. 1987). That a contractor is in technical default is not determinative. The Government is given discretion to default terminate, and that discretion must be exercised reasonably, *Darwin Construction Company, Inc. v. United States* [33 CCF ¶ 75,063], 811 F.2d 593 (Fed. Cir. 1987).

It is also well settled that a reasonable and proper exercise of discretion must not be tainted by impermissible motive. *Darwin, supra see Schlesinger v. United States* [12 CCF ¶ 81,097], 390 F.2d 702 (Ct. Cl. 1968). *See also Fairfield Scientific Corporation v. United States* [26 CCF ¶ 83,881], 611 F.2d 854, 862 (Ct. Cl. 1979), where the Court stated:

> If the contracting officer was improperly influenced by plaintiff's competitor or by anyone else to terminate the contract for default rather than to exercise his own independent judgment in light of the factors set out in the regulations, it would represent an abdication rather than an exercise of his discretion. [Citations omitted]

See also Quality Environment Systems v. United States [32 CCF ¶ 73,267], 7 Cl. Ct. 428, 431 (1985) (on Wunderlich Act review).

In response to the apparent needs of the Army Corps of Engineers, Elmendorf AFB directed Eielson AFB to monitor Walsky more than normal and to default terminate if the smallest thing went wrong (finding 6). On the memorandum that memorialized this directive, the ACO's immediate supervisor circled the words "the smallest thing" in red ink for emphasis.

We hear the Government to argue, first, that there was "nothing wrong" with this directive (reply br. at 52). We do not agree. While we can think of many legitimate reasons for a contracting officer to monitor a contractor "more than normal," to do so to detect performance problems for the purpose of supporting an agency's denial of an award is not one of them. Moreover, for the Government to default terminate a contractor for "the smallest thing" would be a breach of the duty that the Government owes every contractor—to exercise discretion whenever the issue of default termination is presented. *Darwin, supra.*

Alternatively, the Government asks us to believe that military personnel at Eielson ignored the lieutenant colonel's directive, and administered this contract as if the directive did not exist. For us to accept this proposition would require us to suspend our common sense and to ignore the weight of the evidence. Based on this record, we do not have the slightest doubt that the Government's administration of this contract was impermissibly influenced by the lieutenant colonel's directive, as well as by the emphasis placed upon it by the ACO's immediate supervisor.

Preaward, the ACO, after investigation and deliberation, found appellant to be an acceptable and responsible contractor, and made an affirmative determination of appellant's responsibility for purposes of award. Less than two weeks after award, and after receipt of the lieutenant colonel's directive, the ACO suddenly was of the view that appellant was a "marginal" contractor, *i.e.*, a purveyor of shoddy work. She told appellant that she had her "marching orders" (read—the lieutenant colonel's directive), and would not stand for the slightest glitch in appellant's performance (finding 16).

A mere 10 days after the notice to proceed, the ACO issued a cure notice to appellant on the grounds that its failure to provide shop drawings and submittals within 10 days after notice to proceed was endangering contract completion, even though she was well aware that the major design drawings would take much more than 10 days to submit. This was the earliest date that a cure notice could have been issued on this ground. Barely two work days after appellant's timely reply to the cure notice, the ACO decided to issue a show cause notice for default. About 70 percent of the contract time still remained (finding 24). Notwithstanding that appellant had 10 days to reply to the show cause notice, a decision to default terminate, insofar as Eielson was concerned, was made prior to the date that appellant's reply was due (finding 28). Apparently, Eielson's mind was already made up—nothing appellant could have said in the reply would have made any difference.

When appellant's reply to the show cause notice arrived on Friday, 20 July, the default termination plan went into high gear. Both the ACO and the project engineer worked over the weekend to put together a package of documents for the review of the TCO. The package was telefaxed to the TCO on Monday, 23 July. The TCO issued the default termination on Tuesday, 24 July.

Digitized by Google

We are at a loss to logically explain this frenetic activity, this rush to judgment—at least without reference to the lieutenant colonel's directive. The Government does not suggest that such a quick termination would have allowed a new contractor to complete performance by 4 September. In fact, the surety began and completed the work the following year.

Clearly, the administration of this contract was impermissibly tainted by the lieutenant colonel's directive. We cannot believe that Eielson would have rushed to default so early in the contract period absent the lieutenant colonel's marching orders. We must now address whether the review by the TCO had the effect of dissipating the taint. While we would grant the possibility that a complete, deliberate and unbiased review of the facts by one unfamiliar with or untouched by the Government's hidden agenda might dissipate the taint and legitimize the Government's position on the merits, we are not persuaded that the TCO's review was of such a character. This TCO was familiar with the Corps' concerns about Walsky. He was the TCO who received the Corps' inquiry of 4 June; it was his boss who issued the 4 June directive to Eielson. In fact, the TCO fed the ACO damaging information about Walsky during contract performance (finding 16). On top of this, the TCO's deliberations were incomplete and inadequate (findings 37 through 39). We must conclude that this default termination was not a reasonable exercise of discretion.

Our conclusion is also buttressed by the Government's conduct during the post-termination phase of the project. While the Government was quick to default terminate Walsky for its inaccurate submittals and its failure to perform, it was perfectly willing to accept, and work closely with Walsky as a subcontractor under the takeover agreement, although Walsky would still be providing those very same submittals and performance. Why would the Government reject Walsky as a contractor, but accept it as a subcontractor? It made little sense, if not for the lieutenant colonel's directive and the Corps' predicament. The Government's attitude towards Walsky also changed dramatically in the post-termination phase. At hearing, the ACO stated that the Government did not meet with Walsky during the contract period to discuss submittals because it was not normal procedure to do so (finding 48). But the Government chose to sit down with Walsky during the takeover period to iron out their conflicting interpretations of some of the submittal requirements. The Government went into these meetings with "a positive attitude" (*id.*). The project moved forward. Why was Walsky not entitled to this same positive attitude when it was the contractor? Again, the answer lies within the lieutenant colonel's directive.

We also fail to see how the Government was materially prejudiced by a number of the technical violations cited in the termination notice. We are aware of no sound reason why appellant could not have provided the certificate, authorizing it to install the roof system, shortly before the roof system was ready to be installed. Similarly, we do not know why appellant could not have provided the certificate of material compliance shortly before the material was to be delivered to the site. There is nothing of record to suggest that appellant would have been unable to provide this information. To support a default termination on these grounds was improper.

Notwithstanding that may of the grounds asserted by the Government for default termination are weak (findings 41 through 46), we need not explore whether there existed any other conceivable technical grounds to default terminate this contract under the circumstances of this case. A technical reason for default, even if established by the Government, does not require a default termination. We must review the totality of the circumstances to ascertain whether the termination decision was a reasonable exercise of discretion. *Darwin, supra*; *Schlesinger, supra*. When we view the facts of this case in the context of the Government's predisposition against Walsky under this contract, the conclusion is inescapable that this default termination may not stand.

The appeal is sustained, and the default termination is converted to a termination for the convenience of the Government.

[¶ 26,265] **Hogan Construction Company, Inc.**

ASBCA Nos. 37347, 37348, July 28, 1993. Contract No. F41613-87-C-0043.

Interpretation of Contracts—Methods of Interpretation—Knowledge of Other's Definition.—A contractor was bound by the government's definition of storm windows because it knew of the government's interpretation during price negotiations and did not indicate disagreement. Conflicting testimony on whether the government advised the contractor of its definition was resolved on the basis of demeanor and the contractor's faulty memory. The contractor's interpretation that it could install a single uninsulated pane was inconsistent with any definition of storm windows.

Interpretation of Contracts—Methods of Interpretation—Knowledge and Price Agreement.—A contractor was bound by the government's interpretation of a specification for rubber mats because it knew of that interpretation and seemingly accepted it by accepting the price. The government had given the contractor a reference to a source for a brand-name product to check the price. The brand-name product was specified on a drawing note. Although the contractor was entitled to substitute products equal to those named, it was unreasonable to assume that the government would be satisfied with a generic rubber mat that lacked the features of the brand-name product and cost less than one-third the price of that product.

For the appellant: Williams & Jensen, P.C., Washington, D.C., by Robert J. Martinez and Sally B. Pfund. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and R. Stephen Houlihan and John M. Taffany, Trial Attorneys.

Before SCHEPERS, RUBERRY, and RIISMANDEL, Administrative Judges.

SCHEPERS, Administrative Judge: These timely appeals, tried with other appeals under this construction contract, are from two contracting officers' decisions denying appellant's claims which request costs for: (1) installing a second glass with a frame in certain of the windows; and (2) providing a brand name Pedi-Mat rather than a generic footmat. The parties stipulate to quantum in these appeals.

GENERAL FINDINGS OF FACT

On 27 September 1987 appellant was awarded Contract No. F41613-87-C-0043 in the initial amount of $278,770 for renovation of the Willis-Cartwright School at Carswell Air Force Base, Texas (the contract). Modifications raised the contract price to $339,943.75.

The contract incorporated by reference the standard Disputes, FAR 52.233-1 (APR 1984), Changes, FAR 52.243-8 (APR 1984), and Material and Workmanship, FAR 52.236-3 (APR 1984) clauses.

Mr. Richard D. Hogan, appellant's president and sole owner, had over 25 years' experience in the construction industry and had been in business for himself since 1966, with experience in a wide range of general construction projects.

On 24 November 1987 appellant received the Government's undated memorandum which requested a pricing proposal for certain contemplated changes. After appellant's submittal and the parties' negotiations, the Government issued Modification No. P00001 to the contract, a bilateral modification, dated 10 December 1987, which made a number of changes to the contract and increased the contract price by $62,500.

FINDINGS OF FACT PERTINENT TO ASBCA No. 37347

Paragraph g of Modification No. P00001 states:

> g. Replace the existing windows with storm windows and bronze anodized aluminum frames at the following locations: (see drawings, sheet 5 of 11).

Neither the modification nor the specifications contained a definition of a storm window. Section 8D-1, of the Technical Specifications, "Windows," Part 1.01A states:

> Provide and install fixed double glaze insulated lite windows to replace doors existing at the entrance area as indicated on the plans.

Mr. Hogan understood "that a storm window is a window to be applied to the outside or inside of an existing window," and usually is a single pane (tr. 6-7). Mr. Hogan was aware of the requirement to remove the existing windows, and that requirement did

©1993, Commerce Clearing House, Inc.

Digitized by Google

not alter his view that Modification P00001 required the contractor to install only one pane of glass.

The following definitions of "storm window" are part of the record:

> A secondary window attached over the usual window to protect against the wind and cold.
>
> A sash placed outside an ordinary window as a protection against severe weather—called also *storm sash*.
>
> A door (or window) placed outside the regular one as added protection.

Olin Long, Chief of Contract Management for Carswell Air Force Base, testified that during negotiations, in response to appellant's question the Government defined storm windows as two single panes separated by an air gap, i.e., a double-pane window. Mr. Hogan testified that he recalled the storm windows were discussed during negotiations of Modification P00001, but he had no recollection of being told the Government's definition. The price negotiation memorandum does not include this conversation. The parties' proposed prices for the storm windows were virtually the same. We find, based on both witnesses' demeanor, and the record as a whole, specifically the fact Mr. Hogan at times changed his testimony due to faulty memory (tr. 8, 32, 36), that during the negotiations of Modification P00001, a Government representative advised Mr. Hogan of the Government's definition of storm windows.

At the locations specified, appellant removed those existing windows which were not already broken out, and installed one single, non-insulated pane in the existing steel frames. These first windows installed by appellant could not have been screwed on over the existing windows.

In March 1988 the contracting officer rejected the single pane glass as not being storm windows. Appellant was given the option of either installing an additional pane, or replacing the first installation with double pane windows. Appellant installed second panes in anodized aluminum frames outside the first panes.

Installation of double pane windows resulted in costs to appellant of $1,775.03.

DECISION IN ASBCA No. 37347

Appellant asserts that installing a single, non-insulated pane of glass in the old steel frames met the requirements to replace existing windows with storm windows within anodized aluminum frames. The Government contends that appellant was required to provide double pane windows.

A contract is ambiguous if it is susceptible of two different and reasonable interpretations, each of which is found to be consistent with the contract language. *Community Heating & Plumbing Co. v. Kelso* [38 CCF ¶ 76,488], 987 F.2d 1575 (Fed. Cir. 1993). If ambiguous, appellant prevails if its interpretation is reasonable and the ambiguity is not patent. *Interstate General Government Contractors. Inc.* [38 CCF ¶ 76,446], 980 F.2d 1433 (Fed. Cir. 1992). We are unaware of any definition of "storm window" which includes the single panes appellant initially installed. We do not find appellant's interpretation reasonable, thus we need not explore this question further.

Additionally, appellant knew of the Government's interpretation of "storm windows" during price negotiations, did not indicate disagreement, and thus is bound by the Government's interpretation. *Cresswell v. United States,* 146 Ct.Cl. 119, 173 F.Supp. 805 (1959) and cases cited.

Accordingly, the appeal is denied.

FINDINGS OF FACT PERTINENT TO ASBCA No. 37348

Paragraph y of Modification No. P00001 states:

> y. Remove the rubber walk-off mat at the main entry and install a new pedi-mat with color selected by user and approved by contracting officer. See drawings, sheet 4 of 11, note 26.

Note 26 of drawing 4 states:

> REPLACE EXISTING RUBBER WALK-OFF MAT AT THE MAIN ENTRY WITH A PEDI-MAT. COLOR TO BE SELECTED BY USER AND APPROVED BY CONTRACTING OFFICER.

Modification P00001 did not capitalize the term pedi-mat, or otherwise specifically denote a brand name. Pedi-Mat is a registered trademark. We are unaware of any dictionary definition of pedi-mat.

The Material and Workmanship, FAR 52.236-5 (APR 1984) clause within the contract states:

> (a) All equipment, material, and articles incorporated into the work covered by this contract shall be new and of the most suitable grade for the purpose intended, unless otherwise specifically provided in this contract. References in the specifica-

Digitized by Google

tions to equipment, materials, articles, or patented processes by trade name, make, or catalog number, shall be regarded as establishing a standard of quality and shall not be construed as limiting competition. The Contractor may, at its option, use any equipment, material, article, or process that, in the judgment of the Contracting Officer, is equal to that named in the specifications, unless otherwise specifically provided in this contract.

Mr. Hogan testified that during the negotiations of Modification P00001, appellant's proposed price for the mat exceeded the Government's proposed price of $615. The parties were only about $100 apart on the total modification price of approximately $60,000. The Government gave appellant the address and telephone number of a source for Pedi-Mat to confirm the $615 price, along with sources for most of the plumbing supplies. Appellant did not check the source, rather accepted the Government's $615 price. Olin Long, the Chief of Contract Management for Carswell Air Force Base, testified that during negotiation the Government advised appellant specifically of the type of mat it wanted. Mr. Hogan testified he understood the Government wanted a generic footmat. Appellant did not, prior to installing the initial footmat, submit a color selection for approval by the Contracting Officer.

The mat appellant originally supplied cost approximately $200, was rubber and available only in black, was not intended as an entry mat, had no provisions to clean shoes and no area for water to drain. The existing mat was made of approximately 1/2-inch thick rubber connected with metal, and was used in an area of heavy traffic, thus the Government wanted a thinner mat, reducing the tendency to trip. The Pedi-Mat was made of aluminum, thus was thin; shoes could be cleaned of snow and the like, and water could drain.

We find that during negotiations of Modification P00001, appellant understood the Government considered Modification P00001 to require the brand name Pedi-Mat or equal, and appellant made no objection and seemingly accepted this interpretation by accepting the price. The price of Modification P00001 was based in part on the $615 price of the Pedi-Mat. Our finding is based on: (1) observing the demeanor of the two witnesses; (2) the record as a whole but particularly the facts in the two immediately preceding findings; and (3) Mr. Hogan's change or conflict in testimony, specifically on whether he was provided the telephone number of the supplier and whether there was an existing mat (tr. 6-7, 15-16).

On 24 March 1988, appellant was directed to install a Pedi-Mat, Part No. PM 375RM. Appellant incurred costs in installing the brand name Pedi-Mat of $805.80. There is no indication in the record that a product equal to Pedi-Mat was available or that appellant proposed an allegedly equal product.

DECISION IN ASBCA No. 37348

Appellant contends that it satisfied the contract requirements by supplying a $200 rubber mat which was not designed for an entryway, rather than the Pedi-Mat for the $615 price. We do not consider appellant's interpretation reasonable. Further, we found that appellant knew of the Government's interpretation of these provisions and seemingly accepted the interpretation by accepting the price. Based on the authorities and legal statements set out in the decision in ASBCA No. 37347, appellant's position fails.

Accordingly, the appeal is denied.

[¶ 26,266] L.J.C. Mechanical Contractors, Inc.

VABCA Nos. 3507, 3513, 3531, August 3, 1993. Contract No. V679C-5560.

Delays—Time for Performance—Notice by Contractor.—A contractor was not entitled to an extension of its contract to replace an air-conditioning system on the basis of the government's refusal to let it begin work when it was ready, because the contract required it to give two weeks' notice before beginning on-site work. Work was permitted on site when the two-week period had passed, except for tasks requiring prior approval of submittals. The government's refusal to allow demolition of the existing system was not shown to impact the contractor's work.

Modifications—Contractual Effect—Acceptance of Price.—A contractor was entitled to payment of the price it had proposed for change work, because the government's

 ©1993, Commerce Clearing House, Inc.

Digitized by Google

change order had accepted two items as per the proposal. The order did not indicate that prices would be tentative, and there was no objective evidence to support the contracting officer's assertion of an agreement that cost would be determined later.

Quality—Compliance with Specifications—Approvals.—Approval of a contractor's submittal for fencing did not excuse the contractor from providing visual screening slats, because the contractor failed to call the omission of slats to the government's attention as a change in contract requirements. Visual screening slats, though not shown on contract drawings, were required by the specifications.

For the appellant: Richard E. Crum, President. For the government: William G. Stevens, Trial Attorney, Office of the District Counsel, Montgomery, Alabama, Kenneth B. MacKenzie, Trial Attorney, Office of the General Counsel, Washington, D.C., and Phillipa L. Anderson, Deputy Assistant General Counsel.

Before ANDERS, MCMICHAEL, and PULLARA, Administrative Judges.

ANDERS, Administrative Judge: These appeals arise under a contract awarded by the Department of Veterans Affairs (VA or Government) to L.J.C. Mechanical Contractors, Inc. (LJC or Contractor) to replace air conditioning equipment at the VA Medical Center, Tuscaloosa, Alabama.

The three appeals, VABCA Nos. 3507, 3513, and 3531, were consolidated for the purposes of hearing and decision. The record consists of the Rule 4 Appeal Files submitted by the Contracting Officer (CO), as supplemented by the parties, the pleadings, transcripts of the hearing held in Montgomery, Alabama, and posthearing briefs.

VABCA-3507: FINDINGS OF FACT

On March 6, 1991 the VA awarded LJC, as low bidder, a contract in the amount of $183,000 for KITCHEN A/C RENOVATION, the general purpose of which was set forth in GENERAL REQUIREMENTS Section (01010) paragraph 1.1 A as follows:

> Contractor shall completely prepare site for building operations, including removal of (2) two Direct Expansion Air Handling Units, and furnish labor and materials and perform work to install a new constant volume Central Station Air Handling Unit/100 ton Chiller in Building 3 as required by drawings and specifications.

The Contract specifications contained the usual provisions found in VA construction contracts, as provided for by Federal Acquisitions Regulations (FAR), 48 CFR Part 52, and as supplemented by VA Acquisition Regulation (VAAR) in Part 852.

The Notice to Proceed (NTP) was received by the Contractor on Monday, May 13, 1991 (R4, tab 21; Tr. 229). On the following day, LJC personnel arrived on the job site and requested permission to begin work (Tr. 212-22). The CO would not permit any on-site work, reminding LJC of the Contract requirement that two-weeks notice must be given before any on-site work could begin (Tr. 230, 254).

The Contract requirement for a two-week notice before starting work on-site appears in two sections of the Contract. The GENERAL REQUIREMENTS, Section 01010, 1.4.G, Phasing, states that the "contractor shall notify Resident Engineer two weeks in advance of the proposed date of starting work in each specific area of site, building or portion thereof." Paragraph 1.28 of the GENERAL REQUIREMENTS, WORK SCHEDULE, states that the "Contractor will notify Resident Engineer two weeks in advance before beginning work." Richard M. Crum, LJC's estimator, testified that LJC envisioned being able to begin demolition of the existing air conditioning (AC) equipment on the roof on "day one," *i.e.*, upon receipt of the NTP. Mr. Crum assumed that the VA would have shut down the AC by that time in accordance with Amendment #1 to the Invitation for Bids, and that demolition could proceed since no submittals were required for that work (Tr. 1416). Amendment # 1 included the statement that "[a]ll compressors will be removed by the [VA] prior to start of contract."

LJC was informed on May 14, 1991 that the VA intended to continue operation of the AC until temporary AC could be installed, conceding that this was not in accordance with Amendment #1, and advising LJC that, if there were costs resulting from this, LJC should detail such costs for VA's consideration. (R4, tab 39; Tr. 234-35)

Mr. Crum testified that he had given notice to the VA during a preconstruction conference on April 11, 1991 that LJC would begin on-site work upon receipt of the NTP (Tr. 88). LJC offered no written record of what was discussed at the pre-construction

Digitized by Google

conference, and Mr. Crum's testimony was denied by VA personnel who attended the conference.

Andrew Britt, the Contracting Officer's Technical Representative (COTR), testified that LJC did not indicate a date on which it planned to begin on-site work. Mr. Britt testified that the notification requirement was discussed, but he did not recall Appellant's representatives saying when they planned to start work. He added that, if Appellant had made such a statement, it would have been recorded in the minutes of the pre-construction conference. (Tr. 177-78) The minutes of the conference contain no reference to when LJC planned to commence on-site work. (R4, tab 12) Terry Galbraith, the CO, testified that the subject of when LJC intended to begin on-site work did not arise at the preconstruction conference. (Tr. 228)

The Daily Logs submitted by LJC to the VA for the period May 14, 1991, the day after LJC's receipt of the NTP, through June 3, 1991 contain the following under the heading "LOCATION AND DESCRIPTION OF WORK." Pertinent remarks added by the VA Resident Engineer are also shown:

[5-14-91 (Tuesday)]

[LJC:] No work performed.

[VA:] (1) Contractor showed up on site after Terry G. had told Richard Crum that they could not start work because of progress chart rejection, submittals, etc. This happened yesterday. (2) The VA allowed the contractor to drop off his trailer to prevent him from having to pull to site at a later date. (3) Meeting held today at request of Richard Crum (LJC) at 1:30. Meeting was to discuss submittals for chiller. R.C. wanted to submit literature for two (2) separate units w/total of four (4) compressors in lieu of one (1) unit w/ four (4). We looked at submittal literature & told him he could send to A/E for evaluation. At first glance it appeared OK, however, we told him that the A/E & the VA would need a proper amount of time to review. He was told he would receive a "Return of Submittal" (approved or disapproved) after review. We would try to expedite.

[5-15-91 (Wednesday)]

[LJC:] No work performed.

[5-16-91 (Thursday)]

[LJC:] No work performed.

(VA: Resident Engineer summarized discussions with LJC about submittals.]

[5-24-91 (Friday)]

[LJC:] No work performed 5-17-91 thru 5-24-91.

(VA:] (1) (5-22-91) Gave Randall [LJC supervisor] information to help him find someone to modify roof membrane & still retain warranty. Also explained to him the submittal process and told him I would make a list of submittals that was required for project, but the list was for information only; he must still go by specs. His coworker was w/him. (2) (5-23-91) Told Randall & his coworker that the chiller submittals would be ready today.

[5-27-91 (Monday)]

(LJC:] Holiday. No work performed.

[5-28-91 (Tuesday)]

(LJC:] Started layout of forms for concrete pad. Also put up temporary string barrier.

(VA:] (1) Carroll B. allowed him to proceed w/the above only. All his submittals on concrete work & the Progress Chart has not been approved yet. Work must be on items that do not require submittals. (2) Don W. only one here.

[5-29-91 (Wednesday)]

(LJC:] Constructed forms for concrete pad and backfilled w/loose dirt around forms.

[VA:] (1) I rec'd revised Progress Chart, late afternoon today. Still awaiting submittals from A/E.

[5-30-91 (Thursday)]

(LJC:] No work performed.

(VA:] (1) Don W. (LJC) came to my office this morning & we set up a time for our weekly meeting. I also gave him a name & no. for Traco, so he could get information on existing wdws. The new wdw must match existing.

[5-31-91 (Friday)]

[LJC:] Started removal of [window] in mech. room.

[6-3-91 (Monday)]

[VA:] Contractor removed window & double checked forms for chiller pad.

(Gov't Ex. 4)

On May 30, 1991, LJC requested "additional funds and contract time extensions per the attached breakdown on a daily basis starting on our Notice to [Proceed] date 5/13/91" because "[t]he Government has refused to let this contractor [proceed] with on site work." LJC stated that when the VA allows it to proceed, "the daily rate will be multiplied by the final number of days and a request for a MOD for time and money will

©1993, Commerce Clearing House, Inc.

Digitized by Google

be finalized." LJC's claim reads as follows (R4, tab 37):

FIELD OVERHEAD PER WEEK

R. Padgett D. Whisman		$1230
Out of town	5 days @ 60	300.00
Per Diem	5 days @ 30	150.00
Travel 2 Trucks	1200 miles @ 30¢	360.00
Truck on Job	25 x 2	50.00
		2090.00
	15% OH	313.50
		2403.50
	10% Fee	240.35
		2643.85

÷ 7 = 377.69$/day starting 5/13/91

With no claim for [lost] profit due to us not able to man other job.

Mr. Bement, Chief of the VA Contracting Activity, responded to LJC's May 30, 1991 letter on May 31, stating that LJC had already been reminded of the contract requirement for a two-week notice before beginning on-site work; that this requirement was mandatory; and, that LJC had been allowed to mobilize and set up between May 14 and May 28. (R4, tab 39)

LJC's June 1, 1991 response included the following:

> On 5/13/91 we received a N.T.P. and when I arrived in Tuscaloosa on 5/14/91, our company was advised to coordinate our start of on site work with the Resident Engineer. Mr. Padgett, our Superintendent and I met with Mr. Tim Lyons and Mr. Steve Johnson around 9:00 a.m. on the 14th. The question posed to the R.E., Mr. Lyons was "How can we coordinate our forces so that we may start on site work?" Mr. Lyons comment was "Since you have a N.T.P. we have no objections to your commencing on site work on any items of which you have received approval."
>
> * * * * *
>
> Our consistent position, since our letter of 5/14, was that by the Government not allowing us to start demolition, the Government impacted this contractor in the amount of our field overhead expenses for these three weeks. This [figure] was furnished to you on 5/30/91. Assuming that we are able to go to work 100% on 6/3/91 the impact amount is $2,643.85 x 3 weeks = $7,931.55. This is the dollar amount spent by L.J.C. Mechanical for on site work the past three weeks.
>
> (R4, tab 41)

In that same letter, LJC suggested that a fair settlement of time and money could be negotiated to cover the impact of the VA's decision to keep the existing AC operating until temporary AC could be set up. On June 4, 1991, the CO wrote to LJC denying its claim. The CO explained his denial as follows:

> I have reviewed your explanation in your latest letter of June 1, 1991. Your statements related to the ability to start on-site work without notice required by your contract was verbally discussed in our meeting of May 14, 1991. I advised you at that time the two-week notice required would not be waived and you would be allowed to only set-up prior to the completion of the notice period. The meeting in question was subsequent to your meeting with the Resident Engineer. Based on your allegation of delays, I can only assume you intended to rely on an answer that met your immediate needs. The role of the Contracting Officer was previously discussed at the preconstruction meeting. The authority to waive contract requirements does not rest with anyone except the Contracting Officer. Your claim for alleged delays based on the date of the notice to proceed receipt date (May 13, 1991) is denied.
>
> * * * * *
>
> Your subject letter indicates a desire to "negotiate a fair settlement of time and money to cover this impact on our con-

Digitized by Google

tract" when the major equipment is delivered on site. If there is an impact of time or money, it is appropriate to consider those factors at this time. Please submit your proposal at this time if you feel our analysis is in error and your performance is impacted by our continued operation of the current system.

(R4, tab 45)

On June 11, 1991, LJC requested a CO's final decision on its claim in the amount of $7,931.55 ($2,643.85 × 3 weeks) plus 21 days of additional contract time for not being allowed to work during the period from May 13, 1991 to June 3, 1991, which, according to LJC, was the date the VA allowed it to work. LJC asserted in its June 11 letter that this claim was "due solely to the impact of the Government not complying with Amendment #1 to this contract." (R4, tab 50) In that same letter, LJC stated that it did not know the time frame for continued use of the existing AC and that, therefore, "[t]he future impact [of continued use of the existing AC] hinges on what you do in the future." (R4, tab 50)

The CO issued his final decision on June 28, 1991. In that decision, the CO pointed out that LJC gave the required two-week notice on May 14, 1991, making the start date for on-site work May 28, 1991, and that LJC began on-site work on that date on work for which no submittals were required. LJC's claim for $7,931.55 and a time extension of 21 calendar days was denied. (R4, tab 53)

VABCA-3507: DISCUSSION

LJC first gave the VA the required two-weeks notice for beginning on-site work on May 14, 1991, thereby establishing the first permissible day for beginning on-site work as May 28, 1991. LJC began on-site work on May 28, 1991. Appellant's assertion that it gave the required two-week notice at the preconstruction conference on April 11, 1991 is not supported by the evidence.

Appellant argues that the Contract requirement for a two-week notice in advance of any on-site work should not have been strictly enforced, but provides no justification for that position. The notice was a clear contract requirement and the rationale behind the requirement is not relevant to the VA's right to enforce it.

Accordingly, we find that the VA was acting within its contractual rights when it insisted on the two-week notice prior to on-site work, and that the fourteen days between May 14 and May 28 did not constitute a compensable delay period.

The 21 calendar days for which LJC claims a time extension is calculated by LJC as running from May 14, 1991 to June 3, 1991. However, the evidence shows that LJC was permitted to, and did begin on-site work on May 28. The only work it was not permitted to do May 28 was that for which approved submittals were required, and demolition of the existing AC system.

Although LJC was persistent in referring to the cause of its inability to begin on-site work as the VA's failure to shut down the existing AC system, or as LJC puts it, VA's failure to comply with Amendment #1, that is not the case. LJC was precluded by the CO from performing any on-site work until the expiration of the two-week notice period required by the Contract.

Other than its claim for a time extension for the period from May 14, 1991 to June 3, 1991, together with costs claimed for this period of time, LJC has presented no evidence or claim for any impact of the VA's continued operation of the existing AC system.

Appellant's general complaints about the submittal process are not supported by the evidence and are not relevant to the 21-day period on which its claim is based.

"The ultimate burden of proof or persuasion is upon the claimant and the final evidentiary question is whether the claim is supported by substantial evidence and proved by a preponderance of the evidence." *J.C. Edwards Contracting and Engineering Inc.*, VABCA Nos. 1947 & 1969, 85-2 BCA ¶ 18,068 at 90,690. Appellant has failed to meet its burden of proving that it was delayed by, or incurred additional costs because of any improper actions by the VA, or that the decision by the VA to keep the existing AC unit in operation caused an increase in its performance time or costs.

VABCA 3507: DECISION

The appeal is denied.

VABCA 3513: FINDINGS OF FACT

LJC seeks $1,837.21, the amount of its proposal which it says the Contracting Officer accepted when he issued Change Order B. This appeal involves Change Order B. The Government argues that it was only authorizing the work and that no agreement had been reached as to the price of the change order, which it maintains should not exceed $1,464.10.

©1994, Commerce Clearing House, Inc.

Digitized by Google

On or about August 8, 1991, LJC personnel on the job site contacted Mr. R.M. Crum, LJC's estimator, and told him of a problem with apparent omissions from the specifications of certain items they considered necessary for operation of the AC system. The LJC personnel asked Mr. Crum to come to the site and make an estimate for the additional work involved. Mr. Crum hand-carried a proposal for a change order to a Mr. Drennon of VA's engineering office on August 8, 1991. (R4, tab 1; Tr. 6,46-47)

This proposal consisted of three items, the first of which covered a motor inadvertently omitted from the specifications plus two "optional" proposals concerning additional safety wiring and a unit lock pump intended to enhance the project. (Tr. 20-21) Mr. Crum "made a fairly detailed presentation" to Mr. Drennon covering all of the individual cost items. (Tr. 8-9) After going over the proposal with Mr. Drennon and other unidentified VA personnel, Mr. Crum was told that the VA personnel would have to talk to the CO, since he was the only one who could approve it. (Tr. 7-10)

LJC's proposal stated that LJC was sending a change order to the CO for approval. In the "REMARKS" section it reads, "We will need 2 additional days for this work. We will not be able to order material until you advise." The proposal reads as follows:

EXTRA ELECTRICAL AHU #6

1- Size 2 Nema 3R Starter		$350.00

(R4, tab 1)

The Contracting Officer testified that "[a]fter engineering had evaluated them, they recommended the [first] two [items] . . . and I issued a change order B to get the work started." (Tr. 47-48) The Change Order was issued by facsimile transmission and received by LJC on August 9, 1991. Paragraph 14, DESCRIPTION OF AMENDMENT/MODIFICATION, reads:

> This change order is hereby issued for the contractor to proceed in providing all labor, material, equipment, transportation & supervision for extra electrical AHU (starter) and Wire Evaporator Heater (Chiller) only *as per your proposal* received August 8, 1991. (Emphasis added)

(R4, tab 2; Tr. 11)

LJC interpreted Change Order B to mean for it to proceed with the work described in the first two of the three items in their proposal, and that the VA had accepted the prices set forth in its proposal. As Mr. Crum put it, "I gave him a price and he bought the thing." (Tr. 12) LJC completed the work under Change Order B sometime prior to August 20, 1991. (Tr. 13)

On August 15, 1991, the CO sent a facsimile transmission to LJC, which reads as follows:

> Prior to issuing a supplemental agreement I need to point out the requirements of para 1.47 Changes—Supplement in the General Conditions Section of the Contract V679C-556 which limits overhead and profit to 10% respectively and bonding adjustment prior to completion and closing of the contract. I do not dispute direct materials or labor as noted in your proposed costs of 8/8, as issued for the 2 of 3 items listed in change order "B". Will issue a S/A for $1464.10 to cover as follows in C/O "B":
>
> 1. Extra Electrical (AHU) Starter:
>
> | | |
> |---|---|
> | Material | $635.00 |
> | Labor | 300.00 |
> | | 935.00 |
> | OHVD 10% | 93.50 |
> | Profit 10% | 102.85 |
> | Total | $1,131.35 |
>
> 2. Wire Evaporator Heater
>
> | | |
> |---|---|
> | Material | $175.00 |
> | Labor | 100.00 |
> | | 275.00 |
> | OHVD 10% | 27.50 |
> | Profit 10% | 30.25 |
> | Total | $332.75 |
>
> Need further explanation on 2 day extension as the superintendent indicated that materials were in receipt when I gave him C/O "B" on site the morning of the 12th. I am not [necessarily] indicating that I will not grant the extension, but am merely requesting for additional explanation over that of your proposal.

(R4, tab 6)

LJC responded:

> Our direct cost (labor, material) for these two changes were $1040 and $377 [respectively]. You state you do not dispute these costs and then you list a different figure in your recap. If you are going to cut our overhead we must request you to start with our correct material and labor figures.

(R4, tab 7)

The CO replied:

> In response to your 8/16 fax, I stated that I did not dispute your *direct* material and labor costs that are cited in your proposal. "Out of town motel, eats and truck" are not direct labor costs for the work to be accomplished. Additionally, we are not cutting your overhead as [you] put it, but only allowing what is contractual. Refer to Para 1.47 of General Conditions. The labor cited is 8 hrs electrician/8 hrs labor

©1993, Commerce Clearing House, Inc.

Digitized by Google

for starter work and 4 hrs electrician for wire evaporator. (Emphasis in original)

(R4, tab 8)

Supplemental Agreement #3, for an increase in the Contract price of $1,464.10, was issued September 13, 1991 and sent to LJC for signature. (R4, tab 18)

LJC refused to sign the supplemental agreement and on September 23, 1991, requested a Contracting Officer's decision on its claim for "out of town" expenses. (R4, tab 19) The final decision denying LJC's claim was issued September 26, 1991. In that decision, the CO gave the following explanation for denying the claim:

This letter is in response to your September 23, 1991 correspondence requesting a contracting officers final decision regarding the denial of "out of town" expenses that you wish to be included in the resulting supplemental agreement issued to incorporate the work required by Change Order "B".

Your proposal indicated the direct costs associated with the work: overhead @15%, profit @10%, bonding @2.5% and out of town expenses (motel, eats and truck). The direct costs for labor and material were found to be reasonable and not in question. Paragraph (d) of VAAR 852.236-88(b) Changes—Supplement (General Conditions 01001-30) authorizes "allowances not to exceed 10 percent each for overhead and profit". Bond premium adjustments are limited to final contract settlement in accordance with VAAR 852.228-70 (General Conditions 01001-12). Paragraph (j) of VAAR 852.236-88(b) authorized as follows: "Overhead and contractor's fee percentages shall be considered to include insurance other than mentioned herein, field and office supervisors and assistants, security police, use of small tools, incidental job burdens, and general home office expenses and no separate allowance will be made therefore" (General Conditions 01001-31). Therefore, the "out of town" expenses that you allude to are considered as field overhead and therefore unallowable.

On September 30, 1991, the CO issued a unilateral "Settlement by Determination #A," in the amount of $1,464.10 rather than the $1,837.31 requested in LJC's original proposal. (R4, tab 22)

At the hearing, the Contracting Officer said that he viewed Change Order B to be simply an order to proceed with the work with pricing to be determined later. He pointed to the VA's supplement to the Changes clause contained in GENERAL CONDITIONS Section 01001 paragraph 1.47(b) which provides;

(b) When the necessity to proceed with a change does not allow sufficient time to negotiate a modification or because [of] a failure to reach an agreement, the contracting officer may issue a change order *instructing the contractor to proceed on the basis of a tentative price* based on the best estimate available at the time, with the *firm price to be determined later.* Furthermore, when the change order is issued, the contractor shall submit a proposal for cost of changes in work within 30 calendar days. (Emphasis added)

Relying on this provision, he insisted that the language of Change Order B, "to proceed in providing all labor, material equipment... as per your proposal" was just "to identify that we selected only the two [of three proposed] items" and that it did not include "the cost as proposed by the contractor." (Tr. 50) He said he issued Change Order B because the "project was near the completion date of the contract and in order to keep from any delays... I wanted to get notice to the contractor immediately." (Tr. 50) This was an apparent departure from his normal procedure. He said:

Generally, when I issue change orders or contracts, I generally discuss what the work is going to be about and then tell them we'll deal with the cost later, especially if they haven't received a final proposal.

(Tr. 53)

The Contracting Officer could recall no conversation with LJC officials about this work prior to the issuance of Change Order B. (Tr. 52) The CO was asked on cross examination, "Why did you not put [in Change Order B] 'only as per your proposal but not your price?'" The Contracting Officer responded that "I don't feel I left any ambiguity there... I'm only issuing a directive to do two items of work, the price will be determined later." He denied that he had accepted the price by issuing Change Order B, insisting that he had "accepted the work only." (Tr. 62-63)

VABCA 3513: DISCUSSION

LJC cites general contact law for the principle that an offer when accepted becomes a binding contract. It asserts that the government accepted two of the three items proposed without any qualification when it

Digitized by Google

issued Change Order B per your proposal." Having done the work pursuant to that Change Order, the Contractor asserts that it should now receive the price it quoted to the Government. For its part, the Government, which does not bother with any citation to legal authority, simply references the Contacting Officer's testimony for the proposition that Change Order B was "issued upon an agreement to have work performed and the cost would be determined later." (Gov't Br. at 3)

As an initial observation we recognize that the Contracting Officer, anxious to get the air conditioning system operational, may have departed from his normal way of processing changes by issuing Change Order B. Additionally, we find no reason to question his subjective *belief* that all he was doing was authorizing the work and not agreeing to a price. But as the court observed in *WPC Enterprises, Inc. v. United States* [9 CCF ¶ 72,289], 323 F.2d 874, 879 (Ct. Cl. 1983):

> For a contract to exist there does not have to be, and rarely is, a subjective meeting of the minds all along the line. See Corbin, CONTRACTS, § § 96, 106, 546, 559.

As we noted in *Saturn Construction Company,* VABCA No. 3229, 91-3 BCA ¶ 24,151 at 120,857, "the test to be applied looks not to the subjective intent but to an objective manifestation of the parties intent." The objective manifestation of the parties intent in this case is that the Contractor, at the request of the Government, presented a detailed cost proposal separately priced for three items. In issuing Change Order B and accepting two of the three proposed items, the Contracting Officer did not issue a unilateral change order with the price reduced by those items he found unacceptable or unallowable. Nor did he order the work to be done with an explicit indication that the prices were "tentative" and that a "firm price" would be negotiated at a later date as VA "Proceed Orders" routinely do. Rather, the Contracting Officer ordered the Contractor to "proceed in providing all labor material equipment, transportation & supervision... as per your proposal received August 8, 1991." There is no objective evidence in the record that there was any "agreement" that "cost would be determined later." As the Contractor so succinctly put it in his testimony, "I gave him a price and he bought the thing." *See Stampco Construction,* VABCA No. 1599, 83-2 BCA ¶ 16,697 where we found that a "proposal submitted by Appellant which, upon acceptance by the Government, formed a binding contract." The Contracting Officer had the authority to bind the Government and did so when it issued Change Order B. *Texas Instruments Inc. v. United States* [36 CCF ¶ 75,980], 922 F.2d 810 (Fed. Cir. 1990); *Penn-Ohio Steel Corp. v. United States* [11 CCF ¶ 80,189], 354 F.2d 254 (Ct. Cl. 1965); *United States v. Purcell Envelope Co.,* 249 U.S. 313, 29 S.Ct. 300, 63 L.Ed. 620 (1919). When the Government enters the marketplace, as the court noted in *Purcell* at 318, "it should be animated by a justice as anxious to consider the rights of [its contractors] as to insist upon its own."

Finally, we observe that even if we were to find the language of Change Order B ambiguous, the Contractor would prevail under the doctrine of *contra proferentum.*

VABCA 3513: DECISION

The appeal is granted. Appellant is awarded $373.11, plus interest as authorized under the Contract Disputes Act.

VABCA 3531: FINDINGS OF FACT

The dispute in this appeal is over whether the Contract required visual screening slats in the fencing around the chillers.

The VA issued a deductive change order deleting visual screening slats from the Contract and requesting that LJC submit a proposal for the amount of the deductive change. (R4, tab 10) LJC advised the Contracting Officer that it did not know how much money was involved because it had never priced the visual screening slats inasmuch as they were not required under the contract. (R4, tab 13)

The VA issued a unilateral SETTLEMENT BY DETERMINATION which deducted $242 from the Contract price for the deletion of the visual screening slats. (R4, tab 15) LJC does not dispute this amount. (Tr. 106)

The parties agree that the Contract drawings do not show the visual screening slats.

The Contract Specifications, however, include, in Section 02444, CHAIN LINK FENCES AND GATES, the following references to visual screening slats:

Part 2—**Products**

2.6 **Accessories**

2. [V]isual screening slats: Equal to Deco-Link Mfg. Color to be brown.

Part 3—**Execution**

3.9 **Accessories**

©1993, Commerce Clearing House, Inc.

Digitized by Google

2. Supply metal visual screening slats as required and recommended by the manufacturer.

3.12 Installation Of Visual Screening Slats

Install visual screening slats per manufacturers written recommendations.

Article 1.57 of Section 01001, General Conditions, of the Contract specifications, Specifications And Drawings For Construction. Alternate #1 (Far 52.236-21) (Apr 1984), reads, in part, as follows:

(a) ... Anything mentioned in the specifications and not shown on the drawings, or shown on the drawings and not mentioned in the specifications, shall be of like effect as if shown or mentioned in both.

Appellant's submittal for the chain link fence included no reference to visual screening slats. The submittal was returned approved, subject to the following: "Need mfg. literature and data on gate & acc as per spec. section 02444-1.3A1." (R4, tab 3) Section 02444-1.3A1 requires the Contractor to furnish "Manufacturer's Literature and Data: Chain link fencing, gates *and all accessories.* (Emphasis added)

VABCA-3531: DISCUSSION

The only issues here are whether visual screening slats were required by the Contract, and whether the VA's approval of Appellant's submittal for the fencing, which included no visual screening slats, precluded the VA from requiring them.

Appellant's contention that the visual screening slats were not required because they were not detailed on the drawings is without merit because of Article 1.57 of Section 01001, GENERAL CONDITIONS, which provides that "[a]nything mentioned in the specifications and not shown on the drawings ... shall be of like effect as if shown or mentioned in both." Construing this provision in *Saturn Construction Co., Inc.* VABCA No. 2600, 88-2 BCA ¶ 20,632, we noted at 104,296:

> Under this provision, the failure of the Government to show the precise location of the fence on the drawings by use of a fence symbol does not negate the requirement for a construction fence imposed by the specifications. A Contractor is not permitted to rely solely on the drawings and disregard additional work required by the specifications.

Accord, B.D. Click Co. v. United States [27 CCF ¶ 80,096], 614 F.2d 748, 753 (Ct. Cl. 1980); *Merritt-Chapman & Scott Corp v. United States* [11 CCF ¶ 80,243], 355 F.2d 622, 626 (Ct. Cl. 1966)

The Contract specifications specifically require that visual screening slats be installed. Article 3.12 of SECTION 02444, INSTALLATION OF VISUAL SCREENING SLATS, requires that the Contractor "[i]nstall visual screening slats per manufacturers written recommendations."

Appellant's submittal was approved subject to its providing manufacturer's literature on, *inter alia,* accessories, which included visual screening slats. Approval of submittals does not relieve a contractor from the responsibility for furnishing precisely what is specified, nor does it constitute a change in the contract requirements, except where the change, *i.e.,* deviation from the contract specifications, has been specifically called to the Government's attention, which is not the case in this appeal. *Bhandari-Davis-Eckert,* VABCA No. 3475, 93-1 BCA ¶ 25,456 at 126,790; *J.C. Edwards Contracting and Engineering, Inc.,* VABCA Nos. 1947, 1969, 85-2 BCA ¶ 18,068; *Vogt Brothers Mfg. Co. v. United States* [9 CCF ¶ 71,991], 160 Ct. Cl. 687, 714 (1963).

VABCA 3531: DECISION

The appeal is denied.

[¶ 26,267] Hardrives, Inc.

IBCA Nos. 2319/2514, 2375/2475, 2414/2515, 2510, 2511, 2516, 2518, 2519, 2524, August 4, 1993. Contract No. 6-CC-30-04090.

Performance—Specifications—Alteration Without Notice.—Earthwork specifications in a contract for canal construction were defective because the inadequate survey information included incorrect elevations. In addition, they had been altered without notice. Furthermore, estimated borrow quantities, though appearing to a reasonable bidder to be overstated, were in fact greatly underestimated, and borrow quantities provided by the architect-engineer during performance were also inaccurate.

Digitized by Google

Performance—Cooperation Duty—Administration of Contract.—A contractor was entitled to an equitable adjustment under the Changes clause because misadministration of the contract by an architect-engineer amounted to a constructive change. The government agency failed to exercise its right to intercede, although, as the party that had contracted with the contractor, it had the duty to intercede. Although the government and the architect-engineer blamed the contractor's response to requests for proposals for some of the problems, under the Changes clause in the contract (derived from the 1984 version of FAR 52.243-4) the contractor was not obligated to respond to requests for proposals.

Delays—Concurrent Causes—Multiple Government Delays.—A contractor was entitled to an extension of time and an equitable price adjustment because it proved with adequate specificity that delay was the result of government-caused problems. The right to relief was not defeated merely because it was impossible to separate the effects of concurrent, overlapping, and continuous causes of delay attributable to the government. The contractor provided well-supported, as-planned versus as-built evidence to prove it could have completed the project essentially on time but for the government-caused problems. Although it did not use formal critical path method scheduling, its evidence included expert critical path analysis.

Pricing of Adjustments—Total Cost Method—Criteria for Use.—A contractor's use of a modified total cost method of establishing costs attributable to constructive changes was proper, because the four criteria for use of the total cost method were met. Overlapping problems and delays chargeable to the government made it impracticable to prove actual losses directly. The reasonableness of the contractor's bid was shown by comparison to other bids and the government estimate, as well as by expert testimony. The bid was prepared by experienced estimators and was not questioned by the government at the time of bidding. The reasonableness of the contractor's costs was shown by a preponderance of evidence, even assuming that the contractor had the burden of proof. Little weight was given to government audits because of their questionable objectivity. The contractor segregated additional costs for which it was responsible.

Cost Principles—Reasonableness—Presumption Before 1987.—A contractor's incurred costs were presumed reasonable for the purpose of computing an equitable adjustment because the contract was awarded before May 27, 1987. The Pricing of Adjustments clause in the contract required cost questions to be determined by FAR cost provisions in effect on the date of the contract. Prior to May 27, 1987, FAR 31.1201-3 did not state that there was no presumption of reasonableness, and case law at the time was that incurred costs were presumed to be reasonable.

Cost Types—Equipment Costs—Waiver of Designated Schedule.—Equipment ownership costs were computed for purposes of an equitable adjustment using the 1986 Associated General Contractor rates rather than the Yellow Book rates referenced in the contract, because the government had instructed during the contract that the AGC rates were to be used. Modifications prepared according to these instructions had been approved. Thus, the government had waived the contractually specified schedule. The AGC rates that contracting officers had previously agreed upon as reasonable were appropriate for the board to use in calculating adjustments.

Delays—Overhead—Seasonal Business.—A contractor was not entitled to recover unabsorbed overhead at a rate reflecting the seasonal nature of its business, because the lower rate used by both parties at the hearing was the appropriate rate. The contractor urged at the hearing that the board should use a modified version of the *Eichleay* formula for unabsorbed overhead, but the board declined to modify the formula, citing *Capital Electric Co.*, 31 CCF ¶ 72,119. The contractor's entitlement to recover unabsorbed overhead was established in that the contractor met its initial burden to show that uncompensated delay had occurred and that it could not assume other jobs, and the government did not meet its ensuing burden to show that the contractor would suffer no loss by using a fixed mark-up formula.

Pricing of Adjustments—Profits—Contractual Limitation.—A clause limiting the amount of overhead to be included in contractor proposals for modifications was not

©1993, Commerce Clearing House, Inc.

Digitized by Google

relevant to the board's determination of the amount of an equitable adjustment for constructive changes, because the board was not considering a contractor proposal. Aside from requiring the adjustment to be equitable, the Changes clause does not limit profit. The government argued that the rate should be less than the maximum allowed in the Contractor Proposals clause in view of weighted profit guidelines, but the clause was inapplicable, and the applicable guidelines did not limit profit to any particular percentage.

Interpretation of Contracts—Ambiguities, Latent—Reliance on Own Interpretation.—A canal construction contractor was not entitled to recover costs of correcting turnouts to install two gates rather than one, because it failed to show that it relied at the time of bidding on its interpretation that only one gate was required. Evidence of unused gates suggested that the gate-supplier or the contractor at the time of bidding interpreted the drawings to require two gates. Although one-gate turnouts were installed under the oversight of government inspectors, the inspector was not authorized to change the specifications. Under the Inspection of Construction clause, inspections were for the sole benefit of the government and did not imply acceptance.

Quality—Approvals—Notice of Variation.—The alleged approval of a canal construction contractor's drawings showing pipe bends without encasement did not relieve a contractor of the obligation to provide encasement, because the contractor failed to give the government notice of the deviation from contract requirements and did not establish the elements of estoppel against the government.

Quality—Compliance with Specifications—Economic Waste.—A canal construction contractor was obligated to comply with specifications requiring encasement for pipe bends, because it failed to show economic waste. It alleged that there was no practical reason to require field encasement of banded mitered pipe bends. However, in the absence of economic waste, the government is entitled to precisely what it specifies, even if that exceeds what is needed for a satisfactory result. The contractor did not show the exceptional facts needed to establish economic waste.

Interpretation of Contracts—Contract as a Whole—Specific Antecedent.—A specification requiring no sealant for tooled grooves in transverse contraction joints did not conflict with or create ambiguity with respect to drawings and specifications requiring sealant generally in such joints, because the no-sealant clause referred only to tooled grooves. It provided that a groove be "tooled across the concrete curb from the end of each transverse joint," and then provided that no sealant was required for "these tooled grooves." In actual construction, as in the language of the specification, the curb grooves were treated differently.

Payments, Prompt—Invoices—Substantiation of Title.—A canal construction contractor's invoices were properly rejected as a basis for payment because they did not contain lien waivers for unincorporated on-site materials. Although the Payments clause provided that the contracting officer could authorize materials delivered on site to be taken into consideration, the Administration of Payments clause stated that such material could be included in payment estimates only if the contractor had furnished satisfactory evidence of title. Acceptance of the materials for payment purposes was optional. Because the contractor failed to meet its burden of proof of the amount of progress payments that were late after sending a proper invoice, a better-supported calculation was used.

Interpretation of Contracts—Excavation, Grading, and Fill—Surcharge.—A contractor was not entitled to additional compensation for royalties it was required to pay for using a particular borrow area, because the contract required that the borrow surcharge be included in the unit price for excavation from borrow. Both the contractor and its subcontractor had included the royalty charge in their bid prices for borrow.

For the appellant: Graeme Hancock, John R. Jefferies, and Fennemore Craig. For the government: Fritz L. Goreham and Wayne C. Nordwall, U.S. Department of the Interior, Phoenix, Arizona.

Before ROME and PACKWOOD, Administrative Judges.

Digitized by Google

ROME, Administrative Judge: Hardrives has appealed under the Contract Disputes Act of 1978 (CDA), 41 U.S.C. § 605(c)(5), largely from the contracting officer's failure to issue decisions on its claims under its contract with the Bureau of Reclamation (BOR) for the construction of the Hohokam Canal (Canal or Project), part of the Central Arizona Project (CAP). After a 3-week hearing and thousands of pages of transcript, exhibits, and briefs, the parties' combined, oft-disputed, proposed findings of fact totalled over 1000. For the complex procedural background, *see Hardrives, Inc.*, IBCA No. 2319, *et al.*, 91-2 BCA ¶ 23,769 (granting motion to stay); *Hardrives, Inc.*, IBCA No. 2319, *et al.*, 93-2 BCA ¶ 25,669 (opinion on certification); and *Hardrives, Inc.*, IBCA No. 2319, *et al.*, 93-2 BCA ¶ 25,779, 1992 IBCA LEXIS 11 (12/30/92 opinion denying motions to dismiss). We make only those findings necessary to the understanding and resolution of the appeals. Of those, with editing, we have adopted some uncontested proposed findings ("U").

FINDINGS OF FACT

I. *The Contract*

1.U. The Hohokam Irrigation and Drainage District (District) obtained Government financing for the Canal. It hired Franzoy-Corey, Architects and Engineers, Inc. (FC or A/E), to prepare the specifications[1] and to manage construction for BOR, at District expense (Appellant's Exhibits (AX) 7, 10, 15, 21, 22, 51; Transcript (Tr.) 3543-45).

2.U. FC prepared the Canal specifications, served as Construction Engineer, and administered the Project as BOR's authorized representative. BOR retained the right to assume contract administration (Government's Exhibit (GX) 2A at § I.1.1(d) and (e); AX 22 at 11/18/85 agt. at ¶¶ 1, 4; AX 51; AX 134 at Tr. 2/9/87 mtg., lined version with typed names at end at 13; amended complaint and answer (c&a) ¶¶ 21, 25, 29; Tr. 112-13, 426, 3085).

3.U. FC admits that its primary concern was to protect the District (Tr. 3559-60).

4. BOR awarded the contract, in the bid amount of $6,743,617.65, to Hardrives[2] on May 15, 1986, which thereafter subcontracted with MRT Construction, Inc. (MRT), for earthwork, and with Valley Ditch Lining, Inc. (Valley Ditch), for trenching and lining. The contract covered construction of about 14.1 miles of concrete-lined Canal and the Kleck Road Turnout. BOR prepared the specifications for, and administered, the turnout portion of the contract, not at issue. Of Hardrives' bid, $6,225,188.30 pertained to the Canal. Hardrives received the notice to proceed on June 12, 1986. It was to complete the Canal and turnout in 270 days, by March 9, 1987, extended to March 10, 1987, by modification 45 (c&a ¶¶ 3, 4, 17; AX 19, 44, 45; GX 1; GX 2A at § H.1 and at specifications (spec.) 1.1.1 and 1.1.2 a.; GX 2C; GX 478 at Tab A; Tr. 112-13, 237-40, 247-48, 1647).

5. The bid schedule called for lump sums and unit pricing based upon given estimated quantities. Among the latter, excavation for canal was estimated at 280,608 cubic yards (c.y.), for which Hardrives bid $2.78 per c.y., for a total of $780,094.24; excavation from borrow was 409,684 c.y., bid at $1.08, for a total of $442,458.72; excavation for pipe trenches was 18,174 c.y., bid at $4.85, for a total of $88,143.90; compacting embankments was 186,749 c.y., bid at $1.26, for a total of $235,303.74; construction of canal lining was estimated at various amounts of linear feet (l.f.) and bid at varying unit prices; furnishing and applying soil stabilizing solution was estimated at 21,245 l.f., bid at $0.38 per l.f., for a total of $8,073.10; and structural reinforced concrete work, excluding precast, was estimated at 1,241 c.y., bid at $410, for a total of $508,810. The schedule stated that estimated quantities were for bid comparison and, except under the contract's Variation in Estimated Quantity clause (VEQ), no claim was to be made for any excess or deficiency (GX 1 at F-11, *et seq.*).

Among others addressed below, the contract contained the following relevant Canal specifications, in pertinent part (all at GX 2A):

6. For staking the work, "the District" was to establish reference points for horizontal alignment with vertical control to be provided by benchmarks. The contractor was to make all detail surveys needed for construction (spec. 1.1.3).

[1] Unless otherwise indicated, the term "specifications" includes drawings, plans, and earthwork computer analyses provided by FC as part of the contract documents.

[2] On Aug. 12, 1986, Hardrives notified BOR that, to transact business in Arizona, it had to change its name in that State to U.S. Industrial Constructors, Inc. For consistency with the parties, we use "Hardrives" (IBCA 2414 Appeal File (AF) at Tab 8).

©1993, Commerce Clearing House, Inc.

Digitized by Google

7. Project design was based upon the geological description, drawings, logs of subsurface explorations, and test data contained in the specifications. Bidders were encouraged to conduct their own tests. "The District" denied any representation that information provided, other than at the point from which derived, depicted conditions to be encountered. Conclusions about materials to be excavated, difficulties, or other work affected by geology or subsurface conditions, were said to be the contractor's responsibility. The upper hundreds of feet of valley fill were said to be loose, but with thick clay below interbedded with sands and gravels "often partially cemented." Detailed test information was said to be available at FC's offices (spec. 1.3.12; *see also* spec. 1.3.13).

8. The contract's boring logs indicated that weakly or moderately cemented materials had been encountered (GX 2C at 80). They provided: "Where used in these specifications, the terms 'weakly' 'moderately', and 'strongly' cemented refer to materials * * * easily crushed with finger pressure, broken manually, or required a hammer blow to break, respectively" (GX 2C at 72).

9. The Site Drainage clause, at § 2.3.1a., provided: "The Contractor shall handle all flows from natural drainage channels intercepted by the work * * *. He shall provide and maintain any temporary construction required to bypass or * * * cause the flows to be harmless to the work and adjacent property."

10. Direct payment for earthwork would be made only for that required for construction of open canal, excavation for pipe trenches, and excavation from borrow (spec. 3.1.1).

11. "To the extent that they exist[ed]," mass diagrams and earthwork data would be available at FC's offices. "The District" disclaimed any representation that the information was accurate or complete, denied responsibility for conclusions the contractor might reach, and noted that the information was not intended to prescribe the contractor's excavation and hauling procedures. "The District" reserved the right to use and distribute earthwork materials during work. The contract provided further:

> The ground elevations shown on the drawings and used in the earthwork analysis were established photogrammetrically from aerial surveys. The vertical accuracy of the ground elevations is ± 0.25 feet, subject to standard industry tolerances. The bidder/contractor may elect to verify, at his own expenses, the accuracy of the elevations. If in the opinion of the Contractor any deviations cause an increase in cost, these costs shall be included in the unit prices submitted in the bid schedule.
>
> Payment for earthwork items will be made to the neat line dimensions shown on the plans and the quantities in the bid schedule * * *.

(spec. 3.1.2). Again, the contractor was to assume responsibility for the nature and difficulty of materials to be excavated. "The District" disclaimed any representation that the excavation could be performed or maintained at the pay lines described or shown in the specifications (spec. 3.2.1).

12. Compacted materials required certain moisture content, with moistening at the excavation site to be done to the extent practicable, supplemented at the compaction site if necessary (spec. 3.1.3).

13. There were clearing, grubbing, and stripping requirement (*see* specs. 2.1.1a., 3.2.6, 3.4.1).

14. The excavation from Borrow clause provided:

> Where the canal excavation at any section does not furnish sufficient suitable material for embankments, additional material shall be obtained from Borrow Areas A and B. Borrow Area C will be made available to the Contractor upon * * * written notice [to FC]. *However, the Contractor will be charged $0.15 for each [c.y.] of material removed from Borrow Area C.*
>
> * * * * * * *
>
> Payment * * * for "Excavation from Borrow" will be made at the unit price per [c.y.] bid * * *. This price shall include the costs of excavating, hauling, placing embankment, moisture application, *plus the $0.15 per [c.y.] cost of purchasing only borrow material from Borrow Area C,* and all other work described in this paragraph, except * * * clearing and grubbing * * *. [Emphasis in original.]

(spec. 3.2.6a.; *see also* spec. 3.4.2a.). There was no limit upon free-haul distance for excavation and no overhaul was to be paid. All costs were to be included in bid prices for canal or borrow excavation (spec. 3.2.7).

15. Where original ground surface was below Canal grade, and construction of fill below Canal bottom was prescribed, the fill was to be placed as compacted embankment. Where the original ground surface was below the base of a structure, fill to form a

Digitized by Google

foundation was to be placed as compacted embankment (specs. 3.4.2a., 3.4.3a.).

16. Concrete structures were to be located as on the drawings and built to the lines, grades, and dimensions shown. There were to be no allowances above bid prices for minor modifications or extensions to adapt a structure to a site (spec. 5.1).

17. The Drawings clause, at § 10.1.1, provided:

> The drawings which form a part of these specifications show the work to be done * * *.
>
> Specifications and details shown on these drawings which are not applicable * * * shall be disregarded. Where details shown differ from the requirements of these specifications, the specifications shall govern. In the event there are minor differences as determined by the Contracting Officer between details and dimensions shown on the drawings and those of existing features at the site, the details and dimensions of existing features at the site shall govern.
>
> The Contractor shall check all drawings carefully and advise the Contracting Officer of any errors or omissions discovered.
>
> * * * the specifications drawings will be supplemented by such additional or revised general and detail drawings as may be necessary or desirable as the work progresses; and the Contractor shall do no work without proper drawings and instructions.

The contract contained the following relevant General Provisions, in pertinent part:

18. Liquidated damages for failure to complete the Canal work on time were $1,000 per each day of delay (§ H.3).

19. Under, § H.4, the contractor was to provide to the contracting officer for approval a construction schedule in the form of a progress chart showing the order of work and time periods for completion of the various elements. If, in the opinion of the contracting officer, the contractor fell behind its approved schedule, it was to take steps necessary to improve progress. If the contracting officer determined that the contractor was not prosecuting the work with sufficient diligence to ensure completion within the contract period, the contracting officer could terminate the contractor's right to proceed, in accordance with the Default clause. The contract also provided that the contractor was to give FC, for information, a complete construction program, which the contractor was to revise in a timely manner as necessary. The program was to depict work scheduling and progress details, or the contractor could use and provide a critical path method or similar analysis (§ H.8).

20. Time extensions were to depend upon the extent to which changes caused delay (§ H.7).

21. The term "Contracting Officer" included authorized representatives acting within the limits of their delegated authority (§ I.1.1(b)). FC was said to be the District's representative for construction surveillance and contract coordination with the duty to monitor compliance with the specifications and to report violations to the contracting officer (§ I.1.1(d)). Authority to modify the contract on behalf of BOR was limited to contracting officers. Unless otherwise provided in the contract, the contractor assumed all risks of performance in accordance with any written or oral order, including interpretation, of a person not authorized in writing to issue it (§ I.1.2).

22. The contractor was to comply "without unnecessary delay" with any written or oral order, including interpretation, of the contracting officer or his authorized representative, except that, if the contractor considered the order to have been issued without proper authority, or to be a change under the Changes clause, it immediately was to request written confirmation from the contracting officer. Performance pending receipt of confirmation was to be at the contractor's risk (§ I.1.3).

23. If cost or pricing data were submitted for any non-competitively priced contract modification, BOR could examine documentation to evaluate the data's accuracy, completeness, and currency (§ I.1.5).

24. The Site Investigation and Conditions Affecting the Work clause, § I.2.4, provided that the contractor acknowledged that it had ascertained the nature of the work; investigated conditions, including conformation and conditions of the ground; and satisfied itself as to surface and subsurface materials or obstacles to be encountered, as reasonably found from a site inspection, exploratory work done, and from the drawings and specifications. Any failure by the contractor to do so was not to relieve it from determining the difficulty and cost of the work, or from performing without additional expenses to BOR, which assumed no responsibility for conclusions based upon information it had made available.

©1993, Commerce Clearing House, Inc.

Digitized by Google

25. a. Under the Specifications and Drawings For Construction clause, § I.2.16, anything mentioned in the specifications and not shown on the drawings, or vice versa, was deemed included in both. In case of differences, the specifications governed. Discrepancies in figures, drawings or specifications were to be submitted promptly to the contracting officer, who promptly was to make a determination in writing. Any adjustment by the contractor without such a determination was to be at its own risk. Shop drawings were those submitted by the contractor or subcontractor showing in detail the proposed fabrication, assembly, and installation of materials or equipment. The contractor was to coordinate shop drawings and to review them for accuracy and completeness. The contracting officer was to indicate approval or disapproval and, if not approved as submitted, was to indicate the reasons. Any work before approval was to be at the contractor's risk. The clause also provided:

> (e) * * * Approval by the Contracting Officer shall not relieve the Contractor from responsibility for any errors or omissions in such drawings, nor from responsibility for complying with the requirements of this contract, except with respect to variations described and approved in accordance with (f) below.
>
> (f) If shop drawings show variations from the contract requirements, the Contractor shall describe such variations in writing, separate from the drawings, at the time of submission. If the Contracting Officer approves any such variation, the Contracting Officer shall issue an appropriate contract modification, except that, if the variation is minor or does not involve a change in price or in time of performance, a modification need not be issued.

b. The Administration Of Specifications And Drawings For Construction clause, § I.2.17, provided that, if individuals other than the contracting officer were authorized to approve shop drawings, the authorization was to appear in the contract or otherwise be provided in writing to the contractor by the contracting officer. They did not have authority to approve technical data varying from contract requirements that involved a change in price or in performance time and BOR was not to be liable for any increase in cost or time resulting from the contractor's reliance on such approvals. Adjustments for BOR delay in approving requests for approval "of shop drawings or other technical data" were to be made only if BOR approval were required and if the requests were "properly and timely submitted and approvable" (§ I.2.17(c)). Any adjustment was to be under the Suspension of Work clause.

c. The Inspection of Construction clause, at § I.3.1(c)(3), provided that inspections were for the sole benefit of BOR and did not relieve the contractor from providing adequate quality control measures or "[c]onstitute or imply acceptance." The clause also stated: "(d) The presence or absence of a Government inspector does not relieve the Contractor from any contract requirement, nor is the inspector authorized to change any term or condition of the specification without the Contracting Officer's written authorization." The contractor, without charge, was to replace or correct work found by BOR not to conform to contract requirements unless, in the public interest, BOR agreed to accept it with a price adjustment (§ I.3.1(f)).

26. The contractor's operations, including forces employed, sequence, and method, were to be subject to the contracting officer's approval at all times during performance and were to insure completion of the work during the contract period (§ I.2.22).

27. The VEQ clause stated that if a unit-priced item varied more than 15 percent above or below the estimated quantity, an equitable adjustment was to be made upon demand of either party, based upon any increase or decrease in costs due solely to the variation above 115 percent or below 85 percent of the estimate. If the variation caused an increase in time to complete the work, the contractor could request an extension, subject to contracting officer approval (§ I.4.1).

28. The Changes clause, § I.4.5, provided:

> (a) The Contracting Officer may, at any time * * * by written order designated or indicated to be a change order, make changes in the work within the general scope of the contract, including changes—
>
> (1) In the specifications (including drawings and designs);
>
> (2) In the method or manner of performance of the work;
>
> (3) In the Government-furnished facilities, equipment, materials, services, or site; or
>
> (4) Directing acceleration in the performance of the work.
>
> (b) Any other written or oral order (which, as used in this paragraph (b), in-

Digitized by Google

cludes direction, instruction, interpretation, or determination) from the Contracting Officer that causes a change shall be treated as a change order under this clause; provided, that the Contractor gives the Contracting Officer written notice stating (1) the date, circumstances, and source of the order and (2) that the Contractor regards the order as a change order.

(c) Except as provided in this clause, no order, statement, or conduct of the Contracting Officer shall be treated as a change under this clause or entitle the Contractor to an equitable adjustment.

(d) If any change under this clause causes an increase or decrease in the Contractor's cost of, or the time required for, the performance of any part of the work * * *, whether or not changed by any such order, the Contracting Officer shall make an equitable adjustment and modify the contract in writing. However, except for a "proposal for adjustment" * * * based on defective specifications, no proposal for any change under paragraph (b) above shall be allowed for any costs incurred more than 20 days before the Contractor gives written notice * * *. In the case of defective specifications for which the Government is responsible, the equitable adjustment shall include any increased cost reasonably incurred by the Contractor in attempting to comply with the defective specifications.

(e) The Contractor must submit any proposal under this clause within 30 days after (1) receipt of a written change order under paragraph (a) above or (2) the furnishing of a written notice under paragraph (b) above, by submitting to the Contracting Officer a written statement describing the general nature and amount of the proposal, unless this period is extended by the Government. The statement of proposal for adjustment may be included in the notice under paragraph (b) above.

29. a. Under the Pricing of Adjustments clause, § I.4.6, when costs were a factor in BOR evaluation or determination of a price adjustment under the Changes or other clause, they were to be in accordance with cited provisions of the Federal Acquisition Regulation (FAR), as supplemented by any applicable contract clauses. The applicable FAR provisions were "those in effect on the date of this contract."

b. The Change Order Accounting-Modification clause, § I.4.7, provided that the contractor was to maintain sufficient records and data to establish the cost of the work. If the estimated cost of a proposal or claim were to exceed $100,000, the contractor was to keep separate accounts of all incurred segregable direct costs of work, changed and unchanged, allocable to the proposal or claim.

c. The Contractor Proposals—Reclamation clause, § I.4.8, provided:

> (a) The Contractor, in connection with any proposal it makes for a contract modification, shall furnish a price breakdown, itemized as required by the Contracting Officer. Unless otherwise directed, [it] shall be in sufficient detail to permit an analysis of all material, labor, equipment, subcontract, and overhead costs, as well as any profit * * *. Any amount claimed for subcontracts shall be supported by a similar price breakdown * * *. * * *
>
> (b) If adjustments are allowed for work performed wholly or substantially by subcontractors * * *, [they] may include an allowance for the prime contractor's indirect cost and profit. However, the total of such allowances * * * shall not exceed 10 percent of the adjustment allowed for the subcontractor * * *.

30. The Differing Site Conditions clause, at § I.4.11(a)(1) and (b), provided that the contractor was to notify the contracting officer of subsurface or latent physical conditions differing materially from those indicated in the contract. If the contracting officer found they so differed and caused an increase in the cost or time of performance, an equitable adjustment was to be made and the contract modified.

31. a. Under the Default clause, § I.4.14, if the contractor failed to prosecute the work, to insure its completion within the contract period, BOR could terminate the contractor's right to proceed, unless delay arose from unforeseeable causes beyond the contractor's control and without its fault or negligence, including acts of BOR in its contractual capacity. The time for completion was to be extended if deemed warranted by the contracting officer.

b. Regarding Government-caused delays, the Suspension of Work clause, § I.4.12, provided:

> (b) If the performance of * * * the work is, for an unreasonable period of time, suspended, delayed, or interrupted (1) by an act of the Contracting Officer in the administration of this contract, or (2) by the Contracting Officer's failure to act within

©1993, Commerce Clearing House, Inc.

Digitized by Google

the time specified in this contract (or within a reasonable time if not specified), an adjustment shall be made for any increase in the cost of performance * * * (excluding profit) necessarily caused by the unreasonable suspension, delay, or interruption, and the contract modified * * *. However, no adjustment shall be made under this clause for any suspension, delay, or interruption to the extent that performance would have been so suspended, delayed, or interrupted by any other cause, including the fault or negligence of the Contractor, or for which an equitable adjustment if [sic] provided for or excluded under any other term or condition of this contract.

32. a. The Equipment Ownership and Operating Expense clause, § I.4.16, provided that adjustments under the Changes, Differing Site Conditions, or Suspension clauses could include allowance for ownership of equipment by the contractor or any subcontractor. Allowances for ownership and operating expenses were to be based upon the contractor's actual cost records when possible. Except for fully depreciated equipment, for which a reasonable use charge could be agreed upon within limits, the clause provided that allowance for certain depreciation, taxes, insurance, and incidental costs were to be calculated using Tables in the Contractor's Equipment Manual, 1974 Edition, published by the Associated General Contractors of America (AGC) (referred to at hearing as the "yellow book"), and were to constitute the hourly cost of equipment ownership.

b. The Forward to the 1974 yellow book twice stresses that it is intended as a guide only, subject to adjustment to fit the experience of individual equipment owners (GX 577).

33. The Administration of Funds clause, § I.5.6, disclaimed any warranty that funds would be available for payment of earnings, including contract adjustments. The contractor was to notify the contracting officer if it appeared that such funds would be exhausted within 30 days. The contracting officer then could advise of any additional funds available. Prosecution of work at a rate that would exhaust available funds before the end of the fiscal year was to be at the contractor's risk.

II. *IBCA 2375/2475*

Earthwork, Trenching and Lining, Structures, and Contract Management

A. *Earthwork Overview*

34. To ensure proper water flow, the Canal had to be built at specified elevations. The contract included detailed information about the vertical elevation of existing ground and the design elevation of the bottom (invert) of the Canal (c&a ¶ 7; GX 2C at 4-23; AX 528).

35. After clearing and grubbing, Hardrives moved more earth to construct the Canal enbankment. Depending upon the difference between existing ground and design elevations, the embankments were formed either by excavating "cut" dirt or by adding "fill" to raise the existing ground level, or both. Embankments either were compacted or non-compacted. A compacted embankment consisted of fill dirt placed and compacted to a specified density. Substantially all of the fill used to build the portion of the embankments beneath the Canal had to be compacted. The area of compaction changed based upon the elevation of existing grade compared to the Canal invert. The degree of embankment slope also depended upon the difference between the height of the Canal invert and existing ground. If the invert were above existing ground, the embankments required more dirt and flatter slopes. The contract required more fill dirt than was available from cut, but the contractor had to use all material excavated from the Canal before it would be paid for obtaining extra dirt (borrow) elsewhere (specs. 2.1.1a., 3.4.1; GX 2C at 31; Tr. 130-133, 136-39, 146, 150, 158, 169-72).

36.U. To assist in planning construction activities, the contract documents included a computer printout prepared by FC describing the amount of material to be excavated and the amount of fill at all points along the Canal. The printout showed existing grounded elevations, the elevation of the Canal invert, and the volumes of dirt to be excavated at each 100-foot segment (station) of the Canal. BOR also provided Hardrives with drawings graphically depicting the elevation data contained in the printout (AX 528; GX 2C; Tr. 269-78).

37. The data in the specifications correlated to the cut-fill information in FC's computer printout (AX 458).

38.U. Contractors routinely use earthwork quantities and elevations in bid documents

Digitized by Google

to determine work required and to estimate costs (Tr. 1715).

39. In determining bid prices and its anticipated construction schedule, Hardrives relied upon FC's station to station cut/fill information in the computer printout and related drawings. It used the given elevations and earthwork quantities to anticipate haul distances and balance points (where hauled or other cut will equal required fill) to determine the most efficient way to move dirt between cut, fill, and borrow areas (AX 502; Tr. 269-70, 274, 278-80, 284-85, 1191-92, 1385-90).

40.U. Hardrives did not have any information before construction began to suggest that the ground elevations in the contract documents were inaccurate. Before MRT, the earthwork subcontractor, began working, it reviewed and relied upon the earthwork quantities and elevations in the contract to plan its operations (AX 100; Tr. 287-91, 1192, 1396, 2114-16).

41. MRT was not aware of FC's computer printout until after the job was underway. It then found it to be inaccurate and did not use it. It reviewed revisions, but did not find the trustworthy either. It did use the drawings prepared by FC, which, like the printout, depicted alleged existing grades and the elevations to which the contractor was to build. MRT used that information to identify anticipated quantities of cut and fill in portions (reaches) of the Canal (AX 100; Tr. 1192-93; 1974-78).

42. BOR's Chief of the Construction Division, Mr. Fraser, opined:

> * * * this contract included an express warranty as to the accuracy of the original ground profile. [Specification 3.1.2] states in part:
>
> "The ground elevation shown on the drawings and used in the earthwork analysis were [sic] established photogrammetrically from aerial surveys. The vertical accuracy of the ground elevation is ± .25 feet, subject to standard industry tolerances."
>
> * * * * * * *
>
> * * * Bidders are not required to prepare their bids based on their own prebid surveys and investigations. A reasonable job site inspection would not include surveying to check the elevations shown in the specifications. [Footnote omitted.]

(AX 458 at 6, 8).

B. *Trenching And Lining Overview*

43.U. During the first stage of earthwork, the contractor had to construct preliminary Canal embankment. It built a "pad" upon which the trencher would travel while trimming the final inside shape (prism) of the Canal. The contract also required an operations and maintenance (O & M) road. In constructing the embankment, MRT left excess dirt along the Canal sides and invert to enable the trenching equipment to trim the dirt and deposit it where the O & M road was to be built. The contractor had estimated the amount of dirt needed, and the amount to be removed by the trencher, so that it would not require more to complete the road and would not leave excess material when trenching was complete (AX 512D; specs. 1.3.3; 3.4.2b; Tr. 130, 133, 142-43, 145-50, 166-67).

44.U. After its trencher had formed the prism, Hardrives' subcontractor, Valley Ditch, used a continuous paving machine, which sat in the prism and was pulled along by a bulldozer, to line it (Tr. 178-79, 181, 192, 194).

45. The contract specified prism moisture content. If paving fell too far behind trenching, the prism would dry, and more water and reshaping would be required. To prevent this, Valley Ditch tried to keep the paving less than 1 work day behind the trenching. It was not always able to do so (GX 159 A and B; Tr. 179-82).

46.U. As paving proceeded, workers finished the lining surface and others tooled grooves in it (AX 449; Tr. 192).

C. *Structures Overview*

47. The contract required 65 siphons, culverts, field turnouts, lateral turnouts, bridges, and other structures, of which 26 were siphons, pipe drops, and culverts having separate inlet and outlet structures within the Canal prism (spec. 5.1; *see* GX 2C at 44-45, 54; Tr. 113, 125).

48.U. Underground concrete pipe had to be installed as a siphon at numerous locations where the Canal crossed roads, rail lines, and other Canals to convey the Canal water underneath (Tr. 119-20, 2992).

49.U. All of these structures extended into the canal prism. Therefore, it was more efficient to complete the trenching and lining before beginning the structures in a particular location. The alternative would have required stopping the trencher and paving machine and lifting them out of the prism with a crane every time structures were en-

©1993, Commerce Clearing House, Inc.

Digitized by Google

countered (Tr. 128-42, 196-228, 262-63, 529-30, 1738-39, 1986).

50. The paving machine paved over the area where turnouts and other structures were to be constructed. Before the concrete hardened, a hand-trowel was used to cut the concrete adjacent to the future structure. When the cut piece had cured, it was removed with a backhoe. The structure then could be built at the opening (AX 584; Tr. 208-12, 215-16).

51.U. When a structure was complete, hand-placed lining was required between it and the machine-placed lining. The hand-placed took more time, equipment, and materials than the machine-placed, and created more breaks or gaps in the Canal. Completing the trenching and lining before the structures kept hand-placed lining to a minimum (Tr. 203-04).

D. *Finish and Cleanup Work*

52.U. After the structures were built in a particular area, final Canal shaping, finishing, and grading; completion of the O & M road; cleanup; and several smaller work items were required. It was most efficient and economical to perform the finishing operations after all others had been completed in a reach, so that the final work would not have to be redone (Tr. 228-30).

E. *Construction*

53. Hardrives submitted a construction schedule prepared before work began to attempt to comply with the contract requirement and to provide an initial outline showing an orderly progression. It was not a critical path analysis and depicted "early" start and finish dates as identical to "late" ones, with no float. During construction, the schedule was not used, but Hardrives and MRT planned to adhere to a sequential operation (GX 478H; Tr. 261, 886-88, 891, 895-96, 1442-44).

54. MRT began earthwork on July 22, 1986, within 1 day of the schedule. It planned to complete the initial embankment by about December 15, 1986, 2 days earlier than the schedule (GX 478H; Tr. 244).

55. The "schedule" gave an October 1, 1986, start and a December 15, 1986, finish for trenching and lining. Valley Ditch told Hardrives that it planned to start on October 15, and to finish in late January 1987. It expected to complete early, though, as it had in other jobs, to enhance its good reputation. The plan was for it to complete all trenching and lining without catching up with the earthwork and having to demobilize. Assuming placement of 400 c.y. of concrete daily, Valley Ditch expected to complete lining within 45 working days, including 4 10-hour days per week. Lining, not trenching, controlled its progress; it could trench much faster than it could pave. Downtime was anticipated for equipment modification for varying canal widths, breakdowns, and weather (AX 527; GX 478H; Tr. 244-45, 256, 262, 264, 1181-84, 1264-68, 1305-06, 1321-23, 2826).

56.U. To finish the Project on time, the contractor scheduled trenching and lining so that enough would be completed to begin the structures, and then to begin final grading work (Tr. 255, 260-63).

F. *Earthwork Problems*

1. *Elevation Errors*

57. To set the slope stakes and construction stakes, Hardrives hired Mr. Rice, a licensed civil engineer and registered surveyor with experience on Federal, state, and private projects, including prior canal and other work on the CAP (Tr. 292-301, 1490-1511).

58. Mr. Rice attempted to set construction stakes about one-half mile ahead of MRT's earthwork, to avoid getting too far ahead, which would subject the stakes to loss due to weather, animal traffic or other causes, and necessitate rework (Tr. 299-300, 1507).

59.U. As Mr. Rice began slope staking in the first reach, he discovered that original ground elevations were lower than indicated in the contract, by an average of about 0.8 foot (Tr. 291-92, 302-03, 1514).

60.U. Mr. Rice did not know of the elevation "bust" before he began surveying (Tr. 1513).

61.U. Mr. Rice also discovered that the survey bench marks, which had been set by FC, were not accurate. FC did not address the problem (AX 49; Tr. 1518-21, 1581, 1586-87).

62.U. Hardrives informed FC about the erroneous elevations immediately upon discovery. Ms. Hodges, FC's project manager, responded that the 0.8-foot discrepancy likely was an isolated problem and ordered work to continue (Tr. 303-05, 309, 1680-81).

63. Ms. Hodges was not an engineer and had not been involved in earth-work construction prior to joining FC (Tr. 3487).

64.U. Based upon his initial review of actual field elevations and those in the contract documents, Mr. Rice found that FC's

Digitized by Google

elevations were inaccurate by as much as 2 feet (Tr. 1522-24).

65.U. FC's internal memorandum of August 25, 1986, reported the discrepancies between contract elevations and those found by Mr. Rice (AX 67; Tr. 310-11).

66. Hardrives continued to notify FC of elevation problems as it slope staked and promptly sent FC copies of Mr. Rice's survey notes for each new Canal section (Tr. 311-13, 329).

67.U. FC also discovered significant errors in the elevations. In an internal memorandum of August 11, 1986 (AX 65), FC's Mr. Boston noted:

> After reviewing computer earthwork run for HoHoKam Main Canal, I found an error in canal invert elevation between Sta. 110+67.23 and Sta. 135+58. The grade shown on the plans is about 1.71 feet higher than the grade used in the earthwork calculations.
>
> It appears that a change was made to the plans after the computer run was made. The earthwork calc's are not adjusted for this change.

I believe the change in earthwork quantities would be significant enough to warrant new calculations and a plan/ spec revision.

68. FC had had pre-contract concerns, based upon its experience with other Government canal projects that had suffered from inaccurate aerial surveys. Despite those concerns, and despite its own check, completed the day after bid opening, which revealed elevation discrepancies greater than the 0.25-foot contract tolerance, FC did not tell Hardrives that elevations could be inaccurate throughout the Project until September 1986, when the contractor discovered a 4-foot discrepancy between actual and contract-supplied ground elevations (AX 458; Tr. 329-45).

69.U. By letters to Hardrives and the District of November 4, 1986, with copies to BOR, FC asserted that its consultant, Cooper Aerial Survey Co. (Cooper), bad not met accuracy requirements. The discrepancies ranged from 4 feet too low at station 430 to 2 feet too high at station 461 (AX 88, 89, 542; Tr. 310-11, 2150-51).

70.U. BOR and FC admit that some contract elevations were inaccurate throughout the Canal. About 4 percent were accurate; about 20 percent were within ± 0.25 foot, and about 69 percent were within 1 foot of actual elevations (AX 207; GX 478-N; c&a ¶ 39; Tr. 3162-65).

71.U. FC asserts that erroneous aerial surveys caused the elevation errors, which it concedes contributed to additional earthwork (Tr. 3547).

72.U. BOR did nothing substantial during construction to investigate the earthwork problem (Tr. 1679).

2. The Shrink Factor Error and its Effect upon Borrow Calculations, Haul Distances and Overall Planning

73.U. When a c.y. of earth in natural state is excavated, transported, and compacted, it usually becomes less than a c.y. Project site dirt was compacted naturally to about 85-percent density. The contract required "compacted embankment" to be compacted to 95 percent. Thus, more than a c.y. had to be excavated to fill a c.y. after compaction. Thus is the "shrink factor" (spec. 3.1.3; Tr. 355, 522, 2116-17, 2710-16, 3077-78).

74.U. In preparing the contract documents, FC used a shrink factor of 30 percent, equivalent to a cut/fill ratio of 1.43. Based upon this, the contract anticipated borrow at 409,684 c.y. (AX 594; Tr. 2718, 2720, 2723, 2725, 3318-19, 3513).

75.U. Prior to submitting Hardrives' bid, Mr. Hite, then its vice-president and civil division head, who signed and was in charge of the contract, discussed with one of his estimators that the contract's shrink factor seemed too high. The estimator stated that dirt to be excavated from borrow areas might be 50,000 c.y. less than indicated in FC's estimates. Anticipating an underrun, Hardrives priced borrow work without profit or overhead, to avoid losing money (Tr. 2098, 2106-07, 2117-18).

76. Mr. Blattner, with 45 years' experience in the construction industry, including significant experience with BOR, was offered by appellant and recognized as an expert by the Board. He would have expected about 15 percent shrink. Hardrives did not inquire about it pre-bid. In Mr. Blattner's opinion, while he and some contractors likely would inquire if they thought a shrink factor was erroneous, others would not, because it often is a matter of judgment. There is no evidence that any bidder on this Project inquired. Any pre-bid inquiries would have been directed to FC, which knew that the shrink was erroneous and thought that it had overstated its borrow estimate. It bad done so deliberately, without notice to bidders, as a "cushion," to avoid future change orders and administrative difficulties (AX 179; Tr. 1705-14, 1722-24, 1749-50, 2117-24,

©1993, Commerce Clearing House, Inc.

Digitized by Google

2728-30, 2732, 2898, 2923, 3107-08, 3443-44, 3492-94).

77. That shrink might be inaccurate would not put a contractor on notice that contract ground elevations were inaccurate (Tr. 1205, 2122, 2734-35).

78. During construction, as FC made new computer runs, it changed its reported borrow figure from the bid schedule amount of 409,684 c.y. to 628,614 c.y. while, internally, it estimated 532,000 c.y. Its post-contract analysis reported 494,046 c.y. BOR's November 20, 1991, post-contract analysis, which assumed FC's final survey quantities were accurate (disputed by Hardrives), computed borrow at 512,408 c.y. BOR's December 19, 1991, final quantities analysis, also relying upon FC's survey figures, applied a corrected cut/fill ratio and arrived at an adjusted bid schedule amount of 311,296 c.y. Thus, absent the other contract defects, Hardrives would have been correct that borrow had been overestimated in the bid schedule (AX 132, 174, 179, 605; GX 478 at quantum analysis and at Tab I; Tr. 3200-3204, 3235, 3277-3284, 3319, 3492-94).

79. Although MRT did not knowingly consider a shrink factor in estimating its own job costs, it used the contract estimate for borrow, which incorporated one (AX 502; *see* AX 594; Tr. 1920, 1959, 2900).

80.U. Mr. Duin, with a bachelor of science degree in civil engineering, with honors, and significant experience in the construction industry and earthwork operations, was retained by Hardrives in about January 1988, as a consultant. He was offered by appellant and qualified by the Board as an expert witness in estimating, construction, and engineering matters pertaining to the Project. In his experience, it would be prudent for a contractor to bid borrow work at cost if it expected an underrun. It would be balancing its bid to account for the incorrectly estimated quantity (Tr. 2681-2708, 2733-34).

81.U. In Mr. Duin's opinion, FC was obligated to adjust the shrink factor and to provide Hardrives with accurate quantities and information after the first balance point (Tr. 2743-45).

82.U. After the Project, FC figured shrink at about 23 percent, cut/fill at 1.3. At hearing, BOR calculated it at 18 percent, cut/fill at 1.226 (AX 132; GX 478 at Tab K; Tr. 2731-32, 3202, 3233-34, 3318-19, 3513).

83.U. At a predesign meeting, Mr. Corey, a founder of FC, had expressed the need for an accurate cut/fill ratio, but FC never provided Hardrives with an analysis of earthwork quantities using an accurate shrink factor (AX 23; Tr. 521, 1676, 3513, 3526-27, 3539).

84.U. Mr. Chapman, Chief of BOR's Arizona Projects Office's (APO) Major Claims Branch, acknowledged at hearing that FC's shrink factor was too high, and that this resulted in FC's providing Hardrives with misleading information (Tr. 2928-29, 4068-69).[3]

85. The borrow figures in excess of 600,000 c.y. that FC provided to Hardrives and MRT during construction were misleading (Tr. 4068-69).

3. *The Quarter of a Foot Lowering of Elevations*

86.U. In addition to random elevation errors and the faulty shrink factor, undisclosed, FC artificially had lowered all ground elevations in the contract documents by 0.25 foot to account for settlement by earthmoving equipment (AX 49, 67, 134, 458; Tr. 315-20, 325, 411, 1537-39, 2746).

87. Such an undisclosed artificial lowering is not common. It affects the accuracy of unit prices, pay quantities, and job planning. Mr. Anderson, APO's Chief of Engineering at Project time, could not recall any project where BOR had so lowered original ground elevations (Tr. 1623-24, 1724-25, 2746, 2890, 3082, 3090).

88.U. In Mr. Anderson's opinion, bidders should be notified about a lowering of existing ground elevations by 0.25 foot (Tr. 3090-94).

89.U. The specifications indicated that the contractor would be paid based upon volume of earth moved, measured between neat line (design line) and existing grade—not existing grade less 0.25 foot (*see* spec. 3.1.2; Tr. 318-20, 325-26, 3375, 3552).

90.U. The lowering affected pay quantities for excavation for canal and compacted em-

[3] BOR has objected to appellant's allegation that the contract's shrink factor was misleading, because Hardrives did not use that factor. However, BOR did not contest this proposed finding of fact. Also, although Hardrives did not rely upon the contract's shrink factor, per se, it did rely upon the contract representation that the given borrow quantity, and related cut/fill ratio, were indeed FC's (and, thus, BOR's) actual estimate and not deliberately misstated. The contractor also relied upon the given ground elevations and excavation quantities, and their relationship to borrow and to the nature of the work to be done.

Digitized by Google

bankment. The contractor had assumed it would be paid, based upon existing grade, for all c.y. moved and placed (Tr. 1724-26).

91. Even after Hardrives notified FC, by at least August 1987, about elevation discrepancies, FC did not disclose that it had lowered ground elevations by 0.25 foot (AX 67; Tr. 317-28, 1077-78).

4. *Slope Errors*

92. In addition to the other elevation errors, Hardrives found discrepancies in the designated slopes for canal embankment. FC attempted to correct the problem by plan and specification revisions (PSR's) 8 and 9, but Hardrives discovered numerous additional fill sections with discrepancies, totalling almost 20,000 l.f. of slope (AX 49; GX 5; Tr. 1535-37).

5. *Borrow Area C Not Available As Represented*

93. For Borrow Area C, near the Canal, the contract indicated that contractors could dig a 4-foot-deep hole to secure borrow, but a new owner acquired the property and only would allow MRT to excavate dirt by leveling the property and removing the top portion of soil, which required more work, time, and expense (AX 74; AX 172, Tr. 1864-67, 2801-02).

6. *Caliche*

94. During construction, caliche (hard, rock-like material) was discovered, mainly at two locations, which was considerably harder than contract indications. FC was notified upon discovery. The caliche could not be broken by finger pressure or by hand, without a tool. In one area, it stopped Valley Ditch's trencher, which had to be lifted from the Canal and relocated. FC directed over-excavation and removal of the caliche. Placement and corporation of additional material in the embankment was required before Valley Ditch could return the trencher. The remedial operation was concluded within 5 days. In the other area, Valley Ditch was allowed to pave over the caliche, but was able to trench only 282 l.f. on the day the caliche impeded it, compared to its average 1,229 l.f. per day (AX 82, 84, 86, 136, 141, 512G, 586; GX 2C at 72; GX 159A (10/15/86-10/21/86 and 1/27/87); Tr. 427-29, 504-14, 520, 545-48, 1276-79, 1333-34).

G. *Contract Administration Problems*

1. *FC's Treatment of Elevation Problems*

95.U. Before preparing contract documents, FC hired Cooper to perform aerial surveys to determine existing ground elevations. In its original May 1, 1984, proposal, Cooper agreed to conduct a high-level flight at 2,900 feet to produce aerial photographs and provide cross-sectional data accurate to within ± 0.5 foot. Photographs from such a high-level flight should not be used, however, to determine ground elevations due to their accuracy limitation (AX 3, 272, 458; Tr. 1594, 1599, 1601, 1603-04).

96. FC set ground control and called for the flight, which occurred on August 6, 1984 (AX 458; Tr. 1616).

97. FC requested 0.25-foot accuracy. Cooper stated that it needed to conduct lower flights. On August 8, 1984, 2 days after its flight based upon its May 1 proposal, Cooper submitted a proposal for a lower flight. FC did not approve it. Amidst FC and Cooper personnel changes and miscommunications over several months, FC instructed Cooper to determine existing ground elevations, although there had been no lower flight. FC faced deadlines and was in a hurry to get its plans approved (AX 6, 11, 14, 272, 458; Tr. 1595, 1598-99, 1604-11, 1615, 1627-28, 1635).

98. Notes of FC's December 11, 1985, design review meeting record:

> Fred C[orey].—Has not seen an aerial survey yet * * * within its specified accuracy. Company running into earthwork problems on aerial jobs such as Tonopah. Fred recommends to put burden of proof, that aerial surveys are not accurate for pay items, on the contractor. Put paragraph in specifications stating that contractor can get services of registered surveyor to shoot pay quantities before and after construction at his expense. Fred suggests that we need better accuracy than ± 0.5 feet. HoHoKam vertical accuracy is + 0.25 feet.

(AX 23; Tr. 1610, 1612, 1615).

99.U. Compounding matters, when Cooper had conducted the high-level flight, there had been about 2 to 3 feet of cotton along 4.6 miles of the Canal, which decreased the photogrammetric survey's accuracy (Tr. 1616-17).

100. FC had received advance warning from an engineering company that vegetative ground cover could prevent an accurate

©1993, Commerce Clearing House, Inc.

Digitized by Google

photogrammetric survey (AX 4; Tr. 1616-18).

101.U. After photogrammetric surveys, it is customary for designers to conduct ground surveys to confirm the accuracy of elevations determined by the photo surveys (Tr. 1620).

102.U. In March 1986, FC conducted a cursory field check at random locations, which showed ground elevations to be "somewhat erratic" (AX 272; 458, Tr. 1622).

103.U. On April 25, 1986, the day after bid opening and 3 months before construction began, FC found the elevations to be off by an average of 0.36 foot (AX 458; Tr. 3505).

104. Industry standard is that 80 percent of all elevations must be within the required accuracy (AX 458).

105.U. FC complained to Cooper that 84 percent of the survey points did not meet the contract's 0.25-foot vertical accuracy requirement; that 67.7 percent did not satisfy a 0.5-foot industry standard; and that discrepancies of more than 1 foot were not uncommon. FC and Cooper blamed each other (AX 133, 207, 272, 458).

106. FC's use of the aerial survey figures, failure to check them in a timely manner, and continued use of them after problems were revealed, were contrary to BOR's and industry's engineering standards (AX 458; Tr. 4051-53, 4059, 4061, 4065-66).

107.U. Mr. Babitzke, one of BOR's claims analysts, admitted that only 20 percent of the data points that he evaluated met the 0.25-foot contract standard (GX 478N; Tr. 3261-64).

2. *FC's Delays in Re-Surveying*

108.U. FC notified Cooper in September 1986, that the contract ground elevations were inaccurate. Cooper offered to resurvey, which would have taken a month. FC advised that it did not have time for that to occur (Tr. 1622-23).

109. FC began to resurvey in October 1986, starting east of about station 515 because MRT had completed the initial earthwork westerly (Hardrives and MRT worked from west to east). Thus, the only elevation data available west of station 515 was accumulated by Mr. Rice (GX 117; Tr. 235, 344-47, 351-52).

110.U. FC did not provide new elevations and quantities until January 20, 1987. By then, MRT had completed a substantial portion of the initial earthwork (AX 131; Tr. 361-62, 367-69, 1859).

111.U. BOR acknowledges that it should not have taken FC until January 20, 1987, to resurvey the Canal or to provide a revised computer run. FC's project manager Hodges felt that FC should have resolved the earth quantities problem (Tr. 1681-83, 1827, 4065).

112. Until January 20, 1987, MRT had been forced to build the embankments based upon the slope stakes and substantially inaccurate contract elevations (Tr. 362-64, 366-67, 473).

113.U. BOR admits that if it had been administering the contract and had received information that the elevations were inaccurate, it immediately would have conducted a ground survey and issued a modification, to minimize impact. Because FC was administering the contract, however, BOR would not assist unless FC so requested (Tr. 3085-89).

114.U. On March 26, 1987, FC informed Hardrives that the computer run provided on January 20, 1987, was inaccurate. FC provided another revision, but it also was inaccurate (AX 174; GX 91; Tr. 459, 1530-31).

115.U. It was in these revised computer runs that FC indicated that borrow would be in excess of 628,000 c.y., although it actually anticipated about 532,000 c.y. (see above and Tr. 3493-94).

116.U. FC complicated matters by indicating to the contractor that it was moving more borrow than it actually was moving (Tr. 2788-89).

3. *Payment Delays*

117. Hardrives, and thus MRT, were not always timely paid, in part due to FC. For example, FC was to prepare monthly vouchers for BOR, but relied upon Hardrives to do its paperwork for about a year, delaying matters (AX 161; GX 496; Tr. 440-46, 4267-68).

118. While payments were delayed, MRT was in dire financial straits after contract inaccuracies and changes had severely affected its work (AX 152, 154; Tr. 446, 475-79).

119. As of a meeting on February 9, 1987, Hardrives had expected retainage to be reduced to 5 percent. By March 2, 1987, it bad not been; FC said only that it would "get back to" Hardrives (AX 161; Tr. 443).

120.U. To sustain MRT, Hardrives tried to pay it in most cases immediately upon receipt of funds from BOR, even though the subcontract only required payment within 10 days thereafter (Tr. 1353-54).

Digitized by Google

121. Thoughout the Project, MRT's measure, by load count, of earthwork performed, did not match FC's computer run. MRT repeatedly asserted that it was moving more quantities than those for which it was being paid. When Hardrives protested use of the January 1987, computer run for pay purposes, FC threatened to hold its payments (Tr. 449-50, 474, 1870).

We address these issues further, below.

4. *Delays in Design Resolution*

122. FC and BOR issued 48 PSR's and required Hardrives to respond to every request for proposal (GX 4, 5; Tr. 548, 559-60, 2154).

123.U. FC told Hardrives that change orders would not issue until an acceptable pricing proposal was provided (AX 221; Tr. 560).

124. Early on, to attempt to speed matters, Hardrives responded to requests for proposals, although the contracting officer had not issued change orders (Tr. 549, 560-61, 2154-55).

125. FC rejected at least most of Hardrives' initial submissions. If FC did not accept a proposal, it took no action on the underlying engineering issue. If it did accept one, it tried to negotiate a "time and materials," "cost not to exceed" modification. If the work were completed for less than the ceiling, only actual costs would be paid. If there were excess costs, Hardrives would not be reimbursed. Also, it was to sign a complete release. Hardrives did not agree to such modifications. FC then issued unilateral undefinitized modifications providing that commencement of work constituted agreement to a price ceiling (normally a price first proposed by Hardrives). To obtain any adjustment, Hardrives was to submit a proposal within 30 days of receipt of the modification (see GX 4 at 28; Tr. 552-55, 2157, 2161).

126. On March 4, 1988, contracting officer Harding informed Hardrives that proposals had not been received or had not been sufficiently detailed. As of March 10, 1988, Hardrives had completed work described in several modifications and had not been paid. Aborted negotiations ensued. On April 20, 1988, after the Project largely had been competed, the contracting officer still sought proposals, stating that the release requirement had not changed (AX 396; GX 4 at 29; Tr. 2155-59).

127. The procedures and restrictions sought to be imposed upon Hardrives were atypical and unacceptable (Tr. 1705-1714, 1740-41).

128. Hardrives successfully had negotiated modifications and payment with BOR directly concerning the Kleck Road Turnout (Tr. 2158).

H. *Hardrives' and MRT's Attempts to Resolve Problems and Claims*

129. By letter to Hardrives of November 19, 1986, after FC had not resolved the earthwork problems known months before, MRT detailed the problems and their adverse impact upon its operations and finances. It foresaw the need to shut down shortly if compensation for changes were not negotiated and received immediately (AX 100; Tr. 384-88, 390).

130. By copy of FC's notification to the District, BOR was notified by at least November 4, 1986, of elevation inaccuracy, increased borrow, and excess cost problems. BOR met with FC concerning the problems prior to November 20, 1986. By letter to BOR of November 24, 1986, Hardrives cited the earthwork problems, their impact, forthcoming claims, and requested a meeting. One month later BOR asked FC to convene a meeting with Hardrives, the District, FC, and BOR "as soon as possible." FC did not schedule one until February 9, 1987. BOR did not attend because FC failed to notify it (AX 89, 101, 108, 119, 120, 326; Tr. 391-94, 435-37, 2135-37).

131. On January 2, 1987, MRT added a third shift. It eventually had to discontinue it because it could not afford it (GX 117; Tr. 475-76).

132.U. By the end of January 1987, Hardrives still had not been notified of FC's 0.25-foot elevation adjustment. It was notified orally prior to the February meeting, but given no explanation (Tr. 405, 409-11).

133. At the February 9, 1987, meeting, among other things:

a) Hardrives questioned the rationale of the .25 foot adjustment and the lack of notice.

b) Hardrives sought clarification of the .25 foot reduction's relation to FC's computer runs. FC stated that it had no practical effect, but that FC promptly would supply data about the reduction and latest computer run.

c) Hardrives stressed the need for cash flow to MRT; noted that Valley Ditch had had to demobilize due to the earthwork

©1993, Commerce Clearing House, Inc.

Digitized by Google

problems; and discussed problems with caliche.

d) FC first sought a VEQ proposal; Hardrives asserted that the problems amounted to a changed condition. FC stated that BOR was aware that there would be substantial quantity overruns and was urging FC to prepare a modification. Hardrives noted that it intended to file a claim, to protect its rights to interest, and to move matters along more quickly. FC stated that a claim would make no difference; it would work toward prompt resolution by modification.

e) FC conveyed its satisfaction with MRT's methods of operation.

f) To assist with Hardrives' and MRT's cash flow problems, and due to completion to date and known work overruns, FC said it would recommend that BOR drop retainage to five percent and ultimately to zero.

g) FC undertook promptly to secure payments for earthwork performed, upon receipt of information from Hardrives, with unresolved matters to be negotiated thereafter. Hardrives inquired how to submit information to effect the best resolution; FC did not direct a format.

h) FC stated that the December pay voucher had been released for payment and that the January voucher was close to release. FC recognized problems with slow processing and MRT's need for money.

i) FC noted that the meeting was being taped and that everyone would get a copy of the discussion.

The meeting had been amicable. Hardrives expected prompt resolution of problems and monetary relief. It requested a transcript, but was not given one until at least 2 months after the meeting, when it filed a Freedom of Information Act (FOIA) request (AX 134, 163, 181; Tr. 406-31, 444-45, 495, 2137-42, 2246-47).

134. On February 12, 1987, Hardrives sent FC its calculation of the requested pricing changes and time extension due to earthwork problems. FC rejected it as not in accordance with FAR requirements, noted that new computer run information now applied, and sought inclusion of a proposal from MRT. Hardrives undertook to submit a new proposal (AX 137, 142, 144).

135.U. On March 2, 1987, FC and Hardrives met to discuss continued problems; FC had not fulfilled prior promises (AX 161; Tr. 438-50, 457).

136. By letters to Hardrives of March 2 and 3, 1987, treated as a claim, MRT stressed the negative impact of the erroneous elevations upon its financial stability and that it might be forced to shut down within 15 days without relief (AX 152, 154, 159).

137. FC did not secure retainage reduction, did not provide data concerning the 0.25-foot adjustment, and did not expedite monthly payments (Tr. 2141). Rather, it blocked retainage reduction. When Hardrives on March 9, 1987, requested elimination of retainage, citing as security $424,076.27 retained to date, and payment and performance bonds, FC advised BOR not to reduce retainage, noting that, although earthwork progress was good, other work remained. FC concluded: "The balance of the work yet to be done is in the structures and pipe. We believe that the elimination of retention would put our client, [the District], at risk. We recommend that the retainage not be reduced at this time. The district concurs with this viewpoint" (AX 165). BOR followed FC's recommendation (AX 175).

138. FC opined that earthwork problems did not affect structures and pipe work (AX 165), but the entire record demonstrates that it was considerably affected and delayed (see also Tr. 466-67).

139. On March 10, 1987, invoking the contract's Administration of Funds clause, Hardrives notified the contracting officer that it believed that the value of work performed, plus the apparent value of outstanding change orders, modifications, and claims, would exhaust available funds within 30 days. Hardrives cited the risk of proceeding without a commitment of sufficient funds, and notified the contracting officer of its intent to cease operations on April 10, 1987, until sufficient funds were made available. By letter of April 2, 1987, the contracting officer responded that there were sufficient funds remaining in the contract as of that date and that work cessation would subject Hardrives to action under the Default clause (AX 176, 180).

140.U. To alleviate the financial impact of the erroneous elevations upon Hardrives, by letter of April 3, 1987, BOR instructed FC to issue a modification to increase performance time and to provide additional payments to Hardrives. FC did not do so (AX 185; Tr. 481-82).

141.U. On April 9, 1987, MRT submitted a "revised claim" to Hardrives showing in-

Digitized by Google

creased costs and requesting a 148-day extension (AX 190).

142. FC had stressed to Hardrives that all contract administration matters, including claims and disputes, were to be processed through FC. Frustrated with FC, however, Hardrives arranged for a meeting with the contracting officer, then Mr. Cain, the original one on the Project. The meeting occurred on April 9, 1987, among at least Mr. Cain; his assistant, Mr. Mayhew; Hardrives' representatives; and Mr. Franzoy of FC. All but the BOR personnel had attended the February meeting. Prior to the April meeting, Mr. Mayhew had informed Hardrives orally that BOR had reserved funds to resolve the earthwork problems. During the meeting, Mr. Franzoy disclaimed knowledge of the problems. The contracting officer acknowledged them and directed FC quickly to try to quantify the "earthwork bust" and to prepare a modification for Hardrives' review. The contracting officer expected it to exceed $1 million. Mr. Franzoy was instructed to contact Hardrives as soon as possible. Hardrives was assured that he would inform it about the value and timing of the modification by that afternoon, or no later than the next day (AX 192; Tr. 482-85, 2140-46).

143. Mr. Franzoy did not contact Hardrives or return its several calls. FC told Hardrives that he was in meetings, not to be disturbed. MRT then notified Hardrives of its insolvency due to defective contract documents and payment delays. It had continued under hardship, hoping Hardrives could resolve the problems through the meetings and expected modification. On April 13, 1987, Hardrives informed BOR that it had been forced to terminate MRT and that it would complete MRT's work "in as efficient manner as possible given the quality of the contract documents and direction we have received, to date" (AX 192; Tr. 487-89, 710-11, 2146).

144. On April 14, 1987, BOR notified Hardrives that it was FC's position that there would be no adjustment in payments. BOR alleged that it could not act without action by FC and did not issue the anticipated modification (AX 193; Tr. 490-92, 2147).

145. Mr. Cain and Mr. Mayhew, who had expressed understanding of Hardrives' and MRT's problems, retired shortly after the April 9, 1987, meeting (Tr. 493-94).

146.U. On April 15, 1987, Hardrives filed a certified claim for equitable adjustment in price and time due to the defective specifications and FC's failure timely to cure the problems (AF for IBCA 2375, V, Tab 6 at 7; Tr. 495).

147. On April 22, 1987, Mr. Ellis, now contracting officer, informed Hardrives that FC would contact it for information necessary to process its "proposal" and to expect a reply within 30 to 60 days after receipt of the information (AX 201). BOR requested that FC perform a technical analysis. FC alleged that Hardrives' claim was insufficient, did not meet the criteria for certified claims, erroneously was based upon "so called 'defective documents,'" and that a decision by the contracting officer on that aspect had to be rendered "prior to any serious analysis" (AX 213).

148. By letter to FC of May 19, 1987, BOR characterized Hardrives' claim as a request for equitable adjustment and stressed to FC that it was its responsibility to prepare a technical analysis, alleging that the contracting officer could not make a decision without one. FC requested a detailed breakdown of equipment, labor, materials, incidentals, overhead, and profit from Hardrives, which provided it on June 16, 1987 (AX 227, 229).

149. On August 17, 1987, Ms. Hodges submitted a "rough draft" to BOR, stating that the contractor was entitled to a time extension for earthwork overruns and payment for increased concrete, but generally denying Hardrives' claims. In graphic terms, BOR rejected most of the draft, noting that there were contract changes, and that the requirement for more haul had changed the nature of the work (AX 280; Tr. 3474-76).

150. Mr. Salisbury, Ms. Hodges' supervisor, was assigned to redo the analysis. He, too, was not an engineer. He drafted his analysis, dated November 23, 1987, with no firsthand knowledge of the earthwork problems. He concluded, *inter alia*, that it was "readily apparent" that the defective documents claim was "based on supposition, innuendo, and unsupported documentation." BOR did not approve of this draft either (AX 333, 334, 358; Tr. 3440, 3476, 3480-82, 3487).

151. The contract documents had been based upon some done for another CAP project by Mr. Salisbury, with no professional training (Tr. 3491-92).

152. FC's final analysis, by Mr. Salisbury, was dated January 28, 1988. He concluded, *inter alia*, that the VEQ clause applied and that the contractor was entitled to payment for extra borrow and for excavation and

©1993, Commerce Clearing House, Inc.

Digitized by Google

compaction costs (AX 132; GX 17; Tr. 3458-59).

153.U. The contracting officer prepared a draft decision for an Assistant BOR Commissioner's comments, which included the following:

> [Paragraph 8 states]: "There is a changed condition in that more material was excavated from borrow pits and hauled to embankments than could have been anticipated * * *" * * * The decision apparently confused the terms "changed condition" and "constructive change." Further, our review indicates that the Government's interests will not be best served by the use of the constructive change theory because this principle is equivalent to a condition of defective specifications. * * * Using a constructive change is tantamount to agreed with theory [sic] posed by the contractor * * *. As you are aware, the Government would be potentially liable for related costs incurred since the inception of the contract under the constructive change theory.
>
> It is recommended that your revised position be based upon [Type I] differing site conditions * * *.

(AX 446; Tr. 3473).

154. Three months later, by letter of September 14, 1988, to the Field Solicitor's office that tried these appeals, a disgruntled former Hardrives employee accused it of fraud, and no contracting officer's decision issued (AX 459; Tr. 4240). Our earlier opinions address the ensuing civil fraud case. In his June 6, 1991, rule in favor of Hardrives, dismissing the Government's case, United States District Court Judge Copple found the ex-employee devoid of credibility (*United States v. Hardrives, Inc.*, No. 90 CV-1656 (D. Ariz.), appended to appellant's 7/29/91 motion to lift stay).

I. *Elevation Problems' Impact Upon Earthwork*

155. The erroneous elevations, in particular, had a profound impact upon MRT's and Hardrives' abilities to plan and complete the job efficiently. At most locations, the elevations were lower than indicated in the contract, meaning canal excavation was less; more borrow was required; haul distances were longer; and the planned direction of borrow hauls changed; requiring backtracking and hauling dirt to unanticipated places. Areas where elevations were higher than indicated reduced borrow, but were intermingled randomly with areas requiring more borrow, and could not be predicted. No significant area remained unaffected by the erroneous elevations (AX 88, 100; GX 478-N; Tr. 348-357, 372-74, 384-88).

156. Neither Hardrives nor MRT prepared a mass diagram, but it is clear from the entire record, including expert testimony, that they had planned the job based upon the contract information and that a mass diagram was not necessary to estimate haul lengths and costs (see Tr. 1047-48, 1390, 1716, 2751-53, 2787).

157. Hardrives and MRT could not analyze or plan earthwork once underway, because FC and BOR never gave them accurate elevation information or quantities. Beyond the immediate areas staked by Mr. Rice, they could not determine balance points, haul lengths, borrow needs, most efficient source, amount, and timing of pre-wetting, equipment needed, other aspects of the work, or performance times (Tr. 175-76, 347-48, 364, 369-72, 380-82, 417, 473-74, 1682, 1863, 2149-50, 2181, 2919-20).

158.U. BOR admits that it was not Hardrives' responsibility to conduct new engineering surveys and recalculate quantities after the erroneous elevations were discovered (Tr. 1682-83).

159. When the earthwork first fell behind schedule, Hardrives deployed an additional project manager, but without accurate information, it was unable to evaluate acceleration, additional workforce, equipment or takeover options (Tr. 1201-03, 1729, 1733-34, 2183-86, 2803, 2814).

160. BOR's Deputy Construction Engineer and its chief claims analyst admit that lack of accurate information on ground elevations would adversely affect Hardrives' ability to plan (Tr. 3095-97, 4191-92, 4219).

161.U. Mr. Canez, a civil engineer with extensive experience at BOR, who served as its inspector and its only representative somewhat regularly on site, acknowledged that a discrepancy as little as one-half foot in elevations would be a serious problem and eliminate the contractor's ability to balance the material (Tr. 1642-49, 1669).

162. Mr. Canez agreed that problems become more difficult when a bust exceeds one-half foot and even greater when discrepancies are inconsistent, as here. Discrepancies of this magnitude change significantly the contractor's haul sources and deposit sites (Tr. 1670-71).

Digitized by Google

163.U. FC never informed Mr. Canez that the busts were as great as 4 feet too high, and 2 feet too low (Tr. 1670-71).

164.U. During the Project, Mr. Canez was not aware that FC had lowered original ground elevations by 0.25 foot. He agreed that this would make a difference in earthwork quantities and payment due (Tr. 1678).

165.U. Despite the changes in the earthwork operation, Hardrives was still being paid at the original unit price for borrow (Tr. 403).

166. Based upon the entire record, including expert testimony, and testimony by BOR's personnel, appellant has proved that the earthwork fell behind, and the delay could not be remedied by the contractor, due to the considerable problems and additional work encountered by MRT and Hardrives because of contract inaccuracies and FC's faulty contract management, not because of deficiencies in MRT's or Hardrives' operations. Although MRT planned to use more scrapers and average more scraper hours per day than it was always able to do, and there were some equipment and weather delays, as in most projects, neither FC nor BOR criticized MRT's earthwork operations, nor suggested that it alter its methods, even when earthwork fell behind schedule. FC's field personnel complimented MRT. Mr. Canez was not critical of Hardrives' or of MRT's operations and efforts. He was critical of FC. BOR has not provided persuasive, competent, countervailing evidence that MRT or Hardrives would not have been able to complete the job on time even if there had not been the numerous delay-causing problems attributable to FC and BOR (*see* AX 175, 190, 533, 543; GX 117, 118, 478, as amended; Tr. 458, 465-66, 493, 1642-49, 1657-58, 1804, 1808-11, 1813-14, 1935-36, 1949-50, 2142, 2180, 2817-22, 2917, 3185, 3380, 3401, 4318-24).

J. *Trenching and Lining Problems*

167. Although Valley Ditch had planned to complete trenching and lining in mid-December 1986 to January 1987, and its price had assumed uninterrupted work, it was unable to complete work until about June 16, 1987 (AX 242, 541; GX 159B, 478-H; Tr. 522, 531, 1267, 1270-71, 1325).

168. Due to the delays experienced by MRT, lining caught up with it on November 25, 1986. Valley Ditch had to demobilize its paving that day, which was shut down until January 14, 1987. It performed some machine testing and trenching during the week ended December 5, 1986, then had to shut down until January 6. It did not know when it could re-start and had 10 pieces of equipment idle on site (AX 242, 541; GX 159A, 162; Tr. 383-84, 405, 717-18, 720-21, 1094, 1271-72, 1280, 1283, 1292, 2150).

169. Valley Ditch remobilized and began trenching on January 6, 1987. Lining started on January 14. On January 28, it had to demobilize again because it had caught up with the earthwork. On March 30, it began readying its equipment for further operations. In the interim, it had used some on another project. It began trenching again on April 20, 1987, and lining on April 23. It would not have been efficient or cost-saving for it to return sooner and work piecemeal as earthwork permitted. Lining was completed in June 1987 (AX 242, 541; GX 159A, 162; Tr. 522, 718, 721, 1094-97, 1205-06, 1267, 1270, 1272-76, 1282-84).

170. Valley Ditch's owner planned to retire in 1987 and intended the Project to be its last job. Due to Project delays, he was forced to keep its home office open longer than planned (Tr. 1303-04, 2479).

171. There were some Valley Ditch equipment breakdowns and adjustments but none shown to have delayed completion of its work. It had been able to meet its work completion estimate on every other job and never had been late (GX 159A&B; Tr. 1306).

172. In May to mid-June 1987, trenching and lining, particularly lining, were the critical activities on the job (AX 527; Tr. 1218).

K. *Impact Upon Structures*

1. *Delays Attributable To Earthwork*

173.U. Excavation was beyond a structure's dimensions; Hardrives built forms to shape the structure; installed reinforcement steel; poured concrete; stripped the forms to be used at another location; backfilled; and hand-placed lining if required to connect the structure with machine-placed lining (Tr. 1987-90, 2001-03).

174 .U. Hardrives planned to have its various structures crews follow the lining crews as closely as possible, starting with an excavation and pipe crew. Once that crew progressed, Hardrives would organize carpenter, rebar, and pour and placement crews (Tr. 2005, 2071-72).

175. The structures crews had prior experience with irrigation projects, and with the types of structures involved here. FC's on-site inspector Stanley stated that "they did very good work, very good work" (Tr. 3435).

©1993, Commerce Clearing House, Inc.

Digitized by Google

Hardrives was not able to develop or use the specialized crews as planned. Several times it hired additional people for the crews but had to lay them off due to delays in trenching and lining and in resolving design problems (Tr. 534-36, 1108, 2006-07, 2092).

176. Several times lining had been completed past a structure's designated location, but construction was not begun immediately. BOR did not prove Hardrives responsible for the delays (GX 159A&B, 161, 519).

2. *Delays Due To Design Problems*

a. *Miscellaneous*

177. Throughout, defects in structure specifications prevented uninterrupted construction. Hardrives was not able to sequence its operations, build its crews to anticipated size, or maintain continuity (Tr. 526, 2032, 2034, 2051-52).

178.U. For turnouts to divert water from the Canal, stationing on the drawings did not match farmers' existing field ditches (Tr. 2046).

179.U. There were elevation discrepancies from one drawing to another and structural dimensions that did not match (Tr. 526-527).

180. In addition to the erroneous elevations affecting earthwork, invert grades shown on FC's January 12, 1987, computer run did not match plan elevations at 27 locations (AX 324; Tr. 1529, 1531-33).

181. While forming and pouring broken back structures, Hardrives found that FC had miscalculated concrete required. Hardrives poured as much as 15 more yards per structure than had been indicated. This increased its cost, including due to a $2 per c.y. price increase for concrete ordered after March 15, 1987 (Tr. 522-525, 2007-11).

182. Hardrives notified FC whenever it encountered discrepancies in structure specifications (Tr. 527).

183.U. Typically on jobs of this size, the engineer's field representative has authority to resolve minor discrepancies within a day. Here, 50-75 percent of the minor structure problems could have been resolved in the field. However, FC's field personnel had no authority and had to solve its FC's main office, which took several days or weeks to provide a solution. Ms. Hodges stated that she had all the responsibility but none of the authority (Tr. 528, 1112-14, 1211-16, 2020-22).

184.U. Ms. Hodges' authority concerning modifications was simply to request proposals from Hardrives. It was her understanding that, even if no change order issued, BOR could demand a proposal from Hardrives before any extra work would be ordered or paid (Tr. 1818-20, 1822).

185.U. Mr. Canez was critical of FC's staffing and administration of the Project, including Ms. Hodges' lack of authority. At times, FC did not have an engineer available to supervise construction (Tr. 1658, 1662-67).

186.U. Because Hardrives did not receive timely responses from FC, it had to wait for instructions, or to move its crews inefficiently to other structures. Mr. Rice continuously had to resurvey structure locations because Hardrives was unable to build when first surveyed due to contract document problems (Tr. 530, 713-14, 1214-15, 1217, 1540-42).

187.U. When various structures problems arose, FC, in many instances, asked Hardrives to design and price a revision to resolve the problems (*see, e.g.*, Tr. 2052-54).

188.U. The structures delays affected MRT's ability to complete the final grading around the Canal and structures (Tr. 1900-1901).

189.U. In its June 16, 1987, claim letter to FC, Hardrives noted that the number of PSR's had reached 48 and that Hardrives could not complete the construction until FC completed the design (GX 6-D).

190. The inefficiencies caused by Hardrives' inability to establish its specialized structures crews and to maintain its as-planned schedule were not readily quantifiable (Tr. 531, 1217).

b. *O & M Road Blocked*

191.U. As designed, a structure at station 670 would have blocked part of an O & M road used by another irrigation district. Mr. Rice found the error. Hardrives immediately notified FC and suggested moving the structure by about 12 feet, at no cost. However, FC instructed Hardrives to install it as designed (AX 587; Tr. 567-72).

192.U. Hardrives installed the siphon as directed, but did not install the structure because the irrigation district discovered the blocking problem and notified FC. FC issued a PSR in November 1986, containing two alternative designs (GX 5 at Tab 39; Tr. 572-75).

193.U. On February 10, 1987, FC issued PSR 39-A, instructing Hardrives to do what it originally had proposed, but not until it had submitted an itemized proposal for a

Digitized by Google

modification. On February 19, 1987, Hardrives submitted its proposal in the amount of $14,729.92, containing detailed breakdowns of all aspects of work. Until the structure was completed, water could not go into the Canal. Thus, as of February 1987, apart from other problems, the contract could not be completed because Hardrives was waiting for instructions from FC regarding station 670. As of July 27, 1987, Hardrives had not been instructed to proceed and no change order had issued. BOR transmitted Modification 16 for PSR 39-A to FC on August 17, 1987. It did not include an extension of time and contained a release unacceptable to Hardrives (AX 143; GX 4 at Tab 16; Tr. 583-99).

194. Except for disputed clauses (including a notice that there was no guarantee of funds), Modification 16 was based upon a July 27, 1987, agreement with BOR that Hardrives would do the work for $10,231.27. The parties had left any time extension as "disputed" until the actual time was determined (GX 4 at Tab 16; Tr. 591-93, 595).

195. On December 14, 1987, replacing Modification 16, BOR issued Modification 27, a unilateral change order to complete the work for $10,231.27, plus overhead. It did not contain the release clause, but still contained the disputed funds clause (GX 4 at Tab 027; Tr. 603-04).

c. *PSR 19*

196.U. Hardrives was not provided guidance concerning changes to five broken back structures. When it began constructing one at station 722, it discovered a discrepancy in the specifications and conferred with Mr. Canez as to whether broken back or check and pipe inlet structures were required [4] (Tr. 2013-14).

197.U. On July 29, 1986, FC transmitted PSR 19, deleting the five broken back structures and replacing them with check and pipes, describing the changes as a "clarification." Hardrives informed FC that it considered PSR 19 a compensable change (AX 55; Tr. 532-33, 605-10).

198. Mr. Locke had received PSR 19, but his crew had began constructing the slab base for a broken back structure at station 722+40, before he notified them to stop. He had reached other crews to instruct them not to do PSR 19 work (AX 512 M; Tr. 1247-48, 2013-14).

199.U. FC eventually agreed that PSR 19 was a change and, by letter of December 11, 1986, asked Hardrives to submit a proposal by December 15. BOR recognized that the change was due to inadequate or defective specifications (AX 115, 290; Tr. 533, 610-11).

200.U. On February 19, 1987, Hardrives sent its proposal to FC with a breakdown of costs for each structure. It took until then because the request had come at Christmas time and it had to contact suppliers, who did not respond until after the first of the year (AX 145; Tr. 533, 612-15).

201.U. After submitting its proposal in February, Hardrives raised PSR 19 at every weekly meeting throughout the rest of 1987 (Tr. 621).

202. FC admits that it had no sense of urgency about resolving the check and pipe issue (Tr. 3458).[5]

203.U. FC did not forward the proposal to BOR until March 9, 1987 (AX 160; Tr. 615).

204.U. Between February 19 and May 12, 1987, Hardrives did not receive actions to proceed with the PSR 19 changes; FC had notified it not to do so until a modification issued (AX 56, 221; Tr. 617-18).

205.U. In May 1987, FC told Hardrives to revise its price as too high. Hardrives suggested various changes to FC's design of the check and pipe structures to lower their cost (Tr. 533, 618, 622).

206.U. As of June 2, 1987, FC still maintained that Hardrives had to revise its price before it would authorize the work. On June 4, 1987, FC requested another proposal (AX 55, 245; Tr. 619-22).

207. On September 30, 1987, FC provided a new set of drawings with Hardrives' suggested changes. On October 20, 1987, after receiving pricing from suppliers, Hardrives submitted a revised proposal at a price of about $47,011 and a 25-day performance time (AX 306, 314; Tr. 533, 622-25).

208.U. Mr. Canez' weekly report for September 24-30, 1987, indicates that, as of the end of September, the structures were 95 percent complete and Hardrives was waiting for direction on the five check and pipe inlets (AX 519; Tr. 3522-23).

209.U. Mr. Canez' report also states that FC discovered that two turnouts had been

[4] With a broken back structure, water flows directly from the canal through the inlet. A check and pipe inlet contains internal weir walls to slow and control the flow of water (Tr. 564-65).

[5] Mr. Salisbury opined that the contractor had no sense of urgency either, but he was not competent to testify about the contractor's views and the great weight of the evidence is to the contrary.

©1993, Commerce Clearing House, Inc.

Digitized by Google

constructed with one gate, whereas the drawings detailed two (AX 519).

210. Hardrives' Mr. Matheny had interpreted a combination of drawings and a table to require one gate. Although he had seen a drawing depicting two, the drawings had been inaccurate in that pipe required for two structures had been switched, and Mr. Matheny judged that they likely were inaccurate in depicting two gates when the tables appeared to depict one. Mr. Matheny did not know what any shop drawings submitted to FC had depicted and did not inquire of FC or BOR about gates prior to construction. During the work, in May 1987, inspectors did not object to the one-gate installation. Mr. Matheny later found that he had an unused matching gate or gates and raised the issue. On September 30, 1987, Hardrives was direct to install two gates, which FC and BOR interpreted the drawings to require (AX 357, 408 at 4-5; Tr. 646-47, 1658, 1660-61; 2033-34, 2036-45).

211. By October 1987, trenching and lining (but for several hundred feet of hand lining) and major structures, including minor cleanup, were complete, except for the five check and pipes. A broken back transition, four small weirs, and other miscellaneous work (including modifying the two turnouts), also remained, some of which had been scheduled deliberately for Project end (AX 343, 378, 519—Canez weekly report 11/16-11/19/87, attch.; GX 2C at 54; GX 161, 520; Tr. 627, 3711-12).

212.U. FC knew that PSR 19 and the five check and pipes had to be done for Hardrives to complete the Project, but Hardrives had not received the change order or instructions to build. FC stressed that it was not to work on PSR 19 until FC issued a modification. Hardrives had completed all adjacent concrete lining (except hand-placed), siphon installation and outlet structures. Cleanup and finish grading were hampered because it had to avoid the areas where the check and pipes were to be placed. Finishing operations, including O & M road earthwork, would have been more efficient if Hardrives had been able to begin at one end of the Canal and proceed continuously to the other (AX 143; Tr. 608-10, 627, 711-12, 1119-20).

213. While waiting for PSR 19, Hardrives had skilled personnel doing unskilled labor, paying their skilled rates, so they would not seek other employment (Tr. 654-55, 1207-08, 2054-55, 2062-63).

214.U. On November 30, 1987, BOR directed FC to issue an undefinitized modification on the check and pipe structures (AX 338).

215.U. On December 4, 1987, Hardrives met with BOR and FC to discuss Project delays. It informed BOR that it would be forced to demobilize on December 23, if it did not receive direction. On December 4, FC sent BOR an undefinitized modification draft; FC's engineers estimate, done in September 1987; and Hardrives' October 1987, proposal for the five structures (AX 340, 343; Tr. 602, 626-29).

216.U. On December 11, 1987, the contracting officer, then Ms. White, signed undefinitized, unilateral Modification 28; on December 14, BOR sent it to Hardrives (AX 347; Tr. 628-29, 1117).

217. Modification 28 contained $47,011 and 25-day price and time ceilings, the same proposed by Hardrives nearly 2 months earlier. The Modification did not increase reserved funds. If Hardrives began work, it agreed to be bound by the modification's limitations; if it disagreed, it was not to begin and was to notify the contracting officer (AX 314, 347; Tr. 630-31, 1117).

218. On December 17, 1987, Hardrives informed the contracting officer that it was unable to agree because the overhead estimate in its proposal was inaccurate and dated and field overhead alone for the 25-day period would exceed the amount of the modification. It offered to submit a revised estate. It also objected to the lack of additional funding, noting that, in spring of 1987, when it had become clear that the cost to complete would exceed funds reserved, it had been assured of more funding and had relied upon that in staying on the job (AX 350).

219. From the outset, Hardrives had objected to the release, "No change In Reservation Of Funds," and "Contractor's Agreement To Limitations" clauses contained in proposed modifications, because it was concerned about the impact of the job changes, about giving up claims, and about performing extra work at its own risk (Tr. 2162-65).

220.U. BOR sent Hardrives unilateral, undefinitized modification 30, dated January 5, 1988, to replace modification 28, with the same price and time ceilings, albeit subject to overhead audit. It still contained the "Contractor's Agreement to Limitations" and "No Change In Reservation Of Funds" clauses (AX 366; Tr. 632-33).

Digitized by Google

221.U. BOR admits that Hardrives did not receive clear direction on the five check and pipe inlets until January 22, 1988 (when BOR issued a cure notice, below) (AX 602; Tr. 4212).

222.U. Structures work was not completed until spring 1988, because Hardrives had to await instructions for the five inlets (Tr. 712-13).

223.U. Ms. Ramirez, BOR's technician, admitted that it could issue unilateral modifications. Sometimes the contracting officer had authorized them for a negotiated price. When Hardrives filed its appeals, then contracting officer Harding decided not to issue any more unilateral modifications, although Ms. Ramirez had wanted to do so (Tr. 3604-05, 3613, 3647).

224. Although he preferred the "request a proposal route," and that the contractor do the paperwork and agree to cost in advance, BOR's Mr. Anderson acknowledged the considerable importance of resolving changes and modifications as soon as possible and that BOR could issue unilateral modifications directing work, with settlement paperwork to follow. He also admitted that BOR yielded virtually all responsibility for construction and problem management to FC and determined not to intervene unless FC so requested (Tr. 3087-88). The entire record establishes that FC was inordinately slow, and failed to manage the structures problem originating with its defective specifications, and that BOR was slow to address it.

L. *Cure Notice*

225. On January 22, 1988, BOR issued a cure notice, identifying 81 items that it considered critical to March 1, 1988, water deliveries and 52 items not critical but required. Hardrives was to respond satisfactorily or the contract might be terminated for default (AX 374; Tr. 641-42).

226.U. Hardrives responded to the cure notice on January 29, 1988, addressing each item listed (AX 378; Tr. 641-42).

227.U. The first items were the five check and pipes, pending since August 1986. Hardrives had received unilateral modification 30 for them only 2 weeks before the notice (AX 338, 343, 366; Tr. 633-35, 642-43).

228. For the modification, Hardrives had had to submit rebar drawings to FC for approval. It had done so in late December 1987, to January 1988. It did not receive approval, or of rebar drawings for the broken back outlet at station 670, another cure item, until January 27, 1988, after the cure notice (Tr. 643-45, 1117-18).

229.U. When the cure notice was received, the remaining structures were on the critical path (Tr. 666, 1108).

230.U. The other cure items (1) were under construction and completed within days after the notice, (2) had been accepted by FC and now were said to be defective, (3) were incidental to the five check and pipes and the broken back outlet at station 670, (4) related to storm damage at the end of 1987, (5) were contract changes, (6) already were complete, (7) involved testing best left to Project end, and (8) were miscellaneous minor items such as trash racks and ladders that Hardrives planned to install last to minimize vandalism (AX 393; Tr. 260, 642, 645-666, 723-26, 1125).

231. When Hardrives received the cure notice, which it considered its first unencumbered directive to complete work, in order to finish the five check and pipes in time, it had to build them at once, rather than sequentially as planned, resulting in five times the material costs for forming, extra backhoes and other equipment, and overtime (Tr. 641-42, 715, 717, 892, 2066-68).

232. The Project was accepted as substantially complete on March 17, 1988, 373 days after the March 10, 1987, due date. Hardrives accepts responsibility for 3 days' delay due to embankment repairs. On April 28, 1988, BOA decided to release the remaining $200,000 retainage. We have not been directed to any evidence that liquidated damages were assessed (c&a ¶ 34; AX 433; GX 478 at Tab A).

M. *Criticism Of FC*

233. BOR has criticized FC's specifications for the District's CAP water system in general, finding them error-prone (AX 17, 361, 466).

234.U. An Interior Department Office of Inspector General (IG) audit of BOR projects where A/E's such as FC had drafted the specifications and managed the project, found potential conflicts of interest and management and contract problems, including failure promptly to rectify deficient specifications and lax control over payments. this contract, the IG report (AX 361) stated:

> Deficiencies in the specifications * * * could add about $1.042 million to the cost of the [Canal]. Elevations used by [FC] to write the excavation specification (originally estimated at 409,684 [c.y.]) were in-

©1993, Commerce Clearing House, Inc.

Digitized by Google

accurate and resulted in an underestimate of 201,195 [c.y.] (50 percent) of material for the canal * * *. The construction contractor considered such a significant difference to be a change of conditions instead of an increase in quantity * * *.

According to the [COTR], [BOR] will likely pay some additional amount on this claim. However, we believe that a determination of [FC's] liability for deficient specifications should first be made prior to any payment for this deficiency. Having the same consultant engineer that designed the deficient specifications also perform contract administration is not conducive to an objective resolution * * *.

235. BOR has assessed that FC administered the contract poorly. IG Auditor Macy's report of a March 29, 1988, meeting among auditors and contracting officer Harding records:

Art [Harding] stated that [FC] wrote the contract specifications and served as the on-site construction engineers directing the work. At times, BOR had no representatives at the job site and felt that this was a mistake. * * * Art said that BOR agrees that [FC] did a poor job of administering the contract * * *.

(GX 38 at Tab A-7-2 at A-7-13).

236.U. BOR's claims analyst Chapman admits that processing change orders through FC, the District, and BOR was cumbersome and that having FC administer the contract was not conducive to objective claims analysis. BOR no longer enters into such agreements (c&a ¶ 30; Tr. 4090-92, 4096).

237. Judge Copple found that FC had a double conflict of interest.

N. *Delay Attributable To BOR*

238. BOR's challenge to Hardrives' proof was not persuasive. BOR did not offer expert witnesses. The testimony of its analysts was diminished by the fact that, except for a last minute deposition of Mr. Duin, BOR did not conduct discovery and relied principally upon material gathered in the failed Department of Justice (DOJ) fraud case. BOR's key analysts did not review the district court trial and deposition test of Hardrives' witnesses and did not have personal, contemporaneous, knowledge of the job. They relied upon information supplied by FC, which they did not subject to close scrutiny, undermining the objectivity of their work. Some of their quantum and other exhibits changed significantly during and after hearing. Mr. Babitzke, BOR's principal spokesman on earthwork, relied in part upon material he had prepared to advance DOJ's case, further undermining its objectivity (see, e.g., Tr. 2941-42, 3084-85, 3162, 3172, 3177, 3181, 3187, 3205, 3209-13, 3215-23, 3249-50, 3269, 3297-3301, 3327-29, 3331-32, 3336-37, 3345-46, 3987, 4125-26). Ms. Hodges' testimony was very limited and of little impact, except to confirm her lack of authority to resolve problems. We did not credit the testimony of FC's Salisbury and Franzoy due to their obvious bias. Although scheduled, BOR did not call MRT's former principal, Mr. Tripp. No contracting officer testified.

239. Based upon the considerable evidence of record, we find that the earthwork and structure specifications were defective. Hardrives relied upon them in evaluating and submitting its bid. It reasonably believed, based upon the contract information, that borrow had been overestimated when, in fact, it had been greatly underestimated. MRT also relied upon defective specifications in bidding and planning its work.

240. Upon weighing all of the evidence, the Board accepts the contractor's proof, including, but not limited to, the testimony and analysis of: its project manager Locke, whom Judge Copple found to be "totally credible" (6/6/91 ruling), as do we; Mr. Hite; structures supervisor Matheny; surveyor Rice; Hardrives' president, Mr. Hall; MRT's former principal, Mr. Acreman; Valley Ditch's Mr. Crabtree; and appellant's expert witnesses, Mr. Duin and Mr. Blattner. Each of these gentlemen was credible, persuasive, and backed by documentary evidence, as well as by the corroborating records and credible testimony of BOR's Mr. Canez. That proof establishes that Hardrives could have completed the Project essentially on time but for the earthwork and structure problem resulting from defective specifications, FC's and BOR's failures to respond timely or appropriately, and other contract misadministration. Hardrives was delayed by 370 days through no proven fault of its own. Of the 370 days, the Board accepts expert Duin's allocation of 149 days to earthwork problems and 221 days to trenching and lining, structures and mismanagement delays (AX 527; Tr. 2448, 2826-2848, 4323).

O. *Non-Delay Damages*

1. *Hardrives' Accounting System Was Good*

241. Each foreman completed a daily job cost report identifying work performed, all employees on the job, their craft codes, pay rates, and all hours worked. Each craft code

Digitized by Google

and activity had a different cost code. The daily reports also identified each piece of equipment used by a particular crew. This information was entered into Hardrives' accounting system weekly (AX 495; Tr. 731, 737-39, 2257-61).

242.U. Hardrives and its subcontractors also prepared certified payrolls identifying the various employees, hours worked, and pay rates. The payrolls were submitted to BOR weekly (Tr. 2263).

243.U. All material and equipment rental expenses were accounted for and processed as they were received (Tr. 2269).

244.U. Hardrives also accounted for all fixed overhead expenses for its Arizona operations, including salaried supervision, support equipment, living per diems, office yard expenses, contracted services, and incidentals. These expenses represented 14.41 percent of direct Project costs. The auditors found Hardrives' field overhead rate to be 17.8 percent (AX 521 at Tab J; GX 33 at 5-6; Tr. 2177-80, 2291-2310, 3927).

245. One auditor told Hardrives' president that its system was comparatively sophisticated and its books as good as any and better than most (Tr. 1356).

246. Hardrives' Chief Financial Officer (CFO), Mr. Sinjem, is a licensed certified public accountant with a fine academic background including a degree in accounting, with honors, and considerable auditing and accounting experience (Tr. 2248-56). His testimony was credible and persuasive, as was that of Hardrives' other witnesses concerning Hardrives' accounting system.[6] Based upon the testimony and documents of record, we find that Hardrives had a good accounting system.

2. *Cost Segregation Was Impracticable*

247. Hardrives has attempted to segregate costs when possible. However, despite its good accounting system, it was unable to segregate most costs or to attribute specific increased costs to specific earthwork and structure problems. This is because FC defined the job improperly originally, it changed repeatedly, and the changes, problems, and costs were intertwined (GX 38 at Tab A-7-2 at A-7-12; Tr. 1730, 1733, 1767-68, 1895, 1902-03, 2056, 2060-61, 2191-93, 2414-18, 2606, 2611-12, 2627-28, 2658, 2273-74, 2811, 3496, 4278-79).

248.U. The contracting officer recognized the difficulty in determining the impact upon Hardrives. He commented to the auditors: "BOR is completing an analysis of Hardrives' work, and alleged inefficiencies to be used in settlement of the claims. However, this is very difficult to do since BOR changed the contractors [sic] excavation requirements and the original method of work" (GX 38 at Tab A-7-2 at A-7-12).

3. *Hardrives' Bid Was Reasonable*

249. Hardrives' bid was only 9.3 percent lower than the second lowest bid and was 3.3 percent higher than BOR's estimate. It was based upon estimates compiled by two estimators. The chief estimator, who testified at hearing, was a registered professional engineer with many years of experience. There is no evidence that BOR questioned the bid contemporaneously. Mr. Duin's expert analysis, which the Board accepts, also establishes that the bid was reasonable, and we so find (AX 488, 540; Tr. 232-34, 1378-83, 2851-52, 2869, 3622).

250.U. Based upon its estimate and bid submitted, Hardrives expected the job to be profitable, by as much as $1 million (Tr. 1441, 2128).

251. BOR has not controverted successfully appellant's evidence that its individual bid prices were reasonable, and logically based, and we so find (AX 490, 502; Tr. 1378-98, 1720-21, 1737-38, 2031, 2065).

4. *Hardrives' Total Cost Calculations*

252. Judge Copple found that the Interior Department's IG auditors, aware of the civil fraud investigation, and encouraged by the contracting officer to minimize costs and to find claims overstated, because BOR believed it would be subject to liability, were unlikely to have approached their job objectively. The testimony and documentary evidence presented at hearing, including that the auditors were participating in the Government's investigation and that the audit reports were prepared in that context, lead us to the same conclusion. Also, although, prior to its exit conference with the auditors, Hardrives requested a copy of the draft audit report, they did not supply one for review and comment. Ultimately, Hardrives obtained a copy of the audit report only through a FOIA request. Further, the auditors who conducted the audit and testified

[6] BOR's post-hearing allegations as to its "belief" that the daily cost reports are not originals and were prepared by Mr. Sinjem for hearing, are untimely, unsubstantiated, and contradicted by the credible testimony of appellant's witnesses.

©1993, Commerce Clearing House, Inc.

Digitized by Google

at hearing were not certified public accountants. Both took, but neither one passed, the CPA examination. Due to all of these impediments, we give the audit report and auditors' testimony little relative weight (GX 38 at Tab A-7-2 at A-7-8 A-7-15; Tr. 1359-60, 3862, 3867-78, 3898-3907, 4006, 4261-62).

253. In presenting its total costs, appellant used the daily job cost reports and certified payrolls. It summarized the components, including labor, equipment, materials, subcontractor expenses, various overhead, and other markups, in AX 521. In AX 522, it gave day-by-day breakdown of the labor and equipment hours depicted on the daily progress reports and certified payrolls, summarized on a monthly basis in AX 521 (Tr. 2264-731).

254.U. To calculate its labor costs, Hardrives used a labor burden rate of 32.53 percent of the actual wage rate. This represents FICA and unemployment taxes, general insurance costs, workers' compensation, and any other benefits required by law, and was confirmed by the auditors (AX 521 at Tab D-1; Tr. 2286-87).

255. Hardrives asked BOR to waive the portion of the Contractor Proposals clause (Finding of Fact (FF) 29c.) limiting a contractor's recovery for overhead and profit in the event of its proposal for a modification for work performed by a subcontractor. The contracting officer reported to the auditors that he "[felt] that he will accept [the waiver], since he thinks the provision is inequitable for a construction broker firm like Hardrives" (GX 38 at Tab A-7-2 at A-7-11).

256. Based upon its original job cost estimate, Hardrives had anticipated a profit of 11.84 percent. In its claims, it used a 10-percent profit rate, which the auditors also used. We find the 10-percent rate to be fair and reasonable under the circumstance of these appeals (12/89 audit report; Tr. 2339, 2655).

257. Hardrives' bond rate applicable to this Project, and claimed, is 0.4 percent of all amounts received, except for home office overhead, claim interest, and any attorney fees reimbursed. It claims an effective sales tax rate of 3.575 percent which, under the circumstances of these appeals, we accept[7] (AX 521 at Tab J-3; GX 33 at 14, n. 15; Tr. 2339-43).

258. a. Hardrives' and MRT's accounting systems did not track and segregate all equipment expenses. At hearing, BOR used relatively low ownership rates derived from the "yellow book" in conjunction with equipment operating rates derived from the AGC's 1986 Contractors' Equipment Cost Guide (AX 536, described at hearing as the "1986 AGC rates"), which are lower than the yellow book's relatively high operating rates. Expert testimony was that the yellow book is outdated and, at a minimum, it is inequitable to use it for ownership rates, but to disallow its use for operating rates. BOR offered that "pressure" had been applied unsuccessfully to AGC for years to revise the yellow book, but alleged that the rates BOR used were not dated. Its chief claims analyst, Mr. Chapman, conceded that, for settlement purposes, BOR "also always" uses 1986 AGC rates, not the yellow book. He stated that, when an audit is required, for claims over $300,000, the auditors use the yellow book. BOR has not supplied the authority for this policy.

b. During the contract, neither FC, BOR, nor the contractor used the yellow book. At first, FC instructed Hardrives to use "blue book" rates to price proposals. Later, pursuant to BOR's recommendation, specifically that of Mr. Harding, a cost/price analyst who became the contracting officer, FC instructed Hardrives to use 1986 AGC rates for proposals and modifications. No distinction was made for proposals over $300,000. Hardrives obtained a computer system that applied the 1986 AGC rates in light of local conditions. FC and BOR also used the 1986 AGC rates for modifications which had been reviewed and approved by contracting officers. In its damage analysis, AX 521, appellant used equipment ownership and operating costs based upon the same 1986 AGC rates used during the Project (AX 169, 536; GX 500; Tr. 876-80, 2187-89, 2275-77, 3012-13, 3892, 4006-11, 4196-97, 4203-06, 4220-21, 4260-61, 4282-87, 4335-36, 4346-47).

259. The 1986 AGC rates were significantly lower than the rates charged by inde-

[7] The auditors found a higher bond rate of 0.48 percent, but appellant asserts that it negotiated a lower one. BOR states that the sales tax rate is 3.55 percent. Appellant asserts that the tax is calculated upon all amounts received from the Government, including payment to compensate for the 3.55 percent tax and, to make itself whole, it must collect 3.575 percent. Because there is only 0.00025 difference; the recomputation of tax would be very time consuming to little effect; and BOR was willing to apply a higher bond rate and, at one point, a much higher daily overhead rate than we use (*infra*), we accept appellant's sales tax rate without rendering any opinion as to whether such an adjustment is properly chargeable to the Government under other circumstances.

Digitized by Google

pendent equipment rental companies in the area during 1986-87. After MRT's subcontract was terminated, Hardrives rented its equipment at rates exceeding the 1986 AGC tax rates but did not use the higher rates in its damage calculations (AX 521; Tr. 2583, 4256-61).

5. *Direct Costs*

a. *Earthwork*

260. Using the 1986 AGC rates, for the initial earthwork, *i.e.* construction of Canal berm for the trenching and lining operations, Hardrives and MRT incurred costs of $2,747,865—including direct costs for MRT of $2,001,409 and for Hardrives' completion of MRT's work of $400,440 (total $2,401,849), plus field overhead of $346,016. including $23,268 to repair an earthen ditch, a cost for which Hardrives was responsible, earthwork costs exceeded BOR's payments by $1,359,416 (see AX 521 at Tab A, sheet 1; Tr. 2418-46).

261. In the opinion of construction expert Blattner, given the inaccurate elevations throughout the length of the Canal, the considerable amount of extra dirt moved, and the shifting job requirements, the earthwork costs were reasonable and relatively modest (Tr. 1732-33). Based upon his testimony, the weight of the other persuasive evidence, and the fact that job performance time more than doubled, we find the earthwork costs, and Hardrives' other costs, to be reasonable.

b. *Segregable Concrete Costs*

262. After applying certain credits for BOR, including due to the fact that five broken back structures originally were required under the contract, Hardrives was able to segregate extra costs due to a March 1987, price increase for concrete, and the additional costs required to convert the broken backs to check and pipe inlets. Those costs total $53,010 (see AX 521 at Tab A, sheet 4; Tr. 2487-90, 2494-98).

c. *Unsegregable Impact Of Structure Inefficiencies, Defective Elevations and Contract Misadministration*

263. After crediting the estimated direct and field overhead costs of the two-gate turnout correction, which totalled $26,885, and of removal of the slab at station 722+40, which totalled $3,315, both of which we find to be Hardrives' responsibility, Hardrives incurred additional, unsegregable, direct job costs, including field overhead, of $1,181,998 for the inefficient operation of its structures crews and the impact of the defective elevations and contract misadministration upon its operations (AX 521 at Tab A, sheet 4; Tr. 2499-2506).

6. *Home Office Overhead*

264.U. Hardrives has six divisions, performing different work, with their own personnel and division managers. Corporate office staff supplement and support the divisions. The civil division was responsible for the Project (Tr. 1342-43).

265. Hardrives has corporate and divisional overheads (Tr. 3918).

266.U. Given the construction season in Minnesota, Hardrives generally reduces its administrative staff during the winter (Tr. 1350).

267.U. For the Project, the civil division maintained its office staff through the winter. Also, Hardrives was required to maintain additional corporate staff to assist the civil division (Tr. 1351, 1362-63).

268. During the first few months of the Project, Hardrives was able to submit bids on other projects in Arizona. As of summer 1987, due to losses sustained on the Project, the civil division was unable to take on additional work. Ultimately, Hardrives was forced to close it (Tr. 1351-52, 1361, 2175).

269.U. From the beginning of the Project, the civil division did not have any other jobs (Tr. 1364).

270.U. Using the *Eichleay* formula, Hardrives' daily home office overhead rate was $847.76. On a percentage basis, the home office overhead expenses represent 3.625 of the revenues generated during the contract. Hardrives used the $847.76 figure in its proof book. Auditor Macy generally has no objection to computation of overhead on a daily basis (AX 521 at Tab J-2; Tr. 2311-27, 4237-38).

271. Originally, BOR calculated Hardrives' daily unabsorbed home office overhead at $1,434.85 (apparently $1,273 marked up for profit, bond and tax); then used $1,273; then, during hearing, used $847.76 (GX 518, 518(1), 518(2); Tr. 2330-2334, 4037-38).[8]

[8] At hearing, Hardrives presented $1,273 as an alternative overhead rate. It urged that, during winter, the Project had to absorb the majority of its home office overhead expenses and if the seasonality of its construction business were accounted for in the *Eichleay* formula, based upon a weighted average of monthly overhead rates applicable to the Project, the daily overhead rate would

©1993, Commerce Clearing House, Inc.

Digitized by Google

272. At the $847.76 daily rate, given the 370 days of delay charged to BOR, absorbed overhead totals $313,670 (AX 521 at Tab J-2; Tr. 2334).

7. *Total Earthwork Quantum*

273. Accounting for home office overhead for the 149 days of delay attributable to the earthwork, the increase in earthwork costs, including bond, profit, and tax is $1,683,930. This includes the extra costs of caliche excavation ($18,195) and costs associated with MRT's default ($2,903), both of which we find to be BOR's responsibility[9] and for which we make no deduction (AX 521 at Tab A, sheet 3; Tr. 2448, 2451).

8. *Valley Ditch Quantum*

274. Information used in assessing Valley Ditch's damages was derived from the audit, the best evidence in its case. Due to the delays and disruptions it experienced, and taking into account the period when it was employed elsewhere (but including its demobilization and remobilization and associated costs), using 1986 AGC rates, and including certain costs disallowed by the auditors and not now claimed, Valley Ditch incurred additional costs of $129,539. This includes $44,460 for equipment standby, $8,575 for mobilization, $32,105 in direct (field) overhead, and $32,623 in home office overhead. Profit at 10 percent was used, although Valley Ditch's normal profit rate was higher. Hardrives' direct and field overhead and markup brings total Valley Ditch-related excess costs to $177,096 (AX 521 at Tab A, sheets 1, 4, and Tab I, AX 541; GX 35, 57 at Tab P-8-1 at 8-1(1); Tr. 1267, 1270, 1273-75, 1282, 1303-04, 2473-83, 2491-92).

9. *Other Delay and Impact Quantum*

275. Accounting for the 221 days of delay associated with structures and general contract management, increase costs include segregable concrete costs of $274,565.[10] Unsegregable loss of efficiency and impact costs (crediting BOR with the contractor's total estimated costs, including burden, of correcting the two-gate turnout error, which were $32,127, and of removing the concrete slab at station 722+40, which were $3,961) are $1,419,493. The total is $1,694,058 (AX-521 at Tab A, sheet 4).

10. *Total Quantum IBCA 2375/2475*

276. With the stated credits, and after eliminating $58,547 in duplicative home office overhead, and adjusting profit and tax accordingly, total earthwork (including MRT and Hardrives), Valley Ditch, structures, mismanagement, delay, and impact quantum is *$3,488,260* (AX 521 at Tab A, sheet 4; Tr. 2512).

277. The contracting officer received Hardrives' certified claim, in the amount of $2,423,260.38,[11] on April 17, 1987 (AF for IBCA 2375 at Tab V, No. 6). In response to a certification challenge by BOR, Hardrives recertified its claim on December 9, 1987, in the amended amount of $3,773,997.30. We have found the December submission to be an amended, and not a new claim (12/30/92 opinion denying motions to dismiss).

III. *Storm Damage Claim—IBCA 2518*

278.U. In August 1987, Hardrives began installing a siphon pipe at station 135 under Fast Track Road. The contract required that it be placed with at least 3 feet of cover. The road at that location had a "Texas culvert," a dip to allow storm water to cross. In FC's design, the culvert was to move floodwater in runoff canals from the south to the north side of the Canal. When it reached the road, runoff was to cross over the pipe installed by Hardrives in the Texas culvert and proceed to the north side of the road into a designated floodway (AX 589; GX 2C at 68 (drawing No. V-4); GX 10; Tr. 677-78, 684-89).

(Footnote Continued)

be $1,273, which reflects its costs and the impact of Project delays more accurately than the *Eichleay* calculation used in its proof book. BOR's auditor Macy disagreed (Tr. 2327-29, 3922-23). In post-hearing briefing, BOR suggests that corporate and civil division overheads should be combined, for a rate of $337 per day. Hardrives established that separate calculations were required to ensure that civil division overhead was applied only to that division's revenue and that other divisions' overhead was not applied to civil division revenues. Its calculations did not include other divisions' overhead (Tr. 2317-25, 2543, 4235-37). We are not persuaded to modify the $847.76 daily rate used by both parties in their quantum proof at hearing.

[9] Our findings regarding BOR's responsibility are in the context of the appeal before us. Hardrives' contract was with BOR, not with FC. Our findings should not be interpreted to allocate any particular measure of responsibility between FC and BOR.

[10] Expert Duin allocated the 221 delay days to the concrete structure work and the resulting $187,354 in unabsorbed overhead costs are included in this $274,565 figure. He noted, however, that the delay essentially was intermingled with overall contract midsadministration delays.

[11] Hardrives' claim, and those below, also sought time extensions.

Digitized by Google

279.U. During construction, Hardrives discovered that there would be insufficient cover if the pipe were placed at the contract-specified elevation. Instead of 3 feet, the pipe would be only 0.3 foot under the road. Hardrives immediately notified FC and resurveyed to confirm the elevations (AF for IBCA 2518 at Exh. 17; AX 327; Tr. 677-78, 686, 3705).

280. BOR does not contest, and we find, that the pipe design was defective.

281.U. FC directed Hardrives to install the pipe at the contract-specified elevation and to place 2 feet of cover over it to prevent traffic on Fast Track Road from damaging it. This caused a hump that blocked the Texas culvert. FC stated that it would redesign drainage to account for the obstruction (AX 327; Tr. 687-88, 690, 1128).

282.U. During early November 1987, 2 months after FC directed Hardrives to install the pipe as designed, it rained about 1.2 inches near the Project in 2 days—20 percent of the area's yearly rainfall (Tr. 3706-07).

283.U. When the storm runoff came down the Canal's south side, it could not cross Fast Track Read as intended and ran into a berm, which was not part of natural drainage and had been built by a farmer after Hardrives had completed that portion of the Canal. The floodwater ponded; broke through a 1-foot embankment built per contract requirements; entered the Canal; destroyed 10 to 12 concrete panels; and proceeded downstream through all the siphons and structures that Hardrives had completed in this area (AX 319; Tr. 690-95, 702-03, 729, 773-74, 3696).

284.U. The floodwater carried silt, mud, rocks, trash, and other debris down the canal for 3 miles before the water stopped at a closed gate (GX 112 A-E; Tr. 696; 700-02, 3708).

285. At the time of the storm, Hardrives had completed most of its work in the area and was awaiting FC's design solution to problems at Fast Track Road before completing the remainder (AX 322, 343; GX 366 at 5-6, Item 28; Tr. 703, 728-29, 3393-97).

286. Mr. Canez investigated and three draft reports stated: "Personally, I do not see how we could pin this on the contractor." He suggested only that the contractor could have constructed a V ditch (a drainage ditch) and reduced pipe cover to only 6 inches to 1 foot (AX 319, 322). His final report, prepared after a visit with FC, eliminates his opinion that the contractor was not liable and adds that the contract called for a 1-foot berm that could have prevented some damage. Mr. Canez appeared to recall at hearing that the V ditch and berm had not been constructed because Hardrives was waiting for FC's revised design (AX 319, 322; GX 20; Tr. 703-04, 3397). Consistently, BOR's claims analyst Whetstine concluded that "a delay in providing direction for correction of a design deficiency immediately upstream of the damaged lining may have caused the contractor to wait before completing temporary or permanent drainage facilities" (GX 502).

287.U. Although the contract called for a V ditch, the elevation of the pipe at Fast Track Road interfered with its construction. Mr. Whetstine acknowledged the design problem and that FC should not have allowed 3 months to expire without providing information to Hardrives to resolve it (Tr. 605, 703-06, 3704, 3714).

288.U. FC directed Hardrives to repair the damage without additional compensation. Hardrives had to (1) pump rain water from the Canal, (2) remove mud and other debris from it and clean affected siphons and other structures, (3) reconstruct the damaged concrete panels with hand-placed lining, (4) regrade the area where the water had ponded and broken into the Canal, and (5) completely clean the Canal (c&a ¶ 91; Tr. 730-31).

289. FC found Hardrives' resulting claim to be meritless (GX 20).

290.U. BOR commented as follows about FC's analysis (AX 415):

> C.6. The pipe, installed per specifications, failed to meet the 3 ft. minimum cover requirement. This discrepancy was brought to the Engineer's attention on or about August 10, 1987.
>
> * * * * * * *
>
> E.1 contractor also claims expense. It should be noted that contractor has never received a site plan for this crossing.
>
> * * * * * * *

The contractor did give notice of a conflict in the specifications prior to the damage; from the specifications and site visits, they could have reasonably assumed that there was no danger from flooding.

H. We disagree with the Engineer. It is our opinion that failure to resolve the drainage/cover problem places some liabilities on [BOR]. It must also be noted that if the contractor had completed the irrigation crossing at this location, the

©1993, Commerce Clearing House, Inc.

Digitized by Google

damage would not have occurred. We recommend negotiating an equitable adjustment * * *.

291.U. FC eventually accepted responsibility for inadequate pipe cover. However, it alleged that, under the Site Drainage clause (FF 9), Hardrives was responsible for repair of storm damage (AX 448; GX 20, 357; Tr. 1698-99).

292. BOR analyst Chapman, and a contracting officer's decision dated April 14, 1988, admit that the storm damage claim has merit in part. Hardrives has not received any payment (AX 416; GX 4 (Modification 043); Tr. 2346, 4097-98).

293. The weight of the evidence is that the overriding causes of the storm damage were the defective design of the pipe and FC's failure timely to address and cure the drainage problem (see above and Tr. 694, 727-29).

294.U. Hardrives properly kept track of the labor hours, equipment, and materials used to clean up the storm damage (Tr. 731).

295. Hardrives worked on repairing the storm damage at periods from November 1987, to early February 1988. It was performing some, but little, other work, awaiting resolution of the PSR 19 problem. Delay days overlap with those awarded in IBCA 2375/2475 and are not considered. Excess, reasonable, costs and burden not accounted for elsewhere total $27,578 (AX 521 at Tab A, sheet 2; AX 527; Tr. 740-41, 1126-27, 2343-44, 3672-75).

296. The contracting officer received the storm damage claim, in the amount of $91,195.41, on February 8, 1988 (AF for IBCA 2518 at Tab 23).

IV. *FCG Canal Crossing Claim—IBCA 2524*

297.U. The contract required installation of a 60-inch reinforced concrete pipe, with 3 feet of cover, to siphon water under the Florence/Casa Grande Canal (FCGC), which crosses the Canal at about station 42+50. The contractor could either jack pipe underneath the FCGC, divert the FCGC, or take advantage of a period when water was not flowing in it, and excavate a trench for the pipe. Hardrives elected the latter (c&a ¶ 115; spec. 7.1.1; AX 454; GX 2C at 41; GX 111-A; Tr. 118-19; 741-42, 745).

298. Water was drained from the FCGC only during November each year and Hardrives had a limited time to install the siphon (Tr. 742, 750).

299.U. When Hardrives been excavating, it found that the contract's FCGC bottom elevation was inaccurate because the bottom was covered by about 2.34 feet of silt. If Hardrives had installed the pipe as specified, it would have been covered only by the silt, which would have eroded. Hardrives promptly notified FC (AX 90, 590; GX 5 at Tab 36; Tr. 743-49).

300.U. After Hardrives confirmed true bottom, FC directed it to lower the siphon about 2.3 feet. Because of the new depth, Hardrives had to perform additional work and backhoe operations became more difficult and inefficient. The siphon lowering also required changes in the trench side slopes. While Hardrives was excavating to the new depth, FC ordered it to flatten the slopes for safety, which increased the amount and difficulty of excavation. The flatter slopes and deeper trench also caused problems with an earthen dam that Hardrives had constructed in the FCGC to prevent water entry. Material that had been placed into the dam had to be moved (c&a ¶ 118; AX 125, 590; Tr. 749-50, 752-63).

301.U. After excavation, Hardrives laid the siphon, but due to its lowering, the pipe was not long enough to reach the designated elevations of its associated inlet and outlet structures. Hardrives had its supplier prepare drawings for pipe extensions (Tr. 765-68).

302.U. It took about 4 months to design the pipe extensions, obtain FC's and BOR's approval, and manufacture the pipe. Hardrives could not complete the inlet and outlet structures here until the extensions were installed (Tr. 768-69; 774-75).

303. Among other costs, heavy equipment for the additional pipe work had to be transported several miles around the Canal, now full of water; dirt, pipe, forms, and rebar had to be moved in and out; and there was extra excavation, including digging a ditch twice, and extra backfill (Tr. 1174-78, 2065-66).

304.U. BOR and FC admit that the lowering of the siphon was a change and that this claim has some merit, but Hardrives has not received any paymant. The contracting officer received Hardrives' claim, in the amount of $40,211.68, on December 28, 1987 (AX 454; GX 12; Tr. 2377, 4099).

305. Without engaging in comply swing and lift time equipment calculations that were not cost-effective, Hardrives could not segregate to the cost of the additional work. It could not determine exactly what dirt was excavated due to the lowering of the siphon or to the adjustment to the slopes. Estimated conservatively, direct costs, including

Digitized by Google

field overhead, total $20,974. Delay days overlap with those awarded in IBCA 2375/2475 and are not considered. Excess, reasonable, costs and burden not accounted for elsewhere total $25,063 (AX 521 at Tab A, sheet 2; GX 44 at Tab C-15; Tr. 769-72, 1173-81, 2366-76).

V. *Soil Stabilization Claim—IBCA 2511*

306. The contract's soil stabilization clause provided in part.

a. General—The Contractor shall be required to obtain and apply a soil stabilizing solution to the subgrade of a selected test section of the canal prism for the purpose of reducing possible failures of the canal.

* * * * * * *

Product Availability—As part of a proposed field trial and study and in cooperation with [BOR] and the District, the manufacturer of Dustgard will make approximately 4,600 gallons * * * available at no charge * * * This quantity will be roughly 50 percent of the total quantity needed. Additional quantities of the product can be purchases from the same location.

d. Application—The soil stabilizing solution shall be sprayed evenly over the entire canal prism from inside edge to inside edge of berms, including the refill area after excavation, and also the material to be compacted in the refill area, between stations 2+90 and 226+85. Application of the solution must be in such a manner that penetration of the 5-percent magnesium chloride solution will be at least 6 inches into the canal subgrade.

The application rate and number of passes required to obtain the 5 percent concentration and 6-inch penetration shall be at the discretion of the Contractor, but must be compatible with the type of sprayer being used and the method of application so that an excessive accumulation of the solution will not occur in the canal invert or elsewhere.

(GX 3 at spec. 7.2.7 (blue pages)).

307.U. The soil stabilization requirement covered over 4 miles. The solution had to penetrate Canal embankment by 6 inches after trenching but before lining. When it dries, magnesium chloride causes surface dirt to bind and crust (c&a ¶ ¶ 132, 133; GX 3 at spec. 7.2.7; Tr. 776-81, 792-93).

308. Hardrives had planned to test the process, and application rates, with a fire hose and then to make three passes with a water truck with an attached spray bar, adjusted for the proper application rate. The spray bar method would have required one person to operate the truck and a potentially part time foreman. The fire hose method required two full time people (GX 482, 483, 561; Tr. 779-80, 783, 786, 793-94, 913-19, 1444-45).

309.U. BOR's intent, expressed to FC in a pre-contract memorandum dated March 10, 1986, was that: "Application is to be by water truck with modified spray arm. The coverage will probably be one-half the canal section per pass. The penetration of the solutions will determine the rate of application and the number of passes needed" (AX 30 at 3).

310. The beneficiaries of the soil stabilization test program were the District and the supplier of the solution (AX 30 at 4).

311. Hardrives had purchased the contract-estimated amount of solution to be purchased. (Tr. 785).

312.U. Before the overall test program, Hardrives arranged for field tests to define the magnesium chloride solution's penetrability. BOR, FC, and independent testing lab personnel attended (Tr. 780-82).

313. For the field tests, Hardrives used a truck and a fire hose with a variable-rate nozzle to test rates and penetrability and determine proper spray bar design (Tr. 782-83).

314.U. Six-inch penetration could not be achieved, as BOR and FC eventually recognized. The solution ran down the Canal sides and collected in the invert. FC orally released Hardrives from this penetration requirement (AX 222, 233, 235, 256; Tr. 783-88, 795-96, 3450, 3655).

315. Based upon the foregoing and all of the evidence of record, we find that the soil stabilization specification was defective.

316. After FC's oral release of Hardrives from the 6-inch penetration requirement, Hardrives and Mr. Canez asked for written confirmation and direction from FC, but did not receive it (GX 159B at 5/6/87 Canez report; Tr. 1688-89, 4110-11).

317. FC first instructed Hardrives to make three passes in the contract-specified test area. Mr. Canez agrees with Hardrives that FC later directed it to use the entire amount of solution, which it had on hand. PC Instructed Hardrives to apply it evenly throughout essentially the contract-specified test area until it was used up (AX 222,

©1993, Commerce Clearing House, Inc.

Digitized by Google

519 (Canez reports for 5/6-8/87); GX 483; Tr. 785-89, 920-24, 1689).[12]

318. Hardrives understood that it was to continue with the fire hose. In any case, application rate adjustments necessary as soil penetration rates changed with succeeding solution applications dictated use of the hose. It required more labor and tine than the planned spray bar (Tr. 783, 787, 794, 796, 917-19).

319. Soil stabilization took longer then planned because of soil impenetrability and the directive to use all of the solution. It delayed trenching and lining (Tr. 787-804, 1330, 1689-90).

320.U. Hardrives kept track of the costs associated with the soil stabilization (Tr. 804-09).

321. After the work was finished, on August 19, 1987, FC transmitted no-cost Modification 23, stated to be issued by BOR. The modification, which contained a release of claims, described the contract change regarding soil stabilization as follows: "In specifications paragraph 7.2.7(d) change the soil stabilization penetration depth from 6" to 3", as applicable, *applying total plan quantity as detailed*" (GX 487 (emphasis added)). Mr. Hite signed the modification on August 25, after excising the release clause and writing that Hardrives had incurred delay and increased costs due to the specification defect. On September 22, 1987, BOR requested a proposal, which Hardrives submitted on November 12. On December 29, 1987, after receiving no response, Hardrives submitted its certified claim in the amount of $55,231.66 (AF for IBCA 2511 at Tabs 14-20; GX 486, 487).

322. A BOR supervisor reported to the auditors that BOR was at fault, that the solution requirement should have been eliminated, and that Hardrives had been required to attain penetration where none could be achieved (GX 38 at Tab A-7-3 at A-7-17).

323. Crediting BOR because Hardrives did not use its own water truck as planned but rented it at a $264 higher cost, and crediting it with Hardrives' estimate of planned costs, Hardrives incurred excess, reasonable, costs and burden not accounted for elsewhere of $21,780 in complying with the order to apply all of the solution. Delay days overlap with those awarded in IBCA 2375/2475 and are not considered (AX 508, 521 at Tab A, sheet 2, Tab O, 522; Tr. 2391-96, 2560, 2562-63, 2566-73, 2653).

324. The contracting officer received Hardrives' claim on January 6, 1988 (AF for IBCA 2511 at Tabs 18, 20).

I. *Pipe Bend Encasement Claim—IBCA 2510*

325.U. Hardrives installed reinforced concrete pressure pipes and siphons that had horizontal and vertical bends to channel water around or under obstacles along the Canal (Tr. 811).

326. Reinforced concrete pressure pipe was to be manufactured in accordance with BOR's standard specifications (spec. 4.2.1). The Fittings For Reinforced Concrete Pressure Pipe specification (spec. 4.2.2) provided:

> a. General—* * * curves and bends, connections at structures and *encasements* * * * *shall be furnished and installed as shown on the drawings* and in accordance with this paragraph and paragraph 4.2.3 [Laying Reinforced Concrete Pressure Pipe]. * * * [C]urves, and bends, connections at structures and encasements *** shall conform to [BOR's standard specifications].
>
> * * * * * * *
>
> b. Approval of fittings—* * *
>
> * * * * * * *
>
> Any fabrication or procurement performed before approval of details shall be at the Contractor's risk. Approval by the Construction Engineer of the Contractor's details shall not be held to relieve the Contractor of any part of the Contractor's responsibility to meet all the requirements of these specifications or of the responsibility for the correctness of the Contractor's details.
>
> * * * * * * *
>
> d. Curves and bends
>
> (1) General—where shown on the drawings, changes in alignment and grade shall be made with miter bends. Other changes in alignment and grade shall be made by

[12] Mr. Salisbury prepared a technical analysis of this claim on Jan. 14, 1988, in which he alleged that he had instructed Hardrives to do no more work than what it had bid and to apply the plan quantity of material in the test section in three applications and no more. He testified similarly at hearing (AF for IBCA 2511 at Tab 21; Tr. 3451). BOR acknowledges that the technical analysis was many months after the fact (Tr. 4143). Mr. Locke agreed that FC had made such an instruction originally, but testified that it later was changed (Tr. 920). Contemporaneous documentation supports Mr. Locke.

Digitized by Google

pulling the pipe joints, by using beveled end pipe, by using a combination of pulling pipe joints and beveled end pipe, or with miter bends: Provided, That no direct payment will be made to the Contractor for concrete, including cement and reinforcing bars, *in encasements and blocking for miter bends*, and the cost shall be included in the cost of the pipe. * * *

(2) Miter bends—Miter bends shall be fabricated as shown on the Drawing. * * *

* * * * * * *

Reinforcement at bends shall be lapped or welded as shown on the above drawing [but none specified] * * *. After the reinforcement has been lapped or welded, the space between the mitered pipe units shall be filled with mortar. * * * *The mortared space in the bend shall be completely wrapped with welded-wire fabric, which shall be covered with a suitable mortar bend. The mortar shall be allowed to cure before the miter bends are encased or blocked with concrete.*

Miter bends shall be encased or blocked with concrete as shown on the Drawings. [Emphasis added.]

327.U. Hardrives reasonably concluded that it could block or encase pipe bends, depending upon what was shown on the drawings (Tr. 813-14).

328.U. The contract included drawings identifying various pipe bends. All referred to another drawing, V-5, entitled "Pipe Bend Details and Encasement," which depicted the types of possible bends and different methods of reinforcement, and showed a "banded mitered pipe bend" that was neither encased nor blocked (GX 2C, GX 556; Tr. 814-19).

329. No drawing showed an encased banded mitered pipe bend (GX 2C, 556; Tr. 821-22, 1152, 1154-55, 3043).

330.U. BOR's manual, "Commonly Used Drawings for Open Irrigation Systems," which provides standard drawings in detail, does not show how to encase a banded mitered pipe bend (GX 558, 559; Tr. 3043-44).

331. However, the dimension table in drawing V-5 setting the thickness for bands referred only to pipe up to 36 inches in diameter. There were no pipe sizes in the contract between 36 inches and 42 inches and no pipe at issue smaller than 42 inches in diameter. Every drawing in the contract depicting pipe bends 42 inches in diameter or larger showed the pipe bends as encased (GX 547-554, 556; Tr. 957, 3002).

332. Notes to Drawing V-5 provided that "1. Contractor may submit alternative design for approval" and "3. *Encase all pipe bends when [diameter is greater than or equal to 42 inches]*" (GX 556 (emphasis added); Tr. 820, 3001, 3003).

333.U. A mitered bend is formed during pipe fabrication (Tr. 812-13).

334. A banded mitered pipe bend has a band of mortar and wire mesh

(Tr. 817-18, 978, 2993).

335. Encasing entails building a form and pouring a concrete collar around the pipe bend. In blocking, a large monolithic piece of concrete is placed under or along a bend. Blocking supports the joint, disperses water pressure, and prevents pipe movement and leakage. Encasing does the same, but secures pipe more firmly and protects it against ground settlement, vibrations, and exterior and interior water forces. Banding resists hydraulic pressures and prevents leakage, but does not prevent pipe displacement from external forces. If encasement is required, there is no point in banding (GX 562, 570; Tr. 822-23, 966-67, 978, 2994-97, 3006-07, 3045).

336.U. BOR's claims analyst Green had never seen an encased banded mitered pipe bend used on any project (Tr. 3044-45).

337. Hardrives had received a quote, prebid, from Ameron for banded mitered pipe bends. It is not clear whether it covered pipe of 42 inches in diameter or more, or whether Hardrives' bid was estimated based upon factory-supplied banded bends. Mr. Locke, who was not involved in the bid process (Tr. 1037), testified that he decided during the Project that ready-made banded mitered bends would "cut [his] cost" of pipe installation (Tr. 819). Although the factory-made bends were more expensive than straight pipe, they were cheaper than ordering straight pipe, cutting it to form bends, and blocking or encasing the bends. Mr. Locke admitted that Note 3 on drawing V-5 provided that the contractor was to encase all pipe bends, including banded mitered pipe bends, when pipe diameter was equal to or greater than 42 inches (Tr. 820-21). Because the drawings did not show any encased banded mitered pipe bends, however, and because Note 1 to drawing V-5 allowed submission of alternative designs for approval, he concluded that encasing or blocking banded mitered pipe bends was not a contract requirement (GX 556; Tr. 816-21).

©1993, Commerce Clearing House, Inc.

Digitized by Google

338. Before it ordered pipe, Hardrives submitted drawings to FC which depicted banded mitered pipe bends without encasement. Hardrives did not submit rebar drawings, required for encasement. There is no evidence that the submissions stated that the banded mitered pipe bends were in lieu of blocking or encasement or that Hardrives requested approval for an alternate design. FC returned the drawings to Hardrives with no expression of disapproval and did not request rebar drawings (Tr. 821-23, 978, 3049).

339. Upon, or soon after, placement of at least one banded mitered pipe bend without encasement, FC told Hardrives that encasement was required to prevent joint leakage. Hardrives disagreed and FC issued field order No. 2 on September 26, 1986, directing placement of encased pipe bends, stating: "[M]itered pipe bends as supplied by the pipe supplier per pipe drawings does [sic] not suffice as an alternative to encasement." Hardrives continued to backfill. On October 3, FC issued field order No. 3 stating that Hardrives was backfilling at its own risk and might be required to re-excavate and place concrete encasements as directed in field order No. 2 at no additional cost (AF for IBCA 2510 at Tabs 9 and 11; GX 159A (10/3/86 Stanley and Canez reports; Tr. 823-25, 828, 1162, 3437).

340. By letter of September 29, 1986, Ameron asserted that it had manufactured pipe bends "in accordance with the detail for 'banded mitered pipe bends for reinforced concrete pressure pipe, as shown on [drawing V-5]" and that it had that option, or of providing pipe to be encased in the field. It stated that it had elected the banded option, which would provide a water tight bend, and that "further encasement" was not required unless needed for some other purpose (AF for IBCA 2510 at Tab 12).

341. Hardrives was directed to encase all banded mitered pipe bends of 42 inches in diameter or more and did so, ultimately filing a claim (AF for IBCA 2510 at Tab 19; Tr. 827-29, 1224-25, 3003).

Because we find for BOR, we do not reach quantum.

VII. *The Joint Sealant Claim—IBCA 2319/2514*

342. The Contraction Joints For Concrete Canal Lining specification, 5.2.3, provides in pertinent part:

a. General—Contraction joints shall be constructed in unreinforced and reinforced (hand placed) concrete lining as shown on the Drawings.

Joints shall be continuous across the canal section. Terse contraction joints shall be terminated at the top of the side slopes and a 3/4-inch-minimum-depth groove shall be tooled across the concrete curb from the end of each transverse joint. No filler or sealant will be required for these tooled grooves.

* * * * * * *

c. Materials—Elastomeric sealant—The sealant shall conform to [BOR] "Specifications for Elastomeric Joint Sealer", dated August 1, 1983.

d. Sampling, testing, and certification—Elastomeric sealant—The Government will require certification of each batch of elastomeric sealant prior to use. However, acceptance of the joint sealant materials *** will not be made until the materials have been satisfactorily applied at the jobsite.

* * * * * * *

e. Placing elastomeric sealant—The canal lining concrete shall be cured at least 7 days before the two-component elastomeric sealant is placed in the joint grooves. Immediately before placing the sealant in the joint grooves, the joint grooves shall be thoroughly cleaned. * * * Elastomeric sealant shall not be placed while rain is falling. At the time of placing the joint sealant, the joint groove shall be clean * * *.

Before use, each component of the elastomeric sealant shall be thoroughly mixed * * *. * * *

* * * * * * *

The extrusion machine for mixing and placing the sealant shall conform to the manufacturer's recommendations. * * *

The method of mixing and placing shall result in a homogeneous material. The sealant shall be extruded at the bottom of the joint groove and shall be tooled as necessary to work the sealant into intimate contact with the bonding surfaces without entrapping air bubbles. The top surface of the sealant shall be tooled to the shape shown on the drawing.

Elastomeric sealant which does not cure to a homegenous, rubber-like compound, which does not bond to the joint groove faces, or which does not comply with any other requirements of this paragraph shall be removed. The joint groove shall then be recleaned and new sealant placed therein

Digitized by Google

by the contractor at no additional cost to the Government.

Sealant pulled out of joints or damaged by the Contractor's operations or otherwise damaged during the contract period, shall be replaced * * *.

343. Payment for concrete canal lining work was to beat the bid price and to include the cost of joint sealer (specs. 5.2.5; 5.3.21).

344. The drawing of a contraction joint, No. 7506, showed elastomeric sealant in the bottom of the joint groove (GX 2C at 31, GX 538).

345.U. Mr. Rodgers, a registered professional engineer, in the construction business since 1949, prepared most of Hardrives' bid estimate (Tr. 1378-82).

346.U. Prior to the estimate, Mr. Rodgers and his assistant examined the Project site. They also examined two other BOR canal projects. On one, sealant was installed in transverse contraction joints; on the other, it was not (Tr. 1382-85).

347. Mr. Rogers anticipated construction of the Canal lining with a slip form paving machine. Because the contract required transverse contraction joints at 10-foot intervals in the lining, he planned that they would be tooled (Tr. 1400).

348. A "transverse contraction joint," as used in § 5.2.3a., is a groove formed in concrete either by a template (form board) or by tooling. On the job, Valley Ditch hand-tooled the portion of the joint in the Canal and then "hit the curb" with a stick to form the portion located there, which it considered to be the same as tooling. BOR deemed that this method satisfied the specifications. To avoid cracking in the curb, the need to continue the groove placed in the canal up to and over the curb is stressed by BOR. Because it is impractical to place the curb groove at the same time as the groove in a canal, curb grooving is usually done separately (Tr. 1297-98, 1312-13, 2976-81).

349.U. Use of a paving machine and hand tooling were reasonable assumptions (Tr. 3026-27, 3104-05).

350.U. Hand tooling the transverse grooves is the custom and practice in the industry (Tr. 1300).

351. Elastomeric sealant is a caulking compound commonly used to seal contraction joints to form a water-tight seal (Tr. 830, 2969-70).

352.U. In preparing his estimate, Mr. Rodgers first reviewed drawing No. 7506 and concluded that transverse contraction joints required elastomeric sealant (GX 538; Tr. 1401).

353.U. While under that assumption, he listed 25 cents per l.f. of contraction joints, for all equipment, time, materials, and other non-labor expenses. He did not specifically allocate part of the 25 cents to sealant; rather, he used 25 cents as an arbitrary, or "bogeyed," number (AX 494; Tr. 1403-05, 1415, 1420, 1456-59).

354.U. Mr. Rogers then examined the specifications for the first tine. After reviewing § 5.2.3a., he perceived a conflict between the specifications and the plans and concluded that no sealant would be required for tooled grooves (GX 537; Tr. 1405-06).

355. Mr. Rogers brought the alleged conflict to Mr. Hite's attention. The 25 cents was left in the bid as a contingency. A minor amount of joint sealant was required in any case for certain construction joints (Tr. 1415, 1420-22, 1459, 1462-63, 1474-75).

356.U. Mr. Rogers did not question FC or BOR about the matter until after contract award. Appellant concedes that it did not make a pre-bid inquiry (Reply Brief at 326; Tr. 1416, 1462-63, 1474-75).

357. In a series of exchanges, Hardrives sought a change order, alleging that sealant was not required in transverse contraction joints. FC and BOR disagreed. On April 14, 1987, BOR issued a show cause notice, stating that Hardrives had failed to cure a condition deemed to endanger contract performance and that BOR was considering a default termination. on April 23, Hardrives responded that it fully intended to place the sealant and that the delay in completion of the canal lining was due to delays associated with the earthwork portion of the Project, unrelated to sealant (AF for IBCA 2319 at Tab V(a), multiple correspondence).

358.U. Prior to the show cause notice, Hardrives had ordered the sealant and had it on site (AX 203; Tr. 862-63).

359. Under Hardrives' plan, however, the Project had not been ready for the sealing, because the Canal lining had not been completed nor the Canal cleaned. Nonetheless, it began to prepare for and to seal upon receipt of the notice (AX 203, 519; Tr. 863-65).

Because we find for BOR, we do not reach quantum.

VIII. *Sump and Wells Claim—IBCA 2519*

360.U. During construction, Hardrives encountered a sump and wells near the canal that were not on the drawings (c&a ¶ 153; Tr. 872-73).

361.U. By letter of August 11, 1986, enclosing PSR 21, FC asked Hardrives to develop an itemized proposal to cap a well in a right-of-way at station 410+00 (AF for IBCA 2519 at Tab 4; AX 64).

362. It later was determined that unsuitable materials had to be excavated from a sluice pit (apparently the "sump") and that an abandoned well at station 355+50 required capping (AF for IBCA 2519; AX 105; GX 497)

363. On November 17, 1986, estimated that the work would take 4 days and cost $5,500 (AF for IBCA 2519 at Tabs 9, 11, 13, 14; AX 105).

364.U. On November 20, 1986, BOR issued undefinitized unilateral Modification 9, directing Hardrives to excavate unsuitable materials from the sluice pit and to cap the wells (c&a ¶ 155; AX 105).

365. MRT started the work on about November 7, 1986, and completed it on about November 20, using Hardrives' backhoe in at least one case (AX 521 at Tab P; Tr. 873-74, 2345, 2347).

366. On November 20, 1986, BOR asked FC to seek a proposal from Hardrives to be submitted by December 19. On December 9, FC asked for a proposal for Modification 9 and for other modification work, to be submitted by December 18 (AF for IBCA 2519 at Tabs 14, 15).

367. The record includes three invoices from MRT to Hardrives, each dated December 13, 1986, totalling $6,299.47. Two of them, totalling $2,744.68, were marked "Received" by Hardrives on December 19, 1986. Hardrives submitted those two to FC on March 19, 1987, with its proposal. Whether the other invoice, in the amount of $3,554.79, had been provided to Hardrives at the tine is unclear, but the lack of a "Received" stamp, and events below, suggest that it had not been. Hardrives' proposal cited $6,240.17 in subcontractor costs and burden, to which Hardrives added its own costs and burden, for a grand total of $9,512.98 (AX 521 at Tab P; GX 13, 497; Tr. 873).

368. By letter to Hardrives of June 16, 1987, FC stated that the contractor's proposal had omitted the costs to cap the well at station 355+50 and that FC could not write a definitizing modification without that information (AF for IBCA 2519 at Tab 18).

369. Whether the letter was received is unclear because, on February 23, 1988, Hardrives wrote to the contracting officer that there had been no action on its March 19, 1987, submission and asserted a claim for $11,452.51. The claim included $6,240.55 in subcontractor costs and burden. Handrives sought a 1-day extension. We find that the contracting officer received the claim no later than March 3, 1988. There is no apparent correlation between the omitted MRT invoice and the claim increase because subcontractor costs remained virtually the same. However, the station number for the work covered by the third invoice suggests that it pertains to the omission noted by FC. Hardrives included costs reflected on the third invoice in its revised claim amount presented at hearing (AF for IBCA 2519 at Tab 19; GX 13, 497).

370. On April 14, 1988, the contracting officer issued a decision stating that it had always been BOR's intent to compensate the contractor; that the claim had merit; and that an equitable adjustment would be negotiated upon completion of a pending audit (AF for IBCA 2519 at Tab 21).

371. On September 20, 1988, FC transmitted a price negotiation memorandum to BOR. It noted that it was disregarding a price ceiling contained in Modification 9 and concluded:

> The basic costs that the contractor is requesting are generally not out of reason, as this memorandum will demonstrate. There are various markups for overhead and extended overhead which are issues that may be tied to overall project claims and may not be able to be resolved during negotiation of this modification.

(GX 497, Negotiation Memorandum at 2). FC recommended payment of $3,530.86, accepting all claimed direct costs, tax, and bond, but applying only one direct overhead and profit calculation and including extended overhead (GX 497, Negotiation Memos at 6-8).

372.U. BOR admits that the claim has merit, but has never paid anything to Hardrives (Tr. 875, 2350, 3617-18, 3637-38, 4100).

373. Hardrives modified its claim amount for consistency with the calculation of its other claims and to avoid duplication or augmentation of indirect costs. We find that appellant demonstrated direct costs, including field overhead, not accounted for else-

Digitized by Google

where, of $4,402. To that we add profit, bond, and tax at the stated rates, for a total of $5,035. The extension sought overlaps with that awarded in IBCA 2375/2475 and is not considered (AX 521 at Tab A, sheet 2, and Tab P; Tr. 2346-50, 2364-66).

IX. *Interest on Delayed Payments—IBCA 2516*

374. The Payments clause, § I.5.1, provided in pertinent part:

(b) The Government shall make progress payments monthly as the work proceeds, or at more frequent intervals as determined by the contracting Officer, on estimates approved by the Contracting Officer. * * * [T]he contracting Officer may authorize material delivered on the site and preparatory work done to be taken into consideration.

375. However, the Administration of Payments clause, § I.5.2, provided:

(a) Payments shall be made as close to 30 calendar days as administratively possible after receipt by the Government of signed invoices from the contractor on estimates approved by the Contracting Officer.

(b) *Material delivered on the site may be included in the estimates only if the contractor furnishes satisfactory evidence (1) that it has acquired title to such material* and (2) that the material shall be used to perform the contract. [Emphasis added.]

The Mobilization and Preparatory Work clause, § I.5.3, provided for progress payments for such work. Certain mobilization costs were to be paid at intervals.

376. The Prompt Payment Act (PPA) clause, § I.5.12, provided in part:

INTEREST ON OVERDUE PAYMENTS

(a) The [PPA] * * * is applicable * * * and *requires* the payment to contractors of interest on overdue payments * * *.

(b) Determinations of interest due will be made in accordance with the [PPA] and Office of Management and Budget [OMB] circular A-125.

PAYMENT DUE DATE

(a) Payments under this contract will be due *on the 35th calendar day after the later of:*

(1) *the date of actual receipt of a proper invoice in the office designated to receive the invoice*, or

(2) the date the supplies or services are accepted by the Government.

(b) For the purpose of determining the due date for payment and for no other purpose, acceptance will be deemed to occur on the 30th calendar day after the date of delivery of the supplies, or performance of the services required, in accordance with the terms of the contract.

* * * * * * *

(d) Payment shall be deemed to be made on the date of issuance of the Government check.

INVOICE REQUIREMENTS

(a) Invoices shall be submitted * * * to the government office designated to receive invoices in this contract * * *. [Emphasis added.]

A "proper invoice" had to contain basic price and quantity and other information, along with "other substantiating documentation or information as required by the contract."

377. Circular A-125 provided, *inter alia:*

3. Policy. * * * *Agencies will pay interest penalties without the need for business concerns requesting them* * * *.

* * * * * * *

8. Interest Penalty Requirement

a. *An interest penalty will be paid when all of the following conditions are met:*

* * * * * * *

—A proper invoice has been received * * *.

* * * * * * *

c. *Interest penalties are not required when payment is delayed because of a disagreement between a Federal agency and a business concern over the amount of the payment or other issues concerning compliance with the terms of a contract* * * *. Claims concerning disputes, and any interest that may be payable with respect to the period while the dispute is being settled, will be resolved in accordance with the [CDA]. [Emphasis added.]

(GX 497 at OMB circular A-125 at 2).

378. Hardrives seeks interest for alleged late payment of vouchers 1—11, covering about the first year of the contract, through May 25, 1987 (AX 521 at Tab R; AX 588).

379.U. It was FC's responsibility to prepare BOR's monthly payment vouchers (AX 51, 226; Tr. 1694, 3647).

380. For about 1 year after contract award, FC required Hardrives to do the paperwork for it, without instructing Hardrives as to standard BOR format (AX 226; Tr. 441, 1098-99).

©1993, Commerce Clearing House, Inc.

Digitized by Google

381. Normally, on the 25th of each month, Hardrives met with FC to discuss the monthly progress payment (Tr. 670-71, 1098, 1831).

382. Often, FC would seek more information, or ask for changes, before it would submit a voucher to BOR. On occasion, after Hardrives believed agreement had been reached, Ms. Hodges would request changes and, after resubmittal, sometimes would request more. FC did not forward any part of the vouchers, even if related to Kleck Road Turnout work administered by BOR, until Hardives had made all requested changes (GX 51; GX 497 at contact reports; Tr. 671-73, 1832).

383. Hardrives did not get paid within 30 days of submission of any of the 11 vouchers at issue (AX 588).

384. BOR admits that "on six occasions Hardrives did not get paid within 30 days from the date it submitted *proper* vouchers" (emphasis added) (BOR's proposed findings at 127, No. 605; GX 496).

385. On May 15, 1987, BOR reminded FC that it was to prepare the vouchers, stating that Hardrives' submissions had not been in standard BOR format, which had contributed to payment delay. BOR noted that Hardrives had requested the proper format; directed FC to supply it promptly; and strongly recommended that FC prepare the vouchers (AX 226).

386. Mr. Canez was asked to attend progress payment meetings and the procedure was changed so that, if FC disagreed with Hardrives, FC still would forward the voucher to BOR, noting the disagreement. In Mr. Canez opinion, this was the proper procedure. Beginning with voucher 12, progress payments were much faster (see AX 410; GX 496 at Hardrives' 11/30/87 claim letter; Tr. 671, 673, 1694-95).

387. BOR policy is to process all vouchers by not more than 5 working days after receipt (GX 496 at BOR 3/10/87 letter to FC).

388. On February 26, 1987, Hardrives wrote to FC complaining of late payments; asserting financial burden and profit jeopardy due to potential loss of prompt payment discounts from its suppliers; and requesting interest. When BOR inquired about the reasons for payment delays, FC cited format disagreement, and that it was waiting for lien releases in certain cases, among other things (GX 496).

389. If a lien waiver is not with a request for payment for materials, BOR does not consider it a "proper invoice" (Tr. 3615-16).

390. On April 7, 1987, BOR found that the interest request had merit in part. On April 14, though, the contracting officer denied it, alleging that the payment period began when BOR's payment office received a proper, authorized invoice; that any interest would be based upon any delays by that office; that "[t]he courts have held that the Contracting Office [sic] does not have authority to award interest" absent a claim under "Section 611" of the CDA; and that a demand was not a claim (GX 496).

391. Ms. Ramirez opined that undisputed interest could have been paid automatically (Tr. 3644-45).

392. On December 3, 1987, the contracting officer received Hardrives' claim for interest in the amount of $17,216.38 (GX 496).

393. On February 2, 1988, the contracting officer advised Hardrives that its claim had some merit and that it would be notified when BOR was prepared to negotiate it (AX 379).

394. On February 10, 1988, Hardrives appealed to this Board, which remanded the appeal for decision by the contracting officer within 60 days. On June 15, 1988, Hardrives refiled its appeal because the contracting officer had not issued a decision (GX 496).

395. BOR has not paid Hardrives any interest (Tr. 676-77).

396. Interest rates are undisputed; the parties have agreed to a 30-day payment period, rather than 35; and BOR now assert that the period began when FC received a "proper invoice," *i.e.,* one as finally revised per FC's directions. In all but two cases, the deemed "proper invoioe" dates are later than Hardrives' original submissions. Appellant contends without support, that the triggering date is the voucher's "cut-off" date. For this appeal, we accept BOR's triggering date. Appellant has not directed us to documentary evidence that its original invoices in question were "proper," or segregated any alleged "proper" portions, and BOR has supplied evidence that the invoices were improper, at least in part. Regarding payment dates, BOR's were supplied by its fiscal office in Denver. Appellant's are substantially the same, varying by 1 day in BOR's favor and by 4 days in appellant's favor. Because appellant has not directed us to documentary evidence of payment dates, we accept BOR's record (AX 521 at Tab R at R-1; AX

Digitized by Google

588; GX 496 at Technical Analysis and at FC's 12/28/87 analysis; Tr. 3615-17, 3639).

397. An April 1987 prenegotiation memorandum, reviewed by BOR in July 1988, for a proposed Modification 46 (ultimately not issued) recorded the Independent Government Estimate (IGE) of interest due Hardrives at $3,868.13, using a 30-day payment period. BOR's maximum negotiation objective adopted that estimate. The minimum objective, which used a 35-day payment period and fewer days of delay, was $1,964.71. Both calculations credited BOR with overpayments for mobilization costs and for Borrow Area C material. Hardrives has not directed us to any evidence that BOR was mistaken about the mobilization cost overpayment. Accordingly, for purposes of the interest claim, we accept that there was one. Also, it is clear that Borrow Area C costs were disputed and, therefore, not the basis for an interest penalty. At hearing, BOR presented a revised estimate that $1,735.55 was due, with no explanation of the dates upon which it was based or of its differences from the IGE estimate (GX 496; Tr. 3617).

398. We find that the IGE is the best-supported calculation. Thus, interest due is $3,868.13, plus CDA interest as of December 3, 1987.

X. *Borrow Area "C" Royalty Claim—IBCA 2414/2515*

For the relevant contract provision see specification 3.2.6 (FF 14).

399. Per MRT's diary for November 4, 1986, Ms. Hodges thought BOR would pay the contractor 15 cents per c.y. for Borrow Area C material (GX 117).

400. BOR paid Hardrives $14,893 for Borrow Area C royalties, but deducted it from a later process payment, as having been paid in error (c&a ¶ ¶ 172, 173; GX 496).

401. Hardrives included the royalty cost of Borrow Area C material in its bid price for excavation from borrow. MRT also included the cost in its price to Hardrives (AX 502 (black book); Tr. 1477-79, 1918).

402. On July 10, 1987, Hardrives submitted a claim for $14,893 to recover the Borrow Area C surcharge (AF for IBCA 2414 at Tab 17).

Because we find for BOR, we do not reach quantum.

DISCUSSION

IBCA 2375/2475

[1] The Government impliedly warrants the correctness and adequacy for the job of design specifications, like those in this appeal. The warranty is not superceded by disclaimers, as in this contract, alerting bidders to investigate the site, plans and scope of work, nor affected by the fact that an A/E prepared the specifications. *United States v. Spearin*, 248 U.S. 132, 136 (1918); *Hollerbach v. United States*, 233 U.S. 165 (1914); *Pathman Construction Co.*, ASBCA No. 22343, 81-1 BCA ¶ 15,010; *Pilcher, Livingston & Wallace, Inc.*, ASBCA No. 13391, 70-1 BCA ¶ 8331 at 38,763-64. The warranty extends to the contract's survey information; if it contains significant and pervasive errors, the specifications are defective. *H. M. Byars Construction Co., and Nevada Paving Inc., a Joint Venture*, IBCA No. 1098-2-76, 77-2 BCA ¶ 12,568 at 60,937. Here, appellant, and its subcontractors MRT and Valley Ditch, suffered from a series of specification defects that caused overlapping problems and augmented them.

Regarding defective earthwork specifications, first, the contract stated that "[t]he vertical accuracy of the ground elevations is ± 0.25 feet, subject to standard industry tolerances" (FF 11). Bidders were invited to verify this at their expense. Industry standard is that 80 percent of all elevations must be within the required accuracy (FF 104). FC had inserted the bidder verification language because it had had prior bad experience with inaccurate aerial surveys and earthwork problems and wanted to put the onus upon the contractor, should such difficulties occur on this Project (FF 98). However, BOR's Chief of Construction acknowledged that this was unreasonable and deemed the "+ 0.25 feet" representation to be "an express warranty as to the accuracy of the original ground profile" (FF 42).

Earthwork elevations did not approximate the ± 0.25 feet warranty. They were inaccurate at random throughout the 14-mile-long Project, by as much as 4 feet at one point, and never consistently or predictably. The erroneous elevations impeded every aspect of the earthwork, including trenching, lining and structures (FF 53, 56, 69.U.—71.0., 112, 149, 155, 157, 160, 161.U., 162, 167-69, 171-72, 175).

Second, in bidding and planning, Hardrives had relied upon the specifications, including FC's computer printout describing the amount of material to be excavated and

©1993, Commerce Clearing House, Inc.

Digitized by Google

the amount of fill at all points along the Canal. MRT did not rely upon the printout, but relied upon other specifications containing essentially the same information. The cut/fill ratio, or "shrink factor," portrayed in these contract documents was inordinately high, strongly suggesting to a reasonable bidder that shrink would be less than indicated and borrow would underrun the estimated quantity, as Hardrives judged. It priced its borrow and related bids accordingly without inquiring of BOR or FC about shrink. According to expert Duin, this was, in effect, balanced bidding and the prudent thing to do. MRT did not rely upon a shrink factor, per se, in evaluating its projected job costs, but relied upon the contract's borrow estimate, which incorporated that factor (FF 36U., 37, 39, 40.U., 41, 74.U., 75.U., 76, 79, 80.U., 82.U.).

Shrink is often a matter of judgment. There is no evidence that any bidder inquired of FC or BOR about it. Under the circumstances, we find that Hardrives did not have a duty to inquire and reasonably concluded that the cut/fill ratio was high. Indeed, had the correct ratio been used in the contract, but for the other erroneous specifications, borrow would have underrun the estimated quantity, just as Hardrives had anticipated (FF 76, 78).

However, unrevealed to bidders, and without notice to Hardrives even after it had notified FC about elevation inaccuracies, FC deliberately had overstated the cut/fill ratio and, thus, in its belief, the borrow estimate, in a misguided attempt to protect itself against administrative difficulties should borrow be greater than it actually anticipated. In fact, despite this undisclosed manipulation, the contract's borrow estimate proved materially understated (FF 76, 78, 83.U.).[13]

FC exacerbated the borrow problem by providing Hardrives with exceedingly high revised borrow estimates during the job. Moreover, at the time, FC's own internal estimate, while then higher than the contract estimate, was considerably lower than the changing estimates given to Hardrives. FC never did supply Hardrives with an analysis of earthwork quantities using an accurate shrink factor. This affected evaluation of work performed, projection of additional work, payment, planning, selection and location of borrow areas, and anticipated haul routes. FC and BOR admitted the importance of an accurate shrink factor at hearing and BOR's then chief of APO's major claims' branch conceded that the use of the high shrink factor resulted in FC's providing Hardrives with misleading information. We base our determinations not upon the shrink factor, itself, but upon the resulting, continuously misleading borrow figures given to Hardrives from the outset of the contract (FF 78, 81.U., 83.U., 84.U., 85).

Third, the contract states that "[p]ayment for earthwork items will be made to the neat line dimensions shown on the plans and the quantities in the bid schedule" (FF 11). FC, however, again without notice to bidders, and without notice to Hardrives even after it had notified FC about the ground profile inaccuracies, deliberately had lowered the elevation of existing ground in the specifications by a quarter of a foot at all locations. BOR could not recall any other project where this had been done. The lowering affected the accuracy of unit prices, pay quantities (particularly excavation for canal and compacted embankment) and job planning (FF 86.U., 87, 88.U.-90.U., 91).[14]

Other contract representations proved inaccurate: there were discrepancies in embankment slopes; Borrow Area C, due to the imposition of new conditions upon its use and FC's failure to resolve the problem, was not made available in the manner represented; and unforeseen, very hard, caliche was encountered subsurface, when the contract had indicated only partially, weakly, or moderately cemented materials (FF 7, 8, 92-94). We consider the slope discrepancies and borrow area problem to be part of the many contract changes. The caliche constituted a "Type I" differing site condition under section (a)(1) of the Differing Site Conditions clause (FF 30); *Stuyvesant Dredging Co. v. United States* [34 CCF ¶ 75,414], 834 F.2d 1576, 1580-81 (Fed. Cir. 1987). These impediments occurred in combination with the contract errors addressed above and, under the applicable clauses, the measure of damages and delay is the same.

[13] Although the VEQ clause might provide redress under other circumstances, BOR did not use it in its quantum analysis at hearing or raise it in briefing and we find that it does not apply here, where the specifications clearly were defective.

[14] BOR claimed in briefing, but did not prove, that the artificial lowering of existing ground benefitted Hardrives because it increased pay quantities for excavation for canal. Regardless, it was the fact that the contractor believed that it was working from neat lines based upon existing ground levels, and so bid and planned its job, that was detrimental.

Digitized by Google

Therefore, we have not segregated them in our quantum analysis.

BOR concedes that the contract's earthwork elevations were erroneous and that this resulted in increased costs. It disputes the impact of the errors and the amount of the costs (BOR's Brief at 1, 48). It is abundantly clear, however, that the earthwork specifications were so defective that they adversely affected Hardrives' and its subcontractors MRT's and Valley Ditch's bidding, planning, management, and conduct of the contract work in a major, material, delay-inducing, and costly manner.

When defective specifications cause extra work, extra costs, and delay, the contractor is entitled to recovery. Although its theories have changed from time to time, Hardrives now appears principally to invoke breach of contract. Defective specifications may be considered a breach of contract or a constructive change under the Changes clause. Boards typically rely upon the latter, continuing to apply the doctrine that developed pre-CDA, when Boards did not possess jurisdiction to consider breach claims, as we now do. *See* Rand L. Allen and Jeffrey M. Villet, "Implied Warranty of Specifications," Briefing Papers No. 91-8 (Federal Publications July 1991); *La Crosse Garment Manufacturing Co. v. United States* [15 CCF ¶ 83,673], 432 F.2d 1377, 1384 (Ct. Cl. 1970); *L.W. Foster Sportswear Co. v. United States* [13 CCF ¶ 82,493], 405 F.2d 1285, 1290 (Ct. Cl. 1969); *Pathman, supra,* 81-1 BCA ¶ 15,010 at 74,263. The Interior Board previously has applied the constructive change doctrine to defective specifications. *Gracon Corp.,* IBCA No. 2271, 89-1 BCA ¶ 21,232 at 107,100.

Indeed, the Federal Circuit recently stated that "contingencies contemplated by various contract clauses are remedial under those clauses * * * not as a breach of the contract." *Triax-Pacific v. Stone,* 958 F.2d 351, 354 (Fed. Cir. 1992). In *Triax-Pacific* the contractor had appealed from a Board decision denying its claims based upon the government's delay in issuing a notice to proceed. The Board had determined that the delay was due to the contractor's delay under a predecessor contract and was not compensable under the second contract's Changes or Suspension of Work clauses or as a breach of contract. The court of appeals reasoned that because a delay, and not a change, was at issue, the Suspension of Work clause applied to bar the contractor's claims, due to its responsibility for the delay, and that the Board did not err in concluding that there was no breach of contract remedy.

The "constructive" change doctrine, however, recognizes that defective specifications are not covered explicitly by the Changes clause. Moreover, *Triax-Pacific* relied upon *Johnson & Sons Erectors Co. v. United States,* 231 Ct. Cl. 753, *cert. denied,* 459 U.S. 971 (1982), which involved a pre-CDA contract and appeals brought under the Wunderlich Act, 41 U.S.C. § 321, and the CDA. In *Johnson,* the court affirmed the long-standing pre-CDA principle, discussed by the ASBCA at length in the underlying appeal, *Johnson & Son Erectors, Co.,* ASBCA Nos. 23689, 24564, 81-1 BCA ¶ 14,880, *aff'd on recon.,* 81-1 BCA ¶ 15,082, that claims remedial under contract clauses are to be so adjudicated, and not as contract breaches. The court recognized, nonetheless, that defective specification, and other claims, could amount to breach claims under some circumstances (231 Ct. Cl. at 759).

Hardrives did not assert breach during performance and completed the work, including after MRT was forced to default (FF 143; *see Johnson,* 231 Ct. Cl. at 757 ("A contractor having a breach issue not so compensable [under the contract] may be obliged to declare the contract at an end and cease performance in order to avoid a waiver and save its rights.") In any event, here, we conclude that the defective specifications constituted a constructive change and that the contract provides appropriate redress under the Changes clause, which entitles appellant to an equitable adjustment in money and time. Accordingly, we do not reach appellant's various breach claims.

In grounding our remedy in the Changes clause, we do not suggest that Hardrives was required to take the risky course of ceasing work in order to assert breach, or that it would have been warranted. The full extent of the defective earthwork specifications, the contract mismanagement, and their impact, was not known until work was complete (*see* 4A McBride & Wachtel, Government Contracts, § 31.20[1] ("Generally, the doctrine that election to perform waives a breach is limited to those instances in which a party continues performance in spite of a known excuse. If at the time of the supposed election the excuse was not known, the doctrine will not apply"). We do not reach those issues.

[2] In addition to the defective earthwork-related specifications, specifications affecting structures work also were defective, including those eventuating in PSR 19 (FF 239), resulting in constructive changes for which appellant is entitled to an equitable

©1993, Commerce Clearing House, Inc.

Digitized by Google

adjustment in money and time under the Changes clause (FF 177, 178.U., 179.U., 180, 181, 191.U., 199.U.).

[3] BOR admits that FC administered the contract poorly (FF 235). In fact, contract administration was egregious. FC, replete with inexperienced personnel with no authority to resolve problems, and burdened with conflicts of interest, did not do the job. BOR did not timely intercede, although it had the right to do so under its memorandum of understanding with the District and under the contract. It also had the duty to do so, as the entity which had contracted with Hardrives. Instead, BOR aggravated matters by failing to investigate problems when they occurred and by declining to intervene (FF 2.U., 72.U.; 113.U., 137, 144, 148, 150-51, 183.U.-185.U.).

The contract misadministration, in its multiple aspects, is delineated in our fact findings. Summarized:

(1) Despite notice of elevation accuracy problems from the aerial surveyor before the contract design was complete; additional notice from its own prior bad experience with aerial surveys and from its internal review before contract work began; and further notice from Hardrives immediately upon Hardrives' and MRT's discovery of problems in the field; FC allowed the contract to issue, allowed the work to commence, and directed that it continue. FC also did not arrange for an available, more accurate, aerial survey. It slowly conducted a resurvey itself and did not provide new information (still inaccurate) until months into the Project (FF 62.U., 65.U., 66, 67.U., 68, 106, 108.U., 109, 110.U., 111.U., 114.U.).

(2) Similarly, with respect to the discrepancies and defective specifications affecting structures, FC was painfully slow to respond, sometimes making resurveying necessary. Hardrives and MRT had to wait several days, or weeks, to obtain a solution from FC's home office, even for discrepancies that could have been handled in the field (FF 183.U., 186.U.).

(3) When Hardrives discovered that a structure, as designed, would have blocked part of an irrigation district's O & M road, it immediately proposed a no-cost solution, but FC instructed it to proceed as designed. Only when the irrigation district protested did FC issue a PSR. FC ultimately decided upon the solution Hardrives had proposed at the outset, but it took it at least 10 months to issue a change order to perform the work (FF 191.U.-193.U., 195).

(4) Hardrives found a contract discrepancy, which BOR acknowledges was due to inadequate or defective specifications, and on July 29, 1986, FC transmitted PSR 19 replacing five broken back structures with check and pipe inlet structures. BOR admits that Hardrives did not receive clear direction on how to proceed until January 22, 1988, about one and one half years later, even though the contract's other structures were 95 percent complete at the end of September 1987, and FC knew that Hardrives was waiting for direction on the five check and pipe inlets (FF 196.U., 197.U., 199.U., 201.U., 202, 208.U., 212.U., 221.U., 223).

(5) FC and BOR issued 48 PSR's. Even when, as with PSR 19, FC and BOR eventually razed the revisions as contract changes, and changes due to defective specifications, FC required Hardrives to submit proposals before it would issue change orders directing the work (FF 122, 184.U., 187.U., 189.U., 193.U., 199.U.). FC and BOR blame some Project delay upon Hardrives' alleged slow, or inadequate, proposals. Appellant though, without challenge from BOR in briefing, that the Changes clause (FF 28) did not obligate it to respond to requests for proposals from BOR or FC.

The 1984 version of the Changes clause in this contract is derived from FAR 52.243-4 (APR 1984) (48 CFR 52.243-4) (1986). It mandates that, when a change causes an increase in a contractor's cost or time of performance, the contracting officer "*shall* make an equitable adjustment and modify the contract" (§ I.4.5(d)(emphasis added). Proposal submission is linked to the issuance of a change order or, when there has not been an acknowledged change, to a contractor's claim that one has occurred. The clause implies that the submission of a proposal is elective:

> (e) The Contractor must submit *any* proposal under this clause within 30 days after (1) receipt of a written change order under paragraph (a) above or (2) the furnishing of a written notice under paragraph (b) above [that a change has occurred], by submitting to the Contracting Officer a written statement describing the general nature and amount of the proposal * * *. [Emphasis added.] [15]

[15] The version of the Changes clause used in this contract was changed in 1987 to provide that:

> "(e) The Contractor *must assert its right to an adjustment* under this clause within 30 days after

Digitized by Google

§ I.4.5(e). Similarly, the contract's Change Order Accounting and Contractor Proposals clauses (FF 29) refer to the submission of "any" proposal.

Case law is to the sane effect. In denying a contractor the costs of preparation of a proposal sought by the Government, which the contractor withdrew when the Government failed to take prompt action, the Armed Services Board of Contract Appeals (the ASBCA) noted:

> *The establishment of a price is not an essential part of the issuance of a unilateral order directing a change under the changes clause but may be a matter for subsequent agreement or resort to the disputes procedure.*
>
> On the facts it is evident that all the contracting officer did was invite or solicit an offer by appellant which, if accepted by the Government, would result in a bilateral supplemental agreement for performance of the proposed additional work for the offered price, rendering any action under the changes clause unnecessary. *Appellant, therefore, was not under any contract obligation to submit the requested proposal.* [Emphasis added.]

Greenhut Construction Co., ASBCA No. 14354, 70-1 BCA ¶ 8209 at 38,164. *Accord Campus Construction Co.*, VABCA No. 3019, 90-3 BCA ¶ 23,108 at 116,012; *George E. Jensen Contr., Inc.*, GSA No. 3260, 71-1 BCA ¶ 8850.

The ASBCA, in allowing a contractor to recover for Governmental delays in responding to a differing site condition design solution proposed by the contractor at the Government's request, addressed the issue of whether a contractor is obliged to respond to such requests:

> Once the contractor notified the Government of the problem it had encountered the ball was in the Government's court and it had an obligation to tell appellant what the Government wanted done about the situation. The Government was not free, under this differing site conditions situation, to task the contractor with proposing a solution to the problem without issuing a proper directive under the authority of the Changes clause * * * the [Assistant Resident Officer in Charge of Construction] did not issue a directive under the Changes clause which the contractor would have been obliged to follow even if it did not agree with the order. * * * This was a request not a directive even though the words "proposal" and "change order" were used.

GB&E Electrical Contractors, ASBCA No. 34026, 87-3 BCA ¶ 20,119 at 101,874-75.

The ASBCA has not confined the reasoning expressed in *GB&E* to differing site condition situations. In *Pilcher, supra*, a case analogous to this one, an A/E had prepared specifications which proved defective and Governmental delays in remedying the problem ensued. The ASBCA found:

> Much of the delay and expense experienced by the contractor as a result of inadequate and defective specifications could have been avoided if the Exchange representatives had recognized their responsibility for providing the contractor with correct and adequate specifications and taken prompt action to correct deficiencies in the specifications promptly after they had been reported by appellant. Instead, when appellant reported a problem the general practice of the COR and his inspection staff was to impose on appellant the burden of working out a proposed solution to the problem, submitting a shop drawing, showing the proposed solution, and getting it approved by the COR, which was time consuming *and was not the contractual responsibility of the contractor.* The Board has held many times that a contractor is entitled to a price adjustment under the Changes or Suspension of Work clauses for increased expenses resulting from the failure and refusal of the Government to acknowledge specification deficiencies and take prompt action to correct them. [Emphasis added.]

70-1 BCA ¶ 8331 at 38,764.

In another analogous case, the contractor was waiting for a design solution from the Navy to defective specifications. The Navy instead requested proposals from the con-

(Footnote Continued)

(1) receipt of a written change order under paragraph (a) of this clause or (2) the furnishing of a written notice under paragraph (b) of this clause, by submitting to the Contracting Officer a written statement describing the general nature and amount of proposal, unless this period is extended by the Government. The statement of proposal for adjustment may be included in the notice under paragraph (b) above." (Emphasis added). (FAR 52.243-4 (Aug. 1987)) (48 CFR 52.243-4) (1988). The submission of a proposal still is linked to receipt of a change order or to a claim that one has issued. We render no opinion about whether this clause obligates a contractor to respond to requests for proposals when an acknowledged change has occurred.

©1993, Commerce Clearing House, Inc.

Digitized by Google

tractor and, like here, sought its signature on modifications which the contractor interpreted to require a release of its delay claims. Again like here, the Navy acknowledged that it could have issued a unilateral modification when negotiations for a bilateral one proved unfruitful. The Claims Court held:

> Defendant asserts that any critical path delay attributable to the Navy because of the duct work delay does not end beyond the date on which the Navy authorized plaintiff to proceed with the duct revision work * * *. Plaintiff contends that the delay attributable to the Navy continued until plaintiff received a change order for the work * * *. "[A] change authorization is not a change order * * *" *J.D. Hedin Constr. Co. v. United States* [10 CCF ¶ 73,076], * * * 347 F.2d 235, 252 (1965) (delay attributable to Government did not end until change order was issued). A contractor is not obligated to proceed until a change order is issued. *Id.* Therefore, delay attributable to the Navy continued until plaintiff received the change order for the work.

Wilner v. United States [37 CCF ¶ 76,330], 26 Cl. Ct. 260, 275 and n. 14 (1992), *aff'd*, 994 F2d. 783 (Fed. Cir. 5/24/93).

We conclude that, under the applicable 1984 Changes clause, and under the facts, when BOR recognized that contract changes had occurred, and admitted that it could have issued unilateral change orders directing that the work proceed, with cost and other negotiated matters to be resolved later, Hardrives had no contractual obligation to comply with FC's repeated requests for proposals (FF 223.U., 224).

Hardrives, nevertheless, attempted at first to comply as promptly as possible. However, FC frequently rejected its proposals. If a proposal were unacceptable to FC, it would not act upon the underlying matter. If it were acceptable, FC and/or BOR continued to try to force Hardrives to execute, or to be subject to, modifications containing provisions that Hardrives already had explained it disputed (FF 122, 123.U., 124-26, 193.U.).

Hardrives had been able to negotiate modifications successfully with BOR on the Kleck Road Turnout portion of the contract, when FC was not involved. On the Canal portion of the job, BOR largely abdicated responsibility to FC. When matters were disputed, FC and BOR either left work undone or, even when the contractor had completed work described in several modifications, refrained from paying for it (FF 126-27, 224).

With multiple problems and growing impact that was impossible to quantify contemporaneously, Hardrives' concerns were legitimate and FC's and BOR's requirements and actions were unreasonable.

(6) For about a year, without providing the proper format, FC had Hardrives do the paperwork for the submission of monthly pay vouchers, which were FC's responsibility. Although, contrary to its assertion at hearing, Hardrives was responsible under the Administration of Payments clause for providing lien waivers for on site materials (FF 374, 375), waivers were required for only a few of the pay items. FC did not forward any portion of the vouchers, including items pertaining to the Kleck Road Turnout, until Hardrives had satisfied all of its requests for changes or additional information, although it could have arranged for a modified voucher, omitting disputed or pending items, or sent the vouchers to BOR, noting areas of disagreement (FF 385).

Additionally, aware of MRT's reasonable claim that it was doing considerable extra work, and that MRT was in dire need of cash flow, FC raised Hardrives' and MRT's expectations of payment, stating that it would occur soon, and that retainage would be reduced. Despite FC's representations, it continued to fail to process vouchers promptly; threatened to hold payments when Hardrives protested the use an inaccurate computer run for pay purposes; and affirmatively blocked retainage reduction (FF 117-19, 121, 133, 136, 137, 379.U., 380-89).

(7) FC delayed, and did not make an objective effort to evaluate Hardrives' and MRT's problems and claims during the job, and during the formal claims process, defying BOR's directions on more than one occasion. BOR acknowledges that the process of having FC evaluate claims was not objective (FF 130, 132.U., 133, 135.U., 137, 138, 140.U., 142-44, 147-51, 234.U., 236.U.).

The question arises as to whether the delays associated with correcting defective specifications, and otherwise identified above, are remedial as contract breaches, or under the Changes clause, or under the Suspension of Work clause.

In *Chaney & James Construction Co. v. United States* [14 CCF ¶ 83,407], 421 F.2d 728 (Ct. Cl. 1970), a Wunderlich Act appeal from a board decision, when boards did not have breach jurisdiction, the court agreed with the contractor that delays due to defec-

Digitized by Google

tive specifications could be compensable under the Suspension of Work clause, as an administrative substitute for a breach claim. That clause (FF 31b.) provides for some recovery for certain delays attributable to the Government. The court of appeals in *Triax-Pacific, supra*, stated that "[i]n this case, the Suspension clause contemplates equitable adjustments for unreasonable delays in the performance of the contract." 958 F.2d at 354. Although our review of cases reflects that the court is not alone in referring to "equitable adjustments" under the Suspension clause, in fact, in contrast to other remedial clauses, that clause literally refers only to an "adjustment" and excludes profit (*see The Government Contractor*, Vol. 34, No. 14, ¶ 210 at Note (4/8/92)).

In *Pilcher, supra* in addition to converting the default termination of the contract to a termination for convenience, the ASBCA also awarded separate compensation for the Government's unreasonable delays in rectifying design problems. The Board indicated that either the Changes or the Suspension of Work clause could cover the delay award, and it is unclear which of them it applied. More recently, the ASBCA appeared to except change order delays originating with defective specifications from coverage under the Suspension of Work clause: "*Except for delays resulting from defective specifications*, however, delays preceding the issuance of a change order are not compensable under the Changes clause, but are instead under the Suspension of Work clause." *Vic Lane Construction, Inc.*, ASBCA No. 30305, 85-2 BCA ¶ 18,156 at 91,146 (emphasis added). Consistently, in *M.E. McGeary Co.*, ASBCA No. 31700, 86-3 BCA ¶ 19,038 at 96,156, the ASBCA allowed recovery for the "protracted period of time over which appellant was developing proposals in the absence of a change order" and appeared to do so under the Changes clause—both because that was the only clause discussed end because the Board allowed profit as part of the recovery.

Moreover, in *La Crosse, supra*, decided the same year as *Chaney & James*, the Court of Claims held a contractor entitled to recovery under the Changes clause for defective specifications and included in its analysis recovery for delays in curing the defects. In remanding the case to the Board to allow quantum proof, the court noted:

> It is hard to believe that a contractor has not been "unduly delayed" when numerous substantial defects in the Government's drawings go unresolved, despite constant efforts, for almost the life of the contract, because of a breakdown in communication among the elements of the procurement system charged with responsibility for correcting the defects.

432 F.2d at 1385.

In contrast, although we are not bound by Claims Court rulings, as we are by those of the court of appeals, in a case where defective specifications were at issue, the Claims Court held that the Government's alleged unreasonable delays in issuing modifications under the Changes clause were covered by the Suspension of Work clause. *Beauchamp Construction Co. v. United States*, 14 Cl. Ct. 430 (1988).[16]

Here, BOR has not invoked the Suspension of Work clause, and has included profit in its delay quantum analyses presented to the Board. We find, in any event, that the combined effects of FC's and BOR's foregoing actions and failures to act amount to more than Government-caused delays under the Suspension clause. Instead, they constitute a breach of the duty to cooperate inherent in all contracts. We have articulated the standards for such a breach:

> In the realm of Government contracts, in determining whether there has been any Governmental breach of [the duty to cooperate] the court of appeals, Boards, and Claims Court largely have applied a standard of willful, negligent, or unreasonable interference with, or hindrance of, a contractor's performance. This includes unreasonable administration of a contract amounting to material breach; or unreasonable delay by the Government in meeting some obligation it was required by the contract to fulfill.

[16] *See also Atlas Contractors, Inc.*, ASBCA Nos. 34545, 34761, 88-1 BCA ¶ 20,225 (A contractor alleged Governmental delay in providing direction after an omission in the contract drawings was discovered. Without addressing whether the specifications were defective, the Board held that the Suspension clause applied, found concurrent delay by the contractor, and denied recovery. In applying the Suspension clause, the Board cited *Vic Lane, supra*, but did not focus upon that panel's defective specifications distinction.) *See also Berrios Construction Co.*, VABCA No. 3152, 92-2 BCA ¶ 24,828 at 123,874 (Delays in remedying a differing site condition were deemed covered by the Suspension of Work clause. The Board found it significant that, if the contractor had prevailed in its contention that the Differing Site Condition clause governed its delay claim, a Supplemental Changes clause in its contract might have precluded any recovery.)

Blaze Construction Co., IBCA No. 2863, 91-3 BCA ¶ 24,071 at 120,504 (collecting cases.)

The tribunals have allowed contractors to recover for breach of the duty to cooperate either as a breach of contract (especially when a contractor is defending against a default termination—*see Malone v. United States* [34 CCF ¶ 75,508], 849 F.2d 1441, 1445 (Fed. Cir. 1988); *Kahaluu Construction Co.*, ASBCA No. 31187, 89-1 BCA ¶ 21,308 at 107,465), or as a constructive change under the Changes clause *(R&B Berwachungsgesellschaft mbH*, ASBCA Nos. 42213, *et al.*, 91-3 BCA ¶ 24,310 at 121,495; *Cinusa Constructors, Inc.*, ENG BCA No. 4637, 85-3 BCA ¶ 18,258; *Johnson & Son Erectors*, opinion below on reconsideration, *supra*, 81-1 BCA ¶ 15,082; *see also John C. Grimberg Co. v. United States*, 869 F.2d 1475 (Fed. Cir. 1989) (refusal to grant Buy American Act waiver was abuse of Government's administrative discretion under contract and amounted to a constructive change). As with defective specifications, in a previous case involving Government interference with the contractor's performance, the Interior Board fashioned its remedy under the contract (albeit via a constructive partial termination for convenience), rather than finding a contract breach. *R & R Enterprises*, IBCA No. 2417, 89-2 BCA ¶ 21,708 at 109,156.

Here, we find that the constructive change doctrine is appropriate and that appellant is entitled to an equitable adjustment in money and time under the contract's Changes clause.

[4] To sustain the delay aspects of its claims, including those associated with the breach of the duty to cooperate, appellant must prove that (1) the specific delays were due to Governmental actions or inactions; (2) the overall completion of the Project was delayed as a result; and (3) appellant was not responsible for any delays that delayed overall contract completion concurrently with the Government-caused delays. *Commerce International Co. v. United States* [9 CCF ¶ 72,781], 338 F.2d 81 (Ct. Cl. 1964); *Rivera Construction Co.*, ASBCA Nos. 29391, 30207, 88-2 BCA ¶ 20,750 at 104,855-56; *Pathman, supra*, 81-1 BCA at 74,267.

"[A]ll delay due to defective or erroneous Government specifications are [sic] *per se* unreasonable and hence compensable." *Chaney & James*, 421 F.2d at 732. Appellant submitted ample, convincing, documentary evidence and credible testimony, including expert analysis, and proved by a preponderance of the evidence, that the Project was delayed due to the defective earthwork and structural specifications. It submitted the same sort of proof that the Project additionally was delayed unreasonably due to contract misadministration and the breach of the duty to cooperate.

Appellant has established that 370 days of the 373-day Project delay are attributable to BOR, and not to it or to its subcontractors. It showed that, of the 370 delay days, 149 were due to the earthwork problems resulting from the defective specifications and 221 to the balance of the Governmental-caused problems. (See detailed findings above and FF 166, 240.) We find appellant's proof to be specific enough under the facts of this appeal, where there were many concurrent, overlapping, continuous causes of delay attributable to BOR. As another Board noted, in awarding a contract time extension and equitable price adjustment for an extended performance period under similar circumstances:

> Where so many delays occurred with concurrent or overlapping or consecutive time spans, all attributable to the Authority, the right to relief is not defeated merely because it is impossible neatly to separate the intertwined incidents and establish a specific critical impact for each. The present case is an appropriate one to be decided by the often disdained "total time" method.

Norair Engineering Corp., ENG BCA Nos. 3804, *et al.*, 90-1 BCA ¶ 22,327 at 112,209.

Appellant provided well-supported as-planned versus as-built evidence, including expert critical path analysis, in proving that it could have completed the Project essentially on time, but for the problems for which BOR is responsible. While Hardrives and its subcontractors did not utilize formal critical path method scheduling, they did start with a general, on-time schedule and work plan. Hardrives, though, was never able to follow the sequential operation it had planned in the time frame it had scheduled due to the specification errors and severe administrative problems (FF 53-55, 56.U., 155-157, 159, 160, 161.U., 162, 166-72, 174.U., 175, 176, 177, 186.U., 188.U., 189.U., 190, 193.U., 196.U., 201.U., 204.U., 208.U., 211, 212.U., 221.U., 222.U., 224, 240). Any more precise schedule, thus, would have had to have been abandoned in any case. *See John Driggs Co.*, ENG BCA Nos. 4926, *et al.*, 87-2 BCA ¶ 19,833 at 100,388. ("The occurrence of a significant delay generally will affect related work, as the contractor's attention turns to overcoming the delay rather

Digitized by Google

than slavishly following its now meaningless schedule.")

Once appellant met its burden, BOR, unlike the Government in *Chaney & James*, for example, did not provide persuasive countervailing proof. It did not establish that Hardrives could not have completed the job on time even if there had been no defective specifications or the other delaying factors chargeable to BOR. *See John Driggs, id.* It did not prove that equipment breakdowns, or other delays for which the contractor may have been responsible, were extraordinary; or caused overall Project delay; or that FC or BOR sought any remedial action during the contract on account of any such alleged delays. To the contrary, contemporaneously, BOR's and FC's field personnel recorded that Hardrives and its subcontractors were doing good work. BOR's inspector Canez and FC's inspector Stanley so testified at hearing. FC's project manager Hodges provided no testimony to the contrary. Mr. Canez was critical of FC, on the other hand (FF 166, 175).

Although, after the contract due date, BOR issued a show cause notice concerning sealant placement, that involved a disputed requirement. Hardrives, nonetheless, had purchased the sealant before the notice and had been prepared to place it when the Canal was ready for it. The delays in readiness were caused by FC and BOR, not by Hardrives or MRT (FF 357-59). The other cure notice was not issued until well after the contract due date, and long after structures work was 95 percent complete. Moreover, BOR issued it at a time when Hardrives still had not received authorization to proceed with the PSR 19 work, which included structures on the Project's critical path. The cure notice items either were attributable to FC or BOR-caused problems, or were incidental items planned for the end of the Project and quickly completed. BOR's contemporaneous evaluation of the situation is best reflected in the facts that it released retainage in full and did not assess liquidated damages (FF 171, 185.U., 208.U., 211, 212.U., 221.U., 222.U., 225, 227.U., 228, 229.U., 230.U., 232).

Further, BOR offered no explanation for the absence of certain significant witnesses and we draw some adverse inference that their testimony would not have been helpful. *See Brunner Bau GmbH*, ASBCA Nos. 35678, 37526, 91-3 BCA ¶ 24,051 at 120,410; *Warwick Construction, Inc.*, GSA No. 5070, *et al.*, 82-2 BCA ¶ 16,091 at 79,852-53. At a minimum, countervailing, credible, proof by key individuals involved in the Project was missing. Also, unlike appellant, BOR did not offer any expert testimony or analysis. Finally, we have resolved all relevant credibility issues in favor of appellant (FF 238).

For all of the foregoing reasons, appellant is entitled to a contract time extension of 370 days and associated delay damages.

[5] Hardrives has presented its proof of quantum on a modified total cost basis, segregating from its claimed costs for earthwork, structural work, and contract mismanagement, some costs for which it acknowledges responsibility. While not favored, total cost, or modified total cost, proof is acceptable under limited circumstances, as here, where there were concurrent, overlapping, and continuous problems and delays chargeable to the Government, for which it is virtually impossible, or highly impracticable, to segregate the costs and impact. *J. D. Hedin, supra*, 347 F.2d at 246-47. *Accord Tyroc Construction Corp.*, EBCA No. 210-3-82, 84-3 BCA ¶ 17,621 (total cost method applied when, like here, extra work was difficult to segregate from expected work); *Robert McMullan & Sons, Inc.*, ASBCA No. 19129, 76-2 BCA ¶ 12,072 at 57,962 (total cost method applied when, like here, there was no period of performance free of problems); *Sovereign Construction Co.*, ASBCA No. 17792, 75-1 BCA ¶ 11,251 at 53,606 (total cost method applied when, like here, there were Government-caused work inefficiencies and the Board found it impossible to make a direct measurement of inefficient work); *Concrete Placing Co. v. United States* [37 CCF ¶ 76,267], 25 Cl. Ct. 369, 377-78 (1992) (court allowed contractor to change proof at trial from actual costs previously claimed to total cost method because of difficulty, as here, in distinguishing between work caused by defective specifications and work covered by bid).

To recover under a total cost approach, after proving BOR's liability, Hardrives must show: "(1) the impracticability of proving actual losses directly; (2) the reasonableness of its bid; (3) the reasonableness of its actual costs; and (4) lack of responsibility for the added costs." *Servidone Construction Corp. v. United States*, 931 F.2d 860, 861 (Fed. Cir. 1991) (citation omitted). We have found that Hardrives has satisfied all four elements (*see, e.g.*, FF 249, 251-59, 261, 263, 275), and have discussed items (1) and (4) above.

Regarding Hardrives' bid, in assessing reasonableness, we will consider such elements

©1993, Commerce Clearing House, Inc.

Digitized by Google

as the estimator's experience, comparison with other responsive bids, and whether the Government questioned the bid at the time of submission. *See J. D. Hedin*, 347 F.2d at 247; *Akcon, Inc.*, ENG BCA No. 5593, 90-3 BCA ¶ 23,250 at 116,662; *Hewitt Contracting Co.*, ENG BCA Nos. 4596, 4597, 83-2 BCA ¶ 16,816 at 83,643. Prepared by experienced estimators, Hardrives' bid was only 9.3 percent lower than the second lowest bid and was 3.3 percent higher than BOR's estimate. There is no evidence that BOR questioned the bid contemporaneously. Mr. Duin, who was recognized as an expert in estimating (FF 80.U.), also established that the bid was reasonable. BOR's attempt to refute that expert analysis was not persuasive in any respect. There is, thus, substantial evidence that Hardrives' bid was reasonable and we so found (FF 249).

Concerning the reasonableness of costs, BOR alleges that there is no presumption of reasonableness and that Hardrives has the burden of proof. BOR cites to FAR 31.201-3(a), which has so provided, effective May 27, 1987. Under the Pricing of Adjustments clause, however, the applicable FAR provisions are "those in effect on the date of this contract" (FF 29). In 1986, when this contract issued, the FAR, then 31.201-3 (48 CFR 31.201-3 (1986)), did not state that there was no presumption of reasonableness. Rather, it stated that a cost was reasonable if it did not "exceed that which would be incurred by a prudent person in the conduct of competitive business." Case law at the time of the contract was that incurred costs were presumed to be reasonable:

> The Board views actual costs incurred in the performance of changed work as the single, most reliable measure for the required price adjustment not only because *the* costs are "historical" but because, by their very incurrence, they raise the presumption of reasonableness. This presumption controls unless it is proved, by a preponderance of the evidence, that the costs were unreasonable.
>
> *Hewitt, id.* (collecting cases).

Regardless, Hardrives provided a preponderance of evidence that its costs, and those of its subcontractors, were reasonable and we have so found (FF 261). BOR did not offer persuasive contradictory evidence. We have given the Interior Department's IG audits, and the auditors' testimony, little weight due to their questionable objectivity (FF 252), and have used them sparingly. *See Delco Electronics Corp. v. United States* [35 CCF ¶ 75,679], 17 Cl. Ct. 302, 323, 327-29 (1989). (Governmental audit evidence found flawed and of questionable objectivity because audits were prepared with express purpose of defending against claim and were contrary to earlier determinations that claim largely had merit. Claims Court found recovery allowable under either modified total cost approach or jury verdict.)

For the foregoing reasons, we have accepted appellant's modified total cost approach to its quantum proof.

[6] The parties dispute the proper manner of computing certain equipment ownership costs. The contract's Equipment Ownership and Operating Expense clause (FF 32) provides that these costs are to be calculated using the 1974 yellow book. That book provides that it is intended as a guide only, subject to adjustment for an individual contractor's experience. Expert testimony was that the book is outdated and that ownership rates derived from its tables are low, while its operating rates are high. BOR's witnesses for the most part corroborated that testimony and conceded, that, for settlement purposes, BOR "almost always" uses the 1986 AGC rates for ownership expenses.

In its quantum presentations at hearing, BOR used the yellow book to determine ownership expenses but the 1986 AGC rates for operating expenses. Expert testimony was that this is unbalanced and inequitable. Appellant used 1986 AGC rates for both ownership and operating expenses. Those rates were significantly lower than the rates charged by independent equipment rental companies in the area during 1986-87 (FF 402, 403).

Because the contract calls for the use of the yellow book, however, the identified problem with it would not persuade us to do otherwise but for the facts that: BOR instructed during the contract that the 1986 AGC rates were to be used; Hardrives changed its proposal method and adapted its computer system accordingly; FC prepared draft modifications accordingly; and BOR's contracting officers reviewed and approved modifications accordingly (FF 402). We thus deem BOR to have waived the contract's yellow book provision. The 1986 AGC rates, which the contracting officers, by their instructions and actions, previously had agreed were reasonable and should be used, are appropriate for our equitable adjustments. *See Southland Enterprises, Inc. v. United States*, 24 Cl. Ct. 596, 604 (1991).

Digitized by Google

[7] Appellant has used the now well-known formula set forth in *Eichleay Corp.*, ASBCA No. 5183, 60-2 BCA ¶ 2688, *aff'd on recon.*, 61-1 BCA ¶ 2894, to compute its unabsorbed home office overhead. Neither party briefed the *Eichleay* intricacies, although appellant addressed its factual underpinnings in its proposed findings. The Federal Circuit recently reviewed the genesis and offspring of *Eichleay*. In affirming the Claims Court's determination that the *Eichleay* formula should not be applied in a case where a contract modification provided for extra work and a time extension for a brief, known, period of time, the court concluded: "[C]omputation of extended home office overhead using an estimated daily rate is an extraordinary remedy which is specifically limited to contracts affected by government-caused suspensions, disruptions and delays of work." *C.B.C. Enterprises, Inc. v. United States* [38 CCF ¶ 76,395], 978 F.2d 669, 675 (Fed. Cir. 1992). In addressing the appropriate use of the *Eichleay* formula, the court focused upon the element of uncertainty engendered by disruption, suspension or delay of contract performance and cited with approval cases including ones where the Government's inaccurate estimate had caused delay that was unforeseeable and beyond the control of the contractor; the duration of delays was uncertain, so the contractor could not divert to other work; it was virtually impossible to trace the effect of each separate delay; and where changes continued throughout construction.

When a contractor meets its burden to prove that compensable delay occurred, and that it could not undertake other jobs during the contract period, the burden shifts to the Government to show that the contractor would suffer no loss by using a fixed percentage mark-up formula. *C.B.C*, 978 F.2d at 673-74, *citing Capital Electric Co. v. United States* [31 CCF ¶ 72,119], 729 F.2d 743, 745-46 (Fed. Cir. 1984); *accord Community Heating & Plumbing Co. v. Kelso* [38 CCF ¶ 76,488], 987 F.2d 1575, 1582 (Fed. Cir. 1993).

Here, we have found Hardrives entitled to 370 days of compensable delay. Those delay days are all beyond the original contract performance period. We have found that the job changed repeatedly and unpredictably (FF 155, 157, 159, 247, 248.U.); that non-segregable inefficiencies occurred (see FF 248.U., 263, 275); that Hardrives was not able to reduce its administrative staff as it generally does during the winter seasons and had to increase corporate staff to assist its civil division with the Project (FF 266.U., 267.U.); and that the civil division did not have any other jobs and was forced to close due to its Project losses (FF 268, 269.U.). An adjustment in claimed unabsorbed overhead has been made for the one period when Valley Ditch was able to assume other work (FE 274).

Appellant, therefore, has met its initial burden to show that uncompensated delay occurred and that it could not assume other jobs. BOR has not met its ensuing burden to prove that appellant would suffer no loss by using a fixed percentage markup formula. In fact, in post-hearing briefing, BOR did not challenge the use of the *Eichleay* formula. It argued only that Hardrives' civil and corporate, division overheads should be combined. However, Hardrives has separate corporate and divisional overheads and accounts for them separately (FF 264.U., 265; and *see* n. 8).

Also, BOR did not object to the use of a daily unabsorbed overhead rate and eventually used the same figure at hearing, $847.76, that Hardrives originally had advanced and used in its quantum proof. Prior thereto, BOR had used the higher figure of $1,434.85 (FF 270.U., 271).

Hardrives urged at hearing that the Board should apply a modified *Eichleay* formula to account for the seasonality of its business, and that its actual daily unabsorbed home office rate was $1,273. Like the court in *Capital Electric Co.*, 729 F.2d. at 747, we have declined to modify the *Eichleay* formula. We have found that the $847.76 daily home office overhead count used by both parties at hearing is the appropriate one (FF 270.U., 271; n. 8).

[8] Appellant has applied a 10-percent profit rate to its claimed amounts. Although the auditors also used that rate (FF 256), BOR now alleges that the rate should be 8.85 percent, citing the Contractor Proposals clause (FF29c.) and weighted profit guidelines in FAR 15.905 and in BOR and Departmental implementing regulations—RAD 15.905-80 and DIAR 1415.905.

The Contractor Proposals clause is not relevant. Apart from the contracting officer's intent to waive the clause in Hardrives' case (FF 255), it applies "in connection with any proposal [the contractor] makes for a contract modification" (FF 29c.) We are not considering a contractor proposal for a modification. (*See GB&E, supra*, where the ASBCA stressed the same fact in determining that a substantially similar clause did

©1993, Commerce Clearing House, Inc.

Digitized by Google

not apply.) We have a constructive change under the Changes clause, which provides for an equitable adjustment. Aside from the need for the adjustment to be equitable, there is no limitation upon profit imposed by that clause.

As to regulations, the applicable 1986 FAR provision is 15.905-1 (48 CFR 15.905-1 (1986)). It merely provides that unless "clearly inappropriate or not applicable," agencies are to consider general factors in developing a structured approach or other profit analysis. RAD 15.905-80 (1986) and DIAR 1415.905 (1986), both under headings entitled "Contracting by Negotiation," apply to negotiations for construction services, including construction contract modifications, and are to the some effect. We find no applicable regulation limiting profit to any particular percentage.

In a prior case where, unlike here, the contract provided that profit was to be in accordance with applicable BOR procurement regulations, the Interior Board noted that the proffered Departmental Manual, which seemed to be directed at negotiated resolutions (like the materials cited here), did not clearly apply. The Board added that, even if the BOR-espoused structural approach were that intended by the contract, the Board's own consideration of the various factors involved resulted in a higher profit rate than that urged by BOR. *Sanders Construction Co.*, IBCA No. 2309, 90-1 BCA ¶ 22,412 at 112,581.

Similarly, we have arrived at an equitable profit rate based upon our analysis of what is fair in this, and the following, appeals. Ten percent has been found to be a reasonable profit rate for Government construction contracts, even when a prime is seeking recovery for work largely performed by a subcontractor. *Design & Production, Inc. v. United States* [35 CCF ¶ 75,718], 18 Cl. Ct. 168, 210 (1989); *Delco, supra*, 17 Cl. Ct. at 334.

We have found the 10-percent profit rate applied by appellant for its work and that of its subcontractors to be fair and reasonable (FF 256).

[9] In our modified total cost award, we have deducted from the overall extra costs chargeable to BOR the cost of removing a slab apparently constructed after Hardrives' project manager had received PSR 19 changing the required work. The record is somewhat confusing on this point, but, absent clear proof that FC or BOR was responsible for the slab's placement, we have charged the contractor with the costs of removal (FF 196.U., 197, 198, 263, 275).

We also have deducted the cost of correcting turnouts to install two gates rather than one. Hardrives' concrete foreman had observed discrepancies in the drawings but had not sought clarification, and did not know what any shop drawings had shown. When he eventually raised the issue with FC, he was informed that two gates were required, although, to that point, neither FC nor BOR had protested the installation of one gate (FF 209.U., 210, 263, 275).

A contract is ambiguous if it is reasonably susceptible of more than one interpretation. *Edward R. Marden Corp. v. United States* [33 CCF ¶ 74,652], 803 F.2d 701, 705 (Fed. Cir. 1986). If an ambiguity is patent, the contractor has a duty to inquire of the contracting officer, pre-bid, about the meaning of the contract. Determining if an ambiguity is patent involves an objective judgment as to whether it is so glaring as to raise a duty to inquire. Only if the ambiguity is not patent, is the question reached of whether the contractor's particular interpretation is reasonable. If there is a latent ambiguity, and the contractor's interpretation is reasonable, the rule of *contra proferentem* may apply. *Newsom v. United States* [29 CCF ¶ 82,417], 676 F.2d 647, 649, 650 and note 11 (Ct. Cl. 1982). Even if the ambiguity is latent, however, the contractor still must prove that it relied upon its interpretation at the time of bidding. *Fruin-Colnon Corp. v. United States* [36 CCF ¶ 75,923], 912 F.2d 1426 (Fed. Cir. 1990); *Marden*, 803 F.2d at 705.

Here, assuming *arguendo* that the contract drawings were latently ambiguous and that the contractor's interpretation during performance was reasonable, Hardrives, nevertheless, has not established that it relied upon its one-gate interpretation at the time of bidding. What evidence there is, *i.e.* the unused gate or gates, suggests that the gate-supplier, or the contractor, at the time of bid, had interpreted the drawings to require two gates. That a contractor may have relied upon its own interpretation of an ambiguous portion of a Government contract during performance is immaterial. *Fruin-Colnon*, 912 F.2d at 1431; *ECI Construction, Inc.*, ASBCA No. 40097, 90-3 BCA ¶ 23,143, *aff'd on recon.*, 91-1 BCA ¶ 23,313.

Moreover, the contract called for notice and inquiry by the contractor concerning drawing discrepancies or questions of interpretation. The Drawings clause (FF 17) directed the contractor to check all drawings carefully and to advise the contracting of-

Digitized by Google

ficer of any errors or omissions. Under the Specifications and Drawings For Construction clause (FF 25a.), discrepancies in drawings were to be submitted promptly to the contracting officer for a written determination. Action by the contractor without such a determination was to be at its own risk.

Although the one-gate turnouts were installed under the oversight of inspectors, and remained in place for a considerable time, there is no evidence that the inspectors knew that construction had been contrary to FC's and BOR's interpretation of the drawings (FF 210). Farther, the Inspection of Construction clause (FF 25c.) provided that inspections were for the sole benefit of the Government; they did not constitute or imply acceptance; the presence or absence of an inspector did not relieve the contractor from any contract requirement; and the inspector was not authorized to change any specification without the contracting officer's written authorization. The contractor, at no charge, was to replace or correct work that failed to conform to contract requirements unless, in the public interest, the Government consented to accept it with a price adjustment. Hardrives has not even alleged that there was any attempt to convince BOR that one gate turnouts were acceptable.

Based upon all of the foregoing, we have found that appellant is entitled to recover $3,488,260, plus interest under the CDA measured as of April 17, 1987 (FF 276, 277).

Although appellant used a modified total cost approach in establishing its excess costs in connection with IBCA 2375/2475, it asserts that it has applied that approach only to the costs associated with those appeals and that, except for delay costs, the costs claimed in the following appeals are not duplicative. Appellant's CFO also testified several times that duplication of claimed overhead has been scrupulously avoided. BOR has not directed us to any evidence establishing any duplicative costs and we have arrived at our awards accordingly.

IBCA 2518

[10] FC ordered Hardrives to report storm damage without compensation, alleging that the Site Drainage clause (FE 9) required the contractor to handle all flows from natural drainage channels intercepted by the contract work and that the storm damage would not have occurred if Hardrives had completed at least an irrigation V ditch prior to the storm.

BOR now appears to admit full liability and to dispute quantum only (GB at 53). In any case, appellant has established that natural drainage channels were not at issue; the Site Drainage clause did not apply; defective specifications caused the damage and impeded the construction of a V ditch; and that FC and BOR were responsible for any relevant work delays.

We have found that, excluding delay days and costs and burden accounted for in IBCA 2375/2475, appellant has proved, by persuasive, credible, evidence, that it is entitled to an equitable adjustment under the Changes clause of $27,578, plus interest under the CDA as of February 8, 1988 (FF 295-96).

IBCA 2524

[11] Appellant incurred extra costs in lowering and extending a large siphon at the FCGC crossing, made necessary due to defective specifications. BOR admits a contract change, but contests quantum. Appellant's proposed quantum is based upon conservative cost estimates made by its knowledgeable on-site project manager in the absence of any cost-effective way of segregating extra costs.

We have found that, including delay days and costs and burden accounted for in IBCA 2375/2475, appellant has proved, by persuasive, credible, evidence, that it is entitled to an equitable adjustment under the Changes clause of $25,063, plus CDA interest as of December 28, 1987 (FF 305).

IBCA 2511

[12] We have found, as FC and BOR appear to concede, that the soil stabilization specifications were defective (FF 314.U., 315). BOR alleges, however, that FC waived both the contract's penetration requirement and the planned amount of soil stabilization solution; that Hardrives did more work than it had to do; that it has not supported its claimed extra costs adequately; and that they are not reasonable.

We need not reach the issue of FC's ability to waive a contract requirement because BOR issued a post-work proposed no-cost modification waiving only the penetration factor and directing use of the contract's planned quantity of solution (FF 321). This reinforces the testimony of Mr. Locke and of inspector Canez, and the record of contemporaneous inspection reports, that Hardrives was directed to apply the planned quantity, which it had on hand. We resolve all credibility issues in favor of appellant.

©1993, Commerce Clearing House, Inc.

Digitized by Google

Hardrives tracked its costs associated with soil stabilization. We have found those costs to be reasonable and that, after crediting BOR with certain excess water truck rental costs, and with Hardrives' estimate of planned costs, and including delay days and costs and burden accounted for in IBCA 2375/2475, appellant has proved, by persuasive, credible, evidence, that it is entitled to an equitable adjustment under the Changes clause of $21,780, plus CDA interest as of January 6, 1988 (FF 320.U., 323, 324).

IBCA 2510

[13] Appellant claims costs incurred in connection with the encasement of banded mitered pipe bends. It alleges, alternatively, that: the contract did not require encasement of banded mitered pipe bends; the contract was unclear; it was entitled to submit an alternative design for approval and FC approved the banded mitered pipe bends, estopping BOR from enforcing the encasement specifications; or, banding was "factory-made" encasement, equivalent to what Hardrives describes as the "field encasement" directed by FC.

Regarding the contract's requirements, the pertinent specification leads with the presumption that encasement or blocking will be required "[m]iter bends *shall be encased or blocked with concrete* as shown on the drawings." (Emphasis added.) There are several additional references in the specification to encasement of mitered bends.

Appellant stresses that the drawings did not show any banded mitered pipe bends with encasement; BOR's standard manual does not show how to encase them; and BOR's spokesman had not seen any encased banded mitered bends on BOR projects. As BOR suggests, however, these "absences" likely simply reflect the fact that, when encasement is required, it is not contemplated that a contractor will go to the expense of using banded mitered pipe bends.

Every relevant drawing, that is, every drawing showing pipe bends for pipe 42 inches in diameter or larger—the only pipe at issue—showed the pipe bends as encased. Note 3 to Drawing V-5 provided: "Encase *all* pipe bends when [diameter is greater than or equal to 42 inches]" (FF 332). (Emphasis added.) We conclude that the contract plainly required encasement of the pipe bends.

Even if the contract were deemed to be ambiguous, as appellant suggests at one point, Hardrives has not satisfied the standards for recovery enunciated above for either a patent or latent ambiguity. It neither brought the alleged ambiguity to the attention of FC or BOR pre-bid, nor proved that it had relied upon its interpretation at the time of bidding, respectively. Moreover, as noted, the Drawings and the Specifications and Drawings For Construction clauses called for notice if the contractor found drawing discrepancies or had questions of interpretation. Specifically, the Fittings For Reinforced Concrete Pressure Pipe specification (FE 326) provided that any fabrication or procurement performed before approval of details was to be at the contractor's risk.

Hardrives, though, alleges that BOR is estopped from enforcing the contract because the contractor submitted drawings for banded mitered bends as an alternative to encasement; they did not contain the rebar drawings that would have been necessary for encasement; and FC approved the submitted drawings. We have identified the prerequisites to a finding of estoppel:

> (1) the party to be estopped must know the facts; (2) it must intend that its conduct be acted upon, or must so act, that the party asserting estoppel has a right to believe that it is so intended; (3) the latter must be ignorant of the true facts; (4) it must rely upon the former's conduct to its injury; and (5) when estoppel is sought against the Government, the conduct or representations relied upon must be made by Government officers acting within the scope of their authority. [Citation omitted.]

White & McNeil Excavating, Inc., IBCA No. 2448, 92-1 BCA ¶ 24,534 at 122,440.

At a minimum, Hardrives has not proved elements (1), (2), and (5). Although FC did not reject banded mitered pipe bend drawings and did not inquire about the lack of rebar drawings associated with encasement, this does not mean that FC or BOR was aware that Hardrives did not intend to end the bends in the field when the time came. There is no evidence of any written approval by the contracting officer, or by FC, of a deviation from specification requirements, or of any written, or even oral, alert by Hardrives that its banded mitered pipe bend drawings were intended as alternate designs or that it did not plan to encase the banded mitered pipe bends. In contrast, there is affirmative evidence that FC had not intended to accept the banded bends as an alternative to encased ones. When Hardrives began placing the bends without encasement, FC promptly directed it to cease (FF 339).

Digitized by Google

Even if FC were deemed to have approved the drawings, the Fittings clause warned that approval by the Construction Engineer of the contractor's details did not relieve the contractor from specification requirements or from responsibility for the correctness of the drawing details. The Specifications and Drawings For Construction clause also stated that approval of shop drawings did not relieve the contractor from errors in them or from complying with contract requirements unless the contractor described any variations from the contract, in a writing separate from the drawings, at the time of submission, and the contracting officer approved of the variation.

Regarding approval of drawings and of variations, the exact process by which contract drawings were submitted and approved, and whether there was any BOR review following approval by FC, is not clear from the record. Per the Administration Of Specifications And Drawings For Construction clause (FF 25b.), if individuals other than the contracting officer were authorized to approve shop drawings, they, nonetheless, did not have authority to approve shop drawings or other technical data showing variations from the contract requirements that involved a change in price or in time of performance. Hardrives did not seek a contract price or time change when it elected to use banded mitered pipe bends. It expected to save money. However, even if FC had had full authority to approve shop drawings and variations, nothing in this clause relieved the contractor from its duty of notice if any contract variation were intended.

Case law is in accord. When there is no evidence that the Government was on notice, in a sufficiently clear way, that the contractor was deviating from contract requirements, the facts that it submitted drawings different from intended in the contract, and that those drawings were approved, do not establish waiver of a contract requirement. *Vogt Brothers Mfg. Co. v. United States* [9 CCF ¶ 71,991], 160 Ct. Cl. 687, 714 (1963); *A&A Insulation Contractors, Inc.*, VABCA No. 2766, 92-2 BCA ¶ 24,829 at 123,881; *Rivera, supra*, 88-2 BCA at 104,853. Thus, we find no waiver of any contract requirement, or approval of any alternative to encasement.

Hardrives also has alleged that there was no practical reason to require field encasement of banded mitered pipe bends, either because factory-made bands constituted encasement, or because banding served the same function. Although not articulated as such, we deem this to be an economic waste argument. It is well established that, absent economic waste, the Government is entitled to precisely what it specifies, even if that exceeds what is absolutely needed for a satisfactory result. *Ball, Ball, & Brosamer, Inc.*, IBCA No. 2103-N, 93-1 BCA ¶ 25,287 at 125,980 and cases cited. Economic waste finding are the exception to the rule, and the circumstances often are extraordinary. Appellant has not proved any such waste. BOR established at hearing that banding is not the same as encasing, which serves additional important functions (FF 335).

Accordingly, this appeal is denied.

IBCA 2319/2514

[14] Appellant seeks recovery for the cost of placing elastomeric sealant in transverse contraction joints. It vigorously asserts that sealant was not required in those joints, which it formed by tooling. Appellant acknowledges that the pertinent contract drawing depicts sealant in the joints and that this is how its bid estimator first interpreted the contract. It alleges that the estimator later determined, after reading the specifications, that the contract did not require the sealant; or that the contract was ambiguous because the specifications purportedly did not require it and since, in that case, they took precedence over the drawings, no pre-bid inquiry was necessary (FF 356.U.).

In addition to its discrepancy notification requirements, the Specifications and Drawings For Construction clause provided that anything mentioned in the specifications and not shown on the drawings, or vice versa, was deemed included in both. In case of differences, the specifications were to govern. Appellant directs us to *Hensel Phelps Construction Co. v. United States*, 886 F.2d 1296, 1299 (Fed. Cir. 1989), where, in considering the same clause, the court of appeals held that "an order of precedence clause may be relied on to resolve a discrepancy between the specifications and drawings even though the discrepancy is known to the contractor prior to bid or is patent." Here, however, there was no conflict or discrepancy between the drawings and the specifications. Both required sealant in the transverse contraction joints.

As we noted above, in order for a contract to be deemed ambiguous, it must be *reasonably* susceptible of more than one interpretation. *Marden supra*. The contract is not reasonably susceptible of more than one interpretation regarding the sealant issue. The

©1993, Commerce Clearing House, Inc.

Digitized by Google

contraction joint specification, § 5.2.3 (FF 342), began with the direction that the joints be constructed as shown on the drawings. As Hardrives' estimator observed, the pertinent drawing depicted sealant in the joint (FF 344, 352.U.). The bulk of the specification was dedicated to the criteria for, and the Ding and placement of, joint sealant.

Appellant rests its argument upon the one portion of the lengthy specification that provided: "Transverse contraction joints shall be terminated at the top of the side slopes and *a 3/4-inch-minimum-depth groove shall be tooled across the concrete curb from the end of each Transverse joint.* No filler or sealant will be required for *these tooled grooves*" (FF 342 (emphasis added)). The antecedent reference for "these tooled grooves" clearly was to the 3/4-inch grooves to be tooled across the concrete curb. They are the only "tooled grooves" so described in that paragraph. Only those tooled curb grooves did not require sealant. In actual construction, as in the language of the specification, the curb grooves were treated separately from the portion of the contraction joint within the canal proper (FF 348). Appellant's contortions ignore the great remainder of the specification, the applicable contract drawing, and the basic tenets of contract interpretation:

> Contract interpretation begins with the plain language of the agreement. * * * "[P]rovisions of a contract must be so construed as to effectuate its spirit and purpose * * * an interpretation which gives a reasonable meaning to all of its parts will be preferred to one which leaves a portion of it useless, inexplicable, inoperative, void, insignificant, meaningless, superfluous, or achieves a weird and whimsical result." [Citations omitted.]
>
> *Gould, Inc. v. United States* [37 CCF ¶ 76,108], 935 F.2d 1271, 1274 (Fed. Cir. 1991).

Appellant's arguments that its estimator observed some BOR canals that did not have sealant in transverse contraction joints are irrelevant. He also observed others containing sealant. The specifications in this contract control. Appellant made some effort, albeit not persuasive, to challenge the engineering reasons for requiring the sealant. That attempt similarly fails as irrelevant. Appellant has not directed us to any established engineering rule or industry practice that even arguably might render ambiguous, in the eye of a contractor experienced in the trade, what appear to be unambiguous contract provisions. *See Riley Stoker Corp.*, ASBCA No. 37019, 92-3 BCA ¶ 25,143 at 125,327, and cases cited. As established, BOR was entitled to receive that for which it contracted. There is no evidence that BOR's direction to seal the contraction joints resulted in economic waste. Appellant was not entitled to second guess the engineering determinations underlying the specifications and to substitute its own judgment. *Harold J. Younger & Associates*, ASBCA No. 37523, 93-1 BCA ¶ 25,224, *aff'd on recon.*, 93-1 BCA ¶ 25,549.

Accordingly, this appeal is denied.

IBCA 2519

[15] FC and BOR have admitted from the outset that Hardrives and MRT, which incurred most of the costs, are due compensation for direct "sump and wells" work. Only quantum has been contested. Appellant has proved $5,035 in extra costs and burden not accounted for elsewhere, and is entitled to that amount, plus interest under the CDA as of March 3, 1988 (FF 373).

IBCA 2516

[16] Appellant seeks PPA interest on account of delayed progress payments. BOR long has admitted that some interest is due, but it has disputed the number of delayed payments and the triggering date from which interest begins to run. BOR has declined to pay any amount, however, at one point asserting erroneously that it could not do so until appellant filed a CDA claim. There is no such restriction upon the contracting officer to the extent that underlying progress payments are not in dispute.

A goal of the PPA was to reduce administrative payment delays. The PPA clause in the contract (FF 376) directed that determinations of interest due would be in accordance with the statute and OMB Circular A-125 (FF 377). The applicable OMB circular directed that "[a]gencies will pay interest without the need for business concerns requesting them," unless the payment in question were delayed because of a disagreement over its amount or over contract compliance issues. Even after remand by this Board in early 1988 for a contracting officer's decision within 60 days, no decision issued (FF 394). This was prior to the September 1988, letter from a disgruntled employee alleging fraud and BOR's subsequent fraud referral (FF 154), so we ascertain no reason from the record why the contracting officer did not act. We have taken the mistreatment of payment matters into consideration in connec-

Digitized by Google

tion with IBCA 2375/2475, above, and elaborate no further here.

On the other hand, Hardrives' claim for interest was misguided in some respects. Pre-hearing, citing the PPA clause, Hardrives insisted that payment was due no later than the 30th day after the date of delivery of supplies or performance of contract services. Under the PPA clause, however, payments were not due until the *later of* the 35th day after receipt of a proper invoice or the date the supplies or services were accepted by the Government. That *acceptance* was deemed to occur on the 30th day after supplies or services were received. At hearing, again disregarding the contract, Hardrives alleged that the voucher cut-off date was the date from which interest should begin to run.

Despite the 35-day provision in the PPA clause, BOR's own policy was to process payment requests not more than 5 days after receipt (FF 387) and the Administration of Payments clause (FF 375) provided that payments were to be made as close to 30 days as possible after receipt of approved estimates. BOR has stipulated in this appeal to a 30-day payment period (FF 396).

BOR is correct, though, that, under the PPA clause and OMB Circular A-125, the 30-day payment period, after which PPA interest began to accrue, did not begin until a "proper" invoice had been received. Under the PPA clause, in order for an invoice to be "proper," it had to contain substantiating information as required by the contract. FC rejected some of Hardrives' estimates because they did not contain lien waivers for unincorporated on-site materials. Apparently relying upon the Payments clause (FF 374), which provided that the contracting officer "may" authorize materials delivered on site to be taken into consideration, Hardrives disputed the need for such waivers, although it eventually obtained them. Hardrives overlooked the Administration of Payments clause, which stated that material delivered on site could be included in payment estimates "only if" the contractor had furnished satisfactory evidence of title and that the material would be used to perform the contract. Again, acceptance of the materials for payment purposes was optional.

Although BOR agrees that some progress payments were late and that some interest is due, Hardrives has not met its burden to prove interest due in its claimed amount of $17,216.38. We have found the IGE to be the best-supported calculation, and that Hardrives is entitled to $3,868.13, plus interest under the CDA as of December 3, 1987 (FF 398).

IBCA 2414/2515

[17] Hardrives seeks $14,893 for royalties it was required to pay for use of Borrow Area C. The contract plainly required that contractors include the borrow surcharge in their bids: "the Contractor will be charged $0.15 for each cubic yard of material removed from Borrow Area C;" "Payment * * * for 'Excavation from Borrow' will be made at the unit price per cubic yard bid * * *. This price shall include the costs of excavating, hauling, placing embankment, moisture application, plus the $0.15 per cubic yard cost of purchasing only borrow material from Borrow Area C * * *" (FF 14). It is evident that both Hardrives and MRT relied upon this clear contract language in bidding, as both included the royalty charge in their bid prices for borrow (FF 401).

There is no basis for this claim and the appeal is denied.

Decisions

Appeals IBCA 2375/2475 are sustained in the amount of $3,488,260, plus CDA interest as of April 17, 1987; appeal IBCA 2518 is sustained in the amount of $27,578 plus CDA interest as of February 8, 1988; appeal IBCA 2524 is sustained in the amount of $25,063, plus CDA interest as of December 28, 1987; appeal IBCA 2511 is sustained in the amount of $21,780, plus CDA interest as of January 6, 1988; appeal IBCA 2519 is sustained in the amount of $5,035.37, plus CDA interest as of March 3, 1988; appeal IBCA 2516 is sustained in the amount of $3,868.13, plus CDA interest as of December 3, 1987. Appeals IBCA 2510, 2319/2514, and 2414/2515 are denied.

[¶ 26,268] KRW, Incorporated

DOT BCA No. 2572, May 18, 1993. Contract No. DTFH61-88-Z-00038.

Procedure, Boards—Attorneys—Corporate Officer.—A vice-president with limited duties was entitled to represent the contractor because he had been designated as a corporate officer by the contractor's board of directors. The rule permitting a corporate contractor to be represented by an officer did not define officer. After the vice-president had resigned, he was reappointed with authority to collect only three accounts. This limited authority did not prevent him from being an officer, nor did the fact that he received no remuneration and received his mail at home.

Contract Disputes, Certification—Effective Date of 1992 Amendments—Claim v. Appeal.—A claim certification was within the remedial effect of 1992 amendments of the Contract Disputes Act because the claim was not the subject of an appeal until after the enactment of the amendments. Although the certification may not have been valid when made, the amended Act validated certification by any person duly authorized to bind the contractor with respect to the claim.

Payments—Anti-Assignment Statutes—Agreement to Pay Proceeds.—A contractor's designation of an individual to represent it in its claims did not violate the anti-assignment statutes, because no entity other than the contractor was given a direct right to recover from the government. The contractor could distribute any funds it received from the claim in any manner, and it could enter into an agreement obligating to pay all or a portion of its recovery to another without creating an assignment of the claim.

For the appellant: Russell E. Machol, Vice President. For the government: Vivian A. Philbin and Eric A. Kuwana, Federal Highway Administration, Washington, D.C.

Before ROBERTORY, Administrative Judge.

ROBERTORY, Administrative Judge: KRW, Incorporated ("KRW" or "appellant") appealed from a decision by the Contracting Officer, Federal Highway Administration ("FHWA" or "respondent"). That decision denied KRW's claim for $70,096.78 in its entirety. The FHWA has now moved for dismissal based on an alleged lack of jurisdiction.

The respondent alleges that Mr. Russell E. Machol, who is representing KRW in these proceedings, resigned as Vice-President of KRW, Inc. on November 16, 1990, with Mr. George Earnhart, KRW's Chairman and President, purchasing all of Mr. Machol's stock. The FHWA further alleges that on December 20, 1990, Mr. Machol was given the title of "Senior Vice President" with authority only to collect accounts receivable from four sources, including the amount now claimed from the FHWA. The respondent alleges that Mr. Machol, despite his title, receives no salary, benefits, or other compensation from KRW, and that he has requested that all correspondence be sent to his home address.

Based on these factual allegations, the FHWA argues (i) that Mr. Machol was not authorized to certify KRW's claim, (ii) that the transaction constitutes a violation of the Anti-Assignment Act and the Federal Acquisition Regulations "Assignment of Claims (JAN 1986)" clause, § 52.232-23.

MR. MACHOL'S STATUS

At the heart of respondent's Motion is the allegation that Mr. Machol is not really an officer of KRW. Under Rule 29(a) of the Board's Rules of Procedure, 48 C.F.R. § 6302.29(a), a corporate appellant such as KRW may be represented by an officer of the corporation. Therefore, if respondent's allegations are correct, then it would follow that Mr. Machol is not authorized to represent the corporation in the litigation before the Board. Accordingly, we consider his status first.

The Rule does not purport to define officer. Whether or not a person is, in fact and in law, an officer of a corporation is a matter to be determined by state law and the terms of the corporate charter and by-laws. Neither party has made any presentation regarding the applicable state law. With its reply to the Motion, KRW has submitted a copy of the minutes of a December 20, 1990 meeting of the KRW Board of Directors. The minutes sets forth a Resolution adopted at that meeting, that:

Digitized by Google

Russell E. Machol is a Senior Vice President and officer of KRW, Inc. in accordance with Section 13 of the KRW bylaws with authority and duties limited to the collection of the above named accounts receivable . . .

The "above accounts receivable" include the claim now before the Board.

The minutes of the December 20, 1990 meeting of the KRW Board of Directors leave no doubt that the Directors have designated Mr. Machol as an officer of KRW. The fact that he does not have unlimited authority does not necessarily mean that he is not an officer, for most corporate officers have defined functions and those functions need not be all-inclusive of all corporate functions. We are aware of no law or regulation that a corporation may not have a vice-president for accounts receivable or for certain accounts or for other limited purposes.

The Board is also not aware of any legal requirement that a corporate officer must receive any sort of remuneration, regular or otherwise, for performing that office.

Likewise, we are aware of no law or regulation dictating where a corporation must receive its mail.[1] Corporate litigants regularly receive written communications from the Board at addresses other than the corporate address, *e.g.*, at office of their legal representatives.

The Board therefore determines that Mr. Machol is an officer of KRW, Inc. and that as a result of such status Mr. Machol may represent the corporation KRW, Inc., in the present proceedings.

CERTIFICATION

The appellant's claim submitted to the Contracting Officer in the amount of $70,076.98 (AF Tab 107), dated April 22, 1992, was certified by Mr. Machol as "Senior Vice President and Contracting Officer."

Implementing the Contract Disputes Act of 1978, as amended, Federal Acquisition Regulation § 33.207, as in effect on the date the claim was submitted,[2] mandated that when a claimant is a corporation, the claim shall be certified by "(i) A senior company official in charge at the contractor's plant or location involved; or (ii) An officer or general partner of the contractor having overall responsibility for the conduct of the contractor's affairs."

Section 6(c) of the Contract Disputes Act of 1978, as amended subsequent to the filing of the claim and now in effect, 41 U.S.C. § 605(c), states in pertinent part:

(c)(1) A contracting officer shall issue a decision on any submitted claim of $50,000 or less within sixty days from his receipt of a written request from the contractor that a decision be rendered within that period. For claims of more than $50,000, the contractor shall certify that the claim is made in good faith, that the supporting data are accurate and complete to the best of his knowledge and belief, that the amount requested accurately reflects the contract adjustment for which the contractor believes the government is liable, and that the certifier is duly authorized to certify the claim on behalf of the contractor. . . .

(6) The contracting officer shall have no obligation to render a final decision on any claim of more than $50,000 that is not certified in accordance with paragraph (1) if, within 60 days after receipt of the claim, the contracting officer notifies the contractor in writing of the reasons why any attempted certification was found to be defective. A defect in the certification of a claim shall not deprive a court or agency board of contract appeals of jurisdiction over that claim. Prior to the entry of a final judgment by a court or a decision by an agency board of contract appeals, the court or agency board shall require a defective certification to be corrected.

(7) The certification required by paragraph (1) may be executed by any person duly authorized to bind the contractor with respect to the claim.

The Board interprets the KRW Board of Directors Resolution as giving Mr. Machol, a Senior Vice-President, the authority to bind KRW in matters relating to the claim against the FHWA and to take all actions needed to prosecute and settle that claim. Thus, his authority satisfies paragraph (7) of 41 U.S.C. § 605(c).

The FHWA argues that paragraph (7) does not apply to this claim because the claim

[1] We are not talking about agents for service of process, an area in which there are precise statutory requirements in the various states.

[2] As indicated below, the regulation has been altered by the effect of a subsequent statute. See also Office of Federal Procurement Policy Policy letter 80-3, Amendment #1, January 11, 1993, published at 58 Fed.Reg 5039, January 19, 1993.

©1993, Commerce Clearing House, Inc.

Digitized by Google

was pending at the Board prior to enactment of the amendment to the Contract Disputes Act that added paragraph (6) and (7) of § 605(c).[3] This allegation is not factually correct, but we nevertheless consider the issue of the effective date of the statutory amendment.

Paragraphs (6) and (7) were enacted by section 907 of the Federal Courts Administration Act of 1992, Public Law 102-572, October 29, 1992. The Congressional purpose was to mitigate and negate a harsh interpretation of the Federal Acquisition Regulation adopted by *United States v. Grumman Aerospace Corporation,* 927 F.2d 575 (Fed. Cir. 1991). Section 907 establishes the effective date of the amendment:

> (2) The amendment ... shall be effective with respect to all claims filed before, on, or after the date of the enactment of this Act, except for those claims which, before such date of enactment, have been the subject of an appeal to an agency board of contract appeals or a suit in the United States Claims Court.

The appeal from the Contracting Officer's decision denying the claim was received by the Board on November 23, 1992, after the date of enactment of the Federal Courts Administration Act of 1992. Thus, as of the date of the passage of that Act, the claim had not yet been the subject of an appeal to the Board or the filing of a suit in the Claims Court (now the Court of Federal Claims), and the exception set out in section 907 is not applicable. Accordingly, the relief granted contractors by section 907 applies to this claim. While at the time it was filed, the certification may not have passed muster due to the *Grumman* decision, it is within the remedial effect of the Act and 41 U.S.C. § 605(c)(7) applies.

The Board determines the certification to be valid.

THE PURPORTED ASSIGNMENT

The respondent argues that KRW has attempted to assign the contract to Mr. Machol in violation of 41 U.S.C. § 15,[4] citing *John B. Rich (EZ Construction Company, Subcontractor),* DOTBCA NO. 2518, 92-3 BCA ¶ 25,186 (1992).

The contractor is KRW, Inc. The appellant is KRW, Inc., not Mr. Machol. The appeal is being prosecuted under the name of "KRW, Inc." Presumably, if the appellant prevails, the payment check drawn on the Treasury of the United States will be payable to KRW, Inc. Presumably, when that check is received, it will be endorsed in the name of KRW, Inc. A contractor may appoint a person to act as its agent in its name, and such is not an assignment or transfer of a contract. See *United States ex rel. Giant Powder Company v. Axman,* 152 F. 816 (Cir. Ct., N.D. Cal. 1906). Since Mr. Machol is an officer of the corporation, it is reasonable that the corporation should designate him as its agent for the prosecution of the claim.

Once KRW or any of its authorized agents comes into possession of those funds, KRW may distribute them in any manner it sees fit. Respondent has cited us to no precedents that would hold that a contractor may not enter into an agreement, prior to receiving funds from the government, that would have the effect of obligating it to pay all or a portion of those funds to another as part of a separate transaction. The Anti-Assignment Act is only violated if a contractor seeks to create in some other entity a direct right to recover funds from the government in its own name.

The Board concludes that Mr. Machol is pursuing the claim as an agent of KRW and in its name, that there has been no assignment of contract or claim against the government to Mr. Machol, and that having Mr. Machol pursue the claim as the representative of KRW, as he is doing, is not a violation of the Act.

DECISION

The respondent's Motion to Dismiss is denied in its entirety.

---

[3] Motion, p. 7.

[4] 41 U.S.C. § 15 prohibits assignments of government contracts. The clause in Federal Acquisition Regulation § 52.232-23 implements both 41 U.S.C. § 15 and 31 U.S.C. § 3727, *infra,* by permitting an assignment to a financing institution under certain conditions, as authorized by those statutes. No financing institutions are involved in the issues placed before the Board.

[¶ 26,269] CardioMetrix

DOT BCA Nos. 2571, 2591, May 3, 1993. Agreement No. DTCG84-92-A-3KB621.

Contract Types—Blanket Purchase Agreements—Contract as Basis of Jurisdiction.—A blanket purchase agreement for laboratory services was not a contract, because the laboratory had no obligations. A separate contract came into existence whenever the government ordered services and the laboratory undertook to provide them. Even if the government was obligated under the agreement to pay costs in the event of a convenience termination, the laboratory incurred no obligation as a result of the agreement. Thus, consideration, an essential element for contract formation, was lacking.

Convenience Terminations—Noncontractual Agreement—Effect of Termination Clause.—The government's invocation of the Termination clause in a blanket purchase agreement for laboratory services did not entitle the laboratory to recovery under the clause, because the blanket purchase agreement was not a contract. If a contract created by an individual order was terminated for convenience, the contractor could recover up to the price of the terminated contract, but if the government authorized payment for all orders it had issued, there was no contractual authority for recovery of termination costs under the blanket purchase agreement.

Contract Disputes, Jurisdiction—Contract as Basis for Jurisdiction—Blanket Purchase Agreement.—A board had jurisdiction to decide whether a blanket purchase agreement constituted a contract, even though its jurisdiction was contingent on the existence of a contract, because every tribunal has inherent authority to ascertain its own jurisdiction. Thus, the board could determine the existence of a contract even though that determination would effectively dispose of the claim. Because there was no contract, the appeal was dismissed for lack of jurisdiction.

For the appellant: Robert J. Loring, Ph.D., Chief Operating Officer. For the government: Bernard J. Roan, United States Coast Guard, Washington, D.C.

Before ROBERTORY, WARE, and STERN, Administrative Judges.

ROBERTORY, Administrative Judge: These two appeals[1] grow out of the Coast Guard's termination for convenience of the third in a series of Blanket Purchase Agreements. The respondent has filed a Motion to Dismiss on jurisdictional grounds.

BACKGROUND

On January 22, 1990, CardioMetrix and a Coast Guard Contracting Officer at the Maintenance and Logistics Command (Atlantic), Governor's Island, New York, entered into the first of the series of three Agreements, Blanket Purchase Agreement DTCG84-91-A-3KB168, under which CardioMetrix was to provide pathology/laboratory services at the request of Coast Guard medical officers or civilian physicians under contract to the Coast Guard. The Agreement set forth a schedule of prices for various laboratory tests, with estimated quantities for each. The term of the Agreement was January 22-June 1, 1991.

The covering letter which transmitted the executed Agreement to CardioMetrix commenced as follows:

> Enclosed is a Blanket Purchase Agreement (BPA) for *laboratory services.*[2] A Blanket Purchase Agreement is a simplified method of obtaining services. IT IS NOT A CONTRACT. It becomes contractually binding when you accept an eligible U.S. Coast Guard (USCG) patient for care. The Coast Guard is under no obligation to refer personnel for your care and you are under no obligation to accept patients for care . . . (Upper case in original).

On May 28, 1991, the Coast Guard issued the second Blanket Purchase Agreement, DTCG84-91-A-3KB621, similar to the first but for the period June 1-September 30, 1991. CardioMetrix accepted the Agreement on June 3. This Agreement was not accompanied by a letter similar to that accompanying the earlier Agreement (*supra*).[3]

[1] Docket 2571 was an appeal alleging that the Contracting Officer had refused to issue a decision. Docket 2591 is the appeal from the decision that was eventually issued.

[2] Italics so in original.

[3] At least, the Coast Guard did not include one in the appeal file.

©1993, Commerce Clearing House, Inc.

Digitized by Google

On October 1, 1991, the Coast Guard issued the third Blanket Purchase Agreement, DTCG84-92-A-3KB621, the Agreement now before us. This Agreement called for performance of the same services, but during the period October 1, 1991-September 30, 1992. The Agreement was issued on Optional Form 347 (10-83) "Order For Supplies Or Services." The Schedule of Supplies or Services to be Provided recited that this was a "Blanket Purchase Agreement." This Agreement included another preprinted sheet, "Optional Form 347 Page 2 (10-83)." This sheet was entitled "Purchase Order Terms and Conditions" and read in pertinent part as follows:

> 52.252-2. CLAUSES INCORPORATED BY REFERENCE (APR 84)
>
> This contract incorporates the following clauses by reference with the same force and effect as if they were given in full text. Upon request the Contracting Officer will make their full text available:
>
> FEDERAL ACQUISITION REGULATION (48 CFR CHAPTER 1) CLAUSES . . .
>
> 52.233-1 Disputes (Apr 84)
>
> 52.249-1 Termination for Convenience of the Government (Fixed Price) (Short Form) (Apr 84) . . .

The referenced termination clause simply provides that the Contracting Officer could terminate "this contract" when such would be in the government's interest, in which case the parties' rights and obligations would be in accordance with Federal Acquisition Regulation Part 49, *i.e.*, roughly speaking, the contractor would be reimbursed for its costs of performance and in preparing for performance.

On July 30, 1992, the Contracting Officer unilaterally issued Modification 0001 to the Agreement. Citing the authority of Federal Acquisition Regulation clause "52.249-4 Termination for Convenience of the Government (Services) (Short Form)," the Contracting Officer "cancelled" the Agreement in its entirety, noting that unpaid invoices for services rendered prior to the date of termination would be processed per the original agreement. This Modification contained two errors: *First,* it cited the wrong Agreement number.[4] *Second,* it referenced a termination clause other than the one mentioned in the Agreement, a clause nowhere else referenced, implicitly or explicitly, in the Agreement.

On August 18, 1992, the Contracting Officer unilaterally issued Modification 0002, cancelling Modification 0001 in its entirety but repeating its provisions with the correct Agreement number. It continued to reference the termination clause of Federal Acquisition Regulation § 52.249-4.

By letter of August 27, 1992, CardioMetrix correctly advised the Coast Guard that the termination clause cited in the terminating Modifications was not the termination clause incorporated into the parties' Agreement. The letter requested the Contracting Officer to send CardioMetrix a letter "citing one of the other FAR clauses that would allow cost recovery on the part of a contractor."

On September 23, 1992, CardioMetrix filed a claim seeking $9,961.00 in reimbursement for costs incurred in connection with DTCG84-92-A-3KB621. This included $849.00 in bid preparation costs, $498.00 in "bid followup expense," $5,845.00 for "maintenance of ongoing readiness, 10/1/91-8/10/92," $1,500.00 for termination expenses, and $1,269.00 for general and administrative expense at 30% of $4,230.00.[5] The letter requested a "final decision" on the claim.

In reply, by letter of October 15, 1992, the Chief of the Medical Branch (not the Contracting Officer), acting "for the Commander," denied the claim in its entirety.[6] The letter did not state that it was the requested "final decision" nor did it contain the notice of appeal rights that the Federal Acquisition Regulation requires be included in every contracting officer's decision under the Contract Disputes Act. This letter stated that Federal Acquisition Regulation clause 52.249-4 had been cited erroneously, being used "as a courtesy" to advise that the Agreement would not be renewed beyond its expiration date and that invoices for services performed under the Agreement would be processed for payment. The letter further stated that the costs sought were not payable under the terms of the Agreement.

Thereafter, on November 23, the Contracting Officer issued a formal decision under the Contract Disputes Act, denying

[4] It cited DTCG84-92-A-3KB061 vice DTCG84-92-A-3KB621.

[5] The composition of the base amount for application of the overhead rate is not clear.

[6] Only a person possessing a warrant in his/her own right has authority to execute a document effectively denying a claim. Thus, this letter is without effect.

Digitized by Google

CardioMetrix's claim on the grounds that under the Agreement money was due CardioMetrix only for services rendered in accordance with the contract schedule.

DISCUSSION

The Coast Guard argues that the Board has no jurisdiction to consider CardioMetrix's claim because (i) our jurisdiction is limited by the Contract Disputes Act to claims arising out of express or implied contracts, (ii) a blanket purchase agreement is not a contract, (iii) the instant dispute therefore cannot be said to arise out of express or implied contract, and therefore (iv) the instant dispute is beyond our jurisdiction.

The appellant counters that the Blanket Purchase Agreement included a disputes clause and a termination for convenience clause, that CardioMetrix relied on the termination for convenience clause in entering into the Blanket Purchase Agreement, and that CardioMetrix had incurred costs in placing a teleprinter and manuals at the Coast Guard Headquarters Clinic.[7]

The Coast Guard is generally correct in its argument that we do not have jurisdiction over disputes that do not arise out of express or implied contracts. *Coastal Coloration v. United States* [31 CCF ¶ 71,373], 713 F.2d 728 (Fed. Cir. 1983); section 3(a) of the Contract Disputes Act of 1978, 41 U.S.C. § 602(a).[8]

However, it does not necessarily follow that we are without jurisdiction to render any adjudications in regard to this dispute, even if they affect the determinative issue in this case.

Every tribunal has the inherent jurisdiction to ascertain its own jurisdiction, and to find all facts and reach all conclusions of law relating to that limited issue of jurisdiction. *John B. Rich (EZ Construction Company, Subcontractor),* DOTBCA NO. 2518, 93-2 BCA ¶ 25,761 (1993), affd. on recon., slip opinion, March 26, 1993; *Comsat General Corporation,* DOTBCA No. 1226, 83-2 BCA ¶ 16,870 (1983); *Warren Beaves, d/b/a Commercial Marine Services,* DOTBCA No. 1324, 83-1 BCA ¶ 16,232 (1983). In the exercise of this inherent jurisdiction, it is necessary in the instant appeal for the Board to determine whether or not all of the prerequisites for jurisdiction, including the existence of a contract (a determination which involves both questions of fact and questions of law), are present, even though such determination may well be effectively dispositive of the claim.

We recognize that "jurisdictional inquiry must not subsume substantive determination." *B. Inc. v. Miller Brewing Company,* 663 F.2d 545, 550 (5th Cir. 1981). However, it does not follow that the result of a jurisdictional inquiry may not impact the substantive result. In the instant case, it just so happens that the Board's determination on jurisdiction is also dispositive of a key issue in the parties' dispute and, unless our decision is reversed by a court of competent jurisdiction, may collaterally estop the parties from contending otherwise in any other forum.

The Coast Guard is also correct in arguing that a blanket purchase agreement is not a contract. A blanket purchase agreement, also known as a basic ordering agreement, does not create a contract between the United States and the other party to the Agreement. This is because such an agreement lacks an ingredient that is essential for the formation of a contract, namely, mutual consideration. Consideration means that each party either assumes some duty which it does not otherwise have, or gives upon some legal right which it is not required to give up.

In the instant arrangement between the parties, neither party had any obligations: the Coast Guard was not obligated to order any services whatsoever from CardioMetrix, and CardioMetrix could at any time refuse to provide services when called upon to do so by the Coast Guard.[9] The Coast Guard was careful to point this out in the letter which accompanied the first in the series of Agreements, defining that a Blanket Purchase Agreement is not a contract. Absent consideration, there was no contract between the parties. *Ann Riley and Associates, Ltd.,*

[7] CardioMetrix letter of April 27, 1993 responding to the Motion.

[8] **41 U.S.C. § 602. Applicability of law**

(a) Unless otherwise specifically provided herein, this Act applies to any express or implied contract . . . entered into by an executive agency for

(1) the procurement of property, other than real property in being;

(2) the procurement of services;

(3) the procurement of construction, alteration, repair or maintenance of real property; or,

(4) the disposal of personal property.

[9] The Contracting Officer noted this in the covering letter for the original January 22, 1990 Agreement.

DOTBCA No 2418, 93-3 BCA ¶ 25,963, March 30, 1993; *Stanley F. Horton d/b/a T&H Rental & Snow Removal,* DOTBCA No. 1231, 82-2 BCA ¶ 15,967 (1982).[10] Separate contracts came into being each time the Coast Guard ordered services and CardioMetrix provided the requested services.[11] *Ann Riley and Associates, Ltd., supra.*

The appellant urges the Board to apply the principle espoused in *Aviation Specialists, Inc.,* DOTBCA No. 91-1 BCA ¶ 23,534 (1990). That case held that although the government was not obligated to order services from Aviation Specialists, Inc., when it nevertheless invoked the termination for convenience clause, it thereby obligated itself to pay to that firm the costs spelled out in the termination for convenience clause. *Aviation Specialists* is distinguishable from the instant situation in one vital respect: in that case, there was a valid contract in existence prior to the termination. Both the government and Aviation Specialists, Inc. had given valuable consideration for their mutual promises. In the instant case, the lack of consideration means that no contract ever existed.

The appellant also argues that the incorporation by reference into the Agreement of a termination for convenience clause dictates a different result. As can be seen from the above quotation from page 2 of Optional Form 347, that form uses the words *"This contract* incorporates the following clauses . . . ", (emphasis added), rather than stating that any contracts that come into existence pursuant to the Agreement would contain such clauses. Thus, the Agreement as drafted creates unclarity. Arguably, the only reasonable interpretation is the latter, that contracts to be created will contain those clauses. However, rather than address the question of interpretation, we prefer to resolve this issue on another basis. Assuming that the Agreement included the referenced termination for convenience clause obligating the Coast Guard to pay the costs described in the clause in the event of termination, and assuming that such obligation constituted sufficient legal consideration being given by the Coast Guard, there would still be no legal obligation on the part of CardioMetrix as the result of entering into the Agreement. Nowhere did CardioMetrix promise to perform the services upon order; it retained the right to decline to do so. Hence, the Agreement could not rise to the level of a binding contract and the Coast Guard still would not be obligated to comply with the termination clause.

Thus, we conclude that there was no express or implied contract in existence and, under the provisions of the Contract Disputes Act, the Board lacks jurisdiction to consider CardioMetrix's claim.

DECISION

The appeal is dismissed for lack of jurisdiction.

[¶ 26,270] Sterling Federal Systems, Inc. v. National Aeronautics and Space Administration

GSBCA No. 10000-C(9835-P), December 23, 1992.

Protests, GSBCA—Costs of Protest and Attorney Fees—Connection of Costs.—A protester's motion for costs was granted, despite the government's refusal to respond to a show cause order on the ground that the issue of attorney fees was on appeal to a court of appeals, because the appeal involved entitlement to additional amounts not included in the instant costs. Not 1 cent of the costs awarded was the subject of an appeal.

---

[10] A contract came into existence each time the Coast Guard ordered services and CardioMetrix undertook to provide them. Thus the Coast Guard is obligated to pay at the Agreement rates for the services actually performed. *Ann Riley and Associates, Ltd., supra.* The Coast Guard's letter makes clear it is not disputing this obligation.

[11] As we read the termination, it appears that the Contracting Officer was authorizing payment for all services that had been requested by the Coast Guard before the termination; *i.e.,* that none of the separate contracts were being terminated during performance. If this is not correct, then of course the Coast Guard would be liable under each of the separate contracts, in an amount that, by terms of Federal Acquisition Regulation Part 49, would be limited to the price of the separate contract.

Digitized by Google

For the appellant: Saltman & Stevens, P.C., Washington, D.C., by Alan I. Saltman. For the government: David Forbes, Office of the Associate General Counsel (Contracts), Washington, D.C., and Rosamond M. French, Ames Research Center, Moffett Field, California.

Before HENDLEY, PARKER, and WILLIAMS, Administrative Judges.

HENDLEY, Administrative Judge: For the reasons outlined in our decision of May 22, 1992, we award to Sterling Federal Systems, Inc. the amount of $517,436.30 (which includes $457,016.17 in attorney's fees and disbursements and $4,046 in witness' fees, which was the subject of our decision of May 22, 1992, and $56,374.13 in attorney's fees and disbursements for pursuit of the cost case itself).

On August 7, 1992, we issued a Show Cause Order as to why the Board should not award Sterling $514,752.67. The additional $2,683.63 set forth herein represents the amounts identified in Sterling's Third Amendment to its Motion, dated September 16, 1992, for expenses incurred in pursuit of this cost case up to that date.

The respondent did not respond to our Show Cause Order, but instead informed us on December 22, 1992, that its reason for not responding was that the matter is on appeal to the Court of Appeals for the Federal Circuit. That is not, however, so. Our decision of May 22, 1992, which the protester, Sterling Federal, has appealed, denied the protester's claim of entitlement to additional amounts not involved or included in the costs herein granted. Not one cent of the costs herein awarded are the subject of an appeal. The appeal involves costs we declined to award to the protester.

The award, $517,436.30, is to be paid, without interest, from the permanent indefinite judgment fund, 31 U.S.C. § 1304 (1988) 40 U.S.C. § 759(f)(5)(C) (1988).

[¶ 26,271] Sterling Federal Systems, Inc. v. National Aeronautics and Space Administration

GSBCA No. 10000-C-R(9835-P), March 23, 1993.

Protests, GSBCA—Reconsideration—Arguments Already Considered.—A board of contract appeals declined to reconsider its previous decision awarding a protester attorney fees and disbursements for pursuit of its costs case, because the government did not direct the board's attention to any new basis for changing the decision.

For the protester: Saltman & Stevens, P.C., Washington, D.C., by Alan I. Saltman. For the government: David Forbes, Office of the Associate General Counsel (Contracts), Washington, D.C., and Rosamond M. French, Ames Research Center, Moffett Field, California.

Before HENDLEY, PARKER, and WILLIAMS, Administrative Judges.

Reconsideration of 93-3 BCA ¶ 26,270 denied.

HENDLEY, Administrative Judge:

Order

We decline to reconsider our decision of December 23, 1992, awarding Sterling Federal Systems, Inc., the amount of $517,436.30 (which includes $457,016.17 in attorney's fees and disbursements and $4,046 in witness' fees, which was the subject of our decision of May 22, 1992, and $56,374.13 in attorney's fees and disbursements for pursuit of the cost case itself).

In our decision of December 23, 1992, we stated the basis of that decision. The respondent has not directed our attention to any new basis on which we should change that decision. We therefore decline to do so. The respondent's motion for reconsideration is DENIED.

[¶ 26,272] Telcom Systems Services, Inc. v. Department of Health and Human Services; Fortran Corporation, Intervenor

GSBCA No. 12488-P, July 30, 1993. Solicitation No. HCFA-RFP-93-001/CR.

Protests, GSBCA—Procedure—Similar Issues.—A government motion to dismiss several counts of a protest complaint on the ground that the counts were resolved by the dismissal of an earlier protest was granted in part because the protester sought to pursue nearly identical counts in this protest as it had presented in the earlier protest. Unlike in the earlier protest, however, one count in this complaint asserted a conflict between a response to a vendor question and a section of the solicitation. The board dismissed all of the complaint, except to the extent that it alleged such a conflict.

For the protester: Sam Zalman Gdanski, Montebello, New York. For the government: Lyman Goon, Office of the General Counsel, Department of Health and Human Services, Baltimore, Maryland, and Dalton H. Phillips, Office of the General Counsel, Department of Health and Human Services, Washington, D.C. For the intervenor, Fortran Corporation: Cohen & White, Washington, D.C., by Victor G. Klingelhofer and Nikki Koulizakis.

Before DEGRAFF, DANIELS, and LABELLA, Administrative Judges.

DEGRAFF, Administrative Judge: In this protest, filed July 8, 1993, Telcom Systems Services, Inc. (Telcom), challenges the terms of a solicitation concerning a telecommunications system. Telcom's amended protest complaint, filed July 15, 1993, contains eleven counts.

On July 23, 1993, the Department of Health and Human Services (HHS) filed a motion to dismiss counts 7, 10, and 11 of the amended protest complaint. HHS asserts that these counts present claims that were resolved by the dismissal of an earlier protest. The earlier protest was dismissed on April 21, 1993, without prejudice to reinstatement within ten days. *Telcom Systems Services, Inc. v. Department of Health and Human Services*, GSBCA 12383-P, 1993 BPD ¶124 (Apr. 21, 1993). The ten days passed without the earlier protest being reinstated and so, HHS argues, Telcom cannot present claims in this protest that were presented in the earlier protest.

On July 28, 1993, Telcom responded to HHS's motion to dismiss. The response was prepared and filed by Telcom, even though an attorney has entered an appearance on Telcom's behalf. As best we understand the response, Telcom asserts that it seeks to challenge two amendments to the solicitation that were issued after the earlier protest was dismissed.

We grant HHS's motion to dismiss, in part.

Background

On November 25, 1992, HHS issued solicitation HCFA-RFP-93-001/CR, which seeks proposals for the design, engineering, furnishing, site preparation, installation and maintenance of an integrated telecommunications system. Protest File, Exhibit 1.

On April 15, 1993, Telcom filed a protest with the Board concerning the solicitation. The portions of the April 15, 1993 protest complaint that are relevant to the pending motion to dismiss are counts 2 and 7. Protest File, Exhibit 21.

Count 2 of the April 15 protest complaint reads, in its entirety, as follows:

> 2. Amendment of C8.1.1.1.1
>
> Requiring Project Manager and Technician with experience installing communication systems with at least 10,000 ports and maintaining approximately 5,000 active ports.
>
> ISSUE
>
> This is a competency issue to be addressed by the contracting officer and the SBA for small business. The requirement is arbitrary and capricious per answer to A227 at occupancy the number of work stations to be wired with modular connections is 3,800. Based on the building prints, the building won't support 10,000 stations.
>
> Protest File, Exhibit 21.

Related to count 2, at page 13 of the April 15 protest complaint, Telcom complains that, "by requiring a project manager of the scope set forth, the procuring activity is superceeding [sic] and converting any question of responsibility into a question of technical capability impermissibly." Telcom adds, "[I]t is restrictive of competitions [sic] to require a project manager who has done 10,000 ports, since this merely requires add-

Digitized by Google

ing additional ports to the system." Protest File, Exhibit 21.

In count 7 of the April 15 protest complaint, Telcom states, "It is our position that the specification for ISDN BRI has always been either ambiguous, restrictive of competition and/or exceeding the government's minimum need." Telcom then lists, at great length, the sections of the solicitation to which Telcom objects. In summary, Telcom alleges that the requirements of sections C3.2.1, C3.2.2, C3.2.4, and C3.2.5 violate 48 CFR 10.0004(a)(3); violate 48 CFR 10.004(a)(1) and (a)(2); contain "incomplete, unrealistic, or flawed evaluation criteria"; and include "mandatory requirements and mandatory options that go beyond the minimum needs of the government." Protest File, Exhibit 21.

The April 15 protest was dismissed on April 21, 1993, without prejudice to reinstatement within ten days. *Telcom Systems Services, Inc. v. Department of Health and Human Services*, GSBCA 12383-P, 1993 BPD ¶124 (Apr. 21, 1993). No action was taken to reinstate the protest.

On June 9 and July 1, 1993, HHS issued amendments 15 and 16 to the solicitation. These amendments respond to numerous vendor questions (numbered 238 to 282), including questions and issues raised by Telcom in the April 15 protest. Protest File, Exhibits 16, 17.

Telcom filed the present protest on July 8, 1993, and filed its amended complaint on July 15. The counts of the amended complaint that are relevant to the pending motion to dismiss are counts 7, 10, and 11.

Count 7 of the amended complaint filed in this protest reads as follows:

Amendment #15, Question 254

Amendment of C8.1.1.1.1—Requiring Project Manager and Technician with experience installing communication systems with at least 10,000 ports and maintaining approximately 5,000 active ports.

This is a competency issue to be addressed by the contracting officer and the SBA for small business. The requirement is arbitrary and capricious per answer to A227 at occupancy the number of workstations to be wired with modular connections is 3,800. Based on building prints, the building won't support 10,000.

Answer 254

Sections C3.10 lists approximately 7,000 active ports at cutover. Our port requirements at cutover are for 3,800 workstations including 3,800 voice equipment sets, 1,000 voice mail ports, 2,000 data ports, and 190 modem pool ports. In addition, we will need ports for 21 elevators, 8 pay telephones as well as any port required for switch diagnostics. Please note that this total number is 40 percent higher than the 5,000 active ports now specified in the RFP experience provision.

ISSUE

Question 254 was related to Section C8.1.1.1.1 On-Site Project Manager qualifications not Section C3.10. Do we amend Section C3.10 to include workstations, elevator phones, pay phones and ports for switch diagnostics as they are not part of Section C3.10.

At occupancy the number of workstations to be wired with modular connections is 3,800. Based on building prints, the building won't support 10,000 stations.

The Project Manager and technician requirements are excessive in that Health Care Financing Administration requires less than 5,000 ports. This is unfair to small businesses and, therefore, does not allow fair and open competition.

Amended Protest Complaint, at 5.

Count 10 of the amended complaint filed in this protest reads as follows:

Answer to Question 254

In the Health Care Financing Administration's Answer to Question 254, they referred to a requirement of 1,000 voice mail ports as being part of their 10,000 ports.

ISSUE

A voice mail address *is not* voice mail ports, they are merely software programmable addresses (extensions) referred to as mail boxes. All vendors could easily set up a data base for thousands of voice mail addresses at little or no additional hardware cost. Are vendors to assume they may identify these software addresses as ports and, therefore, avoid equipping the switch with hundreds of thousands of dollars of hardware for ports?

Amendment #15, Answer/Question 253

The wired and ready to operate requirement means that the switch must be equipped and wired at cutover (as delivered) such that the Health Care Financing Administration could simply connect cables directly to any of the 10,000 ports to operate a piece of equipment.

©1993, Commerce Clearing House, Inc.

Digitized by Google

ISSUE

What piece of equipment? Are the ports for voice mail or ISDN telephones, staff phones, digital sets—it is not defined. Again, if the Health Care Financing Administration does not know—how can a vendor?

Amended Protest Complaint, pages 6-7.

Count 11 of the amended complaint filed in this protest reads as follows:

Amendment #15, Question 253

This requirement is inconsistent with the requirement of the RFP and all of the amendment.

This statement is correct.

Question 260

The vendor protests that the solicitations violate FAR 10.004(a)(3), which requires that standards be "selectively applied" and "tailored" in the following RFP sections: C.3.2.1, C3.2.2, C3 .2.4, C3.2.5.

Question 261

The vendor protests that the solicitations are vague and ambiguous and thus violate FAR 10.0004(a)(1) and (a)(2) and FIRMR in the following RFP sections: C3.2.1, C3.2.2, C3.2.3, C3.2.4, C3.2.5.

Question 262

The vendor protests that the solicitations violate FAR and FIRMR since they contain incomplete, unrealistic evaluations in the following sections: C3.2.1, C3.2.2, C3.2.4, C3.2.5.

Question 263

The vendor protests that the solicitation violates FAR and FIRMR by including mandatory requirements and mandatory options that go beyond the minimum needs of the government in the following areas: C3.2.1, C3.2.2, C3.2.4, C3.2.5.

All vendors should bid the same system, even if Section C3.10 lists approximately 7,000 active ports (which they claim). How should the vendor equip and wire the remaining ports? How can the Health Care Financing Administration properly evaluate vendors fairly for technical and pricing when the minimum needs are not defined? Each vendor must make assumptions on a minimum of 30 to 50 percent of the switch.

Frankly, it is difficult to believe the Health Care Financing Administration can fairly evaluate vendors when they can't identify their minimum needs and they fail to recognize the difference between ports and lines and voice mail address.

Amended Protest Complaint, at 7-8.

Discussion

HHS asserts that counts 7, 10, and 11 of the amended complaint filed in this protest are "identical" to counts 2 and 7 contained in the April 15, 1993 protest complaint. HHS Motion to Dismiss, at 1. "Claim preclusion, where found, operates to bar subsequent assertion of the same transactional facts in the form of a different cause of action or theory of relief." *Young Engineers v. International Trade Commission*, 721 F.2d 1305, 1314 (Fed. Cir. 1983). The doctrine of claim preclusion operates by virtue of a final judgment, whether the judgment results by default, consent, dismissal with prejudice, or otherwise. *Id.* at 1314. If, as HHS asserts, Telcom seeks to pursue the same claims in counts 7, 10, and 11 of this protest as it presented in counts 2 and 7 of the earlier protest, we will grant HHS's motion to dismiss.

A comparison of count 7 of this protest with count 2 of the earlier protest establishes that the two counts are nearly identical. There is, however, one distinction: Count 7 of the amended complaint filed in this protest asserts that there is a conflict between section C.3.10 of the solicitation and the response to vendor question 254, which is contained in amendment 15 to the solicitation. This claim was not made in count 2 of the earlier protest—nor could it have been, since that amendment was issued after the earlier protest was dismissed. Therefore, we grant HHS's motion to dismiss count 7 of this protest, except to the extent that count 7 alleges that there is a conflict between HHS's response to vendor question 254 and section C.3.10.

We do not see how count 10 of this protest resembles count 2 of the earlier protest. Count 10 of this protest is based upon HHS's responses to vendor questions 253 and 254, which are contained in amendment 15 to the solicitation, which was issued after the earlier protest was dismissed. HHS's motion simply declares that count 10 of this protest is the same as count 2 of the earlier protest. The motion does not explain how the two counts are related, much less establish that they are the same. Therefore, we deny HHS's motion to dismiss count 10 of this protest.

A comparison of count 11 of this protest with count 7 of the earlier protest estab-

Digitized by Google

lishes that the two counts are nearly identical. There is one distinction: In count 11 of this protest, Telcom asserts that the solicitation fails to state HHS's minimum needs because it does not state how 3,000 ports should be equipped and wired. This claim was not made in count 7 of the earlier protest. Therefore, we grant HHS's motion to dismiss count 11 of this protest, except to the extent that count 11 alleges that the solicitation does not state how 3,000 ports should be equipped and wired.

Decision

As set forth above, HHS's motion to dismiss is granted, in part.

[¶ 26,273] Integrated Systems Group, Inc. v. Department of the Army; SYSCON Corporation, Intermec Corporation, and Federal Computer Corporation, Intervenors

GSBCA No. 12417-P, July 9, 1993. Solicitation No. DAHC94-93-R-0002. (The text below is the redacted version issued to the public on July 22, 1993.)

Requests for Proposals and Quotations—Restrictiveness—Minimum Needs.—A protest against the award of a solicitation for hand-held computers alleging that the solicitation unduly restricted competition by requiring an MS-DOS® 5.0 or later operating system for the computers was denied because the protester failed to show that the agency's requirements overstated the government's actual minimum needs. The fact that the protester was not able to compete in the procurement as a result of the solicitation's requirements did not make the requirements restrictive. The MS-DOS® requirements of the solicitation avoided the conversion problems experienced in past acquisitions and would establish a new base line promoting technological flexibility and standardization in this procurement and future acquisitions.

Requests for Proposals and Quotations—Restrictiveness—Reasonable Basis.—A protest against the award of a solicitation for hand-held computers that specified an MS-DOS® 5.0 or later or a fully compatible MS-DOS® 5.0 operating system was denied, despite the protester's contention that the government did need such an operating system, because the government showed that the procurement sought to acquire a system that afforded compatibility for existing program applications and those associated with future procurements. The evidence indicated that most of the government's personal computers used an MS-DOS® 5.0 or compatible operating system and that one of the procurement's goals was to have the hand-held computers interface with the personal computers. The government also showed that an MS-DOS® 5.0 or compatible operating system would enhance the use of peripherals and would enable programmers and users to develop applications on their personal computers and download to their hand-held computers. The government presented evidence detailing the rationale for specifying MS-DOS® 5.0, rather than an earlier version, even if all of the memory management advantages could not be utilized as a result of the hand-held computer's architecture.

Selection of Contractor—Change in Requirements—Relaxation of Requirements.—A protest against the award of a solicitation for hand-held computers that required an MS-DOS® 5.0 operating system was denied, despite the protester's contention that the government's relaxation of the requirement for a limited number of intrinsically safe hand-held computers indicated that the government overstated its minimum needs, because the government relaxed the requirement only after discovering that there were no MS-DOS® 5.0 intrinsically safe devices available on the commercial market. The government's relaxation of the operating system requirement for the intrinsically safe computers was rationally based and designed to enhance competition.

Brand Name or Equal—Salient Characteristics—Description Adequacy.—A protest against the award of a solicitation for hand-held computers requiring an MS-DOS® 5.0 or compatible operating system that alleged that the government's failure to list the brand-name system's salient characteristics violated statutes, regulations, and its delegation of procurement authority was denied because the specification was clear and did not require

 ©1993, Commerce Clearing House, Inc.

Digitized by Google

further elaboration. The protester contended that the specification required it to guess at the desired essential qualities of the brand-name software. Whether the MS-DOS® 5.0 compatibility specification was viewed as a salient characteristic of the hardware or of the software or as a brand-name or equal specification, the protester did not need to guess as to the functional characteristics of an MS-DOS® 5.0 or fully compatible operating system. MS-DOS® 5.0 or fully compatible operating system is self-defining to any knowledgeable vendor.

For the protester: Skolnick & Leishman, P.C., Derwood, Maryland, by Shelton H. Skolnick, Judy D. Leishman, and Amy M. Hall. For the government: Col. Riggs L. Wilks, Jr., Maj. Charles R. Marvin, Jr., Maj. Karl M. Ellcessor III, Maj. Roger D. Washington, and Maj. Rose J. Anderson, Office of the Chief Trial Attorney, Department of the Army, Arlington, Virginia. For the intervenor, SYSCON Corporation: Arthur M. Rayman. For the intervenor, Intermec Corporation: John W. Sobba. For the intervenor, Federal Computer Corporation: David S. Kovach.

Before GOODMAN, BORWICK, and HYATT, Administrative Judges.

GOODMAN, Administrative Judge: Protester, Integrated Systems Group, Inc. (protester or ISG), has protested the terms of a Department of the Army (respondent or Army) solicitation no. DAHC94-93-R-0002 (the solicitation) for the purchase of Automatic Identification Technology (AIT), which includes Portable Data Collection Devices (PDCDs), commonly known as hand-held computers. Protester filed its protest on May 5, 1993, before the time established in the solicitation for receipt of proposals that same day. Three offerors—SYSCON Corporation, Intermec Corporation, and Federal Computer Corporation—have intervened in the instant protest.

The ground of protest which remains to be resolved is whether the Army exceeded the Government's minimum needs and unduly restricted competition by including MS-DOS® requirements for the PDCDs.[1]

Protester argues that the Government's minimum needs are specific functions and capabilities that can be fully satisfied by PDCDs operating systems other than MS-DOS® 5.0 or compatible. According to protester, similar needs have been fully satisfied by the two prior contracts that acquired PDCDs with proprietary operating systems. Even if the Government's minimum needs are for an open system, rather than a proprietary system, protester believes there is no justification to exclude earlier versions of MS-DOS® prior to MS-DOS® 5.0 for the operating system of the PDCDs and MS-DOS® 3.31 for the operating system for the intrinsically safe PDCDs.

According to protester, earlier versions of MS-DOS® provide open system compatibility and, when used in conjunction with third party software, provide the increased functions of memory management that were introduced in MS-DOS® 5.0.

Finally, protester argues that even if MS-DOS® or compatible reflects respondent's minimum requirement for the operating system of the PDCDs, the specification which describes the operating system for the PDCDs is a "brand name or equal" specification which requires the solicitation to list the salient characteristics so that an offeror can select an acceptable operating system.[2]

Respondent's position is that through the AIT procurement, the Government seeks to establish a technological baseline and create a more "open systems" architecture for hand-held computer equipment, thereby taking advantage of the benefits associated with such an environment. Respondent argues that the proprietary operating systems which were provided on PDCDs in two prior procurements cannot now meet the Government's AIT needs, and that a concerted and rational effort was made by the Government to arrive at the decision to include the MS-

[1] Several grounds of protest were withdrawn by protester during discovery, and respondent's motion for partial summary relief with respect to count 2 of the protest, specifically, the part of count 2 which challenges the Army's evaluation methodology as being "unclear," and any similar issue incorporated by reference from protester's agency protest, was granted by the Board's decision of June 9, 1993.

[2] The specification requires the operating system to be "MSDOS® 5.0, or later, or an operating system that is fully MS-DOS® 5.0 or later version compatible, with the exception of the intrinsically safe PDCDs. The intrinsically safe PDCDs' operating system shall be at least MS-DOS® 3.31, or later, or an operating system that is fully MS-DOS® 3.31 or later version compatible." This will be referred to in this decision as the "MS-DOS® 5.0 compatibility specification" or the requirement for "MS-DOS® 5.0 compatibility."

Digitized by Google

DOS® 5.0 compatibility specification for the operating system as minimum requirement.

Respondent further avers that there are many reasons for including the minimum requirement of the MS-DOS® 5.0 compatibility specification for the operating system, rather than a previous version of MS-DOS®, and that the lack of 386 or higher microprocessor in the PDCD does not limit the memory management functions as alleged by protester.

With regard to the "brand name or equal" argument raised by protester, respondent argues that the MS-DOS® 5.0 compatibility specification for the operating system is itself a salient characteristic of the hardware (or software) to be procured, or that it is self defining and no further explanation is required.

For the following reasons, we deny the protest.

Findings of Fact

Previous Procurement of AIT

1. The AIT, procurement pursuant to the instant solicitation is the third in a series conducted over the past ten years. The two previous procurements acquired AIT which included bar code scanners and related items over a period of five years each. These procurements, known as Non-Tactical (NT) I & II, or the Logistics Applications of Automated Marking and Reading Symbols (LOGMARS) I & II, acquired technology with different proprietary operating systems and programming languages in 1983 and 1988. The requirement to program applications in a vendor-unique language, and then re-code from one vendor-unique language to a completely different user-unique language for use with the LOGMARS II equipment, caused significant problems in the Government user community with respect to personnel re-training, re-programming difficulties, equipment utilization delays, and other transition costs. For example, in 1988, the difficulties encountered by the Navy in re-coding applications were so significant that the agency was forced to delay using the NT II equipment by nine months. Transcript at 232-33, 262-64.

Development of Requirements for the Instant Procurement

2. The LOGMARS Acquisition Working Group (LAWG) was formed to develop the requirements for the instant procurement. The LAWG was staffed with members representing the General Services Administration, the Defense Logistics Agency, the Defense Mapping Agency, the Army, Air Force, Navy, Marines, Coast Guard, and Army Information Systems Selection and Acquisition Agency (ISSAA). Transcript at 258-59.

3. A "data call" was sent out to the using community to obtain user input as to the types of functionality and characteristics required by the users' applications, environments, and growth projections. Responses reflected concern over the possibility of receiving proprietary hardware and software from yet another vendor of bar code systems, and a need for a standardized operating system which would allow greater portability of the applications code. Transcript at 161-70; Protest File, Vol. 9, Exhibit 47.

4. As a result, the LAWG sought to avoid in this procurement the need to translate the existing inventory of application software into yet another proprietary language, and to avoid retranslation in future procurements. The LAWG recognized that retranslation would be repeated every five years, unless the incumbent contractor was selected in the subsequent contracts. Transcript at 199-200.

5. After studying responses from the data calls and analyzing government needs, program management personnel conducted extensive market surveys to determine the existence and scope of competition in the relevant portion of the PDCD marketplace. As a result of these surveys, they determined that there were several manufacturers who could compete, offering PDCDs with at least two operating systems, providing the standardization necessary to prevent the need for re-coding and retraining. Transcript at 112-13, 207, 249-50.

The Disk-Based Operating System (DOS) Requirement of the Instant Procurement

6. Before release of the solicitation in the instant procurement, ISSAA released a draft request for proposals (RFP) in November 1992, requesting comments from industry. Transcript at 366, 395. The draft RFP contained a requirement for MS-DOS® 5.0 or WINDOWS- 3.1 for the PDCDs' operating system. Of the approximately 600 comments received in response to the draft RFP, only one questioned the MS-DOS® requirement. *Id.* at 208. That question did not challenge the requirement for MS-DOS® compatibility, but only wanted to know whether the operating system would be resident on the PDCDs or the PCs. *Id.* at 207.

©1993, Commerce Clearing House, Inc.

Digitized by Google

The Solicitation

7. The solicitation was issued by ISSAA on March 5, 1993, Protest File, Vol. 1, Exhibit 1 at A-I, accompanied by a letter from the contracting officer informing offerors that the RFP, and responses to clarifying questions from potential offerors, could be accessed electronically through a bulletin board service established by ISSAA for that purpose. The date for receipt of proposals was established originally as April 5, 1993. This date was subsequently extended to May 5, 1993, at the request of vendors. *Id.*, Vol. 2, Exhibit 2, Amendment 0001 at 2.

8. The solicitation is for the acquisition of hardware, software, maintenance, training, technical engineering services, and documentation to establish and utilize automated identification systems throughout the Department of Defense and certain civilian agencies. The solicitation is for a firm, fixed-price, indefinite delivery, indefinite quantity contract structured to provide a basic year and nine option years. The guaranteed minimum amount is $4,000,000; the maximum amount is $249,370,000. Protest File, Vol. 1, Exhibit 1 at B-1, C-1.

9. The MS-DOS® compatibility requirement in the draft RFP was incorporated into the solicitation. Protest File, Vol. 1, Exhibit 1 at C-22. After release of the solicitation, ISSAA amended the solicitation to clarify further that the operating system requirement was a "DOS" (disk-based operating system) requirement, not an MS-DOS® requirement, to allow competition from other DOSbased operating systems compatible at the MS-DOS® 5.0 level or higher. *Id.*, Vol. 2, Exhibit 4, Amendment 0003 at C-22a. For intrinsically safe PDCDs, the MS-DOS® requirement was relaxed to MS-DOS® 3.31 or compatible, after a review of the market prompted by industry comments revealed the unavailability of any PDCDs utilizing an MS-DOS® or compatible operating system at the 5.0 level or higher. Transcript at 204-06; Protest File, Vol. 2, Exhibit 5, Amendment 0004 at 3; Vol. 4, Exhibit 30 at 2.

10. Section M.3 of the solicitation requires that the Army award the contract to the offeror who provides the "best value" to the Government. Section M.3 of the solicitation provides in part:

> M.3 BASIS FOR AWARD ("BEST VALUE" EVALUATION)
>
> An award will be made to that responsible acceptable offeror based on all evaluation criteria described in this section and is deemed to be in the best interest of the government considering technical, management and logistics, and cost, whose prices are otherwise determined to be fair and reasonable.
>
> M.4.3 Evaluation Areas of Consideration. Consideration shall be given to the areas below. Evaluation shall be based upon the criteria stated in Section M as well as the requirements stated in Section C. All mandatory requirements set forth in the specification shall be met.

Protest File, Vol. 1, Exhibit 1 at M-2 to M-3.

11. Mandatory requirements of the procurement were set forth in Section C of the solicitation, and designated as minimum requirements. The solicitation reads, in pertinent part:

> C.3.1.2. Mandatory Requirements. The Contractor shall satisfy all stated technical requirements of this Specification and the referenced Attachments and Exhibit. Requirements are a stated minimum, unless specified otherwise.

Protest File, Vol. 1, Exhibit 1 at C-2 to C-3.

12. The solicitation informs potential offerors of the applications and objectives of the AIT program:

> C.1.2 AIT APPLICATIONS. Some anticipated applications of AIT are in the areas of personnel identification, health care, food service, inventory management, logistics, retail sales, access control, transportation, and personnel management.
>
> C.1.3 AIT OBJECTIVES. The objectives of the AIT program are to provide: a common, integrated structure for the automatic collection, storage, retrieval, processing, transmission, and receipt of data; standardization and interoperability among Government users of AIT equipment; and flexible systems and equipment that can grow in size and capability, adapting to the needs of the Government.

Protest File, Vol. 1, Exhibit 1 at C-1.

13. The solicitation states the following requirements:

> C.3.1.1 General. The Contractor shall provide all necessary hardware, software, firmware, cables, connectors, accessories, maintenance, training, and documentation. Because of the diversity of applications, the Government requires the Contractor to provide the technical engineering services to configure, operate, and maintain the appropriate hardware and software to satisfy the specific application. AIT equipment shall be user-friendly,

Digitized by Google

commercial-off-the-shelf (COTS) equipment capable of operating worldwide. The Government will require Contractor assistance in completing necessary applications when AIT equipment is installed in foreign countries. All Contractor-supplied operating systems software and firmware shall be installed prior to delivery. AIT equipment shall be capable of supporting operations in both the tactical and non-tactical environment. A tactical environment is defined as similar to a heavy industrial setting that may have a potentially explosive atmosphere. In this rigorous environment, AIT equipment may be subjected to rough handling, operational use, shock, and vibration caused by dropping or transportation over rough terrain. A non-tactical environment is defined as a normal office or light industrial setting, both indoors and outdoors.

. . . .

C.3.1.7 Current Production. All equipment shall be state-of-the-art technology and in current production at the time the Demonstration, C.17, is performed.

a. "State-of-the-art" is defined as the most recently designed components that are in current production, marketed, available, maintained, and supported in accordance with the mandatory requirements specified elsewhere in this document. Prototype or development equipment is not acceptable. Out-of-date or discontinued equipment is not acceptable.

. . . .

C.3.2 FUNCTIONAL INTEGRATION. The Contractor shall provide equipment capable of integrating with other provided AIT equipment into operating configurations necessary to accomplish the automated collection, storage, retrieval, receipt, processing, and transmission of data.

Protest File, Vol. 1, Exhibit I at C-2 to C-4.

14. With respect to the PDCDs being acquired, the solicitation imposes the following requirements:

C.4.4.1 General Requirements. Portable data collection devices (PDCDs) are microprocessor-based, hand-held devices designed to gather source-entry data. The Government has a requirement for a family of PDCDs that meets a variety of operational needs in widely varying environmental conditions. Typical environments include office settings that require PDCDs with no hardening, a tactical environment that requires industrially hardened, intrinsically safe PDCDs, and a warehouse environment where one-handed operations will require bar code scanners embedded in or integral to the PDCDs . . . . The requirements may be met by as few as one or several versions, or models, of PDCDs. . . . The PDCD shall support a wide range of AIT applications. PDCDs shall have memory options for large applications, shall be user-programmable, and shall provide the operator with assistance or prompts to perform required functions. The PDCD shall be reliable and user-friendly. The PDCD shall be able to transmit stored data to a PC or host computer for further processing.

C.4.4.2 Functional Requirements. The PDCD family shall be sufficiently versatile in order to satisfy the following requirements: real-time and batch processing; flexibility in attaching a bar code non-contact scanner or wand; bar code scanner physical integration with the PDCD; interface with peripheral devices used to read/write to integrated circuit cards, and Personal Computer Memory Card International Association (PCMCIA) PC memory cards; interface with a peripheral device used to read magnetic stripe cards; data collection in a location that requires an intrinsically safe device; and data collection for workplaces requiring industrially hardened devices. PDCD memory shall be at least 256 Kbytes of RAM that can be expanded in increments at the user's option, and by the user, to 512 Kbytes and 1 Mbyte of RAM, if less than 1 Mbyte of RAM is provided in the basic configuration. In addition to RAM, a minimum of 64 Kbytes of non-volatile memory modules for storage of applications programs shall be included in the basic configuration and shall use EEPROM technology.

C.4.4.3 interfaces. The PDCDs shall interface with the following peripheral devices: bar code scanners or readers; integrated circuit card reader/writers; PCMCIA PC memory card reader/writers; and magnetic stripe readers. Although the Government requires a family of PDCDs, this requirement could potentially be met by one, or several, PDCD versions that can interface with the peripherals, and are also capable of meeting the following requirements: the PDCDs shall accept data from a bar code scanner or reader, integrated circuit card, PCMCIA PC memory card, magnetic stripe card, or manual data entry by keypad or keyboard; the PDCDs shall write data to integrated circuit cards,

©1993, Commerce Clearing House, Inc.

Digitized by Google

and PCMCIA PC memory cards; and, the PDCDs shall support various types of bar code scanners, such as wand bar code scanners, hand-held, non-contact, bar code scanners, and badge (or slot) bar code scanners. For portable operation, the ICC and PCMCIA PC card reader/writers, and the magnetic stripe reader interface, shall be integral or attached to the PDCD. When in use with the PDCD, the ICC and PCMCIA PC card reader/writers, and the magnetic stripe reader, shall be as mobile or portable as the PDCD and shall not encumber the operator. The Government recognizes that the PDCD may no longer be intrinsically safe when the ICC and PC card reader/writers, and the magnetic stripe reader, are attached.

Protest File, Vol. 1, Exhibit 1 at C-6 to C-7; Vol. 2, Exhibit 4, Amendment 0003 at 3.

15. The solicitation included the following requirements related to software:

C.5 SOFTWARE REQUIREMENTS.

AIT software is comprised of applications software, diagnostic software, and system utilities. Software shall be capable of being installed on PC-based hosts with minimal degradation in equipment performance. Each provided program shall run under MS-DOS® 5.0 or Microsoft WINDOWS® 3.0, or later. The PDCD operating system shall be MS-DOS® 5.0, or later, or an operating system that is fully MS-DOS® 5.0 or later version compatible, with the exception of the intrinsically safe PDCDs. The intrinsically safe PDCDs' operating system shall be at least MS-DOS® 3.31, or later, or an operating system that is fully MS-DOS® 3.31 or later version compatible. An intrinsically safe PDCD with MS-DOS® 5.0 or compatible, or later version, is desirable.

Protest File, Vol. 1, Exhibit 1 at C-22; Vol. 2, Exhibit 4, Amendment 0003 at C-22a, Exhibit 5, Amendment 0004 at 3.

16. The solicitation also requires the awardee to provide bar code application generation software able to produce source code in ANSI "C" and executable code for the PDCD. In addition, the solicitation states that the "ability to produce source code in BASIC® and/or Ada in addition to C would be desirable." Protest File, Vol. 1, Exhibit 1 at C-23; Vol. 2, Exhibit 4, Amendment 0003 at C-23. Compilers including all necessary libraries to allow for calls activating full functionality of the PDCDs are required for ANSI "C," BASIC®, and Ada programming languages. *Id.*, Vol. 1, Exhibit 1 at C-23.

17. An operating system is a computer program that coordinates the activities of a computer. The operating system is responsible for setting guidelines under which common computer tasks are executed. MS-DOS® stands for Microsoft Disk Operating System, manufactured by Microsoft Corporation. Version 5.0 wad released in 1991. Steven Simirin, *The Waite Group's MS-DOS® Bible* (Sams Publishing, 4th Ed. 1991). MS-DOS® 6.0 was released in 1993.

18. DR-DOS 6.0, a Novell product, is considered by the Government to be compatible, for the purpose of this solicitation, with MS-DOS® 5.0. Transcript at 113, 119, 124, 220.

19. The minimum system requirement for MS-DOS® 5.0 is an 8088 or higher microprocessor and 256K of RAM. *Microsoft MS-DOS® Operating System version 5.0 User's Guide and Reference* (Microsoft Corp. 1991). The minimum system requirement for DR-DOS 6.0 is an 8088 microprocessor and a minimum of 512K of RAM. *DR-DOS Version 6.0* (Novell 1992).

20. Compatibility with MS-DOS® 5.0 is determined in two ways—by running applications which MS-DOS® 5.0 is able to run, and by testing similarity of command functions. Transcript at 118-19.

21. It is extremely difficult to find MS-DOS® versions below MS-DOS® 5.0 on the current commercial market. Transcript at 394.

22. As part of Section C, identified as a minimum requirement, the solicitation required a demonstration of the performance of the offerors' equipment:

C.16 AIT DEMONSTRATION PLAN

C.16.1 GENERAL. As part of the proposal evaluation process, those Offerors determined to be in the competitive range shall demonstrate the hardware and software identified in the Offeror's proposal.

C.16.1.1 Demonstration Objective. The Government shall inspect and observe all COTS AIT equipment proposed by the Offeror to satisfy the requirements of this contract. Using the scenarios in this plan, the Offeror shall demonstrate interoperability of all AIT equipment; complete end-to-end connectivity; and, the minimum functional use of each piece of equipment. The demonstration shall occur in two parts: 1) the Offeror's presentation of the AIT equipment following the scenarios provided in this plan; and 2) the Government's independent observation and operation of the AIT equipment. All par-

Digitized by Google

ticipating Offeror's will be given equal opportunity to demonstrate Offeror-proposed AIT equipment and configurations during individually scheduled demonstration periods. The Government reserves the right to schedule additional demonstration periods to review deficiencies noted in any one demonstration. If this right is exercised for any Offeror, it will be exercised for all Offerors with demonstration deficiencies.

. . . .

C.16.2.2

. . . .

f. Portable Data Collection Devices

1. Demonstrate the PDCD's expandable memory feature.

2. Demonstrate the ability of the PDCDs to perform real-time and batch processing of data by interfacing PDCDs with the following equipment:

a) Host Computer. Demonstrate the PDCD's ability to send and retrieve information from a host computer.

(b) Cards. Demonstrate the ability of the PDCD to read and write data to Integrated Circuit cards, PC Memory Cards, and Optical Memory Cards. Demonstrate the ability of the PDCD to read ANSI/ISO Standard magnetic tracks 1 and 2 of the magnetic stripe on the IC Card. The demonstration should include, but not be limited to the following: any unique features, memory capacity, read/write/rewrite functions, card and data tampering protection features, and the connection to an AT-compatible computer via an RS-232C interface.

(c) Software. Demonstrate the use of operating system software and application programs downloaded from a computer. Show a PC screen display that mimics the PDCD display. Download the generated code to a PDCD and demonstrate correct operation on a PDCD. Run the application generator on a PC utilizing the system prompts. Trouble shoot and modify the generated code by changing three lines of code. Demonstrate source code output in BASIC®, ANSI "C", and Ada languages.

(d) Modem. Demonstrate the transfer of data to a host computer using an RF modem.

(e) Port Concentrator. Demonstrate the connection of multiple PDCDs to a host computer using the port concentrators described in C.4.14.

(f) Scanners. Demonstrate interface capability with a bar code non-contact scanner and wand.

Protest File, Vol. 1, Exhibit 1 at C-58 to C-59.

Clarification Questions from Potential Offerors Concerning the MS-DOS® 5.0 Requirements

23. On March 26, 1993, the Army issued RFP amendment no. 0001, which included the answers to questions submitted by prospective offerors. Question 5—pertaining to the MS-DOS® 5.0 requirement in RFP paragraph C.5.2—stated:

> This new requirement (not part of the DRFP) is exclusionary to this contractor. Our operating system is DR-DOS 3.41 and is MS-DOS® 3.3 compatible. Our choice of DR-DOS was made four years ago in order to take advantage of DR-DOS's capability of component shutdown to alleviate unnecessary power consumption during portable operations.
>
> All support PC-based software from this contractor operates under MS-DOS® 5.0 or Microsoft WINDOWS 3.0.
>
> The new mandatory requirement for PDCD MS-DOS® 5.0 operating system is an overly restrictive requirement and is, at this eleventh hour, impossible to satisfy without violating paragraphs 3.1.6 and 3.1.7.
>
> Would the Government consider modifying the requirement to accept MS-DOS® 5.0 *or* DR-DOS 3.41?

The Army's response to question 5 was:

> 1) Your reference above should be to C.5, not C.5.2.
>
> 2) The government requires compatibility with MS-DOS® 5.0. There is no requirement for the solution to be MS-DOS®. The Government believes that is clear in the RFP.

Protest File, Vol. 2, Exhibit 2.

24. RFP amendment no. 0001 also included question 19, which stated:

> Request that the Government rescind the requirement for "full MS-DOS® 5.0, or later compatibility. [sic]" because it severely limits competition and does not appear to be in the Government's best interests. Not all commercially available PDCD's utilize MS-DOS®, and most of those that do, cannot support full MS-DOS® 5.0 because of BIOS and/or memory limitations. Recommend that this requirement be restated as MS-DOS® 3.3 or

©1993, Commerce Clearing House, Inc.

Digitized by Google

later compatibility in order to enhance the competitive nature of the contract.

The Army's response to question 19 was:

The Government requires compatibility with MS-DOS® 5.0. There is no requirement for the solution to be MS-DOS® as stated in answer #5 in Q&As, Set 1, posted to the ISSAA Bulletin Board System (BBS), 15 March 1993.

Protest File, Vol. 2, Exhibit 2.

Protester's Involvement in the Procurement and Submittal of Agency Protest

25. To act as proposal manager, protester secured the consulting services of Mr. Karl Bendorf

26. During the period April 7-29, 1993, protester submitted several questions to the Government regarding the AIT procurement. These questions sought clarification regarding various technical issues, the evaluation criteria, and the methodology to be utilized for scoring proposals. Protest File, Vol. 4, Exhibits 21-27.

27. On April 26, 1993, protester requested a thirty-day extension of the time for receipt of proposals due to allegedly unclear evaluation criteria. Protest File, Vol. 4, Exhibit 25.

28. On April 29, 1993, protester requested clarification regarding the relaxation of the MS-DOS® requirement for intrinsically safe PDCDs from MS-DOS® 5.0 to 3.31 or compatible. Protester professed an inability to understand the reason for the relaxation, stating that "[w]e were forced to select products with higher prices than we would otherwise have chosen, in order to accommodate the higher requirement for MS-DOS® 5.0 on all units." Protester again requested a thirty-day extension of the closing date for the RFP. Protest File, Vol. 4, Exhibit 26.

29. On May 2, 1993, ISG submitted an agency protest to the Army which included, in part, the following objections to the RFP specifications:

The government is procuring data collection devices which have no intrinsic requirement for a particular operating system. The government stipulates a need for a particular version of MS-DOS®, 5.0. We are aware of no aspect of bar code data collection which requires MS-DOS®, however, assuming some, as yet unspecified, need for MS-DOS® we are unable to identify those salient characteristics which are sought by the government. Since there are many different "DOS's", each endowed with different characteristics, capabilities and features, the government must list the salient characteristics desired.

After resisting all attempts by the vendor community to loosen these requirements for MS-DOS® 5.0, the government, at the last minute, has allowed the use of a version of MS-DOS® (3.31) for those data collection devices designed to be used in hazardous environments. Again, no salient characteristics were stated, nor was any reason given for limiting the intrinsically safe PDCD to MS-DOS® 3.31. We can think of no reason for limiting DOS versions below 3.20.

Protest File, Vol. 4, Exhibit 28.

30. On May 4, 1993, the Army contracting officer issued her final decision on ISG's agency protest. The final decision stated, in part, that:

The initial minimum requirement of the Government was to acquire full compatibility with MS-DOS® 5.0 in *all* PDCDs. However, relative to intrinsically safe PDCDs, the compatibility requirement was lowered to MS-DOS® 3.31 to enhance competition for this item, because of the lack of commercial availability of MS-DOS® 5.0 compatibility.

Protest File, Vol. 4, Exhibit 31.

ISG's Protest

31. On May 5, 1993, protester filed this protest before the GSBCA, specifically incorporating all of the allegations made in its agency protest. One of the grounds for the protest was:

The solicitation remains restrictive (requirement for DOS 5.0 or any version of DOS for that matter) ....

Protest File, Vol. 4, Exhibit 35.

32.

33. Three offerors intervened on the side of respondent: Federal Computer Corporation, SYSCON Corporation, and Intermec Corporation.

34. On May 23, 1993, protester amended its protest to withdraw the allegations relating to the printer speed requirement and the failure to extend the time for receipt of proposals. On June 9, 1993, in response to respondent's motion for partial summary relief, protester's allegations challenging the clarity of the evaluation criteria and methodology were dismissed by the Board.

35. A hearing on the merits was held on June 10-11, 1993. The remaining issues for resolution related to protester's allegations concerning the restrictiveness of the specifi-

Digitized by Google

cation with regard to the DOS requirements: the generic requirement for DOS, the MS-DOS® 5.0 compatibility specification, and the propriety of the relaxation of the MS-DOS® version requirement for the intrinsically safe PDCDs.

36. Protester presented the testimony of its vice-president for marketing, Mr. Stephen L. Mills, and consultant, Mr. Karl Bendorf. The following witnesses testified in support of respondent's position: LTC Robert Coxe, the former program manager for AIT, MAJ Valerie Rasmussen, the AIT deputy program manager, Ms. Gloria McGee, the contracting officer, Ms. Christine Pallazza, the contracting specialist, Mr. Frank Murray, a member of the LAWG for this procurement, Mr. Steven Winter of Intermec Corporation, Mr. Robert Kidwell of SYSCON Corporation, and Mr. David Hoyle of Micro Palm Computers, Incorporated, as an expert in market trends in the hand-held computer industry.

The Generic DOS Requirement

37. LTC Coxe, MAJ Rasmussen, and Mr. Murray testified concerning respondent's methodology with respect to determination of its minimum needs. They detailed respondent's experience under the previous AIT procurements, the formation of the LAWG, the responses to the data calls, and the market surveys they conducted in preparation for issuing the draft RFP. Transcript at 85-94, 161-70, 187-88, 214-18, 236-37, 255.

38. LTC Coxe testified as to estimates performed prior to the issuance of the solicitation by the service branches with respect to their software translation costs. As an example, due to previous use of vendor-unique systems, one of the users in the Air Force will incur costs of over $450,000 related to re-coding of software alone, and without a method to allow portability of this software across different manufacturers' devices, these costs would continue to recur. Transcript at 93-94, 164-68; Protest File, Vol. 9, Exhibit 47.

39. Mr. Murray testified as to the need to avoid re-coding costs from the Navy's perspective. Transcript at 236-37. MAJ Rasmussen testified that the open systems approach represented by the MS-DOS® 5.0 or compatible operating system was a choice for the future, which would eliminate the recurring need for software recoding. *Id.* at 199-200.

40. MAJ Rasmussen also testified that the open systems approach represented by the MS-DOS® 5.0 or compatible operating system would eliminate the need for personnel re-training. Transcript at 199-200. Utilization of this approach would also allow the Government to take advantage of the skills of programmers, developers, and applications currently available under that standard. *Id.* at 227.

41. Respondent's market expert, Mr. Hoyle, testified that the market for PDCDs is three-tiered, based on functionality, and that the upper portion of the PDCD market (that portion relevant to this procurement) has already adopted the DOS standard for operating systems for the same reason: increased functionality and competition. He identified five separate producers of PDCDs with products using MS-DOS® 5.0 or compatible operating systems. Transcript at 452. One of the more significant advantages of this category of PDCDs is the inherent flexibility such a device offers to run complex applications or to interface with a vast assortment of peripherals.

At the bottom end of the PDCD market are those devices which can accomplish little more than simple bar code reading and decoding. Above this level are those PDCDs which use a proprietary, vendor-unique operating system. Mr. Hoyle testified that these devices afford some level of flexibility, but are "nowhere near as capable as an MS-DOS®-based system." Indeed, Mr. Hoyle testified that, in his expert opinion, such non-DOS based units are "most definitely" not state-of-the-art equipment. Transcript at 449. According to Mr. Hoyle, perhaps one of the most significant disadvantages associated with such a device is the restricted nature of a vendor-unique operating system:

> Once, for example, a customer had developed an application for a proprietary device, say, in a development environment, he can never take that software and run it on another device. And he can never take other software and run it on the hardware device. So he's very much locked into a hardware and a software platform.

Transcript at 450.

Mr. Hoyle testified that market trend for hand-held computers is moving away from non-DOS based devices and toward PDCDs operating with MS-DOS® 5.0 or compatible operating systems. He stated that the proportion of manufacturers of DOS-based PDCDs in the hand-held computer market has increased dramatically over the past five years. In 1988, only twenty-five percent of manufacturers of PDCD devices produced units using a DOS-based system. By 1992, almost ninety percent of such manufacturers

©1993, Commerce Clearing House, Inc.

Digitized by Google

produced DOS-based PDCDs. Transcript at 446-47. Mr. Hoyle stated that he personally knew of at least five separate producers of PDCDs using an MS-DOS® 5.0 or compatible operating system. *Id.* at 452. Protester's own proposal manager, Mr. Bendorf, acknowledged that he was aware of six or seven different producers of PDCDs using an MS-DOS® 5.0 or compatible operating system. *Id.* at 289.

42. Mr. Hoyle's market analysis was confirmed by both Mr. Winter of Intermec Corp. and Mr. Kidwell of SYSCON Corp. Transcript at 44-45, 411-12. Mr. Kidwell testified that an MS-DOS® 5.0 or compatible operating system provides a standardized architecture that supports the operation of the wide assortment of peripherals required by the AIT solicitation. specifically, Mr. Kidwell testified that standardizing drivers for PCMCIA cards is a "key example" supporting the use of an MS-DOS® 5.0 or compatible operating system. *Id.* at 427.

43. Evidence was also offered at the hearing concerning the current availability of PDCDs that do not run on a DOS-based operating system. Mr. Bendorf testified that at the current time (i.e., June 1993), to his knowledge there are at least 100 different PDCDs that do not run DOS. *Id.* at 290. According to responses he received from manufacturers, the great majority (more than ninety-eight percent) of the bar code PDCDs in the world are not DOS-based. *Id.* at 346-49.

The DOS Version Requirement

44. The Government demonstrated that the purpose of the solicitation was to acquire a system that afforded compatibility for both existing program applications and those anticipated for future procurements. The evidence presented during the hearing demonstrates that the vast majority of Government PCs use MS-DOS® 5.0 or a compatible operating system. Transcript at 231-33, 262-67. Protester's vice president, Mr. Mills, acknowledged that, based upon his dealings with the Government, the typical procurement usually requires PCs using an MS-DOS® 5.0 operating system. *Id.* at 394-95. Consequently, by virtue of this existing DOS operating system environment, Government programmers and users can readily develop applications from their PCs and download immediately to their PDCDs. *Id.* at 37, 98, 105, 132, 137.

45. The requirement for an operating system at the MS-DOS® 5.0 compatibility level was discussed by LTC Coxe, MAJ Rasmussen, Mr. Murray, and both intervenor witnesses. These witnesses stated that the specific version requirement was determined by various technical requirements for the PDCDs to interface with various peripherals, such as Personal Computer Memory Card International Association (PCMCIA) and Integrated Circuit Card (ICC) devices. Transcript at 31-32, 99-101, 153-54, 176-77.

46. LTC Coxe testified that the PCMCIA card requirement could be met by a lower version of MS-DOS®. Transcript at 122. However, such a solution, while possible, was not desirable. He testified that this solution was analogous to using a spare tire, as it might temporarily achieve a result, but you would not want to rely on the spare tire for your everyday needs. *Id.* at 149-51. Mr. Kidwell testified that PCMCIA cards can be used when third party drivers are added to MS-DOS® 3.3. *Id.* at 430-31.

47. LTC Coxe testified that the SmartDrive function of MS-DOS® 5.0 in conjunction with the HIMEM.SYS device driver would allow the PCMCIA card to function as an extension of RAM, and this function does not exist in lower versions of MS-DOS®. Transcript at 101-03.

48. LTC Coxe testified that the code compiler for MS-DOS® 5.0 is standard and that it allows ease of training and use. Transcript at 146, 181. The Army is currently compiling codes on desktop PCs, mostly using MS-DOS® 5.0 as an operating system.

49. Testimony was offered by respondent and one of the intervenors that an MS-DOS® 5.0 operating system also provides the capability to utilize the maximum amount of the first 640K of random access memory (RAM) for storage of applications programs and data on the PDCDs themselves, by loading MS-DOS® 5.0 and device drivers "higher level" memory. LTC Coxe stated that he is not aware of any operating system below MS-DOS® 5.0 that in and of itself has "an EMM 386 driver, extended memory management driver, or to have a HIMEM.SYS driver or to have any of the drivers" for high memory allocation.[3] Transcript at 29-30, 95-96, 99-103, 106-07, 178-79, 267.

50. Respondent's witnesses testified further that the requirement of accessing upper

[3] These memory management drivers are actually software programs for memory management that come as a standard feature of MS-DOS® 5.0, and whose functions can also be performed by third-party software utilities.

Digitized by Google

level memory was essential to the ability of the PDCDs to use assorted peripherals such as the PCMCIA cards and the "smart" ICC Cards. Each of these peripherals requires its own device driver, which allows the PDCD to "talk" to the peripheral. Rather than have these drivers occupying memory addresses in the first 640K of the PDCD's memory, the MS-DOS® 5.0 or compatible operating system loads these drivers onto the device's upper memory (i.e., above 640K). Transcript at 31-32, 99-101, 153-54, 176-77. This allows the "lower 640" to be used for data gathering and collection and for running application programs. *Id.* at 99. Mr. Murray testified that unless the PDCDs used an MS-DOS® 5.0 or compatible operating system, the Government "would effectively be wasting or not have access to approximately 40 percent of the memory (it] just paid for." *Id.* at 267.

51. Mr. Bendorf and Mr. Mills testified extensively as to their knowledge of MS-DOS® in general and MS-DOS® 5.0 and earlier versions. Transcript at 293-316, 369-84. They discussed in detail the system files, the running of programs, and the command functions. *Id.* at 294, 297, 303, 307-08, 310, 325-26, 356-60, 370, 372, 380-81, 386-89, 402. In contrast to respondent's witnesses, Mr. Bendorf and Mr. Mills testified for protester that MS-DOS® 5.0 allows high memory allocation only if a computer has a 386 or higher processor. *Id.* at 295-97, 313, 355-56. Of the six or so PDCDs that run MS-DOS® 5.0, Mr. Bendorf testified that only one PDCD includes a 386 or higher chip. *Id.* at 298.

52. Mr. Bendorf also testified that high memory management can be achieved by adding third party software to versions of MS-DOS® below 5.0. Transcript at 303-05. Three of those third party software products are Quarterdeck, 386 MAX, and RIBS. *Id.* at 370. The Army, through LTC Coxe, was fully aware of the large number of third party vendors. *Id.* at 147-48.

53. Mr. Mills claimed that protester could achieve the requisite functionality of MS-DOS® 5.0 by modifying the MS-DOS® 3.0 version with an assortment of third party software drivers and other programs. Transcript at 403.

54. Mr. Mills, protester's vice president of marketing, while appearing knowledgeable in the general area of memory management and the functional differences between MS-DOS® 5.0 and earlier versions, qualified his testimony, stating that he was not familiar with the specific requirements of the AIT solicitation:

> I'll have to first say that I am not representing myself to be familiar with the specific bid and specific products and what device drivers may or may not be necessary for those specific products.

Transcript at 403.

55. Mr. Kidwell of SYSCON testified that a PDCD with less than a 386 processor could still take advantage of applications compiled on a host computer with an MS-DOS® 5.0 operating system when downloaded from the host to the PDCD. Transcript at 433-34.

56. Respondent's witnesses testified that the term MS-DOS® 5.0 is self defining. Mr. Winter further testified as to the level of specificity necessary for a solicitation to communicate minimum requirements with respect to a DOS operating system. He stated that the specific features of MS-DOS® 5.0 are standard knowledge and that anyone who needs to know the specifics need merely review the manual which is available from Microsoft that comes with the purchase of MS-DOS® 5.0. Transcript at 50, 59-60. LTC Coxe believed the features of MS-DOS® 5.0 were so obvious that the LOGMARS team did not think about specifying them, as those knowledgeable in the industry would be aware of the specific characteristics. *Id.* at 122, 124. He stated that the term is so well used that it is emphasized at trade shows by software vendors to show that their software will run in an MS-DOS® 5.0 environment. *Id.* at III. Mr. Kidwell testified that by requiring that a device operate in an MS-DOS® 5.0 or compatible environment, the computer community has absolutely no difficulty understanding what is required. *Id.* at 426.

The Relaxation of the DOS Version for Intrinsically Safe PDCDs

57. Although respondent originally required an MS-DOS® 5.0 or compatible operating system on all PDCDs, the agency's investigation in response to a question from a vendor discovered that no PDCDs were on the market that offered both intrinsically safe certification, allowing use in potentially explosive environments, and an MS-DOS® 5.0 or compatible operating system. Transcript at 80, 204-06, 221. Such devices are to be used in highly volatile environments—such as fuel points, grain silos, and other sites containing combustible materials. *Id.* at 51-52, 128. Due to the time required to complete the certification process, manufacturers had not yet marketed "5.0" versions of intrinsically safe PDCDs. *Id.* at 55, 416-17.

©1993, Commerce Clearing House, Inc.

Digitized by Google

Respondent states that it relaxed the requirement "reluctantly," in order to obtain the needed intrinsically safe devices, and not due to any reduction in the scope of the Government's technical needs. *Id.* at 221.

Discussion

The MS-DOS® Requirement

Protester argues that the RFP's MS-DOS® requirements violate the delegation of procurement authority (DPA)[4] that was issued by the General Services Administration (GSA) under authority of the Brooks Act. Protester also alleges that the inclusion of the MS-DOS® requirements in the instant solicitation have eliminated numerous responsible sources from the AIT procurement, including manufacturers of PDCDs with proprietary operating systems, manufacturers of PDCDs with DOS-based operating systems that are not compatible with MS-DOS® 5.0, manufacturers of intrinsically safe PDCDs with DOS-based operating systems that are not compatible with MS-DOS® 3.31, and the plethora of third party vendors that sell special software to add "MS-DOS® 5.0 functions" to earlier versions of MS-DOS® and compatible operating systems. Protester's Post-Hearing Brief at 9-12.

Respondent views protester as contending that virtually any PDCD, no matter how rudimentary and using virtually any operating system can, with the right "homemade" modifications, meet the performance objectives of the AIT procurement. Respondent characterizes protester's position as "backward-looking" philosophy, and states that "Protester hopes to pass on dated equipment with limited flexibility—consistent with the fragmented standards of the hand-held computer market five years ago. AIT is a forward-looking acquisition, however, that seeks to capitalize on current market trends promoting a more open operating systems architecture, enhanced standardization, and, hence, greater competition and flexibility among producers in the PDCD marketplace." Respondent's Post-Hearing Brief at 44-45. Instead, respondent contends that protester's marketing strategy attempts to shackle the Government to the past, offering dated equipment that lacks the functionality and flexibility sought in this new generation of automatic identification technology equipment.

This Board has repeatedly held that the fact that a particular vendor may not be able to compete in a procurement due to certain requirements contained in the solicitation does not necessarily make that requirement restrictive. *Irvin Technologies, Inc.*, GSBCA 11581-P, 92-1 BCA ¶ 24,674, 1991 BPD ¶ 348. We have acknowledged that "[e]very solicitation of necessity involves some restrictions." *International Technology Corp.*, GSBCA 9967-P1 89-3 BCA ¶ 21,917, at 110,278, 1989 BPD ¶ 128, at 6.

In order to prevail on this issue, protester must demonstrate that the requirements for MS-DOS® in the solicitation overstate the Government's actual minimum needs. *Irvin Technologies, Inc.*, 92-1 BCA ¶ 24,674, 1991 BPD ¶ 348; *see also Julie Research Laboratories*, GSBCA 9549-P, 88-3 BCA ¶ 21,076, 1988 BPD ¶ 168.

Protester has failed to meet its burden of proof and has not demonstrated that the AIT specifications overstate respondent's actual minimum needs. The goal of this procurement was to establish a new generational baseline for hand-held computer equipment and future Government procurements involving automatic identification technology. The Government wants to free itself of the restrictive limitations associated with vendor-unique hardware and software of past procurements and move to the state-of-the-art open architecture offered by an MS-DOS® 5.0 or compatible operating system. Findings 1-5, 12.

Respondent has presented evidence detailing the underlying rationale for specifying MS-DOS® requirements for the AIT solicitation. Respondent's and intervenors' witnesses discussed the reasons and benefits for movement to the open architecture afforded by an MS-DOS® operating system.

The AIT equipment obtained under the two previous procurements was limited by the then available technology and used two different vendor-unique operating systems. With the award of the second contract, the Government had two systems that used rad-

[4] The DPA in this procurement reads, in relevant part:

> With respect to competition, the basic procurement objective in satisfying FIP requirements is to obtain full and open competition by using competitive procedures which permit all responsible sources that can satisfy the needs of the agency to submit offers. This requires an acquisition strategy, suitable to the circumstances, in which the statement of the user's requirement is set forth in the least restrictive terms possible to satisfy the needs of the agency without compromising economy or efficiency . . . .

Protest File, Vol. 4, Exhibit 33.

Digitized by Google

ically different proprietary languages and, hence, were not compatible with each other. As a consequence, the Government experienced great difficulty in re-programming software applications it had developed under the first contract for use in the second. Consequently, the Government was forced to train programmers in two very different programming languages in order to convert the applications from the first vendor-unique operating system to the second vendor-unique operating system. In 1988, the difficulties encountered by the Navy in re-coding applications were so significant that it was forced to delay using the NT II equipment by nine months. Finding 1.

Respondent presented testimony that re-translating code is not only extremely time-consuming but very costly. Today, the Air Force estimates that it will cost just one of its users about $450,000 to convert its software applications from one vendor-unique system to another.[5] By acquiring a system that uses an MS-DOS® 5.0 or compatible operating system, the Government hopes to free itself from translating vast inventories of software for future procurements. The AIT program manager further determined that only by acquiring an open systems architecture such as that offered by an MS-DOS® 5.0 or compatible operating system could the Government avoid the cycle of coding and then re-translating program codes. Finding 38.

This decision to acquire an open system was the result of the Government's review of a series of data calls, market surveys, the findings of its acquisition working group, and responses to a published draft RFP for the vendor community to accurately determine its minimum requirements. Relying on these extensive resources, the Government promulgated the Section c statement of work contained in the present solicitation. Findings 2-5.

Based upon its experiences with the earlier LOGMARS contracts, the Government is particularly concerned with compatibility of systems for future AIT-related procurements. Additionally, the Government wants to avoid the problems and costs related to training programming personnel on vendor-unique systems and, instead, enhance the ability of users themselves to program their own applications—thereby maximizing user productivity. Finding 40. Therefore, the MS-DOS® requirements of the solicitation avoid the conversion problems experienced in past acquisitions and establish a new baseline that promotes technological flexibility and standardization in this procurement and future acquisitions. Findings 1, 3, 4, 37-40.

Respondent's expert on trends in the PDCD market testified at length as to the three-tiered structure of the market and the advantages of the types of PDCD's sought in this procurement, as well as their availability. Finding 41. Protester's argument that a non-DOS based, proprietary operating system can function just as effectively as a DOS-based operating system ignores the advantages with respect to hardware and software flexibility, and the ability to integrate technologically new components as they are made available.

In *Irvin Technologies, Inc.*, this Board held:

> We cannot take issue with an agency's restrictions on competition in pursuit of legitimate agency requirements where those restrictions are rationally premised and reasonable .... We give more credence to those persons charged with the responsibility for making such discretionary judgments than we give to the opinions of vendors which have not clearly demonstrated greater knowledge of the Government's internal operations and needs.

92-1 BCA at 123,111, 1991 BPD ¶ 348, at 6 (citing *Data General Corp. v. United States*, 915 F.2d 1544, 1551 (Fed. Cir. 1990); *Computervision Corp.*, GSBCA 8744-P, 87-1 BCA ¶ 19,553, at 98,819, 1986 BPD ¶ 227, at 16).

We find that respondent's decision to include the MS-DOS® requirements in the solicitation was rationally premised and reasonable. We give more credence to the testimony of respondent's witnesses, who were charged with the responsibility of making the determination to include the MS-DOS® requirements in this procurement, than we do to the testimony of protester's witnesses, who clearly have not demonstrated greater knowledge of the Government's internal operations and needs.

Protester presented the testimony of two witnesses. Its vice president of marketing disclaimed any specific knowledge of "the specific bid and specific products and what device drivers may or may not be necessary

[5] Protester characterized as speculative the testimony and documentation presented by respondent's witnesses as to the recoding costs that the Government will incur in the future if an open system is not procured. Protester's Post-Hearing Brief at 10-11. While these costs were of necessity estimates, we do not find that they were speculative.

©1994, Commerce Clearing House, Inc.

Digitized by Google

for those specific products." Finding 54.

as stated above, we give more credence to the testimony of respondent's witnesses.

We therefore find that the MS-DOS® requirements in the solicitation are rationally premised and reasonable, given the Government's desire to avoid the technological and competitive restrictions engendered by continuing to have to procure proprietary operating systems for PDCDs.

The MS-DOS® 5.0 Compatibility Specification for the Operating System

Protester offers the same arguments that it made regarding the choice of MS-DOS® requirement with regard to respondent's determination to specify the operating system of the PDCDs as "MS-DOS® 5.0, or later, or an operating system that is fully MS-DOS® 5.0 or later version compatible, with the exception of the intrinsically safe PDCDs." Protester believes that even if the generic requirement for MS-DOS® does not restrict competition, the Government simply does not need the flexibility, or cannot take full advantage of, an operating system which uses MS-DOS® 5.0 as a baseline.

Protester contends that earlier versions of MS-DOS® used in conjunction with third party software can adequately meet the minimum needs of the Government. Respondent argues that this hybrid approach results in the very problems regarding standardization among AIT hardware and software that the Government hopes to avoid. Also, this approach conflicts with protester's statement that it is extremely difficult to find MS-DOS® versions below MS-DOS® 5.0 on the current commercial market. Finding 21.

The Government demonstrated that the purpose of the procurement was to acquire a system that afforded compatibility for both existing program applications and those associated with future procurements. The evidence presented during the hearing and confirmed by protester demonstrates that the vast majority of Government PCs use an MS-DOS® 5.0 or compatible operating system. Finding 44. One of the major goals of the procurement is to have the PDCDs interface with personal computers so that information can be downloaded from the PC to the PDCD and uploaded from the PDCD to the PC. *Id.* The fact that the majority of Government PCs utilize MS-DOS® 5.0 was a significant reason for the MS-DOS® 5.0 compatibility specification for the PDCD operating system. Because the applications required in the procurement are also specified to be developed and run under MS-DOS® 5.0, such compatibility is desirable with the operating system of the PDCD.

Respondent introduced evidence to demonstrate that an MS-DOS® 5.0 or compatible operating system enhances the use of the numerous peripherals also sought by the Government under this procurement, such as the PCMCIA cards and ICC Cards. Findings 45, 47. Additionally, the code compiler for MS-DOS® 5.0 is standard and it allows ease of training and use. Finding 48. Thus, by virtue of this existing MS-DOS® 5.0 operating system environment, Government programmers and users can readily develop applications from their PCs and download to their PDCD's. Finding 44.

A great deal of testimony was offered concerning the advantage of using MS-DOS® 5.0 for memory management. Respondent offered testimony supporting its decision for requiring an MS-DOS® 5.0 or compatible operating system because of the ability of such a system to allow access to upper level memory to load device drivers in order to have more conventional memory free to run programs. These device drivers are standard features of MS-DOS® 5.0. Findings 45, 49-50. Protester's witnesses testified that the advantages of memory management of MS-DOS® 5.0 is lost if the PDCD does not contain at least a 386 microprocessor running in protective mode. Finding 51. Mr. Kidwell, of SYSCON Corporation, specifically refuted protester's argument that only PDCDs using a 80386-series chip can support an MS-DOS® 5.0 or compatible operating system. Mr. Kidwell testified that it is not whether the PDCD uses an 80386-series chip but whether the chip supporting the PDCD has a 16-bit interface. Finding 55.

This apparent confusion in the testimony concerning the type of microprocessor required for taking advantage of MS-DOS® 5.0's capabilities with regard to memory management arises from the similarity of terminology and concepts used in an admittedly difficult subject area. A 286 microprocessor may access the High Memory Area (HMA), the first 64K above 1.024 megabyte (occupied by conventional memory—the first 640K, and upper memory, from 640K to 1.024 megabyte). A 286 processor accesses the HMA and loads MS-DOS® 5.0 in this area by way of a device driver, HIMEM.SYS, thereby freeing those portions of conventional memory that would be normally occupied by MS-DOS® 5.0. However, a 386 processor or higher is needed to access the upper memory blocks (UMB) (va-

Digitized by Google

cant portions of upper memory between 640K and 1.024 megabyte) by using the device driver EMM.386 which acts to map extended memory into these vacant blocks of upper memory. This same result may be achieved with a 286 processor using third party memory management software. *Microsoft MS-DOS®, Operating System Version 5.0 User's Guide and Reference* 315 (Microsoft Corp. 1991). This is further complicated by the fact that the high memory area is often confused with the first 64K of extended memory, which it is not. The first 64K of RAM above 1.024M will either be HMA or extended memory, but it cannot be accessible as both. HMA is accessed in real mode, while the first 64K of extended memory is accessed in protective mode. John M. Goodman,[6] *Memory Management for All of Us* 524 (SAMS Publishing 1992).

The conclusion from the foregoing discussion is that MS-DOS® 5.0's memory management capabilities may not be fully utilized unless the PDCD uses a 386 microprocessor or greater and has extended memory. Even so, MS-DOS® 5.0 can run with an 8088 processor and 256K of RAM, which is the minimum RAM required in the solicitation for the PDCDs, though it may not take advantage of it memory management capabilities due to the architecture of the system on which it is running. Finding 19. DR-DOS 6.0, which respondent has decided meets the MS-DOS® 5.0 compatibility specification, requires an 8088 processor and 512K of RAM. *Id.*

There are at least three versions of a commercially available operating system which would satisfy the MS-DOS® 5.0 compatibility specification for the operating system without using third party memory management software—MS-DOS® 5.0, MS-DOS® 6.0, and DR-DOS 6.0. Findings 17, 18. These products are licensed to vendors and readily available to producers of PDCDs. Respondent's expert in market trends identified at least five different producers of PDCDs using MS-DOS® 5.0 or compatible operating systems. Finding 41.

Protester has failed to meet its burden of proof, and has not demonstrated that the requirement for the operating system to be "MS-DOS® 5.0, or later, or an operating system that is fully MS-DOS® 5.0 or later version compatible" overstates the Government's actual minimum needs. Respondent has cited numerous reasons which justify the choice of MS-DOS® 5.0 rather than an earlier version, even if all the advantages of memory management cannot be utilized as the result of the architecture of the PDCDs.

Respondent has presented evidence detailing the underlying rationale for specifying the MS-DOS® 5.0 operating system requirements for the AIT solicitation. Use of earlier versions of MS-DOS® with third party software may enhance protester's competitive edge, but fails to satisfy respondent's minimum needs. We find that the determination to specify an MS-DOS® 5.0 or later version (or fully compatible) operating system to be rationally premised and reasonable. This determination is not restrictive. Again, we give more credence to the testimony of respondent's witnesses who were charged with the responsibility of making the determination to include the MS-DOS® 5.0 requirements for the operating system in this procurement than we do to the protester, whose witnesses clearly have not demonstrated greater knowledge of the Government's internal operations and needs.

Relaxation of the Operating System for Intrinsically Safe PDCDs Was Rationally Based.

Respondent has detailed the rationale behind the MS-DOS® 5.0 requirements for the AIT procurement. In April 1993, the Government relaxed the operating system requirement for a small portion of the PDCD population—the intrinsically safe PDCDs. The Government took this action only after discovering that there were no MS-DOS® 5.0 intrinsically safe devices available on the commercial market. Thus, to enhance competition, the Government relaxed the operating system requirement for this very limited number of PDCDs. Finding 57.

We do not view this relaxation as an admission by respondent that it has overstated its minimum needs. Rather, having found that the MS-DOS® 5.0 or compatible standard has been established as a minimum requirement for the procurement, for the reasons stated above, the relaxation of the requirement for the intrinsically safe PDCD's, because of the current state of the market, is rationally based. The specification does state that an intrinsically safe PDCD with an MS-DOS® 5.0 operating system or compatible, or later version is desirable. Finding 15.

[6] No relation to the author of this opinion.

Description of the Operating System

Having determined that respondent's decision to designate MS-DOS® requirements and an operating system of MS-DOS® 5.0 or later version fully compatible was rationally based, we turn to the last issue in this protest. Protester alleges that respondent violated statutes, regulations and/or its DPA by not stating the salient characteristics for the brand name software, MS-DOS® 5.0 and MS-DOS® 3.31, for the PDCDs. In essence, protester argues that the specification is unclear and requires further elaboration. Protester bases its argument on Federal Acquisition Regulation (FAR) 10.001 and 10.004. 48 CFR 10.001, 10.004 (1992).

Purchase description is defined in FAR 10.001 as follows:

> "Purchase description" means a description of the essential physical characteristics and functions required to meet the Government's minimum needs.[7]

FAR 10.004, relied upon by protester, reads in part:

> (a)(1) Plans, drawings, specifications, standards, or purchase descriptions for acquisitions shall state only the Government's actual minimum needs and describe the supplies and/or services in a manner designed to promote full and open competition.
>
> ....
>
> (b)(1) When authorized by 10.006(a), or when no applicable specification exists, agencies may use a purchase description subject to pertinent restrictions on repetitive use. *An adequate purchase description should set forth the essential physical and functional characteristics of the materials or services required.* As many of the following characteristics as are necessary to express the Government's minimum requirements should be used in preparing purchase descriptions:
>
> (i) Common nomenclature.
>
> (ii) Kind of material; i.e., type, grade, alternatives, etc.
>
> (iii) Electrical data, if any.
>
> (iv) Dimensions, size, or capacity.
>
> (v) Principles of operation.
>
> (vi) Restrictive environmental conditions.
>
> (vii) Intended use, including—
>
> (A) Location within an assembly, and
>
> (B) Essential operating condition.
>
> (viii) Equipment with which the item is to be used.
>
> (ix) Other pertinent information that further describes the item, material, or service required (emphasis added).

Thus, protester argues that by failing to include "salient characteristics" (i.e., "essential physical and functional characteristics") for the brand name products, MS-DOS® 5.0 and MS-DOS® 3.31, the Army violated the requirements of FAR 10.004 and the DPA in this procurement, and the Competition in Contracting Act. Protester contends that the MS-DOS® 5.0 compatibility specification requires it to guess at the desired essential qualities of the brand name item, which makes it a defective specification. *See Ciba Corning Diagnostics Corp.*, B-223131, 86-2 CPD ¶ 185 (Aug. 13, 1986). As the Board stated in *CMP Corp.*, GSBCA 8703-P, 87-1 BCA ¶ 19,499, 1986 BPD ¶ 214:

> It is axiomatic that bidders should not have to guess at the essential qualities, features or characteristics of the brand name item they have to equal.

Id. at 98,561, 1986 BPD ¶ 214, at 7.

Respondent poses alternative arguments on this issue. First, it argues that salient characteristics are required to be listed only for features that may be segregated from the central identity of the product to be procured. Since this procurement focuses on the purchase of hardware, i.e., PDCDs, the MS-DOS® and MS-DOS® 5.0 requirements may not be segregated, and therefore no salient characteristics need be listed. Respondent argues further that the specification of an MS-DOS® 5.0 or compatible operating system should be considered a salient characteristic of the hardware to be procured, or alternatively, a salient characteristic of the software. Therefore, there is no need to describe a salient characteristic with additional "granularity."

Respondent's alternative argument is that even if the MS-DOS® 5.0 compatibility specification is deemed to be a brand name specification and not a salient characteristic of the hardware or software, salient characteristics need not be listed because the specification itself, MS-DOS® 5.0, coupled with a

[7] Presumably, protester also relies upon the following portion of FAR 10.001, although it fails to cite it in its briefs:

> "Brand name description" means a purchase description that identifies a product by its brand name and model or part number or other appropriate nomenclature by which the product is offered for sale.

Digitized by Google

version level (5.0 or later) denotes a specific set of capabilities, level of functionality, and criterion of performance which should be known to a knowledgeable offeror.

Respondent premises this latter argument on the principle that salient characteristics are by definition those not readily discernable from the identification of the product. *Wordplex Corp.*, GSBCA 8159-P, 86-1 BCA ¶ 18,554, 1985 BPD ¶ 128. Thus, respondent contends that utilization of the phrase "MS-DOS® 5.0 or fully compatible" tells competent offerors exactly what functionality is expected of the operating system. Thus, according to respondent, MS-DOS® 5.0 or fully compatible is self-defining to a knowledgeable vendor, and no further elaboration is necessary. By stating MS-DOS® 5.0, there is no need to list salient characteristics, because such a designation leaves no room for guessing. Thus, the purpose for listing the salient characteristics of the brand name or equal analysis is not present.

We agree with respondent. Whether one considers the MS-DOS® 5.0 compatibility specification a salient characteristic of the hardware or software, or a brand name or equal specification, no further elaboration is necessary. Protester has shown that it does not need to guess as to the functional characteristics of an MS-DOS® 5.0, or later version, or fully compatible operating system.

Respondent's witnesses testified that while the specification may not mean anything to a layman, a knowledgeable vendor would know the functional characteristics of an operating system which is MS-DOS® 5.0 or later version, fully compatible, and that this information is freely available from Microsoft Corporation. Finding 56. LTC Coxe testified that there are two basic approaches to determining compatibility of an operating system—whether applications developed to run under the operating system will do so, and whether commands will execute. Finding 20. The solicitation itself contains a performance demonstration which requires the offeror to demonstrate the operating system by running programs. Finding 22.

Protester's witnesses never disavowed knowledge of the functional characteristics of MS-DOS® 5.0.[8] They testified as to their detailed knowledge of the functional characteristics of MS-DOS® 5.0 and its earlier versions, despite the fact that protester's vice-president of marketing admitted a lack of familiarity with the particulars of this procurement. Findings 51-54. Protester's correspondence before submission of its proposal shows that protester believed it was able to propose an MS-DOS® 5.0 based system. Finding 28. Mr. Mills and Mr. Bendorf both confirm LTC Coxe's testimony that the focus in determining compatibility of an operating system is the running of programs and execution of commands. Finding 51.

In arguing that the advantages of MS-DOS® 5.0 cannot be fully utilized by certain types of microprocessers, and that proprietary operating systems or earlier versions of MS-DOS® 5.0 would suffice, protester's witnesses have demonstrated their understanding of the functions of not only MS-DOS® 5.0 but also earlier versions. Protester has, therefore, demonstrated detailed knowledge to this Board of the very information which protester alleges it lacks—the functional characteristics required by the MS-DOS® 5.0 compatibility specification. Given that the MS-DOS® and MS-DOS® 5.0 requirements of the solicitation are rationally based, protester was certainly aware of at least two commercially available products that would satisfy the specification—MS-DOS® 5.0 and MS-DOS® 6.0.

To require respondent to amend the solicitation to include information detailing the functional characteristics of the operating system would not provide protester with any information additional to that which protester has demonstrated that it already possesses.

Decision

For the foregoing reasons, the protest is **DENIED.** The Board's order of May 7, 1993, suspending respondent's delegation of procurement authority hereby lapses.

---

[8] Being software, there was no discussion as to the physical characteristics (other than to mention that a disk operating system resides on a disk) which, together with functional characteristics, protester alleges comprise "salient characteristics."

[¶ 26,274] Executone Information Systems, Inc. v. Department of Health and Human Services; Government Telecommunications, Inc., Intervenor

GSBCA No. 12402-P, July 21, 1993.

Protests, GSBCA—Interested Party—Direct Economic Interest.—Dismissal of a protest against an award under a negotiated procurement for telephone services was denied, despite an intervenor's contention that the protester's improper response to discovery and alleged inability to comply with the Trade Agreements Act rendered the protester not interested, because neither the government nor the intervenor showed how any alleged lack of direct economic interest required the protester to be ousted from the competition. If the protester prevailed in its protest, the government would require offerors to extend offers or to request another round of best and final offers. Moreover, if the protester prevailed in its protest, it would be a viable offeror in any subsequent negotiations with the opportunity to correct any presumed Trade Agreements Act inadequacies.

Timeliness of Protest, GSBCA—Knowledge of Basis—Supplemental Protest.—A protester's supplemental protest was not untimely filed, despite the government's and an intervenor's contention that the protester knew or should have known of any alleged noncompliance by the intervenor with the contract's mandatory support and maintenance requirements, because the record did not show that these issues were filed more than 10 days after the basis of the protest was known or should have been known. The initial protest generally alleged that the intervenor's proposal was unacceptable. The protester contended that the protest issues expressed in the supplemental protest were refinements of the earlier protest. Moreover, the contracting officer did not show that the protester, through its counsel, knew or should have known of these bases of protest at an earlier date.

Automatic Data Processing Procurement—Evaluation—Mandatory Requirements.—A protest against an award of a contract for state-of-the-art digital telephone systems was denied, despite the protester's contention that the awardee's proposal was technically unacceptable, because the protester failed to present any evidence that showed that the awardee's proposal did not meet the solicitation's mandatory support requirements or that the awardee's proposal did not comply with the solicitation's preventive maintenance requirements. The awardee's proposal included a detailed support plan and a letter from the manufacturer that confirmed its commitment to the awardee. Moreover, the technical evaluation committee and the contracting officer properly recognized that the preventive maintenance requirement did not apply to state-of-the-art digital systems, such as the system involved in this procurement.

Responsibility—Standards—Technical Acceptability v. Responsibility.—A protest against an award of a contract for state-of-the-art digital telephone systems was denied, despite the protester's contention that the government failed to make an independent responsibility determination as part of its technical evaluation of the proposals, because the determination of an offeror's responsibility is not a technical evaluation criterion, but is a distinct requirement to be met before award of any government contract. The solicitation required only that the evaluators determine whether offerors were technically acceptable. An offeror's responsibility is separate from the question of its technical acceptability. Responsibility evaluations are not relative. A more responsible offeror does not outscore a merely responsible offeror in the award selection process.

Responsibility—Procedures—Contracting Officer's Decision.—A protest against an award of a contract for state-of-the-art digital telephone systems was denied, despite the protester's contention that the contracting officer abused her discretion in finding that the awardee was a responsible prospective contractor, because the contractor failed to produce any evidence in support of its position. The record showed that the contracting officer carefully considered all of the requisite factors in making her responsibility determination; she reviewed outside information reflecting the awardee's sales and assets and the awardee's performance record on previous contracts. The contracting officer also considered the awardee's plan to provide installation and support services and the technical evaluation committee's acceptance of the plan. The contracting officer made an informed, committed business judgment in accordance with the regulations and the solicitation.

Digitized by Google

For the protester: Elliott, Vanaskie & Riley, Washington, D.C., by Dennis J. Riley, Jared H. Silberman, and Kenneth A. Martin. For the government: Lloyd M. Weinerman and Rodney L. Benson, Office of the General Counsel, Social Security Administration, Baltimore, Maryland. For the intervenor, Government Telecommunications, Inc.: Glenn J. Ballenger, Vice President and General Counsel, and Fried, Frank, Harris, Shriver & Jacobson, Washington, D.C., by Kenneth S. Kramer, P.C., and James M. Weitzel, Jr.

Before HENDLEY, NEILL, and VERGILIO, Administrative Judges.

HENDLEY, Administrative Judge: The protester, Executone Information Systems, Inc. (Executone), contends that the intervenor, Government Telecommunications, Inc. (GTI), was improperly awarded the contract. Executone maintains that GTI failed to provide and the agency inappropriately waived two mandatory requirements (dealing with subcontractor support/certification and preventive maintenance). Further it contends that the respondent conducted the responsibility determination contrary to the terms of the solicitation and reached an unsupported affirmative determination regarding GTI's responsibility.

We conclude that Executone is an interested party to pursue the protest—despite presumed violations of the Trade Agreements Act by Executone—because it remains capable of submitting an acceptable proposal. Further, we conclude that the issues of protest relating to compliance with solicitation requirements were timely raised. We deny the protest because protester has failed to establish an agency violation of any statute or regulation.

Findings of Fact

The Award Decision

1. On June 22, 1992, the respondent, the Social Security Administration (SSA), issued solicitations SSA-RFP-93-1200 through SSA-RFP-93-1206 (hereinafter collectively referred to as the "solicitation") requesting proposals for the installation, testing, support, and maintenance of state-of-the-art digital telephone systems at various SSA field offices. Protest File, Exhibit 6. The seven solicitations were identical in all material respects, except that the various field office locations covered by the solicitation required different quantities or combinations of equipment. Hence, the respondent contemplated awarding seven contracts to satisfy its overall needs.

2. Each solicitation contemplated the award of a firm, fixed-price contract with indefinite delivery quantity provisions for additional equipment and services not to exceed a seven-year (eighty-four month) system life. Protest File, Exhibit 6. Each stated that award would be made to the low-priced, technically-acceptable offeror. Each solicitation provided that:

> Proposals will be evaluated as to their technical acceptability and overall system-life cost to the Government. To be technically acceptable, the system must meet all of the mandatory requirements in Section C and be in conformance with applicable laws such as the Trade Agreements Act. In order to be eligible for award, a proposal must be technically acceptable *and* have the lowest evaluated system-life cost.
>
> . . . .
>
> (b) *Selection Basis*
>
> When award is made by the Government, it will be made to that responsible offeror whose offer is technically acceptable and represents the lowest present value cost to the Government over the seven (7) year evaluated system life.

Id. at M-2 (§ M-1(a), (b)).

3. On March 26, 1993, both the intervenor and the protester submitted best and final offers in response to every solicitation. Protest File, Exhibits 19, 46. In response to the requirements of the solicitation GTI proposed the Fujitsu 9600 VS digital telephone system and Executone proposed the Executone IDS system with 228 CPU system. *Id.*, Exhibits 8, 9, 19, 37, 38, 46. Both proposals were found technically acceptable by the respondent's Technical Evaluation Committee. *Id.*, Exhibits 26, 32 at 8, 13. GTI's total evaluated price for the seven solicitations was $26,295,013. Executone's total evaluated price for the seven solicitations was $32,022,187. Respondent's Exhibit 1; Transcript at 170. GTI's total evaluated price was several hundreds of thousands of dollars lower than Executone's for each individual solicitation. Respondent's Exhibit 1; Protest File, Exhibit 32.

4. On or about April 16, the respondent awarded each of the seven contracts to GTI. Protest File, Exhibit 33. On April 23, Executone protested the awards here. Aside from GTI, no other competitor entered an appearance in this protest. We suspended performance under the contracts pending our decision on the merits of the protest. *See*

Order on Proceedings (Apr. 26, 1993); Order on Further Proceedings (Apr. 29, 1993).

Support Requirements

5. Specification paragraph C.14 of the solicitation stated:

> C.14 *Support Requirements*
>
> The contractor shall provide maintenance and follow-on service throughout the life of the contract. If subcontractors are used, no substitutions to any of the subcontractors, evaluated and approved during negotiations will be permitted without at least 30 days prior notice by the contractor and prior evaluation and written approval by the contracting officer. Support services shall include:
>
> (a) The personnel support shall be provided by manufacturer-trained and certified individuals fully knowledgeable of proposed system components and who will assist Government personnel to ensure the effective continued operation of the system(s).
>
> *Response:*
>
> *Offeror to identify any proposed subcontractors and provide detailed information demonstrating the subcontractors' certification, or certification plan, to provide support services. Information regarding the subcontractor in supporting the make and model of the system offered should include the name, address, telephone number, experience and proof of certification or a comprehensive established plan for obtaining certification. If a plan for obtaining certification is submitted: 1) Certification must be accomplished not later than 40 days from the date of contract award; and 2) plan shall include a written manufacturer's concurrence.*

Protest File, Exhibit 6 at C-25 to C-26.

6. In response to specification paragraph C.14, GTI's proposal stated that:

> GTI has read, understands, agrees to and is fully compliant with these requirements and is proposing to fully satisfy the requirements stated without taking exception to any of these provisions.
>
> . . . .
>
> The primary subcontractor that this contractor is proposing to use is Fujitsu Business Communications Systems. All Fujitsu Business Communications Systems' products are supported by the company's network of over 40 service areas throughout the United States providing service to over 10,000 customer sites. The company's reputation and capability for service have prompted many large end users to contract with Fujitsu to maintain other telecommunication vendor's [sic] equipment.

Protest File, Exhibit 8 at C-50. GTI's proposal also included a detailed subcontractor certification plan and a letter from Fujitsu to GTI affirming Fujitsu's commitment to GTI. *Id.* at C-51 to C-52; Transcript at 121.

7. GTI's technical proposal did not contain a list of other certified subcontractors. GTI's proposal explained:

> a. GTI has a plan for nationwide coverage which has been in effect since 1987.
>
> b. GTI has been implementing this plan for approximately 4 years, and, in fact has recently signed a contract with the USPS to supply similar systems nationwide to potentially over 42,000 sites.
>
> c. This contract will further expand GTI's nationwide support coverage.
>
> d. Historical SSA data and performance verify GTI's growing support coverage.
>
> e. GTI now covers about 300 locations nationwide and has a plan for as many as 45,000.

Protest File, Exhibit 8 at C-51 (§ C.14).

8. Concerning support requirements, GTI's proposal stated that:

> GTI can and will meet the support requirements of this contract, including all preinstallation, installation, and post-installation activities in accordance with the mandatory requirements of the RFP. For the most part, it will be accomplished with GTI resources.

Protest File, Exhibit 8 at C-51 (§ C.14). GTI's proposal set forth the following seven-point field support plan:

> 1. GTI's key personnel will be certified by the manufacturer prior to any SSA support activities.
>
> 2. GTI will train and certify all other GTI and subcontractor personnel, as required. The manufacturer has agreed that this 2nd-tier certification is authorized.
>
> 3. GTI personnel, exclusively, will perform all pre-installation and installation work, whether manufacturer and/or subcontractor personnel are present.
>
> 4. For most all locations, GTI will perform all post-installation work. Final determination will be made based upon site populations within a given area and the ability of GTI to respond within a 100 mile radius, which is guaranteed as responsive to SSA's response time requirements.

Digitized by Google

5. For a second choice, GTI will utilize the manufacturer's field personnel for post-installation work.

6. For a third choice, GTI will utilize individual subcontractors for post-installation work. In this case the subcontractor must be present during the installation activities.

7. As a long term goal, GTI will relieve the manufacturer's and subcontractor's personnel when GTI expansion so dictates. It will remain a goal for GTI to perform all field activities with GTI personnel. The manufacturers and subcontractors are aware of this stated goal.

Id. at C-51 to C-52.

9. Respondent's Technical Evaluation Committee reviewed GTI's field support plan, including GTI's certification plan, and found it technically acceptable. Transcript at 121, 132-33, 135, 155; Protest File, Exhibits 20, 32 at 8. The contracting officer concurred in that finding. *Id.*

Remedial Maintenance

10. Specification paragraph C.16(a) of the solicitation stated:

C.16 *Remedial Maintenance*

Remedial Maintenance shall be provided by the contractor as follows:

(a) The contractor shall provide maintenance of the installed system(s) on a preventive (scheduled) and remedial (routine and emergency call-out) basis. Protective Systems as defined in section C.7 and C.24(u) shall also be included in the remedial maintenance. Onsite service shall be provided during the Principal Period of Maintenance (PPM) which is 8:00 a.m. to 5 p.m., Monday through Friday excluding Federally-observed holidays; off-hours service shall be provided on a call-out basis. Additional system installation services, as required, for the term of the contract shall also be provided. A written preventive maintenance schedule shall be provided.

Costs, if any, associated with these maintenance and installation services shall be indicated in the pricing tables and shall include all parts and labor.

Response:

(Offeror to indicate all proposed maintenance schedules and routines.)

Protest File, Exhibit 6. Each solicitation also stated that "[a]ll applicable telecommunications terminology is defined in Newton's TELECOM Dictionary (fourth edition)." *Id.* at C-5; Transcript at 95, 112. Newton's TELECOM Dictionary defines "preventive maintenance" as follows:

> The periodic inspection, cleaning, adjusting and repair to eliminate problems before they affect service. *Usually ignored.*

Protest File, Exhibit 50 (emphasis added). Both the contracting officer and the Technical Evaluation Committee Chief testified that state-of-the-art digital telecommunications systems, such as those offered by GTI and Executone, do not have moving parts and do not require "preventive maintenance," while non-state-of-the-art systems (i.e., analog equipment) may require preventive maintenance. Transcript at 111, 208.

11. GTI's technical proposal stated, in response to specification paragraph C.16(a), that "GTI has read, understands, and agrees to and is fully compliant with these requirements and is proposing to fully satisfy the requirements stated without taking exception to any of these provisions." Protest File, Exhibit 9 at C-59. GTI's technical proposal also stated, "Preventive (scheduled) maintenance is not recommended, required or offered." The GTI proposal contains no preventive maintenance schedule. *Id.* GTI's proposed system, the Fujitsu 9600 VS, is a state-of-the-art, digital system. Transcript at 111-12, 207-08.

12. Executone's technical proposal stated that "EXECUTONE will provide maintenance of the installed system(s) on a preventative (scheduled) and remedial (routine and emergency call-out) basis." Protest File, Exhibit 37. A page captioned "PREVENTIVE MAINTENANCE" contains the following:

> The IDS proposed utilize all modular plug in line/trunk, cards, station cards and common control cards, with no moving parts, fan filters, etc., therefore these systems will require little if any "preventive maintenance".
>
> All ancillary equipments, including the battery-backup system, voice mail system are essentially maintenance free components.
>
> The IDS incorporates extensive built in diagnostics to isolate faults which might occur during call processing.
>
> EXECUTONE will remotely access each system every 30 days to perform a system backup and to perform diagnostic testing of the systems operation. Diagnostics testing routines shall at a minimum be as follows:

©1993, Commerce Clearing House, Inc.

Digitized by Google

A. System self tests
B. Line tests
C. Card Activity tests
D. Checks for quantities of abandoned calls
E. SMDR devices
F. Alarms stack

Id.

13. Both the contracting officer and the Technical Evaluation Committee Chief stated that neither Executone nor GTI proposed preventive maintenance because their systems required none. Transcript at 111, 208; *see generally id.* at 116, 118-19, 130. Specifically, the Technical Evaluation Committee Chief testified:

> But the technology in the system that GTI proposed is computerized technology, which has no moving parts, does not require any preventative [sic] maintenance. The system that Executone [pro]posed — same thing. Computerized technology. Preventative (sic] maintenance with that technology is not a requirement.

Id. at 208.

The Contracting Officer's Responsibility Determination

14. Pursuant to the terms of the solicitation and the Federal Acquisition Regulation (FAR) Subpart 9.1, the contracting officer was required to make a responsibility determination after identifying the lowest priced, technically acceptable offeror. The solicitations provided in part:

> M-3 *OFFEROR RESPONSIBILITY*
>
> The award of a contract to an offeror is not solely on the basis of the lowest evaluated price. In addition to the technical and cost evaluations performed on each proposal, due consideration shall also be given to those standards for responsible prospective contractors set forth in FAR 9.104-1. Factors to be considered are financial resources, performance record, organizational strength and a satisfactory record of integrity and business ethics. A prospective contractor must also be qualified under applicable laws and regulations to perform on a Government contract.
>
> Also to be considered is the prospective contractor's ability to meet the specific requirements for delivery and maintenance support over the 7-year systems life.
>
> An offeror whose proposal is found to be technically acceptable, with the lowest evaluated system-life cost, but who is determined unable to meet the required deliveries or to furnish the required maintenance support throughout the 84-month system life, may be eliminated from further consideration.

Protest File, Exhibit 6 at M-4 (§ M-3). After determining that GTI had submitted the lowest priced, technically acceptable proposal, the contracting officer determined that GTI was a responsible prospective contractor. Transcript at 101, 139; Protest File, Exhibit 32 at 28-29. In particular, the contracting officer expressly found that:

> The contractor has the financial capacity to fulfill all requirements of the contract and is a major telecommunications dealer. GTI has been awarded many telecommunications contracts with SSA over the past eight years and has recently been awarded a contract for the Kansas City and Chicago Program Service Centers valued at over $1.5 million. A Dun & Bradstreet Report dated March 30, 1993, is Attachment I to this summary.

Protest File, Exhibit 32 at 28.

15. The contracting officer determined that GTI was financially responsible, in part based upon her review of the Dun & Bradstreet report on GTI. Transcript at 151. The Dun & Bradstreet report attached to the Summary of Negotiations indicated that, at the end of fiscal year 1992, GTI had current assets of $1,828,025, annual sales of $6,990,693, and a net worth in excess of $1 million. Protest File, Exhibit 32 at 28; Transcript at 143. The report noted that GTI is a wholly-owned subsidiary of Computer Equity Corp. (Compec) and that Compec had current assets of $5,933,670 and annual sales of $12,200,478 as of February 29, 1992. Protest File, Exhibit 32. In her responsibility determination the contracting officer recognized that GTI was a wholly-owned subsidiary of Compec. The contracting officer stated that the fact that GTI "could possibly borrow personnel from Compec" or turn to Compec in the event of financial problems was "kind of like icing on the cake." Transcript at 140.

16. Consistent with the admonitions in FAR 9.105-1(b) and (c), the contracting officer expressly found that GTI had the requisite performance record and organizational strength and a satisfactory record of integrity and business ethics. In making this finding, the contracting officer considered the content of GTI's proposal and a variety of information outside the four corners of GTI's proposal, including, *inter alia*, GTI's successful past performance of numerous contracts awarded by SSA. *See generally* Protest File, Exhibit 32 at 28-29; Transcript

The Technical Evaluation of Proposals

17. In conducting the technical evaluation of proposals, the Technical Evaluation Committee considered only the information submitted by offerors with or as part of their proposals. Transcript at 192-94, 202, 205. The Committee did not evaluate whether offerors were capable of performing the work. *Id.* The Technical Evaluation Committee Chief stated that a determination of whether offerors are *capable* of performing the contract is outside the scope of the Committee's responsibilities. That is, offeror capability is a responsibility determination within the purview of the contracting officer. *Id.* at 139, 202, 217.

18. The Technical Evaluation Committee carefully reviewed each proposal to determine its technical acceptability. Transcript at 192-94, 202-05, 213. The Committee expressly found GTI's technical proposal acceptable. Protest File, Exhibit 26.

Executone's Violation of the Trade Agreements Act

19. The solicitations required offerors to comply with the Trade Agreements Act, 19 U.S.C. §§2501-2582 (1988), by providing that:

> For purposes of this solicitation, the end product is identified as *a telephone system.* The Trade Agreements Act applies to this solicitation. Under the requirements of the Trade Agreements Act, only end products which are domestic, or from designated countries or Caribbean Basin Countries, are permissible. Proposals offering equipment which does not meet the criteria of the Trade Agreements Act will be rejected as being technically unacceptable.

Protest File, Exhibit 6 at M-2 (§ M-1(a)).

20. Offerors that propose end products in violation of the Trade Agreements Act are unacceptable and are ineligible for award of the contracts at issue in this protest. Protest File, Exhibit 6 at M-2 (§ M-1(a)). Based solely on self-certifications, the contracting officer found both offerors to be in compliance with the Trade Agreements Act. She did not conduct an independent investigation as to whether the self-certification was accurate or correct. Transcript at 166-67.

21. Our Order On Further Proceedings (Apr. 29, 1993) established a discovery plan and schedule that, among other things, required the parties to exchange interrogatories and requests for production of documents on May 17, 1993, and to file all objections to discovery requests "no later than COB May 20, 1993." Our order also stated that "[s]anctions will be imposed when a party refuses or obstructs discovery." On May 17, 1993, in conformity with our April 29, 1993 order, GTI served upon Executone "Intervenor's First Set of Interrogatories and Requests for Production of Documents." Executone did not file any objections to GTI's interrogatories and requests for production by close of business on May 20, 1993, as required by our April 29, 1993 order.

22. Executone provided no substantive response to an interrogatory seeking the place of manufacture of the line items Executone would supply. A purpose of GTI's unanswered discovery request was to determine if Executone's proposal complied with the Trade Agreements Act. Transcript at 60. The panel chairman imposed a sanction for Executone's willful refusal to respond to this discovery request by informing Executone that the Board would presume that Executone's products violated the Trade Agreements Act unless Executone showed otherwise; the panel chairman placed the affirmative burden on Executone to show at the hearing that its proposed products come from designated countries or otherwise comply with the Trade Agreements Act. Transcript at 62; *see generally id.* at 55-62.

23. Executone's proposal stated: "Approximately 25 percent of the proposed contract price represents foreign content or effort." Protest File, Exhibit 38 at K-23 (¶ K-24).

24. At the hearing, Executone introduced no evidence to establish the country or countries of origin of its proposed products before closing its case-in-chief. After all parties rested their cases we explicitly gave Executone another opportunity to address the Trade Agreements Act issue. Transcript at 225-28. Nevertheless, Executone introduced no evidence concerning the country of origin of any of its proposed products; rather, it chose to rest its case on the contents of its proposal. *Id.* at 228. However, the actual countries of origin of virtually all of Executone's proposed products are not identified in Executone's proposal, Protest File, Exhibits 37-38, or anywhere else in the record. Although Executone states in its post-hearing brief, at 42, that the "components Executone identified to supply with its systems are all domestically manufactured or derive from eligible designated countries identified by the Trade Agreements Act,"

©1993, Commerce Clearing House, Inc.

Digitized by Google

the evidentiary record fails to support such an assertion.

Executone's Initial Protest

25. In its initial protest, Executone maintains, in part, "that GTI failed to meet the [agency's] evaluation factors." Protest at 1. In particular, the protester expressly references mandatory requirements concerning certified support personnel and sections C.1.6 and C.14 of the solicitation. *Id.* at 3-4. The protester also references section M of the solicitation, particularly M-2 and M-3 (involving evaluation factors and responsibility). "Executone asserts that, contrary to SSA's stated evaluation criteria, the SSA failed to factor this information [regarding GTI's performance record, financial resources, organizational strength, and qualifications] into their evaluation of the acceptability of GTI's proposal." *Id.* at 10. In addition to referencing section M-3 (offeror responsibility), protester expressly put the "acceptability" of GTI's proposal at issue. *Id.*

26. The protester pursues no other issues of its initial protest (i.e., those alleging GTI's non-compliance with the Walsh-Healey and Service Contract Act). Supplemental Protest at 2.

Executone's Supplemental Protest

27. On May 3, 1993, counsel for Executone spent five hours reviewing the respondent's official procurement files. Transcript at 170-72; Memorandum of Points and Authorities in Support of Respondent's Motion for Dismissal Regarding Issues Raised in Executone's Supplemental Protest, Exhibit 2 (second Declaration of Michelle Y. Burgesen). The contracting officer testified that she had fewer than six contacts with Executone's counsel while they were reviewing the files, which included GTI's proposal. She observed Executone's counsel input data from the files into a laptop computer. Transcript at 172. Executone's counsel requested a copy of another offeror's proposal that submitted Fujitsu equipment. *Id.* at 173. Executone's counsel also selectively clipped for copying the portions of documents being reviewed that were considered relevant. *Id.* at 176. On May 7, respondent delivered to Executone's counsel copies of the materials identified by Executone's counsel and copied in accordance with their discovery agreement.

28. On May 18, Executone filed a "Supplemental Protest and Bench Memorandum Supporting Executone's Protest Under Solicitations SSA-RFP-93-1200 through 93-1206" (hereinafter "Supplemental Protest"). This Supplemental Protest was filed on the eleventh working day after the day the protester's counsel first reviewed respondent's official procurement files, including GTI's proposal. Transcript at 178. In its Supplemental Protest,

> Executone hereby amends its protest to disclose the additional facts it learned through discovery. These facts establish: (1) SSA's failure to evaluate GTI's compliance with mandatory specification requirements; (2) SSA'[s] waiver of requirements for the sole benefit of GTI; (3) SSA's determination of GTI's capabilities based on information GTI failed to disclose as part of its proposal; and (4) SSA's arbitrary evaluation of GTI as incorporating COMPEC, its parent corporation, despite any contractual privity between COMPEC and SSA.

Supplemental Protest at 3. Executone expressly focuses upon the requirements for preventive maintenance found in section C.16, and for certified, trained personnel found in section C.14. *Id.* at 35.

29. The bases for Executone's assertion concerning paragraph C.16 were a statement in GTI's proposal that "Preventive (scheduled) maintenance is not recommended, required, or offered" and deposition testimony by the respondent's project manager (occurring after May 3) that she concurred with the approach, although a mandatory provision of the solicitation required offerors to provide scheduled preventive maintenance. Supplemental Protest at 4. The bases for Executone's assertion concerning paragraph C.14 are statements in GTI's proposal relating to who will be performing work and the absence of a list of certified subcontractors, and deposition testimony by the respondent's project manager (occurring after May 3) that she was unaware of how GTI would perform contractually required post-installation work. *Id.* at 4-7.

30. The entirety of section C is captioned *"MANDATORY SPECIFICATIONS."* Protest File, Exhibit 6 at C-4. The solicitation states: "This specification is divided into two (2) areas, *Mandatory Specification and Mandatory Add-On Features Specification.* Each proposed system must be fully capable of satisfying *all* of the mandatory requirements of both areas of this specification." *Id.* The contracting officer and the chief of the Technical Evaluation Committee testified that they viewed the entirety of the specifications as mandatory. Transcript at 103, 110, 168, 207.

Discussion

Jurisdiction

GTI asserts that Executone is not an interested party to pursue the protest. Executone submitted proposals, including self-certifications of compliance with the Trade Agreements Act. However, GTI maintains that inferences against Executone's ability to comply with that Act must be drawn in light of Executone's failure to respond properly to discovery and the sanctions imposed by the panel chairman.

Executone failed to abide by discovery orders of the Board. The panel chairman appropriately imposed sanctions. Executone failed to establish that its telephone system complies with the requirements of the Trade Agreements Act. However, neither the respondent nor GTI have established why Executone should be ousted from the competition at this point because of a lack of a direct economic interest in the awards. 40 U.S.C. § 759(f)(9)(B) (1988).

This is a negotiated procurement. Should Executone prevail in its protest, the agency would be required to get offerors to extend offers (they expired on April 30) or to request another round of best and final offers. Should Executone prevail in its protest, it would be a viable offeror in any subsequent negotiations with the opportunity to address or correct any presumed Trade Agreements Act inadequacies. *See CompuAdd Corp. v. Department of the Air Force*, GSBCA 12301-P, et al., 93-3 BCA ¶ 26,123, 1993 BPD ¶ 144 (May 10, 1993).

Accordingly, the Board concludes that the protester is an interested party to proceed with its protest.

Timeliness

The respondent and GTI maintain that Executone untimely raised protest issues in its supplemental protest. They contend that on May 3 Executone, through its counsel, knew or should have known of alleged noncompliance by GTI regarding sections C.14 and C.16. On that date, counsel had access to, and reviewed, respondent's files, which included the GTI proposal. Thus, relying upon Rule 5(b)(3)(ii), they assert that the supplemental protest, filed on May 18, eleven workdays after May 3, is untimely.

A ground of protest not apparent on the face of the solicitation is timely raised at the Board if filed no later than ten working days after the basis for the protest is known or should have been known, whichever is earlier. Rule 5(b)(3). In its initial protest, Executone generally alleged that GTI's offer was unacceptable. Finding 25. Therefore, as protester contends, one could view those issues of protest relating to sections C.14 and C.16 expressed in the supplemental protest as nothing more than refinements of the earlier protest. More importantly, the testimony of the contracting officer, Finding 27, is insufficient to establish that Executone, through its counsel, either knew or should have known of those bases of protest on May 3. The record does not establish that the relevant portions of GTI's proposal were reviewed, or reasonably should have been reviewed, during the initial time available. Moreover, whatever suspicions may have been raised in the mind of counsel of May 3 could not have been readily confirmed until May 7 when the pertinent copies of documents were provided to counsel by respondent pursuant to their working agreement.

The record does not enable the Board to conclude that the issues of protest relating to sections C.14 and C.16 were untimely raised.

Section C.14

With respect to specification paragraph C.14, which relates to support requirements, GTI stated in its proposal, *inter alia*, that GTI:

> has read, understands, agrees to and is fully compliant with these requirements and is proposing to fully satisfy the requirements stated without taking exception to any of these provisions.

Finding 6. GTI included in its response to specification paragraph C.14 a detailed seven-point field support plan, including a detailed subcontractor certification plan. GTI's proposal also included a letter from Fujitsu (which GTI's proposal identified as GTI's principal subcontractor) confirming Fujitsu's commitment to GTI. Findings 6-8.

GTI committed itself or Fujitsu personnel to perform the requisite services. The respondent's Technical Evaluation Committee reviewed GTI's detailed response to specification paragraph C.14 and found it technically acceptable. The contracting officer expressly concurred in the Technical Evaluation Committee's determination of technical acceptability. Finding 9. The Technical Evaluation Committee based its acceptability determination on the statements and certifications contained in GTI's proposal; and the Committee was not required to conduct a "capability" determination, i.e., a responsibility determination as to GTI's organizational strength, staffing, and the like. *See*,

©1994, Commerce Clearing House, Inc.

Digitized by Google

e.g., Del Net, Inc., GSBCA 9178-P, 88-1 BCA ¶ 20,342, 1987 BPD ¶ 259, *aff'd*, 861 F.2d 728 (Table) (Fed. Cir. 1988).

Executone has not identified, presented, or adduced evidence which persuades us that GTI's proposal, as written, does not meet each and every requirement called for by paragraph C.14 or that the respondent's Technical Evaluation Committee abused its discretion when it found GTI's proposal, including its response to specification paragraph C.14, to be technically acceptable.

Section C.16

Executone's allegation that GTI submitted a technically unacceptable response to specification paragraph C.16 is equally without merit. The gravamen of Executone's complaint with GTI's response to paragraph C.16 relates to the statement in GTI's proposal that "[p]reventive (scheduled) maintenance is not recommended, required or offered." Finding 11. Executone contends that GTI's statement shows that GTI's proposal is technically noncompliant with respect to paragraph C. 16(a).

The respondent's Technical Evaluation Committee and the contracting officer recognized that the preventive maintenance requirement does not apply to state-of-the-art digital systems, such as the Fujitsu 9600 VS system proposed by GTI. Consequently, they found GTI's response to specification paragraph C.16 technically acceptable. Finding 13. Inasmuch as no preventive maintenance was necessary or possible, not proposing any was consistent with the respondent's view of compliance with the specification. *Id.*

In any event, Executone cannot complain that GTI did not comply with section C.16 preventive maintenance requirements. Although Executone contends that it offered preventive maintenance, it did so in words only. What Executone proposed fails to conform to the applicable definition of "preventive maintenance." Findings 10, 12. Accordingly, Executone did not propose preventive maintenance or a schedule compliant with the specification. Its allegations relating to specification paragraph C.16 are, accordingly, without merit.

Responsibility

Executone asserts that GTI lacked a satisfactory performance record, financial resources, organizational strength, and qualifications under applicable laws and regulations to perform the contracts. Protest at 13-15. Executone concludes that the respondent improperly selected the intervenor for award.

At the heart of Executone's protest is a fundamental confusion over the distinction between "technical acceptability" and "responsibility." In its pleadings and throughout the course of the hearing, Executone attempted to show that:

(1) the respondent was required by Section M of the solicitations to make an independent responsibility determination as part of its technical evaluation of each and every aspect of the technical proposals, and

(2) the contracting officer abused her discretion in finding GTI a responsible prospective contractor pursuant to FAR 9.104-1.

Both of these allegations are without any foundation in fact, and are without merit.

Section M-3 of the solicitations reminded offerors that the contracting officer was required to make a responsibility determination in accordance with FAR 9.104-1. Finding 14. A responsibility determination, however, is not made until *after* the low-priced, technically-acceptable offeror has been identified. The determination of the otherwise successful offeror's responsibility is not a technical evaluation criterion, but is instead a separate and distinct requirement to be met prior to the award of any government contract.

This is not a case in which the respondent's evaluators ranked or scored technical proposals based upon subjective, qualitative assessments. Rather, the solicitation required only that the evaluators determine whether offerors were technically acceptable; and offerors received no extra credit for exceeding technical requirements.

An offeror's capability or ability to perform the work, i.e., its responsibility, under this solicitation is quite separate and distinct from the question of whether its offer meets the requirements of the solicitation, i.e., technical acceptability. Responsibility evaluations in the context of this procurement are not relative—a "more responsible" offeror does not outscore a merely "responsible" offeror in the award selection process. As we stated in *Severn Companies:*

> The determination that a bidder is or is not responsible, i.e., whether the bidder is capable of performing the contract can, or usually is, made on the basis of information *de hors* the bid submitted. Such information relates to the bidder's ability to perform, and not to whether it is bound to

Digitized by Google

perform in accordance with the material requirements of the solicitation, and thus may be obtained subsequent to bid opening.

GSBCA 9353-P, 88-2 BCA ¶ 20,689, at 104,570, 1988 BPD ¶ 56, at 19. *See also Del Net, Inc.* (offeror's capability to perform computer maintenance is a question of responsibility). Accordingly, Executone's contention that the respondent's technical evaluators were required to take into consideration GTI's capability or ability to perform during their evaluation of GTI's technical proposal is without merit.

Executone's allegation that the contracting officer abused her discretion in finding GTI responsible is also without merit. Protesters challenging a contracting officer's responsibility determination have a real burden because we, as does the Comptroller General, accord a great deal of deference to the sound discretion and business judgment of the contracting officer. *See, e.g., Technology Management & Analysis Corp. v. Environmental Protection Agency*, GSBCA 12082-P, 93-2 BCA ¶ 25,711, 1992 BPD ¶ 406; *Wiltel Communications Systems, Inc. v. General Services Administration*, GSBCA 11854-P, 93-1 BCA ¶ 25,279, 1992 BPD ¶ 195; *Datec, Inc.*, GSBCA 8623-P, 86-3 BCA ¶ 19,264, 1986 BPD ¶ 148. However, in the instant case, Executone not only falls far short of meeting this burden, it has adduced no evidence whatsoever in support of its position. The record amply demonstrates that the contracting officer carefully considered all of the factors set forth at FAR 9.104-1 in making her responsibility determination, and Executone provided no proof whatsoever to rebut the factors upon which the contracting officer based her responsibility decision. *See* Findings 14-16.

FAR 9.104-1 sets forth the applicable responsibility standards. The contracting officer considered all of the standards in finding GTI responsible. Findings 14-16. Among other things, the contracting officer took into account a variety of information outside GTI's proposal, including GTI's Dun & Bradstreet Report, which reflected substantial sales and assets, and GTI's successful past performance record on numerous other contracts with the respondent agency. *Id.; see* 48 CFR 9.105-1(b), (c) (1992) (FAR 9.105-1(b)(c)). She also considered GTI's plan to provide installation and support services and the Technical Evaluation Committee's acceptance of that plan. Findings 14-16. In short, the contracting officer made an informed, considered business judgment in accordance with FAR 9.104-1, and as required by solicitation section M-3, that GTI was a responsible prospective contractor.

Executone purports to challenge the contracting officer's responsibility determination, but it adduced no evidence at the hearing (and there is nothing in the record) that in any way contradicts or undermines the conclusions reached regarding each factor that the contracting officer considered in finding GTI responsible. Further, Executone produced nothing that could lead to the conclusion that GTI is not responsible as a matter of law. *See Wiltel Communications.* Executone, therefore, has failed to meet its burden of showing that the contracting officer abused her discretion, and its allegations challenging her responsibility determination are denied for lack of merit.

In making the determination of responsibility, the contracting officer considered all of the factors set forth in regulation, FAR 9.104-1. The determination evinces an informed, considered business judgment. The record demonstrates that the contracting officer made a responsibility determination consistent with the requirements of the solicitation and regulation.

Contrary to the protester's assertions, the record fails to demonstrate inadequacies in the intervenor's performance record, financial resources, organizational strength, or qualifications. The record does not suggest that the intervenor is non-responsible as a matter of law. The protester has failed to demonstrate any agency violation in the contracting officer's determination.

Decision

For the reasons set forth above, the protest is DENIED. The previously entered suspension of procurement authority lapses by its very terms.

[¶ 26,275] Cordant, Inc. v. Department of the Navy

GSBCA No. 12226-C(12011-P), July 30, 1993.

Protests, GSBCA—Costs of Protest and Attorney Fees—Lodestar Amount.—A protester was entitled to recover a greater amount of protest costs than a fellow protester, despite the government's contention that the fellow protester's amount served as a lodestar amount, because the protester showed that it acted as the "laboring oar" in the protests. The protester provided counsel for many depositions, worked with consultants to analyze matters relevant to the case, and prepared consultants to serve as expert witnesses.

Protests, GSBCA—Costs of Bid and Proposal Preparation—Wasted Effort.—A prevailing protester was entitled to recover its fully documented wasted proposal preparation costs because the amount proposed by the protester represented reasonable compensation for its wasted efforts, which were direct consequences of the government's improper procurement actions. In the underlying protest, the board found that the weights given various scores for live test demonstrations of offerors' proposed systems were inconsistent with the weights prescribed by the solicitation, that discussions were inadequate, and that the best value analysis used to select the awardee was arbitrary. As a result of these violations and the government's decision to continue the procurement under revised terms, the protester changed its proposal and performed a second live test demonstration. Moreover, the protester was entitled to recover its costs of filing and pursuing the protest and attorney fees incurred in preparing the application for reimbursement.

For the protester: Stephannie A. Wood and Howrey & Simon, Washington, D.C., by William A. Roberts III and Lee P. Curtis. For the government: Ellen D. Washington and Thomas L. Frankfurt, Information Technology Acquisition Center, Department of the Navy, Washington, D.C.

Before DANIELS, LABELLA, and PARKER, Administrative Judges.

DANIELS, Administrative Judge: On November 16, 1992, the Board granted *Centel Federal Systems. Inc. v. Department of the Navy*, GSBCA 12011-P, et al., 93-2 BCA ¶ 25,648, 1992 BPD ¶ 359. One month later, the protester, by then having changed its name to Cordant, Inc., filed a motion for reimbursement of the costs it incurred in filing and prosecuting the case. The motion was filed in accordance with our Rule 35 and seeks an award of costs pursuant to 40 U.S.C. § 759(f)(5)(C) (1988).

Cordant's motion has been amended and supplemented several times. As ultimately constituted, it asks that the Board award the firm $567,706.01 in costs of filing and pursuing the protest and $2,845,463.24 in costs of proposal preparation and services rendered by counsel in constructing the portion of the claim associated with the latter category of costs.[1] More specifically, as to protest costs, Cordant's application requests reimbursement of the following amounts: attorney fees, $398,582.64; disbursements made by attorneys for transcripts, document reproduction, computeraided legal research, long-distance telephone calls, various means of document delivery, and other minor, litigation-related items, $29,842.77; consultant services, $61,265.72; and in-house, non-attorney costs, $78,014.88. Cordant also seeks proposal preparation costs of $2,838,688.97 and associated attorney fees of $6,774.27.

The Department of the Navy, respondent, readily agreed that Cordant was a prevailing party in the underlying protest and thus entitled to an award of costs. The parties then sought from the Board, and received, a period of time in which to attempt to reach an agreement as to the appropriate amount for reimbursement. On July 27, 1993, they filed a Joint Motion for Board Order, which constitutes a request for an order that Cordant receive reimbursement in the amount of $2,598,245.62.

With regard to protest costs, Cordant understands that the Board does not award reimbursement of moneys expended for consultant services and in-house, non-attorney costs. *Sterling Federal Systems, Inc. v. National Aeronautics & Space Administration*, GSBCA 10000-C(9835-p), 92-3 BCA ¶ 25,118, 1992 BPD ¶ 141 (full Board). Protester claimed these amounts only for the purpose

[1] The figures we state are very slightly different from those used by Cordant. The application includes a few computational errors which have no material effect on the total amounts involved.

Digitized by Google

of preserving its rights to such an award in the event that the Court of Appeals for the Federal Circuit overturns the cited decision in the appeal now pending. No. 92-1552 (Fed. Cir., docketed Sept. 28, 1992). Eliminating these sums from the total protest costs claimed leaves $428,425.41. This amount is properly documented. The parties have asked that we award $433,245.62.

We note that both of the latter amounts are considerably greater than the sum sought by Cordant's fellow-protester, Federal Computer Corporation, as costs of filing and pursuing the case. *See Federal Computer Corp. v. Department of the Navy*, GSBCA 12221-C (12012-P) (July 14, 1993). We asked Cordant to show cause why the amount awarded to its fellow-protester should not be used as a lodestar against which to measure the reasonableness of the amount sought by Cordant. *See Horizon Data Corp. v. Department of the Navy*, GSBCA 11018-C(10831-P), 92-2 BCA ¶ 24,852, 1992 BPD ¶ 49. Cordant responded persuasively that it had taken the "laboring oar" in the prosecution of the protests, primarily by providing counsel for many depositions at which Federal Computer's counsel had not appeared, and by working with consultants to analyze matters relevant to the case and to prepare some of those consultants to serve as expert witnesses. We are convinced here, as we were not in *Horizon*, that the two protesters appropriately devoted different levels of effort to the case.

With regard to proposal preparation, Cordant used a two-step process to calculate the costs at issue. First, it documented the total costs it actually incurred in constructing the four principal portions of its proposal—technical proposal evaluation sheets, management and support plans, live test demonstration, and pricing. Then Cordant made estimates (supported by affidavits of executives involved in proposal preparation) of the percentage of each category of costs the firm believed were wasted as a result of the Government's violations of law that were identified in the Board's decision in the underlying protest. *See Centel Federal Systems, Inc. v. Department of the Army*, GSBCA 11315-C(11238-P), 92-2 BCA ¶ 25,000, 1992 BPD ¶ 102; *Recognition Equipment Inc.*, GSBCA 9408-C(9363-P), 89-1 BCA ¶ 21,281, 1988 BPD ¶ 228. The Navy did not question Cordant's documentation of costs. Although the parties disagree as to the percentage of some categories of costs that were wasted as a consequence of the Government's improper actions, they were able to agree on a total amount of proposal preparation costs that the Board should reimburse. Of the $2,838,688.97 sought by Cordant, the parties ask us to order reimbursement of $2,165,000. In addition, the Navy agrees that Cordant incurred $6,774.27 in attorney fees in preparing the application for wasted proposal costs; this amount is not included, however, in the parties' joint request for an award.

We conclude that Cordant reasonably incurred, and properly documented, $428,425.41 in costs of filing and pursuing the protest; $2,165,000 in wasted proposal preparation costs; and $6,774.27 in attorney fees associated with preparing the application for reimbursement of the proposal costs. The first of these figures does not include any of the amounts Cordant claims it spent as consultants' fees and expenses or as internal, non-attorney costs relating directly to the protest.

We agree with the parties that Cordant wasted a considerable part of its proposal preparation costs as a direct consequence of the Navy's improper procurement actions. We specifically found in the underlying protest that the weights given various scores attributed to offerors' live test demonstrations of their proposed systems were inconsistent with the weights prescribed by the solicitation; that discussions with the offerors were inadequate; and that the best value analysis relied on to select an awardee was arbitrary. As a result of these violations of law and the Navy's decision to continue the procurement under revised terms, rather than award a contract to the lowest-priced offeror, Cordant and its competitors must make significant changes to their proposals and perform second live test demonstrations. In fixing the precise amount that Cordant wasted consequent to the violations, we are guided by the parties' agreement that the number they have proposed represents reasonable compensation for Cordant's wasted efforts, irrespective of the outcome of the procurement. We would have no way to determine the correct percentage to apply to each of the categories of cost specified in the motion, apart from expert testimony, and because the parties agree on a total, we consider that securing such testimony would be an inappropriate use of resources.

The total of the three amounts set forth above is $2,600,199.60, which is a bit larger than the figure of $2,598,245.62 proposed by the parties. Given this difference, the fact that the amount of protest costs we have

©1994, Commerce Clearing House, Inc.

Digitized by Google

calculated is slightly smaller than the amount jointly proposed is immaterial; clearly, the total award requested is driven by an estimate, which we honor. We grant reimbursement in the total amount agreed upon.

Decision

Cordant's application for reimbursement of costs incurred in filing and pursuing the underlying protest, and in preparing its proposal in the subject procurement, is GRANTED IN PART. We award to Cordant $2,598,245.62, to be paid, without interest, from the permanent indefinite judgment fund, 31 U.S.C. § 1304 (1988). 40 U.S.C. § 759(f)(5)(C) (1988).

[¶ 26,276] P.J. Dick Incorporated v. General Services Administration

GSBCA No. 12052, July 22, 1993.

Contract Disputes, Claims—Quantification—Sum Certain.—A contractor's claim for relief from government directions to maintain a fire alarm system was adequate, despite the government's contention that the contractor never sought payment for a sum certain, because the contractor's submittal of an invoice for incurred costs put the amount of payment in dispute. Sporadic negotiations between the contracting officer and the contractor were post dispute and thus did not taint the existence of a dispute.

For the appellant: Smith, Currie & Hancock, Atlanta, Georgia, by John T. Flynn, and Walstad & Babcock, Provo, Utah, by Paul J. Walstad. For the government: Sharon A. Roach, Gerald L. Schrader, Martin A. Hom, Robert C. Smith, and M. Leah Wright, Real Property Division, Office of General Counsel, General Services Administration, Washington, D.C., and Kenneth E. Kendell, Office of Regional Counsel, General Services Administration, Philadelphia, Pennsylvania.

Before BORWICK, DANIELS, and NEILL, Administrative Judges.

BORWICK, Administrative Judge: Respondent has moved to dismiss this appeal for lack of jurisdiction. The appeal, as it has evolved, now concerns interest on the cost of maintaining a fire alarm system in a building undergoing renovation. The claim began with respondent directing appellant to maintain the fire alarm system, a task which appellant performed under protest. Before the filing of the appeal, respondent acknowledged that appellant was entitled to payment for maintaining the fire alarm system as a constructive change. Nineteen days after the filing of the appeal, the Government issued a contract modification for the full amount of quantum sought by appellant.

Respondent argues that appellant never submitted an appealable claim for quantum under the Contract Disputes Act of 1978 (CDA), 41 U.S.C. § § 601-613 (1988), or implementing provisions of the Federal Acquisition Regulation (FAR). We conclude that appellant submitted an appealable claim for quantum to the contracting officer in January 1991, when appellant requested a decision of the contracting officer and submitted an invoice for incurred costs of $29,197.01. Appellant continued to submit incurred-cost invoices until November 12, 1991. The negotiations between appellant and the contracting officer that continued sporadically in the summer and fall of 1991 and 1992 were post-dispute negotiations and do not taint the existence of a dispute. We deny the Government's motion.

Background

The contract is for renovation of the first five floors of the United States Court House and Post Office, Pittsburgh, PA. At a job meeting on April 20, 1989, the Government's architect/engineering firm directed P.J. Dick to maintain the existing fire alarm system in the construction areas until the Government accepted the new fire alarm system. Affidavit of Appellant's Project Coordinator Barry A. Bandura (Bandura Affidavit), ¶ 3 (Appellant's Opposition to Respondent's Motion to Dismiss, Exhibit A.)

On April 25, 1989, appellant wrote the contracting officer in pertinent part:

> We are proceeding as directed, but emphasize that we consider this work as "extra" and unless we are notified to *stop work* within 72 hours of the facsimile transmission of this letter, we will presume that

Digitized by Google

the G.S.A. recognizes this work as "extra" and that we will be compensated accordingly.

Respondent's Exhibit 1.

On August 1, 1989, appellant wrote the contracting officer:

We are currently providing maintenance of the existing fire alarm system ... in accordance with the direction of the G.S.A. We are doing so under protest, and fully expect to be reimbursed for all related costs.

....

Additionally, we request a Contracting Officer's decision relative to the responsibility for costs of maintaining the existing fire alarm system, including "bagging" and "unbagging."

Appellant also provided detailed suggestions to respondent concerning the procedures for maintaining the existing system during construction. Appellant suggested that it follow then current procedures with the exception of changing the automatic fire department call system to a manual system. Appellant's Opposition to Respondent's Motion to Dismiss, Exhibit B.

On May 21, 1990, appellant wrote again to the contracting officer as follows:

Under previous correspondence we advised you that we were complying with your directive to maintain operation of the existing fire alarm system. We have done so, for more than a year, under protest.

At this time, we request a formal Contracting Officer's decision concerning the responsibility of maintaining this system.

Appellant's Opposition to Respondent's Motion to Dismiss, Exhibit C.

On January 21, 1991, appellant forwarded to the contracting officer an invoice for incurred costs of $29,197.09. Appellant maintained that it had submitted two requests for final decisions, noted that the contracting officer had failed to respond, and urged that the contracting officer "consider this matter one more time." Appellant's Opposition to Respondent's Motion to Dismiss, Exhibits D, E.

On April 4, 1991, the Government advised appellant:

This office has determined that Ferry Electric's [appellant's electrical subcontractor] request for additional compensation for the maintenance of the existing fire alarm initiating devices is valid. Please have Ferry Electric prepare a cost proposal.

Respondent's Exhibit E.

On May 2, 1991, appellant submitted a quotation for $41,811 for "all of the presently known costs for the changes referred to herein," that is, the maintenance of the fire alarm system. Appellant's Opposition to Respondent's Motion to Dismiss, Exhibit F. This figure included incurred costs through May 3 and projected costs through June 28.

Appellant and the Government negotiated the cost of fire alarm maintenance during the late summer of 1991. Negotiations on the cost of maintaining a fire alarm system continued sporadically between September 1991 and late July 1992. Affidavit of Contracting Officer Mark Lewandowski (Lewandowski Affidavit) (March 11, 1993) ¶ ¶ 2-3.

On November 12, 1991, appellant presented another invoice for $43,586, and stated that "this proposal reflects all of the presently known costs for the changes referred to herein." Appellant also stated that it reserved the right to bill for "the full amount of the contract adjustment, whether more or less than the amount proposed above." Appellant's Opposition to Respondent's Motion to Dismiss, Exhibit G.

On September 23, 1992, appellant filed an appeal predicated upon:

[T]he failure of the Contracting Officer to issue a Contracting Officer's final decision within the required time frame, or alternatively, to advise the contractor when such final decision would be issued. More specifically, by letter of August 1, 1989, P.J. Dick submitted a request for Contracting Officer's final decision on P.J. Dick's entitlement to costs of maintaining the existing fire alarm .... No final decision was issued by the Contracting Officer.

Notice of Appeal.

On October 12, 1992, respondent issued Modification AOAU, which increased the contract price by $43,586 for costs incurred for maintenance of existing fire alarm initiating devices during project construction. Appellant's Opposition to Respondent's Motion to Dismiss, Exhibit H. Appellant considered itself in a "claim situation" from April 25, 1989, until paid on March 23, 1993. Bandura Affidavit ¶ 12. Now that the Government has issued Modification AOAU, appellant seeks an "order that Respondent pay [appellant] for all accumulated interest on the principal sum of $43,586.00 (paid under modification no. AOAU.)" Appellant's Oppo-

©1993, Commerce Clearing House, Inc.

Digitized by Google

sition to Respondent's Motion to Dismiss at 13.

Discussion

The Government argues that appellant never submitted a claim cognizable under the Contract Disputes Act or the FAR. Respondent's Motion to Dismiss at 4. The Government suggests that appellant never sought a "sum certain." *Id.* at 6. The Government suggests that appellant never manifested an intent to seek an equitable monetary adjustment, but was merely negotiating. *Id.* Appellant maintains that the full amount of the claim was in dispute as early as April 25, 1989. Appellant's Opposition to Respondent's Motion to Dismiss at 12.

A claim is defined as a:

> written demand or written assertion by one of the contracting parties seeking, as a matter of right, the payment of money in a sum certain, the adjustment or interpretation of contract terms, or other relief arising under or relating to the contract .... A voucher, invoice, or other routine request for payment that is not in dispute when submitted is not a claim.

48 CFR 33.201 (1992).

We are to apply a "common-sense" analysis in determining whether the contractor asserted a proper claim, whether the Government disputed the right, and whether the contractor communicated his desire for a contracting officer decision. *Transamerica Insurance Corp. v United States* [38 CCF ¶ 76,374], 973 F.2d 1572, 1579 (Fed. Cir. 1992).

On August 1, 1989, appellant had submitted a claim for relief from the directive of the Government's architect/engineers to maintain the fire alarm system, but that claim addressed entitlement only. Clearly, between August 1989 and April 1991, there existed a dispute about the responsibility for maintaining the fire alarm system. The Government had directed appellant to maintain the system and appellant disputed its contractual responsibility. In January 1991, appellant put the amount of payment in dispute by forwarding the payment request in sum certain to the contracting officer. A reasonable contractor would not send a payment request after the dispute had arisen solely for the contracting officer's information without at least an implicit request that the contracting officer make a decision as to entitlement. *See Transamerica*, 973 F.2d at 1578. Indeed, this case is stronger than *Transamerica*, as appellant explicitly requested that the contracting officer consider the matter in the context of an invoice from the electrical subcontractor stating a sum certain.

The Government's communication of April 4, 1991, resolved the issue of responsibility, but left the dispute of the amount of payment unresolved. The invoices of May and November 1991 merely supplemented the payment request dispute which arose in January 1991.

The Government points to the ensuing negotiations as showing that there was no dispute. The sporadic negotiations between the fall of 1991 and summer of 1992 were post-dispute negotiations, which do not taint the existence either of a claim or a dispute:

> There is no inconsistency between the existence of a valid CDA claim and an expressed desire to continue to mutually work towards a claim's resolution.

Transamerica, 973 F.2d at 1578.

Finally, this case is unlike *Santa Fe Engineers Inc. v. Garrett* [38 CCF ¶ 75,506], 991 F.2d 1579 (Fed. Cir. 1993). There, the Court concluded that the parties had not reached an impasse when appellant first submitted a claim to the contracting officer, as it submitted additional information so the Government could better understand its proposal. *Id.* at 1582. Here, the appellant and the Government had reached an impasse. From the time of the issuance of the directive in April 1989 the Government thought that maintenance of the fire alarm system was the contractor's responsibility. Conversely, the appellant maintained as early as August 1989 that the work was not within the scope of the contract and that the Government was required to reimburse all related costs. These costs were specifically quantified by the contractor in January 1991 and through subsequent submissions as costs continued to be incurred.

Decision

Respondent's motion to dismiss is DENIED. The Board understands that the parties desire to proceed on the record on the merits of this appeal. The parties shall file their record submissions simultaneously with previously scheduled record submissions in other appeal dockets relating to this contract.

Digitized by Google

[¶ 26,277] Mauldin Dorfmeier Construction, Inc. v. General Services Administration

GSBCA No. 11068, July 30, 1993.

Contract Disputes, Claims—Statement Adequacy—Existence of Dispute.—A construction contractor's request for payments made to a consultant was dismissed for lack of jurisdiction because the parties were not in dispute when the contractor sent a letter to the government requesting a change order and an adjustment. The consultant's subsequent letter, which was sent before the existence of a dispute, did not convert the contractor's letter into a claim. Moreover, the fact that the government did not act upon the contractor's request for payment within 41 days did not establish that the government failed to act within a reasonable time.

For the appellant: Patrick Mauldin, President, and Kim N. Bethell, Project Manager. For the government: Thomas Y. Hawkins, Office of Regional Counsel, General Services Administration, San Francisco, California.

Before DEGRAFF, PARKER, and NEILL, Administrative Judges.

DEGRAFF, Administrative Judge: Appellant, Mauldin Dorfmeier Construction, Inc. (MDC), entered into a contract with the General Services Administration (GSA) to renovate a building. In this appeal, MDC seeks to recover approximately $130,000, based upon GSA's refusal to reimburse MDC for payments that it made to a consultant during the course of contract administration. Because MDC never submitted a claim to the contracting officer, we dismiss the appeal for lack of jurisdiction.

Findings of Fact

On September 27, 1989, GSA awarded a contract to MDC for the renovation of court facilities in the B.F. Sisk Federal Building and Courthouse in Fresno, California. Appeal File, Exhibits 1, 2. On May 16, 1990, MDC wrote a letter to GSA and explained that MDC had hired Special Systems to Protect the Economy of Contractors, Inc. (SSPEC) in order to minimize or eliminate disputes and claims. MDC described SSPEC as "contracting dispute avoidance and resolution experts." Concerning SSPEC's authority, MDC's letter advises, "SSPEC is authorized to speak for MDC in all matters except price adjustments." MDC's letter also states, "SSPEC fees are compensable under FAR." *Id.*, Exhibit 8.

On September 19, 1990, MDC wrote a letter to GSA's Construction Engineer that states, "We have previously stated that the services of SSPEC So Cal are compensable under the FAR's [sic]. Please find the attached invoices and back-up documentation, and issue a change order for $17,011.00 to reimburse Mauldin-Dorfmeier for services provided through August 1990."[1] Appeal File, Exhibit 15. Apparently, GSA received this letter on September 26, 1990. *Id.*, Exhibit 20.

In a letter to GSA dated October 9, 1990, MDC states that there appears to be "some confusion" concerning MDC's relationship with SSPEC. In the letter, MDC explains that an employee of SSPEC "is authorized to speak for Mauldin-Dorfmeier Construction, Inc., on all issues except change order pricing. It is our intent to use [the SSPEC employee's] services to avoid disputes with the government, as this is his area of expertise." Letter from MDC to the Board (May 24, 1993), Attachment.

On November 6, 1990, SSPEC wrote to the contracting officer concerning the invoices that MDC sent to GSA's construction engineer on September 19, 1990. In its letter, SSPEC asserts that GSA had not responded to MDC within a reasonable time. SSPEC states, "This is a formal request for COFD [Contracting Officer's Final Decision] on this dispute." Appeal File, Exhibit 20.

There is no evidence before the Board to suggest that a dispute existed between the parties on September 19, 1990, when MDC submitted its SSPEC invoices to GSA for payment. Similarly, there is no evidence before the Board to suggest that a dispute existed on November 6, 1990, when SSPEC sent its letter to GSA. In a June 17, 1993 letter to the Board, MDC states that no dispute existed between the parties on Septem-

[1] On April 11, 1991, MDC notified the Board that it wished to revise its request for damages from $17,011 to $61,684. On May 24, 1993, MDC notified the Board that it wished to revise its request for damages from $61,684 to $130,364.58.

©1993, Commerce Clearing House, Inc.

Digitized by Google

ber 19, 1990, and alleges that a dispute arose at some unspecified time after that date. There is no evidence in the record that the parties exchanged any correspondence, held any meetings, or conducted any discussions concerning MDC's request for payment between September 19, 1990, and November 6, 1990. MDC states that it never received a response to its September 19, 1990 letter to GSA. Appeal File, Exhibit 36. GSA suggests that MDC could have "inferred" from GSA's silence that GSA did not intend to pay MDC. GSA Response to Order on Proceedings, June 22, 1993.

On January 22, 1991, MDC filed this appeal with the Board. On June 27, 1991, GSA filed a motion to dismiss for failure to state a claim or, in the alternative a motion for summary judgment. MDC filed a response to GSA's motion on July 16, 1991, and supplemented that response on February 9, 1993.

On May 21, 1993, the Board issued an order on proceedings that advises the parties that, upon reviewing the appeal file and the documentation provided by the parties during the course of this appeal, we are not certain that we possess jurisdiction to entertain this case. We directed the parties to clarify the jurisdictional facts by providing information concerning whether MDC ever submitted a claim to the contracting officer. In a series of submissions, the parties provided the Board with responses to the Board's May 21, 1993 order.[2]

Discussion

In order for the Board to possess jurisdiction to consider this appeal, the Contract Disputes Act of 1978 provides that MDC must have submitted a claim to the contracting officer. 41 U.S.C. § 605 (1988). The Disputes clause of the parties' contract provides that a "claim" is a written demand by one of the contracting parties seeking the payment of money in a sum certain. The clause also provides that a request for payment which is not in dispute when submitted is not a claim. Appeal File, Exhibit 1.

MDC's September 19, 1990 letter to GSA requests that GSA issue a change order and adjust the contract price by $17,011 in order to reimburse MDC for payment of SSPEC's fee. Although this letter constitutes a written demand by a contracting party seeking the payment of money in a sum certain, no dispute existed concerning the payment of SSPEC's fees at the time this letter was sent. Because the parties were not in dispute when MDC sent its September 19, 1990 letter to GSA, the letter does not constitute a claim. *Dawco Construction Co. v. United States* [37 CCF ¶ 76,056], 930 F.2d 872 (Fed. Cir. 1991).

The Disputes clause of the parties' contract provides that a request for payment which is not in dispute when submitted may be converted into a claim if a dispute develops concerning the request and if the submission requirements of the Disputes clause are then met. Appeal File, Exhibit 1. Based upon this provision, MDC's September 19, 1990 request for payment could have been converted to a claim by SSPEC's November 6, 1990 letter, if a dispute existed by November 6, 1990, and if SSPEC's letter meets the submission requirements of the Disputes clause. After examining all of the evidence, we conclude that no dispute had developed by November 6, 1990. The fact that GSA did not respond to MDC's September 19, 1990 letter does not establish whether GSA intended to pay SSPEC's fee, deny MDC's request for payment, or request additional information concerning MDC's request. Silence does not necessarily establish the existence of a dispute. Because no dispute existed on November 6, 1990, SSPEC's letter does not convert MDC's September 19, 1990 letter into a claim.

The Disputes clause provides one other means by which MDC's September 19, 1990 request for payment could have been converted into a claim by SSPEC's November 6, 1990 letter: If GSA did not take any action concerning the request within a "reasonable time" and if the submission requirements of the Disputes clause were then met, the request would have been converted into a claim. Appeal File, Exhibit 1. Here, forty-one days passed between the date that GSA received MDC's request for payment and the date that SSPEC sent its letter to GSA.

Although the contract does not define "reasonable time," the Contract Disputes Act provides that a contracting officer is entitled to sixty days to consider a claim of $50,000 or less. 41 U.S.C. § 605. This provision serves as a guideline for deciding whether a contracting officer acts within a reasonable time in responding to a request for payment which does not constitute a claim. *Olympic Industries, Inc.*, NASA BCA 66-0292, 92-2 BCA ¶ 24,901. Because the contracting officer would have been entitled

[2] GSA has not filed a motion to dismiss this appeal for lack of jurisdiction. Even so, we are obligated to consider our jurisdiction and to dismiss this appeal if jurisdiction is lacking.

Digitized by Google

to sixty days to consider a claim, and because a claim could have been submitted only after the parties had engaged in discussions and reached an impasse, it is reasonable to expect that the contracting officer would have needed at least sixty days to consider MDC's request for payment, given that the parties had not engaged in any discussions concerning MDC's request, much less formulated their positions. The fact that GSA did not act upon MDC's request for payment within forty-one days does not establish that GSA failed to act within a reasonable time.

Because no dispute existed and because GSA did not fail to act within a reasonable time, we do not need to decide whether SSPEC's November 6, 1990 letter fulfills the submission requirements of the Disputes clause. We note, however, that MDC withheld from SSPEC the authority to speak for MDC concerning price adjustments and change order pricing. Thus, it is possible that SSPEC lacked the authority to demand, on MDC's behalf, that GSA issue a change order and make an accompanying contract price adjustment, which is what MDC's September 19, 1990 letter requests. If SSPEC lacked the authority to speak on behalf of MDC with regard to such matters, then SSPEC's November 6, 1990 letter does not fulfill the submission requirements of the Disputes clause.

In summary, we lack jurisdiction to consider this case unless MDC submitted a claim to the contracting officer for decision. MDC's September 19, 1990 letter to GSA does not constitute a claim because no dispute existed between the parties at the time the letter was sent. After a dispute developed or after GSA failed to act within a reasonable period of time, MDC could have converted its letter into a claim by fulfilling the submission requirements of the contract's Disputes clause.

Decision

Because appellant did not submit a claim to the contracting officer as required by the Contract Disputes Act of 1978, the appeal is DISMISSED FOR LACK OF JURISDICTION.

[¶ 26,278] Richerson Construction, Inc. v. General Services Administration

GSBCA No. 11051-C(10653), July 27, 1993. Contract No. GS 07P-89-HUC-0017.

Attorney Fees and Costs Under Equal Access to Justice Act—Substantial Justification—Effect of Stipulation.—The government's position in default terminating a contract for interior space alterations was not substantially justified under the Equal Access to Justice Act, despite the government's contention that pews installed by the contractor failed to conform to specification requirements, because the government was bound by a stipulated agreement between the parties in which it agreed that the pews would be deemed to have been acceptable. In settling the default action, the government completely relinquished its position and granted the contractor the full relief it sought. Noting that a stipulation was a judicial admission binding on the parties, absent special circumstances, the board gave conclusive effect to the stipulation.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Consultation with Surety.—Under its application for attorney fees and expenses under the Equal Access to Justice Act, a defaulted contractor was allowed to recover expenses reflecting consultations with its surety because it was found that the consultations were required in order to obtain documents and information needed in connection with its successful challenge of the default termination of its construction contract. In reviewing the itemized billings, the board found that the time charged to the consultation was appropriately chargeable to the action and that the hours billed were not excessive.

For the appellant: Williams & Jensen, P.C., Washington, D.C., by Robert J. Martinez and Sally B. Pfund. For the government: Marie N. Adamson and M. Leah Wright, Office of General Counsel, General Services Administration, Washington, D.C.

Before HYATT, DANIELS, and LABELLA, Administrative Judges.

HYATT, Administrative Judge: Following the settlement of its appeal of the General Services Administration's (GSA's) decision to terminate for default contract GS-07P-89-HUC-0017, Richerson Construction, Inc. (RCI) filed an application to re-

©1993, Commerce Clearing House, Inc.

Digitized by Google

cover attorney fees and expenses pursuant to the Equal Access to Justice Act (EAJA), 5 U.S.C. § 504 (1988).[1] GSA does not dispute RCI's status as a prevailing party or its eligibility to recover EAJA costs other than to assert that the Government's actions were substantially justified. We find that the Government's position in terminating the contract for default and defending the ensuing litigation was not substantially justified and that RCI is thus eligible for an award of attorney fees and expenses under EAJA. The application is granted in the amount of $34,984.53.[2]

Background

The events leading to GSA's decision to terminate for default RCI's contract to complete interior space alterations in the Bob Casey Federal Building and Courthouse in Houston, Texas, are chronicled in the Board's decision ruling on the merits of RCI's claim for termination settlement expenses. *Richerson Construction, Inc. v. General Services Administration*, GSBCA 11161, et al., 93-1 BCA ¶ 25,239 (1992). They are briefly summarized here.

RCI was awarded a contract to demolish existing office space and to build two new bankruptcy courtrooms and associated office space, including judge's chambers. The specifications had been prepared by a design architect that was also awarded a management and inspection (M & I) contract to supervise construction of the renovations.

In its decision granting RCI's appeals relating to its entitlement to recover costs under the termination for convenience of this contract, the Board found that RCI's performance was hindered in many respects by the conduct of the M & I contractor, which arbitrarily rejected RCI's proposed subcontractor and basically administered the contract without due regard to the rules and regulations applicable to such contracts. One of the issues raised in connection with the default termination, but not litigated in the subsequent suit, concerned the pews installed in the courtrooms. It is the Government's position in defense of this cost application that the pews installed were never approved by the M & I contractor and that the pews did not comply with the applicable specifications.[3] Respondent relies on the alleged nonconformance of the pews as a primary factor justifying the default termination decision.

In September 1991, the parties stipulated to acceptance of the pews by GSA. This stipulation was entered into the record in *Richerson*. The parties also stipulated that costs incurred by RCI in connection with supplying the pews were allowable termination for convenience costs in accordance with FAR Part 31 and that GSA would not assert a credit against the contract amount for replacement of the pews. *Richerson*, 93-1 BCA at 125,701, n.7.

Discussion

Substantial Justification

The EAJA provides that an eligible, prevailing party under an adjudication conducted by the Government is entitled to an award of attorney fees and expenses unless the Government's position was substantially justified or special circumstances make an award unjust. 5 U.S.C. § 504(a)(1) (1988). It is the Government's burden to prove both that its litigation posture and the administrative actions or omissions forming the basis of the adversary adjudication were substantially justified. *Schuenemeyer v. United States*, 776 F.2d 329, 330 (Fed. Cir. 1985); *Ellis v. United States*, 711 F.2d 1571, 1575 (Fed. Cir. 1983); *Warwick Holding Co.*, GSBCA 8459-C(5070) et al., 88-3 BCA ¶ 21,114, at 106,590. The term "substantially justified" has been construed to connote "'justified in substance or in the main—that is, justified to a degree that could satisfy a reasonable person." *Pierce v. Underwood*, 487 U.S. 552, 565

[1] Pursuant to a stipulation for judgment filed jointly by the parties, the Board granted the appeal and entered judgment converting the termination for default to one for the convenience of the Government. *Richerson Construction, Inc.*, GSBCA 10653 91-1 BCA ¶ 23,538 (Dec. 5, 1990).

[2] The original application, filed shortly after the Board entered judgment based on the settlement of the parties, was in the amount of $37,288.27. This amount was subsequently reduced to correct errors in the billing of certain expenses. After the Board issued its decision in *Richerson Construction, Inc. v. General Services Administration*, GSBCA 11161, et al., 93-1 BCA ¶ 25,239 (1992), it requested the parties to supplement the briefing with respect to this cost application. RCI did so, and revised its application to include attorney fees incurred in responding to the Board's inquiry. Respondent submitted a letter to the Board stating its position that the record developed in the subsequent, related litigation should not be taken into account in ruling on this fee application.

[3] The Government adds that the defective pews issue was compounded by other numerous deficiencies and by RCI's untimely performance. These additional allegations were addressed in *Richerson* and resolved in favor of RCI.

Digitized by Google

(1988); *see also Quality Diesel Engines, Inc. v. Department of Commerce*, GSBCA 12385-C(11672-COM) (July 1, 1993), 93-3 BCA ¶ 25,228; *Atlas Construction Co. v. General Services Administration*, GSBCA 11088-C(8653), et al., 92-2 BCA ¶ 24,944, at 124,329.

In assessing whether the Government's position was substantially justified, it is not dispositive that the Government lost (or chose to settle) the case. Nor is the Government required to establish that its decision to litigate was based on a substantial probability of prevailing. Rather, the test is whether the Government's actions had a reasonable basis in fact and law. *See Luciano Pisoni Fabbrica Accessori v. United States*, 837 F.2d 465, 467 (Fed. Cir. 1988); *Broad Avenue Laundry and Tailoring v. United States* [30 CCF ¶ 70,546], 693 F.2d 1387, 1391 (Fed. Cir. 1982).

The fact that the relief obtained by RCI in the underlying litigation was derived pursuant to a settlement agreement does not preclude entitlement to an award of attorney fees and expenses under EAJA. *See Austin v. Department of Commerce*, 742 F.2d 1417 (Fed. Cir. 1984); *Bailey v. United States*, 721 F.2d 357 (Fed. Cir. 1983); *Building Services Unlimited, Inc.*, ASBCA 33283, 88-2 BCA ¶ 20,611. At the same time, the fact of the settlement does not conclusively demonstrate that the Government's position was not substantially justified[4]; rather, the Board should evaluate the Government's justification in light of all relevant information in the record, including the degree of relief obtained by appellant. In *Building Services*, the Armed Services Board observed that "[t]he complete relinquishment of the Government's position in the settlement of the dispute reinforces the conclusion that the Government's position that led to the contracting officer's [action] and the ensuing litigation was not substantially justified." 88-2 BCA at 104,152.

GSA asserts that its position in terminating the contract for default was substantially justified, both factually and legally, because, in its view, the pews furnished and installed by RCI in the courtrooms did not conform to specifications. In its opposition to RCI's application, GSA relies on the letter to show cause that preceded the termination for default, which pointed both to RCI's lack of diligence in completing the contract and to the nonacceptability of the pews, which were not approved either by the M & I contractor or by GSA prior to installation. GSA contends that these facts, as set forth in this letter, substantially justified its decision to proceed with the termination and to oppose appellant's appeal of that action.

RCI disputes GSA's interpretation of the specifications concerning the construction of the pews, contending that the pews fully conformed to that specification and should have been approved and accepted by GSA. In addition, RCI disagrees vehemently with GSA's contention that it was unduly dilatory in completing the project. RCI thus urges that none of the contentions raised by the Government in support of its termination decision are factually or legally sufficient to constitute substantial justification either of GSA's administrative or litigation posture.

Ordinarily, in evaluating the validity of arguments concerning substantial justification, only the record before the tribunal as a result of the trial of the case should be consulted, and new evidence, outside of that record, should not be entertained. *See United States v. Property Located at 4880 S.E. Dixie Highway*, 838 F.2d 1558 (11th Cir. 1988); *Kos Kam, Inc.*, ASBCA 34684, 88-3 BCA ¶ 21,049. When a matter has settled prior to a hearing on the merits, however, it is appropriate to consider evidence that was not in the record of the settled matter in order to make a reasoned determination as to whether the applicant is entitled to an award. *See Kuhns v. Board of Governors of the Federal Reserve System*, 930 F.2d 39 (D.C. Cir. 1991); *Digital Services Group, Inc.*, DOT BCA 1817E, 93-1 BCA ¶ 25,358 (1992). As the court noted in *Kuhns*, the purpose of excluding additional evidence after a hearing on the merits is to avoid wasteful expenditure of resources in relitigating a matter after the parties have already had the opportunity to be fully heard. At the same time, where the existing record is devoid of sufficient information to assess the justification for the Government's position, it would be inappropriate to preclude the opportunity to supplement the record so as to reach a fair and reasoned determination.

[4] As respondent points out, the fact of the settlement does not automatically constitute an admission of lack of justification on the part of the Government. The courts have recognized, in evaluating the Government's justification for litigation, that quite apart from the merits of a dispute, policy reasons may "dictate a premature termination of the litigation." *Dubose v. Pierce*, 761 F.2d 913, 920 (2d Cir. 1985), *judgment vacated on other grounds*, 487 U.S. 1229 (1988).

In this case, we are in the unusual posture of having a largely complete factual record, developed after the settlement of this matter, as a result of the trial needed to resolve the disputed issues concerning RCI's entitlement to termination for convenience settlement costs. For the most part, the facts and legal issues relevant to supporting the decision to terminate for default were fully aired in this ancillary proceeding. The reasoning in *Kuhns* and *Digital* persuades us that it is appropriate to consider the record in this proceeding in assessing the Government's position. The record as developed therein persuades us that the Government's position as to RCI's alleged dilatory performance had little basis in fact or law.

GSA's primary basis asserted to support the termination action, in contrast, is one for which relatively little evidence of record is available to permit us to assess its factual or legal validity. This relates to the question whether the pews installed in the courtrooms conformed to specifications or not. The parties are diametrically opposed in their arguments pertaining to this issue. The Board does not have a factual record on which to review and resolve this issue. What is available, however, is the fact that the Government entered into a stipulation, after the filing of this application, in which it agreed that the pews would be deemed to have been accepted and that costs would be recovered in accordance with the applicable Federal Acquisition Regulation (FAR) provision. The Board has construed that very stipulation to bind the Government in related litigation with RCI's surety. *Employers Mutual Casualty Co.*, GSBCA 11003, 92-1 BCA ¶ 24,594, *aff'd on reconsideration*, 93-1 BCA ¶ 25,482 (1992). The rationale supporting this conclusion is even more pertinent in this case, involving the same parties that entered into the stipulation. In *Employers Mutual*, the Board, quoting *John McShain, Inc. v. United States*, 375 F.2d 829, 831 (Ct. Cl. 1967), observed that "[a]s a general proposition, '[a] stipulation is a judicial admission binding on the parties making it absent special consideration.'" 92-1 BCA at 122,709. This precedent requires us to give conclusive effect to this stipulation. Thus, we cannot accept the Government's contention that nonconformance of the pews substantially justified its litigation posture.

To summarize, after reviewing the facts and legal arguments pertinent to the Government's administrative and litigation posture, we cannot find that its actions were substantially justified. It is noteworthy that in settling the default action the Government completely relinquished its position, granting RCI the full relief it sought in that proceeding. *Building Services*, 88-2 BCA at 104,152. The proof adduced by appellant in subsequent ancillary litigation and the stipulation accepting the pews further support the conclusion that the termination for default of RCI's contract was clearly improper. GSA has not established that its position in the adversary adjudication was substantially justified. RCI is, therefore, entitled to an award of reasonable fees and expenses.

Entitlement to Claimed Fees and Expenses

Appellant has submitted an application detailing some $34,984.53 in legal fees and expenses stated to be attributable to RCI's defense of the default termination action. GSA challenged the adequacy of RCI's documentation of certain of these expenses;[5] these objections have been satisfactorily addressed, and amounts reduced in appellant's response to the Government's opposition to its application. More significantly, GSA, citing *Oliveira v. United States*, 827 F.2d 735 (Fed. Cir. 1987), questions whether certain of the attorney fees were genuinely attributable to legal representation required in connection with the default proceeding and suggests that the hours spent on certain tasks were excessive.

First, we note that the itemized bills submitted by appellant's counsel in support of the application are fully and properly documented in accordance with applicable case law. *Naporano Iron and Metal Co. v. United States*, 825 F.2d 403 (Fed. Cir. 1987); *Spectrum Leasing Corp. v. General Services Administration*, GSBCA 10902-C(7347), et al., 93-1 BCA ¶ 25,317 (1992). Appellant's bills reflect the specific task performed, by whom, and the number of hours required to perform the task.

GSA also challenges RCI's entitlement to recover legal expenses reflecting consultations with Employers Mutual Casualty

[5] The amount initially claimed was $37,288.27. In response to GSA's objections to certain of the expenses (relating to travel) claimed, RCI reviewed its application and discovered several errors concerning expenses incurred that were not properly attributed to the default termination action. RCI has deleted these charges and has provided additional documentation and explanation to support its expenses, which include courier, legal database searches and telephone charges. We are persuaded that the documentation is adequate and that the expenses now itemized ($1,842.03) are reasonable.

Digitized by Google

Company (EMCC), RCI's surety. EMCC took over the work after RCI was terminated for default. GSA suggests that, to the extent that these contacts were for the purpose of providing legal advice to the surety in its dealings with the Government, they are not properly chargeable to the default termination litigation. RCI explains, in response, that the contacts made with RCI's surety were required to obtain documents and information needed in connection with its pursuit of the default action. After reviewing the itemized billings, we are persuaded that the time charged to consultation with EMCC is appropriately chargeable to this action and that the hours billed were not excessive.

GSA also questions the number of hours spent on particular activities, such as drafting pleadings and preparing a supplemental appeal file. RCI responds that the hours drafting the complaint are fully justified given the need to investigate the facts to be alleged and research applicable law so as to properly focus the issues in dispute. Similar justifications exist for time spent reviewing documents and exercising judgments as to which should be included in a supplemental appeal file. Based on our review of the record, we conclude that the hours billed by RCI's attorneys are not only appropriate, but are eminently reasonable given the high quality of work produced and the result achieved.

Decision

The application for fees is **GRANTED.** RCI is awarded $34,984.53 in fees and expenses to be paid in accordance with the provisions of 5 U.S.C. § 504(d) (1988).

[¶ 26,279] Tarlton Construction Company v. General Services Administration

GSBCA No. 10528, July 27, 1993.

Interpretation of Contracts—Construction Contracts—Method of Installation.—A contractor erroneously interpreted its building demolition and construction contract as permitting it to attach electrical metallic tubing to suspended ceiling wires, because the contract explicitly required the metallic tubing to be securely fastened to the building structure and the suspended ceiling wires were not considered part of the building structure. The contractor asserted that the support wires of the suspended ceiling were attached to the building. The contractor's position, however, failed to distinguish between the building structure and the suspended ceiling system. A suspended ceiling is considered an architectural feature rather than a part of the building structure.

For the appellant: Blumenfeld, Kaplan, Sandweiss, Marx, Ponfil & Kaskowitz, St. Louis, Missouri, by Jeffrey L. Michelman, Kay R. Sherman, and William C.E. Goldstein. For the government: Gerald L. Schrader, Real Property Division, General Services Administration, Washington, D.C.

Before VERGILIO, LABELLA, and NEILL, Administrative Judges.

VERGILIO, Administrative Judge: On March 2, 1990, the Board received from Tarlton Construction Company an appeal under a contract it had with the respondent, the General Services Administration. The contractor maintains that the agency prohibited work from proceeding in accordance with the terms of the contract; the contractor seeks to recover additional costs incurred because of the alleged change.

The question of entitlement is before the Board, the parties having reserved consideration of quantum. The contractor asserts that the contract permitted electrical metallic tubing (EMT) to be installed with clips attached to suspended ceiling support wires, a method of installation allegedly accepted in the industry and contract-referenced codes. The agency contends that the EMT had to be attached to the building structure, which the suspended ceiling structure is not, and that the clips utilized were not acceptable support devices under the contract.

The Board concludes that the contract required the EMT to be attached to the building structure and that the suspended ceiling structure is not part of the building structure. The contractor's appeal is premised on an erroneous interpretation of the contract. Accordingly, the Board denies the appeal.

Findings of Fact

The contract

1. On September 26, 1989, the agency awarded Tarlton a tenant fit-out (selective demolition and construction) contract to furnish labor, equipment, and materials for the modernization of a federal building in St. Louis, Missouri. Appeal File, Exhibits 18, 11. The work to be performed included the installation of EMT. *Id.*, Exhibit 3, Vol. IV at 16110.

2. The general requirements of the contract's specifications contain a section captioned "electrical basic requirements," a subsection of which addresses the support of electrical items:

> A. Unless otherwise indicated, all electrical items and their supporting hardware, including but not limited to conduits, [and] raceways ... shall be securely fastened to the building structure in accordance with Section 16190—Supporting Devices
>
> B. The load applied to any fastener shall not exceed one-fifth of the proof test load. Fasteners attached to concrete ceilings shall be vibration and shock resistant.

Appeal File, Exhibit 3, Vol. IV at 16010-7 (¶ 3.02).[1] Raceways include EMT. *Id.* at 16110-1 (¶ 1.01.B), 16110-2 (¶ 2.01.0). In particular, the contract directs that all fire alarm, security television, and sound system wiring is to be installed in EMT, as is all underfloor 120-volt power distribution. *Id.* (¶ ¶ 3.01.E, F).

3. The "general description of work" found in the contract section dealing with supporting devices, referenced in Finding 2, provides: "Types of supports, anchors, sleeves and seals specified in this section include the following." There follow ten enumerated items (e.g., one-hole conduit straps, round steel rods, lead expansion anchors). Appeal File, Exhibit 3, Vol. IV at 16190-1 (¶ 1.01.B). A "products" part of this same section identifies particular attributes of various types of supports, anchors, sleeves and seals, conduit cable supports, and u-channel strut systems. *Id.* at 16190-2 through 16190-3 (¶ 2.01). Finally, the same section contains a part dealing with the installation of supporting devices:

> A. Install hangers, anchors, sleeves and seals as indicated, in accordance with manufacturer's written instructions and with recognized industry practices to insure supporting devices comply with requirements. Comply with requirements of NECA [National Electrical Contractors Association], NEC [National Electrical Code] and ANSI/NEMA [American National Standards Institute/National Electrical Manufacturers Association] for installation of supporting devices.
>
> ....
>
> C. Install hangers, supports, clamps and attachments to support piping properly from building structure. Arrange for grouping of parallel runs of horizontal conduits to be supported together on trapeze type hangers where possible. Install supports with maximum spacings indicated.

Id. at 16190-4 (¶ 3.01). "Piping" in paragraph C is a generic term encompassing various types of conduit and raceways. Appeal File, Exhibit 30 at 54-55.

4. The contract contains direction on the installation of electrical raceways:

> Install electrical raceways where indicated in accordance with manufacturer's written instructions, applicable requirements of NEC and NECA "Standard of Installation", and complying with recognized industry practices.

Appeal File, Exhibit 1, Volume IV at 16110-3 (¶ 3.01.A).[2]

5. The 1987 version of the NEC[3] contains a section applicable to the installation (securing and supporting) of EMT, NEC § 348:

> **(a) Secured in Place.** Raceways, cable assemblies, boxes, cabinets, and fittings shall be securely fastened in place. Support wires that do not provide rigid support shall not be permitted as the sole support.

Appeal File, Exhibit 38 at 253 (§ 300-11(a)).[4] The NEC Handbook provides commentary:

---

[1] These general requirements supersede "industry standards" to the extent that they are more explicit or more stringent than industry standards. Appeal File, Exhibit 2 at 01090-4 (¶ 1.07).

[2] Curiously, despite the express reference in the contract, in response to the contractor's request for admission that the initial method of installation was in accordance with the NECA "Standard of Installation," the agency responded: "Can neither admit nor deny. Respondent does not have referenced copy of NECA." Admission (¶ 3).

[3] The parties have stipulated that the 1987 version is applicable to this contract. Transcript at 83; Appeal File, Exhibit 2 at 01090-5 (¶ 1.07.B).

[4] The 1990 version of the NEC contains the following direction:

Digitized by Google

> This section, revised for the 1987 edition, makes it clear that support wires, such as used to hang suspended ceilings, may be used for the support of raceways and cables, but cannot be used as the sole support if the wires do not provide rigid support.

Id.

Performance

6. The contractor, through a subcontractor, installed EMT as part of the building modernization. The initial method of installation utilized clips attached to suspended ceiling support wires which were attached to the concrete slab above. Appeal File, Exhibits 21, 30 at 89. The clips are not one of the types of supports or one of the products enumerated in the contract, Finding 3. While maintaining that the contract expressly requires conduit to be "securely fastened to the building structure," the agency admits "that the installation was in accordance with the edition of the NEC in effect at the time of the installation." Admission (¶ 2).[5]

7. On November 20, 1989, Day & Zimmermann, the construction quality control contractor (QCC) who represented the contracting officer, Appeal File, Exhibit 2 at 01010-2 (¶ 1.02.C), advised the contractor that installing EMT with clips attached to ceiling support wires was inconsistent with the contract because the conduit must be supported from the building structure. Stipulation at 4 (¶ 12); Appeal File, Exhibits 12, 14. In a letter dated November 20, to the contractor, the subcontractor installing the EMT took issue with that conclusion. It expressed a broader view of the phrase "building structure" ("We consider existing walls and ceilings to be structure"), and maintained that its method of installation was in accordance with the NEC and in compliance with standard industry practice. Appeal File, Exhibit 13.

8. Subsequent correspondence and communications involving the QCC, the contractor, and/or the subcontractor occurred into December. The QCC and the subcontractor each held to its view of the contract requirements and permissible EMT installation. The QCC requested that work be corrected to comply with its reading of the contract. Appeal File, Exhibits 14-17; Stipulation at 4 (¶ 13).

9. In response to the contractor's request for a decision, by letter dated December 27, 1989, the contracting officer issued a written decision on the dispute. The contracting officer concludes that the contract is clear—a provision requires EMT to be securely fastened to the building structure; the contractor must comply with applicable codes as well as that provision. Appeal File, Exhibit 19. Further, taking issue with the interpretation of the phrase "building structure" put forward by the contractor, the contracting officer states:

> It is our interpretation that the building structure consists of the elements comprising the load bearing system. If walls were built as part of the load bearing system (i.e., shear walls) then they are considered building structure. However, a suspended ceiling that was installed some time during the life of the building and is easily removed, is considered an architectural feature and not part of the building structure.

Id.

10. The contractor filed an appeal, dated February 26, 1990, with this Board. Appeal File, Exhibit 23.

Testimony and Other Evidence

11. Testimony in support of the contractor's position was not particularly enlightening. For example, regarding the contract language in Finding 2, a witness of the contractor testified: "I don't consider this a specification that's really applicable to this type of work. This looks to be a canned specification that's not really been customized or modified for this building." Transcript at 36-37. Witnesses did not demonstrate familiarity with any particular contracts which clearly utilized language similar to that in Finding 2 (i.e., "securely fastened to the building structure"). E.g., Transcript at 52-53.

12. Deposition testimony of a construction manager involved in the contract for the

(Footnote Continued)

(a) Secured in Place. Raceways . . . shall be securely fastened in place. Support wires that do not provide secure support shall not be permitted as the sole support. Equipment that is located within, supported by, or located below a suspended ceiling shall be permitted to be supplied or controlled by branch-circuit wiring that is supported by the suspended ceiling support wires.

Appeal File, Exhibit 10.

[5] The agency asserts that the 1990 version was in effect at the time of installation, although it has stipulated that the prior version of the NEC (the 1987 version) was applicable to this contract. Finding 5.

©1993, Commerce Clearing House, Inc.

Digitized by Google

QCC reveals the view that wires hanging from structure are not part of structure. Appeal File, Exhibit 30 at 79. "The ceiling assembly is just that. It is a ceiling assembly. It has to do with the ceiling and only the ceiling and those things that are designed to be part of and made a part of the ceiling only. It is not structural." Appeal File, Exhibit 30 at 80.

13. The decision of the contracting officer, Finding 9, which differentiates between the building structure and ceiling structure, is consistent with the testimony of the QCC and is fully consistent with definitions in the *Dictionary of Architecture & Construction* (Cyril M. Harris ed. 1975):

> **suspended acoustical ceiling** An **acoustical ceiling** which is suspended from the building structure above; usually the acoustical material itself forms a **suspended ceiling,** but it also may be secured to a backing.
>
> **suspended ceiling, dropped ceiling** A nonstructural ceiling suspended below the overhead structural slab or from the structural elements of a building and not bearing on the walls.

Moreover, the wires to which the clips were attached become and remain rigid only when the ceiling structure is in place; that is, the wires themselves do not provide rigid support. Transcript at 90-91.

14. Lacking is a credible factual basis supporting the conclusion that under industry practice in the St. Louis area, the EMT was attached to the building structure.

Discussion

The contractor maintains that the contract permitted the installation of EMT with clips attached to the suspended ceiling support wires. The agency contends that the contract prohibited such installation.

The contractor largely relies upon the assertion that its interpretation of the contract is reasonable, and must be adopted under the rubric of contra proferentem. Contractor's Brief at 28-41. The contractor's analysis fails to give meaning to the explicit requirement that the EMT and supporting hardware "shall be securely fastened to the building structure." Findings 2, 3.

The contractor maintains that the initial method of installation fully complies with the contract—the support wires of the suspended ceiling are attached to the building structure, and the support clips and EMT were attached thereto. This argument fails. First, the support wires themselves did not provide a means of rigid support required by the contract language. Finding 13. Second, the contractor fails to distinguish between the building structure and the suspended ceiling system. The clips and EMT were attached to supporting wires which became rigid only with the suspended ceiling system in place. The record establishes that the suspended ceiling system, to which the EMT, through clips, was attached, is not part of the building structure. Findings 12-14. Hence, the initial method of EMT installation failed to comply with an explicit requirement of the solicitation.

The contractor inappropriately reads the referenced codes and industry practice as superseding the specific requirement to fasten the EMT to the building structure. The contract requires the opposite order of precedence—the explicit requirement restricts otherwise acceptable methods of performance under the stated codes and industry practice. Hence, whether or not the NEC permitted EMT to be attached to suspended ceiling wires, the explicit general provisions of the contract must be given meaning. In short, the contractor's asserted interpretation is contrary to the terms of the contract and is not reasonable.[6] No ambiguity exists; there exists no basis, therefore, to resort to the principle of contra proferentem.

Decision

The contractor has failed to establish that the agency's actions constituted a change in the terms of the contract. Accordingly, the Board DENIES the appeal.

---

[6] The contractor maintains that its subcontractor relied upon the asserted interpretation in pricing the work in question. Assuming arguendo that the contract was priced with such an interpretation, the stated interpretation does not become more reasonable. More importantly, the contractor has not asserted that the agency should have been aware of the interpretation underlying the contractor's price.

[¶ 26,280] Amcel Corporation v. General Services Administration

GSBCA No. 9643, July 23, 1993. National Stock No. 8105-01-183-9768.

Defaults, Grounds—Delivery Failure—Refusal to Fill Orders.—A contract to supply plastic bags was properly terminated for default because the contractor refused to fill orders. Although the contractor objected to the government's testing methodology, its own test of a sample also showed that the sample failed to meet specification requirements.

For the appellant: Friedman & Atherton, Boston, Massachusetts, by Lee Kozol. For the government: Tenley A. Carp, Office of General Counsel, General Services Administration, Washington, D.C.

Before DEVINE, HENDLEY, and HYATT, Administrative Judges.

DEVINE, Administrative Judge: Appellant's contract to supply plastic bags to the Government was terminated for default when certain bags failed to pass Government strength tests. Appellant, fearing additional failures, refused to make further shipments. Appellant challenges the accuracy of the tests upon which the Government relied to justify its termination for default.

Findings of Fact

On June 5, 1987, Amcel Corporation (Amcel) and the General Services Administration (GSA), an agency of the United States Government, entered into a contract whereby Amcel would supply to the Government a large number of light, medium, and heavy duty general purpose plastic bags for the sum of $3,265,009.57. Appeal File, Exhibits 1, 2. Only the heavy duty bag bearing National Stock Number 8105-01-183-9768, and referred to by the parties as the "9768 bag" is in issue. Appellant had furnished the 9768 bags under earlier contracts in large quantities without complaint. Transcript at 190-91. Under the earlier contracts Amcel had had its bags tested by an independent testing laboratory. Transcript at 160, 283. Under the contract at issue, Amcel could test its own bags, although the Government had the right to make discretionary tests at its own facilities at any time. Appeal File, Exhibit 1. As a result of this provision Amcel eventually acquired and installed the necessary test equipment. Transcript at 224-25. Government personnel assisted Amcel personnel in learning the test procedures. Transcript at 245-46.

At the outset of production, Amcel had difficulty attaining the required seam strength in several of its bags including the 9768 bags. Appeal File, Exhibits 7, 8. A change in production methods apparently cured the problem. Appeal File, Exhibit 12. Amcel also had difficulty producing 9768 bags that met the contract specification for tear strength. Appeal File, Exhibits 13, 14. On September 23, 1987, at the invitation of the Government, appellant applied for a specification deviation in tear strength from 491 grams to 350 grams. Appeal File, Exhibit 13. The request was approved within the week. Appeal File, Exhibit 14. On December 12, 1987, however, appellant's bags tested well below the new standard. Government's Exhibit 4. Appellant asked for and received the return of several bags from the failed lot for the purpose of running its own tests. *Id.* On these bags the specified tear resistance minimum was 491 grams in the machine direction and 514 grams across the machine direction. The Government's tests showed values of 186 and 190 respectively on the bags it tested. Appellant's tests on the same bags produced values of 266 and 292 respectively. Appeal File, Exhibit 15.

On December 22, 1987, the Government issued a letter entitled "Show Cause Notice" which listed eleven delinquent delivery orders. Appeal File, Exhibit 16. The letter asked for an explanation as to why they were late and warned of termination for default. *Id.* Some of these delivery orders had already been shipped prior to the issuance of the notice, and some were shipped thereafter. *Id.* Four purchase orders, Nos. AWE 90981, CWE 90991, SWE 94011, and FWE 94011, were not shipped. These four were the largest individual orders and totalled 271,035 boxes of 125 count plastic bags. Appeal File, Exhibit 21. The total of these orders was one and one half times larger than the total of all of the other purchase orders combined. Appeal File, Exhibit 2. Appellant sought a further modification of the specifications on January 26, 1988, to apply to the remaining four delivery orders. Appeal File, Exhibit 19. It sought to reduce both the tensile strength requirement (in the machine direction), and the bottom seam strength requirement from a value of 5.7 grams to 4.8 grams. *Id.* The Government denied the re-

©1993, Commerce Clearing House, Inc.

Digitized by Google

quest on March 8, 1988, on the ground that the asked-for changes were incompatible with the heavy duty bag the Government required, and directed Amcel to deliver the four delinquent orders by April 29, 1988, or face a termination for default. Appeal File, Exhibit 21. On April 13, 1988, the Government sent another letter to Amcel. Appeal File, Exhibit 22. This one was entitled "Cure Notice." *Id.* It recited the April 29, 1988, due date for the four orders in question; advised Amcel that it considered performance to be endangered; and requested an explanation for Amcel's tardiness in delivering the bags, by April 25, 1988; and again threatened termination. *Id.* Amcel did not ship the bags within the required time frame, nor did it give an explanation satisfactory to the Government for its failure to do so, although it did write a letter to the contracting officer on January 4, 1988, stating that it agreed not to produce" the four orders in question. Appeal File, Exhibit 18.

On May 11, 1988, the contracting officer terminated the contract for default because of non-delivery. Appeal File, Exhibit 24.

At hearing appellant produced evidence to show that the lot sizes from which the test samples were taken varied greatly since both parties accepted the purchase orders as lots, and the numbers of bags in the various purchase orders differed widely. Appeal File, Exhibit 16. Appellant complained that a single failure in a small lot would result in the rejection of but a small number of bags while a similar failure in a large lot would result in the rejection of a much larger number of bags. However, appellant did not produce any evidence that it had objected to the varying lot sizes prior to termination. Appellant's evidence that the Government's test procedures were unreliable consisted principally of showing that its own tests of the same bags yielded different results. The example in evidence, however, though it showed different results than the Government's tests of the same sample, also showed that even by appellant's figures the sample failed to meet specification by a large margin. Appeal File, Exhibit 15; Government's Exhibit 8. Appellant had earlier blamed the inconsistent quality of its bags on the resin that it was using to produce them. Government's Exhibit 3. Amcel had calculated its bid based on a bag wall thickness of 1.2 mils. *Id.* The specifications on the bags were of the performance type. Bag wall thicknesses were not specified. Amcel was told at a meeting on September 18, 1987, by the Government's experts that a bag of that thickness would probably not consistently meet specifications *Id.* Amcel replied that future bids would be based on a thicker bag wall, but that Amcel could not afford to increase bag wall thickness under the present contract. *Id.*

Discussion

Within days of contract award appellant had asked for and received an extension of its delivery schedules. It also asked for and received a relaxation of the tear strength requirements on 9867 bags, and a further extension of its delivery schedules. However, samples of the 9867 bags taken in October 1987 and tested by the Government in December 1987 showed very low values in the tear resistance tests. Appellant could not or would not solve the problem. Some of appellant's 9867 bags passed and some did not. At hearing appellant spent a great deal of time and effort attacking the Government's test methodology and test results but even its own tests showed that one lot of bags was far below specification requirements even though the Government's test figures and appellant's test figures did not agree. Appellant produced no evidence at all as to why the bags failed, although it produced a great deal of evidence tending to show that it had made thousands of the same bags under prior contracts without complaint by the users. Apparently the walls of the heavy duty 9867 bag were not thick enough to meet test requirements consistently, and appellant was not willing to spend the money to put more resin into the manufacturing process. The size of the undelivered orders may have had something to do with it. They totalled more than three million bags.

When appellant refused to fill the four orders in question it gambled that the possible excess reprocurement costs it might thereby be required to pay would be less than the cost of upping the resin quality and resin content of three million heavy duty plastic bags. It must now await events.

Decision

For the reasons stated the appeal is **DENIED.**

[¶ 26,281] **Bobby A. Edwards**

PSBCA No. 3408, July 29 1993. Contract No. HCR 27057.

Defaults, Grounds—Postal Contracts—Availability of Carrier.—A highway transportation contract was properly terminated for default because the contractor failed to perform services and was unavailable for contact by the Postal Service. The contractor alleged that during a suspension for equipment defects, he was called out of town for a family emergency, with the result that he failed to present his equipment for a required reinspection and was not able to resume performance at the end of the suspension. However, he failed to show that his nonperformance was excusable under the contract, and he gave no reason for failing to contact the Postal Service or to provide a phone number at which he could be reached.

For the appellant: Bobby A. Edwards. For the government: D.D. Anna, United States Postal Service, Washington, D.C.

Before MENEGAT and COHEN, Administrative Judges.

MENEGAT, Administrative Judge: Appellant, Bobby A. Edwards, has appealed the default termination of his highway transportation contract with the United States Postal Service, Respondent. At Appellant's request, this appeal is being processed under the Board's Accelerated Procedure, 39 C.F.R. § 955.36, and is being decided on the record. Appellant was afforded an opportunity to file supplemental evidence and a brief, but did not do so.

Findings of Fact

1. On June 30, 1992, Respondent renewed Appellant's contract, HCR 27057, for transport of mail, two trips per day, six days per week, between Greensboro and Lawsonville, North Carolina, for the period July 1, 1992, through June 30, 1996 (Appeal File Tab ("AF") A, "Statement of Service and Schedule").

2. The contract included the Basic Surface Transportation Contract General Provisions, PS Form 7407T, March 1989. General Provision 4(a) requires the contractor to "carry all mail tendered for transportation under this contract, . . . with certainty, celerity, and security, in accordance with the operating schedule and between the points fixed in the solicitation . . . ." (AF A).

3. The contract called for use of one vehicle, but the contractor was required to have readily available sufficient standby equipment . . . to perform extra trips, to permit vehicle maintenance and to prevent delays in emergencies such as mechanical failures and poor weather conditions." (AF A, section 15.B).

4. Under the contract, Appellant was liable for "ordinary repairs to and maintenance of equipment furnished by the contractor" (AF A, section 16.B(1)).

5. The contract provided:

> The contractor must provide either personal or representative supervision over the operation of the route. The contractor or his route supervisor must maintain a phone and be easily contacted in the event of unexpected problems on the route. (AF A, section 18.A)

6. Among the grounds stated in General Provision 16(a) of the contract for terminating the contract for default are the contractor's "failure to perform service according to the terms of the contract" (General Provision 16(a)(1)) and "[i]f the Contractor's transportation equipment is insufficient, inadequate, or otherwise inappropriate for the service" (General Provision 16(a)(10)) (AF A).

7. If, after a termination for default, it is determined that the contractor was not in default or that the default was excusable, under General Provision 16(c) the termination will be considered as one under the termination for convenience provision of the contract, General Provision 17 (AF A).

8. On Saturday, November 28, 1992, the brakes on Appellant's truck failed causing his driver to terminate the first trip of the day without completing it (AF D). Respondent arranged for another contractor to complete the morning run, perform the second required trip on November 28 and perform the route on the following Monday (AF D). When further inspection of Appellant's truck revealed a number of other equipment deficiencies, Respondent suspended Appellant's performance of service on the route until December 7 and directed Appellant to present an acceptable truck for inspection

©1993, Commerce Clearing House, Inc.

Digitized by Google

before that date (AF D). Although some repairs were made to Appellant's truck, it was not found acceptable when inspected by Respondent on December 4; the rear door was broken and the driver side window was missing (AF D; Declaration of George Whitworth dated June 24, 1993). Appellant did not present the truck to Respondent for reinspection (AF D).

9. On December 7, Appellant left town without advising Respondent that he would be unavailable and without leaving a telephone number where he could be reached. He did not perform or arrange for the performance of the route from December 7 through December 11 (AF D; Complaint; Declaration of George Whitworth dated June 24, 1993).

10. Using the number Appellant had previously supplied, Respondent's employees made several attempts to reach Appellant by telephone during the week of December 7. They left messages on his answering machine asking that he return their calls, but Appellant had not contacted Respondent by December 11 (AF D).

11. By letter dated December 11, 1992, the contracting officer terminated the contract for default, basing the termination on Appellant's failure to comply with General Provisions 16(a)(1) and (10) (AF C). This appeal followed.

Decision

Appellant argues that by December 7 he had repaired the mechanical defects identified by Respondent except for the driver's window and that the missing window did not interfere with use of the truck on the route. He contends that the termination was unwarranted because his failure to present the vehicle for reinspection, to be reachable by Respondent and to carry the route from December 7 through 11 stemmed from a family emergency that required him to leave town. Respondent argues that the failure to carry the route and to have acceptable equipment justified the termination and that Appellant has failed to present excusable reasons for not performing.

Respondent has the burden of proving that the termination was justified, but once Respondent shows that Appellant failed to perform in accordance with the contract, the burden shifts to Appellant to present evidence to demonstrate that the failure to perform was excusable under the contract. *Pamela J. Sutton,* PSBCA No. 1622, 88-3 BCA ¶ 21,031 at 106,237.

There is no dispute that Appellant, without explanation to Respondent, failed to perform the route when, on December 7, the suspension of service expired and Appellant was expected to resume his contractual duties. Appellant could not be "easily contacted" (Finding 5) as he had not left a telephone number at which he could be reached, and he did not respond to messages left at the telephone number he had previously provided to Respondent. Respondent has demonstrated that the termination was justified by Appellant's failure to perform the service under the contract after December 7 and his unavailability to contact by Respondent.

Appellant has not met his burden of demonstrating that his failure to perform and to maintain contact with Respondent was excusable. He has not demonstrated that Respondent's rejection of the truck was unreasonable or that his reasons for not performing the route from December 7 to December 11 were excusable under the contract. Moreover, Appellant has presented no reason for failing to contact Respondent to explain his absence and to provide a telephone number at which he could be reached.

The appeal is denied.

[¶ 26,282] Mike Albert Leasing, Inc.

PSBCA No. 3342-3369, March 4, 1993. Contract No. 114382-86-V-A135.

Contract Types—Vehicle Rentals—Wear and Tear.—A contractor was not entitled to recover for damage to the interior of rental vehicles, because it provided no evidence and made no argument that the damage was either outside ordinary wear and tear or was caused by the act or negligence of government personnel. The contractor contended that the dents from the inside of the vehicles should not be considered normal wear and tear, because the damage was cargo damage, caused by mail trays being stacked too high. However, the government noted that the standard for normal wear and tear should take into account the fact that the vehicles were in commercial service for a period of six years. The contractor

Digitized by Google

also failed to introduce evidence to support its contention that similar damage to other vehicles under this contract was paid for by the government.

Contract Types—Vehicle Rentals—Government Negligence.—A contractor was entitled to recover for rental vehicles that suffered "outward dings," because the nature of the damage indicated that it had occurred while the vehicles were in use by government personnel, and the government did not provide evidence with respect to the cause of the damage. Because the damage most likely occurred while the vehicles were in motion or being loaded or unloaded by government personnel, the burden of proof shifted to the government to come forward with evidence as to the cause of the damage.

For the appellant: Tim A. Graham, Cincinnati, Ohio. For the government: William A. Campbell, Jr., United States Postal Service, Atlanta, Georgia.

Before BROCHSTEIN, Administrative Judge.

BROCHSTEIN, Administrative Judge: Appellant, Mike Albert Leasing, Inc., has appealed from the denial, in whole or in part, of its claims for the cost of repairing damage to vehicles leased to Respondent, United States Postal Service. These appeals are being decided on the record in accordance with the Board's Small Claims (Expedited) procedures. 39 C.F.R. §§955.12 and 955.36. Only entitlement is at issue in these appeals.

FINDINGS OF FACT

1. Contract No. 114382-86-V-A1 35 was awarded to Appellant on May 29, 1986, and covered the lease of 87 mini-van type vehicles to be used for "Park & Loop" service in Fort Lauderdale, Florida. The term of the contract was June 21, 1986, through June 20, 1992. In March 1992 the lease period for 38 of the vehicles was extended to July 19, 1992. (PSBCA 3342-3369 Appeal Files, Tabs (AF) 6, 7).

2. The contract contained the July 1980 version of PS Form 7476, General Provisions for Vehicle Hire Contracts. Clause GP-6 of the general provisions contained the following language relevant to these appeals:

"LIABILITY PROVISIONS.

(a) *Contractor's Vehicles.* The Postal Service shall be responsible for loss of, or damage to, the Contractor's vehicles while in its custody only when caused by the act or negligence of any officer or employee of the Postal Service acting in the scope of his employment.... In no event shall the Postal Service be responsible for ordinary wear and tear...." (AF 6).

3. Through a series of claims dated August 18 and September 2, 1992, Appellant sought to recover costs of repairing damage to a number of vehicles leased under the contract. Each claim was accompanied by two estimates, the lower of which reflected the amount of the claim. In decisions dated October 6, 1992, the Contracting Officer denied the claims in whole (PSBCA Nos. 3342-3350) or in part (PSBCA Nos. 3351-3369).

PSBCA No. 3342—Vehicle No. 67823

4. In this appeal, a PS Form 4577, "Hired/Borrowed Vehicle Condition Report," noted damage at the time the vehicle was returned consisting of a dent or dents "from inside" on the left side of the vehicle. The estimates accompanying Appellant's claim, in the amount of $158.40, noted the same damage. (3342 AF 3-5). In his decision, the Contracting Officer denied the claim in full on the basis that the damage constituted "normal" wear and tear (3342 AF 1).

PSBCA No. 3343—Vehicle No. 67838

5. In this appeal, the Form 4577 showed a dent or dents from the inside on the left side at the time the vehicle was returned. Appellant's claim, in the amount of $197.40, also noted outward dents[1] on the left side. In his decision, the Contracting Officer denied the claim in its entirety, concluding that the damage constituted normal wear and tear. (3343 AF 1, 3-5).

PSBCA No. 3344—Vehicle No. 67608

6. In this appeal, the Form 4577 noted a dent or dents on the right side of the vehicle at the time it was returned. Appellant's claim, in the amount of $198.60, included costs for repairing and refinishing the cargo door, located on the right side. The Contracting Officer denied the claim in its entirety, concluding that the damage to the

[1] The terms "dents from the inside," "outward dents," and "outward dings" are used in the various documents in the record of these appeals to represent the same type of damage—*i.e.*, dents on the vehicle which protrude outward and appear as bumps when viewed from the outside.

©1994, Commerce Clearing House, Inc.

Digitized by Google

cargo door constituted normal wear and tear. (3344 AF 1, 3-5).

PSBCA No. 3345—Vehicle No. 67844

7. The Form 4577 in this appeal showed dents on the right and left doors and a dent or dents from the inside on the left side of the vehicle. Appellant's claim was in the amount of $380.20 and included the cost of repairs to the same three areas. The Contracting Officer denied the claim in its entirety, concluding that the damage constituted normal wear and tear. (3345 AF 1, 3-5).

PSBCA No. 3346—Vehicle No. 67893

8. The Form 4577 for this appeal showed dents and scratches on the right side and right door. Appelant's claim, in the amount of $314.20, included the cost of repairing and refinishing damage in the same areas. In his decision, the Contracting Officer denied the claim, concluding that the damage was normal wear and tear. (3346 AF 1, 3-5).

PSBCA No. 3347—Vehicle No. 67894

9. In this appeal the Form 4577 showed dents on the right side door and cargo door. Appellant's claim, in the amount of $358.60, covered repairs to dents at the same locations. The Contracting Officer denied the claim in its entirety on the basis that the damage constituted normal wear and tear. (3347 AF 1, 3-5).

PSBCA No. 3348—Vehicle No. 67927

10. The Form 4577 in this appeal noted dents from the inside on the right side cargo door and on the rear of the left side. Appellant's claim, for $380.80, covered the cost of repairing and refinishing dents in the same areas. The Contracting Officer denied the claim in full, concluding that the damage was normal wear and tear. (3348 AF 1, 3-5).

PSBCA No. 3349—Vehicle No. 67939

11. In this appeal the Form 4577 noted dents from the inside on the right and left sides and a missing jack. Appellant's claim, in the amount of $369.40, covered repairs to the left quarter panel and the right cargo door. In his decision, the Contracting Officer denied the claim in its entirety, stating that the damage constituted normal wear and tear. (3349 AF 1, 3-5).

PSBCA No. 3350—Vehicle No. 67977

12. The Form 4577 in this appeal noted several dents on the left side of the vehicle. Appellant's claim, for $197.40, covered repairs of dents in the same area and indicated that some of the dents were outward. The Contracting Officer denied the claim in its entirety, stating that the dents constituted normal wear and tear. (3350 AF 1, 3-5).

PSBCA No. 3351—Vehicle No. 67945

13. In this appeal, the Form 4577 noted dents from the inside on the left side and at the approximate location of the cargo door on the right side. The form also showed other dents at the rear of the right side. Appellant's claim, in the amount of $659.03, reflected repairs and refinishing of dents at those locations as well as parts and labor in connection with repairs to a light assembly. The Contracting Officer denied those portions of the claim related to outward dents in the left quarter panel and right cargo door as normal wear and tear. He also denied the portion of the claim related to the light assembly because it was not shown on the Form 4577. Payment in the amount of $248.60 was authorized for the remaining damage. (3351 AF 1, 3-5).

PSBCA No. 3352—Vehicle No. 67899

14. The Form 4577 in this appeal showed a series of dents along the left side of the vehicle, a dent in the right door, and a crack in the rear hatch. Appellant's claim, in the amount of $818.40, included costs of repairing and refinishing dents on both sides of the vehicle, including outward dents in the left rear quarter, and repairing and refinishing damage to the rear "liftgate." In his decision, the Contracting Officer denied the portion of the claim related to the rear hatch [liftgate], stating that Appellant had filed a claim for the same damage several years earlier and that the claim had been denied. The Contracting Officer also denied the portion of the claim related to the "outward dings" in the left quarter panel, stating that this constituted normal wear and tear. Payment in the amount of $388.40 was authorized for the remaining damage. (3352 AF 1, 3-5).

PSBCA No. 3353—Vehicle No. 67917

15. In this appeal, the Form 4577 noted dents on the right side of the vehicle, including the right door and the area below the door, and dents from the inside on the left side of the vehicle. Appellant's claim, for $712.60, included costs for repairing outward dents in the left rear quarter panel,

Digitized by Google

and damage to the right front door, right rocker panel, and right front fender. The Contracting Officer denied the portion of the claim related to right front fender damage because the damage had not been shown on the Form 4577. He also denied the part of the claim related to outward dings on the left quarter panel, concluding that such damage was normal wear and tear. Payment of $394.00 was authorized for the remaining damage. (3353 AF 1, 3-5).

PSBCA No. 3354—Vehicle No. 67895

16. The Form 4577 in this appeal showed dents from the inside on the right side, in the vicinity of the cargo door. It also showed dents at the rear of the left side. Appellant's claim, in the amount of $680.20, covered repairs to the left front door, outward dents in the left rear quarter, and outward dents in the right cargo door. The Contracting Officer denied the portion of the claim related to the outward dings in the right cargo door, stating that such damage was normal wear and tear. Payment of $514.20 was authorized for the remaining damage. (3354 AF 1, 3-5).

PSBCA No. 3355—Vehicle No. 67900

17. In this appeal, the Form 4577 showed dents from the inside on the left side of the vehicle and dents on the right side door and cargo door. Appellant's claim, in the amount of $497.40, covered the cost of repairs to outward dents on the left rear quarter, and dents on the right side door and cargo door. In his decision, the Contracting Officer denied the portions of the claim related to the outward dings on the left side and damage to the cargo door, concluding that the damage was normal wear and tear. The Contracting Officer authorized payment in the amount of $154.60 for the remaining damage. (AF 3355 1, 3-5).

PSBCA No. 3356—Vehicle No. 67897

18. The Form 4577 in this appeal does not contain the record of any vehicle inspection performed at the time the vehicle was returned. Appellant's claim, in the amount of $553.20, covers the cost of repairing damage to the left front fender, left rear quarter panel, and right cargo door. The Contracting Officer denied the portion of the claim related to damage to the cargo door, contending that the damage was normal wear and tear. Payment in the amount of $346.20 was authorized for the remaining damage. (3356 AF 1, 3-5).

PSBCA No. 3357—Vehicle No. 67901

19. The Form 4577 in this appeal showed dents, at least some of which were from the inside, on the left side and left door and dents on the right door and right front fender. Appellant's claim, for $664.40, included the costs of repairing dents in the same locations. In his decision, the Contracting Officer denied those portions of the claim related to dents on the left quarter panel and left door, but authorized payment in the amount of $328.60 for the remaining damage. (3357 AF 1, 3-5).

PSBCA No. 3358—Vehicle No. 67903

20. In this appeal, the Form 4577 showed dents and scratches on the left side, numerous dents on the right side, and scratches and a damaged lens on the rear of the vehicle. Appellant's claim, in the amount of $1139.77, included estimated costs of repairing damage in the same locations. The Contracting Officer denied those portions of the claim related to damage to the right quarter panel, left and right front doors, and the cargo door, concluding that such damage was normal wear and tear. Payment in the amount of $453.77 was authorized for the remaining damage. (3358 AF 1, 3-5).

PSBCA No. 3359—Vehicle No. 67907

21. The Form 4577 in this appeal showed dents from the inside and a scrape on the left side, a dent on the left front fender or door, and dents on the cargo door. Appellant's claim, for $535.40, covered the repair of dents on the left front fender, and cargo door, and an outward dent on the left rear quarter. In his decision, the Contracting Officer denied, as normal wear and tear, the portions of the claim related to the outward dings and scrape on the left quarter panel and the dents on the cargo door. Payment in the amount of $166.00 was authorized for the remaining damage. (3359 AF 1, 3-5).

PSBCA No. 3360—Vehicle No. 67891

22. In this appeal the Form 4577 showed dents from the inside on the left side, dents on the left door, and dents in the right front fender. Appellant's claim, for $591.80, covered repairs to the left front door, dents (outward and inward) in the left rear quarter, and a dent in the right front fender. The Contracting Officer denied, as normal wear and tear, that portion of the claim related to outward dings on the left quarter panel and authorized payment in the amount of $334.20 for the remaining damage. (3360 AF 1, 3-5).

PSBCA No. 3361—Vehicle No. 67731

23. In this appeal the Form 4577 showed dents and scratches on the cargo door and a dent on the right front fender. The notations on the Form 4577 are unclear as to whether the dents were from the inside or outside. Appellant's claim, in the amount of $328.20, covered repairs to the cargo door and a dent in the right front fender, with no notation as to the nature of the dents. A photograph of the right fender area shows what appear to be dents caused by an impact from the outside. A photograph of the cargo door is inconclusive as to the existence or nature of the damage. The Contracting Officer denied the portion of the claim related to repairs to the cargo door, referring to the dents as outward dings. Payment in the amount of $153.00 was authorized for the remaining damage. (3361 AF 1, 3-5).

PSBCA No. 3362—Vehicle No. 67845

24. In this appeal the Form 4577 showed dents on the left door and near the left rear wheel. Appellant's claim, in the amount of $365.00, covered repairs to dents in the same locations. The Contracting Officer denied the portion of the claim related to left door damage, concluding that the damage was normal wear and tear. Payment in the amount of $192.80 was authorized for the remaining damage. (3362 AF 1, 3-5).

PSBCA No. 3363—Vehicle No. 67889

25. The Form 4577 in this appeal showed damage to the edge of the left door, and dents on the right cargo door and on the right quarter panel. Appellant's claim, for $503.40, covered repairs to damage in the same areas. The Contracting Officer denied the portions of the claim related to damage to the right quarter panel, which damage he characterized as outward dings, and damage to the cargo door, concluding that the damage was normal wear and tear. Payment in the amount of $133.40 was authorized for the remaining damage. (3363 AF 1, 3-5).

PSBCA No. 3364—Vehicle No. 67978

26. In this appeal, the Form 4577 showed dents from the inside on the left quarter panel, dents on the left door and front fender, and damage to the turn signal lens and headlight ring. Appellant's claim, in the amount of $858.92, covered repairs to the same damage in the same areas. The Contracting Officer denied, as normal wear and tear, that portion of the claim related to outward dings on the left quarter panel and authorized payment in the amount of $601.32 for the remaining damage. (3364 AF 1, 3-5).

PSBCA No. 3365—Vehicle No. 67902

27. The Form 4577 in this appeal showed dents on the left side of the vehicle and scratches and dents on the right side cargo door and right quarter panel. Appellant's claim, in the amount of $702.00, covered the cost of repairs to damage in the same areas. The Contracting Officer denied those portions of the claim related to what he characterized as outward dings on the left and right rear quarter panels, contending that such damage was normal wear and tear. He authorized payment of $237.00 for the remaining damage. (3365 AF 1, 3-5).

PSBCA No. 3366—Vehicle No. 67610

28. In this appeal, the Form 4577 showed dents from the inside on the left and right sides and dents in the right cargo door. It also showed scratches and dents on the rear of the vehicle. Appellant's claim, for $576.00, covered the repair of outward and inward dents on the left rear quarter, chips in the "rear deck lid," dents in the right rear quarter, and damage to the cargo door. The Contracting Officer denied, as normal wear and tear, those portions of the claim related to outward dings in the left and right quarters. Payment in the amount of $252.40 was allowed for the remaining damage. (3366 AF 1, 3-5).

PSBCA No. 3367—Vehicle No. 67605

29. In this appeal the Form 4577 showed dents on the right and left sides of the vehicle on or adjacent to the front doors. Appellant's claim, in the amount of $328.80, reflected the repair of dents in the same two doors. The Contracting Officer denied the portion of the claim related to the right front door as representing normal wear and tear. Payment in the amount of $171.60 was authorized for the remaining damage. (3367 AF 1, 3-5).

PSBCA No. 3368—Vehicle No. 67904

30. The Form 4577 in this appeal showed dents on the right and left sides of the vehicle. Appellant's claim, in the amount of $387.80, covered repairs to the left rear quarter and right cargo door. The Contracting Officer denied the portion of the claim related to what he characterized as outward dings in the right cargo door, concluding that such damage was normal wear and tear. Payment in the amount of $186.20

Digitized by Google

was authorized for the remaining damage. (3368 AF 1, 3-5).

PSBCA No. 3369—Vehicle No. 67940

31. In this appeal, the Form 4577 showed dents from the inside on the left and right sides and dents on the left front door. Appellant's claim, in the amount of $548.40, covered repairs to the left front door, multiple inward and outward dents in the left rear quarter, and outward dents in the cargo door. The Contracting Officer denied the portion of the claim related to outward dings in the left quarter panel. An examination of the claim and supporting documents indicates that the *amount* deducted by the Contracting Officer in his decision also included the portion of the claim related to outward dents in the cargo door. Accordingly, it is concluded that the Contracting Officer also denied that portion of the claim. Payment in the amount of $144.60 was authorized for the remaining damage. (3369 AF 1, 3-5).

DECISION

In its Complaints, Appellant argues that it submitted claims on 87 leased vehicles (including the 28 at issue here) but that the decisions made by Respondent with respect to the payment of claims were inconsistent. Appellant argues that the damage for which payment was denied in the 28 claims in these appeals is the same type of damage for which payment was made in 59 other claims under this contract which were paid in full. Appellant contends that the definition of normal wear and tear was applied inconsistently.

In particular, with respect to the 28 claims at issue here, Appellant argues that "outward dings," or dents from the inside of the vehicle pointing out, should not be considered normal wear and tear because the damage is cargo damage, caused by mail trays being stacked too high. Appellant argues that it has vans leased to the Postal Service "all over" but that this type of damage is rarely seen.

Respondent argues that Appellant has failed to offer evidence that the damage to its vehicles exceeded normal [ordinary] wear and tear or that the damage was caused by the negligence of Postal Service employees. Respondent notes that the standard for normal wear and tear should take into account the fact that the vehicles were in commercial service for a period of six years. Finally, Respondent argues that the fact that payment was made in other claims (not at issue here) should not give rise to a presumption that the claims under consideration here should have been paid.

As the party seeking recovery, Appellant has the burden of proving that an act or negligence on the part of Respondent's personnel was the proximate cause of the damage to each vehicle and that the damage was in excess of ordinary wear and tear. *E.g., Jake Sweeney Auto Leasing, Inc.*, PSBCA Nos. 2784-2788, 2791-2798, 91-3 BCA ¶ 24,278. However, where the nature of the damage or other evidence in the record persuaded us that it was reasonable to require Respondent to come forward with evidence that damage was not caused by the act or negligence of its employees, we have shifted that burden to Respondent. *E.g., Jake Sweeney Auto Leasing, Inc.*, PSBCA No. 2899, 1991 WL 62357 (April 9, 1991; *Postal Vehicle Supply Service*, PSBCA No. 775, 1980 WL 2295 (June 16, 1980).

With respect to damage other than "outward dings," Appellant has provided no evidence and made no argument that the damage complained of but not allowed by the Contracting Officer was either outside ordinary wear and tear or was caused by the act or negligence of Postal Service personnel. The record also contains no evidence that the nature of the damage or other circumstances were such that the burden of coming forward with evidence should be shifted to Respondent. Appellant has also failed to introduce evidence to support its contention that similar damage to other vehicles under this contract was paid for by Respondent. Therefore, Appellant has failed to meet its burden of proof with respect to this damage and the portions of its appeals related to such damage are denied.

As to those vehicles which suffered "outward dings," the nature of the damage is such that it is reasonable to conclude that the damage most likely occurred while the vehicles were in motion or being loaded or unloaded—*i.e.*, while they were actually in use by Postal Service personnel. Under these circumstances it is appropriate to shift to Respondent the burden of coming forward with evidence with respect to the cause of the damage. Respondent has failed to offer any such evidence. Accordingly, it is concluded that Respondent is liable for the costs of repairing such damage, and the applicable portions of these appeals are sustained. Since quantum is not at issue in these appeals, negotiation of the amount of the damages to which Appellant is entitled is left to the parties. In the event the parties are unable to reach agreement on the

©1993, Commerce Clearing House, Inc.

Digitized by Google

amount due Appellant, the Contracting Officer should issue further decisions, from which Appellant may file appeals.

The appeals are denied in part and sustained in part, as described above.

[¶ 26,283] Electronic Systems and Associates, Inc. v. National Aeronautics and Space Administration; Lockheed Space Operations Company, Intervenor

GSBCA No. 12492-P, July 28, 1993. Solicitation No. 10-O-0017-2.

Protests, GSBCA—Interested Party—Amendment of Solicitation.—A protest against an amended solicitation was dismissed because the protester had not submitted an offer under the original solicitation. Although the solicitation was amended as a result of protests by parties that did submit offers, the protester here remained outside the boundaries of interested party status because there was no resolicitation. FAR 15.606 permits the government to settle the prior protest by amending the existing solicitation and providing copies only to companies that had submitted offers within the time allowed under the original solicitation.

For the appellant: Lemuel Kinney, President/CEO. For the government: Sumara Thompson-King, Office of the General Counsel, National Aeronautics and Space Administration, Washington, D.C. For the intervenor, Lockheed Space Operations Company: Seyfarth, Shaw, Fairweather & Geraldson, Washington, D.C., by Stuart B. Nibley and James M. Mesnard.

Before DEGRAFF, WILLIAMS, and GOODMAN, Administrative Judges.

DEGRAFF, Administrative Judge: On July 9, 1993, Electronic Systems & Associates, Inc. (ESA) filed this protest. ESA seeks to challenge several decisions made by the National Aeronautics and Space Administration (NASA) in connection with a solicitation for a support services contract at Kennedy Space Center. Because ESA is not an interested party as defined by 40 U.S.C. § 759(f)(9)(B) (1988), we dismiss this protest for lack of jurisdiction.

Findings of Fact

On February 24, 1992, and on April 24, 1992, NASA published in the Commerce Business Daily notices of its intent to solicit proposals for providing automatic data processing services at Kennedy Space Center. The first notice announces that NASA intended to release a draft solicitation in March 1992, and it invites potential offerors to request the solicitation and to submit proposals. The later notice states that NASA had issued the draft solicitation and that NASA would issue a final solicitation in May 1992. Like the first notice, the later notice invites potential offerors to request the solicitation and to submit proposals. NASA's Motion to Dismiss, Exhibit G.

On May 26, 1992, NASA issued its request for proposals, solicitation 10-O-0017-2, which provides that proposals were due to be submitted not later than July 15, 1992. NASA's Motion to Dismiss, Exhibits H, I. Four offerors submitted proposals in response to the solicitation. NASA's Motion to Dismiss, Exhibit J. One of the offerors, Lockheed Space Operations Company (Lockheed), intended to utilize ESA as a subcontractor. On November 23, 1992, NASA notified Lockheed that, in NASA's view, ESA was not an acceptable subcontractor. On November 24, 1992, Lockheed notified ESA of NASA's decision. NASA's Motion to Dismiss, Exhibits A, B.

NASA selected Lockheed for negotiations, and this selection was the subject of three consolidated protests filed here by the three remaining offerors. *EG&G Florida, Inc. v. National Aeronautics and Space Administration*, GSBCA 12204-P, et al., 1993 BPD ¶ 23 (Jan. 28, 1993). The *EG&G* protests were dismissed on January 28, 1993, based upon a joint stipulation that was signed by the parties and filed with the Board. In summary, in their stipulation, the parties agreed that NASA would amend the solicitation in order to permit Lockheed and the three other offerors to submit revised proposals and that NASA would evaluate the revised proposals and make its award. The stipulation also provides that NASA would amend the solicitation in order to provide additional workload indicators, to provide additional historical staffing data, and to clarify instructions concerning offerors' small business/small disadvantaged business/woman-

Digitized by Google

owned business plans. NASA amended the solicitation as provided in the stipulation. NASA's Motion to Dismiss, Exhibits C, D.

ESA filed this protest on July 9, 1993, and its amended complaint contains eight counts. In counts 1 and 2, ESA alleges that NASA failed to advertise the solicitation properly, failed to notify ESA of the "new" solicitation, and failed to justify the use of non-competitive procedures.[1] In counts 3, 4, 5, and 6, ESA complains that NASA acted arbitrarily and capriciously when it "debarred" ESA. In count 7, ESA complains that NASA failed to secure full and open competition when it issued the amended solicitation only to those companies which had submitted proposals in response to the solicitation. In count 8, ESA asserts that NASA should have referred the determination of ESA's responsibility to the Small Business Administration and should have specified the basis for finding ESA non-responsible.

NASA filed a motion to dismiss on July 16, 1993. NASA argues that ESA fails to state a valid basis for protest, that ESA is not an interested party, that ESA's protest is not timely, and that ESA fails to state a claim upon which relief can be granted. On July 23, 1993, ESA filed its opposition to NASA's motion. ESA's opposition focuses entirely upon NASA's failure to refer the matter of ESA's responsibility to the Small Business Administration.

Discussion

Pursuant to 40 U.S.C. § 759 (1988), the Board possesses jurisdiction to consider a protest filed by an interested party in connection with a procurement. In order to resolve this case, we must identify the procurement at issue by deciding whether NASA conducted one procurement or whether, as ESA believes, NASA conducted two procurements. After we identify the relevant procurement, we must determine whether ESA is an interested party.

Contrary to ESA's belief, NASA properly conducted only one procurement. NASA issued its solicitation on May 26, 1992, after NASA advertised the solicitation as required by regulation. 48 CFR 5.101 (1991). When NASA settled the *EG&G* protests, it was not required to readvertise or to issue a new solicitation. Instead, the applicable regulation permits NASA to amend the existing solicitation and to provide copies of the amendment only to the companies that had submitted offers in response to- the solicitation. 48 CFR 15.606 (1991). Thus, there is only one procurement relevant to this protest, and it is the subject of the May 26, 1992 solicitation.

ESA is not an interested party in connection with the procurement at issue here. The term "interested party" is defined at 40 U.S.C. § 759(f)(9)(B) as "an actual or prospective bidder or offeror whose direct economic interest would be affected by the award of the contract or by failure to award the contract." In *MCI Telecommunications Corp. v. United States* [35 CCF ¶ 75,677], 878 F.2d 362 (Fed. Cir. 1989), the Court considered whether MCI was an interested party. Although MCI did not submit a proposal in response to a solicitation, MCI was a proposed subcontractor for one of the offerors. MCI asserted that it would be an offeror in response to a resolicitation. The Court held:

> Since the opportunity to qualify either as an actual or a prospective bidder ends when the proposal period ends, MCI's stated intention to submit a proposal in response to any resolicitation, and its efforts to secure resolicitation by filing a protest, can do nothing to create the necessary interested party status. By the close of the proposal period, MCI had placed itself outside the boundaries of interested party status. That is where it must remain unless, owing to the acts of an interested party which actually submitted a proposal or filed a timely protest, a resolicitation results.

Id. at 365.

Like MCI, ESA "placed itself outside the boundaries of interested party status" by not submitting a proposal in response to the May 26, 1992 solicitation. ESA must remain outside these boundaries because the *EG&G* protests did not result in a resolicitation. ESA only participated as a subcontractor in the procurement at issue here. For this reason, ESA is not an interested party and we lack jurisdiction to consider the protest.

[1] It is clear from ESA's complaint that its reference to the "new" solicitation is a reference to the amended solicitation.

Decision

Because ESA is not an interested party, the protest is **DISMISSED FOR LACK OF JURISDICTION.**

[¶ 26,284] Lanzen Fabricating, Inc.

ASBCA No. 44998, June 3, 1993. Contract No. N00163-88-C-0256.

Reprocurement—Assessment of Excess Costs—Improper Termination.—An appeal from the assessment of reprocurement costs was sustained because a separate appeal from the underlying default termination had been sustained (93-3 BCA ¶ 26,079).

For the appellant: Richard P. Diehl, Troy, Michigan. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Donald J. Sherfick, Trial Attorney, Naval Avionics Center, Indianapolis, Indiana.

Before GROSSBAUM, RUBERRY, and SPECTOR, Administrative Judges.

GROSSBAUM, Administrative Judge: This appeal is taken from a contracting officer's decision asserting a government claim against the contractor in the amount of $13,169.80 as the excess costs of repurchasing the supplies ordered under the captioned contract, which had been terminated for default. Proceedings under the appeal had been suspended pending resolution of an appeal from the default termination, ASBCA No. 40328.

In our 24 May 1993 decision in *Lanzen Fabricating, Inc.*, ASBCA No. 40328, we sustained the contractor's appeal from the termination of the contract for default and converted the default termination into a termination for the convenience of the Government.

The validity of the excess cost assessment that is the subject of this appeal was predicated on the propriety of the default termination. When a default termination is found to have been improper and is converted into a termination for the convenience of the Government, excess reprocurement costs may not be charged against the contractor. *Bogue Electric Mfg. Co.*, ASBCA Nos. 26214, 26350, 86-3 BCA ¶ 19,051, *see* Federal Acquisition Regulation (FAR) 49.402-6(a).

Accordingly, the appeal is sustained.

[¶ 26,285] Maitland Bros. Co.

ASBCA No. 43088, August 10, 1993. Contract No. F08602-83-C-0080.

Contract Disputes, Jurisdiction—Boards of Contract Appeals—Nonappropriated Fund Activity.—The contract of a Morale, Welfare, and Recreation Fund was not subject to the Contract Disputes Act, because the only nonappropriated fund instrumentalities mentioned in the Act are military exchanges. Consequently, there was no authority for allowing interest on a convenience termination claim. A decision holding that the Navy Resale and Service Support Office was within the waiver of sovereign immunity of the Tucker Act amendments of 1970 was not controlling (*McDonald's Corp. v. U.S.*, 37 CCF ¶ 76,036). That case did not involve the Contract Disputes Act.

Procedure, Boards—Reconsideration—Timeliness.—A motion for reconsideration of a recent decision was dismissed in part as untimely because it raised an issue that had been decided in a prior decision. The recent decision did not address the applicability of the Equal Access to Justice Act except to find as a fact that the board had dismissed the contractor's EAJA claim in a prior unpublished decision. The time for challenging that prior decision had long since expired.

Digitized by Google

For the appellant: McCormick & Maitland, Norfolk, Massachusetts, by Edward J. McCormick III. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Mark E. Landers and Jean Love, Trial Attorneys.

Before AXELMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

Affirming on reconsideration 93-3 BCA ¶ 26,007.

AXELMAN, Administrative Judge: Appellant has moved that we reconsider the decision dated 30 April 1993 in which we sustained its appeal in the amount of $13,009.74 for convenience termination and other costs.

Accordingly, we have reviewed the record in this appeal and considered the arguments advanced by appellant in its motion and in the memorandum submitted in support thereof.

Our conclusions, upon reconsideration, and the reasons therefor remain the same as those set forth in our prior decision. Appellant has simply not met its burden of proving entitlement to the costs claimed, beyond those which we have allowed, with sufficient certainty that they could be justified by other than mere speculation. Consequently, those costs are not recoverable. *Williams Indus., Inc. v. United States,* 295 F.2d 822, 831 (Ct. Cl. 1961), *cert. denied,* 370 U.S. 903 (1962); *Lisbon Contractors, Inc. v. United States* [34 CCF ¶ 75,358], 828 F.2d 759, 767 (Fed. Cir. 1987).

The only new argument raised by appellant in connection with its present motion is that the Board erred in ruling that the contract in this matter was a non-appropriated fund contract and that appellant therefore was "not entitled to interest or relief pursuant to the Equal Access to Justice Act" or otherwise (Memorandum in Support of Appellant's Motion for Reconsideration at 2-7).

Appellant contends in its motion that "while the Board ruled that the instant matter was a non-appropriated fund contract, the Air Force failed to offer any evidence to establish the character of the funding for the instant contract." However, appellant in this regard, ignores the following specific finding in our initial decision *(Maitland Bros. Co. et al.,* ASBCA Nos. 30089 *et al.,* 90-1 BCA ¶ 22,367 at 112,367):

> 3. Although the Standard Form 23 contract was executed by the contracting division of MAFB, the project was financed as a non-appropriated fund activity by the MAFB Morale, Welfare and Recreation (MWR) Fund (R4, tabs 1, 25, 27, 77).

The decision which is the subject of appellant's present motion for reconsideration made no mention of the Equal Access to Justice Act other than to recite the following among our findings of fact:

> 7. On 4 May 1990, in an unpublished decision (R4, tab 5), we dismissed appellant's Equal Access to Justice Act (EAJA) claim since EAJA is not applicable to non-appropriated fund contracts which are not subject to the Contract Disputes Act of 1978.

Appellant did not challenge that decision by way of motion for reconsideration or appeal, and the time for either such challenge has long since expired. Consequently, insofar as appellant's present motion seeks reconsideration of our 4 May 1990 decision, it is dismissed as untimely.

Significantly, in pursuing its EAJA application, appellant had conceded that its appeals were not subject to the CDA, but nevertheless had contended that EAJA was applicable to its application because Congress intended that statute to include all appeals to the Board in situations where the Government's conduct was unreasonable or unfair (4 Nay 1990 decision, appended hereto).

Appellant bases its present position upon the decision of the United States Court of Appeals for the Federal Circuit in *McDonald's Corp. v. United States* [37 CCF ¶ 76,036], 926 F.2d 1126 (1991). However, its reliance on that case is misplaced. *McDonald's Corp.* involved neither the Contract Disputes Act of 1978 (CDA) nor EAJA and merely held that the Navy Resale and Service Support Office, which was responsible for Navy exchanges and stores, was included within the waiver of sovereign immunity for contract claims against certain non-appropriated fund instrumentalities under the 1970 amendment to the Tucker Act (28 U.S.C. § 1491) even though not specifically listed in the amendment, as were its subsidiary exchanges.

Although contracts of military exchanges are subject to the CDA by specific reference therein, the contracts of other non-appropriated fund instrumentalities like the Morale, Welfare and Recreation Fund, which financed the subject contract, are not described in Sections 1346 or 1491 of the

©1994, Commerce Clearing House, Inc.

Digitized by Google

United States Code, Title 28, and therefore that Act is not applicable to them.

In any event, appellant's claim for interest on the balance due under the contract was rejected by us not only because interest was not allowable under the terms of the contract or by statute, but also because appellant received payment of that balance prior to the filing of its appeal disputing the amount of award; and we denied appellant's claim for interest on direct cost expenses to finance contracting officer's field directives and delays for the additional reason that appellant had not established that such costs had actually been incurred. Thus, appellant's interest claims would not be allowable under the prevalent facts even if its contract had not been financed by a nonappropriated fund instrumentality.

Our prior decision is, upon reconsideration, affirmed.

[¶ 26,286] Danac, Inc.

ASBCA No. 33394, August 13, 1993. Contract No. F17600-82-C-0028.

Procedure, Boards—Reconsideration—Evidence Previously Available.—The government's motion requesting the board to change its prior position on the basis of testimony at trial was denied because the evidence could have been adduced with the exercise of due diligence when the board issued its previous ruling. Furthermore, nothing in the government's motion to declare a contract void as a result of newly discovered evidence warranted the relief requested.

For the appellant: Pettit & Martin, Washington, D.C., by Thomas C. Wheeler and Eric B. Kantor. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Mark E. Landers and Peter M. Ditalia, Trial Attorneys.

Before YOUNGER, SPECTOR, and THOMAS, Administrative Judges.

Affirming on reconsideration 93-2 BCA ¶ 24,873.

YOUNGER, Administrative Judge: Respondent has again moved to have the contract declared void *ab initio*, contending that evidence adduced at the trial on the merits warrants the relief requested in the motion. Familiarity with the voidness issue is assumed. *See Danac, Inc.*, ASBCA No. 33394, 93-2 BCA ¶ 25,708; *Danac, Inc.*, ASBCA No. 33394, 92-2 BCA ¶ 24,873; *Danac, Inc.*, ASBCA Nos. 30227, 33394, 92-1 BCA ¶ 24,519; *Danac, Inc.*, ASBCA Nos. 30227, 33394, 90-3 BCA ¶ 23,246; *Danac, Inc.*, ASBCA Nos. 30227, 33394, 88-3 BCA ¶ 20,993.

By its present motion, respondent "requests that the Board again reconsider its position in reference to Appellant's status as a non-responsible contractor due to the testimony of Mr. Sondergaard at subject trial, which constitutes newly discovered evidence and therefore provides the basis for the Board to reconsider its position." The motion does not contain even the remotest showing that the evidence could not, in the exercise of due diligence, have been adduced previously or that it is anything other than cumulative. *E.g., Sunshine Cordaxe Corp.*, ASBCA No. 38904, 90-1 BCA ¶ 22,572 at 113,277. In any event, we have concluded that neither Mr. Sondergaard's cited testimony, nor any other material referred to in the motion, warrants the relief requested.

Accordingly, respondent's motion to declare the contract void *ab initio* as a result of newly discovered evidence is denied.

[¶ 26,287] Swan Wooster Engineering, Inc.

AGBCA No. 89-203-1, August 13, 1993. Contract Nos. AG41scs00306, 53-0436-9-9.

Contract Disputes, Jurisdiction—Boards of Contract Appeals—Dissolved Corporations.—A board of contract appeals had jurisdiction over a dissolved corporation, which had been the contractor in connection with a contract for the design of a marina,

Digitized by Google

because the dissolved corporation continued its corporate existence for the limited purpose of discharging its liabilities. Moreover, dissolution did not prevent commencement of a proceeding by the contractor in its corporate name.

Procedure, Boards—Summary Judgment—Laches.—A contractor's motion for summary judgment based on laches was denied because the record raised disputed material facts regarding the existence of any undue government delay in connection with the repair of a defective bulkhead under a contract for architectural and engineering services in the design of a marina. The contractor asserted generalized facts and attempted to shift the burden of sorting them out to the government. It failed to prove specific prejudice or that any prejudice was proximately caused by the government's undue delay. Moreover, the record did not support the contractor's contention that elapsed time and inflation, rather than different repair methods, resulted in the price escalation.

Breach of Contract—Damages—Burden of Proof.—Under a contract for architectural and engineering services in the design of a marina, a contractor was not entitled to summary judgment of its appeal from a final decision that awarded breach of contract damages to the government for a defective bulkhead, despite the contractor's contention that the government's lack of any incurred repair costs indicated that there was no claim, because repair of the bulkhead was not a condition precedent to recouping damages. The government was required only to prove the extent of the damage.

Procedure, Boards—Parties—Privity of Contract.—Under a contract for architectural and engineering services in the design of a marina, a contractor was not entitled to summary judgment of its appeal from a final decision that held that the government was entitled to damages for a defective bulkhead, despite the contractor's contention that the government was not the real party in interest, because the government had privity with the contractor as a result of the contract between the parties. Although the port helped fund the contract, only the government and the contractor were parties to it. Neither the port nor the government was required to ignore the contractor's negligent bulkhead design and to bear the costs of repairing the flawed bulkhead. The fact that the port might benefit from the contractor's repair of the bulkhead was irrelevant. The benefit after correction would be no greater than if the contractor's initial bulkhead design were proper.

Procedure, Boards—Summary Judgment—Relevant Fact Issues.—A government motion for summary judgment on the issue of the contractor's liability for a defective bulkhead under a marina design contract was granted because there were no disputed fact issues regarding the government's contention that sand migrated from behind the bulkhead and damaged the parking lot and dry moorage building. The contractor's refutation of the government's evidence that a knowledgeable marine contractor would not have used the concrete panel tieback system that the contractor used did not present a material factual dispute. The tieback system had nothing to do with the problem regarding fill migration, and resolution of any issues regarding the tieback system was not essential to the outcome of the appeal. The board's original decision that addressed the fill migration problem and concluded that the contractor's design was negligent controlled the question of liability in the present appeal.

For the appellant: Schwabe, Williamson & Wyatt, Portland, Oregon, by Daniel F. Knox. For the government: Jim Kauble, Office of the General Counsel, U.S. Department of Agriculture, Portland, Oregon.

Before HOURY, DOHERTY, and SETO, Administrative Judges.

HOURY, Administrative Judge: This appeal arises under contracts No. AG41scs00306 and 53-0436-9-9 between the Soil Conservation Service (SCS), U. S. Department of Agriculture and Swan Wooster Engineering, Inc. (Appellant). The former contract was for architectural and engineering services to design the South Beach Marina located in Newport, Oregon. The latter contract was for architectural and engineering services to supervise construction of the marina. The marina was constructed primarily from funding contributed by the SCS and the Port of Newport (Port), Oregon.[1]

The parties were involved in related prior appeals before the Board. *Swan Wooster Eng'g*, AGBCA Nos. 83-104-1 and 83-124-1, 87-2 BCA ¶ 19,894. Appeal AGBCA No. 83-104-1 pertained to the design contract and involved 17 Government claims based upon defective design by Appellant, as follows:

1.	Manholes	$ 154.00
2.	Catchbasins	4,397.00
3.	Soldier Pile Bulkhead	
	a. Grouting	69,752.00
	b. Excavation	14,925.74
	c. Other Work	2,357.00
4.	a. Outdoor Lighting and Wiring	425.00
	b. Gangway Flexible Conduit	748.00
	c. Relocation of Light	482.00
5.	a. Water Line and Sewer Line	164.00
	b. Sewage Pump Station	3,716.00
	c. Fire Hydrant Relocation	1,487.00
6.	Fishing Pier	220.00
7.	Dry Moorage Building	
	a. Plumbing	642.00
	b. Fire Suppression System	45,743.00
8.	a. Building Shower Floors	642.00
	b. Restroom Door	1,409.00
	c. Landing Floats	11,371.00

Appeal AGBCA No. 83-124-1 pertained to the construction supervision contract and involved a $1,607 claim for alleged negligent inspection services requiring refabrication of the float guides.

Claim 3a, the most significant claim, was for grouting the soldier pile bulkhead. The bulkhead was allowing sand fill to wash out through it into the bay. The fill loss caused subsidence of the land behind the bulkhead damaging a parking lot and the dry moorage building. Grouting was ineffective and did not solve the problem. The Board held that Appellant's bulkhead design had been negligently prepared and denied Appellant's appeal. The Board also denied (at least in part) the appeals for claims 1, 3b, 3c, 4a, 4b, 5a, 5b, 5c, 6, 7a, 7b and 8b. *Swan Wooster, supra.*

Since the Board accepted the parties' agreement to bifurcate the appeals, the bulkhead claim, along with the other claims for which the appeal was denied, was remanded to the parties for negotiation of the amounts owed. No agreement was reached.

In December of 1988, an engineering study indicated that $988,750 would be needed to correct problems with the bulkhead. By Contracting Officer (CO) final decision dated May 11, 1989, the Government sought $1,129,331 in damages from Appellant because of the defective design. This figure included the $988,750, the claims set forth above which had been remanded and remained unresolved, and other damages. *(See* FF 15, below.)

Appellant filed a timely appeal. By September 1989, the Complaint, Answer and Appeal File (AF) had been filed. Since that time, the parties have filed Stipulations and Cross Motions for Summary Judgment along with supporting evidence. The latter process was completed with receipt of the Government's opposition to the Appellant's Motion on May 21, 1993.

The Government relies on Stipulation (Stip.) 20, indicating that sand migrates from behind the bulkhead into the bay and that such migration includes material from beneath the floor of the dry moorage building *(see* FF 5). The Government further relies on the Declaration of William Gunderson, P.E., that the bulkhead problems are inherent in the concrete panel tieback system used by Appellant, and on a report by a marine design firm, Peratrovich, Nottingham & Drage, Inc. (PN&D), that concludes the only practical remedy for the bulkhead problem will cost $988,750. The Government asserts there are no material facts in dispute and seeks summary judgment on these bases.

Appellant advances three reasons why it should be granted summary judgment, the first being laches. Appellant asserts that the Government conducted many studies offering far less expensive solutions to the bulkhead problem. Appellant was not advised of these studies. At the end of 1986, Appellant sold its assets, ceased doing business, maintained no offices or agents of any kind, and became defunct. Appellant asserts that the delay by the SCS has increased the cost of repairs, prejudiced Appellant's ability to defend itself because witnesses and records are simply unavailable, and precluded Appellant from bringing claims against third parties

Digitized by Google

for contribution or indemnification against contractors or subcontractors who might have been responsible for the defects.

Second, Appellant asserts that because no money has yet been spent for repairs, the SCS has no claim to bring, relying on *United Aero, Inc.*, ASBCA No. 26967, 83-1 BCA ¶ 16,268.

Finally, relying on *United States v. San Jacinto Tin Co.*, 125 U.S. 273 (1888), Appellant asserts the United States is not the real party in interest because the Government is not obligated to repair the marina. Appellant contends repair and maintenance are solely the responsibility of the Port, and that the Government lacks a stake sufficient to permit it to proceed with the claim.

FINDINGS OF FACT

1. Pursuant to 16 U.S.C. § 590a-f, the SCS is authorized to prevent soil erosion and maintain the navigability of rivers and harbors, as well as to enter into agreements and contribute money and services to accomplish these goals. In May 1977, the SCS and the Port signed an agreement known as the South Beach Marina Resource Conservation and Development Measure Plan. The plan called for construction of a breakwater protected marina on the south shore of Yaquina Bay at Newport, Oregon. The total installation cost was estimated at $7,122,600, with $2,596,700 to be funded by the SCS, $3,384,417 by the Port, $1,136,483 by the Corps of Engineers, and $5,000 by the Coast Guard. (Stip. Exhibits (Exs.), Tab S.)

In pertinent part, the plan also provided as follows:

C. *Responsibilities for Installation*

The Port of Newport will be responsible for installation of all works of improvement except for the breakwater and access channel which will be the responsibility of the Corps of Engineers and the navigation aids which will be the responsibility of the Coast Guard.

The Port of Newport will obtain the land rights for all works of improvement.

D. *Financing*

Financial assistance provided by the Soil Conservation Service described in this measure plan will be provided with RC&D funds under the authority of the Food and Agriculture Act of 1962 (Public Law 87-703) as amended, the Soil Conservation Act of 1935 (Public Law 46), and Public Law 91-343. The Corps of Engineers' assistance will be provided under authority of the 1960 River and Harbor Act, as amended. The Coast Guard's assistance will be provided as a special budget item of ongoing program authorities.

Part of the installation will be provided by the Port of Newport. The Port of Newport is legally organized under state law and has all necessary authorities to obtain and expend funds for their share of the proposed project measure costs. The local sponsors' costs for installation will be financed by a Farmers Home Administration community facility loan supported by a general obligation bond authorized by vote of the residents in the Port District. A loan application has been made to FmHA and preliminary approval received. Funds for annual payments will be obtained from user fees.

E. *Cost Sharing*

The Port will provide 50 percent of the construction and engineering services costs for all items cost-shared with the Soil Conservation Service, and 100 percent of the land rights costs. The Soil Conservation Service, with RC&D funds, will bear 50 percent of the construction costs, and 50 percent of the engineering services cost.

The Corps of Engineers will bear 73.1 percent and the Port of Newport 26.9 percent of the costs of constructing the breakwater and access channel including associated engineering and administrative costs.

The Coast Guard will pay all costs for installation of the navigational aids.

All organizations will be responsible for project administration costs which they incur on their cost-shared construction work. Since the Port of Newport does not have staff available to do the needed engineering and architectural services for those facilities cost shared with RC&D funds, they will be done by A&E contract, with the contract cost shared 50 percent each by the Port and the Soil Conservation Service. If the Corps of Engineers does work for others they will be reimbursed for the project administration costs they incur.

F. *Method of Installation*

Construction will be accomplished by competitive bid contracts. The Corps will let the contract for the breakwater, shoreline protection, and dredging. The Soil Conservation Service will, with assistance from the Port of Newport, let and administer all other contracts including an A&E

©1993, Commerce Clearing House, Inc.

Digitized by Google

contract for design and construction inspection (except for the navigation aids which will be installed by the Coast Guard with their own forces).

* * * * *

IV. OPERATION AND MAINTENANCE

The Port of Newport will be responsible for the operation and maintenance of the improvements installed, with the exception of the breakwater and access channel which will be maintained by the Corps of Engineers, and the navigational aids which will be maintained by the Coast Guard. Prior to the execution of a project agreement, an operation and maintenance agreement will be entered into between the Port of Newport and the Soil Conservation Service, and between the Port of Newport and the Corps of Engineers setting forth O&M requirements.

2. On June 21, 1977, pursuant to clause IV, Operation and Maintenance, the SCS and the Port entered into an Operation and Maintenance Agreement, which provided that the Port would operate and maintain the marina after its acceptance from the contractor at no cost to the SCS (Stip. Ex. C, clause I, II, V C).

3. On December 8, 1977, the SCS awarded contract No. AG41scs00306 to Appellant in the amount of $251,800. This contract was for design of the marina facilities. The design services were completed in 1978 (Stip. 5). On February 22, 1979, the SCS awarded contract No. 53-0436-9-9 to Appellant in the amount of $164,611.15. This contract was for resident engineering, including establishment of baseline and elevation control, inspection, testing, and other services regarding the first construction increment of the marina. Both contracts were signed by Appellant's president and the CO for SCS. The Port was not a party to the contracts, although as indicated above it provided a portion of the funding (AF AGBCA Nos. 83-104-1, 83-124-1, Contract Tabs.)

4. On January 27, 1981, the SCS accepted Appellant's design work under contract No. AG41scs00306. Construction of the marina was completed in early 1981 (Stip. 6). The construction was performed by Morse Bros., Lincoln Rede-Mix, under SCS contract No. 50-0436-0-12. Final inspection was completed February 6, 1981, with acceptance on April 7, 1981 (Stip. Ex. D, E).

5. Problems with the bulkhead became evident in a matter of weeks after the backfilling was completed. Sinkholes began appearing behind the bulkhead at the wide flange section locations. Also, sand could be seen coming through the front face of the bulkhead (AGBCA Nos. 83-104-1, 83-124-1 Transcript (Tr.) 41-42; AF #1, item 24, pictures 3-6). There were many more sinkholes than indicated by the photographs in the Appeal File, which were merely illustrative (Tr. 44-45). An excessive amount of sand was being lost and subsidence of the land behind the bulkhead was occurring (Tr. 45). An inspection report dated April 27, 1982, item 12, also indicated problems with the bulkhead (Stip. Ex. Q). The parties stipulated that sand migrates from behind the soldier pile bulkhead and that such migration includes material from beneath the floor of the dry moorage building (Stip. 20).

6. On August 31, 1982, the CO filed claims against Appellant which Appellant appealed to the Board. Appellant elected consideration under the Contract Disputes Act. (Stip. 3, 9, 10.)

7. In November 1983, the SCS at the request of the Port conducted an investigation of the bulkhead problems. The report of the investigation, dated March 1, 1984, recommended certain general measures to prevent further damage to the dry moorage building caused by subsidence due to loss of the fill material. (Stip. 11; Stip. Ex. J.) An August 1985 report by a private engineering firm, Moffatt, Nichol & Bonney, Inc. (MN&B), included seven alternative solutions, ranging from an interim grout and filter system costing $694,000 to a "maintenance only" system requiring a $75,000 one-time repair plus $29,000 every 3 years to replace lost fill (Stip. 12; Stip. Ex. K). The investigation leading to this report indicated the bulkhead wall included broken concrete panels and misplaced concrete panels that were not contained within the flanges of the pilings, and that the filter cloth did not provide a continuous filtering boundary (Stip. Ex. J, K, pages (pp.) 1, 2). Appellant asserts it was not made aware of the report, and was not aware of broken concrete panels or misaligned pilings caused by contractors who had built and installed the bulkhead.

8. In the fall of 1986, Appellant's parent corporation sold all Appellant's assets and discharged all professional and lay staff. Appellant has since been an inactive corporation, and there is no surviving corporate entity (Stip. 14).

9. By decision dated May 17, 1987, the Board, among other things, denied Appellant's appeal of the Government's soldier pile bulkhead grouting claim, concluding

Digitized by Google

that Appellant's design had been negligently prepared. *Swan Wooster, supra.* More than 5 years had elapsed between the time the appeals were filed and the Board's decision. A review of the Correspondence Files indicates that neither party prosecuted the appeals with due diligence. The parties requested cancellation of a hearing the Board had scheduled in 1984 and were unable to reschedule until 1986. Other continuances by the parties were requested and extended. But for the Board's prodding, several more years would have been needed. The parties also contemplated another claim by SCS as of July 1984. (Correspondence Files, AGBCA Nos. 83-104-1, 83-124-1.)

10. Also in May 1987, MN&B completed a Phase II, Final Design Report for the bulkhead repair which incorporated a new 10-inch concrete wall on the bay side, attached to the present wall, for an estimated cost of $423,270 (Stip. 16; Stip. Ex. N).

11. The Port paid $10,000 to the marina design firm of PN&D for an inspection of the bulkhead and an estimate for repairs. PN&D issued its report in December 1988. The firm's inspection revealed that after a period of time, the bulkhead could fail at the tieback rods and bulkhead connection, where three separate metals had been used, because this area was saline, damp, and highly corrosive.

12. PN&D's below-the-water examination of the bulkhead wall revealed that material from behind the wall was migrating through holes in the wall or filter fabric. The migration rate of the fill, estimated at 3 cubic feet-per-month, was causing top side slumping with resulting settlement damage. The proposed solution was to build a new wall, constructed of sheet pilings, on the bay side of the present bulkhead at an estimated cost of $988,750. (Stip. Ex. P; Yazbeck Declaration.)

13. The lead engineer for PN&D declared that this was the most practical and cost effective solution to the bulkhead problem and that other repair options of equal longevity would be more expensive. He also declared that the problems encountered are inherent in the "concrete panel tieback system" and that knowledgeable marine engineers would not have used this system. (Gunderson Declaration.) The lack of suitability of "soldier piles and precast concrete lagging for a marine bulkhead" was controverted by Appellant (Freas Opinion Letter, Ex. 1 to Appellant's (App.) Reply Brief).

14. By letter dated January 23, 1989, the Port filed a certified claim against the SCS in the amount of $988,750 to—repair the bulkhead wall (Ex. 2 to App. Reply Brief). The Fort does not have funds to perform the repairs without recovery (Rayburn Declaration).

15. By letter dated May 11, 1989, because of the defective design, the SCS filed a claim against Appellant in the amount of $1,129,331. Of this, $86,309 was based upon the Board's May 19, 1987 decision.[2] The balance was for new claims to correct the bulkhead problems, as set forth below:

A.	Application of the decision of liability to the claim amounts.	
	1. Manholes	$ 121.00
	3. Soldier Pile Bulkhead	
	a. Grouting	69,620.00
	c. Other work	2,357.00
	4. Electrical	
	a. Outdoor lighting wiring	131.00
	b. Gangway flexible conduit	103.00
	5. Sewer and Water	
	a. Waterline and sewer line	131.00
	b. Sewage pump station	3,593.00
	7. Dry Moorage Building	
	a. Plumbing	152.00
	b. Fire Suppression System	8,692.00
	8. Buildings	
	b. Rest room door	1,409.00
	TOTAL	$ 86,309.00

[2] Some of the amounts vary forth those set forth in the introduction because the Board denied Appellant's appeal of certain of the Government claims only in part.

©1993, Commerce Clearing House, Inc.

B.	Design of bulkhead repair works by Moffatt, Nichol & Bonney Inc.	$ 44,272.00
C.	Engineering overview report by Peratrovich, Nottingham & Drage.	$ 10,000.00
D.	Estimated cost of repairs (copy of report attached).	$ 988,750.60
	TOTAL CLAIM	$1,129,331.00

(Stip. Ex. O.)

16. Appellant's former president and former counsel received the CO's May 11, 1989 decision (Hjort Affidavit, paragraph 5; Stip. Ex. O). Appellant's former counsel is "defending this case on assignment from the errors and omissions carrier for ... (Appellant) for the periods covering the events in question in this matter" (Counsel's letter of Feb. 14, 1992, Correspondence File).

17. The Complaint, Answer and Appeal File had been submitted by September 25, 1989. By letter dated November 7, 1989, the Board advised the parties:

> This will confirm the agreements and understandings reached during the telephone conference call of November 7, 1989. The parties will attempt to achieve a comprehensive stipulation of facts and file motions for summary judgment based upon such stipulations.

More than 25 months later, by letter dated December 11, 1991, the Board stated:

> By letter dated November 7, 1989, the Board confirmed the agreements and understandings reached during a telephone conference call of November 7. Parties were to attempt to achieve a comprehensive stipulation of facts and file motions for summary judgment based upon such stipulations. The Board has yet to receive any motions for summary judgment. Therefore, the parties are requested to provide the Board a joint status report within 30 days from the receipt hereof.

By letter dated May 14, 1992, the parties filed their stipulations. Seven months later, by letter dated December 11, 1992, the Board further stated:

> The last filing of record was the May 4, 1992 letter from (Appellant's counsel). The parties were to have agreed upon a schedule for motions and briefings to present to the Board. This has not been accomplished. This appeal is the oldest inactive case on [chief judge's] docket. Please endeavor to make the required submittals as soon as possible.

DISCUSSION

Jurisdiction

Although neither party has raised a question regarding jurisdiction, the Board must assure itself that jurisdiction does in fact exist. Section 7 of the Contract Disputes Act, 41 U.S.C. § 606, provides that "the contractor" may appeal the CO's decision to the agency board of contract appeals. The Act defines the "contractor" as "a party to a Government contract other than the Government." 41 U.S.C. § 601(4).

The Board has no jurisdiction over an appeal from a subcontractor, *Erikson Air Crane Co. v. United States* [32 CCF ¶ 72,392], 731 F.2d 810 (Fed. Cir. 1984); *United States v. Johnson Controls, Inc.* [31 CCF ¶ 71,374], 713 F.2d 1541 (Fed. Cir. 1983), or an assignee. *Produce Factors Corp. v. United States* [18 CCF ¶ 81,750], 199 Ct. Cl. 572 (1972); *United California Discount Corp. v. United States* [35 CCF ¶ 75,804], 19 Cl. Ct. 504 (1990); *Twin City Shipyard and Packer River Corp. v. United States* [36 CCF ¶ 75,952], 21 Cl. Ct. 582 (1990). However, a Miller Act surety may appeal to the extent the Government improperly disbursed funds to the contractor. *Balboa Ins. Co. v. United States* [33 CCF ¶ 74,051], 775 F.2d 1158 (Fed. Cir. 1985).

Appellant was dissolved in 1986 and no longer exists as a corporate entity (FF 8). In 1989, the CO's decision was served on Appellant's former president and on Appellant's former counsel. Appellant's former counsel, who appealed the CO's decision, now represents Appellant's "errors and omissions carrier" for the periods and events in question for this appeal (FF 16).

Because Appellant no longer exists, there is a question as to whether Appellant is "the contractor" within the meaning of 41 U.S.C. § 606. The SCS contracting office and the marina are in the State of Oregon. Title 7, Chapter 60.637, *Effect of Dissolution*, of the Oregon Revised Statutes, provides in pertinent part:

> **60.637 Effect of dissolution.** (1) A dissolved corporation continues its corporate existence but may not carry on any business except that appropriate to wind up

Digitized by Google

and liquidate its business and affairs, including:

* * * * *

(c) Discharging or making provision for discharging its liabilities;

(2) Dissolution of a corporation does not:

* * * * *

(e) Prevent commencement of a proceeding by or against the corporation in its corporate name . . . .

Therefore, in accordance with applicable state law, notwithstanding its dissolution, Swan Wooster Engineering, Inc., continues its corporate existence for the limited purpose of discharging its liabilities. Moreover, dissolution does not prevent commencement of a proceeding by Appellant in its corporate name. Accordingly, under the present circumstances, we conclude Appellant, Swan Wooster Engineering, Inc., is "the contractor" for purposes of 41 U.S.C. § 606 and that the Board has jurisdiction over this appeal.

The Board's Basis for Considering the Parties' Motions for Summary Judgment

The parties seek summary judgment for their respective positions. The considerations for granting or denying summary judgment were set forth in *Stephen Owen Dickhoener*, AGBCA Nos. 85-104-1, 85-105-1, 85-1 BCA ¶17,804, where the Board stated:

> The Board's rules do not provide for summary judgment and therefore the Board looks to Federal Rule [of Civil Procedure] 56, Summary Judgment, for guidance in determining whether the Government's Motion should be granted. The last two sentences of Rule 56(e) are of particular relevance and are set forth below:
>
> When a motion for summary judgment is made and supported as provided in this rule, an adverse party may not rest upon the mere allegations or denials of his pleading, but his response, by affidavits or as otherwise provided in this rule, must set forth specific facts showing that there is a genuine issue for trial. If he does not so respond, summary judgment, if appropriate, shall be entered against him.
>
> These sentences were added by a 1963 amendment to the Rules. The Notes Of Advisory Committee On Rules are set forth below in pertinent part:
>
> The last two sentences are added to overcome a line of cases, chiefly in the Third Circuit, which has impaired the utility of the summary judgment device. A typical case is as follows: A party supports his motion for summary judgment by affidavits or other evidentiary matter sufficient to show that there is no genuine issue as to a material fact. The adverse party, in opposing the motion, does not produce any evidentiary matter, or produces some but not enough to establish that there is a genuine issue for trial. Instead, the adverse party rests on averments of his pleadings which on their face present an issue. In this situation Third Circuit cases have taken the view that summary judgment must be denied at least if the averments are "well pleaded," and not supposititious, conclusory, or ultimate.

The Board's procedure differs from the Federal Procedure in that the Board's procedure permits submission of the Appeal File and consideration of its contents as evidence during the pleading stage of the proceeding, thereby obviating the need to some extent for the parties to develop a record upon which the Board will base its ruling. In order to deny the Government's Motion under Rule 56(e), there must be relevant facts which are not only controverted but which have at least some reasonable probability of proof, not merely a possibility of proof. To hold otherwise would limit the granting of summary judgment to appeals that can be decided purely as a matter of law. This is contrary to the intent of the amendments to Rule 56(e). As was stated in *Donnelly v. Guion*, 467 F.2d 290, 293 (2d Cir., 1972):

> A party opposing a motion for summary judgment simply cannot make a secret of his evidence until the trial, for in doing so he risks the possibility that there will be no trial. Summary judgment motion is intended to "smoke out" the facts so that the judge can decide if anything remains to be tried.

In *Anderson v. Liberty Lobby*, 477 U.S. 242 at 248-252, the Court held only disputes over facts that might affect the outcome of the suit . . . will properly preclude the entry of summary judgment (at 248) . . . There is no issue for trial unless there is sufficient evidence favoring the nonmoving party for a jury to return a verdict for that party. If the evidence is merely colorable, or is not significantly probative, summary judgment may be granted. (249-250.) If reasonable minds could differ as to the import of the evidence, however, a verdict should not be directed (250-251) . . . The mere existence of a scintilla of evidence in support of the [nonmovants'] position will be insufficient. There

©1993, Commerce Clearing House, Inc.

Digitized by Google

must be evidence on which a jury could find for the [nonmovant]. (252.)

Appellant's Motion for Summary Judgment: Laches

Relying on *Travelers Indemnity Co. v. United States* [35 CCF ¶ 75,607], 16 Cl. Ct. 142, 154 (1988), the parties agree that the defense of laches is available to either party. However, the parties disagree whether the present facts allow the Board to conclude that laches exists. In order to prevail, Appellant must show undue prejudice stemming from unreasonable delay. *Id.* Conversely, if liability was not increased and litigation no more difficult than if the claim had been brought earlier, there is no prejudice. *Cornetta v. United States*, 851 F.2d 1372 (Fed. Cir. 1988); *Aukerman Co. v. R.L. Chaides Constr. Co.*, 960 F.2d 1020, 1032 (Fed. Cir. 1992).

Appellant asserts prejudice claiming:

> A problem which might have been fixed for something in the neighborhood of $350,000 in 1984 or 1985 has allegedly escalated now to a full million dollars. [H]ad these claims been made earlier, [Appellant] ... might have been able to bring third-party claims or claims for contribution or indemnity against the contractors who, as noted in the government's own engineering reports [FF 8], evidently were responsible for manufacturing, construction and installation defects ... [A]ll the issues might have been resolved in a single hearing, presumably 7 years ago ... The active engineering staff once available to a thriving [Appellant] no longer exist ... [and] is not available for defense of the claims. Finally, consider that the owner of this project is ... the Port of Newport, not the SCS. The [Port] might have brought suit against [Appellant] ... [b]ut by 1989 ... the [Port's] right ... had long expired. The statute of limitations completely barred the real owner from bringing any claim. Why, then, should the SCS be permitted to bring a claim that the actual owner and operator of the marina cannot bring?

(App. Motion for Summary Judgment, pp. 11-12.)

Appellant's Motion based upon laches is on inherently weak ground because laches by its very nature retires the evaluation and weighing of the evidence prior to concluding whether laches exists. Moreover, Appellant has not helped its cause because Appellant has not asserted or cited specific facts supporting a conclusion of undue delay by the Government. Rather, Appellant has asserted generalized facts and has attempted to shift the burden of sorting them out to the Board. Finally, Appellant has not adequately proven specific prejudice or that any prejudice asserted was proximately caused by the Government's undue delay.

The evidence indicates that the Government was aware of the defective bulkhead in April 1982 (FF 5). A claim for an aborted attempt to repair the bulkhead by grouting was filed against Appellant in August 1982. Delay by the parties was the cause for the more than 5-year period between the time the appeal was filed and the time the Board rendered its decision denying Appellant's claim on the bulkhead (FF 9). Appellant has not proven or even alleged that any of the delay was Government-caused.

After receiving a detailed study to repair the bulkhead for $988,750 in December 1988 (FF 11), the Government filed a claim against Appellant in May 1989 (FF 15). Delay by the parties was the cause of the 4-year time period taken to process the present appeal (FF 17). Again, Appellant has not proven or even alleged that any of the delay was Government-caused.

There were 7 years between the time SCS was aware of the defective bulkhead in April 1982 and the time the present appeal was filed in May 1989. However, Appellant ceased doing business in the fall of 1986 (FF 8), and four studies were conducted thereafter (FF 7, 10, 11, 12). We are not in a position to conclude as a matter of law based upon the record before us that there was undue delay.

Appellant attributes for the escalation in the cost of repairing the bulkhead from $350,000 to a "full million dollars" to the elapsed time between 1984 or 1985 and 1989. Even a cursory review of the studies indicates that the disparate cost may be due to different methods proposed to repair the wall, rather than inflation. We cannot conclude based upon the present record that the 4 or 5-year time period was responsible for the price escalation.

Appellant asserts an inability to bring third-party claims because of the alleged long delay by the Government. Appellant's liability is based upon negligent design, not negligent construction supervision. Appellant has not specified which third-party claim could be brought against whom, or for what. In any event, Appellant was awarded a contract for resident engineering including inspection and test of the first construction

Digitized by Google

increment of the marina (FF 3). Accordingly, there is a strong presumption that Appellant should have been aware of the manufacturing, construction and installation defects of the construction contractor and the subcontractors. We cannot conclude based upon the present record that Appellant has shown any prejudice.

The fact that "all the issues might have been resolved in a single hearing, presumably seven years ago," does not entitle Appellant to have its Motion sustained. Appellant must show that liability has increased and litigation made more difficult as a consequence of undue delay. *Cornetta v. United States, supra; Aukerman Co. v. R.L. Chaides Constr. Co., supra.* Appellant has not done so. Appellant asserts that it's engineering staff is no longer available to defend against claims. Again, Appellant has not shown undue Government delay, or that such delay was the proximate cause of the dissolution of Appellant.

Appellant asserts that because the Port can no longer sue Appellant because of the statute of limitations (an asserted fact not in evidence) that SCS should not be allowed to recover from Appellant. The viability of the Port's right to sue Appellant is irrelevant to SCS's right to claim damages under the Contract Disputes Act. The Port has no privity with Appellant. The SCS has privity with Appellant as a consequence of the contracts between the parties (FF 3), and can therefore maintain the present action.

In conclusion, Appellant has failed to adequately make a *prima facie* case for undue delay or that such delay was the proximate cause of prejudice to Appellant. Even if Appellant had made such a case, the record indicates disputed material facts which preclude granting Appellant's Motion for Summary Judgment on the basis of laches.

Appellant's Motion for Summary Judgment: The Government Has No Claim

Appellant, relying on *United Aero, Inc., supra.* asserts "Because no money has been spent on repairs, there is no claim to bring." We agree with the Government's position that the facts in *United Aero* are readily distinguishable from those in the present appeal.

United Aero involved a Government claim for the excess cost of reprocurement. It is settled law that the reprocurement contract must be completed and paid for prior to the Government's being entitled to recoup the excess costs. Under the present appeal, the damages are based upon breach of contract, and recovery is predicated on proof of damages. There is no requirement that the SCS repair the bulkhead as a condition precedent to recouping damages. The SCS need only adequately prove the extent of the damage.

Accordingly, we also deny Appellant's Motion for Summary Judgment on the basis that the Government has not incurred the costs of repair.

Appellant's Motion for Summary Judgment: The United States Is Not the Real Party in Interest

Appellant relies on *United States v. San Jacinto Tin Co., supra,* contending that the Government is not the real party in interest and may not collect from Appellant. In *San Jacinto,* the United States attempted to set aside a conveyance of land which had ultimately found its way to San Jacinto. San Jacinto asserted that since the Government would acquire no interest in the land, even if successful, the United States could not maintain the cause of action. The Court held that:

> If there does not appear any obligation on the part of the United States to the public, or to any individual, or any interest of its own, it can no more sustain such an action than any private person.

Appellant asserts that maintenance and repair are solely and exclusively the responsibility of the Port *(see* FF 1, 2). The operation and maintenance agreement relied upon by Appellant imposes a duty on the Port to operate and maintain the marina bulkhead without cost to the Government. However, the agreement does not require the Port or the SCS to bear increased and extraordinary operating and maintenance expenses arising as a direct consequence of a flawed marina bulkhead, in turn resulting from Appellant's negligent design. Appellant's position would require the Port and/or SCS to ignore Appellant's negligent design and bear the cost of restoring the marina bulkhead and the buildings it supported as operation and maintenance expenses. Nothing in the operation and maintenance agreement requires such a result.

Moreover, unlike *San Jacinto,* where the Government lacked privity with the defendant, the Government has privity with Appellant as a result of the contract between the parties. Although the Port helped fund the contract, only the SCS and Appellant were parties to it (FF 3).

Appellant did not question the source of funding when it was paid to design the ma-

©1993, Commerce Clearing House, Inc.

Digitized by Google

rina under its contract with the SCS. The fact that the Port may benefit from Appellant's repair of the bulkhead is irrelevant. Indeed, the Port's benefit after correction of the bulkhead will be no greater than if the bulkhead had been properly designed by Appellant in the first instance.

Also, unlike *San Jacinto,* the Government here has an obligation to the Port and to the public to carry out its statutorily mandated obligation to prevent soil erosion and maintain the navigability of rivers and harbors (FF 1). The SCS attempted to carry out these obligations through the agreements with the Port and through the contracts with Appellant. Appellant's contract performance was unsatisfactory, and the SCS is simply enforcing its contract rights, as it is both authorized (and obligated) to do under the Contract Disputes Act.

We deny Appellant's Motion for Summary Judgment on the basis that the Government is not the real party in interest.

The Government's Motion for Summary Judgment

Liability

The Government, citing *Celotex Corp. v. Catrett,* 477 U.S. 317 (1986), recognizes that the moving party has the initial burden of establishing recovery and an absence of any genuine issue of material fact. The Government asserts it has met this burden by Stipulation 20 which establishes that sand fill was migrating from behind the bulkhead and causing damage to the parking lot and dry moorage building (FF 5).

The Government provided evidence that the concrete panel tieback system used by Appellant would not have been used by knowledgeable marine engineers. Appellant refuted this evidence. (FF 13.) This is not a material factual dispute because it is not essential to the outcome of the appeal. *Anderson v. Liberty, supra.* While the tieback system might reduce the useful life of the bulkhead because of the corrosion, the design has nothing to do with the present problem pertaining to fill migrating from behind the bulkhead causing subsidence (FF 11, 12).

The fill migration problem was addressed by the Board in its original decision, which stated:

> *Claim 3(a)—Soldier Pile Bulkhead—Grouting ($69,752)*
>
> The facts pertaining to this claim are adequately set forth in the Findings and will not be repeated here. The filter cloth was the proverbial "Achilles Tendon" of the bulkhead and the structures and adjacent area which relied on the bulkhead to keep back the water and to prevent a subsidence of the land behind the bulkhead. The filter cloth was supposed to keep the sandfill from passing through the filter cloth because of tide and wave action. The filter cloth specified was suitable for such a purpose. Nevertheless sandfill was lost and ground subsidence behind the bulkhead did occur. The filter cloth, because of gaps and/or tears, did not fully cover the underwater portion of the bulkhead, and that the substantial portion of the sandfill loss occurred in these areas, particularly in the WF sections (FF 1, 2, 4, 5-7).
>
> Notwithstanding the importance of the filter cloth and its installation, there was only one short note on one drawing in all the plans and specifications that referred to it. Taken literally, the note only required application of the cloth to the concrete filler panel portions of the bulkhead. It did not require application to the WF sections or indicate it should be tucked in and around the WF sections to form a continuous barrier to prevent the loss of the sandfill (FF 1). The testimony of the Government expert corroborates the fact that Appellant should have provided more detail and should have been more explicit with the design of the filter cloth installation (FF 1, 9).
>
> Contrary to Appellant's position, we do not find that a delay in the award of the construction contract was the cause of the problems with the filter cloth. Indeed, the evidence does not establish that a delay occurred in that the award of the construction contract occurred within the initial 60-day period set forth in the bid package as the time within which the award would be made (FF 8).
>
> Appellant alleges that the design was adequate and that any knowledgeable marine construction contractor should have known the purpose of the filter cloth and the fact that it should have fully covered the underwater portion of the bulkhead including the WF sections. On this issue we agree with the testimony of the Government's expert that construction by even a knowledgeable marine construction contractor does not relieve the A&E of the responsibility to provide adequate specifications (FF 9). Further, Appellant, under the follow-on contract between the parties, supervised the construction contractor's installation of the filter cloth (FF 5). It is apparent that it was not possible to

Digitized by Google

install the cloth tucked around the WF sections and have enough cloth left to overlap with the next section (FF 5-7). There were several different methods for installing the cloth. However, neither the method of installation nor any special care or warnings with respect to the installation were provided by the design.

We conclude that the specifications relating to the design of the bulkhead were defective because they were not specific or detailed enough to indicate an application or installation of the filter cloth which would adequately retain the sandfill against erosion because of tide or wave action. Indeed, the design contained so little detail and specificity that insistence by the Government on a proper application or installation could have been construed as a direction under the Changes clause of the construction contract entitling the construction contractor to additional compensation and time to perform the changed work. We conclude the level of care for this aspect of the design was less than the degree of ordinary and reasonable care, skill and diligence which would be expected from an average member of the profession. On this basis we conclude that Appellant's design was negligent.

(*Swan Wooster, supra.*)

This decision is *res judicata* on the question of Appellant's negligence pertaining to the defective bulkhead design and the resulting fill migration and parking lot and building subsidence. Accordingly, this holding controls the question of liability in the present appeal. We grant the Government's Motion for Summary Judgment, but only on the issue of Appellant's liability.

Costs

The Government seeks $1,129,331 in damages including $988,750 to repair the bulkhead wall by constructing a new wall of sheet pilings on the bay side of the present bulkhead (FF 12, 13, 15). The parties are of the opinion that if they can resolve the bulkhead damages issue, they can resolve the other damages, which are minor by comparison.

Notwithstanding the opinion of the lead engineer, who states that the repair solution offered is the most practical and cost effective, a review of the record indicates other less expensive solutions may be available (FF 7, 10, 13). The record has not been fully developed on this issue.

While we have denied Appellant's Motion for Summary Judgment based on laches, it is not out of the question that there was delay by the SCS that increased the costs to repair the bulkhead in a quantifiable amount. If so, the recovery by SCS could be reduced.

Finally, the parties could agree to offset the costs of the failed attempt to repair the wall by grouting, or a portion of such costs, against a recovery based upon the present appeal. Accordingly, we reserve ruling on the question of costs.

RULING

Appellant's Motions for Summary Judgment are denied. The Government's Motion is granted as to liability only, since there are questions of fact affecting the outcome of any recovery of costs. The appeal is remanded to the parties for a period of 30 days for purposes of effecting a settlement. The parties shall advise the Board no later than 30 days regarding the status of their negotiations. If settlement is not achieved within 30 days, the Board will set a date for hearing limited to the question of damages.

[¶ 26,288] Solar Foam Insulation

ASBCA No. 46278, August 6, 1993. Contract No. NAS9-18546.

Contract Disputes, Claims—Submission to Contracting Officer—Claim Not Presented.—A board of contract appeals lacked jurisdiction to decide a roofing contractor's claims for unilateral mistake in bid and inadequate bid verification because the contractor raised its claims for the first time in its complaint. The portion of the contractor's appeal relating to mistake in bid was dismissed without prejudice to the subsequent filing of a proper claim with the contracting officer.

Modifications—Bar to Claims—Accord and Satisfaction.—A roofing contractor's claims for an equitable adjustment were not barred by accord and satisfaction, because the government raised the defense for the first time in its final prehearing actions, rather than

©1993, Commerce Clearing House, Inc.

Digitized by Google

as an affirmative defense in its answer. The government also failed to meet its burden of proving the elements of an effective accord and satisfaction.

Acceleration Claims—Government Pressure—Proof.—A contractor was not entitled to an equitable adjustment for the costs of increasing its crew size allegedly as a result of directions to accelerate performance of a roofing contract, because the contractor increased its crew size before receiving the acceleration directive. The contractor did not show that it increased crew size as a result of any verbal directions or in anticipation of the written directive. Moreover, the contractor did not actually accelerate work after receiving the directive.

For the appellant: Sullivan & Worcester, Washington, D.C., by Richard D. Lieberman. For the government: Harold B. Dantone, Office of Counsel, Johnson Space Center, Houston, Texas.

Before TODD, RUBERRY, and RIISMANDEL, Administrative Judges.

TODD, Administrative Judge: This appeal arises from the denial of a claim for increased costs incurred in the performance of a roofing contract at the Johnson Space Center of the National Aeronautics and Space Administration (NASA). Appellant seeks an equitable adjustment of $107,291.85 for an alleged direction to increase crew size, or reformation of the Contract on the ground of mistake in bid. A one-day hearing was held. Only entitlement is before us for decision.

FINDINGS OF FACT

1. On April 10, 1991, NASA issued Solicitation No. IFB 9BG3-15-1-9B (the RFP) for roofing repair work on two buildings at NASA's Johnson Space Center in Houston, Texas. The statement of work provided for the removal of existing roofing material and replacement with a built up roofing system. (R4, tab 1) The RFP included precipitation information in the clause, "52.236-4 PHYSICAL DATA (APR 1984)," which stated in pertinent part:

(b) Weather conditions

The weather conditions at the site of the work are approximately as listed below, but each bidder should satisfy himself before submitting his bid as to the hazards likely to arise from weather conditions .... Following summary in Table I is from Houston Hobby Airport from 1930 until the weather station moved in 1969. For the purpose of determining average weather conditions at the Johnson Space Center, this data is used. (R4, tab 1, p. I-16) Table I, referred to as the "weather chart" showed by month the inches of rain recorded and stated the average number of days with 0.01 inch or more, which thus specified 63 "rain days" normal for the anticipated six-month period of performance July 1991 to January 1992 (R4, tab 1, at I-17).

2. Appellant's bid was prepared and signed by Ralph Overturf, Manager, Government Contracts (R4, tab 1; tr. 29, 60, 134). Mr. Overturf had thirty years experience in built-up roofing, the specialized type of roofing work called for in the subject RFP (tr. 29-30). A built-up roofing system consists of multiple barriers of glass felt which are mopped with hot asphalt, covered with insulation installed with hot asphalt and then covered by four more plies of glass felt laminated with asphalt between each ply (tr. 67). Before preparing this bid Mr. Overturf had worked for appellant two to three months organizing his office and bidding 10-15 other jobs. None of these jobs were awarded because appellant was not the low bidder. (Tr. 50) Appellant did not have experience in installing built-up roofing before hiring Mr. Overturf (tr. 88, 183, 257).

3. The amount of appellant's bid was $276,598, including $128,722 stated in the bid for Material and $147,876 for Other (R4, tab 1). Appellant believes it was mistaken in the amounts included for labor in the Other category. Wally Scoggins, appellant's president, made a review of the estimate and found items were omitted (tr. 82). The results of this review, which was made in August 1992, were forwarded to appellant's counsel in this appeal, by letter dated August 17, 1992 (app. exh. 1). Appellant identified items apparently left out of the estimate as equipment, supervision, fuel, inspection fees, warranty fees, sod replacement, general liability insurance, bond, and overhead in a total amount of $92,531 (*id.*). Mr. Overturf did not, in estimating the number of manhours that would be required, take into consideration the anticipated number of rain days stated in the weather chart in the RFP (tr. 30, 48-49, 52). During performance of the

Digitized by Google

contract, Mr. Overturf did not identify to the Government any mistakes in the bid.

4. At the bid opening on May 17, 1991, the amounts bid were as follows:

BIDDER	TOTAL	MATERIAL	OTHER
Elder Roof Syst.	$390,267	$109,000	$281,267
F.W. Walton, Inc.	421,757	125,757	296,000
Solar Foam Insulation	276,598	128,722	147,876

The Government estimate was $413,725. (R4, tab 30) Only the total amounts bid are shown on the bid abstract (R4, tab 5). At the bid opening, which was attended by Mr. Overturf, only the total amounts bid were read (R4, tab 30; tr. 31-32, 47-48).

5. Stephen C. Cleland, the contracting officer who signed the letter requesting bid verification, was concerned about the discrepancy in the total costs bid (tr. 130, 242-43). A contract specialist prepared the letter on the day of the bid opening according to normal procedures and using a standard format (tr. 130, 162, 235, 243, 252). Mr. Cleland was responsible for reviewing the component parts of the bid to determine why there was a discrepancy, but did not do so. He relied on staff support without making his own evaluation, instructing how his staff was to make an evaluation, or checking the accuracy of the letter before he signed it (tr. 244, 252-53). The Government made a significant error in the letter, dated May 17, 1991, sent to appellant requesting bid verification in stating that the difference between appellant's bid and the next low bid was $32,669, and the difference between that bid and the Government estimate was $137,127 (R4, tab 7). The actual difference between bids was $113,669 (R4, tab 5). There was no statement in the letter of why the Government believed there was a discrepancy. The categories of costs bid shown in finding 4 above were not stated (R4, tab 7). The mistake was not intentional, and Mr. Cleland was not aware that the numbers were incorrect when he signed the bid verification letter (tr. 132-33, 236). The contracting officer did not later correct the mistake and ask appellant to reverify its bid (tr. 245-46).

6. Appellant verified its bid after review of Mr. Overturf's take-off sheets by letter, dated 30 May 1991, to the contracting officer (R4, tab 7, tr. 33-34, 51, 80-81).

7. On June 13, 1991, the Government met with appellant to assess appellant's ability to perform the Contract. Mr. Overturf represented appellant and the Government representatives were Mr. Cleland, Ronald Stone, Richard Clingan, Bill Roeh, Vincent Johnson, and Charles Lauritzen (tr. 27-28). Mr. Overturf did not remember being told that appellant's bid was more than $100,000 lower than the next low bidder, but there was discussion at the meeting that appellant's bid was low by over $100,000 (tr. 56, 148, 165A-166, 171, 185-87, 223, 253, 259, 273). The Government understood that appellant wanted this contract to establish a history of working with NASA in built-up roofing (tr. 177, 186, 223, 260). Appellant did not bid for a loss or attempt to buy in (tr. 39, 159).

8. On June 24, 1991, contract No. NAS9-18546 (the contract) was awarded by the Government to appellant in the amount of $276,598. The contractor was required to complete the project not later than 180 calendar days after the receipt of the notice to proceed. (R4, tab 1, at 2, F-1). On 24 June 1991, George M. Moran, the contracting officer reassigned to the contract, issued a notice to proceed. The notice stated that changes affecting the drawings, specifications, or other terms of the contract could be effected only upon the written order of the contracting officer or his duly appointed representative (R4, tab 15).

9. Appellant could not work on some days because of rain (R4, tab 12; tr. 75, 138). If there was a chance of rain, decisions were made on a daily basis whether or not to work in discussions with Mr. Luther Keefer, one of the Government inspectors. They considered the weather reports and observed how cloudy conditions were. Brian Collins, appellant's superintendent on the job, was responsible for deciding not to work based on a chance of rain. (Tr. 113, 122)

10. There was conflicting testimony at the hearing as to whether appellant was prevented by any Government representatives from working when there was a thirty percent or more chance of rain. Appellant's witnesses testified that there was a rule to this effect (tr. 43-44, 75-79, 291-94; app. exh. 2). There is no contemporaneous reference in the Government logs or diaries to such a standard (R4, tabs 11, 12; tr. 99, 112, 194, 272). Appellant did not make any complaints about being prevented from working (tr. 87-88, 194, 271-72). Appellant did not refer to this issue in writing in any of its claims for weather delays (R4, tabs 23 through 26).

©1993, Commerce Clearing House, Inc.

Digitized by Google

Although it was important that roofing not be torn off when the building would be exposed and the inside could be damaged by rain, Government witnesses did not testify to any "30% chance of rain" rule or actions that could have interfered with appellant's job performance (tr. 79, 87, 111, 138, 145, 193, 271). Based on our review of the documentary record and an assessment of the witnesses' credibility, we find that appellant was not prevented by any Government representatives from working when there was a thirty percent or more chance of rain.

11. Appellant's witnesses who testified that verbal directives were given to appellant to increase manning were not persuasive (tr. 74, 294). Mr. Overturf did not remember being told to increase crew size (tr. 43, 60). Mr. Collins, who was subpoenaed to testify but did not appear at the hearing, in his deposition stated that appellant was directed by Mr. Keefer, and Richard Clingan later verified that appellant was required to hire more people (app. exh. 2; tr. 105, 120-21, 136). Messrs. Keefer and Clingan were both inspectors employed by Brown & Root to provide services for this Contract (tr. 106, 254-55). Mr. Keefer did not have authority to issue a directive to increase manning and did not do so (tr. 109-10, 121). Mr. Clingan also was without authority to direct increased manning and did not issue such a directive (tr. 261, 266). Based on an assessment of the witnesses' credibility, we find that appellant was not directed to increase manning by the Government inspectors.

12. Beginning 26 August 1991, appellant requested extensions for 25 days during the period from 16 July to 19 September 1991, on the ground of excusable delay for weather when the roofing crew could not work because of rain (R4, tabs 19, 20, 22; tr. 39). By Modification No. 1 to the contract, dated 9 December 1991, the Government extended the contract completion date by eight days that were additional to the rain days allowed in the contract for July, August and September (*ibid.*; R4, tab 2).

13. As of 29 August 1991, appellant increased the size of its crew. The Government log shows the number of employees on the job on given days increasing from a maximum of 12 to between 21 and 32 on most days worked up to 23 October 1991. There were no changes in the numbers after 19 September 1991. (R4, tab 12) There was inefficiency with increasing the number of persons working on the job by approximately doubling the size of the crew (tr. 86, 197, 266, 294).

14. Other causes of inefficiencies were the inexperience and lack of training of the crew, poor supervision, lack of teamwork and coordination, and lack of quality control (tr. 88, 115-17, 125-27, 139, 191, 197-203, 225, 262-65, 275). The finished project was of acceptable, if not superior quality (tr. 117, 190).

15. On 17 September 1991, Ronald Stone, the contracting officer's technical representative responsible for inspection of appellant's work, sent a letter to appellant stating that its rate of progress on the Contract was not acceptable. The letter said that appellant's performance was approximately 20 percent behind its approved schedule of 50 percent and directed submission of a revised progress schedule showing all steps necessary to "regain the agreed rate of progress." (R4, tab 16) Mr. Stone did not take into account that appellant had requested extensions for weather delays when he determined the contractor was behind schedule (tr. 211, 277-79). Mr. Stone signed the letter as "Authorized Representative of the Contracting Officer" and had authority to issue a change in contract terms (R4, tab 16; tr. 136, 158, 212, 261). The letter was received by appellant on 19 September 1991 (R4, tab 16).

16. In response to the letter, appellant submitted a revised progress schedule, but Mr. Stone had no recollection of its receipt (tr. 49, 268). The schedule could not be found by either party (tr. 63). The Government expected a response in the form of a schedule submission (tr. 137, 195-96). The letter did not specify the method that should be used to expedite the job (tr. 120, 136, 196). Appellant interpreted the letter as requiring an increase in productivity by increasing the crew size (tr. 43, 93). Appellant did not make complaints about any directive to increase manning (tr. 110, 145, 197-98, 266).

17. The total number of days requested by appellant for weather delays was 138 (R4, tab 30). By modifications to the contract, the Government granted a total of 71 days of time extensions for weather delays (R4, tabs 2, 30). Appellant understood that the grant of extensions was for those days in excess of the anticipated number of rain days shown in the weather chart in the contract (tr. 102, 193, 267-68).

18. On 25 February 1992, the Government took beneficial occupancy of the buildings repaired under the contract (R4, tab 17).

19. On 15 April 1992, appellant submitted a claim for additional funds based on alleged

Digitized by Google

written direction to increase crew size when the job was not behind schedule and being prevented from work on the project when there was a thirty percent chance of rain or greater. By letter dated April 23, 1992, the contracting officer returned the claim with no action taken because the claim did not meet requirements of certain clauses of the Federal Acquisition Regulation, copies of which were enclosed for appellant's information. The letter referenced meetings held to discuss appellant's low bid and stated that appellant was asked to verify its bid because of the Government's concern that a mistake may have been made in the bid. (R4, tab 9)

20. By letter dated 11 May 1992, appellant submitted a certified claim in the amount of $107,291.85 for increased labor costs, overhead and profit resulting from a Government direction to make adjustments to bring the contractor's progress back on schedule. The letter stated that appellant was not behind schedule because there were weather delays for which extensions of time were later granted. Appellant claimed that it had increased its crew size in response to the direction. (R4, tab 13)

21. The contracting officer's final decision, dated 16 July 1992, denied the claim on the grounds that no Government personnel directed an increase in manning and appellant did not increase its job manning numbers. The decision included a history of contract events that stated the circumstances of bid verification and that no mistake in bid had been made by appellant. (R4, tab 14)

22. On 23 July 1992, appellant filed its notice of appeal to initiate these proceedings at the NASA Board of Contract Appeals. The appeal was docketed NASA BCA No. 77-0792 prior to the merger of the NASA BCA and ASBCA that was effective 12 July 1993.

23. In its complaint appellant, filing *pro se*, alleged entitlement to compensation for weather associated losses from directives to increase crew size and not tear off any existing roofing material if the chance of rain exceeded 30 percent. Appellant also alleged in the complaint that it had been fraudulently misled by the contracting officer concerning the disparity of bids.

DECISION

We have considered whether we have jurisdiction to decide appellant's claim for unilateral mistake in bid and inadequate bid verification, which was not presented by appellant until it made allegations in its complaint. Contractor claims against the Government must be submitted in the first instance to the contracting officer for decision. Contract Disputes Act (CDA), 41 U.S.C. § 605(a). The proper scope of an appeal process under the CDA is circumscribed by the parameters of the claim, the contracting officer's decision thereon, and the contractor's appeal therefrom. *Service Engineering Company*, ASBCA No. 40274, 93-1 BCA ¶ 25,520, at 127,126; *Stencel Aero Engineering Corp.*, ASBCA No. 28654, 84-1 BCA ¶ 16,951, at 84,315. Since appellant's claim that it was misled by the Government's bid verification request was never submitted to the contracting officer for decision, we have no jurisdiction to decide the claim.

The portion of the appeal relating to mistake in bid is, therefore, dismissed without prejudice to the subsequent filing of a proper claim with the contracting officer.

In its final prehearing actions the Government raised for the first time the defense of accord and satisfaction stating that Modifications 1, 2, and 3 to the Contract contained release language which covered a minimum period from 16 July 1991 to 27 December 1991. The Government is obligated to raise accord and satisfaction as an affirmative defense in its answer. Rule 6(b); *Brooks Lumber Company*, ASBCA No. 40743, 92-1 BCA ¶ 24,572.* Appellant made a motion at the hearing to strike the defense, and we deferred ruling until issuance of this opinion. We cannot accept the defense of accord and satisfaction because it should have been raised earlier, and the Government has failed to meet its burden of proving the elements of an effective accord and satisfaction. *Infotec Development, Inc.*, ASBCA Nos. 31809, 32235, 91-2 BCA ¶ 23,909. The Government provided no briefing on the point stating that the defense was not relevant because it relates only to quantum. We have no basis to consider whether the accord and satisfaction doctrine applies to the modifications in this appeal and conclude that the doctrine is not a bar to appellant's claims.

*The Memorandum of Agreement, dated June 28, 1993, for merger of the NASA BCA and the ASBCA provides that NASA appeals will be decided using the rules, regulations, and procedures applicable to the operation of the ASBCA. The NASA BCA Rule was substantially the same as this ASBCA Rule. 14 C.F.R. § 1241.106(b).

C.L. Fairley Construction Co., Inc., ASBCA No. 32581, 90-2 BCA ¶ 22,665.

In order to receive compensation from the Government for increased costs resulting from acceleration, a contractor must generally establish (a) the existence of excusable delay, (b) contractor notice to the Government of the excusable delay and a request for a performance time extension, and (c) an express or implied Government order to overcome the excusable delay or to complete performance by a date earlier than that by which the contractor was entitled to perform due to the excusable delay. *Intermax, Ltd.*, ASBCA No. 41828, 93-2 BCA ¶ 25,699; *Trepte Constr. Co., Inc.*, ASBCA No. 38555, 90-1 BCA ¶ 22,595. An additional essential element of a successful acceleration claim is actual acceleration of the work. *T.H. Taylor, Inc.*, ASBCA No. 27699, 86-2 BCA ¶ 18,743, and cases cited therein.

We have considered whether the required elements are present here. The Government found excusable delay due to the weather and granted extensions of time for days prior to the issuance of Mr. Stone's letter on 17 September 1991. Appellant had experienced weather days and requested time extensions, but the Government did not grant the extensions until the first modification to the contract in December 1991. It was reasonable to interpret Mr. Stone's statement to provide schedule information that would "regain the agreed rate of progress" as an acceleration directive. The Government was requiring the contractor to complete performance in less time than would have been available had the time extensions been considered.

However, appellant had increased its crew size before receiving the directive, and we have not found that any changes were made in response to the letter (finding 13). There is no evidence that actions to increase crew size were taken by appellant as a result of any authorized verbal direction or in anticipation of the directive as appellant has alleged (finding 11). Appellant did not actually accelerate the work after receiving the Ron Stone letter and has not, therefore established its entitlement to an equitable adjustment.

Appellant also claims it was prevented from performance by the Government's application of the "30 percent chance of rain" rule. Appellant has failed to sustain its burden of proof with documentary evidence of Government interference with its performance or sufficient credible evidence from witnesses that there was such a rule and, accordingly, we deny this claim.

With the exception of the claim dismissed for lack of jurisdiction, the appeal is otherwise denied.

[¶ 26,289] Franklin L. Hassell

ASBCA No. 45242-697, August 16, 1993. Contract No. N00181-90-C-0152.

Contract Disputes, Claims—Quantification—Sum Certain.—Under a contract for civilian employee assistance services, a contractor's request for an order directing the contracting officer to issue a decision was denied because the contractor's previous letter requesting interpretation of a contract term was not a properly quantified monetary claim in a sum certain. Although the contractor attempted to present a monetary complaint as a dispute over contract interpretation, the essence of the disagreement was monetary.

For the appellant: Holmes & Edmonds, Virginia Beach, Virginia, by Doris L. Edmonds. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Robert E. Lieblich, Trial Attorney, Naval Sea Systems Command, Washington, D.C.

Before RUBERRY, SPECTOR, and STEMPLER, Administrative Judges.

RUBERRY, Administrative Judge: The contractor has filed a Rule 1(e) request for an order directing the contracting officer to render a decision on a "claim" filed with the contracting officer. The Government objects, arguing that the contractor has not filed a claim cognizable under the Contract Disputes Act, 41 U.S.C. § § 601-613 (CDA).

On 20 September 1990 the Norfolk Naval Shipyard (NNSY) awarded contract No. N00181-90-C-0152 for civilian employee assistance services with the contractor, Franklin L. Hassell. The contract was awarded for a base year with options for second and third years. The contract incorporated by reference the FAR 52.233-1 Disputes clause. In a letter dated 8 August 1991, the contractor

Digitized by Google

was informed by the contracting officer that the Government did not intend to exercise the second year option under the contract.

On 18 September 1991, the contractor protested the Government's failure to award him the option years. It stated, in part, as follows:

> I am filing a protest in reference to your inability to award me the option years. Please be advised that during my initial submission of the bid packet, the other bidders had the option to bid on the option years. Further, they were aware that the RFP specifically indicated that they include the prices for those years. Surely, I was not the only bidder who submitted option year data.
>
> I am further requesting that the specific acquisition regulations that require synopsis and evaluation of options prior to the award be forwarded to my office.

No CDA certification accompanied this letter.

The Government asserts that the contractor's letter of 18 September 1991 is insufficient as a claim because if it is a monetary claim, he failed to state a sum certain. Additionally, the Government argues that if the contractor seeks other relief, he seeks relief beyond the jurisdiction of the contracting officer and beyond the scope of the CDA unless he is seeking an interpretation affecting his future contractual performance obligations. For those reasons, the Government argues, his claim should be dismissed for lack of jurisdiction.

Contractor's attorney asserts that the 18 September 1991 letter requested "adjustment or interpretation of a contract term" and therefore was a proper claim. In a subsequent letter to the Board, the contractor's attorney "clarified" that the amount of relief sought was $72,136.65. This was the first assertion of a sum certain by the contractor.

DECISION

Where the essence of a disagreement is monetary, we have declined to take jurisdiction over a claim presented as a dispute over contract interpretation. *International Creative and Training, Ltd.*, ASBCA No. 42833, 93-3 BCA ¶ 26,009 21 April 1993; *Winding Specialists Co., Inc.*, ASBCA No. 37765, 89-2 BCA ¶ 21,737; *Shirley Construction Corporation*, ASBCA No. 35868, 89-2 BCA ¶ 21,590.

Just as in *International, supra*, the appeal before us is an attempt to present a monetary complaint as a dispute over contract interpretation. Indeed, counsel has advised the Board that the contractor seeks relief "in the amount of $72,136.65." Consequently, we hold that the essence of the contractor's claim was monetary, and his failure to present the claim in a sum certain to the contracting officer (and certify it) is fatal to this appeal.

Contractor's Rule 1(e) request for an order directing the contracting officer to render a decision is denied. The appeal is dismissed without prejudice to submission of a quantified, certified claim to the contracting officer.

[¶ 26,290] Sal Esparza, Inc.

ASBCA No. 45582, August 17, 1993. Contract No. F41620-90-D-0002.

Interpretation of Contracts—Grounds Maintenance Services—Emergency vs. Routine.—Under a contract for grounds maintenance services, a contractor was not entitled to an equitable adjustment for tree limb removal following a snowstorm, because it failed to show that the removal work was emergency work, rather than routine work under the contract. The contractor did not notify the government that it considered the tree limb removal work as emergency action until three months after receipt of a work order that designated such removal work as routine. Although the government used the phrase "storm damage" in its work order, "storm damage" is not the contractual equivalent of "emergency action" to protect government property damaged by a natural disaster. Moreover, the record did not refer to any contractual course of dealing as to whether the tree limb removal work was mutually understood to be a routine or emergency action.

For the appellant: Sal Esparza, President. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Maj. Jonathan A. Basten, USAF, Trial Attorney.

Before JAMES and PAUL, Administrative Judges.

©1994, Commerce Clearing House, Inc.

Digitized by Google

JAMES, Administrative Judge: This appeal arises from the contracting officer's final decision denying appellant's $5,299.08 claim for removing tree limbs and debris pursuant to work order No. F-1429 under the captioned contract. The parties dispute whether such work was "emergency" or "routine." The Board has jurisdiction of the appeal under the Contract Disputes Act of 1978, 41 U.S.C. §§ 601 *et seq.* Appellant elected the Rule 12.3 accelerated procedures. The parties agreed to submit the appeal for decision on the record pursuant to Board Rule 11. Only entitlement is before us for decision. Neither party submitted a brief.

SUMMARY FINDINGS OF FACT

On 1 March 1990 the U.S. Air Force awarded contract F41620-90-D-0002 to the U.S. Small Business Administration (SBA) for grounds maintenance services at Reese Air Force Base, Texas, from 1 March to 30 September 1990 for a total estimated amount of $480,000, with four yearly option periods. SBA subcontracted the entire performance to Sal Esparza, Inc. (SEI), under the "8(a) Program" (15 U.S.C. § 637(a)). (R4, tab 1)

Contract Section C-1, provided:

> 1.6.2. *Repair of Government Property Damaged By Natural Disaster*
>
> 1.6.2.1. In the event government property is damaged by causes of disastrous nature, such as a tornado, flood, windstorm, hail, or fire and the contracting officer determines emergency action is necessary to protect government property, he/she may direct the contractor to do emergency work to the extent necessary to protect government property. Such work shall be subject to separate negotiation for reimbursement.

Section C-5, ¶ 5.1.4, required SEI to perform 42 types of ground maintenance services as stated in "Work Orders" issued by respondent within the time set forth by the work order. Section C-5, ¶ 5.1.4.5 specified one of those 42 maintenance services types:

> Remove tree limbs and debris from improved grounds, selected improved grounds, occupied and unoccupied Military Family Housing units, and semi-improved grounds within 2 days of receiving job order.

Section C-2, DEFINITIONS, ¶ 2.2.13 provided: "*Wind and Storm Damage.* Fallen trees, limbs and debris deposited on roads, streets, sidewalks, fence lines, improved and semi-improved grounds." The phrase "*Wind and Storm Damage*" is an isolated definition which appears neither in Section C-1, ¶ 1.6.2.1, Section C-5, ¶ 5.1.4.5, nor elsewhere in contract 0002, and whose intended meaning was not explained by either party.

Effective 1 October 1990, contract modifications P00003 and P00004 respectively exercised respondent's option to extend contract services for one year through 30 September 1991 and fixed $54,166.66 per month for the period October-December 1990 for performance of the 42 ground maintenance services types. (R4, tab 1)

On 7 November 1990 at Reese Air Force Base there were freezing rain, sub-freezing temperatures and two to four inches of snow, creating hazardous driving conditions. Early on the morning of 8 November 1990 at Reese Air Force Base, SEI's Project Manager Mike Tatum observed elm trees covered with ice with broken tree branches hanging in trees, over electric power lines and fallen on the ground. Tatum met with respondent's representatives LT Robert E. Howland, Chief of Contract Management which was responsible for issuing work orders under contract 0002, and Howland's subordinate, Joe Rosendo, quality assurance evaluator (QAE), to determine a course of action. Howland and Rosendo said that respondent would issue an appropriate work order. (Complaint & answer)

Tatum's undated, unsigned and unsworn handwritten notes attached to SEI's complaint state that Howland and Rosendo decided to remove tree limbs over electric power lines by Government personnel and equipment, Tatum had read the contract provision about "storm damage" and Tatum asked Rosendo and Howland "if this wots [sic] covered and would we get a WO to that effect. The answer was yes." They do not say that Tatum mentioned "emergency" to Howland and Bosendo.

Rosendo's and Howland's affidavits state that at no time on 8 November 1990 did Tatum say that SEI's tree limb clean up was an "emergency action" and that neither Rosendo nor Howland stated that SEI's work would be "emergency" work under "natural disaster" conditions to protect Government property. Rosendo's affidavit states that "When a work/order is issued for clean up of Base and HFH of debris, down limbs, and limbs hanging from trees a routine work/order is issued." Affiant Lisa Gardill submitted a list of the work orders issued under contract 0002. None was for removing damaged tree limbs after ice storms except

Digitized by Google

order F-1429. The record evinces no course of dealing between the parties with respect to ordering of tree limb removal after storms.

SEI commenced removing tree limbs before issuance of a written work order (complaint & answer). At about 9:00 A.M. on 8 November 1990 respondent issued written work order F-1429 requiring SEI to "Pick-up limb [sic] from storm damage" on the base and military family housing areas, with an "X" entered in the box designated "routine" (R4, tab 2). SEI completed work order F-1429 on 19 November 1990 (complaint & answer).

SEI's invoice No. 04440 dated 31 December 1990 for work order F-1429 requested payment of $5,299.08 for "storm damage clean up," cited 454.25 direct labor hours incurred between 14 and 21 November 1990, and did not expressly characterize such services as "emergency" (R4, tab 3).

On 29 January 1991 respondent declined to pay SEI's invoice 04440 on the ground that such work was included in the services under contract Section C-5, ¶ 5.1.4.5, and the contracting officer had never authorized performance of services requiring payment in addition to the fixed monthly cost (R4, tab 3). SEI's 5 February 1991 letter to the contracting officer argued that work order F-1429 services were of an "emergency nature" (enclosure 6 to SEI's complaint), but respondent denied receipt of that letter (complaint & answer, ¶ 14). At no time before February 1991 did SEI dispute the "routine" (rather than "emergency") designation entered on work order F-1429.

Respondent verbally declined to pay invoice 04440 at a 14 June 1991 meeting with SEI (R4, tab 5). SRI resubmitted its claim and invoice 04440 on 19 August 1992 (R4, tab 6). The contracting officer's 23 October 1992 final decision denied that claim and SEI timely appealed (R4, tabs 10, 11):

DECISION

Appellant has the burden of proving its claim. Aside from the evidentiary niceties of unsworn, unsigned, undated notes versus affidavits, the undisputed facts dictate the correct interpretation of the parties' actions on 8 November 1990 with respect to work order F-1429.

First, the task in work order F-1429 most nearly approaching protection of Government property damaged by natural disaster was removal of Reese Air Force Base tree limbs broken by ice which endangered electric power lines over military family housing, which work respondent performed. SEI's work removing other tree limbs was not to protect government property (but presumably to protect unwary passers-by below).

Second, had SEI's Tatum clearly notified Messrs. Howland and Rosendo that SEI's tree limb removal work was an "emergency action," surely he would have immediately questioned their designation of that work as "routine" in the written work order Tatum received approximately two hours after the oral discussion. SEI did not notify respondent that it considered such work to be an "emergency action" until nearly three months later at the earliest.

Third, Tatum's notes say that he had read the contract section on "storm damage" before his 8 November 1990 oral conversation with Messrs. Howland and Rosendo; they do not say that he mentioned "emergency" to Howland and Rosendo. Respondent used the phrase "storm damage" in work order F-1429. But "storm damage" is not the contractual equivalent of "emergency action" to protect Government property damaged by a natural disaster, but rather is an isolated definition nowhere appearing in Section C-1, ¶ 1.6.2.1, or Section C-5, ¶ 5.1.4.5, or elsewhere in the contract provisions. The statements of both parties' representatives on 8 November 1990 were not inconsistent and appear to be truthful.

Fourth, the record contains no contractual course of dealing by which we can determine whether the tree limb removal in work order F-1429 was mutually understood to be a "routine" or "emergency" action.

We hold that SEI's tree limb removal work was ordered properly under ¶ 5.1.4.5 of Section C-5 and there was no enforceable agreement to designate work order F-1429 as "emergency." We deny the appeal.

[¶ 26,291] Neossolutions, Inc.

ASBCA No. 45997, August 12, 1993.

Contract Disputes, Claims—Submission to Contracting Officer—Claim Not Presented.—A board of contract appeals lacked jurisdiction to hear a contractor's claim for compensation for furnishing food wash to the government, despite the contractor's contention that it provided the product at the request of an unidentified representative who contacted the contractor by telephone and claimed that the product was necessary to support the military effort in Saudi Arabia, because the contractor never submitted a proper claim to the contracting officer under the Contract Disputes Act. During a telephone prehearing conference, the board explained the disputes process to the contractor, and the contractor indicated that it had never filed a claim with the contracting officer.

For the appellant: Dr. P.J. Adams, Owner. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Capt. Mitchell R. Chitwood, JAGC, Trial Attorney.

Before DELMAN, SPECTOR, and VAN BROEKHOVEN, Administrative Judges.

DELMAN, Administrative Judge: Under this appeal, Neossolutions, Inc. seeks $70,000 for furnishing a certain quantity of "food wash" to the Department of the Army. The contractor contends that it provided this product to the Government at the request of some unidentified representative from Fort Hood, Texas, who contacted appellant by telephone and claimed that the product was needed to support the military effort in Saudi Arabia. According to appellant, the Government "representative" promised to send documentation confirming the order. Appellant never received any documentation.

The Government has moved to dismiss this appeal, contending that the Board is without jurisdiction. The Government contends, *inter alia*, that Neossolutions failed to submit a proper claim to a contracting officer under the Contract Disputes Act (CDA), 41 U.S.C. § 601 *et seq.* The Board convened a telephone prehearing conference to discuss the matter. The Board explained to appellant's owner the disputes process under the CDA, and asked whether appellant ever filed a claim with the contracting officer. Appellant agreed with the Government that no such claim had ever been filed.

The CDA requires a contractor to file its claim with the contracting officer for decision under the Act. 41 U.S.C. § 605(a). Absent the submission of such a claim, we do not have jurisdiction. *See Paragon Energy Corporation v. United States*, 645 F.2d 966, 971 (Ct. Cl. 1981). *Checker Moving*, ASBCA No. 32654, 87-1 BCA ¶ 19,357.

Accordingly, we dismiss this appeal without prejudice to the submission of a claim to the contracting officer. If the claim is in excess of $50,000, it should also be certified. 41 U.S.C. § 605(c)(1).

[¶ 26,292] Engineered Maintenance Services

ASBCA No. 45261, August 16, 1993. Contract No. DAAH03-89-C-3050.

Contract Disputes, Certification—Authority—Recertification.—The Federal Courts Administration Act of 1992, which amended the Contract Disputes Act's certification requirements by providing that a defect in certification did not deprive a board of contract appeals of jurisdiction, applied to a contractor's appeal under its contract for the installation of fire protection systems, because the postmarked date, which was presumed to be the mailing date, indicated that the amendment was in effect when the appeal was filed. The government contended that under the Federal Acquisition Regulations, the certifier was not qualified to certify the contractor's claim. The board held that it was not required to determine whether the certifying official qualified under the FAR provision and that the contractor was required to submit a revised certification complying with the amendment's requirement that the certification state that the certifier was duly authorized to certify the claim. After the contractor submitted a revised certification, the government would advise the board as to whether the certifier was qualified under the amended standards.

Digitized by Google

For the appellant: Leo & Associates, Huntsville, Alabama, by Karl W. Leo. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Capt. Timothy M. Connelly, JAGC, Trial Attorney.

Before RUBERRY, SPECTOR, and FREEMAN, Administrative Judges.

RUBERRY, Administrative Judge: The Government, arguing appellant's claim was not properly certified, moves to dismiss the appeal. Appellant contends that the Federal Courts Administration Act of 1992 permits the Board to exercise jurisdiction over its appeal.

STATEMENT OF FACTS

Appellant was awarded contract DAAH03-89-C-3050 for the installation of Halon fire protection systems in various buildings at Redstone Arsenal, Alabama (R4, tab 1). On 7 July 1992, appellant filed a claim with the contracting officer for $61,142.00 for delays and additional work (R4, tab 39). Appellant's claim included a certification executed by James D. Trapane, appellant's Vice-President.

The contracting officer denied appellant's claim in its entirety on 8 September 1992 (R4, tab 41). Appellant filed a timely notice of appeal with the Board. The envelope containing appellant's notice of appeal, dated 28 October 1992, was postmarked 29 October 1992.

The Government filed a motion to dismiss asserting that Mr. Trapane was not a proper individual to certify appellant's claim under Federal Acquisition Regulation 33.207(c)(2).* Appellant asserts that Mr. Trapane satisfies the FAR requirements, but that, in any event, its appeal was filed after the effective date of the Federal Courts Administration Act which provides that proper claim certification is no longer a jurisdictional requirement. It also has submitted an affidavit of its president which states, in pertinent part, as follows:

> 2. Since January 1, 1991, James D. Trapane has been Vice President of EMS. During 1989 and 1990, James D. Trapane was Corporate Treasurer of EMS. James D. Trapane is the senior company official in charge of the Halon Systems project designated Contract No. DAAH03-89-C-3050 ("Contract") which is the subject of the current appeal ("Project"). James D. Trapane has overall responsibility for the conduct of EMS's affairs for the Project. In addition, James D. Trapane has general authority to bind EMS with respect to any of its legal and financial affairs, including all power and authority necessary to authorize the appeal of any decision of the Contracting Officer with respect to any federal government contract which EMS is performing.
>
> 3. The authority described in Paragraph 2 above has been in place at all times relevant to the Project, including July 7, 1992 when he executed the Certification of Claims....

The Government disputes application of the Federal Courts Administration Act, arguing that the 29 October 1992 postmark did not nullify the possibility that appellant's notice of appeal was in the control of the United States Postal Service on 28 October 1992.

DECISION

The Federal Courts Administration Act of 1992 amended the certification requirements of the Contract Disputes Act, 41 U.S.C. §605(c), to provide that a defect in the certification of a claim does not deprive a court or board of contract appeals of jurisdiction over the claim. P.L. No. 102-572, 29 October 1992 §907(a), 106 Stat. 4506. This amendment applies to those claims filed before, on, or after 29 October 1992. Excluded from the amendment's coverage are those claims which were the subject of an appeal to an agency board of contract appeals or a suit in the United States Court of Federal Claims before 29 October 1992.

Appellant's notice of appeal was dated 28 October 1992 but postmarked on 29 October 1992. There is a presumption that the postmarked date is the date of mailing—not the date of the letter or notice. *Hugo Auchter GmbH*, ASBCA No. 39642, 91-2 BCA ¶23,777. The Government has not rebutted this presumption. Therefore, the 29 October 1992 postmark on appellant's notice of ap-

* Federal Acquisition Regulation 33.207(c) defines those individuals who may execute the claim certification on behalf of a corporate contractor:

> (2) If the contractor is not an individual, the certification shall be executed by—
>
> (i) A senior company official in charge at the contractor's plant or location involved; or
>
> (ii) An officer or general partner of the contractor having overall responsibility for the conduct of the contractor's affairs.

©1993, Commerce Clearing House, Inc.

Digitized by Google

peal is controlling and the appeal was not filed before the effective date of the CDA amendment.

Thus, the Federal Courts Administration Act of 1992 applies to this appeal and we need not determine if Mr. Trapane qualified under the FAR provision, *supra*. Pursuant to this statute, a certification "may be executed by any person duly authorized to bind the contractor with respect to the claim." 41 U.S.C. § 605(c)(7). Accordingly, within 30 days from receipt of this decision: appellant shall submit a revised certification complying with the amendment's requirement that the certification state that "the certifier is duly authorized to certify the claim," and the Government shall advise the Board whether it contends that Mr. Trapane is not qualified to certify appellant's claim under the revised standard and file its answer.

ASBCA No. 45192, August 6, 1993. Contract No. F07603-89-D-4000.

Contract Disputes, Claims—Submission to Contracting Officer—Claim Not Presented.—Dismissal of those counts of a contractor's complaint regarding a Department of Labor classification in connection with a contract for audio-visual services was proper because matters raised in several counts of the complaint were not contained in the claim presented to the contracting officer.

For the appellant: Sweeney & Yetman, Mount Holly, New Jersey, by John P. Yetman, Jr. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Maj. William M. Lackermann, Jr., USAF, Trial Attorney.

Before RUBERRY, RIISMANDEL, and AXELMAN, Administrative Judges.

RUBERRY, Administrative Judge: Appellant seeks damages for alleged Government interference with contract performance related to increased costs associated with a Department of Labor (DOL) classification of workers. The Government moved to dismiss for lack of jurisdiction, and appellant responded. Both parties also responded to the Board's invitation to address the legal implications, if any, of the recent decision of the U.S. Court of Appeals for the Federal Circuit in *Burnside-Ott Aviation Training Center, Inc. v. United States* [38 CCF ¶ 76,479], No. 92-5034, 17 February 1993, 12 FPD ¶ 14.

STATEMENT OF FACTS

In 1989 the Air Force (hereinafter referred to as the Government) awarded appellant contract No. F07603-89-D-4000 for audio-visual services at Dover Air Force Base, Delaware (R4, tab 1). The contract was subject to the Service Contract Act (SCA) of 1965, 41 U.S.C. § 351, *et seq.*, and included two DOL Wage Determinations, 86-1029 and 86-1034 (Rev. 2, dated 17 September 1987). Included in the contract also was a "Statement of Wage and Fringe Benefit Rates Applicable To Federal Wage Board (Blue Collar) Employees ... (*For Information Only*)," which contained the statement that: "The rates cited on this sheet are not to be used in calculating bids. The rates on this form merely indicate rates that are paid to federal employees for the services called for herein." The rates recited were for four classifications of Government employees: Supervisory Visual Information Specialist, GS-9, Illustrator, GS-7, Photographer, GS-5, and Audio Visual Clerk-Typist, GS-4.

The contract included Defense Acquisition Regulation (DAR) clause 7-1903.41(a), "Service Contract Act (SCA) of 1965, as amended" (January 1984) and DAR clause 7-1905(b), "Fair Labor Standards Act and Service Contract Act—Price Adjustments (Multi-Year and Option Contracts)" (September 1979) (R4, tabs 7, 8) which required that all employees be paid not less than the minimum wage and furnished fringe benefits specified by the relevant DOL wage determinations. The contractor was also required to classify employees not listed in the wage determination so as to provide a reasonable relationship between unlisted classifications and classifications listed in the wage determination.

The contract also included a "Disputes Concerning Labor Standards" provision, which identified the DOL procedures for resolving disputes concerning labor standards requirements and noted that such disputes were subject to DOL procedures and not the Disputes clause of the contract. In

Digitized by Google

addition, the contract provided: "[d]isputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and the contracting agency, The U.S. Department of Labor, or the employees or their representatives." The contracting officer was also required to withhold funds, if requested by the DOL, to pay underpaid contractor employees (R4, tab 7).

The contract was modified on several occasions in 1989 and 1990 to incorporate revisions to the two wage determinations in the original contract (R4, tabs 2-6). In October 1990, the Government contract administrator noted "discrepancies" contained in payroll information appellant had previously submitted in support of claimed increases in the contract price resulting from the new wage determinations in that two of appellant's four hourly employees had not received wage increases which had been previously incorporated into the contract. This information was forwarded to the DOL (R4, tabs 11-13).

The resulting DOL investigation revealed $34,672.57 in alleged SCA violations resulting from appellant's failure to pay required fringe benefits and to properly classify and pay six employees (including the two originally identified by the contract administrator). On 5 August 1992, DOL directed the contracting officer to withhold those funds from contract payments otherwise due appellant (R4, tab 23).

It should also be noted that on 29 March 1991, appellant submitted two conformance requests through the contracting officer for DOL authorization of additional classifications for new audio-visual positions. The contracting officer agreed with one proposal and disagreed with the other (R4, tabs 15, 16).

On 12 August 1992, appellant submitted a "protest" to the contracting officer in which it challenged the validity of the information provided to DOL and asserted that the erroneous Government information had resulted in $29,546 in "direct damages" and $8,323 in "additional damages" for "alternative" contract performance. Appellant stressed that it was not challenging the actions of DOL in directing the withholding of funds or utilizing the Disputes clause for that purpose. Rather, it claimed that it had been misled into relying on the "Statement of Federal Wage and Fringe Benefit Rates" in determining the complexity of the work and classifying employees under the SCA. Specifically, appellant objected to the inclusion of the Illustrator and Photographer GS classifications. However, the "direct damages" claimed corresponded to the amount DOL had notified appellant was due for misclassification violations. (R4, tab 25)

On 3 September 1992, DOL informed the contracting officer, that as a result of negotiations with appellant, funds currently being withheld could be released, but that the final contract payment (for September 1992) should be withheld until further notice (R4, tab 27). Apparently, DOL has not made a final determination in the matter.

The contracting officer rejected appellant's contention that Government misinformation had harmed appellant by final decision, dated 16 September 1992. The contracting officer indicated that any reliance by appellant on Wage and Fringe Benefit Rates attached to the contract (for informational purposes) had been misplaced and that any questions regarding proper employee classification should be directed to DOL (R4, tab 29). On 3 October 1992, appellant appealed this matter to the Board.

Appellant, in its formal complaint, dated 23 December 1992 and divided into seven counts, reiterated its position that the contracting officer had provided DOL false information (first count). In addition, it claimed that the Government had failed to negotiate in good faith (third count) and held appellant to a different standard of performance than called for in the contract (second count); that the Air Force subsequently used personnel with grades lower than or equivalent to the grades appellant had used (fourth count); and that it had been wrongfully denied a contract extension (sixth count) and the opportunity to bid on a successor contract (seventh count). Appellant sought $14,440 (fifth count) for contract performance (final payment withheld at DOL direction) and $8,500 for "alternative" contract performance (not explained), and for fees and costs. The complaint does not mention any alleged ambiguity.

DECISION

The Government contends that DOL has exclusive jurisdiction over this matter because appellant's complaint is related to a DOL classification determination. Appellant responds that the Board retains jurisdiction because this is a contract dispute arising out of contract ambiguity.

The matters raised in the second, third, fourth, sixth and seventh counts of appellant's complaint were not contained in the

©1994, Commerce Clearing House, Inc.

Digitized by Google

claim presented to the contracting officer and, therefore, must be and are dismissed. *See, Freeman General, Inc.*, ASBCA No. 34611, 89-2 BCA ¶ 21,809. In addition, this Board is without authority to grant relief for denial of an opportunity to bid on a solicitation. *See Coastal Corp. v. United States* [31 CCF ¶ 71,373], 713 F.2d 728, 730 (Fed. Cir. 1983).

With respect to the first count (the contracting officer's provision of allegedly false information to DOL) and the fifth count (the claim for the final payment which was withheld), it appears that a final DOL decision has not been issued as to the alleged misclassification violations. *Cf. Burnside-Ott, supra.* Accordingly, this remaining aspect of the appeal is premature and is dismissed without prejudice to its reinstatement when DOL has issued its decision. *See M.A. Mortenson Company*, ASBCA No. 45584, 93-3 BCA ¶ 26,238, 22 July 1993.

[¶ 26,294] L. A. Downey & Son, Inc.

ASBCA No. 45180-693, August 5, 1993. Contract No. DACA54-90-C-0001.

Contract Disputes, Certification—Adequacy—Scope of Certification.—A contractor's revised certification of its aggregated claims was proper, despite the government's contention that the certification was defective, because the word "claim" in the contractor's transmittal letter, preceding the revised certification, referred unambiguously to the total package and the certification applied to all four claims included in the package. The transmittal letter referred to the package as a single "request" and stated the aggregate total of the individual claims in the request.

Contract Disputes, Certification—Authority—Federal Courts Administration Act of 1992.—A contractor's revised certification of its aggregated claims was proper, despite the government's contention that the contractor's certifying official was not authorized to execute the certification on the contractor's behalf, because the certifier was authorized to bind the contractor with respect to the claim, as required by the Federal Courts Administration Act of 1992. Although the Act was enacted after the contractor submitted its claims, it applies to all claims submitted before or after enactment, except those appealed or on which suit was filed before enactment. An application for an order under the Act is not an appeal, and no appeal or suit was brought on the contractor's claims before enactment. The contractor submitted an affidavit stating that the certifier was duly authorized to bind the contractor with respect to the claims asserted. Moreover, the certifier signed the bid for the contract on the contractor's behalf.

For the appellant: Anderson, Broadfoot, Johnson, Pittman, Lawrence & Butler, Fayetteville, North Carolina, by T. Alan Pittman. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Caroline J. Struthers, Engineer Trial Attorney, U.S. Army Engineer District, Wilmington, North Carolina.

Before FREEMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

FREEMAN, Administrative Judge: This application was submitted by L.A. Downey & Son, Inc. (Downey) for an order pursuant to 41 U.S.C. § 605(c)(4) directing the contracting officer to issue a decision on four claims. After the application was submitted, the contracting officer decided two of the claims which were in amounts less than $50,000. Two claims in amounts greater than $50,000 remain undecided, allegedly for lack of proper certification.

All four claims were submitted to the contracting officer on 28 May 1992 as a certified package in the aggregate amount of $200,839.09. Upon advice of the contracting officer that the certification was defective, Downey submitted a revised certification on 29 June 1992. The letter containing the revised certification was signed by Robert E. Bittner, Vice President, and read as follows:

> In accordance with Federal Acquisition Regulation, FAR 52.233-1 DISPUTES (Apr 1984), L.A. Downey and Son, Inc., hereby submits its request to the Contracting Officer for a Written Decision.
>
> The accompanying Request for Equitable Adjustment of Contract Cost Increase is supported by four (4) separately identified

Digitized by Google

claims which are in the aggregate amount of TWO HUNDRED THOUSAND EIGHT HUNDRED THIRTY NINE AND 09/100 ($200,839.09) DOLLARS.

L.A. Downey, Inc., certifies that—

(1) The claim is made in good faith;

(2) Supporting data are accurate and complete to the best of the contractor's knowledge and belief; and

(3) The amount requested accurately reflects the contract adjustment for which the contractor believes the Government is liable.

The Government contends that the foregoing certification is defective because (i) the word "claim" is ambiguous as to which of the four claims is being certified; and (ii) Mr. Bittner was not a proper person to execute the certification on the contractor's behalf. Both contentions are without merit.

Downey's four claims were submitted as a package. The paragraph in the 29 June 1992 transmittal letter immediately preceding the revised certification referred to the package as a single "request" and stated the aggregate total of the individual claims in the request. In this context, the word "claim" referred unambiguously to the total package in the amount of $200,839.09 and the certification applied to all four claims therein.

Pursuant to 41 U.S.C. § 605(c)(7), a claim certification "may be executed by any person duly authorized to bind the contractor with respect to the claim." Section 605(c)(7) was enacted after Downey's claims were submitted. However, it applies to all claims submitted before or after its enactment, except those appealed or on which suit was filed before enactment. Federal Courts Administration Act of 1992, Pub. L. No. 102-572, § 907(a)(2), 106 Stat. 4506 (29 October 1992). An application for an order under 41 U.S.C. § 605(c)(4) is not an appeal, *Honeycomb Co. of America, Inc.*, ASBCA No. 33936-246R, 88-1 BCA ¶ 20,284, and no appeal or suit was brought on Downey's claims before section 605(c)(7) was enacted. Accordingly, that section is applicable to the certification of Downey's claims.

Downey has submitted the affidavit of its President stating that Mr. Bittner is duly authorized to bind Downey with respect to the claims asserted. This affidavit is further supported by evidence that the bid for the contract was signed on Downey's behalf by Mr. Bittner. We find on this evidence that Mr. Bittner meets the requirements of section 605(c)(7).

The revised certification submitted 29 June 1992 being valid, the contracting officer is directed to decide the two undecided claims within 60 days of receipt of this decision. Since this order completes all necessary action by the Board, the case is dismissed. If the contracting officer should fail to comply with this order, such failure will be deemed a decision by the contracting officer denying the claim and the contractor may appeal to this Board or sue in the U.S. Court of Federal Claims.

[¶ 26,295] Carlson Construction Group, Inc.

ASBCA No. 42532, August 11, 1993. Contract No. N62467-85-C-0631.

Contract Disputes, Certification—Authority—Overall Responsibility.—Certification of a contractor's appeal by its president was valid, despite the president's use of the wrong letterhead, because the certifier was the contractor's president at the time he executed the certification and he intended to and did sign as president of the contractor. Certification by a corporate officer without explanation implies that the contractor is representing that the certifier has the requisite overall authority.

Procedure, Boards—Parties—Successor in Interest.—An appeal filed on behalf of an alleged successor contractor under a construction contract between the government and a prime contractor was properly dismissed for lack of privity of contract between the appellant corporation and the government because the appellant was not a successor in interest to the prime contractor. The appellant did not contend that the government impliedly recognized it as the successor in interest to the prime contract.

For the appellant: Holbrook, Akel, Cold, Akel & Holbrook, P.A., Jacksonville, Florida, by John R. Stiefel, Jr. For the government: Arthur H. Hildebrandt, Navy Chief Trial

Digitized by Google

Attorney, and Anthony Dowdle, Trial Attorney, Chesapeake Division, Naval Facilities Engineering Command, Washington, D.C.

Before DICUS, RUBERRY, and RIISMANDEL, Administrative Judges.

DICUS, Administrative Judge: Respondent has filed a Motion to Dismiss alleging lack of standing and the Board, *sua sponte,* has questioned its jurisdiction in this appeal. The Board has raised the propriety of both the certification and the sponsorship of the underlying claim. Appellant has filed supplements to the record in response to each of these issues.

STATEMENT OF FACTS

Contract No. N62467-85-C-0631 was awarded to Carlson Florida Construction Services, Inc. (Carlson Florida) on 2 February 1989 (R4, tab 3). By letter of 4 September 1990 Carlson Florida filed a claim certified by its secretary, James A. Morrison, on behalf of its second tier subcontractor, Atlantic Insulation Inc. (Atlantic), in the amount of $171,912.00 (R4, tab 12). As the claim was addressed to the Resident Officer In Charge of Construction, respondent advised Carlson Florida that the claim should be sent to the contracting officer in a 2 October 1990 letter. Respondent also questioned whether Mr. Morrison was an appropriate official to certify the claim (R4, tab 13). Thereafter, by letter dated 17 October 1990 addressed to the contracting officer and on Carlson Constructors of NC, Inc. (CCNC) stationery, the claim was certified under signature of Nick Cawood, President (R4, tab 14). The claim was denied in a final decision dated 28 November 1990 (R4, tab 15). A Notice of Appeal dated 25 February 1991 was filed by George D. Wenick on behalf of Carlson Construction Group, Inc. (Carlson) "successor of Carlson Florida Construction Services, Inc." (R4, tab 16). The Notice of Appeal identifies the amount in controversy as $153,647.00 and attached the contracting officer's final decision. Mr. Wenick, attorney for Carlson, withdrew thereafter in favor of Mr. Stiefel, Jr. (letter of 4 March 1991).

Respondent filed a Motion to Dismiss on 9 March 1992, asserting that, as the contract was awarded to Carlson Florida, Carlson has no privity of contract with respondent and thus no standing to appeal. The Motion is supported by a Declaration stating that Carlson Florida is a corporation in good standing in the state of Delaware, that the contract has never been modified to change the contractor's name, and that a novation agreement has never been executed (Declaration of Gordon Ivins). Accordingly, we find respondent has not expressly recognized a successor in interest to Carlson Florida.

On 2 April 1992 the Board issued a letter directing Mr. Stiefel to state his position with respect to whether Mr. Morrison or Mr. Cawood satisfy the requirements of FAR 33.207 regarding claim certification, and whether Carlson Florida or its successor consent to sponsor the claim. As to the latter point, the Board requested evidence that Carlson Florida or its successor authorized the appeal, and consented to continued sponsorship, Mr. Stiefel's representation, and to be bound by the Board's decision.

In response, appellant provided a copy of a Cooperation Agreement between Carlson, Seaboard Surety Company, CNF Constructors, Inc. (the first tier subcontractor), and Atlantic. The Agreement identifies Carlson as the party entering into the underlying contract with the Navy, establishes that Carlson filed the instant appeal on behalf of Atlantic, that Atlantic and its attorney will conduct the appeal, and Carlson and CNF agree to assist Atlantic "in every reasonable manner in connection with the ASBCA Appeal [sic]." We conclude, therefore, that the appeal predates the Agreement. Although the copy of the Agreement is signed only by Atlantic's president, the letter from counsel with which it was enclosed states that the Agreement was signed and dated by all parties. The letter also represents that Carlson Florida, while still in existence, is no longer operational and has no employees or bank accounts. Carlson Florida's business affairs, according to the letter, are handled by Carlson (letter of 5 May 1992).

Enclosed with the letter are affidavits from Mr. Cawood and Mr. Morrison. Mr. Morrison affirms that he was Secretary of Carlson Florida when he executed the claim certification on 30 August 1990 (Morrison affidavit). Mr. Cawood states:

> 1. At the time I executed the October 17, 1990 [certification] letter at the request of Phil Robbins, ... Resident Officer in charge of construction.
>
> 2. At the time I signed on the letterhead of Carlson Constructors of N.C., Inc., my signature, Nick Cawood, President was in the capacity of President of Carlson Florida Construction Services, Inc.
>
> 3. The relationship between Carlson Florida Construction Services, Inc. and

Digitized by Google

Carlson Construction Group, Inc. was that Carlson of Florida Construction Services, Inc. is a wholly-owned subsidiary and division of Carlson Construction Group, Inc.

4. The Notice of Appeal, signed the [sic] February 25, 1991 by George Wenick, accurately reflects that Carlson Construction Group, Inc. is successor in interest to Carlson Florida Construction Services, Inc. and did give permission to CNF and Atlantic Insulation to perfect the appeal and pursue it on behalf of Carlson Construction Group, Inc.

5. On October 17, 1990, I intended to sign the certification as Nick Cawood, President of Carlson Florida Construction Services, Inc., and, in fact, sign [sic] as President and on behalf of that corporation.

(Cawood affidavit)

At the Board's request, the affidavit of Patricia O'Donnell was filed, stating that she has knowledge of the books and records of Carlson Florida and Carlson, and asserting:

2. On January 1, 1990, Carlson Construction Group, Inc. (which subsequently changed its name to SAE Americon Construction Group, Inc. on December 13, 1990) purchased all of the stock of Carlson Florida Construction Services, Inc.

3. On January 1, 1991, the Carlson Group, Inc. (Delaware) purchased all of the stock of Carlson Florida Construction Services, Inc. from SAE Americon Construction Group, Inc. (formerly Carlson Construction Group, Inc.)

(O'Donnell affidavit)

DECISION

Respondent argues that the certification was invalid because it was filed by the wrong corporation. Further, it is argued that Carlson lacks standing because respondent has never recognized Carlson as successor in interest to Carlson Florida and is not in privity of contract with respondent. Appellant argues that it has cured any impediments to proceeding and points out that respondent has offered no case law supporting its arguments.

The Contract Disputes Act requires that for a claim against the Government totalling more than $50,000:

> the contractor shall certify that the claim is made in good faith, that the supporting data are accurate and complete to the best of his knowledge and belief, and that the amount requested accurately reflects the contract adjustment for which the contractor believes the government is liable.

(41 U.S.C. § 605(c)(1))

The Federal Acquisition Regulation ("FAR"), which implements the Act, limits the corporate officials who may certify a claim to:

> (i) A senior company official in charge at the contractor's plant or location involved; or
>
> (ii) An officer or general partner of the contractor having overall responsibility for the conduct of the contractor's affairs.

(FAR 33.207(c)(2), 48 C.F.R. § 33.207(c)(2) (1990)) Failure to comply with section 605(c)(1) of the Act and its implementing regulations deprives the Board of jurisdiction to hear the claim. *Grumman Aerospace* [36 CCF ¶ 76,013], 927 F.2d 575 (Fed Cir. 1991); *see Ball, Ball & Brosamer, Inc. v. United States* [35 CCF ¶ 75,681], 878 F.2d 1426, 1428 (Fed. Cir. 1989) (certification requirement is a jurisdictional prerequisite).

Mr. Cawood asserts that he was president of Carlson Florida at the time he executed the certification and that, notwithstanding the use of the wrong letterhead, he intended to and did, in fact, sign as president of Carlson Florida. In *United States v. Newport News Shipbuilding and Dry Dock Co.* [37 CCF ¶ 76,095], 933 F.2d 996 (Fed. Cir. 1991), the Court held that "certification by a corporate officer, without explanation, necessarily implies that the contractor is representing that he has the requisite 'overall authority,' at least where his title is not inconsistent therewith." *Id.* at 998, n. 2. We thus conclude that Mr. Cawood's 17 October 1990 execution was a proper certification of appellant's claim.

As to the issue of Carlson's standing, the evidence of record provides a convoluted trail. However, it is established that Carlson purchased the stock of Carlson Florida on 1 January 1990. Thus, Carlson owned Carlson Florida at the time the claim was properly certified on 17 October 1990. However, Carlson was divested of its interest in Carlson Florida on 1 January 1991 when all of Carlson Florida's stock was purchased from Carlson by The Carlson Group, Inc. (Carlson Group). When the appeal was filed on 25 February 1991, Carlson held no stock in Carlson Florida. As far as this record is concerned, there was no connection between Carlson and Carlson Florida at the time of the appeal. Further, the Cooperation Agreement was executed after filing of this appeal and Carlson Florida is not mentioned therein. Accordingly, the record does not establish a basis for the assertion in the Notice of Appeal that Carlson was at that time successor in interest to Carlson Florida. To the

©1994, Commerce Clearing House, Inc.

Digitized by Google

contrary, the record establishes that Carlson Group owned the stock of Carlson Florida and was on 25 February 1991 the most likely candidate for Carlson Florida's successor in interest among the entities identified.

Respondent argues that the Anti-Assignment Act, 41 U.S.C. § 15, generally prohibits transfer of Government contracts. Although there are exceptions for financial institutions in the statute, none apply here. Respondent notes that FAR 42.1204 permits the Government to recognize a successor in interest when that party's interest arises from transfer of all assets or the entire portion of the assets involved in performing the contract. Here, the Government has not recognized a successor in interest. Moreover, there is no evidence of transfer of assets, only sale of stock. The two actions have decidedly different consequences. *The Kellogg Bridge Company v. United States,* 15 Ct. Cl. 111 (1879). Appellant does not argue that respondent has impliedly recognized Carlson as successor in interest to Carlson Florida.

Although not raised by either party, we believe as the contract has been performed, it is the Assignment of Claims Act, 31 U.S.C. § 3727, that is most applicable here. *Tuftco Corp. v. United States* [27 CCF ¶ 80,097], 614 F.2d 740 (Ct. Cl. 1980). While the Cooperation Agreement gives credence to Carlson's ownership of the claim, that Agreement also identifies Carlson as entering into the underlying contract with the Navy. As Carlson Florida was the prime contractor, the genesis of Carlson's interest in the claim is erroneously stated in the Agreement. Finally, while there is serious doubt that purchase of the stock of Carlson Florida is adequate to support Carlson's right to pursue the claim in any event, *The Kellogg Bridge Company, supra,* the factual record here establishes that Carlson did not own Carlson Florida's stock at the time of the appeal. Thus, the admonition to apply the anti-assignment statutes pragmatically cannot overcome the evidence in the record that Carlson is not successor in interest to Carlson Florida. *Cf. United International Investigative Services v. United States* [38 CCF ¶ 76,369], 26 Cl. Ct. 892 (1992).

The Contract Disputes Act of 1978, 41 U.S.C. § § 601-613 (CDA), provides at § 601(4) "the term 'contractor' means a party to a Government contract other than the Government." For the Board to have jurisdiction, we must conclude that Carlson was lawfully substituted for Carlson Florida as the "contractor." *CBI Services, Inc.,* ASBCA No. 34983, 88-1 BCA ¶ 20,430. For the reasons stated above, we cannot do so. The appeal is dismissed.

[¶ 26,296] Construcciones Electromecanicas S.A.

ASBCA No. 41413, August 17, 1993. Contract No. F66501-87-C-0026.

Procedure, Boards—Evidence—Settlement Offers.—A government motion to strike documents that referred to a settlement agreement was denied because the purpose of the evidence was to show that the settlement agreement was breached, rather than to show the merits of the underlying dispute. Evidence of a settlement agreement is admissible to prove the parties' undertakings in the agreement in connection with the contention that a party broke the agreement.

Procedure, Boards—Summary Judgment—Relevant Fact Issues.—A contractor's motion for summary judgment was denied, despite the contractor's contention that the dispute had been settled by agreement of the parties, because the contractor failed to show that the existence of an enforceable settlement agreement was undisputed. The government's affidavit indicated that there was a factual dispute concerning whether the government signed such an agreement. Moreover, a government memorandum asserted that the agreement was subject to approval of a directorate, and the record did not establish such approval.

For the appellant: De Obaldia & Garcia De Paredes, Panama City, Republic of Panama, by Carlos A. De Obaldia. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Mary L. Broerman, Trial Attorney.

Before DICUS, SPECTOR, and VAN BROEKHOVEN, Administrative Judges.

Digitized by Google

DICUS, Administrative Judge: Appellant has filed a Motion for Summary Judgment alleging that the dispute in this appeal was settled by agreement of the parties. Respondent denies that the agreement was consummated and has filed a Motion to Strike, alleging that certain documents submitted by appellant are inadmissible under Fed. R. Evid. 408.

We deal first with respondent's Motion to Strike, as it would have us exclude certain evidence in deciding appellant's Motion for Summary Judgment. Respondent seeks the exclusion of certain documents and portions of documents which reference settlement negotiations, include specific dollar figures presented during settlement negotiations, or both. Respondent cites Fed. R. Evid. 408, which provides:

> RULE 408. Compromise and Offers to Compromise
>
> Evidence of (1) furnishing or offering or promising to furnish, or (2) accepting or offering or promising to accept, a valuable consideration in compromising or attempting to compromise a claim which was disputed as to either validity or amount, is not admissible to prove liability for or invalidity of the claim or its amount. Evidence of conduct or statements made in compromise negotiations is likewise not admissible. This rule does not require the exclusion of any evidence otherwise discoverable merely because it is presented in the course of compromise negotiations. This rule also does not require exclusion when the evidence is offered for another purpose, such as proving bias or prejudice of a witness, negativing a contention of undue delay, or proving an effort to obstruct a criminal investigation or prosecution.

We agree that Rule 408 is broad enough to cover the documents and portions of documents to which respondent objects. However, where the purpose of the evidence is to establish that the settlement agreement was breached, and not the merits of the underlying dispute, the evidence may be admissible. "Obviously, a settlement agreement is admissible to prove the parties' undertakings in the agreement, should it be argued that a party broke the agreement." *Cates v. Morgan Portable Building Corp.*, 780 F.2d 683, 691 (7th Cir. 1985). Similarly, in *Central Soya Company, Inc. v. Epstein Fisheries, Inc.*, 676 F.2d 939, 944 (7th Cir. 1982), the Court found error in excluding testimony on settlement negotiations under Rule 408:

> Rule 408 excludes evidence of compromises and offers to compromise, and of 'statements made in compromise negotiations.' Although this language is broad enough to cover Haack's testimony, the purpose of the rule must be considered. It is to encourage settlements. The fear is that settlement negotiations will be inhibited if the parties know that their statements may later be used as admissions of liability. But Haack's testimony was not offered for the purpose of demonstrating that Central Soya was or was not liable to Aquarium Farms for breach of its contract to supply a complete catfish feed. The purpose was to demonstrate what the terms of the settlement of Aquarium Farms' claim were. 'Where the settlement negotiations and terms explain and are a part of another dispute they must often be admitted if the trier is to understand the case.' 2 Weinstein & Berger, Weinstein's Evidence ¶ 408[5], at 27 (1981). That is this case.

Appellant's summary judgment motion is based on appellant's allegation that an enforceable settlement agreement was negotiated by the parties. For the Board to understand this issue fully, we need to consider the alleged agreement. Because there is no executed bilateral agreement in the record, documentary evidence relating to negotiations and the fruits of negotiations, including evidence as to the consummation, or the failure to consummate, the alleged agreement, is material to the issue of whether an enforceable agreement ever came into being. Consideration of the evidence is therefore within Rule 408's purpose, which is to encourage settlements. *Central Soya Company, Inc., supra.* Accordingly, for purposes of this Motion for Summary Judgment only, respondent's Motion to Strike is denied.

FINDINGS OF FACT

1. Contract F66501-87-C-0026 was executed between appellant and respondent on 18 September 1987 (R4, tab 1). The contract included the Secretarial Approval of Contract (APR 1984) clause, requiring approval of the contract by the Secretary or a duly authorized representative. Appellant filed a claim in the amount of $235,134.61 on 14 May 1990 (R4, tab 77). When a final decision was not issued within 60 days, this appeal was filed by letter of 19 July 1990 (R4, tab 86). The claim was amended 21 September 1990 to $267,934.07 (R4, tab 91).

2. By letter of 22 October 1990 respondent requested a meeting to discuss settlement on

©1993, Commerce Clearing House, Inc.

Digitized by Google

26 October 1990 (R4, tab 96). The parties thereafter jointly requested a stay of proceedings, which was granted (R4, tab 95). Discussions continued into November and the following memorandum was sent from the contracting officer to counsel on 16 November 1990 with a copy to appellant:

> 1. On 16 Nov 90 a settlement agreement of $294,135 was reached for subject claim. This settlement agreement settles all associated costs under the Contractors claim dated 14 May 90 and its update of 21 Sept 90. Additionally, it settles all associated costs including extended overhead and unabsorbed home office overhead up to the current contract completion date of 05 Feb 91. The settlement agreement also includes the cost to definitize Modification P00012 and the Contractor's waiving of all interest under subject claim.
>
> 2. Due to the dollar amount of the settlement agreement, the Directorate of Contracting Headquarters Tactical Air Command approval is required. The Contracting Officer Officer [sic] anticipates issuance of final settlement agreement by 15 Dec 90.

(R4, tab 101)

3. Appellant maintains the agreement was subject only to legal approval, and that it was signed (Motion at 6). The contracting officer asserts that "no bilateral documents were signed consummating a settlement agreement," and that all negotiated costs were subject to higher review (affidavit of Archibald D. Black (Black aff.)).

4. On 29 November 1990 appellant sent a letter to the Board stating "As you can see from the documents enclosed herewith, the appeal has been settled, and is only pending of approval." Attached was a copy of the 16 November 1990 memorandum at finding 2. Respondent's counsel sent a 13 December 1990 letter to the Board stating she had been advised the dispute was settled and would provide copies of settlement documentation as soon as she received them.

5. By letter of 25 December 1990 the contracting officer informed appellant of miscalculations in the negotiated costs and the period of delay to which extended overhead had been applied. A meeting was scheduled for 28 December 1990 (R4, tab 106). Appellant claims that at the meeting appellant was shown a letter signed by respondent's counsel confirming the validity of the settlement agreement subject only to independent audit (Motion at 3). The contracting officer denies this (Black aff.).

6. By letter of 14 January 1991 the contracting officer requested that appellant provide the results of an independent audit performed on the company in 1988 (R4, tab 108). By letter of 25 January 1991 appellant's auditor provided the results of its 1988 audit to appellant who, in turn, provided it to respondent (R4, tab 109; Black aff.). By letter of 15 February 1991 respondent iterated to appellant the terms it understood to constitute their settlement agreement "subject to verification by independent audit" (R4, tab 110).

7. By Order of 19 February 1991 the appeal was dismissed, subject to reinstatement if the settlement was not consummated. This followed an Order of the Board dated 9 January 1991 giving the parties 20 days to show cause why the appeal should not be dismissed as settled, subject to reinstatement as above.

8. Thereafter respondent conducted an audit, during which time discussions continued. The contracting officer reevaluated the terms of the agreement and determined that appellant was entitled to a lesser amount. By letter of 23 March 1992 the contracting officer informed appellant that a final decision was in preparation (R4, tabs 129, 130, 132). By letter of 10 April 1992 appellant asserted "We have always sustained our rights on the basis of the settlements, notwithstanding our availability to hear any reasonable offer." (R4, tab 131) The final decision denying the claim was issued 30 April 1992 (R4, tab 134).

DECISION

Appellant argues there was a signed settlement agreement executed by an authorized official, and subject only to an independent audit. Further, appellant asserts the audit failed to show anything "incorrect" in the settlement figure. Respondent argues there can be no enforceable agreement unless it was executed by the contracting officer, and there is no evidence the contracting officer ever did so.

Under Rule 56 of the Federal Rules of Civil Procedure summary judgment shall be rendered if "there is no genuine issue as to any material fact and . . . the moving party is entitled to a judgment as a matter of law." The nonmoving party is entitled to the benefit of the doubt on factual issues. *Barth v. United States*, 24 Cl. Ct. 836 (1992). The moving party bears the burden of establishing there is no genuine dispute over material facts and that it is entitled to judgment as a matter of law. *Balboa Insurance Company v.*

Digitized by Google

United States [33 CCF ¶ 74,051], 775 F.2d 1158 (Fed. Cir. 1985). Moreover, as appellant bears the burden of proof at trial, it must make a showing "sufficient for the court to hold that no reasonable trier of fact could find other than for the moving party." W. Schwarzer, *Summary Judgment Under the Federal Rules: Defining Genuine Issues of Material Fact,* 99 F.R.D. 465, 488 (1948).

In order for the Board to grant appellant's Motion, we must find there was an enforceable settlement agreement. Thus, the existence of an enforceable agreement is material to the outcome of this appeal. There is a dispute of fact, supported on respondent's side by an affidavit, as to whether respondent ever signed such an agreement (findings 3, 5). Moreover, respondent's 16 November 1990 memorandum, prepared the same day an "agreement" was reached, asserts the agreement was subject to approval of the Directorate of Contracting Headquarters Tactical Air Command (finding 2). Appellant received a copy of this memorandum and referred to it in its letter to the Board advising that the case was settled "only pending of approval" (finding 4). On this record the approval of that Directorate is not established (finding 3). Summary judgment is not, therefore, appropriate. Appellant's Motion is denied.

[¶ 26,297] Computer Valley International, Ltd.

ASBCA Nos. 39658, 40496, August 13, 1993. Contract No. NAFSAC-86-C-0006.

Contract Disputes, Jurisdiction—Boards of Contract Appeals—Nonappropriated Fund Activity.—The board had jurisdiction over an appeal by a concession contractor because the contract contained a Disputes clause that authorized decision by the board. The board's charter gives it jurisdiction to decide appeals under contracts that have such a requirement. The board did not have Contract Disputes Act jurisdiction, however, because the nonappropriated fund activity that issued the contract was not among the activities named in the Act. The contract itself also provided that the Act was inapplicable.

Interpretation of Contracts—Concessions—Location of Store.—A contractor was not entitled to additional compensation for costs resulting from moving the location of its computer concession, because the government's obligation to provide facilities was only to provide a specified amount of space in a particular market building. The contract did not assure the contractor of a permanent location, and the new location to which the contractor moved was suitable. The contractor's expenses incurred in renovating the new location were undertaken voluntarily. Similarly, there was no understanding that expenses incurred in renovating the original location would be amortized through utilization of that location for the term of the contract.

Interpretation of Contracts—Concessions—Inventory Security Interest.—The government's release of concession inventory in which the concession contractor allegedly had a security interest was not a breach of the concession contract, because the government did not have notice of the alleged interest. The contractor had a private, internal agreement with the purchaser of the related firm that had been operating the concession. Under the law of the District of Columbia, applicable under the contract's Choice of Law clause, a secured creditor must take action to give effective public notice of its interest.

Payments—Authority—Contractor's Directions.—Government payments to a firm that had been operating a computer concession store on behalf of the contractor were proper because the payments represented the firm's percentage of sales made from inventory that it owned and sold. Furthermore, most of the payments were made before the government received the contractor's rescission of its prior instruction to make payments to that firm. After the operating firm was purchased from the contractor's owner by another company, the operating firm, rather than the contractor, continued to operate the concession.

For the appellant: James A. Langemak, Vice President, and Michael J. Lyon, Director. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. E. Michael Chiaparas, JAGC, Trial Attorney.

Before YOUNGER, SPECTOR, and THOMAS, Administrative Judges.

YOUNGER, Administrative Judge: In these consolidated appeals, a concession contractor with a non-appropriated fund activity seeks relief under its contract to operate a computer store, as well as damages for breach. Appellant claims the coats of remodeling, renovating and moving its store, as well as the value of inventory and concession payments that respondent tendered to a third party, along with lost profits and punitive damages. The contract is governed by District of Columbia law. Appellant elected to submit its case on the record but respondent appeared at the hearing. Only entitlement is before us. We deny the appeal.

FINDINGS OF FACT

A. *The Contract*

1. By date of 12 December 1985, the Army's Non-appropriated Fund Supply, Acquisition and Contracting Agency, Europe (NAFSAC) awarded contract no. NAFSAC-86-C-0006 to "Bear Valley Computers, c/o Computer Valley International, Ltd." We find, and the parties do not dispute, that "Bear Valley Computers" was a trade name employed by Computer Valley International, Ltd., the entity to which the contract was awarded and the appellant here. We further find that appellant was a Delaware corporation that was not registered to do business in the Federal Republic of Germany.

2. The scope of work required the contractor to operate a computer concession in the Video, Audio, Photo Mart (VAP Mart) in Mainz-Kastel, Federal Republic of Germany. The VAP Mart was itself operated by the Wiesbaden Community Morale, Welfare and Recreation Fund (the Fund), one of several such funds for which NAFSAC performed contracting functions.

3. The contract contained various clauses employed in non-appropriated fund supply and service contracts, including clause I-2, "NON-APPROPRIATED FUND INSTRUMENTALITY (SEP 1984)," which provided as follows:

> The Non-appropriated Fund Instrumentality (NAFI) which is a party to this contract is a non-appropriated fund instrumentality of the Department of the Army. NO APPROPRIATED FUNDS OF THE UNITED STATES SHALL BECOME DUE OR BE PAID THE CONTRACTOR OR CONCESSIONAIRE BY REASON OF THIS CONTRACT. This contract is not subject to the Contract Disputes Act of 1978.
>
> (Capitalization in original)

4. The contract also included clause I-24, "ASSIGNMENT OF CLAIMS (SEP 1984)," which provided that "[t]he contractor cannot assign any rights or delegate any obligations under this contract without the prior written permission of the Contracting Officer."

5. The contract also contained clause I-25, "DISPUTES (SEP 1984)," which provided in part that "[t]he contract is *not* subject to the Contract Disputes Act of 1978 (41 U.S.C. 601-603)." (Emphasis in original) The clause then set forth a procedure for disputes resolution similar to that set forth in FAR 52.233-1. However, the clause also provided:

> The Contracting Officer's final decision may be appealed by submitting a written appeal to the Armed Services Board of Contract Appeals within 90 days of receipt of the Contracting Officer's final decision. Decisions of the Armed Services Board of Contract Appeals are final and not subject to further appeal.

6. The contract also included clause I-4, "CHANGES (SEP 1984) FIXED PRICE SUPPLY," which was similar to the clause appearing at FAR 52.243-1; clause I-28, "TERMINATION FOR CONVENIENCE OF THE FUND (SEP 1984)," which was similar to the clauses set forth in FAR 52.249-1 and 52.249-4; and clause I-29, "TERMINATION FOR DEFAULT (SEP 1984)," which was similar to the clause appearing in FAR 52.249-8.

7. The contract also contained clause I-40, "CHOICE OF LAW," which provided that "[t]his contract will be construed and the rights and obligations thereunder will be governed by the laws of the District of Columbia, ... as interpreted by the United States Federal Courts, regardless of the place of execution or performance."

8. The contract obligated appellant, in Part I, Section C of the schedule, to "provide and maintain in stock" specified types of computer equipment and to "provide per-

Digitized by Google

sonnel to operate concession at own expense."

9. The contract contained provisions regarding space for the concession. In Part I, Section C of the schedule, it required appellant to operate the concession "in the area designated by the manager of Video, Audio, Photo Mart." Section C further provided that "[t]he Fund will provide to the concessionaire approximately 100qm of room space." The contract also provided in Part I, Section F, that performance was to be accomplished "in areas assigned by the COR (contracting officer's representative)." The contract contained no provisions requiring appellant to remodel or renovate the space provided, or allocating the cost of doing so. We further find that the contract contained no provision allocating the cost if appellant's assigned space were moved.

10. The contract also specified the financial arrangements between the parties. Clause I-20, "PAYMENTS (SEP 1984)," provided in part that "[t]he NAFI [*see* finding 3] shall pay the Contractor, upon the submission of proper invoices or vouchers, the prices stipulated ... for supplies delivered and accepted or services rendered and accepted, less any deductions provided in this contract." Under Part I, Section G of the schedule, appellant was to "deposit with the Video, Audio, Photo Mart cashier all funds collected at the close of each business day" and to invoice the Fund monthly for specified percentages of the gross receipts. Thereafter, the Fund would verify appellant's sales figures and make payment "to the concessionaire." Thus, for total monthly sales of computer hardware, software and accessories ranging from $0 to $100,000, appellant was entitled to payment for 90 percent of gross receipts. We find that, under this arrangement, no Federal funds were disbursed; if appellant had no receipts, it received no payments under the contract.

11. While the contract provided in Part I, Section F of the schedule that performance "will begin [in the] later part of November 1985," it did not specify a termination date.

B. *Contract Performance*

12. Contract performance began in November 1985. Appellant's president, James A. Langemak, and its secretary-treasurer in 1985, Michael J. Lyon, were often present in the store, together with sales personnel.

13. When it began performance, the facilities assigned to appellant consisted of the store itself, which was located on the third floor of the three-story VAP Mart, and a warehouse on site. The store had previously been used as a retail outlet. Appellant redecorated the store at or about the time that it began performance. In its discovery responses, appellant has asserted that "it was understood at such time that the costs of remodeling the area would be amortized through utilization." We find no credible evidence of such an understanding between the parties or of any other agreement by respondent to pay the cost of this redecoration. We further find no evidence that respondent ordered the redecoration.

14. In the Summer or Fall of 1986 (both periods appearing in the record), appellant moved its store from the third to the first floor of the VAP Mart, following respondent's advice that it would terminate the contract for convenience if appellant did not move. The first floor area to which appellant moved had previously been used for administrative purposes. We find that the first floor location was not inadequate for contract performance. We further find that it did not have a satisfactory appearance to appellant, and appellant chose to perform renovations. Appellant removed walls and carpeting, lowered the ceiling, installed wainscoting, wallpaper and shutters, and replaced a steel door with glass doors. The parties discussed whether respondent would pay for this renovation. We find that respondent did not agree to pay any of the cost of renovating the first floor store. We find credible the testimony of the contracting officer's representative that he advised appellant that "[i]f the concessionaire wished to do that [renovating], then they would need to do that at their own cost." We find that this testimony is not inconsistent with appellant's assertion in its Rule 11 submissions that the contracting officer's representative advised appellant to "hold any request for compensation ... until the new outlet was finished and functioning."

15. Appellant has asserted that, when it moved the store from the third to the first floor, it was also compelled to move its warehouse. We find the evidence of record fragmentary regarding this claimed move. We find insufficient evidence that the warehouse was moved. Appellant points to a 12 December 1986 letter that it sent to the contracting officer's representative. In the letter, appellant makes no express statement that it has moved the warehouse. Appellant recites that "the German government will now ... authorize this warehouse as tax- and customs free" and requests permission to erect walls and doors "at our expense." The

©1993, Commerce Clearing House, Inc.

Digitized by Google

original contracting officer's representative responded in the negative to the compound question of whether, during his tenure, appellant was "asked or forced or in any way did they move that warehouse?" His successor testified that appellant did not move the warehouse. We find no credible evidence that respondent agreed to assume any costs relating to the warehouse.

16. In January 1987, respondent issued a cure notice. In his 12 January 1987 letter, the contracting officer advised appellant that "[i]t has come to our attention that your agency is not registered in Germany under any given name or address." He asked appellant to advise him of the "measures which you will take to ensure that proper registration procedures have been completed." He also asserted that appellant had failed to maintain contractually-required inventory levels. In its 14 January 1987 response, appellant referred the contracting officer to a 20 March 1986 letter in which it had advised that "[o]ur legal agent and representative in West Germany is Bits 'N Bytes, a partnership (BGB) that is fully registered in Wiesbaden with the German authorities." Respondent subsequently accepted appellant's explanation.

17. By letter dated 23 February 1987, appellant advised respondent that "Scope GmbH [Scope] . . . is the new agent for Computer Valley International, Ltd." under the contract. Appellant assured respondent that Scope was "registered in the Handelsregister in Wiesbaden." One Doris Henkelman, the mother of Lyon (*see* finding 12), was at this time the nominal majority shareholder of both appellant and Scope. Appellant has characterized Scope as its "facilitating agent and supplier." We find that from February 1987 through June 1988, Scope: (a) ordered and paid for inventory sold in the store; (b) staffed the store with sales personnel; (c) paid the salaries of store employees; and (d) paid insurance on the store.

18. We find that, during 1987, Lyon directed respondent to make payments under the contract to Scope. We accept the affidavit of Scope's former general manager that "[i]n 1987, LYON told Mr. Garrison, the chief of the Central Accounting Division of the Wiesbaden Moral[e] Welfare and Recreation Fund to make checks in payment under the VAP Computer Mart contract out to SCOPE. I was there and heard him." The affidavit finds some corroboration in appellant's 28 February 1989 letter to the contracting officer stating that, although Garrison refused, "Mr. Lyon did at one time request of Mr. Garri(s)on a change in the designated payee for contract NAF-SAC-86-C-0006." The affidavit also finds corroboration in an 11 April 1989 memorandum from Martha E. Quinton of the Central Accounting Division to the contract specialist reciting that "[i]n late December 1987 Mr. J.R. Garrison was approached by one of the managers of the computer concession and asked to change the payee on the concession checks from only Scope to Scope/Computer USA . . . ."

19. We find that, beginning in the Fall of 1987, the presence of Langemak and Lyon (*see* finding 12) at the store began to diminish. Thereafter, neither they nor appellant operated the store at any time in 1988. While appellant points to a June 1988 meeting with respondent as evidence of its continuing operation of the store, we find that that meeting related to a proposal for a new computer sales venture. In addition, we find no credible evidence to support appellant's assertion that it "continued to operate the computer store at the VAP Mart until 2 Feb 90."

20. By date of 23 December 1987, Omni Holding AG (Omni), a Swiss firm, through its German affiliate, Augusten-Passage Immobilien GmbH (Augusten-Passage), acquired Scope. We find that, as part of this transaction, Omni acquired all stock and fixtures of the store. We further find that, at the time of this transaction, the store was Scope's sole or principal source of income.

21. The record contains two documents purportedly advising respondent to discontinue payments to Scope. The first document is a letter addressed to respondent dated 5 January 1988, in which appellant stated that its

> agent in West Germany, Scope GmbH, was sold to a West German firm, Augustenpassage GmbH of Hamburg, on 23 December 1987.
>
> * * *
>
> With the sale of Scope GmbH, the two companies are no longer owned by the same person. It now becomes very important that you instruct the [contract administration office) to use Computer Valley International, Ltd as sole payee on all checks paid under [the contract].

The second document is a letter addressed to respondent dated 15 February 1988, in which appellant stated that it "has not been associated with Scope GmbH since 2 February 1988 and since that date Scope GmbH is

Digitized by Google

not acting as agent for" appellant. We find, however, that respondent did not receive either the 5 January 1988 letter, or the 15 February 1988 letter, until December 1988, when they were attached to another letter that appellant then sent to respondent. We accept the consistent testimony of the contracting officer, the contracting officer's representative, and the contract specialist (to whom the letters were addressed) to this effect.

22. We find on the present record that, after January 1988, respondent paid at least six checks, aggregating $114,515.71, to Scope, either as sole payee or as co-payee with "Computer/USA." By letter dated 5 December 1986, appellant had advised respondent that "[w]e are now using the trade name 'Computer USA', instead of 'Bear Valley Computers' [see finding 1], for the store." These checks are as follows:

Date	Payee	Amount
2 February 1988	Scope	$ 187.59
22 February 1988	Computer USA/Scope	$33,409.67
2 March 1988	Scope/Computer USA	$ 5,283.74
10 March 1988	Scope GmbH/Computer USA	$28,004.31
23 December 1988	Scope	$17,904.50
11 April 1989	Scope	$29,725.90

We find that these checks represented concession payments for Scope's percentage of gross sales made from inventory that it owned and sold. We further find no credible evidence that appellant owned any of the inventory for which these checks represented concession payments.

23. The contracting officer's representative testified that, in February 1988, he noticed unusual activity in the store and sought an explanation from those who appeared to be in charge:

> A When I approached them and asked them in what capacity—they identified themselves as the new owners of the store, and at which time I was immediately alarmed as well as concerned, and said, "We need to discuss that in greater detail," and asked them to join me in my office, ... at which time I made detailed inquiry as to elaboration on new ownership.
>
> Q So back in your office what transpired?
>
> A Well, ... they explained to me that there had been a sale of Scope GmbH, and that they had bought it, and that they were the new owners, and that there was no longer an affiliation with Mr. Langemak and Mr. Lyon.
>
> * * *
>
> THE WITNESS: And I asked if they could elaborate on the issue of the sale of Scope and their no longer having any affiliation with Mr. Langemak and Lyon, at which time they had stated that they had purchased the rights to the contract, at which time I retorted immediately, "You cannot purchase rights to a Government contract" ....

24. On 22 February 1988, respondent's chief of contracting, as well as the contracting officer and the contract specialist, all met with Scope's new managing director and his predecessor. Langemak and Lyon were not invited because, according to the contracting officer's representative, "they weren't there" and the only telephone number that he had for them was at Scope's offices, and because of Scope's representations that it had purchased the rights to the contract in any event. At the meeting, the chief of contracting testified, "the discussion was more or less exploratory. In other words, I let [the Scope representatives] present whatever they had to state and also asked for documentation to support what they were saying" regarding Scope's claimed acquisition of the contract, as well as of the store and the inventory.

25. Following the meeting, Scope's managing director furnished respondent, by letter dated 26 February 1988, documentation to support its claims and undertook to perform the obligations in appellant's contract. She furnished

> sales agreements [and] also copies of the insurance policies which cover both the warehouse and store at Mz-Kastel .... Additionally, I have enclosed a copy of the sales agreement which transfers ownership of Scope GmbH and subsequently the computer store at Mz-Kastel to Mrs. Henkelman. Numerous invoices and documents on file with our accountants, Arthur Anderson [sic] & Co. GmbH, demonstrates [sic] further proof of the intent to transfer ownership of the store at

©1993, Commerce Clearing House, Inc.

Digitized by Google

Mz-Kastel to Scope GmbH. All stock and fixtures in this store are the absolute property of Scope GmbH, according to the documentation. Further, Mr. Michael Lyon has personally directed the staff at [the Fund's Central Accounting Division) to issue all checks payable to Scope GmbH.

I hereby certify that Scope GmbH is willing to assume all contractual obligations. Additionally, I certify that Scope GmbH will uphold all warranty repair for equipment sold after 26 February 1987. I further certify that Scope GmbH is willing to uphold the regular system of returns as determined by the VAP Mart for advertising or returns will be promptly paid. I further agree to keep the store stock levels at "fully stocked" as supply of merchandise allows.

Scope also produced a balance sheet indicating the value of inventory in a warehouse, together with a 15-page computer list of inventory.

26. We find that the parties to the contract did not at any time enter into a novation agreement substituting Scope as the contractor in lieu of appellant. (*See* finding 4) In March 1988, the Fund initiated a purchase request that "NAFSAC modify the present concession contract NAFSAC-86-C-006, Bear Valley Computers, to reflect the new owners of the concession. Scope, the new concessionaire, shall complete the current contract period (and) the Fund requests that we retain the option to extend this contract should this be advantagious [sic] to the Fund." Respondent took no final action on the request, however, because Scope shortly sought to close the store.

27. By letter to respondent dated 18 April 1988, Scope's managing director advised respondent that "[u]pper management of Scope has made the decision to close the retail computer outlet at Mainz-Kastel .... [I]t is our intention to vacate the premises both in the VAP Mart and the allotted warehouse not later than 30 April 1988." Scope thereafter vacated the premises.

28. After its decision to close the store, Scope claimed the remaining inventory. We find that Scope or its parent owned the inventory. In its interrogatory answers, appellant stated that "[t]he stock in the warehouse on-post in Scope's name prior to December 23, 1987 ... was sold to [Augusten-Passage] along with the rest of Scope on December 23, 1987" (see finding 20), and we find no credible evidence that any other inventory was not included in the sale.

29. Nonetheless, the contracting officer afforded appellant the opportunity to assert a claim to the inventory. By letter dated 26 May 1988 to "Bear Valley Computers" (*see* finding 1) at the residence address for Langemak and Lyon, the contracting officer advised that respondent had received "[d]ocumented evidence of claim to assets" in both the store and warehouse. He stated that the claim appeared "valid and warrants release action on the part of the Government." He offered appellant the opportunity to present contrary evidence by 16 June 1988 and stated that failure to do so "will result in the release of the subject assets" to the claimant on that date. We find that appellant did not respond to the letter. We further find that, on or about 14 June 1988, respondent released the inventory to Scope. In so doing, respondent checked the inventory to be released against the 15-page computer listing of inventory that had been furnished as part of Scope's substantiation of its claim to ownership of the store (*see* finding 25).

30. We find no credible evidence that appellant had a lien or other enforceable interest in the inventory at the time that it was released to Scope. We further find that whatever interest that appellant had in the inventory derived from a "private, internal agreement" between it and Omni. In its Rule 11 submissions (*see* finding 34), appellant has asserted that "NAFSAC need not be notified of said lien, as this was a private, internal agreement between [the former chief financial officer] of Omni Holding AG and Appellant."

31. Respondent did not at any time terminate the contract for convenience or for default. (*See* finding 6)

C. *Claims and Appeals*

32. By date of 8 June 1989, as amended by date of 13 June 1989, appellant submitted a certified claim to the contracting officer for $325,360, which was said to represent monies paid to Scope, lost profits, and interest and administrative costs. By decision dated 11 September 1989, the contracting officer denied the claim. We docketed the appeal as ASBCA No. 39658.

33. By date of 26 September 1989, appellant submitted a second certified claim to the contracting officer for $260,354, which was said to represent the value of inventory released to Scope, the costs of remodeling, renovating and moving the store and warehouse, and interest, administrative and legal costs. By decision dated 11 December

Digitized by Google

1989, the contracting officer denied the claim. We docketed the appeal as ASBCA No. 40496.

34. By letter to the Board dated 5 May 1992, appellant elected that "pursuant to Board Rule 11, the case be submitted on the record." Appellant repeated that election in a conference call with the Board on 14 May 1992. Respondent declined to elect Rule 11 disposition, and the Board accordingly held a hearing at which respondent presented testimony from eight witnesses. Respondent also offered, and the Board received in evidence, its first set of interrogatories and requests for admissions and appellant's responses thereto.

35. In its supplement to the Rule 4 file, and in its Rule 11 submissions, appellant adduced evidence regarding: (a) Scope's "lockout" of appellant "from its contractually guaranteed office in the Scope GmbH building" in February 1988; (b) "the Scope February 3, 1988 break-in of the Appellant's office;" (c) "perjurious responses" to Freedom of Information Act requests; and (d) respondent's "persistent cover-up." We find no connection between this evidence and claims within our jurisdiction.

DECISION

A. *Jurisdiction*

We conclude that we have jurisdiction over these appeals pursuant to the Disputes clause. (*See* finding 5) Under our Charter, we have jurisdiction to decide appeals "pursuant to the provisions of contracts requiring a decision by the Secretary of Defense or by a Secretary of a Military Department or their duly authorized representative or board." 48 C.F.R. § 271, Appendix A, ¶ 1. Plainly, the Disputes clause (finding 5) calls for a decision here.

We also conclude that we do not have jurisdiction under the Contract Disputes Act, 41 U.S.C. § 601 *et seq.* Under 41 U.S.C. § 602(a), the Act applies to the contracts of "the nonappropriated fund activities described in [28 U.S.C.] sections 1346 and 1491." We cannot conclude that the Fund (*see* finding 2) falls within the categories set forth in those sections. *See McDonald's Corp. v. United States* [37 CCF ¶ 76,036], 926 F.2d 1126, 1132 (Fed. Cir. 1991) (noting that "an organization serving the recreational needs of servicemen might not" fall within 28 U.S.C. § 1491) We have long treated such non-exchange funds as outside our Contract Disputes Act jurisdiction. *E.g., Recreational Enterprises*, ASBCA No. 32176, 87-1 BCA ¶ 19,675 at 99,599 (base recreational fund). In addition, while not conclusive, the contract itself twice provides that the Act is inapplicable. (Findings 3, 5)

B. *Merits*

In its complaint, appellant seeks eleven different forms of relief. These forms of relief find expression in appellant's voluminous Rule 11 submissions. We group these prayers for relief into six broad categories that generally track appellant's claims to the contracting officer. (See findings 32, 33) Those categories are: (a) costs associated with moving and renovating the store and supporting warehouse in 1985 and 1986; (b) the value of appellant's interest in inventory transferred to Scope; (c) funds that respondent paid to Scope after 5 January 1988; (d) lost profits from May 1988 to the present; (e) punitive damages; and (f) claim and appeal costs, as well as attorney fees and interest. We discuss each category of relief in turn below.

1. *Remodeling, Renovating and Moving Costs.*

As alleged in the complaint, appellant's claim for moving and renovating costs has three components. Appellant seeks the costs of: (a) "remodeling the original retail outlet and supporting warehouse in 1985;" (b) "completely renovating the second location for the computer retail outlet, in the Fall of 1986;" and (c) "moving the retail outlet and supporting warehouse to the second locations."

This claim presents both factual and legal issues. The factual issues relate to whether respondent's representatives agreed, at the time of the remodeling, renovating and moving, that respondent would bear any of the costs. We have resolved these factual issues against appellant with regard to all three aspects of the claim. (Findings 13, 14, 15) The legal issues fall under the rubric of contract interpretation. They relate to whether the contract itself affords a basis for imposing the claimed costs on respondent. We conclude that it does not.

While appellant's legal theory regarding the remodeling and renovating costs is not articulated in its brief, it did set forth two theories in response to interrogatories admitted into evidence. (*See* finding 34) With respect to the 1985 remodeling costs, appellant asserted that it originally "accepted responsibility" for the costs because "it was understood" that it could amortize them through utilization of the store. Respondent is said to have breached this understanding

©1993, Commerce Clearing House, Inc.

Digitized by Google

by requiring that appellant move the store in 1986. We have, however, found no credible evidence of such an understanding. (Finding 13) From all that appears in the record, appellant undertook to redecorate its third floor location entirely as a volunteer to satisfy its own notions of the most presentable retail outlet.

With respect to the 1986 renovation costs for the first floor location, the theory is different. In its discovery responses (*see* finding 34), appellant asserts that it is entitled to recover because of a "non-compensated change to and/or breach of the contract by requiring Appellant to move ... the store and warehouse to unsuitable facilities." Appellant also argues unjust enrichment. We do not accept any of these arguments. The contract did not impose an obligation upon respondent to furnish appellant with a store area that was fully renovated to appellant's taste. (*See* finding 9) Instead, respondent's obligation was limited to providing appellant with "100qm of room space" in the VAP Mart. (Finding 9) We have been unable to find that the first floor location was inadequate for contract performance before appellant undertook the renovation. (Finding 14) We have found that respondent did not direct appellant to renovate the first floor, but that appellant chose to do so. (*Id.*)

With respect to moving costs, appellant's theory is also expressed in its discovery responses (*see* finding 34) as "noncompensated change and/or breach of the contract." We cannot agree that the claimed costs are recoverable under either rubric. As to the store itself, we conclude that the contract did not assure appellant of any permanent location. The contract provided, in Part I, Section C, that the store would be "in the area designated by the manager" of the VAP Mart. (Finding 9) It also provided, in Part I, Section F, that the store would be "in areas assigned by the COR." (*Id.*) Given these provisions, we cannot conclude that respondent made an undertaking that the store would remain on the third floor for the life of the contract, so that a move would constitute either a change or a breach. As to the warehouse, we have found against appellant on the factual issue of whether the record shows that it was moved at all (finding 15), but we believe in any event that the same legal considerations would be dispositive.

Accordingly, appellant is not entitled to recover remodeling, renovating and moving costs.

2. *Value of Appellant's Interest in Inventory.*

Appellant contends that, by releasing the inventory to Scope (*see* findings 28-30), respondent breached the contract by "interfering on Scope GmbH's behalf in a German civil legal matter and ... without notifying Appellant." According to appellant, the inventory "was obligated to Appellant by Omni" to guarantee performance of a separate contract that Omni is said to have breached in manifold ways.

We reject these contentions. The premise of all of them is that appellant had an interest in the inventory. Relying upon appellant's own characterization, we have found that this interest was the product of a "private, internal agreement" of which respondent was unaware. (Finding 30) This characterization runs headlong into District of Columbia law. (*See* finding 7) "[B]asic to the law of secured transactions is the principle that 'the secured creditor must do something to give effective public notice of his interest.' " *First Savings Bank of Virginia v. Barclays Bank, S.A.*, 618 A.2d 134, 138 (D.C. 1992) *quoting* 1 GILMORE, SECURITY INTERESTS IN PERSONAL PROPERTY § 14.1 at 438 (1965). In addition, we reject, as contrary to our findings, appellant's assertion that respondent released the inventory "without notifying appellant." (*See* finding 29)

Accordingly, appellant is not entitled to recover for any interest that it may have had in inventory.

3. *Funds Paid to Scope.*

While appellant's brief does not articulate a legal theory for recovery of funds paid to Scope after January 1988, appellant's interrogatory answers (*see* finding 34) do. Appellant's stated theory is "[b]reach of contract as the Appellant is the payee on the contract .... Improper contract termination by the Government and a change to the contract."

We cannot accept these contentions. We recognize that the contract required respondent to make payments "to the Contractor" or "to the concessionaire" upon compliance with invoicing requirements. (Finding 10) Ordinarily, these requirements would be dispositive, but appellant's argument also rests on two broad factual premises that we have rejected. The first rejected premise is that, while appellant advised respondent in 1987 to make payments under the contract to Scope (finding 18), it rescinded that advice in January 1988, and again in February 1988. We have found, however, that respon-

Digitized by Google

dent did not receive these two letters until December 1988. (Finding 21) In addition, we have found that the disputed payments to Scope represented its percentage of gross sales on inventory that it owned and sold. (Finding 22) The second rejected premise lies in appellant's assertion in its discovery responses that it "functioned in the same manner after January 5, 1988 as it had" since contract award in 1985. To the contrary, we have found that appellant did not perform its obligations under the contract in 1988 but that Scope did instead. (Findings 17, 19)

With respect to appellant's argument that there was an "[i]mproper contract termination," we have found that respondent did not at any time terminate the contract for convenience or for default. (Finding 31) We cannot conclude, however, that this circumstance entitles appellant to the funds paid to Scope.

Accordingly, appellant is not entitled to recover funds paid to Scope.

4. *Lost Profits.*

While District of Columbia law permits the recovery of lost profits if they are "'fairly certain and can be ascertained," *Garcia v. Llerena,* 599 A. 2d 1138, 1143 (D.C. 1991), appellant has failed to establish the prerequisite of a material breach by respondent. In any event, we could not conclude that lost profits "from sales at the . . . store, from May 1988 to the present" are anything other than speculative under the evidence presented. (*See* Findings 10, 17, 19)

Accordingly, appellant is not entitled to recover lost profits.

5. *Punitive Damages.*

While "[u]nder District of Columbia law, punitive damages for breach of contract may be assessed in certain, narrowly defined circumstances, where a breach of contract merges with, and assumes the character of, a willful tort," *Kuwait Airways Corp. v. American Security Bank, N.A.,* 890 F.2d 456, 466 (D.C.Cir. 1989) (internal quotations omitted), appellant has not established a material breach of contract, much less willful conduct by respondent.

Accordingly, appellant is not entitled to recover punitive damages.

6. *Claim and Appeal Costs, Attorney Fees, and Interest.*

Appellant's prayers for claim and appeal costs, as well as attorney fees and interest, all presuppose favorable determinations of entitlement on some or all of its other claims. We have not made such determinations.

Accordingly, appellant is not entitled to recover claim and appeal coats, attorney fees, and interest.

CONCLUSION

The appeals are denied.

[¶ 26,298] Cocoa Electric Co., Inc.

ASBCA No. 33921R, July 30, 1993. Contract No. F08650-83-C-0100.

Pricing of Adjustments—Proof—Government Estimates.—Although a contractor failed to prove its damages with any certainty, it was entitled to an equitable adjustment because government estimates were sufficient to support an award at a fair approximation of the damages. Expenses for claim preparation were not allowable, and alleged expenses for design engineering work were not allowable as a direct cost. No design engineering was performed, and the claimed expenses included functions normally performed by a project manager but allegedly in this instance performed by a corporate officer, who was compensated by a weekly draw against his share of the profits.

For the appellant: Frederick D. Sarkis, Merritt Island, Florida. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Diana S. Dickinson, Trial Attorney.

Before SHACKLEFORD, RUBERRY, and RIISMANDEL, Administrative Judges.

SHACKLEFORD, Administrative Judge: This decision resolves the quantum aspects of the subject appeal. We issued a decision on entitlement on 24 September 1990 (91-1 BCA ¶ 23,442) in which we granted 25 parts of a 56 part claim. Of that 25, liability had been conceded by the Government in 17 of them. We denied a motion for reconsideration on 15 February 1991 (91-2 BCA ¶ 23,780). After the parties unsuccessfully sought to settle

©1993, Commerce Clearing House, Inc.

Digitized by Google

the claims on which appellant had prevailed, a quantum hearing was held. Both parties have filed briefs addressing the quantum issues. In addition to the transcript of the quantum hearing and documents associated therewith, the record includes the documents, transcripts and decisions made in conjunction with the entitlement portion of this appeal. Familiarity with the prior decisions in this appeal is presumed.

FINDINGS OF FACT

1. Following the entitlement decision, Cocoa Electric prepared a cost analysis of the 25 claims granted and submitted it to the contracting officer. Although the parties negotiated this revised claim, no agreement was reached.

2. In its claim of October 1985, Cocoa sought a specified number of hours for design engineer on each of the claim items at $27.50 per hour. In the revised claim the amount for design engineer is lumped with hours claimed for electricians and is reduced to the electrician rate of $16.28 per hour. In the original submission Cocoa claimed consulting expenses of $65,438. This amount represented the actual billed amount for a consultant to prepare the claim. In the revision, the amount claimed was reduced to $23,694.15 to reflect an allocation to the 25 claims approved by the Board, and was removed from the G&A pool and claimed as a separate cost element.

3. A summary of the revised claim is set forth below. Each category will be discussed in turn.

Cost Element	Requested Amount
Burdened Labor	$30,223.79
Direct Material	5,045.53
Fisher-Robinson (Subcontract)	1,101.00
Total Job Cost for 25 Claims	36,370.32
G&A	3,736.72
Consulting Fees	23,694.15
	63,801.19
Profit @ 10%	6,380.12
Performance bond at 2.0408%	1,432.26 *
Total	71,613.57

4. The burdened labor component of the claim essentially consists of three items. The first is design engineer hours. The second is the totality of hours claimed for skilled workers and laborers to perform the additional work. The third item is the direct labor overhead applied to the labor costs.

5. Appellant originally claimed a total of 735 hours for design engineer for the 25 claims granted. In this quantum case, the 735 hours have been charged at the electrician rate of $16.28 per hour, reduced from $27.50 per hour. The great majority of these hours are alleged to have been performed by Mr. Elkins, who is not an engineer. Mr. Elkins is an owner and officer of Cocoa Electric. His compensation was a weekly draw against his share of any annual profits. During the times that Mr. Elkins claims he performed these functions, he employed both a project manager and an assistant project manager to process change orders and manage the work on site. On several occasions in the original decision on entitlement we expressed disbelief at the number of hours claimed for design engineer. The Government's expert witness, Mr. Clinchard, saw no necessity for the incurrence of costs for design engineer.

6. Based upon our review of the record, including a determination that the testimony of Mr. Elkins on the subject of design engineer hours was not credible, we find as a fact that no design engineering work was performed, and no costs were incurred for that function. To the extent this category includes functions such as coordination with subcontractors and shop drawing review, these functions are normally performed by a project manager.

7. In attempting to prove the amount of skilled worker and labor hours incurred for the 25 items on which appellant prevailed, appellant offered the testimony of Mr. Elkins. Mr. Elkins testified that after completion of the contract, he met with a claims consultant and estimated the number of labor hours incurred to perform the additional work. The Government attempted to prove the amount of skilled worker and labor hours incurred for the 25 items on which appellant prevailed through the testimony of Mr. Clinchard, an architect and an experienced estimator. Mr. Clinchard had no responsibilities for the work during performance and prepared his estimate after the work was complete and the claim had been filed. In our original decision on entitlement we found the man-hours claimed for the condenser pad extension (Claim No. 3.3.1) to be incredibly high and found the number of hours incurred for Additional

* Cocoa has consistently based its computation of bond on 2.0408 percent while rounding its assertion of the bond rate to 2 percent. The actual rate is 2.0408 percent.

Digitized by Google

Circuits (Claim No. 3.3.9) to be *de minimis*, totalling no more than one hour, where seven were claimed, Moreover, Mr. Elkins testified to only one item on direct and two or three others on rebuttal, leaving no proof of hours for the great majority of the claims. Based upon our view of the record, including a determination that Mr. Clinchard's testimony was more complete and more credible than Mr. Elkins', we find the Government estimate to represent a better estimate of the actual number of hours needed to perform the additional work.

8. Based upon the foregoing, we find the labor hours proved along with rates (which are not disputed) as follows:

DIRECT LABOR FOR 25 APPROVED CLAIMS

Para.	Claim Description	Electrician	Sheet Metal	Carpenter	Painter	Mason	Laborer
2.4	P00003/P00004	1	2	35			25
3.2.4	Coffer Ceiling			2			
3.2.5	Carpet Removal						13
3.2.6.	Addit. Circuits	14					
3.3.1	Cond. Pad Ext.			3		4	13
3.3.4	A/C Duct Ext.		8				
3.3.6	Wall Extension			13	1		5
3.3.8	Conduit Repl.	28½					
3.3.9	Addit. Circuits	½					½
3.3.10	Jnct. Box Removal	2					
3.4.2	Tile vs Paint			9			12
3.4.5	Double Doors			6			7
3.4.6	AC Refrig. Lines			9	4		2
3.4.7	Hot Water Lines			6			1
3.5.1	Door Hdwr Specs			32			
4.2.1	Commun. Cabinet		16			2	
4.2.2	Alcove Mods.			10			2
4.2.3	Phase III Power	13					
4.2.5	Window Trim			11			2
4.2.7	Misc. Elect.	86					
5.6	Remove Ink						2
5.7	Rpl Sound Soak						
7.2.4	Wall Extension			8			
7.2.7	Sound Soak (Sub)			9			
Total Hours by Trade		145	26	153	5	6	84½
Hourly Rate by Trade		$16.28	15.63	13.17	12.13	11.95	9.11
Hours times rate		$2,361	406	2,015	61	72	770
Total Direct Cost of Labor		$5,685					

©1993, Commerce Clearing House, Inc.

Digitized by Google

9. The final portion of burdened labor is the direct labor overhead rate or labor burden. Appellant claims 16.2 percent for "wage fringe" and 43.8 percent for other Direct Labor Overhead. The Government used an approximate rate of 35 percent in its calculations. A Government audit reveals that Cocoa's bid was based upon a labor overhead rate of 41 percent and that is the rate we allow. The total allowance for labor, therefore, is $5,685 plus 41 percent of $5,685, or $8,016.

10. Appellant claims $1,101 for subcontract costs and $5,046 for the cost of direct materials. The Government agrees with these figures. We find as a fact that appellant incurred subcontract and material costs of $6,147 incident to the 25 claims on which it prevailed.

11. Mark-ups of 10 percent for overhead and 10 percent for profit are considered fair and reasonable. Cocoa's fair and reasonable bond rate for the contract was 2.0408 percent.

DECISION

Although appellant has not proven its damages with any certainty, we find the Government estimates to be sufficient to support an award at a fair approximation of the damages. See *S.W. Electronics & Mfg. Corp. v. United States* [29 CCF ¶ 81,726], 655 F.2d 1078, 1088-89 (Ct. Cl. 1981). However, the expenses for claim preparation, although incurred, are not allowable. *Owen L. Schwam Construction Co., Inc.*, ASBCA No. 22407, 79-2 ¶ 13,919. Moreover, the alleged expenses for design engineer, performed by Mr. Elkins, are not allowable as a direct cost in an equitable adjustment when performed by a corporate officer. *J.M.T. Machine Co., Inc.*, ASBCA Nos. 23928, 24298, 24536, 85-1 BCA ¶ 17,820.

Based upon our findings, we award for the 25 items on which Cocoa prevailed as follows:

Labor (including burden)	$ 8,016
Materials and subcontracts	6,147
Total direct costs	14,163
overhead (G&A) at 10%	1,416
	15,579
Profit at 10%	1,558
	17,137
Bond at 2.0408%	350
Total award	17,487

This and our prior entitlement decision tracked the individual claim items using the format and nomenclature set forth in the 28 October 1985 consultant-prepared claim. Although earlier claim submissions were made that might have included some of the items on which appellant has prevailed, Cocoa has failed to demonstrate with any certainty the precise date on which specific claims were presented to the contracting officer earlier than the 28 October 1985 claim package. Consequently, we decide that interest on amounts recovered herein is to be measured from 31 October 1985, the presumed date of receipt of the claim by the contracting officer, until paid.

The appeal is sustained in the amount of $17,487 plus interest under the Contract Disputes Act from 31 October 1985 until paid. In all other respects the appeal is denied.

[¶ 26,299] Apex International Management Services, Inc., by Trustee in Bankruptcy

ASBCA Nos. 37813, 38178, 38224, 38278, 38297, 38354, 38514, August 6, 1993. Contract No. DAKF10-85-C-0464.

Indefinite Delivery Contracts—Estimates by Government—Historical Workload.—A record of the maintenance workload of the prior contractor, included in a solicitation for the operation of a motor pool, was prepared with adequate care. Government personnel spent two weeks counting individual maintenance work orders before placing totals in the solicitation document. Historical workload figures have been approved for use as bases for estimates used for bidding invitation purposes. In any event, the contractor's actual workload did not differ markedly from the number of maintenance events shown.

Indefinite Delivery Contracts—Estimates by Government—Burden of Proof.—The government did not have the burden of persuasion to prove the reasonableness of its estimating procedures under a solicitation for the operation of a motor pool, because the maintenance workload experienced by the contractor did not differ markedly from the

Digitized by Google

events shown in the historical record included in the solicitation. Furthermore, the contractor could gain no benefit from board precedents for shifting the burden when actual orders vary significantly from estimates, because such reasoning was effectively overruled by the U.S. Court of Appeals for the Federal Circuit in *Medart Inc. v. Austin*, 38 CCF ¶ 76,349.

For the appellant: Marks, Gray, Conroy & Gibbs, Jacksonville, Florida, by Nicholas V. Pulignano, Jr. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. Karl M. Ellcessor III, JAGC, Trial Attorney.

Before PAUL, RIISMANDEL, and RUBERRY, Administrative Judges.

PAUL, Administrative Judge: These are timely appeals of contracting officer's decisions denying appellant Apex International Management Services, Inc.'s (Apex) claims for equitable adjustments in a total amount of $390,931.75. The Contract Disputes Act (CDA), 41 U.S.C. § § 601 *et seq.*, is applicable, and only issues of entitlement are before us for decision. A prolonged, two-day hearing was held in Jacksonville, Florida, and each party later filed two sets of post-hearing briefs.

GENERAL FINDINGS OF FACT

1. On 5 September 1985, the Army awarded contract No. DAKF10-85-C-0464 to Apex. This was a firm fixed-price contract requiring the management, operation, and maintenance of the Transportation Motor Pools (TMPs) located at Fort Stewart, Georgia, and Hunter Army Airfield, Georgia (JSF-1).[1]

2. The contract contained option clauses to extend contractual performance for two additional years, and the Army exercised these options. As a result, Apex's total contractual performance period extended from 1 October 1985 to 30 September 1988. The base contractual year was Fiscal Year (FY) 1986, and the optional years were FY 1987 and FY 1988 (JSF-2).

3. The contract incorporated by reference FAR 52.243-01, "Changes-Fixed Price-Alternate I APR 1984." In addition, it contained a host of clauses which are pertinent to the underlying disputes. Among them are the following:

C.1.1. *Introductions* [sic]: This statement of work consists of motor vehicle operations, fleet management, bus and taxi service, and NTV maintenance functions of the Transportation Motor Pool at Fort Stewart/HAAF, Georgia.

C.1.2. *Scope:* The work involves all phases of the Transportation Motor Pool, vehicle management, operations, and maintenance. The NTV fleet under this contract consists of approximately 500 vehicles, of which approximately 290 are located at Fort Stewart and approximately 100 at HAAF. Approximately 110 vehicles are hand receipted and on recurring dispatch to off post USAR, ROTC, and active duty users in Florida. This fleet consists of a wide variety of vehicles, to include sedans, buses, ambulances, light, medium, and heavy cargo type vehicles, (including tractor/trailers) and wreckers. The maintenance function is responsible not only for the vehicles assigned but shall provide support to satellited and transit vehicles as outlined in para C.5.11.1.1 and C.5.11.1.2 of this statement of work. The Transportation Motor Pool will be operated by the Contractor, on a user-driver concept. This concept requires the requesting activity to furnish drivers for assigned NTV provided by the TMP with the exception that the Contractor shall furnish drivers for buses, taxi, tractor/trailer combinations, cargo trucks, as specified herein and wrecker support provided under this contract, or as required on one-time transportation requests.

C.1.2.1. The Contractor shall furnish all personnel, equipment, repair parts and supplies, except as specified herein as Government furnished to manage and operate vehicle operations, fleet managment [sic], and maintenance at Ft. Stewart/HAAF, Georgia and off post hand receipted vehicles. Performance shall be according to the standards contained herein and meet the intent of AR 58-1, AR 700-88, TM 38-600 and other directives listed in Section C-6.

C.1.2.2. *Operating Hours:* The Contractor shall operate the Transportation Motor Pools 24 hours per day, 7 days per week. The working hours for work shifts will be established by the Contractor to meet re-

[1] "JSF-__" refers to the "Joint Stipulation of Facts and Issues" submitted by the parties prior to the hearing held in this matter.

©1993, Commerce Clearing House, Inc.

Digitized by Google

quirements of the contract and to ensure that the following functional areas are adequately staffed and operational during the time frames specified below:

Management/Administration/Driver Testing: Regular duty hours 0730 a.m.—1600 p.m. (Monday—Friday) excluding holidays set forth in Para H. Management/Administration shall be staffed to a minimum during lunch period.

Taxi Operations: 0730 a.m.—1600 p.m. (Monday—Friday) including lunch period. During the remaining hours, not specifically cited above, the Contractor shall schedule sufficient number of personnel to perform all services covered in the contract.

* * *

C.3.1. *General:* The Government will provide facilities and equipment as set forth in Technical Exhibits 3 and 4. Repair or replacements will be made as necessary due to fair wear and tear. Vehicle replacements will depend on Army procurement.

C.3.1.1. All required Department of the Army, Department of Defense and local forms, regulations and directives, and official letterhead paper will be furnished by the Government. Initial supplies of these items will be available at contract start. The Contractor shall establish requirements through the COR to local publications distribution office for follow-on needs.

C.3.1.2. The Government shall furnish pickup and disposal service for all garbage and trash placed in Dempsey Dumpster located in the area.

C.3.2. *Facilities:* The Government will furnish or make available the facilities described in Technical Exhibit 3.

C.3.3. *Vehicle and Vehicular Equipment:* The Government will furnish vehicles and vehicular equipment as set forth in Technical Exhibit 4. Technical Exhibit 4 is current as of 30 Apr 85. The total number of vehicles may vary during the term of the contract because of budgetary constraints and lead time in replacing uneconomically repairable vehicles or changes in authorizations. The Government will make every effort to replace vehicles within the constraints of the procurement process. If failure to replace a vehicle renders the Contractor unable to meet commitments, the Contractor shall inform the COR immediately. See Special Provision No. H-7 for price adjustment clause.

C.3.4. *Tools and Equipment:*

C.3.4.1. The Government will furnish equipment as set forth in Technical Exhibit 4. The Contractor shall be responsible for all maintenance, to include repair parts and labor required to repair equipment listed in Technical Exhibit 4, up to the one-time repair limit IAW applicable publications set forth in paragraph C-6, for the item.

C.3.5. *Utilities:* The Government will furnish utilities including maintenance of those utilities as required for the proper and effective operation of the facilities provided. These utilities include gas, electricity, water, sewage disposal, fuel oil, and on-post phone service. Contractor shall carefully conserve all utilities furnished. The Contractor shall comply with installation regulations and/or directives with respect to use of the heating and air conditioning system, and/or other systems.

C.3.6. *Mobility Fuel:* The Government will furnish all MOGAS and Diesel fuel required in the execution of this contract. The contractor shall furnish all other fuel, oil, and lubricants required.

* * *

C.4.3. *Materials and Supplies:* The Contractor shall furnish all parts, materials, office furniture, supplies, tires, lubricants, batteries, toll tickets, license plates, tools and clothing, except government furnished items as defined herein, required to meet the terms of the contract.

* * *

C.5.1.2 *Files:* The Contractor shall maintain sufficient files to document information contained in all reports required under this contract.

The Contractor shall make all records and files applicable to this contract available for review by any agency or individual authorized access by the Contracting Officer or his representative during the term of this contract.

C.5.1.3. *Required Reports:* The Contractor shall furnish the Government the required reports listed in Technical Exhibit 7 or as otherwise required. Format and frequency will be as outlined. Additional information for the Cost and Performance data report is described in paragraph C.5.13 of this contract.

Digitized by Google

* * *

C.5.8. *Wrecker Service:* The Contractor shall provide wrecker service for all NTV assigned to or satellited on TMP, Fort Stewart and HAAF. Service shall be provided within a distance as outlined in Technical Exhibit 13. The Contractor shall dispatch all wrecker calls within 20 minutes during normal duty hours (0730-1600) Monday thru Friday and 45 minutes from time of receipt of request after hours (1600-0730), and Saturday, Sunday, and holidays. The Contractor shall provide qualified drivers to operate the TMP wreckers. For information purposes, after duty wrecker service was required approximately 31 times a year in the past for HAAF and 86 for Fort Stewart. The Contractor shall also provide wrecker service deemed necessary by the Provost Marshal to transport vehicles obstructing traffic on the installation or similar emergency requirements or to remove abandoned civilian vehicles. (Approximately 38 times a year at HAAF and 34 times at Fort Stewart). The Contractor shall maintain a monthly log of all wrecker calls to include time call received, time wrecker dispatched, and name or activity of requestor.

C.5.9. *Fuel and Oil Dispensing Facility:* The Contractor shall operate an automotive fuel and oil dispensing facility at Fort Stewart and HAAF. All MOGAS and Diesel fuel will be furnished by the Government. The Contractor shall be responsible for issuing automotive fuels and oil to all authorized users listed in Technical Exhibit 11. The facility will be attended and operational from 0730 to 1600 hours Monday through Friday, except for a period not to exceed 15 minutes per day for daily inventory. Provisions will exist for on call service for after hours, weekends, and holidays. The Contractor shall respond to these requests for after duty service within 10 minutes of request. Issues an average of approximately 82 during normal duty hours and 39 after duty hours daily at Fort Stewart. Issues at HAAF average approximately 30 during duty hours and 17 hours daily.

* * *

C.5.9.2. *Daily Issuance Records:* All automotive fuel and oil issued shall be recorded by the Contractor on DA Form 3643 (Daily Issues of Petroleum Products) at the time of issuance. The Contractor shall obtain the signature and grade of the recipient and complete the DA Form 3643 in accordance with FM 10-69 (petroleum Supply Point Equipment and Operations), for each business day. The Contractor shall take dispensing pump meter readings and dipstick readings at the beginning and ending of each day of operation. The beginning reading will be entered at the top of the DA Form 3643 using stamps provided. The closing reading will be entered immediately after the last issue of the day. The Contractor shall then forward the original form and any receipt documents to the COR by 1000 hours the following day.

C.5.10.4.1. *Off Post Hand Receipted Vehicles:* The Contractor shall receive requests from authorized off post activities for vehicles to be retained at the user's location for extended periods, due to either (a) continuing mission requirements after normal duty hours, or (b) being located at such a distance from the TMP that return of the vehicle to the TMP on a more frequent basis would not be practical. Such requests will be processed IAW procedures outlined in para C.5.10.3 and C.5.10.4. The Contractor shall hand receipt vehicles to authorized users. The Contractor shall ensure the user provides utilization and cost data required, that the user is provided US Government credit cards, toll tickets, turnpike toll cards, as required, with instructions for their use, and that the user does not misuse/abuse the vehicle. The Contractor shall maintain and service all vehicles on hand receipt the same as all other vehicles. Maintenance and services shall be performed on location. Only those vehicles within a 50 mile radius of the TMP at Fort Stewart or HAAF on official business shall be maintained or serviced in the TMPs. The Contractor shall be responsible for transportation of inoperable vehicles to maintenance location. When US Government credit card is used for towing expense, the Contractor shall reimburse the Government in accordance with procedures outlined for roadside repair in paragraph C.5.5.2. Vehicles requiring major repairs may be transported (not driven) to Fort Stewart/HAAF at the Contractor's expense for repairs. The vehicle may be driven for return to it's [sic] usual place of use. All scheduled maintenance services shall be accomplished within the prescribed schedules and tolerances. The Contractor shall not extend either time or mileage intervals for scheduled maintenance to take advantage of scheduled vis-

©1993, Commerce Clearing House, Inc.

Digitized by Google

its to Fort Stewart/HAAF by the user. All vehicles located in Key West, Florida, shall be rotated every six months due to rust deterioration. A list of vehicles on hand receipt to units/activities located off post is at T.E. 12, which also contains the existing letter of instructions to off post vehicle users. The Contractor shall update this document to provide his instructions to users and submit it to the COR for approval 30 days prior to contract commencement. The Contractor shall be responsible for distributing letter of instruction to all users of off post vehicles.

* * *

C.5.11.1.9. *Accident Repair:* The Contractor shall make repairs necessary as a result of accidents up to the one-time repair limit as specified in AR 700-88 and FORSCOM Supplement 1. Repairs above the limit will be processed IAW paragraph C.5.11.1.6 above. Accident damage shall include only that damage incurred in an accident. Minor maintenance, scheduled service, and extensive drive train repairs shall not be included in order to exceed the one-time repair limit. The Contractor shall be totally responsible for repairs without regard to repair limitations when the accident is the result of negligence by the Contractor or it's [sic] employees. The cost of accident repairs during FY 84 was $16,730.51.

C.5.11.2. *Maintenance Functions:*

C.5.11.2.1. The Contractor shall perform management, supervisory, and administrative functions to accomplish service and repairs for all assigned NTV and equipment. The minimum services and repairs required are user/operator, inspection service, scheduled maintenance, unscheduled maintenance, accident repairs, and warranty maintenance to maintain NTV and equipment within manufacturer's specifications IAW the manufacturer's service manual applicable to each vehicle as specified by TM 38-600. All vehicles shall be maintained at all times IAW safe and serviceable criteria as defined by TM 38-600 and AR 58-1.

C.5.11.2.2. *Scheduled Maintenance:*

C.5.11.2.2.1. The Contractor shall follow established scheduled maintenance programs outlined and scheduled on monthly Maintenance File Listing PCN: AGV-351, AGV-361, and perform preventive maintenance on all assigned vehicles and equipment in accordance with manufacturer's specifications and the requirements outlined in TM 38-600.

Intervals of scheduled maintenance are generally specified by the vehicle or equipment manufacturer, however, the Government may specify intervals which take precedence over the manufacturer's recommended interval. Presently the Government specifies the following intervals for two service items: (a) oil and filter change: The engine oil (crankcase) shall be changed at intervals established by the vehicle maunufacturer [sic] until the provisions of the warranty have expired. After expiration of warranty provisions of TM 38-600 will apply. The tolerance for scheduled maintenance is 10 days or 100 miles before or after scheduled due date. Appendix D, TM 38-600, provides a guide for preventive maintenance service and inspection guides. (b) Antifreeze: The antifreeze shall be changed at intervals established by the maunufacturer [sic] until the provisions of the warranty have expired. After expiration of the warranty, antifreeze shall be changed when inspection indicates it is contaminated and no longer performs the service for which it was intended.

C.5.11.2.3. *Unscheduled Maintenance:* Contractor is responsible for:

C.5.11.2.3.1. All maintenance and repairs required to maintain vehicles in a safe and serviceable condition IAW TM 38-600.

C.5.11.2.3.2. Vehicle modifications authorized in TM 38-600 or modifications when approved by the Major Command Headquarters.

C.5.11.2.3.3. Preparation of Technical Inspection, DA Form 461-5, as required.

* * *

C.5.12. *Administration:*

C.5.12.1. The Contractor shall provide daily reports (see Technical Exhibit 7) regarding the maintenance status, VDT of vehicles in the fleet and additional reports as required.

C.5.12.1.2. The Contractor shall maintain a Maintenance Request Register IAW DA Pam 738-750. The Contractor shall issue all work order numbers in numerical sequence developed locally using DA Form 2405.

C.5.12.1.3. The Contractor shall assure the safety inspection and schedule preventive maintenance programs are accomplished on time as shown in AGV 351 and

Digitized by Google

AGV 361, Preventive Maintenance Schedule, output monthly from IAVMS.

C.5.12.1.4. The Contractor shall prepare Quality Deficiency Reports (SF 368) per instructions outlined in DA Pam 738-750, TM 38-600, and AF 700-88.

C.5.12.1.5. Historical workload is in Technical Exhibit 22. Annual mileage driven is contained in Technical Exhibit 4.

(ASBCA No. 37813, R4, tab 1)

4. Subsection C-6 of the contract incorporated by reference several Governmental publications relating to vehicular maintenance, including TM 38-600 (September 1979). Paragraph 6-7b of this manual, entitled "Preparation of New Equipment for Operation," provided:

Each new vehicle assigned to an installation or activity will be inspected and serviced only to the extent necessary to insure acceptability and proper operation until the initial scheduled service. Particular attention will be given to the detection of deficiencies eligible for correction under the warranty provisions of the contract.

(ASBCA No. 37813, R4, tabs 1, 104)

5. Technical Exhibit No. 4 of the contract, which was referred to in subsection C.3.3., detailed the number, type, model, mileage, and age of the vehicles which comprised the TMP. This listing was prepared by the Army on 30 April 1985, approximately two months prior to issuance of the solicitation, and it provided information with respect to 523 vehicles as of that date (ASBCA No. 37813, R4, tab 1). By July 1985, two months before Apex commenced performance under the contract, the fleet size of the TMP had dropped to 497 vehicles (ASBCA No. 37813, R4, tab 144).

6. Technical Exhibit No. 22 of the contract, which was referenced in subsection C.5.12.1.5., contained "Historical Maintenance Workload" data compiled by Army personnel based upon records supplied by the prior contractor. It stated the following workload:

	TMP SHOP		COMMERCIAL SHOPS	
	TMP VEH	NON TEMP VEH	TMP VEH	GRAND TOTALS
A Maintenance	469	14	103	586
B Maintenance	323	9	93	425
C Maintenance	319	0	85	404
Other Repairs	3031	48	303	3382
Major Repairs	28	0	5	33
Maintenance and Other	560	9	68	637
Inspection Only	26	0	0	26
Accident	21	0	3	24
Warranty	0	0	25	25

The second page of Technical Exhibit No. 22 provided a "Definition Of Services" as follows:

A, B, & C Maintenance—Maintenance scheduled at regular intervals as specified in TM 38-600 or Operator's Manual.

Other Repairs—Repairs performed due to breakdown or other malfunction occurring between scheduled maintenance.

Major Repairs—Repairs performed involving major components of a vehicle, to include repair or replacement of engine, transmission, transfer case, differential.

Maintenance and Other—Repairs performed at the same time that a scheduled maintenance is performed.

Inspection Only—Involves inspection of a vehicle to determine cost of repairs, serviceability, etc.

(ASBCA No. 37813, R4, tab 1)

7. Regarding "A" and "B" maintenances, the parties concur with these more detailed definitions:

An "A" Maintenance is due 12 months or 12,000 miles from the last "A" service done and consists of the following:

Oil and Oil filter change

Lubrication

Air Filter Change

Check differential and transmission fluid levels

Pull one wheel and check brakes

A "B" Maintenance is due 6 months or 6,000 miles from the last "A" service and consists of the following:

Oil and Oil filter change

Lubrication

Check air filter (change if necessary)

©1993, Commerce Clearing House, Inc.

Digitized by Google

Check differential and transmission fluid levels

Check PCV

(ASBCA No. 37813, R4, tabs 90, 104) [2]

8. The maintenance category of "Other Repairs" was contrasted in Technical Exhibit No. 22 with the category of "Major Repairs" and, accordingly, encompassed "very quick," low cost repairs such as replacements of nuts, bolts, screws, light bulbs, or windshield wiper blades. Appellant's employees colloquially referred to such "Other Repairs" as "Quick Fixes" (tr. 1/172).[3]

9. A dispute has arisen between the parties regarding both the manner in which Technical Exhibit No. 22 was prepared and the degree of care which Army personnel exercised during its preparation. Relying strictly upon hearsay, Apex's project manager surmised that the Army had utilized internal computerized summaries in compiling the historical workload data (tr. 1/156-63). However, the Army presented several witnesses whose testimony directly conflicted with this account. Specifically, Mr. Henry S. O'Neal, Mr. James D. Rowe, and Ms. Shirley Collins all testified upon personal knowledge that they prepared Technical Exhibit No. 22 over a period of several weeks using DA Form 2407s provided by the predecessor contractor. These forms were very detailed and listed every maintenance event performed during the final year of the prior contract (tr. 2/320-41; exh. A-4). Having weighed this testimony, the Board finds that the Army used DA Form 2407s in preparing the exhibit at issue.

10. Apex also alleges that the Army did not exercise due care in its preparation of Technical Exhibit No. 22. It bases this conclusion upon statements made by Ms. Patsy W. Warnock, a former Governmental employee, in her discovery deposition. But a close reading of the passages relied upon by Apex demonstrates that Ms. Warnock's memory concerning the development of the exhibit faded. For example, she testified that the exhibit had been prepared by the predecessor contractor and that the Army's personnel had failed to verify the underlying information. But Ms. Warnock's deposition testimony in this regard was flatly contradicted by the live, credible testimony of the Army's witnesses. Mr. O'Neal, Mr. Rowe, and Ms. Collins testified that they personally spent at least two weeks counting individual, maintenance work orders as they appeared on DA Form 2407s before placing the totals on the exhibit (tr. 2/88-89, 320-41).

11. Two other contractual provisions are pertinent to this dispute. Paragraph H-7, entitled "Price Adjustments For Variations In Quantity Of Vehicles," provided:

> In the event the number of vehicles controlled and maintained by the Contractor under this contract varies by more than 7% of [sic] above or below the current authorization, 562 (526 for NTV and 36 for satellited and transient vehicles) for continuious [sic] period of 90 days or more an equitable adjustment in contract price shall be made upon demand by either the Government or the Contractor. The equitable adjustment shall be based on any increase or decrease in costs due solely to the variation above 575 vehicles or below 499 vehicles. No adjustment shall be made for variations in fleet size of less than the above stated range.

During the life of the contract, the number of vehicles controlled and maintained by Apex never varied more than seven percent "above or below the current authorization." Further, the contract did not contain a clause providing for an equitable adjustment due to a variation from the historical workload data contained in Technical Exhibit No. 22 (ASBCA No. 37813 R4, tab 1).

12. Finally, the contract incorporated FAR 52.215-02, "Audit-Negotiation (APR 1984)," which stated in pertinent part:

> (d) *Availability.* The Contractor shall make available at its office at all reasonable times ....
>
> * * *
>
> (2) Records relating to appeals under the Disputes clause or to litigation or the settlement of claims arising under or relating to this contract shall be made available until such appeals, litigation, or claims are disposed of.

[2] Except for minor maintenance to motor scooters, the parties did not use the "C" maintenance category in their dealings under the contract.

[3] The definitions contained in Technical Exhibit #22 for the "Major Repairs" and "Maintenance and Other" categories are sufficient for purposes of this opinion. The Board simply notes that, of necessity, the "Major Repairs" category involved high cost maintenance.

Digitized by Google

(ASBCA No. 37813, R4, tab 1)

13. Work proceeded under the contract; and, on 9 February 1988, Apex filed its first certified claim for "work performed beyond the estimated work load in the amount of $446,948.71." Apex broke its claim down as follows:

	Estimate	1st yr.	2nd yr.	Diff.	Price each	Total
A. Maint.	586	655	749	232	85.76	19,896.32
B. Maint.	425	634	682	466	85.76	39,964.16
C. Maint.	404	655	749	232	included in A above	
Other Repairs	3,382	6,216	6,233	5,685	47.34	269,141.49
Major Repairs	33	41	54	29	included in other repairs	
Maint. and Other	637	1,289	1,431	1,466	included in A & B	
Inspection only	26	136	163	247	$ 50.00	12,350.00
Accident	24	27	71	50	$697.10	34,855.00
Warranty	25	6	63	19	$ 14.00	266.00
						$376,472.97
					G&A—12%	45,176.76
					Profit—6%	25,298.98
					TOTAL	$446,948.71

(ASBCA No. 37813 R4, tabs 62, 117) However, Apex did not include any underlying documentation to support is claim.

14. On 11 April 1988, the contracting officer, Ms. Glenda W. Geiger, responded to Apex's submission. She wrote:

> Reference is made to your claim, dated February 9, 1988, concerning work load estimates.
>
> While your claim is understandable; [sic] it is not supported by sufficient documentation. The cost claimed appears to be based on your estimated costs at the time of bid preparation. This is not a sufficient basis for a determination of quantum. You need to submit actual cost data to demonstrate that you actually incurred additional costs over and above what you estimated.
>
> Also request you submit copies of all work orders (DA Forms 2407) for all repairs, maintenance, acccidents [sic] and warranty work performed, and parts invoiced to substantiate any repair parts shown on the work orders. These copies are needed in order for this office to adequately evaluate your claim.
>
> I appreciate your offer of a briefing but feel that at this point it would be a nonproductive exercise.
>
> Your letter also stated that the price of A and B maintenance was determined by totalling the cost and dividing the number of services during November 1987. The month of November 1987 is not included in the period of your claim, which you state covers the period of 1 October through 30 September 1986, therefore your pricing should be based on the period covered.
>
> Your claim is herewith returned for the additional information requested above.

(ASBCA No. 37813, R4, tab 116)

15. After receiving the contracting officer's letter, Mr. Perc Jones, Apex's project manager, initiated several telephonic conversations with her. He indicated that Apex intended to resubmit its claim by job categories, and Ms. Geiger responded by stating that she "had no problem with how he wanted to submit it, just to be sure he sent the documentation to back up" the claim (tr. 2/127-29).

16. On 10 June 1988, Mr. Jones forwarded a memorandum to Ms. Geiger in which he stated, in pertinent part:

> Reference is made to the above described contract and our recent discussions concerning the workload claim.
>
> Attached please find the copies of the work order logs (DA Form 2405) covering work at Ft. Stewart and Hunter Army Airfield. As you can see these logs list the work order numbers, vehicle numbers, manhours and parts cost for each job order.

(ASBCA No. 37813, R4, tab 74) Apex did, indeed, attach several hundred pages of DA Form 2405s to its letter. These forms, which Apex was required to maintain pursuant to subsection C.5.12.1.2 of the contract, were summaries of information derived from the aforementioned PA Form 2407s. The latter forms, which we have already discussed, were the basic work orders which contained a wealth of detailed information concerning the maintenance performed by Apex which, of necessity, was not included in the DA Form 2405s (exh. A-4, -5).

©1993, Commerce Clearing House, Inc.

Digitized by Google

17. The contracting officer, who had repeatedly requested that Apex provide the Government with "copies of all work orders (DA Forms 2407) for all repairs, maintenance, accidents [sic] and warranty work performed, and parts invoices to substantiate any repair parts shown on the work orders," consulted with her technical staff to determine if the summary sheets were adequate substitutes for the work orders. The conclusion of the Governmental personnel was that the DA Forms 2405s did not constitute a proper basis for analyzing Apex's claim because they were simply summaries which did not describe the maintenance events in sufficient detail. Ms. Geiger gave as an example the fact that, in the logs, Apex simply referred to maintenance under the contract's "Other Repairs" category as "Quick Fixes" without providing any detail concerning the type of work performed (tr. 2/129-32).

18. Ms. Geiger registered her disappointment with Mr. Smith who, once again, promised that Apex would forward the work orders to support its claim; however, the DA Form 2407s were not forthcoming (tr. 2/132-33). Instead, on 5 July 1988, Apex submitted an amended, certified claim for "A" and "B" maintenance events for the first two years of the contract which was supported not by work orders but by internal computerized summaries. Through its amended claim, Apex alleged that it had performed a total of 2,335 "A" and "B" maintenance events for the first two years of the contract whereas Technical Exhibit No. 22 had stated a total number of 1,011 for such maintenance events for the last year of the prior contract. Accordingly, Apex contended that it was entitled to an equitable adjustment in a total amount of $29,252.49. (ASBCA No. 37813, R4, tab 77)

19. At some point during the summer of 1988, Apex forwarded work orders to the contracting officer to support its claim that it had performed "A" and "B" maintenance events during the first two years of the contract which exceeded the number of such events specified in Technical Exhibit No. 22. Ms. Geiger forwarded these materials to Mr. John Brinson, the contracting officer's representative (COR) under the contract, who examined them in detail (tr. 2/134-35). On 23 September 1988, Ms. Geiger issued a final decision which incorporated Mr. Brinson's analysis of Apex's claim. She stated, in pertinent part:

> Reference is made to your claim, dated July 5, 1988, on workload estimates.
>
> Your claim asserts that you are entitled [sic] additional compensation for schedule A and B preventive maintenance services as provided for in the contract. You indicate specifically that this work was "performed over and above the estimated workload" for the foregoing services.
>
> In accordance with Technical Exhibit #22, Definition of Services, it states that "A, B, and C Maintenance is maintenance scheduled at regular intervals as specified in TM 38-600 or Operator's Manual". It also states that "Maintenance and other repairs are performed at the same time that a scheduled maintenance is performed." There were 401 job orders that should not be considered as A and B Maintenance. These include work orders for tire replacement, engine overhauls, air conditioner repairs, battery replacement, and etc. Consequently, these 401 job orders can not be properly considered as schedule A and B Maintenance and any additional compensation could only be evaluated in the category of "Maintenance and other" services.
>
> Also, of these 401 job orders, 189 were for initial processing of new or leased vehicles. Processing of new vehicles should not need maintenance at that time, but required bumper numbers, trip tickets, tags, etc., which is considered a function of the operation section not the maintenance section.
>
> Furthermore, if the total number of job orders submitted are reduced by 401, the actual total of A and B Maintenance does not exceed the historical levels provided in TE#22.
>
> Your reference to an "estimated number of services" is also incorrect. Paragraph C.5.12.1.5 of the contract states in part, that "Historical Workload is in Technical Exhibit #22." This historical data is not considered a government estimate. You may have relied on this in formulating your bid, however, there is no presentation that those services, properly considered to be A and B maintenance, ever exceeded the historical levels in TE#22. Based on the above your claim is hereby denied.

(Tr. 2/135-39, 267-71; ASBCA No. 37813, R4, tab 79)

20. At the hearing held in this matter, the parties disputed whether the initial processing of new vehicles should be considered an "A" or "B" maintenance event. Such processing did not constitute such mainte-

Digitized by Google

nance but rather comprised an administrative task designed to incorporate vehicles into the fleet. This conclusion is bolstered by a plain reading of paragraph 6-7b of TM 38-600 which was referenced in subsection C-6 of the contract. This paragraph stated, in pertinent part: "Each new vehicle assigned to an installation or activity will be inspected and serviced only to the extent necessary to insure acceptability and proper operation until the initial scheduled service." Accordingly, the contracting officer acted correctly in declining to consider the inprocessing of a new vehicle as a scheduled "A" or "B" maintenance event.

21. Apex appealed the contracting officer's decision, and the appeal was docketed as ASBCA No. 37813.

22. On 18 November 1988, Apex filed a similar claim for purportedly excessive "A" and "B" maintenance events for the third year of the contract in a total amount of $13,581.07 (ASBCA No. 38278, R4, tab A). Because the Army did not have access to the original work orders which supported the claim, the contracting officer declined to issue a final decision (ASBCA No. 38278, R4, tab B). On 24 January 1989, Apex appealed the deemed denial of its claim, and the appeal was docketed as ASBCA No. 38278.

23. On 8 August 1988, Apex forwarded a certified claim to the contracting officer in a total amount of $14,278.57 for "Accident Repairs" which occurred during the first and second years of the contract allegedly in excess of the number of such repairs set forth in Technical Exhibit No. 22. Apex contended that it had performed 91 accident repairs during this two-year period, whereas the exhibit listed only 24 such repairs for the last year of the preceding contract. Apex did attach copies of the pertinent work orders to this claim (ASBCA No. 38512, R4, tab 4); however in formulating its claim, Apex ignored paragraph C.5.11.1.9 of the contract, which stated, in pertinent part, that the "cost of accident repairs during FY 84 was $16,730.51." FY 1984 was, of course, the last year of the preceding contract, and Apex's "Accident Repairs" expenditures for each of the first two years of its contract were far below this figure.

24. On 13 January 1989, the contracting officer denied Apex's claim in its entirety. She stated, in pertinent part:

> Reference is made to your claim in the amount of $14,278.57 for accident repairs based on workload estimate, dated August 8, 1988.
>
> This claim is hereby denied. In this claim you have included other type repairs which are not accident related, such as brake repairs, air conditioning, etc. There are no accident reports to show what was involved in the repairs.
>
> There is no justification to support the cost of the parts, or damages as you are showing the estimated cost of damages, not the actual cost.
>
> Paragraph C.5.11.1.4, Repair Sources, states that vehicle maintenance requirements which exceed the inhouse capability of the contractor shall be obtained from other sources that the contractor may choose, at no additional cost to the Government, therefore, the additional labor hours added to the job orders is not justified cost under this claim.
>
> Paragraph C.5.11.1.9 gives the cost of accident repairs as being $16,730.51 for FY84. Based on your figures presented in your claim, you are $8,008.32 below the estimated dollar amount for a two year period. It appears that the claim, as presented, did not consider the additional information in this paragraph.

(ASBCA No. 38514, R4, tab 5)

25. Apex appealed this decision, and the appeal was docketed as ASBCA No. 38514.

26. On 1 December 1988, Apex filed a certified claim for purportedly excessive "Accident Repairs" for the contract's third year in an amount of $1,201.83. It contended that it had performed 27 such repairs whereas Technical Exhibit No. 22 listed only 24 repairs as having been performed during the last year of the preceding contract (ASBCA No. 38354, R4, tab A).

27. In a decision dated 16 February 1989, the contracting officer denied Apex's claim. She stated:

> Reference is made to your claim for Accident Repairs—3rd year in the amount of $1,210.83.
>
> This claim is hereby denied based on the following reasons.
>
> a. Exceeding the historical data workload by only 3 repairs in a year's period is not excessive and does not warrant compensation. The standards applied are normally plus 15%.
>
> b. You have also incorporated work orders into this claim that list tire replacement, brake repairs, hose repairs and others. These repairs should not be included unless you can show that these damages occurred during an accident.

©1993, Commerce Clearing House, Inc.

Digitized by Google

c. The work orders and your computation show labor hours for Apex were added when work was accomplished in commercial shops.

d. Paragraph C.5.11.1.9 shows an amount of $16,730.51 that may be expected annually for accident repairs. In your claim you show that you expended only $9,110.88 which is far below the cost shown in subject paragraph.

(ASBCA No. 38354, R4, tab C)

28. Apex appealed the contracting officer's decision, and the appeal was docketed as ASBCA No. 38354.

29. On 25 October 1988, Apex filed a certified claim for an equitable adjustment in an amount of $94,140,38 for purportedly excessive maintenance events performed with respect to the contract's category of "Other Repairs" during FY 1986. On 28 October 1988, Apex filed a similar claim in an amount of $214,443.47 for the contract's second year; and, on 17 November 1988, Apex submitted a claim for allegedly excessive "Other Repairs" for FY 1988 in an amount of $112,686.15 (ASBCA No. 38178, 38224 and 38297, R4, tabs A, B, C).

30. Despite the contracting officer's repeated requests that Apex provide copies of work orders to support its claims, the contractor simply enclosed internal computerized lists which, *inter alia,* served to exaggerate the volume of "Other Repairs" by tabulating individual entries on repair orders rather than computing the numbers of repair events themselves. To use an example stated by Apex's project manager himself, Apex's clerical personnel had separately counted the installations of a distributor cap and a rotor as "Other Repairs" whereas common sense would dictate that these installations comprised elements of one repair event, *i.e.,* a tuneup. As Mr. Smith admitted in his testimony, because of this erroneous practice, "the number of events might be less than [Apex] thought when this was prepared" (tr. 1/209-10).

31. Another problem generated by the computerized lists was that they contained entries which were wholly unrelated to the category of "Other Repairs," such as maintenance which Apex performed on its own equipment, the issuance by Apex's personnel of small amounts of oil or other lubricants to "top off" fluid levels, and requisitions of hand cleaner (ASBCA Nos. 38178, 38224 and 38297, R4, tabs A, B, C; tr. 2/273-81).

32. Having examined the pertinent computerized lists, the Board concludes that Apex erred by separately tabulating individual entries on repair orders as "Other Repairs." Instead, in formulating its claims in this category, it should simply have computed the numbers of repair events. Further, the Board concludes that the issuance of small amounts of oil and other lubricants for the purpose of "topping off" fluid levels does not constitute "Other Repairs," as defined in the contract. Finally, the Board finds that Apex should not have included repairs of its own equipment and such items as requisitions of hand cleaner in its claims as "Other Repairs" under the contract.

33. On 30 December 1988, the contracting officer wrote the following letter to Apex:

Reference is made to your claims in the amount of $94,140.38, $112,686.15, and $214,443.47 for "Other Repairs."

It appears that there may be a basis for entitlement for an adjustment, however, it cannot be determined based on the computer reports. In order to determine adjustment, you must submit actual substantiated cost to include copies of all DA Form 2407s and parts invoices applicable to these claims.

If you resubmit the above claims with supporting documentation it [sic] will be evaluated and a decision issued as soon as possible.

(ASBCA Nos. 38178, 38224 and 38297, R4, tab D)

34. The work orders were not forthcoming; and, in January 1989, the contracting officer issued a decision denying Apex's claims for excessive "Other Repairs" in their entirety (ASBCA Nos. 37818, 38224 and 38297, R4, tab H). Apex filed three notices of appeal, and the appeals were docketed as ASBCA Nos. 38178, 38224 and 38297, respectively (ASBCA Nos. 37818, 38224 and 38297, R4, tab I).

35. Sometime in the winter of 1989, Apex forwarded three boxes of disorganized work orders to the contracting officer for her review. Ms. Geiger described the condition of the boxes as a part of her testimony at the hearing. She testified:

It looked like something someone would have put in the trash can. Three boxes of totally just papers picked up and dropped in the boxes. Had I not been expecting 2407's I would not have been able to identify what the things were for. I had no idea.

(Tr. 2/157-58) Rather than return the boxes, Ms. Geiger employed three or four of

Digitized by Google

her subordinates for a period of three months in an effort to organize, to segregate by job category, and to count the various work orders (tr. 2/159-65). During the spring of 1992, while discovery was ongoing in these appeals, Apex inexplicably produced six additional boxes of work orders. Over a one-month period, the contracting officer directed her staff to count the new work orders and to add the sums to the previous totals (tr. 2/175-77).

36. The result of the Government's efforts was the following exhibit:

GOVERNMENT COUNT OF WORK ORDERS SUBMITTED BY APEX

JOB CATEGORY	TE #22	CLAIMED BY APEX FY 86 [YR 1]	ACTUAL COUNT BY GOVT [YR 1]	CLAIMED BY APEX FY 87 [YR 2]	ACTUAL COUNT BY GOVT [YR 2]	CLAIMED BY APEX FY 88 [YR 3]	ACTUAL COUNT BY GOVT [YR 3]

LEGEND

*: Appellant did not segregate its claim by type of maintenance service.

***: Accident Repairs for Years 1 & 2 [FY 86-87] combined for a total of 91. See corresponding entry for Year 2 [FY 87].

(Exh. G-1) (Bracketed information in original) Based upon its review of the record, the Board finds the Government's count of repair events to be accurate and credible. In tabulating "A" and "B" events, the Government properly declined to include the processing of new vehicles. Moreover, in computing the number of "Other Repairs," which included minor repair events which could be accomplished in a few minutes at most, the Government correctly decided to count repair events rather than separately to tabulate installations of multiple parts which comprised single repairs. Finally, the Government properly declined to count as "Other Repairs" the issuance by Apex's personnel of small amounts of oil or other lubricants to "top off" fluid levels.[4]

DECISION

A preliminary issue which we must decide relates to the degree of care exercised by the Army's personnel in preparing Technical Exhibit No. 22. As the United States Court of Claims held in *Womack v. United States* [12 CCF ¶81,795], 182 Ct. Cl. 399, 412-13, 389 F.2d 793, 801 (1968), "in promulgating an estimate for bidding-invitation purposes, the Government is not required to be clairvoyant but it is obliged to base that estimate on all relevant information that is reasonably available to it." The Army complied with this requirement. Its personnel spent at least two weeks counting individual, maintenance work orders for the last year of the preceding contract as they appeared on DA Form 2407s before placing the totals on the exhibit. Several tribunals, including this

[4] In an apparent attempt to rebut the Government's exhibits, Apex presented at the hearing a series of handwritten calculations performed by an unnamed paralegal. Many of these sums were derived from documents other than the original work orders and, accordingly, we decline to give them credence.

©1993, Commerce Clearing House, Inc.

Digitized by Google

Board, have endorsed the use of historical workload figures for prior years as bases for such estimates. *Accord Medart v. Austin* [38 CCF ¶ 76,349], 967 F.2d 579 (Fed. Cir. 1992); *Integrity Management International, Inc.*, ASBCA Nos. 34802, 35412, 36149, 37140, 89-3 BCA ¶ 21,996. Accordingly, absent any credible evidence to the contrary, we conclude, as matter of law, that the Army exercised due care in preparing Technical Exhibit No. 22.

Turning to Apex's actual experience under the instant contract, we simply note a line of precedent from this Board which holds that when actual orders vary significantly from estimates the burden of persuasion shifts to the Government to prove the reasonableness of its estimating procedure. *Huff's Janitorial Service,* ASBCA No. 26860, 83-1 BCA ¶ 16,518; *Viktoria Fit International Spedition,* ASBCA No. 39703, 92-2 BCA ¶ 24,968. However, this reasoning was effectively overruled by the Federal Circuit's recent decision in *Medart,* 967 F.2d at 581, and is, therefore, of no avail to Apex.

The *Medart* decision notwithstanding, Apex's workload under the contract did not, as a whole, differ markedly from the number of maintenance events set forth in Technical Exhibit No. 22. For example, with respect to "A" and "B" maintenance, the Government's credible count demonstrates that Apex actually experienced fewer events than were listed in the exhibit. Hence, viewed in conjunction with our holding that the Army exercised due care in preparing Technical Exhibit No. 22, we conclude that Apex is not entitled to any recovery under ASBCA Nos. 37813 and 38278.

We reach a similar result concerning Apex's claims for "Accident Repairs." It is true that the number of repairs performed by Apex during each of the three years of the contract exceeded the number of such repairs set forth in the technical exhibit. But in formulating its claim, Apex ignores paragraph C.5.11.1.9 of the contract which stated a historical sum for "Accident Repairs" of $16,730.51 for the last year of the preceding contract. Apex never approached, much less exceeded, this figure for any of the contractual years. Based upon this fact, we must deny any relief in ASBCA Nos. 38514 and 38354.

Apex's claim for excessive "Other Repairs"—or "Quick Fixes"—must also fail. Although Apex is correct in pointing out that, even by the Government's count, the number of such repairs exceeded the figure set forth in Technical Exhibit No. 22 for all three years of the contract, we have already held that the exhibit was prepared with due care. Further, many of these so-called "Quick Fixes" could be accomplished in a few minutes at most. Therefore, any discrepancies that appear on the Government's count are *de minimis* and do not rise to a level whereby Apex could recover damages. Accordingly, we deny relief with respect to ASBCA Nos. 38178, 38224 and 38297.

CONCLUSION

The appeals are denied.

[¶ 26,300] M.V.I. Precision Machining, Ltd.

ASBCA No. 37393, August 3, 1993. Contract No. N00383-84-C-2673.

Attorney Fees and Costs Under Equal Access to Justice Act—Statutory Fee Rate—Accountant's Fees.—A contractor was not entitled to recover its accountant's full $80 per hour charges for services necessary in presentation of the contractor's successful appeal, because fees allowable under the Equal Access to Justice Act are limited to no more than $75 per hour. The contractor recovered $2,675 for 32 hours of accounting services plus 11 hours of travel time at $25 per travel hour. The contractor's recovery of attorney fees billed at $100 per hour was also limited to the statutory $75 per hour.

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Employee as Consultant.—A contractor was not entitled to recover amounts billed by a purported consulting firm for services in connection with a successful appeal, because the billing firm was the alter ego of the contractor's vice president. The contractor contracted with the vice president's firm for time spent in selling and marketing its products and for advice. The value of employee time and effort for presentation of an appeal is not recoverable under the Equal Access to Justice Act. However, a billing by the vice president for the cost of obtaining a copy of the hearing transcript was allowable.

Digitized by Google

Attorney Fees and Costs Under Equal Access to Justice Act—Propriety of Charges—Legal Work.—A contractor was not entitled to recover amounts paid to its vice president for work ordinarily performed by an attorney, because the vice president was not an attorney. A nonattorney is not entitled to an award of fees under the Equal Access to Justice Act for performing legal work.

Attorney Fees and Costs Under Equal Access to Justice Act—Amount—Alternative to Actual Expenses.—Meal and lodging expenses for the contractor's attorney and accountant in connection with a successful appeal were allowable, in the absence of specific charges, at the maximum daily rate allowable for federal employees at the time of the hearing. In addition, the accountant's fee included 11 hours of travel billed at $25 per hour. That rate was a fair and reasonable alternative to the actual costs of travel and compensation for the accountant's time spent during travel.

For the appellant: William F. Long, Executive Vice President. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Kevin J. Malloy, Trial Attorney, Navy Aviation Supply Office, Philadelphia, Pennsylvania.

Before HARPER, RUBERRY, and SPECTOR, Administrative Judges.

HARPER, Administrative Judge: Appellant, M.V.I. Precision Machining, Ltd. (hereinafter "MVI") has requested our assistance in determining the amount of attorney's fees and other expenses to which it is entitled per our prior decision in this appeal reported at 93-1 BCA ¶ 25,376.

In *M.V.I. Precision Machining, Ltd.*, ASBCA No. 37393, 91-2 BCA ¶ 23,898, we held that Government's decision to terminate a contract was improper and that the termination had to be considered as a termination for the convenience of the Government. MVI was the prevailing party in such adversary adjudication.

In *M.V.I. Precision Machining, Ltd.*, ASBCA No. 37393, 93-1 BCA ¶ 25,376, we held that MVI is entitled to attorney's fees and other expenses it reasonably incurred in connection with the aforesaid adversary adjudication with certain specified limitations. We directed the parties to determine the amount of award and, in the event they could not agree, to submit the matter to the Board for resolution. The parties have been unable to agree upon the amount to which MVI is entitled.

As part of its application for attorney's fees and other expenses MVI submitted an itemized bill from its attorney, Dennis D. Del Cotto, listing 320.2 hours of services rendered to MVI to initiate, prepare and present its appeal to the Board. We have carefully reviewed such bill and have determined that the services provided and the time consumed were fair and reasonable considering the effort needed to properly present the appeal. Mr. Del Cotto charged for his services at the rate of $100 per hour which exceeds the $75 per hour limit imposed by the Equal Access to Justice Act (EAJA), 5 U.S.C.A. § 504. Accordingly, we award attorney's fees in the amount of $24,015.

MVI also submitted as a part of its application a bill, fully itemized, from Charles A. Deluzzio, C.P.A., for his services. Mr. Deluzzio's bill lists 32 hours spent by Mr. Deluzzio in preparation, testifying, assisting, and attending the MVI hearing. His efforts concerned MVI finances essential to the proof of MVI defenses to the termination for default. Mr. Deluzzio charged for such time at the rate of $80 per hour. He also charged for 11 hours spent travelling from his office in Monroeville, Pennsylvania to the place of hearing in Falls Church, Virginia, and return at the rate of $25 per hour. Government does not object to Mr. Deluzzio's charges.

We deem the services provided by Mr. Deluzzio to have been necessary and reasonable to present the appeal. We, likewise, consider the cost of 11 hours at $25 per hour as a fair and reasonable alternative to the actual costs of travel involved and compensation for Mr. Deluzzio's time consumed during such travel. Mr. Deluzzio's charges, however, must be limited to no more than $75 per hour. See *PetroElec Construction Co., Inc.*, ASBCA Nos. 32999, et al., 87-3 BCA ¶ 20,111. Accordingly, we award in the aggregate $2,675 for Mr. Deluzzio's services.

Also included with its EAJA application were claims for reimbursement by MVI for sums paid to nine of its employees for preparation and assisting with the presentation of the appeal. Among the nine employees was William F. Long, Executive Vice President of MVI. The total sought for the eight employees, other than William F. Long, amounts to $17,013.51. The amount of

©1993, Commerce Clearing House, Inc.

Digitized by Google

$40,283.75 was sought for William F. Long. Such amount was manifested by an itemized bill from Executive Consulting, Inc. Executive Consulting, Inc. is the alter ego of Mr. Long. MVI contracts with Executive Consulting, Inc. for Mr. Long's time spent in selling and marketing MVI's products and for his advice. MVI pays for Mr. Long's services at the rate of $65 per hour, plus expenses, plus a commission of 5% of each purchase order, and plus a sum of $1,000 each month.

We previously decided that the time spent by MVI's nine employees are not compensable under an EAJA award. We have repeatedly held that the value of employee time and efforts spent for the presentation of an appeal are not recoverable under EAJA. See *Goetz Demolition Company,* ASBCA No. 39129, 91-2 BCA ¶ 23,836.

Even if Mr. Long performed tasks ordinarily performed by an attorney such as research, preparation of a complaint, and establishing arguments, such does not entitle MVI to be compensated for such effort as part of an attorney's fee. A non-attorney is not entitled to an award of fees for performing legal work. *Union Precision & Engineering,* ASBCA No. 37549, 93-1 BCA ¶ 25,337.

MVI also submitted as a part of its claim for EAJA relief an Expense Statement for $1,722.09 from Mr. Long to MVI. Such statement was indicated by Mr. Long to cover all hotel expenses, meals, telephone charges, and automobile rental of Michael R. Vucish, President of MVI, William F. Long, Executive Vice President of MVI, Dennis D. Del Cotto, Attorney for MVI, and Charles A. Deluzzio, C.P.A. for MVI during the five days of the hearing. The Expense Statement did not differentiate as to how much of each expense item was attributable to each of the named parties. Moreover, MVI failed to provide any further information as to such expenses.

As previously mentioned the expenses of employees such as Michael R. Vucish, President and William F. Long, Executive Vice President are not allowed as part of an EAJA award. *P-B Engineering Company,* ASBCA Nos. 39041, 39042, 91-3 BCA ¶ 24,361. However, we recognize that the reasonable meal and lodging expenses of MVI's attorney and of MVI's accountant may be included as a part of an EAJA award. In the absence of the specifics of such expenses we allow for five days the per diem rate allowable to federal employees at the time of the hearing as being reasonable which amounts to $121 per each person or $242 in the aggregate to cover the lodging and meals of Mr. Del Cotto and Mr. Deluzzio. We make no award for automobile rental as there was no showing that such was reasonably necessary for either the attorney or the accountant.

Lastly we award the sum of $1,025 to cover the cost of obtaining a copy of the hearing transcript which was shown on the itemized bill of "William F. Long, Agent."

In summary we award to MVI under EAJA as follows:

Attorney's fee	$24,015
Accountant's fee	$ 2,675
Meals and Lodging for Attorney & Accountant	$ 1,210
Copy of Transcript	$ 1,025
Total	$28,925

[¶ 26,301] Sermor, Inc.

ASBCA Nos. 32824, 32984, 33173, August 16, 1993. Contract No. F09603-81-C-4921.

Contract Disputes, Jurisdiction—Boards of Contract Appeals—Discretionary Relief.—Under a contract for the production of gun parts that was terminated for default, the board lacked jurisdiction to decide a contractor's claim seeking award of a government loan, despite the contractor's contention that the government improperly denied the contractor's request for guaranteed financing, because the relief sought was discretionary and not available under any contract clause or regulation imposing a contractual duty. Even if the board had authority to award a loan, the evidence did not show that the contractor filed an application with the financing institution as required by the regulations.

Pricing of Adjustments—Actual Costs—Mitigation.—Under a contract for the production of gun parts that was terminated for default, a contractor was not entitled to an equitable adjustment for the losses incurred in selling castings for scrap to obtain funds to keep working, despite its contention that it was improperly denied a guaranteed government

Digitized by Google

loan, because the decision to sell equipment at a loss was not a reasonable business decision and ultimately violated the contractor's duty, as an injured party, to exercise reasonable care in mitigating damages. The contractor did not show that its need to sell scrap at a loss was a direct and foreseeable consequence of any alleged government delays in disapproving the contractor's first article.

Pricing of Adjustments—Actual Costs—New-for-Old Damages.—Under a contract for the production of gun parts that was terminated for default, a contractor was not entitled to recover the difference between the scrap price and original purchase price of castings that the contractor sold as scrap to obtain funds to keep working, because it did not show that it suffered any monetary injury. The contractor failed to provide any probative evidence that the value of the castings was greater than the price for which they were sold. Moreover, allowing the contractor to recover the original purchase value of the castings would be tantamount to furnishing new castings for castings that had been used and depreciated.

Defaults, Grounds—Failure to Progress—Ability to Perform.—Default termination of a contract for the production of gun parts was proper, despite the contractor's contention that the government made sure that the contractor lacked the funds needed to complete the contract, because the government met its burden of proof in showing that the contractor failed to perform the contract in accordance with the delivery schedule. The contractor did not show that any delay in approving progress payments or that any alleged *de facto* debarment or alleged denial of fair and equitable treatment excused its failure to complete the contract.

Delays—Adjustment—Proof.—A contractor, under a contract for the production of gun parts, was not entitled to an equitable adjustment for an alleged increase in plating costs owed its plating subcontractor as a result of government-caused first article approval delays, because the contractor failed to provide any evidence in support of its claim, other than brief testimony from its president. The president did not indicate when prices went up or whether the contractor was liable to the subcontractor for the increased price. The contractor did not provide any bills, invoices, or letters or any testimony regarding oral demands.

For the appellant: Sergio Morsani, Jr., President. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Kenneth J. Murray, Jr., Trial Attorney.

Before DICUS, WILLIAMS, and RIISMANDEL, Administrative Judges.

DICUS, Administrative Judge: These appeals arise from a default termination and the denial of claims by the contracting officer under the captioned contract for the production of parts for a Gatling gun. ASBCA No. 32824 is taken from denial of claims for Government financing in the amount of $2,900,000.00 and additional costs totalling $90,977.33, ASBCA No. 32984 is taken from the default termination of Contract No. F09603-81-C-4921 (hereinafter 4921), and ASBCA No. 33173 is taken from denial of a claim for $2,978.84.

FINDINGS OF FACT

1. Contract 4921 was awarded to appellant on 1 October 1981. The contract called for 2 first articles and 2473 production items priced at $8.49 each for a total fixed price of $21,012.75. First article delivery was due within 120 days from receipt of the contract, with production items due within 150 days from Government approval. The Government had 150 days to approve or disapprove the first articles. The contract contained the Disputes (JUN 1980), Default (AUG 1969), Government Delay of Work (SEP 1968), and First Article Approval—Government Testing (with Optional Paragraph (i)) (SEP 1969; APR 1974) clauses (R4, tab 1).

2. The part to be produced is called a track rotor (R4, tab 1; exh. G-51). The rotors are part of the mechanism in the M61/M61A1 and GAU-4A Gatling gun which allows the bolts to ride back and forth as rapidly as 6000 times per minute (tr. 158-59; exh. 5).

3. Appellant did not meet the first article delivery date and on 25 August 1982 a new date of 28 December 1982 was proposed by respondent. Appellant agreed to the new date by letter of 14 September 1982 (R4, tabs 4, 5). By letter of 13 October 1982 appellant was advised as follows:

> Drawing No. 7268552 is clarified below as requested:

©1993, Commerce Clearing House, Inc.

Digitized by Google

a. Depth of counterbore in Section A-A is not given; .148-.010 refers to the thickness of material left on top of the counterbore.

b. The .310 + .005 radius should be referenced for four places instead of only two.

c. Phantom lines in bottom view on Drawing #7268552 stop at the point where the .188 + .003 radius runs into the .310 + .005 radius.

d. Finish should be in accordance with 1.7.1 of MIL-STD-171.

(R4, tab 6)

4. Appellant did not meet the new delivery schedule and by letter of 18 July 1983 proposed first article delivery by 30 August 1983 and production items by 25 February 1984 (R4, tab 9). Thereafter first article delivery date was changed to 26 September 1983 and the contract price reduced by $150.00 by bilateral Modification No. A00003 (R4, tab 10). First articles were examined at appellant's facility on 27 September 1983 and delivered to respondent's facility 3 October 1983 (R4, tab 11). By letter of 23 January 1984 respondent disapproved the first articles, stated a second submission was not authorized, and advised appellant that its failure to timely deliver a conforming article was grounds for default. Appellant was afforded 10 days to respond. The following specific deficiencies were listed, referencing the relevant contract drawing:

Drawing Requirement	First Article Checked
Dwg. No. 7268552	
30° - 4 Places	20°
30° - 2 Places	20°
30° - 2 Places	Range 13° - 17°
30° - 2 Places	Range 13° - 18°
.2195 - .0010	.2211
.38 Min 2 Places Both ends	F/A not as depicted on dwg.

(R4, tab 13)

5. When appellant failed to respond to the 23 January 1984 letter the contracting officer sent a 25 April 1984 letter advising appellant the contract was terminated for default by Modification P00001, which was executed 2 May 1984 (R4, tab 15). Affecting the contracting officer's action was appellant's filing for bankruptcy on 14 March 1984 (tr. 220, 594). The default termination was set aside under 11 U.S.C. § 362 (the automatic stay provision) by the United States Bankruptcy Court for the Southern District of Florida ("bankruptcy court") (R4, tabs 16, 17). The bankruptcy court subsequently lifted the automatic stay to allow respondent to attempt to terminate contract 4921 (R4, tab 18).

6. Respondent chose to reinstate the contract and negotiations ensued. The termination contracting officer sought a first article resubmission, 120-day delivery, a $475.00 price decrease, a pre-award survey establishing responsibility, and a release from any claims arising from the default termination (R4, tabs 20, 21, 30, 31). Appellant sought progress payments and a reservation of claims arising from the default termination. It offered to deliver in 45 days if progress payments were included (R4, tabs 23, 26).

7. Modification No. P00002, which reinstated the contract, provided for 120-day delivery. It did not include progress payments, but contained the following provision:

> The contractor hereby waives and releases the Government from any and all claims, demands, or suits arising out of the previous default termination.

(R4, tab 33)

8. Appellant signed Modification No. P00002 on 18 January 1985. However, the 18 January 1985 forwarding letter, which acquiesced in pursuing progress payments separately, contained the following reservation:

> Sermor's release does not cover any of the actions of the government that led up to the Default Termination of 25 April 1984.

(R4, tabs 31, 33)

9. Notwithstanding the reservation, the termination contracting officer executed the modification on 31 January 1985 (R4, tab 33). By letter of 8 February 1985 he responded to appellant's 18 January letter. He noted that 5 June 1985 was the delivery date for the first article and directed appellant to the procurement contracting officer for progress payments or "other matters." No mention was made of appellant's reservation of claims from the default termination (R4, tab 34).

10. For the first time, appellant took exception to the test results on which the January 1984 disapproval of appellant's first article submission was based. While conceding that the 30 degree chamfer requirement was not met (*see* finding 4), appellant asserted in a 21 February 1985 letter that it presented no serious technical difficulty in

Digitized by Google

production (R4, tab 35). At a meeting on 9 May 1985 it was conceded that the drawing that governed the track rotor's dimensions had no plus or minus tolerance for the 30 degree chamfer. Thus, the drawing was considered deficient and the chamfer angles of 13 to 20 degrees on appellant's first articles which were correctable in production were not considered grounds for outright disapproval. Moreover, the part's plating thickness was calculated to permit an allowable maximum of .2211 (*cf.* finding 4; tr. 1/7-8, 5 June 1990 Simpson memorandum). As it was determined the part otherwise met specifications, conditional approval was granted (R4, tab 40; tr. 812; exh. G-20, 21). Appellant agreed to a tolerance of plus or minus 1 degree on the chamfer angle at no price increase, and bilateral Modification No. P00003, executed by the contracting officer on 17 June 1985, incorporated that change into the contract (R4, tabs 42, 43).

11. By letter of 21 June 1985 appellant requested that contract 4921 be amended to include progress payments (R4, tab 44). Appellant maintains that in a conversation with Lt. Colonel Eugene Bates on 9 May 1985 it was agreed that progress payments would be provided as part of the consideration for appellant agreeing to the tolerance for the chamfer angle at no cost (tr. 733). Col. Bates denies this (tr. 813). Appellant made no mention of such an agreement in contemporaneous correspondence until 3 September 1985 (R4, tabs 42, 44, 46, 50, 61; *cf.* findings 14, 15). We conclude no such agreement was made.

12. Appellant maintains that the procurement contracting officer informed appellant in a telephone conversation on or about 2 July 1985 that appellant's request for progress payments had been approved (tr. 2/45-46). The procurement contracting officer denies this (tr. 2/77-81). Contemporaneous documents establish that respondent was gathering information about appellant's financial condition in early July 1985 and no decision had been made (R4, tab 51). On balance, we conclude appellant was not told in July 1985 that its request for progress payments had been approved.

13. Modification No. P00004, executed by respondent on 8 July 1985, acknowledged acceptance of the first article after the 9 May 1985 meeting and rescinded the $475.00 price reduction imposed by Modification No. P00002 (R4, tab 45).

14. Respondent determined it was not in its interest to include progress payments in the contract and communicated its decision to appellant on 14 August 1985 (R4, tab 49). Appellant had, on that date, advised respondent by letter that its ability to produce was affected by the lack of progress payments (R4, tab 48). On learning that its request had been denied appellant sent a 19 August 1985 letter asserting that respondent was in breach of contract, that appellant was relieved of the obligation to perform, and that it would file a request for an equitable adjustment (R4, tab 50). By letter of 22 August 1985 appellant informed respondent that it was unable to make a payment on a piece of equipment allegedly valued at $220,000.00 and that it would file an equitable adjustment claim against respondent for replacement cost of the equipment (R4, tab 52).

15. By letter of 22 August 1985 appellant contended that it had stopped all activity not related to contract 4921 and that, in effect, respondent would be held accountable for resultant damages (R4, tab 53). Further allegations of resultant damage were contained in a 23 August 1985 letter (R4, tab 54). Thereafter, a 27 August 1985 meeting was held between the parties to further discuss the issue, but again the decision to deny progress payments was made and communicated to appellant on 29 August 1985 (R4, tab 57).

16. Appellant sent various letters asserting potential claims, asserting among other things that no contract existed as a result of denial of its request, that labor costs were increased due to management personnel running machines, and that contract 4921 was responsible for its financial problems (R4, tabs 62, 63, 69, 72). On 22 October 1985 respondent informed appellant of a default investigation arising from its failure to deliver and requested a response in 10 days (R4, tab 77).

17. Bilateral Modification No. P00005 dated 31 October 1985 incorporated progress payments into the contract. Deliveries of 350 items were scheduled monthly from 18 November 1985 to 18 February 1986 with a final delivery of 23 items 5 March 1986 (R4, tab 82). Progress Payment Request No. 1 was presented 1 November 1985 in the amount of $18,473.00 and paid 11 November 1985 in the amount of $16,164.00 (R4, tab 84). The administrative contracting officer explained in a letter of 7 November 1985 that he had applied a loss ratio to the payment, citing FAR 32.503-6(g)(1) and appellant's certification of costs incurred ($61,501.00), costs to complete ($10,000.00), and the contract price ($20,862.75) (R4, tab 85). Loss ratios were

©1993, Commerce Clearing House, Inc.

Digitized by Google

thereafter applied to all progress payments (tr. 564-69).

18. Progress payments of $1,737.00 and $390.00 were made in December 1985 and January 1986, also applying the loss ratio (R4, tabs 98, 111). Progress payments reflected in the record total $18,291.00 (*id.*; finding 17).

19. In a letter dated 12 November 1985 appellant demanded the $2,390.00 difference between the request and payment for Progress Payment No. 1, requested a final decision on alleged delays, and asserted various grievances against respondent, including a failure to issue a final decision from a 1 November 1985 meeting, the minutes of which indicate nothing was presented that was identified as a claim and no final decision was requested (R4, tabs 84, 87).

20. The contracting officer responded on 20 November 1985, advising appellant that she did not consider there to be an existing dispute. She also briefly outlined the procedure for submitting a claim (R4, tab 93). By letter dated 10 December 1985, identified as Claim No. 1 and certified appropriately, appellant sought a $2,900,000.00 loan or loan guarantee (R4, tab 100). By letters dated 11 December 1985 and presented at a 13 December 1985 meeting, Appellant claimed $76,316.38 (Claim No. 2) and $14,658.95 (Claim No. 3) for delays allegedly caused by respondent (R4, tabs 101, 102). Claim No. 2 seeks damages for the cost of castings and claim preparation. Invoices are attached without explanation. The basis of the claim is that appellant sold the castings for scrap "to keep producing." (Tr. 652). The castings were purchased from Unexcelled Castings for another contract (tr. 652). Appellant owed Unexcelled Castings $110,000.00 (tr. 800). Other than the sale price as scrap, there is no probative evidence of the value of the castings at the time of sale. Claim No. 3 seeks costs related to sale of two Bridgeport milling machines, claim preparation and reacquisition costs (R4, tab 102). The claim does not explain the relationship of the machines to the contract. Appellant's president testified of the sale price "We were getting as much as we could but we couldn't get the true value from it." (Tr. 652).

21. Respondent requested a unitary claim on 18 December 1985 (R4, tab 107). This request was repeated 14 January 1985 (R4, tab 112).

22. Appellant declined to combine claims, but increased Claim No. 2 by $16,054.57 and Claim No. 3 by $211.56 on 29 January 1986 (R4, tabs 113, 115). Appellant also submitted Claim No. 4 dated 28 January 1986, asserting that delays caused by respondent resulted in increased costs for plating of $.60 per item, using the August 1981 price of its vendor as a baseline (R4, tab 115). The claim is unsupported by invoices or other evidence. There is no probative evidence to indicate the timing of the increases. Appellant's president testified "We got a request for an increase in price, and we happen to agree with him that he deserves it." (Tr. 771). Claims 1, 2 and 3 were denied in a 30 January 1986 final decision in which Claim No. 1 is not granted because it seeks relief not available under the Disputes Clause (R4, tab 116). Appellant considered the denial of its claims a breach of contract (tr. 775-76).

23. Appellant stopped shipments in January 1986 because it ran out of money (exh. G-40; tr. 776-77). A total of 1841 units had been shipped, leaving 634 units due (exh. G-44). By letter of 7 March 1986, 2 days after the final delivery date, appellant was given 10 days to show cause why it should not be default terminated for failure to deliver (R4, tab 118; *see* finding 17).

24. Appellant responded to the show cause letter by letter of 18 March 1986. The letter stated that 345 parts were at its plating subcontractor and the rest were complete, awaiting shipment to the plating subcontractor. Appellant also asserted that it was not delinquent because respondent's denial of its claims had relieved appellant of any duty to continue performance. Appellant further stated it "stands ready to successfully complete this contract when (respondent) treats us fairly, impartially and equitable [sic] as required by the contract or when we can generate funds apart from referenced contract to meet our commitments to Orlando Plating and thereby make final shipment." (R4, tab 119).

25. In a final decision dated 27 March 1986 respondent denied appellant's Claim No. 4 (R4, tab 123).

26. Although appellant had suspended manufacturing operations and was liquidating equipment, it offered in a letter of 29 April 1986 to proceed with the plating of 634 pieces. The offer was conditioned on a modification giving appellant 40 days to deliver and with the understanding that appellant had no equipment to correct improper plating. Respondent was given 5 days to reply (R4, tab 125).

Digitized by Google

27. On 1 May 1986 appellant filed its appeal from the 30 January 1986 final decision (R4, tab 126).

28. Notice of default termination of contract 4921 was provided to appellant in a final decision dated 23 May 1986 (R4, tab 128). An appeal was filed 30 May 1986 (R4, tab 130). By letter dated 25 June 1986 an appeal was taken from the 27 March 1986 denial of Claim No. 4.

DECISION—ASBCA No. 32824

Appellant argues that respondent delayed performance improperly by its disapproval of the first article submission in January 1984. It seeks a $2,900,000.00 Government loan to be put back to its original position and costs it attributes to the delay. Appellant also argues it did not receive fair and equitable treatment. Respondent argues the Board has no jurisdiction to award a Government loan, that rejection of the first article submission was proper, and that the claim is barred by the release in Modification No. P00002.

For reasons set out more fully below under ASBCA No. 32984, we conclude that appellant has not established entitlement to recovery for allegedly unfair and inequitable treatment. We reach a similar result with other allegations regarding respondent's role in appellant's inability to perform. However, we conclude respondent is responsible for the delay arising from first article disapproval.

We have found that appellant's original submission met specifications and was conditionally acceptable (finding 10). Of the deficiencies that resulted in first article rejection, subsequent review of the specifications by respondent's technical personnel led to the conclusion that all but the chamfer angle were met (finding 10). As no tolerance was provided for the chamfer angle in the drawings and specifications, that was considered an inadequate basis for disapproval (*id.*). Accordingly, the outright disapproval of the first article in January 1984 was not justified. *Dunrite Tool & Die, Inc.*, ASBCA No. 27538, 83-2 BCA ¶ 16,830.

Moreover, we are not persuaded by respondent's argument that claims arising from the events leading to the 25 April 1984 termination for default are barred by Modification P00002. Appellant forwarded that modification with an 18 January 1985 transmittal letter reserving claims from actions that led up to the default termination (finding 8). Notwithstanding the reservation, the contracting officer signed the modification. Although other matters were addressed in a letter responding to the 18 January letter, the contracting officer did not comment on the reservation (finding 9). Under similar circumstances we have rejected the argument that appellant released its claim. *Farnsworth & Chambers Co., Inc.*, ASBCA No. 7130, 1962 BCA ¶ 3499. We find that appellant did not waive claims arising from actions leading to the 25 April 1984 default termination. Likewise, appellant's failure to appeal the default termination does not divest the Board of jurisdiction. This is because of the automatic stay provision at 11 U.S.C. § 362, under which the bankruptcy court rendered the default termination null and void (finding 5). *Communications Technology Applications, Inc.*, ASBCA Nos. 41573, 42993, 92-3 BCA ¶ 25,211.

Although appellant was delayed by the improper rejection of the initial first article submission and did not waive claims from actions leading to the default, the specific claims at issue present other problems. We do not interpret the Contract Disputes Act of 1978, 41 U.S.C. §§ 601-613 (CDA), the Disputes Clause, or the FAR provisions on loan guarantees at Subpart 32.3 to provide Board jurisdiction with respect to Claim No. 1.

The CDA defines the jurisdiction of the boards of contract appeals as follows:

> (d) Jurisdiction
>
> Each agency board shall have jurisdiction to decide any appeal from a decision of a contracting officer (1) relative to a contract made by its agency, and (2) relative to a contract made by any other agency when such agency or the Administrator has designated the agency board to decide the appeal. In exercising this jurisdiction, the agency board is authorized to grant any relief that would be available to a litigant asserting a contract claim in the United States Court of Federal Claims.

The Tucker Act, 28 U.S.C. § 1491, grants jurisdiction to the United States Court of Federal Claims on claims against the United States "founded ... upon any regulation of an executive department, or upon any express or implied contract with the United States." The Tucker Act thus distinguishes between the Court's jurisdiction on contract claims and that based solely on regulations. The Board can only grant relief available in the Court on contract claims. In *Paragon Energy Corp. v. United States* [28 CCF ¶ 81,290], 645 F.2d 966 (Ct. Cl. 1981), the Court reviewed the genesis of the language

©1993, Commerce Clearing House, Inc.

Digitized by Google

in Section 7 of the CDA regarding the relief available before the boards. The Court concluded the CDA denies jurisdiction to grant the discretionary relief only authorized by Public Law 85-804. The relief sought under Claim No. 1—granting a guaranteed loan—is just such discretionary relief.

In *Thompson Numerical, Inc.*, ASBCA No. 41327, 91-3 BCA ¶ 24,169, we refused to take jurisdiction over an appeal where the requested relief was a loan or advanced payment that cited Public Law 85-804 but included a CDA certification. Here, appellant does not refer to Public Law 85-804, but nonetheless seeks the same relief, which is not available under any contract clause or regulation imposing a contractual requirement. We can find no enforceable duty in Subpart 32.3 of the FAR. Moreover, even if we did believe we had such authority, FAR § 32.304-1 requires the filing of an application by the contractor with a financing institution. We have no evidence this was done. Appellant's Claim No. 1 for financing in the amount of $2,900,000.00 is dismissed for lack of jurisdiction.

With respect to Claim No. 2, appellant claims that it was forced to sell castings for scrap to obtain funds to keep working. On its face, the decision to sell equipment at an alleged $76,316.38 loss to finance production on a $21,012.75 contract is not a reasonable business decision and ultimately violates the general rule that the injured party is bound to exercise reasonable care and diligence in mitigation of the resulting damage. *John S. Doane Co. v. Martin*, 164 F.2d 537, 541 (1st Cir. 1947). Appellant's financial difficulties and the contributions thereto of appellant's management were established in *Sermor, Inc.*, ASBCA No. 29046, 87-1 BCA ¶ 19,568. Here, there were also delays preceding disapproval of the first article for which respondent's responsibility is not established (findings 3, 4). We are not persuaded this was a direct and foreseeable consequence of the first article delay and thus appropriate for the award of damages. "The rule which precludes the recovery of uncertain damages applies to such as are not the certain result of the wrong ...." *Joseph Pickard's Sons Co. v. United States* [22 CCF ¶ 80,210], 532 F.2d 739, 743 (Ct. Cl. 1976).

In any event, appellant must show it has suffered monetary injury to recover. *Assurance Co. v. United States* [33 CCF ¶ 75,181], 813 F.2d 1202 (Fed. Cir. 1987). The castings were used on another contract and appellant has established their original purchase price. It is the value at time of loss, however, that is essential to a determination of damages, and the only evidence as to the value of the castings at the time of loss is their sale price as scrap. If they were not worth more, appellant has suffered no monetary injury and may not recover. If they were worth more, it is incumbent on appellant to establish that value. *Missouri Baptist Hospital v. United States*, 555 F.2d 290, 296 (Ct. Cl. 1977). Here, appellant fails. Appellant has simply not provided probative evidence that the value of the castings was greater than the price for which they were sold. We cannot, therefore, find monetary injury. Moreover, allowing appellant to recover original purchase value would be tantamount to furnishing new castings for castings that had been used and depreciated, which is precluded by the "new for old" rule. *Midwest Industrial Painting of Florida, Inc. v. United States* [31 CCF ¶ 71,962], 4 Cl. Ct. 124, 134-35 (1983). Accordingly, Claim No. 2 is denied.

Claim No. 3 for the sale of Bridgeport milling machines is similarly lacking. Appellant claims it had to sell its machines at a loss because of financial difficulties precipitated by the Government. All the reasons for denial of Claim No. 2 apply here, except that appellant establishes replacement value instead of purchase value, while alleging its loss is the difference between sale and replacement value (finding 20). As the only evidence of value at the time of loss is the sale price, and appellant offered testimony that they were sold for as much as it could get, awarding appellant the replacement cost is precluded by the "new for old" rule. *Midwest Industrial Painting of Florida, Inc., supra.* Once again, there is no evidence of value greater than the sale price of the used machines. The burden of proof is on appellant and the claim is not proof of disputed facts. *Peterman, Windham, and Yaughn*, ASBCA No. 21147, 77-2 BCA ¶ 12,674. Claims 2 and 3 fail for lack of proof.

The appeal is denied.

DECISION—ASBCA NO. 32984

Appellant argues that respondent "made sure that Appellant lacked the monies needed to complete this contract," and the lack of money was the result of actions denying fair and equitable treatment. Respondent argues the default termination was proper.

It is undisputed that appellant did not complete the contract. Appellant concedes the reason for this is that it ran out of money (finding 23). A Show Cause letter was

Digitized by Google

sent on 7 March 1986, two days after the final delivery date. Appellant's response denied it was delinquent, but conditioned further performance on fair, equitable, and impartial treatment or obtaining sufficient funds to complete the contract from other sources (finding 24). A reasonable reading of the letter is that appellant was out of money, as we have found. While appellant offered to complete the contract in April 1986, it was without equipment to correct errors (finding 26). In any event, there is no probative evidence appellant did any further work after its last delivery in January 1986, and the contract was default terminated 23 May 1986 (findings 26, 28). We conclude that respondent has met its burden of proof in establishing that appellant had failed to perform the contract in accordance with the delivery schedule.

Appellant would have us find its default excusable because of respondent's role in its deteriorating financial condition. Appellant's argument about respondent's role in its financial condition appears centered on other contracts and the alleged delay in granting progress payments. We are unpersuaded that circumstances existed which permit the consideration of other contracts. *General Dynamics Corp. v. United States* [25 CCF ¶ 82,730], 585 F.2d 457 (Ct. Cl. 1978). As to the delay in granting appellant's request for progress payments, we have found there was no agreement to include them as part of Modification No. P00003 (finding 11). Similarly, we have found the contracting officer did not tell appellant that progress payments had been approved in July 1985 (finding 12).

As to the 4 months between appellant's request for progress payments and inclusion of the Progress Payments (APR 1984) clause by Modification No. P00005, respondent was under no obligation to include the clause, particularly since the contract was for less than $100,000 and no consideration was offered. FAR 32.501-4, 32.502-1. Moreover, Modification No. P00005 also extended the delivery schedule. Appellant made deliveries thereafter until it ran out of money. We cannot conclude, therefore, that appellant's inability to perform the contract was somehow the result of the 4-month approval period, or that the approval period constitutes an excusable delay. Even if the delay in granting progress payments was a breach, and we do not so find, appellant lost the right to stop work after it was cured. *Parkway Distributor and Building Services, Inc.*, ASBCA No. 36190, 89-3 BCA ¶ 22,199.

Although a loss ratio was applied to payments in accordance with FAR 32.503-6(g), appellant received $18,291.00 in payments against a contract price of $20,862.75, or 87 percent, as compared to the maximum contract rate of 90 percent (findings 17, 18). It delivered 1841 of the 2475 track rotors, or approximately 75 percent of the contract requirement (finding 23). Thus, even with application of the loss ratio, appellant had received payment at a rate in excess of the contract value of 100 percent of its deliveries. Respondent was not, therefore, in breach of the contract. *Cf. Consumers Oil Company,* ASBCA No. 24172, 86-1 BCA ¶ 18,647.

Appellant argues on brief it was systematically denied the award of numerous contracts for which it was low bidder. Appellant contends this constituted a "de facto debarment," a contention which it apparently includes among the factors contributing to its financial difficulties and therefore excusing its inability to perform. In *Sermor, Inc., supra,* we rejected this argument as totally speculative. Moreover, this is not within the jurisdiction of the Board under either the CDA or the Disputes clause. In the absence of an express contract, Board jurisdiction may arise from a contract implied-in-fact. *Vec-Tor, Inc.*, ASBCA No. 25807, 26128, 84-1 BCA ¶ 17,145. Here, however, appellant's argument is based on allegations that respondent violated a legal requirement to award contracts to appellant where appellant was the low bidder. Any resulting contractual obligation would be a contract implied-in-law over which the Board would have no jurisdiction. *Fincke v. United States,* 675 F.2d 289 (Ct. Cl. 1982).

Appellant also argues that it was denied fair and equitable treatment. We interpret this argument as addressing various actions of respondent that contributed to appellant's deteriorating financial condition. We have considered these issues here and in our decision on ASBCA No. 32824, *supra.* While we have found that respondent erred in denying conditional first article approval, we have also denied the specific claims filed by appellant arising therefrom. The contracting officer's denial of those claims was, therefore, neither a breach of contract, nor unfair, nor inequitable, as appellant would have us find. Similarly, we have rejected arguments based on other contracts and "de facto debarment." We also note the Board's finding in *Sermor, Inc., supra,* that appellant's management and not the Government's treatment of progress payments, led to its default

©1993, Commerce Clearing House, Inc.

Digitized by Google

termination in that appeal. Accordingly, we are unable to identify actions of respondent that would excuse appellant's failure to complete the contract.

Appellant maintains that it agreed to the contract reinstatement effected by Modification P00002 under duress, specifically the threat of another default termination. Appellant, at the time of execution, reserved its right to file claims arising from actions leading to the 25 April 1984 default termination, but did not otherwise object to the modification at the time. It also agreed to deliver in 45 days if progress payments were included in the contract, although the final version provided for first article delivery in 120 days and did not include progress payments (finding 7). Appellant's forwarding letter can only be read as acquiescing in dealing with progress payments as a separate issue (finding 8). While appellant was under economic pressure, it is insufficient to establish duress. *Louisiana-Pacific Corp. v. United States* [29 CCF ¶ 81,737], 656 F.2d 650, 653 (Ct. Cl. 1981).

Having considered the arguments of the parties, we conclude the default termination was proper.

DECISION—ASBCA No. 33173

Appellant claimed that its plating costs went up because of Government-caused delays. Neither party offers argument directly on this claim.

In addition to offering no direct argument on this claim, appellant has offered no evidentiary support for the claim but brief testimony from its president. We do not know when prices went up, and thus cannot determine whether the increase is attributable to the first article delay. Moreover, even the testimony of appellant's president leaves a significant question as to whether appellant was bound to pay the increased price—"We got a request for an increase in price, and we happen to agree with him that he deserves it." (Finding 22). In order to recover in behalf of a subcontractor, appellant must first show that it is liable to the subcontractor for that amount. *Barnard-Curtiss Co. v. United States* [8 CCF ¶ 71,689], 301 F.2d 909, 913 (Ct. Cl. 1962). We are provided no bills, invoices, letters, nor even testimony on oral demands. We have a claim and testimony of a *request* for an increase which appellant thought its subcontractor deserved. This falls short of establishing that appellant was liable. The appeal is denied.

[¶ 26,302] Sermor, Inc.

ASBCA Nos. 30576, 33176, 33179, August 16, 1993. Contract No. F41608-81-C-2322, F42600-81-C-6026.

Defaults, Procedure—Bankruptcy of Contractor—Automatic Stay of Termination.—A contractor's appeal under its contracts for the production of jack assemblies and engine mount pins that was filed more than 90 days after default terminations of the contracts was timely because the default terminations, which were filed after the contractor's bankruptcy action, were voided by the automatic stay provisions of the Bankruptcy Code. The appeal notice, which was filed after the stay was lifted, was timely.

Procedure, Boards—Prior Decisions—Estoppel.—A contractor, under contracts for the production of jack assemblies and engine mount pins, was collaterally estopped from litigating issues regarding alleged improper withholding of progress payments under other contracts, because the board had previously decided the same issues for the same parties in an appeal of the default terminations of the contracts.

Defaults, Government Acts Excusing—Other Contracts—Exceptional Circumstances.—The default terminations of contracts for the production of jack assemblies and engine mount pins was proper, despite the contractor's contention that improper government actions under other contracts excused the terminations, because the contractor did not prove the requisite exceptional circumstances justifying relief. The contractor did not provide any probative evidence of its contention that the government's actions were intended to put the contractor out of business, nor did it identify any government actions that exceeded the boundaries of the government's legal rights.

Defaults, Grounds—Delivery Failure—Effect of Unilateral Extension.—The default termination of a contract for the production of jack assemblies was proper, despite

Digitized by Google

the contractor's contention that no true delivery date existed at the time of default termination, because the government's unilateral modification following the contractor's failure to meet the initial delivery date established a reasonable and specific new delivery date. The reasonableness of the new delivery date was shown by the contractor's abandonment of performance and by the length of the extension, which was consistent with the most recent extension requested by the contractor. The contractor's closure of its plant four days after failing to meet the extended delivery date did not constitute the reliance needed to show the government's waiver of the delivery date. The government's receipt of consideration for the extension did not indicate that time was not of the essence.

Defaults, Grounds—Delivery Failure—Waiver of Delivery Date.—The default termination of a contract for the production of engine mount pins was proper, despite the contractor's contention that the government waived the delivery date, because the contractor's admission that it lost its capacity to produce the pins months before the termination indicated that the contractor did not rely on the delivery date. The contractor's failure to deliver the pins was not excused by the government's failure to promptly terminate the contract for default. Moreover, the government acted reasonably in suspending a progress payment while considering whether to terminate the contract for default.

Pricing of Adjustments—Proof—Records in Support.—Under a contract for the production of engine mount pins, the contractor was not entitled to recover additional costs incurred in meeting the contract's coating requirements, because the contractor did not provide probative evidence in support of its claim. The contractor contended that various improper government actions rendered the contractor financially unable to use a coating subcontractor that would have paid delivery costs and charged less for coating than the subcontractor that completed the requirements. The contractor did not present any evidence in support of the claimed original per-item-coating price. The contractor's failure to show that the original vendor would have delivered the items for free precluded the contractor's recovery of any direct labor costs incurred in delivery of the items.

For the appellant: Sergio Morsani, Jr., President. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and David C. Barnett, Trial Attorney.

Before DICUS, WILLIAMS, and RIISMANDEL, Administrative Judges.

DICUS, Administrative Judge: These appeals arise under two contracts with the United States Air Force. ASBCA No. 30576 is an appeal from the default termination of Contract No. F41608-81-C-2322 (hereinafter 2322). ASBCA No. 33176 is an appeal from the default termination of Contract No. F42600-81-C-6026 (hereinafter 6026) and ASBCA No. 33179 is an appeal from denial of a $6,130.40 claim for additional costs under that contract.

FINDINGS OF FACT—ASBCA NO. 30576

1. Contract No. 2322 between appellant Sermor, Inc. and respondent United States Air Force was awarded 10 September 1981. The contract, which contained the standard Default (AUG 1969) and Disputes (JUN 1980) clauses, was for manufacture of 95 jack assemblies at a fixed-price of $23,315.85, with delivery scheduled for 30 April 1982 (R4a, tab 2).*

2. The original delivery date was not met due to rejection of castings by appellant, who forecast a new delivery date of 30 September 1982 (tr. 1/82-83; R4a, tab 41). By letter of 6 January 1983 appellant asked for copies of a specification and advised it had changed its casting supplier, which caused it to seek an extension to April 1983 (R4a, tab 6). By letter of 20 January 1983 respondent advised it was evaluating its request, promised a response by 9 February 1983, and requested an offer of consideration to extend the delivery date (R4a, tab 7).

3. Appellant, in a 9 February 1983 telephone conversation, explained that it could not offer consideration for an extension because it was financially pressed (tr. 2/88). However, after further correspondence, appellant executed Modification No. A00001, which extended delivery to 15 August 1983 and in which appellant agreed to attempt completion of all its government contracts

* The Rule 4 file in ASBCA No. 30576 is designated "R4a." The Rule 4 file for ASBCA Nos. 33176 and 33179 is designated "R4b."

©1993, Commerce Clearing House, Inc.

Digitized by Google

ahead of schedule at no increase in price (R4a, tab 13).

4. When appellant failed to meet the 15 August 1983 schedule, respondent issued a show cause letter dated 17 August 1983 (R4a, tab 16). Appellant responded by letter dated 8 September 1983 in which it alleged that suspension of progress payments on other contracts had caused the delay. An extension to 31 October 1983 was requested (R4a, tab 18). By Mailgram dated 3 October 1983, appellant offered $200.00 for an extension to 31 October 1983 (R4a, tab 21). The attempt to modify the contract went awry because it was sent to appellant's old address (R4a, tabs 14, 22).

5. After further delays and discussions the parties executed Modification No. P00002, which extended the delivery schedule to 9 December 1983 and decreased the contract price by $200.00 (R4a, tab 27). On 3 January 1984 (the same day respondent signed Modification No. P00002), respondent issued unilaterally Modification No. P00003, extending the delivery schedule to 30 January 1984 (R4a, tab 28; tr. 1/157). Appellant stopped all work and laid off its employees on 3 February 1983 (tr. 1/174-75). It reopened at the end of February 1984 with 3 persons returning in addition to 3 family members (tr. 2/9). Appellant was prepared to start production of a contract other than 2322 or 6026 (*id.*). Appellant filed for Chapter 11 Bankruptcy in the United States Bankruptcy Court, Southern District of Florida (hereinafter Bankruptcy Court) (R4a, tab 36).

6. Respondent terminated the contract for default by Modification No. P00004 dated 15 March 1984 (R4a, tab 30). The modification was not received by appellant until 8 May 1984 (R4a, tab 32). The Bankruptcy Court set the default termination aside by Order of 27 August 1984 as in violation of the automatic stay provisions at 11 U.S.C. § 362(a), declaring it null and unenforceable (tr. 1/159-60; app. R4, tab 73). Relief from the 27 August Order was granted to respondent with respect to contracts 2322 and 6026 by the Bankruptcy Court on 4 September 1984 (R4b, tab 2).

7. Modification No. P00005, dated 2 October 1984, was issued affirming the 15 March 1984 termination (R4a, tab 36). Appellant filed its notice of appeal 28 December 1984 (R4a, tab 39).

FINDINGS OF FACT—ASBCA NOS. 33176 and 33179

8. Contract 6026, for the manufacture of 930 engine mount pins for the F4 aircraft, was awarded to appellant on 2 October 1981 at a fixed price of $33,331.20. It included the Default (AUG 1969) and Disputes (JUN 1980) clauses. The contract called for first article delivery in 300 days, with 624 production items due 365 days after first article approval and 306 items 30 days thereafter. First article delivery was changed to 15 June 1983 (R4b, tab 1).

9. When appellant failed to meet the first article date, a Show Cause Notice dated 12 July 1983 was issued (R4b, tab 34). Appellant responded by letter of 18 July 1983 in which it was asserted that the "illegal" suspension of progress payments on other contracts and appellant's move to a new location at Palm Coast, Florida, were responsible for the delay. From October 1982 to May 1983 appellant's president averaged 1 day per week away from the plant in conjunction with the move, which took place in late June and early July of 1983. Appellant proposed the delivery schedule be changed to 30 August 1983 for first article and 30 March 1984 for the 930 production items (R4b, tab 35; tr. 2/39-40).

10. By Modification No. A00004 the parties extended the delivery schedule as proposed by appellant to 30 August 1983 for first article and to 30 March 1984 for the 930 production items, and reduced the contract price by $200.00 (R4b, tab 1). On 30 September 1983 appellant advised respondent that the first article was ready for inspection and acceptance. The first article was submitted on 3 October 1983. Respondent had 45 days under the contract to approve or disapprove (R4b, tab 1; app. R4, tabs 130, 131).

11. During the period from October to December 1983 respondent visited appellant's plant and assessed its condition, culminating in a 16 December 1983 Report of Adverse Development in which appellant was characterized as being financially unstable due to cash flow problems (app. R4, tabs 65-66, 68).

12. Respondent did not approve the first article until 19 December 1983, more than a month longer than the 45 days allowed by the contract. Appellant did not receive the letter of approval until 27 December 1983 (app. R4, tab 142).

13. Appellant shut down its plant on 3 February 1984. On 6 February 1984 an update to the 3 December 1983 Report of Ad-

Digitized by Google

verse Development was issued reporting the plant shutdown and the award to another company of a contract appellant had hoped to obtain. Appellant's financial capability was considered "critical" (app. R4, tab 68; tr. 1/177-78).

14. Respondent sent cure notices to appellant on 13 February and 1 March 1984 (R4b, tabs 37, 38). In a letter dated 2 March 1984 appellant asserted that the delay in delivery was due to actions of the Army and Navy, not itself or respondent, and requested $27,000.00 in progress payments from respondent (R4b, tab 39).

15. Appellant filed for bankruptcy on 14 March 1984 (finding 5). On 16 March 1984 a Show Cause letter was sent (app. R4, tab 150). There is no evidence that appellant ever responded. Modification No. P00001 terminating the contract for default was issued on 2 April 1984 (R4b, tab 1). After proceedings in the Bankruptcy Court (findings 5, 6) the contract was reinstated on 18 October 1984 by Modification No. P00002. Delivery of 930 production items was set for 17 January 1985 and DAR Clause 7-104.35(b), Progress Payments for Small Business Concerns (SEPT 1982), was added to the contract (R4b, tab 1).

16. After receipt of Modification No. P00002 appellant attempted to obtain the material necessary to complete the contract from its subcontractor. Although the subcontractor had sold the material several days before, appellant continued to work with the material it had on hand using its SMT horizontal turning center ("SMT") (tr. 1/184-85, 2/72). The delivery date was extended to 28 February 1985 for the first 346 items and 30 August 1984 for the final 584 items in consideration for a $150.00 price reduction (R4b, tab 1).

17. when appellant did not meet the 28 February 1984 date a Show Cause letter dated 15 March 1985 was issued (R4b, tab 3). Appellant sent a letter dated 18 March 1985 complaining that progress payments had been suspended and stating that it had the parts ready for heat treatment. Because of being on a cash on delivery basis appellant did not ship the parts, asserting "we could not run the risk of having the parts done and not paying for them immediately." (R4b, tab 4)

18. By letter dated 5 April 1985 appellant responded to the 15 March 1985 Show Cause letter in which it stated that more than 350 items were ready for heat treatment on 26 February 1985 but appellant held them until 2 March 1985 to review the quality of the parts. Appellant further stated that Progress Payment No. 4 had been suspended (R4b, tab 5). Progress Payment No. 4 was not processed at that time because respondent was considering whether appellant's contract should be terminated for default (tr. 2/194).

19. In a letter dated 14 April 1985 appellant reiterated that it had 356 items awaiting heat treatment and plating at Rex of Florida and Orlando Plating, respectively. Appellant asserted again it was on a cash basis with vendors and that it needed Progress Payment No. 4 to continue production (R4, tab 6).

20. In a meeting on 2 May 1985 the parties were unable to resolve their differences. On 8 May 1985, an Industrial Specialist visited appellant's facility and reported to respondent that the estimated cost to complete of the contract was $29,218.00 and the cost to complete the first shipment was $3,813.00. Appellant stated it needed $3,018.00 to complete the first shipment. Thereafter, Progress Payment No. 4 was released (app. R4, tab 78).

21. Modification No. A00007, dated 14 May 1985, changed the delivery schedule. As a result, 355 items were due 10 June 1985 and 575 were due 31 December 1985 (R4, tab 1). Appellant shipped 341 items on 31 July 1985. However, the materials to complete the contract were not ordered (tr. 1/188, 191, 2/146). As a result of appellant's decision to spend its money accelerating production under another contract rather than pay the finance charges on the SMT, the machine was repossessed in the fall of 1985 (tr. 2/51, 66-69). With the loss of the SMT, appellant's capability to produce the remaining items under the contract was effectively gone (tr. 1/189-90).

22. Respondent issued Modification No. P00003 unilaterally on 31 October 1985, extending delivery for all remaining items to 31 December 1985 (R4b, tab 1). At that point appellant had received 94 percent of the contract price, or $31,212.00 (R4b, tab 42). On 18 December 1985 respondent learned that appellant had not yet ordered the material necessary to complete the contract (R4b, tab 43). Another Show Cause letter was issued 7 January 1986 (R4b, tab 19; tr. 2/152). Appellant responded by letter of 17 January 1986, in which it recounted various contractual problems between itself and the Federal Government, asserted that it did not have the money for the material to finish the contract because of various actions of re-

©1993, Commerce Clearing House, Inc.

Digitized by Google

spondent, and cited the delay in receiving Progress Payment No. 4 as a particularly crucial matter. Appellant also asserted that late first article approval affected ordering materials, because by late December 1983 appellant no longer had sufficient cash flow to authorize delivery (R4b, tab 20).

23. By letter of 27 January appellant submitted a claim for $6,139.40 in additional costs incurred to meet the coating requirements of the contract. Appellant asked for a final decision within 60 days. The claim letter states:

> Enclosed find Sermor's Claim #2, with supporting documentation. During July 1981, Sermor quoted the coating requirements of referenced contract with a coating vendor from Broward County, Florida. The original quote, as we discussed in June 1985, was for $2.50 each. In addition our sub-contractor had pick-up and delivery service at no extra charge. Because of many government improper actions, such as four different Progress Payment suspensions (without substantial evidence), as well as a six month refusal to pay any other monies that could become due on other government contracts, (referenced contract). Sermor's financial condition was then effectively destroyed. This left Sermor open to continual government harassment, such as, improper Termination for Defaults, defective government specifications, delays in approval of First Article testing by the government, refusal to provide contract financing as required, defacto-debarment. These factors contributed to the long delay in producing this referenced contract as well as the severe escalation of costs.
>
> This claim is for the increase in costs, above what was originally contemplated by Sermor. Sermor also expended direct labor in delivering these parts to the coater, via freight companies. Upon each of these two categories of costs, applicable overhead rates have also been applied. The third category of the costs incurred is for preparation of this claim with applicable rates.

(R4b, tab 21)

24. A second claim under the contract was submitted by letter dated 28 January 1986, seeking $1,130.75 for costs incurred responding to show cause letters and preparing the claim (R4b, tab 22). By letters dated 26 March 1986 respondent advised appellant that it lacked sufficient information to evaluate the 27 and 28 January 1986 claims (R4b, tab 24).

25. On 4 April 1986 Modification No. P00004 was issued terminating the contract for default. As the address was wrong, Modification No. P00005 was issued on 22 April 1986 correcting the address and forwarding a copy of Modification No. P00004 (R4b, tab 1). By letter dated 25 June 1986 appellant appealed from the termination for default and respondent's 26 March 1986 letter, which appellant treated as a denial of its 27 January 1986 claim.

DECISION

Appellant lists 9 bases for recovery, as follows: fair and equitable treatment from the government; progress payment problems; first article testing; prior course of dealing; defective government specifications; improper termination for default; de-facto debarment; unconscionable acts; and time of the essence. Respondent argues that appellant's appeals from the default terminations were untimely; that the terminations were proper; and that respondent is not liable for delay damages.

Respondent contends that since no appeal was filed within 90 days of either termination, ASBCA Nos. 30576 and 33176 were untimely. Respondent ignores the effect of the automatic stay provision at 11 U.S.C. § 362, which rendered the two default terminations filed after the bankruptcy action null and void. *Communications Technology Applications, Inc.*, ASBCA Nos. 41573, 42993, 92-3 BCA ¶ 25,211. The appeal notices filed after the stay was lifted were timely (findings 7, 25). Respondent's argument that the appeals are untimely is without merit.

The focus of appellant's arguments in the 9 bases argued is not the contracts at issue in these appeals, but past actions under other contracts. Particular emphasis is placed on progress payments under other contracts which appellant alleges were improperly withheld. The issues raised were previously tried between the parties in *Sermor, Inc.*, ASBCA No. 29046, 87-1 BCA ¶ 19,568. Under the doctrine of collateral estoppel, we may not retry those issues. *Sequal, Inc.*, ASBCA No. 30838, 86-3 BCA ¶ 19,230.

Appellant similarly argues improper government actions under its other contracts on the panoply of issues referred to above. However, only in exceptional circumstances will actions under other contracts provide a basis for relief. In *General Dynamics Corp. v. United States* [25 CCF ¶ 82,730], 585 F.2d 457 (Ct. Cl. 1978), the Court said at 465-66:

Digitized by Google

Where the extra costs result from the "impact" of one contract on another, the situation appears to be different.

* * * *United States v. Beutas,* 324 U.S. 768, 65 S.Ct. 1000, 89 L.Ed. 1354 (1945), sets forth the "established rule" of nonliability in such circumstances and mentions, without adopting, a possibility of government liability for intentionally and knowingly hindering plaintiff or culpably increasing its costs. * * *

In *Allied Paint Mfg. Co. v. United States* [18 CCF ¶ 81,895], 470 F.2d 556, 200 Ct.Cl. 313 (1972), plaintiff supplied paint under numerous small orders. Defendant suddenly changed its inspection procedure, without being able at once to perform its new inspection requirements, but it was held entitled to make the change it did. The change impeded plaintiff by disrupting its operations to the extent that paint under 31 orders was not even tendered for inspection. It was held that defendant was entitled to terminate those 31 orders for default.

In *Specialty Assembling & Packing Co. v. United States* [11 CCF ¶ 80,242], 355 F.2d 554, 568, 174 Ct.Cl. 153, 175 (1966), it is held that the "impact" of the breach of one contract on costs under another is not compensable unless the adverse effect is "reasonably foreseeable." See also *Ramsey v. United States,* 121 Ct.Cl. 426, 433-34, 101 F.Supp. 353, 357-58 (1951), *cert. denied,* 343 U.S. 977, 72 S.Ct. 1072, 96 L.Ed. 1369 (1952), and *Myerle v. United States,* 33 Ct.Cl. 1, 27 (1897), as to general adverse effects of a government breach on the contractor's business not being compensable.

The cases seem to lead to the conclusion that only in exceptional circumstances can an equitable adjustment be made for extra cost in performing one contract, caused by the government doing things it has a right to do, respecting other contracts. Such rare cases will be those of concealment from the plaintiff, when it bids, of already formulated plans and intentions respecting other contracts, which plans and intentions the plaintiff needs to know to estimate its costs, possibly some instances of intentionally and knowingly hindering the plaintiff in doing the contract work, and perhaps other instances where some degree of government culpability and "proximate cause" exist.

We find no such exceptional circumstances here. While appellant has characterized various actions by respondent as, in effect, intended to put appellant out of business, we find no probative evidence of such an intent. Indeed, however badly the parties' relationship may have deteriorated, on this record we are unable to identify actions by respondent that exceeded the boundaries of respondent's legal rights. If appellant suffered economic loss in the process, it is a burden appellant must bear. *Sermor, Inc., supra.* The disposition of these appeals must rest on the actions of the parties under contracts 2322 and 6026.

ASBCA NO. 30576

Appellant argues that no true delivery date existed when the contract was default terminated on 15 March 1984, that respondent was more interested in receiving consideration than delivery, and never treated time as of the essence. Respondent argues that the default termination was proper.

Appellant's argument is apparently based on there being no delivery date agreed to by the parties. However, valid delivery dates can be established by means other than a bilateral agreement. The binding effect of the schedule is not abrogated because it was never the subject of a formal contract modification. When the contract delivery date has not been met and the contract is not default terminated, the Government's subsequent exercise of its rights under the Default clause requires the establishment of a new delivery date that must be reasonable and specific. *DeVito v. United States* [13 CCF ¶ 82,319], 413 F.2d 1147, 1154 (Ct. Cl. 1969). The new schedule may be established by various means short of a contract modification. *Simplex Manufacturing Corp.,* ASBCA Nos. 13897, 14380, 71-1 BCA No. ¶ 8814; *Max M. Goldhaber,* ASBCA Nos. 8277, 8370, 65-2 BCA ¶ 5083. Here the contract date was 9 December 1983. When it was not met respondent on 3 January 1984 unilaterally issued a modification extending the delivery date to 30 January 1984 (finding 5). Thus, the new date was specific.

While there is no bright line between forbearance and waiver, the elements to be considered in determining the reasonableness of the new delivery date include whether the contractor continues to work or abandons performance. *DeVito, supra.* Appellant closed its plant on 3 February 1984 (finding 5). Moreover, the length of the extension was consistent with the most recent extension requested by appellant (finding 4). Accordingly, we find it was reasonable.

The plant closure is significant from another viewpoint. Before respondent can be found to have waived a delivery date, the

©1993, Commerce Clearing House, Inc.

Digitized by Google

record must demonstrate reliance by appellant. *A.B.G. Instrument & Engineering, Inc. v. United States* [25 CCF ¶ 83,025], 593 F.2d 394 (Ct. Cl. 1979). Appellant laid off its employees and closed its facility 4 days after missing the 30 January delivery schedule. It intended to start production on another contract upon reopening in late February (finding 5). We cannot, therefore, find the requisite reliance.

Referring to respondent's obtaining consideration for extensions (findings 2, 4, 5) appellant argues this is proof that time was not of the essence. However, it is an established rule that where consideration is not obtained the resulting agreement may not be binding. *Institutional and Environmental Management, Inc.*, ASBCA Nos. 32924, 34948, 90-3 BCA ¶ 23,118. Therefore, it was entirely appropriate for respondent to obtain consideration for the extensions.

We find the termination for default of contract 2322 was proper. The appeal is denied.

ASBCA NO. 33176

As appellant correctly argues, respondent exceeded the contract period for first article approval. However, the termination of 2 April 1984 was rescinded and the contract reinstated by mutual agreement on 18 October 1984 by Modification P00002, which established a new delivery date of 17 January 1985 (finding 15). In agreeing to that date, appellant eliminated from consideration whether the termination for default was excusable due to the causes of delay occurring prior thereto. *Environmental Devices, Inc.*, ASBCA Nos. 37430, 39308, 39719, 93-3 BCA ¶ 26,138.

Appellant argues that time was not of the essence to respondent. Unlike ASBCA No. 30576, *supra*, appellant does not argue that no valid delivery date existed. By Modification No. A00007, executed by both parties, the delivery date was 31 December 1985 (finding 21). Unilateral Modification No. P00003 merely extended the delivery date for 14 overdue items to 31 December 1985 (finding 22). Respondent issued a Show Cause letter on 7 January 1986, received a response on 17 January 1986 and two claims 11 days thereafter (finding 22-24). The contract was default terminated by Modification No. P00005, dated 4 April 1986, reissued with a correct address as Modification No. P00005 on 22 April 1986 (finding 25). In order for the Board to find respondent waived the delivery date, we must find reliance by appellant. *A.B.G. Instruments & Engineering, Inc. v. United States, supra.* However, appellant's president testified that appellant did not have the capability to perform after repossession of the SMT horizontal turning center in the fall of 1985 (finding 21). This came about because of appellant's decision to pursue other contracts instead of paying finance charges (*id.*). Thus, appellant, by its own admission, had lost its capacity to produce the engine mount pins called for by the contract months before the termination. As it could not have continued to work on the contract, we cannot find that appellant in some way relied on respondent's 95-day analysis of appellant's response to the 7 January Show Cause letter and continued to perform. Appellant's production on contract 6026 had ceased. We find that appellant's failure to deliver is not excused by respondent's failure to promptly terminate the contract for default. *Olson Plumbing & Heating Co. v. United States* [26 CCF ¶ 83,506], 602 F.2d 950 (Ct. Cl. 1979) (13 months held not to be a waiver where contractor did not resume performance).

Appellant argues that suspension of Progress Payment No. 4 was improper and adversely affected its ability to perform, as the money was badly needed to pay a plating subcontractor. However, the parties have stipulated that Progress Payment No. 4 was suspended to allow respondent time to consider whether appellant, having missed a delivery date, should be default terminated (finding 18). We have found it reasonable to suspend a progress payment while considering whether a contract should be default terminated. *Sermor, Inc., supra.* Respondent's actions do not, therefore, excuse appellant's failure to meet the delivery date.

The appeal is denied.

ASBCA NO. 33179

Appellant's 27 January 1986 claim asserts that its coating costs increased because of various actions by respondent. It asserts that its original coating subcontractor would have charged $2.50 per part and picked up and delivered the parts free of charge, but it actually paid $5.23 per part for coating and had to pay for pick up and delivery. While the claim is supported by a copy of an invoice for coating 340 items at $5.23 and invoices purporting to show transportation costs, there is no probative evidence to establish the basis for the alleged bid cost of $2.50. Likewise, there is no probative evidence to establish that the original vendor would have delivered the items without cost. Claim letters are not proof of disputed

Digitized by Google

facts. *Peterman, Windham and Yaughn, Inc.*, ASBCA No. 21147, 77-2 BCA ¶ 12,674. Without proof that appellant's original subcontractor would have performed as claimed, the direct labor and administrative costs allegedly incurred as a result could not be sustained even if there were probative evidence in support.

The appeal is denied.

[¶ 26,303] Sermor, Inc.

ASBCA Nos. 29798, 30149, 30423, August 16, 1993. Contract No. DAAA09-81-C-2488.

Defaults, Grounds—Delivery Failure—New Delivery Schedule.—A contract for the production of smoke grenade launchers was properly default terminated for failure to deliver, despite the contractor's contention that no valid delivery dates were in effect at the time of the termination, because the contractor failed to make delivery in accordance with the new schedule that it had proposed and that the government had accepted. The binding effect of the new delivery schedule was not abrogated, because it was not the subject of a formal contract modification. The new delivery schedule did not require a formal modification. In proposing the new schedule and making deliveries in accordance with it, the contractor had agreed that the reestablished completion date was reasonable, and it was thereby obligated to make delivery in accordance with the new schedule.

Defaults, Procedure—Cure Notice—Adequacy of Response.—A defaulted contractor's contention that it remedied a cure notice involving the shutdown of the plant used in its grenade production contract was rejected because the contractor's request that the administrative contracting officer inform the procurement contracting officers that it intended to reopen the plant was not an adequate response to the cure notice. At the time the contractor made its request to the ACO, the contractor was dealing with the administrative contracting officer under another contract for which it had received progress payments. Given the ambiguity involved in this contract situation as well as the administrative contracting officer's uncertain reply to the request, the board refused to conclude that the contractor had adequately responded to the cure notice.

Defaults, Procedure—Bankruptcy of Contractor—Reinstatement of Termination.—Despite an order of the Bankruptcy Court that invalidated the default termination of a production contract for grenades, the board rejected the contractor's contention that the government violated the court order by seeking and obtaining the reinstatement of the default termination, because the contractor neither sought clarification of the order nor contested the government's action in the Bankruptcy Court. The Bankruptcy Court's order lifting the automatic stay provision was clear on its face in granting relief to the government from staying its right to default terminate contracts.

Delay—Causation—Concurrent Delays.—Although the government delayed contract performance by failing to provide resistor packs and paint needed in the production of grenade launchers, the contractor's delay claim was denied because the contractor failed to prove that these delays were not concurrent with other delays for which it was responsible. The contractor's failure to deliver any grenade launchers, even after resolution of the packaging problem and the paint supply problem, was not adequately explained by the contractor. It was clear, however, that the contractor was experiencing difficulties with equipment and in obtaining needed parts and that its financial problems were such that it closed its plant and filed for bankruptcy.

For the appellant: Sergio Morsani, Jr., President. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. R. T. Harders, JAGC, Trial Attorney.

Before DICUS, WILLIAMS, and RIISMANDEL, Administrative Judges.

DICUS, Administrative Judge: These appeals arise under a contract for production of smoke grenade launchers. ASBCA No. 28798 is an appeal from the default termination of Contract No. DAAA09-81-C-2488 (hereinafter 2488). ASBCA No. 30149 is an appeal from a contracting officer's final decision denying all but $3,893.22 of appellant's claim

©1993, Commerce Clearing House, Inc.

Digitized by Google

of $1,305,017.50 for additional costs which appellant alleges resulted from improper government actions. ASBCA No. 30423 is an appeal from denial of a progress payment request.

FINDINGS OF FACT—GENERAL

1. Contract No. 2488 between appellant Sermor, Inc. and respondent United States Army was executed 30 September 1981. Appellant was low responsive, responsible bidder at a fixed price of $689,990.00. Contract 2488 called for production of 1,090 M250 smoke grenade launchers at a price of $521.00 each and 150 M239 smoke grenade launchers at a price of $814.00 each. First article approval was required (R4a, tab 1).*

2. Contract No. 2488 incorporated the Standard Form 32 General Provisions (Supply Contract) APR 1975, amended by inclusion of the Disputes (1980 JUN) clause. Included also was Progress Payment For Small Business Concerns (1976 JUL) which required the contractor to maintain an accounting system adequate for proper administration of the clause. Special Provision H.2 limited progress payments prior to first article approval to 15 percent. The First Article Approval—Contractor Testing (1969 SEP) clause limited progress payments to costs for the first article until approval thereof. The first article was to be delivered within 180 days, and was to be manufactured at the same facility at which the contract was performed (R4a, tab 1).

3. The contract also provided for optional quantities. This provision was exercised 30 September 1981 by Modification P00001, which increased the quantity of M239 grenades by 180 at the contract price of $814.00 each (R4a, tab 1a). Delivery was to commence 28 May 1982 and continue through 24 December 1982 for the M250. For the M239, delivery was to commence 28 May 1982 and continue through 24 November 1982, including option quantities (R4a, tabs 1, 1a).

4. Supplemental Agreement A00001, dated 27 July 1982, extended the delivery schedule at no increase in price by mutual agreement. First Article delivery was extended to 16 August 1982, with monthly deliveries commencing 17 October 1982 and continuing through 14 May 1983 (R4a, tab 1g).

5. Modification P00006 dated 24 February 1982 incorporates Engineering Change Proposals (ECPs) CIL2476 and CIL3048 into the contract (R4a, tab 1f). Modification P00007 (undated) incorporates 3 ECPs into the contract. The ECPs are COC2831 Resistor Park [sic] Improvement, CIL3051 Dimensional Changes, and CIL2434 Protective Finish Change. The Modification contains the following handwritten note: "not sent to Kr because he did not reply to ltrs requesting ceiling price and delivery changes." The DD Form 1692 for COC2831 is dated 28 July 1980. CIL2434 and 3051 are dated 8 October 1981 and 6 August 1981 (R4a, tab 1i).

6. Modification P00008, executed 8 July 1982 only by appellant, was intended to provide 250 gallons of camouflage paint to appellant at $18.00 per gallon (R4a, tab 1j). This was withdrawn by Modification P00009 dated 2 December 1982, which was executed by both parties and in which appellant agreed to furnish paint. The Modification also withdrew a 13 October 1982 termination for default, established 4 January 1983 as the delivery date for the first article with appellant to provide 15 days advance written notice prior to beginning first article tests, and revised the delivery schedule to provide for monthly deliveries commencing 4 April 1983 and completion by 29 March 1984 (R4a, tab 1k).

7. Modification P00012, signed only by respondent on 12 April 1984, accepted appellant's 13 October 1983 offer to change the packaging of the M239 pursuant to ECP 2488-001 for a price increase of $3,890.45 (R4a, tabs 1p, 43, 43a).

8. At the pre-award survey 24 September 1981 appellant was told that respondent had surplus green camouflage paint it wanted to sell (tr. 3/32). In response to a telephone call from respondent advising of the availability of the surplus camouflage paint, appellant sent a 3 December 1981 letter expressing interest in purchasing a quantity of the paint (R4a, tab 2). Aberdeen Proving Ground had 250 gallons available (R4a, tab 3). By letter of 17 February 1982 appellant agreed to purchase 250 gallons at $18.00 per gallon (R4a, tab 6). Modification P00008 was forwarded to appellant in March 1982 (tr. 3/72). Appellant subsequently agreed to accept 200 gallons by letter of 19 July 1982, although none was ever delivered (R4a, tab 11; finding 6).

9. Respondent erroneously believed it had incorporated two ECPs in the solicitation. By letter of 21 December 1981 respondent

* The Rule 4 files for ASBCA Nos. 29798, 30149 and 30423 are designated a, b and c, respectively.

Digitized by Google

forwarded copies of the ECPs. ECP CIL2476 changes a casting drawing. ECP CIL3048 makes certain dimensional changes (R4a, tabs 4, 4a). These were incorporated into the contract on 24 February 1982 by Modification P00006 (finding 5). ECPs COC2831, CIL3051, and CIL2434 were forwarded 19 February 1982 (R4a, tab 7, 7a-7c), although Modification P00007 was never executed (finding 5). An ECP correcting errors in the technical data package, CIC3007, was forwarded 4 March 1982, but not incorporated into the contract (R4a, tabs 1a-1p, 9, 9a). Although requests for cost information on the ECPs were sent to appellant, the information was not provided (R4a, tabs 5, 7, 8; tr. 12-13).

10. A Delay in Delivery form was forwarded to the administrative contracting officer (ACO) on 29 July 1982, noting "Contractor has presently placed contract on a 'hold' status due to problems on other contracts. Date of resumption of work not presently known." The result was Supplemental Agreement A00001, which extended first article delivery to 16 August 1982 and commencement of monthly deliveries to 17 October 1982 (R4a, tab 12; finding 4).

11. Respondent had not provided the promised paint to appellant by 13 August 1982. Appellant telephoned the contracting officer to inquire about delivery and was told to submit the first article without paint. Appellant did not do so because of concern about rejection of an unpainted first article (tr. 3/75-78). When the 16 August 1982 first article date passed without a submission, respondent sent a show cause letter dated 18 August 1982 asserting that respondent was considering terminating the contract for default (R4a, tab 13). Appellant responded by letter of 3 September 1982 in which it cited respondent's failure to deliver the camouflage paint as the reason for non-delivery (R4a, tab 14).

12. Respondent terminated the contract for default by telegram dated 13 October 1982, confirmed by letter of 15 October 1982 stating the appellant's "reply dated 3 September 1982 provided no acceptable reasons for your firm's failure to perform . . ." (R4a, tabs 15, 16).

13. Appellant set out to have the termination overturned and was ultimately successful, with the result being Modification P00009 (tr. 3/83-88; finding 6). The necessary paint was determined to be available commercially (tr. 19) and appellant submitted a first article test report that was conditionally accepted 18 January 1983. One of the conditions was resolution of a resistance test which appellant believed to be the result of the insulating properties of the Anodic coating on the discharger body (R4a, tab 23; tr. 3/94-95).

14. Appellant advised respondent that it could not meet the 4 April 1983 first production delivery date without an engineering change to the Anodic coating, the proposal for which had been submitted to respondent. Respondent told appellant to ship with the old coating (tr. 3/94-96, 100). Although aware of appellant's position that the engineering change was necessary before delivery could begin, the contracting officer issued a 12 April 1983 show cause letter (R4a, tabs 26). Appellant requested the change again by letter of 14 April 1983, and respondent forwarded the change, which had been approved 22 February 1983, by telegram of 19 April 1983. The change was conditioned on "no increase in contract price as agreed" and delivery changes were to be included in the reply to the show cause letter (R4a, tabs 27, 28).

15. Appellant answered the show cause letter in a 29 April 1983 letter, pointing out the delay in issuance of the change from Anodic coating, accusing respondent of intentionally creating circumstances to justify issuance of a show cause letter, and advising respondent of difficulties in obtaining armor plate which had slipped delivery to 1 June 1983 (R4a, tab 28). Appellant, by telegram of 5 May 1983, proposed a delivery date of 15 June 1983 which respondent accepted by telegram of 6 May 1983 (R4a, tab 31).

16. After further discussion the delivery date was again extended to 20 June 1983 and respondent on 16 June 1983 requested that appellant execute Modification P00010, formalizing that date and, *inter alia*, a second delivery on 15 July 1983 (R4a, tabs 11, 33). That modification was cancelled and Modification P00011 was forwarded (R4a, tabs 1i, 1m). Although P00011 shows 15 June 1983 as the date signed by the contracting officer, it was not received by appellant until 19 July 1983 (R4a, tab 1m; tr. 254-55). On 20 June 1983 appellant delivered 25 M250s (exh. G-1).

17. When appellant failed to meet the 15 July 1983 delivery date for 50 M239s another show cause letter was sent (R4a, tab 35). By telegram of 25 July 1983 appellant advised respondent of equipment problems (R4a, tab 36). By letter of 1 August 1983, appellant responded to the show cause and proposed deliveries for the M250s to begin 24 August 1983, with M239 deliveries to be-

Digitized by Google

gin 30 August, continuing through 30 September 1983 (R4a, tab 38). In a letter of 17 August 1983 appellant proposed deliveries on the last day of each month as follows (0001AB is the M250, the other numbers refer to the M239):

0001AB:	25 units Jun 83	50 units Aug
	50 units Sept	75 units Oct
	100 units Nov	100 units Dec
	100 units Jan 84	100 units Feb
	125 units Mar	125 units Apr
	125 units May	115 units Jun
0002AB:	25 units Sep 83	25 units Oct
	25 units Nov	25 units Dec
	25 units Jan 84	25 units Feb
0004AB:	35 units Feb 84	35 units Mar
0005AB:	35 units Apr	35 units May
	40 units Jun	

(R4a, tab 39)

18. The delivery schedule was accepted by respondent by telegram of 25 August 1983 (R4a, tab 40). By telegram of 15 September 1983 appellant, having delivered 75 M250s (exh. G-1, -2), advised respondent of a packaging problem with M239s and proposed a correction (R4a, tab 41). The contracting officer requested a cost and delivery proposal (R4a, tab 42). Appellant by letter of 13 October 1983 proposed a price increase of $3,890.45 based on 330 M239s at $11.79 per unit, but provided no specific delivery dates (R4a, tabs 43, 43a).

19. The M239 is an M250 with an armored box and other refinements (tr. 3/127, 132). The packaging problem affected only the M239 (tr. 37). On 19 October 1983 respondent forwarded ECPs intended to solve the packaging problem (R4a, tabs 44, 44a, 44b). However, appellant believed the ECPs went too far. In a letter dated 28 October 1983 appellant claimed that the new packaging made the packaging purchased for both the M239 and M250 obsolete, that its costs were increased because the old boxes were rendered useless, and that delivery of the M250s scheduled for October could not be met because of the packaging changes (R4a, tab 45).

20. Respondent had, on the same day, sent a telegram rescinding the ECPs, accepting the change proposed by appellant, and disputing appellant's proposed cost increase (R4a, tab 46). This was acknowledged in a 1 November 1983 letter in which appellant defended its cost increase (R4a, tab 47). Referring to a telephone conversation, appellant asked for clarification of respondent's position and asked for written confirmation of its cost proposal in a 16 November 1983 letter. The letter also stated that, upon receipt of respondent's confirmation, it would propose a new delivery schedule for the M239s (R4a, tab 48).

21. Also referring to contemporaneous telephone conversations, the contracting officer by letter of 17 November 1983 confirmed acceptance of appellant's proposed change, promised to negotiate a fair price increase upon funds becoming available, and agreed to revise the delivery schedule for the M239s. However, the letter suggested that appellant continue to ship M250s (R4a, tab 49). This was followed by a 25 November 1983 letter that repeated the essence of the 17 November letter (R4a, tab 51).

FINDINGS OF FACT—ASBCA NO. 29798

22. By letter of 6 January 1984 appellant stated it would shut down its facility forthwith unless it received financial help from the United States government. Appellant blamed actions of respondent for its condition (R4a, tab 53). At that point appellant had delivered 300 M250s consistent with the schedule in its 17 August 1983 letter, including deliveries in November and December 1983 (exh G-1 to -5; finding 17). No further deliveries were ever made (tr. 42; 1/61). However, negotiations on appellant's cost proposal were continuing (R4a, tabs 52, 54). By letter of 10 January 1984 appellant restated its financial plight and sought a meeting with the commanding general as soon as possible (R4a, tab 55). The commanding general responded in a 23 January 1984 letter advising that cessation of production could not be permitted under appellant's contract, referring appellant to the procedures for a Government Guaranteed Loan, and advising that the Small Business Administration's refusal to issue a Certificate of Competency had eliminated appellant from consideration for award of another contract (R4a, tab 56).

23. Appellant's cost proposal on packaging was accepted 3 February 1984 (R4a, tab 57). The production facility was closed down that same day (tr. 512, 516).

24. By letter of 6 February 1984 appellant again sought action on its request for financial assistance (R4a, tab 58). On the same day the ACO prepared a memorandum on adverse developments in appellant's financial condition, which was described as critical (exh. G-6). In a letter of 7 February 1984, Unexcelled Castings Corp., a supplier to appellant, advised respondent that it was owed

Digitized by Google

$89,355 by appellant for work under contract 2488, not counting in process inventory (R4a, tab 59).

25. On 16 February 1984 appellant was sent a 10-day cure notice, received by appellant on 22 February 1984, in which termination for default was asserted as a consequence of failure to cure the shutdown of its plant and non-payment of subcontractors (R4a, tab 60). There is no probative evidence of record that appellant made payments thereafter to subcontractors.

26. Under another contract appellant received a modification authorizing a progress payment of $64,000 on 24 February 1984 (exh. A-33). Appellant told the ACO that operations would begin the following Monday, 27 February 1984, and asked that the ACO so inform appellant's procurement contracting officers. The ACO stated he would inform "the appropriate people." (Tr. 524, 525).

27. Appellant opened its plant thereafter and on 2 March 1984 a team representing respondent visited appellant's plant to review inventory (tr. 2/87-88). Appellant's president testified that it had 5 of the 18 production employees working, and work was done on contract 2488 and at least one other contract on 2 March (tr. 525). However, in response to the termination, appellant's president told the contracting officer on 9 March 1984 that it began work on contract 2488 on 5 March 1984 (R4a, tab 63a). The team reported to the ACO that appellant was not working on 2 March (tr. 2/132). As the 9 March conversation was within 4 days of the event, we find it more reliable and conclude that appellant did not begin work on contract 2488 until 5 March 1984. One of the inventory team told appellant on 2 March that he was there to determine how many trucks would be necessary to take the materials and equipment, which respondent was prepared to do to recoup its progress payments (tr. 525-26).

28. Having had no response from appellant on the 16 February cure notice, appellant was default terminated by telegram on 7 March 1984 (R4a, tab 62). Appellant telephoned respondent on 9 March 1984 and objected to the termination stating, among other things, that the cure notice did not require it to respond, only to take action to cure. Appellant maintained it met the requirements of the cure notice when it reopened its plant (R4a, tab 63). By letter of 14 March 1984 appellant also advised it considered respondent's "lack of direction in furnishing delivery dates" to be a Government-caused delay of work (R4a, tab 64).

29. The 16 March 1984 letter confirming the termination, setting out the detailed reasons therefor, and providing appeal rights was received by appellant on 26 March 1984 (R4a, tab 65). Appellant had, however, filed for bankruptcy on 14 March 1984 (exh. A-30). Appellant filed its notice of appeal by a mailgram received by the Board 6 June 1984 (R4a, tab 66). By Order of the United States Bankruptcy Court, Southern District of Florida (hereafter "Bankruptcy Court"), dated 10 August 1984, the termination was declared null and unenforceable, but without prejudice to a motion from respondent for relief from the order "to proceed with actions affecting the contract." (Exh. A-30)

30. Respondent filed a Motion for Relief from Automatic Stay with the Bankruptcy Court. By Order of 29 November 1984 the court granted respondent's "request for relief from the automatic stay provisions of 11 U.S.C. § 362 to terminate contracts DAAA09-81-C-2488 and DAA J09-81-C-1455 for the reasons set forth at the conclusion of the hearing." (R4a, tab 67) The termination was reinstated "Nunc Pro Tunc" the next day (R4a, tab 68). Appellant did not thereafter contest the termination as contrary to the Order of the Bankruptcy Court or seek clarification of that Order (tr. 567).

DECISION—ASBCA No. 29798

Appellant argues there were no valid delivery dates in effect at the time of the termination, that the termination violates the Order of the Bankruptcy Court, and that various actions of respondent are the real cause for appellant's failure to deliver. Respondent contends the termination was proper.

At the outset we hold that, to the extent appellant's arguments are based on allegations of impropriety with respect to withholding of progress payments, those issues were addressed in *Sermor, Inc.*, ASBCA No. 29046, 87-1 BCA ¶ 19,568. In that decision, the Board found the Government's actions in suspending progress payments to be proper. The Board also found that appellant had received $505,862.00 in progress payments by August 1983 under contract 2488, and that audits had found payments under the contract to be excessive. The doctrine of collateral estoppel precludes the retrial of issues previously litigated between the same parties. *Sequal, Inc.*, ASBCA No. 30838, 86-3 BCA ¶ 19,230. Given that this record estab-

©1993, Commerce Clearing House, Inc.

Digitized by Google

lishes that only 75 M250s and no M239s had been delivered at a point where appellant had received over $500,000 in progress payments, there is nothing in this record to support appellant's contention that respondent's issuance of progress payments on contract 2488 violated appellant's contract rights. As to appellant's argument that actions under other contracts somehow give rise to a remedy, it is only in exceptional circumstances that relief is based on the Government's actions under other contracts. In *General Dynamics Corp. v. United States* [25 CCF ¶ 82,730], 585 F.2d 457 (Ct. Cl. 1978), the Court observed at 466:

> The cases seem to lead to the conclusion that only in exceptional circumstances can an equitable adjustment be made for extra cost in performing one contract, caused by the government doing things it has a right to do, respecting other contracts. Such rare cases will be those of concealment from the plaintiff, when it bids, of already formulated plans and intentions respecting other contracts, which plans and intentions the plaintiff needs to know to estimate its costs, possibly some instances of intentionally and knowingly hindering the plaintiff in doing the contract work, and perhaps other instances where some degree of government culpability and "proximate cause" exist.

No such circumstances have been established here. The only evidence of an impact on contract 2488 by other contracts has been the financial impact issues which were decided against appellant under *Sermor, Inc.*, ASBCA No. 30838, *supra*.

We also find appellant's argument that no valid delivery dates existed contrary to the evidence of record. Indeed, it was appellant's letter of 17 August 1983 which proposed a schedule with deliveries commencing 24 August 1983 (finding 17), and it was that schedule to which respondent agreed by telegram of 25 August 1983 (finding 18). Appellant delivered M250s in accordance with that schedule (finding 22). The binding effect of the schedule is not abrogated because it was never the subject of a formal contract modification. When the contract delivery date has not been met and the contract is not default terminated, the Government's subsequent exercise of its rights under the Default clause requires the establishment of a new delivery date that must be reasonable and specific. *DeVito v. United States* [13 CCF ¶ 82,319], 413 F.2d 1147, 1154 (Ct. Cl. 1969). The new schedule may be established by various means short of a contract modification. *Simplex Manufacturing Corp.*, ASBCA Nos. 13897, 14380, 71-1 BCA No. ¶ 8814; *Max M. Goldhaber*, ASBCA Nos. 8277, 8370, 65-2 BCA ¶ 5083. Appellant proposed the schedule under which it was default terminated and had made deliveries in accordance with it. "Thus, by word and conduct, Appellant agreed that the re-established completion date was reasonable." *Geomar Engineering, Inc.*, ENG BCA No. 5569, 90-1 BCA ¶ 22,425 at 112,636. Accordingly, we conclude that appellant was obligated to deliver in accordance with the schedule proposed in its 17 August 1983 letter and accepted in respondent's 25 August 1983 telegram.

While appellant contends that the packaging problems prevented deliveries, we find this contention without support in the record. Appellant's proposed solution to the problem was accepted by respondent after a misstep that was corrected on 28 October 1983 (findings 19, 20). Packaging of M250s was not affected (finding 19) and appellant's argument to the contrary is mortally wounded by its continued delivery of M250s during the period when the problem would have affected operations (finding 22). Moreover, the record persuades us that delivery of M239s should not have been affected after 28 October 1983. Thus, failure to deliver is not excused by the packaging change. Appellant's failure to deliver after December 1983 is not in dispute (finding 22).

Appellant's actions in threatening to suspend operations in January 1984 unless it received financial help from respondent and the subsequent closing of the plant on 3 February 1984 (findings 22, 23) led to issuance of a cure notice on 16 February 1984. In addition to the plant shutdown, respondent cited appellant's failure to pay subcontractors as a reason for the cure notice (findings 24, 25). Appellant argues that it cured the deficiencies for which the notice was sent. According to appellant, the plant re-opened 27 February 1984. However, we have found, based on appellant's 9 March 1984 telephone conversation with the contracting officer, that appellant did not begin work on contract 2488 until 5 March 1984 (finding 27), the tenth day after the cure notice was received. Even by appellant's testimony, only 5 production employees were working on at least two contracts on 2 March 1984 (finding 27). Appellant maintains that he had informed the ACO on 24 February 1984 that he would reopen the plant the following Monday. According to appellant, this satisfied his obligation to respond to the cure notice.

Digitized by Google

This argument fails. Appellant was dealing with the ACO under another contract for which it had received progress payments, not 2488. The ambiguity of the situation and the ACO's reply (finding 26) were such that we cannot find appellant's request that the ACO inform the procurement contracting officers that appellant was reopening the plant an adequate response to the cure notice. Most significantly, however, we have found that work on contract 2488 did not begin until 5 March, which is consistent with information the ACO received from the inventory review team (finding 27). Thus, the information that appellant would reopen the plant on 27 February was of limited significance to contract 2488 and did not remedy the failure to make progress. As respondent argues, the failure of appellant to provide adequate assurances that it had begun to perform on contract 2488 gave the contracting officer the right to terminate. *Tubular Aircraft Products, Inc. v. United States* [23 CCF ¶ 81,327], 213 Ct. Cl. 749 (1977); *International Verbatim Reporters, Inc. v. United States* [34 CCF ¶ 74,323], 9 Cl. Ct. 710, 723 (1986).

Moreover, on 2 March 1984 appellant was informed by an inventory review team that respondent was prepared to take appellant's equipment to recoup progress payments (finding 27). This should have alerted appellant to the precarious position it was in and that the cure notice was still in effect. Appellant's failure to respond more fully to the cure notice or at least inquire as to respondent's intentions in the face of such information is difficult to fathom. Further, one of the bases for default termination named in the cure notice and the final decision terminating the contract was failure to pay subcontractors. We have found that nothing was done to correct the situation (finding 25). This failure to take corrective action further reinforces respondent's right to terminate. *International Verbatim Reporters, Inc., supra.*

While we have found, based on a conversation 4 days later, that work on contract 2488 did not begin until 5 March 1984, even by appellant's subsequent testimony only 5 production employees, or less than one-third of the production staff of 18, were working on 2 March 1984 (finding 27). Assuming, *arguendo*, that some were working on contract 2488, the size of appellant's workforce is an appropriate consideration in determining whether it has effectively remedied the failure to make progress. *Cox & Palmer Construction Corp.*, ASBCA Nos. 38739, 38746, 92-1 BCA ¶ 24,756. Thus, even were we to give appellant the fullest benefit of the doubt on when production began on contract 2488, we could not conclude that this action would make performance at levels reasonably commensurate with contract requirements possible and, as appellant suggests, that the contracting officer abused his discretion in terminating the contract.

As is painfully clear from the record, appellant was experiencing severe financial difficulties which had a profound effect on its ability to perform and deliver the required items. As stated previously, the issue of whether respondent was responsible for appellant's financial situation was litigated under *Sermor, Inc.*, ASBCA No. 30838, *supra*, and appellant is bound by its outcome. In any event, appellant filed for bankruptcy on 14 March 1984 and by Order of 10 August 1984, the termination was declared null and unenforceable by the Bankruptcy Court. However, respondent filed for relief and by Order of 29 November 1984 respondent was granted relief from stay provisions preventing termination of contracts. The next day, the termination was reinstated "Nunc Pro Tunc." Appellant maintains respondent's actions were contrary to the Bankruptcy Court's Order. However, appellant did not seek clarification of the Order or contest respondent's action in the Bankruptcy Court (finding 30). The Order is clear on its face in granting relief to respondent from staying its right to terminate contract 2488 (finding 30). Additionally, we note that precedent exists to support the Bankruptcy Court's action. In *In re West Electronics, Inc.*, 853 F.2d 79 (3d Cir. 1988), the Court held that the Nonassignment Act, 41 U.S.C. § 15, prevents a third party such as a debtor-in-possession from assuming a defense contract without Government consent. It lifted the automatic stay and allowed the Government to terminate the contract. Accordingly, we reject appellant's argument that the reinstatement of the termination violated the Order of the Bankruptcy Court.

The appeal is denied.

FINDINGS OF FACT—ASBCA No. 30149

31. The bid package did not contain an ECP changing the requirements for the resistor pack used in both the M239 and M250 (tr. 343). This was disclosed to appellant at the preaward survey on 24 September 1981, and respondent told appellant a correction would be issued. Appellant expected the correction within a month (tr. 3/29-31; exh. A-28). On or about 14 January 1982 appel-

©1993, Commerce Clearing House, Inc.
Digitized by Google

lant brought this matter to respondent's attention (tr. 340). The resistor pack change was forwarded by letter dated 19 February 1982. The change re-routed wires, changed molding compound and clamps, added a washer, reduced certain tolerances, eliminated tests, and added "Class 1" to the material call out for the grenade box (R4b, tabs 7, 7a). After the change it took 16 weeks to get delivery on the item (tr. 343-44). Appellant was asked to submit any additional costs for implementing the change (R4b, tabs 7, 8). The record contains no evidence that any such submission was ever made.

32. The first article test was conducted 3 January 1983. The test report noted several deficiencies, including the resistance test (R4b, tab 22; finding 13). Conditional acceptance by the contracting officer, by letter of 18 January 1983, was subject to deletion of certain tolerances, corrective action on an out of tolerance threaded hole, and submission of a waiver request for a hole in the casting surface (R4b, tab 23). The resistance test was to be resolved as well (finding 13).

33. By letter dated 7 March 1984 appellant filed a certified claim in the amount of $1,305,017.50 for "Government interferences that have led to the delay of this contract ...." The letter presents the elements of the claim as follows:

1. Failure of AMCCOM to timely furnish resistor pack changes which forced the delay in First Article testing. (Available since 28 Jul 1980)

2. A renegotiated date which was then missed due to the pre-meditated withholding of Government furnished paint which Sermor allowed the Government to furnish at *THEIR SPECIFIC REQUEST.*

3. The illegal termination of Contract DAAA09-81-C-2488, October 1982.

4. The incomplete conditional acceptance of Sermor's First Article of 4 January 1983 which included the pre-meditated withholding of engineering changes necessary for first production shipment.

5. Additional delays caused by fraudulently issued Show Cause letter, April 1983.

6. Illegal Progress Payment suspension, 27 October 1982 through 12 April 1983, and the refusal of the PCO to grant Sermor interim financing arrangements as written and verbally requested.

7. Illegal action taken during July-August 1983. (Suspension of Progress Payments)

8. Delay in receiving packaging correction to the tech data package which included the pre-meditated withholding of approved changes from 15 April 1983.

(R4b, tab 67)

34. The contracting officer issued a final decision dated 30 July 1984 granting appellant's claim in the amount of $3,893.22 for the increased cost of resistor pack manufacture and otherwise denying the claim (R4b, tab 69). An appeal notice was filed 11 September 1984 (R4b, tab 70).

DECISION—ASBCA No. 30149

Appellant has filed a $1,305,017.50 claim for delay damages. The record establishes that, at least with respect to the resistor pack and the Government furnished paint, appellant was delayed by respondent. In *Cox & Palmer Construction Corp.*, ASBCA Nos. 43438, 43439, 43440, 43441, 43442, 93-3 BCA ¶ 26,005, 30 April 1993, we said:

> [w]e note here the longstanding interpretative approach that we have followed in reviewing bilateral modifications granting time extensions. Namely, the action of the contracting parties in agreeing to a new performance schedule eliminates from consideration the causes of delay occurring prior to the extension. *Taylor Corporation*, ASBCA Nos. 37139, 38351, 90-2 BCA ¶ 22,693, *aff'd on recon.* 90-3 BCA ¶ 22,958; *Sierra Blanca, Inc.*, ASBCA Nos. 30943, 32286, 34838, 91-2 BCA ¶ 23,990; *RFI Shield-Rooms,* ASBCA Nos. 17374, 17991, 77-2 BCA ¶ 12,714; *Winder Aircraft Corporation of Florida*, ASBCA Nos. 4364 and 4733, 58-2 BCA ¶ 2044. Moreover, where the modification fails to include a waiver or release of claim, the failure to reserve a claim for delay costs is not fatal to a later claim when the circumstances do not indicate the parties' intention to include the delay costs. *See, e.g., Chantilly Construction Corp.*, ASBCA No. 24138, 81-1 BCA ¶ 14,863; *JDV Construction, Inc.*, ASBCA No. 37937, 89-3 BCA ¶ 22,012; *Beaty Electric Company, Inc.*, EBCA No. 408-3-88, 90-2 BCA ¶ 22,829.

Thus, although for purposes of the default termination, appellant is held to the new dates, the remedy of delay costs could be available if the Board were persuaded that the parties did not intend to include such costs in the various modifications. However, even if we find that delay costs were not included, appellant must establish that the delays were caused by respondent and the overall completion date was delayed as a result. *Cox & Palmer, supra.* In this regard

Digitized by Google

appellant must also show the delays were not concurrent with other delays or there can be no recovery. *Commerce International Co. v. United States* [9 CCF ¶72,781], 338 F.2d 81, 90 (Ct. Cl. 1964). It is here that appellant falters. Appellant placed the contract on a "hold" status as early as July 1982, it experienced difficulties with equipment and in obtaining armor plate, its inability to deliver a single M239, even after resolution of the packaging problems, is not satisfactorily explained on the record, and its financial difficulties throughout the contract period were such that it closed its plant in February 1984 and filed for bankruptcy in March 1984.

Appellant has not presented proof or even argued its case in such a way that we can distinguish between events so as to identify with particularity the consequences of the specific actions addressed in the claim. The claim itself is not proof of disputed facts. *Peterman, Windham, and Yaughn*, ASBCA No. 21147, 77-2 BCA ¶12,674. We are not, for example, provided with a satisfactory explanation as to why M250s could not be delivered in October 1983 even though the packaging correction was relevant only to M239s. Since we know that armor plate affected the M239s, we know that another matter not related to packaging also delayed delivery. Further, since the resistor pack affected both M239s and M250s it could not have been a continuing obstacle to delivery of M239s, or else M250s could not have been delivered either. Insofar as the delays are attributed to respondent's actions related to progress payments, that issue has been litigated and resolved against appellant. *See* ASBCA No. 29798, *supra*. As to the M250s, appellant's plant closure was indisputably a significant cause of delay, as was appellant's earlier "hold" on contract performance. Even where there has been a material breach by the Government, the burden of proof is on appellant to establish that circumstances existed which gave it the right to refuse to perform. *Brenner Metal Products, Inc.*, ASBCA No. 25294, 82-1 BCA ¶15,462 at 76,620. Appellant, on this record, has not established that such circumstances existed. In addition, the record establishes equipment problems. In the face of these concurrent delays, we cannot find that appellant has established the right to recovery. *Commerce International Co. v. United States, supra*.

While appellant has not provided the proof necessary to sustain the claim, we observe that respondent's actions throughout performance of contract 2488 contributed to appellant's difficulties. Unfortunately for appellant, in the give and take of contract performance appellant's own actions as portrayed in this record left its legal rights eroded to the point where we are unable to find a basis for recovery. In this regard, although neither party has argued the doctrine of mutual fault, we have considered whether the facts here make that doctrine applicable.

In *Ascani Construction and Realty Co., Inc.*, VABCA Nos. 1571, 2304, 85-3 BCA ¶18,272, the Board found mutual fault where a contractor had been terminated for default with a delay claim for which the Government was found partly responsible still pending after 11 months. Here, however, respondent adjusted the delivery schedule numerous times, usually acquiescing in appellant's proposals. This resulted in establishment of new schedules which we have found the parties agreed to and imposition of the rule stated in *Cox & Palmer, supra*. We are precluded from consideration of progress payment issues by collateral estoppel and the last specification issue had been resolved months before the February 1984 plant closure. *Cf. Dynalectron Corp. v. United States* [21 CCF ¶84,115], 518 F.2d 594 (Ct. Cl. 1975). The matters appellant raises may persuade us that respondent's contract administration here was flawed, but the nature of the flawed administration has not been shown to be such that legal remedies are available to appellant as a result. The appeal is denied.

FINDINGS OF FACT—ASBCA NO. 30423

35. By letter dated 15 October 1984, received by respondent 19 October 1984, appellant submitted Progress Payment Request No. 23 (R4c, tab I, L). By letter dated 31 October 1984, confirming a telephone conversation the same day, respondent informed appellant that progress payments were suspended pending the outcome of motions filed in the Bankruptcy Court for relief from the stay on termination and to convert the bankruptcy from Chapter 11 to Chapter 7 (R4c, tab M). Appellant objected, stating in a letter dated 5 November 1984 that it considered the failure to pay Progress Payment No. 23 an abuse of discretion and asking respondent to review its actions "to reach a final decision" (R4c, tab N).

36. By letter dated 9 November 1984 respondent reiterated its intention not to pay progress payments until the Bankruptcy Court had ruled on the pending motions

©1994, Commerce Clearing House, Inc.
Digitized by Google

(R4c, tab P). On 21 November 1984 appellant filed an appeal from the failure to pay Progress Payment No. 23 with the Board. On 29 November 1984 the Bankruptcy Court granted respondent relief from the stay (R4c, tab T). On 30 November 1984 the termination for default was reinstated (R4c, tab U).

DECISION—ASBCA NO. 30423

Appellant argues, in effect, that when the termination for default is converted to a termination for convenience, the Board should order respondent to pay Progress Payment No. 23. As we have upheld the default termination, appellant is entitled to recover only for deliveries made. *Century Hone Division of Desert Laboratories, Inc.*, ASBCA No. 18360, 78-1 BCA ¶ 12,990 at 63,360, affirmed on recon. 78-2, BCA ¶ 13,343, *aff'd* 229 Ct. Cl. 493 (1981). Thus, appellant's claim for Progress Payment No. 23 is rendered moot. The appeal is denied.

[¶ 26,304] Potomac Computers Unlimited, Inc.

DOT BCA No. 2603, August 16, 1993. Agreement No. 2XTBPA-7013.

Awards—Existence of Contract—Purchase Agreement.—A business firm's claim for the cost of preparing to teach computer classes under a contract allegedly arising out of a blanket purchase agreement was denied because there was no indication that the authorized ordering agent placed a call upon the firm to conduct the computer courses. A blanket purchase agreement is a collection of provisions that will mature into a contract at such time as individual purchase orders are issued by the government through authorized ordering officers and are accepted by the contractor. Although the firm received a letter from a government official stating that the government intended to use the business firm to present the computer programs, the board concluded that no contract came into existence because the government official who wrote the letter was not authorized to place orders under the purchasing agreements. The firm's execution of the form at the bottom of the letter, therefore, did not constitute an acceptance creating a contract that legally obligated the firm to teach the classes.

For the appellant: Augustine Fendrock, President. For the government: Richard P. Theis, United States Department of Justice, Washington, D.C.

Before ROBERTORY, Administrative Judge.

ROBERTORY, Administrative Judge: This appeal arises out of a self-styled "Blanket Purchase Agreement" entered into between Potomac Computers Unlimited, Inc. ("Potomac Computers" or "appellant") and the United States Department of Justice ("Justice Department" or "respondent") under which the former was to provide computer training courses. The claim seeks $2,819.80, stated to be the costs of preparing to teach two classes in dBase III+. The appellant would also have the Board declare the Agreement null and void. (Tr. 11).[1]

FINDINGS OF FACT

1. On June 24, 1991, the respondent issued a Request For Quotations (Standard Form 18) soliciting prices for conducting various microcomputer training courses. (AF Tab 1). Packaged with the solicitation were (i) a Statement of Work (Finding 2), (ii) Enclosure 1 to the Statement of Work (Finding 3), and (iii), as Enclosure 2, a reproduced "Optional Form 347—Order For Supplies Or Services" with Continuation Sheets (Standard Form 35) on which appeared certain provisions, as described in Finding 4.[2] This Optional Form 347 was to be the actual award

[1] The appellant also requested that the Board order the Contracting Officer to restore it to the "bidders' list" for software training courses. From the Bench, the Board ruled that it does not have jurisdiction to grant this relief. (Tr. 113). An off-the-record discussion with the parties, aimed at resolving any dispute they might have in this regard, indicated that there may have been a misunderstanding between the parties as to the appellant's desire to be on that list.

[2] This Form is not included with the Request For Quotations that the Contracting Officer included in the appeal file as Tab 1. However, the record indicates that, with somewhat different

Digitized by Google

document. The reproduction of the Optional Form 347 in the solicitation did not include the second page of that Form (the contents of which page are described in Finding 9).

2. The Statement of Work in the solicitation included the following provisions regarding performance:

a. The contractor shall furnish all necessary equipment, materials and personnel and shall perform all services necessary to conduct ADPE training courses as outlined in Enclosure No. 1. The courses will be presented over a twelve (12) month period beginning in FY 1992. The dates of the courses are outlined on Enclosure No. 1 and subject to change by the Department of Justice. No minimum or maximum number of courses is guaranteed for any one fiscal year. (Opening paragraph).

b. Minimum number of students will be eight (8); maximum will be twelve (12). (Paragraph I.b.).

c. If the minimum number of participants is not met, the course will be cancelled unless a smaller number of participants is mutually agreed upon. It should be noted that every attempt will be made to make a determination as to course presentation within 24 hours prior to its commencement. The Government will not be responsible for any costs incurred as a result of course cancellations. (Paragraph I.e.).

d. The Government contemplates awarding a Blanket Purchase Agreement for these services. A sample package is enclosed for your review. (Enclosure No. 2). (Section III "Type of Contract").

e. Proposals will be evaluated and the prospective Contractor will be selected based principally on the following criteria ... (Section IV Evaluation Factors For Award).

The Request for Quotations did not advise interested parties that more than one blanket purchase agreement would be issued, and it was not apparent in the solicitation package that this could happen. In fact, blanket purchase agreements were awarded to six vendors. (Tr. 57).

3. Enclosure 1 to the Statement of Work listed several courses to be given and multiple dates for each. Next to each were blanks in which interested quoters were to insert prices per student per course. Among the courses were a course in basic dBase III+ to be given on September 18 and 21, 1992 and a course in Advanced dBase III+ and Programming on September 24 and 25, 1992. These dBase III+ courses are the courses over which the parties' dispute has arisen. The Contracting Officer testified that these were dummy dates, included in the solicitation solely to provide a basis for estimating and pricing purposes. (Tr. 61, 63). However, the solicitation did not indicate that these were dummy dates or that they were other than real, contemplated dates for the respective courses. (Tr. 63; AF Tab 1). In fact, all of the dates for courses that Potomac Computers was ultimately selected to conduct (see Finding 12) did appear in the solicitation.[3]

4. The first page of the Optional Form 347 as it appeared in the solicitation included the following provisions:

a. Under the heading "I. Description Of Agreement" appeared:

This is a Blanket Purchase Agreement (BPA) for the following supplies or services for which the contractor ... may be in a position to deliver to the Government if and when requested by the Contracting Officer or authorized representative for an indefinite period commencing the effective date ... and until termination by either party.

b. In section II. "Extent Of Obligation" appeared:

The Government is obligated under this BPA only to the extent of call orders placed by authorized individuals against this Agreement. The Contractor is cautioned that acceptance of calls from personnel other than those authorized herein, acting within the scope of their authority, may jeopardize payment.

c. Behind the Optional Form 347 were several Continuation Sheets, Standard Form 36, on which were typewritten various provisions, including an incorporation of certain clauses by reference in the following words:

This Blanket Purchase Agreement incorporates the following clauses by reference, with the same force and effect as if they were given in full text ... These clauses are in addition to those previously incorporated hereunder: ... The following addi-

(Footnote Continued)

content, it was in fact a part of the solicitation package. (Tr. 55).

[3] Compare AF Tab 1 and the respondent's December 17, 1991 letter, AF Tab 5 quoted in Finding 12. Also see Tr. 101.

©1994, Commerce Clearing House, Inc.

Digitized by Google

tional Terms and Conditions are applicable to Purchase Orders for services.... [Federal Acquisition Regulation §] 52.249-4 APR 84 Termination for Convenience of the Government (Services) (Short Form).[4]

5. This incorporated clause "Termination for Convenience of the Government (Services) (Short Form) (April 1984)" of Federal Acquisition Regulation § 52.249-4 is prescribed for use in contracts

> when the Contracting Officer determines that because of the kind of services required, the successful offeror will not incur substantial charges in preparation for and carrying out the contract, and would, if terminated for the convenience of the Government, limit termination charges to services rendered before the date of termination.

The clause itself, as set out in the Federal Acquisition Regulation, reads in its entirety as follows:

> The Contracting Officer, by written notice, may terminate this contract, in whole or in part, when it is in the Government's interest. If this contract is terminated, the Government shall be liable only for payment under the payment provisions of this contract for services rendered before the effective date of termination.

6. Mr. Augustine Fendrock, appellant's president, reviewed this solicitation and raised with Mr. David Lamb, a Potomac Computers employee, the question of what appeared to be an unlimited right in the respondent to terminate on negligible notice without any liability. Mr. Fendrock testified that he had expected Mr. Lamb to raise this with the Contracting Officer. However, Mr. Fendrock also testified that he did not know if this other employee raised the matter with the respondent. Potomac Computers did not raise any objection in its response to the solicitation. (Tr. 17-18). The Contracting Officer testified that two other firms, but not Potomac Computers, had raised this issue. (Tr. 57). The Board therefore finds that, prior to submitting a proposal, Potomac Computers was aware of the possibility that Potomac Computers might expend time and effort in preparing to teach a course for which it might not receive recompense in the event of a Justice Department decision not to proceed with the course but, nevertheless, did not object or otherwise raise this matter with the Contracting Officer.

7. On July 11, 1991, Potomac Computers submitted its prices for conducting the various courses listed, filling in the blanks on the Enclosure 1 described in Finding 3. (AF Tab 2). Potomac Computers's price for each dBase III+ course was $125 per student per course.

8. On October 1, 1991, the Contracting Officer issued "Blanket Purchase Agreement" 2XTBPA-7013 (AF Tab 3), on Optional Form 347 with the Standard Form Continuation Sheets previously described in Finding 4. Also included was the Statement of Work previously described (Finding 2) which continued to reference Enclosure 1 (described in Finding 3) by stating, "The contractor shall furnish all necessary equipment, materials and personnel and shall perform all services necessary to conduct ADPE training courses as outlined in Enclosure No. 1." However, Enclosure 1 itself was not a part of the award. The Contracting Officer testified that it was not intended that the Blanket Purchase Agreement contain pricing. (Tr. 48-50). The Agreement as awarded did not contain any schedule of dates or prices for the various courses; in fact, it did not even list the courses or give any description of them. But the Agreement as issued by the Contracting Officer contained an additional document, a preprinted second page to Optional Form 347.

9. Mr. Fendrock testified (without contradiction, and we find his testimony to be correct) that this page 2 of Optional Form 347 had not been included in the solicitation package. (Tr. 15). This page 2 *inter alia* states,

> 52.252-2 CLAUSES INCORPORATED BY REFERENCE (JUN 88).—This contract incorporates the following clauses by reference ...

On the list of incorporated clauses that follows is the clause entitled "Termination for Convenience of the Government (Fixed Price) (Short Form) (Apr 84)" of Federal Acquisition Regulation § 52.249-1. This clause is quite different from that incorporated by the provisions typewritten onto the Continuation Sheets (Finding 5). It states:

> The Contracting Officer, by written notice, may terminate this contract, in whole or in part, when it is in the Government's interest. If this contract is derminated, the rights, duties, and obligations of the parties, including compensation to the Contractor, shall be in accordance with Part

[4] Many other clauses were incorporated, but only this is of immediate relevance.

Digitized by Google

49 of the Federal Acquisition Regulation in effect on the date of this contract.

10. The Agreement as awarded authorized only Patricia Raines, Pat Ciuffreda, and Alex Bartning to place calls under the Agreement. (Tr. 60; AF Tab 3).

11. The Blanket Purchase Agreement did not provide that the respondent would procure all of its needs for such training from the appellant. Although the solicitation which led to the award had stated that "The Government contemplates awarding a Blanket Purchase Agreement for these services," which implies a single Blanket Purchase Agreement would be awarded, six such Agreements were awarded as a result of this solicitation. (Tr. 57). Potomac Computers was not advised by the Contracting Officer that multiple awards were being made, although it may have learned such from conversations. (Tr. 59).

12. On December 17, 1991, Mr. Richard Kubic, whose title was "Assistant Director for Career Management, Personnel Staff, Justice Management Division,"[5] of the respondent wrote to Potomac Computers. Mr. Kubic was not an authorized ordering officer under the Agreement (see Finding 10). After referring to Potomac Computers's proposal, the letter stated:

> Please refer to your response to Blanket Purchase Agreement (BPA) No. 2XTBPA 7013. The Department of Justice is pleased to inform you of its intention to use the services of your organization to present the program(s) listed below ...
>
> If the minimum number of eight students is not met, the program will be cancelled unless a smaller number of students is agreed upon. The maximum number of students will be 12. It is understood that you will provide all instructional services and training materials necessary for the successful presentation of the program. You will subsequently receive a purchase order with appropriate fiscal and billing information authorizing you to bill the Department at the end of the program for the services rendered and setting forth the rights of all parties concerned. The Justice Department retains the right to cancel a program at any time prior to the date of performance at no cost to the Government.

There followed a list of courses and dates therefor, among which were the two courses in issue. Specifically, it called for a course in dBase III+ on September 18 and 21, 1992 and a course in Advanced dBase III+ on September 24 and 25, 1992. The price for both courses was $125 per student per course, the per student price bid by Potomac Computers if it had to furnish hardware.[6] Near the end of the letter, appeared the following:

> Please indicate your acceptance of this schedule by signing in the space provided below and returning one copy to the undersigned.

Mr. Fendrock executed the document for Potomac Computers in the designated blank.

13. Calls for services under the Blanket Purchase Agreement were made by Mr. Bartning at various times during 1992. (AF Tab 6). The dates of these calls and the dates on which the courses were to be conducted were as follows:

Date of Call	Course	Dates of Course
March 5	Introduction to DOS	March 9-10
March 9	Wordperfect5.1	March 11-12
March 12	Advanced Wordperfect 5.1	March 13, 16
March 16	Lotus 1-2-3	March 17-18
March 17	Harvard Graphics	March 19-20
March 21	Overflow	March 23-24
March 23	Overflow	March 25-26
September 11	Introduction to DOS	September 14-15
September 13	Wordperfect 5.1	September 16-17
September 15	Harvard Graphics	September 22-23

These courses were given and Potomac Computers duly paid. The courses entitled "Overflow" were additional sessions given by Potomac Computers when more than 12 persons[7] were seeking to take a particular course. (Tr. 21).

14. Acting in reliance on the December 17 letter, and in order to be able to prepare the dBase III+ courses sufficiently in advance of their commencement dates, Potomac Computers made two purchases. On August 26, 1992, it ordered twelve training guides at $12.00 each ($144.00) and one instructor's kit at $395.00, a total (with Virginia sales tax) of $569.25. On September 2, 1992, it purchased a copy of the dBase III+ program on which the students were to be trained, for $522.39, including sales tax. (AF Tab 4; Tr. 24). To prepare for the course, the appellant opened the packages in which these products came, and as a consequence was not able to return them for credit. (Tr. 26-27).

15. Under the Blanket Purchase Agreement, Potomac Computers was also obliged

[5] This is the title he used in signing the letter.

[6] Finding 7.

[7] See Finding 2b.

©1994, Commerce Clearing House, Inc.

Digitized by Google

to provide the computers and peripheral equipment on which the training was to be conducted. Therefore, on August 27, it ordered twelve sets of that hardware from a rental firm, for the period September 11 through 28, 1992. (AF Tab 4; Tr. 28, 31-32). The price was $3,695.36. The rental period was intended to cover the several courses which Potomac Computers would be running during this period.[8] (Tr. 27, 31-32). In addition to the two courses in issue, Potomac Computers gave a course in Introduction to the Microcomputer and DOS on September 14 and 15,[9] a course on WordPerfect 5.1 on September 16 and 17, and a course on Harvard Graphics on September 22 and 23. As noted earlier, the course in basic dBase III+ had been scheduled for September 18 and 21 (Friday and the following Monday, respectively) and in Advanced dBase III+ for September 24 and 25.[10]

16. No calls were placed by any authorized ordering officer (see Finding 10) or by the Contracting Officer for either of the two dBase III+ courses in issue.

17. Mr. Bartning was the only one of the authorized ordering officers who placed formal calls with Potomac Computers for services. (Tr. 60). On September 8, he advised Potomac Computers that only two students had expressed interest in the Advanced dBase III+ class. The parties were in mutual agreement that it would not be practical for Potomac Computers to conduct a course for only two students. (Tr. 23, 95). This communication was Mr. Bartning's first communication with Potomac Computers regarding the September courses. (Tr. 91).

18. On September 15, a Tuesday, Mr. Bartning advised Potomac Computers that only six persons had expressed an interest in taking the basic two-day dBase III+ course, scheduled to commence on Friday, September 18. Although on occasion Potomac Computers had agreed to teach a course when only seven students were interested (Tr. 89, 92), it declined to teach a course for only six; this declination was in accordance with the Blanker Purchase Agreement (see Finding 12). Mr. Bartning thereupon advised that the course would not be held. (Tr. 91).

19. On October 1, 1992, Potomac Computers wrote to the Justice Department, submitting a claim in the amount of $2,819.80, said to have been the costs that it had incurred in preparing to perform the dBase III+ classes. Potomac computers cited Federal Acquisition Regulation, Part 49 as the legal grounds for the claim. Part 49 is the portion of the Regulation addressing the "Termination of Contracts." The costs claimed include the $522.39 for the purchase of the dBase III+ program and the $569.25 for the purchase of dBase III+ courseware (cf. Finding 14). The claim also included $1,478.16 for the rental of computers and $250.00 for lost profit. The rental claim was calculated by taking the $3,695.36 rental for the computers and dividing it by the total number of course days in September (10 days) to obtain a daily rental of $369.54. For the four days of dBase III+ courses, this yielded the $1,478.16 sought. The profit figure was calculated at an average of 10 students at $125.00 each for two classes ($2,500.00), on which there would be a 10% profit. The claim included copies of suppliers' invoices to support the amounts claimed. The respondent has not questioned the fact that the amounts claimed (other than profit) had actually been paid out, and we find the amounts claimed were actually expended. See also Findings 14 and 15.

20. On January 28, 1993, the Contracting Officer issued her decision. She noted that Federal Acquisition Regulation Part 49 governs terminations and that Part 33 governs claims for payment, and that she would treat the claim under the latter. Citing the Statement of Work provision regarding cancellations (set out in Finding 2.c), the Contracting Officer determined that under that provision the cancellation did not give rise to any liability of the government. The Contracting Officer stated that while the Statement of Work spoke of 24-hour notice, in fact the respondent had given three days notice of cancellation of one course and "more than two weeks" notice of the cancellation of the other.

---

[8] See Finding 13.

[9] The Board takes judicial notice of the days of the week on which various dates fall. September 14 was a Monday. Potomac Computers had the rental period commence on the preceding Friday, September 11, so that it could have the computers up and running and the software loaded prior to the start on class on Monday morning.

[10] September 25 was a Friday. September 28, the last day of the rental term, was the next workday, the following Monday.

DISCUSSION

That a blanket purchase agreement, rather than a firm contract, was intended was clear from the terms of the solicitation and its recurring use of that term "blanket purchase agreement." See Findings 2.d and 4.a. That term appears sufficiently often that a reasonable prospective proposer would have been obligated to make inquiry if it had any doubts as to the respondent's intent to award something other than a firm contract.

A blanket purchase agreement is not a contract. It is merely a collection of provisions that will only mature into a contract or contracts at such time or times as individual purchase orders may be issued by the government through authorized ordering officers and accepted by the contractor. *CardioMetrix,* DOTBCA Nos. 2571, 2591, 94-1, BCA ¶ 26,269, (May 3, 1993). In the context of the instant dispute, a contract would come into being only after an authorized ordering officer would place a call upon Potomac Computers to teach a course and Potomac Computers accepted that call. *CardioMetrix, supra; Ann Riley & Associates, Ltd.,* DOTBCA No. 2418, 93-3 BCA ¶ 25,963 (1993).

The only post-award document referencing the two dBase III+ courses in issue was the December 17, 1991 letter. (Finding 12). But the author, Mr. Kubic, was not an authorized ordering officer under the Agreement. Therefore, no contract came into existence at the time Mr. Kubic sent his letter or at the time Mr. Fendrock accepted the schedule by executing the bottom of the letter and returning it. As of that time, Potomac Computers was not legally obligated to teach these two dBase III+ courses and the Justice Department was not obligated to Potomac Computers.

The record contains nothing that would indicate or even imply that Mr. Bartning, the only authorized ordering officer who had communication with Potomac Computers, ever placed a call upon the appellant io conduct the dBase III+ courses. The only communications between Mr. Bartning and Potomac Computers relative to these courses appear to have been the conversation of September 8 (Finding 17) in which Mr. Bartning advised that the Advanced Course, previously scheduled for September 24 and 25, would not be held and the conversation of September 15, in which he advised that the basic course, scheduled for September 18 and 21, would also not be held.

Thus, the Board must determine that no contract ever came into existence for the teaching of the two dBase III+ courses.

The Board agrees with Mr. Fendrock's argument that, in order to present a course properly, a teacher would require more time than elapsed between the calls and the respective course dates (see Finding 13). However, prior to participating in the procurement Mr. Fendrock recognized the problems inherent in having to prepare to teach courses with no assurance of recouping the costs of preparation (Finding 6), but nevertheless elected to submit prices, to accept the Blanket Purchase Agreement, and eventually to incur expense in anticipation of presenting the courses. By so doing, he assumed the risk of not receiving the formal call to provide services and the associated opportunity to recoup costs of preparation. We note the converse of the instant situation: when the Justice Department issued the last-minute formal call for a vendor to conduct a previously scheduled course, that vendor could refuse to accept the call, leaving the Justice Department with a classroom of students and no teacher.

If a call for services had been placed and the Justice Department had then cancelled the course, we would be facing an issue of ascertaining which of the three termination provisions (described in Findings 9,[11] 5,[12] and 2.b [13]) would be applicable. However, since no contract ever came into existence for either of these two dBase III+ courses, there is nothing to terminate and we do not consider this question. *Ann Riley & Associates, Ltd., supra.*

There being no contract in effect between the Justice Department and Potomac Computers for the latter to give the dBase III+ courses, the appellant is not entitled to recover the costs it incurred in preparing for those courses.

With regard to the appellant's request to have the agreement declared null and void, the Board is unable to see what that action would accomplish or upon what legal basis we could ground such a determination. Inasmuch as the respondent has not accepted

[11] The Federal Acquisition Regulation § 5.2.249-I clause.

[12] The Federal Acquisition Regulation § 52.249-4 clause.

[13] "The Government will not be responsible for any costs incurred as a result of course cancellations."

any dBase III+ instructional services, it has received no benefit from Potomac Computers's efforts and recovery on a *quantum meruit* basis would not be available. In addition, *quantum meruit* does not lie when there is an agreement between the parties regarding the work performed and in consequence of which work was performed. See *John B. Rich (EZ Construction Company, Subcontractor),* DOTBCA No. 2518, 93-3 BCA ¶ 25,990 (1993) and *Undersea Engineering and Construction Company, Inc. v. International Telephone & Telegraph Corporation,* 429 F.2d 543, 552 (9th Cir. 1970).

DECISION

The appeal is denied.

[¶ 26,305] American Telephone & Telegraph Company, Federal Systems Advanced Technologies

DOT BCA No. 2479, August 24, 1993. Contract No. DTFA01-86-C-00034.

Procedure, Boards—Discovery—Depositions.—The government's motion to compel further deposition of an inactive witness who performed management consulting services on behalf of the contractor was granted because the attorney for the witness inappropriately directed the witness not to answer questions propounded by the government during the deposition. If an attorney objects to questions posed during a deposition, the objection will be noted in the record, but the witness must then proceed to answer the question. Only when a question involves the attorney-client privilege or the attorney-work-product privilege and the witness's response to the question would vitiate that privilege may the witness refuse to answer. There was no allegation, in the instant case, that the question sought to probe privileged matters. In fact, the board concluded that the questions to which the attorney took objection were proper questions.

For the appellant: Loretta A. Cecil and Debra L. Whited, and McKenna and Cuneo, Washington, D.C., by E. Sanderson Hoe, David M. Eppsteiner, Andrew N. Patrakes, James P. Lamoureux, and Richard A. Feinstein. For the government: John R. McCaw, James T. Waters, Nathan Tash, Gregory C. Carter, Christian Jordan, and Robert Zuckerman, Federal Aviation Administration, Washington, D.C. For the deposition witness: Bromley, Greene & Walsh, Falls Church, Virginia, by Cleveland Thornton.

Before ROBERTORY, Administrative Judge.

ROBERTORY, Administrative Judge: The respondent Federal Aviation Administration ("FAA") has filed a Motion to Compel deposition testimony from Mr. Gerald Thompson, who is neither a party to the action nor an employee of a party, and for leave to recall Mr. Thompson as a deposition witness. Mr. Thompson through counsel opposes so much of the Motion as seeks to compel further deposition.

The appellant, American Telephone and Telegraph Company ("AT&T"), is not an active party to this Motion. Mr. Thompson was not an AT&T employee at the time of the deposition and was not under its control.

The background of this litigation is set forth in several published decisions.[1] AT&T held a contract for the design and production of certain equipment intended for air traffic control purposes, known as the "Radio Control Equipment." The FAA terminated AT&T's contract for default and AT&T has appealed. During pretrial discovery, the FAA subpoenaed Mr. Thompson to give his deposition. His direct contact with the terminated contract is described below.

The Motion states as grounds for the relief sought that Mr. Thompson's counsel, Cleveland Thornton, Esq. at the deposition "raised so many inappropriate objections, often directing the witness not to answer, that the FAA's ability to discover relevant facts was extremely prejudiced." Counsel's directing the witness not to testify is by far more serious than the allegation of inappropriate objections; apart from minor delay,

[1] See earlier decisions in this appeal, reported at 93-1 BCA ¶ 26,087 (May 17, 1993) and 93-3 BCA ¶ 26,088 (May 24, 1993) as well as decisions on an earlier appeal under this contract, *AT&T Technologies, Inc.,* DOTBCA No. 2007, 89-3 BCA ¶ 22,104 (1989), affirmed on reconsideration 90-1 BCA ¶ 22,380 (1989).

Digitized by Google

the latter did not materially impede the FAA's ability to proceed with the deposition.

The transcript of the deposition was furnished with the Motion. The transcript reflects that the tenor of the deposition was established at its commencement, when Mr. Thornton announced,

> "I have an objection with Mr. Tash and the agency for which he works, and I have worked for DOT before, and I want to object to the facilities."

This objection appears on the first page of the transcript, immediately after Mr. Thompson had been sworn and before Nathan Tash, Esq., respondent's counsel, had said anything on the record. The transcript does not reflect the nature of Mr. Thornton's objection "with Mr. Tash and the . . ." FAA. The Board does not comprehend the meaning of an objection to another Member of the Bar personally or to an opposing party personally, as opposed to their conduct. The Board determines this to be an invalid objection, not supported by the record.

Mr. Thornton also objected to Mr. Tash asking Mr. Thompson to state his background and experience, on the grounds that this was not relevant and was "wasting time." (Tr.[2] 8). It is unquestionably proper in deposition to inquire into a witness's experience and background, be he/she a fact or an expert witness. In addition, an alleged lack of relevancy is not a valid basis for a deposition witness to refuse to answer a question. *Drew v. International Brotherhood of Sulphite and Paper Mill Workers,* 37 F.R.D. 446, 450 (D.D.C. 1965). This is in keeping with the general rule that, regardless of whether a matter would be excluded from the record at trial due to lack of relevancy, the test in discovery is whether the material sought may lead to the uncovering of admissible evidence. Fed. R. Civ. P. 26(b)(1).[3] On several occasions, this Board has announced that it follows Rule 26(b)(1) in determining the permissible scope of discovery.[4] The Board determines that this objection was also groundless, and an unwarranted intrusion into the conduct of the deposition.

At least two statements by Mr. Thornton that he characterized as objections (Tr. 38, 57-58) were in fact attempts to instruct Mr. Tash on how to pose questions. On another occasion, Mr. Thornton in effect tried to testify. (Tr. 47). These were not appropriate.

Mr. Thornton on two occasions objected that Mr. Tash's questions to Mr. Thompson were tantamount to seeking expert opinion without payment. (Tr. 52 and 64). While Mr. Thornton is correct when he says that a deposition is not an appropriate place to obtain expert advice from a nonexpert witness, the transcript does not support the assertion that this is what was occurring. On both occasions, it appears that the questions were designed to pinpoint factual matters relating to Mr. Thompson's involvement with this contract and came in a context where the witness had just indicated a possible misunderstanding or vagueness. When a fact witness has been involved in some technical aspect of a contract's performance, deposition questions which are designed to ferret out the depth of his/her technical ability or to probe his/her understanding of technical concepts which will be involved in that person's testimony regarding factual events, are valid questions.

The transcript gives some indication that Mr. Thompson was personally involved in technical matters during contract performance. At the time of the deposition, he was president of Jerry Thompson Associates, Inc. His deposition testimony indicated that he had previously been employed by the FAA, eventually becoming Director of Airway Facilities, a post he held until 1982. He

[2] References to the transcript ("Tr.") are to Mr. Thompson's deposition transcript.

[3] "(b) **DISCOVERY SCOPE AND LIMITS.** Unless otherwise limited by order of the court in accordance with these rules, the scope of discovery is as follows:

(1) In General. Parties may obtain discovery regarding any matter, not privileged, which is relevant to the subject matter involved in the pending action, whether it relates to the claim or defense of the party seeking discovery or to the claim or defense of any other party, including the existence, description, nature, custody, condition and location of any books, documents, or other tangible things and the identity and location of persons having knowledge of any discoverable matter. It is not ground for objection that the information sought will be inadmissible at the trial if the information sought appears reasonably calculated to lead to the discovery of admissible evidence. . . .

[4] "The standards which this Board applies in determining whether a document is subject to discovery are set forth in Rule 19(c) of our Rules of Procedure and in Rule 26(b)(1) of the Federal Rules of Civil Procedure. *Roebbelen Engineering, Inc.*, DOTBCA Nos. 1591 *et al.*, 87-3 BCA ¶ 20,163 (1987); *Southwest Marine, Inc.*, DOTBCA Nos. 1497, *et al.*, 86-2 BCA ¶ 18,773 (1986); *Time Contractors, J.V.*, DOTBCA Nos. 1669, 1691, 85-3 BCA ¶ 18,412 (1985)." *Aerospatiale Helicopter Corporation,* DOTBCA Nos. 1905 *et al.*, 89-2 BCA ¶ 21,770 (1989) at 109,542.

Digitized by Google

then became involved with the preparation of a National Airways Plan for the FAA.

Mr. Thompson left the FAA in March, 1984 and formed Jerry Thompson Associates, Inc. (Tr. 19). That firm subsequently undertook work on behalf of AT&T in connection with the terminated contract, performing what appears to have been essentially management consultant services. (Tr. 22-23). Mr. Thompson participated in AT&T's proposal preparation efforts for that contract. (Tr. 24-26).

Subsequently, Jerry Thompson Associates, Inc. assisted AT&T in reviewing scheduling and software problems (Tr. 27-28) and became involved with an "assessment" or "audit" of AT&T's problems and progress at a time when problems were developing with regard to contract performance.

Mr. Thompson was included by AT&T in its prospective witness list filed with the Board on March 1, 1993. That filing did not indicate that he was other than a fact witness, a person who would be called to recite facts with which he was familiar due to contact with some portion of the AT&T-FAA dispute. His deposition testimony regarding his background indicates that Mr. Thompson is a fact witness who had some expertise in the areas of policy planning for the airways system of the United States and of management techniques, and who had applied that expertise in analyzing AT&T's management policies during contract performance. For him to now give testimony relating to this exercise of expertise during contract performance does not render him an expert witness, nor does his testifying in deposition as to what he found in the exercise of that expertise constitute an effort by the respondent to obtain the benefits of an expert witness without the cost.

Accordingly, the Board determines that the questions to which Mr. Thornton took objection (Tr. 52, 64) were proper questions.

We turn to the respondent's allegations regarding Mr. Thompson's refusal, at direction of his counsel, not to respond to certain questions posed to him.

During the deposition, FAA counsel showed three documents to Mr. Thompson. These were identified as deposition Exhibits 1, 2, and 3.

Exhibit 1 was represented [5] as being a document that Jerry Thompson Associates, Inc. had itself provided the FAA in response to a subpoena. (Tr. 33). Deposition Exhibit 1 was an assessment of the Radio Control Equipment Program that Jerry Thompson Associates, Inc. had prepared for AT&T. Mr. Tash presented it to Mr. Thompson for the latter to review before posing questions. Initially, Mr. Thompson testified that the first time he had seen it was the day before the deposition. (Tr. 33). Thereupon, before Mr. Tash stated anything further or posed any questions referencing the documents, Mr. Thornton stated,

> Well, let me tell you now that he only saw it and he has not read it and the first time he saw it was yesterday.
>
> So that we're real clear, what you're not going to do is ask him questions off this document that he did not write and has not seen. (Tr. 33-34).

Although he had just testified that he had never seen the document until the day before the deposition, Mr. Thompson then testified that he had signed a letter sending this document to Mr. Don Smith of AT&T well prior to the day before the deposition and apparently about October, 1990, but had never given it more than cursory review. (Tr. 34, 35). This testimony that he had signed the letter sending it to Mr. Smith is inherently inconsistent both with his testimony that he had not seen it until the day before the deposition and with Mr. Thornton's representations[6] to the same effect.

Furthermore, as noted above, Exhibit 1 was produced by Jerry Thompson Associates, Inc. Mr. Thompson was and is the founder and president of Jerry Thompson Associates, Inc. Mr. Thornton argued strenuously that this was a small firm and Mr. Thompson "the key man" in the firm. (Tr. 64). Exhibit 1 was transmitted to AT&T by means of a letter signed by Mr. Thompson.[7] Regardless of whether or not Mr. Thompson has previously seen the document (which as noted above is questionable), pointing out specific portions of the document and asking him if he has knowledge of the veracity of those statements is a valid line of questioning.[8] This is not a document with which he has had no prior connection; as president of the company which created it, he must an-

[5] The deponent or his counsel did not dispute this representation.

[6] Set out *supra* (referencing Tr. 33-34) and *infra* (referencing Tr. 34 and 36).

[7] The covering letter itself is not in the record, but we have Mr. Thompson's testimony that he signed the transmittal.

[8] When a response is not forthcoming, one may assume that the responses which a deposition wit-

Digitized by Google

swer for its contents. As founder of the company which bears his name, and as the "key man" in a small firm, one would expect Mr. Thompson to be familiar with a report his firm produced for a major client. Mr. Thompson's testimony has raised issues of credibility, justifying further questioning with regard to Exhibit 1 *and its contents.*

The FAA's counsel then stated his intent to pull out several comments from Exhibit 1 and to ask Mr. Thompson, independent of the document, if he knew whether each such statement was accurate:

> MR. TASH: Then what I would propose to do is there are several comments in this document and I would like for you to pull out those comments and ask whether you, independent of this document, have a recollection whether or not that was an accurate statement as of the time of the audit,[9] to the extent that you know. (Tr. 34).
>
> Q. Mr. Thompson, as I stated, I would like to pull out several of the comments located in this document and ask you, independent of this document, whether you have knowledge of whether this was an accurate statement as of October 1990 ... (Tr. 35).

In this passage, Mr. Tash did not state that Mr. Thompson should read the document and then answer questions that would require a detailed knowledge of the document's contents or an attempt to read the minds of its authors. Rather, Mr. Tash said he would point to specific statements and ask if, to Mr. Thompson's knowledge, such was a correct statement. Mr. Thornton responded:

> No sir. He didn't write it and he ain't going to review it. [sic] He had never seen it until yesterday and he didn't read it then. He just said I haven't seen this before. (Tr. 34).

and subsequently he reiterated his position:

> No, sir. We're not looking at a document. You can read him stuff and you can ask him a question about something that you've read, but he is not going to look at this document because he didn't write it and he hasn't seen it before. That is not going to happen. I'll instruct him not to answer and you can get an order if you think you can....
>
> This is not learn-while-you-earn time. This is to get information that he knows of his own knowledge. It is not for him to read documents which speak for themselves and interpret them for you when he has not written it nor has he seen it. That's the end of this....
>
> I'm instructing him not to answer a question where it involves him reading the document. If you want to ask him a question, I will listen to the question and decide if I'm going to object then, but he is not going to look at the document. You can remove it from in front of him. (Tr. 36).
>
> I'm instructing him not to answer a question where it involves him reading the document.... (Tr. 37).

Thereafter, Mr. Thompson proceeded to answer questions regarding what was found during the assessment, thereby illustrating his personal involvement with the assessment which gave rise to Exhibit 1. There is no way to ascertain from the record what questions Mr. Tash would have asked but for Mr. Thornton's limiting Mr. Thompson's testimony. We accept as factually correct Mr. Tash's statement that he did not reach the full breadth of examination he desired, which was the respondent's right under the rules of discovery.

The document marked as Deposition Exhibit 2 is an outline entitled "Software Evaluation Outline." Neither party's brief has identified what this document is or by whom it was prepared. Mr. Thompson testified that he did not recognize the document. Mr. Tash stated his intent to ask questions "referencing the document and see if you agree with the statements contained therein." Again Mr. Thompson directed the witness not to look at the document. (Tr. 54-56). Mr. Thompson then testified regarding software structure and what was found during the assessment regarding AT&T's engineering of software systems. Once again, his testimony indicated familiarity with the subject of AT&T and software systems used in the Radio Control Equipment. Once again, there is no way to ascertain from the

(Footnote Continued)

ness would have given would have been beneficial to the questioning party, either by constituting relevant admissible evidence or by pointing towards the discovery of admissible evidence. *Ralston Purina Company v. McFarland,* 550 F.2d at 973.

[9] A reference to the assessment of AT&T's management capabilities mentioned above. (Note by the Board.)

Digitized by Google

record what questions Mr. Tash would have asked but for Mr. Thornton's limiting Mr. Thompson's testimony and again we accept Mr. Tash's statement that he did not reach the full breadth of examination he desired.

The document marked as Exhibit 3 is a Trip Report for a Mr. Max Robinson[10] for the period June 1-5, 1987. Mr. Robinson is not further identified. Mr. Thompson testified that he did not "think" he had seen it before, and would be surprised if he had. (Tr. 62). The Report states that Mr. Robinson attended a "walk-through" at AT&T on the "Cost/Schedule Status Report." It also sets forth criticisms of the Cost/Schedule Status Report system in effect at AT&T, the capabilities of AT&T's data collection system, the status of the knowledge possessed by AT&T personnel assigned to the project, and the use made by AT&T management of reports generated by the Cost/Schedule Status Report system. Once again Mr. Tash expressed an intent to ask questions regarding the document and asked Mr. Thompson to refer to the document, and once again Mr. Thornton instructed Mr. Thompson not to comply or respond. (Tr. 62-63).

Neither party in their filings on this Motion have referred the Board to any precedents addressing the question of whether a deposition witness can be requested to review documents and answer questions based thereon. It is to be noted that the Board does not have before it a situation where the person conducting a deposition has asked a witness to review a mass of documents and then submit to questioning thereon. Rather, the situation is simply that Mr. Tash intended (see Tr. 34-35) to refer the witness to statements in the documents and then ask the witness to state whether, to his knowledge, such statements were accurate. This is a proper approach, especially considering Mr. Thompson's involvement in AT&T's contract performance.

The overwhelming weight of authority is that it is not appropriate for counsel to direct a witness not to answer a question propounded during a deposition. *Ralston Purina Company v. McFarland,* 550 F.2d 967, 973 (4th Cir. 1977); *Mendenhall v. American Booksellers Association,* 1991 US DIST LEXIS 50513 (S.D.N.Y. 1990) at 3-4; *Coates v. Johnson and Johnson,* 85 F.R.D. 731, 733 (N.D. Ill. 1980); *Shapiro v. Freeman,* 38 F.R.D. 308 (S.D.N.Y 1965).

When counsel has an objection to a question posed during a deposition, that objection should be noted on the record and the witness should then proceed to answer the question. Fed. R. Civ. P. 30(c); *Ralston Purina Company v. McFarland,* 550 F.2d at 973; *Hearst/ABC-Viacom Entertainment v. Goodway Marketing, Inc.,* 145 F.R.D. 59, 61, 63 (E.D. Pa. 1992); *Shapiro V. Freeman, supra.*

The only exception to this rule is the situation where a privilege is involved, such as the attorney-client privilege or the attorney-work-product privilege, so that any response to the question would vitiate the protection of the privilege. *Eggleston v. Chicago Journeymen Plumbers' Local Union No.* 130, 657 F.2d 890, 903 (7th Cir. 1981), cert. den. 455 U.S. 1017 (1982); *Coates v. Johnson and Johnson,* 85 F.R.D. at 733. There are no allegations in this case that the questions sought to probe privileged matters and, indeed, the record indicates that such a contention does not lie.

When, and only when,[11] an objection is based on privilege, or upon a belief that "the examination is being conducted in bad faith or in such manner as unreasonably to annoy, embarrass, or oppress the deponent," [12] the procedure is to briefly recess (not terminate) the deposition and communicate with a judge to obtain a ruling. Fed. R. Civ. P. 30(d); *Kelvey v. Coughlin,* __ R.I. __, 625 A.2d 775 (1993).

The Board therefore determines that Mr. Thompson could not refuse to answer the questions which the FAA counsel sought to put to him, in the format that FAA counsel elected to use: pointing out passages and asking if he knew whether or not the statements made were accurate, to the best of his knowledge.

The respondent's Motion to Compel further deposition testimony by Mr. Thompson is granted. An Order in implementation of this decision is set forth below.

ORDER

IT IS HEREBY ORDERED THAT Mr. Gerald Thompson present himself for further deposition by the Federal Aviation Administration at a time and place designated

[10] The copy attached to the Motion is not wholly legible.

[11] If such an allegation is made, but is not proved, the objecting party may subject himself/herself to sanctions. *Hearst/ABC-Viacom Entertainment Services v. Goodway Marketing, Inc.* 145 F.R.D. at 62.

[12] Quoting from Fed. R. Civ. P. 30(d).

Digitized by Google

in a *Subpoena ad testificandum* to be issued by the Recorder of the Board contemporaneous with the issuance of this Opinion and Order, and to respond fully and completely to questions posed by the counsel for the Federal Aviation Administration.

IT IS FURTHER ORDERED THAT counsel for the said Mr. Gerald Thompson shall not order or direct or advise Mr. Thompson not to answer or respond to any such questions and shall comport himself in strict accordance with the legal principles governing the conduct of depositions as set forth above. *Provided, however,* that this Order shall not be construed as precluding counsel for Mr. Thompson from noting objections on the record or, if he is of the opinion that a question seeks to inquire into otherwise privileged matter or such request is justified pursuant to Fed. R. Civ. P. 30(d) and Board Rule 18(a),[13] he may request a recess in the deposition and the parties, during such recess, may communicate with the judge issuing this order or, if he should be unavailable, any judge of the Board, for a ruling on whether or not a privilege applies.

[¶ 26,306] Tri-Comm, Inc. v. Department of Veterans Affairs

GSBCA No. 12505-P, August 4, 1993. RFP 548-02-93.

Timeliness of Protest, GSBCA—Apparent Improprieties—Solicitation Defects.—A protest based upon alleged improprieties in a solicitation for a telephone and paging system was dismissed as untimely because it was not filed before the closing time for receipt of initial proposals. Protests based upon improprieties in the solicitation must be filed before the date for receipt of proposals in order to be considered timely.

Timeliness of Protest, GSBCA—Jurisdictional Considerations—What Constitutes a Protest.—A corporate firm's assertion that a letter the firm had sent to the government was a protest concerning the requirements for the timely submittal of proposals under the solicitation was rejected, because a plain reading of the letter indicated that the letter was not a protest but a request for an extension of the response date. The letter was not characterized by the firm as a protest, and it contained no allegation that the time allowed for responding to the solicitation violated any statute or regulation. Nor did the letter allege that the response time precluded any offeror from responding to the solicitation. The letter simply stated the difficulties that the firm anticipated in gathering information and meeting the closing date.

For the appellant: Mychal H. Walker, President. For the government: Paul Grabelle, Dennis Foley, and Philip Kauffman, Office of General Counsel, Washington, D.C.

Before GOODMAN, DEVINE, and NEILL, Administrative Judges.

GOODMAN, Administrative Judge: On July 26, 1993, Tri-Comm, Inc. (Tri-Comm or protester) filed a protest concerning the requirements of RFP 548-02-93 (the solicitation) for a telephone and paging system for the Veterans Administration Medical Center to be constructed in West Palm Beach, Florida, by the Department of Veterans Affairs (VA or respondent).

Respondent has moved to dismiss the protest as untimely. For the reasons stated below, we grant respondent's motion and dismiss the protest.

Background

The solicitation was issued June 16, 1993, for the supply and installation of a telephone and paging system for the Veterans Administration Medical Center to be constructed in West Palm Beach, Florida. Exhibit 1.[1] The solicitation required offerors to furnish a bid guarantee and the awardee to furnish a performance bond. Exhibit 2. The original closing date for receipt of initial proposals was July 20, 1993. Exhibit 1. Amendment 1 to the solicitation, issued July 6, 1993, extended the closing date for receipt of initial offers to July 22, 1993, at 3:00 p.m. local time. Exhibit 3.

Tri-Comm sent a letter dated July 13, 1993, to the contracting officer which stated, in relevant part:

> [D]ue to the enormous detail and information required to ensure an appropriate response, we respectfully request a (30) day extention [sic] to appropriately respond.
>
> We are quite capable of providing the required information that is requested in The RFP as well as, we are capable of performing all of the tasks necessary to complete the project, but the time frame required for the proposal submission is very ambitious.
>
> The fact that the site visit was on July 6, 1993 and the submission date is scheduled only twelve (12) days later, in addition, with the requirement for a bid bond it does not allow ample time to review the proposal, make corrections, or get sub-contractors coordinated and allow our bonding company enough time to prepare the bid bond for submission on July 20 or July 22.

Exhibit 4.

The remainder of Tri-Comm's letter noted the level of detail required in the proposal, that the proposal was required to be submitted in triplicate and on a computer disk, and that an offeror would be required to mail the proposal no later than the fifth calendar day before the date specified for receipt of offers if it intended to respond by mail.

By letter dated July 15, 1993, the VA contracting officer responded to Tri-Comm's letter dated July 13, 1993, and denied Tri-Comm's request for an extension of time for submission of proposals, stating that offerors had thirty-six days from the date of issuance of the RFP to submit proposals, which the VA considered "ample time for preparation and well within the guidelines of the Federal Acquisition Regulations and the Veterans Administration Acquisition Regulations." Exhibit 5.

The contracting officer also replied to the other concerns raised by Tri-Comm in its letter by stating that obtaining subcontractors and bonds are part of normal business practices, the level of detail required in the offerors' proposals was necessary so that the VA could be assured the offeror understood the solicitation requirements, and the requirement for submission of the proposal on a computer disk is common practice today. The contracting officer also stated that the method of delivery of the proposal was the responsibility of the offeror. The contracting officer's letter dated July 15, 1993, was telecopied to Tri-Comm that same day. Exhibit 5.

Amendment 2 to the solicitation, issued July 20, 1993, stated that "[t]he hour and date specified for receipt of Offers is not extended. Proposals are due July 22, 1993 at 3:00 PM local time." Exhibit 7.

Protester submitted a proposal in response to the solicitation on July 22, 1993, and filed this protest on July 26, 1993. The protest complaint reads in relevant part:

> [T]he contracting officer . . . constructed a RFP that required enormous detail and information for submission as well as a bid bond in an extremely short time frame. The Veterans Administration in the past two (2) years since MIRMO (Medical Information Resource Management Office) has taken over the procurement process of telephone systems have [sic] not required bid bonds nor performance and payment bonds. Most notably, on the past nine (9) VA Medical Centers won by small businesses and 8(a) firms bonds were not required [the letter listed nine previous solicitations which Tri-Comm alleges did not contain bonding requirements] . . . .
>
> Due to the enormous information requested in RFP 548-02-93, the unrealistic time frame set for the response and the fact that bid bonds were required for submission on RFP 548-02-93 and (bonds) not required in the previous submissions, we respectfully request that RFP 548-02-93 . . . be re-bid without bonding requirements.

Complaint at 1-2.

During a prehearing conference with the Board on July 28, 1993, respondent's counsel informed the Board that Tri-Comm's proposal was received by respondent after the closing time for receipt of proposals. Tri-Comm's president stated that the proposal was delivered by commercial airline, and that he had received a written statement from the airline that the airplane had arrived later than scheduled.

Respondent's counsel also stated during the prehearing conference that respondent would file a motion to dismiss the protest as untimely, as the protest is based upon alleged improprieties in the solicitation which were apparent before closing time for receipt of proposals and, therefore, should have been filed before the closing time for receipt of initial proposals. Protester's president stated that he had sent a letter to the contracting officer on or about July 13, 1993, concerning the solicitation requirements

Digitized by Google

before the date for receipt of proposals, and had received a written response.

As the issue of timeliness was raised in the prehearing conference, the Board directed respondent to file its motion and address the issue of whether the contracting officer construed protester's letter of July 13, 1993, as a protest to the agency. Respondent filed its motion to dismiss, which we grant as discussed below.

Discussion

Respondent's motion to dismiss alleges that this protest is based upon alleged improprieties in the solicitation which were apparent to the protester before the closing time for receipt of proposals. Protests based upon improprieties in the solicitation must be filed before the date for receipt of proposals. Thus, according to respondent, the protest is untimely.

Protester maintained in the prehearing conference that its letter to the contracting officer dated July 13, 1993, was a protest which raised the issues addressed in its protest to this Board. Thus, protester contends that the protest to this Board is timely, as it was filed within ten working days of its receipt of the contracting officer's denial of its agency protest.[2]

We must first review protester's July 13, 1993, letter to determine whether it was a protest, as the determination as to whether a document constitutes a protest is one to be made by this Board. *Electronic Systems & Associates, Inc.*, GSBCA 11883-P, 93-1 BCA ¶ 25,278, 1992 BPD ¶ 187.

A "protest" is defined as "a written objection by an interested party to a solicitation by a Federal agency for bids or proposals for a proposed contract for the procurement of property or services . . . ." 40 U.S.C. § 759(f)(9) (1988). Both the Federal Acquisition Regulation (FAR) and VA Acquisition Regulation (VAAR) require that a protest contain: (1) the name, address, and telephone number of the protester; (2) the solicitation or contract number; (3) a detailed statement of the legal and factual grounds for the protest, including copies of relevant documents; (4) a request for a ruling by the agency; and (5) a statement as to the form of relief requested. 48 CFR 33.103(b)(3) (1992) (FAR 33.103(b)(3)); 48 CFR 833.103(b)(4) (1992) (VAAR 833.103(b)(4)).

Respondent considered Tri-Comm's letter of July 13, 1993, a request for additional time to prepare a proposal, and not a protest of the terms of the solicitation. A plain reading of Tri-Comm's letter supports respondent's interpretation. The letter was not characterized by Tri-Comm as a protest. While Tri-Comm noted the detailed response required and described the difficulties it believed it would encounter in preparing a response in the time allowed (coordination of subcontractors, obtaining bid bond, submission on floppy disk, and timely delivery), it stated that "[w]e are quite capable of providing the required information that is requested in The RFP as well as, we are capable of performing all of the tasks necessary to complete the project . . . ."

Tri-Comm's letter contained no allegation that the time allowed for response to the solicitation violated any statute or regulation, nor did it allege that the response time precluded any offeror, including Tri-Comm, from responding to the solicitation. Rather, Tri-Comm only stated difficulties which it anticipated in gathering information and meeting the closing date. The contracting officer did not construe this letter as a protest because the letter stated no legal or factual grounds challenging any term of the solicitation and emphasized Tri-Comm's ability to meet the solicitation requirements. In response, the contracting officer noted that the response time was not in violation of the FAR and the VAAR.[3] Despite the difficulties Tri-Comm anticipated in preparing a proposal, it did submit a proposal to respondent to be delivered on the date for receipt of proposals.

We agree with respondent that Tri-Comm's July 13, 1993, letter was a request for an extension of the response date, and not a protest.

In its protest to this Board, Tri-Comm again notes the amount of detail required in the proposal, references what it considers the "extremely short time frame" for response, protests the inclusion of bonding requirements in the solicitation, and requests the procurement be re-bid without the bonding requirements. The bonding requirements were clearly apparent to Tri-Comm before the closing time for receipt of proposals. Tri-

[2] Protester did not file a response to respondent's motion.

[3] FAR 5.203(b) requires that solicitations allow thirty days for response. The VAAR, which is to be utilized in conjunction with the FAR (VAAR 801.101) does not modify this requirement for procurements by the VA.

Digitized by Google

Comm's letter of July 13, 1993, indicates Tri-Comm was concerned about its bonding company having enough time to prepare the bid bond for submission before the date for receipt of proposals, but did not protest the inclusion of the bonding requirements.

Board Rule 5 [4] reads, in relevant part:

(3) *Protests.* A protest will be considered by the Board if it includes the information required by Rule 7(b)(2) and is timely filed.

(i) A protest based upon alleged improprieties in any type of solicitation which are apparent before bid opening or the closing time for receipt of initial proposals shall be filed before bid opening or the closing time for receipt of initial proposals.

. . . .

(iii) If a protest has been filed initially with the agency, any subsequent protest to the Board filed within 10 days of formal notification of, or actual or constructive knowledge of, initial adverse agency action will be considered, provided that the initial protest to the agency was filed in accordance with the applicable time limits in subparagraphs (b)(3)(i) and (ii) of this rule.

As this protest is based upon alleged improprieties in the solicitation which were apparent to Tri-Comm before the closing time for receipt of proposals, and no prior protest had been filed with the agency, pursuant to Rule 5(b)(3)(i) such a protest must be filed before the closing time for receipt of initial proposals. This protest was filed four days after the closing time and was, therefore, untimely.

Decision

Respondent's motion to dismiss this protest as untimely is **GRANTED.** The protest is **DISMISSED.** The suspension order dated July 29, 1993, hereby lapses.

[¶ 26,307] Sterling Services, Inc.

ASBCA Nos. 45885, 45886, August 20, 1993. Contract No. F08651-89-D-0003.

Pricing of Adjustments—Proof—Government-Furnished Equipment.—Under a contract to provide medical transcription services, a contractor was not entitled to recover costs in excess of the amount already provided by the contracting officer for malfunctioning government-furnished equipment, because the contractor presented no evidence to support its claim. Further, the government provided sworn affidavits, at least two of which effectively rebutted the contractor's allegations.

For the appellant: Michael D. Melle, Division Manager. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Capt. Patrick E. Tolan, USAF, Trial Attorney.

Before PAUL and JAMES, Administrative Judges.

PAUL, Administrative Judge: These are timely appeals of a contracting officer's decision on remand which granted a portion of appellant Sterling Services Inc's (SSI) claim for an equitable adjustment. SSI opted to proceed under the accelerated procedures provided by Board Rule 12.3, and the parties agreed to submit the case on the record pursuant to Board Rule 11. Both parties provided documentary materials, and the Air Force filed two briefs; however, SSI declined to file any briefing materials. The Contract Disputes Act (CDA), 41 U.S.C. § § 601 *et seq.*, is applicable. We have already ruled on entitlement; accordingly, only issues of quantum are before us for decision.

SUMMARIZED FINDINGS OF FACT

1. On 15 March 1989, the United States Air Force awarded contract No. F08651-89-D-0003 to SSI to provide medical transcription services at Eglin AFB Hospital in Florida. The contract had a base period extending from 1 June 1989 through 31 May 1990 and three option periods encompassing the following three years. The Air Force eventually exercised the first two options in accordance with the contractual terms, and the total estimated payment for the first year of the contract was $78,061.20. (R4, tab 1)

2. The contract contained an extensive Performance Work Statement (PWS) which defined the parties' responsibilities in great

[4] 48 CFR 6101 (1992).

Digitized by Google

detail. For its part, SSI was required to perform "listed services," consisting of completed transcripts of various lengths, at an "Acceptable Quality Level" (AQL). In addition to providing the contractor with the necessary electronic equipment to perform its transcriptions, the Government was required under the PWS to monitor SSI's performance through random sampling techniques. If the Air Force determined that SSI was not performing at an AQL, it could issue a Contract Discrepancy Report (CDR) and deduct amounts which would otherwise be due to SSI. (R4, tab 2)

3. The Air Force did not issue any CDR's to SSI during June of 1989, the "phase-in period" of the contract. On 25 July 1989, the Air Force's contracting officer informed SSI in writing that "several records have been sent back because of errors which should have been caught before they got to the QAE." The contracting officer also wrote: "A deviation higher than the maximum allowable deviation from perfect performance for each listed service could result in the Government invoking a payment computation formula resulting in a payment of less than 100% of the maximum payment for the listed service." (R4, tab 7)

4. On 11 August 1989, the contracting officer issued six CDR's to SSI relating to work which it had performed during the prior month. As a result, she withheld a total of $599.75 from SSI's payment. On one of the CDR's the contracting officer wrote, in pertinent part: "Majority of errors were due to lack of proper review prior to submission; for example, 1000 WBC rather than 10,000; four instead of floor, hemorrage [sic] instead of hemorrhoids." (R4, tab 10)

5. SSI replied to the CDR's in a letter of 12 September 1989 in which it gave various explanations for the discrepancies. However, SSI did not deny that it had in fact made the grammatical and procedural errors brought to its attention by the contracting officer. (R4, tab 12)

6. From July 1989 through October 1990, the Air Force issued CDR's for all months under the contract except for December 1989 and July 1990. As stated by Ms. Gentile, the Air Force's Quality Assurance Evaluator (QAE), in her sworn affidavit: "[I]t was clear to me that adequate proofreading would have eliminated many of the problems encountered with the transcripts when I reviewed them" (exh. G-16). Based upon our review of the evidence, we find that SSI did make the errors on the transcripts attributed to it by the Air Force's QAE.

7. Although SSI did not deny that it had made the errors attributed to it by the QAE, it did point out to the Air Force that the electronic transcribing equipment furnished to it by the Government pursuant to the contract frequently malfunctioned. Because of these difficulties, backlogs developed and SSI's transcribers were forced to work quickly to bring their workload up to date. As a result, SSI contended, its employees' work product was not flawless. (R4, tab 59)

8. On 11 December 1990, SSI filed a claim in a total amount of $4,087.65 for payments withheld from July 1989 through September 1990; and on 21 December 1990, it filed a claim for $192.99 for payments withheld for October 1990 (R4, tab 60).

9. The Air Force reviewed all of the CDR's issued to SSI and concluded that it had erred in its calculations of amounts withheld for the months of June, September, and October 1990. Accordingly, the Air Force determined that it owed SSI a total amount of $270.89 with respect to these months. (R4, tabs 60, 61)

10. On 8 February 1991, the contracting officer issued a decision in which she granted in part and denied in part SSI's two claims. As part of the decision, the contracting officer implicitly admitted that the Air Force had erred in withholding an excess amount of $270.89 from SSI. In addition, the contracting officer wrote:

> The Government acknowledges there were problems with the Sony Management System and the telephone system. In consideration of the equipment problems, the Government proposes to offer an equitable amount of 15% of the amount claimed. Documentation from your company will be required if there is a continuance of malfunctioning equipment in the future.

(R4, tab 65)

11. SSI declined the Air Force's offer of settlement and appealed to this Board. In a published decision issued on 7 November 1991, *Sterling Services, Inc.*, ASBCA Nos. 42892, 42893, 92-1 BCA ¶ 24,541, the Board sustained SSI's appeals in part and remanded to the parties for a determination of quantum. We held:

> Based upon the Board's review of the evidence, we conclude that SSI did make the errors on the transcripts attributed to it by the Air Force's QAE. Hence, it is clear that under the contract the Govern-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ment is entitled to recover for these errors. However, our conclusion in this regard is tempered by the contracting officer's admission that the Air Force erred in withholding a total amount of $270.89 for three months in 1990. Further, we hold, based upon the Government's concession, that SSI is entitled to recover an equitable adjustment for the difficulties caused by malfunctioning, Government-furnished electronic equipment.

12. After receiving our remand order, SSI increased its claim from $4,087.65 to $23,645.54. However, SSI did not provide the contracting officer with any evidentiary materials which served to substantiate its claim. The contracting officer issued a final decision on quantum on 4 December 1992. He stated, in pertinent part:

> 5. Based upon the Board's decision and upon my review of the facts surrounding your claims, I have determined that you not are [sic] entitled to any amount in excess of the amount set out below:
>
> $270.89 - Amount that the Air Force mistakenly withheld for three months of 1990.
>
> $613.15 - 15% of the amount of your claims due to the malfunctioning government-furnished electronic dictation equipment. This amount is based solely on the Contracting Officer's previous offer which was incorporated into the final decision dated 8 February 1991 and not upon any other evidence. I note that you have not presented any evidence of entitlement in excess of this amount.
>
> $182.04 - You are also entitled to interest under the Contract Disputes Act from the date of your claim through the date of payment.

(R4, tab 83)

13. SSI appealed the contracting officer's decision, and the appeals were docketed as ASBCA Nos. 45885 and 45886. As we have stated, the Air Force submitted two briefs and a host of evidentiary materials, including several sworn affidavits from witnesses who had direct involvement with the contractual undertaking. SSI declined to submit any briefing materials or affidavits. Indeed, its only submission consisted of a letter signed by its division manager, Mr. Michael D. Melle, to which were attached several financial documents purportedly relating to travel undertaken by corporate executives of SSI in connection with the instant contract. There is no record evidence demonstrating that Mr. Melle had any personal knowledge of the contract at issue.

14. SSI apparently contends that its corporate executives were required to travel to Eglin Air Force Base in order to resolve problems caused by malfunctioning Government-furnished equipment. But SSI has not submitted any evidence to substantiate this contention. Moreover, the Air Force has forwarded sworn affidavits from two of the individuals allegedly involved in this undertaking which rebut SSI's apparent contention. Mr. Ernest E. Sisneros, a former project manager for SSI, stated, in pertinent part:

> 5. While at Eglin AFB, I remembered that the transcriptionists would complain that the QAE's standards were too demanding. I remember that they said the Government was too precise regarding medical terminology. I don't remember transcriptionists ever complaining that the government-furnished equipment was malfunctioning causing them to work in a more hurried fashion.

(Exh. G-32) Similarly, another project manager for SSI, Ms. Anna B. McPherson, stated, in part:

> 3. I remember that the QAE at Eglin was marking down SSI for every error. The home office felt that the QAE was unduly harsh. I felt that there was no sense in the mark downs as long as the doctors were happy with the dictation and approved the transcription.
>
> 4. I don't remember any problems with Government furnished equipment. I don't think the topic was ever brought up while I was at Eglin.

(Exh. G-26)

15. As part of the quantum phase of these appeals, SSI has not presented any evidence to support its claim that it incurred additional costs as a result of malfunctioning Government-furnished equipment. Indeed, the only credible, positive evidence in this regard is the contracting officer's admission that such problems occurred and his offer, communicated through a final decision, proposing to grant SSI 15 percent of its original claim.

DECISION

In *Lisbon Contractors, Inc. v. United States* [34 CCF ¶ 75,358], 828 F.2d 759, 767 (Fed. Cir. 1987), the United States Court of Appeals for the Federal Circuit cited with approval an earlier decision of the Court of Claims in *Willems Indus., Inc. v. United States* [8 CCF ¶ 71,693], 295 F.2d 822, 831, 155 Ct. Cl. 360 (1961), *cert. denied,* 370 U.S.

Digitized by Google

903, 82 S.Ct. 1249, 8 L.Ed. 400 (1962), in which its predecessor court stated: "The claimant bears the burden of proving the fact of loss with certainty, as well as the burden of proving the amount of loss with sufficient certainty so that the determination of the amount of damages will be more than mere speculation." Except for the amount to which the contracting officer conceded SSI was entitled in the original proceeding before this Board, SSI has failed to meet this burden. It has not presented any evidentiary materials supporting its claim. Further, the Air Force has submitted several sworn affidavits, at least two of which effectively rebut SSI's allegations. Therefore, the Board is unable to award SSI any sums in addition to those which the contracting officer has already granted it.

CONCLUSION

The appeals are denied.

[¶ 26,308] B.L.I. Construction Co., Inc.

ASBCA No. 45560, August 17, 1993. Contract No. 200-89-0096.

Procedure, Boards—Pleadings—Matters Pending Elsewhere.—Portions of a contractor's complaint were stricken by the board because they involved matters pending in other appeals. The contractor had included in its complaint reference to many of its other pending claims in order to place the appeal in a comprehensive context.

Site Conditions—Notice—Prejudice.—The government's assertion that portions of an appeal were barred on the basis of the contractor's failure to give notice under the Differing Site Conditions clause and other provisions of the contract was rejected because the failure to give notice did not require dismissal of the appeals. The government asserted that the requirement for notice, as incorporated in the contract provisions, was a condition precedent to the government's waiver of its sovereign immunity against suit. In noting the government's contention, the board stated that it was unwilling to depart from the general rule that a failure to comply with a notice requirement will not lead to an automatic denial of a claim unless the government can demonstrate that the late notice prejudiced it in some way. In any event, the board denied the government's motion for summary judgment because disputed issues of facts remained regarding the adequacy of notice and the government's knowledge or waiver of notice.

For the appellant: Smith, Currie & Hancock, Atlanta, Georgia, by Hubert J. Bell. For the government: Elise Harris and Julie Ann Sammons, Trial Attorneys, Department of Health and Human Services, Atlanta, Georgia.

Before YANNELLO, SPECTOR, and THOMAS, Administrative Judges.

YANNELLO, Administrative Judge: The subject contract, awarded by the Department of Health and Human Services (HHS), has given rise to a number of disputes, claims, and appeals. The Government's motion presently before the Board addresses portions of the appeal docketed as ASBCA No. 45560, and the complaint filed therein.

ACCORD AND SATISFACTION

Pursuant to the motion, both parties agree that paragraphs 130 to 134 of the complaint in ASBCA No. 45560 relate to contract Modification 34, deleting a ceiling light fixture and wiring, which was the subject of an appeal docketed as ASBCA No. 42828 which in turn, pursuant to the parties' settlement, was dismissed with prejudice. Accordingly, paragraphs 130 to 134 of the complaint in ASBCA No. 45560 are stricken and, to this extent, the Government's motion is granted.

DUPLICATION

Appellant has included in its complaint in ASBCA No. 45560 reference to many of its other pending claims in order to provide a comprehensive context; appellant has also requested that, for discovery and trial purposes, all its pending claims under the subject contract be consolidated.

The parties agree that: (*a*) the subject of paragraph 15 of the complaint in ASBCA No. 45560, appellant's weather claim, is pending before the Board in ASBCA No. 41727; (*b*) the subject of paragraphs 45 to 57, the slab deflection claim, is pending in ASBCA No. 42128; (*c*) the subject of para-

©1994, Commerce Clearing House, Inc.

Digitized by Google

graph 97, the fuel oil tank leak detection system, is pending in ASBCA No. 42991; (*d*) the subject of paragraphs 96 and 98, the freeze protection pump, is pending in ASBCA No. 43513; (*e*) the subject of paragraphs 107 to 112, Modification 22, is pending in ASBCA No. 44028; (*f*) the subject of paragraphs 113 to 116, the Triad Unit, is pending in ASBCA No. 44028; (*g*) the subject of paragraphs 117 to 121, Modification 23, is pending in ASBCA No. 43976; and (*h*) the subject of paragraphs 122 to 129, Modification 32, is pending in ASBCA No. 42923.

Inasmuch as these portions of the complaint in ASBCA No. 45560 are duplicative, they are stricken and to this extent the Government's motion is granted. The Board will subsequently consider the manner in which the various pending claims should be consolidated.

NOTICE

The Government also asserts that various portions of ASBCA No. 45560 are barred on the grounds that appellant failed to provide requisite notice under the standard Changes, Differing Site Condition, and Suspension of Work clauses in the contract.

The claims sought to be dismissed include the following paragraphs of the complaint in ASBCA No. 45560: *paragraphs* 4 to 7, benchmark pins and survey markers; *paragraphs* 16 to 20, clarifications of Structural and Mechanical drawings; *paragraphs* 21 to 23, clarification of Beam TB-14; *paragraphs* 24 to 26, RFI No. 44; *paragraphs* 27 to 34, foundation of shearwall B; *paragraph* 35, second floor slab 2A; *paragraphs* 36 to 39, shearwall C and column B.1/1.5; *paragraphs* 40 to 44, finish samples; *paragraphs* 58 to 61, acceptance of building; *paragraphs* 65 to 66, jobsite delay costs; *paragraphs* 67 to 70, finish testing on aluminum storefront windows and lightpoles; *paragraphs* 71 to 73, gravel; *paragraph* 74, overtime; *paragraphs* 75 to 76, scheduling costs; *paragraph* 77, soil compaction testing; *paragraph* 80, asphalt and sealant; *paragraphs* 96, and 102 to 103, claims of mechanical subcontractor "Ragan"; and *paragraphs* 149 to 158 and 161 to 164, claims of electrical subcontractor "Dyco."

In support of its motion, the Government relies primarily upon the doctrine of Sovereign Immunity, as well as the Appropriations Clause of the Constitution, with numerous case citations provided. In essence, the Government argues that the requirement for notice, as incorporated into the contract provisions pursuant to various provisions of the Federal Acquisition Regulation, is a condition precedent for the Government's waiver of its sovereign immunity against suit; without such notice, the Government's immunity precludes prosecution of appellant's claims here. In discussing various court and board decisions (concerning notice, knowledge, waiver, and prejudice) under standard contract provisions, the Government "urges the Board to break from a line of ill-considered cases, and follow the Supreme Court's reasoning in [*Federal Crop Insurance Corp. v. Merrill*, 332 U.S. 380 (1947)] and its progeny."[1]

Appellant asserts, essentially, that the boards and courts have not applied the provisions concerning notice to act as a technical bar to suit; that notice requirements may be satisfied even without written notice; that the Government's actual knowledge and/or waiver of notice may act so as to eliminate any bar to suit; and that the Government must show prejudice as a result of any alleged lack of notice or knowledge. Also, appellant asserts that notice was given and/or that the Government had knowledge of the circumstances, waived the requirement for notice, and/or was not prejudiced.

We need not discuss the parties' contentions in detail here. Suffice it to say that, with respect to the Government's reliance on the doctrine of Sovereign Immunity or the Appropriations Clause, we are reluctant to depart from the well-established applications of the contract's notice requirements

[1] The Government's discussion, particularly of existing caselaw, does not make clear what, if any, distinctions exist between (1) jurisdictional statutes in which the Government has waived its immunity from suit so long as suit, or appeals, are initiated within stated limitations periods; (2) statutory, regulatory, or contractual provisions, if any, governing the time periods in which "claims" must be asserted (*see, e.g., Do-Well Machine Shop Inc. v. United States* [35 CCF ¶ 75,633], 870 F.2d 637 (Fed. Cir. 1989) re: submission of settlement proposals under the termination for convenience clause; *Stone Forest Industries, Inc. v. United States* [38 CCF ¶ 76,341], 26 Cl. Ct. 410 (1992) re: claims for refund under timber sales contract); and/or (3) contractual provisions requiring that the contractor give notice to the Government whenever it believes, for example, that a change, changed condition, suspension of work, or other circumstance exists for which the contractor may be entitled to an equitable adjustment. It would appear that the present appeal raises questions only as to the third category noted above. However, given our decision here, it is not necessary to further differentiate between these various provisions.

Digitized by Google

(*see, e.g., Central Mechanical Construction*, ASBCA Nos. 29431, *et al.*, 85-2 BCA ¶ 18,061; and *Big Chief Drilling Co. v. United States*, 15 Cl. Ct. 295 (1988)).

More importantly, we conclude that facts, such as those discussed in the aforementioned cases, including notice, knowledge, waiver, and prejudice, are in dispute here and that the Government has not shown that it is entitled to summary judgment.[2]

For the foregoing reasons, the Government's motion, to this extent, is denied.

CONCLUSION

Based on the foregoing discussion, the Government's motion is granted to the extent of striking from the complaint paragraphs 15, 45 to 57, 97, 96, 98, 107 to 112, 113 to 116, 117 to 121, and 122 to 129, and paragraphs 130 to 134, and is otherwise denied.

[¶ 26,309] COLSA, Inc.

ASBCA No. 45505, August 16, 1993. Contract No. DAAD07-87-C-0020.

Cost Limitations—Overruns—Basis of Denial.—Although the amount a contractor billed for work items did not exceed the total amount of funds allocated to the contract, the contractor was not entitled to reimbursement for invoiced costs that exceeded estimates for work assignment orders, because the government was not obligated under the Schedule section of the contract to reimburse the contractor for such costs. The Limitation of Funds clause and the Schedule section both allow the contracting officer to deny reimbursement of costs, but in different cost situations. The Limitation of Funds clause provides that the government is not obligated to reimburse the contractor for costs incurred in excess of the total amount allotted by the government in funding. The Schedule section provides for the disallowance of costs incurred in excess of the total estimated amount of work orders. The contractor's contention regarding total funding limits was relevant to the issue of whether costs were properly disallowed under the LOF clause, but it was not relevant to whether the costs had been properly disallowed under the Schedule section, the basis for the government's disallowance of billed costs.

Cost Limitations—Overruns—Fee Calculation.—The government's calculation of provisional fee payments under a cost-plus-fixed fee contract was proper because the government was not shown to have either reduced the amount of the fixed fee specified in the Schedule or prevented the contractor from receiving the specified fixed fee upon completion of the contract work. In contending that fees to be paid were fixed and could not be altered in the absence of a change, the contractor confused the Fixed Fee clause and the Schedule. The Fixed Fee clause provided that for performing the contract, the government was to pay the contractor the fixed fee specified in the Schedule. The Schedule both specified the amount of the fee and provided that the fee was payable provisionally in installments upon certification by the contractor of the effort expended. In accordance with the Schedule, the contracting officer calculated the installment fee payments on the basis of adjusted costs for work orders in which the cost ceiling had been exceeded. The contractor cited no reduction in the specified fixed fee.

Cost Limitations—Overruns—Government Benefit.—A contractor was not entitled to reimbursement for its billed costs that exceeded estimates for work assignment orders under its cost-plus-fixed-fee contract, even though the contractor contended that the government benefited from the effort expended, because the contractor's benefit argument provided no basis for concluding that the contracting officer acted improperly in disallowing the contractor's overruns. The contractor failed to give the required notice of anticipated cost overruns relating to estimated work orders. The contract provided that the government need not reimburse the contractor for any amount that the contractor incurred above the

[2] See also the parties' contentions with respect to "final payment" and/or final settlement of a contract and timeliness of claim submission, as discussed in *H.H.O. Company v. United States* [34 CCF ¶ 75,256], 12 Cl. Ct. 147, 162-64 (1987); *see also Pembroke Machine Co., Inc.*, ASBCA No. 39028, 90-1 BCA ¶ 22,528.

Digitized by Google

estimated work order costs if the contractor failed to give notice of anticipated overruns. The fact that the government may have received a benefit for the contractor's continued performance did not affect the government's contractual right to disallow the overruns.

Cost Limitations—Waiver of Limitations—Intention to Induce Performance.—A contractor's contention that the government waived any notice requirements for cost overruns with respect to work assignment orders under its cost-plus-fixed-fee contract was rejected because the government's payment of vouchers could not be construed, under the circumstances of the case, to have been intended to induce the contractor's continued performance. The vouchers were mistakenly paid to the contractor by a government office that was unaware both that the contracting officer had questioned the costs and that the parties were in discussion as to the allowability of the costs. The contractor incurred all the disputed costs before submission of the vouchers and was engaged in discussions over the allowability of these costs before it became aware that the vouchers had been paid.

For the appellant: Gary L. Rigney and Henry L. Brown, Huntsville, Alabama. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Capt. Scott E. Lind, JAGC, Trial Attorney.

Before HARTMAN and VAN BROEKHOVEN, Administrative Judges.

HARTMAN, Administrative Judge: This is a timely appeal from a final decision disallowing $46,553.62 in costs, which were billed by and paid to appellant under a cost-plus-fixed-fee contract, because appellant had "overrun" the estimated work cost set forth in three work assignment orders by that sum without notifying the contracting officer and obtaining approval to do so. Pursuant to Rules 11 and 12.3, the parties have elected to follow the Board's accelerated procedure, waive a hearing, and submit the case for decision on the record. Only the issue of entitlement is before us for decision.

SUMMARY FINDINGS OF FACT

In 1987, pursuant to section 8(a) of the Small Business Act, 15 U.S.C. § 637(a), the Department of the Army entered into a five-year, level-of-effort, cost-plus-fixed-fee contract, No. DAAD07-87-C-0020 ("contract 0020"), with the Small Business Administration ("SBA") for the provision of engineering support to the anti-tank guided missile simulation facility at White Sands Missile Range ("WSMR"), New Mexico. SBA then entered into a subcontract, No. 4-87-1-0083, with appellant, COLSA, Inc. ("COLSA"), for the performance of that contract work. (R4, tab 1)

Contract 0020 incorporated by reference standard allowable cost and fixed fee clauses (R4, tab 1 at 31). The former (FAR 52.216-7) provided that the "Government shall make payments to the Contractor . . . as work progresses . . . in amounts determined to be allowable" by the contracting officer ("CO") in accordance with the FAR and "[a]ny payment [made] may be (1) reduced by amounts found by the [CO] not to constitute allowable costs or (2) adjusted for prior overpayments." The latter (FAR 52.216-8) provided that "[t]he Government shall pay the Contractor for performing this contract the fixed fee specified in the Schedule" and "[p]ayment of the fixed fee shall be made as specified in the Schedule."

Contract 0020 also incorporated the standard Limitation of Funds ("LOF") clause (R4, tab 1 at 32). That clause (FAR 52.232.22) stated: "the parties estimate that performance . . . will not cost the Government more than [ ] the estimated cost specified in the Schedule;" "[t]he Contractor shall notify the [CO] in writing whenever it has reason to believe that the costs it expects to incur . . . in the next 60 days, when added to all costs previously incurred, will exceed 75 percent of [ ] the total amount so far allotted to the contract by the Government" and "state the estimated amount of additional funds required to continue performance;" the Contractor is not obligated to continue performance . . . until the [CO] notifies [it] in writing that the amount allotted by the Government has been increased and specifies an increased amount;" "to the extent that the amount allotted . . . is increased, any costs the Contractor incurs before the increase that are in excess of [ ] the amount previously allotted . . . shall be allowable to the same extent as if incurred afterward" unless the CO issues a special notice; and "[t]he Government is not obligated to reimburse the Contractor for costs incurred in excess of the total amount allotted" absent a specific exception set forth elsewhere in the contract.

The Schedule for contract 0020 specified "total estimated productive labor hours" of

Digitized by Google

29,788, an "estimated total cost" of $2,346,915.00, and a "fixed fee" of $146,357.00. Section B.5 of the Schedule provided that:

> The fixed fee shall be payable provisionally in installments . . . upon certification by the Contractor of the effort expended and the Government's acceptance of the technical quality of performance. Each such payment shall be in an amount which shall bear the same proportion of the total amount of the fixed fee as the effort expended during the billing period bears to the total level of effort of the contract.

(R4, tab 1 at 2, 6)

Section H.21 of the Schedule set forth procedures for the assignment of contract work, whereby the CO's representative ("COR") would issue a "work assignment order" ("WAO") requesting an estimate to perform specific tasks, the contractor would furnish a detailed estimate to perform the tasks, the COR and CO would review the estimate and, if necessary, "conduct discussions [with the contractor] to assure a mutual understanding . . . concerning all elements of the WAO," and the CO would thereafter execute the WAO if it was to "be officially assigned" the contractor. Section H.21.6 expressly provided that, if a contractor anticipated exceeding its original estimate while completing a WAO, a "change to the WAO must be accomplished and approved by the [CO]" in the "same manner as the original order." (R4, tab 1 at 28-29)

Schedule Section H.16 stated, with respect to modification of the contract, that "[n]o oral statement by any person, whomsoever in any manner or degree, shall modify or otherwise affect the terms of this contract" and "all changes shall be incorporated by written modification" (R4, tab 1).

Between March of 1987 and October of 1989, the CO assigned COLSA 9 WAOs and made 10 modifications to the contract to reflect funding changes (R4, tabs 2 through 18, 21, 22). By letter dated 9 November 1989, the CO reminded COLSA that "increases over the currently approved cost estimate for a task order may not be exceeded without the approval of the [CO]" and "[f]ailure to obtain the required approval could result in unallowability of the excess costs" (R4, tab 23).

In February 1990, the parties executed contract modification No. P00013. That modification substituted a new Schedule section H.21 requiring written notice, which provided, in part, as follows:

> H.21.6 The WAO will be officially assigned when the [CO's] signature has been obtained .... The contractor shall exert no effort under the WAO until the official assignment has been made. *Performance initiated by the Contractor in anticipation of formal assignment of a WAO is at the Contractor's own risk if the work has not been authorized by the Government pursuant to the terms of the contract.*
>
> * * *
>
> H.21.10 *The contractor shall notify the [CO] and the COR, in writing, if at any time the contractor has reason to believe that the costs which he expects to incur in the performance of the WAO in the next succeeding 15 days, when added to all costs previously incurred, will exceed 85% of the total estimated amount of the WAO.* If the remaining funds are estimated to be insufficient to complete the WAO, this notice shall also include a detailed estimate to complete. *The Government shall not be obligated to reimburse the contractor for costs incurred in excess of the total estimated amount of the WAO. Increases to WAO estimates shall be accomplished by written modification of the WAO. Approval of WAO modification by the [CO] is required.*

(R4, tab 24) (emphasis supplied)

Between February of 1990 and December of 1991, the CO assigned COLSA five additional WAOs (Nos. 10 through 14) and made nine modifications to the contract to reflect funding changes (R4, tabs 25 through 32, 35 through 37, 39, 40). By letter dated 12 December 1991, COLSA advised the CO that: it had incurred more labor hours than invoiced for some WAOs; "[d]uring a recent internal audit . . . our billing department discovered that we have failed to invoice the government in accordance with instructions in Section B.5 of the contract;" we "previously invoiced using the cost incurred as a basis for determining fee;" in "estimating fee [we also] used the cost as a basis to determine fee instead of Direct Productive labor hours;" and "[t]he Government funded the WAO's based on our estimates but [we] and the Government should have realized this method of fee calculation was not in compliance with contractual requirements." Enclosed with COLSA's letter were vouchers purportedly correcting COLSA's "prior billing errors." (R4, tab 41; see R4, tab 42)

In the vouchers submitted, COLSA sought reimbursement of the cost of labor hours, which exceeded the number of labor hours it had estimated and been authorized to incur

Digitized by Google

for some WAOs. COLSA also sought a portion of the fixed fee, which was calculated by dividing the amount of the fixed fee ($146,357.00) by the total estimated productive labor hours (29,788), as specified in section B.5 of the contract Schedule, and then multiplying that sum ($4.91) by the number of productive labor hours "expended" for the WAO, regardless of whether the latter number exceeded the number which had been estimated by COLSA for the WAO. The following chart sets forth the hours, fees, and costs COLSA invoiced, the hours, fees, and costs COLSA had estimated ("Est."), the fees COLSA should have estimated pursuant to Schedule section B.5, and the difference ("Diff.") between some of those sums:

(R4, tabs 2, 5, 6, 8, 10, 12, 16, 18, 21, 26, 27, 32, 41, 48)

By letter dated 1 April 1992, the CO advised COLSA that: he agreed COLSA had been invoicing incorrectly, *i.e.*, "billing at a rate of 6.5% of cost rather than $4.91 per productive labor hour;" it appeared COLSA also had "incorrectly proposed the WAO estimates using a percentage of cost rather than $4.91/productive labor hours;" correction of COLSA's billing errors reflected COLSA had "overrun" WAO Nos. 3 through 6, 10, 11, and 12; COLSA had "failed to notify the Government that 85% of the funded WAO amounts had been expended, as required . . ." and not obtained CO authorization to exceed the estimated cost for the WAOs; and it thus "appears that . . . [the extra] amounts are unallowable" (R4, tab 48). In a letter to the CO dated 30 April 1992, COLSA stated that: because "the WAO is only an administrative tool for directing effort under the contract line items," we do not agree with your interpretation that "the government is not obligated to reimburse . . . for cost incurred in excess of the total estimated amount of the WAO;" "COLSA has never exceeded the authorized funding level of this contract;" and "[t]here is no reference in the Schedule stating that section H 21 [concerning WAOs] takes precedence" over other contract terms (R4, tab 49).

On 17 June 1992, the CO advised COLSA that: Schedule section "B.3 limits the total effort that can be performed under the con-

Digitized by Google

tract to the total amount actually funded;" Schedule section "H.21.6 (revised as H.21.10 by Mod P00013) further limits the effort that can be performed under the contract to actual amounts authorized by the WAOs;" "[t]he net effect is that the costs expended under a WAO cannot exceed the amount authorized by the WAO and the total amount expended under all the WAOs cannot exceed the amount funded under the contract;" COLSA's "failure to provide accurate completion notices and ... timely cost and performance reports ... prevented the Government from detecting the overruns;" and therefore "the Government is not obligated to reimburse [COLSA] for any amount (including fee) in excess of the approved WAO estimate," but COLSA will be "granted a final opportunity to provide additional information on the cause of the overruns and sound reasoning on why any portion of the overruns should be allowed" (R4, tab 50). In a letter to the CO dated 14 July 1992, COLSA stated that "[o]ur failure to provide the required notice in the individual WAO's resulted from a conversation we had with one of the contracting officers, which led us to believe that as long as the overall funds allotted to the contract were sufficient to cover the costs, it was not necessary to modify the individual WAO" (R4, tab 52).

On 11 August 1992, COLSA advised the CO that, because the fixed fee for the contract was established at the inception of the contract and payable provisionally in installments, it believed that, at a minimum, it should be paid "the fee earned as part of the overrun costs associated with WAO's 10, 11, and 12" (R4, tab 56). On 15 September 1992, COLSA further advised the CO that it recently discovered the December 1991 "corrected" vouchers had been paid by the Government and, thus, although COLSA had been prepared to submit a claim to the CO for payment of services provided, it no longer had a dispute with the Government (R4, tab 57).

In a final decision dated 25 November 1992, the CO determined that: the overruns, after correction of COLSA's error in billing fee, on WAOs 10, 11, and 12 of $5,199.90, $35,235.67 and $6,118.05, respectively, which total $46,553.62, were disallowed; the finance and accounting office had been unaware of negotiations regarding the allowability of the overruns and mistakenly disbursed the overrun amounts billed by COLSA; the Government was offsetting the amount of COLSA's September 1992 invoices ($21,588.25) against the overrun amount determined owing; and $24,965.37 thus remained due. As support for these determinations, the CO stated that: special contract provisions concerning issuance and modification of WAOs expressly required that no effort be exerted by the contractor prior to approval of a WAO and that increases over a WAO estimate be approved by the CO prior to any effort being exerted; COLSA never notified the Government its expenditures had reached 85 percent of a WAO estimate as required; no revisions to WAOs for overruns had been approved by the CO; and allowing fee on the excess hours would be equivalent to allowing a portion of the overrun. (R4, tab 58)

By letter dated 28 December 1992, COLSA appealed the CO's decision to this Board. In support of its appeal, COLSA submitted an affidavit by its contract manager, Michael Lamb, providing as follows:

> During the year 1990, COLSA had two contracts with the [WSMR]. They were contracts DAAD07-87-C-0020 and DAAD07-89-C-0024. Both contracts were modified in ... 1990, to include a clause in the ... (WAO) procedures ... which required the contractor to notify the [CO] when it appeared that the estimated funds stated in the WAO would not be sufficient to complete the WAO....
>
> Sometime after March 1990, I had a telephone conversation with Ms. Jill Schrecongost, the contracting officer for DAAD07-87-0024. The conversation was necessary because I had realized that the projected cost to complete the work required by one of the WAO's was in excess of the original estimate. I asked Ms. Schrecongost for a modification to the WAO and I was advised that the procedures pertaining to the WAO's were placed in the contract to provide a means of assigning work to the contractor. She stated that if sufficient funds had been obligated to the overall contract, *no modification of the contract was required.* Subsequent to this conversation, COLSA followed the advice received and *did not seek changes to individual WAO's when the amounts stated in the WAO's were in an overrun condition.* [Emphasis added]

COLSA also submitted an affidavit by one of its contract administrators, stating: she had participated in the telephone call, Ms. Schrecongost had said, "if sufficient funds had been obligated to the overall contract, *no modification of the contract was required;*" and, based "upon the representa-

©1994, Commerce Clearing House, Inc.

Digitized by Google

tions of Ms. Schrecongost, *we did not ask for modification of WAO's* when the actual amount necessary for completion exceeded the original estimate" [Emphasis added].

In response to COLSA's affidavits, the Government submitted affidavits by a CO and two contract specialists. The CO stated in his affidavit he "did not authorize, verbally or in writing, the overrun of costs on [WAOs] issued under WSMR Contract DAAD07-87-C-0020 while serving as [CO] for the contract." A contract specialist stated in her affidavit that she did not make any statement to COLSA that modification of a WAO was not necessary where COLSA would exceed the WAO estimate and overall funds allotted to the contract were sufficient to cover the costs. Ms. Schrecongost, the other specialist, stated in her affidavit as follows:

> I was employed as a *Contract Specialist* ... for the period 31 Dec 84 through 23 Jan 93. In Aug 1988, I was assigned to the Services Contracting Branch ... and given pre-award *responsibility for ... Contract Number DAAD07-89-C-0024.* ... After award I administered the contract for approximately 6 months pending transfer of the contract to the Contract Administration Branch for post award administration. [Emphasis added]
>
> I interfaced with Mike Lamb of COLSA and do recall a conversation regarding estimated amounts. I advised Mr. Lamb the individual cost elements in a Work Assignment Order (WAO) could be exceeded as long as the total estimated amount of the WAO was not exceeded.... I had over two years of experience with administration of WAO type contracts. I would not have advised Mr. Lamb that exceeding the WAO estimated cost was permissible.

DECISION

In its briefs, COLSA acknowledges that it failed to comply with the provisions of Schedule section H.21.10, but contends that it is entitled to reimbursement for the sums billed, which exceed the estimates for WAO Nos. 10, 11, and 12, because: (1) the costs billed do not exceed the "amount [of funds] allotted to the contract;" (2) a portion of the sums billed is "fee," the payment of which is "fixed" under the contract and not subject to the LOF clause; (3) the Government benefitted from the costs billed; and (4) the Government waived any notice and written authorization requirements with respect to the sums billed. As discussed below, however, COLSA's first three contentions are each premised upon a misunderstanding of the contract provisions and the last contention is not supported by the record.

1. *Amount Of Funds Allotted Contract*

COLSA devotes part of both its briefs to arguments concerning "funding" allotted the contract. Essentially, COLSA argues its "requested payments were not in excess of the [funding] amount allotted to the contract" and, even if they were, the LOF clause "provides that any costs the contractor incurs before [an] increase [in funding] that are in excess of the amount previously allotted by the Government to the contract ... shall be allowable to the same extent as if incurred afterward ...." However, in making such an argument, COLSA confuses the contract's LOF clause with Schedule section H.21.10.

The CO disallowed the costs invoiced which exceed those estimated and authorized for WAO Nos. 10, 11, and 12 based upon Schedule section H.21.10, not the LOF clause. While Schedule section H.21.10 and the LOF clause are similar in that they both allow a CO to decline reimbursement of costs, they authorize such action with respect to "different" costs. Schedule section H.21.10 provides that "[t]he Government shall not be obligated to reimburse the contractor for costs incurred in excess of the *total estimated amount of the WAO.*" The LOF clause provides that "[t]he Government is not obligated to reimburse the Contractor for costs incurred in excess of the *total amount allotted* by the Government" in funding. Arguments concerning the funding "amount allotted" to a contract, thus, are relevant to whether costs have been properly disallowed under the LOF Clause, but not to whether costs have been properly disallowed under Schedule section H.21.10, the basis proffered by the CO for disallowing the costs here and subject of this appeal.

2. *Mandated Fixed Fee*

COLSA also devotes part of both its briefs to arguments that contract 0020 mandates payment of a "fixed" fee. Essentially, COLSA contends that the fee to be paid it was "fixed" at the inception of the contract and cannot be altered under any contract clause, absent a change in the scope of contract work. However, in making such an argument, COLSA confuses the Fixed Fee clause with the provisions of Schedule sections B.5 and H.21.

While the Fixed Fee clause and Schedule sections all relate to the contractor's receipt of a "fixed" fee, only the latter is of import here. The Fixed Fee clause incorporated in

Digitized by Google

contract 0020 simply provides that the "Government shall pay the Contractor for performing ... the fixed fee specified in the Schedule." The Schedule sections set forth the procedures by which the contractor may obtain provisional payment of the specified fixed fee in "installments." Pursuant to the Schedule sections, the CO calculated the "installment" fee payments deemed due with respect to WAO Nos. 10, 11, and 12. COLSA has not cited anything in the record indicating that the CO ever reduced the amount of fixed fee specified in the Schedule or suggested COLSA was precluded from receiving upon completion of all contract effort the total fixed fee specified. Rather, COLSA simply has pointed to the CO's calculation of the "installment" fee payments, *i.e.*, determination under the Schedule sections of the "portion" of fixed fee to be paid provisionally for a WAO.* COLSA's arguments concerning the "fixed" nature of the total fee thus are also of no relevance to the actions of the CO which are the subject of this appeal.

3. *Government Benefitted*

Throughout both its briefs, COLSA repeatedly states that the Government benefitted from the monies expended and therefore should reimburse COLSA for those monies. Essentially, COLSA argues that cost reimbursement contracts are employed only where parties cannot be certain of the costs that will have to be incurred and it is unfair to penalize a contractor for not being able to accurately forecast its costs where both parties recognize a lack of certainty with respect to the costs which will be incurred. However, in making such an argument, COLSA fails to comprehend Schedule section H.21 and similar contract provisions.

Schedule section H.21, like the LOF and Limitation of Cost clauses, provides that, when the contractor has reason to believe costs incurred in performance will exceed or "overrun" an estimated performance cost, it must furnish the CO with written notice to that effect and a revised estimated performance cost to allow the CO to determine whether the Government should approve continued funding of the work, and if the contractor fails to give such notice to the CO the Government need not reimburse the contractor any amount the contractor incurs above the estimated performance cost. *See 3C Systems, Inc.*, ASBCA No. 41463, 91-2 BCA ¶ 23,916 at 119,817; *Systems Engineering Associates Corp.*, ASBCA Nos. 38592, 38593, 38594, 38595, 38596, 38626, 38750, 91-2 BCA ¶ 23,676 at 118,577; *Vehicle Research Corp.*, ASBCA No. 26581, 83-2 BCA ¶ 16,721 at 83,171. It is well established that, where a cost reimbursement contract contains such a provision, the contract does not require the CO to fund an overrun and, in the absence of the prescribed formal written notice, a contractor's overrun claim may properly be denied. *Software Research Associates*, ASBCA No. 33578, 88-3 BCA ¶ 21,046 at 106,304; *Falcon Research & Development Co.*, ASBCA No. 26853, 87-1 BCA ¶ 19,458 at 98,336-37, *aff'd*, 831 F.2d 1056 (Fed. Cir. 1987). The fact that the Government may have received a benefit from continued performance of work and incurrence of costs does not, by itself, alter these principles. *See, e.g., 3C Systems, supra; George G. Sharp, Inc.*, ASBCA Nos. 32338, 32339, 89-3 BCA ¶ 22,103 at 111,146, *aff'd*, 899 F.2d 1227 (Fed. Cir. 1990) (table). Thus, even if it is assumed the Government benefitted, as COLSA asserts, COLSA's benefit argument provides no basis for concluding that the CO acted improperly in disallowing the overruns.

4. *Notice And Written Authorization Requirements Waived*

Finally, COLSA argues in its briefs that the Government waived any notice and written authorization requirements with respect to costs exceeding those estimated for WAO Nos. 10, 11, and 12. According to COLSA, it

* In determining WAOs where an overrun had occurred, the CO "corrected" a WAO's total cost, which had been estimated by COLSA and authorized by the CO, to reflect calculation of the fixed fee in accordance with Schedule section B.5, *i.e.*, multiplication of a WAO's estimated productive labor hours by $4.91 (fixed fee divided by total estimated productive labor hours), rather than by 6.5%, as COLSA mistakenly had done. COLSA's error in calculating fixed fee when estimating and invoicing WAOs, which was first raised by COLSA in its letter of 12 December 1991, thus had no effect upon the CO's findings of WAO overruns and COLSA received the greater portion of fixed fee it was entitled as a fee installment under Schedule section B.5 for productive labor hours authorized and actually incurred with respect to WAO Nos. 10, 11, and 12. The CO simply declined to adopt COLSA's practice of using labor hours incurred, but not authorized, in allocating fee for the installment payments. In its brief, the Government correctly suggests that granting COLSA its requested higher fee with respect to WAO Nos. 10, 11, and 12 would, in effect, be authorizing retroactively the labor hours exceeding the WAO estimate for one purpose (allocation of fixed fee), but not another (reimbursement of costs).

Digitized by Google

did not have to comply with the provisions of Schedule section H.21 because Ms. Schrecongost advised with respect to another WSMR contract that it was not necessary to abide by the requirements, and the Government is precluded from objecting to the excess costs because it paid the vouchers for the costs shortly after their submission.

The Government may destroy its right of refusal to fund a cost overrun not approved in advance of incurrence. In order to do so, however, the Government must know there will be an overrun and then induce continued performance, *i.e.,* further incurrence of cost, through the conduct of an authorized official that is intended, or that reasonably could be construed as being intended, to be acted upon by a contractor unaware of the true facts. *E.g., American Electronics Laboratories, Inc. v. United States* [33 CCF ¶ 73,973], 774 F.2d 1110, 1113 (Fed. Cir. 1985); *George G. Sharp, supra,* at 111,145-46; *Falcon Research, supra,* at 98,339-41. COLSA has not shown such actions by the Government here.

The payment of COLSA's vouchers, which were submitted after incurrence of all the excess costs, while the parties were discussing whether the CO should disallow the costs, by an office unaware the CO had questioned the costs, in no way induced, or could even be construed reasonably as being intended to induce, "continued performance" by COLSA. COLSA incurred all the disputed costs *before* submission of the vouchers and was engaged in discussions with the CO over the allowability of those costs for several months before it became aware the vouchers had been paid. Further, the Allowable Cost clause incorporated in contract 0020 expressly provides that, before final payment is made, "[a]ny payment may be (1) reduced by amounts found by the [CO] not to constitute allowable costs ...." Such circumstances foreclose a finding of inducement with respect to payment of the vouchers. *See, e.g., Law Mathematics and Technology, Inc. v. United States* [33 CCF ¶ 74,148], 779 F.2d 675, 678-79 (Fed. Cir. 1985); *Dynamic Concepts, Inc.,* ASBCA No. 44738, 93-2 BCA ¶ 25,689; *3C Systems, supra,* at 119,818; *Hughes Aircraft Corp.,* ASBCA No. 24601, 83-1 BCA ¶ 16,396 at 81,517-20.

In addition, while two officials of COLSA state that they "did not seek changes to individual WAO's when the amounts stated in the WAO's were in an overrun condition" due to a telephone conversation they had with Ms. Schrecongost, a WSMR employee, the information they claim Ms. Schrecongost provided them in no way induced, or could even be construed reasonably as being intended to induce, "continued performance" of contract 0020 without adherence to Schedule section H.21. Contract 0020 expressly provides that "[n]o oral statement by any person ... shall modify or otherwise affect the terms of th[e] contract." Moreover, even if the restriction against oral modification is ignored, a statement by Ms. Schrecongost that, "if sufficient funds had been obligated to the overall contract, no modification of the *contract* was required" [emphasis added] cannot justify a failure by COLSA to obtain a modification of a *WAO.* As discussed above, Schedule section H.21 imposes the notice and authorization requirements regarding modification of "WAOs." A different provision, the LOF clause, sets forth notice and authorization requirements regarding modification of the "contract" to increase funding. Also, there has been no showing that Ms. Schrecongost had authority to excuse COLSA from complying with Schedule section H.21. The affidavits of COLSA's officials identify Ms. Schrecongost as a Government official with responsibility for administering a contract other than contract 0020. Ms. Schrecongost's affidavit confirms that she was not the CO for contract 0020. It states that she was a contract "specialist" assigned to contract no. DAAD07-89-C-0024 when she participated in the telephone conversation with COLSA's two officials. Such circumstances foreclose a finding of inducement with respect to the claimed statement by Ms. Schrecongost. *See, e.g., Mater Manufacturing, Inc.,* ASBCA No. 37499, 90-2 BCA ¶ 22,777 at 114,401; *George G. Sharp, supra,* at 111,146; *Hughes, supra,* at 81,517-19. Accordingly, COLSA has failed to cite evidence in the record, which would support a determination that the Government had lost its right of refusal to fund a cost overrun not approved in advance of incurrence, or proffer any other basis which would allow a conclusion that the CO had erred in disallowing the overrun costs and fee billed and paid for WAO Nos. 10, 11 and 12.

CONCLUSION

The appeal is denied and remanded to the parties for resolution of quantum.

Digitized by Google

[¶ 26,310] PAE GmbH

ASBCA No. 45456, August 20, 1993. Contract No. DAJA37-87-C-0262.

Procedure, Boards—Parties—Representation Before Board.—A government motion to dismiss an appeal filed on behalf of a foreign business association was denied, despite the government's contention that the business failed to comply with a board rule requiring the business to be represented before the board by one of its officers, because the general manager of the business had delegated in writing to the representative the authority to represent the business in all contract matters involving the United States. Even if the representative were not found to have been a corporate officer, the board determined, in view of the delegation, that this did not constitute a jurisdictional defect mandating dismissal.

Procedure, Boards—Pleadings—Complaint Sufficiency.—Although a contractor failed to style its pleadings as a complaint, the government's motion to dismiss the appeal on the basis of the complaint's nonconformity with board rule requirements was denied because the contractor's pleadings had been recognized as a complaint, and there was no requirement that the complaint conform to a particular form. The board rules expressly provide that a complaint must fulfill the generally recognized requirements of a complaint, but no particular form is required.

For the appellant: Heinz D. Bertram, Director of Contracts. For the government: Ralph Lohmann, Associate Counsel, Office of Counsel Europe (DLA).

Before PAUL and JAMES, Administrative Judges.

PAUL, Administrative Judge: This is a timely appeal of a contracting officer's decision denying appellant PAE GmbH's (PAE) claim for an equitable adjustment. PAE opted to use the accelerated procedures provided by Board Rule 12.3. Subsequently, the Government filed a motion to dismiss the appeal with prejudice. First, it alleged that PAE had failed to comply with Board Rule 26 because its representative was not a corporate officer; and, second, the Government contended that PAE's initial pleading did not conform to the requirements for a complaint which are set forth in Board Rule 6.

We deny the motion to dismiss and grant the Government's accompanying motion for an enlargement of time in which to file its answer.

FACTUAL BACKGROUND

It is undisputed that PAE is a *Gesellschaft mit beschraenkter Haftung, i.e.,* a German business association which corresponds to a close corporation under American law. The pertinent German statute, the Close Corporation Act, provides for the appointment by a close corporation of one or more individuals, denominated *Geschaeftsfuehrers* or business managers, who would be responsible to the stockholders for the overall management of the corporation. In this instance, PAE's *Geschaeftsfuehrers* are Messrs. Edward A. Shay and Allen E. Shay; and, in this capacity Mr. Allen E. Shay delegated in writing to Mr. Heinz D. Bertram, PAE's director of contracts, the following authority:

> Effective immediately, you are hereby delegated authority to represent PAE GmbH in all contractual matters vis-a-vis the US Government including, but not limited to, signing RFPs, proposals, contracts and contract modifications, requests for payment, claims against the US Government (except for the certification of claims exceeding $50,000), appeals of contracting officer final decisions, and other related actions. Your actions are subject to review and concurrence by the *prokurist(s).*
>
> This authority is valid until the end of your employment with PAE GmbH, or until withdrawn by the *Geschaeftsfuehrer,* whichever is sooner.

It is true, as the Government points out, that the Board's Rule 26 provides, in pertinent part, that "a corporation [may appear before the Board through] one of its officers." However, even if we were to find that Mr. Bertram was not a corporate officer, that fact would not constitute a jurisdictional defect leading us to dismiss the appeal with prejudice. Mr. Allen E. Shay, in his capacity as *Geschaeftsfuehrer,* has delegated to Mr. Bertram the authority to file "appeals of contracting officer final decisions." Accordingly, the appeal was properly filed, and we possess jurisdiction to review it.

©1994, Commerce Clearing House, Inc.

Digitized by Google

The Government's second ground for dismissal is also not well taken. On 6 January 1993, PAE filed a seven-page, single-spaced document entitled *"TITLE OF PLEADING"* to which it attached seven lengthy exhibits. PAE did not style the pleading a "complaint"; however, Board Rule 6 clearly states that "no particular form is required." In addition, our Recorder recognized the pleading as a complaint and accepted it for filing. This Board functions as an informal forum for resolution of appeals. Accordingly, it is not our province to penalize unrepresented contractors because they do not conform to procedural niceties in formulating their pleadings. Therefore, we reject this basis for the Government's motion.

The Government's motion to dismiss was accompanied by a motion for extension of time to file its answer. The latter motion is granted, and the Government will file its answer within 20 days after receipt of this decision.

CONCLUSION

The motion to dismiss is denied.

[¶ 26,311] Flight International, Inc.

ASBCA No. 45300, August 17, 1993. Contract No. N00019-91-C-0190.

Procedure, Boards—Pleadings—Adequacy of Statement.—The government's motion to dismiss an appeal for failure to state a claim upon which relief could be granted was denied because the allegations of improper government delay in awarding the contract and the contractor's resulting increased costs were sufficient to state a claim for compensation. Although the facts alleged in the complaint related to preaward matters, it was clear that the contractor was seeking to recover under its express contract. The asserted basis for recovery for delay in award and start-up was an unreasonable government delay in the initiation of the contract work, which could be viewed, according to the contractor, as a constructive change or possibly a breach of contract.

For the appellant: Vandeventer, Black, Meredith & Martin, Norfolk, Virginia, by Daniel R. Weckstein and Howard W. Roth III. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Ronald L. Fouse, Trial Attorney.

Before TODD, RUBERRY, and VAN BROEKHOVEN, Administrative Judges.

TODD, Administrative Judge: Appellant Flight International, Inc. (Flight) has appealed the denial of its claim alleging bad faith of the Navy in delaying award of a contract for the Undergraduate Naval Flight Officer (UNFO) training program. The Government has moved that the Board dismiss the appeal for failure to state a claim upon which relief can be granted. We deny the motion.

STATEMENT OF FACTS

The Government's initial award of the UNFO contract was made to Sabreliner Corporation on 3 March 1990, but that award was held improper by the Comptroller General in a decision issued 28 September 1990, which stated that "award to any offeror other than Flight International would be an abuse of discretion."

In April 1989, appellant had purchased a prototype Learjet for delivery in October 1989, the Navy's initially stated contract award date, for $3,445,000. Appellant retained the aircraft pending the outcome of the protest.

By letter dated 4 October 1990, the Navy informed Flight that it would follow the Comptroller General's recommendation.

The Navy delayed award of the contract to Flight from 28 September 1990 pending a pre-award survey regarding Flight's capability to perform the contract, the provision of performance guarantees by Flight, the issuance of a Certificate of Competency (COC) to Flight by the Small Business Administration (SBA) on 7 January 1991, initiation by the Navy of a size protest at SBA with respect to Flight's status as a small business, Navy requests to the SBA to reconsider its issuance of the COC to Flight, reissuance of the COC to Flight on 8 February 1991, a third reissuance of the COC, and repeated appeals of the SBA determination made 4 February 1991, that Flight was a small business.

Appellant believes that the purpose of the Navy's actions was solely to delay contract

Digitized by Google

award to Flight and destroy the company and has asserted that the Navy acted in bad faith.

In May 1991, appellant sold the Learjet aircraft to mitigate costs associated with the delay in award.

On 11 June 1991, Flight filed an action in United States District Court for the Eastern District of Virginia for an injunction to obtain award of the contract. The lawsuit was settled with an agreement by the Navy to award the contract to Flight.

On 9 July 1991, the Navy awarded contract N00019-91-C-0190 for the UNFO training services to appellant. The contract called for services to assist in radar and navigation training, including airborne training service hours on contractor-furnished aircraft. The initial training capability was scheduled to begin 18 months after award. (R4, tab 1, pp. 2-1, 5-1) This was a short delivery schedule for appellant to prepare to meet.

In order to comply with the delivery schedule, appellant was required to have a prototype Learjet aircraft available immediately upon contract award to make necessary modifications to the aircraft and to begin flight testing.

On 12 September 1991, Flight submitted a certified claim for an equitable adjustment in the amount of $2,865,504.98 on the grounds of failure to make timely award of the contract and bad faith. Flight claimed compensation for costs associated with the prototype aircraft from March 1990 until May 1991, including facilities cost of capital, depreciation, sales commission costs, costs of modifications required by the buyer of the aircraft, insurance costs, and hangar costs. An additional amount of $754,970 was claimed for the increased replacement cost of the aircraft required to be purchased after award. Other claims were for costs incurred prior to award for consultants who provided assistance in bid revalidation, responding to the Navy's pre-award survey, and the SBA COC process. Appellant claimed employee costs for three individuals assigned to the UNFO project during the period 1 October 1990 to 30 June 1991. In addition, Appellant also claimed entitlement to recover certain miscellaneous costs, indirect costs, and an amount for profit or fee.

The Contracting Officer issued a final decision denying the claim on 14 August 1992 (R4, tab 20).

DECISION

In considering a motion to dismiss for failure to state a claim upon which relief can be granted, all facts alleged by the non-moving party must be accepted as true. *Robert K. Adams,* ASBCA No. 34519, 89-2 BCA ¶ 21,699. We have stated the facts above on the basis of appellant's complaint and solely for purposes of deciding the motion. Whether the facts alleged or proved support the relief requested remains to be seen. As a general rule, a motion to dismiss for failure to state a claim is viewed with disfavor and should rarely be granted. *Bird-Johnson Company,* ASBCA No. 30592, 86-1 BCA ¶ 18,707, at 94,096.

The Government argues that Flight has not identified a legal theory under which it can recover, but allegations of improper delays by the Government in awarding the contract and resulting increased costs are sufficient to state a claim for compensation. The asserted basis for recovery for delay in award and start-up is an unreasonable Government delay in initiation of the contract work, which, according to appellant, may be viewed as a constructive change or possibly a breach of contract. *Hoosier Lawn Pro,* ASBCA No. 43742, 92-3 BCA ¶ 25,097. Every contract imposes on each party a duty of good faith and fair dealing in its performance. *S & S Equipment,* ASBCA No. 36681, 89-1 BCA ¶ 21,469. Where the contractor was led to maintain its bid price by improper acts of the Government, the equitable remedy of reformation, which appellant also asserts, may also be available. *LaBarge Products,* ASBCA No. 33593, 93-2 BCA ¶ 25,630.

Although the alleged facts relate to pre-award matters, Appellant is seeking to recover under its express contract. *LaBarge Products,* ASBCA No. 33593, 91-3 BCA ¶ 24,110. This is not a claim seeking recovery of bid preparation costs on the grounds of bad faith evaluation of proposals for a new contract on an implied contract theory for which there would be no Board jurisdiction. *See Coastal Corporation v. United States* [31 CCF ¶ 71,373], 713 F.2d 728 (Fed. Cir. 1983); *Kirk Brothers Mechanical Contractors, Inc.,* ASBCA No. 35771, 90-3 BCA ¶ 23,052. We have concluded that we have jurisdiction to hear and decide appellant's claim.

Respondent's motion to dismiss with prejudice is denied.

Respondent also filed a Motion for More Definite Statement on which the Board sus-

©1994, Commerce Clearing House, Inc.

Digitized by Google

pended action pending the disposition of the Motion to Dismiss. The Government requests that the Board order appellant to file a proper complaint, setting forth numbered paragraphs containing direct, concise allegations in accordance with Board Rule 6(a). Flight's complaint is 27 pages of narrative, taken largely verbatim from its claim. In its Response to the Government's Motion to Dismiss, appellant noted that its complaint was filed *pro se* and suggested that amendment of the complaint under Board Rule 7 would be appropriate. Accordingly, appellant is hereby ordered to file an amended complaint within 20 days of receipt of this decision.

[¶ 26,312] Tomahawk Construction Co.

ASBCA No. 45071, August 18, 1993. Contract No. DACA45-88-C-0071.

Pricing of Adjustments—Interest—Incorporation of Cost Principles.—Interest paid upon funds borrowed by a contractor to finance contract modification work was not reimbursable, because there was no contractual or statutory basis for the contractor's recovery of such interest. The contract contained the Pricing of Adjustments clause, which makes Federal Acquisition Regulation cost principles applicable to equitable adjustments. FAR expressly provides that interest on borrowings and costs of financing are unallowable. The decisions cited by the contractor to support its position that such interest is recoverable involved contracts that did not contain a Pricing of Adjustments clause.

For the appellant: Rebecca L. Campbell, Kansas City, Kansas. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Willie J. McAlister, Jr., Engineer Trial Attorney, U.S. Army Engineer District, Kansas City.

Before HARTMAN, RUBERRY, and PAUL, Administrative Judges.

HARTMAN, Administrative Judge: This is a timely appeal under the Contract Disputes Act of 1978, 41 U.S.C. § 601 *et seq.*, from a contracting officer's final decision denying a claim by appellant, Tomahawk Construction Company ("Tomahawk"), for interest paid upon funds allegedly borrowed to finance contract modification work. Pursuant to Rule 11, the parties have elected to waive a hearing and submit the case for decision on the record. Only the issue of entitlement is before us for decision.

FINDINGS OF FACT

On 2 May 1988, the Army Corps of Engineers ("Corps") awarded to Tomahawk a fixed-price contract, No. DACA45-88-C-0071, in the amount of $5,733,657 for construction of the B-2 Support Facilities, Security Police Complex at Whiteman Air Force Base, Missouri (R4, tabs 3, 4). The parties' contract contained a standard Pricing of Adjustments clause (DFARS 52.243-7001), which states:

> When costs are a factor in any determination of a contract price adjustment pursuant to the Changes clause or any other clause of this contract, such costs shall be in accordance with Part 31 of the Federal Acquisition Regulation and the DoD FAR Supplement in effect on the date of this contract.

(R4, tab 6)

More than 40 modifications were made to the parties' contract after award. The following chart sets forth the number, authority, executions, dollar amount, alleged notice to proceed ("NTP") date, and execution ("Ex.") date for the seven modifications at issue in this appeal:

Number	Authority/Clause	Executions	Amount	NTP Date	Ex. Date
P00007	Changes Clause	Bilateral	$ 16,499	11/09/88	10/13/89
P00010	Changes Clause	Bilateral	$ 23,733	12/28/88	10/26/89
P00011	Differing Site	Unilateral	$ 53,823	10/21/88	11/28/89
P00019	Changes Clause	Bilateral	$ 48,508	04/10/88	10/16/89
P00030	Changes Clause	Unilateral	$ 24,699	06/07/89	05/04/90
P00034	Changes Clause	Unilateral	$ 57,462	02/14/89	07/26/89
P00041	Changes Clause	Unilateral	$434,087	03/29/89	01/20/90

Tomahawk has stated it refused to execute some of these modifications because "of the interest it had accrued due to the Corps' failure to timely and promptly pay for the

Digitized by Google

extra work." (R4, tab 5; app. supp. R4, tab 1; app. br. at 5, 6)

On 9 April 1992, Tomahawk submitted a certified claim to the Corps' contracting officer seeking an equitable adjustment in the amount of $65,306 for "interest expense on borrowed capital" which "was a direct and proximate result of having to ... perform those contract modifications authorized and ordered by the Corps" (app. supp. R4, tab 1). In a final decision dated 12 June 1992, the contracting officer denied Tomahawk's claim because interest expense is not an allowable cost under the Pricing of Adjustments clause contained in the parties' contract (R4, tab 1). Thereafter, on 11 September 1992, Tomahawk noticed this appeal (R4, tab 2).

DECISION

Tomahawk contends in its briefs that it is entitled to fair and reasonable compensation for increased costs attributable to contract modifications, and it should be awarded reimbursement for interest paid on borrowed funds "associated with the performance of extra work." According to Tomahawk, the Court of Claims held that interest on borrowings to perform contract modification work was an allowable cost in *Bell v. United States* [13 CCF ¶ 82,406], 404 F.2d 975, 186 Ct. Cl. 189 (1968), and various tribunals have recognized the "continued vitality" of that holding. Tomahawk, however, misconstrues *Bell* and its progeny.

In *Bell,* the Court of Claims simply determined that the allowance of interest on borrowings as a cost under an equitable adjustment was not in conflict with 28 U.S.C. § 2516(a) (1964) or the decisions which implemented that Congressional policy. 404 F.2d at 984, 186 Ct. Cl. at 205. For many years, the Department of Defense, as a matter of policy, had denied interest as a cost under an equitable adjustment. The Department, however, altered its policy in November of 1954 "to allow interest on borrowings, as part of equitable adjustments under fixed-price contracts." *Id.* Based upon the Department's change in policy, this Board began allowing such costs in certain cases. *E.g., Kaman Aircraft Corp.,* ASBCA No. 10141, 66-1 BCA ¶ 5581 at 26,085-87. The Court of Claims subsequently held in its 1968 *Bell* decision that the Board's practice regarding recovery of interest on borrowings, which was by then "long-standing," was "allowable." 404 F.2d at 984, 186 Ct. Cl. at 205.

During 1970, the Department of Defense again altered its policy concerning interest on borrowings by making its standard cost principles applicable not only to determination of allowable costs under cost-reimbursement contracts, but to the pricing of all equitable adjustments under fixed-price contracts through the inclusion of a "Pricing of Adjustments" clause in its fixed-price contracts. *Blue Cross Association and Blue Shield Association,* ASBCA No. 25778, 89-2 BCA ¶ 21,840 at 109,903-04; *R.L. Spencer Construction Co.,* ASBCA No. 18450, 75-2 BCA ¶ 11,604 at 55,424; Defense Procurement Circular No. 79; ASPR 7-103.26. The Department's cost principles (ASPR 15-205.17) expressly provided that interest on borrowings, however represented, was not allowable. *E.g., International Equipment Services, Inc.,* ASBCA Nos. 21104, 23170, 83-2 BCA ¶ 16,675 at 82,925; *R.L. Spencer, supra,* at 55,424. Based upon the Department's 1970 change in policy, *i.e.,* inclusion in contracts of the Pricing of Adjustments clause (ASPR 7-103.26), this Board subsequently held on various occasions that a contractor could not recover interest on borrowings as part of an equitable adjustment. *E.g., G P Construction & Development Corp.,* ASBCA No. 33121, 91-3 BCA ¶ 24,302 at 121,439-40; *E.L. David Construction Co.,* ASBCA Nos. 29225, 34387, 89-3 BCA ¶ 22,140 at 111,436.

The United States Court of Appeals for the Federal Circuit, one of the successors to the Court of Claims, when presented with the issue of whether the cost of interest on borrowings could be allowed as part of an equitable adjustment under a contract containing the Pricing of Adjustments clause, reached the same conclusion as this Board, that it could not. *Servidone Construction Corp. v. United States* [36 CCF ¶ 75,797], 931 F.2d 860, 863 (Fed. Cir. 1991), *aff'g,* 19 Cl. Ct. 346 (1990). The cases cited by Tomahawk in its briefs as standing for the opposite proposition and reaffirming *Bell* all involve contracts which did not contain the Pricing of Adjustments clause (ASPR 7-103.26, DAR 7-103.36, or DFARS 52.243-7001)* and which clause thus did not apply to the pricing of equitable adjust-

* In 1978, Department of Defense ("DOD") Directive No. 5000.35 redesignated the Armed Services Procurement Regulation ("ASPR") as the Defense Acquisition Regulation ("DAR"). *Lincoln Services, Ltd. v. United States* [25 CCF ¶ 82,506], 678 F.2d 157, 162 n.11, 230 Ct. Cl. 416, 425 n.11 (1982). Today, the Pricing of Adjustments clause can be found in the DOD Federal Acquisition Reg-

Digitized by Google

ments, ASPR 15-205.17 or one of its successors (DAR 15-205.17 and FAR 31.205-20). *See, e.g., Gevyn Construction Corp. v. United States* [34 CCF ¶ 75,350], 827 F.2d 752, 753 (Fed. Cir. 1987) (1963 DOD contract); *S.S. Silberblatt, Inc. v. United States* [29 CCF ¶ 81,610], 228 Ct. Cl. 729 (1981) (Postal Service contract); *Fischbach & Moore Int'l Corp. v. United States* [27 CCF ¶ 80,268], 617 F.2d 223, 224, 223 Ct. Cl. 119, 122 (1980) (USIA contract); *Dravo Corp. v. United States* [25 CCF ¶ 82,542], 594 F.2d 842, 843, 219 Ct. Cl. 416, 420 (1979) (1969 DOD contract); *N.Y. Shipbuilding Co.*, ASBCA No. 16164, 76-2 BCA ¶ 11,979 at 57,402 (pre-1964 DOD contracts).

Tomahawk's contract with the Corps contains the Pricing of Adjustments clause (DFARS 52.243-7001) which makes standard cost principles, such as FAR 31.205-20, applicable to equitable adjustment pricing. FAR 31.205-20 expressly provides that "[i]nterest on borrowings (however represented), ... [and] costs of financing and refinancing capital ... are unallowable ...." Thus, this appeal is governed by *Servidone* and similar cases, rather than by *Bell* and its progeny, and Tomahawk is precluded from recovering interest on borrowings as part of an equitable adjustment to its contract. *Servidone Construction*, 931 F.2d at 863; *COMSI, Inc.*, 88-1 BCA ¶ 20,245 at 102,477.

Tomahawk asserts in its briefs that denial of reimbursement for interest expense on borrowings would arbitrarily deprive it of the time cost of money and contravene the spirit of the FAR, Prompt Payment Act, and Fifth Amendment, which Tomahawk states is to make "whole" individuals who suffer expense due to Government action. However, the Supreme Court has stated that:

> "[T]he immunity of the United States from liability for interest is not to be waived by policy arguments of this nature. Courts lack the power to award interest against the United States on the basis of what they think is or is not sound policy."

Library of Congress v. Shaw, 478 U.S. 310, 321 (1986), *quoting United States v. N.Y. Rayon Importing Co.*, 329 U.S. 654, 663 (1947). Moreover, although Tomahawk also asserts that, in attempting to recover its cost of interest on borrowings, it is not seeking " 'interest per se," but a "business expense" or "enhanced rate of profit," the prohibition against the allowance of interest cannot be circumvented by recharacterizing one's claim as seeking something other than "interest." *See, e.g., J.D. Hedin Construction Co. v. United States* [17 CCF ¶ 81,001], 456 F.2d 1315, 1330, 197 Ct. Cl. 782, 807 (1972); *Servidone*, 19 Cl. Ct. at 383. Accordingly, the bar against interest (FAR 31.205-20) applicable to Tomahawk's contract (DFARS 52.243-7001) precludes, as part of an equitable adjustment, the recovery of reimbursement for interest expense on borrowings "associated with the performance of extra work" which Tomahawk seeks here.

CONCLUSION

The appeal is denied.

[¶ 26,313] C.M. Lowther, Jr.

ASBCA No. 44624, August 17, 1993. Contract No. N62467-87-C-4346.

Pricing of Adjustments—Total Cost Method—Subcontractor's Billing.—A subcontractor's demand for total hauling services was not a proper basis for determining a contractor's equitable adjustment for damage caused by the malfunction of a government-owned and -operated sump pump, because the contractor failed to present a reasonable basis for the computation of the amount attributable to the malfunction. The contractor attempted to isolate the increased cost of hauling wet soil by deducting the amount that it asserted was the hauling subcontractor's bid cost estimate for its services. However, there was no corroboration of that amount or any breakdown of the component costs. On the other hand, the government's proposed equitable adjustment had independent support in the record, and the contractor produced no evidence showing that the amount was insufficient.

Attorney Fees and Costs Under Equal Access to Justice Act—Application Procedures—Accompanying Documentation.—A contractor's claim for attorney fees

(Footnote Continued)

ulation Supplement ("DFARS"). *Blue Cross, supra*, at 109,904 n.38.

Digitized by Google

under the Equal Access to Justice Act was held in abeyance, pending the contractor's furnishing information and documents as described in the board's procedures for claims under EAJA. The decision that the government was liable for an equitable adjustment was sufficient to establish the contractor as a prevailing party. Thus, the submission of the claim was treated as the filing of an application under the EAJA.

Pricing of Adjustments—Claim Preparation Costs—Proposal for Equitable Adjustment.—A contractor was not entitled to recover the cost of preparing its equitable adjustments proposal, because there was no direction by the government to prepare the proposal. The contractor voluntarily prepared an equitable adjustment proposal in aid of its claim for additional compensation under the contract. Reimbursement of such costs of prosecuting a claim is prohibited by federal acquisition regulations.

For the appellant: C.M. Lowther, Jr., Owner. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Alan R. Caramella, Trial Attorney, Naval Facilities Engineering Command, Chesapeake Division, Washington, D.C.

Before MOED, SPECTOR, and RUBERRY, Administrative Judges.

MOED, Administrative Judge: In an earlier decision (hereinafter the "Entitlement Decision"), we held that appellant was entitled to recover for added expense caused by the malfunction of a Government-owned and operated sump pump. The parties have not been able to agree on the amount due appellant and have referred the matter back to the Board. By agreement, the determination of that amount will be made on a documentary record pursuant to Rule 11. Familiarity with the Entitlement Decision is presumed. Findings from that decision are referred to herein as "EF _"

FINDINGS OF FACT

1. In conjunction with removal of asbestos insulation around pipes in Building 111, Marine Corps Recruit Depot, Parris Island, SC, the contract required the excavation and disposal of the upper six inches of soil in the crawl space of the building which had become contaminated with asbestos fibers that had fallen from the insulation. In the course of this work, which was performed by appellant's subcontractor, Industrial Insulation Co. (IIC), a sump pump located in a mechanical room adjoining the crawl space malfunctioned, causing water to overflow into appellant's work area in the crawl space. Appellant subsequently submitted a claim in the amount of $90,042.17 for added performance costs resulting from the overflow. (ET 1-4, 19)

2. The claim was denied by the contracting officer, resulting in a timely appeal to the Board under ASBCA No. 38407. The appeal was sustained in a decision dated 12 August 1991, published at 91-3 BCA ¶ 24,296. We held that appellant was entitled to an equitable adjustment for added costs of the overflow. The only damage identified in the findings was the added cost of transportation of water-saturated soil removed from the areas of the crawl space affected by the overflow (EF 20). The quantum of the equitable adjustment was referred back to the parties for negotiation. They have not been able to agree on that amount and have returned the issue to the Board for determination.

3. Appellant's proposal, dated 20 March 1993, seeks an equitable adjustment in the amount of $143,532. In that document, appellant claims that the overflow into the crawl space caused damages as follows:

CLAIM A. "[E]xtra disposable materials (used for safety purposes) ... used during the 56 days it took to remove the asbestos and contaminated soil from the crawl space." *Ibid.* at 4. These materials included: disposable coveralls, respirators, asbestos bags, gloves, filter bags, etc.—$8,569.61.

CLAIM B. The rental cost of the HEPAVAC machine that could not be used for soil removal in the crawl space—$5,966.40.

CLAIM C. Additional air quality sampling and air monitoring as required by OSHA regulations for 56 days—$16,705.

CLAIM D. Additional labor cost for removal of asbestos and contaminated soil from crawl space, consisting of 1 supervisor and 6 laborers for 56 days actually required *vice* 1 supervisor and 2 laborers for 24 days planned—$34,438.

CLAIM E. Additional transportation expense resulting from added weight of wet soil removed from crawl space—$9,677.

4. The amounts above include overhead and profit of IIC at the rates of 13 percent and 10 percent, respectively. In addition, the

©1994, Commerce Clearing House, Inc.

Digitized by Google

claim includes: attorney fees pursuant to the Equal Access to Justice Act (EAJA) ($2,550); appellant's overheads (15 percent), profit (10 percent), and added bond premiums (3 percent) (totalling $24,440); and interest under the Contract Disputes Act ($38,715).

5. Appellant also seeks payment of $2,770 disbursed to T.A. McMullen Consultants, Inc. for preparation of its present equitable adjustment proposal. The proposal is a reworking of appellant's previous claim which we dealt with in our entitlement decision.

6. The premise of Claims A, B, C, and D, *supra,* is that in bidding the contract, appellant expected to complete soil removal in the crawl space in 24 working days using a HEPAVAC machine with one supervisor and two laborers. Appellant alleges in the proposal, at 2, that:

> Due to the wet conditions caused by the overflow, the Hepa Vac [sic] method was impossible to use. Consequently, IIC was forced to use manual labor in the crawl space to remove asbestos and contaminated soil by hand. This took an average of 1 supervisor and six laborers 56 days to accomplish the intended scope of work. Consequently, IIC has used the difference of 32 days to establish the additional labor cost and letters from vendors to establish other cost.

7. Appellant's decision to discontinue use of the HEPAVAC machine and to resort to the hand method of removing soil in the crawl space was not occasioned by the overflow. That decision was prompted, instead, by moisture normally prevailing in the environment of the crawl space which rendered the HEPAVAC machine unsuitable for use. The moisture gave the soil a thick, pasty consistency which caused the vacuum hoses of the machine to become clogged and constantly needing to be cleared. Because of this problem, appellant abandoned use of the machine after only four days and changed to hand removal of the soil. (EF 11-17) It has not been established that any of the 32 additional days allegedly expended for hand removal of soil from the crawl space was due to the condition of the soil in the areas affected by the overflow.

8. Moreover, the overflow could not have caused or contributed to the malfunction of the HEPAVAC machine because the machine was never used in areas of the crawl space that received the overflow (EF 11, 13).

9. The added expense of hauling soil removed from the affected areas of the crawl space to the disposal site was proximately caused by the overflow. Because of the added weight of the water in the soil, the containers could only be partially filled in order to avoid violating weight limits on the state roads. This required more trips and, thus, an increased expense (EF 20).

Quantity of Crawl Space Soil Affected By Overflow

10. In the Entitlement Decision, we found that the area of standing water measured approximately 76 feet long and 19 feet wide. The adjacent area of water-saturated soil was depicted on a drawing in the record (exh. G-1). As so depicted, that area was approximately one and one-half times the size of the standing water area. The contract required removal of soil in the crawl space to a depth of six inches. The volume of soil required to be removed from these two areas, accordingly, is as follows:

Standing water area: (76 feet × 19 feet × .5 feet)	—	722 cubic feet
Saturated soil area: (150% of Standing water area)	—	1,083 cubic feet
Total Volume		1,805 cubic feet
Total Volume		66.85 cubic yards

11. The soil excavated from the crawl space was placed in dumpster containers for removal. These containers had a capacity of 24 cubic yards when full. ATS, Inc. the hauler hired by IIC to remove soil excavated from the crawl space, had priced its offer to IIC on the basis of hauling full containers. The wet soil removed from the crawl space, however, was heavier than the dry soil that ATS anticipated would be carried. The added weight made it necessary to cut each load in half (*i.e.,* 12 cubic yards per load) in order to stay within state road weight limits.

12. Under conditions of full containers, approximately 2.8 loads would have been employed to carry away the 66.85 cubic yards of soil in the areas affected by the overflow. When the containers could be transported only half full, an additional 2.8 loads were required in order to carry away the same volume of soil.

Digitized by Google

Parties' Proposals for Equitable Adjustment

13. *Appellant's Proposal*—The amount of $9,677 claimed by appellant for the increased transportation expense consists of an added cost to the third tier haulage subcontractor, ATS, Inc., of $7,785 plus $1,892 overhead and profit mark-ups for IIC. The added cost of the ATS subcontract was arrived at by subtracting the amount that appellant states was included in IIC's subcontract bid for transportation of the excavated soil ($16,865) from the amount demanded by ATS for the entire operation after completion of the services ($24,650). That demand, set forth in a letter to IIC dated 29 January 1993, reads in pertinent part as follows:

> We hereby request payment for the hauling of contaminated soil from Parris Island to Appleton Landfill in the amount of $24,650. The amount of loads hauled was higher than anticipated due to the weight of each load. We were only able to haul approximately 12 yards in each load. Below is a breakdown of charges:
>
> | | |
> |---|---|
> | 35 loads @ 650 per load | $22,750.00 |
> | Rent: 2-20 yd for 4mo @ $75/mo | 600.00 |
> | Service Charge: 2 trips—unable to get cans | 500.00 |
> | Delivery Charge: 3-20 yd @ $250.00 | 750.00 |
> | 1 hour wasted time waiting for paperwork | 50.00 |
> | TOTAL AMOUNT DUE | $24,650.00 |

14. The record does not indicate the composition of IIC's subcontract bid amount for transportation of the excavated soil or how ATS' demand breaks down between services included in the original agreed price and extra services due to the higher than anticipated weight of the soil. As to the latter, only a portion of that greater weight was attributable to wetness caused by the overflow. Moisture causing added weight was present in the crawl space soil caused by conditions, such as hot and humid air, that normally prevailed in that area (ET 16). The record does not show how much of ATS' demand represents added costs for the overflow consequences alone.

15. *Government's Proposal*—The Government offered an equitable adjustment of $5,000 consisting of $3,000 for added transportation cost of containers of wet soil and $2,000 for any additional costs incurred for removal of the wet soil (affidavit of Dewayne Roby, dated 26 May 1993). Providing for the latter contingency was reasonable since there may have been added costs for movement of the wet soil from the crawl space to the containers.

16. The record contains a cost estimate in support of the Government's offer. The estimate includes overhead and profit for IIC at the rates of 13 percent and 7.31 percent. As to appellant, rates of 8 percent for overhead, 2 percent for added bond premium, and 7.10 percent for profit have been used.

17. The amount included in the Government's offer for added transportation cost is consistent with an estimate of that cost based on other information in the record. Because of the added weight of the moist soil, an additional 2.8 loads were necessary for carrying away the 66.85 cubic yards of soil in the areas affected by the overflow. Applying the rate of $650 per load shown in ATS' bill, which has not been challenged by the Government, and the rates for overhead, added bond premium, and profit set forth in the Government estimate (finding 16), the amount of the equitable adjustment for the added transportation cost would be computed as follows:

Added transportation expense ($650× 2.8)	$1,820.00
IIC overhead (13 percent)	236.60
	2,056.60
IIC profit (7.31 percent)	150.34
	2,206.94
Appellant's overhead (8 percent)	176.55
	2,383.49
Appellant's profit (7.10 percent)	169.23
	2,552.72

©1994, Commerce Clearing House, Inc.

Digitized by Google

Additional bond premium (2 percent)	51.05
Total	$2,603.77

18. The Government's offer was formalized in a written contracting officer's decision dated 26 May 1992. Thereafter, the contracting officer issued unilateral contract modification P00002, dated 24 March 1992, determining that the amount of $5,000 was "a fair and equitable adjustment" for the additional transportation expense and authorizing invoicing and payment of that amount.

DECISION

As claimant, appellant had the burden of "establishing the fundamental facts of liability, causation, and resultant injury." *Wunderlich Contracting Co. v. United States* [11 CCF ¶ 80,069], 351 F.2d 956, 968 (Ct. Cl. 1965). In the entitlement phase, we addressed the matter of liability and decided that appellant had been damaged by the overflow of water into the crawl space and that the Government was responsible for such overflow. In the present quantum phase, we address the remaining elements, namely, the types of damage proximately caused by that event and the amount due from the Government therefor.

Appellant claims that the overflow caused five types of damage. The record, however, shows that only the added cost of transporting wet soil removed from the standing water and water-saturated soil areas of the crawl space (Claim E) was proximately caused by the overflow. The other four categories of claimed damage (Claims A-D) were caused by the unsuitability of the HEPAVAC machine for use under the conditions normally prevailing in the crawl space.

While appellant was not obliged to prove the amount of that additional transportation expense with "absolute exactness or mathematical precision" *Electronic & Missile Facilities v. United States* [14 CCF ¶ 83,109], 416 F.2d 1345, (Ct. Cl. 1969), it was required to present, at least, "a reasonable basis for computation even though the result [was] only an approximation of damages." *L.B. Samford, Inc.*, ASBCA No. 32645, 93-1 BCA ¶ 25,228 at 125,660.

The amount put forward by appellant as the added transportation expense (exclusive of overheads and profit) is based on the haulage subcontractor's demand for $24,600 for the total quantity of services rendered. While the demand speaks of a "higher than anticipated" number of loads due to the weight of each load, it does not break out any resulting increased cost.

Appellant attempts to isolate that increased cost by deducting, from the demand, an amount which it asserts to be IIC's bid cost estimate for these services. However, there is no corroboration of that amount from IIC's records nor has any breakdown of the component costs been provided. Given these deficiencies in the underlying information, appellant's basic figure is simply not credible and does not afford the "reasonable basis for computation," *supra*, needed for serving as the basis of the equitable adjustment.

The increased transportation cost proposed by appellant would not be acceptable, even if it were credible. It represents the entire increased cost of transportation of the crawl space material. Appellant is entitled to recover only the portion of increased cost attributable to the overflow.

The Government has proposed an equitable adjustment which has independent support in the record (findings 15, 17). Appellant has produced no evidence showing that the amount is insufficient and has failed to substantiate its own proposal. In that state of the record, we conclude, and so hold, that the Government's offer of $5,000 constitutes an adequate equitable adjustment for the increased costs that appellant is entitled to recover. *L.B. Samford, supra* at 125,661.

Claim for Attorney Fees

Appellant claims attorney fees under the Equal Access to Justice Act (EAJA), 5 U.S.C. § 504, in the amount of $2,550. The decision that the Government is liable for an equitable adjustment for the effects of the overflow is sufficient to establish appellant as a prevailing party in this appeal, authorizing the filing of an application for an award under EAJA. *Aqua-Fab, Inc.*, ASBCA Nos. 34283, 36258, 91-1 BCA ¶ 23,655. The submission of the claim, accordingly, will be treated as the filing of said application. Further processing, however, will be held in abeyance pending appellant's furnishing the information and documents described in the Board's Interim Procedures for Claims under EAJA.

Digitized by Google

Claim for Proposal Preparation Costs

Appellant also seeks to recover $2,770 expended for preparation of its present equitable adjustment proposal. There was no direction by the Government to prepare the proposal. It was an action voluntarily undertaken by appellant in aid of its claim for additional compensation under the contract. Under these circumstances, there was no obligation on the part of the Government to pay for preparation of the proposal. Indeed, reimbursement of such costs of prosecuting a claim is prohibited by FAR 31.205-33.

Conclusion

For the added work that was required as the result of the overflow into the crawl space, appellant is entitled to recover $5,000 plus interest pursuant to section 12 of the Contract Disputes Act (CDA), 41 U.S.C. § 611, from 13 August 1990.

[¶ 26,314] CS&T General Contractors, Inc.

ASBCA No. 43657, August 24, 1993. Contract No. F49642-89-C-0212.

Procedure, Boards—Reconsideration—Clarification.—The government's motion to clarify a board holding that did not expressly exclude the recovery of costs for unabsorbed or extended fixed overhead costs was granted, even though the contractor contended that the board's power to correct a decision is limited to ministerial, arithmetic, or other nonjudgmental mistakes that do not affect the award, because board rules authorize the board to correct an error, including corrections changing a party's recovery. The board determined that there was no inconsistency between the board's initial holding that the record did not establish the elements of proof of unabsorbed and extended overhead costs and the final holding that the contractor was entitled to recover any increased costs incurred as a result of differing site conditions and suspensions of work. However, the decision was clarified to state that the contractor was entitled to recover any increased costs other than unabsorbed or extended fixed overhead costs incurred as a result of differing site conditions and suspensions of work.

Procedure, Boards—Reconsideration—Timeliness.—A government motion to clarify a board holding was timely, even though it bore a postage meter stamp dated on the 29th day after the government received the board's decision, because an uncanceled postage meter date stamp on an envelope containing a motion for reconsideration, together with a supporting affidavit that the envelope was mailed on the same date as the postage meter date stamp, constituted the filing of the motion on that date. Although the contractor contended that the date of physical receipt, rather than a postmark date, governs the timeliness of a motion for reconsideration, it is well established under the Contract Disputes Act of 1978 that a postmark date on a motion for reconsideration constitutes *prima facie* proof of the date of filing the motion.

For the appellant: Sadur, Pelland & Rubinstein, Washington, D.C., by Francis J. Pelland. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Diana S. Dickinson, Trial Attorney.

Before JAMES, RUBERRY, and RIISMANDEL, Administrative Judges.

JAMES, Administrative Judge:

Findings

The Board decided the appeal of *CS&T General Contractors, Inc.*, ASBCA No. 43657, 93-3 BCA ¶ 26,003, on 28 April 1993. Our certified mail receipts establish that on 3 May 1993 respondent received its copy of that decision. On 3 June 1993 we received respondent's 1 June 1993 motion styled "RESPONDENT'S MOTION TO CORRECT ERROR IN THE DECISION" pursuant to Rule 5(b) of the Board's Rules, whose second paragraph states:

> Should the Board determine it more appropriate that this Motion be styled a Motion for Reconsideration under the Board's Rule 29, Respondent requests that the Board consider this Motion to be Respondent's Motion for Reconsideration.

According to respondent, our holdings that appellant (i) "may not recover unabsorbed overhead costs for any delay during the original 210-day contract performance period"

©1994, Commerce Clearing House, Inc.

Digitized by Google

(slip op. at 9), which 210 days included the 44 day suspension in 1989 and the nine day suspension in April 1990, and (ii) "cannot recover extended overhead costs for the 176 days of delay in 1990" (slip op. at 10), which included the 12 day suspension in July 1990, conflict with (iii) our final holding that appellant is "entitled to recover any increased costs incurred as a result of the differing site conditions and suspensions of work for 44 days in 1989 and 21 days in 1990."

The Board's 3 June 1993 letter noted that respondent mailed said motion in an envelope on which it affixed a 1 June 1993 postage meter stamp, but which envelope bears no postmark dated by the U.S. Postal Service, and ordered appellant to respond to the respondent's 1 June 1993 motion.

Appellant's 10 June 1993 Motion to Dismiss argues that "Respondent's Motion to Correct Error in the Decision" presents no new facts or law or matters of special significance not already in the record and seeks to reduce the award to appellant; accordingly, it must be treated as a "Motion for Reconsideration"; and such motion was untimely because filed at the Board on 3 June 1993. The 1 June 1993 metered date on the envelope in which respondent's motion was mailed is the 29th day after respondent received our decision. Appellant argues that the date of physical receipt, rather than a postmark date, governs the timeliness of a motion for reconsideration.[1]

Respondent's 9 July 1993 opposition to appellant's motion to dismiss submits affidavits attesting that sometime after 4:00 p.m. on 1 June 1993 respondent's trial attorney gave the ASBCA No. 43657 motion to her clerk who placed the motion in envelopes addressed to appellant and the ASBCA and went to obtain proper postage thereon from respondent's mailroom; the mailroom personnel applied postage meter date stamps on those envelopes; the clerk returned the metered mail envelopes to the trial attorney; and at 6:30 p.m. the trial attorney placed those envelopes in the U.S. Postal Service receptacle outside the West Carrollton, Ohio, post office.

Respondent argues that (a) its motion to correct error is not a motion for reconsideration, because it does not question the Board's factfinding or legal holdings, request clarification or consideration of new evidence, but rather requests correction of "an apparently inadvertent but obvious inconsistency between the last two conclusory paragraphs of the decision and the specific holdings of fact and law," citing various precedents for the rule that the Board may vacate or correct a decision even after the 30 day period for filing a motion for reconsideration, which is inapplicable to respondent's motion; (b) if considered a motion for reconsideration, the postal meter date stamp establishes that the motion was timely filed; and (c) a letter mailed on 3 June 1993 in Dayton, Ohio, cannot be delivered to Falls Church, Virginia, that same day, so it must have been mailed no later than 2 June 1993, the 30th day after respondent received our decision.

Appellant's 21 July 1993 response to respondent's opposition argues that the principal decisions on which respondent relies for the rule that the postmark date is the date of filing of a motion for reconsideration, *Union Precision & Engineering*, ASBCA No. 37549, 92-1 BCA ¶ 24,662, and *Hugo Auchter GmbH*, ASBCA No. 39642, 91-2 BCA ¶ 23,777, were erroneously decided because not supported by the decisions they cited. Appellant also argues that the Board's power to correct a decision is "limited to ministerial, arithmetic or other non-judgmental, non-discriminatory mistakes that do not affect the award itself," but does not include reversing its holding and ordering appellant to repay 62 days of compensable costs to respondent. Appellant also requests the Board to eliminate its remand of the appeal for the parties to determine quantum, because the "parties have stipulated, and the Board so found, that for all purposes Appellant's per diem compensable delay costs were $632."

Respondent's 27 July 1993 letter urges us to disregard appellant's 21 July 1993 request to eliminate remand, which is really a belated motion for reconsideration. Appellant's 9 August 1993 letter denies that its request to eliminate remand is a motion for reconsideration.

DECISION

Appellant's arguments about the limits of a motion for correction of a decision and what constitutes the filing of a motion for reconsideration are untenable.

[1] Appellant further states that its Motion to Dismiss does not address the merits or the substance of respondent's motion, and hence, in the event its motion to dismiss is not granted, requests 21 days to file a substantive response. Neither the Board's 3 June 1993 letter nor its Rules provide for seriatim responses first to the timeliness and next to the merits of an opponent's motion.

Rule 60(b), Federal Rules of Civil Procedure, authorizes a court to correct an error, ambiguity or lack of clarity in its judgment, *Knox v. Lichtenstein*, 654 F.2d 19, 22, (8th Cir. 1981), including corrections changing a party's recovery, *Meadows v. Cohen*, 409 F.2d 750 (5th Cir. 1969) (trial court judgment awarding Social Security Act disability benefits commencing in June 1960 modified to award benefits commencing in December 1964, one year prior to filing of claim, where trial court was unaware of statutory limitation). By analogy to Rule 60(b), we have done the same. *Kos Kam, Inc.*, ASBCA No. 34681 (slip op., unpub., 11 Feb. 1993) (appeal previously sustained in part corrected to denial in entirety).

It is well established under both the Contract Disputes Act of 1978 and the pre-CDA Disputes clause that the postmark date on a notice of appeal or motion for reconsideration constitutes *prima facie* proof of the date of filing of such notice or motion. *Hugo Auchter, supra; American Abrasive Metals Co.*, ASBCA Nos. 35198, 35410, 88-1 BCA ¶ 20,287; *Clyde P. Thomas*, ASBCA No. 28296, 87-2 BCA ¶ 19,692; *Northwest Technical Industries, Inc.*, ASBCA No. 19024, 74-1 BCA ¶ 10,623, and precedents cited therein. Moreover, an uncancelled postage meter date stamp on an envelope mailing a notice of appeal or motion for reconsideration, together with a supporting affidavit that the envelope was mailed on the same day as the postage meter date stamp, constitute the filing of that appeal or motion on such date. *Dawson Construction Co., Inc.*, ASBCA No. 29447, 85-1 BCA ¶ 17,862 at 89,415 (timely notice of appeal); *Union Precision & Engineering*, ASBCA No. 37549, 92-1 BCA ¶ 24,662 at 123,029 (timely motion for reconsideration). We conclude that respondent's 1 June 1993 motion was timely, whether considered as a motion to correct error, akin to F.R.C.P. Rule 60(b), or as a motion for reconsideration under Board Rule 29.

The holdings in our 28 April 1993 decision are not inconsistent.[2] We did not deny unabsorbed and extended overhead costs in one breath and award unabsorbed and extended overhead costs in the next breath. We found that differing site conditions delayed commencement of work for 44 days in 1989 (finding 10), respondent suspended work for 21 days in 1990 (finding 15), and appellant signed no release for the initial 44-day suspension or the 21-day suspension in 1990 (findings 13, 15). The parties do not question the accuracy of such findings. Those findings amply support our final conclusion that appellant is entitled to compensation under the contract's Differing Site Conditions and Suspension of Work clauses, which compensation may include direct costs and variable indirect costs other than unabsorbed and extended fixed overhead costs, if substantiated.

There is no inconsistency between our initial holdings that the record did not establish the elements of proof of *unabsorbed and extended overhead costs*, and our final holding that appellant is entitled to recover any increased costs incurred as a result of differing site conditions and suspensions of work. Perhaps our decision should have stated that appellant "is entitled to recover any increased costs *other than unabsorbed or extended fixed overhead costs* incurred as a result of differing site conditions and suspensions of work." To this extent, we clarify our 28 April 1993 decision.

In the litigation context of disputed unabsorbed and extended overhead costs, the stipulated "daily rate of $632.00 for all purposes in connection with this appeal" does not address, much less automatically quantify, any direct costs and variable indirect costs appellant may have incurred, and profit to which it could be entitled, due to suspensions and differing site conditions. In resolving quantum, the parties may find that appellant incurred more or less than 65 times $632 = $41,080.

Respondent's motion to correct error is granted to the extent of the clarification set forth two paragraphs above, and is otherwise denied. Appellant's motion to dismiss is denied.

---

[2] Considering the three opportunities appellant has taken to argue these motions and the substantive result we reach, no useful purpose would be served by allowing appellant to submit still another response on the "merits or the substance" of respondent's motion.

[¶ 26,315] R&B Bewachungsgesellschaft mbH

ASBCA No. 42221, August 20, 1993. Contract No. DAJA76-88-C-0272.

Fees and Costs Under Equal Access to Justice Act—Substantial Justification—Invalid Regulation.—In response to a motion for reconsideration, the board affirmed its earlier decision, 93-3 BCA ¶ 26,010, that although the contractor was a prevailing party otherwise eligible under the Contract Disputes Act, it was not entitled to attorney fees and costs, because the government's position was substantially justified. The government successfully argued that its decision not to pay interest relied on a promulgated regulation that forbade it from paying the contractor's claim for interest and that its position was, therefore, substantially justified. The board remained convinced that although the government's regulation was not reasonable, because it was inconsistent with the legislative intent, the government's position was justified.

For the appellant: von Maur & Partners, Sulzbach, Germany, by Michael J. Murphy. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. Gregory O. Block, JAGC, Trial Attorney, Headquarters, U.S. Army Europe & 7th Army.

Before PAUL, RUBERRY, and RIISMANDEL, Administrative Judges.

Reconsideration of 93-3 BCA ¶ 26,010 denied.

PAUL, Administrative Judge: In a slip opinion dated 23 April 1993, we denied appellant R&B Bewachungsgesellschaft mbH's (R&B) application for attorneys' fees and other expenses under the Equal Access to Justice Act (EAJA), 5 U.S.C. § 504. Although we ruled that R&B was a prevailing party otherwise eligible as defined in the Act, we concluded that the Government's position was substantially justified.

With respect to the merits, the Army had argued, based upon FAR 32.901, that the "interest payment provisions of the Prompt Payment Act" (PPA) did not apply to contracts awarded to foreign vendors outside the United States for work performed outside the United States. Because the underlying contract involved such work, the Army concluded that it could not pay R&B's claim. Analyzing the legislative history of the PPA, as well as the position of OMB—the agency charged with prescribing regulations to effectuate the PPA—we ruled that FAR 32.901 was inconsistent with the intent and purpose of the PPA. Accordingly, in a decision dated 27 January 1992, 92-1 BCA ¶ 24,752, we held that the regulation did not apply to appellant's contract and sustained its appeal.

In our decision denying R&B's application under EAJA, we ruled that the Government had demonstrated substantial justification for its position. We stated, in pertinent part:

> ... As the Corps of Engineers Board held in *Hill Brothers Construction Co.*, ENGBCA No. 5685-F, 91-3 BCA ¶ 24,146:
>
> A decision on an EAJA Application requires an examination of the Government's actions in view of the prevailing general legal rule as it existed prior to the decision and as applied to the specific facts of a case. A proper judgment on the issue of substantial justification may not be made by applying new or expanded legal principles announced by the Board in the underlying decision.
>
> Here, the Army based its decision upon a promulgated regulation which forbade it from paying R&B's claim for interest under the PPA. In ruling that the regulation was inapplicable, we announced a new legal principle which, in effect, changed the existing law as it applied to R&B. Thus, we altered "the prevailing general legal rule that had existed prior to the decision"; and, in evaluating the Government's position, we conclude that the Army was substantially justified in relying upon a promulgated regulation.
>
> We derive support for this holding from our decision in *Zinger Construction Co.*, ASBCA No. 31858, 88-2 BCA ¶ 20,661. There, we denied Zinger's request for fees and expenses under EAJA although we had previously sustained its appeal for interest on progress payments pursuant to the PPA. In reaching this decision, the Board stressed the Government's reliance on Army regulations which forbade it from making such interest payments. Finding that the Government's position was not "inconsistent with the express provisions of the statute or the implementing regulations in effect at the time," we ruled that it was substantially justified under 5 U.S.C. § 504(a)(1). Because this

Digitized by Google

case presents a factual and legal situation which is substantially identical to that in *Zinger,* we adopt our reasoning in that appeal and deny R&B's application.

In its motion for reconsideration, R&B argues that this case is readily distinguishable from *Zinger, supra.* It contends:

> Unlike in Zinger where the issue was whether the Army had adopted a correct interpretation of the PPA as that act concerned progress payments, in this case the Army's interpretation was not based on any part of the PPA. There is nothing in the PPA that could have reasonably been seen to have indicated that contractors of a foreign country were not to enjoy the benefits of the Act. The difference between Zinger and the case at bar is that in Zinger there was a something in the PPA upon which to base an interpretation. Here, the Army had nothing more than its desire not to pay PPA interest abroad; on the basis of that desire, it took the position that because the Act does not mention foreign contractors specifically, they were excluded.

(Br. at 2)

R&B is mistaken. After further review of our decision in *Zinger, supra,* we remain convinced that the two cases present factual and legal situations which are substantially identical. In *Zinger, supra,* just as in this appeal, we held that the Government's regulation was not reasonable because it was inconsistent with the legislative intent of the PPA. However, as here, we held that the Army's *position* was substantially justified. Based upon these crucial holdings which are common to both cases, we, once again, conclude that the Government's position in this case was substantially justified.

CONCLUSION

We have reconsidered our initial decision and affirm it.

[¶ 26,316] Ross & McDonald Contracting, GmbH

ASBCA Nos. 38154, 38155, 38156, 38717, 38718, 38719, 38720, 38722, 39415, 40121, 40122, 40123, 40124, 42528, 42529, 42530, 42531, August 24, 1993. Contract Nos. DAJA76-86-C-0478, DAJA76-86-C-0506, DAJA76-86-C-0507, DAJA76-86-C-0509, DAJA76-87-C-0519, DAJA76-87-C-0625.

Payments, Prompt—Disputes—Repudiation.—A contractor was not entitled to interest under the Prompt Payment Act, because before the contractor's invoices came due, the contractor notified the government that it was stopping performance. Although the government could not assess reprocurement costs until it awarded a reprocurement contract and paid the reprocurement contractors, it was not obligated to pay for accepted services without regard for its right to set off. On the date the contractor notified the government that it would not perform, there was an existing disagreement between the parties concerning the contractor's compliance with the contracts, which tolled the payment due date for outstanding invoices. For invoices submitted after the government terminated the contracts for default, there was an existing disagreement at the time the invoices were submitted, so that the interest penalty did not start to accrue.

Reprocurement—Duty to Mitigate—Award to Next in Line.—In light of the urgency of reprocurements for custodial services, the government acted reasonably and in accordance with the regulations and the Default clause when, in seeking to reprocure the services, it contacted those firms that submitted offers in response to the initial solicitations rather than issuing a new solicitation.

Reprocurement—Duty to Mitigate—Option Exercise.—The government's entitlement to excess reprocurement costs under a defaulted contract was limited to costs incurred during the unexpired portion of the base or option period because the government did not carry its burden of proving that it mitigated its reprocurement costs when it exercised the option. The award of the reprocurement contract was made to an offeror other than the second low offeror because the second low offeror had been found to be nonresponsible. There was no evidence that the contracting officer had reviewed the prior determination of nonresponsibility to determine if the second low offeror was still nonresponsible at the time the contracting officer exercised the option to extend the reprocurement contract for additional years.

For the appellant: O'Haire & Fiore, Frankfurt am Main, Germany, by Daniel F. Crowley. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. Robert Terrence Harders, JAGC, Trial Attorney.

Before VAN BROEKHOVEN, RUBERRY, and HARTY, Administrative Judges.

VAN BROEKHOVEN, Administrative Judge: The Government terminated the above cited contracts for default. The contracting officer issued final decisions assessing excess reprocurement costs against appellant and withholding amounts due appellant as setoffs for the excess reprocurement charges. Appellant timely appealed these decisions. Appellant contests only the Government's assessments of the reprocurement costs and withholdings and does not contest the propriety of the terminations for default. Therefore, we do not address in detail that portion of the record relating to the events surrounding the terminations except to the extent that they are relevant to the determination of these appeals. Both entitlement and quantum are before the Board for decision.

FINDINGS OF FACT

1. Following competitive solicitations, the U.S. Army Regional Contracting Office, Frankfurt, Germany awarded the subject contracts to appellant in July 1986 and June 1987. The contracts were for custodial services to be performed in all of the military installations in the Frankfurt area, except the dependent schools, and all the dependent schools in the Wiesbaden area. Therefore, these contracts covered most custodial requirements for the military community in the greater Rhein Main area. All the contracts were for a fixed term of one year, with two one-year extension options.

2. All of the contracts contained the standard clauses for service contracts, including the DEFAULT (Fixed-Price Supply & Service) clause (FAR 52.249-8, APR 1984), the PAYMENTS clause (FAR 52.232-1, Apr 1984), the DISCOUNTS FOR PROMPT PAYMENT (FAR 52.232-8, Apr 1985), and the LIMITATION ON WITHHOLDING OF PAYMENTS clause (FAR 52.232-9, Apr 1984). The contracts provided for the contractor's submission of monthly invoices for services performed and Government payment at the end of each month. Discounts offered for prompt payment ranged from 1 percent for payment in 10 days in contract no. DAJA76-87-C-0625 to 2 percent for payment in 20 days for most of the other contracts. In addition to the foregoing, the solicitations contained a provision, EVALUATION OF OPTIONS, which provided, in pertinent part, that the Government would evaluate offers for award purposes on the basis of total price proposed for the base year and all options. However, evaluation of the options would not obligate the Government to exercise the option(s).

3. On 13 January 1988, appellant's principals met with contracting officials of the Regional Contracting Office, Frankfurt. The purpose of their visit to the Regional Contracting Office was to deliver to the contracting officer a letter dated 13 January 1988 notifying the Chief of the Regional Contracting Office of their immediate termination of all services under the subject contracts, such services to be discontinued after midnight, 15 January 1988. Appellant experienced significant cash flow problems and was unable to meet the Friday, 15 January 1988 payroll of approximately DM 208,000. Moreover, the stated reasons in appellant's 13 January 1988 letter for the termination of contract services were the alleged interference by the contracting officer's representatives in the performance of inspections, alleged Government delays in making contract payments, and alleged Government delays in issuing contract modifications exercising the options. In addition to these stated reasons for terminating their contract services, appellant's principals had experienced significant personal health problems, which led to hospitalization in December 1987 and ultimately to death of one of the principals shortly after the termination of the contracts. Therefore, according to appellant, the failing health of its principals adversely affected their ability to administer the contract services. Because of the critical Government requirement for these custodial services, appellant desired a meeting with Government contracting officials to present its letter terminating contract services and to offer assistance to the Government and to the replacement contractor or contractors during the transition of custodial services.

4. During this meeting, Government contracting officials attempted unsuccessfully to encourage appellant to complete contract performance. However, appellant specified certain conditions for returning to work, including payment of approximately DM 400,000 claimed by appellant to be due and placement of DM 200,000 in an escrow account as advance payment, which, according

Digitized by Google

to the Government officials, were unacceptable and beyond the authority of the contracting officer. The meeting ended in an impasse when it became clear to the Government that appellant had no intention of continuing the work. The Government contracting officials informed appellant of the possible consequences of appellant's termination of its performance, including termination of the contracts for default and assessment of excess reprocurement costs. Earlier in that week, on or about 11 January 1988, appellant's principals had directed appellant's employees to return all major items of equipment and keys to appellant's offices. Appellant had informed Government officials during the meeting that it was considering bankruptcy. On 15 January 1988, appellant declared bankruptcy. Government contracting officials also understood that the German Arbeitsampt would pay appellant's employees their outstanding pay on Friday, 15 January 1988. Appellant ceased performance of all contract work under the six contracts on 15 January 1988.

5. On 15 January 1988, the contracting officer issued notices under each of the contracts terminating the respective contracts for default and informing appellant that the terminated services would be reprocured against appellant's account and that appellant would be liable for any excess reprocurement costs. These notices of default termination included the standard contracting officer final decision language and appellant's appeal rights. The same day, the contracting officer issued contract modifications to the respective contracts reducing the contract price for the services not performed and deobligating the funds resulting from the terminations for default. Appellant does not dispute the propriety of the terminations for default. According to appellant, appellant breached its contracts by anticipatory repudiation (app. brief, p. 1).

6. The contracting officer determined that there was an urgency of the requirement for custodial services for the entire Frankfurt area military community and the schools in the Wiesbaden area which would have been without such services as a result of appellant's abandonment of the work under all its contracts. Therefore, the Government's contracting officials decided that there was insufficient time to solicit new offers in order to provide for the continuing uninterrupted custodial services. The contracting officials, further, decided that the Government should evaluate the offers submitted during the initial solicitations and contact only those offerors who had submitted the lowest responsive offers, as evaluated in accordance with the EVALUATION OF OFFERS provision of the solicitation, during the initial solicitations, to determine if they were willing to perform the remaining services under these contracts at their originally proposed prices. According to FAR § 49.405, "the contracting officer normally will arrange for completion of the work by awarding a new contract based on the same plans and specifications." The regulation further provides in this section that, "[t]he new contract may be the result of sealed bidding or any other appropriate contracting method or procedure," but that the contracting officer "shall exercise reasonable diligence to obtain the lowest price available for the completion."

7. Accordingly, the Government did not solicit new or additional competitive offers for the reprocured work. Rather, it contacted the original low offerors submitting offers during the initial solicitations leading to the above referenced contracts to appellant and awarded the contracts to the lowest, responsible offerors agreeing to perform the reprocured services at their originally bid prices.

8. The contracting officer computed the excess reprocurement costs for all terminated contracts in accordance with a procedure developed to provide a reasonably accurate comparison of the costs attributed to appellant's contract performance had the contracts not been terminated and the costs invoiced and paid under the reprocurement contracts. The bases for the cost comparisons were the prices, quantities, and square meter amounts as reflected on the last amendment to appellant's contracts issued prior to appellant's default. No increases in services required under the reprocurement contracts were included in the computation of excess reprocurement costs on the theory that appellant theoretically may not have accepted these changes to the contract requirements and pricing therefor. Decreases in contract requirements and contract prices were reflected for their effective date and included as decreases in contract requirements and prices for appellant's defaulted contracts as of that date. In accordance with this procedure, the actual cost comparisons were established separately for each month of contract performance. Prompt payment discounts were considered to the extent that, if offered by the reprocurement contractors and taken for prompt payment, it was assumed that payments to appellant would have been made in the same time

©1994, Commerce Clearing House, Inc.

Digitized by Google

frames. In a number of instances, appellant offered higher prompt payment discounts than the reprocurement contract, and the amount calculated in the assessments of excess reprocurement costs was based on the lower prompt payment discount offered by the reprocurement contractor.

9. The custodial services required under contract no. DAJA76-87-C-0625 covering the Abrams complex in Frankfurt were the most time critical because of an unperformed work order for certain specific scheduled services and an impending high-level meeting of NATO officials scheduled for 19 January 1988 in the Abrams complex. Twelve firms had submitted proposals in response to the initial solicitation. Adlatus-Alpha Reinigungs GmbH (Adlatus-Alpha), the second low offeror in the prior solicitation for this work, was contacted by the contract specialist and agreed to perform the work in accordance with its previous offer and proposed price. Based on the agreement by Adlatus-Alpha to perform the work in accordance with its previously proposed prices and the good competition in response to the initial solicitation, the contracting officer determined that the prices proposed by Adlatus-Alpha were fair and reasonable. Accordingly, on 15 January 1988, the contracting officer awarded contract no. DAJA76-88-C-0179 to Adlatus-Alpha for the performance period of 16 January 1988 to 30 June 1988, the remaining unexpired period of performance for the base period under appellant's terminated contract. This contract awarded to Adlatus-Alpha, consistent with the original solicitation, contained option provisions and prices for the option years that authorized the Government to extend the contract for two additional years at the prices quoted by Adlatus-Alpha in response to the initial solicitation.

10. Prior to appellant's abandonment of the work on 15 January 1988, the contracting officer's representative (COR) had requested the contracting officer to delete several areas of custodial services, which had not been performed by appellant due to construction activities in the Abrams complex, the effective date of the requested contract modification to be 1 February 1988. Moreover, since appellant had not performed custodial services in areas affected by the construction, the COR recommended that appellant's contract price be reduced, that a total of DM 22,692.24 be deducted from appellant's contract payments resulting from overpayments for work not performed, and that appellant be advised to reduce its monthly invoices by additional amounts for work not performed.

11. The proposed contract modification to appellant's contract was not issued prior to the termination of appellant's contract for default and the deleted work was not deleted from the reprocurement contract requirements as awarded to Adlatus-Alpha. On 17 March 1988, the contracting officer issued a modification to contract No. DAJA76-88-C-0179 decreasing the total floor space for custodial services and correcting a typographical error in the award of that contract resulting in the firm, fixed priced amount of DM 432,013.40.

12. On 30 September 1988, the contracting officer issued a final decision assessing excess reprocurement costs against appellant in the amount of DM 80,657.01 for the services performed and invoiced by Adlatus-Alpha under contract no. DAJA76-88-C-0179. As of 30 June 1988, payments under that contract to Adlatus-Alpha had totaled DM 431,703.01. Payments to appellant under the defaulted contract had appellant completed performance of the base period would have been DM 351,046.00. According to the contracting officer's final decision, the amount of excess reprocurement costs assessed therein applied only to the period of 15 January 1988 to 30 June 1988, and the Government reserved the right to assess additional excess reprocurement costs for the costs incurred during the two option years. Appellant timely appealed this decision, which appeal was docketed as ASBCA No. 38156.

13. By modification P00006 dated 30 June 1988, the Government exercised its option under contract no. DAJA76-88-C-0179 extending the contract for an additional one year term, from 1 June 1988 to 30 June 1989. There was general testimony from two contracting officers to the effect that prior to executing the options to extend the contract terms for all the contracts in dispute, the contracting officers acted on the reprocurement contracts in a manner consistent with the Federal Acquisition Regulation, namely that the Government determined that the services were still required and that the costs for obtaining the services through the exercise of the options would be the most advantageous to the Government, which determination was generally made on the basis of an informal survey. Neither of these contracting officers recalled whether this was done in the exercise of the options in these reprocurements, or indeed, if they were even involved in the exercise of these options. However, they testified that

Digitized by Google

there should be documentation in the contract files reflecting the actions, and reasons therefor, that were taken to establish compliance with the Federal Acquisition Regulation. See tr. 1/63-65, 68-73. There is no evidence that the Government performed any price survey of potential offerors prior to exercising the option to extend this particular contract (C-0179) for an additional year or performed other determinations required by FAR § 17.207. There was no documentation in any of the appeal files for the respective contracts to establish the fact that the Government did perform such surveys or made any of the determinations required by FAR § 17.207. The testimony of the two contracting officers in this regard is general and tentative and, therefore, of little persuasive weight. Consistent with Adlatus-Alpha's initial proposal for the first option year, adjusted to reflect the deleted work, the firm, fixed price was increased by DM 962,365.60 to a revised total contract price in the total amount of DM 1,400,739.00. On 16 January 1989, the contracting officer issued a final decision assessing excess reprocurement costs against appellant in the amount of DM 49,503.93 for services invoiced by Adlatus-Alpha during the first quarter of this option period. As of 30 September 1988, Adlatus-Alpha had invoiced and been paid a total of DM 217,890.40 for this first quarter of the first option year. Had appellant completed performance of the same work under the defaulted contract for this period, the Government would have paid appellant DM 168,256.07 for those services. Appellant timely appealed this decision, which appeal was docketed as ASBCA No. 38722.

14. On 19 January 1989, the contracting officer issued a final decision assessing excess reprocurement costs against appellant in the additional amount of DM 41,025.08 for services invoiced by Adlatus-Alpha under contract no. DAJA76-88-C-0179 for the second quarter of the first option year. As of 31 December 1988, payments to Adlatus-Alpha had totaled DM 263,462.08 for services performed during the period of 1 October 1988 to 31 December 1988. Had appellant completed performance of the same work under the defaulted contract for this period, the Government calculated that it would have paid appellant DM 222,437.00. Appellant timely appealed this final decision, which appeal also was docketed as ASBCA No. 38722.

15. By final decision dated 15 May 1989, the contracting officer assessed excess reprocurement costs against appellant in the additional amount of DM 50,276.19 for services invoiced by Adlatus-Alpha under contract no. DAJA76-88-C-0179 for the third quarter of the first option year. As of 31 March 1989, payments to Adlatus-Alpha had totaled DM 218,010.90 for services performed during the period of 1 January 1989 to 31 March 1989. Had appellant completed performance of the same work under the defaulted contract, the total payments to appellant for this period would have been DM 166,676.79. Appellant timely appealed this decision, which appeal was docketed as ASBCA No. 39415.

16. The contracting officer issued a final decision dated 26 September 1989 assessing excess reprocurement costs against appellant in the additional amount of DM 42,901.80 for services invoiced by Adlatus-Alpha under contract no. DAJA76-88-C-0179 for the fourth quarter of the first option year. As of 31 July 1989, payments to Adlatus-Alpha for services performed during the period of 1 April 1989 to 30 June 1989 under this contract totaled the amount of DM 278,447.49. During this period, Adlatus-Alpha performed additional services not covered by appellant's defaulted contract. Accordingly, the contracting officer calculated the amount of excess reprocurement costs claimed by the Government by adjusting the amount invoiced by Adlatus-Alpha to delete amounts attributed to those additional services. Had appellant completed the work under the defaulted contract for that period, the Government calculated that its payments to appellant for this period would have totaled DM 218,672.68. Appellant timely appealed this decision, which appeal was docketed as ASBCA No. 40121.

17. The contracting officer exercised the option to extend contract no. DAJA76-88-C-0179 for a third year on 27 June 1989. The term under this option ran from 1 July 1989 to 30 June 1990. There was no evidence that the Government performed a price survey of the potential offerors prior to exercising the option to extend the contract for this additional year or made other determinations required by FAR § 17.207. See also finding 13, *supra*. The contract modification, in the amount of DM 1,028,855.54, increased the total contract price to a new fixed price amount of DM 2,441,163.33. On 28 September 1989, the contracting officer modified the contract further to incorporate additional services through the increase of floor space, carpet

©1994, Commerce Clearing House, Inc.
Digitized by Google

space, and glass area and increasing the contract price by DM 458.71.

18. The contracting officer issued a final decision on 26 November 1990 assessing appellant excess reprocurement costs in the amount of DM 80,374.40 for services performed by Adlatus-Alpha during the period of 1 January 1990 through 30 June 1990. Adlatus-Alpha invoiced and was paid under contract no. DAJA76-88-C-0179 for services performed during this period a total amount of DM 510,765.87. This amount included additional services under the contract modifications which were not a part of appellant's defaulted contract. Therefore, the contracting officer adjusted the amount paid Adlatus-Alpha for excess reprocurement cost calculations resulting in a recalculated amount of DM 477,246.98. Had appellant successfully completed performance of the work under its defaulted contract for this period, the amounts due appellant would have been DM 396,872.58. Appellant timely appealed the contracting officer's final decision assessing excess reprocurement costs for this period, which appeal was docketed as ASBCA No. 42530.

19. Under contract no. DAJA76-86-C-0478, appellant was required to perform custodial services in the EUD headquarters and north Frankfurt areas. The contracting officer had exercised the option to extend the contract for the first year option period on 24 August 1987. Appellant, therefore, abandoned performance of this contract in the middle of the first option year. The Government had previously issued a solicitation to 21 firms and had received 11 offers in connection with the original procurement of these services. The Government contracting officials decided that the pricing review and evaluation for the award of the reprocurement contracts would be based on the applicable base or option period prices offered by the offerors to this particular solicitation and that any modifications to appellant's defaulted contract would not be considered in the repurchase decision but would be negotiated after award of the reprocurement contract and incorporated in a contract modification after award.

20. On Friday, 15 January 1988, a Government contract specialist began to contact the offerors submitting offers in the original solicitation for this requirement, beginning with the second low offeror and proceeding up the list according to the prices offered. The contracting officer determined that the second low offeror in the initial procurement was non-responsible because it had a continuing record of unsatisfactory performance of its contracts and had been determined non-responsible several months earlier in connection with the award of an unrelated custodial services contract. Adlatus-Alpha was the third low offeror in the initial solicitation and agreed to perform the services at its originally offered prices. Based on Adlatus-Alpha's agreement to perform the work in accordance with its previously proposed prices and the fact that there had been good competition in response to the initial solicitation, the contracting officer determined that the proposed prices were fair and reasonable.

21. The contracting officer awarded the reprocurement contract, contract no. DAJA76-88-C-0178, to Adlatus-Alpha in the amount of DM 162,072.50 for custodial services to be performed during the period of 18 January 1988 through 31 August 1988, the period remaining on appellant's first option year. This contract to Adlatus-Alpha contained option provisions and prices for the option periods that authorized the contracting officer to exercise an option to extend the contract for one additional year, the sole remaining option year authorized under the initial solicitation. The contracting officer modified this contract on 17 March 1988 reducing some of the services and reducing the contract price to a new fixed price amount of DM 156,270.44.

22. Following additional contract modifications with minor changes to the required services, on 30 August 1988, the contracting officer issued a contract modification exercising the option to extend the contract for the period of 1 September 1988 through 31 August 1989 and increasing the contract price by DM 265,342.06. There is no evidence that the Government performed a price survey of potential offerors prior to exercising the option to extend the contract for this additional year or made the determinations required by FAR § 17.207, or that it reviewed its prior determination of nonresponsibility of the second low offeror in the original solicitation to determine if that firm continued to be nonresponsible at the time of the exercise of the option. See also findings 13 and 20, *supra*.

23. The contracting officer issued a final decision on 22 February 1989 assessing excess reprocurement costs against appellant in the amount of DM 876.56 for the period of 15 January 1988 through 30 November 1988. Adlatus-Alpha had invoiced and been paid for services performed during this pe-

Digitized by Google

riod DM 228,716.52. As a result of the various contract modifications issued by the contracting officer changing the performance requirements, the contracting officer adjusted this amount for excess reprocurement costs computations by reducing the amount for the decreases in work requirements and ignoring any increases in prices due to increased services. Accordingly, the contracting officer determined that for purposes of cost comparisons for excess reprocurement cost assessment, the computed amount of payments to Adlatus-Alpha totaled DM 215,320.53. According to the contracting officer's computations, had appellant performed the services during this period, payment to appellant for services during this period would have been DM 214,445.97. Appellant timely appealed the contracting officer's decision, which appeal was docketed as ASBCA No. 38717.

24. Adlatus-Alpha's contract payments for services performed during the period of 18 January 1988 to 31 August 1988 totaled DM 168,042.35. This amount was adjusted for excess reprocurement cost comparison purposes to reflect the decrease in services effected by modification P00001 issued on 17 March 1988 to DM 154,650.36. According to the contracting officer's calculations, had appellant performed this work during this period, appellant would have been paid a total of DM 155,204.52. Therefore, the calculated costs under appellant's defaulted contract exceeded the calculated costs of the reprocurement contract for the unexpired period of 18 January 1988 to 31 August 1988 by DM 554.16. Payments to Adlatus-Alpha for the period of 1 September 1988 through 30 November 1988 totaled DM 60,674.17. Had appellant completed performance of this work for this period under the defaulted contract, payments to appellant would have totaled DM 59,241.45. Therefore, excess reprocurement costs for this period totaled DM 1,432.72.

25. The contracting officer issued a final decision on 26 September 1989 assessing excess reprocurement costs against appellant in the amount of DM 188.73 for the period of 1 December 1988 through 30 June 1989, the last seven months of the final option period. Adlatus-Alpha had invoiced and been paid for services performed during this period DM 148,770.57. As a result of the various contract modifications issued by the contracting officer changing the performance requirements, the contracting officer adjusted this amount for excess reprocurement costs computations by reducing the amount for the decreases in work requirements and ignoring any increases in prices due to increased services. The contracting officer determined that for purposes of cost comparisons for excess reprocurement cost assessment, the computed amount of payments to Adlatus-Alpha totaled an amount of DM 146,979.81. According to the contracting officer's computations, had appellant performed the services during this period, payment to appellant for the services during this period would have been DM 146,821.08. Using the contracting officer's calculations, we have calculated the excess reprocurement costs for this period as DM 158.73 rather than the DM 188.73 assessed by the contracting officer. Appellant timely appealed the contracting officer's decision, which appeal was docketed as ASBCA No. 40122.

26. Under contract no. DAJA76-86-C-0506, appellant was required to perform custodial services in the north Frankfurt Drake and Edwards Kasernes areas. The contracting officer issued a contract modification on 14 August 1987 exercising the option which extended the contract for the period of 1 September 1987 through 31 August 1988. Following appellant's notification of 13 January 1988 that it was terminating contract performance on all the above referenced contracts, appellant abandoned performance of this contract on 15 January 1988.

27. Following the procedure which had been established for the reprocurement of all contract requirements to avoid, as much as possible, a significant lapse of required custodial services, the Government contracting officials began contacting the offerors submitting the low offers in response to the initial solicitation for this requirement. Nine firms submitted responses to the initial solicitation. The second low offeror, Weichelt Gebaeudereinigung GmbH, had been performing unsatisfactorily on eight contracts in various areas in Germany and had been previously determined non-responsible. The third low offeror, Gebaeude-Service Dr. Zimmermann GmbH, also had a record of unsatisfactory performance on its current contracts and was determined to be non-responsible. Adlatus-Alpha was the next low offeror and agreed to perform the services at its originally proposed prices, beginning its performance on 19 January 1988. Because Adlatus-Alpha agreed to perform the work in accordance with its previously proposed prices and due to the fact that there had been good price competition in

©1994, Commerce Clearing House, Inc.

Digitized by Google

response to the initial solicitation, the contracting officer determined that Adlatus-Alpha's proposed prices were fair and reasonable.

28. The contracting officer, therefore, awarded contract no. DAJA76-88-C-0177 to Adlatus-Alpha for the custodial services in the north Frankfurt Drake and Edwards Kasernes areas for the period of 18 January 1988 through 31 August 1988. This contract awarded to Adlatus-Alpha contained option provisions and prices for option periods that authorized the contracting officer to exercise the option to extend the contract for an additional one year period, the remaining option year available under the original solicitation. The contracting officer issued a contract modification on 30 August 1988 exercising an option to extend the contract for a year, extending from 1 September 1988 to 31 August 1989. There is no documentary evidence that the Government performed a price survey of potential offerors prior to exercising this option to extend the contract for an additional year or made the determinations required by FAR § 17.207, or that it reviewed its prior determinations of nonresponsibility of the two lower offerors in the initial solicitation to determine if they were still nonresponsible at the time the contracting officer exercised the option. See also findings 13 and 27, *supra*.

29. The contracting officer issued a final decision dated 17 October 1988 assessing excess reprocurement costs against appellant under contract no. DAJA76-87-C-0506 for excess reprocurement costs in the total amount of DM 21,027.43 incurred during the period of 15 January 1988 through 31 August 1988. As of 31 August 1988, Adlatus-Alpha had invoiced and been paid an amount of DM 182,209.66 for services performed during this period under its contract no. DAJA76-88-C-0177. Had appellant performed the same work under its defaulted contract, payments to appellant for this period would have totaled DM 161,182.23. Although the contracting officer's final decision stated that the amount of excess reprocurement costs asserted therein applied only to the period of 15 January 1988 to 31 August 1988, the contracting officer stated therein that the Government reserved its right to assert further excess reprocurement costs for the period after 31 August 1988. Appellant timely appealed this final decision, which decision was docketed as ASBCA No. 38155.

30. On 15 February 1989, the contracting officer issued a final decision assessing further excess reprocurement costs against appellant under contract no. DAJA76-87-C-0506. The amount asserted by the Government in this final decision was DM 10,444.75 for the excess reprocurement costs incurred during the period of 1 September 1988 through 30 November 1988. As of 30 November 1988, Adlatus-Alpha had invoiced and been paid DM 79,904.34 for services performed during the period of 1 September 1988 through 30 November 1988. Had appellant performed the same work under the defaulted contract for this period, payments to appellant under its contract would have totaled DM 69,459.59. Appellant timely appealed this final decision, which appeal was docketed as ASBCA No. 38718.

31. The contracting officer issued a final decision on 26 September 1989 assessing additional excess reprocurement costs against appellant under contract no. DAJA76-87-C-0506. The amount asserted by the Government in this final decision was DM 22,724.21 for the excess reprocurement costs incurred during the period of 1 December 1988 through 30 June 1989. As of 30 June 1989, Adlatus-Alpha had invoiced and been paid DM 164,768.30. Had appellant completed the same work under its defaulted contract for this period, payment to appellant under the defaulted contract would have totaled DM 142,044.09. Appellant timely appealed this decision, which appeal was docketed as ASBCA No. 40123.

32. Under contract no. DAJA76-86-C-0507, appellant was required to perform custodial services in the north Frankfurt areas of Camp King, Oberusel, and Weisskirchen. The contracting officer issued a contract modification on 5 September 1987 exercising the option to extend the contract for the period of 1 September 1987 through 31 August 1988. Following appellant's notification of 13 January 1988 that it was terminating contract performance on all the above referenced contracts, appellant abandoned performance of this contract on 15 January 1988.

33. Following the procedure which had been established for the reprocurement of all contract requirements to avoid, as much as possible, a significant lapse of required custodial services, the Government contracting officials began contacting the offerors submitting the low offers in response to the initial solicitation for this requirement. Nine firms submitted responses to the initial solicitation. The second low offeror, Weichelt Gebaeudereinigung GmbH, had

Digitized by Google

been performing unsatisfactorily on eight contracts in various areas in Germany and had been previously determined non-responsible. The third low offeror, Gebaeude-Service Dr. Zimmermann GmbH, also had a record of unsatisfactory performance on its current contracts and was determined to be non-responsible. The fourth low offeror was Uniputz, which was no longer in existence. The fifth low offeror was ICS GmbH & Co. KG, and had a record of unsatisfactory performance on its contracts and was, at the time, subject to a cure notice. ICS GmbH was, therefore, determined to be non-responsible and was not considered for award of the reprocurement contract. Adlatus-Alpha was the next low offeror and was the only contractor within the zone of competition with the necessary work force and equipment to perform the work in a satisfactory manner. Adlatus-Alpha agreed to perform the services at its originally proposed prices, beginning its performance on 19 January 1988. Because Adlatus-Alpha agreed to perform the work in accordance with its previously proposed prices and due to the fact that there had been good price competition in response to the initial solicitation, the contracting officer determined that Adlatus-Alpha's proposed prices were fair and reasonable.

34. The contracting officer awarded contract no. DAJA76-88-C-0180 to Adlatus-Alpha for the custodial services for Camp King, Oberusel, and Weisskirchen areas for the period of 19 January 1988 through 31 August 1988, the time remaining unexpired under appellant's terminated contract for the first option year. This contract contained option provisions and prices for the option years that authorized the contracting officer to exercise the option to extend the contract for an additional year, the remaining option year available under the original solicitation. The contracting officer issued several modifications incorporating certain changes, adding and reducing services under the contract. The contracting officer issued a contract modification on 8 August 1988 exercising an option to extend the contract for a year, extending from 1 September 1988 to 31 August 1989. There is no evidence that the Government performed a price survey of potential offerors prior to exercising the option to extend the contract for this additional year or made the determinations required by FAR § 17.207, or that it reviewed its prior determinations of nonresponsibility of the three lower offerors in the initial solicitation to determine if they were still nonresponsible at the time the contracting officer exercised the option. See also findings 13 and 33, *supra*.

35. On 31 January 1989, the contracting officer issued a final decision assessing excess reprocurement costs against appellant under contract no. DAJA76-86-C-0507. The amount asserted by the Government in this final decision was DM 33,054.46 for the excess reprocurement costs incurred during the period of 15 January 1988 through 31 August 1988. As of 31 August 1988, Adlatus-Alpha had invoiced and been paid DM 113,383.54 for services performed during the period of 15 January 1988 through 31 August 1988. Had appellant performed the same work under the defaulted contract for this period, payments to appellant under its contract would have totaled DM 80,329.08. Appellant timely appealed this final decision, which appeal was docketed as ASBCA No. 38719.

36. The contracting officer, on 25 November 1990, issued a further final decision assessing excess reprocurement costs against appellant under contract no. DAJA76-86-C-0507 in the amount of DM 51,774.26 for the period of 1 September 1988 through 31 August 1989. As of 31 August 1989, Adlatus-Alpha had invoiced and been paid DM 210,783.12 for services performed during the period of 1 September 1988 through 31 August 1989. As a result of the contract modifications issued which increased work requirements, the contracting officer, consistent with the procedure described above in finding 8, adjusted the amount calculated for excess reprocurement assessment purposes to DM 193,906.73. Had appellant performed the same work under the defaulted contract for this period, payments to appellant under its contract would have totaled DM 142,132.47. Appellant timely appealed this final decision, which appeal was docketed as ASBCA No. 42528.

37. Under contract no. DAJA76-86-C-0509, appellant was required to perform custodial services in the Roedelheim/Hausen areas. The contracting officer issued a contract modification on 5 September 1987 exercising the option to extend the contract for the period of 1 September 1987 through 31 August 1988. Following appellant's notification of 13 January 1988 that it was terminating contract performance on all the above referenced contracts, appellant abandoned performance of this contract on 15 January 1988.

38. Following the procedure which had been established for the reprocurement of all contract requirements to avoid, as much

©1994, Commerce Clearing House, Inc.

Digitized by Google

as possible, a significant lapse of required custodial services, the Government contracting officials began contacting the offerors submitting the low offers in response to the initial solicitation for this requirement. Eleven firms submitted responses to the initial solicitation. The second low offeror, Weichelt Gebaeudereinigung GmbH, had been performing unsatisfactorily on eight contracts in various areas in Germany and had been previously determined non-responsible. The third low offeror, Gebaeude-Service Dr. Zimmermann GmbH, also had a record of unsatisfactory performance on its current contracts and was determined to be non-responsible. The fourth low offeror was Uniputz, which was no longer in existence. The fifth low offeror was Deutsche Industrie-Wartung, which declined to accept any reprocurement contract for this work. Adlatus-Alpha was the next low offeror and was the only contractor within the zone of competition with the necessary work force and equipment to perform the work in a satisfactory manner. Adlatus-Alpha agreed to perform the services at its originally proposed prices, beginning its performance on 19 January 1988. Because Adlatus-Alpha agreed to perform the services at its originally proposed prices and due to the fact that there had been good price competition in response to the initial solicitation, the contracting officer determined that Adlatus-Alpha's prices were fair and reasonable.

39. The contracting officer awarded contract no. DAJA76-88-C-0181 to Adlatus-Alpha for the custodial services in the Roedelheim/Hausen areas for the period of 18 January 1988 through 31 August 1988, the period remaining to be completed under appellant's terminated contract for the first year option period. This contract contained option provisions and option year prices that authorized the contracting officer to exercise the option for an additional one-year period, the remaining option year available under the original solicitation. On 7 September 1988, the contracting officer issued a contract modification exercising the option to extend the contract for the period of 1 September 1988 through 31 August 1989. There is no evidence that the Government performed a price survey of potential offerors prior to exercising the option to extend the contract for this additional year or made the determinations required by FAR § 17.207, or that it reviewed its prior determinations of nonresponsibility of two of the lower offerors to determine if they were still nonresponsible at the time the contracting officer exercised the option. See also findings 13 and 38, *supra*. Moreover, there was no evidence that the Government contacted the fifth low offeror in the initial solicitation to determine if it was interested in submitting an offer for the work covered by the option.

40. On 10 February 1989, the contracting officer issued a final decision assessing excess reprocurement costs against appellant under contract no. DAJA76-86-C-0509. The amount asserted by the Government in this final decision was DM 28,550.73 for the excess reprocurement costs incurred during the period of 18 January 1988 through 31 August 1988. As of 31 August 1988, Adlatus-Alpha had invoiced and been paid DM 199,698.73 for services performed during the period of 15 January 1988 through 31 August 1988. Had appellant performed the same work under the defaulted contract for this period, payments to appellant under its contract would have totaled DM 171,148.00. Appellant timely appealed this final decision, which appeal was docketed as ASBCA No. 38720.

41. The contracting officer, on 25 November 1990, issued a further final decision assessing excess reprocurement costs against appellant under contract no. DAJA76-86-C-0509 in the amount of DM 53,382.90 for the period of 1 September 1988 through 31 August 1989. As of 31 August 1989, Adlatus-Alpha had invoiced and been paid DM 384,999.97 for services performed during the period of 1 September 1988 through 31 August 1989. As a result of the contract modifications issued which increased work requirements, the contracting officer, consistent with the procedure described above in finding 8, adjusted the amount calculated for excess reprocurement assessment purposes to DM 358,180.31. Had appellant performed the same work under the defaulted contract for this period, payments to appellant under its contract would have totaled for this period DM 304,797.41. Appellant timely appealed this final decision, which appeal was docketed as ASBCA No. 42529.

42. Under contract no. DAJA76-87-C-0519, appellant was required to perform custodial services in the Wiesbaden schools. Following appellant's notification of 13 January 1988 that it was terminating contract performance on all the above referenced contracts, appellant abandoned performance of this contract on 15 January 1988.

43. Following the procedure which had been established for the reprocurement of

Digitized by Google

all contract requirements to avoid, as much as possible, a significant lapse of required custodial services, the Government contracting officials began contacting the offerors submitting the low offers in response to the initial solicitation for this requirement. The second low offeror which responded to the initial solicitation declined to participate in the reprocurement solicitation. The third low offeror, Ferd. Ruegamer, Gebaude u. Machinenreingung (Ferd. Ruegamer), agreed to perform the services in accordance with the originally proposed price proposal.

44. On 15 January 1988, the contracting officer awarded contract no. DAJA86-88-C-0022 to Ferd. Ruegamer for the custodial services for the dependent schools in the Wiesbaden area for the period of 19 January 1988 through 31 May 1988, the unexpired period remaining in the base year of appellant's terminated contract. This contract contained option provisions and option year prices that authorized the contracting officer to exercise the options for two additional one-year periods, the remaining option years available under the original solicitation. On 21 May 1988, the contracting officer issued a contract modification exercising the option to extend the contract for the period of 1 June 1988 through 31 May 1989. The contracting officer issued a further contract modification on 2 June 1989 exercising the option to extend the contract for an additional year, for the additional period of 1 June 1989 through 31 May 1990. There is no evidence that the Government performed price surveys of potential offerors prior to exercising these options to extend the contract for these additional periods or made the determinations required by FAR § 17.207, or that it contacted the lower offeror to determine if it was interested in submitting an offer for the work covered by the option. See also findings 13 and 43, *supra*.

45. By letter dated 26 September 1989, the contracting officer issued a final decision assessing excess reprocurement costs against appellant under contract no. DAJA76-87-C-0519. The amount asserted by the Government in this final decision was DM 78,210.54 for the excess reprocurement costs incurred during the period of 18 January 1988 through 31 May 1989, the remaining portion of the basic year awarded to appellant and all of the first option year. As of 31 May 1988, the reprocurement contractor, Ferd. Ruegamer had been paid DM 323,197.74 for services performed during the period of 18 January 1988 through 31 May 1988. Had appellant performed the same work under the defaulted contract for this period, payments to appellant under its contract would have totaled DM 315,515.00. The total amount of excess reprocurement costs for this period was DM 7,682.74.

46. Payments to Ferd. Ruegamer totaled DM 860,267.30 for the first option year running from 1 June 1988 through 31 May 1989. According to the contracting officer's computations, had appellant performed the same work under the defaulted contract for this period, payments to appellant would have totaled DM 731,373.20. According to our computations based on the record provided by the Government, payments to appellant for this period would have totaled DM 794,510.20. The contracting officer's computations, based on the calculated monthly differences of payments made to Ferd. Ruegamer and calculated payments to appellant had appellant performed the work during this period resulted in a total difference of DM 70,527.80 between the calculated payments to Ferd. Ruegamer and calculated payments to appellant. Our calculations of the total difference between the total monthly amounts paid Ferd. Ruegamer and the deemed total monthly amounts payable to appellant had appellant performed the work totaled an amount of DM 65,757.10. Appellant timely appealed the final decision of 26 September 1989 (finding 45), which appeal was docketed as ASBCA No. 40124.

47. The contracting officer, on 17 April 1990, issued a further final decision assessing excess reprocurement costs against appellant under contract no. DAJA76-87-C-0519 in the amount of DM 33,689.42 for the period of 1 June 1989 through 31 December 1989. As of 31 December 1989, Ferd. Ruegamer had invoiced and been paid DM 488,782.00 for services performed during the period of 1 June 1989 through 31 December 1989. As a result of the contract modifications issued which increased work requirements, the contracting officer, consistent with the procedure described above in finding 8, adjusted the amount calculated for excess reprocurement assessment purposes to DM 482,359.42. Had appellant performed the same work under the defaulted contract for this period, payments to appellant under its contract would have totaled for this period DM 448,670.00. Appellant timely appealed this final decision, which appeal was docketed as ASBCA No. 42531.

48. By letter dated 18 February 1988, the Volksbank Gelnhausen, submitted to the

©1994, Commerce Clearing House, Inc.

Digitized by Google

Chief of the Regional Contracting Office, Frankfurt, a listing of outstanding invoices submitted by appellant under the six custodial contracts that remained unpaid as of that date. The total amount identified as due was DM 367,373.30. Following a meeting between the parties on 26 February 1988, appellant, by letter dated 2 March 1988, provided the Government a listing of outstanding unpaid invoices under the six contracts asserting DM 367,373.30 due appellant. On 12 September 1988, appellant submitted to the contracting officer a properly certified claim in the total amount of DM 354,774.41 and requested contracting officer decisions on the reprocurement costs under the six contracts and immediate payment of the outstanding invoices. In its claim, appellant conceded deductions under the contract on three of the invoices. Appellant, in this letter, included a claim for Prompt Payment Act penalties and Contract Disputes Act interest on its unpaid invoices, in addition to its claim for payment of the invoices.

49. The record does not contain appellant's invoices, as identified in the 18 February 1988 letter from the Volksbank Gelnhausen and appellant's letter of 12 September 1988, under the six contracts. However, appellant, in its letter of 12 September 1988, identifies the specific invoices under their related contracts and the dates these invoices were submitted to the Government. Of the total claimed unpaid invoice amount of DM 354,774.41, ten invoices against all contracts were submitted prior to the termination for default and totaled DM 277,552.41. According to appellant's letter, one of these invoices, in the amount of DM 26,527.00, was submitted to the Government on 30 November 1987, and the remaining invoices were submitted on 21 and 31 December 1987. Following the termination for default, according to appellant's letter of 12 September 1988, appellant, on 26 January 1988, submitted seven additional invoices totaling DM 89,430.39, less an amount of DM 12,178.89 for accepted deductions, for a total amount due of DM 77,252.00 [sic, DM 77,251.50].

50. The Government, in a spread sheet setting forth the date of the various final decisions, contract numbers, reprocurement costs, setoffs, appellant's invoiced amounts, and the amount of setoff, does not provide any information concerning the dates appellant submitted the invoices identified by appellant in its letter of 12 September 1988. However, in an attached spread sheet identifying the invoices, the dates of the invoices correspond with those identified by appellant, although the amounts of most of the invoices identified by the Government do not correspond with the amounts asserted by appellant. There is no evidence in the record concerning the dates when the invoices were received or physically arrived in the contractually designated Government payment office. Moreover, there is no evidence in the record that the Government ever notified appellant within 15 days after it received these invoices that it considered them to be improper.

51. On 8 December 1988, the contracting officer responded to appellant's claim in a letter to appellant's attorneys stating that several final decisions on excess reprocurement cost assessments had been issued under two of the contracts and that several additional contracting officer's final decisions under three other contracts would be issued within 30 days. The two final decisions identified by the contracting officer as having been issued under contract no. DAJA76-87-C-0625 and contract no. DAJA76-86-C-0506 asserted excess reprocurement costs only and did not attempt to setoff the amounts claimed by the Government against amounts due appellant under any of appellant's contracts. According to the contracting officer, as stated in this letter, a separate final decision on appellant's claim of 12 September 1988 was not deemed to be necessary.

52. Appellant, by notice of appeal dated 21 December 1988, appealed a deemed denial of its claim for DM 354,774.41 for the unpaid invoices and the contracting officer's final decisions under contract no. DAJA76-87-C-0625 and DAJA76-86-C-0506 asserting excess reprocurement costs. The appeal from the deemed denial of the claim for unpaid invoices was docketed as ASBCA No. 38154.

53. In his letter of 8 December 1988 to appellant's attorneys, the contracting officer stated that final decisions assessing excess reprocurement costs against appellant would be issued under contracts nos. DAJA76-86-C-0478, DAJA76-86-C-0507, and DAJA76-86-C-0509 within thirty days. On 22 February 1989, the contracting officer issued a final decision assessing excess reprocurement costs, in the amount of DM 876.56, under contract no. DAJA76-86-C-0478, and formally asserting a setoff of this amount against three invoices from appellant on amounts due appellant (finding 23). Both the assessment of excess

Digitized by Google

reprocurement costs and setoff were included in appellant's appeal docketed as ASBCA No. 38717. On 31 January 1989, the contracting officer issued a final decision assessing excess reprocurement costs, in the amount of DM 33,054.46, under contract no. DAJA76-86-C-0507, and asserting a setoff of this amount against an invoice from appellant on an amount due appellant (finding 35). Both the assessment of excess reprocurement costs and the setoff were included in appellant's appeal docketed as ASBCA No. 38719. On 10 February 1989, the contracting officer issued a final decision assessing excess reprocurement costs, in the amount of DM 28,550.73, under contract no. DAJA76-86-C-0509, and asserting a setoff of this amount against invoices from appellant on amounts due appellant under this and several other contracts (finding 41). Both the assessment of excess reprocurement costs and setoffs were included in appellant's appeal docketed as ASBCA No. 38720.

54. In his final decisions of 16 January 1989, 19 January 1989, 15 May 1989, and 26 September 1989, assessing excess costs against appellant under contract no. DAJA76-87-C-0625, the contracting officer also asserted setoffs of the amounts claimed as excess reprocurement costs against invoices from appellant on amounts due under that contract (findings 13-16). Both the assessments of excess reprocurement costs and the setoffs were included in appellant's appeals docketed as ASBCA Nos. 38722, 39415, and 40121. In addition to these final decisions under contract no. DAJA76-87-C-0625, the contracting officer, on 27 February 1989, issued a further final decision amending his final decision of 19 January 1989, asserting setoffs of the claimed excess reprocurement costs under its 19 January 1989 decision against invoices from appellant on amounts due appellant under contracts nos. DAJA76-86-C-0478 and DAJA76-87-C-0519. Appellant appealed this final decision, which appeal was docketed as ASBCA No. 38722, and consolidated with the appeal docketed as ASBCA No. 38154.

55. In his final decisions of 26 September 1989 assessing excess reprocurement costs against appellant under contract no. DAJA76-86-C-0478, the contracting officer also asserted setoffs of the amounts claimed as excess reprocurement costs against invoices from appellant on amounts due under contract no. DAJA76-87-C-0519 (finding 25). This final decision and appeal therefrom were included in the appeal docketed as ASBCA No. 40122.

56. In his final decisions of 15 February 1989 and 26 September 1989 assessing excess reprocurement costs against appellant under contract no. DAJA76-86-C-0506, the contracting officer also asserted setoffs of the amounts claimed as excess reprocurement costs against invoices from appellant on amounts due under contract no. DAJA76-86-C-0478 and contract no. DAJA76-87-C-0519 (findings 30-31). The setoffs included in these final decisions were included in the appeals from the assessment of excess reprocurement costs docketed as ASBCA Nos. 38718 and 40123.

57. In his final decision of 26 September 1989 assessing excess reprocurement costs against appellant under contract no. DAJA76-87-C-0519, the contracting officer also asserted setoffs of the amounts claimed as excess reprocurement costs against invoices from appellant on amounts due under that contract and contract no. DAJA76-86-C-0506 (finding 45). The setoffs included in this final decision were included in the appeal from the assessment of excess reprocurement costs, which appeal was docketed as ASBCA No. 40124.

58. During the hearing in these appeals, appellant's sole surviving managing director responsible for the liquidation of appellant firm and his counsel proposed, as settlement of its claim for unpaid invoices and the appeal docketed as ASBCA No. 38154, the amount of DM 350,524.42. The contracting officer and Government trial attorney accepted this proposal and stipulated this amount as the amount due under the subject contracts.

59. The contracting officers assessed a total amount of DM 678,664.40 as excess reprocurement costs against appellant under all six contracts. However, according to our calculations, the total amount of excess reprocurement costs that could have been assessed against appellant under all its terminated contracts, including option periods exercised under the reprocurement contracts, was DM 674,417.88. The difference between our calculation and the amount assessed by the contracting officer resulted from mathematical errors in the contracting officer's calculations, and the contracting officer's totaling the excess costs asserted under the contracts without regard to whether in certain instances, the reprocurement contract costs were less than the calculated costs for appellant had it completed the work, whereas we calculated costs by contract period for each of the contracts and did not include costs in which appellant's

©1994, Commerce Clearing House, Inc.

Digitized by Google

calculated costs exceeded those of the reprocurement contractor for the like period. Of the amount of excess reprocurement costs asserted under all contracts, the total amount of excess reprocurement costs assessed against appellant under all the contracts for the base periods in the reprocurement contracts was DM 170,972.39. The total amount of excess reprocurement costs attributed to costs incurred during the option periods of the six reprocurement contracts was DM 503,445.49.

DECISION

Appellant contends under ASBCA No. 38154 that it is entitled to Prompt Payment Act interest penalties on its unpaid invoices and entitled to interest under the Contract Disputes Act on its unpaid invoice claim of 12 September 1988. Except with respect to the stipulation between the parties and settlement concerning the amount of unpaid invoices during the hearing, the issues raised in this appeal were not addressed by the parties during the hearing. Moreover, although appellant addressed the appeal and its claim for Prompt Payment interest penalty and Contract Disputes Act interest on the unpaid invoices in its post-hearing brief, the Government did not address any issue raised by this appeal in its post-hearing brief.

The contracts in dispute in these appeals were awarded prior to the 1988 amendments to the Prompt Payment Act. Therefore, we address the law as it existed prior to the 1988 amendments. The Prompt Payment Act (31 U.S.C. § 3901-3906) provides, in pertinent part, that a payment is due 30 days after the receipt of a proper invoice, unless the contract establishes a different date, and that an interest penalty is assessed from that date if payment is not made within a 15-day grace period after the due date (*id.*, at § 3902). However, under both the Act and OMB Circular A-125, interest penalties are not required when payment is delayed because of a dispute over the amount of the payment or other issues concerning compliance with the contract, but may be due under a claim filed under the Contract Disputes Act.

As we found above, there was no evidence in the record concerning the dates the Government received the invoices identified in appellant's claim, or that the Government ever notified appellant that it considered the invoices improper. Nor was there any evidence that the work required by the contracts for which the invoices were submitted was not accepted by the Government. Therefore, although there is no basis for specific findings with respect to when the Government received the invoices and whether or not they were proper invoices, we assume for the purpose of considering the applicability of possible Prompt Payment Act interest penalty to these invoices that the invoices in question were received by the Government on the dates of the invoices, that they were proper invoices, and that the work represented as performed was accepted. Based on these assumptions, the payment date for appellant's invoice in the amount of DM 26,527.00, submitted to the Government on 30 November 1987, was 15 January 1988, which included the 30-day payment date and the 15 days grace period authorized by the Act in which to make payment without incurring the Prompt Payment Act interest penalty (finding 47). The payment date for the invoices submitted by appellant in late December 1987 was 15 February 1988, which included the 30-day payment date and the 15 days grace period authorized by the Act in which to make payment without incurring the Prompt Payment Act interest penalty (*id.*). The payment date for the invoices dated 26 January 1988 was 15 March 1988 absent any dispute concerning these invoices, which date also included the 30-day payment date and the 15 days grace period authorized by the Act in which to make payment without incurring the Prompt Payment Act interest penalty. It is unclear from the record when the Government took the deductions on some of the invoices and which deductions were accepted by the appellant.

Although there is no documentation in the record concerning the invoices in dispute, the parties appear to be in general agreement concerning the amounts of the invoices and the approximate dates they were received by the Government. As a result of the stipulated agreement between the parties as to the total amount due under these invoices, the sole issue before us is whether or not the delayed payments for which appellant claims Prompt Payment Act interest penalty and Contract Disputes Act interest involved disagreements over the amounts due at the time of their submission or other issues of contract compliance.

This raises an issue concerning the possible tolling of the payment due dates because of the terminations for default of the six contracts in question on 15 January 1988 following appellant's 13 January 1988 notifi-

Digitized by Google

cation that it was terminating its performance of the contracts on 15 January 1988. In accordance with § 3906(c) of the Prompt Payment Act, the payment period is tolled if a dispute exists concerning the amount of payment or compliance with the contract. 31 U.S.C. § 3906(c) (1982); OMB Cir. A-125, § 8(c); *James Lowe, Inc.*, ASBCA No. 42026, 92-2 BCA ¶ 24,835; *see also*, Michael J. Renner, *Prompt Payment Act: An Interest(ing) Remedy for Government Late Payment*, 21 Pub. Cont. L. J. 177, 215 (Winter 1992). Except with respect to appellant's notice of termination of its contract performance under all the contracts and the subsequent terminations of the contracts for default, there is no evidence that there existed any dispute between the parties concerning the amount of payments or compliance with the contracts. Neither party has addressed this issue, either in the record or in their briefs.

We have not previously directly addressed this issue. However, where, as here, the contractor has defaulted, the Government is entitled, in accordance with its common law right of setoff and with the regulation, to withhold a reasonable amount of the monies due the defaulted contractor. *C.f., Southland Construction Co.*, VABCA Nos. 2217, 2543, 89-1 BCA ¶ 21,548, at 108,456-58; which relied, in part, on FAR § 49.402-6.

Moreover, under the terms of the DEFAULT clause, appellant was subject to liability to the Government for any excess costs for services reprocured similar to those terminated. Appellant does not, in these appeals, dispute the propriety of the terminations of the contracts for default. Indeed, appellant knew, or should have known, on 13 January 1988, when it delivered its letter informing the Government that it was terminating its performance under all the contracts in dispute here that it was subject to liability for excess reprocurement costs.

Although it is clear, under the above cited regulation and the facts of this case, that the Government may not assess excess reprocurement costs against appellant until after the Government awarded the reprocurement contracts and paid the reprocurement contractors, this does not require the Government to pay appellant for its accepted services under its outstanding invoices, without regard to its right of setoff, pending such an assessment to avoid Prompt Payment Act interest penalties. All that is required under the Act is that any questions concerning whether appellant's performance was in compliance with the contract be raised in good faith in order to establish a *bona fide* dispute between the parties. H.R. Rep. No. 461, 97th Cong., 2d Sess. 15, *reprinted in* 1982 U.S. Code Cong. & Ad. News 111, 125; *Arkansas Best Freight System, Inc. v. United States* [36 CCF ¶ 75,905], 20 Cl. Ct. 776, 779 (1990). Moreover, as the court stated in *Arkansas Best Freight System, Inc. v. United States*, at 779, there must be, at the time payment of an invoice is delayed, a "present basis for delaying payment which is related to an objective discernible dispute." The fact that an appellant may ultimately prevail on the merits of the underlying dispute does not defeat an otherwise proper withholding of payment where there is a good faith dispute with respect to whether the appellant's performance was in compliance with the contract at the time of the withholding. *C.f., Toombs & Co., Inc.*, ASBCA Nos. 35085, 35086, 91-1 BCA ¶ 23,403, at 117,428-29. At the time the Government delayed payment of appellant's invoices and initiated withholding action, it was in the process of awarding reprocurement contracts and, on the basis of the prices of those contracts, including prices for the option periods, and in the position of estimating its total reprocurement costs although it was unable to assess such reprocurement costs against appellant until it had paid the reprocurement contractors.

As we found above, appellant submitted ten invoices prior to the terminations of the contracts for default, all except one were for payment due after the termination for default. One of these invoices, in the amount of DM 26,527.00, was submitted to the Government on 30 November 1987, with payment due, on or about 30 December 1987 or, with the 15-day grace period, due 15 January 1988, two days after appellant informed the Government that it was terminating its performance of all contracts, and the day the Government terminated these contracts for default. We hold that on 13 January 1988, there was a disagreement between the parties regarding appellant's compliance with all the contracts and that this disagreement tolled the payment due date on these ten invoices submitted prior to the terminations for default. We further hold that, with respect to the seven invoices submitted under the various contracts on 26 January 1988, after the terminations of the contracts for default, there was an existing disagreement between the parties regarding appellant's compliance with the contracts and that the interest penalty on these invoices did not start to accrue. *Zinger Construction Co., Inc.*, ASBCA No. 41690, 92-1 BCA ¶ 24,652.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Moreover, we have held that where the contracting officer justifiably withholds payment in accordance with the contract, the Prompt Payment Act interest penalty does not accrue with respect to the amount properly withheld. *Steven E. Jawitz,* ASBCA No. 33610, 87-3 BCA ¶ 20,011. Accordingly, we hold that appellant is not entitled to any Prompt Payment Act interest penalties on these 17 invoices.

Although appellant concedes that it breached all six contracts by anticipatory repudiation, appellant contends that the Government failed to mitigate its damages upon the breach of the contracts. The gist of appellant's position is that the applicable legal standard requires the Government to reprocure services after default using competition to the maximum extent practicable. According to appellant, it was practicable for the Government to obtain competitive offers from numerous firms rapidly during the last week of appellant's contract performance, and to obtain full and open competition to reprocure the services covered by the unexercised options in appellant's contracts.

The Government's basic positions are that its reprocurements of the services were reasonable and that the prices it paid for the reprocured services were reasonable. Although the Government concedes that competitive reprocurement is preferred, it contends that noncompetitive awards of reprocurement contracts have been upheld by the Board where the Government urgently needs the services and the prices for such reprocured services are reasonable.

Under FAR § 49.402-6 and the DEFAULT clause of appellant's contracts, the contracting officer is authorized to reprocure the services still required after the terminations of the contracts for default under "the terms and in the manner the Contracting Officer considers appropriate." As stated by the court in *Cascade Pacific International v. United States* [33 CCF ¶ 73,958], 773 F.2d 287, 293-94 (Fed. Cir. 1985):

> [E]xcess reprocurement costs may be imposed only when the Government meets its burden of persuasion that the following conditions (factual determinations) are met: (1) the reprocured supplies are the same or similar to those involved in the termination; (2) the Government actually incurred excess costs; and (3) the Government acted reasonably to minimize the excess costs resulting from the default.

The first condition is satisfied by comparison of the services reprocured with the services terminated. *Cascade Pacific International v. United States, supra.* There is no dispute concerning the similarity of the reprocurement services and contracts. Indeed, as our findings set forth, all the reprocurement contracts were awarded under the same terms and conditions as the defaulted contracts inasmuch as awards were made in accordance with the original solicitations. Moreover, as we found above, in those instances in which work was added or deleted by modification to the reprocurement contracts, the contracting officer did not include the additional work in the computation of excess reprocurement costs and made an adjustment to appellant's contracts to delete the costs of the deleted work.

The second condition requires that the Government establish what was spent in the reprocurement. *Id.* There is no dispute concerning the prices paid by the Government to the reprocurement contractors. As set forth in our findings, the contracting officer's assessments of the reprocurement costs against appellant are supported by the respective reprocurement contracts, the invoices received from the reprocurement contractors and paid by the Government, and the Government's computations of the excess costs to be assessed based on the adjustments to the reprocurement costs to account for any contract modifications to the reprocurement contracts, and subject to our mathematical adjustments, so that there is an accurate comparison between the prices paid on the reprocurement contracts and calculated prices that would have been paid appellant had appellant completed contract performance.

As stated by the court in *Cascade Pacific International v. United States,* "The third condition requires that the Government act within a reasonable time of the default, use the most efficient method of reprocurement, obtain a reasonable price, and mitigate its losses." *Id.* Therefore, these appeals raise two essential issues regarding the reprocurements within the context of the Government's obligation to mitigate costs resulting from appellant's defaults of the contracts. Thus, the first issue is the propriety of the Government's reprocurement actions when the Government, rather than issuing new solicitations, merely contacted those firms that submitted offers in response to the initial solicitations, in the order of the previously evaluated low offerors, and sought their agreements as to whether they would accept contracts under the same terms and conditions contained in the initial solicita-

Digitized by Google

tion at their previously proposed prices. The second issue is whether once having awarded the reprocurement contracts, the Government acted properly when it exercised the options to extend the contracts under the reprocurement contracts without issuing new competitive solicitations or performing a market survey.

In *Luther Benjamin Construction Co.*, ASBCA Nos. 40401, 40606, 93-1 BCA ¶ 25,459, we held that the Government took all necessary action to proceed with the negotiation and award of the reprocurement contract when, because of the urgency for the completion of the building, negotiated with, and awarded the contract to one of the bidders submitting a bid in response to the original solicitation under which the terminated contract was awarded. Nine bids had been received in response to the original solicitation. Following the termination for default, four offerors were solicited, only one of which submitted a bid in response to the original solicitation and responded to the reprocurement solicitation. The contracting officer obtained an Independent Government Estimate and negotiated the reprocurement price with the offeror submitting an offer on the reprocurement solicitation. We, therefore, sustained the assessment of excess reprocurement costs notwithstanding the fact that the Government did not solicit competitive sealed bids from a larger number of potential bidders and did not advertise the requirement in the Commerce Business Daily.

In *Ronald L. Collier d/b/a Carolina Maintenance Company*, ASBCA No. 26972, 89-1 BCA ¶ 21,328, we denied the appeal challenging the assessment of excess reprocurement costs in which the appellant contended that the contracting officer failed to properly calculate the amount of excess reprocurement costs. The issue arose there because the Government modified an existing contract of the reprocurement contractor for similar services elsewhere in the Charleston, South Carolina area, to include services required under the terminated contract. In upholding the actions of the contracting officer, which effected the modification of the completion contractor's contract within four days after terminating the appellant's contract, we said:

> When a contracting officer is faced with completing contract work which remains undone after a termination action he/she has a large amount of discretion as to how the completion of that work will be obtained. Surely in many situations making a competitive procurement is the preferred method. That is not, however, always possible. Here the work to be completed was maintenance of family housing. The contracting officer concluded, and we have no basis for disagreeing with that conclusion, that the need was so urgent that the preferable approach was to get a contractor then performing identical work in the same general geographic area to add the work to its contract. It was clear that work from the defaulted contract was being added to the completion contract. The Government protected appellant as best it could by obtaining agreement with the completion contractor that appellant's uncompleted work would be charged for at the same prices the completion contractor was charging for identical work under its own contract.

Id., at 107,557-58. We, therefore, held that the contracting officer did all that was required to do in securing the completion of the work after terminating for default the appellant's contract. The contracting officer had acted promptly in awarding the reprocurement work to the completion contractor. He obtained the same type of services required by the terminated contract. He obtained the most fair and reasonable prices under the circumstances of the urgent need.

Although *Luther Benjamin Construction Co., supra*, and *Ronald L. Collier d/b/a Carolina Maintenance Company, supra*, are distinguishable on their facts, the principles contained therein are consistent with the authority granted in FAR §§ 49.402-6 and 49.405 and the DEFAULT clause of appellant's contract and are applicable to the facts in the instant appeals. Moreover, as stated in *Cascade Pacific International v. United States, supra*, "The third condition [for the authorized imposition of excess reprocurement costs against the terminated contractor] requires that the Government act within a reasonable time of the default, use the most efficient method of reprocurement, obtain a reasonable price, and mitigate its losses," a condition we hold has been satisfied in these appeals with respect to the awards of the reprocurement contracts.

The contracting officer awarded the reprocurement contracts on 15 January 1988, two days after appellant notified the contracting officer on 13 January 1988 that it was terminating performance of all the contracts two days later on 15 January 1988, the date the contracting officer terminated

©1994, Commerce Clearing House, Inc.

Digitized by Google

appellant's contracts for default. The reprocurement contracts were awarded for the same services in the same geographic areas, and under the same terms, conditions, and specifications as those contained in appellant's terminated contracts. The contracting officer determined that the services terminated were still required after termination of appellant's contracts for default, that the need for such services was urgent, and that the most efficient method of reprocurement under these circumstances was to solicit the agreements of the unsuccessful low offerors under the original solicitations to perform the work at their originally proposed prices in order to obtain reasonable prices for these services and, therefore, mitigate its losses. Appellant has presented no persuasive evidence or argument, nor have we found any, that would justify a conclusion that the Government did not satisfy its obligation to mitigate its losses in the awards of the reprocurement contracts. In light of the urgency of these reprocurements and the need for uninterrupted custodial services in the Frankfurt and Wiesbaden military communities, we, therefore, hold that the contracting officer acted reasonably and in accordance with the regulations and DEFAULT clause of appellant's contract when the contracting officer, rather than issuing new solicitations for the reprocurement contracts, contacted those firms that submitted offers in response to the initial solicitations, in the order of the previously evaluated low offerors, and sought their agreements as to whether they would accept contracts under the same terms and conditions contained in the initial solicitation at their previously proposed prices.

With respect to the second issue presented by these appeals, namely, whether once having awarded the reprocurement contracts, the Government acted properly when it exercised the options to extend the contracts under the reprocurement contracts without issuing new competitive solicitations or performing a market survey, appellant contends that a total of DM 508,246.18 excess reprocurement costs assessed resulted from the payments of invoices for performance of services by the reprocurement contractors during the option periods, whereas the total amount of excess reprocurement costs assessed against appellant was DM 678,664.40. As indicated in our findings, we have calculated the total amount of excess reprocurement costs as DM 674,417.88, of which amount a total of DM 503,445.49 were assessed for the performance of services by the reprocurement contractors during the option periods (finding 59). Appellant contends that the exercise of these options cannot be justified under FAR § 17.207 "in light of the restricted procedures used to award the reprocurement contracts in January 1988." Citing *General Optical Limited,* ASBCA No. 23835, 84-1 BCA ¶17,026, appellant contends that there was a failure to mitigate costs where the Government reprocured through the exercise of an option under another contract without having first solicited offers to determine if competitive market prices would be lower. The Government did not address this issue either during the hearing or in its post-hearing brief.

As a general rule, we have held that the Government is entitled to reprocure for the period of the defaulted contract, including additional option years, that the defaulted contractor had originally contracted to perform. *Lewis Management & Service Company,* ASBCA Nos. 24802, 24803, 24804, 26180, 26182, 85-3 BCA ¶18,416, at 92,467; *Advance Building Maintenance Company,* ASBCA Nos. 27183, 28219, 85-2 BCA ¶18,076, at 90,750-51. Thus, in *Givens Services, Inc.,* ASBCA No. 28511, 84-1 BCA ¶17,151 and *Givens Services, Inc.,* ASBCA No. 31048, 87-1 BCA ¶19,418, we upheld the assessment of excess reprocurement costs incurred by the Government under the exercise of two options to extend the term of the reprocurement custodial services contracts. Although we made certain adjustments in the amount of excess reprocurement costs based on our calculations in *Givens Services, Inc.,* ASBCA No. 28511, there was nothing in that decision that questioned the assessment of excess reprocurement costs incurred during the option periods. However, the issue was not raised and we did not address the question of whether or not the Government complied with the determination requirements of FAR § 17.207, or whether the failure, if any, to comply with these requirements resulted in the possible failure of the Government to mitigate its costs.

General Optical Ltd., ASBCA Nos. 23835 and 26469, *supra,* cited by appellant is inapposite. That decision involved the exercise of the option for additional quantities under another existing contract and, although a supply contract, is more analogous to *Ronald L. Collier d/b/a Carolina Maintenance Company, supra,* than to the instant appeals. Moreover, in *General Optical Ltd.,* we held that:

> While we have held that the reprocurement may not have been proper, we do not agree with appellant that the Government

Digitized by Google

> is not entitled to any excess costs of reprocurement. Just because the Government may have paid more than it might have for the reprocured items does not preclude it from recovering the appropriate amount for excess costs if the basis for computing the amount chargeable to the defaulting contractor can be established.

Id., at 84,785. Although *General Optical Ltd.* is factually distinguishable from the instant appeals, it does underscore the importance we place in reprocurements on testing the market and compliance with FAR § 17.207 before the contracting officer exercises an option.

FAR § 17.207 provides that the contracting officer may exercise an option after determining that funds are available, if the requirement covered by the option fulfills an existing Government need, and the exercise of the option is the most advantageous method of fulfilling the Government need, price and other factors considered. This provision of the regulation requires that the contracting officer shall make the determination to exercise the option based on one of the following factors: a new solicitation fails to produce a better price or a more advantageous offer than offered by the option; an informal analysis of prices or an examination of the market indicates that the option price is better than prices available in the market or that the option is the more advantageous offer; or the time between award of the contract containing the option and the exercise of the option is so short that it indicates the option price is the lowest price obtainable or the more advantageous offer. Moreover, the regulation provides that the determination of other factors should take into account the Government's need for continuity of operations and potential costs of disrupting operations.

The reprocurement contracts awarded following the terminations of appellant's contracts for default were identical in their terms and conditions, including option provisions, to those included in appellant's contracts. These reprocurement contracts were awarded for the contract periods commensurate with the periods of appellant's contracts at the time they were terminated for default. Therefore, the reprocurement contracts did not provide for performance periods, including option years, beyond those in appellant's contracts had appellant continued its performance under its contracts. Although there was testimony of the two contracting officers with respect to the standard procedures generally followed prior to the exercise of options to extend the contracts for additional terms, which procedures, according to these contracting officers generally complied with the requirements of FAR § 17.207, there was no direct evidence in the documentary record or by testimony to the effect that the Government followed these procedures in connection with the exercise of the particular options of the reprocurement contracts at issue in these appeals.

Moreover, as we found above, there was considerable price competition in response to the initial solicitations. However, except with respect to the award of the reprocurement contract for contract DAJA76-87-C-0625, the awards of the other reprocurement contracts were made to offerors other than the second low offeror because of non-responsibility determinations and lack of interest on the part of a prior offeror in performing the services under a reprocurement contract at the originally proposed prices of these lower priced offerors. As we found above with respect to the Government's exercise of the options to extend the reprocurement contracts, there was no evidence that the contracting officer reviewed these prior determinations of nonresponsibility to determine if the lower offerors were still nonresponsible at the time the contracting officer exercised the options to extend the reprocurement contracts for additional years. In light of the amount of competition evidenced in response to the initial solicitation, the award of the reprocurement contracts to offerors other than the second low offeror (except with respect to the award of the reprocurement contract to Adlatus-Alpha under DAJA76-87-C-0625), the amount of time available to the Government to either solicit new offers for the option periods or to conduct market surveys or to comply with the other requirements of FAR § 17.207 prior to exercising the options under the reprocurement contracts to extend those contracts for additional periods, we hold that the Government did not carry its burden of proof to establish that it mitigated its reprocurement costs when it exercised the options. We, therefore, had no basis for determining what the excess costs should have been for the option periods. *C.f., General Optical Ltd., supra.*

In light of the foregoing, although we hold that the Government is entitled to recover excess reprocurement costs against appellant under all of its terminated contracts, we also hold that such entitlement is limited to re-

©1994, Commerce Clearing House, Inc.

Digitized by Google

covery of excess reprocurement costs incurred during the unexpired portion of the base or option period of appellant's defaulted contracts in which the terminations for default were issued. Accordingly, the Government is not entitled to recover excess reprocurement costs for the reprocured custodial services performed under the exercised options of the reprocurement contracts.

Based on our calculations, the Government is entitled to excess reprocurement costs in the total amount of DM 170,972.39, which is the amount of excess reprocurement costs for all six contracts for the remaining portions of the base or option periods unperformed by appellant, which portions were covered by those reprocurement contracts. We hold that the Government is not entitled to recover DM 503,445.49 as excess reprocurement costs incurred by the Government during the periods covered by its exercised options extending the contract terms of the reprocurement contracts.

Consistent with the parties' stipulation and agreement during the hearing, we hold that appellant is entitled to DM 350,524.42 for the unpaid invoices. However, we hold that appellant is not entitled to Prompt Payment Act interest penalties, nor is appellant entitled to interest under the Contract Disputes Act on the full amount of the invoices since payment was properly withheld as offset against the anticipated excess reprocurement costs. The amount of DM 350,524.42 due appellant for the custodial services it performed prior to the terminations for default and invoiced the Government in accordance with the parties' stipulation and agreement shall be offset by DM 170,972.39, the amount of excess reprocurement costs to which we hold the Government is entitled. Accordingly, appellant is entitled to DM 179,552.03, the difference between the DM 350,524.42 the Government owes appellant for services performed by appellant under its contracts prior to the terminations for default and the amount of excess reprocurement costs to which the Government is entitled. The appellant is entitled to interest on this amount in accordance with the Contract Disputes Act on the unpaid invoices on the withheld amounts of excess reprocurement costs asserted by the Government for costs incurred during the option periods of the reprocurement contracts, such interest to run from 12 September 1988, the date appellant submitted a claim for the unpaid invoices, until paid.

Accordingly, we sustain the appeal docketed as ASBCA No. 38154, to the extent indicated herein and deny the appeal with respect to appellant's claim for Prompt Payment Act interest penalty. We deny appellant's appeals docketed as ASBCA Nos. 38156, 38155, 38719, 38720, 40124 in part and sustain in part in accordance with findings 45-46, and sustain appellant's appeals docketed as ASBCA Nos. 38722, 39415, 40121, 42530, 38717, 40122, 38718, 40123, 42528, 42529, 42531.

[¶ 26,317] Arctic Corner, Inc.

ASBCA No. 38075, August 24, 1993. Contract No. DAAB07-82-C-Q443.

Contract Disputes, Jurisdiction—Boards of Contract Appeals—Related Court Proceedings.—A contractor's motion to dismiss an appeal, arguing that the board lacked jurisdiction to decide the government's claim for excess costs until the Court of Federal Claims decided the surety's related appeal of the default termination of its contract and the assessment of excess costs against it, was denied because there was no legal authority to support the proposition that a tribunal adjudicating the assessment of excess reprocurement costs and liquidated damages against a defaulted contractor lacks jurisdiction if another tribunal is also adjudicating the validity of that assessment.

Reprocurement—Variations from Defaulted Contract—Burden of Proof.—In an appeal that arose from the government's assessment of excess reprocurement costs under a contract for barracks rehabilitation and that included the contractor's assertion of affirmative defenses alleging, among other things, the dissimilarity and unreasonableness of the reprocurement contract, the government met its burden of proving that the reprocured contract work was similar to the terminated work, the reprocured work occurred within a reasonable time, the reprocurement price and mitigated damages were reasonable, final payment on the reprocurement contract was made, and the excess costs assessed were based on the government's liability for a sum certain.

Digitized by Google

Liquidated Damages—Amount—Original Contract Price.—Following the default termination of a contract for barracks rehabilitation, the default termination of the surety's takeover agreement, and the award of a reprocurement contract, there was no danger the government would, by recovering liquidated damages from the original contractor, recover duplicate liquidated damages, because the government had assessed liquidated damages against the contractor and the surety jointly and severally, thereby precluding duplicate recovery of liquidated damages. Because the surety takeover agreement required completion of performance within the original contract price, it was not a reprocurement for purposes of measuring excess costs, nor was it a reprocurement for purposes of limiting assessment of liquidated damages. However, a $6\frac{1}{2}$-month delay in awarding the reprocurement contract was unreasonable and was excluded from the assessment.

Reprocurement—Expenses and Deductions—Administrative Costs.—The government's assessment of reprocurement costs against a defaulted contractor was denied because the administrative costs in question were not proven. Such costs are recoverable at common law, a right the government expressly reserved in the Termination for Default—Damages for Delay—Time Extensions clause, if supported by reasonable estimates. the contracting officer testified that the amount assessed was a reasonable administrative cost without further explanation or elaboration.

For the appellant: Pasquale Chiacchio, President, and Albert Rondinelli, Vice President. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. Robert A. Duecaster, JAGC, Trial Attorney.

Before JAMES, RUBERRY, and RIISMANDEL, Administrative Judges.

JAMES, Administrative Judge: We upheld the 1984 default termination of contract DAAB07-82-C-Q443 (contract Q443) in *Arctic Corner, Inc.*, ASBCA No. 29405, 88-1 BCA ¶ 20,396. This appeal arises from respondent's assessment of excess reprocurement costs, liquidated damages and administrative costs due to the default termination of contract Q443, the 1985 default termination of the Takeover Agreement of appellant's surety, Indemnity Insurance Company of North America (IICNA), to complete performance of contract Q443, and its substantial completion by Sharp Construction Co. in 1986. IICNA appealed the default termination of its Takeover Agreement to the U.S. Claims Court (now renamed the Court of Federal Claims).

Appellant asserts as affirmative defenses the invalidity of the IICNA takeover contract, dissimilarity and unreasonableness of the reprocurement contract and untimeliness of respondent's assessment. A four-day hearing was held in Freehold, NJ. Respondent moved to consolidate this appeal with ASBCA No. 44360-657 (tr. 1/19), redesignated ASBCA No. 45421. Appellant moved to dismiss ASBCA No. 38075, arguing that the Board lacks jurisdiction to decide respondent's claims until the Court of Federal Claims decides IICNA's suits regarding IICNA's default termination and excess reprocurement costs which respondent assessed against IICNA and appellant jointly and severally (tr. 1/164-68). Both parties submitted post-hearing briefs. We decide both the motions and the merits of entitlement and quantum (tr. 1/9).

FINDINGS OF FACT

1. Respondent awarded contract Q443 to appellant on 29 September 1982 for rehabilitation of five troop barracks at Barker Circle, Ft. Monmouth, NJ, for the fixed price of $1,476,750 in accordance with specification PR80-8105 and drawing Nos. 9826-1 through -37. Dynamic Industries Co., Inc. was the second low bidder on contract Q443 at $102,000 more than appellant's low bid price. Trataros Construction Corporation was third low bidder. (R4, tabs 1, 2; exh. A-3)

2. Contract Q443 provides in pertinent part:

> *Termination for Default* (DAR 7-602.4) (1965 JAN) [In the event of default termination] the Government may take over the work and prosecute the same to completion, by contract or otherwise, and may take possession of and utilize in completing the work such materials, appliances, and plant as may be on the site of the work and necessary therefor. Whether or not the contractor's right to proceed with the work is terminated, he and his sureties shall be liable for any damage to the Government resulting from his refusal or failure to complete the work within the specified time.

Liquidated Damages (DAR 7-603.39) (1965 JAN) In case of failure . . . of the Contractor to complete the work within the time fixed in the contract or any extensions thereof, the Contractor shall pay to the Government as liquidated damages, pursuant to the clause of this contract entitled "Terminations for Default—Damages for Delay—Time Extensions," the sum of $200.00 for each day of delay.

Contract Q443's General Provision No. 5 is the "Termination for Default—Damages for Delay—Time Extensions" clause, which provides in pertinent part:

(b) If fixed and agreed liquidated damages are provided in the contract and if the Government so terminates the Contractor's right to proceed [for default], the resulting damage will consist of such liquidated damages until such reasonable time as may be required for final completion of the work together with any increased costs occasioned the Government in completing the work.

(R4, tab 2)

3. IICNA issued payment and performance bonds to appellant as principal under contract Q443 (R4, tab 2).

4. Bilateral contract modifications added changes and increased contract Q443's price by $216,626 to $1,693,376 (R4, tab 3; exh. G-2; tr. 1/40). Contract Q443 required completion within 365 days, but the parties agreed informally to extend the completion date to 1 March 1984.

5. On 7 February 1984 respondent terminated contract Q443 for default and on 8 February 1984 notified appellant that it would be held liable for excess reprocurement costs (R4, tab 28). Appellant appealed respondent's default termination decision, which appeal we denied. *Arctic Corner, Inc.*, ASBCA No. 29405, 88-1 BCA ¶ 20,396, *aff'd, Arctic Corner, Inc. v. United States*, 862 F.2d 321 (Fed. Cir. 1988) (table).

6. Before termination of contract Q443 respondent paid appellant $738,456 in progress payments, or about 43.6 percent of the contract price (exh. G-2; tr. 1/75, 77, 3/7-12). In a post-termination "walk-through" inspection, respondent determined that (a) appellant had performed about 44.8 percent of the contract work (exh. G-2), (b) left mailboxes on the ground, disconnected water fountains, construction materials in the buildings, ceilings open with wires hanging from them, disconnected electrical boxes on the floors, doors off their hinges and inoperative latrines, and (c) corrective work items remained unperformed, including replacing building 205's front stairs (R4, tab 27; tr. 1/42-43, 81-82, 2/28, 55, 4/152), installing window anchors and removal of debris from balconies (tr. 2/102-03).

7. On 20 March 1984, (a) modification P00005, executed by respondent's contracting officer and by IICNA, but not by appellant, substituted IICNA as contractor and incorporated a 6 March 1984 TAKEOVER AGREEMENT in which IICNA agreed to complete performance of contract Q443 by 1 July 1984, with compensation at IICNA's actual costs, but not more than the available contract Q443 unpaid balance of $954,920, with $200 daily liquidated damages to accrue from 2 March 1984 (R4, tab 4; tr. 1/48); and (b) modification P00006 added rear stair replacement and radiator relocations and extended IICNA's completion date to 20 July 1984 (R4, tab 6).

8. By October 1984 respondent had paid IICNA $448,340. Appellant's and IICNA's cumulative billed progress payments of $1,318,662 were 77.9 percent of the amended contract Q443 price (exh. A-26). Respondent made a site survey; compared the work actually performed to the total quantity of work set forth in the contractors' payment schedules, the contract specifications and drawings; and estimated that about 59 percent of the interior and 85 percent of the exterior contract Q443 work had been completed by October 1984. (Exh. G-2; tr. 1/78, 2/191, 3/9-10, 102-09, 120-22) Of the amended contract Q443 price, $506,580 (including $131,866 in retainages) was unexpended in October 1984 (tr. 1/78-80) and about $690,000 was unearned.

9. On 12 October 1984 respondent terminated IICNA's TAKEOVER AGREEMENT for default (R4, tabs 7, 31; tr. 1/49). IICNA appealed that decision to the U.S. Claims Court (now the Court of Federal Claims), Docket Nos. 122-85C and 323-85C. At the time IICNA's performance was terminated, the site contained uninstalled and damaged materials, inoperable fire tower doors and missing door glass and hardware (tr. 3/11, 40-41, 83).

10. Completion of the Barker Circle troop barracks remained urgent to respondent (tr. 1/42-49). After prospective architect-engineer firms met on 25 October 1984 with respondent and made a site visit, on 14 November 1984 respondent retained the services of the architect-engineer firm of H.V. Weeks (a) to update the contract Q443 drawings to show the original work performed and work unperformed by appellant and

Digitized by Google

IICNA, and new work to be added, (b) to estimate the cost required to complete contract Q443, and (c) to estimate separately the cost of new work not required by contract Q443. Weeks' quantitative estimates were not to be provided to prospective reprocurement contractors. (R4, tabs 32-34)

11. Solicitation DAAB05-85-R-T008 of 28 February 1985 requested offers to reprocure substantially the same work specified in contract Q443 but remaining to be done, based on Weeks' updated drawings. The cost estimate sheets respondent provided to offerors listed site work items without Weeks' unit quantities. On 3 April 1985 Weeks estimated $949,179 for unperformed work, corrective work and work to protect the existing structure identified during the offerors' site visits. (R4, tab 13; exh. A-1; tr. 1/109-11, 2/86-92, 135-37) Respondent received proposals from Sharp Construction Company, Inc. (an affiliate of Dynamic Industries, Inc.), Trataros Construction Corporation (respectively second and third low bidders in 1982 on contract Q443) and G&P Parlamas, Inc., selected to perform Phase II rehabilitation work in the Barker Circle barracks in 1985 (R4, tab 8; tr. 1/51-55, 2/105). Sharp's undated $1,124,311 estimate for buildings 205, 206, 207, 208 and 287 had work item cost estimate sheets with Sharp's estimated quantities and prices; and its $565,757 labor costs included supervision and payroll expenses (exh. A-1).

12. Between 18 March and 9 April 1985 respondent negotiated with the foregoing three offerors and instructed them in submitting best and final offers to disregard any new work shown on the revised drawings to assure identity of the scopes of the terminated and reprocured work (R4, tabs 8, 19, 37-39; tr. 1/58, 2/95-96, 159-60).

13. The best and final offers respondent received on 9 April 1985, compared to the Government's 9 April 1985 estimate, were:

Government estimate	$949,179
Sharp Construction Co.	997,000
G&P Parlamas, Inc.	1,168,525
Trataros Construction Corp.	1,224,895

(R4, tab 15; tr. 2/83). The contracting officer determined that Sharp's low offer was reasonable when compared with the Government estimate and in the context of effective price competition (R4, tab 16; tr. 2/30-31).

14. On 25 April 1985—6 1/2 months after respondent terminated IICNA's Takeover Agreement—respondent awarded Sharp reprocurement contract DAAB08-85-C-R218 (contract R218) for the firm fixed price of $997,000 (R4, tab 19; tr. 1/60, 112-13). The record contains no evidence that contract R218's price increased due to any inflationary cause during February-March 1984 or October 1984-April 1985.

15. Contract R218 required completion of performance within 180 calendar days after notice to proceed (R4, tab 19). Notice to proceed was issued on 14 May 1985, establishing 11 November 1985 as the contract R218 completion date (R4, tab 24).

16. Contract R218 required Sharp to complete the work left unfinished, including replacement of items that were missing, damaged or improperly installed prior to the terminations of appellant and IICNA, in accordance with specification PR80-8105 and drawings "10058-1 through 10058-38, including 10058-8A, -14A, -20A, -26A and -32A (43 sheets) dated 31 JAN 1985" depicting contract Q443 work performed, unperformed and misperformed by appellant and IICNA (R4, tab 19; exh. A-3; tr. 1/142-43, 2/92-95). Appellant stated that the contract R218 and contract Q443 drawings were "basically the same" (tr. 4/48).

17. The $997,000 price for contract R218 included (a) about $50,000 for work not required by contract Q443: sandblasting floors and ceilings; two coats rather than one coat of floor paint; and painting over Thoroseal coating (exh. A-1; tr. 2/142-56) and (b) work appellant and IICNA performed incompletely: fan and water fountain reinstallation; repair of unprotected wallboard; installation of window retainer clips, anchors and caulking at six each per window for 2773 windows; and installation of nine door frames (tr. 2/166-80, 230-34, 3/24-27, 56, 77-82; app. R4 supp., tab 46).

18. In October 1985 respondent learned that fan coils, which had been removed by appellant or IICNA, were not on the work site. Sharp spent two to three months searching for the missing fan coils and required sixteen weeks to reorder and install them. (Tr. 2/104, 4/148-49)

19. Sharp substantially completed contract R218 by 1 April 1986 (tr. 3/209, 4/148). Contract R218 certified payroll reports contain wages payable to employees of Sharp from 1 May 1985 to 2 April 1986 and of subcontractor Modern Iron Works from 9 June 1985 to 1 April 1986, totalling $81,588.94 (exh. A-2). Respondent made final inspection and took beneficial occupancy of the Barker Circle barracks on 1 May 1986 (R4, tab 24).

©1994, Commerce Clearing House, Inc.

Digitized by Google

20. Bilateral modifications dated 30 September 1986 and 11 March 1987 added six changes to contract R218, including facia and shingle repairs; convector replacements; interior stair repairs; acoustic ceiling, water coolers and carpet reinstallation; and toilet renovation; increased contract R218's price by $144,180; and extended its completion date to 31 March 1987 (R4, tab 23; tr. 2/159-61, 3/136-40, 144-53, 170, 173). Sharp included $2,500 of unpaid original contract R218 work and the $144,180 for the six changes in its invoice 9 of 16 March 1987 (exh. G-5; tr. 3/205-07). In June 1987 respondent paid Sharp's tenth partial payment, leaving an unpaid contract R218 balance of $2,500 for change order work (exh. G-5).

21. Respondent's 12 September 1988 letter assessed appellant and IICNA jointly and severally $513,496 in excess reprocurement costs, exclusive of the costs of changed work; $152,200 for 761 calendar days of liquidated damages (2 March 1984 to 1 April 1986); $757 in administrative costs to process the reprocurement and $18,411 to update the drawings; and gave notice of appellant's appeal rights (R4, tab 25; tr. 1/75).

22. The contracting officer testified that $757 was a reasonable cost without further explanation or breakdown (tr. 1/57). Weeks submitted an $18,411 invoice for services to update the drawings (R4, tab 35).

23. Appellant's 5 December 1988 letter timely appealed respondent's 12 September 1988 final decision.

24. On 10 April 1989 Sharp submitted the eleventh and final contract R218 invoice of $2,500 for change order work; respondent paid it on 20 April 1989 (exh. A-25, G-7; tr. 3/207-10).

25. At trial, respondent eliminated from its excess reprocurement cost assessment against appellant $18,000 arising from Sharp's installation of window clips (tr. 3/125-27).

DECISION

I. MOTIONS

At trial, respondent moved to consolidate ASBCA Nos. 38075 with ASBCA No. 44360-657. Since ASBCA No. 44360-657 (redesignated ASBCA No. 45421), is in the discovery stage and ASBCA No. 38075 has been tried and is ready for decision, we deny respondent's motion to consolidate the two appeals. We will give due consideration to a motion to incorporate the evidence in ASBCA No. 38075 into the record of ASBCA No. 45421, to avoid needless duplication.

Appellant moved to dismiss this appeal arguing that the ASBCA lacks jurisdiction to decide respondent's claims until the Court of Federal Claims (COFC) decides IICNA's default termination and excess reprocurement costs which respondent assessed against IICNA and appellant jointly and severally. Appellant cites no legal authority, and we know of none, that a tribunal adjudicating the assessment of excess reprocurement costs and liquidated damages against a defaulted contractor lacks jurisdiction if another tribunal is to adjudicate the validity of that assessment against the contractor's surety which failed to perform a takeover agreement on the contractor's defaulted contract, or that the possibility of an inconsistent decision by the other tribunal impairs our jurisdiction. *Cf., Employers Mutual Casualty Co.*, GSBCA No. 11003, 91-3 BCA ¶ 24,202, *recon. den.*, 92-1 BCA ¶ 24,442, *aff'd*, 93-1 BCA ¶ 25,482 (notwithstanding conversion of the contractor's default to a convenience termination of a contract, Government had the legal right to terminate the surety's Takeover Agreement for default if the facts justified such termination).

The COFC has not ordered the consolidation of *pro se* appeal No. 38075 with IICNA's Claim Court Docket Nos. 122-85C and 323-85C pursuant to 41 U.S.C. § 609(d). Only if the COFC should decide the assessment of excess costs and liquidated damages issues in advance of the ASBCA might such COFC judgment collaterally estop appellant. The possibility of such future collateral estoppel cannot impair this Board's present jurisdiction. Accordingly, we deny appellant's motion to dismiss for lack of jurisdiction.

II. MERITS

A. *Excess Reprocurement Costs.*

Respondent has the burden of proving that the reprocured contract work was the same as or similar to the terminated work; it reprocured within a reasonable time after the default termination; the reprocurement price was reasonable and respondent reasonably mitigated damages; it made final payment on the reprocurement contract; and the excess costs assessed are based on respondent's liability for a sum certain. *Rayco Inc, et al.*, ENG BCA No. 4792, 88-2 BCA ¶ 20,671 at 104,476.

Appellant argues that (i) the IICNA Takeover Agreement was invalid; (ii) contract

Digitized by Google

R218 was dissimilar from contract Q443; (iii) contract R218's price was unreasonable and (iv) respondent did not assess excess reprocurement costs timely.

Appellant adduced no evidence to substantiate that the IICNA Takeover Agreement was invalid. Although appellant did not sign the IICNA Takeover Agreement (finding 7(a)), a surety Takeover Agreement may be, but is not required to be, signed by the defaulting contractor. FAR § 49.404(d). Appellant argues that the initial $227,000 payment respondent made to IICNA was "illegal." A surety who completes a defaulted contract under a performance bond, as IICNA sought to do here, is entitled to payment from the unexpended contract balance of progress payments, whether earned prior or subsequent to the original contractor's default. B-192237, 79-1 CPD ¶ 19 (15 Jan. 1979) Even if such payment were "illegal," which it was not, that would not invalidate the surety Takeover Agreement. Our review of the Takeover Agreement discloses no basis for concluding that it is invalid.

The specifications in contracts Q443 and R218 are identical and their drawings are basically the same (findings 1, 16). Respondent segregated in reprocurement contract R218 the costs of added work from the original contract Q443 work, except for $50,000 of contract R218 work not required by contract Q443 (findings 10, 12, 17). Respondent sustained its burden of proof of similarity of the defaulted and reprocurement contracts.

Appellant argues that Sharp's labor costs were unreasonable because (1) respondent provided estimated unit labor quantities and prices to offerors and (2) Sharp's incurred labor costs were significantly less than its proposed labor costs. Appellant concludes that the $997,000 contract R218 price was unreasonable. The record does not support appellant's argument. The cost estimate sheets respondent provided to offerors contained no unit quantities, hours, or prices (finding 11). Appellant's comparison of Sharp's proposed vs. incurred labor costs is invalid because (i) appellant calculated $663,469 in proposed labor costs, but Sharp proposed $565,757 in labor costs (finding 11); (ii) Sharp's proposed labor costs were for a $1,124,311 estimate, not the $997,000 best and final offer accepted in contract R218 (findings 11, 13, 14); and (iii) Sharp's $565,757 proposed labor costs included overhead (supervision and payroll expenses) (finding 11), while the certified payroll reports contained $81,588.94 in unburdened wages (finding 19). Moreover, Sharp's incurred costs are immaterial to whether the price it offered in April 1985 in effective competition with two other qualified offerors (finding 13) was reasonable. We hold that contract R218's price was reasonable.

Appellant argues that respondent's assessment of excess reprocurement costs against appellant on 12 September 1988, some $4\frac{1}{2}$ years after contract Q443 was terminated for appellant's default (finding 21), was untimely. Timeliness is measured by the period from the default termination to the date of award of the reprocurement contract, not the date of excess cost assessment. Respondent and IICNA entered into the Surety Takeover Agreement on 6 March 1984, only 27 days after contract Q443 was terminated (findings 5, 7). Appellant does not contend that such period was unreasonable. Respondent reprocured from Sharp on 25 April 1985, $6\frac{1}{2}$ months after IICNA's Takeover Agreement was terminated for default on 12 October 1984 (finding 14). The record contains no evidence that contract R218's price increased due to any inflationary cause during February-March 1984 or October 1984-April 1985 (finding 14). We hold that the time taken to reprocure from Sharp did not affect the reprocurement contract price or prejudice appellant. *SanColMar Industries, Inc.*, ASBCA No. 15052, 73-2 BCA ¶ 10,306 (delay of $7\frac{2}{3}$ months without proof that the reprocurement contract price increased due to such delay; excess cost assessment was valid).

Respondent could not properly assess excess reprocurement costs against appellant until it had paid Sharp for such work. Respondent completed payment of the original reprocurement work under contract R218 in March 1987 (finding 20), before it assessed excess costs against appellant in September 1988 (finding 21). The fact that respondent paid Sharp's final invoice for added and changed work in April 1989 (finding 24), does not invalidate its September 1988 assessment of excess costs. Respondent sustained its burden of proof of excess reprocurement costs in the amount of $445,496 ($513,496 assessed (finding 21), less $50,000 for work not required by contract Q443 (finding 17), less $18,000 respondent conceded (finding 25)).

B. *Liquidated Damages.*

Respondent assessed $152,200 for 761 days of liquidated damages against appellant (finding 21). Respondent has the burden to prove the validity of its assessment. Liquidated damages are not assessable when there

©1994, Commerce Clearing House, Inc.

Digitized by Google

are concurrent excusable or Government-responsible causes of delay which are not segregated from contractor-caused delays. *Acme Process Equipment Co. v. United States* [10 CCF ¶ 73,060], 171 Ct. Cl. 324, 437 F.2d 509 (1965).

Respondent ordered the added work on 30 September 1986, five months after Sharp had substantially completed contract R218 on 1 April 1986 (findings 19, 20). Accordingly, respondent sustained its burden of proof that Government-responsible causes of delay were segregated from contractor-caused delays.

Though not briefed by either party, one may question whether respondent was entitled to liquidated damages after terminating IICNA's surety takeover agreement on 12 October 1984 (finding 9), either because for the period 12 October 1984 to 1 April 1986 respondent could receive duplicate liquidated damages from appellant and IICNA, or because such liquidated damages are unreasonable. The GSA Board in *Urban Industries Corp.*, GSBCA No. 3050, 72-2 BCA ¶ 9604, found it inequitable to assess liquidated damages until completion by the second repurchase contractor, since the defaulted contractor had no control over the activities of either repurchase contractor and could not reasonably foresee that the first repurchase contractor would be terminated for default. Here, respondent assessed liquidated damages against appellant and IICNA jointly and severally (finding 21), thereby precluding duplicate recovery of liquidated damages. No decision by the ASBCA or any other tribunal extends *Urban Industries* to a surety takeover agreement. Since the IICNA surety takeover agreement required completion of performance within the original contract price (finding 7), it was not a "reprocurement" for purposes of measuring excess costs, nor do we believe that it is a "reprocurement" for purposes of limiting assessment of liquidated damages. However, we conclude that the $6\frac{1}{2}$-month delay in awarding the Sharp reprocurement contract (finding 14) was unreasonable for purposes of assessing liquidated damages, and must be excluded from the assessment. We hold that respondent is entitled to $113,200 for 566 days in liquidated damages, assessed from 2 March 1984 to 1 April 1986, the date of substantial contract completion, less 195 days for the $6\frac{1}{2}$-month delay. *Rayco, supra.*

C. Administrative Costs.

Respondent assessed $757 in costs to process reprocurement contract R218. Such costs are properly recoverable at common law, a right respondent expressly reserved in the "Termination for Default—Damages for Delay—Time Extensions" clause of contract Q443 (finding 2), if supported by reasonable estimates. *Birken Manufacturing Company,* ASBCA No. 32590, 90-2 BCA ¶ 22,845. Here respondent's contracting officer testified that $757 was a reasonable administrative cost without further explanation or elaboration (finding 22). We hold that such administrative costs were not proven. Respondent's post-hearing brief admits that the $18,411 to update the contract Q443 drawings was improper, and withdrew that element of damages.

We uphold respondent's assessment of excess costs of reprocurement and (in part) liquidated damages and deny the appeal to the extent of $558,696. We sustain the appeal with respect to the amounts respondent claimed in excess of $558,696.

[¶ 26,318] Delta Industries, Inc.

DOT BCA No. 2602, August 26, 1993. Contract No. DTCG40-91-C-30039.

Defaults, Procedure—Cure Notice—Delivery Failure.—Default termination of a contract to supply desks was not vitiated by reason of the government's failure to provide a cure period prior to termination, because the contracting officer's determination that the desks provided by the contractor did not meet the specifications was equivalent to a contracting officer's determination that the contractor failed to deliver. The board did not accept the contractor's argument that a cure notice can be bypassed only if there has not been any delivery and does not apply if there are discrepancies in a shipment. Inherent in the Default provision excusing a cure notice in the case of nondelivery is the notion that supplies delivered must be in substantial conformance with the contract specifications.

Procedure, Boards—Summary Judgment—Default Issues.—The government's motion for summary judgment in an appeal from the default termination of a supply contract for desks was denied because there were substantial and critical factual issues over

Digitized by Google

which the parties were in dispute. Despite the government's argument that the desks were clearly defective and that the contractor did not deny they were defective, several letters and a filing all alleged specific facts in support of the contractor's assertion that the government bore some responsibility. These documents also disputed the accuracy of both deficiency reports and the specifications. Whether the desks as delivered were actually defective, whether the contract specifications were actually defective, and whether the government was a cause of the problem encountered during performance all required the presentation of facts.

Contract Disputes, Contracting Officer's Decision—Applicability of Requirement—Appeal of Terminations.—Whether a contractor appealing the default termination of its contract for desks presented all of its defenses to the contracting officer before the termination was not relevant, because a termination for default is in effect a government claim. In addition, new defenses, like new grounds for relief or new bases for a default termination, may be first raised and argued after an appeal has been filed.

For the appellant: George S. Price. For the government: Isaac Johnson, Jr., United States Coast Guard, Washington, D.C.

Before ROBERTORY, Administrative Judge.

ROBERTORY, Administrative Judge: We have before us an appeal by Delta Industries, Inc. ("Delta" or "appellant") from the action of the Contracting Officer, United States Coast Guard Supply Center, Curtis Bay, Maryland ("Coast Guard" or "respondent") in terminating the contract between them for an alleged default. The termination was based on the Contracting Officer's determination that desks provided by Delta under this supply contract did not meet the specifications.

Both parties have now moved for summary judgment.

APPELLANT'S MOTION

Delta has moved for summary judgment on the grounds that the termination notice was issued only "eight (8) days after the date of notification to the Appellant from the Contracting Officer 'specifying the failure to perform the provisions of this contract.' ([AF] tab 24, para 2 and attachments)." According to Delta, this eight-day interval was a failure to allow Delta the ten days specified by the Federal Acquisition Regulation § 52.248-8 default clause and vitiated the termination.

The referenced appeal file Tab 24 notice is a February 24, 1993 letter from the Contracting Officer to Delta stating that contract line items 113(a) through 120(a) were rejected in their entirety due to deficiencies noted in attached Quality Deficiency Reports and asking Delta to provide return shipment instructions within three days. Nowhere in that letter or its attachments is there any mention of Delta being afforded any cure period, ten days or otherwise.

The contract incorporated by reference the clause "Default (Fixed-Price Supply And Service) (April 1984)" set forth in Federal Acquisition Regulation § 52.249-8. Paragraph (a)(1) of the clause permits the Contracting Officer to terminate a contract for default "if the Contractor fails to—(i) Deliver the supplies . . . within the time specified in this contract or any extension; (ii) Make progress, so as to endanger performance of this contract (but see subparagraph (a)(2) below); or (iii) Perform any of the other provisions of this contract (but see subparagraph (a)(2) below)." The referenced subparagraph (a)(2) provides that the Government's right to terminate for reasons (ii) or (iii) may only be exercised if the Contractor does not cure a failure within ten days of receiving a notice specifying the failure.

After reciting the facts as the Contracting Officer perceived them, the termination for default stated that Delta was in default of the contract "because of your failure to deliver goods conforming to the contract's specifications and drawings within the time specified in the contract . . ." Thus, the termination was effected under reason (i) as set forth in the clause. A ten-day cure period is not required prior to terminating under reason (i).

The appellant argues that reason (i) only applies if there has not been any timely delivery, but does not apply if there are discrepancies in a shipment. We do not accept this argument, for inherent in reason (i) is that the supplies delivered must be in substantial conformance with the contract specifications. *UB Corporation*, GSBCA No. 7701-COM, 86-2 BCA ¶ 18,831 (1986).

©1994, Commerce Clearing House, Inc.

Digitized by Google

A ten-day cure period neither being required by the clause nor afforded by the Contracting Officer, the termination is not defective for the Contracting Officer's not having allowed ten days to pass prior to issuing the termination.

The appellant's Motion for Summary Judgment must be denied. Whether or not the criteria of reason (i) have been satisfied will be considered at trial.

RESPONDENT'S MOTION

The respondent also seeks a summary judgment in its favor, arguing (i) that Delta "was clearly in violation of the expressed terms of (a)(1)(i) of the default clause," (ii) that Delta did not deny in any Board filing that it was beyond the due date for delivery or that the delivered desks were defective, and (iii) that Delta has provided no explanation for the failure to deliver on time. The respondent further asserts that its reports show beyond a "reasonable doubt" that the desks were defective and those defects were more than merely cosmetic.

The test of whether summary judgment should be granted or denied is not the existence of reasonable doubt. Rather, the test is whether facts are uncontroverted or uncontrovertible. The record belies such an assertion.

A letter to the Board dated May 13, 1993, copies of letters from Delta to Coast Guard Counsel, and a Delta filing dated August 11, 1993, all allege specific facts in support of the appellant's assertion that the Coast Guard bears some responsibility and dispute the accuracy both of the deficiency reports and of the specifications. Whether or not the desks as delivered were actually defective, whether or not the contract specifications were actually defective, and whether or not the Coast Guard was a cause of the problem encountered during performance all require the presentation of facts. The parties are in dispute over these facts and this dispute must be resolved through trial.

In addition, the appellant has raised the argument that delivery was delayed due to weather conditions in Idaho; respondent counters that bad weather in Idaho is not unusual. The default clause makes certain weather conditions an excuse for a failure to perform in a timely manner. Weather conditions in Idaho during performance, what is usual weather in Idaho during that period of the year, and the impact of any bad weather upon performance are all factual issues.

There is indication that the appellant may not have presented some of these defenses to the Contracting Officer before the termination was issued. This is not relevant. Being a termination for default, this is in effect a government claim. In addition, new defenses, like new grounds for relief or new bases for a default termination, may be first raised and argued after an appeal has been filed. *Diversified Marine Tech, Inc.*, DOTBCA No. 2455, 93-2 BCA ¶ 25,719 (1993); *Joseph Morton Company, Inc. v. United States* [32 CCF ¶ 73,277], 757 F.2d 1273 (Fed. Cir. 1985); *Pots Unlimited, Ltd. v. United States* [26 CCF ¶ 83,395], 220 Ct. Cl. 405, 600 F.2d 790 (1979).

DECISION

The parties' arguments show that there are substantial and critical factual issues over which they are in dispute. In such circumstances, disposition by summary judgment would be inappropriate. The Cross-Motions for Summary Judgment are denied in their entirety.

[¶ 26,319] Golden West Refining Company, Kern Oil & Refining Company, Lunday-Thagard Company, Sunland Refining Corporation

EBCA Nos. C-9208134, C-9208135, C-9208136, C-9208137, July 26, 1993.

Procedure, Boards—Discovery—Depositions of Experts.—An expert expected to testify for the government regarding the fair market value of crude oil and the damages incurred by the contractors by reason of the government's extension of their contracts was barred prospectively from testifying on these issues at the hearing because his refusal to testify on these matters on deposition was inexcusable. The pleadings had clearly put the government on notice that these were the key issues that would be explored in the appeals. At his deposition, when asked about these areas, the expert testified that he had not reached any opinions or conclusions on the fair market value, and because the contractors' damages depended on the fair market value, he had also not reached any opinions or conclusions on damages.

Digitized by Google

For the appellant: Fettmann & Tolchin, Fairfax, Virginia, by Edward J. Tolchin. For the government: Gustav Goldberger and Michael S. Yanock, Office of the General Counsel, U.S. Department of Energy, Washington, D.C.

Before GILMORE, Administrative Judge.

GILMORE, Administrative Judge: The Board held a hearing on July 20, 1993, to hear oral arguments on Appellants' Motion for Sanctions. Also pending before the Board was Respondent's Motion to Strike with Appropriate Sanctions, which the Board denied at the beginning of the hearing. (See Transcript of Hearing, p. 5.) After considering the oral arguments and written briefs of counsel, the Board grants the Motion for Sanctions, in part, as set forth below.

PARTIES' POSITIONS

By motion filed June 15, 1993, Appellants asked the Board to sanction Respondent for failing to allow a meaningful deposition of Respondent's expert witness by excluding the expert's testimony. Respondent answered that its expert, Dr. Tolmachoff, did provide opinions in areas that he could and should not have been expected to be totally prepared when the hearing was months away. Respondent also argues that Dr. Tolmachoff was to rebut Appellants' case and that Respondent had reserved the right to submit additional interrogatories on Appellants' Strategic Petroleum Reserve (SPR) calculations.

BACKGROUND

In response to Appellants' first set of interrogatories in February 1993, Respondent provided a Federal Rules of Civil Procedure Rule 26(b)(4) disclosure for its expert witness, Innokenty Tolmachoff, Ph. D. It indicated that Dr. Tolmachoff was expected to testify on the following subject matters:

A. Fair market value of crude oil sold from the Naval Petroleum Reserve's Elk Hills field for the period commencing March 1, and ending May 1, 1992, and

B. Damages incurred by Appellants because of the Government's extension of their contracts.

At his deposition, when asked about these areas, Dr. Tolmachoff testified that he had not reached any opinions and conclusions on (A) and, because (B) depended on (A), he had also not reached opinions and conclusions on (B). (Transcript of Tolmachoff Deposition, pp. 30-31) Although he answered a few questions regarding the fair market value of Naval Petroleum Reserve (NPR) crude oil, they were general in nature and did not address the specific factual issues in dispute. The pleadings had clearly put the Respondent on notice that these were key issues that would be explored in these appeals and its Rule 26(b)(4) disclosure shows that Respondent recognized this fact.

In its January 21, 1993, *Pre-Hearing Conference and Scheduling Order,* the Board informed the parties that:

> *No witness, expert or otherwise, will be permitted to testify* who, in response to a request for the witness' identity, has not been identified in time to allow a deposition to be taken or the substance of the witness' knowledge ascertained, or, in the case of an expert, to allow the facts relied upon and opinions held by him/her to be obtained prior to discovery cutoff. (Emphasis in original).[1]

The record demonstrates that, with regard to the issues of fair market value of NPR crude and damages alleged by Appellants, Respondent's failure to allow Appellants any meaningful discovery of the opinions and conclusions of its expert witness prior to the close of discovery on June 25, 1993, was inexcusable. Therefore, pursuant to the Board's Order, Dr. Tolmachoff will not be permitted to offer any testimony about these issues beyond those opinions and conclusions already offered at his deposition.

However, with regard to the issue of SPR pricing, Dr. Tolmachoff will be allowed to testify. At the time of his deposition, the facts underlying this theory of relief were reserved for further discovery by Respondent. Appellants were aware that Respondent had follow-up questions regarding the SPR calculations that were submitted to Respondent for the first time at the deposition of Appellants' expert.[2] (Hearing Transcript, pp. 32-33) As such, Dr. Tolmachoff's inability to answer questions about SPR pricing was excusable.

[1] The Board, under its inherent case management authority, has broad discretion to manage the litigation on its docket. *The Wm. Powell Company,* 86-3 BCA ¶ 19,253 (EBCA).

[2] At the time of this hearing, Respondent's interrogatories had been submitted but not answered by Appellants, who cited Respondent's failure to cooperate during discovery.

Digitized by Google

CONCLUSION

Appellants' Motion for Sanctions is granted, in part.

Dr. Tolmachoff will not be permitted to offer further testimony regarding the issues of fair market value of NPR crude and Appellants' alleged damages. Dr. Tolmachoff will be permitted to offer testimony regarding SPR pricing.

ORDER

In light of the above ruling, Respondent's Interrogatories and Requests for Admissions shall be answered by August 9, 1993. If Appellants wish to further question Dr. Tolmachoff regarding SPR pricing, Respondent shall make him available for questioning between August 18 and August 25, 1993, at Appellants' convenience. Respondent's response to Appellants' Motion for Summary Judgment shall be filed by September 10, 1993. Appellants' reply shall be filed by September 20, 1993. The Pre-hearing and Hearing Schedule is suspended until after the Board rules on Appellants' Motion for Summary Judgment.

[¶ 26,320] Integrated Systems Group, Inc. v. Department of the Navy

GSBCA No. 12495-P, August 12, 1993.

Protests, GSBCA—Interested Party—Purchase Orders.—A protest against a purchase order under a nonmandatory schedule contract for automatic data processing equipment was dismissed because the protester did not submit a response to the *Commerce Business Daily* notice within the 15-day period specified in the notice and was therefore not an interested party. Through its own lack of action, the protester effectively eliminated itself from the procurement. Although the *CBD* notice did not involve a competitive solicitation and replies submitted by interested vendors did not constitute offers, the notice did advise vendors of the intended procurement action and afforded them the singular opportunity to identify their interest and capability to respond to the requirement.

For the protester: Skolnick & Leishman, P.C., Derwood, Maryland, by Shelton H. Skolnick, Judy D. Leishman, and Amy M. Hall. For the government: Timothy K. Dowd and Barbara Amster, Office of Counsel, Command, Control and Ocean Surveillance Center, Department of the Navy, San Diego, California, and Anita M. LeBlanc, Office of Counsel, Naval Supply Systems Command, Department of the Navy, Washington, D.C.

Before NEILL, LABELLA, and BORWICK, Administrative Judges.

NEILL, Administrative Judge: This protest was filed on July 14, 1993, by Integrated Systems Group, Inc. (ISG). At that time, ISG protested, *inter alia*, the contracting officer's issuance of a purchase order under a nonmandatory schedule contract for the purchase of various automatic data processing equipment (ADPE). ISG contends that the contracting officer erred in proceeding with the issuance of the purchase order after the passage of fifteen days but before the expiration of a thirty-day period following publication in the Commerce Business Daily (CBD) of the Government's intent to make such a purchase. ISG has subsequently amended its protest to include an allegation that the analysis done by the contracting officer of replies received to the CBD notice was improperly performed.

On July 26, respondent, in this case the Department of the Navy, filed a motion to dismiss the original protest asserting that protester lacks interested party status or, alternatively, that the protest is untimely. Following ISG's amendment of the protest, respondent, on August 4, filed a request for reconsideration in the context of a further motion to dismiss the protest, as amended. The request for reconsideration went to the Board's order of August 2 allowing protester's amendment.

Upon consideration of written arguments provided by counsel for the parties, we grant the request for reconsideration and the motion to dismiss this protest, as amended, for the reasons set out below.

Findings of Fact

1. On June 14, 1993, respondent published in the CBD a notice of intent to purchase off of a General Services Administration (GSA) non-mandatory schedule contract for ADPE. The notice provided in part:

Digitized by Google

> This is a notice of intent to place an order under an optional GSA schedule contract. The Government has made a determination that the listed Part Number(s) is/are the only product that will meet the Government minimum requirements. However, interested parties are invited to identify their interest and capability to respond to the requirements within 15 days of this synopsis. Include GSA contract number, if applicable, and price. Alternative sources will be considered only if: (1) clear and convincing documentation including technical and pricing information is furnished within 15 days of this synopsis, (2) the proposed equipment and/or services meet the requirements of the Government and (3) it is advantageous to the Government to consider alternative sources. If no affirmative written responses are received within 15 calendar days after publication of this notice to the effect that an acceptable alternate source is available, an order will be place [sic] with GTSI [Government Technology Services Inc.] against GS00K93AGS5681 or subsequent contract. If a response is received that meets the requirements, and analysis indicates competitive acquisition would be more advantageous to the Government, a formal solicitation may be issued. No contract award will be made on the basis of information received in response to this notice. This synopsis is a notice of intent to place an order against a GSA schedule contract and should not be considered as a request for offers.

Respondent's Motion to Dismiss, Attachment 1.

2. On June 29, the contracting officer proceeded to issue the order as originally indicated in the CBD notice. The order is said to have been issued by the contracting officer "after making all relevant determinations and documenting the file." Declaration of Contracting Officer Jane McCluskey (July 19, 1993) Contracting Officer's Declaration at 1.

3. On July 1, the contracting officer received a submission from ISG by telephone facsimile. The cover letter for the submission was dated June 30. Contracting Officer's Declaration at 1. The cover letter states:

> This letter/proposal is in response to your procurement notice in the Commerce Business Daily dated June 14, 1993, page 31. As required by the announcement, this information is submitted within fifteen (15) days of the announcement.

Respondent's Motion to Dismiss, Attachment 4.

4. The contracting officer concluded that ISG had to submit documentation, in accordance with the express terms of the CBD announcement, on or before June 28, 1993, the fifteenth day after synopsizing.[1] She, therefore, did not consider ISG to be a participant in the procurement which led to the issuance of the order against the GSA schedule contract. Contracting Officer's Declaration at 1-2.

5. On July 13, protester, upon inquiry, learned from the Navy that the purchase order which was the subject of the June 14 CBD notice had been issued on June 29. ISG thereupon filed this protest with the Board. The protest alleges:

> The contracting officer failed to timely properly notify ISG of award to the noticed GSA Schedule holder thereby prejudicing ISG's right to a suspension.
>
> The contracting officer failed to wait the required thirty days before placing a GSA Schedule order. 41 USC §§ 401 *et seq.*, 15 USC § 637(e).
>
> The contracting officer conducted and awarded a sole source procurement when brand name or equal products existed, thereby failing to achieve full and open competition.[2]

Complaint at 3.

6. On July 27, protester filed an amendment to its initial complaint. The amendment makes the additional allegation that the contracting officer did not perform a proper analysis (as required by FIRMR 201-39.803-3(b)(2)(i)) that purchase of the synopsized GTSI non-mandatory schedule contract items provides the lowest overall cost alternative to meet the Government's needs. Protester's Complaint, Amendment No. 1 at 3.

---

[1] The Federal Information Resources Management Regulation (FIRMR) expressly provides: "In calculating the 15 calendar days for synopsizing, the first day shall be the actual date the synopsis appears in the CBD." 41 CFR 201-39.501-3(b) (1992).

[2] Two other allegations contained in the original complaint have subsequently been withdrawn by protester. *See* Complaint, Amendment No. 2.

Discussion

In its motion to dismiss, respondent urges us to follow the line of analysis used by our appellate authority in its decision, *MCI Telecommunications Corp. v. United States* [35 CCF ¶ 75,677], 878 F.2d 362 (Fed. Cir. 1989). In that decision, the Court held that a subcontractor was not by law an interested party for purposes of filing a protest. It explained that in order to qualify as an interested party, a vendor had to either bid the contract or protest alleged deficiencies in the solicitation prior to the date for bid opening. *Id.* at 365.

We find merit in the arguments advanced by respondent, especially with regard to the allegation in the initial complaint that the contracting officer has conducted a sole source procurement when brand name or equal products existed and the allegation in protester's amended complaint which challenges the contracting officer's analysis of replies received in response to the CBD notice. The facts in this case demonstrate that ISG not only failed to submit a response to the CBD notice within the fifteen day period specified in that notice but also failed to reply before the agency proceeded with the issuance of a purchase order. Through its own lack of action, therefore, ISG effectively eliminated itself as an actual player in the procurement which was the subject of that notice. We recognize that the CBD notice did not involve a competitive solicitation and that replies submitted by interested vendors did not constitute offers. Nevertheless, the CBD notice did advise vendors of the intended procurement action and afforded them the singular opportunity to identify their interest and capability to respond to the requirement.

For purposes of this protest, and determining interested party status, we agree with respondent that the situation created by the publication of an intent to purchase off of a GSA non-mandatory ADPE schedule contract is sufficiently analogous to that of a competitive procurement as to justify reliance on the fundamental principle enunciated by the court of appeals in *MCI*. A vendor who does not reply to the published notice until after the agency has carried out the intended action is effectively precluded from protesting the propriety of that decision.

In connection with its amended complaint, ISG has attempted to shore up its challenged interested party status by pointing out that, even if it did not submit a timely reply or challenge to the CBD notice, it still has a continuing interest in responding to any solicitation which might have been issued in lieu of a purchase order on the schedule contract. Where the distinction between the decision not to issue a solicitation and the decision to issue a purchase order is anything other than a purely mental distinction, this argument of protester's might have some merit. As it is, however, these "two" decisions are, in reality, nothing more than two sides of the same coin. This fact is readily confirmed when one realizes that to challenge successfully the contracting officer's decision not to issue a competitive solicitation, one must look at the same operative facts supporting the decision to proceed with the purchase order, namely, the analysis and evaluation of replies received to the CBD notice.

In its motion to dismiss this protest, as amended, respondent argues that the rights of ISG, and any other potential offeror, on a solicitation would only be cognizable in the event a decision had actually been made to issue an RFP. Respondent's Motion to Dismiss/Motion for Reconsideration at 2. We agree. In the absence of such a decision, the parameters of the procurement in question do not extend beyond the issuance of a purchase order against the GSA schedule contract. This is a procurement action in which protester failed to make a timely appearance and one, therefore, which protester can not challenge at this late juncture. We are, therefore, in agreement with respondent that protester's challenges to the contracting officer's decision to proceed with the issuance of a purchase order must be dismissed in view of ISG's lack of interested party status.

Our conclusion with regard to the remaining allegations in the initial complaint is, however, somewhat different. In the second principal allegation, ISG contends that the contracting officer was required to wait not fifteen but thirty days for receipt of submissions in response to the CBD notice. In itself, this is a protestable issue and one which ISG, as an interested vendor, could have used as a ground of protest. Nevertheless, the alleged defect was apparent on the face of the CBD notice and clearly, in accordance with our Rule 5(b)(3)(i), should have been protested before the deadline established in the notice for submission of replies. Consequently, so far as this allegation is concerned, we find respondent's alternative argument to dismiss for lack of timeliness much more persuasive. We, therefore, are dismissing as untimely ISG's allegation re-

Digitized by Google

garding the insufficiency of the fifteen day notice.

The third and remaining allegation in the complaint, as initially filed, is that the contracting officer failed to provide prompt notice to ISG that the purchase order was, in fact, issued. This allegation has been made in support of a request for suspension, which, although not timely filed, is sometimes granted by the Board pending resolution of a protest if it can be determined that notice was required. *American Service Corp.*, GSBCA 8224-P, 85-3 BCA ¶18,517. Failure to provide such notice, however, is not deemed to be sufficient by itself to justify granting a protest. *PCA Microsystems, Inc.*, GSBCA 9597-P, 88-3 BCA ¶21,081; *American Service Corp.*, GSBCA 8224-P, 86-1 BCA ¶18,652 (1985). Given the conclusions herein to dismiss all other allegations of this protest, we are dismissing this allegation as well.

Decision

Respondent's motion to dismiss is granted. Protester's allegations that the issuance of a purchase order is in violation of statute and regulation are DISMISSED for lack of jurisdiction. Protester's allegation that the CBD notice of intent to issue this order was defective is DISMISSED as untimely filed. Protester's remaining allegation that respondent failed to provide prompt notice of award is DISMISSED as insufficient, by itself, as an independent ground of protest for which relief can be granted.

[¶ 26,321] Integrated Systems Group, Inc. v. Department of Commerce

GSBCA No. 12420-P, July 16, 1993. Solicitation No. 51-EANE-3-00048.

Responsiveness of Bids—Information to Be Considered—Adequacy of Description.—A protest against an award for computer equipment was granted because the government improperly rejected the protester's bid as nonresponsive for failure to specify the source or age of the used items included in its bid. The government contended that the protester did not comply with the invitation for bid's requirement that bidders provide a complete description of used items being bid. Although the protester did not specify the source or age of the used equipment, its bid conformed to the solicitation's plain language, which required the identity and salient characteristics of the used items. The protester also included a statement that "all equipment is used/refurbished/warranted as new." To require the protester to indicate the source or age of the reconditioned equipment would impose a more stringent requirement than any contained in the IFB. Moreover, the government was not entitled to impose an unstated need for details on the acceptability of used equipment pursuant to a general requirement that bidders supply a complete description of their products.

For the protester: Skolnick & Leishman, P.C., Derwood, Maryland, by Shelton H. Skolnick, Judy D. Leishman, and Amy M. Hall. For the government: Jerry A. Walz and Kenneth A. Lechter, Office of the Assistant General Counsel for Finance and Litigation, Department of Commerce, Washington, D.C.

Before GOODMAN, WILLIAMS, and DEGRAFF, Administrative Judges.

GOODMAN, Administrative Judge: This protest was filed by Integrated Systems Group, Inc. (ISG or protester) on May 7, 1993, alleging that respondent, the Department of Commerce (Commerce or respondent) improperly rejected ISG's bid for computer equipment to be supplied to the National Climatic Data Center, Asheville, North Carolina.

By decision dated June 15, 1993, we denied respondent's motion for summary relief, as genuine issues of material fact remained in dispute. On June 21, 1993, a hearing on the merits was held.

For the following reasons, the protest is granted.

Findings of Fact

The Solicitation

On February 22, 1993, Commerce issued solicitation number 51-EANE-3-00048 (the solicitation), which contains requirements for the following contract line item numbers (CLINs):

©1994, Commerce Clearing House, Inc.

Digitized by Google

0001	2 Clearpoint Research Corp. P/N ENCL 0101-07 19-inch, 4 bay minitower enclosure with Centronics 6-foot cables (or equal)
0002	6 Maxtor P/N Panther P1-17S 5.25" 1.7 GB external hard drives (or equal)
0003	2 Exabyte 8500T, 8mm 5.0GB cartridge tape subsystem with Willow Blue Chip device driver (or equal)
0004	1 Documentation IAW Section C

Protest File, Exhibit 1 at 3. Immediately following the list of CLINs, the solicitation provides: "*DESCRIPTIVE LITERATURE SHALL BE SUBMITTED FOR ALL ITEMS ABOVE. REFERENCE CLAUSE 52.214-21 IN SECTION L.*" *Id.*

Section C of the solicitation contains a thorough description of the characteristics of the equipment listed in the CLINS, Protest File, Exhibit 1 at 4-6. Section C.8, Warranty period, of the solicitation states:

> The Contractor shall furnish, at no cost to the Government, all parts and labor, as specified in this contract, for a period of 365 days or the manufacturer's standard warranty whichever is greater, beginning on the Acceptance Date.
>
> Prior to the expiration of the warranty period, whenever equipment is shipped for repair or replacement purposes, the Contractor shall bear all costs, including but not limited to, costs of packing, all transportation, and insurance.

Id. at 7.

Section F.2 of the solicitation requires delivery of all items within thirty days after the date of the contract. Protest File, Exhibit 1 at 11.

Section L.1 of the solicitation, Instructions, Conditions and Notices to Offerors, incorporates Federal Acquisition Regulation (FAR) 52.210-6, LISTING OF USED OR RECONDITIONED MATERIAL, RESIDUAL INVENTORY AND FORMER GOVERNMENT SURPLUS PROPERTY (APR 1984), which provides:

> (a) If the offeror proposes to furnish items or components which are used or reconditioned material, residual inventory resulting from terminated Government contracts, or former Government surplus property, the offeror shall provide the following information as an attachment to the offer: a complete description of the items or components; quantity; name of Government agency from which acquired; and date of acquisition, if applicable. No used, reconditioned, residual inventory, or former Government surplus property other than that listed on the attachment shall be furnished under the resulting contract unless authorized in writing by the Contracting Officer.
>
> (b) All items to be furnished under the resultant contract must comply with the terms and specifications contained in the contract.

48 CFR 52.210-6 (1992) (FAR 52.210-6); Protest File, Exhibit 1 at 36.

Section I of the solicitation, Contract Clauses, incorporates FAR 52.210-7, USED OR RECONDITIONED MATERIAL, RESIDUAL INVENTORY, AND FORMER GOVERNMENT SURPLUS PROPERTY (APR 1984), which provides:

> (a) The Contractor shall not furnish any item or component which is used or reconditioned material, residual inventory resulting from terminated Government contracts, or former Government surplus property, unless such item or component was listed in the applicable attachment to the offer and approved by the Contracting Officer or unless otherwise authorized in writing by the Contracting Officer.
>
> (b) All items or components furnished under this contract shall comply with the terms and specifications contained in the contract.

Protest File, Exhibit 1 at 17.

Section M.2, AWARD, of the solicitation states:

> Award will be made to that Contractor whose bid complies with the requirements set forth in Section C and is considered to be the most advantageous to the Government, price and other price-related factors considered.

Protest File, Exhibit 1 at 40.

There is no requirement in the solicitation that used equipment could not exceed a certain age or that the offeror must have possessed the offered equipment at the time of the offer. Transcript at 13, 51-52.

ISG's Bid

ISG submitted a bid that offers to supply an equivalent product (JMR Electronics' Four Plex FPXT) for CLIN 0001, the specified brand name products for CLINs 0002 and 0003, and the documentation required by CLIN 0004. ISG's total bid price was $14,960.55. Protest File, Exhibit 6.

ISG's bid includes one page entitled "Pricing Notes" that states: All equipment is

Digitized by Google

used/refurbished/warranted as new. Protest File, Exhibit 6.

ISG's bid offers the warranty period required by the solicitation:

> Integrated Systems Group furnishes at no cost to the Government, all parts and labor, as specified in this contract, for a period of 365 days or the manufacturer's standard warranty whichever is greater, beginning on the Acceptance Date.
>
> Prior to the expiration of the warranty period, whenever equipment is shipped for repair or replacement purposes, Integrated Systems Group will bear all costs, including but not limited to, costs of packing, all transportation, and insurance.

Protest File, Exhibit 6.

ISG's bid contains an "Equipment Description" and a section entitled "Compliance with Technical Requirements." In these sections, ISG states that it understands the specifications, repeats the equipment characteristics set forth in Section C of the solicitation, and states that its equipment will possess those characteristics. Concerning the equipment ISG offered in CLIN 0001, ISG's "Compliance with Technical Requirements" section states: "Reference: See Four Plex Model FPXT Technical Data Sheets." ISG's bid also contains the statement that "[t]he proposed items are both technically compliant and cost effective. All necessary and required delivery, preparation, installation and maintenance work will be done in a timely manner and in accordance with the solicitation specifications." Protest File, Exhibit 6.

ISG's bid also contains two pages of descriptive literature prepared by JMR Electronics, Inc., concerning the items offered by ISG in CLIN 0001. The second page is dated "Summer '92" and states, "[p]roduct specifications subject to change without notice." These are the technical data sheets to which ISG refers in the "Compliance with Technical Requirements" section in its bid. Protest File, Exhibit 6.

ISG is a systems integrator that deals with a number of distributors on a daily basis. Transcript at 32. Refurbished equipment purchased by ISG for resale is tested by the distributors from which ISG acquires the equipment, and ISG's practice is to test the equipment after assembly and before delivery to the purchaser. *Id.* at 32-33.

ISG had not acquired any used equipment prior to the bid opening date, although it had obtained firm price commitments from the vendors. Transcript at 34-36. ISG had a verbal commitment from JMR Electronics to supply two 19-inch, 4 bay minitower enclosures with Centronics 6-foot cables, Part Number Four Plex, FPXT, which ISG considered to be equal to that specified in CLIN 0001 (2 Clearpoint Research Corp. P/N ENCL 0101-07 19-inch, 4 bay minitower enclosures with Centronics 6-foot cables (or equal)). ISG did not believe a written contract with JMR was necessary, since in ISG's past dealings with JMR, on a daily basis, that firm had acted as a reliable source. *Id.* at 40-41.

ISG had also assured itself of the availability of the identical items required by CLIN 0002 (6 Maxtor P/N Panther P1-17S 5.25" 1.7 GB external hard drives (or equal)) from at least three sources. Transcript at 42. With regard to CLIN 0003, ISG had contacted three sources to confirm the availability of the identical items requested, 2 Exabyte 8500T, 8mm 5.0GB cartridge tape subsystems, and had contacted Willow Blue Chip's local representative with regard to the availability of the Willow Blue Chip device driver. *Id.* at 42-43. CLIN 0004, the documentation in accordance with Section C of the solicitation, was to be provided as required.

Having assured itself of the availability of the items offered, ISG anticipated delivery from vendors to ISG, and ISG assembly and testing, within the thirty-day delivery period had ISG been awarded the contract. Transcript at 43-44.

Commerce's Rejection of ISG's Bid

Commerce received nineteen bids by the time of the bid opening on April 1, 1993, with the four lowest bids being:

$13,050.00	International Computer Purchasing
$14,690.00	Andataco
$14,960.55	ISG
$15,326.00	AC Technology

Protest File, Exhibit 8.

Commerce rejected the lowest bid as nonresponsive because the bid did not include all the items that were solicited, and the bid did not include any descriptive literature. Commerce rejected the second lowest bid as nonresponsive because the bid did not include any descriptive literature. Protest File, Exhibit 8.

Commerce rejected ISG's bid as nonresponsive because it failed to provide information about the offered used equipment. The contracting officer's reasons for finding ISG's bid nonresponsive are set forth

©1994, Commerce Clearing House, Inc.

Digitized by Google

in his Memorandum For File dated April 21, 1993:

> The third low bidder is Integrated Systems, Inc. In accordance with FAR 52.210-7, the Contractor shall not furnish any item or component which is used or reconditioned material, unless such item or component was listed in the applicable attachment to the offer and approved by the Contracting Officer unless otherwise authorized in writing by the Contracting Officer. The offeror indicated that all equipment is "used/refurbished/ warranted as new." The Contracting Officer has not approved such a list verbally or in writing.
>
> Additionally the bid did not list the quantity, if obtained from another Government activity, and date of acquisition as required by FAR 52.210-6. The Contractor only gave a complete description of the items as it appeared in Section C. Therefore, their bid is considered non-responsive and shall be rejected in accordance with FAR 14.404-2(a).

Protest File, Exhibit 8.

The contracting officer made the decision to reject ISG's bid as nonresponsive, as he believed there was not enough information contained in the bid to enable him to make a determination as to the acceptability of the used equipment offered. He testified as to his decision finding ISG nonresponsive:

> Q What was the basis for that decision?
>
> A The basis is that there was not enough information with the bid, required information, for me to make a determination as to the acceptability of the used equipment offered.
>
> Q And what did you deem to be missing?
>
> A Specifically, what was missing, the source of the equipment was not identified, nor was the date of acquisition, as required by FAR clause 210-6.
>
> Q Okay. Now is that required, in your view of the regulation or the clause—is that information required if an offeror has not yet acquired the used equipment?
>
> A I believe that information is required irrespective of whether or not the equipment has been acquired. The fact that—for example, the fact that the date of acquisition is not available at the time of the bid, does not, in my opinion, negate that requirement.
>
> Q So ... what should an offeror ... say if they ... have not yet acquired the equipment?
>
> A I can only guess that what a contractor should do is to provide whatever information is available to him. If they have not yet acquired the equipment, then they should so state and either provide an estimated date of acquisition or even, if they cannot do that, to simply state the equipment has not yet been acquired.
>
> Q Okay. And assuming that information had been provided, that the equipment had not yet been acquired, so there is no source and no date, that would have satisfied your understanding of the clause, if they had stated that in their bid?
>
> A If I had been faced with that information, it would have resulted in a bid rejection.
>
> ....
>
> Q And why would that be rejected?
>
> A If you were unable to tell me what the source or the date of acquisition was, then I would not have enough information to make a decision. In that case you are telling me you haven't even gone out and purchased this equipment yet. You are telling me, by being silent and not offering that information, that you don't know where you are going to get it and you don't know how old it is going to be or what condition it is going to be in. I do not have enough information, as a contracting officer, to make a reasonable determination of the quality of that item.

Transcript at 11-13.

When the contracting officer reviewed ISG's bid and noted there was no source or acquisition date for the offered equipment, he determined that the lack of this information was not a minor informality that could be cured because it went to the quality of the equipment. Transcript at 17-18.

The contracting officer explained why, in his view, age of used equipment was important:

> In acquiring ADP equipment, just as in acquiring a used car, the age is vitally linked to the reliability and to maintenance costs over the life of that item. And the older the item is, the higher the contract cost is going to be in the long run.
>
> So that, depending on whether or not you gave me something that was ten years old or three years old, I am going to take a look at those two items. For example, if two bidders gave me different items, one that is ten years old and one that is three years old, I would have to assume that the three year old item would be more reliable

Digitized by Google

in the long run than would the ten year old item. It probably would break down far less often.

. . . .

[B]eing used equipment, what I would need to make a determination of acceptability would be some indication of how old this equipment was, so that I could ultimately determine how reliable it would be and how much it would cost the government ultimately to maintain this equipment, as opposed to new equipment.

Transcript at 14, 20-21.

The contracting officer further testified that he assumed the end user would use the computers purchased under this procurement for more than one year, but he was not sure. Transcript at 49-50. He also had no idea how long the CLINs had been manufactured and on the market. *Id.* at 18.

Although the contracting officer testified that the age of the equipment would provide some indication of increased maintenance costs after the warranty period expired, he had no knowledge of life cycle costs. He also stated he did not know if the end user intended to have a maintenance contract after the warranty period expired, nor how long the equipment was to be used. Transcript at 22, 25, 48-50.

On April 21, 1993, Commerce decided to award the contract to the fourth lowest bidder, AC Technology. Protest File, Exhibit 8. AC Technology offered the same "equal product" for CLIN 0001 as ISG—the JMR Four Plex. Protest File, Exhibit 7.

By letter dated April 29, 1993, Commerce notified ISG of contract award and informed ISG why ISG's bid was not selected:

Your bid was not selected for award because it did not contain all of the information required by FAR Clause 52.210-6, which was included in Section L of the solicitation. Therefore, your bid failed to conform to the Invitation for Bids.

Protest File, Exhibit 10.

ISG's Agency Protest

On May 4, 1993, ISG filed an agency protest that stated, in part:

Integrated Systems Group, Inc. participated in the referenced solicitation and was notified via a letter dated April 29, 1993 that an award was made to AC Technology for $15,326. Since ISG's bid price was less than the awarded price, and since our bid complied with 52.210-6, we are requesting that award to AC Technology be terminated and award be made to the rightful low bidder, ISG. Our bid complies with all of the specifications required by the solicitation. Your reasons for dismissal are unfounded, for ISG's bid meets the requirements of FAR Clause 52.210-6.

Protest File, Exhibit 11.

On May 5, 1993, Commerce denied ISG's agency protest by stating, in part:

Other than a pricing note which merely stated that "all equipment is used/refurbished/warranted as new," and the statement that "the proposed items are both technically compliant and cost effective," the bid did not contain any other description of used or reconditioned equipment. Further, the bid did not specify the source or age of the equipment being offered, as expressly required by Clause 52.210-6. Therefore, we were unable to determine if the ISG bid would be advantageous to the Government, when compared with other bids which offered new equipment. For that reason, we were compelled to reject the bid.

Protest File, Exhibit 12.

Discussion

The issue in this protest is whether respondent properly rejected protester's bid as nonresponsive. The solicitation included FAR 52.210-6, which required that where used or reconditioned material was bid "a complete description of the items or components had to be included." Respondent contends that protester failed to provide a complete description of the used equipment being offered in that protester's bid did not identify the source or the age of such equipment. Protester contends that the solicitation did not require that used equipment be in the possession of the bidder at the time of bid or that the source or age be identified. We agree with protester and conclude that ISG's bid was improperly rejected as nonresponsive.

It is fundamental that an agency cannot deem a bid nonresponsive when that bid conforms to the plain language of the solicitation, *e.g., International Data Products Corp. v. Department of Energy*, GSBCA 11848-P, et al., 93-1 BCA ¶ 25,293, at 126,025, 1992 BPD ¶ 191, at 4. Further, a bid cannot be deemed nonresponsive where a bidder is clearly bound to perform the material requirements of the IFB and has not taken exception to such requirements. *Denro, Inc.*, GSBCA 9626-P, 89-1 BCA ¶ 21,287, at 107,368-69, 1988 BPD ¶ 238, at

©1994, Commerce Clearing House, Inc.

Digitized by Google

13. Here, ISG submitted not only the information that the IFB required—the identity of the precise equipment being bid and the salient characteristics—but also a statement that "all equipment is used/refurbished/warranted as new."

The solicitation contained no requirement that the source or age of used equipment obtained from a non-governmental source be identified. Protest File, Exhibit 1. Thus, respondent cannot now reject ISG's bid for used equipment simply because ISG failed to provide information on the source or age of such equipment. Indeed, to require ISG to specify the source and age of the used or reconditioned equipment would impose a far more stringent requirement than any contained in the IFB.

FAR 10.010 mandates that when an agency solicits used or reconditioned material, "the solicitation shall clearly identify the supplies or their components that need not be new, *along with the necessary details on their acceptability*" (emphasis added). Here, since there were no "details" on the acceptability of used or reconditioned equipment set forth in the solicitation, respondent cannot impose them in the evaluation. If there were particular details concerning used equipment that Commerce wanted bidders to include in their bids, it should have stated them explicitly in the solicitation. Commerce cannot subsume an unstated need for details within a general requirement that bidders supply a "complete description" of their products.

In sum, respondent's rejection of ISG's bid as nonresponsive violated statutory requirements for (1) evaluation of sealed bids based solely on the factors specified in the solicitation, 41 U.S.C. § 253b(a) (1988), and (2) award of contracts considering price and other factors included in the solicitation, 41 U.S.C. § 253b(d)(4) (1988). As such, respondent's rejection of ISG's bid as nonresponsive cannot stand.

Decision

The protest is GRANTED. Respondent's delegation of procurement authority is revised as follows: ISG's bid may not be rejected as nonresponsive. Respondent may make an award consistent with this opinion, or revise its solicitation to reflect accurately its current justifiable needs or otherwise proceed in accordance with statute and regulation.

[¶ 26,322] James W. Collins & Associates, Inc. v. Department of Commerce

GSBCA No. 12205-P-R, August 16, 1993.

Protests, GSBCA—Reconsideration—Arguments Already Considered.—Reconsideration of a board's dismissal of a protest against a procurement for computer maintenance services as untimely filed was denied because the protester's reconsideration motion reasserted the contention, previously raised in its response to the government's motion to dismiss, that a telephone call apprising the protester of its status took place later than initially asserted in its complaint. Unlike the contracting officer, who submitted a declaration regarding the date of the telephone call, the protester did not submit affidavits or a declaration in support of its contention that the date asserted in the complaint as initially filed was mistaken.

For the protester: Von L. White I, President of Exact Data Services Division. For the government: Jerry A. Walz and Kenneth A. Lechter, Office of the Assistant General Counsel for Finance and Litigation, Department of Commerce, Washington, D.C.

Before HYATT, BORWICK, and WILLIAMS, Administrative Judges.

Reconsideration of 93-2 BCA ¶ 25,770 denied.

HYATT, Administrative Judge: Protester, James W. Collins & Associates, Inc. (JWC), has moved for reconsideration of the Board's decision dismissing for lack of timeliness its protest of respondent's actions with respect to the procurement of certain maintenance services for Government-owned automatic data processing equipment (ADPE). JWC's protest challenged respondent's decision to exclude it from further consideration for award of the contract and, alternatively, requested recovery of the costs of preparing its proposal and pursuing

Digitized by Google

this protest. For the reasons stated, we deny protester's motion.

Background

This protest concerned a proposed small business set-aside procurement for computer maintenance services required by the Office of Computer Services of the Commerce Department. Certain irregularities occurred during the procurement process, which are described in the Board's decision dismissing JWC's protest as untimely filed. *James W. Collins & Associates, Inc. v. Department of Commerce*, 1993 BPD ¶ 22 (Jan. 7, 1993). As a result of these irregularities, the contracting officer excluded from further consideration for award several small businesses, including JWC. JWC protested.

In its complaint, filed on December 3, 1992, JWC stated that a telephone conversation had been held with the contracting officer concerning this matter "on or about November 17, 1992." In a declaration signed and certified to by the contracting officer, she confirmed that a conversation had occurred on this date, and that she had initiated the call in response to a telephone call she had received on November 16. The fact that she received a call from protester on November 16 is verified by an electronic mail message to that effect. A copy of this message was proffered by respondent in its opposition to the motion to reconsider. Her records indicate that she returned the call.

In responding to the initial motion to dismiss, protester asserted that the telephone call that it initially had conceded occurred on or about November 17 actually did not occur until later in November. This assertion was made in an unsworn statement which was not accompanied by any substantiating documentation. The Board noted that protester had made this claim but did not address it in the decision dismissing the protest because it deemed that the weight of the evidence supported the conclusion that a telephone conversation apprising JWC of its status in the procurement had in fact taken place on November 17. *James W. Collins & Associates, Inc.*

In its motion for reconsideration, protester essentially objects that the Board's finding that the telephone call took place on November 17 is erroneous, and adds, again simply in the form of an unsworn pleading, that it has searched its own records and has located no record of such a call. Protester offers to supply copies of its records but never supplied them in the first instance. Based on its records, protester maintains that the call must not have taken place on November 17 after all, and thus contends that its protest should not have been deemed untimely.

Discussion

It is the protester's burden to establish the timeliness of its protest. Rule 7(b)(2)(vi) [1]; *Rotating Memory Services*, GSBCA 10851-P, 91-1 BCA ¶ 23,408, at 117,446, 1990 BPD ¶ 311, at 3; *Electronic Systems Associates, Inc.*, GSBCA 10177-P, 90-1 BCA ¶ 22,439, at 112,679, 1989 BPD ¶ 336, at 13. As we stated in the initial decision, in the interest of minimizing expenses incurred by Government agencies and prospective contractors, as well as creating a degree of certainty as to when protests may or may not be brought, the Board has, on more than one occasion, warned that its timeliness rules will be enforced strictly. *James W. Collins & Associates*, slip op. at 4 (citing *Integrated Systems Group, Inc.*, GSBCA 11075-P, 91-2 BCA ¶ 23,790, 1991 BPD ¶ 42; *Teradata Corp.*, GSBCA 10677-P-R, 90-3 BCA ¶ 23,278; 1990 BPD ¶ 250). Protester's complaint, as initially filed, averred that a telephone conversation took place between it and the contracting officer on or about November 17. Records supplied by respondent have established that a call was placed by protester to the contracting officer on November 16. In her declaration, the contracting officer indicated that she routinely returns calls as promptly as possible and that, to the best of her recollection, she in fact returned protester's call on November 17 and apprised protester of the status of the procurement.

The protest was filed on December 3, 1992. Based on protester's concession and the contracting officer's declaration that the information needed to apprise protester of its basis for protest was conveyed in the telephone conversation that occurred on November 17, the Board dismissed the protest as untimely filed. Although not explicitly stated, the Board simply could not give as much credence to protester's conflicting, unsworn, and otherwise unsupported retraction of its earlier statement concerning that telephone conversation. Based on the preponderance of the evidence in the record at that time, the Board concluded that, as of November 17, protester had full knowledge of its grounds of protest, and, to be timely,

[1] 48 CFR 6101 (1992).

©1994, Commerce Clearing House, Inc.

Digitized by Google

would have had to file a protest within ten working days. It did not do so.

Protester's motion does little more than reassert its contention that the telephone call it initially conceded took place around November 17 actually took place much later in November. In contrast to the contracting officer's declaration, no sworn affidavit or declaration is offered to support the contention that the date asserted in the complaint as initially filed was mistaken. Protester has offered no new argument or evidence that it could not have offered prior to the dismissal to justify granting its motion for reconsideration. Rule 32.

Decision

Protester's motion for reconsideration is DENIED.

[¶ 26,323] Universal Automation Labs, Inc. v. Department of Transportation; Diversified International Sciences Corporation and Galaxy Scientific Corporation, Intervenors

GSBCA No. 12370-P, July 7, 1993. (The text below is the redacted version issued to the public on July 27, 1993.)

Selection of Contractor—Evaluation Factors, Disclosure—Clarity.—A protest against a solicitation for concepts analysis division support services was denied, despite the contractor's allegation that a solicitation factor failed to state clearly that proposals demonstrating more in-house prime contractor technical expertise would be scored higher than proposals relying more upon the use of subcontractors, because the solicitation, when read as a whole, indicated a preference for in-house expertise. The factor focused primarily on the presence of in-house technical expertise to ensure the effective management of subcontractors.

Cancellation of Solicitation—Changed Needs—In-House Capability.—An amendment that revised the language of an evaluation factor did not warrant cancellation of and reissuance of the solicitation, because the amendment constituted a substantive change rather than a clarification of the solicitation. The amendment changed neither the government's original intent regarding the factor nor the meaning or purpose of the other factors. The protester did not prove its contention that the changes made to the evaluation factor, which expressed a preference for in-house expertise, required the protester to cancel its teaming agreements with subcontractors.

Automatic Data Processing Procurement—Authority to Procure—Blanket Delegation Limitation.—A protester's contention that under a footnote to a revised FIRMR rule that was published in the Federal Register, the government needed a specific delegation of procurement authority to procure computer support services during the transition period before the revised rule's effective date was rejected because, in a series of technical corrections, the Federal Register subsequently required the removal of the footnote requiring a specific DPA. In alleging that the footnote remained valid, despite the technical corrections, the protester interpreted the corrections as amendments. The record showed that the footnote was erroneous and was inadvertently included in the final draft.

Selection of Contractor—Equal Treatment—Proof of Bias.—A protest against an award for computer support services that contended that the protester was deprived of an impartial evaluation of its proposal was denied, because the more detailed comments to the awardee regarding its proposal's weaknesses did not stem from any desire to treat the awardee more favorably than the protester. Moreover, after the protester failed to address evaluators' comments regarding its proposal's potential weaknesses, the government issued clarifying language in an amendment. The clarification in the amendment amply compensated the protester for any temporary advantage that might have accrued to the awardee as a result of the more specific comments that it received. The fact that the protester had filed two previous protests against the government did not constitute proof of bias. The protester's allegations regarding negative statements made by various government employees also did not amount to proof that the protester was treated unfairly.

Digitized by Google

Conflicts of Interest—Appearance of Impropriety—Social Contacts.—A protest against an award for computer support services was denied, despite the protester's contention that the government officials' social contacts with competing contractors during the course of the procurement raised the appearance of impropriety, because the protester did not present any hard facts showing the possibility and appearance of impropriety or any evidence that the alleged impropriety could have produced an adverse effect on the procurement process. Although the protester criticized one official's friendships with contractors' representatives, it did not provide any evidence refuting the official's testimony that he did not discuss business during social meetings.

Small Business—8(a) Procurements—Delay in Procurement.—A protest against an award under a solicitation for computer support services was denied, despite the protester's contention that the government's delay in awarding the contract all but guaranteed award to a large contractor in violation of the Small Business Act's requirement that a fair proportion of government contracts be placed with small businesses, because the protester did not cite any regulations that precluded the participation of companies that had developed during the course of the procurement to a point where they were no longer "small."

For the protester: Winston & Strawn, Washington, D.C., by Michael R. Lemov, Michael L. Sibarium, Mark J. Hedien, and Robert A. Berger, and Manatt, Phelps & Phillips, Washington, D.C., by James H. Robert III. For the government: John R. McCaw, Jr., and Sybil Horowitz, Office of the Chief Counsel, Federal Aviation Administration, Washington, D.C., and Thomas E. Flatley, Jr., Patricia A. McNall, and William R. Sheehan, Office of the Assistant Chief Counsel, Federal Aviation Administration, Atlantic City Airport, New Jersey. For the intervenor, Diversified International Sciences Corporation: Smith, Pachter, McWhorter & D'Ambrosio, Vienna, Virginia, by Arthur I. Leaderman and Carl T. Hahn. For the intervenor, Galaxy Scientific Corporation: Saul, Ewing, Remick & Saul, Philadelphia, Pennsylvania, by Robert G. Fryling and John W. Fowler, Jr.

Before NEILL, HYATT, and VERGILIO, Administrative Judges.

NEILL, Administrative Judge: This protest was filed by Universal Automation Labs, Inc. (UAL) on April 14, 1993. It concerns a solicitation for concepts analysis division support services (CADSS), issued by the Technical Center of the Federal Aviation Administration (FAA) located in Atlantic City, New Jersey.

UAL's protest has been prompted by a solicitation amendment issued by FAA. Protester contends that the amendment is considerably more than a mere clarification of an evaluation factor. According to protester, the amendment introduced a change into the evaluation factor in question which was so substantive that it should have led to a cancellation rather than an amendment of the solicitation. UAL further contends that there is proof of bias against it on the part of FAA and that it has been deprived of the opportunity for an impartial evaluation of its proposal. UAL's protest, as amended, also alleges that FAA, in carrying on this procurement, has violated: the Small Business Act, the Procurement Integrity Act, conflict of interest regulations, and other agency requirements, and that these violations so taint the procurement as to necessitate cancellation of the solicitation. Finally, as the record for this protest has developed, an additional issue has arisen regarding the validity of the delegation of procurement authority (DPA) for this procurement.

Two other firms competing for this procurement have intervened in the protest as intervenors of right. They are Diversified International Sciences Corporation (DISC) and Galaxy Scientific Corporation (Galaxy).

The protester and respondent each filed motions for partial summary relief. In addition, intervenor DISC filed a motion for summary disposition on seven of the nine counts in the complaint, as amended. By decision dated May 17, 1993, we denied all of these motions. *Universal Automation Labs, Inc. v. Department of Transportation*, GSBCA 12370-P, 93-3 BCA ¶ 26,142, 1993 BPD ¶ 159 (May 17, 1993).

For the reasons set out below, we deny UAL's protest.

Findings of Fact

FAA's Selection Plan

1. The selection plan for this procurement indicates that it would be for an estimated value of $ and was required by the FAA to provide engineering and test support

services in conjunction with research, development, implementation and testing of the national airspace system (NAS). The selection plan identifies several program areas of concern such as navigation, communications, surveillance, landing, maintenance, and air traffic control (ATC) program elements and equipment. Protest File, Exhibit 5.

2. The selection plan also indicates that the planned procurement is to be reserved for competitive award to a small business under Section 8(a) of the Small Business Act as amended. Protest File, Exhibit 5. Prior to the time of this procurement, contracts awarded to small businesses by the Technical Center had not been awarded on a competitive basis. Instead, contracts were awarded to small business firms identified to the Technical Center by SBA. After evaluating the capabilities of these firms, the Technical Center would select one with which it would then negotiate on a non-competitive basis for eventual award. Transcript at 699, 809-11.

3. The Technical Center's selection plan for this procurement was approved on August 27, 1990. It envisioned an award within thirty-five weeks of that approval and contemplated a five-year period of performance. Protest File, Exhibit 5.

The DPA

4. By letter dated March 30, 1990, the Technical Center submitted an agency procurement request (APR) to the Director of the Office of Information Resource Management for the Department of Transportation (DOT). Protester's Exhibit BB. A DOT official responsible for review of all APRs from operating administrations within the agency testified that he read the APR submitted by the FAA for this procurement. Transcript at 624-25. This official further testified that no specific DPA was required from GSA for the procurement because there was, at that time, an unlimited blanket regulatory DPA from GSA. *Id.* at 613-17. The Board takes judicial notice that, in the spring of 1990, Part 201-23 of the Federal Information Resources Management Regulations (FIRMR), which prescribes policies and procedures regarding DPAs, provided: "Agencies do not require GSA approval to contract for commercial ADP support services." 41 CFR 201-23.104-6 (1990); *see also* 55 Fed. Reg. 30,702, 41 CFR 201-23.103-1(c)(2) (July 27, 1990).

5. While DOT concluded that no specific DPA was required from GSA, it nonetheless issued an internal redelegation of procurement authority to FAA for this procurement. Transcript at 617-18. The internal DPA was granted in writing by letter dated April 17, 1990. Among its provisions is the statement:

> An amendment to this DPA must be obtained whenever any material change is expected from the basis on which this DPA was issued. Examples of such changes include: a substantive revision in the technical requirement, a change in acquisition strategy, a significant slippage in the planned contract award date, a change in contract life, or an increase in anticipated contract costs.

Protest File, Exhibit 2.

6. On December 28, 1990, the Federal Register published a revised version of the FIRMR. The introductory note published with the final rule contains the following provision:

> EFFECTIVE DATE: This rule is effective April 29, 1991, but may be observed earlier. This rule is applicable to solicitations issued on or after the effective date.
>
> FOR FURTHER INFORMATION: Paul Whitson, GSA, Office of Information Resources Management Policy ....

55 Fed. Reg. 53,386 (1990).

7. Several pages into the FIRMR rule, published in the December 28 issue of the Federal Register, is Section 201-20.305-1, which deals with regulatory delegations. A footnote appended to a provision concerning contracts for support services states:

> For transition purposes, solicitations for support services, regardless of cost, released prior to (insert publication date here) may be awarded without obtaining a specific DPA from GSA and solicitations for support services released after (insert publication date here) that are not awarded prior to (insert effective date here) require a specific DPA if they exceed the applicable dollar threshold in this § 201-20.305-1.

55 Fed. Reg. 53,401 n.1 (1990).

8. On January 3, 1991, shortly after the publication of the final FIRMR rule on December 28, the Technical Center issued the solicitation for this procurement. Protest File, Exhibit 7.

9. On February 7, 1991, the Federal Register carried a series of technical corrections to the final FIRMR rule previously published in the December 28 issue. Among the corrections called for is the following:

Digitized by Google

On page 53401 in the third column in § 201-20.305-1(a)(1) introductory text in the second line the reference "1" to the footnote and the footnote are removed.

56 Fed. Reg. 4948 (1991). This notice of technical corrections to the final FIRMR rule carries an effective date of April 29, 1991. *Id.*

10. Mr. Paul Whitson, the GSA representative identified in the December 28 notice as the official to contact for further information, has provided for the record in this case a declaration under penalty of perjury. He states:

> With respect to the footnote that appeared on page 53401 of the December 28th Federal Register, it was the intent of the FIRMR improvement team that the footnote not be included in the version of the new FIRMR published in the Federal Register. The footnote was contained in an early, draft version of Part 20 which was inadvertently given to the Federal Register for publication. When the error was discovered, the decision was made to remove the footnote in a correction which was published in the Federal Register on February 7, 1991.

Respondent's Supplemental Posthearing Brief, Exhibit 3.

11. The DOT official who processed the APR for this procurement has also provided for the record a declaration under penalty of perjury. In that declaration, he states that shortly after the new FIRMR appeared in the Federal Register on December 28, 1990, he contacted various GSA representatives and was told that a specific DPA was not necessary for this procurement because the solicitation had been issued prior to April 29, 1991. He likewise has declared that in early February 1991, after these telephone contacts, he received a GSA guidance memorandum which confirmed the oral advice already received. Respondent's Supplemental Posthearing Brief, Exhibit 4. When called to testify, this same individual stated that subsequent contacts with GSA representatives—as recent as the day on which he testified—have continued to confirm that the "grandfathered old FIRMR blanket delegation of procurement authority" was still valid. Transcript at 636.

12. The DOT official responsible for processing the APR submitted by the Technical Center for this procurement and for issuing the internal redelegation of procurement authority has also testified that neither the APR nor the internal DPA had ever been amended. Transcript at 630-31. He explained, however, that in mid-1992, he received a telephone call and a telefacsimile from his contact at the FAA Technical Center. At that time he was advised of the status of this procurement. He was asked if an amendment of the DPA was needed. He replied that it was not. Rather, he suggested that FAA defer requesting an amendment until the agency has a clear indication of when award will be made. *Id.* at 619-23.

The Evaluation Provision

13. Section M of the solicitation states that proposals will be evaluated to determine which offer is the most advantageous to the Government—technical, cost, and other factors considered. Protest File, Exhibit 7 at 156. The original solicitation listed six evaluation factors in descending order of importance. They were:

> Factor 1: Understanding Requirements
>
> The ability of the contractors to show an understanding of the purpose, scope, and requirements of the work associated with this contract. This will include the contractor's response to the overall contract, the defined task areas, and the technical response to the sample problems.
>
> Factor 2: Experience in the following fields of work. Because of the ongoing nature of the ACD-300 [Concepts Analysis Division] work effort, any new contractor ideally would be experienced in each of the various technical fields; specifically,
>
> Air to Ground Communication/Data Link Processing/Development,
> Air Traffic Control Human Factor,
> Air Traffic Control Modeling and Simulation,
> Data Link Design and Development,
> Maintenance Control Center Design,
> Remote Data Acquisition,
> Remote System Communication, and
> Weather Data Processing.
>
> Factor 3: Experience with the FAA Air Traffic Control System.
>
> Because of the uniqueness of the FAA responsibility, experience and knowledge of air traffic control system requirements/procedures is essential. Specific experience of the potential contractors staff in air traffic control systems and the number of years of experience each staff member brings to the effort will be used to judge the effectiveness of each proposal.
>
> Factor 4: Management Plan
>
> Due to the size and scope of this contract, it is expected that a mix of the prime contractor's and subcontractors will be re-

©1994, Commerce Clearing House, Inc.

Digitized by Google

quired. The extent of in-house expertise in the specific technical areas and the use of subcontractors for additional expertise must be explained in a Management Plan and will be evaluated.

Factor 5: Management Ability

The ability of the contractors' management to respond to the needs of the projects and their willingness and success at resolving problems as they develop will be evaluated by analysis of previous work efforts and the response to the sample problem and initial tasks.

Factor 6: Realism and Reasonableness of Price[1]

The cost proposals shall be evaluated for realism and reasonableness. The contractor shall include all cost elements that are allowable to the effort and specify if they are to be charged as direct costs or indirect costs.

Id. at 156-57.

Protester's Teaming Agreements

14. At the time protester decided to offer on the CADSS procurement which is the subject of this protest, it likewise elected to offer on two other 8(a) procurements similarly involving support services and issued by the Technical Center during, more or less, the same time period. Transcript at 76, 144, 577. One of these procurements is referred to in the transcript as the "weather" contract or procurement while the other is referred to as the "communications" contract or procurement. Transcript at 231, 577, 809.

15. Protester's Vice President of Contracts testified that at the start of the CADSS procurement UAL had enough in-house staff to cover approximately ninety-five percent of the required expertise. Transcript at 144-45. However, since UAL was interested in offering on all three 8(a) procurements and in submitting winning proposals, it sought subcontractor experience in areas where a subcontractor's expertise would increase its prospects for award. *Id.* at 577.

16. UAL's Proposal Manager testified that it was his understanding that as long as UAL's proposal met the SBA fifty percent minimum,[2] it would not be penalized for using subcontractors. He stated: "As far as the mix, we were free to go up to the maximum allowable by SBA and we felt we had a right to do that." Transcript at 553. He likewise noted that, based on his experience, the FAA had been encouraging and accepting team competition. *Id.* at 555.

17. UAL's Vice President of Contracts testified regarding what he considered to be additional evidence of FAA's policy of not crediting offerors in evaluations for having a higher degree of expertise among in-house staff as opposed to subcontractor staff. He testified that the solicitation for the "weather" procurement had originally contained an evaluation factor which gave credit for in-house expertise. It read:

Factor 3 Prime Contractor Involvement.

The extent of in-house support expertise in the specific technical areas of interest to ACN-230 is of prime interest. The ability to support the technical areas required of the contract and the depth of in-house staff back at the home plant to resolve complex technical problems will be evaluated.

A vendor's question regarding this factor asked: "Does this imply a preference toward bidders who do not use subcontractors?" As a result of this inquiry, FAA deleted this original Factor 3 in its entirety and replaced it with a factor entitled "Technical Approach for Project Completion." This factor includes no reference to either prime or subcontractors. *See* Protester's Exhibit V. It is the testimony of UAL's Vice President of Contracts that this action on the part of FAA provided a context for understanding the language of Factor 4 in the CADSS solicitation. Transcript at 106-07, 147-49. Both this witness and UAL's Proposal Manager contend that they read Factor 4 as not providing additional credit for in-house expertise but rather as allowing and encouraging the use of subcontractors to supplement in-house expertise. *Id.* at 107, 559-60.

18. Accordingly, UAL moved out at an early juncture to negotiate teaming agreements for the CADSS contract with three promising subcontractors. Although the agreements are dated November 19, 1990, correspondence in the file indicates that they were signed after that date. One agree-

[1] This sixth and last factor was subsequently eliminated as a separate evaluation factor by solicitation amendment 0006. Protest File, Exhibit 40 at 157.

[2] Namely, 15 U.S.C. § 644(o) (1988) (in service contracts awarded to a small business concern, fifty percent of the cost of contract performance incurred for personnel shall be expended for the employees of that concern).

Digitized by Google

ment appears to have been signed in early December 1990, a second later in that month, and a third in late January 1991. Protester's Exhibit O; Transcript at 592.

19. Under the terms of the teaming agreements, the agreements terminate if the programs to be supported by the CADSS contract were to be canceled or if UAL were not to receive the contract. The agreements do not provide for termination in the event the solicitation is amended. Protester's Exhibit O.

20. The statement of work (SOW) in each of the three teaming agreements provides that a specified percentage of the contract work will be done by the subcontractor or that a designated number of the subcontractor's employees will assist with contract performance. The SOW also provides that each subcontractor will be expected to participate in those areas where its expertise will provide the maximum benefit to the UAL team. Other than a provision prohibiting UAL from soliciting employees of the subcontractor for hire, we find nothing in these agreements which precludes UAL from hiring key staff personnel with an expertise similar to that which presumably is possessed by one or more employees of any of the three potential subcontractors. Protester's Exhibit O.

Evaluation of Offers

21. The chairman of the technical evaluation team (TET) for this procurement prepared two sets of technical evaluation instructions. The first set was a draft that he eventually concluded did not include enough detail or provide for a sufficient number of evaluators. Transcript at 755-56. He, therefore, prepared a radically revised set of instructions prior to receipt of initial proposals. These instructions were then used for all technical evaluations which have been done to date in this procurement. *Id.* at 756-60.[3]

22. The technical evaluation instructions used for all evaluations done thus far in this procurement advise evaluators that the extent of in-house expertise in specific technical areas and the use of subcontractors for additional expertise is to be evaluated. Lower scores are to be assigned for [4]

[5] Protest File, Exhibit 6.

23. The TET chairman was also the author of the technical evaluation factors in Section M of the solicitation. Transcript at 752. He testified at some length regarding the use of subcontractors for this procurement and the interrelationship of the mix of prime and subcontractors to some of the evaluation factors. He explained that, to the extent that the use of subcontractors enlarged the pool of available expertise, this could enhance an offeror's prospects of a higher score on the first factor which dealt with understanding requirements. Transcript at 753, 848-49. He also acknowledged that the number of subcontractors that a prime contractor intended to use could affect an evaluation under Factor 5, management ability. *Id.* at 845.

24. With regard to Factor 4, the TET chairman testified that the purpose of this factor was to examine a proposal from the standpoint of key management personnel employed by the prime contractor. He explained that, in the past, the absence of key personnel expertise in the prime had created problems for the Technical Center. He offered two examples:

> Number one is I have had a couple of cases where a contractor would deliver me a document that I was told that the task was on track, it was being done, it was right. When I got the document, it was technically off of the mark. When I would ask why, I would find out that there was nobody in the prime contractor that had the expertise to be able to evaluate. It wasn't until it got to the Government that we found out. A lot of times they were drafts, and we then had to pay to get them redone.
>
> The other place that I have had a problem is that the subcontractor goes away. For some reason—either the prime and the sub have a falling out or the company goes out of business, or due to other contracts that they are bidding on, they have to terminate with that contract. When that occurs, then I find that there may not be any expertise in the primary company, I end up having to pay to either bring it into the company or education time to

[3] The record contains a copy of this revised instruction. It has, however, been further revised. This third version is a "red-lined" version of the second. The changes introduced in the third version reflect solicitation amendment 0006 and are not considered by the TET chairman to be substantive changes. Transcript at 756, 762.

[4] Namely,

[5] Namely

train another sub—I had to bring them up to speed.

So it is important that we had some expertise in the prime company that had to do with their knowledge of each one of the areas. That is why I called that key staff mix.

Transcript at 753-54.

25. proposals were received by the amended closing date of July 10, 1991. Protest File, Exhibits . The technical portions of the proposals were sent to the TET to be scored in accordance with the criteria in Section M of the solicitation. The TET completed an initial draft evaluation on August 2, 1991. It showed the following average scores:

[6]

Average Score
Percentile

Id. Exhibit 17. Based upon this initial draft evaluation report, offerors were kept in the competitive range. *Id.*, Exhibit 26; Transcript at 767.

26. By letters dated November 22, 1991, clarification requests were sent to all offerors. Protest File, Exhibit 18. Replies were received during December 1991. *Id.*, Exhibits . On January 17, 1992, following receipt of these replies, the TET chairman submitted a final version of his technical evaluation report.

. *Id.*, Exhibit 24; Transcript at 768.

27. After submitting his final technical evaluation report, the TET chairman met with the Source Evaluation Board (SEB) for this procurement. The SEB requested more information and details to support the technical ratings assigned. In response, the TET chairman revised his report and submitted an expanded version on May 1, 1992. Protest File, Exhibit 27; Transcript at 767-69.

28. When the expanded evaluation report was presented to the SEB for review, concerns were expressed about variances in scores among the evaluators. Transcript at 770-72. In response to these concerns, the TET chairman reviewed the original scoring sheets and conferred with the individual evaluators. As a result of this exercise, it was discovered that certain arithmetic errors had been made, some data overlooked, and some evaluation subfactors misinterpreted. The errors were corrected and a revised technical evaluation report dated May 19, 1992, was provided to the SEB. *Id.* at 771-79; Respondent's Exhibit 3. The average technical scores shown in this revised report were:

Average Score
Percentile

Protest File, Exhibit 28.

29. In June 1992, letters were sent to offerors regarding weaknesses and deficiencies said to have been found in their proposals by the evaluation team. Protest File, Exhibit 29. weaknesses were listed in the attachment to the letter addressed to protester. For purposes of this protest, we are concerned with only one, namely:

> A large percentage of the experience presented is provided by the subcontractors, not the prime.

Id. This weakness, as well as the other listed in the letter sent to protester, were included in the technical evaluation report of May 19. *Id.*, Exhibit 28. The TET chairman has testified that the strengths and weaknesses of individual proposals which he listed in his revised report were comments found on the scoring sheets of the individual evaluators. Transcript at 770.

30. Protester's Vice President of Contracts testified that he was "amazed" at the statement made by FAA that a large percentage of experience is provided by the subcontractor and not the prime. He stated:

> I was amazed at the statement because what large means, I don't know. Large to me could be 60 or 70 percent, and our proposal did not have 60 or 70 percent of subcontractors in it. So I was puzzled at the statement.

Transcript at 151. Nevertheless, although this individual sought clarification on of the listed weaknesses said to have been found in UAL's proposal, he did not seek clarification on this matter of subcontractor experience. Protest File, Exhibit 33; Transcript at 170-73.

31. In the letter sent to DISC listing potential weaknesses found in DISC's proposal, two are of particular significance for this protest, namely:

> DISC has

Protest File, Exhibit 29. DISC's Proposal Manager for this procurement testified: "

32. By the end of June 1992, the offerors had responded to FAA's letters concerning potential weaknesses and deficiencies in their proposals. Protest File, Exhibits 34-37. Protester made no changes in its technical proposal which were responsive to the concern raised earlier by FAA regarding the extent of its subcontracting. Instead, in addressing this weakness, UAL simply reaffirmed the confidence it had in the team members it had selected to use as subcontractors should it receive the contract. *Id.*, Exhibit 37. DISC, on the other hand, provided a reply to the concern raised by FAA regarding
. DISC
. *Id.*, Exhibit 34 at 19-23.

33. The responses received from the offerors were forwarded to the TET for further review. In the course of updating the technical evaluations, it was discovered that the score-sheet previously used for Factor 4 was incomplete in that it did not list all task areas identified in the solicitation as being within the contract scope. Instead, the TET members were relying on an incomplete listing of task areas which the TET chairman had listed on the score-sheet for Factor 3. Protest File, Exhibit 6 (score-sheets for Factors 3 and 4). The error was corrected by the issuance of a revised score-sheet for Factor 4. Respondent's Exhibit 6; Transcript at 781-89.

34. On January 7, 1993, an addendum was issued to the TET's earlier evaluation report. As a result of the clarifications provided by offerors in response to FAA's earlier letters regarding weaknesses and deficiencies and as a result of the correction in the score-sheet for Factor 4, the scores for the offerors were revised as follows:

Average Score
Percentile

Protest File, Exhibit 39 at 2 (unnumbered); Transcript at 786-87. This addendum expressly notes
Protest File, Exhibit 39 at 5 (unnumbered).

35. We have examined the scores given by each evaluator for each individual factor prior to receipt of answers to the letters regarding potential weaknesses and deficiencies. We have likewise examined these same individual scores as revised after receipt of replies to these letters. From this comparative analysis, it is clear that the principal cause

Amendment 0006

36. On February 19, 1993, the Technical Center issued amendment 0006 to the CADSS solicitation. The modification was an extensive one. It updated and/or clarified various provisions. It afforded offerors the opportunity to update both their cost and their technical proposals. Protest File, Exhibit 40.

37. Amendment 0006 included a number of changes regarding the evaluation factors listed in Section M of the solicitation. Factor 6, which dealt with cost realism, was removed and transformed into an altogether separate provision calling for evaluation of cost proposals for realism and reasonableness. Wording was added to the introductory language for clause M.1 to state that the technical factor is considered to be significantly more important than cost but that cost will be increasingly more important as the difference between the technical factor scores decreases. The experience factor in Factor 2 was clarified as being applicable not to total available staff, but to total available key staff. Protest File, Exhibit 40 at 156.

38. Of special significance for this protest are the changes introduced by amendment 0006 into the language of Factor 4. To facilitate analysis, we have italicized the new language added by this amendment. Factor 4 was revised as follows:

> Due to the size and scope of this contract, it is expected that a mix of the prime contractors and subcontractors will be required. The extent of in-house *prime contractor* expertise in the specific technical areas and the use of subcontractors for additional expertise must be explained in a Management Plan and will be evaluated *based on the key staff mix; the higher the degree of in-house expertise, the higher the score for this factor. Whether the offeror's management approach is unique,*

[7] We recognize that some of this is attributable to the correction made in the Factor 4 score-sheets. *See* Finding 33.

©1994, Commerce Clearing House, Inc.

Digitized by Google

complete and reasonable will also be considered.

Protest File, Exhibit 40 at 157 (emphasis added).

39. The members of the SEB supported the various changes introduced by amendment 0006, particularly those made to the Section M evaluation factors. Protester's Exhibit L. The TET chairman testified in some detail regarding the changes made in the language of Factor 4. These changes were, in his opinion, particularly important. He explained that there was concern that this provision was not properly understood by all offerors. He pointed out that when FAA's concerns relating to this factor had been brought to the attention of in the letter dealing with potential weaknesses and deficiencies, had responded . It was the TET chairman's concern that Factor 4 be understood by all offerors in the same way it was understood by those doing the evaluation. Transcript at 801-03.

40. Upon review of the approximately fifty pages of changes and/or modifications made in the original solicitation by amendment 0006, a UAL consultant concluded that the changes contained in Sections B through H were of a non-substantial nature and would have no impact on UAL's technical and cost proposals. Respondent's Exhibit 4; Transcript at 180-81, 185. This consultant did, however, consider the changes introduced in the wording of Factor 4 in Section M to be a "drastic change." Transcript at 186.

41. Protester's Vice President and Proposal Manager both confirmed that they considered the change made by amendment 0006 in the language of Factor 4 to be a substantive change. They also referred to a change in Section L, which they considered significant. Transcript at 112-15, 139-40, 555-57. The original provision in Section L indicated that respondent, in reviewing resumes, would be looking for recent experience in air traffic control automation. Amendment 0006 limited this experience to *FAA* air traffic control automation. *Compare* Protest File, Exhibit 7 at 148 *with* Exhibit 40 at 148. The TET chairman testified that the addition of the term "FAA" to the resume experience provision in Section L was to bring it into line with the original requirement in Section M for "Experience with the FAA Air Traffic Control System." Transcript at 804-05; Protest File, Exhibit 7 at 156.

42. Subsequent amendments to the solicitation extended the date and time for the submission of proposal updates until 3 p.m., April 14, 1993. Protest File, Exhibits 41, 44. UAL filed its protest with the Board on April 14, 1993, the date on which replies to amendment 0006 were due.

Alleged Bias and Procurement Integrity/Ethical Violations

43. UAL has been involved in two earlier protests against the FAA Technical Center. The first involved the elimination of UAL from the competitive range in the so-called "weather" procurement. The Board granted UAL's protest. *Universal Automation Leasing Corp.*, GSBCA 11268, 91-3 BCA ¶ 24,255, 1991 BPD ¶ 168. The second protest, GSBCA 11867, followed on the heels of the first and alleged that the FAA was failing to comply with the relief provided by the Board in the first protest. This second protest was eventually settled and dismissed in June 1992. Protester's Exhibit Y.

44. At the hearing for this protest, it was reported by a consultant for UAL that a former director of the FAA's Technical Center was reputed to have said that the current director, Mr. Harvey Safeer, had told this former director that UAL would never get a contract. Transcript at 192. When called to the stand, the former director denied having made the statement. *Id.* at 390. Mr. Safeer, himself, likewise denied having made this or any similar statement. He observed that such a statement would be "dumb." He also pointed out that such a statement would constitute an unwarranted intrusion into the responsibilities of his program managers and would be totally inconsistent with quality management. *Id.* at 294.

45. Mr. Safeer, the current director of the Technical Center, was the original source selection official for this procurement until May 1991. At that time, an FAA policy change led to his being replaced as source selection official by an official at the FAA headquarters. Mr. Safeer, however, was unaware of his role as source selection official until he was notified that he had been replaced. Transcript at 288. His only involvement with the procurement, apart from this protest, was to make inquiry several months ago to determine why it was reported to be behind schedule. *Id.* at 289.

46. As Director of the Technical Center, Mr. Safeer is expected to play an active role in the community. He also is expected to receive business representatives wishing to call on him and to discuss, in general terms,

Digitized by Google

business with the Center. Transcript at 288, 309-11. Last year he attended fourteen Christmas parties. Two were put on by industry; the rest were put on at the Technical Center or by Technical Center organizations. This included a party given by . He explained that it is his policy to accept such invitations provided he can pay his own way. *Id.* at 307, 312.

47. Mr. Safeer freely admits to having had business meetings with representatives of and to having had some social contacts with senior officials of this company. In particular, he is a close and longtime friend (over twenty years) of an individual who is currently a vice president of . Nevertheless, he contends that no business is discussed when he meets socially with these and other company representatives. Further, he testified that when he has business meetings with the representatives of and other companies, the discussion is general in nature and does not concern specific procurements. Transcript at 291-92, 305-10, 312-14.

48. The TET chairman and one of the TET members are longtime friends of and have frequent social contacts with Mr. William R. Thomas, a former employee of the Technical Center. Transcript at 409-13, 492-96. Mr. Thomas

. Protest File, Exhibits 16 at 8, 14 at 2-1, 15 at 113, 37 at B-11.

49. Mr. Thomas currently works at the Technical Center as a consultant for one of the incumbent contractors. Transcript at 410. This incumbent has not submitted an offer to the FAA for the CADSS procurement

Protest File, Exhibit 13 at III-10. The TET chairman is, of course, aware of this fact. Transcript at 413-14. Mr. Thomas has stated, under oath, that he knew

because of that chose not to become involved in the proposal preparation process. Protester's Exhibit X at 50-51. The TET chairman has testified that he did not discuss the CADSS procurement with Mr. Thomas. Transcript at 429, 451, 813. Likewise, the member of the TET who was also a long-term friend of Mr. Thomas has testified that he never discussed the CADSS procurement with Mr. Thomas except to acknowledge that it was ongoing. *Id.* at 499.

50. A former director of the Technical Center who is now a consultant has stated in a deposition taken in this case that he was advised by a fellow former director that there was a "big flap" between UAL and FAA and that he should distance himself from it. Protester's Exhibit W at 36. This individual has also stated that he did not consider the statement to be derogatory or prejudicial but simply a statement of a fact and a suggestion that he "back away." *Id.* The individual said to have given this caution confirmed at the hearing that he had made the statement. He explained that he had heard "rumblings and rumors" about problems UAL was having with the FAA. He also stated that he did not know the nature of the problems or who was right or wrong. Transcript at 393-94.

51. The President of UAL testified that at a Christmas party she attended last year at the Technical Center, she was advised by a senior FAA official, whom she considers to be a friend, that she should maintain a "quiet rapport" with the Center and keep other UAL representatives away from the Center for a period of time. Transcript at 72, 79-81, 87, 91-96.

52. UAL's Vice President of Contracts testified that, in his opinion, a cost analyst associated with the CADSS procurement has demonstrated bias against UAL. He explained that during negotiations relating to the definitization of a contract in connection with the "weather" procurement, this analyst became extremely agitated and was taken out of the conference room two or three times by the contracting officer. Upon return, the analyst is said to have been a "different person." Transcript at 120-22, 533. In his testimony, the TET chairman for the CADSS procurement confirmed that this same cost analyst is a member of the SEB for the CADSS procurement and has served on the SEB for the weather procurement as well. He stated that this individual has a tendency to become disagreeable with everybody who has numbers that do not match his. The TET chairman also observed that he had never seen this individual participate in negotiations, but at SEB meetings he had seen him become red in the face and agitated whenever he disagrees with a contractor's figures. *Id.* at 816-17.

53. One of UAL's site managers, who has worked either for FAA or for contractors at the Technical Center for approximately thirty-two years, testified that he believes there is bias against UAL at the Technical Center. Transcript at 527-30. He based this conclusion on comments said to be made by FAA and on-site contractor employees after

©1994, Commerce Clearing House, Inc.

Digitized by Google

UAL's first GSBCA protest. These comments expressed, in general, the hope that winning the protest would not go badly for UAL. *Id.* at 531. He expressed the opinion that the conduct of the cost analyst mentioned by UAL's vice president also evidenced bias. *Id.* at 532-33.

54. This same UAL site manager stated that he considers the association of Mr. Safeer, the Director of the Technical Center, with representatives of companies participating in the CADSS procurement is also evidence of bias. Transcript at 534. Finally, this UAL employee testified that he finds bias in remarks he has heard several times from one particular FAA employee who serves on the TET. These remarks are that UAL, as a contractor, is not providing the Government with its best value, that UAL should not be a contractor, and that work would be better done by government employees. *Id.* at 535.

55. The TET member referred to in the finding immediately above, when called to testify, freely admitted to having made such statements regarding UAL as well as other contractors working at the Technical Center. He explained that his personal preference for use of government employees rather than contractor personnel is well known at the Center. He further explained that his preference is based on a personal belief that use of contractors is not always in the Government's best interest and does not result in getting the best value from government employees. Transcript at 865-66. The TET chairman confirmed from his own personal observations that this is indeed the expressed preference of this TET member. He pointed out, however, that this negative attitude toward outside contractors was "across the board" and not directed to UAL alone. *Id.* at 816.

56. Proposal Manager for the CADSS procurement is also its Vice President for Systems Engineering. As part of his job, he is expected to undertake marketing trips. During the months of June and July 1992, he made several capability presentations to various officials at the Technical Center. This included a presentation on or around June 10 to the TET chairman who, besides being a member of the CADSS SEB, is also Branch Manager for the Advanced Systems Technology Branch of the Technical Center. Transcript at 749. A presentation was also made to the head of the directorate to which the TET chairman's branch belongs. Brief presentations were also made to senior Center officials including the Director and the Deputy Director of the Center. *Id.* at 682-90.

57. On June 29, 1993, the Board received from counsel for respondent a letter supplementing interrogatory answers previously provided to protester and contained in the record for this case. *See* Protester's Exhibit A. The letter advises opposing counsel and the Board that a member of the TET for the CADSS procurement, while attending a conference in Orlando, Florida in late January 1993, received an offer of employment from a representative of . At the time, the TET member informed the representative that he was not interested. Letter from Respondent to the Board of June 28, 1993, at 1-2.

58. In an affidavit provided for the record, this TET member stated that in April 1993, his parents moved to central Florida; that because of their failing health, they asked him to join them; that shortly thereafter he was again contacted by the same representative and told that the offer to work for in Florida was still open; that he then replied that he was interested and began to negotiate in earnest with this individual; and that a firm offer was made on June 10 and accepted by him shortly thereafter. Affidavit of Mark Smolensky (Smolensky Affidavit) (June 29, 1993) ¶ ¶ 2-8.

59. . Letter from Respondent to the Board of June 28, 1993, Attachments (Bylaws).

is mentioned in the proposal submitted for the CADSS procurement by . The is listed as an "available resource" to . Protest File, Exhibit 15 at 2.

60. A memorandum from the contracting officer to the Director of the Technical Center advising him of "possible integrity violations" reports that the TET member has accepted employment with but that his salary will be paid by . Nevertheless, the same memorandum states that, after a "thorough investigation," the contracting officer has concluded that any possible violation has had no impact on the pending award or selection of a source for the CADSS procurement. Letter from respondent to the Board of June 28, 1993, Attachments (Contracting Officer's Memorandum to Harvey B. Safeer (undated)). Counsel for respondent has advised the Board that when the suspension order is lifted, the FAA will pursue the matter further to determine if there has been any vio-

Digitized by Google

lation of the Procurement Integrity Act. Respondent's Letter to the Board of June 28, 1993, at 2.

Delay of the Procurement

61. The original schedule for this procurement was disrupted for a variety of reasons. One member of the TET suffered a heart attack. Another had a parent pass away after a prolonged illness. The contracting officer's husband had a heart attack and the wife and daughter of the TET chairman also had health problems during the course of the procurement. Transcript at 805. The TET chairman, obviously a key figure in the procurement, was also beset by a series of other demands on his time. During the period of this procurement, he was program manager for two major programs undertaken on behalf of FAA headquarters in Washington, DC. This involved considerable time and travel to and from Washington. *Id.* at 806. It is also clear from previous findings that the TET chairman was required to spend an extraordinary amount of time preparing for, directing, and validating the evaluation process in the CADSS procurement. *See* Findings 21-28, 34-35.

62. The Director of the Technical Center also provided some explanation for the delay of this procurement. He testified that it was necessary at one point to divert personnel resources from this procurement to plan a massive transcontinental air traffic control simulation to be staged in conjunction with the annual meeting of the Air Traffic Control Association. Transcript at 290. During the procurement three members of the TET were also diverted to assist in rehabilitating a building at the Technical Center to be used as a human factors lab at the Center. *Id.*; Protester's Exhibit D.

63. A representative of and a representative of have testified that their companies are now, or soon will become, too large to qualify under the SBA 8(a) program applicable SIC (standard industrial classification) size criterion for this procurement. Transcript at 652-53, 675-76.

Discussion

Did the FAA Violate Federal Acquisition Regulation (FAR) 15.605?

We consider first protester's allegation that the original solicitation failed to state clearly that proposals demonstrating relatively more in-house prime contractor technical expertise would be scored higher—based on an arithmetic formula under Factor 4—than proposals relying relatively more upon the use of subcontractors.

In making this allegation, protester contends that this alleged failure on the part of the FAA is in direct violation of FAR 15.605(e). This section of the FAR provides in pertinent part:

> (e) The solicitation shall clearly state the evaluation factors, including cost or price, cost or price-related factors, and non-cost or non-price-related factors, and any significant subfactors, that will be considered in making the source selection and their relative importance . . . .

48 CFR 15.605(e) (1992).

For purposes of this discussion, we repeat here the original language of Factor 4. It reads:

> Factor 4: Management Plan.
>
> Due to the size and scope of this contract, it is expected that a mix of the prime contractors and subcontractors will be required. The extent of in-house expertise in the specific technical areas and the use of subcontractors for additional expertise must be explained in a Management Plan and will be evaluated.

Finding 13.

Protester contends that it read this language as not providing additional credit for in-house expertise but rather encouraging the use of subcontractors to supplement in-house expertise. Findings 16, 17. We find this interpretation unreasonable. We agree with respondent that the language of the factor itself together with the context of the entire clause, when read as a whole, indicate that the preferred element in Factor 4 is the presence of in-house expertise.

The first sentence in Factor 4 makes it clear that subcontracting is a given necessity. Nevertheless, the subsequent sentences in the factor indicate a preference for in-house technical expertise. This is the specific quality which is sought in Factor 4 just as Factor 1 evaluates the ability of contractors to show understanding of the work, Factors 2 and 3 look to the experience of the offerors, Factor 5 considers the management ability of the offeror, and Factor 6 measures the realism and reasonableness of the price. *Id.* Given the fact that all other factors mentioned in the evaluation clause focus on the presence of a positive quality, it seems strikingly inconsistent to conclude that Factor 4 would look for less of the specified positive quality and credit instead the degree to

©1994, Commerce Clearing House, Inc.

Digitized by Google

which that quality can be supplemented with "additional expertise."

We also find significant the fact that the heading for Factor 4 is "Management Plan" and the language for this factor states that the extent of in-house technical expertise and the use of subcontractors for additional expertise "must be explained in a Management Plan ...." When technical expertise is mentioned in the context of program management, one presumably can and should conclude that, *for purposes of management,* it is obviously preferable to have in-house technical expertise rather than to rely primarily on subcontractors to provide it.

Protester offers several arguments in support of its interpretation of Factor 4. First is the claim that FAA encouraged the use of subcontractors to supplement in-house expertise. Finding 17. This statement in itself is correct but it does not provide support for protester's interpretation of Factor 4. As already noted, the first sentence of Factor 4 confirms that a mix of prime and subcontractors will be required. The testimony of the author of the evaluation clause likewise confirms the anticipated need for subcontractors. In addition, the author of the evaluation provision has likewise explained not only the expected need but the benefit of subcontracting in a procurement such as this. Finding 23. We agree with respondent that protester, in reading Factor 4, appears to have stopped with the first sentence. Subcontracting *is* encouraged. Factor 4, however, concerns itself with the presence of in-house technical expertise to ensure that subcontractors are effectively managed. *See* Respondent's Initial Posthearing Brief at 7.

Another argument offered by protester in support of its interpretation of Factor 4 is that UAL understood that as long as its proposal met the SBA fifty percent minimum, it would not be penalized for using subcontractors. As the Proposal Manager stated: "As far as the mix, we were free to go up to the maximum allowable by SBA and we felt we had a right to do that." *See* Finding 16. For this reason, UAL contends that a reasonable interpretation of Factor 4 is that a higher score would be given for the presence of technical expertise in subcontractors than for its presence in the prime. Again, protester's initial premise is correct. The SBA fifty percent minimum does apply to this procurement. It does not, however, support UAL's interpretation of Factor 4. The reason for this is the same as that given above. In the final analysis, Factor 4 does not concern itself with the degree of allowable subcontracting. Rather, it is concerned with a degree of in-house technical expertise which will ensure the effective management of subcontractors.

Perhaps the most puzzling argument advanced by UAL in support of its interpretation of Factor 4 is that regarding the appearance of similar language in Factor 3 of the solicitation for the weather procurement. The language in Factor 3, although different in some respects from that in Factor 4 of the CADSS solicitation, was nonetheless recognized by UAL as being similar. When FAA was questioned on whether the language in Factor 3 was meant to discourage subcontracting, it simply deleted any reference to in-house expertise from the weather solicitation. When similar language appeared in Factor 4 of the CADSS solicitation, UAL somehow concluded that this similar language now appearing in the CADSS solicitation was to be interpreted as simply encouraging technical expertise among subcontractors but not permitting any additional credit for in-house expertise. Finding 17. We are at a loss to understand how protester could draw such a conclusion from the similar reappearance of the language particularly because, in this case, the language remained in the CADSS solicitation and was not deleted as it had been in the weather solicitation.

In short, we are unpersuaded by protester's argument that Factor 4 lacked the clarity required by FAR 15.605(e). We find protester's interpretation in fundamental conflict with both the words and the context of the provision when read as a whole. Moreover, the agency has consistently applied Factor 4 and has attempted to ensure that all offerors shared this meaning. Finding 29-31.

Respondent's interpretation, on the other hand, is reasonable and gives meaning to the provision when read as a whole. From an examination of the instructions prepared for the TET members early in this procurement, it is clear that the Technical Center's understanding of the language in Factor 4 remains unchanged. Furthermore, we do not find that the scoring technique described in these instructions for Factor 4 represents unstated evaluation factors or significant subfactors. *See* Finding 22. Rather, we find them to be logically related to and reasonably encompassed within Factor 4 as originally stated. *See American Computer Educators, Inc.*, GSBCA 10539-P, 90-2 BCA ¶ 22,919, at 115,076, 1990 BPD ¶ 110, at 10; *Johnson Controls, Inc.*, GSBCA 10115-P,

Digitized by Google

89-3 BCA ¶ 22,172, at 111,563, 1989 BPD ¶ 245, at 10; *Phoenix Associates, Inc.*, GSBCA 9190-P, et al., 88-1 BCA ¶ 20,455, at 103,450, 1988 BPD ¶ 1, at 17. Finally, we are convinced that the requirement underlying this Factor 4, as explained by the author of the evaluation provision, is a valid and reasonable one. *See* Finding 24.

Does Amendment 0006 Violate FAR 15.606(b)(4)?

The story does not stop here, however. Upon examining the reply of protester to the letter regarding deficiencies and weaknesses in UAL's proposal, respondent became concerned that UAL had misunderstood Factor 4. Finding 39. In a subsequent amendment to the solicitation, therefore, the FAA issued slightly revised language to clarify the meaning of Factor 4. At that point in time, whether the original language of Factor 4 complied with the requirements of FAR 15.605(e) became academic. With issuance of amendment 0006, any allegedly obscure or latent elements regarding this factor became unquestionably clear. *See* Finding 38.

Protester does not believe this revision of the language in Factor 4 was a mere clarification. Instead, it contends that the language constitutes a substantive change in the solicitation and thus, pursuant to regulation, the solicitation must be canceled and reissued.

The section of the FAR relied on by protester reads as follows:

> If a change is so substantial that it warrants complete revision of a solicitation, the contracting officer shall cancel the original solicitation and issue a new one, regardless of the stage of the acquisition.

48 CFR 15.606(b)(4) (1992).

In the past, we have cautioned that "solicitations should not be canceled save for the most pressing of reasons." *C.M.P. Corp.*, GSBCA 9015-P, 87-3 BCA ¶ 20,075, at 101,644, 1987 BPD ¶ 148, at 6. On the other hand, when convinced that a change in a solicitation is truly substantive, we have upheld cancellation. *Vikonics, Inc.*, GSBCA 10575-P, 90-3 BCA ¶ 23,044, 1990 BPD ¶ 148 (cancellation warranted because both technically acceptable offerors had taken material exceptions to liquidated damages provision, payment schedule, and certain technical requirements, and four of six prequalified offerors did not submit bids because of liquidated damages provision and payment schedule); *System Dynamics, Inc.*, GSBCA 9763-P, 89-1 BCA ¶ 21,497, 1988 BPD ¶ 324 (increase in requirements coupled with a drastic revision of the evaluation criteria are so significant as to be tantamount to a complete revision of the solicitation).

The changes made in the language of Factor 4 by amendment 0006 certainly do not warrant complete revision of the CADSS solicitation. The language introduced by the amendment only makes explicit what respondent intended from the outset. We find no change in respondent's original intent regarding this factor and see no change in the meaning or purpose of the other factors resulting from this clarification. Protester appears to have confused an alleged need to completely revise its own proposal with the need to completely revise a solicitation. It is the latter and not the former which justifies cancellation of a solicitation. Cancellation of a solicitation undoubtedly leads to the complete revision of proposals as well. However, to repeat, it is the need to completely revise the solicitation which triggers the cancellation.

We are convinced, therefore, that no complete change in the solicitation is warranted. Furthermore, even the argument that UAL will have to revise radically its own proposal is less than convincing.

Protester apparently is of the opinion that, in view of the changes made in Factor 4, its teaming agreements should be canceled. In its posthearing brief, protester states: "UAL cannot increase its use of in-house expertise in response to Amendment 6 without breaching these agreements." Protester's Initial Posthearing Brief at 18. Protester, however, does not cite us to specific provisions in the agreement supporting this contention. We cannot understand protester's reasoning here. We have examined the agreements in detail and find nothing in any of them which precludes protester from hiring key staff personnel with a technical expertise similar to that which presumably is possessed by one or more employees of any of its three potential subcontractors. Finding 20.

Ironically, despite respondent's efforts to clarify the purpose of Factor 4, protester still appears to misunderstand it. Factor 4, whether in its amended or original form, does not discourage the use of subcontractors. Indeed, as noted more than once herein, the lead sentence of the factor acknowledges the need to rely on subcontractors. The author of the evaluation provision has confirmed this fact and pointed to a specific evaluation factor where the use of subcontractors could even enhance the score of an offeror. Finding 23. In addition, pro-

©1994, Commerce Clearing House, Inc.

Digitized by Google

tester's own intention from the start of this procurement has been to rely on subcontractors. Findings 14-16. We, therefore, remain at a loss to understand why protester now believes that the clarification offered by respondent relative to Factor 4 requires a complete revision of its proposal and a cancellation of the teaming agreements it has already negotiated with future subcontractors.

Whatever protester's reasons may be for wanting to restructure its proposal, the reasons given are less than convincing. Furthermore, even if a total revision of UAL's proposal were to be necessary, this does not justify a cancellation of the solicitation. If there is a fundamental problem with UAL's proposal, then this is a problem peculiar to UAL and not one which stems from the CADSS solicitation or any action on the part of respondent. Protester's contention that the amendment of Factor 4 was in violation of FAR 15.606(b)(4) is, therefore, rejected.

Respondent's DPA

Late in the development of the record for this case, the question arose as to whether respondent has a valid DPA for this procurement. Respondent and intervenor DISC both argued in their posthearing briefs that the issue was untimely raised. Regardless of whether this issue was specifically pled by protester, it is obviously, a matter of fundamental importance and requires close review. *CACI, Inc. v. Stone* [38 CCF ¶ 76,501], 990 F.2d 1233, 1236 (Fed. Cir. 1993). The Board *sua sponte* reopened the record and requested the parties to brief the issue and submit any relevant evidence they might have.

Protester's contention that respondent's DPA has expired is based upon the footnote contained in the FIRMR rule published in the December 28 issue of the Federal Register. The note covers the transition period between December 28, 1990, and the effective date of the new FIRMR, April 29, 1991. It provides that solicitations for support services issued after December 28, 1990, require a specific DPA if award is not made before April 29, 1991. *See* Finding 7. Because the CADSS solicitation was issued on January 3, 1991, and award was obviously not made by April 29, 1991, protester contends that a specific DPA was required.

Had GSA not issued technical corrections to the FIRMR rule published on December 28, protester's argument would be a convincing one. The technical corrections, however, effectively put an end to the matter. We have found that on February 7, 1991, the Federal Register carried a series of corrections to the rule published on December 28. Among the corrections was a provision calling for the removal of the footnote on which protester relies. Finding 9.

Protester argues that the footnote remained valid notwithstanding the technical corrections issued on February 7. Protester supports this position by noting that the effective date of the technical corrections was April 29. Since the transition period which began on December 28 concluded on April 29, protester contends that it was appropriate to eliminate from the permanent rule, effective April 29, any footnote which addressed the need for a DPA during the transition period and that this was the only reason for eliminating the footnote from the original published notice.

Several factors lead us to reject protester's interpretation of the regulations in question. First, there is the language of the notice published on February 7. It is said to contain technical *corrections*. These are not amendments, they are corrections. Second, a correction regarding the footnote in question appeared to be particularly appropriate in view of language contained on the face of the original notice of December 28. That notice contained, in its introductory provisions, a statement that April 29, 1991, was the effective date for the rule which followed. The provision in the footnote in question was located several pages into the text of the rule and clearly conflicted with the effective date stated in the introduction. This in itself suggested the presence of an error in either one date or the other and the need for a correction.

A third reason for rejecting protester's claim that the footnote remained valid is that we see no reason why the correction of February 7 needed to take effect prior to April 29. The note provided that specific DPAs were required for solicitations for support services if the solicitations were issued after December 28 and award was not made by April 29. Under the footnote, therefore, a DPA for a solicitation issued after December 28 was to expire on April 29 if award was not made. If the footnote, however, were to be canceled effective April 29, then obviously any such DPA would remain in effect. In short, the effective date of April 29 for the correction of the footnote was precisely on target because it would not have been until that date that the note would have had any operative effect. In the meantime, the gen-

Digitized by Google

eral public was advised, well in advance of that date, that the note would have no such effect.

The conclusions we reach here regarding the effectiveness of the footnote on which protester relies are based on our analysis of the relevant regulations themselves. We note, however, that our interpretation is fully supported by information provided for the record in this case by the GSA representative identified in the December 28 notice as the official to be contacted for further information on the rule. He has confirmed that the footnote in question did represent an error. It was inadvertently included in the final draft of the rule that was given to the Federal Register for publication. Once the error was discovered, the decision was to correct it through the technical corrections issued on February 7. *See* Finding 10.

We also note that the record contains a declaration from a DOT official responsible for processing his agency's APRs. He likewise confirms that in contacts with GSA officials during the transition period and since then, in connection with this protest, he has been advised that the original blanket DPA for a solicitation issued prior to April 29, 1991, remains valid. *See* Finding 11.

We are, therefore, satisfied that the issuance of the new FIRMR rule on December 28, 1990, and the subsequent published corrections of that rule did not terminate the blanket DPA currently relied upon by respondent as the source of its authority to carry on the CADSS procurement. There remains, however, the question of whether the internal delegation of that authority to the FAA within DOT has remained valid.

The redelegation to the FAA by the DOT stated that an amendment should be obtained whenever a material change was expected from the basis on which the DPA was issued. Among the examples given are "a significant slippage in the planned contract award date." *See* Finding 5. Evidence provided by respondent convinces us that FAA officials did, in fact, advise DOT of the delay in this procurement. It is true that no formal amendment was granted at that time but only because the DOT official responsible for processing any amendment preferred to defer formal action until the date for award became more certain. We find nothing in the conduct of this DOT official which would suggest that the internal redelegation of authority was withdrawn or considered terminated. On the contrary, the implication is that it remains valid and that the reconfirmation of it prior to award is deemed to be little more than a formality.[8] *See* Finding 12.

In conclusion, based on the record before us, we find nothing which convinces us that the DPA for the CADSS procurement is invalid or otherwise inadequate either as provided by GSA or as redelegated within the DOT to the FAA.

Alleged Bias

In its initial posthearing brief, protester sums up its contentions regarding bias in the CADSS procurement as follows:

> There is irrefutable proof of bias against UAL at the FAA Technical Center that has deprived UAL of an impartial evaluation of its proposal.

Protester's Initial Posthearing Brief at 25. UAL is also of the opinion that the facts in this case show not only a bias against UAL on the evaluation team but also a built-in bias among the team's members in favor of . *Id.* at 28.

In making findings of fact in this case, we have spent a considerable amount of time examining the evaluation process. Findings 21-35. In particular, we have reviewed carefully the testimony of the TET chairman as well as the documentation discussed by him during the course of his testimony. We find nothing in this or any of the other related evidence in the record which supports protester's contention that it has been deprived of an impartial evaluation of its proposal.

The record indicates the opposite. The evaluators' concerns regarding UAL's compliance with the requirements underlying Factor 4 were specifically passed on to UAL in the letter regarding the potential weaknesses and deficiencies in protester's proposal. *See* Finding 29. When UAL failed to seek any clarification regarding these concerns or even to address them in a meaningful manner in its response to the letter, respondent decided to issue clarifying language for Factor 4 in an upcoming amendment. Finding 38.

Neither are we convinced that in response to the letter it received on potential weaknesses and deficiencies was attributable to favorable bias on the part of the

[8] Having satisfied ourselves in this case, that the redelegation was not, as a matter of fact, withdrawn, we do not reach the question of what effect, if any, the withdrawal of the redelegation would have had on the validity of this procurement.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Technical Center. The comments provided in the letter to were much more enlightening than the comment provided to UAL. *Compare* Finding 29 *with* Finding 31. The letter to made specific reference to " " " " . In contrast, the comment made to UAL simply .

We do not believe, however, that the more detailed comments to stemmed from any desire to treat more favorably than UAL. The TET chairman has explained that the difference in the comments was attributable to the fact that these enumerated weaknesses were taken from specific comments written on scoring sheets by individual evaluators. *See* Finding 29. We conclude, therefore, that the greater degree of detail in the letter was merely accidental. In any event, the clarification issued in amendment 0006, primarily for UAL, amply compensates for any temporary advantage which may have accrued to as a result of the more specific comments it received.

Protester contends that the alleged bias against it stems from the fact that it has filed two previous protests relating to Technical Center procurements. Protester's Initial Posthearing Brief at 26. Testimony has been provided for the record indicating that various individuals have speculated or commented on the possible negative effect these protests might have on the business relationships between UAL and the Technical Center. *See* Findings 43, 50, 51, 53.

These comments should not come as a surprise to anyone. This is workplace chitchat. Undoubtedly the present protest has also prompted similar comments and speculations. Protests, however, are a fact of life in the world of government procurement. Once a protest has been settled or decided, experienced, professional, government procurement personnel are expected to put the matter behind them. They generally do. The facts relating to the evaluation of UAL's technical proposal convince us that, so far as this procurement is concerned, this is exactly what has occurred. *See* Findings 21-39.

With regard to the statement attributed to Mr. Safeer, the Director of the Technical Center, that UAL would get no contract, we are not convinced that the statement was ever made. The witness reporting it obviously has an interest in the future of UAL. Both Mr. Safeer and the individual to whom he allegedly made the comment deny it was made. *See* Finding 44. Furthermore, even if the remark was made, nothing indicates that Mr. Safeer could or would have followed through on it. His actual involvement in this procurement was only to inquire once why it was not on schedule. There is no indication that he was involved in any way in the evaluation of proposals. As to his being the source selection official, he was not even aware of this fact until he was replaced by a change in FAA policy. *See* Finding 45.

As to the cost analyst said to be hostile to UAL, Technical Center officials appear to be fully aware of his excitable nature. We find it particularly significant that even UAL's Vice President reported on the contracting officer's ability to calm this individual down quickly by merely taking him out of a meeting for a brief respite. *See* Finding 52. We are not at all convinced that a mercurial temperament such as this would necessarily be the source of any firm or long-term bias. Furthermore, there is no evidence that this individual's attitude has affected in any way the results of any evaluations made thus far in the procurement.

In a similar vein, protester has presented us with nothing which convinces us that one member of the TET who harbors reservations regarding the Government's use of outside contractors has a particular bias towards UAL. The individual in question has made no secret of his views and we have been presented with nothing which convinces us that these reservations are limited to UAL or have in any way affected his ability to serve thus far on the TET. *See* Findings 54, 55.

Alleged Procurement Integrity and Ethical Violations

In its initial posthearing brief, protester states:

> The conduct of FAA officials, including frequent social contacts between source selection officials and competing contractors, during the course of this procurement has violated important procurement regulations and ethical standards.

Protester's Initial Posthearing Brief at 28.

Protester would have us conclude that the contacts described have, in fact, adversely affected the CADSS procurement. Nevertheless, protester also reminds us that even the appearance of impropriety is sufficient to disqualify a contractor. *NKF Engineering v. United States* [33 CCF ¶ 74,691], 805 F.2d 372 (Fed. Cir. 1986).

It is correct that in *NKF*, a contracting officer's decision to eliminate an offeror

Digitized by Google

from the procurement based on an appearance of impropriety was upheld. It should be noted, however, that *NKF* expressly states that any alleged appearance of impropriety must be amply supported by "hard facts" demonstrating both the possibility and appearance of any alleged impropriety. Mere "suspicion or innuendo" is not sufficient. *Id.* at 376. For this reason, in applying the *NKF* standard, we require a strong factual showing in support of any allegation of an appearance of impropriety including evidence that the alleged impropriety could actually produce an adverse effect on the procurement process. *TRW Inc.*, GSBCA 11309P, 92-1 BCA ¶ 24,389, 1991 BPD ¶ 205.

In reviewing all the relevant facts adduced by protester and respondent regarding the contacts in question, we conclude that protester has not proven that these contacts rise to the level of an appearance of impropriety.

We examine first the conduct of Mr. Safeer. Mr. Safeer is criticized for maintaining during the CADSS procurement a longstanding friendship with an individual who is today a senior official in one of the companies participating in the procurement. He is also criticized for meeting both socially and for business reasons with other senior representatives of this same company as well as with representatives of other companies which may eventually be awarded the CADSS contract or be subcontractors on that procurement. *See* Finding 54.

The facts, as developed by both parties, convince us that Mr. Safeer is merely doing his job. As director of the Technical Center, he is expected to meet and greet representatives of potential and/or incumbent on-site contractors. He has testified that when meeting with these representatives at the Center, he discusses business with them in general terms. When meeting with them socially, he claims that he does not discuss business. When attending Christmas parties, he insists on paying his own way. Findings 46-47.

Protester has offered us nothing which would lead us to doubt the testimony of Mr. Safeer. He appears to be well aware of the straight line he must walk in dealing with the myriad of contracting and marketing representatives who continually beat a path to his door. When seen in this factual context, the contacts referred to by protester do not appear to us to have the appearance of impropriety. Furthermore, protester has not convinced us of the probability that the alleged appearance of impropriety could adversely affect the procurement process. Mr. Safeer is no longer the source selection official; indeed, he never knew he was. Finding 45. It is also clear that he is not even remotely connected with the actual evaluation process as it has been described in this case. *See* Findings 21-35.

We turn next to protester's concern with contacts the TET chairman has had with Mr. Thomas, and contacts a member of the TET has had with this same individual. As in the case of Mr. Safeer, the relevant facts, when taken as a whole, do not convince us that we are confronted here with an appearance of impropriety. Neither the TET chairman nor the TET member deny their longstanding friendship with Mr. Thomas. Both, however, have stated under oath that, during the pendency of the CADSS procurement, they have not discussed it in any detail with him. We find both witnesses highly credible and have no reason to doubt their word. Mr. Thomas, himself, has stated under oath that,

he deliberately chose not to be involved in the proposal preparation process. *See* Findings 48-49.

Protester believes that the contacts between Mr. Thomas and these two FAA employees have an unmistakable appearance of impropriety because of the . Using a phrase employed by the Court in the *NKF* decision, protester describes this development as having "a certain aroma that is hard to purify." Protester's Initial Posthearing Brief at 31.

We do not view this as evidence of the possibility that the contacts between Mr. Thomas and the two FAA employees could adversely affect the procurement. has no suspicious aroma about it. It was attributable to the fact that specific comments were included in FAA's letter to regarding potential weaknesses and deficiencies in its proposal. The proposal manager was alert enough to recognize the weakness and . Findings 31, 32. We have found this change to be the principal cause for the allegedly . Finding 35. Furthermore, the issuance of amendment 0006 with its clarification of the wording for Factor 4 provided other offerors a similar opportunity to amend their proposals in the same fashion. The may well be only temporary.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Finally, there is the recent resignation of a TET member and his acceptance of employment with an entity which may be utilized by as "an available resource" if award is eventually made to . On July 6, the Board convened a conference of counsel for the parties to discuss protester's request that the record be reopened to include the materials submitted by respondent and protester regarding this latest development. The request was granted.

The record, even as supplemented in accordance with protester's request, does nothing to strengthen protester's case. It does not contain the "hard facts" necessary to demonstrate that this individual's conduct constitutes a genuine appearance of impropriety and one which could very possibly affect the procurement adversely. Counsel for respondent advises us that they plan to pursue the matter to see if there has been a violation of the Procurement Integrity Act but that this will not be done until our suspension order is lifted. Finding 60.

Furthermore, preliminary indications are that the requisite "hard facts" may not exist at all. A determination by the contracting officer refers to a "thorough investigation" but provides us with no details. The conclusion reached by the contracting officer, however, is that, if there has been a violation, it has had no impact on the pending award or selection of a source for the CADSS procurement. Finding 60. In addition, an affidavit from the TET member represents that his contacts with the representative took place well after completion of the evaluation which led to the current ranking of offerors. *Compare* Finding 34 *with* Findings 57-58. In short, we find nothing in this recent development, as reported to us, which proves the appearance of an impropriety or that such an impropriety could actually produce an adverse effect on the procurement process.

Protester's allegations of procurement integrity violations and other ethical violations are, therefore, rejected.

Alleged Violations of the Small Business Act

In its Initial Posthearing Brief, protester contends:

> The FAA's inexplicable delay in awarding the contract and the substantial changes to the solicitation brought about by Amendment 6 have all but guaranteed the contract will be awarded to a large, incumbent contractor.

Protester's Initial Posthearing Brief at 32. This is said to be contrary to the provisions of the Small Business Act which require that a fair proportion of contracts for the Government be placed with small business concerns and that these contracts be distributed equitably pursuant to objective criteria. *See* 15 U.S.C. § 636 note (1988).

We find nothing mysterious or inexplicable about the delay in this procurement. The delay is regrettable but readily explained. *See* Findings 61-62. As to the alleged substantial changes to the solicitation, we have already discussed and rejected protester's contention that the clarifications provided for Factor 4 in amendment 0006 constituted a substantial change in the solicitation. As for the alleged substantial change in Section L, we disagree with protester. The addition of the term "FAA" was appropriate in order to have the language of this section conform with related provisions in Section M. *See* Finding 41.

The question we are left with, therefore, is whether the delay in the CADSS procurement which did occur violates the Small Business Act by promoting the possibility of award to an 8(a) firm which is no longer "small" under the applicable SIC code.

It is true that and have both developed since the issuance of the CADSS solicitation to a point where they either now or in the near future may no longer qualify under the SIC code for this procurement. Finding 63. Protester, however, cites us to no regulation which precludes either of these companies from continuing to participate in the procurement. We would expect the Small Business Administration, as the agency charged with the responsibility of implementing the Small Business Act, to have a regulation in place if the continued participation would lead to a violation of the Act. If the current SBA regulatory scheme permits continued participation, we will defer to those regulations rather than substitute our judgement for that of the SBA by accepting the interpretation of the Small Business Act which protester urges on us. *See Chevron U.S.A., Inc. v. Natural Resources Defense Council*, 467 U.S. 837, 843-44 (1984).

Decision

This protest is **DENIED.** The Board's order suspending the DPA expires in accordance with its terms.

[¶ 26,324] Federal Data Corporation v. Department of Justice; ViON Corporation, Federal Computer Corporation, and Amdahl Corporation, Intervenors

GSBCA No. 12264-P, March 25, 1993.

Requests for Proposals and Quotations—Restrictiveness—Minimum Needs.—A protest stating that a request for proposals for direct access storage devices and controllers for data centers was overly restrictive was denied, because the protester did not produce any evidence showing that the specified seek times would not meet the government's minimum performance needs. The protester's contention that the required seek times rendered the solicitation unduly restrictive was rejected, because seek times were meaningful indicators of overall performance.

For the protester: Skolnick & Leishman, Derwood, Maryland, by Shelton H. Skolnick and Judy Leishman. For the government: Ellen McElligott, Department of Justice, Washington, D.C. For the intervenor, ViON Corporation: Latham & Watkins, Washington, D.C., by David R. Hazelton. For the intervenor, Federal Computer Corporation: David S. Kovach. For the intervenor, Amdahl Corporation: Cohen & White, Washington, D.C., by David S. Cohen.

Before DEVINE, HENDLEY, and GOODMAN, Administrative Judges.

DEVINE, Administrative Judge: The sequence of events that led to the present protest began when Amdahl Corporation protested Amendment 6 to the original solicitation prior to award. The parties settled and the protest was dismissed with prejudice. The terms of the settlement agreement became Amendment 8, which was protested by ViON Corporation, an intervenor in the earlier protest. ViON thereafter dismissed its protest with prejudice without any apparent resolution. Meanwhile Federal Data Corporation had filed the present protest on January 19, 1993. It also challenged Amendment 8. A motion to dismiss ViON's attempt to re-enter as an intervenor was granted. The DOJ's pending motion to dismiss the present protest as untimely, heretofore taken under advisement, is denied.

Findings of Fact

The Department of Justice (DOJ) issued a request for proposals seeking a large number of direct access storage devices (DASDs) and controllers for its various data centers. Protest File, Exhibit 7. The equipment was to be delivered over a five-year period, with options that could extend the contract life to eight years. Protest File, Exhibit 4. The estimated cost of the contract was $305,458,000 over the eight-year system life. The equipment was to be installed at large data centers operated by the DOJ and the FBI as service bureaus for a variety of organizations. The DOJ centers operate large on-line systems that run 24-hours a day and serve the Immigration and Naturalization Service, the Drug Enforcement Agency, the Bureau of Prisons, the DOJ's civil, criminal, tax, and antitrust divisions, plus INTERPOL, and the Internal Revenue Service. Transcript at 118-19. The FBI data centers provide automation support for all of the FBI field offices nationwide, and provide administrative, investigative, and intelligence support for all of the headquarter's divisions. Transcript at 200. The FBI data center also supports the National Crime Information Center, and maintains more than 420 data bases serving 69,000 local, state, and federal law enforcement agencies. *Id.* at 201. These systems require considerable data base query work. *Id.* at 119.

This procurement was designed to give DOJ more data base capacity, and more data retrieval speed. Transcript at 115-16, 119, 187. DOJ proposed to do this with DASDs equivalent to the IBM 3390-2 and controllers equivalent to the IBM 3990-3, with 128 megabytes (MB) of cache memory. Protest File, Exhibit 15. The controllers are not in dispute. The total DASD storage capacity

©1994, Commerce Clearing House, Inc.

Digitized by Google

required was 14.59 terabytes of data, a very large amount. Protest File, Exhibit 15.

Certain performance characteristics of direct access storage devices are at issue in the present protest. These devices store data which are to be used or processed by a computer. The data are stored on disks in a DASD and are manipulated by electromechanical devices known as disk drives. Transcript at 45-46. A disk drive consists of rotating platters on which data are stored in concentric rings or tracks, together with an actuator containing read/write heads, which are used to retrieve data from the platters. Joint Hearing Exhibit 38. The platters are stacked vertically in the disk drive. The tracks or rings in the same relative position on each platter can be considered to form a vertical cylinder. *Id.* On command, the actuator head senses the computer language set out in 1s and 0s on the platter's surface, just as a phonograph needle picks up music from the grooves of a phonograph record, and sends it to the controller. The actuator contains at least one head for each platter. *Id.* It may move from cylinder to cylinder or it may skip cylinders while searching for data. *Id.* This motion is called a "seek." When the computer needs data from the DASD, it issues an input/output (I/O) request. Transcript at 49. This goes to the controller which has its own memory called "cache." The controller tells the DASD to read the data requested, plus a certain amount of additional data surrounding it on the same cylinder. The requested data goes both to the computer and into cache along with the surrounding data. The next I/O request will be answered electronically from cache if it is related to the first and is to be found in cache (a "cache hit"); if it is not, it will be answered electro-mechanically (and more slowly) from the DASD (a "cache miss"), with nearby data again going to cache. Transcript at 52, 53. A cache hit is much faster than a miss because the data are transmitted at the speed with which electricity travels rather than at the speeds associated with the movement of mechanical actuator arms. A cache miss requires the DASD to again use its mechanical actuator head to find the proper cylinder. While it does this it disconnects from the controller. After it finds the requested data it must wait while the data rotates into position beneath the actuator head. The time to do this is called latency. Transcript at 232. Next the DASD must reconnect to the controller. If the reconnect paths are all in use there will be a wait while the platter rotates for another attempt. Joint Hearing Exhibit 21.

Seek times vary from computer to computer. Joint Hearing Exhibit 32. Seek time is categorized in the manufacturer's literature as:

> Minimum seek time. The time required to move the actuator from a cylinder to the next adjacent cylinder.
>
> Maximum seek time. The time required to move the actuator from the innermost to the outermost cylinder and vice versa.
>
> Average seek time. The time required for the actuator to traverse one third of all the cylinders on a given disk.

Transcript at 61-3.

The average seek time is theoretical. It assumes that all possible seeks are equally likely to occur. Transcript at 62-6, 341-42. The actual average seek time of a given DASD can only be determined by observation during a specific application. Transcript at 342. Different applications will generate different average seek times. *Id.*

Interactive data base applications, common in the DOJ/FBI systems, will exhibit actual average seek times closer to the theoretical numbers than non-interactive batch applications. Transcript at 250-51. The number of minimum seeks is also affected by the type of application under consideration. Transcript at 250-51. The presence of a large cache storage greatly reduces the number of minimum seeks. Transcript at 387-88.

Maximum seek times measure the worst that can occur. Transcript at 246. Thus the IBM 3390-3 at a maximum seek time of 33 milliseconds (ms) will provide slower performance than another DASD meeting the specification requirement of 23 ms.

The most important factor affecting efficiency of performance is the cache hit rate. Transcript at 236. As we have seen, data are transmitted from cache much faster than from the DASD. Transcript at 237. Where a limited amount of data is being accessed repeatedly, as in batch applications, cache hit rates may reach 90%, giving correspondingly quick performance. Transcript at 237-38. On the other hand highly interactive, data-base oriented applications, especially with many simultaneous users, will yield cache hit rates as low as 40%, with correspondingly slower speeds. Transcript at 238-39.

The many factors affecting computer performance led to the development of mathematical models designed to predict system efficiency. One such model is the "Sahai-Gates" which one expert witness testified "will work for most I/O workloads on most

Digitized by Google

volumes in most installations." Joint Hearing Exhibit 5. According to the testimony of one expert witness, it is "widely used to model disk subsystems in terms of their expected response times." Transcript at 235. The Sahai-Gates model ignores maximum and minimum seek times, using only average seek times. Joint Hearing Exhibit 21.

The terms of the solicitation, which called for a storage device equivalent to an IBM 3390-2, essentially limited the procurement to the equipment of three manufacturers: IBM, Amdahl Corporation or Hitachi Data Systems. All three offer both a Model 2 DASD with 1.89 gigabytes (GB) of storage and a Model 3 with 2.83 GB. Their operational times are as follows:

	IBM 3390-2	IBM 3390-3	Amdahl 6390-2	Amdahl 6390-3	Hitachi 7390-2	Hitachi 7390-3
Minimum Seek Time	1.5 ms	1.5 ms	1.7 ms	1.7 ms	1.5 ms	1.5 ms
Average Seek Time	12.5 ms	15.0 ms	10.7 ms	11.5 ms	10.0 ms	12.5 ms
Latency	7.1 ms	7.1 ms	6.9 ms	6.9 ms	7.1 ms	7.1 ms

Joint Hearing Exhibit 32.

The above chart does not show the corresponding specification requirements or the maximum seek times. The specifications require an average seek time of 12.5 milliseconds (ms), a maximum seek time of 23 ms, and a latency of 7.1 ms. No minimum seek time is specified. The IBM Model 3 (3390-3) with a maximum seek time of 33 ms and an average seek time of 15 ms does not meet the specifications in either of these categories. All of the other devices do.

The Sahai-Gates model, using the above figures and some generally accepted values, predicts that the IBM Model 3 DASD will service each I/O request approximately 8% slower than the IBM Model 2 for cache hit rates in the 40-75% range. Transcript at 243. It also predicts that the IBM Model 3 will be 13-15% slower than the Amdahl Model 3 (6390-3) under similar circumstances. Transcript at 245. It also shows that the Amdahl Model 3 will outperform the IBM Model 2. Transcript at 242.

At the outset of this procurement the original solicitation generated a large number of questions, some of which resulted in significant amendments. Amendment 3 made it clear that DOJ was seeking DASDs equivalent to the IBM 3390-2 rather than the larger capacity but slower operating IBM 3390-3. Amendment 5 confused the issue again and Amendment 6 (which Amdahl protested), issued to clarify the situation, appeared to allow an IBM 3390-3 at half capacity to be considered equivalent to an IBM 3390-2 with respect to performance. DOJ apparently believed, mistakenly, that at half capacity the speed of the 3390-3 equalled the 3390-2. Next came Amendment 8 which grew out of a settlement agreement executed in a prior protest of this procurement by intervenor Amdahl. Amendment 8 set out what protester refers to as "new requirements:" a maximum seek time of 23 ms and an average seek time of 12.5 ms. These are not new. They are the same seek times set out in the DOJ's requirements study made in 1991, and track identical seek times characteristic of the IBM 3390-2, the same DASD that the original solicitation used as an equivalency. Protest File, Exhibit 1 at 46. It is this amendment that protester challenges on several grounds. The first is that neither a maximum seek time nor an average seek time is a "meaningful" indicator of DASD performance. The second is that there is no basis to conclude that either a 33 ms maximum seek time or a 15 ms average seek time will not satisfy the DOJ's performance needs. The third is that an IBM 3390-3 and an IBM 3390-2 are equivalent in performance, and the fourth is that Amendment 8 imposed more stringent requirements than the original solicitation and thus unnecessarily reduced competition in contravention of law.

Discussion

We consider protester's complaints in order. Protester attempts to show by its evidence that a maximum seek, during which the actuator arm of a disk drive is required to travel from the inner most to the outermost cylinder, is so rarely encountered in the everyday operations of a disk drive that the length of time this passage takes is of no significance in assessing the speed of a system. In doing so protester ignores the fact that it is not the frequency of the manuever but the speed with which it is performed that makes the maximum seek time a valid measure of performance because it gives us

©1994, Commerce Clearing House, Inc.

Digitized by Google

some idea of the quickness of the machine. It is true that there may well be better measures of overall performance, but it is also true that if A's actuator arm moves faster than B's, then A is always going to be faster than B in operations utilizing the arm, other things being equal. The same reasoning applies to protester's contention that the average seek time is not a valid measure of performance. Protester calls the concept theoretical, and it is. It is calculated by combining the time required to move the actuator arm from each cylinder to every other cylinder and then averaging the positioning time for all combinations. Joint Exhibit 19 at 11. It probably never occurs in the real world. Once again, however, the frequency of its occurrence is not in issue. It remains a measure of the speed of the actuator arm and thus a measure of the speed of one of the elements in the system. All else being equal, the system with the faster arm will get faster results. The experts tell us that the actual average seek time probably does not amount to as much as one quarter of the theoretical seek time, but this can give no comfort to protester. Average seek time, theoretical or not, is a significant aspect of the speed of a system. In a similar vein protester argues that there is no evidence that a 33 ms maximum seek time (rather than the specified 23 ms maximum seek time) will not satisfy the DOJ's performance needs. In this protester is simply wrong. The DOJ's experience with its present system was testified to at some length. Its present system does not have enough storage capacity, nor does it have enough speed. The evidence amply supports these findings and protester has produced nothing to contradict them. We have already found that the 23 second maximum seek time specification is a speed requirement. It is based on the IBM 3390-2 which the testimony shows has been tested in use in small numbers by DOJ in preparation for this procurement, and which the DOJ found to be satisfactory to its needs. Certainly protester has produced no evidence to show otherwise. Continuing this line, protester also argues that there is no evidence that a 15 ms seek time (rather than the specified 12.5 ms seek time) will not satisfy the DOJ's performance needs. Again protester is off the mark. The average seek time is also a gauge of the speed of the system. What we said with respect to the maximum seek time applies with greater force here. Protester next argues that an IBM 3390-3 (Model 3) is equivalent in performance to an IBM 3390-2 (Model 2). However, there is no evidence to support the statement. Protester's own evidence shows only that the best Model 3 can do is get close to the performance of the Model 2. DOJ's evidence shows the Model 3 to be lagging behind the Model 2 in speed of performance by approximately 8%.

In the end, however, it is not a question of whether or not a slightly slower DASD would have performed successfully when put to the tasks that DOJ envisioned for it. The only questions before us are two: Who decides what the minimum needs of the DOJ are? And is there anything in this procurement that unnecessarily restricts competition? As to the first question the answer, within very broad limits, is the Department of Justice. Especially in procurements of the size and complexity shown by the evidence, it is the buyer who knows what is required and not the seller, and for this reason it is the buyer who decides the issue. It is only when there is some element in the procurement which unnecessarily restricts competition that the buyer may be called to account. The emphasis is on "unnecessarily" because all procurements by their intrinsic nature limit competition. All procurements for horses necessarily exclude mules. Although mules and horses look and act very much alike, there are subtle differences between them that make the one emininently suited for tasks that the other would fail at. In the matter before us we find no significant element of the procurement specifications to be unnecessarily restrictive. We find no violation of any regulation, or of the DOJ's procurement authorization, or of any statute. It is not until the competitive process is restricted for some reason having nothing to

Digitized by Google

do with the Government's procurement needs that we may intervene.

Decision

We **DENY** the protest.

[¶ 26,325] Air Inc. v. General Services Administration

GSBCA Nos. 10506, 10935, August 17, 1993.

Performance—Directions by Government—Contract Requirements.—Under contracts for disk sanders, a contractor was not entitled to compensation for expenses incurred in refitting and assembling sanders in response to government directions to replace all felt-faced plastic disks with integrated rubber pads, because the disks initially supplied by the contractor failed to comply with the contracts' performance requirements for felt, fiber, or rubber pads that were capable of removing metal and wood from curved surfaces. The government's demand that the contractor supply components complying with the terms of the contracts was fully consistent with the Warranty of Use clauses. The government's approval of the preproduction model did not preclude it from rejecting the items delivered for failure to meet certain untested performance requirements and did not relieve the contractor of its duty to furnish conforming supplies.

For the appellant: Takahashi & Associates, Washington, D.C., by Kenneth K. Takahashi. For the government: John E. Cornell and Wendy Nevett Bazil, Office of General Counsel, Personal Property Division, General Services Administration, Washington, D.C.

Before LABELLA, HENDLEY, and VERGILIO, Administrative Judges. Separate dissenting opinion by Administrative Judge VERGILIO.

LABELLA, Administrative Judge: On February 5, and October 22, 1990, the Board received notices of appeal from Air Inc. Air Inc. was to provide pneumatic disk sanders under two contracts with respondent, the General Services Administration. The contractor had delivered and was delivering sanders in accordance with pre-production models and first article tests which the agency had accepted. A felt-faced plastic disk was part of each sander. Thereafter, the agency received a single complaint from a user that the disk component had shattered during use. The agency inspected the sanders and concluded that the disk component failed to meet the contractual requirements. The agency "directed" the contractor to replace all felt-faced plastic disks with integrated rubber pads for sanders already delivered, and to provide sanders with integrated rubber pads for all items yet to be delivered.

Relying on the Changes clause, the contractor contends that it is entitled to be compensated for its efforts and expenses in refitting and assembling sanders. It maintains that the felt-faced plastic disks complied with federal specifications and had been approved by the agency. Only the question of entitlement is before the Board, the parties having reserved the issue of quantum.

Relying upon the warranty clauses, the agency contends that no change occurred. The contractor was required to deliver a felt, fiber or soft rubber pad that is capable of heavy removal of metal and wood on curved surfaces; the agency claims that the felt-faced plastic disk was not compliant.

We conclude that the felt-faced plastic disks supplied by the contractor failed to satisfy the performance requirements of the contracts. They are not suitable for heavy removal of metal and wood on curved surfaces as required under the contracts as is apparent from an examination of the component itself, introduced into the record, and from the Government's performance test in which five items failed.

Findings of Fact

The contracts

1. The agency issued solicitations (one negotiated procurement for a definite quantity, the other a sealed bid procurement for an indefinite quantity) to obtain portable pneumatic disk sanders in accordance with federal specification 00-S-101 (type II; style 2). Appeal File, Exhibits 1, 2.[1]

[1] Two appeal files exist in these consolidated cases. Unless otherwise noted, references to an appeal file relate to the appeal file in GSBCA 10506. Also, a two volume transcript exists in these ap-

©1994, Commerce Clearing House, Inc.

Digitized by Google

2. The specification dictates that the sander "shall be equipped with a felt, fiber, or soft rubber pad." Appeal File, Exhibit 16 at 5 (¶ 3.17.1). While the sealed bid solicitation provided an express exception to the specification allowing the sanding pad for the type II, style 3 disk sander to be made of plastic and further providing for a metal or nylon backup plate to which the pad is to be attached, no such exception was provided for the type II, style 2 sander in issue here. *Id.*, Exhibit 2, Contract at 18. Indeed, the specification for the item in issue here had no specific requirement for the composition of the backup plate to which the pad is attached; it only speaks to the composition of the pad. Regarding the general construction of the sander, the specification provides that the "sanders shall be of rugged construction so as to withstand, without failure, treatment encountered during actual service conditions .... Working parts subject to wear shall be of sufficient hardness to withstand the service required." *Id.* at 2 (¶ 3.3). Further, the specification notes that the style and type of sander in issue here is normally used for heavy removal of metal and wood on flat and curved surfaces. *Id.* at 1 (¶ 1.1), 8 (¶ 6.1). In the sealed bid procurement, appellant's bid for the type II, style 2, sander in issue here was more than twice the bid price for the type II, style 3, which inter alia permitted a plastic pad component.

3. The federal specification "requirement" regarding preproduction samples is applicable only when a solicitation so specifies. The clause requires a contractor to submit one sander:

> to prove, prior to starting production, that his production methods and choice of design detail will produce sanders that comply with the requirements of this specification. Examination and tests shall be those specified herein. Any changes or deviations from the preproduction model during production shall be subject to the approval of the contracting officer. *Approval of the preproduction model by the contracting agency shall not relieve the supplier of his obligation to furnish sanders conforming to this specification.*

Appeal File, Exhibit 16 at 2 (¶ 3.1) (emphasis added). The specified "examination" provision dictates: "Each sander shall be examined for conformance to design and construction, dimensions, weight, materials, finish and coating, workmanship and marking requirements." *Id.* at 7 (¶ 4.7). Regarding acceptance tests, the specification provides: "Each sample shall be run at no load to determine integrity of working parts, noise, and vibration." *Id.* at 7 (¶ 4.7.1). The specification does not provide for subjecting equipment to conditions of anticipated use for purposes of acceptance testing. In fact, testing was to be run at "no load" and thus was not a test of the performance requirements that the product be of rugged construction and be capable of heavy removal of metal and wood from curved surfaces, requirements that we interpret to mean a heavy duty product.

4. The definite quantity contract calls for preproduction samples:

> The Contractor shall have available at his expense within *30* days after receipt of notice of award two preproduction samples of each item to be delivered under the contract for inspection and determination by the Government as to compliance with the specifications ....
>
> Preproduction samples required by this contract must conform to all specification requirements. The acceptance of any previous preproduction samples or the granting of any deviations on previous preproduction samples or on supplies required by previous contracts for the same item(s) shall in no way be considered as justification for assuming that the preproduction samples submitted under this contract will be accepted unless they fully meet specifications or that deviations will be granted.
>
> When the preproduction samples are approved, the Government shall notify the Contractor of their acceptance in writing .... (One preproduction sample) shall be delivered to the Government in accordance with instructions to be furnished by the Contracting Officer and upon acceptance shall be deemed an item delivered under the Contract.

Appeal File, Exhibit 1 at 4 (¶ E-FSS-500-A (April 1984)).

5. The indefinite quantity contract provides for "first article approval—contractor testing." Appeal File, Exhibit 2 at 32 (Federal Acquisition Regulation (FAR) 52.209-3 (Alternate I) (June 1985)). Under this provision, the contractor shall test one unit and submit a first article test report within

(Footnote Continued)

peals. Unless otherwise noted, references to a transcript are to volume one.

thirty calendar days of contract award. Thereafter,

> the Contracting Officer shall notify the Contractor, in writing, of the conditional approval, approval, or disapproval of the first article. The notice of conditional approval or approval shall not relieve the Contractor from complying with all requirements of the specifications and all other terms and conditions of this contract.

Id. (FAR 52.209-3(b)). The clause further states:

> (e) Unless otherwise provided in the contract, and if the approved first article is not consumed or destroyed in testing, the Contractor may deliver the approved first article as part of the contract quantity if it meets all contract requirements for acceptance.
>
> ....
>
> (g) Before first article approval, the acquisition of materials or components for, or the commencement of production of, the balance of the contract quantity is at the sole risk of the Contractor. Before first article approval, the costs thereof shall not be allocable to this contract for (1) progress payments, or (2) termination settlements if the contract is terminated for the convenience of the Government.

Id.

6. Both contracts incorporate the "bid sample" provision from the FAR, 48 CFR 52.214-20 (1985). Appeal File, Exhibits 1 at 11, 2 at 40. Both also contain a clause captioned "Quality Approved Manufacturer Agreement," E-FSS-539 (May 1984), which states in part:

> Notwithstanding any other provision of this contract concerning the conclusiveness of acceptance by the Government, any supplies or production lots shipped under this contract found to be defective in material and workmanship, or otherwise not in conformity with the requirements of the contract within a period of *12* months after acceptance shall at the Government[']s option be replaced, repaired or otherwise corrected by the contractor at no cost to the Government within 30 calendar days (or such longer period as the Government may authorize in writing) after receipt of notice to replace or correct.

Id., Exhibits 1 at 5, 2 at 30.

The sanding pad and backing plate component

7. Prior to the award of each contract, in response to agency facility plant investigations, Air Inc. identified a price, a particular manufacturer, and the domestic or foreign origin of each component of the sander it would be supplying. Appeal File, Exhibits 2, 19, 21, 22. According to the contracting officer, this was done after receipt of appellant's bid and proposal because the facilities plant report questioned appellant's compliance with the "domestic end-product" requirement. *Id.*, Exhibit 31. The appellant's component sheet refers to the sanding pad as a "back up pad," a component comprised of a single part, and lists the source as Spiralcool, a domestic source, at a component cost of $4.75. *Id.*, Exhibits 2, 22 (item 28). At hearing, the Spiralcool pad was shown to be an integrated rubber pad and backup plate, although there was no such representation in the post-bidding documents. *Id.*, Exhibits 2, 19, 21. With effective dates of March 26, and May 6, 1987, respectively, the agency awarded to Air Inc. a firm, fixed-price contract for a definite quantity and an indefinite quantity contract to supply portable, pneumatic sanders in accordance with its bid. Appeal File, Exhibits 1, 2.

8. Under the definite quantity contract, as part of its preproduction sample, the contractor provided a felt-faced plastic disk—that is, a component constructed of a plastic backing plate that is $6\frac{3}{4}$ inches in diameter with a felt ring or gasket approximately $\frac{1}{8}$ inch thick and $1\frac{3}{8}$ inches wide attached by an adhesive to the outer circumference of the plastic backing plate. Appellant's Exhibit 1; Transcript at 46. The agency accepted the sander as a preproduction sample. Appeal File, Exhibit 27 (undated report); Transcript at 41-43, 46, 52. This approval occurred, even though agency personnel testified at the hearing that a simple visual inspection indicated that the component was clearly made of plastic with felt of insufficient size to constitute a compliant product. Transcript, Vol. 2 at 36, 37, 44. Under the indefinite quantity contract, the contractor provided a first article test report. Appeal File, Exhibit 25. Based upon the information contained in that contractor provided report, the agency approved the first article test of the item. *Id.*, Exhibit 27 (letter dated June 24, 1987). Under both contracts, until later problems arose, the contractor provided sanders only with the felt-faced plastic disk utilized in its preproduction sample. Transcript at 42-43,

©1994, Commerce Clearing House, Inc.

Digitized by Google

46; Appeal File, GSBCA 10935, Exhibit 18. The component actually supplied during pre-production testing and these subsequent deliveries, however, was not that identified prior to award in the component lists and apparently was less costly to the contractor than the pad identified in the component price sheets. Finding 7. Although the agency approved the pre-production model, which was not to be deviated from without contracting officer approval, Finding 3, the contractor did not point out the discrepancy between those items identified as a result of the plant facility investigation and those delivered (for pre-production and subsequently). That is, the contractor did not inform the agency that it was providing other than the rubber pad of the manufacturer identified during the plant facilities investigation. Transcript at 63; Appeal File, Exhibit 31. Moreover, the pre-production model and the first article sanders were tested at "no load" in accordance with the contract terms and, therefore, were not determined to be conforming to the "heavy removal" from curved surfaces service requirement of the specifications. Finding 3.

Shattering disk

9. After delivery had commenced, the agency received a complaint from a user regarding a contractor-supplied sander. A written "record of complaint investigated" describes the "nature of complaint": "Sanders are a hazard to crew members due to the continual breaking of the plastic Backup Pad on Sander which hold[s] the sandpaper in place." Appeal File, Exhibit 3. The summary of the investigator's action states, in part:

> Onsite investigation revealed that Back-up Pad on sander is made of a hard plastic with very little flexibility, and does not conform to contours as a rubber back-up pad would. This causes the operator to put extreme pressure on the sander to try and cover the full surface of the sandpaper. The extreme pressure applied by the operator causes the plastic back-up pad to wear at the outer edge, which then, while in use, splits and then shatters into small pieces creating the hazard to personnel. Recommend that plastic back-up pads be replaced with rubber pads, which would result in safer operation for user and personnel.

Id. The "record of complaint investigated" has blocks filled in as follows: contract number: none; order number: none; batch or lot number: none; date of manufacture: none; date received: 2/88; amount received: 8 each; amount on hand: 8 each; and amount unsatisfactory: 5 each. *Id.* The investigator's findings state that the complaint was justified because of a material deficiency. *Id.* The contractor has raised subsequent concerns, Finding 15, as to whether the referenced "extreme pressure" constituted anticipated or normal use of the sander and whether breakage occurred after any anticipated life of the component. Nevertheless, we think a reasonable reading of this report together with an examination of the component is that "extreme pressure" was necessitated by the requirement in the specifications to perform heavy removal from curved surfaces together with the inflexibility of the item rather than the use of excessive force in the sense of a negligent use or abuse of the item. In the absence of evidence to the contrary, which appellant had the burden of bringing forward, we cannot presume that the Government was negligent in its use of the items.

10. Thereafter, by letter the agency informed the contractor of the complaint:

> Onsite investigation revealed that the backing plate on the sander is made of a hard inflexible plastic that does not conform to sanding contours. This causes the operator to put extreme pressure on the sander causing the plastic back-up plate to wear and eventually split and shatter into small pieces, creating a hazard to personnel.

Appeal File, Exhibit 5. Further, it states that pursuant

> to the warranty paragraph of Clause E-FSS-539, Quality Approved Manufacturer Agreement," of the above noted contracts, you are to replace these 1539 defective sanders. Please advise this office in writing, within ten (10) calendar days after receipt of this letter, of your specific instructions regarding the replacement and disposition of this defective material.

Id.

11. A subsequent "laboratory test record" dated September 9, 1988, notes that a sample size of five items out of a lot of 1539 was utilized for a purchase order under the indefinite quantity contract. Appeal File, GSBCA 10935, Exhibit 9. The lab report supersedes an earlier report which is not in the record. Under a section captioned "test requirements," the report notes that sanders are to be equipped with a felt, fiber or rubber pad. The same section also states:

> Note: The American Society for Testing and Materials defines an elastomer (rubber) as "a p[o]lymeric material which at

Digitized by Google

room temperature can be stretched to at least twice its original length and upon immediate release of the stress will return quickly to approximately its original length." The pad supplied with the sander does not stretch whatsoever, thus indicating that the material is not rubber. Further, the density of rubber is 1.0-2.0 GMS per cubic centimeter. The pad has a density of less than 1.0 which is indicative of a plastic or plastic-like material.

Id. The test record concludes that the component does not comply; the sole basis indicated for non-compliance is "no rubber pad." The results are silent as to whether or not the pad is a felt pad. *Id.*

12. By letter dated September 13, 1988, regarding both contracts, the agency informed the contractor that an "examination of the backing plate provided by your firm under these contracts reveals that it is neither felt nor fiber." Moreover, the agency had determined that plastic was not rubber. The agency concluded that the contractor's product failed to conform to paragraph 3.17.1 (felt, fiber or soft rubber), Finding 2. The agency sought corrective action from the contractor for breaching the warranty provision of the quality approved manufacturer agreement, Finding 6. Appeal File, Exhibit 7.

13. A "notice of inspection" dated September 15, 1988, states that the agency has "rejected" a lot of sanders delivered under a purchase order under the indefinite quantity contract. The "remarks" portion of the document contains the following: "The density of the backing plate (rubber) is 1.0-2.0 GMS per cubic centimeter. The backing material has a density of less than 1.0 which is indicative of a plastic or plastic-like material." Appeal File, Exhibit 27.

14. A "notice of inspection" dated September 19, 1988, for the identical purchase order and lot in the notice in the previous finding, rejects the sanders with the following "remarks":

> Pad does not conform to requirements as it shatters into pieces when used under normal performance conditions. This presents a serious hazard to the user.
>
> Material fails paragraph 3.17.1 that sander shall be equipped with a felt, fiber, or soft rubber pad, and paragraph 3.15 for workmanship, in that the sanders shall be free from all defects or imperfections which will adversely affect the general appearance, function, serviceability, or life expectancy.

Appeal File, GSBCA 10935, Exhibit 36.

15. By letter dated September 20, 1988, the contractor informed the agency:

> If the application is such that "extreme pressure" is required, we are obviously not talking about "normal performance conditions".
>
> To cover "the full surface of the sandpaper" is a physical impossibility with this type of tool with any pad. The torque generated by the tool is such that it would be impossible to control and the operator would definitely be subjecting himself to an extremely hazardous condition.
>
> "Extreme pressure applied by the operator" caused the pad to wear on the outer edge. Since the proper size abrasive is 7" and the pad diameter is $6\frac{3}{4}$" it is impossible to wear the outer edge of the pad unless using the wrong size abrasive or an abrasive that has worn away exposing the pad. Operating in this manner, which surely is not "normal performance conditions" will definitely wear the outer edge of the pad and is an abusive use of the tool.

Appeal File, Exhibit 8.

In the letter the contractor also states that it supplies "a plastic backing plate supporting a felt pad which is in contact with the abrasive. Our *pad* meets the specification requirements. There is no *backing plate* requirement." *Id.*

16. By letter dated October 6, 1988, the agency responded to the contractor:

> The question at issue here is that the Pad, Air Inc. Part Number 716-49, currently provided in your Disk Sander, NSN: 5130-00-596-1176, is unsuitable to the Government's requirements. The rigidity, or lack of flexibility of this part creates a hazardous condition during use.
>
> . . . .
>
> Visual inspection clearly reveals that the part, supplied by your firm, is made of hard black plastic.
>
> Accordingly, therefore, the Government reaffirms its position as stated in its letter of September 13, 1988, which requires that you replace the defective sanders in accordance with Clause E-FSS-539, Quality Approved Manufacturer Agreement.

Appeal File, Exhibit 9.

17. By letter of October 20, 1988, the contractor informed the agency that it would "replace all rejected felt pads held by various customer agencies with rubber pads." The contractor also expressly reserved the right to file a claim for all additional costs

©1994, Commerce Clearing House, Inc.

Digitized by Google

incurred to accomplish the rework. Appeal File, Exhibit 10. The replacement pads were similar to those of the manufacturer named in the component cost sheets, although apparently somewhat less expensive. *Id.,* Exhibit 12; Finding 7; Transcript at 63. By letter of the same date, the contractor repeated its request to the agency for an amendment adjusting the price of the contracts. Appeal File, Exhibit 10. Although the letter alludes to "over 10,000 tools furnished to the government with this type of pad," the record does not support the conclusion that the actual component in question here had been supplied in all of those 10,000 instances. Transcript at 65, 68. Thus, even if felt-faced plastic disks had been provided and had performed satisfactorily, the history of those disks has not been connected to those supplied under the contracts in dispute.

Contractor submissions

18. By letters dated November 13 and 14, 1989, the contractor submitted claims to the agency under both contracts for actual costs incurred in substituting rubber pads for felt-faced plastic disks previously supplied. Appeal File, Exhibit 12. The contracting officer issued a decision denying both claims on December 11, 1989. The basis for the denial was the failure of the felt-faced plastic disk to conform to the requirement that the pad be felt, fiber or rubber. *Id.,* Exhibit 13 ("Visual inspection revealed that the sanding pad, actually the backing plate appeared to be made of a hard, rigid, plastic material."). On February 5, 1990, the Board received the contractor's notice of appeal of that decision. *Id.,* Exhibits 14, 15.

19. By letter dated June 18, 1990, the contractor submitted a claim to the agency for alleged additional costs for sanders delivered with rubber pads under a purchase order under the indefinite delivery contract. Appeal File, GSBCA 10935, Exhibit 18. By letter dated August 2, 1990, the contracting officer denied this additional claim. *Id.,* Exhibit 19. On October 22, 1990, the Board received from the contractor a notice of appeal of the decision. *Id.,* Exhibits 20, 21.

The component in dispute

20. The component in dispute is part of the record as Appellant's Exhibit 1. Finding 8. The $1/8$ inch thick and $1\,3/8$ inch wide felt gasket does not make the component, with its plastic backing plate, less rigid. The item has little flexibility. At hearing, the Government's mechanical engineer who has responsibility for the specification in issue here testified that "the way the specification is written, we would have to accept" a plastic backup plate to which a thicker felt pad was attached. Transcript, Vol. 2 at 5-8, 44. He stated that if a thicker felt pad was attached, the plastic backing plate's flexibility would not change but the extra thickness would allow for better sanding in curved surface areas. *Id.* at 45-46. It is clear from looking at the rejected component that it will not be capable of satisfactorily performing the contract-specified sander function of heavy removal of metal and wood from curved surfaces. The item itself confirms the post-delivery test result of the agency that the component fails to satisfy the intended use identified in the specification.

Discussion

The contractor maintains that the felt-faced plastic disk it supplied satisfies all requirements of the federal specification and contracts, there being no specific requirement for the composition of the backup plate. It maintains that the felt pad and component it furnished performed satisfactorily. Consequently, by requiring the substitution of an integrated rubber component, the agency changed the contracts, thereby entitling the contractor to adjustments in the contract prices.

The principal assertion in the contractor's argument fails; that is, the felt-faced plastic disk it supplied does not satisfy the performance requirements of the federal specification and contracts. Namely, the rigidity of the component, taken as a whole, with the scant amount of felt, makes it ill-suited to the heavy removal of metal and wood on curved surfaces. The best evidence supporting the conclusions of the agency, Findings 9-16, 18, is found in the component itself, Finding 20. Additional credible evidence is found in the investigative report that indicates that the product could not be satisfactorily used on contoured surfaces without applying more pressure than the rigid plastic disk could absorb without shattering. Finding 9.

The agency's demand that the contractor supply components complying with the terms of the contracts is fully consistent with the warranty of use clauses. Findings 3-6. The fact that the agency gave its approval of appellant's pre-production model does not preclude the agency from rejecting the items delivered for failure to meet certain performance requirements of the specifications which were not examined or tested under the contracts' quality assurance provi-

Digitized by Google

sions. Moreover, the approval of the preproduction model did not relieve the contractor of the obligation to furnish conforming supplies, that is, sanders that would meet the contract's performance specifications in addition to those requirements that were tested. Accordingly, the agency actions do not constitute a "change" under the terms of the contracts.

The concurring opinion concludes that the contractor provided components at variance with what it obligated itself to deliver under the contracts. We do not agree that the representations made after submission of bids and proposals for purposes of determining whether the bid item is foreign or domestic necessarily bind the vendor to supply only components manufactured by the intended subcontractor identified apart from any bidding document. Had the representation been made as a part of the bid as in an "or equal" procurement, we would agree with the concurring opinion. The only commitment in appellant's bid and proposal was to furnish a domestic end product and the case before us presents no question of appellant's compliance with that requirement.

Decision

The agency has demonstrated that the felt-faced plastic disks supplied by the contractor fail to satisfy the federal specification and the terms of the contracts. No change has occurred under the contract. Accordingly, the Board **DENIES** the appeals.

VERGILIO, Board Judge, dissenting in part, concurring in result.

I dissent from the conclusion of the majority that the record establishes that the felt-faced components initially supplied by the contractor and accepted by the agency fail to satisfy the performance requirements of the contracts. I conclude that the agency has not demonstrated either that the felt-faced plastic component fails to be "felt, fiber or soft rubber," or that the component fails to satisfy the performance characteristics of the contracts. In short, the agency has not proven that it properly invoked the warranty of use provisions of the contracts. However, I concur with the result that the appeals must be denied—the contractor has not established that any change occurred from what it obligated itself to deliver under the terms of the contracts.

The agency substantiates its actions on a narrow ground; it "argues that Appellant did not originally comply with this requirement (that the pad be of felt, fiber or soft rubber), hence, the request for a repair or replacement properly came under the warranty clause." Agency Post-Hearing Brief at 8. This argument is made without regard to the performance characteristics of the pad; rather, the assertion is that there is insufficient felt to be a felt pad, and the plastic is neither rubber nor fiber.

The agency has not met its burden of proof to establish that the component supplied by the contractor was not a felt pad. The agency accepted the felt-faced plastic component as a preproduction sample. The agency acknowledges that a visual inspection of the component supplied by the contractor reveals that it is made of plastic with a felt disc attached to it. The agency accepted this component as part of the preproduction model. Although the component contains no rubber, the solicitation permits felt pads.

The agency's belated attempt to disavow its earlier acceptance of the felt-faced plastic component and to now assert that the design of the felt-faced plastic component is insufficient simply because the component is not made of soft rubber (or felt or fiber) lacks credibility, and runs contrary to the pre-production clause which requires the agency to make a determination regarding the "choice of design detail," Finding 3.[1] Moreover, the test reports of the agency arc lacking in credibility. For example, a lab report provides a definition of rubber (material stretchable to twice its original length), notes that the contractor's component "does not stretch whatsoever," and concludes that this indicates that the material is not rubber. Finding 11. The rubber pads which the agency claims are acceptable, Agency Exhibits 1, 2, do not satisfy the stretchability requirement of the definition.

Given the patent appearance of the felt-faced plastic component, Findings 8, 16, and the unrebutted assertions by the contractor that similar components have been accepted as satisfying the identical federal specification, Finding 17, I am unable to conclude that the component submitted by the con-

[1] The Board is not here faced with the situation where the contractor is objecting to the agency's disapproval of the pre-production sample as an acceptable pre-production model because the component is neither felt, fiber or soft rubber. Here, at the pre-production stage, the agency deemed the felt-faced plastic component to be an acceptable pre-production model.

©1994, Commerce Clearing House, Inc.

Digitized by Google

tractor was other than a "felt pad" under the federal specification.

Although the agency has not demonstrated that the contractor submitted other than a felt pad, the component must still satisfy the performance and warranty of use provisions of the specification and solicitation. Findings 2-6.[2] There is no indication that the sander was operated under actual use conditions during the preproduction testing; the record actually suggests to the contrary. Findings 3, 8-10.[3] The acceptance of the pre-production model does not limit the scope of the performance and warranty of use provisions so as to absolve the contractor of its obligation to supply a product which conforms to the performance or use requirements expressed in the federal specification. *Keco Industries, Inc.*, ASBCA 13271, 71-1 BCA ¶ 8727. Thus, I would conclude that the agency prevails in this dispute, had it demonstrated that the component failed to satisfy the performance or warranty of use provisions.

In order to prevail under a warranty claim, the agency bears the burden of proof. *Camrex Reliance Paint Co.*, GSBCA 6166, 83-1 BCA ¶ 16,485 (Board concluded that material was not tested in accordance with contract requirements, where chemist who performed tests recited in great detail steps taken in testing; Board inferred from his not mentioning specific procedures that he failed to utilize those procedures in testing); *R.E. Lee Electric Co.*, GSBCA 1040, 1964 BCA ¶ 4401.

The standard of performance and use to be satisfied is expressed in the federal specification: "[S]anders shall be of rugged construction so as to withstand, without failure, treatment encountered during actual service conditions.... Working parts subject to wear shall be of sufficient hardness to withstand the service required." Further, the specification notes that the sanders are normally used for heavy removal of metal and wood. Finding 2.[4]

It may well be that when compared to felt-faced plastic pads, soft rubber pads offer enhanced performance capabilities for sanding contoured surfaces. *See* Finding 9 (the felt-faced plastic pad does not conform to contours as would a rubber pad). However, such attributes are not relevant to the matters before the Board. The specifications permit three types of pads. Nothing in the specification requires that any two varieties of pads perform equivalently in any or all circumstances.

Although the agency has demonstrated that one component failed during actual use, under what is stated to be "excessive pressure," Findings 9, 10, and that some failed during subsequent testing, the agency has failed to develop the record in important areas. The record does not reveal what the subsequent testing entailed. At best, the record contains inconclusive evidence regarding the actual test conditions (what was tested—new or already used equipment—and how), the reasonableness of whatever tests occurred (the duration and extent of pressure necessary to result in shattering as compared to normal or anticipated use), and what may have been the expected durability of an acceptable component.[5]

The state of the record exists despite concerns raised by the contractor, prior to these appeals, regarding the sufficiency of the tests to establish lack of compliance with the specification. Finding 15. In developing the record for these appeals, the agency has not been responsive to the contractor's inquiries and concerns, particularly when the contractor asserted in correspondence that its component meets the specification requirements. *Id.* The record reveals no agency method of testing—none is suggested in the testimony or documents, described in the test reports, or otherwise prescribed in the contracts. Thus, although there exists "a presumption that the method of testing followed by a Government laboratory is proper," *Continental Chemical Corp.*, GSBCA 4483, 76-2 BCA ¶ 11,948, at 57,269, without any indication of the method of

[2] Although I reference Finding 3, I find nothing in the record to support the conclusion of the majority that a "heavy duty product" was solicited.

[3] Although I reference Finding 9, I do not agree with the final two sentences thereof. The alleged "reasonable reading" is conjecture. The agency has not revealed any method of testing or established a prima facie case to shift a burden to the contractor.

[4] Contractor contends that the federal specification "does not specify the intended use of the sander, nor the standard of performance the sander is suppose[d] to achieve. In short, [the specification] is a design, and not a performance type specification." Contractor's Post-hearing Brief at 7. Contractor overlooks the actual language of the specification.

[5] A report states that, after the pad wore at its outer edge, it split and shattered. Finding 9. Nothing in the record suggests that normal or anticipated use includes continued use of a pad worn at its outer edge.

Digitized by Google

testing used, there exists no basis to invoke the presumption.

Unlike the majority, my examination of the actual component, Appellant's Exhibit 1, does little to support the agency's position. The thickness of felt is just as apparent to me as it should have been during the pre-production samples. Further, I do not find the performance characteristics of the component to be patent—whether the component is more likely than not to shatter during normal or anticipated use is not evident from an examination of the component. As a judge, I would not on my own, after the record closed, attach the component, Appellant's Exhibit 1, to a sander and test its ability to perform. Whether or not the single component survived my testing would be inconclusive regarding its general performance characteristics. The majority goes much further than performing such a test—it simply examines the component and draws conclusions for which I believe there exists no evidentiary foundation in the record.

The fully developed record does not support the contention that the actual felt-faced plastic components supplied failed to be sufficiently rugged to comply with the specifications. The failure of one product during use (the record contains but a single report of a shattered component) and some products while being subjected to unspecified testing do not enable me to conclude that the components violated warranty of use provisions—the agency has failed to meet its burden of proof.

The record, developed for a *de novo* determination by the Board, reveals that the contractor provided components at variance with what it obligated itself to deliver under the contracts. Findings 7, 8. The contractor neither notified the agency of the substitution, nor gave the agency an express opportunity to accept (with or without price modification) or reject the change. Ultimately, the agency rejected the change, when it required the contractor to provide a pad similar to that designated in the contracts. Finding 17.

Unlike the majority, I conclude that the contractor obligated itself in its contracts to deliver rubber pads with its responses to the plant investigations. Prior to obtaining each of the contracts, after being informed both of the agency's concerns regarding its potential compliance with the Buy American Act and that its *"response will be incorporated into your proposal,"* Air Inc. provided the agency with its "component cost sheet on the sanders offered on this solicitation .... The manufacturers and points of production are indicated in the source column and listed under 'Supply Codes'." Appeal File, Exhibits 18 (emphasis added), 19, 22, 31. The agency relied upon the responses and certifications in making the awards. *Id.*, Exhibit 31. Air Inc. obligated itself to provide a Spiralcool Company "pad" under each contract. *Id.*, Exhibits 19, 22.[6] After receiving the contracts, the contractor failed to inform the agency with the submission of its pre-production samples and its first-article approval that it had deviated from its contracts. Accordingly, by ultimately requiring the contractor to supply a pad component conforming to its contractual obligations, the agency actions did not constitute a change. In essence, upon becoming aware of the contractor's previously undisclosed variation from the terms of the contract, the agency rejected the proposed change—the substitution of felt-faced plastic components for rubber pads. In short, no change occurred—the agency required the contractor to supply components conforming to the terms of the contracts. The contractor has failed to demonstrate its entitlement to any relief given its undisclosed deviations from the terms of its contracts.

[¶ 26,326] Penn Environmental Control, Inc.

VABCA Nos. 3599E, 3600E, 3725E, August 20, 1993. Contract No. V513C-220.

Attorney Fees and Costs Under Equal Access to Justice Act—Prevailing Party—Settlement Agreement.—A contractor that appealed the contracting officer's final decision that reduced the contract price for deleted work was a prevailing party for

[6] In response to requests for admissions, contractor, through its president, denies that either the record or the contracts contain a component cost sheet; it also denies that its prices were based on the provision of pads supplied by Spiralcool. Appeal File, Exhibit 29 at 3 (¶¶ 9-12). The sweeping denials, with no further support in the record, are not credible—they contravene the documentation in the record, including a declaration of a procuring contracting officer. *Id.*, Exhibits 18, 19, 31.

Digitized by Google

purposes of the Equal Access to Justice Act, despite the government's contention that the contractor agreed to a settlement that increased its proposed deduction more than 100 percent, whereas the government reduced its offer by less than 50 percent, because the deduction was significantly decreased. Although the government contended that the contractor did not prevail in its claim regarding payments for the removal of asbestos-containing material, the contractor obtained payment of a substantial portion of the amount sought.

Attorney Fees and Costs Under Equal Access to Justice Act—Substantial Justification—Reasonableness in Asserting Position.—Under the Equal Access to Justice Act, a contractor was entitled to recover the attorney fees and costs incurred in litigating its appeal of the government's settlement by determination that reduced the contract price for deleted work, because the government's position was not substantially justified. The government unreasonably contended that the contractor's failure to cooperate in negotiating the reduction required the contracting officer to issue a final decision reducing the price by an estimated amount. Although the contractor complied with the contracting officer's request for a proposal to prevent the issuance of the settlement by determination, the contracting officer ignored the proposal and issued the settlement by determination, which forced the contractor to initiate litigation by filing an appeal with the board.

Attorney Fees and Costs Under Equal Access to Justice Act—Substantial Justification—Retainage.—Under the Equal Access to Justice Act, a contractor was entitled to recover attorney fees and costs incurred in appealing the government's withholding of the payment of retainage on the ground of potential government liability for the disposal of asbestos-containing material, because the government's litigation position in refusing to make any payments was not substantially justified. The government relied on informal advice from the Environmental Protection Agency in deciding to withhold payments, rather than on any contract provisions. The contractor was entitled to recover its fees and expenses in litigating the appeal from the date of the contracting officer's final decision to the date of the government's payment under an agreement in response to the contractor's motion for summary judgment for payment, but it was not entitled to recover any costs incurred in connection with subsequent government withholdings that were substantially justified.

Attorney Fees and Costs Under Equal Access to Justice Act—Amount—Attributability to Adversary Adjudication.—Under the Equal Access to Justice Act, a contractor was not entitled to recover fees and expenses for services provided before the date of the underlying final decision, because costs incurred prior to the prosecution of an appeal from an adverse final decision are not recoverable. Services rendered by an attorney in connection with matters unrelated to the appeals and services rendered by a lay witness were not compensable. However, the contractor was entitled to recover reasonable attorney fees and court reporter expenses related to the adversary adjudication, despite the government's unreasonable contention that the contractor refused to cooperate in negotiations related to the appeals.

For the appellant: Frederick J. Condon, Solon, Ohio. For the government: Kenneth B. MacKenzie, Trial Counsel, Office of General Counsel, Washington, D.C. William E. Thomas, Jr., Assistant General Counsel, and Phillipa L. Anderson, Deputy Assistant General Counsel, of counsel.

Before KREMPASKY, PULLARA, and ROBINSON, Administrative Judges.

KREMPASKY, Administrative Judge: Penn Environmental Control, Inc. ("PEC" or "Applicant"), has submitted timely applications for attorneys fees and expenses under the *Equal Access to Justice Act ("EAJA")*, 5 U.S.C. §504, in relation to the appeals in VABCA-3599, 3600, and 3725 which were dismissed by the Board with prejudice on April 9, May 7 and May 13, 1993, respectively, pursuant to the parties' settlement of the disputes underlying the appeals and their resulting motions for dismissal. These three applications were consolidated for decision by the Board's Order, dated July 20, 1993.

PEC has submitted separate applications with supporting data, to which the Department of Veterans Affairs ("VA" or "Government") has separately responded, in VABCA Nos. 3599E, 3600E and 3725E. In our decision, we will consider the applications and

Digitized by Google

limited record in the underlying three appeals filed with the Board prior to their dismissal to the extent necessary to determine PEC's eligibility to receive attorneys fees. The record in each appeal consists of the Complaint, Answer, the Appeal File submitted by the parties pursuant to the Board's Rule 4, and the parties' Stipulations of Settlements in each appeal.

BACKGROUND

VABCA NO. 3599

VABCA No. 3599 involved the appeal of the Contracting Officer's ("CO") final decision in Settlement by Determination ("S/D") A, dated March 12, 1991, reducing the contract price by $8,532 for deletion of certain work in Contract No. V513C-220 ("Contract"). The S/D was issued in accordance with unpublished VA Acquisition Regulation ("VAAR") 843.204. The amount of S/D A was based solely on the VA engineering estimate submitted to the CO on January 7, 1991. In response to the CO's threat to issue a settlement by determination reducing the Contract price by $8,532 if PEC did not submit a proposal by a specified date, PEC submitted a detailed proposal to reduce the Contract price by $1,930.03 on January 9, 1991. The CO, in the period between January 9 and March 12, 1991, unsuccessfully attempted to contact PEC by telephone to discuss the deductive change. There is nothing in the record to indicate that the parties ever discussed the amount of the deductive change to the Contract price prior to the issuance of the final decision; nor does the record indicate that the VA ever detailed its position on the amount of the change to PEC.

Subsequent to the docketing of the appeals in VABCA Nos. 3599 and 3600, the Board *sua sponte* issued an Order to Show Cause why the appeals should not be dismissed for lack of jurisdiction. This Order referenced the Board's decision in *Interstate Contractors, Inc.*, VABCA No. 3404, 92-1 BCA ¶ 24,480 wherein we held that we did not necessarily have jurisdiction over an appeal from a unilateral change embodied within an S/D issued under VAAR 843.204 simply because the S/D styled itself, as required by the VAAR provision, as an appealable final decision. Both parties responded to the Order to Show Cause. The Board held in *Penn Environmental Control, Inc.*, VABCA Nos. 3599, 3600, 1992 WL 309896, a decision issued on October 15, 1992, that under the facts involved in VABCA Nos. 3599 and 3600 that the parties were in dispute at the time the final decision in VABCA Nos. 3599 and 3600 was issued and that the Board had jurisdiction over these appeals.

The parties resolved the appeal in VABCA No. 3599 by agreeing to a Contract price reduction of $4,000.

VABCA NO. 3600

VABCA No. 3600 also involved a deductive change to the Contract price for deletion of work which was implemented by the CO pursuant to her final decision in S/D B issued on March 12, 1992. The Contract price reduction in S/D B was also based solely on the VA's engineering estimate of $2,920. PEC had forwarded a detailed proposal, under the same CO's threat involved in S/D A, for the deletion of the work involved in S/D B on January 28, 1992. PEC's proposal for the reduction in Contract price was $369.55. As with the deductive change involved in S/D A, the CO attempted, without success, to contact PEC by telephone to discuss the S/D B price deduction. The details of VA's position on the amount of S/D B were never forwarded to PEC prior to the issuance of the final decision reducing the Contract price by $2,920.

VABCA No. 3600 was resolved by the parties with their agreement to a $369.55 price reduction.

VABCA NO. 3725

The appeal in VABCA No. 3725 resulted from the CO's final decision denying PEC's claim for payment of Contract Progress Payment Request ("PPR") No. 3. The VA has never disputed that PEC had performed the work on which the request for payment was based. PEC applied for payment of PPR No. 3 in the amount of $95,002.40 on January 22, 1992. The CO returned the payment application on February 10, 1992, because PEC had not acceded to the VA's position on the amount of the deductive changes. A series of correspondence between the VA, PEC, and PEC's counsel ensued in which PEC questioned the validity of withholding the full contract payment solely because agreement on the amount of the two relatively minor deductive changes had not been reached. On March 19, 1992, the CO again returned PPR No. 3, which PEC had resubmitted, without action. The CO once more noted the lack of agreement on the amount of the deductive changes and cited two additional reasons for return of this payment application: the VA's potential liability for PEC's alleged failure to comply with documentation requirements for the disposal of 98 bags of asbestos containing material ("ACM") generated in per-

©1994, Commerce Clearing House, Inc.

Digitized by Google

formance of the Contract, and a notice from the Federal Department of Labor ("DOL") to withhold $13,229.89 under the Contract labor provisions. Although PPR No. 3 was not a request for final payment, it is uncontested that all Contract work (with the exception of the ACM disposal) was complete by January 28, 1992. After the second return of PPR No. 3, PEC filed a claim for payment of the full, unpaid portion of the Contract price which the CO denied on June 19, 1992. In her final decision, the CO determined that withholding of the remainder of the Contract price was required to "protect the Government's interest" due to the DOL withholding, PEC's appeal of S/Ds A & B, and because the EPA had "informally" advised the VA that the funds be withheld pending a determination of the issues concerning the disposal of the ACM.

Subsequent to the docketing of the appeal in VABCA No. 3725, PEC moved for summary judgment for payment of the Contract price. Subsequent to this motion, the VA agreed to pay PEC $72,222.88 on November 27, 1992, and made payment of that amount on December 18, 1992. In addition to the Contract payment, the VA paid interest under the *Prompt Payment Act* on the Contract payment for the period between 30 days after PEC's submission of its first application for payment of PPR No. 3 until the date of payment. The VA continued to withhold the 10% retainage, the DOL withhold and the full amount of its Contract price reductions in S/Ds A and B. Upon the payment, PEC withdrew its Motion for Summary Judgment.

The record in VABCA No. 3725 indicates that, prior to the parties' settlement, there were valid questions concerning the documentary record pertaining to the disposal of the 98 bags of the ACM and that there was a reasonable basis for the VA to believe that it had some potential liability, as the hazardous waste generator, for the documentary deficiency. However, nothing in the record indicates that the CO undertook any efforts to establish the potential amount of that liability.

The parties resolved the appeal in VABCA No. 3725 at the hearing convened for the appeals in VABCA Nos. 3725 and 3726 (an additional appeal under the Contract pending decision) in February, 1993, by a mutual clarification of the documentary record pertaining to the 98 bags of ACM supplemented by sworn testimony at the hearing by PEC's president that the 98 bags of ACM had been disposed of in accordance with the applicable Contract requirements.

FEE AND EXPENSE APPLICATION

PEC has applied for recovery of $6,199 each in fees and expenses in VABCA Nos. 3599E and 3600E and $13,534 in fees and expenses for VABCA No. 3725E. The amounts claimed are in four categories of fees and expenses: the fees of PEC's former counsel the firm of Quinn, Buseck, Leemhus, Toohey, and Kroto, Inc. ("Quinn"); payments to Mr. William Davey (a former employee who was PEC's job foreman for the VAMC, Batavia project) for his services during the appeals; court reporter costs for discovery depositions; and the fees of Mr. Condon, PEC's counsel in the underlying appeals.

In the case of the Quinn fees, the payments to Mr. Davey, and the court reporter costs, PEC has allocated one fourth of the total of each of those categories to each application. PEC makes this allocation based on the four appeals that resulted from the Contract. Three of these appeals are discussed above. The fourth appeal, VABCA No. 3726, is currently pending decision at the Board. PEC indicates that these three categories relate to all four appeals and that there is no way to detail, other than its allocation, the costs to any one of the appeals.

The application for Mr. Condon's fees is based on a detailed summary of his time based billing records identifying the appeal to which a particular block of time was devoted.

DISCUSSION

ELIGIBILITY FOR RECOVERY OF ATTORNEYS FEES AND EXPENSES

The Government has not questioned PEC's eligibility, under *EAJA* statutory size standards, to recover fees and expenses in the litigation of its appeals in VABCA Nos. 3599, 3600, and 3725. Based on the certified net worth statements submitted by PEC, we find the Applicant eligible to recover attorneys fees and other expenses in these three applications.

PREVAILING PARTY

VABCA NO. 3599E

In order to recover fees and costs incurred in litigating the three underlying appeals, PEC must be a "prevailing party" in the litigation. PEC need not have prevailed totally on all of its claims; it need only show that it obtained some significant relief from

Digitized by Google

the litigation. *Fletcher & Sons, Inc.*, VABCA No. 3248E, 93-1 BCA ¶ 25,472; see also *Preston-Brady Company, Inc.*, VABCA Nos. 1892E, 1991E, and 2555E, 88-2 BCA ¶ 20,574.

The VA avers that PEC was not a "prevailing party" in the litigation of the appeal in VABCA No. 3599 because the deductive amount eventually agreed upon, on a percentage basis, was closer to the amount of S/D A than to PEC's original, proposed amount of the deduction. In VABCA No. 3599, PEC appealed the CO's final decision to reduce the Contract price by $8,532 for the deleted work. PEC's price for the deleted work was $1,930.03. The parties eventually settled this dispute by agreeing to a Contract price deduction of $4,000. The Government contends that, since PEC settled its claim by increasing its proposed deduction by over 100%, while the Government reduced its offer by less than 50%, PEC did not prevail.

The dispute in VABCA No. 3599 centered on PEC's claim that the VA's deduction was excessive; the deduction was significantly decreased after PEC's entry of its appeal and the parties' subsequent successful negotiations. Therefore, under the *Fletcher* and *Preston-Brady* standards discussed above, PEC was a prevailing party in VABCA No. 3599E.

VABCA NO. 3600E

The Government does not contest that PEC was a prevailing party in VABCA No. 3600E. Accordingly, we find, for the reasons expressed in our discussion of VABCA-3599E above, that PEC was a prevailing party in the appeal.

VABCA NO. 3725E

The Government argues that PEC did not prevail in VABCA No. 3725 because PEC has never proved that it complied with Contract requirements regarding ACM disposal. This argument by the Government is more in the nature of an assertion of the reasonableness of, or substantial justification for, its withholding. PEC obtained payment of a substantial portion of the amount it had demanded in its claim as a result of its appeal. Consequently, we find, for the reasons expressed in the discussion of VABCA-3599E, that PEC was a prevailing party for the purposes of its eligibility to recover fees and expenses under *EAJA*.

SUBSTANTIAL JUSTIFICATION

VABCA NOS. 3599E AND 3600E

Once, as is the case here, an applicant specifies in what respect the Government's position was not substantially justified, the Government carries the burden of showing that its position was "substantially justified" in order to avoid the assessment of the applicant's allowable and reasonable fees and expenses against it. *Delfour, Inc.*, VABCA Nos. 2049E et al., 90-3 BCA ¶ 23,066. We find that the VA has failed to meet that burden.

The VA contends that it was substantially justified in issuing S/D A (the underlying issue in VABCA No. 3599) because the CO was left with no recourse but to issue a final decision reducing the Contract price by the amount of the Government's estimate due to PEC's failure to cooperate in negotiating the price reduction. We find nothing in the record to indicate that PEC refused to cooperate in negotiating the deductive changes. Moreover, PEC complied with the CO's demand for a proposal, a demand that stated that submission of the proposals would prevent the issuance of the settlements by determination which gave rise to the underlying litigation. After receiving the proposal, the CO apparently gave it no consideration and proceeded to issue S/D A, which, in turn, forced PEC to initiate litigation by filing the appeal with the Board. The Government's argument rings hollow when it has not shown that PEC refused to negotiate and when the effect of the final decision was to cut off the very negotiations it claims that it sought. Issuing the final decision without any apparent consideration of PEC's proposal for the deduction at issue in VABCA No. 3599 or formal communication to PEC exploring the differences between the VA's estimate and PEC's proposal does not support the Government's argument that its only recourse was the issuance of a final decision. In this context, we find that the VA's position was not "reasonable" within the meaning of the substantial justification benchmark established in *Pierce v. Underwood*, 487 U.S. 552, 108 S.Ct. 2541 (1988).

We are troubled by the fact that the Government forced the matter to litigation when the Contract provided it the ability to assert its position without placing PEC in the position of having to initiate litigation to protect its interests. As we noted in *Interstate Contractors, supra*, the changes provisions in Federal contracts permit a CO to unilaterally change the contract price. The

©1994, Commerce Clearing House, Inc.

Digitized by Google

VAAR, however, goes further and provides instructions for issuing such a change in the form of a putatively appealable final decision. This has the potential effect of forcing a contractor into premature and fruitless litigation. Even though, in the case of the underlying appeal here, we found that we had jurisdiction based on the fact that it was a properly disputed claim for which the CO was obligated to provide a final decision, the price reduction could have been implemented without compelling PEC to immediate litigation. As the Government pointed out in its brief, the CO knew that the amount of the Government estimate was likely to be revised after discussions with PEC. Moreover, the VA's subsequent actions in withholding Contract payments because PEC had not agreed on the price reduction would seem to indicate the VA's belief that discussions on the amount of the deductions would continue. This expressed belief is contradicted by the apparent unreasoned application of the questionable VAAR provision that served to cut off discussions by finalizing the Contract price reduction. The Government chose to place the matter in litigation without any apparent consideration of either PEC's proposal or of alternative actions available to it under the Contract. Once again, in light of these circumstances, we urge the VA to review VAAR 843.204.

The Government admits that it was not substantially justified in its litigation position in VABCA No. 3600, an admission that recognizes that, with a settlement in the amount of PEC's proposal, there was no rational basis for that position.

VABCA NO. 3725E

PEC argues that the VA had no substantial justification for withholding any funds except the DOL withhold. In support of its argument, PEC points to the Government's acquiescence to the December, 1992, payment, the settlements in VABCA Nos. 3599 and 3600, and the Government's eventual acceptance of sworn testimony to resolve VABCA No. 3725 as evidence that the Government was not substantially justified in refusing to pay the Applicant. The Government asserts that it was substantially justified in withholding payment because of uncertainties relating to the disposal of the 98 bags of ACM and the potential VA liability resulting therefrom.

We find that the VA was not substantially justified, for the reasons discussed, *infra*, in its initial refusal to pay any of the remaining Contract balance; however, we find that the VA was substantially justified in its Contract withholding after December 18, 1992.

Both parties have characterized the amounts that the VA was asserting as deductive changes in S/Ds A and B as Contract withholdings. In fact, the unilateral change orders in S/Ds A and B, as a matter of law, had the effect of reducing the Contract price by a total of $11,452; this reduction was appealed in VABCA No. 3599 and 3600. We discuss the issues related to PEC's entitlement to recover fees and expenses under *EAJA* for litigation of these appeals elsewhere in this opinion. However, since the CO, by issuing S/Ds A and B, had reduced the Contract price, there was no reasonable basis for the VA's original determination to withhold payment of the remaining amounts otherwise due PEC solely because PEC would not agree on the amount of the Contract price reduction already implemented by the CO. There is, of course, no question that the VA was justified in the DOL withholding, since that withholding was permitted by the express terms of the Contract.

The VA also based its withholding on its alleged potential liability relating to the disposal of ACM. However, we find nothing in the record to support the VA's assertion that it was reasonable to withhold the entire remaining Contract amount against that potential liability. In the first place, the VA justified the withholding on the "informal" advice of the EPA to withhold payment. There is no provision in the Contract, similar to the Contract labor provisions, permitting the VA to withhold payment upon the EPA's request or direction. Moreover, there was apparently no official EPA notification to withhold or any formal notification to the VA that it, not PEC, would be liable for any potential EPA assessment of penalties resulting from the ACM disposal issue. The EPA's advice, as characterized by the VA, was "informal." Finally, we find nothing in the record to indicate that the VA made any attempt to quantify the amount of the VA's potential liability arising from the questions concerning the disposal of the 98 bags of ACM that would justify the withholding of all Contract payments due.

After December 18, 1992, the Government withheld payment of the Contract retainage of $26,152.49 and the DOL withhold of $13,229.89. As we noted above, we do not consider that the unilateral Contract price reductions resulting from S/Ds A and B represent Contract withholdings. The Contract payment provisions expressly permit

Digitized by Google

the CO to continue to withhold Contract retainage after substantial completion in amounts the CO determines are necessary to protect the interests of the Government. There was a clear basis for the CO to continue the DOL withhold. However, the justification for withholding the retainage because of the ACM issues is less clear.

We are unable, with the sparse record before us, to determine the amount of the VA's potential liability if, in fact, PEC had either improperly disposed of the ACM or if it failed to keep proper records of the disposal. However, since release of the retainage, under the terms of the Contract, was within the discretion of the CO, we find her determination to continue withholding the retainage against the VA's potential liability relating to the ACM disposal questions was a reasonable exercise of that discretion.

Consequently, the period in this litigation prior to the Government's December, 1992, payment and the period subsequent to the payment are two "discrete phases" of the litigation upon which it is appropriate for us to make separate assessments of the substantial justification for the Government's position. *Devine v. Sutermeister,* 733 F.2d 892 (Fed. Cir. 1984). The circumstance in this application is similar to the situation where the Government makes a settlement offer and the eventual judgment in the case does not exceed the offer. In such a situation we have allowed recovery of fees and expenses incurred up to the time of the settlement offer and disallowed recovery for fees and expenses thereafter. *Marino Construction Co. Inc.,* VABCA No. 2752E, 92-2 BCA ¶ 25,015.

Consequently, under the *Underwood* standard, there was no substantial justification for the Government's litigation position, prior to December 18, 1992, that it would make no payments. However, after the payment, we find that the Government was substantially justified in withholding payment of the retainage and the DOL withholding. The eventual final settlement of VABCA No. 3725 wherein PEC obtained all that it had sought, contrary to the Applicant's view, does not demand a finding that the Government's position from the date of the final decision until the date of the settlement was not substantially justified. *Digital Services Group, Inc.,* DOT BCA No. 1817E, 93-1 BCA ¶ 25,358.

Thus, we will permit PEC to recover its fees and expenses in litigating VABCA No. 3725 from June 19, 1992, the date of the Contracting Officer's final decision, to December 18, 1992, the date of the VA's payment of $72,222.88.

FEES AND EXPENSES

VABCA NOS. 3599E AND 3600E

PEC has applied for the recovery of fees and expenses in the amount of $6,199 in VABCA No. 3599E and $6,199 in VABCA No. 3600E. PEC computed the amounts by totaling one fourth of the fees and expenses relating to the services of Quinn, the services of Mr. William Davey, and court reporter costs for each application. To this amount, PEC adds the fees and expenses of PEC's counsel, Frederick J. Condon, derived from Mr. Condon's billings identfying the appeals for which the services were rendered.

Since the underlying appeals in the applications in VABCA Nos. 3599E and VABCA No. 3600E involve essentially the same issues and were contemporaneous, and PEC, in large part, treated the underlying appeals together, we will consider the fee requests for these two appeals together.

PEC has requested a total of $1,160 for legal fees billed by Quinn in these two applications. A review of the documentation supporting this fee request reveals that the bulk of the fees were for services provided prior to March 12, 1992, the date of the applicable final decision. Costs incurred prior to the prosecution of an appeal from an adverse final decision are not recoverable under *EAJA. Fletcher,* 93-1 BCA at 126,874; *Levernier Construction, Inc.,* 947 F.2d 497 (Fed. Cir. 1991). On the face of the documentation presented by PEC, services rendered by Quinn subsequent to March 12, in the main, relate to the Department of Labor withhold, a matter of no relevance to either of these two applications or the transition of representation from Quinn to Mr. Condon. Thus, we find that the services rendered by Quinn have no discernible connection to VABCA Nos. 3599E and 3600E. Consequently, the fee request for legal services provided by Quinn are not recoverable. *Oliviera v. United States,* 827 F.2d 735 (Fed. Cir. 1987); *Delfour, supra.*

PEC requests one half of the $5,000 cost of the services of Mr. William Davey in these two applications. Mr. Davey was PEC's job foreman on the VAMC, Batavia project and testified as a factual witness in VABCA No. 3726. *EAJA,* in 5 U.S.C. § 504(b)(1)(A), permits recovery of the reasonable expenses of expert witnesses or the preparation of reports necessary for the preparation of the applicant's case. As we found in *Fletcher,*

©1994, Commerce Clearing House, Inc.

Digitized by Google

supra, the above cited *EAJA* provision does not permit recovery of the expenses of lay witnesses. Mr. Davey was a lay witness; consequently, none of the costs of his services are recoverable. PEC cites us to *Akcon, Inc.*, ENG BCA No. 5593-F, 91-3 BCA ¶ 24,147 in support of its request for the costs of Mr. Davey's services. In *Akcon,* the Board allowed recovery of the costs of an independent engineer employed by the Appellant's counsel. The engineer provided professional consultation to Appellant's counsel and testified at the hearing. In allowing the recovery of the engineer's costs, the Board found that, although the engineer did not actually testify as an expert witness at the hearing, his testimony and services were in the nature of expert witness services; consequently, the Board allowed recovery of the engineer's costs under the express provision of *EAJA* allowing recovery of the costs of expert witnesses. In this case, Mr Davey, as indicated in PEC's application, was an employee of PEC when he performed the services, the costs for which recovery is sought, and Mr. Davey testified as a fact witness at the hearing. Thus, this case is clearly distinguishable from *Akcon* and we find in it no basis for permitting the recovery of amounts paid to Mr. Davey.

The VA contests the reasonableness of the application for Mr. Condon's fees and the court reporter costs on the basis that PEC unreasonably refused to negotiate the underlying appeals relating to these two applications and settle the appeals over the telephone. On the strength of these assertions, the VA argues that the court reporter costs should be disallowed and that PEC's attorney fee recovery in these two applications should be limited to a total of 6 hours of services.

As we have previously noted, the VA forced PEC to litigate VABCA Nos. 3599 and 3600 and the VA was not substantially justified in so doing. In the context of the four appeals relating to disputes under the Contract being litigated, we find nothing to indicate that PEC unreasonably failed to negotiate the appeals in VABCA Nos. 3599 and 3600 or that the Applicant unreasonably prolonged the litigation. The course of the litigation of the two underlying appeals here, in our view, suggests that it was the VA, not the Applicant, who acted unreasonably. Thus, PEC is entitled to recover the court reporter costs in the amount of $79.00 each for VABCA Nos. 3599 and 3600.

With regard to Mr. Condon's fees, we have determined that Mr. Condon performed 43.91 hours of services, equally apportioned between the two appeals, relating to the litigation of VABCA Nos. 3599 and 3600. In light of the issues and circumstances of those two appeals we find that this effort is reasonable. PEC requests that it recover the costs of these services at the rate of $150.00 per hour. We have no basis to award fees in excess of the maximum *EAJA* statutory rate of $75.00 per hour. *Fletcher, supra; Buckley Roofing Co., Inc.,* VABCA No. 3374E, 92-2 BCA ¶ 24,826. Consequently, PEC's recovery of attorney fees in VABCA Nos. 3599E and 3600E is $1,646.63 and $1,646.62 respectively.

VABCA NO. 3725E

As discussed above, recovery of fees and expenses under *EAJA* is limited to those fees and expenses incurred in the prosecution of an appeal from a contracting officer's final decision. Thus, only fees and expenses incurred after June 19, 1992 will be allowed. As we found in our discussion of substantial justification in this application, the Government's litigation position was not substantially justified until it made its Contract payment on December 18, 1992; thereafter, the VA was substantially justified in not releasing the retainage. Consequently, PEC can recover its reasonable and allowable fees and expenses incurred between June 19 and December 18, 1992 for litigation of VABCA-3725.

For the reasons discussed above, the amounts claimed for the services of Mr. Davey are not recoverable in this application. In addition, based on the dates of the incurrence of the costs and period in the litigation in which the Government's position was not substantially justified, the Quinn fees are not recoverable. The claimed Court reporter costs relate to depositions conducted on November 23 and 24, 1992; thus, the claimed $79.00 cost for the court reporter may be recovered.

This leaves the determination of the portion of Mr. Condon's fees which will be allowed under this application.

The Government contends that only 2 hours of Mr. Condon's services should have been required to resolve this matter. This assessment is based upon the Government's contention that the parties' agreement to utilize the testimony by PEC's president that the ACM was properly disposed as the mechanism to resolve the payment issue in VABCA No. 3725 should have reasonably required only 2 hours of legal services. The Government asserts that PEC thwarted the

Digitized by Google

settlement of the appeal until the hearing; PEC attributes any settlement delay to the Government since the Government never indicated that the appeal could be resolved by a sworn statement from PEC's president.

We concur in the Government's assertion that it is responsible only for the reasonable legal fees and that the Board is entitled to look at the complexity of the issues involved in the litigation in making a determination of the reasonable attorneys fees an applicant can recover. Unlike the Government's characterization, the ACM disposal issue was not the only basis of the Government's determination to withhold all payments. Up to the Government's December 1992, payment, the Government had several reasons for its adamant refusal to pay any amount for PEC's performance of a Contract that was, for the most part, completed in January 1991. There is nothing apparent in the record showing that the Government attempted to rationally determine whether withholding PEC's entire payment request was necessary to cover its alleged potential liability. Moreover, we see nothing in the record indicating that either party unnecessarily delayed the resolution of the matter.

Thus, we determine that the hours of Mr. Condon's effort claimed in this application from the date of the final decision up to December 18, 1992, are reasonable and recoverable. After review of the application, we have determined that 26.6 hours of Mr. Condon's services between June 19, 1992 and December 12, 1992, inclusive, are attributable to the litigation of VABCA No. 3725. At the statutory rate of $75.00, PEC is entitled to recover $1,995.00 for Mr. Condon's services.

DECISION

For the foregoing reasons, the Applicant, Penn Environmental Control, Inc., is awarded fees and other expenses under the *Equal Access to Justice Act* under the applications in VABCA Nos. 3599E, 3600E, and 3725E as follows:

Application No.	Amount of Fees and Expenses
VABCA No. 3599E	$1,725.63
VABCA No. 3600E	1,725.62
VABCA No. 3725E	2,074.00
TOTAL	5,525.25

[¶ 26,327] Busby School Board of the Northern Cheyenne Tribe

IBCA No. 3007, August 25, 1993. Contract Nos. C-50-C-1420-5510, C-50-C-1420-5682.

Contract Disputes, Jurisdiction—Boards of Contract Appeals—Indian Self-Determination Act.—The Interior Board of Contract Appeals had jurisdiction to determine whether the parties to contracts under the Indian Self-Determination and Education Assistance Act had entered a binding settlement agreement, because the contracting officer's final decision denying the contractor's properly certified claim triggered the board's jurisdiction and subsequent Contract Disputes Act review.

Procedure, Boards—Summary Judgment—Relevant Fact Issues.—Cross motions for summary judgment on whether the contracting officer entered into a binding settlement agreement were granted because the record showed that the material facts were undisputed. Both parties had the opportunity to engage in discovery and to submit affidavits and documentary evidence. The board concluded that little would be gained by a hearing and that there was an unambiguous, integrated written agreement with respect to which credibility assessments would be immaterial.

Procedure, Boards—Summary Judgment—Factual Dispute.—A school operations contractor under the Indian Self-Determination Act was entitled to summary judgment, despite the government's cross-motion alleging a dispute regarding the availability of funds and the authority of officials who executed a settlement agreement, because the record did not raise any disputed facts regarding these issues.

Awards—Existence of Contract—Consideration.—A settlement agreement regarding school operations contracts under the Indian Self-Determination Act was supported by adequate consideration, despite the government's allegation that the absence of a release in the agreement rendered it invalid due to lack of consideration, because the contractor showed that it believed that it had a legitimate claim for contract support funds in excess of

 ©1994, Commerce Clearing House, Inc.

Digitized by Google

the settlement amount. The settlement, which stated that it was in resolution of claims, was as binding on the contractor as it was on the government.

Award—Existence of Contract—Intent of Parties.—Extrinsic evidence was admissible to determine the existence of an integrated final settlement agreement of a contractor's claims in connection with its contracts under the Indian Self-Determination Act, despite the government's contention that such evidence was barred by the parol evidence rule, because extrinsic evidence is admissible to establish whether a writing is or is not a completely integrated agreement. The contractor supplied affidavits indicating that the settlement agreement was complete and final, and the government failed to provide persuasive evidence controverting the contractor's extrinsic evidence.

Interpretation of Contracts—Contract as a Whole—Plain and Ordinary Meaning of Words.—A contracting officer entered into a binding settlement agreement of a contractor's claims in connection with school operations contracts under the Indian Self-Determination Act because the plain meaning of the agreement as a whole, harmonizing, and giving a reasonable meaning to all of its parts indicated that the parties intended to enter a final settlement agreement. Words in the agreement, such as "negotiation," "settlement," "resolution," "settlement amount agreed to," "process the award for payment," and "agree" were clear and unambiguous indications of the agreement's purpose.

Mistakes—Relief After Award—Invalidation of Settlement Agreement.—A contracting officer was not entitled to repudiate its settlement agreement of a contractor's claims in connection with contracts under the Indian Self-Determination Act, despite the government's contention that the contracting officer made a mistake in settling, because the government did not invalidate the settlement agreement reached by its authorized contracting officer. The government failed to provide any of the requisite compelling reasons, including proof of invalidity by either fraud or mutual mistake, for setting aside an otherwise valid settlement. Moreover, a unilateral mistake is not sufficient to limit or avoid the effect of an otherwise binding settlement agreement.

For the appellant: Hobbs, Straus, Dean & Wilder, Washington, D.C., by Carol L. Barbero, Michael L. Roy, and Christopher T. Stearns. For the government: Gerald R. Moore, Department Counsel, U.S. Department of the Interior, Office of the Solicitor, Billings, Montana.

Before ROME and PACKWOOD, Administrative Judges.

ROME, Administrative Judge: This appeal concerns a dispute originating under contracts issued pursuant to the Indian Self-Determination and Education Assistance Act, P.L. No. 93-638, 88 Stat. 2203 (1975) (*codified as amended* at 25 U.S.C. § § 450-450n (1993) (Self-Determination Act). The Self-Determination Act provides that the Contract Disputes Act (CDA) applies to self-determination contracts. 25 U.S.C. § 450m-1(d). As we elaborate upon below, we have jurisdiction under the CDA to entertain this appeal.

Appellant Busby School Board of the Northern Cheyenne Tribe (Busby) and the Bureau of Indian Affairs (BIA) have cross-moved for summary judgment, pre-hearing, on the question of whether BIA's contracting officer entered into a binding settlement agreement that Busby was entitled to be paid for part of its contract claim and rendering wrong his later decision denying entitlement. In the alternative, appellant has moved for summary judgment that, before reneging, the contracting officer issued what should be deemed a final decision in Busby's favor, not subject to rescission. Because we grant summary judgment for appellant on the first ground, we do not reach the second.

FACTS

I. *Background*

Effective October 1, 1982, Busby entered into contract No. C50-C-1420-5510 (contract 5510) with BIA to operate the Busby School. The contract, as amended, covered fiscal years (FY) 1983-85. Contracting officer Henry Graham signed it on behalf of the United States (Appeal File (AF) 12). Effective November 1, 1985, Busby and BIA entered into a similar contract, No. C50-C-1420-5682 (contract 5682) also signed by Mr. Graham, and, as amended, covering FY 1986 and 1987 (AF 13). Both contracts provided for BIA's payment of negotiated

Digitized by Google

indirect costs, also termed "contract support funds" (CSF) (AF 12, *e.g.*, at 3/28/84 and 3/29/85 mods. and Gen. Prov. 24 "Negotiated Overhead Rates"; AF 13 at mods. 5, 7, 9 and Gen. Prov. 24). Appellant alleges that BIA underpaid CSF for FY 1985-87 by $258,203 and that contracting officer Graham agreed to settle Busby's $258,203 claim for $114,719, plus CDA interest.

Procedures under Self-Determination Act contracts for negotiating and fixing CSF; the role of the Department of the Interior's Office of Inspector General (IG); and the fact that BIA's method for allowing indirect costs changed beginning with FY 1985, were described in *Alamo Navajo School Board, Inc.*, IBCA Nos. 2123, *et al.*, 88-2 BCA ¶ 20,563. BIA's statements of procedures in effect for FY 1985-87 are contained in memoranda of record (AF 7, 8); in its responses to appellant's interrogatories (interrog. resp.) 2, 3, 16, 17; and in its response to appellant's document production request 6.

In brief, BIA states: it did not use IG-negotiated rates for payment of indirect costs in FY 1985-87; pursuant to direction from Congress, it changed the way it funded indirect costs for those years and lumped direct and indirect funds together in one payment to Tribal contactors; but, for education contracts, such as those at issue, Federal law still required program and support funds to be identified separately. For FY 1985-87, BIA states that it limited CSF payments to a percentage of the FY 1984 IG-audited rate, but that contractors could use program funds to cover CSF (interrog. resp. 16). The following sequence of IG review and BIA's payment of CSF to Busby for FY 1985-87 is undisputed.

II. *IG-Approved CSF For FY 1985-86 And BIA's Payments*

By letter of January 7, 1985, to Busby's chairman, the IG recorded its review of the school's revised lump sum indirect cost proposal for FY 1985 and presented adjustments to a direct cost base and to indirect costs. The letter concluded that the chairman could use the letter "in the negotiation of lump sum agreements for the reimbursement of indirect costs from the applicable program sources." The chairman signed his concurrence, noting Busby's view that, regarding certain lump sum indirect cost awards, it was free to negotiate with the contracting officer for the full amount allocated by the IG to a particular program, regardless of over or underrecoveries of indirect costs from prior years. The chairman mentioned Department of Education grants. It is not clear whether he also was referring to BIA contracts (AF 8).

Of an accepted $189,537 in indirect costs for FY 1985 (based upon a proposal of $226,769), the IG allocated $72,782 to the school's "General Operations ISEP [Indian School Equalization Program] (BIA)" (AF 8, Exhs. A & B). Appellant alleges that modification 21 to contract 5510 adopted the IG's CSF allocation of $72,782 and added $61,865 of that amount to the contract, and that modification 23 added $7,276, for a total of $69,141. BIA has not disputed this and admits that it paid $61,685 and $7,276 in CSF (complaint and answer (c&a) ¶ 6; interrog. resp. 2 a.). The difference between the IG's $72,782 CSF amount and the $69,141 paid was $3,641.[1]

For FY 1986 and contract 5682, the IG reported its indirect cost findings in its May 16, 1986, letter to Busby's chairman (AF 8). Busby alleges, and BIA does not dispute, that the IG arrived at an indirect cost amount of $136,188 (interrog. resp. 2b).[2] Of the $136,188, effective June 18, 1986, BIA added $45,750 in CSF under modification 3 to contract 5682; and added $5,533, $5,822, and $1,609 under modifications 5, 7, and 9, respectively, effective October 6, for a total of $58,714 (AF 13). BIA admits that it paid the $58,714 (interrog. resp. 2 b.; Response to Requests for Admission (admiss.) 2 a.). The difference between the IG's $136,188 CSF amount and the $58,714 paid was $77,474.

III. *Modification 18 For FY 1987*

BIA issued modification 18 to contract 5682, effective July 8, 1987, which, under "DESCRIPTION OF AMENDMENT/MODIFICATION," provided:

[1] We do not find modifications 21 and 23 in the record. A Mar. 29, 1985, modification of record (AF 12) indicates that: (1) it applied to contract 5510 and to other of Busby's BIA contracts; (2) modification 21 had provided Busby with $11,438 in CSF; and that (3) the $72,782 IG-allocated amount and BIA provisions for $61,865 applied to a contract not at issue. It may be that the briefs and record merely contain insufficient information to clarify the situation. These and other confusing parts of the record do not represent disputed facts and are not material.

[2] We assume that this was $129,168 in ISEP funding and $7,020 in Special Education funding, which the IG apparently mistakenly described as a Department of Education program (AF 8 at 5/16/86 letter, Exh. 1).

©1994, Commerce Clearing House, Inc.

Digitized by Google

1. Increase Contract amount by $2,100 for FY-87.

2. Attached revised budget is hereby incorporated into this contract. This addes [sic] Contract Support Funds for the special Education Program per fund distribution document #0811 dated June 1, 1987.

(AF 13). A "CONTRACT SUPPORT BUDGET FY 1987" in the total amount of $247,688 was attached to the modification. BIA admits that it approved the modification (admiss. 1). Busby alleges that modification 18 entitled it to $247,688 in CSF for FY 1987. The contracting officer who signed modification 18 is deceased. Although contracting officer Graham, who signed and administered contract 5682, submitted an affidavit in support of BIA's cross-motion, he did not address the modification.

For guidance in assessing consideration for the alleged settlement, the Board issued a Call pursuant to Rule 4.114 (43 CFR § 4.114) and, among other things, requested a copy of fund distribution document #0811, but BIA was unable to find one. BIA's counsel speculated that the second sentence of paragraph 2 in the modification's description should have been placed at the end of paragraph 1, and that the modification added only $2,100 in CSF. In so doing, he arbitrarily eliminated the separate paragraph numbering from his quotation to the Board of the description. His speculation is backed by plausible argument, however.

BIA urges that modification 18 was not intended to entitle Busby to $247,688 in CSF, by analogizing to a fund distribution document 0812, also dated June 1, 1987, which granted $2,000 in CSF to a different school under a different contract (and, in fact, as set forth below, BIA paid only $2,100 in CSF for FY 1987 under modification 18). BIA also notes that the contract support budget attached to modification 18 does not refer to the Special Education program; the IG's FY 1987 lump sum allocation of indirect costs for all contract programs, including Special Education, was $134,699; Busby's original budget submitted for CSF for Special Education was less than 10 percent of the total budget for all programs; total "estimated cost" of the contract, including direct and indirect costs for all contract programs, originally was $372,078; it was increased by modification 11 to $503,439; and modification 18, as interpreted by Busby, would have added, for Special Education, about one half of the total contract amount for CSF. BIA states that modifications 13, 14 and 16 decreased the contract amount from $503,439 and that the revised budget incorporated by modification 18 might be explained by this reduction (BIA Call resp. at 2-4, 7-8; AF 8 at 11/30/87 letter, Exh. 1; AF 13 at § I ¶ 2 and mods.).

Appellant counters with arguments that are not frivolous. It agrees that modification 18 could not, in practicality, be directed at Special Education CSF, a relatively small part of Busby's programs. It urges that the modification covered the panoply of indirect costs identified in the attached Contract Support budget—costs funded through CSF. Busby disagrees with BIA's suggestion that modification 18's budget might be a reduction of modification 11's budget due to a reduced total contract cost. Busby notes that the two budgets covered different costs and alleges that the net effect of modifications 12-17 was to increase modification 11's $503,439 contract amount to $801,400 (Busby 3/19/93 Call resp. at 6-7; Busby 4/8/93 resp. to BIA 3/19/93 Call resp. at 4-5).

IV. *IG-Approved CSF For FY 1987 And BIA's Payments*

For FY 1987, the IG reported its indirect cost findings in its November 30, 1987, letter to Busby's chairman (AF 8), stating that Busby had proposed lump sum indirect costs of $193,016. Appellant alleges, and BIA does not contest (interrog. resp. 2 c), that the IG arrived at an indirect cost amount of $104,204.[3] Of the $104,204, BIA added $65,600 in CSF under modification 14 to contract 5682, effective February 2, 1987, and $2,900 by modification 15, effective March 17, 1987. Both modifications were prior to the disputed modification 18. Regardless of its contentions about modification 18, appellant agrees that BIA paid only $2,100 in CSF under it. BIA does not contest that the total CSF amount paid for FY 1987 was $70,600 (admiss. 2 b.) The difference between the IG's $104,204 CSF amount and the $70,600 paid was $33,604, and between modification 18's alleged CSF $247,688 amount and the $70,600, was $177,088.

[3] We ascertain this to be the total of various amounts for general operations, transportation, Special Education and costs under the Education of the Handicapped Act (AF 8 at 11/30/87 letter, Exh. 1).

V. *Busby's Claim*

Appellant supplied Mr. Clifford Long Sioux's affidavit. Although not a Busby member when modification 18 issued in 1987, he was a member as of July 21, 1988, and Busby's chairman from January 17, 1989, to June 6, 1991. He stated that he and other members believed, after extensive review, including by Busby's accountant and its counsel, that Busby had not received all of the funding to which it was entitled under its BIA contracts. Regarding modification 18, they determined that Busby had a valid claim that it had alloted $247,688 in CSF for FY 1987.

On May 17, 1991, contracting officer Graham received Busby's $258,203 claim for CSF due for FY 1985-87, properly certified by Mr. Long Sioux. The letter opened with an unqualified request for a contracting officer's decision—an unqualified request repeated in the body of the letter (AF 1). The $3,641 shortfall claimed for FY 1985 was the difference between what was stated to be the $72,782 CSF amount approved—based upon "approval documents" cited as the IG letter of January 7, 1985, and modification 21—and the $69,141 received. (Mr. Long Sioux states in his affidavit that, for FY 1985, the IG-approved amount was approved by BIA through modification 21.) The $77,474 shortfall claimed for FY 1986 was the difference between what was stated to be the $136,188 CSF amount approved—based upon an "approval document" cited as the IG's May 16, 1986 letter—and the $58,714 received. (Mr. Long Sioux states that, for FY 1986, there was no approving modification.) The $177,088 shortfall claimed for FY 1987 was the difference between what was stated to be the $247,688 CSF amount approved—based upon an "approval document" cited as modification 18—and the $70,600 received. The letter concluded that, if Busby's claim were denied in whole or in part, it requested a written decision from the contracting officer stating the reasons for the denial and providing CDA appeal rights (AF 1).

On August 29, 1991, Mr. Graham wrote to Busby that "[w]e are currently researching the files and will issue a decision by October 1, 1991" (AF 2). On September 30, 1991, Mr. Graham wrote to Busby that BIA's records agreed with the claimed $3,641 CSF shortfall for FY 1985 and agreed that there was a $77,474 shortfall for FY 1986 under the ISEP and Special Education programs but, if overall BIA-funded programs and a lump sum agreement were considered, the FY 1986 shortfall was $55,302 for all of the programs. For FY 1987, Mr. Graham stated:

> 3. The total amount of indirect costs allocated to [BIA] funded programs for FY 1987 was $134,699, not $247,688 as you stated. The amount allocated for the General Operations contract was $104,204. A total of $70,600 was provided by [BIA]. This left a shortfall of $33,604.

(AF 3). He concluded: "I believe a shortfall of between $92,547 and $114,719 exists and your claim should be amended accordingly before a decision is made by this office" (AF 3).

VI. *The October 29, 1991 Meeting*

At Busby's request, on October 29, 1991, Mr. Graham met with then Busby chairman Jack Badhorse; Busby member Raymond Little Bear; school superintendent Ted Rowland; the school's business manager, Kitty Gillespie; and the school's accountant, Jon Donham (first and second Badhorse affids.; Rowland affid.; Donham decl.; Graham affid.). Messrs. Badhorse, Rowland and Donham each proclaim, in their affidavits and declaration, respectively, that: (1) the meeting was to settle Busby's claim; (2) Mr. Graham stated that Busby was not entitled to the full amount claimed, but was entitled to $114,719, which included the amounts claimed for FY 1985 and 1986 and the $33,064 difference between the IG-approved CSF for FY 1987 and the amount BIA paid; (3) Mr. Graham stated that, if Busby did not accept the $114,719, he would deny its claim; and (4) an agreement was reached to settle Busby's claim for $114,719. Mr. Badhorse reported that, although Busby believed its full claim was valid, it agreed to the lower amount because Mr. Graham had stated that he would deny the higher claim; a decision might not issue for a long time; Busby needed more funds as soon as possible; to pursue the claim would require costly legal and other expenses; and the outcome on appeal could not be predicted.

Mr. Graham and appellant agree that, after the $114,719 amount was reached, Mr. Donham and Mr. Graham telephoned Mr. Jim Thomas, a "Self Determination Analyst" in BIA's Central Office in Washington, D.C. Mr. Donham states that: Mr. Graham explained to Mr. Thomas that he had determined that Busby was entitled to $114,719 but that BIA's Billings Area Office did not have sufficient funds to pay Busby; and Mr. Thomas explained that he could not act until Mr. Graham had responded to Busby's claim and forwarded his decision to Wash-

©1994, Commerce Clearing House, Inc.

Digitized by Google

ington. Mr. Rowland states that Mr. Donham and Mr. Graham reported the foregoing to the others.

Mr. Graham states that: he explained "the claim we had received" to Mr. Thomas and that there were no funds in BIA's Billings office to pay a CSF claim for FY 1985-87; asked whether there were funds in the Washington office; and Mr. Thomas told him "to send the entire claim" there for his review. Mr. Graham alleges that he and Busby agreed only that the "proper amount of the claim" was $114,000; it should be amended; and it would be sent to Washington to "see if it could be paid" (Graham affid. at ¶ 6, 7). BIA has not supplied any affidavit from Mr. Thomas.

VII. *The Written Memorialization Of Settlement*

By letter dated October 31, 1991, chairman Badhorse, who had full authority to act for Busby, set forth its understanding of the agreement reached on October 29 (AF 4; first Badhorse affid. at ¶ 5, 6). Because it is key to this appeal, we quote the letter virtually in full:

Re: Resolution Of Claim Under Contract Disputes Act

Dear Mr. Graham:

This is in further reference to the contract dispute initiated by [Busby's] letter of May 14, 1991 requesting a Contracting Officer's Decision under the [CDA] regarding our claim for contract support funds for [FY] 1985, 1986 and 1987. In your response dated September 30, 1991, you acknowledged that [Busby] is due at least $92,547, and perhaps $114,719, and recommended that we amend our claim accordingly.

On October 29, 1991 representatives of [Busby] met with you to negotiate this matter. At that negotiation, you and [Busby] agreed to resolve the claims for the three fiscal years for $114,719. A comparison of the amount claimed and the settlement amount agreed to for each fiscal year follows:

Fiscal Year	Claimed Amount	Amount Agreed to at Negotiation
FY 1985	$ 3,641	$ 3,641
FY 1986	77,474	77,474
FY 1987	177,088	33,604
TOTALS	$258,203	$114,719

As you know, the [CDA] requires payment of interest on the amount paid calculated from the date on which the request for a contracting officer's decision was filed through date of payment. 41 U.S.C. § 611. Please assure that interest is paid on [Busby's] award in this case.

We enclose two copies of this letter, both bearing an original signature on behalf of [Busby]. To evidence your concurrence with this resolution of our claims we ask that you sign both copies. Please use one copy to process the award for payment and return the other copy to us.

* * * * * * *

Agreed:

_____
Henry Graham
Contracting Officer

* * * * * * *

Date:_____

(AF 4). The letter did not include any CDA claim certification.

Mr. Graham responded by letter of November 5, 1991, to Mr. Badhorse:

Reference is made to your letter dated October 31, 1991, regarding a claim for Contract Support Funds during Fiscal Years 1985, 1986, and 1987. Your claim has been revised per our discussions on October 29, 1991. By this letter and a signed copy of your letter (enclosed) acknowledging the claim, I concur with the amount claimed. However, no funds are available in the Billings Area Office to pay the claim. Therefore, it will be forwarded to the Self-Determination Services Division, Central Office for processing.

(AF 5). Mr. Graham signed the October 31, 1991, memorialization of agreement and dated it November 5, 1991, in the spaces provided under the caption "Agreed," without adding any qualification or modification by his signature or elsewhere on the agreement, and without any oral qualifica-

Digitized by Google

tion or expression of disagreement to Busby (AF 4; first Badhorse affid. at ¶ 8).

VIII. *Contracting Officer's February 18, 1992, Repudiation of Agreement*

Over three months later, by letter dated February 18, 1992, stated to be his "final decision" and containing appeal information, Mr. Graham wrote to Mr. Badhorse that: a $258,203 claim for CSF shortfall had been submitted; BIA had "reduced" the "claim" to between $92,547 and $114,719 due to "incorrect calculations" by Busby; at the October 29, 1991, meeting, the parties had agreed to "the amount of the claim or shortfall;" an "amended claim" for $114,719 had been received; and all documents pertaining to the claim had been forwarded to Mr. Thomas for review and "possible resolution." Mr. Graham then reported: "My decision is to deny your claim as amended."

Mr. Graham cited various factors, including BIA's different treatment of CSF for FY 1985-87 for Tribal contractors; that indirect costs agreements (presumably with the IG) did not fix CSF to be awarded; and that, although BIA's method of fixing CSF "undoubtedly contributed to shortfalls in CSF funding," his office had no control because direct and indirect funds could not be separated and it could not be determined if there were an actual shortfall for a particular contract. He also considered Busby's claim untimely, stating that almost four fiscal years had passed since Busby "experienced a shortfall in CSF;" he "suspected" Busby used program funds to cover CSF shortfalls; and he questioned whether award of CSF funds would constitute a "windfall," rather than a replacement of program funds used to cover indirect costs. He concluded that it "probably cannot be determined" whether Busby actually suffered from the CSF shortfall and that "[t]he fact that there may have been a shortfall in CSF does not constitute a claim against the Government" (AF 6). Mr. Graham did not state that there were no funds available to pay the claim.

In response to appellant's interrogatory requesting clarification of the windfall suggestion, BIA stated that, at the end of each FY 1985, 1986, and 1987, there were unexpended program funds for direct costs; Busby carried them over to the next year; they were available to pay unfunded direct costs; and a windfall would occur if Busby received funds for indirect costs that already had been paid (interrog. resp. 14). The interrogatory had been directed to Mr. Graham, but BIA's interrogatory responses were signed only by BIA counsel. Mr. Graham did not mention any windfall in his affidavit and BIA did not supply any documentary or testimonial support for the allegation of potential windfall.

IX. *Contracting Officer Graham's Full Authority*

BIA concedes that Mr. Graham had full authority to enter into the type of binding settlement agreement Busby asserts; that there was no dollar limit or procedural or substantive limitation upon his authority; that there was no form or format prescribed by statute, regulation, or other pronouncement of policy (whether or not made available to the public) for a binding settlement agreement; and that Mr. Thomas held a staff position, was not a line officer, and had no superseding authority over the contracting officer regarding appellant's claim (Call and 3/19/93 BIA Call resp.; *see also* interrog. resps. 15, 24-26).

X. *The Appeal*

On March 26, 1992, Busby filed a notice of appeal with this Board from the contracting officer's February 18, 1992, proclaimed final decision. In the appeal notice appellant alleged that, after meeting with the contracting officer to resolve its claim, Busby filed "an amended claim" on October 31, 1991, on the contracting officer's advice and that, on November 5, 1991, the contracting officer wrote to Busby acknowledging the amended claim and awarding "the amount claimed" (AF 9 at 2). The complaint similarly alleges that, on October 31, 1991, Busby filed "an amended claim" for CSF "pursuant to its October 29, 1991 agreement with the contracting officer" and that, on November 5, 1991, the contracting officer issued his decision to award Busby $114,719 in CSF for FY 1985-87 (AF 10 at ¶ 12, 13).

In its motion for summary judgment, appellant no longer alleges that it submitted an "amended claim" on October 31, 1991, and asserts that an agreement was reached on October 29, 1991, not subject to further negotiation or to a later contracting officer's decision; that Mr. Graham did not inform Busby at the time of the meeting that he intended anything other than a final enforceable settlement; and that the October 31 letter, upon which Mr. Graham executed his concurrence, memorialized the settlement agreement. It is now in the alternative that appellant alleges that Mr. Graham's November 5, 1991, letter constituted a decision awarding Busby $114,719, which was

©1994, Commerce Clearing House, Inc.

Digitized by Google

final and nonrescindable, because the time to appeal from it expired.

DISCUSSION

[1] We first consider our jurisdiction to entertain this appeal. Appellant principally has asked us to find a binding settlement agreement. The CDA applies to certain types of procurement or property disposal contracts, 41 U.S.C. § 602(a), and, by virtue of the Self-Determination Act, to self-determination contracts, as cited above. The alleged settlement agreement, *per se,* does not satisfy those categories.

However, without reaching appellant's alternative contention that the contracting officer issued a final decision awarding Busby its reduced claim amount, it is clear, at a minimum, that Mr. Graham's February 18, 1992, proclaimed final decision denying Busby's properly-certified claim under contracts 5510 and 5682, and Busby's appeal therefrom, imbued us with jurisdiction under the CDA. *See Paragon Energy Corp. v. United States,* 645 F.2d 966, 967 (Ct. Cl. 1981) (a contracting officer's decision is the linchpin for subsequent proceedings under the CDA).

As part of our analysis of the legitimacy of the contracting officer's decision, we may determine whether the claim at issue was settled previously. *See Texas Instruments, Inc. v. United States,* 922 F.2d 810 (Fed. Cir. 1990), where the court of appeals found a final binding agreement on a price for supplies, when an administrative contracting officer had signed her approval, on an internal memorandum, of her representative's oral agreement with the contractor, which had been confirmed in writing by the contractor. In so doing, the Federal Circuit reversed an underlying board decision, *Texas Instruments, Inc.,* ASBCA No. 27113, 90-1 BCA ¶ 22,537, and particularly the board's earlier decision on cross-motions for partial summary judgment, *Texas Instruments, Inc.,* ASBCA No. 27113, 87-1 BCA ¶ 19,394, *reconsid. denied,* 87-2 BCA ¶ 19,767, which had held that there had been no such binding agreement. A contracting officer's decision denying the agreement had triggered the board's jurisdiction and subsequent CDA review. *See also Kurz and Root Co.,* ASBCA No. 17146, 74-1 BCA ¶ 10,543 (successor contracting officer's final decision denying a claim provided jurisdictional context for board's review of, and sustaining, an oral settlement agreement between prior contracting officer and contractor resolving the claim, which had been confirmed by the prior contracting officer in an internal memorandum).

[2] The parties have cross-moved for summary judgment. We have noted previously:

> Summary judgment is a salutary method of disposition to effect the speedy, just and inexpensive resolution of a case when there is no genuine issue of material fact and the movant is entitled to judgment as a matter of law. Although the burden is upon the movant, when it has supported its motion with evidence which would establish its right to judgment, the non-movant must proffer countering evidence sufficient to create a genuine factual dispute * * *. Even if there is a genuine dispute as to fact, the disputed fact is only material if it would make a difference in the result of a case. [Citations omitted.]

Blaze Construction Co., IBCA No. 2863, 91-3 BCA ¶ 24,071 at 120,507. The fact that cross-motions have been made does not, in itself, mean that summary judgment is appropriate:

> [S]ummary judgment in favor of either party is not proper if disputes remain as to material facts. * * *. Rather, the court must evaluate each party's motion on its own merits, taking care in each instance to draw all reasonable inferences against the party whose motion is under consideration.

Mingus Constructors, Inc. v. United States [33 CCF ¶ 75,126], 812 F.2d 1387, 1391 (Fed. Cir. 1987). When the parties seek summary judgment on the same issue, however, it strongly suggests that the material facts are undisputed. *Id.*

In their joint report to the Board of September 2, 1992, the parties agreed that resolution of the common issue advanced—whether the contracting officer entered into a binding settlement agreement—did not involve significant factual disputes. Also, while only appellant engaged in discovery, both parties had an opportunity to do so, and to submit affidavits and documentary evidence. BIA states that it has provided its available records. As we elucidate below, our conclusions are based upon what we have found to be un unambiguous, integrated written agreement, with respect to which credibility assessments would be immaterial. Thus, little would be gained by a hearing.

Because the material facts upon which we have relied are uncontroverted, we have found summary judgment appropriate.

Digitized by Google

[3] Appellant has alleged a compromise and written settlement agreement with BIA's contracting officer memorializing the parties' oral agreement. To prove an express contract with the Government, appellant must establish mutual intent to be bound, expressed by definite offer and unconditional acceptance; that the Government's representative had the requisite contracting authority; and consideration. *Fincke v. United States,* 675 F.2d 289, 295 (Ct. Cl. 1982); *Russell Corp. v. United States,* 537 F.2d 474, 481 (Ct. Cl. 1976), *cert. denied,* 429 U.S. 1073 (1977); *Penn-Ohio Steel Corp. v. United States,* 354 F.2d 254, 267 (Ct. Cl. 1965). Because we have found that there clearly was a written agreement, we do not reach the question of whether there was a prior oral agreement.

Since this appeal involves the compromise of a disputed claim, principles of accord and satisfaction are relevant:

> In our digests * * * and treatises we find "compromise and settlement" and "accord and satisfaction" listed as two separate and apparently independent titles. In fact they are not separate and independent. * * * [A]n accord is an agreement for the settlement of some previously existing claim by a substituted performance. It will be found that this definition of accord also includes all compromises * * *. But the previous claim may be one that is in doubt or in dispute, or one that is certain, liquidated, and undisputed. It is only the former claims that the subject of compromise. * * * From this it appears that a compromise is always an accord, but that an accord is not necessarily a compromise.

6 *Corbin on Contracts* § 1278 at 124 (1962). An accord is reached in the same manner as other contracts. Satisfaction is the performance of the accord, the giving and the taking of the agreed item or service. *Chesapeake & Potomac Telephone Co. of Virginia v. United States* [28 CCF ¶ 81,488], 654 F.2d 711, 716 (Ct. Cl. 1981).

The elements of accord and satisfaction are proper subject matter, competent parties, meeting of the minds, and consideration, typically involving satisfaction of a claim or demand in bona fide dispute. *Nevada Half Moon Mining Co. v. Combined Metals Reduction Co.,* 176 F.2d 73, 76 (10th Cir. 1949), *cert. denied* 338 U.S. 943 (1950); *accord Brock & Blevins Co. v. United States* [10 CCF ¶ 72,981], 343 F.2d 951, 955 (Ct. Cl. 1965). *See also Aviation Contractor Employees, Inc. v. United States* [37 CCF ¶ 76,184], 945 F.2d 1568, 1574 (Fed. Cir. 1991); *Penn-Ohio Steel Corp.,* 354 F.2d at 268.

[4] There is no genuine dispute that the settlement's subject matter was proper and that the officials executing the agreement on behalf of the parties were authorized. BIA has conceded that Mr. Graham had full authority.

Nevertheless, in support of its cross-motion, BIA alleged: "After having been informed by Mr. Thomas of the BIA Washington Office that there were no funds available from which the Tribe's claim could be paid, Mr. Graham issued his final decision denying the claim on February 18, 1992" (BIA's 11/10/92 Reply Br. at 4). BIA did not submit any affidavit from Mr. Thomas, or from any other knowledgeable official, or any other evidence, in support of its allegation. Contemporaneously, contracting officer Graham merely stated that there were no funds in the Billings office, he did not claim that no funds were available at all, and his affidavit in support of BIA's cross-motion does not so contend. As the court of appeals has stressed: "[T]he party opposing the motion [for summary judgment] must point to an evidentiary conflict created on the record at least by a counter statement of fact or facts set forth in detail in an affidavit by a knowledgeable affiant. Mere denials or conclusory statements are insufficient." *Barmag Barmer Maschinenfabrik AG v. Murata Machinery, Ltd.,* 731 F.2d 831, 836 (Fed. Cir. 1984).

In fact, Mr. Graham's decision purporting to deny Busby's claim did not allege lack of funds and, in its response to our Call inquiry as to whether Mr. Thomas had any superseding authority over contracting officer Graham, BIA confirmed that he did not.[4]

[5] Although BIA alleges that the settlement agreement was deficient because it did not contain a release, at the same time it has

[4] BIA added:

"If the Board's question is whether the contracting officer could have entered into a contract in 1991 for which no funds were available and whether such a contract would be binding on the United States, the answer would be a legal opinion. Although Department Counsel knows of no cases on point, the issue could be researched and argued if the Board desires." (BIA 3/19/93 Call resp. at 11, 12). BIA has had ample opportunity to brief any alleged defenses to appellant's motion and all arguments in support of its own. We decline its invitation and do not reach any hypothetical funding question.

Digitized by Google

conceded that no format was required for the agreement. The Federal Acquisition Regulation (FAR), and predecessor regulations, requiring the execution of a particular form for an agreement modifying a contract to be finalized and funds to be obligated, as in *SCM Corp. v. United States* [26 CCF ¶ 83,166], 595 F.2d 595 (Ct. Cl. 1979) and *Mil-Spec Contractors, Inc. v. United States* [34 CCF ¶ 75,412], 835 F.2d 865 (Fed. Cir. 1987) (oral settlement agreements alleged unsuccessfully by the contractor and by the Government, respectively), are irrelevant. The FAR does not apply to Self-Determination Act contracts (except construction contracts). 25 U.S.C. § 450j.(a).

In any case, we are not considering an agreement to modify a contract. Appellant alleges that the claim funds were due under the contract, including modifications already in place. *See Texas Instruments, supra* (contracting officer's signature of approval, on internal Government memorandum, was sufficient to create binding pricing agreement even though her assent had not been communicated to contractor; acquisition regulations requiring execution of standard modification form were inapplicable because a modification was not involved; even internal, albeit unpublished, Governmental monetary limits upon contracting officer's authority did not render agreement invalid.)

This leaves for examination the questions of consideration and mutual assent to contract.

[6] BIA alleged initially that the absence of a release in the October 31, 1991, agreement rendered it invalid due to lack of consideration. The agreement, however, referred to "settlement" amounts and stated that it was "in resolution of our claims." That resolution was as binding upon Busby as it was upon BIA.

Other statements by both parties, however, led us to question whether a bona fide dispute had been resolved or whether Busby had agreed with BIA that its claim had been calculated incorrectly. In its Statement of Uncontested Facts, appellant had declared that the claim sought "the difference between the indirect cost budget approved by the IG for [FY] 1985 to 1987 and the amount of contract support costs funded by BIA for those years" (Busby 10/9/92 Br. at 3, fact 5). BIA also had alleged that appellant's claim was for the difference between IG-reviewed CSF and the amount of CSF paid by BIA in FY 1985-87 (BIA 11/10/92 Br.). Because the settlement appeared to be precisely the difference between IG-determined CSF for FY 1985-87 and the amount paid, the Board's Call aimed to eliminate confusion. The Board noted that appellant's claim for FY 1987 actually appeared to be based upon modification 18 and its alleged addition of $247,688 in CSF to the contract.

Both parties took their lead from the Board in responding. BIA reiterated that Busby had sought recovery of the total amount of IG-approved CSF, and now alleged that there was no consideration because the settlement was for the maximum amount that Busby could have received under that theory. Busby now contended that its claim for FY 1987 "was not based on the CSF budget negotiated with the [IG], but on a CSF budget for that year expressly approved by the BIA contracting officer and incorporated in the contract by Modification 18" (Busby 3/19/93 Call. Resp. at 3-4).

In actuality, as we delineated in the Facts above, Busby's claim for FY 1987 did differ from its claims for FY 1985 and 1986 and was based upon modification 18. Busby has established, in its briefs and affidavits, that it believed that it had a legitimate claim for CSF for FY 1985-87 totalling $258,203, and not merely for the $114,719 settlement amount. The Court of Claims noted many years ago that: "[I]t is settled law that a compromise is supported by sufficient consideration when there is a bona fide claim which is * * * disputed or doubtful, the real consideration to each party being not the sacrifice of the right but the settlement of the dispute." (Citations omitted.) *Penn-Ohio Steel Corp.*, 354 F.2d at 268. Consideration would not be diminished even if BIA's position on the merits of Busby's claim were found to be correct. *Aviation Contractor Employees,* 945 F.2d at 1574. As long as there is a bona fide dispute, "once the parties enter into a valid settlement agreement, the merits of the compromised claims become inconsequential." *Cheyenne-Arapaho Tribes of Indians of Oklahoma, et al. v. United States,* 671 F.2d 1305, 1311 (Ct. Cl. 1982). The parties benefit from the settlement by avoiding the risks and expense of litigation. *Id.* at 1309. Forbearance of a legal right, "even a tenuous cause of action, is good consideration for a bargain." *Goltra v. United States,* 96 F. Supp. 618, 626 (Ct. Cl. 1951).

[7] Regarding the parties' mutual assent to the settlement agreement, "[w]hether a legally enforceable contract has been formed by a meeting of the minds depends upon the totality of the factual circumstances." *Texas Instruments,* 922 F.2d at 815. "For a con-

Digitized by Google

tract to exist there does not have to be, and rarely is, a subjective 'meeting of the minds' all along the line." *WPC Enterprises, Inc. v. United States* [9 CCF ¶ 72,289], 323 F.2d 874, 879 (Ct. Cl. 1963). Thus, in determining whether a meeting of the minds occurred, we look not to subjective intent, but to the objective manifestation of the parties' intent, which can be found in their signed agreement. *Saturn Construction Co.*, VABCA No. 3229, 91-3 BCA ¶ 24,151 at 120,857.

The appellant in *Saturn* argued that agreements with the Government did not constitute accord and satisfaction. The appellant, like BIA here, urged that language used in the agreements did not reflect mutual assent or mean what it seemed to mean because items had yet to be determined, or it had intended to reserve them from the agreements. The appellant pointed to prior correspondence that certain issues would be addressed later, which it alleged should be read in conjunction with the agreements. The board noted that any intended exceptions to the written agreements should have been expressed in them and that the parol evidence rule precluded consideration, on a motion for summary judgment or otherwise, of evidence of prior dealings not included in the agreements when offered for the purpose of varying clear, unambiguous language. 91-3 BCA at 120,857-58.

The Claims Court discussed the parol evidence rule at length in *Design and Production, Inc. v. United States* [35 CCF ¶ 75,718], 18 Cl. Ct. 168, 194-96 (1989). To summarize, the rule operates generally to disallow prior or contemporaneous extrinsic evidence, oral or written, when the parties have reduced their agreement to a final, integrated (complete) writing and the evidence offered would contradict or vary the unambiguous terms of the writing. The most reliable clue to the parties' intentions is the language of the contract.

Despite the parol evidence rule, and prior to considering questions of contract interpretation, extrinsic evidence is admissible to establish that a writing is, or is not, a completely integrated agreement. *Restatement (Second) of Contracts* § 214(a) (1981).

Appellant has supplied affidavits and a declaration of individuals present during the October 29, 1991, meeting (including two affidavits from Busby's chairman, Mr. Badhorse), each of which is to the effect that the settlement agreement was complete and final. Contracting officer Graham executed an affidavit stating that the only agreement reached was that Busby would amend its claim to an agreed amount and he would forward it to BIA's Washington office to see if it could be paid. He did not state that he and appellant discussed that alleged interpretation. At a minimum, it is clear from the plain terms of the October 31, 1991, letter, which was captioned "Resolution Of Claim Under Contract Disputes Act"; referred several times to settlement and resolution of appellant's claim; contained a space for the contracting officer's written concurrence; and asked him to forward a signed copy to Washington as evidence of his decision to "process the *award* for payment" (emphasis added), that Busby did not so interpret the agreement.

Although both parties used the phrase "amended claim" at various times, including Busby in the October 31, 1991, letter and in its notice of appeal and complaint, we conclude, based upon the full text of the letter, upon all of the surrounding circumstances, and upon common sense, that the phrase was intended to mean "claim as reduced and resolved by agreement." There was no motivation for Busby to reduce its claim absent an agreement by the contracting officer that the reduced amount was acceptable for payment. Mr. Graham did not contest the statements in the affidavits and declaration of Busby's participants in the October 29 meeting that he would deny the claim if it were not reduced. It is apparent that they did not intend to abandon their higher claim only to leave the contracting officer the option to deny the reduced amount.

The contracting officer signed the bilateral October 31 agreement without any exception or reservation expressed in it. Citing his unilateral November 5 cover letter, he alleged in his affidavit that no agreement was reached about the validity of Busby's claim and that he simply was sending it to BIA's Washington office to see if it could be paid. We examine the November 5 letter not as part of the settlement agreement, because only the contracting officer signed it, but as extrinsic evidence of whether the October 31 agreement was integrated.

The contracting officer's representations are inconsistent not only with the unambiguous terms of the October 31 letter, but also with his November 5 letter, in which he stated that he concurred with the amount claimed, but no funds were available in Billings, so he was forwarding appellant's "claim" to Washington for "processing". The Washington office did not have any decisional role. The only practical purpose of

©1994, Commerce Clearing House, Inc.

Digitized by Google

forwarding the "claim" was to reflect the contracting officer's decision allowing it and to get it paid, just as Busby had requested and the parties had agreed.

Further, the contracting officer's statements are illogical. He did not dispute the validity of Busby's reduced claimed in his affidavit, or even claim that he notified Busby that he had not yet made a determination on the merits. Mr. Graham wrote that he concurred with "the amount claimed." This can only mean that he had determined that the reduced claim was valid, because the contracting officer has no role in determining the amount of a contractor's "claim" (nor can he control the nature of a claim, as attempted in his February 18 decision: "The fact that there may have been a shortfall in CSF does not constitute a claim against the Government"). He can only agree or disagree with it, or agree with it in some modified form after negotiations, as he did here.

Indeed, in his final decision denying the claim, Mr. Graham stated that, at the October 29, 1991, meeting, the parties had agreed to "the amount of the claim or shortfall," indicative both of his interpretation of the term "claim" and that, at a minimum, he had acknowledged the possibility of a CSF shortfall. As long as there was a good faith dispute, BIA had an interest in resolving the claim.

Thus, we find BIA's proffered extrinsic evidence unpersuasive and conclude that there was an integrated, final settlement agreement.

[8] We turn to interpretation of the agreement and derive the parties' intent from the plain language of the instrument as a whole, harmonizing and giving a reasonable meaning to all of its parts, without out of context analysis or regard to the subjective unexpressed intent of one of the parties. *Gould, Inc. v. United States* [37 CCF ¶ 76,108], 935 F.2d 1271, 1274 (Fed. Cir. 1991); *Thanet Corp. v. United States* [25 CCF ¶ 82,997], 591 F.2d 629, 633 (Ct. Cl. 1979); *ITT Arctic Services, Inc. v. United States* [21 CCF ¶ 84,288], 524 F.2d 680, 684 (Ct. Cl. 1975). When contract provisions are clear and unambiguous, they must be given their plain and ordinary meaning. *George Hyman Construction Co. v. United States* [34 CCF ¶ 75,378], 832 F.2d 574, 579 (Fed. Cir. 1987).

BIA did not establish that the contracting officer's alleged intent was anything other than subjective and unexpressed. Moreover, when we interpret all portions of the settlement agreement to find harmony, rather than conflict, and give its words—such as "negotiation", "settlement", "resolution", "settlement amount agreed to", "[Busby's] award", "process the award for payment" and "agree"—their plain meaning, we find the agreement clear and unambiguous.

Appellant's $258,203 claim was compromised and resolved at $114,719.

[9] The contracting officer's reversal of position suggests that someone decided he had made a mistake in settling with Busby. Regardless, when a valid and binding settlement agreement has been created, neither party can cast it aside without the most compelling of reasons, including proof of invalidity, either by fraud or mutual mistake. A unilateral mistake is not sufficient to limit or avoid the effect of an otherwise valid settlement agreement. *Cheyenne-Arapaho,* 671 F.2d at 1309, 1311.

Although it has not been necessary for us to address appellant's alternate argument that the contracting officer's November 5, 1991, letter constituted a final CDA decision, it is, nonetheless, clear that he decided that Busby's reduced claim was acceptable and settled it accordingly. As the Court of Claims emphasized in analogous circumstances, when the Army later determined not to fund a cost overrun after a contracting officer with full authority had agreed to do so:

> We find * * * that [the contracting officer] was aware of the overrun situation and his indication of concurrence meant exactly what it said: that he, as contracting officer, approved the funding of the overrun and favored reimbursing plaintiff for its costs. Under the facts present here, we believe that when an authorized contracting officer expresses a definite opinion concerning the merits of the claim with knowledge of the relevant facts, a "decision" has been made.
>
> As we have emphasized numerous times, it is the unfettered opinion of the person delegated as decision-maker by the parties to the contract that is determinative. * * * the decision of a duly authorized contracting officer could not be defeated by a funding official * * *. Nor, by implication, could the [contracting officer's] finding be reversed by a successor contracting officer. [Citations omitted.]

General Electric Co. v. United States [13 CCF ¶ 82,881], 412 F.2d 1215, 1221 (Ct. Cl. 1969).

Digitized by Google

If, as a fully authorized contracting offcer, Mr. Graham had applied his signature to the October 31 letter without considering its import and had sent a "claim" to Washington for processing which he did not consider to be valid, or worthy of settlement and payment, he would have been abusing his discretion, which we will not assume. Unless there is evidence to the contrary, the law presumes that official actions are properly taken. *Id.*

BIA has failed to invalidate the settlement agreement reached by its authorized contracting officer. All of the elements of an express contract, and of a compromise and accord, were met in the October 31, 1991, agreement, but there has been no satisfaction, because BIA has reneged.

Decision

Summary judgment is granted for appellant in the amount of $114,719, plus interest under the CDA computed as of May 17, 1991, the date the contracting officer received its certified claim.

[¶ 26,328] Donald Cooley dba Mojave Equipment Company, Inc., and Mojave Equipment Sales

AGBCA No. 93-202-7, August 31, 1993.

Procedure, Boards—Motion to Vacate—Error of Law.—A joint motion to vacate a prior ruling that a notice of proposed debarment served to debar the contractor as of the date of its appeal to the board was denied because the board could not conclude, as a matter of law, that it erred in holding that the contractor was debarred at the time of appeal. After issuing its ruling that interpreted the notice of proposed debarment, the board dismissed the ruling with prejudice on the ground that there was inadequate evidence to substantiate allegations against the contractor. However, the record did not indicate that the ruling contained any errors of law or fact that would support vacating the prior ruling. The cross motions to vacate did not present any evidence of the debarring official's subjective intent or of the parties' understanding of that intent. The contractor's wish to clear the record of any hint of debarment and the government's desire to show that it did not intend to deny due process were insufficient reasons for vacating the ruling.

For the appellant: Manatt, Phelps & Phillips, Attorneys at Law, Washington, D.C., by James H. Roberts. For the government: Alan D. Groesbeck, Office of the General Counsel, U.S. Department of Agriculture, Washington, D.C.

Before EATON, HOURY, and DOHERTY, Administrative Judges.

Motion to vacate 93-3 BCA ¶ 26,210 denied.

EATON, Administrative Judge: Donald Cooley, dba Mojave Equipment Company, Inc., and Mojave Equipment Sales, of Victorville, California (Appellant), and the Forest Service, U.S. Department of Agriculture (USDA), jointly move to vacate the Board's Ruling of July 19, 1993, *Donald Cooley, dba Mojave Equipment Co., and Mojave Equipment Sales,* AGBCA No. 93-202-7, 93-3 BCA ¶ 26,210, 1993 WL 267112 (July 19, 1993).

In that Ruling, the Board interpreted a notice of proposed debarment, provided to Appellant by letter dated April 23, 1993, which stated that the action would "become final and effective 30 days after receipt of this letter." Appellant had moved for summary disposition, alleging that the notice constituted a *de facto* suspension because, pursuant to the Federal Acquisition Regulation (FAR), 48 CFR §§ 9.404 and 9.405, its name had been placed on a Government-wide list of contractors ineligible for offers, awards, or subcontracts. The Government, in a cross motion for dismissal, argued that the Board had no jurisdiction over a mere "proposed" debarment.

The Board held that the notice, which advised Appellant that any information and argument opposing the proposed action should be submitted within 30 days, but gave no indication that the period would be tolled by submission of information, as contemplated by 48 CFR § 9.406-3(a)(2), or participation in a hearing, as provided by implementing USDA regulations, 48 CFR § 409.406-3(c), served to debar Appellant as of June 1, 1993, the date of its appeal to the Board. The Board retained jurisdiction, but

©1994, Commerce Clearing House, Inc.

Digitized by Google

declined to dispose of the appeal summarily. The Board further stated that it had no objection to the parties participating in an informal hearing, but would regard such as more in the nature of settlement negotiations than an administrative remedy that must be exhausted.

The parties met and subsequently moved for dismissal on grounds that USDA's Debarring Official had determined there was not adequate evidence to substantiate allegations against Appellant; that Appellant was presently responsible; and that the debarment should not have been imposed. On August 13, 1993, the Board granted the motion and dismissed the appeal with prejudice. *Donald Cooley, dba Mojave Equipment Co., and Mojave Equipment Sales,* AGBCA No. 93-202-7, 1993 WL 308865 (Aug. 13, 1993).

On August 17, 1993, the parties filed a second joint motion, seeking to vacate the Ruling of July 19, 1993. Attached to the motion was a letter dated August 12, 1993, from the Debarring Official to counsel for Appellant, which stated in pertinent part:

> On July 22, 1993, I met with you and your client ... Based on this conference, and based on my examination of Mr. Cooley and Mr. Forster (of Mojave Equipment Company), I have determined that it would not be appropriate to debar Mr. Cooley, *et al.,* from doing business with the Government ... It was never the intention of the Department that this notice of proposed debarment should ripen into a debarment by the mere lapse of time. Accordingly, I am withdrawing the debarment of Mr. Cooley, *et al.* Furthermore, Mr. Cooley, *et al.'s* status as being proposed for debarment is terminated ...

In considering this motion, we use the Federal Rules of Civil Procedure as guidelines. Federal Rule 60(b) states in pertinent part:

> On motion and upon such terms as are just, the court may relieve a party or the party's legal representative from a final judgment, order, or proceeding for the following reasons: (1) mistake, inadvertence, surprise, or excusable neglect; (2) newly discovered evidence ... (3) fraud ... (4) the judgment is void; (5) the judgment has been satisfied, released, or discharged, or a prior judgment upon which it is based has been reversed or otherwise vacated ... or (6) for any other reason justifying relief from the operation of the judgment.

There is some authority that an error of law will justify relief under Rule 60(b). *See Zinger Constr. Co.,* ASBCA Nos. 28788 and 39873, 91-1 BCA ¶ 23,303 and cases cited therein. In this case, however, the Debarring Official's letter clearly and unequivocally stated that the debarment would become final 30 days from Appellant's receipt of notice of the proposed action. We therefore cannot conclude that the Board erred in holding, as a matter of law, that Appellant had in fact been debarred at the time of appeal.

Nor do we find an error of fact in our Ruling. There was no evidence in the cross motions before the Board of the Debarring Official's subjective intent, and no persuasive evidence of the parties' understanding of that intent.

The Board is sympathetic to Appellant's apparent wish to clear the record of any hint of debarment, so as to maintain its reputation and standing in the procurement community. We also recognize the Debarring Official's apparent desire to demonstrate lack of any intent to deny Appellant due process. As reasons to vacate our prior decision, however, these are not within the purview of Rule 60(b). The Board's published decisions on the motion to dismiss and on this Motion, however, amply set out the positions of the parties for these purposes.

RULING

We deny the Joint Motion to Vacate the Board's Ruling of July 19, 1993. The Ruling, and the August 13, 1993, dismissal of the appeal with prejudice, stand.

[¶ 26,329] Diversified House Logs, Inc.

AGBCA Nos. 93-197-R, 93-198-R, 93-199-R, August 31, 1993.

Procedure, Boards—Reconsideration—Arguments Already Considered.—Reconsideration of the board's decision in a consolidated appeal under three timber sale contracts was denied because both parties relied on arguments that they had previously raised. The record showed that the board addressed the issue of the contractor's reliance on an ambiguous interpretation of the contract and that the board properly determined the

Digitized by Google

weight of credibility to afford all evidence, including the contractor's testimony, which the government described as self-serving. Moreover, the contractor did not provide any new arguments or evidence in support of its motion to reconsider the board's favorable ruling for the government in the third appeal.

For the appellant: Murphy, Robinson, Heckathorn & Phillips, P.C., Kalispell, Montana, by Donald R. Murray. For the government: Alan J. Campbell, Office of the General Counsel, U.S. Department of Agriculture, Missoula, Montana.

Before DOHERTY, HOURY, and EATON, Administrative Judges.

Reconsideration of 93-3 BCA ¶ 25,991.

DOHERTY, Administrative Judge: The Government requested reconsideration of this Board's decision in the consolidated appeals of *Diversified House Logs, Inc.*, AGBCA Nos. 92-212-1, 92-213-1 and 92-214-1, 93-3 BCA ¶ 25,991, 1993 WL 119821 (Apr. 16, 1993). In the opinion the Board ruled favorably to Appellant in the first two appeals and for the Government in the third. Appellant subsequently sought reconsideration of the third case and the Government moved dismissal of that motion on the basis that it was not timely. Since we find no basis to reconsider our earlier decision, we do not deal with the procedural niceties of the Government's perhaps inadvertent request for reconsideration of the third case and how that might bear on the timeliness of Appellant's submission.

The referenced appeals involved three timber sales. In each case Appellant asserted the right to harvest dead lodgepole pine in defined areas outside sale unit boundaries. The Government defended disallowance of such harvest on the basis of contract interpretation and, in the instance of the third sale, notice prior to award of its interpretation. As to the first two cases, the Board found Appellant's interpretation reasonable. As to the third, based on the weight of evidence, the Board concluded Appellant had notice of the Government's interpretation prior to bidding and could not therefore rely on a contrary interpretation under the facts of the case.

It is well established that reconsideration is discretionary with the Board and that reconsideration will not be granted in the absence of a compelling reason, *i.e.*, newly discovered evidence which could not have been discovered at the time of the original proceeding. Reconsideration is not intended to allow the moving party to reargue its position. *Ben Henderson Logging*, AGBCA No. 86-288-1, 86-3 BCA ¶ 19,212. Arguments that could have been raised at the time of the original proceeding do not provide a basis for reconsideration. *Eagle Contracting, Inc.*, AGBCA No. 92-197-R, 93-1 BCA ¶ 25,320; *Samuel W. Riddle*, AGBCA No. 87-375-1, 88-1 BCA ¶ 20,372.

The Government argues the Board did not address the issue of reliance on an ambiguous interpretation of the contract by Appellant. The Board, in its decision, found the Appellant's interpretation the most reasonable and addressed ambiguity only as an alternative. To the extent the issue was considered important by the Government there was an opportunity to raise and develop the matter prior to the Motion to Reconsider. While not a matter emphasized by the parties, the Board found Appellant's business relied on dead lodgepole pine; both parties wanted to salvage such material; there was environmental litigation and legislation to allow the sales; Appellant participated in those efforts believing the purpose was to sell such materials; Appellant separately cruised the materials including dead lodgepole; and Appellant considered the application of grizzly bear habitat and the unavailability of other materials. Contrary to the Government's assertion on reconsideration, although not made an issue at the time, the Board did in fact consider Appellant's reliance. In Finding of Fact (FF) 21 we found that Appellant concluded he could not compete with other bidders and reduced his bid after the Government announcement that it would not sell timber in the disputed 200-foot buffer zone.

The Government next argues the Board should not rely on testimony of Appellant as self-serving.

The most common witness in Board proceedings, regardless of who else may be called for either side, is the Appellant. The Government asserts that the Board cannot rely on an Appellant's testimony as it is self-serving and, having done such, the Board's opinion should be reconsidered and reversed.

The Board determines the weight of credibility to afford all evidence and in fact accepted as cited testimony of Appellant.

©1994, Commerce Clearing House, Inc.

Digitized by Google

On the other hand, Appellant restates the evidence offered on the third case and restates those arguments previously presented; principally that he did not know the Government interpretation at the time of bidding the third contract. We found other evidence more persuasive. No new previously unavailable evidence was offered.

RULING

We find nothing in either party's submissions seeking reconsideration that could not have been argued at the time of the Board's consideration of the appeals. The Motions for Reconsideration are denied.

[¶ 26,330] M.C. & D. Capital Corp.

ASBCA Nos. 38181, 40159, August 30, 1993. Contract No. DACA27-85-C-0041.

Procedure, Boards—Reconsideration—Arguments Already Considered.—A "request for an order for award proceedings," treated as a motion for reconsideration of an earlier decision, was denied because it presented no new facts or arguments.

For the appellant: James H. Smith, Downey, California. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Carlton A. Arnold, Engineer Trial Attorney, U.S. Army Engineer District, Louisville.

Before FREEMAN, RIISMANDEL, and RUBERRY, Administrative Judges.

Reconsideration of 93-3 BCA ¶ 25,925.

FREEMAN, Administrative Judge: M.C.& D. Capital Corp. (MC&D) has submitted a "Request for Order for Award Proceedings" with respect to its application under the Equal Access to Justice Act, 5 U.S.C. § 505. The request is dated 5 April 1993. The application to which it refers, however, was denied on the merits by our decision dated 9 March 1993.

Considered as a motion for reconsideration, the request presents no new fact or argument that was not previously considered by the Board at the time the application was denied. On reconsideration, we find no error in our original decision and reaffirm denial of the application.

[¶ 26,331] Petrie Brothers Logging, Inc.

AGBCA No. 92-218-1, August 31, 1993.

Sales of Government Property—Timber Sales—Price Index.—The board would not rule that it was improper to use a regional lumber index to adjust prices under a timber sale contract, even though the same index had been found inadequate under identical contract terms by the United States Claims Court (*Arcata Forest Products Co. v. U.S.* (ClCt 1989) 35 CCF ¶ 75,725), because the purchaser had left the board with only speculation as to the actual relationship of the index to the relevant market. The government offered no evidence of the validity of the index at best; at worst, the government showed disregard for the relationship of the index to actual experience. The contractor, on the other hand, strongly argued for lack of relevance of the index but offered no supporting evidence. In *Arcata*, the court had evidence of direction and amplitude of change experienced by a significant group of affected firms.

For the appellant: Pat Petrie. For the government: Marcus R. Wah, Office of the General Counsel, U.S. Department of Agriculture, Missoula, Montana.

Before DOHERTY, GISH, and EATON, Administrative Judges. Separate concurring opinion by Administrative Judge EATON.

DOHERTY, Administrative Judge: This appeal arises under Forest Service Timber Sale contract No. 753512 awarded to Appellant April 30, 1991. The contract, known as the

Digitized by Google

Bruin Beetle Salvage Sale, was located in Shoshone County, Idaho, on the Avery Ranger District of the Idaho Panhandle National Forests. Appellant appeals a Contracting Officer's (CO's) final decision dated May 26, 1992, that denied two claims under the contract. Appellant claims $30,164.56 was improperly charged under the contract's price escalation provision and seeks refund of $3,730.62 in disputed road fees.[1]

A hearing was conducted at Coeur D'Alene, Idaho, April 8, 1993. The Board has jurisdiction under the Contract Disputes Act (CDA) of 1978 (41 U.S.C. § 601 *et seq.*).

FINDINGS OF FACT

1. Petrie Brothers Logging Inc., was awarded Forest Service Timber Sale contract No. 753512 April 30, 1991. The contract was known as the Bruin Beetle Salvage Sale and was located on the Avery Ranger District of the Idaho Panhandle National Forests in Shoshone County, Idaho (Appeal File (AF) E-1-1, F-1-1, G-16-1; Tr. 4). Award was based on sealed bids followed by oral auction April 30, 1991 (AF E-1-1, E-2-1, E-3-1). The contract provided in the Instructions to Bidders that award was to be by written award to the successful bidder (AF E-3-4). Award was by letter dated April 30, 1991 (AF G-16-1), which stated in part:

> You were the high bidder on the BRUIN BEETLE SALVAGE Timber Sale held on April 30, 1991. The sale is hereby awarded to you, effective April 30, 1991.
>
> Enclosed for your signature and certification are three copies of the timber sale contract. Also enclosed are two copies of the Performance Bond Application. Your Performance Bond needs to be in the amount of $15,000.00.

2. Prior to bidding Appellant obtained the Timber Sale Prospectus for the sale (Tr. 7, 33). That document indicated there were required deposits and road maintenance costs that would be adjusted each year (AF E-1-2). The prospectus also included the statement that "Bid rates for timber, except Dead Lodgepole and Dead White Pine, will be tentative, subject to quarterly adjustment during the contract period" (AF E-1-2; *see* Tr. 78-79).

3. Timber payment rates were included at contract provision A5. At A5a rates were entered for Species and Products to be Paid for at Rates Escalated under B3.2 (AF F-1-3; *see* Tr. 80-81; *see also* Tr. 127 and B4.223 **Deposits for Changes Subject to Escalation,** AF F-1-20). Definitions of terms used in A5 included Bid Rates as rates bid by the purchaser exclusive of deposits and consisting of the sum of advertised rates and bid premium rates. The definition further stated that until rate redetermination became effective, the bid rate for species and products in A5a would be the Tentative Rate which was subject to quarterly adjustment under B3.2 (AF F-1-4). The Base Index was entered in A5a as $229.61 per thousand board feet (MBF) as was Appellant's "bid (Tentative)" of $83 per MBF (AF F-1-3).

Base Index was defined in the contract (AF F-1-4) as follows:

> **Base Index** is the specified average of the lumber or other product selling value index used as the basis for computing adjustment in rates for variance in product selling value as provided in B3.2. Base Indices shall be redetermined when rate redeterminations are made under B3.31.

4. Clause A6—Indices used in Quarterly Adjustment applicable to B3.2 (AF F-1-4) listed the Douglas-fir—Larch Index (1985-86 Basis). The index was the Western Wood Products Association Inland Lumber Price Index (Appellant's (App.) Exhibit (Ex.) 3, Government's (Gov't) Ex. 2, AF D-2-1; *see* Tr. 80-85).

5. Clause B3.2 was included in the contract as follows (AF F-1-18):

> **B3.2 Escalation Procedure.** Tentative Rates for those species and products listed in A5a are subject to quarterly escalation in accordance with the following procedures: The calendar-quarter index average for each price index described in A6 is the arithmetic average of the three such monthly price indices preceding January 1, April 1, July 1, and October 1. The difference between said calendar-quarter index average and Base Index listed in A5a shall be the basis for quarterly escalation. To arrive at Current Contract Rates for timber scaled during the preceding calendar quarter, Tentative Rates for each species shall be: (a) reduced by such difference when the calendar-quarter index average is less than Base Index except that a reduction shall not result in a rate below Base Rate, or (b) increased by half of such difference when the calendar-quarter index

[1] The parties specifically agreed that the Government's arithmetic computations were not in dispute but that Appellant challenged the appropriateness of the adjustments made under the terms of the contract (Transcript (Tr.) 7,17,143).

©1994, Commerce Clearing House, Inc.

Digitized by Google

average is greater than Base Index except that no increase shall exceed the difference between Tentative Rate and Base Rate.

6. The contract included clause B3.21 Unavailable or Inadequate Index as follows (AF F-1-18):

B3.21 Unavailable or Inadequate Index. If an index described in A6 is no longer available or there is reason to believe said index is an inadequate indication of product-price fluctuations, the unavailable or inadequate index may be replaced by another suitable index commonly acceptable in the industry. When there is no replacement index, Current Contract Rate for the remainder of the sale shall be a Flat Rate derived from adjustment of Tentative Rate by the arithmetic average for the index for the preceding 12 months, using the procedure described in B3.2 for quarterly adjustment. Such Flat Rate shall be subject to rate redetermination as provided elsewhere under this contract.[2]

7. Appellant was aware the sale was based on quarterly adjustment (Tr. 9, 39). At the time of the sale Appellant believed adjustment would be based on local log prices (Tr. 24, 37-40, 51-52, 131-132). The sale in issue was the first escalation sale Appellant had purchased (Tr. 32). Appellant relied most heavily on the prospectus with some review of the sample contract (Tr. 33-34). The prospectus is to provide sufficient information in addition to the advertisement of the sale to enable prospective bidders to determine if further investigation of the sale is warranted prior to bidding (AF E-1-1; Tr. 76).

8. The Base Index was $229.61 per MBF; it was in the appraisal summary (AF D-2-1, line 52) and the Western Wood Products Association Inland Lumber Price Index Douglas Fir-Larch (1985-86 Basis) of December 1990 (App. Ex. 3). The base index figure was based on December 1990 prices as that was the figure used in the appraisal (AF D-2-1; Tr. 83, 86-87, 116). The contract stated what the index was and how used but did not identify why the December 1990 index was used (Tr. 87, 89). Contract prices were adjusted upward on the basis of the index (Tr. 94-96; Gov't Ex. 6).

9. Contract clause B3.2 (Finding of Fact (FF) 5) and the Western Wood Products Index have been used with some minor modifications for 25 to 30 years, and in the present format since 1973 (AF F-1-14; Tr. 100-101). The Government expert testified that normally local log prices are not checked, and that he thought the index equitable because he believed lumber prices have an influence on log prices (Tr. 121-122).

10. Prices generally go up in the summer and down in the winter; however that is not always true nor is the season the only factor (Tr. 118-119). It is likely that the price paid for timber will vary from the base index quarter because of the lag between appraisal, advertising, bidding, award, and harvest of timber (Tr. 125, 129).

11. Appellant's bid was $83 per MBF with a Base Index of $229.61 per MBF (AF F-1-3, E-4-1; Tr. 79-80, 84, 87, 92). The rate charged was increased by one half of the increase experienced in succeeding quarters' lumber price index (Gov't Ex. 6). For example, in the second quarter the index rose to $264.73 (App. Ex. 3) or an increase of $35.12. One half of that, or $17.56, was added to the bid of $83 for a price of $100.56 charged for timber hauled during that quarter (Tr. 94-96; Gov't Ex. 6 and 1 at AF I-15-3).

12. The amount claimed, $30,164.56, represents the approximate difference between the amount bid for the timber harvested and the amount paid at adjusted rates (AF C-1-3; *see* Tr. 9-10, 22-24).

13. Road maintenance deposits are collected under authority of the National Forest Roads and Trails Act of October 13, 1964 (16 U.S.C. § § 532-538). Rates are established by the Forest Engineer with approval by the Forest Supervisor. The contract provided for deposits at **C5.4#—ROAD MAINTENANCE** [*see* reference therein to C5.411#, C5.412#, C5.414#, and C5.45#] (AF F-1-40), **B5.4 Road Maintenance,** and **B5.41 Road Maintenance Deposits.** (Gov't Ex. 5; Tr. 103-106.) Fees collected included: recurrent road maintenance C5.45# (AF F-1-54, *see* specific work elements AF F-1-42—F-1-50; Tr. 108-109), surface replacement C5.414# (AF F-1-51—F-1-52), and roadside vegetation C5.415# (AF F-1-53; Tr. 142).

14. The Timber Sale Prospectus (AF E-1-1—E-1-5) indicated required deposits and cost share road maintenance for which the purchaser would be responsible. The prospectus informed interested parties that road maintenance deposits would be required, including vegetation control at included rates, and the deposits would be

[2] Causes B3.2 and B3.21 were supplemented at clauses C3.2 and C3.21 respectively (AF F-1-33). The supplemental language is not considered material under the facts of this appeal.

Digitized by Google

adjusted annually (AF E-1-2). The prospectus was based on hauling the timber to a location in Montana (AF E-1-2, *see* AF D-2-1, D-3-4—D-3-6).

15. Appellant intended to haul the timber over a different route to St. Maries, Idaho (*see* AF G-13-2; Tr. 7). Deposit figures were included in the contract as executed by the parties for both routes, including roadside vegetation deposits (AF F-1-51—53). The record did not include a sample contract or other document available to Appellant prior to bidding that stated what roadside vegetation deposit would be required for the route Appellant intended to use.

16. Prior to bidding on the contract, Appellant asked what the alternate figures for road maintenance would be to St. Maries (Stipulation (Stip.) of the parties; Correspondence File letter of March 29, 1993; Tr. 7).

17. A Forest Service employee without specific contracting authority, but who had been designated by the CO to respond to inquiries regarding the sale (Tr. 59, 70, *see* 73), advised Appellant that St. Maries, Idaho, was 81.4 miles (*see* AF D-3-9) at a fee of $8.28 per MBF (*see* AF D-3-8, F-1-2) for a total cost of $14,572.80 based on the estimated volume of 1,760 MBF. At the same time Appellant was advised the cost share portion of the total road maintenance fee had not been "refigured" for the current year and could change. (Stip.; Tr. 8, 65-66.) The person providing answers to Appellant was designated by the CO because that employee was the one most familiar with the sale (Tr. 59-60).

18. Appellant was charged $10.47 per MBF instead of $8.28 per MBF. The actual volume hauled to St. Maries, Idaho, was 1,712.04 MBF. Consequently, the total amount paid by Appellant for road maintenance fees was $17,925.05 ($10.47 multiplied by 1,712.04). (Stip. of the parties; AF I-1-1; Tr. 139-141.)

19. The figures used in computing the $8.28 Appellant was informed of (AF D-3-8) may be compared to the figures used in computing the $10.47 (Tr. 139-141) charged as follows:

Road Maintenance Summary	Told	Charged
Recurrent Maintenance (Purchaser)	$ .82	-
Recurrent Maintenance (Cost Share)	2.50	$ 4.01
Recurrent Maintenance (FS)	-	-
Surface Replacement (FS)	4.04	4.04
Road Reconditioning (Purchaser)	.92	-
Roadside Vegetation (Purchaser)	-	2.42
Totals	$8.28	$10.47

20. The $8.28 figure was taken from the Forest Service timber sale appraisal appendix at (4) Road Maintenance Summary. The appendix is the work sheet used in computing road costs for the sale appraisal. The road maintenance summary form did not have a line item for roadside vegetation. (AF D-3-8; Tr. 61.) Bidders were on notice the document was available and should be reviewed prior to bidding (AF E-1-1, E-2-1; Tr. 62-64).

21. The Timber Sale Appraisal Appendix (AF D-3-1—D-3-13) included all required deposits for the route to Montana (AF D-3-6) but omitted the amount to be deposited for roadside vegetation control ($2.42 per MBF) (AF D-3-8; C5.414, AF F-1-53; Tr. 136) for the route planned by Appellant to St. Maries, Idaho. The vegetation deposit was a new requirement that should have been included for both routes (Tr. 136-137).

22. The $8.28 included two items for $.82 and $.92 that were estimated performance figures for Recurrent Maintenance and Road Reconditioning. These figures would not be required deposits but were cost estimates for work to be performed by the purchaser on the ground. (Tr. 138.)

23. The Recurrent Maintenance (Cost Share) was, in accord with the contract as Appellant had been advised (*see* FF 12, 13, and 16, *supra*), adjusted from $2.50 to $4.01 (AF F-1-23 (B5.4), F-1-54 (C5.45), G-11-1, I-1-1).

DISCUSSION

Appellant claims $30,164.56 as the approximate difference between the amount paid for timber harvested and the amount that would have been charged at Appellant's original bid (FF 12). Appellant knew at the time he bid on the contract that the price would be adjusted on a quarterly basis. Appellant misunderstood the method of adjustment, thinking that it would be related to local log prices. (FF 2, 7.) Appellant also asserts the price should not have varied in the first quarter, noting that the price of the timber increased before he could cut any. Appellant argues the general propriety of escalation for

©1994, Commerce Clearing House, Inc.

Digitized by Google

sales such as the one here considered and the appropriateness of using a regional lumber index to adjust prices for material sold locally as logs.

Appellant did not offer any alternate basis of computation. He did argue that he relied on some discussions with various people in the Forest Service without specifics as to who provided what particular information. The record includes general assertions as to log sales but does not include any specific evidence of prices Appellant may have received for the timber. More specifically, neither side produced evidence of the actual product price fluctuations on which the Board could base a determination of the index adequacy.

The contract clearly stated that rates were subject to quarterly adjustment and stated the procedure for adjustment including the Base Index and the price index to be used (FF 3, 4, 5, 8). The Base Index was taken from the December 1990 index price (FF 8). Adjustments were based on calendar-quarter index averages (FF 5). There was no explanation of why a monthly price was used as the base except that it was the figure used in the Forest Service's appraisal (FF 8) when a quarterly average was designated in the contract as the basis for adjustment (FF 5). Appellant asserts the December price was used because it was the lowest for the year. Prices generally go up in the summer and down in the winter. That is not always true nor is the season the only factor affecting prices. (FF 10.)

Appellant's honest belief that payment rates were governed by local log prices and expectation that adjustment would not be made in the first quarter of cutting cannot alter the clear and unambiguous terms of the contract. *Hickman Mechanical, Inc.*, GSBCA No. 11787, 93-1 BCA ¶ 25,546; *Zinco Gen. Contractors*, GSBCA No. 5652, 80-2 BCA ¶ 14,785. An Appellant cannot rely on general oral advice particularly to support assumptions regarding contract requirements that are not reasonable. *See Winandy Greenhouse Co.*, AGBCA No. 88-239-3, 89-1 BCA ¶ 21,495.

The Board may consider whether the index was inadequate under the contract. The apparent same index has been found inadequate under identical contract terms where it was shown not to reflect product prices for the north coast of California. *Arcata Forest Prods. Co. v. United States* [35 CCF ¶ 75,725, 8 FPD ¶ 116], 18 Cl. Ct. 93 (1989) modified Aug. 25, 1989, *aff'd* without published opinion, 915 F.2d 1584 (Fed. Cir. 1990). In that case, the court recognized the intent of the parties was to split the risk of rising and falling markets, avoiding a windfall to either party. That objective is defeated when market changes presumed from the index are not experienced in actual sales.

The Government offered no evidence of the validity of the index at best; at worst the Government showed disregard for the relationship of the index to actual experience (FF 9). The Contractor, on the other hand, strongly argued the lack of relevance of the index but offered no supporting evidence. In the *Arcata* case, *supra*, the court had evidence of direction and amplitude of change experienced by a significant group of affected firms.

In an appropriate case on the basis of adequate evidence this Board would not hesitate to set aside an index shown not to be relevant. Here, left only to speculate as to the actual relationship of the index to the relevant market, the Board will not assume it inappropriate.

Appellant's second claim of $3,730.62 represents the total increase in road deposits from pre-contract information to the amount he was charged.[3] There was undisputed authority for road deposits and for annual adjustment thereof (FF 13-14, 17). Appellant knew of the requirement and sought information regarding the deposits prior to bidding (FF 16). Bidders were directed to the timber sale appraisal appendix for information regarding the sale (FF 20).

Information was provided to the Appellant from the designated source by a qualified Forest Service employee designated by the CO to give such information (FF 17). The information included a figure taken from that data that purported to be the current unadjusted road maintenance figure of $8.28 (FF 19). That figure was in error in two respects. First, it included two items of $.82 and $.92 that were not required deposits (FF 22). Second, it did not include a new required deposit of $2.42 for roadside vegetation control (FF 21). The Government has an obligation to assure reasonable accuracy in contract documents. *Tidewater Contractors, Inc.*, AGBCA No. 90-195-1, 93-3 BCA

[3] The figure used by the parties ($3,730.62) varies slightly from the computed amount: that is, the figure charged per MBF ($10.47) minus the pre-bid figure given apellant ($8.28), or ($2.19) times the volume cut (1,712.04) equals $3,749.37.

Digitized by Google

¶ 26,050; *Recon.* 1993 WL 193310 (June 8, 1993).

The Government argues that correct figures could have been obtained from the sample contract Appellant reviewed (*see* FF 7; *see also* the CO's final decision at AF C-1-4). The deposit for roadside vegetation was included in the contract (FF 15). The Government does not, however, reference, and we do not find evidence of when, if ever, the figure in question was included in the sample contract available prior to the time of bidding (*see* FF 1).[4]

In accord with the Instructions to Bidders, the contract was awarded and was binding on the parties with the notice of award (FF 1). Signature by Appellant was not necessary to the award. *K. L. McNew,* AGBCA No. 86-221-1, 91-1 BCA ¶ 23,483; *see McMillen Lumber Co.,* AGBCA No. 85-110-1, 88-3 BCA ¶ 21,071. The parties do not raise the potential Government defense that the contract signed by Appellant after award contained a rate for roadside vegetation not included in the pre-award information (FF 15, 19).

Refraining from that argument is consistent with the doctrine of equitable estoppel which acts to prohibit a party from raising a defense or objection otherwise permitted, or from bringing an action which could be pursued under normal circumstances. The doctrine's four requirements would appear to have been met in this case. That is, the Government knew the facts in that it changed the contract; it offered the prior information intending it to be relied on by bidders; and Appellant was unaware of the vegetation deposit figure when bidding and relied on the figures given to his detriment. *Eel River Sawmills, Inc. v. United States,* [38 CCF ¶ 76,473] 27 Fed. Cl. 604 (1993).

Appellant has an obligation to apprise himself of relevant contract information and is charged with that knowledge that a reasonable investigation would disclose, including review of information to which he is directed. *Donald R. Stewart & Assoc.,* AGBCA Nos. 84-226-1 *et seq.,* 92-1 BCA ¶ 24,705; *see Page Constr. Co.,* AGBCA Nos. 92-191-1, 92-228-1, 93-3 BCA ¶ 26,060, 1993 WL 169184; *also* 1993 WL 160316 (May 13, 1993). Appellant did that. He obtained and relied on information from the relevant documents by calling the Forest Service. He received the information as it was included therein. At some point the Government added the roadside vegetation deposit amount to the contract without advising Appellant.

Where the Government fails to disclose to bidders information that is vital for preparation of estimates and for contract performance, the Government is liable. *Jack L. Olsen, Inc.,* AGBCA No. 87-345-1, 93-2 BCA ¶ 25,767. Here the Government knew when it added roadside vegetation to the figures previously included in the timber sale appraisal (FF 18, 20, 21). The Contractor neither knew or should have known of the additional deposit and, by virtue of having given information and then adding an additional deposit, the Government should have been aware of Appellant's lack of knowledge.

The Government vigorously and correctly asserts the well known axiom that the Government is not bound by unauthorized acts of its employees. *Federal Crop Ins. Corp. v. Merrill,* 332 U.S. 380 (1947); *RMTC Sys.,* AGBCA No. 88-198-1, 91-2 BCA ¶ 23,873; *Pine Mountain Lumber Co.,* AGBCA No. 83-194-1, 83-2 BCA ¶ 16,880. There is some evidence of authorization (FF 17). *See Max Drill, Inc., v. United States* [15 CCF ¶ 83,691], 427 F.2d 1233 (Ct. Cl. 1970). We need not decide that issue, however, as the Government employee acted only as a conduit to provide that information to which Appellant had been directed otherwise (FF 20).

There is no evidence in the record to indicate Appellant or any reasonably knowledgeable potential bidder would have been more perceptive than the designated Forest Service employee in reviewing the information provided. The vegetation deposit was new (FF 21) and there was no indication it was not included within another heading. Should Appellant have noted any discrepancy it would have been that the $.82 and $.92 figures were not required deposits but were estimates used for computation by the Forest Service (FF 22). There was no reason for Appellant to compare the two routes if there was no interest in the first.

It is most reasonable to conclude that after Appellant was provided the information on which he relied in bidding, the Government knowingly completed or corrected computation for the route in question and prepared the contract for award with such figures in-

[4] The Presiding Judge at the hearing specifically asked both Government witnesses how a bidder would get to the correct figure for the deposit. The first witness stated the question would be better directed to the second witness (Tr. 69). The second witness referred only to the contract (Tr. 141-142), not to the sample contract or any other source.

©1994, Commerce Clearing House, Inc.

Digitized by Google

cluded. The award letter enclosing three copies of the contract was dated the day Appellant was the high bidder at oral auction (FF 1). There was no evidence offered to indicate Appellant or any other bidder was advised of an amendment to available contract information.

Under such facts we find the contract on which Appellant bid, and which Appellant was awarded, is the contract by which the parties are bound. In that contract the $2.42 per MBF was not included (FF 21). However, two figures of $.82 and $.92 (FF 22) were included and considered by Appellant in bidding. Appellant was therefore misled in the amount of $.68 and is entitled to refund of that amount paid per MBF for the 1,712.04 MBF purchased or $1,164.19. Appellant is not entitled to an adjustment for increases in recurrent maintenance costs (FF 23) as he was on notice that such costs would be adjusted.

DECISION

The appeal is allowed in the amount of $1,164.19. The remainder of the appeal is denied.

SEPARATE OPINION BY ADMINISTRATIVE JUDGE MARILYNN M. EATON CONCURRING IN RESULT

This appeal concerns a salvage timber sale. Appellant first challenges the Forest Service's quarterly adjustment of bid rates on the basis of a Western Wood Products Association (WWPA) index for Douglas fir and larch. Appellant's contract clearly set out the procedure for adjustment, as well as for use of an alternate index if the index specified were inadequate or outdated.

The majority indicates that in an appropriate case, the Board would consider whether the WWPA index was adequate. In this appeal, however, Appellant primarily argues that for a salvage sale, *any* index is inequitable and a gamble. I would not conclude that the Government disregarded the relationship of the index to actual experience simply because local log prices were not checked. Nor in this case would I shift the burden to the Government to establish the validity of the index. The Forest Service's use of an index is not *per se* illegal or improper, and I would deny Appellant's first claim on that basis.

Appellant's second claim is based on information on required road maintenance deposits, provided by telephone, that omitted a $2.42 deposit for vegetation control for the route over which Appellant planned to haul the timber. The appraisal worksheet that a Forest Service employee consulted to determine the figure provided to Appellant also omitted the deposit in question.

The appraisal, however, was merely one of the documents the Timber Sale Prospectus advised prospective bidders was available for review; among others was a sample contract. The Prospectus specifically stated that in event of errors or contradictions, the sample contract would govern. Appellant's representative testified that in addition to telephoning the Forest Service to determine what road maintenance deposits would be required for its planned haul route, he reviewed the sample contract. It is not clear whether such review included road maintenance deposits.

The Instructions to Bidders provided that after completion of the oral auction, award would be made when written Notice of Award was mailed to the successful bidder, without further action by either party. It is clear, therefore, that the terms of the awarded contract are those of the sample contract.

In its brief, the Government asserts that the sample contract contained the $2.42 deposit for vegetation control for Appellant's planned route. The Government has provided no evidence to support this assertion, although the sample contract was within the exclusive custody and control of the Government at all times prior to the auction and award. The sample contract could have been offered at hearing or included in the record as part of the Rule 4 File. It is not before the Board. From this, I would draw the negative inference that the $2.42 vegetation control deposit was not in the sample contract. This is a logical inference, since the figures included in the sample contract would likely have come from the appraisal from which the deposit was omitted. This interpretation is consistent with the Restatement, Contracts, 2d, Section 28(2), which states:

> Unless contrary intention is manifested, bids at an auction embody terms made known by advertisement, posting or other publication of which bidders are or should be aware, as modified by any announcement made by the auctioneer when the goods are put up.

Comment e. *Published and announced terms,* further states:

> The terms on which goods are to be sold at auction are often made known in advertisements or catalogues or posted at the place where the auction is to be held.

Digitized by Google

When the goods are put up, the announcer commonly refers to such terms, and sometimes he announces a modification of the published terms. Ordinarily bidders are or should be aware of terms so published or announced. A bid need not repeat such terms; it is understood as embodying them. Hence the bidder is held to the published or announced terms, even though [the bidder] may have neglected to read them or may have arrived at the auction after the announcement was made. Theoretically, a bidder could make an offer on terms different from those announced, but bidders seldom or never do so.

Here, so far as we can determine from the record, Appellant was never made aware of the $2.42 deposit omitted from the appraisal and, presumably, from the sample contract. There is no evidence that the Forest Service corrected the sample contract before the auction, and no evidence of any modification announced before the auction.

The majority would estop the Government from charging Appellant the $2.42 because of the erroneous appraisal and oral advice based on it. Regardless of the authority or alleged lack of authority of the Forest Service employee providing the advice, I would not permit recovery on the basis of estoppel under the present facts. I would conclude that the sample contract, omitting the $2.42, was the contract on which Appellant bid and the one that the Forest Service awarded. The contract provided to Appellant with the notice of award, corrected to include a deposit for roadside vegetation control, is not enforceable. I concur in the result reached by the majority.

[¶ 26,332] SRP Healthcare, Inc.

ASBCA No. 46227, August 26, 1993. Contract No. F29651-983-00001.

Contract Disputes, Claims—Quantification—Sum Certain.—The board did not have jurisdiction over an appeal seeking a cease and desist order and a declaration that the government breached the contract, even though the appeal may have been seeking money damages as well as injunctive relief, because a claim for money had not been submitted to the contracting officer.

For the appellant: Kathleen P. Allyn, General Counsel. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Capt. Leonard M. Cohen, USAF, Trial Attorney.

Before HARTY, RUBERRY, and RIISMANDEL, Administrative Judges.

HARTY, Administrative Judge: By letter of 22 June 1993, SRP Healthcare, Inc. (SRP) appealed the Air Force's refusal to allow a particular doctor to perform services under SRP's contract for providing emergency room physician health care at the 49th Medical Group Hospital, Holloman AFB. The appeal is based on the contracting officer's 28 May 1993 written confirmation that she did not wish the doctor to work at the base hospital. The contracting officer was responding to a 27 May 1993 letter from appellant that took exception to her oral instruction on that day not to permit the doctor to work at the base hospital during a scheduled June shift. The complaint is an elaboration of appellant's letter of 27 May 1993. It seeks an order from the Board directing the Government to cease and desist from barring the doctor from performing services. The complaint also seeks a finding that the Government breached the contract, but does not claim monetary damages. Appellant has elected the expedited procedures of Board Rule 12.2.

During a telephone prehearing conference on 6 August 1993, arranged by the Board to determine its jurisdiction, appellant's counsel acknowledged that SRP Healthcare was seeking money damages as well as injunctive relief. In this regard, a claim for $5,818.20, covering another incident in late April, was filed with the contracting officer on 3 May 1993 and was still under evaluation at the time the present appeal was docketed on 25 June 1993. On 1 July 1993 the contracting officer issued a final decision denying this claim. (R4, tabs 8 & 21)

Under the circumstances, it was recognized that since the Board is not authorized to grant injunctive relief or specific performance, it is not in a position to order the Air Force to cease and desist from barring the doctor from performing services. Moreover, where, as here, the claim is monetary in nature, it is essential to the Board's jurisdic-

©1994, Commerce Clearing House, Inc.
Digitized by Google

tion under the Contract Disputes Act, 41 U.S.C. §§ 601-613, that the claim be submitted to the contracting officer in a sum certain. *E.g. Rohr, Inc.*, ASBCA No. 44773, 93-2 BCA ¶ 25,787 (29 January 1993). Since this was not done, the Board lacks jurisdiction over the appeal.

In reaching this conclusion, we have not treated the 3 May claim as providing a monetary component to support this appeal. That claim appears to involve a separate incident and was not referenced in appellant's 22 June 1993 appeal letter. However, if the 3 May claim was intended to provide a monetary component, then the appeal was premature since the contracting officer had yet to complete her analysis of the claim and she was entitled to 60 days from receipt of the claim in which to do so and to issue her final decision. 41 U.S.C. § 605(c)(1). We believe dismissal would still be appropriate in light of appellant's election of the expedited procedures of Rule 12.2. *See Canova Moving and Storage Company*, ASBCA No. 24143, 79-2 BCA ¶ 14,143. If appellant wishes to appeal the contracting officer's 1 July 1993 final decision, it may do so.

Based on the discussion during the prehearing conference, appellant's counsel indicated that she desired to withdraw the present appeal and confirmed that intent by letter of 10 August 1993, withdrawing the complaint.

DECISION

The present appeal is dismissed without prejudice.

[¶ 26,333] Mech-Con Corporation

ASBCA No. 44934, August 30, 1993. Contract No. N62477-83-C-4104.

Quality—Testing—Additional Testing.—A contractor under its contract for chillers was entitled to compensation for additional capacity tests because testing required a full load, which was provided for only one hour on the date selected by the contracting officer. The government was also liable for the reasonable charges of the supplier for its marketing manager's time and expenses and for the time and expenses of the contractor's project manager.

Pricing of Adjustments—Claim Preparation Costs—Necessity for Performance.—A contractor was not entitled to recover, as direct costs of a contract modification, litigation support and claim preparation costs incurred in connection with a claim for additional test expenses, because the costs were not necessary to the performance of the retesting work. The modification recognized the contractor's right to recover for cleaning and retesting.

For the appellant: Albert L. Bond, Jr., President. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Lisa C. Gerideau, Trial Attorney, Naval Facilities Engineering Command, Chesapeake Division, Washington, D.C.

Before FREEMAN, RUBERRY, and VAN BROEKHOVEN, Administrative Judges.

FREEMAN, Administrative Judge: Mech-Con Corporation claims additional compensation under a unilateral modification. The appeal has been submitted under Rule 11 without oral hearing. We sustain in part on entitlement and remand for settlement of amount.

FINDINGS OF FACT

1. The contract was awarded to Mech-Con on 17 October 1984 for replacement of chillers Nos. 3 and 4 at an air conditioning chilled water plant. The new chillers were installed in March and May 1986, and immediately put in service. In June 1986, they were tested for capacity. The test required a full load for eight hours with capacity readings taken hourly. The average of the hourly readings was to determine whether the specified capacity (900 tons) had been met.

2. Specification section 15652 at paragraph 6.2.1.5 stated: "Testing shall be accomplished when it is determined by the Contracting Officer to be hot enough to provide full load." On the date selected by the contracting officer for the June 1986 tests, a full load was provided for only one hour and the tests could not be completed as specified.

3. On 19 August 1986, the Government notified Mech-Con that it would not declare

Digitized by Google

beneficial occupancy until, among other things, the chillers had passed the capacity test. On 21 August 1986, Mech-Con requested that the chillers be made available for testing. This request went unanswered for months. In January 1987, Mech-Con was told that the chillers could not be taken out of service for testing. There was also a disagreement within the Government as late as 6 March 1987 over whether and how a full load could be provided. A second test of the chillers was not conducted until 18 June 1987. The chillers did not meet the specified capacity on this test, but again a full load was not provided for the specified eight hours.

4. After the 18 June 1987 test, chiller No. 3 was opened. Gaskets were found out-of-place or "blown," and the heat exchangers had "extensive fouling" from corrosion and other material. A third test of chiller No. 3 was conducted on 5 December 1987 after the chiller was cleaned and the gaskets reinstalled. The unit did not meet the specified capacity but it was nevertheless considered to be "within the range of acceptability" and was accepted by the Government.

5. On 4 March 1988, the Government directed Mech-Con to clean the heat exchangers on chiller No. 4. This was done on 26-27 March 1988. When the chiller was opened for cleaning a "ripped" gasket was found. Chiller No. 4 was retested in April 1988. This test was unsatisfactory because the chiller had not been properly cleaned. Chiller No. 4 was recleaned and on 12 January 1989 retested. Capacity was found satisfactory and the unit was accepted on 14 January 1989.

6. The Government contends that the "blown" and "ripped" gaskets caused the fouling of the heat exchangers. The chiller supplier, however, has provided calculations showing that the condition of the gaskets had no significant effect on capacity. These calculations are unrebutted by the Government. The Government also contends that exposure of the chillers to weather while awaiting installation caused the fouling of the heat exchangers. The heat exchangers, however, were not directly exposed to the weather. The exposed storage was noted at the time by the parties. The possibility of exterior rust and dents was discussed but not the danger of interior corrosion. The evidence is insufficient to show a causal relationship between the exposed storage of the chillers in late 1985 and early 1986, and the condition of the heat exchangers in June 1987 after more than one year of operation. Chemical analyses were made of the chilled water supply for the chillers in November 1987. One laboratory found a high iron level and noted the absence of standard water treatment. The second laboratory found low iron and "very low" nitrite levels. The second laboratory stated that the low nitrite levels "will eventually lead to corrosion," and recommended evaluation of "the effectiveness of the [water] treatment program against oxygen pitting and general corrosion."

7. On 16 January 1991, Mech-Con submitted a claim for cleaning and retesting the chillers. This claim was addressed to the Resident Officer in Charge of Construction (ROICC) with a request that he "Please forward this claim to the Contracting Officer for his decision." A revised claim in the amount of $200,732 was submitted on 26 April 1991 directly to the contracting officer at the Naval Facilities Engineering Command, Chesapeake Division (NAVFAC-Chesapeake). By letter dated 8 May 1991, the contracting officer replied to the claim in relevant part:

> The issues contained within the request appear to have merit and deserve serious consideration. The Government is presently researching and preparing its position and wishes to conduct negotiations to resolve this matter in the very near future.

8. On 26 August 1991, a negotiator for the ROICC agreed to settle Mech-Con's claim for $176,000, subject to approval of the NAVFAC-Chesapeake contracting officer. Mech-Con's president understood this condition at the time of the negotiation. In a letter to the negotiator dated 4 September 1991, he stated:

> . . . you indicated that the papers were still not ready, but they would be completed immediately and forwarded to Chev Div [sic] for their final approval. Your paper work to Chev Div [sic] would contain the ROICC approval and justification for a settlement payment in the amount of $176,000.00.

9. The NAVFAC-Chesapeake contracting officer did not approve the full amount of the settlement. By unilateral Modification A00006 dated 28 January 1992, he allowed a price increase of $119,066 with no extension of time for "[the] additional cleaning and testing of chillers #3 & #4 as well as additional contractor administrative efforts to support the operation of the two 900 ton chillers after constructive BOD, including interests for one year."

©1994, Commerce Clearing House, Inc.
Digitized by Google

10. On 26 February 1992, Mech-Con requested a final decision on five items of cost that were not included or were only partially included in Modification A00006. By final decision dated 7 May 1992, this claim was denied. The claimed additional costs are described in Findings 10 through 14 below.

11. Mech-Con claims an additional three hours per person per meeting for three meetings with the ROICC on the cleaning and retesting problem. Modification A00006 allowed five hours per meeting. Mech-Con states that the meetings so fatigued its personnel that they performed no more productive work for the day. There are no affidavits or contemporaneous documentation on the actual lengths of the meetings, the fatigue of Mech-Con's participating employees, or their post-meeting duty status.

12. Mech-Con claims the costs of the June 1987 and April 1988 tests which were not allowed in Modification A00006. The June 1987 tests failed to demonstrate the specified capacity because the heat exchangers were dirty due to inadequate treatment of the chilled water supply. The condition of the chilled water supply was the Government's responsibility. The April 1988 tests failed to demonstrate capacity because the chiller had not been properly cleaned as directed by the Government. The proper cleaning of the chiller was Mech-Con's responsibility.

13. Mech-Con claims the unallowed balance of charges by the chiller supplier for the time and expenses of its marketing manager on the cleaning and retesting work. The claimed hours and expenses are supported by detailed records and estimates. We find that 179 hours of the marketing manager's time and $3,847.40 of his expenses were incurred on that work. Eighteen hours incurred on 28 October 1988 for responding to an oil loss problem are not shown to have been related to the cleaning and retesting. Mech-Con has also failed to show the reasonableness of the $100 hourly charge for the marketing manager's time. Mechanical service work was charged by the supplier at $50 per hour. Absent evidence of the actual hourly pay of the marketing manager, we find $75 per hour a reasonable charge for his time including all supplier fringes and mark-ups.

14. Mech-Con claims the unallowed balance of its program manager's time and expenses incurred on the cleaning and retesting work. The claimed time and expenses are supported by detailed records and estimates. We find that 1,368 hours of the project manager's time and $360 of his expenses were incurred on the cleaning and retesting work. We find unproven six hours of a total ten hours per item estimate for correspondence with the chiller supplier. Mech-Con's ten hours per item estimate is inconsistent with (i) its own estimate of four hours per item on similar correspondence with the Government, and (ii) the four hours per item charged by the chiller supplier for substantially the same correspondence. The 405 hours of the project manager's time supporting the litigation with the chiller supplier made no contribution to the performance of the cleaning and retesting work.

15. Mech-Con claims 140 hours for claim preparation work by a vice-president. The claim was prepared after the last chiller was accepted. The record does not indicate whether the vice-president's salary was charged on Mech-Con's books and records as an indirect cost (overhead or G&A) or direct to particular jobs. The contracting officer found the claim preparation expense and the project manager's time on the supplier litigation unallowable under FAR § 31.205-47. The FAR Part 31 cost principles in effect on the date of the contract were made applicable to adjustments under the contract by the DFARS § 252.243-7001 "PRICING OF ADJUSTMENTS (APR 1984)" clause. That clause was mandated for Mech-Con's fixed price contract by DFARS § 243.205 (S-71).

DECISION

The Government in this appeal has not repudiated unilateral Modification A00006. Therefore, the cleaning and retesting of the chillers is properly compensable under that modification, and the only issue is whether the claimed additional costs are recoverable under the modification. Mech-Con first contends that it is entitled to the difference between the $119,066 allowed in the modification and the $176,000 agreed upon with the ROICC negotiator. That agreement, however, was subject to approval of the NAVFAC-Chesapeake Division contracting officer, and that approval was not given. Accordingly, the agreement with the ROICC negotiator did not become legally binding on the Government.

Mech-Con, however, is otherwise entitled to compensation for the 18 June 1987 tests. Those tests were required because a full load was not provided for the June 1986 tests. The Government was responsible under the contract for designating test dates when a full load would be provided. The Government is also liable for the reasonable charges

Digitized by Google

of the supplier for its marketing manager's time and expenses and for the time and expenses of Mech-Con's project manager to the extent indicated in the findings above. The time and expenses indicated in the findings are shown by credible records and estimates to have been incurred for performance of the cleaning and retesting work.

Mech-Con's claim for additional hours for three meetings with the ROICC fails for lack of proof. There are no affidavits or contemporaneous documentation of the length of the three meetings, the fatigue of the participating employees or their duty status upon return from the meetings. Mech-Con's claim for the April 1988 tests is also without merit. Those tests failed because the chiller had not been properly cleaned as specifically directed by the Government before the tests. The Government is not liable for the consequences of Mech-Con's improperly performed work.

Mech-Con's litigation support and claim preparation costs are not barred by the FAR Part 31 cost principles in effect on the date of the contract. FAR § 31.205-47 then in effect applied only to defense of fraud proceedings. The litigation with the chiller supplier was not a fraud proceeding. FAR § 31.205-33 then in effect applied only to "outside" professional services, and not to "in-house" employees and officers. The litigation support was provided by the project manager, an employee, and the claim preparation was performed by a vice-president. Nevertheless, those costs are not recoverable as direct costs of Modification A00006 because they were not necessary to performance of the cleaning and retesting work. *See Singer Co., Librascope Division v. United States* [24 CCF ¶ 81,914], 568 F.2d 695, 720-21 (Ct. Cl. 1977).

The appeal is sustained in part on entitlement as indicated above, and remanded to the parties for settlement of amount.

[¶ 26,334] Engineering Technology Consultants, S.A.

ASBCA Nos. 44237, 45277, 45302, August 27, 1993. Contract No. F66501-90-C-0009.

Contract Disputes, Jurisdiction—Boards of Contract Appeals—Default Terminations.—The board had jurisdiction over a contractor's claim for an equitable adjustment for delay, even though the contract had been terminated for default and a surety had succeeded to the rights and liabilities of the contractor, because the contractor was in privity of contract with the government at the time the alleged delay was experienced. The board's jurisdiction extends to appeals by a contractor as "a party to a Government contract other than the Government." A claim concerning the government's refusal to allow the contractor's president onto the project site after the default termination was beyond the board's jurisdiction because, at this time, the contractor, having been terminated for default, was no long in privity with the government.

For the appellant: Carlos A. Salazar, President, and De Obaldia & Garcia de Paredes, Panama, Republic of Panama, by Carlos A. De Obaldia. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Gerald K. Fields and Capt. Michael P. Chiffolo, USAF, Trial Attorneys.

Before ELMORE, RUBERRY, and RIISMANDEL, Administrative Judges.

ELMORE, Administrative Judge: Engineering Technology Consultants, S.A. (ETC or appellant) has timely appealed from four separate "final decisions" of the contracting officer (CO) as follows: ASBCA No. 43454—terminating appellant's contract for default [1]; ASBCA No. 44237—ETC's equitable adjustment claim for $237,647.12, the alleged costs incurred due to the Government's "interference and delays" and "extended overhead expenses," and a 72-day time extension; ASBCA No. 45277 (a Rule 12.2 appeal)—ETC's equitable adjustment claim for $6,756.49, the alleged cost incurred

[1] ASBCA No. 43454, a Rule 12.3 election, is mentioned for information purposes only and is not included in the Government's motions to dismiss. However, we will be referencing the R4 file for ASBCA No. 43454 since it contains documents relevant to our decision. References to a R4 file will be cited with the docket number of the appeal as follows "43454, tab" or "R4, tab" for the R4 file of the appeal being discussed. The same application will be followed for citations to exhibits.

©1994, Commerce Clearing House, Inc.

Digitized by Google

due to the "Government debarring Surety's Supervisor from the project"; and ASBCA No. 45302 (a Rule 12.2 appeal)—ETC's equitable adjustment claim for $4,257.36, the alleged cost incurred due to the Government's unjustified suspension of payment for work performed and accepted prior to the termination for default.

The Government, in ASBCA Nos. 44237, 45277 and 45302, has filed Motions To Dismiss For Lack of Jurisdiction based on the Board's questioning of its jurisdiction to decide the appeal and raised *sua sponte* during the hearing in ASBCA No. 44237 (tr. 3/147-56, 4/121-24). Appellant has filed responses in Opposition To the Government's Motions. These matters are consolidated for purposes of deciding the motions only. At the hearing in ASBCA No. 44237 ETC was represented by counsel, Mr. De Obaldia. ETC, represented by its President, Mr. Carlos Salazar, has elected to submit on the record and in accordance with Board Rule 12.2, the Small Claims (EXPEDITED) Procedure, ASBCA Nos. 45277 and 45302.

SUMMARY STATEMENT OF FACTS FOR PURPOSES OF RULING ON THE MOTIONS

GENERAL

ETC was awarded negotiated firm fixed price contract F66501-90-C-0009 (C-0009) on 28 September 1990 for the contract price of $397,890.12 to "furnish all transportation, plant, equipment, tools, labor and materials, and all necessary operations to perform 'Miscellaneous Repairs/Alter Kobbe School, Bldg 841', at Howard AFB, Pn, in strict accordance with the technical specifications and drawings, subject to the terms and conditions of the contract." (44237, tab 2)

On 20 May 1991 the CO issued, and ETC acknowledged receiving, contract modification P00001, a final decision terminating for default the contract due to ETC's failure to obtain General Liability insurance between 30 September 1990 and 1 January 1991; its failure to maintain comprehensive General Liability insurance in the correct amount as required by contract and special contract clauses; its signing the Certificate of Compliance with Insurance Requirements without ensuring that the contract requirements were met; and its failure to present proof of insurance for all of its subcontractors. (43454, tab 8; 44237, tab 3; 45277, tab 4; 44302, tab 4)

At a meeting held on 22 May 1991 with the surety, Cia. International de Seguros, S.A. (Cia. International or Surety), the parties agreed that approximately 72 percent of the work had been completed but not totally accepted due to the existence of discrepancies which required correction, and the surety, assuring the Government it would be able to complete the work requested, and the Government agreed to allow Mr. Salazar to act as the surety's consultant. (45277, exh. G-1, -11)

In a letter dated 13 July 1991, Roy Phillipps P., Esq., representing the surety, informed the Government that the on-site Government construction "Inspector [James R.] Teal" had told the surety's subcontractors that Mr. Salazar's presence at the site was "prohibited by superior orders" and, if he made that statement, that Inspector Teal be directed to allow Mr. Salazar access since the parties had agreed the surety was free to use Mr. Salazar's " 'know how' in an *ADVISORY* capacity only"; that it was "no one's intention that [Mr. Salazar] would go back into the project and 'run the show' "; and if Mr. Salazar is prohibited from visiting the project site, his usefulness to the surety in an "*ADVISORY*" capacity will be completely nullified. (Underline in original) (45277, tab 7)

On 17 July 1991 the CO, responding to Mr. Phillipps' 13 July 1991 letter and acknowledging the Government's agreement to allow Mr. Salazar to act as the surety's technical representative, stated Mr. Salazar had written the Government concerning payment which was outside his authority as a technical representative. Mr. Phillipps was informed that if Mr. Salazar agreed to perform in the capacity of a technical advisor and agreed to leave the administration of the contract to the surety, he may continue to visit the project site in the agreed capacity. (45277, tab 8)

On 31 July 1991 the CO acknowledged receipt of ETC's executed Notice and Instrument of Assignment dated 30 July 1991, assigning to Cia. International "payments due or to become due under this contract [C0009]." (44237, tr. 4/14-18; exh. G-12; 45277, exh. G-3)

On 23 August 1991 the Government and the surety executed bilateral modification P00002, "CONSTRUCTION CONTRACT TAKEOVER AGREEMENT," effective 29 May 1991, wherein the parties agreed (44237, tab 4; 45277, tab 5; exh. G-2; 45302, tab 5):

Digitized by Google

1. Identification—The following terms will be used to refer to the indicated parties and the following specified contract in this agreement:

a. *RELINQUISHING CONTRACTOR:* Engineering Technology Consultants S.A. . . .

b. *SURETY:* Compania International de Seguros S.A. . . .

c. *SUBCONTRACTORS;* (1) Ingeneria Santiago S.A. . . . (2) Asfaltos Panamenos S.A. . . .

d. *GOVERNMENT:* The United States of America by and through its duly authorized agents.

e. *CONTRACT:* F66501-90-C0009; Project No. HOW 89-0115; Miscellaneous Repair/Alter Kobbe School.

2. On 20 May 1991, the Government terminated the rights of Relinquishing Contractor to proceed with further work on contract F66501-90-C0009 when it terminated the contract for default. In accordance with its obligations pursuant to a performance bond issued to the Relinquishing Contractor for the benefit of the Government on behalf of the Relinquishing Contractor, Surety hereby confirms its election to complete the work required by subject contract in strict accordance with all its terms and conditions not specifically superseded by this agreement.

3. The parties agree to the following:

a. The contract will be administered by the Government, which will hereafter deal directly with Surety in the role of prime contractor unless Surety notifies the Air Force in writing that one of the above referenced subcontractors may be authorized to act on behalf of the Surety in the completion of the project.

b. Upon the completion of satisfactory progress, and in accordance with the terms of the contract, the remaining balance of the contract price, excluding any costs which are or may become due to the Government for reimbursement of expenses incurred in correcting damages to the interior of Kobbe Elementary School, shall be paid directly to the Surety.

c. Surety agrees to the established terms and conditions of the performance period as outlined hereafter.

(1) Surety agrees to the following performance period at no additional costs to the Government.

(2) Further physical construction on this project may commence on 17 June 1991 or after the date when all required signatures are affixed to this Takeover Agreement. The Surety will have sixty (60) calendar days beginning the effective date of this Agreement (17 June 1991), to accomplish all remaining construction. Said work shall be completed by the Surety and accepted by the Government in accordance with the terms and conditions of subject contract. The revised contract completion date is 15 August 1991.

d. Surety certifies that it has on hand all labor, tools, parts, materials, equipment, supervision and quality control required to complete this contract within the above mentioned performance period as extended.

e. The Government does not waive or release it's [sic] right to liquidated damages for delays in work completion subsequent to this Takeover Agreement, except to the extent such delays are excusable under the contract.

f. Except as specifically set forth herein, nothing in this agreement shall alter, affect or vary the rights and obligations of the parties to the subject contract.

g. By accepting the above mentioned subcontractors identified to complete the contract at the election of Surety, all parties hereto agree that the Government will be deemed to have taken appropriate steps to mitigate its damages with regard to the subject contract. Surety will indemnify and hold the Government harmless from any claims that the Relinquishing contractor might make for any alleged failure to mitigate said damages based on the Government's choice to not solicit competitive bids to complete the contract.

h. The Surety's right to payment from the contract retainage and unpaid earnings shall be governed by FAR provision 49.404.

i. Surety further agrees to repair and replace at no additional cost to the Government, all property items which have been identified by the Government for either repair or replacement in the Government's letters to the Surety dated 24 May 1991. Surety agrees to provide to the Government on or before 21 June 1991, satisfactory evidence that new carpeting, vinyl wall base, ceiling tile and wall tile, to complete repairs, have been ordered. The Surety further agrees that all the items listed in the Government's letters to the Surety dated 24 May 1991, excluding the installation of new carpeting, will be installed prior to 15 August 1991 unless oth-

©1994, Commerce Clearing House, Inc.

Digitized by Google

erwise authorized by the Contracting Officer. Installation of carpeting will be completed within 3 weeks of receipt by Surety.

j. The Government will withhold the amount of $100,000.00 until such time that the surety progresses with the repairs to the interior of the facility. The aforementioned sum ($100,000.00) is subject to release as the repair work progresses to the satisfaction of the Contracting Officer.

4. In consideration of the modification agreed to herein, *which ratifies a Takeover Agreement by the Surety* and *establishes a new performance period,* Surety hereby releases the Government from any and all liability, for further equitable adjustments attributable to *this* modification.

FAR provision 49.404, Surety-takeover agreements, provided in pertinent part that if the surety offers to complete the contract work it should normally be permitted to do so, that because of conflicting demands for unpaid prior earnings (retained percentages and unpaid progress estimates) of the defaulting contractor, the surety may condition its offer of completion upon the execution by the Government of a 'takeover' agreement fixing the surety's right to payment from those funds, and, in that event, "the contracting officer may (but not before the effective date of termination) enter into a written agreement with the surety" which should provide:

> ... for the surety to complete the work according to all the terms and conditions of the contract and for the Government to pay the surety the balance of the contract price unpaid at the time of default, but not in excess of the surety's costs and expenses, in the manner provided by the contract subject to the following conditions:
>
> (1) Any unpaid earnings of the defaulted contractor, including retained percentages and progress estimates for work accomplished before termination, shall be subject to debts due the Government by the contractor, except to the extent that such unpaid earnings may be required to permit payment to the completing surety of its actual costs and expenses incurred in the completion of the work, exclusive of its payments and obligations under the payment bond given in connection with the contract.
>
> * * *
>
> (4) The surety shall not be paid any amount in excess of its total expenditures necessarily made in completing the work and discharging its liabilities under the payment bond of the defaulting contractor. Furthermore, payments to the surety to reimburse it for discharging its liabilities under the payment bond of the defaulting contractor shall be only on authority of—
>
> (i) Mutual agreement between the Government, the defaulting contractor, and the surety ....

By letter dated 8 July 1992, the surety informed the CO (44237, tr. 1/71; exh. A-12; 45277, exh 2):

> All costs associated with execution and completion of [contract C0009] have been paid in full by Engineering Technology Consultants, S.A. (hereinafter E.T.C.), therefore, there exists no outstanding liabilities arising from the Performance and Payment Bonds issued by our firm.
>
> From the foregoing facts we hereby declare null and void the Assignment of Funds made by ETC for the benefit of Cia. International de Seguros, S.A., and request that all further payments be made directly to Engineering Technology Consultants, S.A. ....
>
> [signed] L.E.G. de Paredes
>
> Manager

ASBCA No. 44237

By letter dated 24 May 1991 the CO, Linda M. Dunn, provided the surety with a notification for reimbursement in the amount of $1,743.46 for electrical damages which occurred at Kobbe on 3 May 1991 due to water infiltrations (R4, tab 83).

On 18 June 1991 the surety provided to another CO, Sgt. Jose R. Medina, notice that a check in the amount of $33,727.52 for damaged property being replaced by the Government was delivered to "DODDS." The check in question identified ETC as the payor. The surety requested a reciprocal amount of money be released and paid to it, the surety, and that "all items replaced and covered by this payment as well as items replaced by future payments become the property of the [surety] and as such will [be] remove[d] as soon as possible." (R4, tab 88)

On 18 June 1991 the surety provided to the CO copies of the purchase order for carpet and for ceiling and wall tile, and its contract with Construcciones Ensin for the installation of the replacement carpet at Kobbe School. The purchase order for the

Digitized by Google

ceiling and wall tile, dated 15 June 1991, had been placed with D.R.V. Services & Supply Co. by ETC. On 21 June 1991 the surety provided the CO with a copy of a check in the amount of $34,636.50 issued by ETC to Construcciones Ensin as an advance payment for the new carpet. (R4, tabs 89, 90, 91)

By letter dated 18 July 1991 ETC filed with the Government a certified equitable adjustment claim in the amount of $237,647.12 alleging in pertinent part that the Government had delayed the procurement of roofing material by delaying the approval of the roofing submittals, and that the delay resulted in ETC incurring additional costs which ETC alleged were the responsibility of the Government (R4, tab 95). ETC contends that $93,300.22 of the claim was costs incurred "prior" to the termination and $144,346.90 was costs incurred "after the termination but prior to the signing of the takeover agreement" (app. brief, para. 8).[2]

On 30 September 1992, after the surety declared ETC's Assignment of Funds "null and void," modifications P00005 and P00007 were executed reimbursing ETC $1,328.25 and $523.45 respectively, in compliance with the Board's decisions rendered in ASBCA No. 43376 (*Engineering Technology Consultants, S.A.*, ASBCA No. 43376, 92-3 BCA ¶ 25,100, modified on app. mot. for reconsid., 93-1 BCA ¶ 25,371). (Exh. 23, 24)

ASBCA No. 45277

By letter dated 19 May 1992 ETC, in pertinent part, filed an equitable adjustment claim in the amount of $6,756.49 as follows (R4, tab 10):

Debarment of Surety's Advisor

During the execution of the above captioned contract after the termination for default I was impeded by the Air Force to visit, inspect and/or perform any duties on behalf of Cia. Internacional de Seguros, S.A. (the Surety) for most of the performance period.

The Surety had requested to the Air Force that I be allowed to act as consultant and advisor of the Surety in order to make sure that resources being invested were efficiently utilized. The Air Force did not accept my involvement for most of the period. This decision by the Air Force caused cost increments in labor and materials that were ultimately paid out by our firm as all other costs. The Air Force never provided a reason for this debarment which was downright unjustified. The cost increments being claimed herein are calculated as follows:

Labor costs after default:	$20,474.21.
Inefficiency losses fue [sic] to lack of Surety's Supervisor 33% or $6,756.49 which is the true value of this claim.	

By letter dated 24 July 1992 the CO issued a final decision denying ETC's claim stating in pertinent part that ETC's right to proceed on the contract had been terminated on 20 May 1991; that the contract was completed and accepted by the Government on 27 May 1992, that the Surety had named a technical representative, Mr. Crespo, who it was agreed by both parties would act on behalf of the Takeover Surety at meetings and inspections throughout the contract; that the surety had named a capable superintendent, Mr. Guardado, who was the inspector's point of contact; that the surety represented that Mr. Salazar would act only in the capacity of technical manager or consultant; and that neither the surety nor ETC incurred 33 percent inefficiency costs due to the lack of surety supervision. (R4, tab 2)

By letter dated 26 October 1992 ETC appealed the CO's adverse decision, electing to have the matter adjudicated under Board Rule 12.2, the EXPEDITED Procedure and Board Rule 11, record submittal (R4, tab 11).

ASBCA No. 45302

On 14 May 1991 ETC submitted to the Government "Invoice No. 7" for contract work completed less retainage and prior payments in the amount of $141,912.09 (R4, tab 6).

By letter dated 19 May 1992 ETC, in pertinent part, filed a claim for interest in the amount of $4,257.36 as follows (R4, tab 9):

Unjustified Suspension of Payment

On 14 May 1991, ETC submitted Invoice No. 7 for $141,912.09 with a prompt payment discount period of 10 days. Due date for payment was 24 May 1991.

The above monies were withheld by the Government for several months and finally released on 06 September 1991.

Period from 24 May to 06 September is 105 days or 3.5 months. Assuming 1% interest costs on these funds we have 3.5%

[2] The Government's arguments in support of its motion will be referred to as "Govt. brief". Appellant's Opposition to the Government's Motion will be referred to as "app. brief." References to attachments to either the Government's or the appellant's briefs will be referred to as "attach."

Digitized by Google

interest accrued less 0.5% for the prompt payment discount.

Actual interest costs 3.5% − 0.5% = 3.0%
Value of this claim: 0.03 × $141,912.09 = $4,257.36

By letter dated 24 July 1992 the CO issued a final decision stating in pertinent part that at the 22 May meeting the subject of the unpaid earnings was discussed and the Surety and the Government subsequently entered into a Takeover Agreement wherein it was agreed that upon acceptance of satisfactory progress and in accordance with FAR provision 49.404 the remaining balance of the contract price would be paid directly to the Surety; and that ETC, on 30 July 1991, executed an Instrument of Assignment transferring to the Surety "all rights, title and interest in all monies due or to become due from the contract." (R4, tabs 2, 5; 45277, exh. G-3)

On 30 October 1992 ETC appealed the CO's adverse decision, electing to have the matter adjudicated under Board Rule 12.2, the EXPEDITED Procedure and Board Rule 11, record submittal (R4, tab 10).

DECISION

At the outset we must declare our disappointment with the quality of the briefs submitted by the parties on the issue of the Board's jurisdiction. It is evident that the briefs were hastily done with a minimum of research and effort. Suffice to say that the attorneys did their clients, and the Board a disservice with their laxity in presenting an adequate legal discussion of the issues which go to the Board's jurisdiction over these appeals.

It is settled law the Board's jurisdiction extends only to appeals by a contractor described in 41 U.S.C. § 601(4) as "a party to a Government contract other than the Government." *Aries Marine Corporation*, ASBCA No. 37826, 90-1 BCA ¶ 22,484, citing *CBI Services, Inc.*, ASBCA No. 34983, 88-1 BCA ¶ 20,430. An appeal from a contracting officer's decision by a person not a party to the contract must be dismissed for lack of privity of contract. *Technic Services, Inc.*, ASBCA No. 38411, 89-3 BCA ¶ 22,193. For us to have jurisdiction over ETC's appeals, therefore, we must conclude that ETC was in privity of contract with the Government at the time the claims arose and that its right to file the claims was not extinguished by the default termination. *Peerless Insurance Company*, ASBCA No. 28887, 88-2 BCA ¶ 20,730.

The facts in ETC's appeals relevant to this issue are essentially undisputed. ETC was default terminated on 20 May 1991, whereupon, the surety, Cia. International, agreed to finish the contract. On 30 July 1991 ETC executed a Notice and Instrument of Assignment assigning to the surety "Payments due or to become due" under contract C-0009. Cia. International and the Government, on 23 August 1991, executed a takeover agreement wherein the surety agreed to act as the prime contractor and that Mr. Salazar, ETC's president, would act "only" as a technical representative or consultant for the surety, without any authority to administer the contract. At the time of the default termination 72 percent of the contract work had been completed. Unquestionably, at the time of the default termination Cia. International by subrogation succeeded to the rights and liabilities of the terminated contractor. *Sosa y Barbero Constructores, S.A., CIA. International de Seguros, S.A., and Misener Marine Construction, Inc.*, ENG BCA No. PCC-57, 90-2 BCA ¶ 22,823, citing, *Peerless Ins. Co., supra.*

ETC, no longer in privity of contract with the Government after the termination, would be entitled to payment for work which was properly performed prior to the default termination. *J.G. Enterprises, Inc.*, ASBCA No. 27150, 83-2 BCA ¶ 16,808. However, if the amount remaining of the contract price is insufficient to cover the Government's cost to complete and liquidated damages, if assessed, the payment to the contractor is reduced by the excess amount. *Id.*, citing *Mark Smith Construction Company, Inc.*, ASBCA Nos. 25058, 25328, 81-2 BCA ¶ 15,306.

ASBCA No. 44237

ETC claims it is entitled to an equitable adjustment in the contract price for delay allegedly incurred when the Government disapproved appellant's submittal No. 21, its proposed roofing system, because the rustic red color was unacceptable.[3] ETC argues that it is the proper party in interest because "of the mere fact that [it] was the party in privity of contract when the injuries came into existence and when the expenditures were incurred" and the surety's rights to the retained funds do not attach until the take-

[3] The Board has determined that ETC was entitled to an equitable adjustment for having been required to install "colonial red roof" vice the "rustic red" proposed in submittal No. 21. *Engineering Technology Consultants, S.A.*, ASBCA No. 42649, 93-3 BCA ¶ 26,134, 8 June 1993.

Digitized by Google

over agreement is executed. In the alternative appellant contends that since it was the party making the payments it is the proper party to file the claim "pursuant to subrogation of rights by operation of law of the Republic of Panama," and should the termination for default be held to be improper, the surety's right to the contract's unpaid balance would be inferior to ETC's.

The Government contends the Board lacks jurisdiction inasmuch as ETC was not the contractor in privity with the Government having been terminated for default and therefore is not the proper party to bring this appeal. The Government further argues that the record is silent as to the surety certifying the claim or authorizing ETC to bring the claim.

We limit our decision to whether ETC was the contractor in privity of contract with the Government at the time the alleged delay was experienced and we need not determine the merits of the claim. The alleged delay complained about was experienced between November, 1990 and March, 1991, a period when ETC was the contractor in privity of contract with the Government. Accordingly, ETC is the proper party in interest to bring the claim. Based on this determination we need not address the other arguments raised by ETC.

The Government's motion to dismiss is denied.

ASBCA No. 45277

ETC claims entitlement to an equitable adjustment of $6,756.49 due to the Government's refusal to allow Mr. Salazar onto the project site after the default termination and while he was "performing duties on behalf of Cia. International de Seguros, S.A." The Government contends the Board lacks jurisdiction since ETC, having been terminated for default, was no longer the contractor in privity of contract with the Government.

Unquestionably the claim is predicated on material facts which did not exist until after ETC had been terminated and the surety was the contractor in privity of contract with the Government. Accordingly, the claim and the right to appeal a CO's adverse decision rests with the surety and not Mr. Salazar or ETC.

The Government's motion to dismiss is granted.

ASBCA No. 45302

ETC claims entitlement to interest in the amount of $4,257.36 due to the Government's failure to timely pay ETC's invoice No. 7 submitted 14 May 1991. The Government contends the Board lacks jurisdiction since ETC, having been terminated for default, and was no longer the contractor in privity of contract with the Government.

Invoice No. 7, submitted prior to the default termination, was for work accomplished prior to the termination. ETC's entitlement to interest involves a material fact in dispute and would be predicated on whether the delay in the payment of the invoice was reasonable or not. Since a contractor generally is entitled to payment for work successfully accomplished prior to a default termination, the motion to dismiss, under the circumstances, is without merit.

The Motion to Dismiss is denied.

SUMMARY

The Motions to Dismiss in ASBCA Nos. 44237 and 45302 are denied. The Motion to Dismiss in ASBCA No. 45277 is granted.

[¶ 26,335] Ordway Construction Co., Inc.

ASBCA No. 44149, August 26, 1993. Contract No. N62470-91-C-1015.

Interpretation of Contracts—Patent Ambiguity—Duty to Seek Clarification.—A construction contractor was not entitled to an equitable adjustment for being required to perform work beneath a site proposed for buildings, even though it argued that errors in the drawings persuaded it that site work directly beneath the proposed buildings was not required, because discovering what it believed was a government error did not entitle it to assume that the site work was not required. The contractor reported in a letter that it had not included anything in its bid price for work under the buildings and that the drawings elsewhere stated that the buildings were to be constructed under a separate contract. However, when the government, by amendment, changed the drawings to state that the area under the proposed buildings was to be excavated, the contractor knew or should have known that site work was required beneath the proposed buildings.

For the appellant: Outland, Gray, O'Keefe & Hubbard, Chesapeake, Virginia, by David A. Hearne. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Garrett L. Ressing, Trial Attorney, Chesapeake Division, Naval Facilities Engineering Command, Washington, D.C.

Before STEMPLER, RUBERRY, and SPECTOR, Administrative Judges.

STEMPLER, Administrative Judge: This is a timely appeal from a contracting officer's decision denying appellant's claim for compensation for a direction to perform work alleged to be outside the requirements of the contract. The Contract Disputes Act is applicable. A hearing was held and both parties have filed briefs. Only entitlement is before us for decision.

FINDINGS OF FACT

1. In early 1991, Welford Lucy, president of appellant (Ordway Construction Co., Inc. (OCC)) received a call from a Navy contract specialist inquiring whether OCC would be interested in submitting a quote for site work at the Cheatham Annex that was required to be finished by 1 March 1991. The contract was to be awarded by purchase order through the small purchase procedures in order to expedite the matter.* OCC replied that it would be interested (tr. 17-18; exh. G-1).

2. OCC received a package of drawings and specifications to quote on from the Government and it used this package to prepare its quote of $33,000. The Government then called OCC and asked why the quote was so high because the Government needed to keep the price below $25,000. OCC explained that much of the money was involved in the gravel parking lot that the drawings required to be constructed. The Government then revised the drawings to delete the parking lot. OCC revised its quote to $20,900 on 7 February, and the Government issued the purchase order on 11 February 1991 (tr. 18-20; R4, tab 1).

3. Drawing C-1 is relevant to this dispute. The original version of C-1 showed a gravel parking lot to be constructed by the site contractor and the elevations for the grading outside of the footprint (outline) of two proposed buildings: the Command/Administration Building and the Vehicle Maintenance Building. These two buildings were marked, "to be constructed under separate contract." Actually, the buildings were scheduled to be built by a Seabee unit as a training exercise. Finished floor elevations for the buildings were given but there was no information that would enable the site contractor to grade within the proposed buildings' footprints and no information on the buildings themselves. The evidence established that it is industry custom that site work, absent other directions in the contract, starts 5 feet outside of a building's footprint. Site work inside this 5 foot area and inside the building's footprint is considered building construction. Various items on the drawings were represented by different styles of lines. A solid line broken by two dashes represented the limits of grading. The outer limits were marked with such a line and the buildings' footprints were also marked with such a line. On 22 January 1991, the Government, wishing to provide the information necessary to perform the site work under the proposed buildings, had issued amendment 0001 to the solicitation. The amendment revised drawing C-1 and changed the finished floor elevations and added the notes "excavate to 31.25' " and "excavate to 31.00' " to the notes inside the two building footprints. The amended drawing also gave grading elevations. Mr. Lucy testified that these notes did not have any significance to him when he prepared appellant's quote or make any sense to him because the depths to which the notes directed him to excavate were higher than the existing elevations. The actual number for the elevations appeared inside the footprints but a line under the numbers appears to point to areas outside the footprints. It cannot be determined from the drawings whether these lines point to locations outside the 5 foot building construction zone extending from the buildings' perimeters. Additional elevation information for areas outside of the footprints was also given. The broken line indicating the limits of grading around the buildings' footprints was replaced by a solid line (R4, tab 1; tr. 35-36, 39-40, 58, 77; exh. G-2).

4. On 4 February 1991, the Government had issued amendment 0002, revising drawing C-1, deleting the requirement for a gravel parking lot. The broken line indicating the limits of grading was again present

* FAR Part 13 allows the use of expedited small purchase procedures for contracts under $25,000.

Digitized by Google

for the buildings' footprints (R4, tab 1; tr. 36-37).

5. On 22 February 1991, OCC signed the purchase order resulting in contract No. N62470-91-C-1015. The firm fixed price construction contract called for completion of the work by 1 April 1991. The work was described as "site work for Vehicle Maintenance Building and Administrative Headquarters Building at the Naval Supply Center, Cheatham Annex, Williamsburg, Virginia" (R4, tab 1).

6. The contract specification contained the following provisions:

> 01010 ¶ 1.4
>
> It is the declared and acknowledged intention and meaning to provide and secure Site Work for Vehicle Maintenance Building and Administrative Headquarters Buildings complete and ready for use.
>
> * * *
>
> 02220 ¶ 3.4.2 Backfill and Fill Material Placement
>
> Provide under paved areas and in the locations indicated for the two proposed buildings. Place in 6-inch lifts. Place backfill material adjacent to structures as the structural elements are completed and accepted. Backfill against concrete only when approved. Place and compact material to avoid loading upon or against the structure.
>
> * * *
>
> 02220 ¶ 3.5.1 General Site
>
> Compact underneath areas designated for vegetation and areas outside the 5-foot line of the proposed structures to 85 percent of ASTM D698.
>
> * * *
>
> 02220 ¶ 3.5.2 Structures, Spread Footings, and Concrete Slabs
>
> Compact the top 12 inches of subgrades under the two proposed buildings to 95 percent of ASTM D698 using a sheepsfoot roller. Compact fill and backfill material to 95 percent of ASTM 698.
>
> 02220 ¶ 3.5.3 Adjacent Area
>
> Compact areas within 5 feet of structures, and proposed structures to 90 percent of ASTM D698.

(R4, tab 1)

7. Mr. Lucy assumed the specification sections requiring work under the proposed buildings did not apply to the contract he was quoting for and applied to the eventual building contractor because some elements in those sections clearly could not be performed by the site contractor. Mr. Lucy did realize, however, that some of the language in the specification sections which required work under the buildings could be read to apply to his contract. He testified:

> This [section 3.4.2] could very well apply to the building contractor, whoever that was to be. At the time, I didn't know when I bid the job. That could apply to the building contractor as well, if not more so than the site work because that's within the building.

(Tr. 41-42)

8. The wage rates required by the contract were for highway construction. These rates are proper for site work outside of the buildings' footprints. A higher rate is appropriate for work inside the footprint because it is considered building construction (tr. 45-46, 79).

9. The job progressed well and in late March, when OCC was almost finished and only the seeding remaining to be done, Mr. Lucy received a call from a Seabee reserve unit in Pennsylvania inquiring about the work OCC was doing. Mr. Lucy explained OCC's work and the Seabee wondered who was going to perform the site work within the buildings' footprints because the Seabees did not plan to (tr. 22-24).

10. On 25 March 1991, OCC called the Government regarding the site preparation within the footprints of the buildings. OCC stated that the drawings stated that the buildings would be constructed under a separate contract and that OCC interpreted this as meaning that its contract would not involve any work within the limits of the buildings' lines. OCC stated that it was not responsible for site work within the buildings footprints (R4, tab 2).

11. On 26 March 1991, the Government ordered OCC to perform the disputed work (tr. 23-24).

12. On 28 March 1991, OCC wrote the Government, taking exception to the Government's direction to perform the site work within the buildings footprints. OCC stated that it had not included anything in its bid price for this work because the drawings stated that the buildings were to be constructed under a separate contract and because there were no details in the contract as to how to prepare the grade in this area. OCC stated that it would perform the work under protest (R4, tab 3).

©1994, Commerce Clearing House, Inc.

Digitized by Google

13. On 1 April 1991, the Government replied to OCC's 28 March letter, stating that the site work within the buildings' footprints was part of the contract because of ¶¶s 3.4.2, 3.5.1 and 3.5.2 of the specifications (R4, tab 4).

14. The contract work was completed on 2 April 1991 (tr. 23-24).

15. On 29 October 1991, OCC filed a claim for $11,441.50 for the work done under protest. The claim was broken down into approximately $8,700 for fill, $1,100 for stripping top soil and $1,600 for compaction. OCC stated that it had been instructed by the inspectors as to the elevations to grade to and what materials to use since the contract did not provide this information. Specifically, OCC stated that while the drawings did furnish finished floor elevations for the buildings, they did not provide any information as to whether the buildings would be constructed with a slab or with footers, and that the finished floor elevation information was useless without the construction details (R4, tab 7; tr. 25-26, 30-32, 64-5).

16. On 29 January 1992, the contracting officer issued a decision denying the claim, stating that it was clear from ¶¶ 3.4.2, 3.5.1 and 3.5.2 of the specification that the work was included in the contract and that amendments 0001 and 0002 to the solicitation provided the information necessary to perform the work (R4, tab 8).

17. On 17 February 1992, OCC filed a timely appeal.

DECISION

The issue to be decided in this appeal is whether the contract required site work to be performed within the footprints of the proposed buildings. OCC says it does not and points to provisions in the drawings and specifications that support that view. The Government says it does and points to provisions in the drawings and specifications that support that view.

The specifications are confusing and conflicting. While it is true that certain portions (*e.g.*, ¶ 3.4.2, sentence 1) indicate site work was to be performed under the proposed buildings, other provisions indicate that these directions were merely left in the specification when the site work and building construction were separated for separate award (*e.g.*, ¶ 3.4.2, sentences 3-5). Additionally, the wage rate provisions of the contract tend to indicate that no work was to be performed within the footprints of the buildings. Nonetheless, OCC realized at the time it quoted, that the specification could be read to require work by the site contractor under the proposed buildings.

Similarly, the drawings are confusing and conflicting. As originally issued, they stated that the buildings were to be constructed under separate contract. Since the contract did not provide any information on these structures, and there was not sufficient information in the drawings to allow site work to be performed under the proposed buildings (*e.g.*, no elevations in the footprints), one could assume that industry custom would prevail and no site work would be performed within five feet of the buildings' footprints. Further, the "limits of grading" lines seemed to exclude the area under the proposed buildings from the contract. The matter was further complicated by the Government changing the outline line of the proposed buildings in amendment 0001 and back again in amendment 0002. Be that as it may, we are convinced that in amendment 0001, when the Government changed the drawings to state that the area under the proposed buildings was to be excavated, OCC knew or should have known that site work was required under the proposed buildings. OCC is correct when it points out that the elevations the drawings directed it to excavate to were above the existing elevations of the site. OCC, however, realized this at the time it was preparing its quote. The only explanation for this is that OCC read the note, realized that work was being required, and examined the elevations relevant to the work. That it discovered what it believed was an error in the Government's figures did not entitle it to assume that site work was not required. Merely discovering that Government specifications are defective does not entitle a contractor to ignore provisions that require work to be done. Given the totality of the circumstances, we find the Gov-

Digitized by Google

ernment's interpretation to be the only reasonable one.

CONCLUSION

The appeal is denied.

[¶ 26,336] Spartan Building Corp.

ASBCA Nos. 43849, 44431, August 26, 1993. Contract No. N62467-88-C-0039.

Contract Disputes, Certification—Adequacy—Liquidated Damages.—A contractor's contention that to the extent appeals before the board concerned liquidated damages they arose from government claims and that therefore certifications were not required for the board to exercise jurisdiction over them was denied because the government had not asserted a claim against the contractor. The government had only withheld liquidated damages and denied the contractor's claims for an equitable adjustment. The contractor's first "claim" made no specific request for relief from the assessment of liquidated damages. A subsequent letter requested an equitable adjustment for interest on late contract payments and liquidated damages. The contracting officer's decisions concerning these claims did not expressly assert a government claim for liquidated damages. Both decisions merely denied, in relevant part, the contractor's requests for an equitable adjustment.

Contract Disputes, Certification—Adequacy—Amount Claimed v. Claim.—The board affirmed its prior decision dismissing a claim for inadequate certification because, by certifying only as to the amount claimed rather than the entire claim, the contractor qualified the scope of the claim certification so as to vitiate the effectiveness of the certification. The board declined the contractor's invitation to reconsider its initial position and take a less "hyper-technical" construction of the certification requirement in light of recent decisions of the United States Court of Appeals for the Federal Circuit, because the certification language used by a contractor must be sufficient so as to "bind the contracting organization in fraud and contract."

Contract Disputes, Certification—Adequacy—Common Sense Reading.—Certification of the amount claimed instead of the claim itself could not be cured by a "common sense" reading of the claim certification documents, because the certification must still contain the "critical information" required by the Contract Disputes Act. The CDA mandates that the contractor certify that the claim is made in good faith. Certificates of pricing and overhead costs submitted by the contractor could not cure the defective certification, because these documents were limited in scope and did not satisfy the CDA certification requirements, even when all the certifications were examined together.

Contract Disputes, Certification—Applicability of Requirement—Nonmonetary Nature of Claim.—An earlier decision dismissing a contractor's appeals for lack of certification of the underlying claims was reversed to the extent that it dismissed the portion seeking a 131-day extension of time, because, as a nonmonetary claim, the contractor's request for a time extension did not have to be certified.

For the appellant: Gardner & Kewley, Metairie, Louisiana, by Thomas F. Gardner. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Richard A. Gallivan and Helen D. Rosen, Trial Attorneys.

Before RUBERRY, SPECTOR, and LIPMAN, Administrative Judges.

Reconsideration of 93-1 BCA ¶ 25,506; motion denied on ASBCA No. 44431, granted on ASBCA No. 43849 with respect to extension of time.

RUBERRY, Administrative Judge: Appellant timely moves for reconsideration of our decision dismissing its appeals without prejudice for lack of jurisdiction (93-1 BCA ¶ 25,506). That decision concerned solely whether appellant's claim certifications substantially complied with the requirements of the Contract Disputes Act (CDA), 41 U.S.C. § 605(c)(1). In the instant motion, appellant argues that the Board erred on the facts and law in its earlier decision. The Government has responded in opposition. Familiarity with our initial decision is presumed.

©1994, Commerce Clearing House, Inc.

Digitized by Google

Appellant, now represented by different counsel, contends for the first time, that subject appeals arise from Government claims and, therefore, CDA certifications are not required for the Board to exercise jurisdiction over them. Appellant asserts that our jurisdiction derives from the contracting officer's final decisions which allegedly denied appellant's requests for relief from the Government's retention of $141,600 in liquidated damages. As this argument is presented for the first time, a review of the pertinent facts is required.

Contract performance extended past the 29 December 1990 contract completion date. By letter dated 22 January 1991, appellant was notified that the Resident Officer in Charge of Construction (ROICC) had begun and would continue to assess liquidated damages in the sum of $1200/day (R4, ASBCA No. 44431, tab 62). Thereafter, liquidated damages were withheld from each of appellant's monthly pay invoices.

On 26 February 1991, appellant submitted a "claim" to the contracting officer requesting an equitable adjustment of $734,708.74, which included, *inter alia,* subcontractor costs, direct costs, home office overhead, consultant fees, and profit associated with Government caused delays. Also claimed was entitlement to a time extension of 131 calendar days (R4, ASBCA No. 43849, tab 103). The "Background Summary" in the claim document mentioned that the contract contained a liquidated damages provision, but there was no specific request for relief from the assessment of liquidated damages. The contracting officer's 12 September 1991 final decision denied appellant's claim in its entirety (R4, ASBCA No. 43849, tab 104). The decision did not make any reference to liquidated damages. The appeal from this decision was docketed by the Board as ASBCA No. 43849.

By letter dated 25 November 1991, appellant submitted a request for equitable adjustment in the amount of $348,499 in which it sought compensation for additional costs resulting in part from the Government's "[i]mproper assessment of liquidated damages" (R4, ASBCA No. 44431, tab 116). Specifically, appellant stated:

> Because of the Government's refusal to acknowledge and provide extensions of time for delays imposed by the Government, the Government saw fit to withhold liquidated damages as well as other funds otherwise properly due to Spartan. Spartan seeks recovery of the costs of *interest* for this money as demonstrated herein. [Emphasis added]
>
> * * *
>
> Interest on late contract payments and liquidated damages $28,598.00

On 6 March 1992, the contracting officer issued a final decision stating in pertinent part:

> You seek $28,598.00 for interest on late progress payments and liquidated damages .... Liquidated damages were withheld on December 30, 1990, because you were not making satisfactory progress in finishing the job .... Since the alleged Government delays are the basis for this quantum item and since the issue is currently being litigated before the ASBCA, no entitlement to this claim item can be granted.

(R4, ASBCA No. 44431, tab 118) The appeal from this decision was docketed by the Board as ASBCA No. 44431.

Under the CDA, all Government claims must be the subject of a decision by the contracting officer. 41 U.S.C. § 605(a); *Van Elk, Ltd.,* ASBCA No. 45311, 93-3 BCA ¶ 25,995 (20 April 1993); *Melcon Systems, Inc.,* ASBCA No. 40825, 90-3 BCA ¶ 23,139. It is evident from the above facts that neither the 12 September 1991 nor the 6 March 1992 contracting officer's decisions expressly asserted a Government claim against appellant for liquidated damages. Both decisions merely denied, in relevant part, appellant's requests for an equitable adjustment.

However, appellant argues that, in the process of denying its claims, the contracting officer's decisions effectively ratified the ROICC's assessment of liquidated damages. Appellant asserts that by denying all time extensions, the contracting officer determined that the Government properly withheld $141,600 in liquidated damages (which would be the amount for 118 days of delay). In support of this argument, appellant points to the Board's holding in *Bradford Electric Co.,* ASBCA No. 43356, 92-3 BCA ¶ 25,205.

In *Bradford,* the liquidated damages assessed were less than $50,000, so that no certification issue was involved. The issue resolved there was whether the right of the Government to assess liquidated damages was in dispute.

Here, neither of appellant's claims specifically sought remission of the liquidated damages being withheld by the Government. Appellant's monetary requests for

Digitized by Google

$734,708.74 and $348,499, respectively, are pure contractor claims which must be certified under the CDA, 41 U.S.C. § 605(c)(1).

Appellant also contends that the Board's original decision was incorrect as a matter of law. It encourages us to reconsider our initial position in light of *Heyl & Patterson, Inc. v. O'Keefe,* Nos. 91-1446, 92-1072 (Fed. Cir. Feb. 12, 1993) and *Fischbach and Moore Int'l Corp. v. Christopher,* No. 92-1092 (Fed. Cir. March 2, 1993) and apply a less "hypertechnical" construction of the certification requirement so as to conclude that appellant's claim certifications substantially complied with the CDA. In addition, appellant argues that a "Certificate of Pricing Pursuant to Defense, DFAR 252.233-7000" and a "Certificate of Overhead Costs" submitted in conjunction with each of the certified claims, satisfies the CDA's statutory requirements.

Appellant was not required to recite the exact language of the CDA, 41 U.S.C. § 605(c)(1), when it certified its claims. *Heyl & Patterson,* slip op. at 7, *citing, United States v. General Elec. Corp.* [31 CCF ¶ 72,180], 727 F.2d 1567, 1569 (Fed. Cir. 1984); *see also Fischbach and Moore,* slip op. at 8. However, the certification language used by a contractor must be sufficient so as to "bind the contracting organization in fraud and contract." *Fischbach and Moore,* slip op. at 9. We believe that, by certifying only as to the *amount claimed* rather than the entire claim, appellant qualified the scope of the claim certifications so as to "vitiate[] the effectiveness of the certification[s]." *LaBarge Electronics,* ASBCA No. 44401, 93-2 BCA ¶ 25,617 (2 December 1992). As we stated in our first decision, appellant is required under the CDA to certify as to the underlying facts asserted in support of entitlement, not just to the calculation of the amount of the claim. In *Heyl & Patterson* and *Fischbach and Moore,* the Federal Circuit noted that the contractors' certification language actually rendered the claim certifications broader than that required by the CDA. *Heyl & Patterson,* slip op. at 9; *Fischbach and Moore,* slip op. at 8. That is not the case with appellant's certifications.

Further, we do not agree with appellant that inclusion of a certificate of pricing and a certificate of overhead costs helps cure an otherwise defective CDA claim certification. Appellant points to *Transamerica Ins. Corp. v. United States* [38 CCF ¶ 76,374], 973 F.2d 1572 (Fed. Cir. 1992), while arguing in favor of a "common sense" reading of its claim certification documents. However, in affirming the use of a standard of substantial compliance when evaluating the adequacy of a certification under the CDA, the court stated that the claim certification must still contain the "critical information" required by the statute. *Id.* at 1580, *citing, General Elec., supra.* The CDA mandates that the contractor certify that the *claim* is made in good faith. Appellant's certificates of pricing and overhead costs are limited in scope and do not satisfy the CDA certification requirements, even when all the certifications are examined together. *See Norcoast-BECK Constructors, Inc.,* ASBCA No. 37977, 89-3 BCA ¶ 21,979; *Continental Maritime of San Diego, Inc.,* ASBCA No. 36733, 89-1 BCA ¶ 21,249.

While we affirm our earlier decision that appellant's monetary claims for $734,708.74 and $348,499, respectively, are not properly certified, it appears that appellant submitted a valid claim to the contracting officer for a 131-day extension of time. As a nonmonetary claim, appellant's request for a time extension does not have to be certified. *See Skip Kirchdorfer, Inc.,* ASBCA Nos. 40515, *et al.,* 93-3 BCA ¶ 25,899 (3 March 1993). This request was denied in the contracting officer's 12 September 1991 decision. Accordingly, appellant's entitlement to a time extension is properly within the scope of our jurisdiction.

CONCLUSION

As for ASBCA No. 44431, appellant's motion for reconsideration is denied. As for ASBCA No. 43849, appellant's motion for reconsideration is granted only with respect to appellant's claim for an extension of time.

[¶ 26,337] John E. Day Associates, Inc.

ASBCA No. 43758, August 30, 1993. Contract No. N62477-88-C-0154.

Interpretation of Contracts—Painting—Stripping.—A contractor's interpretation of a historic preservation contract's window drawing note as excluding some windows from contract paint stripping requirements was unreasonable because the contractor was

©1994, Commerce Clearing House, Inc.

Digitized by Google

inconsistent in defining the term "existing." The language in the note instructed the contractor to reinstall refurbished sashes for the windows "in existing frames." The contractor interpreted "existing" to mean that the frames were to be left in the same condition as found, meaning that they were not to be stripped of paint. The contractor's witnesses testified that this is the common usage of the word "existing" in the historic restoration trade. The government interpreted the word "existing" to mean simply "that was there" and contended that there was no basis for excluding the windows from the paint stripping requirements. When used elsewhere in the contract, the word was applied by the contractor as having the common definition of "existing," which is something that has actual or real being, and the contractor accomplished the required work or reinstallation with respect to the existing item.

For the appellant: Blum, Yumkas, Mailman, Gutman & Denick, P.A., Baltimore, Maryland, by Joseph C. Kovars. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Sterling Adams and Lisa C. Gerideau, Trial Attorneys, Naval Facilities Engineering Command, Alexandria, Virginia.

Before DUVALL, RUBERRY, and STEMPLER, Administrative Judges.

DUVALL, Administrative Judge: This appeal is taken from a contracting officer's final decision denying appellant's claim for an equitable adjustment for stripping paint from 46 windows as part of a family housing repair contract. Appellant interpreted a window drawing note as excluding the windows from contract paint stripping requirements. This appeal turns on the proper interpretation of language in the note that instructs the contractor to reinstall refurbished sashes for these windows "in existing frames." Appellant interprets "existing" to mean "as they are" or in the same, or pre-existing condition, meaning that the frames are not to be subjected to the following note (No. 13), which calls for the stripping of paint from, *inter alia*, wood frames. The Government understands the word "existing" to simply mean "that is", and contends that there is no basis for excluding the windows listed in note 12 from the paint stripping requirements of note 13. We agree with the Government.

Findings of Fact

On 2 April 1990, the Navy awarded appellant a contract in the amount of $1,194,650 for family housing repairs to four admiral's quarters, A, C, G and U, at the Washington Navy Yard, Washington, D.C. Three of the quarters, including Quarters A, the subject of this dispute, were located in what was designated as the historic area of the Navy Yard. The contract included installation of new HVAC systems, removal and/or replacement of piping, asbestos, and roofing, and selective renovations, which included such items as floors, kitchens, finish and rough carpentry and windows.

Quarters A, the traditional home of the Chief of Naval Operations, was completed in 1803. It has historical significance, and is decorated to a museum quality level. Quarters A has over a hundred windows, of 32 different sizes. Many of the windows in Quarters A are oversized; some are double hung windows approximately 12 feet high. An estimated 30 to 60 layers of paint had been applied to the windows over the years.

The procurement was by competitive negotiation. The project was considered to be general construction. However, special skills were required of proposers, since the work involved "historic construction." Accordingly, prospective proposers were pre-qualified. As part of the pre-qualification procedure, proposers were asked to submit their restoration experience during the past five years. Appellant was able to list ten historic projects it performed during that period. Appellant had extensive historic preservation experience.

Specification 08640, WOOD SASH RESTORATION, included the following provisions:

3.1 Restoration, General:

3.1.1 The extent of wood window restoration work is shown and scheduled on the drawings and specified herein; the work includes but is not limited to the following:

3.1.1.1 Removing all existing wood sash.

3.1.1.2 Stripping paint from both sides of wood sash including the fixed arched sash and transoms, wood sills, exterior of wood frames and stops and preparing surfaces for the application of epoxies, primers and paints.

* * *

Digitized by Google

3.1.1.5 Removing existing weatherstripping, if any.

* * *

3.1.1.9 Field applying liquid and paste epoxies to wood sills.

* * *

3.1.1.12 Shop applying paint to the exterior of the wood sash.

3.1.1.14 Field applying paint to the exterior of the fixed arched wood sash and transom sills and related areas.

3.1.1.15 Field applying the specified primer and paints to the interior of the sills and exterior wood frame, trim and stops.

* * *

3.3 Strip existing paint and finishes to bare wood from exterior and interior of wood sash, wood frames, wood casings, sills, stops and trim. Follow OSHA guidelines when removing lead-base paint.

Drawing A-10, the Quarters A Window Schedule, contained a "window number" column beginning with window 1 and ending with window 103. A window number 96 was missing from the schedule but was shown on an architectural drawing. The residence actually had 102 windows. The window listed as 103 did not exist. (Tr. 159)

Central to this dispute are notes 10 through 15 of the window schedule, which read as follows:

10. THE FOLLOWING WINDOWS ARE TO BE REPAIRED IN PLACE. BROKEN GLAZING AND DAMAGED COMPOUND WILL BE REMOVED AND REPLACED. THE SCOPE OF REPAIR WORK FOR THESE WINDOWS DOES NOT INCLUDE THE REMOVAL OF EXISTING PAINT BUILD-UP OR OVERALL GLAZING REPLACEMENT.

MAIN HOUSE: 13 THRU 44, 52, 59, 72, 73, 74, 75, 83, 85 & 87.

GARAGES #2 & #3: 92, 93, 94, 96 THRU 102.

11. THE FOLLOWING WINDOWS ARE INTERIOR OR TRANSOM AND WILL NOT HAVE ANY REPAIR WORK DONE: 50, 51, 95, 53 AND 54.

12. THE FOLLOWING WINDOWS WILL HAVE THEIR SASHES REMOVED, TAKEN OFF SITE, HAVE THE PAINT REMOVED FROM THE SASH, BE REGLAZED, WEATHERSTRIPPED, PRIMED & PAINTED. THEY WILL THEN BE *REINSTALLED IN EXISTING FRAMES:* 1 THRU 12, 45 THROUGH 49, 55 THRU 58, 60 THRU 71, 76 THRU 82, 84, 86, 88 THRU 91. (emphasis added)

13. STRIP EXCESSIVE MULTIPLE LAYERS OF EXISTING PAINT TO BARE WOOD FROM EXTERIOR AND INTERIOR OF WOOD SASH, WOOD FRAMES, INTERIOR WOOD CASINGS, SILLS, STOPS AND ALL TRIM. PREPARE SURFACE FOR NEW PAINT FINISH.

14. ALL HARDWARE IS TO BE REMOVE [sic], CLEANED AND REINSTALLED. DAMAGED HARDWARE IS TO BE REPLACED TO MATCH EXISTING.

15. WHERE WOOD FRAMES, SASHES, AND SILLS ARE BADLY DAMAGED, ROUT IN NEW WOOD TO MATCH EXISTING.

Notes 13, 14 and 15 also appeared (with different numbers) on the window schedules for the other quarters covered by the contract. Specific instructions such as those contained in Notes 10-12 on the Quarters A schedule were not included in the schedules for the other quarters, which had fewer and less elaborate windows. While most of the windows in Quarters A had heavy paint layer build-up, window location and budgetary considerations led the Navy to limit work, as indicated in the notes.

The Quarters A Schedule also contained an "Existing Window Remarks" column that included instructions to repair such items as sills and sashes. Detail 3 of drawing A-11, Quarters A Window Details, depicted a cut diagram of a window and associated construction. The detail included a note stating "Exist. Construction, frame & trim to remain. Repair frame per specs." Detail 4 of the drawing included a note stating "Repair sash as per specs. Reinstall in existing frame."

An American National Standards Institute (ANSI) publication, WOOD WINDOW UNITS, was incorporated into the contract by reference. The stated purpose of the publication is to "establish nationally recognized standard performance requirements for materials, construction, and assembly of wood window units . . ." (Para 1.1). The publication contained separate definitions for a sill, a stop, casings, and window frame. No definition of trim was given. The definitions in the publication indicate that a sill and a stop may be included in a broad definition of the word frame, but that casings were not

©1994, Commerce Clearing House, Inc.

Digitized by Google

included as part of the frame. The frame definition did not include trim.

Appellant's Vice President of Estimating testified that during bid formation he reviewed the bid take-off from the drawings done by an employee and the specifications and drawings, and concluded that the stripping requirements in note 13 did not apply to the 46 windows specified in note 12 based on his definition of the word "existing". While the sashes were to be removed and renovated, they were to be "reinstalled in existing frames." He interpreted "existing" to mean that the frames were to be left in the same condition as found, meaning that they were not to be stripped of paint. Appellant's witnesses testified that this is the common usage of the word "existing" as used in the historic restoration trade. No corroborating evidence for a special trade usage of the word "existing" was presented.

Since note 10 specifically excluded paint removal from the windows listed in the note, and note 11 stated that no repair work was to be done on the five indicated windows, appellant's Vice President of Estimating testified that appellant concluded that the general stripping requirements of note 13 applied only to window 103 shown on the schedule, which was the only window not listed in the preceding three notes. This testimony conflicts with a letter written to the contracting officer by appellant prior to the appeal which acknowledged that notes 10, 11 and 12 covered all the windows of Quarters A. (R4, tab 14, at 2, 5) Appellant was unable to locate its bid papers or other corroborating evidence of reliance on its interpretation during bid preparation.

Appellant interpreted the term "frames" as inclusive of such items as wood casings, sills, stops and trim, which were separately listed for stripping in note 13 (tr. 74). The Government disagreed with appellant's inclusive interpretation of the word frame. According to a Government witness, a sill or a stop attached to a jamb may be part of a frame, as indicated in the aforementioned referenced publication, but casings and trim are not (tr. 165/177). We find based on this testimony and the aforementioned ANSI publication, that the term "frame" does not normally include casings or trim.

Appellant's interpretation of the meaning of the word "existing" differed when applied to its use elsewhere in the drawings, such as the aforementioned details on drawing 11. There "existing" was defined by appellant as well as the Government to mean the item (*e.g.* frame) "that was there." (Tr. 64) Appellant repaired "existing" items and reinstalled in "existing" frames as instructed elsewhere in the contract.

In July or August 1990 the dispute arose over the extent of work on Quarters A windows designated in Note 12 of drawing A-10. At the Government's request, appellant sent the Government a Request for Information (RFI) relating to the dispute. The Government answered the RFI in a 28 September 1990 letter directing appellant to apply note 13 to all Quarters A windows not designated in notes 10 and 11. Appellant accomplished the directed stripping and in November 1990 submitted a claim for the cost of stripping the 46 Quarters A windows listed in note 12, in the amount of $104,223.

DECISION

We find appellant's interpretation of the word "existing" as used in drawing note 12 to be strained and unreasonable for several reasons. First, appellant was inconsistent in defining the term. Where used elsewhere in the contract, appellant applied the common definition of "existing", which is something that has actual or real being (Webster's Third International Dictionary (1971)), and accomplished the required work or reinstallation with respect to the existing item. Yet it applied the alleged "historical renovation" meaning *i.e.*, to leave unchanged, only to note 12. Appellant failed to justify this inconsistency.

Second, we find appellant's uncorroborated testimony to be insufficient to meet its burden of establishing that widely accepted trade custom or practice gives the term a special meaning, at least in the context of drawing note 12. See *Bruce Anderson Company, Inc.*, ASBCA No. 29412, 32347, 89-2 BCA ¶ 21,872 at 110,030. Third, appellant's interpretation ignores the fact that the operative phrase in note 12 refers only to frames, while note 13 identifies "wood frames, interior wood casings, sills, stops and all trim" for paint stripping. We have found that a "frame" does not include casings and trim.

Finally, a contract must be read as a whole, giving meaning to all of its provisions if possible, rather than as rendering certain provisions useless or inoperative. *Hol-Gar Manufacturing Corporation v. United States* [10 CCF ¶ 72,885], 169 Ct. Cl. 384, 395; 351 F 2d 972, 979 (1965). Aside from ignoring references to casings and trim in note 13, appellant's interpretation of note 12 would mean that the note 13 stripping requirements would have no application to any Quarters A window. We have found that appellant un-

Digitized by Google

derstood that notes 10-12 covered all of the windows in the building. The Government's interpretation, which we conclude is the only reasonable one, interprets the contract so as to give meaning to both notes 12 and 13.

The appeal is denied.

[¶ 26,338] Eveready Battery Company, Inc.

ASBCA No. 43640, August 30, 1993. Contract Nos. DAAA09-82-G-7810, DAAA09-85-C-0835, DAAA09-85-G-0019, DAAA09-86-C-1255.

Contract Disputes, Certification—Authority—Overall Responsibility.—Certification of a corporate contractor's claims by its assistant secretary and manager of contract administration was unauthorized because the contractor failed to show that the certifying official had the requisite overall responsibility for the conduct of the contractor's affairs in general. Although the certifier was responsible for the contractor's government contracts, nothing in the record indicated to what extent the contractor's overall business was comprised of government contract work. Without such information, the board was unable to determine whether responsibility for executing and managing the contractor's government contracts was adequate to satisfy the regulatory requirement for overall responsibility. The submission of a supplemental certification by the contractor's plant manager after the contracting officer's decision on the defectively certified claim did not retroactively render the claim properly certified. In any event, the contractor did not show that the plant manager was in charge of the contracts.

For the appellant: Coburn & Croft, St. Louis, Missouri, by Timothy F. Noelker. For the government: Col. Riggs L. Wilks, Jr., JAGC, Chief Trial Attorney, and Maj. Margaret A. Schuyler, JAGC, Trial Attorney.

Before RUBERRY, RIISMANDEL, and LUSSIER, Administrative Judges.

RUBERRY, Administrative Judge: The Board, *sua sponte*, directed the parties to address the adequacy of appellant's claim certification under FAR 33.207(c)(2). Appellant contends that its claim was properly certified by its assistant secretary, or alternatively by its plant manager, and has submitted affidavits and copies of corporate resolutions in support. The Government responded by filing a motion to dismiss, arguing that neither certifying official had requisite authority to certify the claim.

STATEMENT OF FACTS

From 1984 to 1986, the Government awarded appellant the above-referenced contracts to supply batteries. The batteries were manufactured in appellant's plant at Bennington, Vermont. In 1987 a dispute arose concerning whether utility costs properly could be allocated to these contracts (R4, tabs 6, 7). By letter dated 8 December 1987, appellant submitted a $167,001 claim to the contracting officer (R4, tab 8). The claim was accompanied by a properly-worded certification (41 U.S.C. § 605(c)(1)) executed by J.F. O'Keefe—Assistant Secretary.

By letter dated 28 March 1988, appellant revised the claim to $146,337 (R4, tab 9). This revised claim was also accompanied by a properly-worded certification executed by Mr. O'Keefe.

On 10 June 1988, the contracting officer denied the claim, but failed to apprise appellant of its appeal rights under the Contract Disputes Act (CDA), 41 U.S.C. § 605(a) (R4, tab 10).

By letter dated 22 February 1991, appellant submitted a "formal claim" under the CDA renewing its previous request for an equitable adjustment in the amount of $146,337 (R4, tab 11). Once again, the claim was certified by J.F. O'Keefe, this time as Assistant Secretary, Manager, Contract Administration. By letters dated 17 April 1991 and 17 July 1991, the contracting officer denied appellant's claim in its entirety (R4, tabs 12, 13). On 15 October 1991, appellant filed a timely notice of appeal and complaint with the Board, copies of which were also sent to the contracting officer. Included with the complaint was a "Supplemental Certification of Claim" containing language conforming to 41 U.S.C. § 605(c)(1) and signed by Jonathan K. Perryman, Plant Manager, Bennington, Vermont. Although a copy of the complaint, with enclosures, is indicated on the cover letter to the Board as sent to

©1994, Commerce Clearing House, Inc.

Digitized by Google

the contracting officer, there is no evidence that it was received by the contracting officer. Nor does the record show that any claim was submitted to the contracting officer subsequent to the 22 February 1991 claim.

After reviewing the record, the Board directed the parties to address the adequacy of appellant's claim certification in light of *United States v. Grumman Aerospace Corp.* [36 CCF ¶ 76,013], 927 F.2d 575 (Fed. Cir.), *cert. denied,* 112 S. Ct. 330 (1991). The Government responded by filing a motion to dismiss, arguing that the Board lacks jurisdiction due to the absence of a proper certification. In support of its position, appellant submitted the affidavit of Jerry F. O'Keefe. It states:

1. My name is Jerry F. O'Keefe. I am employed by Eveready Battery Company ("Eveready"), Checkerboard Square, St. Louis, Missouri 63164. I have been employed with Eveready originally under the Union Carbide Corporation and, later, the Eveready Battery Company, since 1960.

2. At all times relevant to this appeal, I have been the Assistant Secretary of Eveready Battery Company and its Manager of Contract Administration.

3. At all times relevant to this appeal, I have had the authority to enter into and manage all contracts with the Federal Government for and on behalf of Eveready. Consequently, I am an officer of Eveready and have overall responsibility for the conduct of Eveready's affairs with the Government.

4. In preparation for this appeal dated October 11, 1991 and received by the ASBCA on October 15, 1991, I personally assisted in coordinating the additional certification of Jonathan K. Perryman. At the time Mr. Perryman made his certification, which was immediately prior to its filing, he was Plant Manager of Eveready's plant in Bennington, Vermont. In that role, Mr. Perryman was a senior company official in charge of Eveready's plant at the location involved in this appeal.

Appellant also submitted the affidavit of Harry L. Strachan, III in which he attests in part:

2. I am now and at all times relevant to this claim have been Vice President, General Counsel and Secretary of Eveready Battery Company, Inc. ("Eveready").

3. J.F. O'Keefe is now and at all times relevant to this case has been the Assistant Secretary of Eveready.

4. As Assistant Secretary for Eveready, Mr. O'Keefe is an officer of Eveready and has the authority to bind Eveready with respect to a claim.

5. In addition, Jonathan K. Perryman was at the time this claim was made and at the time he made his certification the Plant Manager for Eveready's Bennington facility. In that capacity he too had authority to bind the company with respect to the claim.

In addition, appellant submitted copies of corporate resolutions which authorized Mr. O'Keefe, on behalf of appellant, to submit bids to and execute contracts and contract modifications with the federal Government.

DECISION

The Contract Disputes Act of 1978 (CDA), 41 U.S.C. § 605(c)(1), requires that all claims in excess of $50,000 be certified by the contractor. Proper certification of a claim is a prerequisite to the Board's jurisdiction to adjudicate claims in appeals filed prior to the date of enactment of the Federal Courts Administration Act of 1992. P.L. No. 102-572, § 907(a)(2), 106 Stat. 4506, 4518 (29 October 1992); *Lawlor Corp.,* ASBCA No. 45154, 93-3 BCA ¶ 26,181, 25 June 1993; *Arnold M. Diamond, Inc.,* ASBCA No. 40885, *on mot. for recon.,* 93-3 BCA ¶ 26,083, 7 May 1993, *aff'g,* 93-2 BCA ¶ 25,680; *George Hyman Constr. Co.,* ASBCA Nos. 44155, 44361, 44362, 93-2 BCA ¶ 25,870, 24 February 1993. Federal Acquisition Regulation (FAR) 33.207(c)(2) defines those individuals who may execute the claim certification on behalf of a corporate contractor:

(2) If the contractor is not an individual, the certification shall be executed by—

(i) A senior company official in charge at the contractor's plant or location involved; or

(ii) An officer or general partner of the contractor having overall responsibility for the conduct of the contractor's affairs.

Accordingly, since appellant filed its notice of appeal with the Board on 15 October 1991, the Board lacks jurisdiction if the certification was not executed by a proper individual. Further, appellant bears the burden of demonstrating by substantial evidence that the certifying official met the requirements of FAR 33.207(c)(2). *Fidelity and Deposit Co. of Maryland,* ASBCA No. 40327, 91-1 BCA ¶ 23,312.

As for the claim certifications executed by J.F. O'Keefe, appellant contends only that Mr. O'Keefe qualifies under the second

Digitized by Google

prong of the regulation, FAR 33.207(c)(2)(ii). Moreover, inasmuch as the batteries were manufactured in Vermont and Mr. O'Keefe is located in St. Louis, it is clear that he does not qualify under the first prong. Also see Mr. Strachan's affidavit, *supra,* regarding Mr. Perryman's position. Consequently, appellant must establish that as the Assistant Secretary and Manager of Contract Administration, Mr. O'Keefe, at the time he signed the certification(s), had "'overall responsibility for the conduct of the contractor's affair in general." *Grumman,* 927 F.2d at 580 (quoting FAR 33.207(c)(2)(ii)).[1]

A subordinate officer may qualify as a certifying official, *Kimmins Contracting Corp.,* ASBCA Nos. 43800 *et al.,* 93-3 BCA ¶ 26,000, 27 April 1993, and the evidence submitted suggests that Mr. O'Keefe may indeed have "authority to bind Eveready with respect to a claim." However, appellant has failed to demonstrate that Mr. O'Keefe had the requisite overall responsibility within the meaning of the above FAR provision. Although it appears that Mr. O'Keefe was/is responsible for appellant's contracts with the federal Government, nothing in the record indicates to what extent appellant's overall business is comprised of government contract work. Without such information, we are unable to determine whether responsibility for executing and managing appellant's government contracts is "adequate to satisfy the regulatory requirement that the certifier have 'overall responsibility for the conduct of the contractor's affairs in general.' " *Johnson Controls, supra* at 8.[2]

With regard to Mr. Perryman's certification, a certification submitted after a contracting officer's decision on an uncertified or defectively certified claim does not retroactively render the claim properly certified. *DMS,* ASBCA No. 43595, 92-2 BCA ¶ 24,952; *Jarke Corp.,* ASBCA No. 43509, 92-2 BCA ¶ 24,987 at 124,561. There is no evidence that his certification was received by the contracting officer nor that any claim was submitted after 22 February 1991. *Cf. Carmona Industrias Electricas, S.A.,* ASBCA No. 42996, 93-3 BCA ¶ 25,975, 6 April 1993. In any event, appellant has not shown that Mr. Perryman was "in charge" of the contracts. *Cf. Ingalls Shipbuilding, Inc. v. O'Keefe* [38 CCF ¶ 76,470], Fed. Cir., Feb. 12, 1993, 12 FPD ¶ 13.

CONCLUSION

Appellant has not established that a properly certified claim was submitted to the contracting officer.

The appeal is dismissed without prejudice to appellant's right to submit a properly certified claim to the contracting officer and to timely appeal from an adverse decision or failure to render a decision.

[¶ 26,339] General Dynamics Corp.

ASBCA No. 39866, August 24, 1993. Contract No. N00024-81-C-2134.

Cost or Pricing Data—Data to Be Disclosed—Subcontract Data.—A contractor's motion for summary judgment of an appeal from a contracting officer's decision that reduced the prices of a shipbuilding contract on the grounds of defective pricing by a subcontractor was denied because the contractor did not show as a matter of law that the government could not prove that the subcontractor's defective data resulted in a contract price increase. The contractor contended that the remedy under the prime contract's Price Reduction for Defective Cost or Pricing Data clause did not apply to the subcontract, which was awarded under an earlier contract, and that the government did not rely on the subcontract data in negotiating the prime contract. The contractor did not show that the

---

[1] While appellant alleges otherwise, Mr. O'Keefe's positions in the company, Assistant Secretary and Manager of Contract Administration, certainly do not avail appellant of the rebuttable presumption adopted in *United States v. Newport News Shipbuilding and Dry Dock Co.* [37 CCF ¶ 76,095], 933 F.2d 996 (Fed. Cir. 1991), where the contractor's Executive Vice President was found to be qualified to certify the claim. In *Newport News,* the court stated that "certification by a corporate officer, without explanation, necessarily implies that the contractor is representing that he has the requisite 'overall authority,' at least where his title is not inconsistent therewith." Also see, *Fischbach and Moore Int'l Corp. v. Christopher* [38 CCF ¶ 76,483], No. 92-1092, (Fed. Cir. 2 March 1993); *Johnson Controls World Services, Inc. v. Garrett* [38 CCF ¶ 76,477], No. 92-1051, n.4 (Fed. Cir. Feb. 19, 1993).

[2] We also take notice that the Eveready brand of batteries is well-known in the commercial market.

Truth in Negotiations Act precluded a defective pricing action in a later contract based upon data that formed the basis of negotiation of the earlier contract.

Procedure, Boards—Summary Judgment—Relevant Fact Issues.—A government motion for summary judgment of an appeal from a contracting officer's decision that reduced the prices of a shipbuilding contract on the grounds of a subcontractor's defective pricing was denied because the contractor's advancement of one legal theory in support of its summary judgment motion, that is, that the government could not prove reliance on the data, did not constitute abandonment of other positions raised in the pleadings. The record showed that disputed material facts remained as to the date upon which the contractor and subcontractor reached a price agreement and as to whether the subcontractor was entitled to an offset.

For the appellant: Saul, Ewing, Remick & Saul, Philadelphia, Pennsylvania, by John W. Fowler, Jr. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and James H. Haag, Trial Attorney.

Before LIPMAN, RUBERRY, and VAN BROEKHOVEN, Administrative Judges.

LIPMAN, Administrative Judge: This is an appeal from a contracting officer's decision which determined that the prices of (a) the captioned negotiated contract for the construction of Trident-class ballistic missile submarines and (b) a subcontract purchase order should be reduced as a result of defective pricing relating to cost data provided by appellant's subcontractor, Artisan Electronics Corporation. This appeal has been filed pursuant to a sponsorship agreement between appellant and Artisan permitting Artisan to proceed in appellant's name.

Appellant filed a Motion for Summary Judgment, which was followed by the Government's Cross Motion for Summary Judgment and further responses by the parties to both of the motions. Our statement of facts and decision on the motions rest upon the present documentary record, and proposed findings of fact advanced in the motions and uncontested by the opposing party. The sole affidavit before us is an affidavit submitted by appellant's in-house counsel.

STATEMENT OF FACTS

On 30 September 1978, appellant and the Navy entered into Contract N00024-78-C-2453 (Contract 2453), under which appellant, as design agent for the Trident-class submarine, was to procure long lead time materials and equipment for the Trident submarines identified as SSBN's 734 and 735. Contract 2453 contained the Defense Acquisition Regulation (DAR) clauses 7-104.29(a) "Price Reduction for Defective Cost or Pricing Data (1970 Jan) and 7-104.42(a) "Subcontractor Cost or Pricing Data (1970 Jan)."

Under Contract 2453, appellant issued to Artisan Electronics Corporation (Artisan) requests for quotations seeking subcontracts for the supply of cable assemblies for missile tube interface harness wiring systems, which were among the long lead time items in the contract. In response to the request for quotations, Artisan proposed a price of $550,024 for each of three shipsets, contingent upon the simultaneous award of the two subcontracts under Contract 2453 and a subcontract under Contract 2201, which also required the cable assembly. On 7 July 1981, appellant issued three separate purchase orders for the three shipsets on the basis of "not to exceed" prices, subject to an audit to be conducted by appellant.

On 16 January 1981, Artisan entered into a collective bargaining agreement with Amalgamated Local 427 of the International Union of Electrical, Radio and Machine Workers, AFL-CIO. The agreement was in effect until 15 January 1984.

On 23 September 1981, appellant completed an audit of Artisan's pricing proposal for the three shipsets. The audit determined that the unit cost proposed by Artisan for each shipset was $490,886, of which $250,841 was comprised of material costs, including quotes from vendors, as follows:

Source	1 Ship Set	3 Ship Sets
ITT Cannon Electric	$121,445.76	$364,337.28
Stanford Applied Eng.	59,270.02	$177,810.06
D. G. O'Brien, Inc.	3,840.00	11,520.00

Digitized by Google

Appellant gave advance notice to the Government of the award of the subcontracts; the notice referred to Contract 2453.

On 15 October 1981, Artisan placed a purchase order with Bendix Corporation (Bendix) and, on 31 October 1981, Artisan placed a purchase order with Stanford Applied Engineering (SAE). Both purchase orders were for material to be used in performing the subcontract.

On 7 January 1981, the Navy awarded appellant Contract N00024-80-C-2201 (Contract 2201), on a fixed price incentive basis, for the construction of the SSBN 733 Trident-class missile submarine, with options for the construction of SSBNs 734 and 735. Contract 2201 contained the DAR clauses 7-104.29(a) "Price Reduction for Defective Cost or Pricing Data (1970 Jan)" and 7-104.42(a) "Subcontractor Cost or Pricing Data (1970 Jan)." In connection with that contract, appellant submitted a certificate of current cost and pricing data dated 31 October 1980, the date of the parties' agreement on the price of the SSBN 733.

On 7 January 1982, the Navy and appellant entered into the captioned contract (Contract 2134), on a fixed price incentive basis, for the construction of SSBNs 734 and 735. Contract 2134 contained the DAR clauses 7-104.29(a) "Price Reduction for Defective Cost or Pricing Data (1970 Jan)" and 7-104.42(a) "Subcontractor Cost or Pricing Data (1970 Jan)."

On 6 January 1982, appellant certified that its cost or pricing data with respect to Contract 2134 was accurate, current and complete as of 30 December 1981.

Under Contracts 2201 and 2134, appellant entered into subcontracts with Artisan under which Artisan was to supply harness assembly shipsets for incorporation into the vessels.

The DAR 7-104.29(a) clause entitled "Price Reduction for Defective Cost or Pricing Data (1970 JAN)," found in each of the contracts, provided, in pertinent part:

> If any price, including profit or fee, negotiated in connection with this contract or any cost reimbursable under this contract was increased by any significant sums because:
>
> * * *
>
> (ii) a subcontractor, pursuant to the clause of this contract entitled "Subcontractor Cost or Pricing Data" or "Subcontractor Cost or Pricing Data—Price Adjustments" or any subcontract clause therein required, furnished cost or pricing data which was not complete, accurate and current as certified in the subcontractor's Certificate of Current Cost or Pricing Data;
>
> * * *
>
> the price or cost shall be reduced accordingly and the contract shall be modified in writing as may be necessary to reflect such reduction.
>
> * * *

The DAR 7-104.42(a) "Subcontractor Cost or Pricing Data (1970 JAN)" clause, found in each of the contracts, stated, in pertinent part:

> (a) The Contractor shall require subcontractors hereunder to submit, actually or by specific identification in writing, cost or pricing data under the following circumstances: (i) prior to the award of any subcontract the amount of which is expected to exceed $100,000 when entered into; (ii) prior to the pricing of any subcontract modification which involves aggregate increases and/or decreases in costs plus applicable profits expected to exceed $100,000, except where the price is based on adequate price competition, established catalog or market prices of commercial items sold in substantial quantities to the general public, or prices set by law or regulation.
>
> (b) The Contractor shall require subcontractors to certify, in substantially the same form as that used in the certificate by the Prime Contractor to the Government, that to the best of their knowledge and belief, the cost or pricing data submitted under (a) above is accurate, complete, and current as of the date of agreement on the negotiated price of the subcontract or subcontract change or modification.
>
> * * *

Contract 2453 contained the following clause:

> J-3 RELATIONSHIP OF LLTM TO SHIPBUILDING CONTRACTS
>
> The shipset of long lead time material (LLTM) to be procured under this contract covers items that are contractor-furnished material under shipbuilding contracts. Because of long lead time character of this material, procurement is being initiated under this contract in advance of execution of applicable shipbuilding contracts, to facilitate adherence to planned TRIDENT Program schedules. It is intended that the shipbuilding con-

©1994, Commerce Clearing House, Inc.

Digitized by Google

tract for the eighth hull of the TRIDENT shipbuilding program will provide that upon execution of that contract the shipbuilder automatically will assume total responsibility for the respective shipset of LLTM as CFM for the respective hull including items previously ordered from vendors or fabricated in-house whether or not delivered and items remaining to be ordered. *The shipbuilding contract will also provide, among other matters, that all costs related to the respective LLTM shipset, direct and indirect, incurred or to be incurred, and any payment made under this LLTM contract on account of such costs shall be deemed to be costs incurred and payments made under the shipbuilding contract.* This includes the cost incurred associated with Program Management of the LLTM contract for Hull eight. *To reflect the foregoing, upon execution of the shipbuilding contract, the Contracting Officer will appropriately reduce the estimated cost of this contract.* To permit implementation of the above stated intent, the Contractor agrees that all contracts and subcontracts with vendors will include legally sufficient provisions for substitution of the Government or the Government's designee for the Contractor, as the Government may direct. Further, with respect to items of LLTM being fabricated or provided by the Contractor in-house, the Contractor agrees to the substitution of the Government's designee for the Government under this contract, as the Government may direct. [Emphasis added]

Contract 2134 included the following clause:

H-63 CONTRACTOR FURNISHED EQUIPMENT

(a) Under Contract N00024-78-C-2453, the Contractor, as design agent for the TRIDENT Class Submarine also is procuring certain long leadtime materials and equipment for the TRIDENT ships identified as SSBN's 734-735. As of the effective date of this contract with regard to Item 0005, all equipment and materials which are being, have been or will be procured for said ships under Contract N00024-78-C-2453 shall be deemed to be equipment and material furnished by the contractor for the performance of this contract. The direct and indirect costs, both already incurred and to be incurred, of such equipments and materials shall be deemed to be costs arising under this contract and the incurrence of such costs and all payments made under Contract N00024-78-C-2453 shall be deemed to be costs incurred and payments made under this contract as of the dates of such incurrence and payments, respectively. The parties acknowledge that each of the prices set forth in Section B of this contract opposite Items 0001 and 0005 include full allowance for the corresponding number of shipsets of long leadtime materials provided for in Contract N00024-78-C-2453. Accordingly, as soon as possible after execution of this contract, and after the exercise of any option under Clause H-36, as the case may be, the estimated cost of Contract N00024-78-C-2453 shall be reduced accordingly.

On 7 January 1982, the date that the parties entered into Contract 2134, they also executed bilateral modification P00012 to Contract 2453. The modification stated as follows:

WHEREAS, by Contract N00024-81-C-2134 the Government is procuring the construction of the FY 81 TRIDENT Class Submarine (SSBN 734) and Special Provision H-63, entitled "Contractor Furnished Equipment", of that Contract provides that as of the effective date of that Contract all equipment and materials which are being, have been or will be procured under this Contract N00024-78-C-2453 for the FY 81 TRIDENT Class Submarine shall be deemed to be equipments and materials furnished by the Contractor for the performance of Contract N00024-81-C-2134, and that the estimated cost of this Contract N00024-78-C-2453 shall be reduced accordingly;

NOW THEREFORE, contemporaneously with the execution of contract N00024-81-C-2134, the total Estimated Cost of Line Item 0002 under Line Item 0002 under SECTION E of this contract and the Limitation of Government Liability under Line Item 0002 are decreased from $101,200,000.00 to zero dollars. The reduction of $101,200,000.00 is credited to the appropriation cited in Attachment A hereto.

On 16 February 1982, as agreed by the parties in clause H-63, appellant transferred the cable assemblies to be supplied under the subcontracts from Contract 2453 to Contract 2134.

On 4 March 1982, Artisan placed a purchase order with Mili Bride, Inc., for material to be used in performing the subcontracts.

Digitized by Google

By letter of 24 May 1982, appellant requested Government ratification of the placement of the subcontracts with Artisan at the price proposed by Artisan. The letter referenced Contract 2453.

On 26 May 1982, Artisan's president certified that the cost or pricing data submitted in support of its proposal was accurate complete and current as of 28 April 1982.

On 20 May 1985, the Defense Contract Audit Agency (DCAA) issued a report of an audit of the cost or pricing data which had been submitted by Artisan to appellant in connection with its obtaining the subcontracts. The report identified Contract 2134 as the prime contract. DCAA concluded that Artisan did not disclose to appellant current, complete and accurate pricing data, which resulted in excess costs being paid by the Government. DCAA determined, more specifically, that the prices of Artisan's material vendors were lower than the prices to which Artisan certified, as follows:

As Certified		As Produced		Adjustment
Vendor	Cost	Vendor	Cost	
Pirelli	$ 57,380	Mili Bride	$ 51,413	$ 5,967
SAE	297,642	SAE	187,040	110,602
Bendix	267,586	Bendix	203,237	64,349
Total	$622,608		$441,690	$180,918

To the recommended adjustment of $180,918, DCAA added the figure of $124,522, which had been a 20 percent escalation figure added to the proposal, producing a total of $305,440. DCAA also recommended that, as the result of an existing union agreement which Artisan had entered into on 16 January 1981, Artisan's proposed labor rate of $7.72 per hour be reduced to $5.72. The total price reduction recommended was $569,859.

By letter of 3 July 1985, the contracting officer forwarded the audit report to appellant, indicated that the audit had determined that appellant had submitted defective cost and pricing data in Contracts 2134 and 2201, and provided appellant with an opportunity to comment upon the audit's findings and to communicate with Artisan before the Government took any action to reduce the contract prices as a result of the defective pricing.

Upon being afforded the opportunity to comment on a preliminary version of the DCAA report, on 4 April 1985, Artisan, through its accountant, commented on the report. Among other things, it asserted that, in the conclusions reached in this audit, consideration should have been given to the fact that Artisan experienced losses on previous subcontracts for similar shipsets. It also pointed out that Artisan's proposal was submitted to appellant in May 1981; that appellant's audit of the proposal was completed in August 1981; that appellant informed Artisan that a formal purchase order based on the proposal would be issued; that, in October 1981, Artisan proceeded to place orders for the necessary material; and that, in May 1982, appellant requested that Artisan execute a certificate of cost and pricing data, which Artisan did, as of 28 April 1982, despite the fact that Artisan had submitted its proposal in May 1981 and appellant's own certificate regarding Contract 2134 was effective as of 30 December 1981.

Artisan also stated that the audit had not established that the prices the Government paid appellant were increased as a result of reliance upon Artisan's estimated cost data and also took issue with the quantification of the proposed price adjustment. Artisan further indicated that it charged labor costs as indirect, rather than direct, costs. Artisan also asserted a right to offsets for an increased manufacturing indirect expense rate, increased G&A expense, and certain start-up costs. It offered no comment on the DCAA report's reference to Contract 2134 as the prime contract.

In its reaction to Artisan's comments, DCAA, among other things, noted that Artisan's indirect charging of labor costs had not been previously disclosed to DCAA.

By letter to DCAA of 13 September 1985, appellant compared the results of the DCAA audit with appellant's own pre-award audit of Artisan and asked that DCAA reevaluate its findings based upon appellant's audit. Among other things, appellant pointed out it had determined that the three major vendors proposed were ITT Cannon Electric, SAE and D.G. O'Brien, which differed from the DCAA findings. Appellant also noted that its audited amount of the proposals by the three vendors was $553,667, a total of $111,977 more than the $441,690 reported to have been the total of the actual purchase orders placed by Artisan, and not the

©1994, Commerce Clearing House, Inc.

Digitized by Google

$305,440 differential shown in the DCAA audit.

On 12 March 1986, appellant advised the Government's contracting officer that appellant had had no knowledge of pertinent information regarding Artisan other than that contained in appellant's proposal, which appellant audited. Appellant also stated, in pertinent part, as follows:

> As a result of this latest review and disclosure of data, it now appears the lower-tier subcontractors quotes provided by Artisan to the General Dynamics Subcontract Audit Department and upon which they based their recommendations and, subsequently the Division based its proposal for contract N00024-81-C-2134, were not the same vendors and/or prices to whom Artisan awarded its actual orders.
>
> Assuming that these orders are for exactly the same material as that contained in Artisan's quote to Electric Boat Division and which they presented to our auditors for review, the chronology of events clearly shows that these three orders were placed well in advance of Artisan's certification to us but were never disclosed to Electric Boat Division prior to award of our order to them. That is, Artisan was audited in September 1981; placed two purchase orders for their material in October 1981, and the last in March 1982; and in May 1982 certified to Electric Boat that their quote to us was current, complete, and accurate as of April 28, 1982, *even though they had already placed their orders to different vendors and/or in different amounts than those quoted to Electric Boat Division and to which they certified.*
>
> Accordingly, Electric Boat Division agrees with the DCAA's statement that 'this known data [on the part of Artisan) should have been furnished [to Electric Boat Division] in accordance with the Truth in Negotiations Act'. [Emphasis and bracketed text in original]

Appellant did take issue with the dollar amount at issue as a result of the defective pricing and with the DCAA conclusion regarding the Artisan labor rate. With respect to Contract 2201, appellant argued that, since it certified its costs prior to the date that it requested a bid from Artisan, there could be no defective pricing on that contract by appellant, the prime contractor. Appellant further advised that, with the concurrence of the contracting officer, it would engage in negotiations with Artisan toward a downward price adjustment.

By letter of 23 July 1986, the contracting officer commented upon the points raised in appellant's 12 March 1986 letter, and pointed out areas where it agreed and disagreed with appellant's contentions. The contracting officer authorized appellant to negotiate with Artisan to resolve the defective pricing issues, but at a greater price reduction than that recommended by appellant. The contracting officer also advised appellant that it would have agreed with appellant's position with respect to Contract 2201 had that contract been awarded on a firm fixed price basis but that, since it was an incentive contract, defective subcontractor cost or pricing data could still have an effect on the cost incurred by the Government.

Pursuant to a request of the contracting officer, DCAA, on 27 June 1986, provided the contracting officer with comments upon appellant's letter of 12 March 1986. Among other things, DCAA stated as follows:

> According to EB's [appellant's] chronology of events Artisan submitted their proposal to EB on 28 May 1981. On 25 June 1981 EB issued an Advance Notification of Award to Artisan and on 7 July 1981 PO's negotiable downward only were issued. On 23 Sept 81 EB completed their audit of Artisan's proposals with no cost questioned.
>
> Artisan, however, did not certify their costs until 28 May 1982 which was eight months after EB completed their audit. In this time span, Artisan not only switched certain vendors but also obtained significantly lower material prices, as indicated in our referenced Audit Report. It is obvious that these lower prices were not mentioned to EB when Artisan certified their costs on 28 May 1982. EB is wrong in calculating a lesser amount for the material cost adjustment based on vendor quotations given to their auditor by Artisan at the time of the EB review (September 1981). Artisan obtained lower prices prior to signing their certificate (5/28/82) and should have made these lower prices known. Their certification is defective and in view of the lower prices obtained the vendor quotations given to EB's auditor, as cited in EB's letter, are meaningless. We repeat, Artisan obtained lower prices and kept silent. Our recommended material price adjustment still stands.

Following further correspondence between the parties, the contracting officer, on 20 October 1988, acknowledged that there had been no defective pricing between appel-

Digitized by Google

lant and the Government on Contract 2201, although he maintained that the subcontract price should be reduced because of defective pricing between Artisan and appellant. With respect to contract 2134, he restated the Government position that defective pricing had occurred on the prime contract level and that the price of the contract be reduced. He concluded that the Artisan union agreement had been disclosed to DCAA, but that Artisan had otherwise erred in the calculation of its labor rate. In addition, he reported that the Government had discovered what it considered to be additional defective pricing resulting from information provided by Artisan regarding its inclusion, in its proposal, of toolmaker and technician labor costs as direct, rather than indirect, costs, a change from past practice, which resulted in an overstatement of price. He also concluded that Artisan was not entitled to its claimed offset.

On 17 August 1989, the contracting officer issued a decision in which he concluded that Artisan had failed to disclose to appellant all information reasonably available within its organization as of the date of its agreement on price, 28 April 1982. The bases for the defective pricing determination were the material pricing and the certified labor rate.

With regard to the material pricing, the contracting officer concluded that Artisan had failed to inform appellant of actual purchase orders placed with vendors prior to 28 April 1982, the date of agreement on price between Artisan and appellant. The contracting officer recounted Artisan's contention that agreement on price had actually been reached in September 1981, that Artisan had certified its data as of 28 April 1982 only at appellant's request, that the purchase orders were, therefore, placed after the "shakehands" date on price, and that, as a result, no defective pricing had taken place. However, the contracting officer noted that appellant did not agree that price agreement was reached in September 1981 and confirmed the certification date of 28 April 1982 as the "shakehands" date, which the contracting officer stated was the Government's position.

The contracting officer described the other issue regarding the certified labor rate as stemming from Artisan's removal of costs of its non-union personnel from its overhead pool and including them as a direct cost which the Government considered to be inaccurate and to inflate the labor rate included in the price.

He determined that the total defective pricing that resulted was $482,500, or $160,833 per shipset of cable harness assemblies. He concluded that, with respect to Contract 2201, that the defective pricing existed only with respect to the subcontract and that the subcontract price should be reduced by $160,833 for the one shipset. With respect to Contract 2134, the contracting officer concluded that the contract price should be reduced by $321,667 for the two shipsets purchased under that contract. The inclusion of appellant's profit brought the total price reduction sought by the contracting officer to $382,193. The contracting officer also denied Artisan's contention that it was entitled to offsets.

On 18 August 1989, appellant, apparently not yet having received the contracting officer's decision, sent the contracting officer a letter in response to the contracting officer's letter of 20 October 1988. In its letter, appellant took issue with Artisan's contention that the two companies had definitized the purchase order price as of September 1981, stating that it was not appellant's practice to permit its auditors, who were communicating with Artisan at that point, to negotiate subcontracts, a task performed by the buyers of its purchasing department. Appellant also pointed to price negotiations with Artisan continuing into April 1982 as further supporting the conclusion that the "shakehands" date between appellant and Artisan was 28 April 1982, the effective date of Artisan's certification. Appellant also stated that it considered the Government's determination of defective pricing in material "to be clear and sound." Appellant stated, further, that it agreed with the Government determination of defective pricing with respect to direct labor in that there was no evidence that Artisan had ever disclosed the change in treatment of toolmaker and technician labor from indirect to direct costs. In addition, appellant asserted that it concurred with the Government's rejection of Artisan's offset claims. Appellant's letter concluded, as follows, with respect to an offer of settlement which had been made by Artisan:

> Although Artisan continues to deny the existence of any defective pricing ... [appellant] cannot support Artisan's proposed settlement. [Appellant] concurs with [the Government's] position, as presented in [the Government's letter of 20 October 1988], that the amount of defective pricing is $482,500.

By counsel's letter of 13 November 1989, received by the Board on 14 November

©1994, Commerce Clearing House, Inc.

Digitized by Google

1989, appellant timely appealed the contracting officer's decision. The notice of appeal included the following:

Artisan Electronics Corporation is bringing this appeal in the name of General Dynamics Corporation, pursuant to an agreement with General Dynamics Corporation. The undersigned attorneys represent Artisan Electronics Corporation.

The record includes an affidavit of appellant's in-house assistant division counsel. In his affidavit, he states that he supervised appellant's participation in this indirect appeal by Artisan; that the alleged subcontract defective pricing here is just one of many issues and cost disputes between appellant and the Government between 1985 and 1990; that appellant's letters of 12 May 1989 and 18 August 1989 in which appellant "seemingly adopted a position contrary to that which it now espouses in this appeal represent the good faith attempt by Appellant to resolve amicably" the Government's defective pricing claims; that appellant considers that Artisan's factual and legal arguments were not frivolous and that appellant took the arguments in good faith; that continued cooperation with Artisan in the prosecution of this appeal evidences appellant's continued belief that Artisan's litigative position has merit; and, that appellant does not concur with the contracting officer's decision which is the subject of this appeal.

The parties' pleadings reflect that they do not agree on the date of agreement on the price of the Artisan subcontracts and on other issues.

DECISION

In this appeal from a contracting officer's decision, seeking recovery, on behalf of the Government, of $382,193 as a result of alleged defective pricing by a subcontractor, Artisan Electronics Corporation (Artisan), each of the parties has moved that we grant summary judgment in its favor.

The Truth In Negotiations Act, 10 U.S.C. § 2306(f), as amended, (TINA) requires a contractor, in a contract of this size, to submit cost and pricing data and to certify that, to the best of its knowledge and belief, the cost and pricing data submitted are accurate, complete, and current. The contract's clause entitled "Price Reduction for Defective Cost or Pricing Data" calls for a contract price reduction if cost or pricing data furnished by the contractor are not complete, accurate and current. The contractor's duty to provide complete, accurate, and current data extends to that data provided by a subcontractor. Subcontractor data and vendor quotations are normally cost or pricing data which must be disclosed to the extent that the data should reasonably be expected to have a significant bearing on estimated costs or the contract price. *Norris Industries, Inc.*, ASBCA No. 15442, 74-1 BCA ¶ 10,482. Even where it appears that the prime contractor is not at fault, the prime contractor is responsible to the Government for the impact upon the prime contract of the subcontractor defective data. *Lockheed Aircraft Corporation v. United States* [15 CCF ¶ 84,015], 193 Ct. Cl. 86, 432 F.2d 801 (1971).

The purpose of TINA was well described in *Cutler-Hammer v. United States* [14 CCF ¶ 83,124], 189 Ct. Cl. 76, 84, 416 F.2d 1306, 1311 (1969), as follows:

> Public Law 87-653 was intended to apply to situations where the data supplied was incomplete, inaccurate, or non-current. It was aimed at cases where costs were known, but information about them was withheld. The statute (and the contract clause which is utilized pursuant to the statute) speaks in terms of Defective Pricing. If a cost is known when the contract price is being negotiated, it must be furnished accurately, completely, and on a current-price basis. If a contractor purchases components from a subcontractor, these costs are also subject to the Defective Pricing Clause.

The Government bears the burden of proving that the contractor failed to disclose accurate, complete and current cost and pricing data. *Sylvania Electronic Products, Inc. v. United States* [18 CCF ¶ 82,334], 479 F.2d 1342 (1973). In determining whether that burden has been met, the test is whether the undisclosed, noncurrent or inaccurate data would be reasonably expected to have a significant effect upon price negotiations. *Plessey Industries, Inc.*, ASBCA No. 16720, 74-1 BCA ¶ 10,603. Disclosure need not take the form of a formal, written submission, and the contractor's obligation is fulfilled if the Government obtains the data in question in some other manner or had actual knowledge thereof. *See, e.g., Grumman Aerospace Corporation*, ASBCA No. 27476, 86-3 BCA ¶ 19,091; *Boeing Company*, ASBCA No. 33881, 92-1 BCA ¶ 24,414, *aff'd on reconsid.* 19 August 1991; *EDO Corporation*, ASBCA No. 41448, 93-3 BCA ¶ 26,135, 9 July 1993.

The Government must also prove that the defective data caused a significant overstatement of the contract price. In that effort,

Digitized by Google

however, it is aided by a rebuttable presumption that the natural and probable consequence of nondisclosure is an increase in the contract price. At that point, the burden of persuasion shifts to the contractor, who must show that the defective data were not relied upon, or that the undisclosed data would not have been relied upon even if complete disclosure had been made. *Sylvania Electric Products, Inc., supra.* However, the ultimate burden of proving the causal connection between the defective data and an overstated contract price remains with the Government. *Conrac Corporation,* ASBCA No. 19507, 78-1 BCA ¶ 12,985.

We will grant a motion for summary judgment when there is no genuine issue of material fact and where the moving party is entitled to judgment as a matter of law. The moving party bears the burden of demonstrating both elements and the party against whom the motion is advanced is entitled to have all inferences drawn in its favor. *Paragon Van Lines, Inc.,* ASBCA No. 32294, 87-1 BCA ¶ 19,366. We proceed to apply these standards to each of the moving parties.

Appellant's Motion

In seeking summary judgment, appellant's basic argument is that the Artisan subcontracts under which the alleged defective pricing occurred were negotiated and awarded under the 1978 prime Contract 2453 and that, as a matter of law, the Government is, therefore, unable to meet its burden of proving that the price of prime Contract 2134 was increased as a result of data submitted by Artisan.

In support of its contention, appellant points to the subcontract (a) request for quotes, (b) proposal evaluation, (c) proposal audit by the prime contractor, (d) prime contractor advance notice to the Government of award, and (e) prime contractor request for Government ratification of award, all of which, it states, were conducted and performed under Contract 2453, while the clause providing the Government's remedy is the "Price Reduction for Defective Cost or Pricing Data" clause of Contract 2134. Appellant further argues that the Government's remedy, a reduction in contract price, is limited to a situation where incomplete, inaccurate, or noncurrent data is submitted for the negotiation of the contract having the remedy-granting clause.

Clause H-63 of Contract 2134 refers to equipment and material procured under Contract 2453 and deems them as furnished under Contract 2134. It also refers to the direct and indirect costs of such equipment and material and deems those costs, both already incurred and to be incurred, and payments made under Contract 2453 as costs arising and incurred under Contract 2134 and payments made under Contract 2134, as of the dates of their incurrence and payment, respectively. The Government relies on clause H-63 to bring the Contract 2453 subcontract cost and pricing data under Contract 2134 to enable it to pursue a defective pricing action, based upon that cost and pricing data, pursuant to the "Price Reduction for Defective Pricing Data" clause of Contract 2134.

Appellant, however, contends the purpose of clause H-63 is merely to transfer the material supplied under the Artisan subcontracts from Contract 2453 to Contract 2134, but not to bring the subcontracts themselves under Contract 2134. It argues that the purpose of TINA is to "provide a level playing field for the negotiation of government contracts," that the "playing field" for the Artisan subcontracts is Contract 2453, and that the determination as to whether defective pricing has occurred with respect to the subcontracts "must be made with reference to the factual context of the contract under which the Artisan subcontracts were awarded and the cable assemblies were purchased, Contract 2453." Appellant's argument continues:

> The Navy's position would result in measuring the completeness, accuracy, and currency of Artisan's cost or pricing data with reference to the price agreement dates, certifications, and negotiation of Contract 2134, the 1981 [sic] contract, which occurred years after the award of Contract 2453, the 1978 contract, the contract under which the subcontracts were awarded. Unpredictable and unfair results would follow. For example, cost or pricing data may be complete, accurate, and current with reference to the operative dates of Contract 2453 but not when scrutinized in the context of Contract 2134. In addition, when reviewed under Contract 2453, the subcontracts may be eligible for exemptions and other factual defenses, such as cost overruns exceeding the ceiling price, which would require [appellant] to absorb the increased costs caused by any defective pricing. Thus, TINA and the implementing contract clauses require the defective pricing analysis to be focused on the contract under which the subcontracts were awarded and thereby provide an equalized body of cost information for the

©1994, Commerce Clearing House, Inc.

Digitized by Google

pricing of government contracts. TINA does not empower the Navy to redetermine the price of any other contract to which the items and related costs might eventually be transferred. To bring the pricing of the Artisan subcontracts within the provisions of Contract 2134, as argued by the Navy, goes beyond the scope of TINA and the Price Reduction for Defective Cost or Pricing Data clause.

Appellant argues that the remedy provided by the "Price Reduction for Defective Cost or Pricing Data" clause is a creation of the clause in each individual contract, that the remedy exists only by virtue of the clause, and that the effect of the clause is limited to the contract in which it was created. Thus, appellant contends that, here, the appropriate contract for any defective pricing action based upon the Artisan subcontracts is Contract 2453 and that the Government has presented no facts to demonstrate that it relied upon the Artisan subcontract data in negotiating Contract 2134. Appellant would have us conclude, as a matter of law, that the Government can not maintain a defective pricing action under Contract 2134 based on the Artisan subcontracts.

We are unable to reach that conclusion. Our task is to ascertain the rights and obligations of the parties based upon a contract interpretation which, to the extent possible, finds meaning in all pertinent contract terms and reads none out of the contract.

In order for the Government to recover for defective pricing under the "Price Reduction for Defective Cost or Pricing Data" clause of Contract 2134, it must establish that incomplete, inaccurate, or noncurrent data were submitted and that the defective data resulted in an overstatement of the contract price. The key question here is whether the cost or pricing data in question, originally submitted by Artisan in connection with the performance of Contract 2453, became part of Contract 2134 for purposes of a defective pricing action under the latter contract.

We are unaware of any provision of TINA or its implementing regulations which would preclude a defective pricing action in a later contract based upon cost or pricing data which formed the basis of negotiation of an earlier contract, as long as that cost or pricing data performed a similar role with respect to the later contract. We must, therefore, look to the specific contract provisions and the manner in which the cost and pricing data related to, and were treated within, each of the contracts.

It is quite clear, based upon a reasonable reading of clause J-3 of contract 2453 and clause H-63 of Contract 2134, that the parties to the prime contracts at issue—appellant and the Government—fully recognized the long lead time nature of Contract 2453 and that material was procured under that contract for use in the individual shipbuilding contracts to follow. They clearly provided that the costs incurred in the performance of Contract 2453 were to be deemed arising out of Contract 2134, as of the date of Contract 2134, with respect to equipment and materials procured in Contract 2453 and deemed to be equipment and materials in Contract 2134 because of their use in Contract 2134.

Consistent with their expectation, and in implementation of the contract clauses, the parties decreased the estimated cost of Contract 2453 from $101,200,000 to zero and increased the estimated cost of Contract 2134 to reflect the transfer of long lead time items to the shipbuilding contract. Contract 2134 was, therefore, comprised, at least in part, of the cost of the items procured in Contract 2453, including those from the Artisan subcontract. Furthermore, the cost and pricing data which supported the negotiated price of Contract 2453 likewise supported the cost and pricing of Contract 2134 although the negotiations between the parties had occurred earlier with respect to Contract 2453. It follows, therefore, that any defect in the cost or pricing data submitted in support of the negotiation of Contract 2453 would be similarly defective with respect to Contract 2134 unless there was an adjustment in contract price to remedy the effect of the defective data prior to the inception of Contract 2134. Accordingly, an action under TINA to remedy an overstated price of Contract 2134 resulting from defective subcontract data originally submitted under Contract 2453 is well-founded and consistent with the purpose of the statute. The remedial clause is the "Price Reduction for Defective Cost or Pricing Data" clause of Contract 2134, the contract to which the costs were transferred and the contract which then became the object of the supporting cost and pricing data. Of course, the applicable burden of proof and presumptions, as discussed above, would apply. Since the cost or pricing data were originally submitted under Contract 2453, Government reliance upon that data must, initially, be demonstrated in the context of the negotiation of that contract and continuing into Contract 2134, as well.

Digitized by Google

We are unable to share appellant's concern that this result would subject a contractor to unpredictable and unfair results. Considering the Artisan subcontract cost or pricing data within Contract 2134 for purposes of a defective pricing action does not alter appellant's obligations or the substantive law with regard to whether its cost or pricing data, or that of its subcontractor, are defective. The fact that the incentive pricing provisions of each of the contracts could conceivably lead to different cash flow results from a cost reduction is not a reason not to apply the provisions of Contract 2134. As the Government effectively argues, if we were to adopt appellant's position that the Government's only remedy lies under the provisions of Contract 2453, (a) how can that remedy be exercised since all of the costs were transferred out of Contract 2453 and (b) what purpose is served by the "Price Reduction for Defective Cost or Pricing Data" clause in Contract 2134 and to what cost or pricing data did appellant certify in its Contract 2134 certification?

We conclude that the Government is not precluded from maintaining a defective pricing action under the "Price Reduction for Defective Cost or Pricing Data (1970 JAN)" clause of Contract 2134 based upon cost or pricing data originally submitted under Contract 2453. Appellant's Motion for Summary Judgment is denied.

The Government's Motion

In its Cross Motion for Summary Judgment, the Government argues that since appellant, in its Motion for Summary Judgment, bases its entire argument on its contention that the Government cannot prove reliance on the subject cost and pricing data in the negotiation of Contract 2134 in view of the submission of the cost and pricing data in Contract 2453, appellant had abandoned all of its previous positions stated in its Complaint. Those positions included the allegation that Artisan's cost reductions occurred after its effective date of agreement on price with appellant which, appellant argued, leads to the conclusion that neither appellant nor the Government could have relied upon the cost reductions to Artisan when they negotiated the price of Contract 2134.

We do not agree. While appellant's Motion for Summary Judgment is based upon the one legal theory, its advancement of only that theory in support of a motion for summary judgment does not equate to abandonment of other positions advanced in the pleadings as defenses to the Government's claim, with regard to which it may present evidence later at trial should its motion fail.

The Government also points to appellant's letters which, it contends, constitute binding admissions by appellant that Artisan had submitted defective cost or pricing data, and it further maintains that the admissions are binding on Artisan, which is permitted to pursue this appeal before the Board only through appellant's sponsorship.

The Government is accurate in stating that Artisan can pursue the appeal only with appellant's sponsorship. However, a prime contractor need not be in full agreement with the merits of its subcontractor's position in order to sponsor an appeal on its behalf. *Taysom Construction Company,* ASBCA No. 41016, 91-2 BCA ¶ 23,710. The record includes an affidavit by appellant's in-house counsel in which he states that appellant supports Artisan's litigative position and attempts to explain the apparently clearly-stated position by principals of appellant in agreement with the Government as nothing more than statements made in furtherance of settlement efforts. At this time, we offer no comment upon the affidavit and how it squares with the contemporaneous correspondence except to indicate that, although we regard the letters as admissible evidence of appellant's opinion on the merits (although they may be more in the nature of opinions of law rather than admissions of fact), we do not regard them as binding, determinative of the merits, or as inconsistent with appellant's sponsorship of the appeal.

The crux of the Government's argument is that appellant has advanced no evidence resulting in a question of material fact and that the Government is, therefore entitled to recover as a matter of law.

With the exception of the limited affidavit already addressed, the record contains no affidavits and the parties, in advancing their motions, are apparently content to rest upon the documentary evidence. With respect to the Government's motion, the documentary record is insufficient to enable it to carry its burden of proof and to prevail as a matter of law.

It is quite correct, as the Government contends, that mere allegations in the pleadings are insufficient to establish a dispute of material fact in the face of evidence to the contrary. However, here the record consists of more than mere allegations by appellant and less than sworn affidavits by the Government. We are presented with contempo-

©1994, Commerce Clearing House, Inc.

Digitized by Google

raneous, but unsworn, documents of the Government, including correspondence, the audit report and contracting officer's decision, comprised of allegations of defective pricing, and contemporaneous, but unsworn, correspondence by Artisan denying the allegations. We are not prepared to grant summary judgment in the Government's favor simply because most of the documents were authored by Government officials.

The material facts in dispute include a question as to the date upon which appellant and Artisan reached agreement on the price of the subcontract. Artisan maintains that the two companies reached agreement in September 1981 but that, at appellant's request, Artisan dated its certificate 28 May 1982. Artisan argues that, had the true date of price agreement been reflected in the certificate, purchase orders for lesser amounts issued by Artisan subsequent to that "shakehands" date could not have been used as a basis for a defective pricing action.

On the present record, we are unable to determine the date upon which appellant and Artisan reached agreement on price, or, even if appellant is correct in its allegation that agreement was reached at the earlier date, whether appellant was required to request from Artisan, or whether Artisan was required to provide, an update of its cost and pricing data with notice of the lower purchase order information.

Other material facts apparently in dispute relate to the Government's allegation of defective pricing with respect to Artisan's treatment of labor and Artisan's contention that it is entitled to an offset.

Since there are material facts in dispute, the Government's Motion for Summary Judgment is denied.

Summary

Appellant's Motion for Summary Judgment is denied pursuant to the discussion above.

The Government's Cross Motion for Summary Judgment is denied since we have concluded that there are material facts in dispute.

[¶ 26,340] Techno Engineering & Construction, Ltd.

ASBCA Nos. 41539, 42810, August 27, 1993. Contract No. N62471-87-C-2457.

Modifications—Changes—Responsibility for Additional Costs.—A contractor was not entitled to compensation under the Changes clause of its contract to install a gas tank, because it failed to show by a preponderance of the evidence that the claimed costs were related to change orders. The contractor did not distinguish between the labor, material, and equipment costs anticipated and incurred for the original scope of work and presumably included and reimbursed in the bid price and any additional costs demanded by the unilateral change orders.

Pricing of Adjustments—Proof—Causation and Amount.—A contractor under a contract to install a gas tank was not entitled to recover the full amount of claimed additional office expenses allegedly caused by changed work and an extended performance period, because the amount claimed by the contractor was unreasonably high. A substantial portion of the claimed expenses was not related to performance of the work and was not recoverable under the Changes clause. The board allocated a reasonable measure of the contractor's monthly additional office expenses over the extended period for which the government was responsible and then subtracted the overhead already paid by the government under unilateral change orders. The board also added profit rate, bond premium rate, and interest under the Contract Disputes Act.

Delays—Overhead—Proof of Loss.—Under a contract to install a gas tank, a contractor was not entitled to recover unabsorbed overhead for a suspension of work between a stop work order and issuance of a unilateral modification, because it did not show that it was imprudent or impracticable to obtain new work or to shift work forces to existing work during the period of delay. The mere existence of a delay did not automatically entitle the contractor to unabsorbed overhead.

Liquidated Damages—Delays—Delay After Completion Date.—Although a contractor's performance under its contract to install a gas tank was delayed by government

Digitized by Google

changes, the contractor was not entitled to recover its liquidated damages, because the record showed that it did not diligently prosecute its work. The contractor's unreasonable failure to do any work at the site for significant periods of time contributed to the late completion.

Contract Disputes, Relief Available—Injunctions—Board's Authority.—Under a contract to install a gas tank, a contractor was not entitled to a board order directing the contracting officer to remove and correct the government's evaluation rating of the contractor's performance, because the board lacked the authority to grant the type of injunctive relief that the contractor requested. Although the Contract Disputes Act authorizes the board to grant injunctive relief under limited circumstances, such circumstances were not applicable in the present case.

For the appellant: Michael A. Georgopapadakos, President. For the government: Arthur H. Hildebrandt, Navy Chief Trial Attorney, and Ellen Evans and Wayne O. Hadland, Trial Attorneys, Naval Facilities Engineering Command, West Coast Litigation Team, San Bruno, California.

Before DELMAN, RUBERRY, and RIISMANDEL, Administrative Judges.

DELMAN, Administrative Judge: Appellant, Techno Engineering & Construction, Ltd., seeks compensation for Government-ordered changes and delay under its construction contract. It also seeks correction of an unsatisfactory performance rating. Jurisdiction of these appeals lies under the Contract Disputes Act (CDA), 41 U.S.C. §§ 601 *et seq.* We sustain the appeals, in part.

FINDINGS OF FACT

1. On 16 September 1988, the Government sought firm, fixed price bids for the performance of work entitled "Renew Gas Tank, Building A-19 at Camp Catlin Area, Pearl Harbor, Hawaii." Insofar as pertinent, the work included the installation of a fuel storage tank atop a concrete pad, surrounded by a concrete retaining wall; adjacent steel stairs; the installation of an electric dispenser/pump, and related piping and connections. Originally, an underground tank was to be removed, but this work was deleted by amendment P00003.

2. On 1 February 1989, appellant submitted its bid, in the amount of $34,156. Award was made to appellant on 4 April 1989; contract completion was set for 16 October 1989. The contract contained the standard clauses for Disputes (Apr 1984), FAR 52.233-1; Changes (Aug 1987), FAR 52.243-4; and Suspension of Work (Apr 1984), FAR 52.212-12.

3. At or about the time of award, the Government decided to issue a contract modification to relocate the fuel tank. At the preconstruction meeting on 27 April 1989, appellant was given a new set of drawings and a pricing proposal was requested.

4. Appellant submitted a proposal and the parties entered into negotiations. They negotiated for a considerable period of time, and ultimately came to terms. Bilateral contract Modification P00003, dated 1 August 1989, relocated the fuel tank and added incidental work. The parties agreed that the contract price was to be increased by $5,035 and that contract completion was to be extended 45 calendar days, through 30 November 1989.

5. The contract required appellant to furnish daily reports, entitled "Daily Report to Inspector" (DRI), regarding its work activities. Section 01010, Paragraph 1.10 (R4, tab 1). Prior to 1 August 1989, appellant filed only two reports, reflecting site work on 19 and 25 July (exh. G-40).

6. For the next six weeks, appellant performed site work intermittently. See DRI Nos. 3 through 8 dated 3 August, 11 August, 15 August, 16 August, 12 September, 13 September, and 14 September. The record does not explain this erratic work pattern. As of 30 August 1989, with 90 days remaining to perform, appellant had completed only 5 percent of the work (R4, tab 15).

7. On 15 September 1989, appellant's excavation of the work site uncovered a 16-inch water line and a 15-inch sewer line (exh. A-44). The Government's project engineer visited the site on that date and advised appellant to stop work. By letter to the Government dated 15 September, appellant confirmed the project engineer's directive and awaited further direction (R4, tab 17). On 22 September 1989, the contracting officer issued contract Modification P00004 which directed appellant to suspend all activity on the project (R4, tab 18).

©1994, Commerce Clearing House, Inc.

Digitized by Google

8. The Government decided to relocate the fuel tank a second time, and to repair the existing trench excavated by appellant. The Government solicited a cost proposal from appellant on 28 September 1989, and enclosed a sketch of the new work (R4, tab 20).

9. On 13 October 1989, appellant submitted its cost proposal, an estimate, in the amount of $14,949, excluding repair to the existing asphalt pavement. Appellant also estimated a time extension of 90 calendar days to do this work and to complete the contract (R4, tab 22).

10. The parties entered into negotiations but this time they did not reach agreement. The Government maintained that appellant's proposed costs were unsubstantiated. Appellant submitted a revised estimate on 6 November 1989, in the amount of $12,925, excluding paving repair. The Government also found this proposal unsubstantiated and unacceptable. The parties exchanged letters regarding the reasonableness of appellant's figures in late November 1989 (R4, tabs 25, 26). However, the parties made no further progress in the negotiations. From 15 September to 5 December, when a unilateral modification was issued (below), the Government's stop work order was in effect. We find that this was an unreasonable period of time to hold up the contract work.

11. On 5 December 1989, the Government issued unilateral contract Modification P00005, which directed appellant to proceed with the relocation of the fuel tank and related incidental work. The unilateral change order increased the contract price in the amount of $3,200 and extended the contract completion date by a period not-to-exceed 60 calendar days. The change order also directed appellant to submit a detailed cost proposal by 8 December 1989, and indicated that the change order was to be definitized no later than 2 February 1990. (R4, tab 3)

12. By letter to the Government dated 11 December 1989, appellant acknowledged receipt of Modification P00005 and took exception to the Government's unilateral determination of contract price, which it interpreted as "not to exceed $3,200.00." Appellant contended that it had already incurred $2,912 of costs for the change and believed that the "ceiling price" was unfair. (R4, tab 30)

13. We find that appellant misunderstood the nature of the unilateral change order. It was not priced as a ceiling amount, and did not rule out additional compensation for appellant for the changed work. In fact, Modification P00005 solicited a further cost proposal from appellant, as stated above.

14. The parties met again on 12 December 1989. Appellant reiterated that it had already expended $2,900, and that it would cost approximately an additional $3,400 (total $6,300) to complete the change. The Government advised that Modification P00005 was subject to monetary revision if appellant could prove its costs. (R4, tab 31) Appellant's revised cost proposal of 6 November (finding 10) was over twice as high as its projected cost to complete, as stated herein.

15. On 3 January 1990, the Government requested a DCAA audit of appellant's latest cost proposal (exh. A-49). As far as we can tell, an audit was never conducted.

16. The Government's direction to proceed was sent to appellant on or about 5 December 1989, and was received by appellant on or before 11 December 1989. Appellant did not proceed with the work at this time. It chose to commence field work "after the holidays." Appellant returned to the site on 9 January 1990, approximately one month after receipt of the notice to proceed. See DRI No. 10, dated 9 January 1990 (exh. G-40).

17. When appellant returned to work, it encountered another site problem. The existing subgrade at the new fuel tank location was made up of a clay-like substance which could not be compacted at a 95 percent level per contract requirements. By letter dated 12 January 1990, appellant advised the Government of this fact, and awaited further direction (R4, tab 35).

18. The Government recognized that a further change in the scope of the work would be necessary to accommodate this site condition (exh. A-52). The proposed fix was to excavate wider and deeper to obtain a more suitable subgrade—one foot below the subgrade of the fuel tank's concrete slab and two feet beyond the containment walls. Appellant submitted a cost proposal for this extra work on or about 7 February 1990, in the amount of $3,874. Appellant also submitted a revised estimate for Modification P00005 at this time, in the amount of $13,102.

19. The parties could not agree on a price for either proposal. On 22 March 1990, the Government issued unilateral contract Modification P00006. This modification added $2,405 for the work to be performed under P00005 (relocation of tank), for a total adjustment of $5,605. The Government ex-

Digitized by Google

tended the contract completion date 113 calendar days for this work. Modification P00006 also directed appellant to proceed with the additional excavation work which was the subject of appellant's 12 January 1990 letter. The Government increased the contract price by $3,255, and also granted appellant a 10 calendar day time extension for this work.

20. Based upon Modification P00006, the contract price was $48,051. The contract completion date was 2 April 1990.

21. Unlike the situation under Modification P00005, the Government did not suspend work pending issuance of Modification P00006. Between 12 January 1990 and 22 March 1990, appellant made substantial progress (see DRI Nos. 14 through 43), except for the brief period stated below.

22. Soon after appellant discovered the soil problem on 12 January, the weather turned bad—rain precluded any meaningful site work on the following dates: 16, 17, 18, 19, 24 January 1990. (See DRI Nos. 14 through 17, 20) Appellant did not ask for a time extension for weather-related reasons. To the extent there was any project delay, we find that this delay was concurrent with the delay caused by Modifications P00005 and P00006, for which the Government granted appellant a total of 123 days of additional time to complete the work.

23. The Government determined the project to be substantially complete on 13 April 1990. Since the completion date, as extended by the Government, was 2 April 1990, the Government withheld $275 for liquidated damages (11 days late at $25 per day).

24. By letter to appellant dated 21 May 1990, the Government advised appellant that its performance on this job was rated, overall, unsatisfactory. The letter explained the basis for the Government's decision. On 23 May 1990, appellant requested that the Government provide the documentation it relied upon to support its findings. On 13 June, the Government provided this information. (R4, tabs 83 through 85)

25. By letter to the Government dated 4 April 1990, appellant resubmitted its proposals under Modifications P00005 and P00006, in the amounts of $21,599 and $4,045 respectively, less amounts paid, and requested a contracting officer's decision (R4, tab 73). By letter to the Government dated 23 April 1990, appellant supplemented its claim by requesting delay damages in the amount of $32,323. The total amount of appellant's claim was $49,108.

26. The Government failed to issue a contracting officer's decision within 60 days of receipt of appellant's claim, as revised. 41 U.S.C. § 605(c)(1). Appellant timely appealed to this Board, and the appeal was docketed as ASBCA No. 41539.

27. During a prehearing conference in January 1991, it appeared that appellant had other claims under the contract which it desired the Board to consider, but which had not been submitted to the contracting officer for decision. The Board directed appellant to file a claim with the contracting officer, incorporating all claims under the contract.

28. By letter dated 6 February 1991, appellant filed such a claim with the contracting officer. In this claim, appellant reiterated its claims under Modifications P00005 and P00006 and for delay damages, but modified the amounts sought. It now sought $13,099 for Modification P00005 (relocation of the tank plus incidental work), $477 for Modification P00006 (additional excavation), and $8,511 for delay damages. The new claim also added a demand for return of liquidated damages ($275), a return of a withholding for payroll discrepancies ($266), and a return of general contract retainage ($1,000). It appears that the Government was unable to justify the latter two withholdings, and $1,266 was returned to appellant. The date of payment is not of record.

29. In its 6 February claim, appellant also challenged its performance rating. Appellant contended, *inter alia,* that the Government failed to follow certain administrative procedures in making the evaluation, and also claimed that its performance was not unsatisfactory. Appellant sought to have the unsatisfactory rating removed and/or corrected.

30. The Government did not issue a contracting officer's decision on the 6 February claim, and appellant appealed to this Board. The appeal was docketed as ASBCA No. 42810 and was consolidated with ASBCA No. 41539.

Appellant's Claims Under the Unilateral Change Orders

31. With respect to appellant's claim under Modification P00005, appellant seeks approximately $2,857 for equipment "ownership and operating expense." However, appellant did not base this amount upon ownership and/or operating expense, but on commercial rental rates. Appellant also did not explain in its claim, nor at trial, how it distinguished between equipment cost in-

©1994, Commerce Clearing House, Inc.

Digitized by Google

curred for the base contract work and that incurred for the change order work. We question this amount.

32. During the negotiation of the change orders, appellant's president advised the Government that it used a company known as "ENT" to supply certain equipment for the contract (R4, tab 51). Appellant's project engineer never heard of ENT (tr. 1/82). No such concern was registered in the State of Hawaii.

33. As for some other claimed costs, we note that dump truck rental agreement No. 19540 appears to reflect a 5-hour truck rental for 26 January 1990, yet the agreement indicates that the truck was driven 743 miles. Rental agreement No. 19492 reflects a two-day truck rental charge, but indicates that the truck was driven 1,163 miles. (Exh. A-3) Absent an adequate explanation of record, we question whether these costs pertain solely to Modification P00005. With respect to appellant's alleged dumping costs, we find that the dumping is not fully corroborated by appellant's daily reports. We question whether the 38.87 tons of dirt allegedly dumped relate solely to Modification P00005. Appellant was working other jobs concurrently with this one (exh. A-8).

34. As for labor, appellant claims approximately $4,511, and attaches daily reports and payroll forms in support. However, these documents make no distinction between base contract and change order work. Absent explanation from appellant, we question whether this labor was incurred solely to perform the extra work under Modification P00005.

35. Under Modification P00006 (additional excavation), appellant claims approximately $1,013 for equipment and $571 for labor, and supports its claim in a manner similar to that described above. Our findings regarding the lack of substantiation of these types of costs under Modification P00005 apply equally here.

Additional Office Expense For Extended Contract Period

36. Appellant introduced into evidence documentation which purportedly showed the additional office expense incurred by appellant on this job during the extended period of contract performance. This office expense reflected the wages and salaries of office personnel, and was direct costed to the claim. The salaries were for clerical help, project engineer, construction manager, and "administrator" (appellant's president). For the extended contract period of December 1989 through March 1990, appellant claimed additional office expense, attributable to this contract, in the amount of $9,642. (exh. A-7, -8). Based upon our review of the record, we believe that a substantial portion of this expense related to the protracted negotiations under Modifications P00005 and P00006.

37. According to appellant's claim, appellant's salaried personnel expense, as a percentage of contract revenue, is 14.16 percent (exh. A-6), which we find to be reasonable. By applying this percentage against anticipated contract revenue (the contract price) of $34,156, we find that appellant's anticipated office expense for this contract was $4,836.

The Government's Estimates

38. The Government's estimates, which were used to support the pricing of the unilateral contract modifications, were based upon the estimates of the Government's senior construction management engineer, Mr. Pang, the estimates of the project engineer and the use of the Means "estimating guide." Mr. Pang's production rates were ultimately used to price the modifications, since they were more generous than the Means guide (Fielding Affidavit).[1]

39. In general, the Government allowed additional labor, material, equipment cost, overhead and profit for all the additional work, but less than that claimed by appellant. The Government allowed the equipment rental rates supported by the contractor. For equipment owned by the contractor, the Government used equipment ownership rates derived from the Army Corps of Engineers' Ownership and Operating Expense Manual. Dumping costs were allowed at appellant's claimed unit price per ton, but at a lower total tonnage. (Fielding Affidavit)

40. The Government's estimate to relocate the fuel tank plus the extra incidental work was $5,605; the estimate for the additional excavation work was $3,255. These figures included allowances for overhead ($141.40 and $84.70 respectively), profit at 6 percent and bond premium at 1.44 percent. (See the

[1] As the parties were unable to complete the hearing in the time they had allotted for the trial, it was agreed that the remaining evidence would be submitted by record submittal. References in this opinion to "Fielding Affidavit," "appellant's rebuttal," etc., relate to these evidentiary submissions.

Digitized by Google

Government's estimates included as part of appellant's rebuttal evidence).

DECISION

The Unilateral Change Orders

The Government extended this 180-day job a total of 168 days based upon Government changes. Per Modification P00003, appellant agreed to compensation for all direct and indirect costs for the first 45 days of extended performance, through 30 November 1989, but the balance of the period, 123 days, was extended and priced unilaterally by the Government—without appellant's agreement. Under the *Changes* clause, appellant has the contractual right to recover its increased costs related to the performance of the changed work and any extended performance period.

As a threshold matter, however, appellant has the burden to show, by a preponderance of credible evidence, that its claimed costs were incurred for the changed work in issue. Appellant has not met this burden. Generally, appellant failed to distinguish between, and to account for the labor, material and equipment cost anticipated and incurred for the original scope of work and presumably included and reimbursed in the bid price, and any additional cost demanded by the unilateral change orders. For this reason, and for the other infirmities recited in our findings (findings 31 through 35), we must deny appellant's direct cost claim for labor, material and equipment.

We hear appellant to argue that the Government's estimates under Modifications P00005 and P00006 were too low. However, the Government need not prove its estimates—it has no claim here. Appellant has the claim, and must prove that it incurred cost related to the changes beyond that allowed by the Government. Appellant has failed to do so. Hence, it may not recover.

Additional Office Expense Due to Extended Performance

Appellant claims that it incurred $9,642 in additional office expense related to the changed work and the extended period of performance (finding 36). We find this figure unreasonably high. Appellant's anticipated office expense for the entire contract was only $4,836 (finding 37). We believe that a substantial portion of the claimed expense is related to the protracted negotiations under Modifications P00005 and P00006 These costs do not relate to the performance of the work and are not generally recoverable under the *Changes* clause.

We reduce appellant's claimed costs by converting appellant's anticipated salary expense for the contract ($4,836) to a monthly rate of $806 ($4,836 divided by 6 months), and applying that rate over the extended period of the contract for which the Government was responsible (an additional 123 days or 4.1 months). Hence, a reasonable measure of appellant's direct costed additional office expense, allocated to the extended period of performance, would be $3,305 ($806 multiplied by 4.1). From this we must subtract the overhead already paid by the Government under the unilateral change orders ($226), for a subtotal of $3,079. We add the rates for profit (6 percent) and bond premium (1.44 percent) used by the Government, for a total recovery of $3,308, plus interest under the CDA. (Findings 37, 40) We have reviewed appellant's alternative methods of computation and reject them as unsupportable under the contract and the law.

Delay Costs: Unabsorbed Overhead During the Suspension Period

While we agree with appellant that it experienced an unreasonable suspension of work between the stop work order and the unilateral issuance of Modification P00005, this fact, alone, does not entitle appellant to compensation for unabsorbed overhead for this period. As we stated in *J.W. Cook & Sons, Inc.*, ASBCA No. 39691, 92-3 BCA ¶ 25,053 at 124,863:

> A contractor must prove more than the mere existence of delay to be entitled to unabsorbed overhead. It is well settled that a contractor must also show that the fixed G&A expenses could not have been reasonably absorbed by other work. [Citations omitted]

Appellant adduced no credible evidence to this effect—it provided no evidence that it was imprudent or impracticable to obtain new work or to shift work forces to existing work. *Capital Electric Company v. United States*, 729 F.2d 743 (Fed. Cir. 1984); *Decker & Co., GmbH*, ASBCA No. 38657, 92-2 BCA ¶ 24,970. Appellant's claim for unabsorbed overhead is denied.

Liquidated Damages

Appellant contends that its performance was delayed due to Government changes. We do not hear the Government to argue the point—the Government does not disavow that it granted appellant an additional 168 days to complete the contract, through 2 April 1990, pursuant to Modifications P00003, P00005 and P00006. However, with

©1994, Commerce Clearing House, Inc.

Digitized by Google

respect to the issue of liquidated damages, the question before us is not who was responsible for the 168-day delay, but who was responsible for the delay beyond that period, from 2 April 1990 through 13 April 1990.

This record is replete with evidence that appellant did not prosecute the work diligently, even well after the scope of work was settled. There were significant periods when appellant chose not to do any work on site at all, for no valid reason (findings 6, 16). We have no doubt that this fact contributed to late completion. We conclude that appellant was responsible for its failure to complete the project by 2 April 1990. We deny its claim for return of liquidated damages.

Interest on Amounts Withheld

In February 1991, appellant claimed for the payment of contract retainage in the amount of $1,226 which was subsequently paid to appellant. Appellant is entitled to interest on this principal amount under the CDA, from the date the contracting officer received the claim, until payment.

The Correction of Appellant's Performance Ratio

Appellant seeks a Board order directing the contracting officer to remove and/or correct the Government's evaluation of appellant's performance under this contract. This prayer for relief is injunctive in nature. While the CDA authorizes the Board to grant injunctive relief under limited circumstances, 41 U.S.C. § 605(c)(4), those circumstances are not apposite here. We have consistently held that we do not have the authority to grant the type of injunctive relief that appellant requests. *Tempo, Inc.*, ASBCA Nos. 37589, 37681, 93-1 BCA ¶ 25,276. *G. Bliudzius Contractors, Inc.*, ASBCA No. 42365, 92-1 BCA ¶ 24,605. *Konoike Construction Co.*, ASBCA No. 40910, 91-3 BCA ¶ 24,170. Appellant provides us with no good reason to depart from this well settled precedent.

We are mindful of appellant's concern that at some future date, the Government may use this unsatisfactory rating to deny appellant a contract award. See FAR 9.104-3(c). If the Government's actions prove unwarranted at that time, legal recourse may be had in a different forum. However, this tribunal cannot afford appellant the relief it seeks. The claim is dismissed.[2]

CONCLUSION

The appeals are sustained in part, dismissed in part, and are remanded to the contracting officer to determine quantum in accordance with this opinion.[3]

[¶ 26,341] Whitton Construction Co., Inc.

ASBCA No. 40756, August 30, 1993. Contract No. F14614-87-C-0022.

Modifications—Bar to Claims—Accord and Satisfaction.—A modification of a contract to install water lines and fire hydrants that increased the contract price for extra work did not constitute an accord and satisfaction that barred the contractor's claim for additional compensation, because the contractor executed a release that excepted claims in connection with the modification. Although the government failed to meet its burden of proving that the modification barred further liability for the contractor's claims, the contractor failed to prove entitlement to an amount in addition to that included in the modification.

---

[2] Since we cannot grant appellant the remedy it seeks regarding its performance rating, we need not address whether the Government complied with its internal procedures to evaluate the work, or whether appellant's work was or was not satisfactory.

[3] After the evidentiary record closed, the Government submitted to the Board a copy of an indictment of appellant for mail fraud and Davis-Bacon Act violations. Several months thereafter, the Government submitted, for "the Board's information," a press release pertaining to the conviction of appellant for mail fraud. The Government did not argue that this matter somehow estopped appellant from pursuing its contract claims. See generally *Emich Motors Corporation v. General Motors Corporation*, 340 U.S. 558, 569 (1951). Nor did the Government move the Board to reopen the record to admit these documents. We can only conclude, under the circumstances, that the Government's submissions had no other purpose but to seek to predispose the Board against appellant. This was improper. The indictment, the press release and the conviction are not of record, and they have been ignored by the Board in the disposition of this appeal.

For the appellant: Randy Whitton, President. For the government: Col. James C. Babin, USAF, Chief Trial Attorney, and Robert P. Balcerek, Trial Attorney.

Before JAMES, RUBERRY, and RIISMANDEL, Administrative Judges

JAMES, Administrative Judge: This appeal arises from the contracting officer's final decision denying appellant's $16,228.44 claim for extra work under the captioned contract. The Board has jurisdiction of the appeal pursuant to the Contract Disputes Act of 1978, 41 U.S.C. §§601 *et seq.* By agreement of the parties (tr. 5-6), we decide both entitlement and quantum. After a hearing in Wichita, Kansas, respondent submitted, but appellant did not submit, a post-hearing brief.

FINDINGS OF FACT

1. On 27 April 1987 the parties entered into contract F41614-87-C-0022 (contract 0022) to install water lines and fire hydrants at McConnell Air Force Base, Wichita, KS, for the fixed price of $64,580.00. Contract 0022 required completion of performance within 150 calendar days after receipt of notice to proceed and incorporated by reference the FAR clauses 52.233-1 "Disputes," 52.243-4 "Changes" and 52.236-9 "Protection of Existing Vegetation, Structures, Equipment, Utilities and Improvements," which required appellant to protect from damage all existing utilities at or near the work site, the locations of which are made known to or should have been known by appellant. (R4, tab 1)

2. No contract plans show the location of any underground telephone line (R4, tab 36; tr. 52-54). At the 1 May 1987 preconstruction conference respondent gave appellant a "dig permit" with communication drawings "CENTEL ALL SHTS" (exh. G-18; tr. 31, 41, 75, 80-82). Prior to the 1992 hearing, respondent's inspector Jim Whitaker copied a two-page portion of CENTEL drawings and verified that it showed an underground telephone line on the site (tr. 77-83). It is not clear which drawings in May 1987 comprised the "CENTEL ALL SHTS" and whether Whitaker's 1992 CENTEL drawings were identical to the 1987 CENTEL drawings accompanying the dig permit (tr. 82-83). The Board-ordered Government pretrial exhibit list included no CENTEL drawing. When offered in evidence, the CENTEL drawing was not received (tr. 89-90).

3. On 4 May 1987 appellant received notice to proceed on contract 0022, establishing 1 October 1987 as its completion date (R4, tab 4).

4. On 17 June 1987 appellant's surety, Wichita Insurance, invoiced $1,743.66 to appellant for contract 0022 payment and performance bonds, at 2.7 percent of the contract price (exh. G-4, G-16, G-17). Appellant paid $1,743.66 to Wichita Insurance on 24 July 1987 (exh. A-1).

5. The parties amended contract 0022 on 22 June and 14 August 1987 for changes and differing site conditions not in dispute, increasing the price by $1,043.33 and leaving the completion date unchanged (R4, tab 2).

6. On 17 August 1987 appellant tried to locate on site an eight-inch line shown on the plans to which to connect a new water line. Appellant found no eight-inch line, but did locate a six-inch line, which respondent confirmed was the intended line. Appellant had one back hoe, one loader, two equipment operators, three laborers and one field superintendent on the contract 0022 site, and spent about $2\frac{1}{2}$ hours attempting to locate the misdesignated eight-inch line. Thereafter appellant moved its equipment approximately 200 feet to start other work. (Exh. G-6, G-28; tr. 45, 68-70)

7. On 21 August 1987 appellant severed an unmarked water line. Appellant had one back hoe, one loader, two equipment operators, two laborers and one field superintendent on the contract 0022 site. The parties stipulated that appellant is entitled to compensation for 2.25 hours for the consequent delay. (Stipulation No. 1, tr. 7; exh. G-6, G-27)

8. Between approximately 7:30 and 9:00 a.m. on 10 September 1987 appellant excavated for a fire plug. At 9:00 am. respondent directed appellant to change the direction of a section of the water line. (Exh. G-6, G-26; tr. 39, 73-74) Appellant had one back hoe, one loader, two equipment operators and three laborers on the contract 0022 site. On 11 September 1987 appellant had one back hoe, one loader, one trencher (excavator), two equipment operators, three laborers and one field superintendent on the contract 0022 site (exh. G-6, G-25). The parties stipulated that appellant is entitled to compensation for 12 hours incurred on 10-11 September 1987 as a result of the Government's 10 September 1987 change (stipulation No. 2, tr. 7).

9. Before appellant began construction work, the parties visited the construction

©1994, Commerce Clearing House, Inc.

Digitized by Google

site and observed telephone line locations marked by respondent (tr. 77, 84). On 16 September 1987 the telephone line flags were no longer in place. During the previous week appellant did not ask respondent to re-flag the telephone line locations, as excavators typically do (tr. 51-52). On 16 September 1987, while digging where the water line was to cross a road, the parties saw a telephone pedestal or pole. Respondent's inspector warned appellant to watch out for a telephone line. Appellant stopped digging, found no telephone line on the contract plans, gave respondent the "dig permit" and asked the location of the telephone line. Using appellant's dig permit, respondent's "telephone people" verified that there was a subsurface telephone line crossing the water line. Appellant asked respondent to mark the location of that telephone line and dug two feet on each side thereof by hand shovels. (Tr. 28-29, 48-50, 57, 85-87) On 16 September 1987 appellant had one back hoe, one loader, one equipment operator, two laborers, one field superintendent and one foreman on site (exh. G-6, G-24); locating and digging around the telephone line delayed appellant about $1\frac{1}{2}$ hours (tr. 87).

10. On 17 September 1987 respondent failed to shut off water valves in a timely manner (exh. G-23). On that day appellant had one back hoe, one loader, one equipment operator, two laborers, one foreman and one field superintendent on site. The parties stipulated that appellant is entitled to compensation for 3.75 hours delay. (Exh. G-6, G-23; stipulation No. 3, tr. 7)

11. On the dates set forth in findings 6-10, (a) appellant paid hourly wages as follows: laborers $6.36, one equipment operator $10.00, another operator $15.00, and field superintendent $15.00 (exh. G-6); (b) appellant's overhead rate, including labor burden, was 44.4 percent (stipulation No. 4, tr. 7-8); and (c) the record contains no evidence of any ownership cost or rental paid for the backhoe, loader and excavator appellant used on contract 0022 (R4, tab 29; tr. 105, 113). Appellant purchased $920.96 in additional materials for Government changes on 11 and 16 September 1987 (R4, tab 29; exh. G-3).

12. Appellant adduced conclusory, nonquantitative testimony about "impact" caused by respondent's foregoing delays (tr. 34-37), but proved no specific additional time or costs for such impact or loss of efficiency. The record contains no evidence that appellant paid Wichita Insurance any additional premium for increasing the bond amounts on contract 0022.

13. In addition to the 22 hours of delay described in findings 6-10, appellant delayed performance while awaiting valves on 15 July 1987 and awaiting surveying on another date (exh. G-10, tr. 87-88). Appellant completed contract 0022 work on 2 or 5 October 1987 (exh. G-8, G-9). There is no evidence that respondent assessed liquidated damages on contract 0022.

14. On 19 and 31 August and 22 September 1987 appellant gave respondent written notice of inaccurate contract plans and delays, claiming $13,065.77 and 45 days additional time on 22 September 1987 (R4, tabs 5-7).

15. After submitting its 22 September 1987 claim, appellant's employees Barnes and Morris agreed on 8 October 1987 to the amounts claimed for the backhoe, loader and excavator equipment they owned (R4, tab 9). The record contains no equipment ownership or rental cost data from such manuals as the Associated Equipment Distributors (AED) or "Means" or "AGC." Respondent called Wichita equipment dealers in 1987-88. The lowest monthly rental rates, from Foley Tractor, converted to hourly rates (by dividing by 175), were back hoe, $10.22; loader, $20.00 and excavator, $20.57 (exh. G-2, G-21).

16. Appellant revised and supplemented its 22 September 1987 claim ten times between 29 September 1987 and 13 December 1989 (R4, tabs 8-14, 27, 29, 30). The last revised claim was $16,228.44 (R4, tabs 29, 30).

17. After 9 October 1987 and 4 February 1988 negotiations, the parties agreed to $5,016.05 compensation for the 17 and 21 August, 10-11, 16 and 17 September 1987 delays and "impact" costs appellant claimed as of February 1988, ten percent profit ($501.61) thereon, and $99.32 bonding costs, for a total price adjustment of $5,616.98 (exh. G-21).

18. On 13 May 1988 bilateral modification P00003 to contract 0022 increased the contract price by $5,616.98 for extra work under the "Changes" clause, but did not increase the contract performance time. Modification P00003 contained the following concluding paragraphs:

> RELEASE OF CLAIMS: In consideration of this modification agreed to herein as complete equitable adjustments for contractor's P00003 "PROPOSAL FOR ADJUSTMENT," the contractor hereby releases the government from any and all

Digitized by Google

liability under this contract for further equitable adjustments attributable to such facts or circumstances giving rise to the "PROPOSAL FOR ADJUSTMENT" (Except for P00003) [sic].

It is the contractors [sic] understanding that this release must be signed in order to receive payment of monies due the contractor. The contractor has been instructed by the Contracting Officer that these monies can not be paid unless he signs this release. The Contracting Officer has assured the Contractor that this release does not in any way wave [sic] or prevent the contractor from further pursuit of recovery of his claim. The Contractor will in no way be prevented or has he given up any of his rights to recover the additional monies he is entitled to for extra work performed under any part of this contract.

(R4, tab 2)

19. The contracting officer's 12 January 1990 final decision denied appellant's claim for compensation in addition to the amount included in modification P00003 (R4, tab 31).

20. Appellant timely appealed that final decision to the Board on 10 April 1990 (R4, tab 33).

DECISION

This appeal presents two legal issues: First, does Modification P00003 bar appellant's present claims? Second, if not, to what compensation is appellant entitled on account of proven extra work, delays and changes?

I.

Respondent argues that Modification P00003 is an accord and satisfaction barring further liability for appellant's claims. Because accord and satisfaction is an affirmative defense, respondent has the burden of proof thereof. *Southwest Marine, Inc.*, ASBCA No. 39472, 93-2 BCA ¶ 25,682 at 127,761-62. Respondent did not sustain that burden. When a contractor signed a release without exception or reservation of claims, as in *George H. Craddock dba Southern Heat Pump Co.*, ASBCA No. 23422, 80-2 BCA ¶ 14,635, cited by respondent, the Board held that further claims arising from the same facts are extinguished. But where a release excepts or reserves specified claims, such claims are not barred. *MSI Corp.*, ASBCA No. 9779, 65-2 BCA ¶ 5094 at 23,996.

The phrase "(Except for P00003)" included at the end of the "RELEASE OF CLAIMS" paragraph appears to except therefrom the "facts and circumstances" giving rise to Modification P00003. Furthermore, appellant reserved its prior claims in their entirety in the final paragraph of P00003. (Finding 18) As in *H.L.C. & Associates Construction Co. v. United States* [11 CCF ¶ 80,495], 367 F.2d 586, 176 Ct. Cl. 285 (1966), respondent "accepted a release which released nothing." We hold that Modification P00003 does not bar appellant's claims in dispute. However, to avoid duplicate recovery, the $5,616.98 payable to appellant pursuant to Modification P00003 must be excluded from any compensation to which we conclude appellant is entitled.

II.

Appellant has the burden of proving entitlement and quantum with respect to affirmative claims such as those in dispute in this appeal. *Service Engineering Company*, ASBCA No. 40274, 93-1 BCA ¶ 25,520 at 127,119.

We have found that (a) respondent's misdesignated eight-inch water line caused appellant's $2\frac{1}{2}$ hour delay on 17 August 1987 (finding 6); (b) by stipulation appellant is entitled to 2.25 hours compensation for the delay caused by severance of respondent's unmarked water line on 21 August 1987 (finding 7); (c) by stipulation appellant is entitled to 12 hours compensation for respondent's change order redirecting a section of the water line on 10-11 September 1987 (finding 8); (d) by stipulation appellant is entitled to 3.75 hours compensation for respondent's failure to shut off water valves timely on 17 September 1987 (finding 10). These four items of Government-caused delay total $20\frac{1}{2}$ hours. Appellant sustained its burden of proof with respect to those four changes and delays.

Appellant should have known of the location of the underground telephone line before 16 September 1987 because of respondent's prior marking of such line and appellant's prior site visit to that location. Appellant failed to ask respondent to re-flag that telephone line's location one week prior to excavation, as excavators typically do. Appellant's "dig permit" drawings enabled respondent to relocate and re-flag the telephone line on 16 September 1987. (Finding 9). Appellant was responsible for the $1\frac{1}{2}$ hour delay on 16 September 1987. It failed to prove any specific additional time or costs for the alleged impact or loss of efficiency

caused by respondent's changes and delays (finding 12).

On each of the foregoing days for which we have found Government liability (a) we have found how many laborers, equipment operators, field superintendents, and job foremen appellant had on the contract 0022 site (findings 6-10); (b) appellant paid its laborers $6.36 per hour, one equipment operator $10.00 and another $15.00 per hour, and its field superintendent $15.00 per hour (finding 11); (c) appellant's stipulated overhead rate, including labor burden, was 44.4 percent (*id.*); and (d) in bilateral Modification P00003, which increased the contract price for these same changes and delays, the parties agreed to 10 percent profit (findings 17, 18).
